and must be done during the present session. I do not intend any remarks or any suggestions that I now make to be exhaustive. The subject is too large for any one man to cover adequately. I do want, however, to make a few suggestions to the government in connection with the fishing industry of the province of Nova Scotia, and I make them now because I believe that a full discussion of the fisheries' commission report will not be possible during the session.

In the first place, scientific research needs to be intensified. We have, it is true, a biological station at Halifax. While it has achieved valuable results, it is only scratching at the surface of a great problem. The research needs to be intensified, and the fruits of that research need to be brought home in a practical manner to the fishermen.

The next thing which needs to be done is to have the fishermen organized along co-operative lines so that they will not buy in the most expensive market and sell in the cheapest. Hon. gentlemen opposite have always used this expression as a sort of dogma, and they now have a chance to give their views practical application and enable the fishermen to organize cooperatively.

In the next place, market development is necessary. I know that a campaign has been carried on to educate people in the use of fish, but that campaign has not been adequate, and it needs to be re-started on a more intensified scale. Coupled with it there needs to be improved transportation facilities to get fish to market in the proper condition. The system of collection boats has been started at places along the coast. That system needs to be extended to cover the whole coast line wherever people are unable to get their products into the nearest market.

Standardization, inspection, and grading of the product which comes on the market is the next essential. The consumer, in order to make him a permanent customer, needs to be assured that he is getting the best article obtainable, and these products should be graded, just as are other products, by government inspection.

The next necessity is the perfection of a system of storm signals and bait reports. The Minister of Marine and Fisheries has, I see by the papers of Nova Scotia, offered to inaugurate a system of storm warnings. The same despatch, which emanated from Ottawa, stated in effect that that was due to the insistence of the hon. member for Antigonish-Guysborough (Mr. Duff) on the floor of this house. I have not heard him myself, but I hope that he has done something towards getting this from the minister, because it is a step in the right direction. I was also pleased to learn that seventy-five vessels of the Lunenburg fleet are equipping with radio to prepare themselves for receiving the broadcast weather reports. But this is only a beginning. The Louisburg station may not be sufficient. It may be necessary to broadcast from five or six stations in the provinces in order to give complete reception at sea. There have been no tests to determine whether you can hear Louisburg at a particular point or not. It should be started on a larger scale. The commercial station at Halifax and the station at Moncton should also broadcast the storm warnings and as well there should be included a system of bait reports to tell the fishermen at sea where the nearest point is at which they can obtain bait when they need it.

In the next place, provision for giving fishermen information as to market quotations is a necessity. In very many isolated districts to-day there is no such provision, and the fisherman does not know if he is getting a fair price for his product or not.

Lastly, and as I say, I do not mean these suggestions to be exhaustive, there should be developed a more intimate association between the ministry, or the department administering the fisheries, and the fishermen. In the past that department has been administered by the Minister of Marine as a subdivision or branch of his department. It is the unanimous opinion of the people of Nova Scotia—and I believe the other provinces agree—that the only effective way to administer the department is to sever it completely from the Department of Marine and to place it under a responsible minister. Then, and then only, will we get that intimate touch which is necessary for the industry to prosper and improve.

Now, Sir, I have given these only as suggestions, but I give them because, as I said, immediate action is necessary; something must be done to save an industry which has great potentialities, an industry which ought to grow and prosper, but which to-day is decaying and dying. And I may say that in any references which I have made to the province of Nova Scotia I have not been actuated by any feeling of depression or any lack of faith in her future. I believe she has a wonderful future if a lead is given in governmental policy; but in so far as this present session is concerned, as revealed by the budget, to which we look at least for some intimation as to the policy of the ministry, it is exceedingly barren. We who come from Nova Scotia are appealing: first, for a national fuel policy and protection for steel to enable our

coal and steel industries to grow; secondly, we want a home market for our agricultural producers—that is, we want the hardship entailed by unfair competition from abroad removed and that market saved for our own people; thirdly, being the gateway of Canada, we want a fair proportion of the trade of Canada to go through our ports; fourthly, we want for our diversified manufacturing industries encouragement and protection where necessary—not the protection which will enable them to profiteer, but the protection which will enable them to live in certainty for the future; and, lastly, we want for our great fishing industry, an industry of inexhaustible resources, a chance to grow and prosper. I believe, Sir, that if we get these things to which I have drawn your attention the dream of Joseph Howe will come true:

That the day will come when Nova Scotia, small as she is, will maintain half a million men upon the sea.

At six o'clock the house took recess.

After Recess

The house resumed at eight o'clock.

Mr. JULES-EDOUARD PREVOST (Terrebonne) (Translation): Mr. Speaker, in the brief time allotted to me, I wish to make a few remarks which may be considered as thoughts suggested by the budget rather than comments on the budget proper. And this is the reason: It seems to me absolutely unnecessary to praise the budget which was presented to us by one of the most popular finance ministers that Canada has ever had. On this side of the house, a number of speakers, financial experts, have sung its praise so highly and with such competence that I deem it useless to begin over again. The more so, as I feel that the task would be for me difficult. In regard to the opposition, their thoughts on the present budget, as expressed in their amendment, are so hazy and indistinct that one is obliged to look elsewhere to discover the real views of the government's opponents on the important political questions in Canada.

Mr. Speaker, it is interesting to note that the program of the Conservative party—in so far as they have one—must, to measure up with the thoughts and ideal of the Canadian people, unavoidably resemble the Liberal program. I could furnish numerous proofs to this effect. The attitude of the Conservative opposition on this budget is a further evidence.

It has for ever so long been admitted that politics is the science of concessions. This is especially true in a country as extensive as ours where government is so difficult and complicated owing to differences in situation, nationality and religious belief. Conservatives and radical Progressives—I mean those members of the opposition on the extreme left—object to this budget on totally different grounds, more than that, for reasons which are contradictory to, and exclusive of, one another. The Conservative amendment and the sub-amendment emanating from the extreme Progressives therefore clearly define the difficult situation that the government of this country has to face.

The happy medium policy, so consistently advocated by Laurier, is still the policy of the present government. It has been battered by extremists. However, it is still the policy needed in this country and the one which must eventually triumph as it does at present. This is so much the case that extremists of all shades are forced to admit and submit to it when they wish to attain practical results, face realities and the duties entailed by the latter.

Let us for the present consider the Conservative party only. The stand taken by them on the budget indicates fully well that they do not dare any more to boast of those great principles which they so loudly proclaimed, and that, not so long ago; very meekly and only to save appearances do they oppose in their amendment the policy of the Liberals. In the amendment to the budget moved by the hon. member for St. Lawrence-St. George (Mr. Cahan), we find a weak, vague, lifeless, wavering and uninspired criticism; in that amendment, I say, we find the obscure policy inspired by the great Conservative convention held at Winnipeg in October last. This solemn congress brought together the entire forces of the Conservative party for the purpose of choosing a leader and defining their program. In the resolutions of this congress, the outcome of elaborate discussions, are to be found the obvious proof that the Conservative party cannot adopt a policy which suits the Canadian people without falling into line with the Liberal program. The resolutions adopted at that convention regarding the numerous issues with which the country is faced, in no way throw new light on our problems, but, under various forms, they endorse the policy adopted and put into practice by the Liberals.

Let us first examine the tariff question which for fifty years was their great battle steed. The tariff resolution passed at the Winnipeg convention, is indeed an abandon-

ment of the Conservative policy. It is a complete surrender and the opponents of the Liberal policy herewith lay down their arms. That party which for many years past has been lamenting to the four winds, moaning on the sad plight of industries ruined by the Liberals; these Conservatives who for ever so long have never ceased, both in their wild speeches and subsidized press, exclaiming that the tariff taxes were too low, that the Liberals had lowered them too much, that our markets were being swamped by foreign products, that the King government were too indifferent, guilty, criminal and unpatriotic, because they did not raise the tariff walls as it is done in the United States and elsewhere, finally these Conservatives at a large and solemn meeting gathered to issue their program, what do they do? Listen to them: "the convention glories in the historical and fiscal policy of the Conservative party."

Let us admire this new and timid phraseology on the lips of Conservatives. They dare not even mention the word "protection" of which their orators gargled their throats during fifty years.

Listen to them again: "Our tariff should from time to time be revised". But what becomes then of this stability loudly proclaimed and which was set up as a dogma?

The resolution then asks for a tariff commission—which after all the Liberals have established and will maintain. The resolution further demands a preferential tariff for the empire, which should neither be detrimental to the farmers nor the workingmen and includes the utilizing of Canadian ports—for ever so long these things have formed part of the Liberal program, and already an essential part of it has been realized. That comprises all. It is all the Conservative party mentions and demands as regards the tariff.

As you are aware, sir, therein is to be found the Liberal policy. The Conservative party ceases to be strictly uncompromising on the tariff question, they are willing to make concessions which in the past they refused indignanatly. The time is no more when protection, high protection was the Alpha and Omega of the Tories' policy!

At that time, it might have been said with reference to that policy always claimed by the Conservatives as the remedy for all evils, what Sydney Smith said of the Electoral Reform sought in England between 1815 and 1830:

> All young ladies will imagine—as soon as this bill is carried—that they will be instantly married. Schoolboys believe that the Gerunds and Supines will be abolished, and the Currant Tarts must ultimately come down in price; the Corporal and Sergeant are sure of double pay; bad Poets will expect a demand for their epics; Fools will be disappointed, as they always are.

This bubble has been pricked by the Conservatives themselves.

How far remote we are from the noisy and violent Conservatives' outbursts of 1925 and 1926! After having tried to stir up the country against the Liberals whom they charged with ruining the national industries, the Conservative party in their so-called program, which was concocted in Winnipeg, have neither more nor less rallied to the Liberal standard. They acknowledge its superiority, since they cannot do otherwise than follow in its footsteps and copy it. That party admits that there is no more place in our country for high protectionists, doctrinaries and extremists. It is exactly what the Liberals have thought for a long time past, to the great horror of the Conservatives.

The Liberals have taken the lead and the Conservatives are but following them. In fact, the Liberal party was the first to grasp that the tariff should be supple and flexible, capable of adapting itself to new needs and various circumstances in which the country finds itself.

Owing to a moderate tariff policy and a sound opportunism, the Liberals, while lightening the burden of customs duties, have stimulated the development of Canadian industries, especially those which depend on our natural resources.

Again do I state, the tariff policy of the Liberals was strongly opposed by the Conservatives who, to-day, accept and adopt it. The Conservative party, especially after 1921, taunted the Liberal party, in whom they feigned to see an enemy of industries and a slave of the west. All the leaders of the Tory party, in this house, on the public hustings and in their press, have violently denounced the Liberals who, according to them, are traitors to the true interest of the country, selling the east to the west, etc.

Why did they sound the alarm? Simply because the Liberals believed that a party, and therefore more so a government, cannot and must not favour especially one part of the country, one section or one class; that a tariff, while protecting our industries, must consider the producer, the farmer and the consumer. This is what, at present, the Conservative party demand, if we are to put faith in the resolution on the tariff adopted in Winnipeg. Really, the Liberals have been well avenged.

The Conservative party which dilly-dallied in an out-of-date policy and sterile criticism, now change their plans simply for election purposes. On the other hand the Liberals are but adhering to a policy which they have always advocated and from which Canada has largely benefited.

Political history tells us that the Liberals were able to apply protection in a more practical way than the Conservatives who, for half a century, boast of having given it birth. The present Liberal government continues to carry out the beneficial policy adopted by the Laurier administration which gave Canada fifteen years of great prosperity.

The Conservatives by more or less adopting the Liberal policy, acknowledge the excellent bases of this policy which demands rather a wider protection than a higher one, thus benefiting all classes in this country and not only a few favoured and privileged groups.

Some hon. MEMBERS (Translation): Hear, hear!

Mr. PREVOST (Translation): The same may be said, Sir, with regard to the important problem of transportation. For the maritime provinces as well as for the western provinces and centre ones, what can the Conservative party suggest which the Liberals have not already accomplished or begun?

Without gainsay, transportation is one of the most important political questions.

Since the Liberals are at the helm of the country's affairs, they have given close attention to this question and have made an effort to solve these difficulties with which it is surrounded.

The freight rates from east to west and west to east, the famous agreement of the Crowsnest pass, the transportation of our enormous crops from the west to Canadian ports, the interests of the ports of Quebec and maritime provinces threatened by too high freight rates, all these aspects of a complex question, where various interests come in conflict, have been closely studied by the King government.

Since the Liberals have assumed power, excellent reforms have taken place in the freight rates affecting the maritime provinces, as well as the western and centre provinces. A solution has not yet been found for all the difficulties which unavoidably beset a system of transportation across a country as vast as ours. However, we are on the path which leads to a complete solution of this difficult problem.

The country is indebted to the Liberal government for the efforts made in order to improve conditions and for the excellent results already obtained.

[Mr. Prevost.]

Wishing to foster in this country union and peace, without which a true national spirit cannot exist, the King government listened with an open mind to the complaints and grievances which rose from the various parts of the Dominion. Defying prejudices, so easily roused by opponents, and influences of powerful organizations which attempt to enslave Canadian politics to their egotistical interests, the Liberal government turned towards the east and west to render them justice each in their turn.

The Conservatives, naturally, highly criticized the Liberal government. But what do they intend doing to solve the transportation problem? The resolutions of the Winnipeg convention apprise us that on the transportation question, as well as that on tariff, the Conservatives are quite satisfied in rallying themselves to the Liberal policy.

Is the west concerned? The convention asserts that the Conservative party pledges itself to maintain as a maximum the present freight rates on grains and their products. When it is a question of the maritime provinces. The convention asserts that the Conservatives "approve and pledge themselves, when they return to power, to put into force legislation which will carry out the Duncan report." Now, as everybody knows, it is exactly what the King government is doing.

Is it a question of the Canadian ports? The convention asserts "that the policy of the Conservative party is to promote, through Canadian ports, the transit of Canadian products and imported goods for the use of Canadians." This, as we all know, is the policy put into practice by the King government. In fact, by reducing the freight rates, it favours the ports of Quebec and those of the Maritime provinces; moreover, it has lowered the customs duties on goods entering the country through Canadian ports.

Is it to the Hudson Bay railway that reference is made? The convention asserts, that the Conservative party pledges itself to complete it without delay and build a terminus and suitable port."

Is it a question of the national railways? The convention asserts "that the Conservative party pledges itself to keep the national railway system free from political influences." Well, that is acknowledging and approving what was done by the Liberal government which placed the management of this railway system in the hands of a highly competent man, and who, free from all political ties, has made it a great success.

So far as the transportation problem and the tariff are concerned, the Conservative party sails in the same boat as the Liberal party.

It offers nothing to the Canadians which is personal, new, special and superior on questions which agitate Canadian politics.

Whether it is a question of tariff or transport, of social legislation or administrative reforms, the Liberal party has always kept in sight Canadian interests, and has endeavoured to have these national interests dominate over the narrow views of parties and groups.

Its broadminded policy on national unity was first ignored by the Conservative party which brands it, for instance, with sacrificing the east to the west, of selling the east to the Progressives. We still hear, in certain quarters of the Tory press, the faint echoes of this violent denunciation of 1925 and 1926. But now the Conservative party is preparing to also turn their back on their past. The selection of Winnipeg for its convention of last autumn is quite an indication, one moreover discussed and explained in a very lucid manner by the former temporary leader of the Conservatives who, with an unexpected gracefulness, turned his back on the east and opened his arms to the west.

Mr. LAPOINTE (Translation): Hear, hear!

Mr. PREVOST (Translation): Once more, the Conservatives vary their tactics. In a rather clumsy way and without tact, they endeavour to follow out the Liberal policy and gain favours from the west. However, what the Liberal party has always done, under Laurier and Mackenzie King, from conviction and love of national unity, the Conservative party does it, to-day, for election purposes. This tardy expedient to which it has recourse is so repugnant to its past history that we have a right to suspect its sincerity.

Let us now consider the so important question of imperialism and our imperial relations.

The Conservative party did not state its policy at the Winnipeg convention, on our relations with the empire as regards our participation in wars and the military or naval defence of England and its possessions in all parts of the world.

Notwithstanding the famous intervention of Mr. Meighen, the convention neither endorsed nor disavowed the statement of the ex-prime minister. So that in the event of Canada being called upon to participate in an imperial war, we do not know what would be the Conservatives attitude. Would they make an appeal to the people before taking a decision, as advocated by Mr. Meighen or would they choose the policy of immediate action which is thus expressed: "Ready, aye ready" and which was proclaimed by the same Mr. Meighen at Toronto? The country has yet to learn.

The convention remained silent on this important and serious aspect of our policy.

In beautifully couched phrases, the convention expressed the Conservative party's loyalty to the crown. "In words no less beautiful it rejoiced in the powers and freedom of action that Canada as a nation has attained." It ends there. Really that is very little. These are but words, and very vague at that. We must wait and hope that the Conservative party will prove by their actions the sincerity of its Canadian and autonomous sentiments. I well remember several circumstances of their not acting in accordance with those sentiments. For instance, when they rebuked the King government for having concluded with the United States a treaty which bore only the signature of a Canadian minister and thus having insulted England and its ambassador at Washington.

The imperial spirit which has guided the Conservative party in the past is well known. It has brought on legislation, struggles, regrettable acts which form part of our political history. To-day, even with a program overflowing with pleasant words and pompous statements on Canadian autonomy and equality of races, I think that this is insufficient to reassure us on the course the Conservative party will take. Time alone will tell us whether this party has freed itself of the influence of Tories, Orangemen and jingos who have guided it heretofore.

Canadians who are lovers of peace, union and harmony—French Canadians are of that number—do not wish to be unfair to the Conservative party, but they do not wish either to be imposed upon by the politicians who for too long a time acted as generals for that party.

The French Canadians especially have grounds to be prudent and cautious. They have not yet forgotten those waves of fanaticism which have embittered Canadian life, and from which they had so much to suffer. They are not yet ready to forgive the Conservative party for its odious Elections Act during the war. Their pride as well as their true love of national unity forbid them to confide without reserve in the guidance of a party which allowed them to be vilified far too long by its principal newspapers and which have still as allies, to-day, leaders of leagues who batter at the principles which guided the fathers of confederation, by advocating one single language for this Dominion.

Truly, the Conservative program, evolved in Winnipeg, offers no serious guarantees that the imperialists and Orangemen have ceased to have the upper hand in the Conservative party.

The true Canadian policy, the one that looks to the future, is in the hands of the Liberal party. The Conservative party cannot adopt any other without drifting away from the expressed will and wish of the nation.

To-day like yesterday, the Liberal idea is at the basis of all reforms which benefit the people. The Liberals take pride in this beautiful tradition. Loyal to the crown, yes, indeed, they are, but they are first Canadian citizens, jealous of their freedom and autonomy.

The Conservatives, with or without the Orangemen, will be forced to rally to this policy or resign themselves to wallow in their helplessness and unpopularity.

The fact that the Conservatives cannot adopt a suitable program for Canada without incorporating the main features of the Liberal program, is a homage to that program and at the same time a lesson to the Conservatives, who have set aside the best traditions of their party and have too often forgotten that Canada is invincibly and irresistibly forging ahead towards her great national destinies.

Mr. A. E. ROSS (Kingston): Mr. Speaker, in continuing the debate on the budget I think it can be safely stated that it is one of the duties of a government to have an exact knowledge of the natural resources of the country. For this purpose the government is divided into departments, each department having a head, in order that a special study of some particular branch of the question may be carried on. It is equally a duty of the government to know the people of the country, to learn their racial characteristics, their aptitude for special work, their tendencies and their aspirations in order to work these people into the development of the natural resources in such a way as to apply their special characteristics to the task. If one were to study this budget to ascertain the policy followed by the government in its preparation, one could find nothing of this kind at all. The government, through a knowledge of the natural resources and a knowledge of the people, should be able to formulate a national policy in the national interest, but if this budget is studied nothing of that nature will be found. The government should be able also to show an adherence to whatever policy may be formed, but a study of the last few budgets will show that this King government adheres to no policy. A party which is pleased one year will be displeased the next year, and so you have nothing but a characteristic shuffling of policies to keep the party in power instead of a national policy in the best interests of the country.

We can go even further. We find that this government ascribes a great deal to Providence; they are still trusting in Providence. If a man wants a job he has to trust in Providence rather than in this government. In the city of Ottawa, as in many other cities, the unemployed are still trusting to Providence and the occasional snow storm to give them a job if even only for a few hours.

Now I would like to speak for a moment with regard to how this budget affects or does not affect my own constituency. Others have spoken along technical lines and have taken up the different features of this budget; we had a splendid address this afternoon showing its effect on Nova Scotia, and now I would like to deal with certain matters connected with that section of the country from which I come. The first question with which I will deal is that of the feldspar industry. In the county of Frontenac is found the finest type of feldspar in the world, and quantities of this ore are also found in different parts of Ontario and the eastern United States. It is interesting to note the facts with regard to this ore and to see how this government is proceeding to develop that natural resource. Feldspar is employed in a great many industries; it is used in the ceramic industries, in the manufacture of porcelain and tiles as well as the making of certain glasses; thirty-one mills are located in the United States for the grinding of this ore. The rough ore is admitted free, while a 30 per cent duty is placed against ground ore in the United States. With the best ore it is possible to get, Canada has only two mills, and that deplorable fact can only be explained by the indifference of this government. One of these mills is located in Kingston, while the other is in Toronto; these are able to take care of the requirements of this country at present, but if they were given the same treatment by this government as is received by this industry in the United States, the situation would be greatly improved. If instead of the 30 per cent duty on ground ore we had even a 15 per cent duty, these mills would double their capacity and double the number of their employees. This matter was brought before the tariff advisory board, but received no consideration whatever. I believe the government should take it into consideration and give these two mills at least one-half the protection received by the United States mills.

The situation is very similar with regard to mica. In Quebec and Ontario we have mica ore of the very finest quality, but we do not help this industry as the United States helps the mica industry of that country. When the ore is taken from the mine in Canada and sent to the United States unwashed and with no labour expended on it, it is admitted free, but just as soon as there is any Canadian labour applied to it the duty begins, and it ascends from that point. In other words, the intention is to provide work in the United States by taking that work away from Canada.

Another question which should be considered by the government is the application of the vegetable growers for consideration. It may seem strange that the representative of an urban constituency should speak on behalf of the vegetable growers, but I believe we in the cities realize that if you have a prosperous urban community you will have a prosperous rural community and vice versa, because the two things cannot be separated. There are a great many people throughout Canada engaged in growing vegetables, and they certainly should receive some consideration from this government. The vegetables which would be affected most by any duty would be those which might be called the rich man's vegetables, and in that case he can well afford to pay for them, but in any event, this association of vegetable growers should receive consideration from this government, which they certainly do not now receive.

For a number of years, in connection with providing more work throughout Canada, I have brought to the attention of the government the question of the direction of steamship companies. The United States will not permit a board of directors to have Canadian representation, while in Canada it is only necessary to have one Canadian representative, which gives to these Americans the control of our shipping and takes work away from our Canadian sailors and steamships. In the same way I brought to the attention of the government the question of repair work on damaged ships. When an American boat is damaged in Canadian waters it is taxed 50 per cent for the necessary repair work when it returns to the United States, while Canada only charges 25 per cent. Therefore, under these regulations, no work will be done to American bottoms on Canadian shores.

Another item in the budget which interests my constituency is the small protection given for the manufacture of locomotives and other machinery required in the mining industry. If there is one industry in Canada which should be supported by work done in Canada it is the mining industry. The Canadian Locomotive Works in Kingston have started to manufacture locomotives, engines and other things required in mining, and I would ask the government to see that this industry is given a little more protection than is provided by this budget, in order that this work may be carried on in Canada.

There is still another matter to which the budget does not refer, but which is of primary importance in our section of the country. I refer to the St. Lawrence development. Eastern Ontario is somewhat divided in this matter, and while I believe everything that can be said has been brought out, I would like to draw the attention of the government to the fact that the development of the St. Lawrence is not only an engineering question but that it is also a question of navigation, and the advice of navigators and marine men should be taken into consideration when considering whether or not this great work should be proceeded with.

After having referred to these local matters I would like to say a few words on the budget as a whole. One would naturally expect a certain amount of independent criticism from the other side of the chamber, especially since we have across the way an independent wing which moved from this side of the house, led by our good friend the Minister of Immigration and Colonization (Mr. Forke). More especially would this independent criticism be expected since on more than one occasion the Minister of Immigration has expressed himself very strongly from the front benches of this side of the house. I would like to ask him how he views this budget to-day, in the light of what he said in past years. Let me speak more specifically. In 1924 he declared that the budget should be a financial statement showing the commitments and liabilities of the country so plainly that the man in the street might easily understand it. If the Minister of Immigration believes this budget to be so plain that the man in the street can understand it, he has acquired since crossing the floor a wider viewpoint than he had while on this side of the house. In 1923, while leading this independent wing, the same gentleman expressed himself very strongly and moved an amendment to the budget which contained two things. First, it advocated the readjustment and extension of the income tax, to bear more heavily on unearned increment, and then it suggested the increase of excise and other taxes on luxuries. Now, for two years the minister has sat on the other side of the house and watched his principles trampled to the ground without

once raising his voice in their defence. We can understand the feelings of those hon. gentlemen a few years ago when the first desertions from their camp took place; two gentlemen, finding no support for their principles on this side of the house, crossed the floor. They took their places on the back benches, and we all remember how the tears rolled down the cheeks of the present minister that day, as he denounced the treachery that had occurred in his camp. It was very sad; his chief whip and the chairman of his caucus went back on him. But where does he find himself to-day? Where but in the arms of these gentlemen. He has now gone to the support of his chief whip. I would like to draw the attention of the house to one very significant fact, however. When those two deserters crossed the floor of the chamber they took their places on the back benches opposite, but my hon. friend the minister has got as close to the front as he can possibly get, and for what reason? Someone says for ten thousand reasons, but at least we know that he has entirely divested himself of the principles he espoused while on this side of the house.

Mr. MILLAR: May I ask the hon. gentleman a question?

Mr. ROSS (Kingston): I have not come to the hon. gentleman yet; if he sits down I will reach him in due time.

My friend the minister made another statement in dealing with the necessity for the existence of this independent wing. He said they were absolutely necessary to this country, and made use of the following words:

> There will be no turning back; we have our faces to the rising sun...

Apparently it does not matter where the sun is now that the principles have gone. This budget is representative of a government composed of elements united for power alone; elements which have discarded their principles and which have divested themselves in a few short years of all conscious adherence to those principles which could possibly form the foundation of a national policy tending to develop the whole country into one great unit. The budget has nothing whatever to offer to the working man. In defence of the budget it has been said that there is a good deal of prosperity in the land. If that be so I should like to ask this question, and that is all I am going to say on the prosperity: If this is a prosperous country and the people are conscious of it, if the people in the old country are conscious of it, and we have a Minister of Immigration trying to bring immigrants to this prosperous country and they do not come, what is the conclusion? It must be one of two things: Either the country is not as prosperous as the government claim or the minister has fallen down on the job.

An hon. MEMBER: Both.

Mr. ROSS (Kingston): An hon. member says "both". Well, the government can settle for themselves which it is.

The government claim that they have reduced the debt of Canada. That subject has been well threshed out, but I have failed to hear any member of the government explain why there is an increase in the railway debt greater than the supposed reduction of the national debt. I am not going to discuss the matter any more than to cite figures which have been repeatedly given. According to their own figures there has been a reduction of $105,000,000, and then turning to the official report of the national railways you find an increase of indebtedness amounting in round numbers to $158,000,000, showing that not only has there been no reduction in the debt but there has actually been an increase of approximately $53,000,000 during the time this government have been in power.

I wish to turn now to a matter which has been already fully discussed but upon which I wish to say a few words. The treatment which this government have given the woollen industry is very marked and is characteristic of their attitude toward this branch of commerce. If we study the history of the woollen industry we will find that for some unknown reason the Liberal party have been always antagonistic to it. The following figures will amply demonstrate that: In 1885 there were 241 mills, 460 cards, 2,062 looms in this country. In 1897 there were 236 mills, 477 cards, and 2,120 looms. Then came the Liberal policy, and the next figures we have are for 1907 when, owing to the tariff of the Liberal government, the mills had been reduced from 236 to 148. In 1912 they had dropped to 78. During the few years that a government favourable to the industry was in power the number of mills increased, but owing to the policy of the Liberal government for the last few years the number has been reduced until it stands at, I think, about 59. I should like to draw this supposition to the attention of the government in connection with the admission of free yarn. If one manufacturer sends for yarn to a country outside of Canada he says practically to his employees: I have no further interest in you. I will close that branch of my industry dealing with yarns and I will make more progress. My industry will go on, but I will discontinue employing the

labour in connection with the branch in question. Now if one manufacturer takes that stand and imports his yarns what will be the result? Every other manufacturer in Canada will do the same. The Minister of Trade and Commerce (Mr. Malcolm) shakes his head, but I will guarantee that is the very course they will pursue. Every other man in the yarn business will have to import his yarn in order to compete with the manufacturer who first adopted that policy.

Mr. MALCOLM: My hon. friend realizes, of course, that free yarn is only intended for one class of the industry.

Mr. ROSS (Kingston): That is what I mean. I am only referring to one class. I do not know what would happen if it were pursued generally.

Mr. MALCOLM: A great deal of yarn is imported now.

Mr. ROSS (Kingston): That is all I wish to say in regard to that matter. I have said sufficient if I have shown what the effect will be upon one branch of the woollen industry. Every manufacturer in that branch will necessarily have to do the same as the other manufacturer who imports his yarns in order to compete with him. The result will be that the labour engaged in that particular branch will be thrown out of employment and, in effect, will be told by the government to seek work in the United States or wherever they can get it.

The government claims that it is reducing taxation, but we on this side do not agree that the claim is justified. When you reduce the income tax you affect, as was said to-day, only 116,000 people in this country. But when you retain your sales tax, the abolition of which we urge in our amendment, you are touching all the people in the country. The collection of taxation in this form affects the poor people to a greater degree than any other class. During its term in office the government has taken out of the people from this source $472,888,973. The largest amount taken from the people by the Conservative government was some $38,000,000. The present government took over $100,000,000 when it increased the sales tax to 6 per cent. We think the sales tax should be wiped out. Let me give the exact figures of the amounts which this government has collected in taxation of this character from the poor people of this country. In 1921-22 they collected $61,520,687.79, having increased the tax to 4 per cent. In 1922-23, they collected $91,262,254.13. In 1923-24 they increased the tax to 6 per cent and collected $100,980,076.80. In 1924-25 the government reduced the tax to 5 per cent—this is what they call reducing taxation—and they collected $62,795,183.84. In 1925-26 they collected $74,025,093, and in 1926-27 they collected $82,305,670, a total of $472,888,973 raised from the sales tax. They took this enormous amount of money out of the poor people of the country, and in view of the fact that they are making great professions of economy and that the present Minister of Immigration and Colonization when sitting on this side of the house demanded rigid economy, the government would be well advised to wipe out the sales tax. I should like to quote from a little article which I read the other day in regard to cloth, and if you want to substitute any other article of manufacture, it will meet the situation just as well. This was the policy adopted by England when she was labouring to get herself into a good sound position:

> Cloth is to be sold rather than wool, finished cloth rather than unfinished, the more highly worked cloths rather than the simpler fabrics, the dyed rather than the undyed, dyed with English colours rather than foreign colours, and all with the object that the subjects of the realm may take as much benefit as possible.

Mr. ADSHEAD: What is the date of that?

Mr. ROSS (Kingston): About 1714. That was England's policy and it is her standing policy to-day. I should draw the attention of the hon. gentleman to the fact that England secured her position through protection, and this is one of the policies that she adopted. This is another, which follows upon it, and which I would also ask the government to accept:

> That the importation of such goods as hinder the consumption of our own or check the progress of any of our manufactures is a visible disadvantage, and necessarily tends to the ruin of multitudes of people.

That is a policy which this government has absolutely ignored. The Minister of Agriculture (Mr. Motherwell) sits complacently in his seat while some other ministers put it all over his department with the Australian and New Zealand treaties. The result is that he rarely ventures to meet the dairymen's conventions or associations of this country because they have a few questions to ask him. He is an artful dodger.

In conclusion, I should like to say that if any country ever was blessed with an opportunity to formulate a national policy, this country is the one. No government ever had a better opportunity to evolve a policy that would be founded upon national interests. We have in Canada unlimited resources, any one of which will develop an integrated industry, and yet we are sending out our ores,

allowing these integrated industries to be developed on the other side of the line. To refer only to one that this government could well take in hand and work up into a big industry, I would mention the iron industry and in that connection this government have all the opportunities that any government ever had. We have deposits of iron ore in eastern Ontario and any quantity of it north of the great lakes, and yet in the last few years not one pound of Canadian iron ore has been mined or used. There are difficulties connected with other industries, but this is one which this government could well take in hand and work up into a great national policy. The same thing is true of the pulp and paper industry. Now is the time; if the government wait another five or ten years this opportunity will have passed, never to be regained by this or any other government to evolve a policy that will help in making this a great country.

The fishing industry has been allowed to dwindle away on both the Atlantic and the Pacific. This government are quite indifferent to the question; they have no policy on it, and in fact I should like to know what they have a policy on except whatever will enable them to gather in and to hold this independent wing so that they may remain in power. They should have some pity on this independent wing; they should give them a chance not to see all their principles massacred, but to see some of the principles which they had on this side of the house worked up on the other into a policy. But the government have surrounded them in front, behind, to the right, to the left, so that there is no escape for this poor independent wing. They have to sit there and listen in quietness to a crucifixion of all the principles they ever adopted on this side.

I would ask the government, therefore, that they should study the situation of Canada; that they should take hold of some one of these great natural resources and work it up into a national policy that will make Canada a good place to live in and that will give work to our people. If these resources were made use of, every man in Canada would have a job, the exodus to the United States would be practically stopped and, in fact, men would be looking to Canada and returning. We would have an actual return, not a mere fanciful fiction on paper. I have canvassed my constituency and all the country round, and I cannot find more than a dozen people or so who have returned. Deseronto and Trenton, which once were prosperous towns, are now almost off the map owing to the policy of this government. Families of eight and ten have gone away and I have not seen one of them return. I would therefore ask the government in their next budget to consider some national policy on some natural resource so as to make this a better country than they have so far made it.

Mr. MALCOLM LANG (South Timiskaming): Mr. Speaker, having just returned from a visit over the week-end to my constituency, I feel it is my duty and pleasure to convey to the Minister of Finance (Mr. Robb), the government and members of this house the general satisfaction which prevails throughout my constituency with regard to the budget which is under discussion in this chamber at this time. I had occasion to visit different parts of that great constituency and to speak with prospectors, miners, farmers, and housewives, people of all classes and people who have in the past been affiliated with all the different political parties, and in no case did I meet with any other expression of opinion than approval of the budget that was brought down and satisfaction with the wonderfully improved conditions which, they know, prevail throughout this great land of ours.

I wish for a moment to pay my respects to the hon. member for Kingston City (Mr. Ross) who has just addressed us. I have listened with a great deal of pleasure and attention to his speech, and I wish to compliment him and say that in my opinion he made a most wonderful address considering the difficult case which he tried to make out. I am going to refer first, if I may, to some of the arguments which he asked this house to listen to with regard to the mining industry, by reading from an editorial which appeared in the Northern Miner on Thursday last. This editorial appeared in this publication after the editor had time to study the effects of the tariff proposals upon the mining industry in Canada. This publication, the Northern Miner, is published in Cobalt, the centre of the constituency which I have the honour to represent. It is owned and edited by two brothers who some years ago came into northern Ontario to do pioneering work along with the rest of the people in that north country. One of them, prior to coming into the north country, had had some newspaper experience, and after staying with us for a short time and becoming acquainted with the possibilities, these gentlemen were able to get a job printing press in with which they started a printing plant about the beginning of the Porcupine camp in 1909 or 1910. This paper has grown and now has an extremely large circulation in all parts of Canada. It is read with confidence by everyone in this country and in the United States who has anything

to do with the mining industry or mining investments. It has built up a reputation for itself for honesty and for giving authentic information to the public. Its circulation is not confined within the borders of our country, but reaches out to every country that is interested in mining. It has a wide circulation in the United States and in Great Britain. Every man who has the slightest connection at all with mining knows The Northern Miner, of Cobalt, and looks forward to its authentic information about our Canadian mines. It is read in Europe, in South Africa, in the United States and every other country where the mining industry has a place. I think an editorial in its issue of February 23rd last will be of interest to members of the house and the country generally. It is headed, A Good Budget for the Mines, and says:

> Tax and tariff reductions announced by the Minister of Finance indicate savings to the Canadian mining industry of a million dollars a year. And the changes made will be particularly encouraging to a branch of the mining industry in whch Canada may be expected to take a leading part, that of treating complex ores, such as copper-zinc-lead-gold-silver ores, now shown so abundant in northern Manitoba, in Sudbury and in Rouyn.
>
> Among the interesting items in the tariff changes are those that admit free certain acids used in the treating of complex ores and which lower the duty on machinery and equipment used in concentrating and smelting. With several new plants going up these items are particularly interesting. Another reduction is in the duty on hoists of a type not made in Canada.
>
> The tariff changes were so framed as not to hurt the growing manufacture of mining machinery in Canada. This is becoming quite an industry, and one which is proving helpful to mining by reason of the ability of Canadian factories to quickly supply machines and parts of a kind suitable to Canadian needs. The government feels that in cutting the tariff on these items it will aid mining and not yet injure manufacturing.
>
> The Ontario Mining Association must have felt gratified to learn that five out of its six tariff recommendations were adopted. The sixth was not of great importance and because it was found to impose on manufacturing was not pressed.

That testimonial, coming from such a source, is to my mind, and I believe to that of every fair-minded person, a remarkable commendation of the Minister of Finance and of the government of the day.

Mr. GOTT: Give the credit to Hon. Charles McCrea.

Mr. LANG: Perhaps it is just as well for me to tell this house that the Northern miner is particularly friendly to the Hon. Charles McCrea and to Conservative governments as a rule. As I said at the outset, this paper has built up a reputation for honesty and for giving authentic information to the public in regard to the mining industry of Canada. It has been kept pretty well independent so far as party politics is concerned, but to my knowledge the owners and the editor have voted Conservative on all occasions in the past. With that explanation, hon. gentlemen will understand that this editorial has not been written with a view to commending the Liberal government that is in power at Ottawa, but simply as the honest expression of its own conclusions after having studied the effect of the tariff reductions that are proposed in the budget brought down by the Minister of Finance.

This house is indebted to the hon. member for Nipissing (Mr. Lapierre) for the address which he delivered early in this debate. In a very concise way he showed the important place which the mining industry holds in Canada at this time, and I shall therefore not dwell upon that. I wish, however, to give credit to the present Minister of Mines (Mr. Stewart) in the government of the day for the sympathetic attitude which he and his department have always had towards the mining industry ever since the advent of this administration. It is admitted by mining men in all parts of Canada who have been watching events, and by those who had been engaged in the mining industry for years prior to the advent of this administration, that the treatment which they have received from the present Minister of Mines and the Mines branch has been more kindly and sympathetic than under any previous administration, a tribute that applies equally to their attitude towards the mining industry as a whole. The Mines branch, under Dr. Camsell, as deputy minister, has carried on geological surveys in all the back portions of this great country of ours, and has prepared geological maps giving information which has proved of untold value to prospectors and mining men generally. Their research work has also been of great benefit to the mining industry in this country. Before leaving that subject, may I say for the benefit of the hon. member for Kingston City who has just addressed the house, that if he had listened to the remarks of the hon. Minister of Mines a few days ago, when he told the house of his trip to the old land last year and of the activities in scientific research as applied to mining, intimating to the house that the problem of the proper treatment of the iron ores of this country had been, he felt assured, solved by scientific research, he would have realized that the iron which we have in such great abundance in many parts of this country constitutes a great national asset, and that the iron industry will in a very short time be one of the great industries of this country.

Then the hon. member for Kingston City referred to the St. Lawrence waterway—something that most of his colleagues are keeping pretty well away from, I notice. The hon. member for Fort William (Mr. Manion) also wanted to know where the government stood in regard to this question. I cannot speak for the government, of course, but I think I can speak for every member on this side of the house when I say that at least there will be no danger of the government trying to steal the policy of the Conservative party in respect to this great project. It is my sincere hope that the negotiations now proceeding between the two nations will reach a successful conclusion, and that the deepening of the St. Lawrence will be proceeded with as rapidly as possible. When that day comes, and I hope it will come quickly, our fresh water carriers will be able to transport grain and other cargoes from the head of the lakes down to Montreal for reshipment on ocean going vessels, and this will do away with the present unsatisfactory condition of American bottoms carrying 80 per cent of our grain. Then we shall be able to build up a merchant marine that this nation will be proud of.

Most of the hon. members who have so far taken part in this debate have dealt with immigration, and our friends opposite have tried to create the impression that the trek across the line never commenced until the Liberal administration came into power, and that it never will be stopped until the Conservative party regain office. But I have lived long enough to remember that prior to 1896, when the Laurier administration assumed control, we suffered the greatest loss of our manhood and womanhood to the United States. With the wonderfully improved conditions—if the term "prosperity" is objected to, I am quite satisfied with this description—that exist throughout the Dominion to-day, and with the still greater improvement that we may expect from now on under the present strong, sane administration, I do not think we need worry very much about our immigration policy. During the past year it has been shown conclusively that our people have become rich enough to invest a very large proportion of the capital that is now being used to develop our industries: in fact more than half of the capital that has gone into our mining development is Canadian capital. It is also gratifying to find that capital is being attracted from all parts of the world for investment in the Dominion, for the simple reason that capitalists in other countries are shrewd enough to see the great possibilities of profitable investment in the development of our natural resources. And there is not a doubt in the world but that immigration will follow capital. I am confident that men and women, physically fit, will seek to establish themselves and play their part in the pioneer work that is necessary to continue the development of our natural resources and the industries related thereto, and that we shall have all the immigrants we need from Great Britain and continental Europe. Our chief concern must be to see to it that only those best fitted are allowed to enter the Dominion.

I was struck by an observation made by the hon. member for Parry Sound (Mr. Arthurs) when he took part in this debate. He stressed a point that used to be stressed years ago, but I thought the Conservative party had gotten over it by this time: he laid the blame for all our railway troubles on the Laurier regime in building the Grand Trunk Pacific railway during the period from 1908 to 1911. Let me point out, Mr. Speaker, that if the Grand Trunk Pacific railway had not been constructed by the Laurier government we would not be getting to-day the great benefits flowing from the development of our mineral, forest and agricultural wealth that has taken place along the railway in northern Quebec, northern Ontario and northern Manitoba since the war ended. As a result of this development, that part of our Canadian National railways which a few years ago our Conservative friends predicted would always be a charge on the country, is now paying its way, and in the near future it will be one of the best revenue producing portions of our National railway system.

Now, Mr. Speaker, there is just one other matter that I wish to mention: it has to do with the recent discoveries of mineral wealth in northern Manitoba and northern Saskatchewan, and particularly with the administration of the mining laws to govern the great activity that we may expect there in the immediate future. From what prospectors in northern Ontario have told me, I feel sure that in the coming season there will be the greatest rush to stake mineral claims in northern Manitoba and northern Saskatchewan that we have ever witnessed in the mining history of Canada. It is vital for the good and the prosperity of the mining industry and of the people of Canada generally that the very best mining laws and regulations be established to govern the staking and the operation of mines which will be opened up. In my humble opinion the present mining laws which have been enacted by the federal parlia-

ment and which up to the present time have been in force in relation to the staking of mineral wealth and of the natural resources of our provinces, where those resources are still under federal jurisdiction, are not up to date, nor are they the wisest laws that could be enforced under the conditions as they now exist. I would therefore suggest to the Minister of Mines and to the government that during this session, before the staking rush begins in that part of the Dominion for the ensuing season, they endeavour to formulate the most suitable laws and regulations in order to give to that country the best government possible. We in Ontario have had a good deal of experience with mining laws and we have been able to cope with many great rushes in different parts in the north of the province. In northern Quebec also there have been some big rushes in the staking of claims, and the mining act of that province has very successfully met the situation that has developed there. In my opinion our Ontario mining act is probably one of the best pieces of legislation of the kind, if indeed it is not the best, in Canada or for that matter anywhere in the world, and I do not think that this government would encounter any difficulty in drawing from the acts of these two provinces such regulations as would take care of the situation in the part of the country I have been speaking of, with a view to obviating as far as possible litigation and disputes generally that must inevitably arise in connection with every mining rush.

I do not think there is much more I want to burden the house with. I feel that we in Canada to-day are living in the most favoured spot on earth. With our great agricultural wealth, our vast forest resources, our enormous hydro potentialities, our good climate and the unbounded possibilities in minerals—the greatest possibilities of mineral wealth of any nation in the world—we have every reason to be proud and happy. I am sure that all Canadians must take the keenest pleasure in the realization of the resources available to us to-day. When we look back over the pages of history we find that from the earliest recorded times the nations that have become supreme and that have maintained supremacy have always forged ahead because they have had hidden treasures in minerals to supplement their other resources. This has been so throughout the ages. Until the Armada, Spain had scoured the seven seas in search of precious metals. Then came the Spanish Armada and England wrested the supremacy; and she has retained her supreme place since that time because of her possession of mineral wealth. To begin with, she had coal and she developed her iron and steel industry, in which field she has long remained in the forefront. Is it not a gratifying reflection that we in this part of the empire should possess mineral resources which will be available for centuries to come? We can picture Canada in future generations, indeed, centuries from now, playing an exceedingly important part in helping to maintain the supremacy of the great commonwealth of nations to which she belongs. The British Empire has been supreme on land and sea, commercially and in every other way, and it is the fervent prayer of every Canadian that she may long continue to maintain her position. And in the maintenance of that supremacy, in the interests of humanity, Canada will be an important factor. This country is destined to play a vital part in holding the empire together to the end that her benign influence may spread to the furthermost corners of the civilized world and that peace and Christianity may everywhere prevail.

Mr. W. E. ROWE (Dufferin-Simcoe): The amendment moved by the hon. member for St. Lawrence-St. George (Mr. Cahan) to the budget which has been brought down by the Minister of Finance (Mr. Robb), has failed, and naturally so, to enlist the support of gentlemen on the government benches. However, it has attracted keen interest in all other sections of the house and national concern throughout the Dominion at large. When we carefully consider the activities of this government since it came into office in 1921, and since it was given a new lease of life after the last election, we cannot but regret the absence of any sign of stability of purpose or principle in the economic management of the affairs of this Dominion. After the government's long term of office, it would seem that the ship of state to-day is merely drifting aimlessly, without any apparent course. The present government has depended very largely on the whims of fate, as members of the administration have said on different occasions. Providence has been indeed very kind to them. Listening to the hon. member for South Timiskaming (Mr. Lang), who described the greatness of the country in its natural resources, I could not help thinking that it was indeed fortunate for the Dominion that our heritage was so vast and our harvests so bountiful; because had this country not been so blessed in natural endowments, so favoured by Providence in natural conditions, the people could not have prospered as they have done under so weak an administration as that which now governs the affairs of this Dominion.

After almost ten years of privilege, almost from the conclusion of the Great war, the government, much to the disappointment of the people, shows no sign of retrenchment nor of any effort at a permanent reduction in the national debt. Year by year we have heard of different surpluses, but when you analyze the government's own reports for the last five years, from 1921 to 1926, when you look into the liabilities in connection with the national railways, you find that our debt stands to-day at $217,000,000 more than it did when the present government came into office. During their term of five years the government, who have been preaching economy to this side of the house and to the Dominion, with a political astuteness which we are now bound to admit and which is becoming more and more evident to the people, have been securing money from the taxpayers by a process of painless extraction. At any rate, they have collected and spent more during the past year by $18,000,000 than the year before, and they have collected $211,000,000 more in the five years from 1921 to 1926 than did their predecessors in the previous five years, including a part of the war period. They have indicated in this year's estimates their intention to spend $10,000,000 more in the coming year, and for nine months of this fiscal year they have already extracted $14,000,000 more in taxes than they did during the same period last year.

The present much talked of era of prosperity is indeed a splendid advertisement for the present administration; at least they are taking advantage of it. To quote the glib words of the Prime Minister (Mr. Mackenzie King), prosperity is no longer in the far distant future; it is here: we have had in the past year a total trade greater by $42,000,000 than we had in the previous year. But what are the facts? When you analyze the figures you are disappointed to find that this $42,000,000 of a greater trade is really not so favourable as it seems on the surface, for there have been greater importations to the extent of $103,000,000, of products that might have been manufactured in this Dominion, while there has been a diminution in exports from Canada to the extent of $67,000,000. So that when the government boasts of an increase of $42,000,000 in our total trade it is on the wrong side of the ledger. There has been a decrease in exports, in the nine months of the present fiscal year for which we have figures of $56,000,000; and when we look over the monthly reports of the Department of National Revenue we find that our importations have increased by over $33,000,000 in the past nine months than in the same period of the previous year. It is hard to understand how the government can take credit to themselves for the era of prosperity, for which Providence is so largely responsible.

The people of this Dominion have been viewing with alarm the attitude of the government towards the manufacturing industries of this country. Hon. gentlemen opposite have negotiated several trade treaties with foreign countries, and it seems to me that they must surely admit now that they are poor international traders. They are apparently optimistic regarding their future success as ambassadors, but it seems to me that, judging from our experience of them as traders, they are hardly fitted for ambassadorial responsibilities. In the case of every trade treaty which this government has negotiated with a foreign country our favourable trade balance has appreciably diminished. I will refer the house to our treaties with Australia, New Zealand and France. I wonder what the Minister of Agriculture (Mr. Motherwell) thinks to-day of the Australian treaty, which he once cherished so dearly. It must be a source of inspiration to him as he sings "bit by bit" the old free trade song; and no doubt, the Minister of the Interior (Mr. Stewart) will rejoice once more in sounding the death knell of protection. I do not think, however, that the Western Dairymen's Association, the farmers and sheep-breeders throughout the country would be entertained by a duet on the part of these two ministers, because the evil effects of the Australian treaty have been felt by every farmer and dairyman throughout the Dominion, With Australia our favourable trade balance has declined by $3,500,000, only to be followed by similar reductions in our trade balances with other countries. In the case of New Zealand our favourable trade balance has been reduced by $5,500,000, and in the case of Belgium by $4,500,000. With France, with whom we had that famous treaty, our trade balance has declined by $7,500,000, and to-day we are purchasing from that country twice as much as we are selling to her. In our relations with the British West Indies, our favourable trade balance has declined by $2,000,000, while with Japan our favourable balance has been reduced by $8,500,000.

Under the circumstances, the present administration must realise that the home market is more important to the agriculturist, more important to the domestic producer in every line, than markets which may be sought far afield. We have often endeavoured to impress upon the government the necessity for culti-

vating the home market, and the uncertainty of foreign markets is clearly demonstrated in our trade with the United States. We must, however, accord the government credit for endeavouring to give the United States a reasonable chance in their trade with this Dominion. Since taking over the reins of power the government have made every effort to build up trade with the country to the south of us, but what have they given us in return for the home market which we have lost? We find that in 1921, when the present administration took office, we sold to the United States two and a half times the amount of agricultural products which we sold them in the year just past. This is an evidence of the uncertainty that exists in attempting to establish markets far from our own shores. Many members on all sides of the house have in the past emphasized the view that agriculture was the basic industry of the country, but experience has taught us that no basic industry can make any progress without reference to others; it is bound to be more or less dependent upon the secondary industries if the industrial development of the country is to be maintained.

We awaited with interest the budget that has been brought down by the Minister of Finance, and now that it has been submitted we find certain tariff changes proposed. The budget may be pleasing to those who are interested in a low tariff: the Minister of Finance calls it a re-classification, but whether you describe it thus, or whether you call it a ratification or a modification or a lowering of the tariff or tariff tinkering, the effect will be the same; it will be felt just as injuriously by industry throughout the Dominion. The present budget is only another evidence of the instability of this administration's fiscal policy, and it will react unfavourably not only on the textile industry but on many others besides. Certainly, at any rate, it will affect the textile industry, one of the earliest established enterprises in this Dominion. I need not go into details in regard to this industry inasmuch as the effect of the proposed tariff reduction as related to textiles has been emphatically stated in Hansard. But while the budget will entail considerable hardship, while it will throw many of the labouring class out of employment, while it will shut down many factories and worry many capitalists who have put their money into similar industries, it will prove the statement I have made that agriculture and all these other enterprises are interdependent: one cannot suffer without injury to the other.

We on this side regret that the government has dealt the textile industry another blow of uncertainty. The effect upon the industry, the labouring man, and our domestic markets can readily be anticipated. This subject has been dealt with in detail by several hon. members on this side and is therefore already on Hansard. But may I say that we find industry and agriculture showing a common concern in view of the unhappy situation in which they find themselves. I know there are many older members in this house who will recall the tariff cuts on textile goods in 1898, when hundreds of woollen mills and scores of textile plants were forced out of business. The sheep industry immediately felt the effects and began to decrease from 2,500,000 head until the number reached 2,000,000 head only in 1911. After the smoke of the reciprocity battle had blown away, and a stable fiscal policy had been inaugurated, we find that both industries improved and the increase in the number of sheep by 1921 amounted to 60 per cent. Then followed the negotiation of the French and Australian treaties, and we regret to note that during the succeeding five years the number of sheep decreased from 3,700,000 head to 2,877,000 or approximately 30 per cent. It is interesting also to find that during that time Australia increased its number of sheep by 13,000,000, and France by 1,000,000.

In the early days of Canada the sheep was christened the golden hoof of agriculture. The value of sheep as weed exterminators has always been appreciated by expert agriculturists, and when we hear of the admitted problem of weeds where grain cropping becomes the chief enterprise, as our western friends well understand, I would ask the right hon. the Prime Minister, who has recently joined the industry, and the hon. Minister of Agriculture (Mr. Motherwell), another sheep breeder, if they would not consider the possibility of gaining 100,000,000 sheep for Canada, similar to the number in Australia and other countries, instead of the two or three million that we now have as likely to prove a benefit to agriculture.

Now, Mr. Speaker, I note a report has been laid on the table of this house by a research commission regarding the condition of our woollen industry, and while I have not read it I might say that if the government is desirous of improving conditions they have only to follow a very simple process. First, let them encourage the breeding of better sheep, and the careful grading of the wool. Second, let the duty be raised on raw wool, as well as woollen products instead of being lowered. Let them also encourage other industries, thereby enlarging the home market for mutton.

Then let the government amend the Australian treaty so as to no longer invite cheaply produced mutton and wool to supply the Canadian home market when it is established. Our citizens in western Canada, might with profit scan the past and realize what the future holds in store for them if their present favorite policy of low tariff or free trade prevails. Forty years ago Ontario was chiefly an agricultural province. Its people then were imbued with the same ideas touching a national policy as our friends in the west now are. As Ontario became industrialized and good home markets came into existence their views altered, and the effect of this experience is beginning to be felt in the west.

On this question I wish to refer to page 39 of the annual report of the Canadian Bank of Commerce, which, quoting the president's address, says:

> It is not generally understood in eastern Canada how far the springing up of local manufacturing industries and such developments as those just referred to are hastening the time when the interests of the prairie provinces will no longer be almost purely agricultural, and when they will play a most prominent part in Canada's industrial activities. In 1926 the factories of Manitoba turned out manufactured goods valued at $125,000,000, those of Saskatchewan $40,000,000 and those of Alberta, $75,000,000. This total of $240,000,000 represented the products of about 2,150 manufacturing establishments in the three prairie provinces and is the outcome of an investment, in round figures, of $220,000,000, and the payment of wages of $42,000,000 to over 25,000 employees. These developments are bound to increase, and must result in a lessened economic dependence of the west upon the east.

With adequate protection these industries will continue to expand and population will be attracted to the prairies, other than for land settlement purposes, creating an ever growing home market for diversified products of the land. On the other hand our farmer friends should not overlook the obvious fact that they are not long going to enjoy the present markets in Europe except with the keenest competition and substantially decreased prices for grain.

Russia, an agricultural country covering half of Europe and Asia, is rapidly going to become a competitor of Canada in the wheat market of both those continents. Located adjacent to both it will produce and transport at much less cost wheat equal in quality to No. 1 hard at a price ruinous to the Canadian farmer. Russia has a population of 146,000,000, of whom 116,000,000 are peasant farmers owning, occupying and operating 22,000,000 farms. Their production of farm products has increased 34 per cent in the last four years. Their 1926 crop was 87 per cent in excess of the 1921 crop. They produced in 1926 sufficient to feed their large population and exported 18.3 per cent of their production, or sufficient to feed 30,000,000 more persons. This is going to be a real problem with our western farmers, because the European market will indeed be affected. They are educating their farmers more carefully than they have in years gone by; they are employing railway experts from the United States; they are getting American efficiency into their transportation problems, and there is no doubt that the time is not far distant when the cumulative effect of these efforts intelligently to increase production and economically transport the products from these 22,000,000 farms to the centres of population in both Europe and Asia, will have a profound effect upon our foreign markets for farm products. As a forecast of this I say to our western friends that last year our exports of agricultural products fell by more than $77,000,000. Is this not an opportune time for industrial expansion throughout our western provinces? Is it not important at this particular time that some encouragement should be given to industries so that the western farmer will very soon have established within his own border, his own section a stable and what is, after all, the only safe market for any agricultural area to depend entirely upon.

There is one other department that, for several reasons, is closely associated with agriculture and that is the Department of Immigration. In the first place our present immigration policy is to allow inside our shores only those who are interested in agricultural pursuits. The second reason is that the present Minister of Immigration (Mr. Forke) who, I regret, is not in his seat, has been a farmer, and also a short time ago he led a group of farmers in this other corner of the house, only later to leave them, in order to sit on the other side. Apparently he has lost his policy in the confusion, because we find that he is now struggling with a real problem, one that affects the very life of our nation. He has a whole army scouring European countries and hand-picking prospective immigrants who can be assimilated in certain sections of this Dominion, and the result is that his department is spending more money and accomplishing less than it did under any previous administration. This is indeed a serious problem. It is all very well to say that immigrants are going to come here because the Lord is sending us good times; but we must have a definite and fixed policy of immigration if we are going to accomplish anything in this Dominion, and I would suggest to the Minister of Immigration, who has made such a great change of heart in

order to give his services to the present government, that he now ask the government of which he is a member to make a change of heart also and to adopt a policy whereby our people may have more work at a reasonable wage. If that is done our immigration problem would soon be solved.

When we stop to consider that more boys and girls are to-day leaving our shores than we are bringing in to replace them, we can appreciate the seriousness of the problem. Some of the members of the government shake their heads. I will go back some years and I somewhat agree with the hon. member for South Timiskaming (Mr. Lang). I will make this statement and I ask any member of the government to contradict it. If we go back some years it will be found that more of the Anglo-Saxon race and their descendants have gone to the United States to reside than we have in the whole Dominion of Canada, and I ask my hon. friends from Quebec if a similar situation does not exist in regard to the French-Canadians in their province. I am not giving all the credit for that misfortune to the present administration, but I say that that is the situation in this Dominion. The very best blood of our nation, the sons and daughters of the old homesteads, the labouring man and his family, the university graduate and his sweetheart have all gone to the United States where they can find employment. Only the other day I was speaking to a boy who graduated this year, and I asked him what he was going to do. He said that he was going to the other side, so I said: "Why not stay in Canada?" He said: "Fifty per cent of our year are going there and last year they all went there but one."

This is a serious problem and it is high time that the immigration department assumed more responsibility than merely endeavouring to assimilate the foreigners who settle in Canada. I do not mean to say for a moment that we do not need the foreign element to assimilate in this country, but we should give some attention to those boys and girls who are born under the British flag, and who do not need assimilating in order to become fine Canadian citizens. If a foreign settler is worth one thousand dollars to our nation before he becomes assimilated, how much more is one of our own boys or girls worth? It is high time that we inaugurated in the Department of Immigration a real immigration policy, and by the way I hope that, after this immigration investigation is completed, the immigration department will do what the old customs department did, namely, change its name to a more creditable and better name, a name that will be more appropriate to the changed conditions. We could well change the name to Farm Settlement and Colonization department or any such name as the government might choose. But let the government change the system first and give us a policy whereby our own boys and girls as well as those who come from other countries will receive some assistance. When we change the name of this department, we should change it to one more pleasing to the newcomer and less embarrassing to our own boys and girls who, under the new system, might seek assistance from this department.

I know that my time is limited and forty minutes does not give sufficient time to do justice to the weakness of such an administration as this. No doubt the Minister of Finance has, as he has often glibly said, tried to serve all classes of this Dominion, and with all due respect and regard for the responsibility which is his, I wish to tell him that the farmers and dairymen realize that he was the founder of the Australian treaty, and they will see that he has done nothing to relieve them in regard to the cut in the price of butter to the tune of from twelve to fourteen cents a pound and nothing to reduce their taxation. I am satisfied that the average citizen will look over this budget carefully and he will see that, while there have been some reductions in the income tax, they affect only 1.3 per cent of our population. He will also see that he is still paying a sales tax of three per cent, at which rate it stood when this government came into power, on every dollar's worth of the necessaries of life that he buys. He will also note that it would be a good thing for this Dominion if we had more rich men because they have been well dealt with. If a man's annual income is $100,000, his taxes will be reduced by $2,000; if his income is $200,000, the relief he will get by this budget is $6,000, and if by any chance any person should be clever enough under this administration to make $300,000 a year, this poor man's budget will reduce his burden of taxation to the tune of $9,000. The labouring man will also note that the treaties which this government have made, have increased the cost of some of his foodstuffs by 35 per cent.

Let me say in conclusion, because I do not want to trespass on the rules of the house, that I thoroughly regret that the present government has given no relief to the labouring man in the way of decreased cost of living, nor any sign of more work and better wages. In this budget there is no encouragement for the agriculturist in his home market nor any reduction in his present taxation. There is

also no sign of an attempt to recover the long since lost security that is necessary for advanced industrial development in any country. On the other hand, to the strong and the true who are hewing our timbers and sending forth our raw resources to foreign manufacturing plants, the Minister of Finance hands out only the slogan, "Work harder, practise thrift, and the kind hand of Providence may come to your rescue with a bountiful harvest, and our ambassadors will then go forth and tell the world of the wonders of our trade".

Mr. FRANKLIN SMOKE (Brant): Mr. Speaker, the budget speech starts out with statements of leaders of finance and industry as reflecting progress and prosperity. The people are the best judges of whether there is prosperity or not. Prosperity with the banks and so-called leaders of finance and industry, is not necessarily conclusive of a similar degree of prosperity among the masses. We must go to the masses to learn how far they are sharing in this prosperity. The degree of unemployment which still exists among those in greatest need—whether they are wholly unemployed, or working on part time only, and even when employed, employed at wages such as at present prevail—is a far better criterion of the social condition of that class of the community which should receive the greatest care from the administration. A contented populace is the best sign of prosperity.

The constant nibbling at the tariff, which is the favorite diversion of this government, makes it harder every day for the employers of labour to carry on, and if they do succeed in carrying on, too often it is done by the reduction of the wage scale as a necessity to their carrying on at all. There is a constant demand that profits should be passed on to the consumer. This is the reverse case. The losses are passed on to the working man.

Should these reductions in the tariff result in the slowing down, or closing down, of industries, it means, besides greater hardships to the working man, the depreciation or wiping out of capital which, once lost, is lost for all time—lost not only to the individual who suffers the loss, but to the country as a whole as a part of the previously accumulated wealth.

Too much is made of the term "industries". Very often people look upon industries, or rather the owners of industries, as plutocrats, but as a matter of fact in nearly every large industry the stock is widely scattered and held by all classes of the community who have in the past been able to add a little to their savings. The widow, the orphan, as well as the man of moderate means, and the wealthy, are the ones whose funds are available as capital with which to carry on these industries, and when industries fail the losses reach to all classes of the community who have in any way been able to lay by something in the past. It is hard to distinguish such treatment by the present government from the Soviet system of confiscation. If it differs at all, the system of the present government is worse than the soviet system. As I understand the soviet system, they confiscate, but do not destroy; they leave facilities for production practically unimpaired, and production still goes on, while by the system adopted by this government capital is entirely destroyed. This government will be known to posterity as bolshevist or worse. No name can more accurately describe it.

The financial statement of the Minister of Finance (Mr. Robb) has been punctured most effectively by the hon. member for St. Lawrence-St. George (Mr. Cahan), and by those who have preceded me. No one, not even the Minister of Finance, is deceived by the casuistries of his argument, though he hoped to convey the impression in the country that all is as he says. All he has done is to furnish the Liberal stump speakers—or such of them as are unable to think of something themselves, and there are many such—with ammunition with which to stump the country in the next campaign. That is probably as much as the minister hoped for.

I am old enough to remember the days of the Macdonald administration, when the government were spending $28,000,000 a year, and this covered all public services. That is only about forty years ago. The cries of indignation of Sir Richard Cartwright and others over the extravagance of the government still reverberate through the memories of many now living. To increase the expenditure by $28,000,000 from one budget to the next in these days is mere child's play. It is done almost every year.

We hear a lot about the desire for work and thrift. The minister highly recommends it, but it would be more to the purpose if he were to lay a foundation by practising economy in the public service so that those who do practise thrift will not necessarily see the product of their labours taken away from them in taxes.

I am not well enough acquainted with the effect the tariff changes will have on the industries of the country, or even on the industries in my own riding, though I have what I consider good grounds for believing these changes will be injurious, and possibly disastrous. An attempt is being made to lessen the injury to these industries by the re-

duction or wiping out of the duty on some of their raw material and what machinery they may desire to import. The reduction or wiping out of the duty on raw material may be of benefit to those who are not manufacturers of this raw material, but it will cut out from under the feet of those who do both weaving and knitting a profitable part of their business, and will do no one any good. While as for machinery, there are few mills who have not now more machinery than they know what to do with; instead of wishing to buy they are in the market to sell, and there are no buyers, and the result is it will have to be sacrificed, which means pretty nearly a total loss.

What will be the effect on the wool industry of the country as a result of the proposal in the budget to admit free yarns? The sheep industry has had hard sledding for years. Statistical tables show that the sheep population has been almost constantly dwindling for many years, and that the per capita sheep population in Canada is many times less than that in other countries where sheep thrive no better than they do in Canada. What do Canadian sheep farmers think of this? The farmers' cry, in so far as there has been a distinctive cry from that class, has been that the government has been more solicitous for the weal of the urban industries at the expense of the farmer. Surely if ever there was justice in this contention, this government has gone out of its way to give absolute proof that after all the government's pretended care for the farmer is only a pretence.

The amendment proposed by the hon. member for St. Lawrence-St. George expresses regret that the measures proposed by the government do not provide for increased employment in Canada, nor prevent the continued emigration of our people to the United States, and that they do not make provision for the preservation of our domestic markets for Canadian farm and dairy products, nor for the effective development of our national resources, nor for the early abolition of the sales tax. As I believe the arguments hitherto presented in this house are conclusive proof of the statements in the amendment, I am in hearty accord with his amendment, and shall have pleasure in voting for it.

There is, however, another subject which has a strong appeal to me It is not in any sense a criticism of the government except in so far as it may indicate a line of inaction on the part of the government. I must premise what I am about to say by stating that I have not consulted my chief or any of my colleagues on the subject, and that my statements which follow will be as new to them as to any other member of this house, and it necessarily follows that what I have to say is only my personal view and is not in any way binding upon a single member of this chamber.

I have, however, long meditated on the subject. I know that it has been mooted elsewhere, but that is about as far as it has got. It has been pooh-poohed and ridiculed, but that is no argument in itself. It has been brushed aside as something entirely subversive of all economic ideas held hitherto as almost sacred, but I have failed in my reading to come across any reasoned and convincing argument against it.

While not denying that some inconvenience will result, still if it could be accomplished without too great an interference with economic conditions, the result would be well worth striving for. If the experiment is not fraught with too great dangers to warrant the attempt necessary to secure the accomplishment of the project, I am sure every one will agree that the project is well worth the consideration of parliament.

We heard from the hon. member for Red Deer (Mr. Speakman) and the hon. member for Last Mountain (Mr. Fansher), and we have heard and shall hear from many other members of that school of thought, that because certain kinds of taxes were imposed during the war—such as income tax, sales tax, business profits tax—these should be retained unaltered so long as any part of the war debt remains. What is there so sacred about the income tax, or the sales tax, that they must not be touched? At the time of the war the need was great and the government of the day saw these ways for raising money and adopted them. Others might have found other or additional ways. That is not the question

I look upon Canada in its financial aspect after the war as just like a mutual fire insurance company. Everyone knows that the members of a mutual fire insurance company share the losses of those who suffer loss in proportion to the size of their several risks. Our country was in deadly jeopardy. Had we lost the war to Germany, it cannot be seriously contended that Canada would not have fallen into German hands. Our property would have been actually confiscated, or if not, we should have been so taxed by the Germans that confiscation would have been proferable. The war debt is a debt of the nation and should be paid for by those whose property was salvaged in direct proportion to the risks involved, exactly as in the insurance case mentioned. It is easy to say that the debt is a debt of the nation, but when it cames to payment it is not the artificial

entity, the nation, which pays it; it has to be paid by the individual through the tax collector. It is our debt—yours and mine—and we should face the situation.

It is calculated that the national debt of the country is practically ten per cent of the total estimated wealth of all Canadian citizens. These citizens in the last analysis owe it and must pay it. I know the idea of a capital levy is looked upon as financial heresy. It may be so. Not having been a profound student of finance, and not being a financier, I cannot say, but as I look upon it I owe ten per cent of whatever small amount of this world's goods I possess to the creditors of the Dominion of Canada. Except for the fact that our creditors have been good enough to defer time of payment, our debt would be now due and payable. An honest debtor pays his debts if within the range of possibility, and it is my duty to do my share, and the duty of every citizen of this country to do his share. I am willing that ten per cent of my worldly wealth be sequestered to meet my share of this debt; and until I can be convinced that the idea of a capital levy is not only supposedly, but really, financial heresy, I shall continue in the belief that this is the true and only sensible solution of the difficulty. If I think I am worth $10,000, that being the whole of my means, and I really owe $1,000 of this to the creditors of the Dominion of Canada, I am only worth $9,000. Let us take ourselves down a notch or two and get into an honest environment. Let us face facts. As to how this would be accomplished, I do not venture to say. We all remember that during the war every person had to register, and in the archives of this building, or in some other public department in this city, will probably be found a record of such registration. It was not difficult to do in those days. A new doomsday book can be compiled showing the total wealth of all kinds in Canada. A comptroller for liquidation of the national debt might be appointed and given authority to have this doomsday book prepared, and then some way might be devised of sequestering the ten per cent, or whatever percentage necessary, of each person's wealth. I would not say, take it away from any industry or any company; a company is owned by its shareholders. I would take it away from the individual owner, that is, I would sequester ten per cent of every person's stock, whether in a joint stock company, a bank, or in any other form of investment—10 per cent of his property of every kind. It should be set aside and administered, not necessarily all at once, but in time, so as not to disturb unduly the business of the country. The national debt would then be taken care of.

[Mr. Smoke.]

The farms and other property of the hon. member for Red Deer and the hon. member for Last Mountain are a part of the property salvaged by our troops as the result of our success in the war, and in my humble judgment they should be willing to have ten per cent of their wealth, or whatever amount the assessment on an insurance basis would require, set aside as their contribution to the payment of the debt. We think we are worth twenty-five billion dollars. We owe two and one-half billion. All we are really worth is twenty-two and one-half billion dollars. Do not let us continue to deceive ourselves by thinking anything else.

The war was not the result of anything we in Canada had done, nor was Great Britain's responsibility for the causes of the war any greater. The Anglo-Saxon and the French races have an inborn love of peace, and all that peace brings in its train, and this has been the outstanding policy of the Anglo-Saxon and French peoples for at least a century. It must, however, be peace with honour. Great Britain was forced into the war, and Canada without hesitation wholeheartedly took her natural place beside the motherlands and has never regretted it.

We, as a result of the war, are burdened with a colossal debt. Why should we of this generation not pay it? Are we going to cast on posterity—which may without this burden have troubles enough of its own—the burden? True, we were not the cause of it, but it was incurred during our trusteeship of the country's affairs. Let us have mercy on the growing and unborn generations, and look after our own burdens. Let us leave posterity free to deal with its own problems untrammelled by any which have arisen during our trusteeship. May I suggest the appointment of a committee or commission of inquiry into the feasibility of a capital levy? Such committee should not contain a single member chosen for political reasons, but it should be strictly non-partisan and have no thought of politics. The government can surely select representatives of every class of the community who would be really helpful, and whose duty it would be to give intelligent study to the question, who would cast aside every conclusion arrived at hastily and without sound logic, and all preconceived prejudices. The members of this commission need not be all Canadians. I would welcome the appointment of members from the motherland, or from any part of the world where good material is available and would not limit the number

so long as all chosen would be of some real service. It may be that the proper conclusion will be against the idea in favour of which I venture to speak, but I do not believe it. If it should happen, as I pray that it may, that the people of Canada can lead the way and evolve and carry out a plan that will free the rising generations from the incubus of the war debt, utopia will have arrived, we shall have presented an object lesson to other nations who will eagerly follow our successful efforts, and the name of Canada will be revered throughout all the nations of the world through every generation forever and forever.

On motion of Miss Macphail the debate was adjourned.

On motion of Mr. Robb the house adjourned at 10.30 p.m.

Tuesday, February 28, 1928

The house met at three o'clock.

CRIMINAL CODE AMENDMENT

POSSESSION OF WEAPONS

Mr. G. R. GEARY (South Toronto) moved the first reading of Bill No. 37 (from the Senate), to amend certain provisions in the criminal code respecting the possession of weapons.

Motion agreed to and bill read the first time.

COMMITTEE ON AGRICULTURE AND COLONIZATION

Hon. ERNEST LAPOINTE (Minister of Justice) moved that the name of Hon. Mr. Ralston be substituted for that of Mr. Sylvester on the committee on agriculture and colonization.

Motion agreed to.

TARIFF ADVISORY BOARD

SEASONABLE FRUIT AND VEGETABLE TARIFF INQUIRY

On the orders of the day:

Hon. R. B. BENNETT: I direct the attention of the Minister of Finance to the fact that so far as I have been able to ascertain the evidence in the fruit and vegetable tariff inquiry has not been filed with the evidence in the other cases. Perhaps the minister will be good enough to look into the matter and see if it can be procured.

Hon. J. A. ROBB (Minister of Finance): I shall be very glad to do so.

MONEY POINT, N.S., LIGHTHOUSE

On the orders of the day:

Hon. J. C. ELLIOTT (Minister of Public Works): I desire to state, in answer to a question asked by the hon. member for Cape Breton-North Victoria (Mr. Johnstone) yesterday, that it is not the intention of the Department of Public Works to discontinue the telephone service between Bay St. Lawrence and the lighthouse and fog alarm at Money Point at the present time.

TOBACCO GROWING INDUSTRY

On the orders of the day:

Mr. E. J. GOTT (South Essex): I should like to put a question to the Minister of Agriculture. Seeing that he is not in his seat I will put the question on record, and if the minister cares to release the information it will be possible to get it from him to-morrow. The question is as follows:

1. Upon whose recommendation was the commission appointed to investigate the tobacco growing industry in western Ontario?
2. What qualifications were required?
3. What will be the duties of the commissioners?
4. What is the general attitude of the department towards the industry, and can a slight outline of the proposals contemplated be given?

Mr. SPEAKER: The hon. gentleman has stated that he wishes to put his question in the form of a notice. This will be taken as a notice.

THE BUDGET

DEBATE ON ANNUAL FINANCIAL STATEMENT OF MINISTER OF FINANCE

The house resumed, from Monday, February 27, consideration of the motion of Hon. J. A. Robb (Minister of Finance), that Mr. Speaker do now leave the chair for the house to go into committee of ways and means, the proposed amendment thereto of Mr. Cahan and the amendment to the amendment of Mr. Fansher (East Lambton).

Miss AGNES MACPHAIL (Southeast Grey): We come again to a consideration of the budget brought down by the Minister of Finance (Mr. Robb). In the opinion of the members of the Liberal party that budget is a good one, and I am sure they will support it. The Liberal-Progressive members, I am sure, do not think it is a good budget but they will support it. The Liberals from Saskatchewan, coming as they do from that part of this enlightened Dominion, cannot like the budget, and yet I am expecting to hear them say it is a good budget. The Conservatives think this is a good budget, but the-

must declare it not to be so and having said that they will not be able to vote for it. I think it a rich man's budget and I am in the splendid position of saying that I do not like it and of voting in accordance with my views. So also are those hon. members who sit around me.

The hon. member for South Huron (Mr. McMillan) extended an invitation to me to join up with hon. members opposite and so find entrance to the promised land. I should like him to amplify his invitation. I should like to know if the promised land is entered through proper approach to one of the three bachelor leaders, or through the Liberal party, or both. I agree with what he stated as to the conditions which confront the farmers of Ontario to-day. I think he described the actual conditions as they will be found by anybody who takes the trouble to go out and investigate them. With the rest of the hon. gentleman's remarks I do not agree.

Agriculture is still the main business of the Canadian people. The nation's prosperity depends on a bumper crop. It has been well said that the agricultural returns are the barometer of national prosperity. The following words were used by Aristotle:

> The first attention should be paid to that which is in accordance with nature; for by nature agriculture is first; next come all those things which are derived from the earth, such as mining and other arts of like kind.

Or as has been often said, "The well-being of the people is like a tree." Agriculture and other primary industries are its roots, manufacturing and commerce its branches and its life; if the root is injured, the leaves fall, the branches break away and the tree dies.

The roots of the tree of Canada's national life have been injured. We have, for a young and rich country, a depleted and impoverished agricultural industry. In this young country agriculture has not held its own people, nor its power of place and influence. I regret it, but it is true. I do not think anyone in this house will care to deny that our educational, religious, business and political policies have been framed, not with rural needs in mind, but rather, whether consciously or unconsciously, directly antagonistic to those needs. The result is clear to anybody who cares to look around, namely, that our people are leaving the land in numbers that would worry any government, even this one. It does not seem to go further than worry with them, but still it worries them. This great mass of people is disappearing from the open spaces into crowded places which we call cities in either Canada or the United States. To my mind one

of the saddest things is that the individual is lost in the great mass of human beings, and so this constant robbing of the open places does not enrich the cities to the extent that it robs the country. The individual is lost; people who have been a power in a local community will after they have spent five years in a city, show by their personality the great loss they have suffered. It is quite true that many people who leave the land and come to the cities give leadership to city enterprises and gain for themselves a place of power and possibly of wealth; but again the country is robbed of very much needed leadership and the places in the country that have been vacated are being taken by citizens of other lands. As a matter of fact we are striving to bring people in from other places to fill up the places vacated by our own people.

Country life develops thoughtful, wholesome and genuine people, to a greater extent than any other life, and I think it is true that in the last analysis the conscience of the nation lies in the country. I think we can all bear testimony, if we care to, to the fact that in cities and towns the conventions of life veneer even the ways of our friends and it is in the country that we find the beauty of simplicity and sometimes the bluntness of unaffected candour. Country living makes for character and because of the need of character in all national undertakings, and because of the importance of agriculture in our national life, we see how disastrous the results must be if people continue to leave the land. Aside from the economic consequences, it heralds the approach of the time when the country will no longer furnish that leadership in business and public life which has been so influential in shaping the course of events.

The rural problem is a many-sided problem and I am not one of those who think that governments are so important that they altogether make the problem or, to any great extent, solve it. I know there are many other forces which operate. It would take too long —and I never wanted to speak for forty minutes until I could not speak any longer— to go into all the phases of this question, but I should like to mention one thing that I think has done much to aggravate our rural problem and that is our educational system. It is true that the whole educational trend is towards the city. Our educational system in Canada has acted simply as a "gangway" to life in urban centres. If I had time I should like to quote some leading educational authorities, corroborative of this view, but I think I can ask hon. members to look around their own counties; if

they do they will find it is true that more and more people are going to high school and that life in school and high school is utterly divorced from the life of people who live in the neighbourhood of the school and support them. The result is that too many people are rushed into city enterprises; we have an abundance of people hunting for white collar jobs and too few people who are willing to do the very much nobler and better work of nation-building in the open spaces. I am glad that I have not had too much of that kind of education to prevent me thinking for myself, but we have an educational system that actually stuffs children with facts and creates in them a reverence for things as they are, and this is a great disaster to our children, because it hinders them in creating institutions to meet changed conditions. It is true that the best teachers go to the cities to teach, because they are better paid there. This is also true of preachers, I am sorry to say. The better preachers go to the cities because the salaries are greater. Anything, it seems, does for the country.

One other thing that has a great deal to do with the rural problem is this. Individuals and groups of individuals donate large sums of money to educational and religious institutions which grants have a moderating influence on the attitude of these and similar institutions towards economic reform that would bring about a better condition for the masses of the people. Until lately the fact that the farmer produced goods but did not market them added greatly to the rural problem. He was not a business man. Now the farmer is becoming a business man, and as a keen business man he is not going to put up with the slipshod methods that obtain particularly in this house and in some other places in Canada. I thought it would be worth while putting on Hansard this sentence of Professor Macklin, of Wisconsin university:

> The industry that neglects to assume the responsibility of marketing its own products arrives last in the race for the consumers' dollar—like the runt pig.

The farmer is ceasing to be the runt pig and he is learning to market his own products. He is not going to be last in the race for the consumer's dollar, and he is going to demand educational systems that will meet his needs. I should like to know why some fellow, with a fossilized brain sitting in some office in some government service, should direct the kind of education which the children of farmers are to have, and I hope the day may speedily come when that will not be the case.

It would take much longer time than I have at my disposal to review the sufferings of the farmer in the political field. The farmers, because there are more of them and because they carry on the primary industry of the country, have suffered more than any other class from political policies framed by governments antagonistic to the farmer's economic needs. The full discussion of this question would take me into the realm of finance, transportation, and many other places into which I have not time to go, but I want to review, for the edification of this house and particularly of the Liberal party, a history of the political life of Canada as it is related to the farmers just before and since 1896.

Prior to 1896 the farmers in Canada, to a very great extent, felt that the Liberal party, did voice their aspirations and needs. That is, the Liberal party was the vehicle used by the farmers for the expression of their political needs. For the seventeen years prior to 1896 many able men, particularly Sir Richard Cartwright and Sir Wilfrid Laurier, impressed upon the people of Canada this fact. The farmers believed that the Liberal party was opposed to special privileges, and particularly special privilege as it is embodied in the national policy. Sir Richard Cartwright made some very able speeches, opposing the protective tariff. On one occasion he said:

> The moment you introduce the protective system you create a class whose interests are essentially different from those of the people at large, and who become ready contributors to corruption funds sharing with their masters the plunder they have been enabled to take from the people.

Mr. COOTE: It is too bad Cartwright is dead.

Miss MACPHAIL: Yes, it is too bad he is dead but in any case he was ruined before he died. Let me quote from him again:

> My objection to this scheme goes deep. I object to it not merely on the ground of the increase of taxes that it involves, or of its complicated details, but on much higher ground than that. I deny entirely the justice of the principle that it is the duty of the government to enable certain sections of the community to tax the rest of the people for their private gain.

I think he puts the principle very clearly. I want to quote an extract from a speech by Sir Wilfrid Laurier given on page 380 of Edward Porritt's Sixty Years of Protection in Canada. This is a famous quotation which we have often heard. Sir Wilfrid Laurier, speaking at Winnipeg as reported in the Free Press, said:

> We stand for freedom. I denounce the policy of protection as bondage—yea, bondage; and I refer to bondage in the same manner in which American slavery was bondage. Not in the same degree, perhaps, but in the same manner.

That was before 1896. Lovely speeches those! They went to the country, and the people, tired of special privilege in high places, sent back the Liberals with a majority. In 1897 the Liberals brought down their first budget, and I suppose that the low tariff people of Canada never looked forward with as great hope to any other budget. In speaking of the time following the bringing down of the budget and subsequently, Mr. Porritt has this to say at page 362:

> The policy of the Laurier government with regard to protection has been characterised as a betrayal of Canadian Liberalism. Betrayal is a strong word. But an examination of the fiscal and bounty legislation at Ottawa since 1897 abundantly justifies its use.

And again, at page 366:

> When I come to examine the bounty policy of the Laurier government, the amendments to the Railway Subsidy Act and the patent laws, the legislation against dumping, the new regulations intended to reduce the circulation of American trade advertising, the tariff war with Germany, and the readiness with which the tariff question was reopened at the bidding of the Canadian Manufacturers' Association, and the many new concessions that were made to the protected interests in the revision of 1906-07, it will become apparent, I am convinced, that the Liberal government has not only adopted the national policy of the Conservatives, but has greatly strengthened and extended it, and has fastened it more securely on the people of Canada.

Again, at page 385, he says:

> It is one of the ironies of Canadian history that responsibility for the full recognition of this new privileged order and for nearly a score of enactments continuing, extending and guaranteeing its existence, should lie with the Liberal party.

Speaking of the farmers having no further representation through the Liberal party, he says at page 456:

> Since 1897 the privileged order of manufacturers has held captive both political parties, and the farmers have had no representation in parliament on this question.

One is moved to ask, were there no Liberals who really believed in Liberal principles? Did nobody protest against the betrayal of 1897? Porritt, at page 5 of The Revolt in Canada, says:

> While at first there were liberals in the House of Commons who bitterly resented the betrayal of 1897, these men were appeased in the usual Ottawa fashion—by appointment to office or the promise of an appointment, or they dropped out in 1900, in disgust at the cynical abandonment in 1897 of all that Liberalism had stood for in Canada from the days of William Lyon Mackenzie—

Not King.

Following rather sketchily the history subsequent to 1897, we find the Liberals still claiming, indeed they do yet, but they did it with a little more vigour in the years immediately following 1897, to be low tariff. It is quite true that they had the honesty to see that they could not have educational reform clubs or young men's Liberal clubs after such a betrayal, and very comfortably for themselves they dropped them. Sir Wilfrid Laurier did tour the west in 1910, and there he met organized agriculture, and if anybody likes to read the story of it he will find it in the Revolt of Canada. It is very interesting to note that John Evans was one of the men who appeared before Sir Wilfrid Laurier; that is the hon. member for Rosetown in this house, and his speeches then read very much like the last one he made in this house. Others who appeared before Sir Wilfrid Laurier were Roderick McKenzie, father of Donald McKenzie now on the tariff board, J. W. Scallion and J. W. Speakman, father of the hon. member for Red Deer (Mr. Speakman); so some of our men have run true to form.

In 1911 the Laurier government was defeated, and from that time on they never did to any great extent regain the confidence of the low tariff farmers in Canada. Some indeed were such good Liberals that they remained Liberals rather than farmers, but for the most part the confidence of the farmers in the low tariff principles of Liberalism was broken never to be mended again. This sank very deeply into the minds of the farmers, and was really one of the causes of revolt which brought in the sixty-five Independents who came into this house in 1921. The farming people in the constituencies had voted for honest party men, of their own class, men who spoke well in the constituencies, saying they would come to Ottawa and be true to the agricultural industry. But when these men came to Ottawa they were true to their party, and not to their industry; they were farmers, but they were Conservatives or Liberals first, last and all the time, except at election time, and so the farming people decided they would have to find a new method of representation. They had up until that time sent such men here as the hon. member for South Huron (Mr. McMillan), a man who understands the rural problem, who knows what the farmers need, who knows now that this budget is no good to his constituency, but who because of affiliation with the Liberal party will vote for it, and go back to his constituency and justify it.

Mr. McMILLAN: I do not know that it is not a benefit to my constituency.

Miss MACPHAIL: Then the hon. gentleman is not as intelligent as I thought he was. As I was going on to say, agriculture said: This kind of thing is no good; we are going to organize ourselves as an industry. They said to themselves: Our politics is our business, and we have been foolish in letting other people look after our business; we will never do well that way; we will send people to Ottawa; we will choose them, finance and elect them; we will control them. These ideas were not as clearly defined in their minds perhaps as I have now stated them, but they were more or less clearly in the minds of the people who voted to send the sixty-five independents to the house in 1921. The idea was that these members would vote on issues as they found them in the house, that they would be attached neither to the Liberal nor the Conservative party, nor indeed be antagonistic to either, but be here to look after the interests of agriculture and be an agricultural group in the house. I want to review the comparative failure of the working out of that splendid idea.

In 1921, the sixty-five came to this house—and we must, in recalling what has happened since then, remember that the sixty-five were for the most part men who up until then had been either very ardent Conservatives or ardent Liberals. They were party people with a party bias—a very difficult mind to work independently with. We had not been here long till it became evident to everybody in our group, and I should think to everybody else, that there was dissension among us. I should say that three of the sixty-five were Labour members, and there was no dissension among them, nor between them and us. But from within our own group we lost two to the Liberal party. The dissension among the remaining members, arose on principle, not on legislation. On the legislation we wanted, we all agreed; but on method and in outlook we were two different groups, two schools of political thought, trying to function as one, and it could not possibly go on. The larger number believed in party politics. While they condemned parties, they sought to perpetuate a new party. We, a small group, did not believe in party politics. We believed in an altogether new psychology, which I shall try to make plain to you in a moment. If you think of the personnel of the sixty-five in 1921 and the personnel that are here to-day, you will see quite clearly that those who represent the new school of thought, have been returned while those who perpetuated parties while denouncing them with words were driven by the logic of events either into private life or into the Liberal party. Others again, as suits them better, are being driven a step at a time, which the government no doubt considers a step in the right direction. If I took my whole forty minutes I could not tell you what we suffered in 1921 and on down to 1925. The government secured two of our men, and thus gave themselves a party majority, and having done so the issues did not have to be debated on their merits. The legislative programs which the government brought down between 1921 and 1925 do not take long to enumerate. We got almost nothing out of them—the Crowsnest pass rates legislation excepted, we got nothing at all. We went to the country in 1925 because the Liberals had not lived up to their promises, because our farm group had not clearly understood what they were, because we lacked aggressive action and leadership. We were both very much discredited in the country, and only those of the new school and those who sit with our hon. friends opposite came back.

At that time it will be recalled that the government found themselves in a position where they had to do the will of the House of Commons—the will of the people of Canada. No doubt most uncomfortable for the government, but excellent for the people. In 1926 we got a legislative program from the government which was not their program, but the program that had been introduced into this house by the independent group by resolution during the four sessions between 1921 and 1925. Anyone who cares to go over the legislation of that time will find that I am telling the truth. We got a reduction in the tariff—the only real reduction the Liberal party has ever been guilty of; we got rural credits; we got old age pensions—not as good as it might have been, but certainly something worth while; we got the Hudson Bay railway. In fact we got very many things, and this legislative program captured the imagination of the people, with the result that the electorate sent back the Liberal government as you see it to-day. And they sent back the independent group that sits in this quarter of the house.

Mr. SPENCER: In increased numbers.

Miss MACPHAIL: Yes. The Liberal party benefited very much from having brought down for the consideration of the house legislation which met the approval of the country. That is what accounts for the Liberal majority in the house to-day. I do not need to tell them; I do not think they can deny this.

Before I proceed further let me say something about our idea. We are here not to

work as a party. In that awful session of 1926 we were accused every day of being Grits or Tories although as a matter of fact we were neither. We are not interested either in Liberals or Conservatives, except, personally; as a party we are interested in neither. We want such amendments in the rules and usages of the house as will enable new groups to function; that is, we want to come closer to having representative government than we have had it before. We believe that questions should be debated on their merits, that private members should be free to vote on legislation on its merits; and more than that, that private members should be able to introduce legislation and that this house should be free to vote on the merits of such legislation. As it is now, legislation is all cornered by the government, and only the legislation which the government approves of stands any chance of getting through this house.

A very considerable number of people in the country believe what we believe. They believe that our present system of government is outworn, that it possibly served its day, but that day is over, and they want such amendments in the rules and usages of parliament as will cause it more closely to resemble a representative institution. For instance, take the budget which the Minister of Finance has brought down. Whose budget is it? Is it the budget of the House of Commons?

Some hon. MEMBERS: No.

Miss MACPHAIL: Who planned the budget? Did the Minister of Finance take the members of the Liberal party into consultation, did he have their cooperative help, did he get the help of the Progressive-Liberals, or the Liberal-Progressives—I always forget their correct title—did he? No, he did not, I am sure of that. He brings the budget down, but it is not representative of the opinion of the House of Commons nor of the Liberal party. If the Minister of Finance is to bring down budgets in this way, well, the rest of us had better go home or go down to Keith's theatre. It looks to me as if the time must come when the government will have to be representative of the people. In a word, it is a Robb budget.

The time will come when the cabinet will be a committee of the House of Commons. The cabinet will be chosen from the house and be responsible to it. I look to that day with hope. I do not look for it soon, but I do think it is coming. Once more I want to quote from a leading Canadian to show that others than the few of us who sit in this corner of the chamber believe, that the two old parties as at present constituted are simply the cover under which class interests operate in this country. Sir Andrew Macphail in his Essays in Politics, published in 1909, said:

> We are living under the government of an interested class, who find a party in power and keep it there until it becomes too corrupt to be kept any longer; when it seizes upon the other party and proceeds to corrupt it.

Sir Andrew Macphail is not a man who makes rash statements. That statement should sicken any good Canadian, and yet I believe it is absolutely true. Of course, I think they pick the finest looking men for the cabinet; the privileged classes like to dress their windows to the best advantage. But, after all, the forces which operate through any cabinet are exactly the same. They are not the forces which look to the interests of the people of Canada; they are the forces which look to the interests of certain well-organized and wealthy classes in this country.

Now I come for a moment or two to the budget. At last we have a "stable" government, the government that the Prime Minister wanted. He made very entreating, very convincing speeches to the country that he must have a majority in the house before he could bring down legislation that was good for all the people, that he must not be hampered by having to submit proposed legislation to the house and be humiliated possibly by having it turned down. So he came back from the last election with a majority. He was joined by our Liberal-Progressive friends, lead by the Minister of Immigration (Mr. Forke) who thought—and possibly still thinks—that the Prime Minister needed greater numbers to bring good government to Canada. I want here to say that my heart aches for the Minister of Immigration. He is an honest, but a deluded man. So the Prime Minister comes back to the house with a majority, and now we are going to get legislation that is in the interests of all the people. We are going to get this thing that he has been desiring to give us since 1921. Last year, his first session, one could say that he had hardly begun, and the budget then brought down was not much; but we can overlook that. Now we come to the second year of his administration, and we get another budget. Well, if this budget is in the interests of the common people, then I certainly am not capable of representing their interests. We had the income tax reduced 10 per cent last session, and now there is another 10 per cent reduction, and we had the spectacle yesterday of the hon. member for North Battleford (Mr. McIntosh) getting up and entreating the rich men

of the Dominion to make anonymous donations to wipe out the national debt. I do not understand why there should be all this modest anonymity. Since we have started to quote Scripture in this chamber, let me cite the following words which I think describe the effect of the budget very accurately: "For he that hath, to him shall be given; and he that hath not, from him shall be taken even that which he hath." The budget plays with the tariff just as a boy plays with marbles to see how many he can catch when he throws them in the air. There is no real reduction in the tariff. No one knows that better than the Minister of Finance. If there is any reduction at all it is on things bought by people who could very well afford to pay higher prices. On the lower grade of cottons there is no reduction. Surely the Minister of Finance does know that the stretching of the percentage of labour and material that is to go into goods which enter under the British preference from 25 per cent to 50 per cent undermines the British preference. He does not think it was patriotic, does he? He does not believe it was in the interests of the common people, does he? I think not. I think the economic classes that control governments whisper very convincingly in the ear of the Minister of Finance, and he kept himself clear from the enlightenment that might have come to him from his western men. By listening to his own supporters and his stepchildren he might have heard the truth regarding this matter. But he shut himself securely away and so hearkened unto those highly organized and exceedingly wealthy groups who whispered to him what would look like a reduction in the tariff but would not hurt them in the least. I hope that my Conservative friends will not be further exercised about the manufacturers: I have no doubt they will pull through this year.

The history of the whole attitude of the Liberal party to the new groups since 1921 has been one of protestations of friendship which, if accepted, have proven to the honest the graveyard of their hopes and to the others a fulfillment of their treacherous plans. Speaking for myself, I would rather have the bitter, uncompromising, unfriendly and snobbish attitude of the Conservative party. At least it was honest and we knew where we stood. I often wonder why these Conservatives think they are so much better than other people.

Mr. BELL (Hamilton): They look at the Liberals.

Miss MACPHAIL: I never could understand it. Certainly, however, if they are ever to get into power they need to lose that characteristic as rapidly as they can.

Mr. CHAPLIN: You said that at least they were honest.

Miss MACPHAIL: They were honest in their bitterness towards us. Now, a very great deal of criticism is directed to myself and others any time we try to point out that economic groups do function under parties, and that the only thing for us to do is to come out as an economic unit and find a place in this house, striving to have the rules and usages amended in order that our people may be given real representation. The hon. member for Winnipeg North Centre (Mr. Woodsworth) the other day quoted in the house an article from the Atlantic Monthly which was reproduced in MacLean's Magazine of August 15, 1927. In that article, under the title "Money dominant in politics," the following sentences appear:

> These interest-groups, as we may call them, work for the most part within the ranks of the party organization. Indeed,—

This is an enlightening sentence.

> —the chief function of the party organization is to furnish a cover or screen for the political activities of groups which desire to keep their true objectives invisible.

This is perfectly true, and we say therefore that the only thing for us to do is to come out as an economic group—a class group, if you like, for I am not afraid of the word—and seek representation in the House of Commons —a genuine representation of the needs of our industry. Politics is a business, and agriculture being the basic industry in Canada, the most important single industry in the country, has a perfect right to find for itself honest and above-board representation in this house. I should not like to say that only functional or occupational groups should come to this house, but I do think that the two parties are simply that. I would not say that others should not come, but I do say that we live in an age of functional organization: and since political life is only a reflection of economic life it is only reasonable that these new class, or economic, or occupational groups in the country should seek reflection in the House of Commons and should not find it necessary—certainly I do not—to apologise for their place here.

When we have electoral reform, when the Canadian people grasp the idea more clearly, particularly when they know that the old parties are simply systems under which class groups operate we shall see an increase in

groups. The day will come when the members of our group, the members of the Labour group will increase, and when other groups not now named will appear and find representation in this chamber. When that happens the new groups will be too strong for either of the old parties to command a majority and carry on the government of the country in the old way. Modifications will have to be made and a new method found. It does seem to me exceedingly reasonable that the House of Commons and not the Prime Minister should decide when there should be a dissolution. Why should power be put into the hands of one man to determine when there shall be a dissolution of parliament and when the people of the country shall be called upon to bear the expenses of a general election? I know that some people have the idea that those of us who say these things are cranks. We are not. I am not saying, of course, that I am not, but I certainly say emphatically that the Canadian people are thinking new thoughts and that to them it does not seem at all reasonable that things should be as they are. Our institutions, whether educational or political, will change to meet the needs of changing times. That is only natural. I see no reason why we should not have a change in the form of our governmental institution to meet the changing views of the people, and in conclusion I would quote a great authority on this subject. Follett speaking of politics and of the old idea giving way to the new sentiment of co-operation, says:

> What we must get away from is "the hell of rigid things." This is a living life of the people and it must flow directly through our government and our institutions. We are not fossils—

Sometimes one would question that.

> —petrified in our social strata. We are alive. All is growing; we must realize this and free the way for growth.

It seems to me that the groups in the house are nothing but an indication of growth in the country. I should hate to bear upon my shoulders the responsibility which rests to-day upon the shoulders of the Liberal-Progressive group in this house. They have done much to discourage progressive thought in Canada: they have, to my mind, a great deal to answer for. Indeed, I should not care to be the Liberal party: I should not care to bear the responsibility—I am not sure whether it is parliamentary—of false friendship such as they have shown towards the new groups in this house, from 1921 to this day. But speaking personally, I say it is better for them to realize that we are not people who will one day be Liberals: we have no such ambition. We represent agriculture. We are not Conservatives; we are agricultural representatives, and the sooner this house knows that, the sooner they quit wondering whether we are Tories or Liberals, the better it will be for everyone concerned.

Hon. JAMES MALCOLM (Minister of Trade and Commerce): In spite of the remarks of my hon. friend from Southeast Grey (Miss Macphail), in which she expresses an unfavourable opinion of this year's budget, I am glad to be able to compliment my colleague, the Minister of Finance (Mr. Robb) on the statement of Canada's business which he has presented for this year. It is but a reflection of favourable editorial comment which has appeared in the Canadian press from the Atlantic to the Pacific, and I believe, in spite of everything that has been said by hon. gentlemen opposite, that every man in this house realizes that we in Canada have readjusted our finances and re-established our national credit in a manner more satisfactory and more complimentary to us, since the war, than has any other nation in the world. What percentage of this credit is due to the self-reliance and industry of our people, what percentage to the acts of a benign Providence and what to the actions of the government seems, however, to be a matter for debate. But I think that anyone who has read the statements of leaders of finance and industry, or who has studied the Canadian figures of production, both agricultural and industrial, will admit that we in Canada since the war have as a people done some very remarkable things.

Some hon. gentlemen, speaking on the budget, appear to be unable to comprehend the national sentiment that prevails in this country. Probably they are too close to the accomplishments of the last five years; they are like the men who cannot see the woods for the trees. Let me place on record a comment made by a disinterested observer, a man with a great deal of knowledge of the affairs of the world. Mr. Marcosson, writing in the Saturday Evening Post, used the following words:

> Equally provocative of comment is the existing Canadian prosperity; the tides of Dominion internal and external trade were never quite so high or the national bank roll of Canada so securely entrenched. All the costly economic hangover of war is completely out of the Canadian system; the country faces an era of unprecedented development.

That comment coming from such a disinterested observer is worthy of a great deal of consideration in this Dominion.

It is a remarkable fact, Mr. Speaker, that each successive budget since 1922 has been met by hon. gentlemen opposite with the statement

that the industrial life of Canada is facing ruin and that the budget under discussion will complete that ruin. Unemployment has always been cited in this house as an evidence of the lack of appreciation of industry by the government—this government always has been accused by hon. gentlemen opposite of being unwilling to consider the unemployment of labour in Canada. To me it is very difficult to explain, except for one particular reason. Our estimated population in 1914 was about 7,693,000; fourteen years later, in 1928, our estimated population is about 9,519,000, or an increase of practically 2,000,000 in the population of this country during a period of fourteen years. Yet we are told that Canada is not growing.

That population has been absorbed, Mr. Speaker. The figures of employment in industry show a remarkable increase, and yet hon. gentlemen opposite are quite honest in their expressions of opinion, and those expressions of opinion can find some unemployment figures to support them. In this Dominion we have at the present time tens of thousands of artisans and sailors who are out of work, and who are not worrying about it. They expected to be out of work; they made provision for it, and now they are getting ready to resume their spring operations. These men are not now and never have been a problem of employment in Canada. I come from a district in western Ontario where every town has its full quota of sailors who are now enjoying our Canadian winter sports, having fully expected to take a two months' holiday in the winter before starting work again in the spring. In addition to these men, however, we always have the newcomer; we always have had him and always will have him. He is a man who in many cases has not adjusted himself to the fact that in Canada many occupations are seasonal, and he is an ever present problem for municipal and provincial governments. Until such time as he realizes that his occupation is seasonal and that during nine or ten months of work he must make provision for the remainder of the year he will always say that Canada cannot produce enough jobs to take up the entire twelve months. That is something which we must admit in this country.

Now I want to speak of this question of unemployment from another angle, and first I would like to read a statement from the industrial employment bureau:

> There was a very noticeable decrease in employment in the textile industry. A seasonal curtailment was reported in the boot and shoe industry and many of these factories are operating on part-time schedules. Operations in several lumbering sections of the country were greatly curtailed during the past thirty days, and a large surplus of this class of labour was reported.

Hon. gentlemen might consider that a very unsatisfactory state of affairs, and probably it is, but this statement does not deal with conditions in Canada; it is issued from Washington and covers conditions in the great republic to our south. They also suffer there from this same problem of seasonal employment. While hon. gentlemen opposite may discuss unemployment in Canada, as they have a perfect right to do and in connection with which they have reasonable figures, and while it must be admitted that there is a certain amount of unemployment in cities like Toronto, Winnipeg and Montreal, yet one has but to read the industrial press of the United States to learn that of the 42,000,000 workers in that country to-day 4,000,000 are unemployed, or 10 per cent of the total. That is admitted by the statisticians at Washington and by the leaders of the trades unions. The condition in Canada is entirely due to seasonal employment, and does not in any way reflect a condition comparable with that existing in the United States.

In this connection I would like to place a few figures on record. In 1921 the unemployment in the Dominion of Canada, not from the figures of the government but from those of the trades and labour coucils, represented 12.7 per cent of their total membership. By 1927, however, we find that we have absorbed those newcomers to our country so well that the percentage has gone down to 4.9.

Mr. HANSON: They have gone away to the United States.

Mr. MALCOLM: Just a moment; I will answer that point very quickly. On the other hand, in the United States the unemployment this year represents 10 per cent of their total workers. My hon. friend says that the Canadian unemployed have gone to the United States. Let me read the employment of industries, and we will see:

> The year 1927 was characterized by steady advances in manufacturing, in which activity was greater than in any other year since 1920; on December 1, the index was, in fact, higher than on the corresponding date in all other years of the record, including 1920. Statistics were received from some 3,875 manufacturers, employing, on the average, 472,286 operatives, as compared with 452,392 in 1926—

That showed an increase of the operatives of the reporting firms themselves, on their own figures, of 20,000 in the one year.

> —while the mean index, standing at 95.6, compared satisfactorily with an average of 92.1 in

the preceding year. Practically all divisions of manufacturing shared in the generally favourable movement. Especially noteworthy were the gains in the iron and steel, pulp and paper, food, rubber and textile groups, which together employ a large proportion of the workers engaged in manufacturing processes.

My hon. friend can have that statement verified by the figures of production in Canada, which I would like to give him. In the year 1926 the total value of the products of Canadian industry reached the enormous total of $3,250,000,000. That represented exactly a million dollars a day more industrial production in Canada than in the year 1927, and the increase of 4 per cent in employment in 1927 over 1926 indicates that the industrial production in this country in the year just closed will reach the enormous total of something around $3,450,000,000. The figures of actual production supplied to the statistical department by the industries themselves and the figures of employment supplied by the industries both tally with the figures of the labour organizations of Canada, and show irrefutably that Canada in the past fourteen years has absorbed practically two million people who have come to her shores, and that unemployment other than seasonal does not exist in this Dominion. Mr. Speaker, it is an interesting fact that we never hear of unemployment in Canada between May and December, it is never a question of discussion anywhere in this country. It so happens however that this house meets just at the time of the year when seasonal unemployment exists, therefore statements made on this side as to employment and statements made on the other side as to unemployment can both be substantiated.

Mr. BELL (Hamilton): Has my hon. friend not been informed that people who had been working three days a week in their thousands are now working two days a week in order to spread out the employment?

Mr. MALCOLM: That does not agree with the figures of total production. There may have been part time employment in some industries, but when the figures of total production for the manufacturing industries of the Dominion are compared and found to be in direct ratio to the employment figures and the increase therein then there can be no sound basis for the argument my hon. friend advances.

Mr. HEAPS: I wonder if the minister would care to answer a question?

Mr. MALCOLM: Yes.

Some hon. MEMBERS: No, no.

[Mr. Malcolm.]

Mr. SPEAKER: Order.

Mr. HEAPS: The year 1921 was the year of deflation when large numbers of men were thrown out of employment. But in the previous year, 1920, there were probably 100,000 more men employed in industry than at the present time. Why not take that year?

Mr. MALCOLM: There is something in what my hon. friend said for this reason: Taking the statistics referring to employment —and I have never denied this fact—1920 was the peak year of the post-war boom—we all admit that—and it was in that year that our index number was based on 100. But what we are concerned with at the moment is the decreased employment at the time this government took office in the spring of 1922, together with the figures of employment to-day, showing as they do to hon. gentlemen oposite that their contention that the successive budgets we have introduced have done nothing to increase the activity of industry in Canada is not fair and is not correct.

Mr. MACDOUGALL: I wish to ask the minister if his attention has been called to a report in to-day's press of a speech made by the Minister of Labour—

Mr. SPEAKER: Order.

Mr. MACDOUGALL: —in which he says unemployment is the biggest problem in Canada to-day.

Mr. SPEAKER: Order.

Mr. MALCOLM: I should be happy to answer my hon. friend's question.

Mr. SPEAKER: I do not think it is fair, now that we are under the forty minute rule, to interrupt an hon. member who has the floor unless with his express permission.

Mr. MALCOLM: I am quite satisfied to answer the hon. gentleman's question.

Mr. MACDOUGALL: I was quite certain when the hon. gentleman resumed his seat that he was willing to answer the question. My question is this: Has the minister's attention been drawn to a report in to-day's Montreal Gazette crediting the Minister of Labour, one of his colleagues, with the statement that unemployment is the most serious problem that Canada has to deal with at the present time?

Mr. MALCOLM: I have not heard that statement, but I think my hon. friend is fair enough and broadminded enough to realize that at the present time, as always at this time of the year there is sea-

sonal unemployment. That is the situation which has always prevailed in Canada and always will prevail.

It is not possible for me in the forty minutes time allotted to deal with many phases of the budget, but there are certain particular matters I should like to discuss. The budget of my hon. colleague the Minister of Finance may be subjected to criticism by some members in the opposite corner of the house on the ground that it was a rich man's budget; it may be criticized by other hon. gentlemen opposite on the ground that certain reductions in tariff items were too severe, but I will say that the general effect of the gradual sales tax reduction which my colleague has introduced meets with general approval all over Canada as does the reduction in the income tax.

An hon. MEMBER: No.

Mr. MALCOLM: I am not saying that it meets with the specific approval of every man in Canada. Any man who could win the approval of the members in every corner of this house has no right to be on earth. I am prepared to say also that any man who could get the general approval of every member of the house half the time should be translated. But speaking generally the budget has been well received across Canada.

Miss MACPHAIL: Do you think—

Mr. MALCOLM: I did not interrupt my hon. friend from Southeast Grey and I would ask the same courtesy that I extended to her.

I should like to deal with the criticisms on trade matters which have been presented to the house. They can be divided into five points. In the first place there is the criticism that we are exporting too much to Great Britain in comparison with the amount we import from her. Secondly there is the criticism that we are importing too much from the United States in comparison with what we are exporting to that country. In the third place our trade balance is criticized on account of its decline. In the fourth place we are criticized for exporting raw material and in the fifth place our trade treaties are under criticism as not being favourable to Canada.

With reference to the first item namely that we are exporting too much to Great Britain and not importing enough therefrom, may I ask how many hon. gentlemen in the house realize that we keep our trade figures as trade figures only, that in reality we do not know the destination of many of our exports. We know that Great Britain is the greatest distributing and greatest trading nation in the world; she does not begin to consume anything like the percentage of goods which we credit to her in our export figures. For example, Great Britain herself admits the redistribution of 83,000,000 bushels of Canadian wheat. She admits also the redistribution of a great deal of flour ground from Canadian wheat. The total export figures of the North American continent, and they have to be taken together, show an export of 170,000,000 bushels of wheat from Canada to Great Britain and of 17,000,000 bushels from the United States, whereas Britain's figures of import show only 104,000,000 imported from the two countries. Hon. gentlemen in this house know that the British merchant who buys a cargo of grain on this side has the option of chartering a vessel and transferring that cargo to one probably of four or five points. The cargo may be transferred to Rotterdam even if its possible destination is in Switzerland. In so far as our figures show the export is made to Britain and Britain is credited with that export. Now practically all the European countries keep their trade figures on a country of origin basis so that our statistics of trade in the total are correct; but they do not show exactly our trade with these other countries. Switzerland claims to import a very great deal more wheat than our figures show. France claims to import $11,000,000 of Canadian products in excess of our trade figures. Germany claims an import of twenty-four or twenty-five million dollars more than the imports which we credit to her. In fairness I want to say that there is no loss of trade. The British exporter is able to distribute our products probably better than we could distribute them ourselves, so that no loss of exports occurs. The only difficulty that arises in the whole situation is the problem of finding who our final customer is and allocating the business to the proper countries. That problem has been confusing to the statisticians of the world for several years. It was a subject of very vital study at the conference which was held last month in Cairo at which Canada had a representative. It will be much better if we can ultimately have figures on a country of origin and country of destination basis as we will then have a better opportunity of judging our trade with given countries. It is safe to say that if our trade figures were absolutely correct on the country of origin and the country of destination basis many of the compliments or much of the criticism with regard to our trade with given countries would have to be completely reconsidered.

With regard to our imports from the United States which are supposed to be excessive, practically the same problem in another form presents itself. The United States, like Great

Britain, is a trading country of great magnitude. On account of its proximity to Canada it is a convenient country to buy from, and it has special advantages in importing due to its great population and its ability to import in bulk cargoes. A great percentage of the purchases made through United States wholesale houses by Canadian merchants are made as a result of convenience and their ability to import in large quantities. Moreover, many of the raw materials which we use in our industrial life come through the United States but are not of United States origin. Probably the rubber industry is the most outstanding example of this. Ninety per cent of the cotton used in the rubber industry is Egyptian cotton, so I am informed by the chairman of the association, but it is bought on the Boston market. The rubber used in this industry is imported via the United States, but it all comes from the Straits Settlements and Malaysia. Therefore we have this anomaly that as regards teas, coffees, spices and other agricultural products, which come in great quantities from agricultural countries and are collected in the United States, we are crediting to the United States in various items tens of millions of dollars which, if we were crediting our imports to the country of origin, would really be credited to some part of the British Empire.

Mr. CHAPLIN: We have always done that.

Mr. MALCOLM: I appreciate that fact. I am pointing out to the house that in dealing with our statistics of United States imports, we should divorce from them the figures which represent imports really from within the empire. Furthermore, it is not fair to allow such imports to stand as United States imports for another reason. I may say in passing that a distinguished British visitor whom we had here recently was quite interested in the problem and I believe he is making a study of it. We are endeavouring to develop trade within the empire. We are trying to show that we are patronizing, as far as we can, other parts of the empire. At the same time so long as we are not able to segregate our empire imports which come to us via the United States, we do not give credit to the other parts of the empire for the purchases we really make from them, and so long as we export through the United States we are not receiving credit ourselves for doing business within the empire.

In the third place we have heard a good deal of criticism with regard to our favourable trade balance declining. The decline in our favourable trade balance, which to-day stands at $156,000,000, is to be admitted; but it is also to be admitted that the favourable trade balance which we have is the largest favourable trade balance of any country in the world, and while a decline has occurred, it can easily be accounted for as the speeches of some hon. gentlemen opposite have already indicated in this debate. The total decline in our exports is due entirely to the decline in value of agricultural products. As regards wheat alone, the average value of a bushel of wheat for the calendar year 1927 was $1.41; for the year 1926 it was $1.52, thus reflecting an average lower value in the price of flour of thirty-five cents a barrel. Indeed it may be said that all agricultural products taken together account for a greater decline, not in the volume of our trade, because the volume of our trade is as great, but in the dollar value of our exports, than the total decline. The interesting side to this question is that the value of our non-agricultural products, that is, our manufactured articles, has actually increased during the past year. That again, I will say to the hon. member for Lincoln (Mr. Chaplin), bears out the contention that our industrial development has been increasing during the past year.

As there has been criticism in this house that we are exporting too much raw material, let me give this statement as being absolutely sincere and true, namely, that compared with United States exports, the percentage of all exports that leave Canada in manufactured form is something of which every Canadian has a right to be proud and is a steadily increasing quantity. I am sorry I have not the correct figures of exports of raw materials by the United States during the past year, but I know it amounts to about 39 per cent, whereas we exported raw material to the extent of 46 per cent. Their manufactured exports plus semi-manufactured exports amounted to 53 per cent, whereas ours amounted to about 46.6 per cent. Thus it is seen that the United States is about six points ahead of Canada. A very interesting factor however comes into this question of exports, namely, that of our total exports of raw materials, amounting to $578,000,000, no less a quantity than $340,000,000 worth is represented in the value of our wheat, whereas in the total export of United States raw materials a very much smaller amount, which I am sorry I have not under my hand as I left the sheet in my room, is represented in the value of wheat. If from these figures we divorce wheat, which is one of the great commodities which we are exporting to a far

greater extent than the United States, it is seen that we in Canada are exporting as high a percentage of manufactured goods as is the country to the south.

There is one point on which I should like to speak for the benefit of my Progressive friends. Some people have argued in this house and, indeed, it has been argued in the country, that an industry should not be supported by governments unless it is indigenous to the country. May I point out that, with each passing decade, with increasingly easy lines of communication and especially lines of transportation, the world is becoming more and more of an economic unit. To my hon. friends who say that we should not export raw materials I should like to point out the very significant fact that in 1870 the cost of moving freight on American railways worked out at 1.89 cents per ton mile; while in 1926 the cost of moving freight on Canadian railways worked out at one cent per ton mile. Even these rates are high in comparison with water transportation. The cost of moving grain from Port Arthur to Port Colborne by boat on the great lakes is just one-eighth of the cost of moving any commodity by rail; the rates on grain work out at less than one-eighth of one cent per ton mile. Water transportation has in fact become so cheap that every great seaport in the world has very favourable rates as compared with every other great seaport and we have ceased to measure by distance; we are measuring now entirely by carriage rates. It is notable that products of tropical countries are moving more freely from those countries for processing to the temperate zone, and that practically all of the products of tropical countries are now being processed in countries such as Canada. What is the reason for this? There are, I believe, three reasons to consider. First, there is the superior skill of our people; secondly there is the ability of a skilled people to harness the powers of nature in the work of turning a raw material into a finished product, and, thirdly there is a great potential market for the commodity in the country in which it is being processed. Canada is a very notable example in this regard. We are to-day importing raw materials from the four corners of the globe; we are becoming an industrial nation, the second industrial nation of the British Empire. This is a position of which we are proud and which we intend to maintain, and we are doing thirty per cent of this business on materials which we do not produce ourselves. I would like to give to the house and to put on Hansard a few very interesting figures with regard to this group of industries

Take that great group of industries of which iron and steel are the basis, and which some day will use Canadian ore—I hope soon, because up to the present time ninety per cent of the ore used in Canada comes from either Newfoundland or the United States. We find that in 1926 that group employed 103,500 persons, paid $137,000,000 in wages and salaries, manufactured materials to the value of $258,000,000, and produced products to the value of $505,000,000, adding a net of $247,000,000 to the wealth of Canada. Practically all the iron which is the basis of that group of industries came from other countries.

The story of rubber is probably one of the most amazing stories of any product. The rubber industry has grown tremendously in the last twenty-five years, and probably deserves consideration from the people of Canada to an extent that very few other industries do. Bringing its raw products from the opposite side of the world it has developed to the point where it is not only supplying the needs of Canada but has become a very important export factor in this country. It has grown to enormous proportions. It employs about 15,000 people, pays $15,000,000 to $16,000,000 in wages and salaries, produces commodities to the value of $80,000,000 or $90,000,000, which with some other commodities produced in smaller plants will make a total of $100,000,000. Its exports of its own products amount to $26,000,000, and with other rubber articles exported the exports probably reach a total of $30,000,000. Yet all the raw commodity comes from other countries.

Our tobacco industry employs about 8,000 people, and produces goods to the value of $65,000,000, and until recently this industry has been based upon a raw material which is imported.

Our sugar industry employs about 3,000 people and produces goods to the value of $65,000,000.

Our cotton textile industry is to-day employing in Canada 22,000 people, and producing goods to the value of $86,000,000, and every pound of cotton, its raw material, comes from some other country.

Ninety per cent of all the crude oil used in the petroleum industry in 1926, the products of which were worth $71,000,000, was imported.

A very interesting industry which we have developed in Canada is the aluminum industry. Bauxite the raw material used in that

industry, is brought from British Guiana by water to Quebec, and by virtue of our cheap power the industry has been established there. These industries, which are all using raw material imported from abroad, have been established here by virtue of the potential market in Canada, by virtue of the superior skill of our people, by virtue of our knowledge in harnessing the powers of nature, and in addition, by virtue of certain political advantages in the form of British preferences which have enabled them to enter the export field. By virtue of her preferred position Canada is to-day exporting to seventy-five or eighty different countries.

We have had a policy in the Dominion of Canada, for which I am proud to give full credit to a former Minister of Trade and Commerce in another government, of creating trade agencies and establishing steamship communication. That policy has been of inestimable value to this country. If the house could read the many letters in the department showing appreciation from Canadian industrialists as to how much this assistance has meant to Canada's export industry, I am sure they would be proud of the service, I am surprised to hear some hon. gentlemen say that Canada should not be manufacturing anything except those things for which she has the raw material. If we took away from the industrial life of this Dominion the raw materials which by reason of our climatic conditions we cannot produce and must import, I am afraid that the whole industrial fabric of the Dominion would fall.

I am also prepared to say to my hon. friends opposite that so long as we expect the nations of the world to allow us to take raw materials from them which we do not produce, we cannot afford as Canadians to refuse to give to them some of the raw materials which we have in abundance and which they need for fabrication in their own country.

I want to place on Hansard a few more figures showing whether the policy of this government has been injurious to the various industries with which I have been dealing. It was said in 1922 that industry would languish in Canada if the policy of this government was put in force. I do not think that has been the case, Mr. Speaker. The hon. member for East Toronto (Mr. Ryckman) the other night made a most amazing statement when he said that industry—manufacturing, I think, was the word he used—was stagnant in Canada. My hon. friend is one of the leaders in the rubber industry. No one knows that industry better than my hon. friend, and he knows that in 1922 the employment in the rubber industry in this country was nothing like it is to-day. In 1921 there were twenty-six manufacturers of rubber products in Canada, employing an average of 8,586 people.

Mr. CHAPLIN: You did not change the duty on rubber. That is the reason.

Mr. MALCOLM: I admit that, but I will give my hon. friend an illustration the other way in a moment. To-day that industry produces goods to the value of almost $100,000,000. I say to my hon. friend from Lincoln (Mr. Chaplin) that we did not change the duty, but we did change the trade treaties with certain countries, and that gave them a market. My hon. friend also realizes this, that the most notable industry in Canada as an example of not hiding behind the tariff is the rubber industry. That industry deserves the compliments of the people of Canada in this, that in no size of tire is its price over eight per cent higher than in the United States, and on some smaller tires it is lower. They have been able to establish an export trade in foreign countries where we have no trade privileges, and where they have had to compete with the other countries of the world. The rubber industry, I think my hon. friend will admit, has grown very materially in this country.

The policy of the Liberal government has always been to encourage, by trade treaties, wider markets, and my hon. friend, in speaking of trade treaties, must remember this, that from the time we came into power up to the end of March, 1927, we have made fourteen trade treaties, and to these countries we have sold $7,700,000 of rubber products. In 1921 our total exports of rubber products were only $800,000. To Australia, New Zealand and the British West Indies, countries which in recent years have received more favourable trade treatment, the rubber industry sold goods in 1922 to the amount of $600,000, while to-day that figure has reached over $6,000,000.

Canada is going ahead in spite of the cries, the odd cries, of ruination. I will admit they are odd, and in fairness to the leader of the Conservative party I am glad to say that they do not come from him. He has not upon any occasion that I know of made statements of that kind. We as Canadians have a right to be proud of our country. We as a government are prepared to face criticism by the opposition of our methods of administering the affairs of the country, but with the figures in front of us of our industrial production and industrial employment I say

that if we put our shoulders to the wheel of developing this country, and confine our criticisms to each other, and not to the Dominion, we shall make very much greater progress than was made when the Dominion was a target for attack.

Hon. J. W. EDWARDS (Frontenac-Addington): Mr. Speaker—

Mr. SPEAKER: Before the hon. member proceeds, I should like the chair to be supported in this. There were many interruptions a moment ago, with the result that I had to give a few minutes more to the hon. Minister of Trade and Commerce in order that he might complete his sentence. Under the forty-minute rule if interruptions are too numerous speeches are so cut up that in many instances the meaning of the hon. member who has the floor may be obscured. On this point let me quote Bourinot:

> Whilst a member is addressing the house, no one has a right to interrupt him by putting a question to him, or by making or demanding an explanation.

Of course, the member addressing the house may give way through a sense of courtesy, but unless that express consent has been given no interruption must be attempted.

Mr. EDWARDS (Frontenac): Mr. Speaker, you have had a long and distinguished political career and you are well known as a very keen observer of men and events. I am sure, therefore, that you will have noted that one of the peculiar characteristics of the present government is the facility with which its members forget its discreditable acts, and also the ease with which they attribute to others the sins that they themselves have committed. We have had many exemplifications of this in the house, and we had one a few days ago during the course of the speech delivered by the hon. member for Fort William (Mr. Manion) when the hon. Minister of Justice (Mr. Lapointe) and the hon. Minister of Railways (Mr. Dunning) sang a duet in regard to the "shadow" government.

It is quite true, Mr. Speaker, that the government formed by the Right Hon. Arthur Meighen in 1926 was not representative of a majority of the votes in the Dominion. It is quite true that the Conservative party in the house at that time represented only 46.8 per cent of the vote polled in the preceding election. But it is also true that the party represented by the usurping government of Mr. King received the support of only 40.11 per cent of the votes polled in that election. It is quite true that Mr. Meighen had to select his cabinet from 116 members returned at the previous election. It is also true that the Liberal party selected their administration from only 101 members returned at that election. It is true likewise that the Conservative party in the election of 1925 polled 201,062 more votes than did the Liberal party who usurped the reins of office; that the government of Mr. Meighen in 1926 represented 133,396 more votes in the election of 1925 than the present Liberal government has backing them now; and that the Meighen government of 1926 represented 48,117 more votes than were polled by the Liberal candidates and their Liberal-Progressive allies in the last election. It is likewise true that on June 25, 1926, the King government was defeated three times in one day. It is also true that when a vote of censure was pending the Prime Minister hastened to the Governor General to try to get a dissolution. It is also true that the then leader of the Progressive party, the present Minister of Immigration and Colonization (Mr. Forke), gave his solemn written pledge to the Governor General that he would stay with the session and with the government until the business of the session was finished and supply voted. It is also true that the pledge was violated. It is further true that subsequently the government of Mr. Meighen was defeated in this house by a majority of one, through a member of the Progressive party polling his vote inadvertently. It does seem to me, sir, that it does not come with very good grace from any of the ministers of the government opposite to talk about "shadow" government.

How is their government composed at the present time? The Minister of Trade and Commerce (Mr. Malcolm) and the Minister of National Revenue (Mr. Euler) are well-known protectionists; the minister of Agriculture (Mr. Motherwell) occupies a doubtful position since he has two opinions on everything, one a public opinion and the other a private; while the Minister of the Interior (Mr. Stewart) nails the black flag to the mast and declares himself for the "death of protection." I would call the present government, because of their peculiar career, a zig-zag government, and I would suggest that each member of the cabinet should wear on the lapel of his coat, and hang around his neck by a black ribbon when he puts on his Windsor uniform, a large letter "Z" made of brass. I suggest that letter because it signifies a zig-zag government; I suggest it be made of brass for very obvious reasons. I think something might be added to that, a little emblem in a convenient place worn by the Minister of Trade and Commerce and the Minister of National Revenue with the representation of a strong wall to signify that they are protectionists; on

the emblem worn by the Minister of the Interior there might be inscribed the skull and crossbones to signify the "death-knell of protection"; a question mark on the one worn by the Minister of Agriculture would indicate his doubtful position; and a representation of a forest on the one worn by the Minister of Immigration would signify that he was still wandering or lost somewhere in the political wilderness.

I recall very distinctly the attitude taken by the present Minister of Immigration when he was leader of the Progressive group in 1924, 1925 and 1926, how he stood forth in the front rank of that party and declared:

> If anybody in this house thinks the Progressive movement is done, he is vastly mistaken.

How he declared further:

> Whatever changes may take place in the cabinet, the Progressive group will remain intact and carry on as in the past.

And how in 1925 he chided the Liberals—with whom he now sits—for their broken pledges. He saw little difference between Liberals and Conservatives then. He did not think if the Conservatives came into power they would raise the tariff very much, and he was even willing to join them in a coalition. You will find, that sir, in his speech at page 3967 of Hansard for 1925. I quote from a speech he delivered in Winnipeg on September 17, 1925:

> Absorption of Progressives by Liberals under whatever guise would postpone for a generation necessary reforms, reshaping of national policies, infusion of that moral courage and idealism which slavish partisanship has well-nigh destroyed.

There he stood forth, the admiration of all those whom he led at that time. He waved his claymore in the air and he shouted:

> "Come one, come all! this rock shall fly
> From its firm base as soon as I."

And encouraged by the applause of this open defiance of all and sundry at that time, he turned to right and to left and said:

> "With such a small majority this government can well be blocked by three.
> Now who will stand on either side and keep the bridge with me?"
> Up spoke the member for Lisgar, an old time Grit was he:
> "Lo, I will stand on thy right hand and keep the bridge with thee."
> Then up spoke the member for Southeast Grey, a U.F.O. was she:
> "Lo, I will stand on thy left hand and keep the bridge with thee."

And so they went forth to battle. But what happened? Two of them threw their swords down at the entrance to the bridge and struck for the other side as fast they could run. They are sitting over there now, one of them having realized his ambitions to the full extent of ten thousand and one. One of these ambitions is not an unworthy one, namely, the honours of office, the other ten thousand being represented by a dollar apiece. As to the member for Lisgar (Mr. Brown), he went on the strength of hopes which are vain and, I fancy, will never be realized.

Now I want to make a few remarks regarding the national debt. During the war years and the years immediately following, not one dollar was added to the public debt of Canada for any other than war purposes or purposes arising out of the war. Moreover, not only did the Conservative party in those years administer the affairs of the country out of the revenue but they paid off $698,809,700 of war obligations. I remember the sessions of 1917, 1918, 1919 and 1920. Seventeen appropriation bills were put through this house covering a total of $1,755,000,000, not one dollar of which was ever challenged; nor was the integrity of a cabinet minister ever called in question. I call attention to a few of the burdens which were borne by the Conservatives in those years and from which the present government was relieved: $164,000,000 paid in soldier gratuities; $102,000,000 paid in soldier civil re-establishment; $80,000,000 paid in soldier land settlement; $90,000,000 paid in pensions to soldiers; $10,000,000 paid in soldiers' technical education; and $7,000,000 paid out in soldiers' insurance. These items alone total $453,000,000. In his budget speech the Right Hon. Mr. Fielding, in May, 1922, spoke about surpluses, just as the present Minister of Finance (Mr. Robb) does, but he was a little more candid. He said:

> "The result of the operations for the year just closed is that while we have, according to one calculation, a surplus, we have to acknowledge an addition to the public debt of $86,417,000."

The very next year Mr. Fielding, in introducing his budget, again spoke of a surplus, just as the present Minister of Finance has done, only more candidly. He had this to say:

> So far this is a story of surpluses; but there is a further statement to be made which quite destroys that happy picture. There were charges for advances to railways of $97,950,645. If we take the whole expenditure for the year, ordinary, capital, special and railways, there was a deficit; and, allowing for certain deductions, the net result was that we added to the public debt $81,380,864.

I ask, why was not the present Minister of Finance equally candid? He said that the chartered accountants had certified in their report to a reduction of $105,942,498 in the net debt of Canada for the period from 1924 to 1927. The hon. member for St. Lawrence-

St. George (Mr. Cahan) referred to that claim and punctured the argument by simply quoting from the report of the chartered accountants, which made it very clear indeed that in the statement they made they did not include the issues of the Canadian National railways guaranteed by this Dominion. The present Minister of Finance claims a reduction in the debt for the last year of $41,896,000, but he ignores railway guarantees of $46,000,000. He claims a reduction of $105,000,000 in the debt in 1924, but he ignores guarantees of $168,000,000 for the same period. That, I contend, is not dealing candidly with the people.

With reference to the reduction in taxation referred to by the Minister of Finance, he seeks applause for reducing taxes which his own party imposed—an increase in the sales tax, an increase in income tax and receipt tax, and so forth—which did not exist under the Conservatives—and an increase on cheques. These are now being gradually reduced and the government is asking credit therefor.

I remember that previous to 1921 the Liberal party were very insistent in declaring that if only they were returned to power they would show that a government that exercised proper economy in their expenditures would not find it necessary to extract all these taxes from the people. Well, we took in the last year of the Conservative administration, in these various taxes, some $73,000,000. How much was collected last year? The amount taken in was $105,613,160, or over $32,000,000 more than was taken in the last year of Conservative rule. Has there been economy in expenditures? I think not.

I have in my hand some figures taken from a return which I asked for last session. It may be news to some in this house perhaps, and I am sure it will be to the people in the country, that we have under this government 623 motor cars for the use of various departments; that there has been spent on these cars, in first cost and repairs and maintenance and chaffeurs' livery, as well as for other things in connection with their use, $1,311,198; and that the ministers themselves have run up a bill for their cars and chaffeurs of $164,640. Adding to that the fact that they had their private railway cars—some ten—one of them the Acadia for the railway commission, to which no one will object; three for the governor general in 1922 and two since that time; for the ministers themselves, five in 1922 and six in 1923; seven in 1924; four in 1925, and six in 1926. I find that we have paid out for these private cars $376,877. For the ministers' private railway cars and their motor cars, it has cost the country so far some $541,000. That does not seem to me to indicate any reduction in expenditures along proper lines. This is for the last two years.

I wish now to refer for a few moments to the question of immigration. In discussing this subject the hon. member for St. Lawrence-St. George struck the keynote of the whole situation when he said that the question of keeping our own population here and inducing others to come to Canada depended upon the rate of wages paid in this country and the ability to provide our men in this Dominion with employment. So far as wages are concerned, I have this to say: A country paying low wages may successfully cultivate free trade; a country paying high wages must cultivate protection. Wages in Canada are governed largely by wages in the United States; Canada cannot pay high wages and compete with the low scale of wages paid in Europe and Japan, for instance. So long as the products of the United States are protected and wages are high, Canadians will go to the United States and Canada will be simply a nursery for that country. We will continue to raise boys and girls, educating them at enormous expense, only to lose them to the country to our south.

Now, Mr. Speaker, much has been said on this subject of immigration, and there are one or two things I would like to bring to the attention of the house. First I must say that when the United States adopted the quota system, and by that means closed their doors to over a million immigrants, this country had the greatest opportunity ever given any country to increase immigration. That quota system reduced the number of immigrants coming to the United States from 1,218,000 to 168,184 a year; it applied to all countries with the exception of Canada and Mexico. I find that in the four years from 1911 to 1914, under Conservative rule, 554,298 British immigrants, 501,700 immigrants from the United States and 396,633 immigrants from other countries entered Canada, a total of 1,452,631 or an average for the entire four years of over 1,000 immigrants each day. Then let us consider the past seven years; under this government; 361,834 immigrants entered Canada from Great Britain, 175,553 came from the United States and 273,953 came from the continent of Europe, a total of 811,340, or an average of 317 each day as compared with the Conservative average of 1,000 a day, yet this government had a distinct advantage because of the adoption of the quota system in the United States.

Let me proceed a little further. For the last five years the total British immigration to Canada has amounted to 248,552; the total number returning from the United States, including Canadians, British and naturalized Canadians amounted to 227,953, or a total addition to our population in that five year period of 476,505 British and Canadians. At the same time, however, and during the same period, the number of Canadians leaving this country for the United States amounted to 598,402, so from the officials returns of both the United States and Canada we find that we sustained a net loss during that five year period, under this government, of 121,897 British and Canadians, while we brought in to take their places 226,163 foreigners from continental Europe.

I have not a word to say in regard to foreigners coming to this country; many of them make first class citizens, and we welcome those who come to Canada with the intention of becoming British subjects in every sense of the word. I do say, however, that our immigration policy should be so framed as to permit the British element to predominate. I would also like to point out what this loss of 200,000 Canadians means to this country. It means a loss of a billion dollars of capital invested in raising and educating these boys and girls; it means the loss of a home market for $17,500,000 worth of farm products and $48,660,000 of manufactured goods; it means homes established in the United States which should be established here. The average value of each citizen to the state is $2,000, which means an annual loss to Canada of $400,000,000, and it means the loss of our best, to be replaced by those who are to say the least not so efficient. I say, Sir, that so long as a policy is followed in this country which makes it difficult for Canadians to get work here at remunerative wages, our Canadians will cross the line to get the work which they must have. Moreover, I say that so long as we follow a policy which deprives the dairymen and farmers of our country of their rights and makes it difficult for those industries to carry on, we can offer no inducement to immigrants to come to this country and go on the farms. Take the figures in dairying, fruit and vegetable growing and sheep raising in Canada; these show no inducement to any person understanding the situation to come from the old country and go into any of those lines of industry here. Everything possible has been done to discourage people from following those pursuits.

Just here I should like to again refer to the McConachie case, and again to direct the attention of the minister to that case. McConachie is a Scotchman who fought in the war, afterwards coming to Canada to work and make a home. Then he sent for his wife and five children to join him in this country. Before leaving they were inspected by two government doctors, and they underwent a further inspection on the boat, being passed by all three examiners. When they came to Halifax, however, the little fourteen-months old child was turned down and ordered from the country. I speak of this again because I want to appeal to the Minister of Immigration on behalf of that family. The records show that the minister issued permits to persons almost blind, and to others reported by his own officers as feeble minded; he placed his signature on a permit which allowed a thief to remain in this country, but apparently up to the present he has no consideration at all for this Scotch woman and her little baby. What earthly harm could happen to this country even supposing that child were feeble minded? There would be no harm done at all for at least eight or ten years.

Mr. KING (Kootenay): The child is prohibited under the law.

Mr. EDWARDS (Frontenac): Does the minister state that?

Mr. KING (Kootenay): Yes.

Mr. EDWARDS (Frontenac): What about the 140 others who received special permits? They were also prohibited under the law. What about the feeble minded boy, of whom the government examiners said he did not know enough to even move out of the way of possible harm? He was prohibited under the law; the officers reported he could not be expected to make enough money to provide for himself in Canada. He was prohibited under the law, but the permit of the minister allowed him to remain in Canada. What about the young man who came here and became a thief as a means of livelihood? He was prohibited under the law, but the permit of the minister allowed him to remain. Is the minister going to show less consideration for this Scotch woman and her little baby than he has shown for the man who spent six months behind the bars of one of our prisons? I say, Mr. Speaker, that it is high time the Minister of Immigration asserted himself as a man of his race should. Belonging as he does to a race which has written its name all over the world with high honours, I appeal to him to throw off the shackles which prevent him from asserting himself over the heads of his department, who are ruining it and making it a joke throughout the country.

Mr. FORKE: I will not admit a feeble minded girl.

Mr. EDWARDS (Frontenac): The minister will not admit a feeble minded girl but he will admit a feeble minded boy; he has done so. He will allow a thief to remain in the country; he will admit those who have occupied asylums on the other side of the ocean, as the permits show, but he will not admit a feeble minded child only fourteen months old because he is afraid this country will suffer damage. He will deprive the other children of that family of the love and care of their mother for a few years, rather than grant a permit to allow this little girl to remain in Canada. If that is the minister's final answer in the matter I am sorry for him. I am also sorry for this country that we have in the office of Minister of Immigration and Colonization a man who has been acting apparently merely as the tool or the subservient slave of those who are running his department.

Mr. FORKE: You must change the act.

Mr. EDWARDS (Frontenac): The act does not debar the minister from putting his name to permits and allowing people to come in and stay in this country who were turned down by his officials.

Mr. FORKE: The act forbids me to admit that girl.

Mr. EDWARDS (Frontenac): If the act forbids the minister to admit the girl then the act forbids the minister to admit the one who served time in an asylum on the other side. But that is not the point.

Mr. FORKE: The act forbids me to admit them.

Mr. CAHAN: But it gives the power to issue a special permit.

Mr. FORKE: No, it does not, and the lawyers know it.

Mr. EDWARDS (Frontenac): I do not think the minister was influenced much by lawyers. I remember the time when he had not much use for them, but times have changed.

Mr. ELLIOTT: He knows them better now.

Mr. EDWARDS (Frontenac): I should like to ask the minister, since he has interjected a reference or two, one straight question: Is there or is there not anything in the act which would prevent him from issuing a permit for that mother and child to stay here for six months?

Mr. FORKE: Yes there is. I have no authority to let that girl in under the act. Any lawyer would know that if he turned to the act.

Mr. EDWARDS (Frontenac): Then all I have to say is that the minister has not made a very careful investigation, because he has admitted others in violation of the act—

Mr. FORKE: No, never of the same character.

Mr. EDWARDS (Frontenac): —certified by his own officers to be unfit to come into this country, both physically and mentally.

The returns are there to prove what I say.

Mr. FORKE: I do not like to be criticized before the country as being cruel or inhuman when the law is there.

Mr. EDWARDS (Frontenac): The minister will get lots of criticism before the session is over, he may be sure of that.

Mr. FORKE: That does not help the girl. I think I have probably suffered more over that girl than any member of this house.

Mr. EDWARDS (Frontenac): I am glad there is one minister over there—of course he has not been there long—whose epidermis is not so callous that it cannot be penetrated. It is pretty hard to get through the skins of some of them, but there is a sensitive spot in my hon. friend although it takes quite a while to reach it.

Now I wish to direct attention for a minute or two to the situation of our dairy farmers in Canada, and what this government has done to make their situation worse. In 1926 our exports of dairy products—cream, milk, butter, cheese, condensed milk, milk powder, casein and eggs were as follows compared with 1927:

	1926	1927	Reduction	Increase
Cream	$ 7,711,312	$ 7,222,971	$ 488,341	
Milk	957,263	741,668	215,595	
Butter	3,358,960	1,094,694	2,264,266	
Cheese	25,244,029	22,640,668	2,603,361	
Milk (condensed)	2,892,821	2,463,904	428,917	
Milk (powder)	846,846	721,644	125,202	
Milk (evaporated)	.....	1,090,788	.....	1,090,788
Casein	15,218	46,773	.....	31,555
Eggs	766,178	313,354	453,224	
Totals	$41,892,622	$36,336,464	$5,556,158	

(Decrease in one year)

In 1926 our export of these commodities amounted to $41,892,622. In 1927 it had fallen to $36,336,464, a decrease in one year of $5,556,158 in dairy products alone. In 1925 Canada's exports of butter were 24,553,000 pounds, and our imports were 193,000 pounds. Our farmers were supplying Canadian tables and exporting over 24,000,000 pounds a year. The Australian and New Zealand trade agreements changed all that by permitting butter to come into Canada for one cent a pound. Our exports for the year ending March 31, 1927, dropped by 13,425,500 pounds, and our imports rose to 7,190,267 pounds. For the year ending November, 1927, Australia and New Zealand sent us 10,122,866 pounds of butter, and we sent them $3,503,833 in payment, every dollar of which should have gone into the pockets of Canadian farmers instead of into the pockets of Australian and New Zealand farmers. We are up against the Paterson plan in Australia where three cents on every pound of butter manufactured there goes into a pool, and where a bonus of six cents a pound is paid on every pound of butter exported. Now it costs less than three cents a pound to bring butter from Australia and New Zealand to Vancouver, and butter from those countries shipped from Vancouver to Montreal can be carried at the rate of $2.30 per hundredweight. On the other hand British Columbia butter has to pay a rate of $3.58½ cents per hundredweight. The rate from Regina or Saskatoon to Vancouver is 2½ cents a pound, so that the price of butter in Saskatoon and Regina is fixed at 2½ cents lower than the price of New Zealand butter when it lands in Vancouver.

I wish to give here some figures brought forward by the hon. member for Victoria (Mr. Tolmie) illustrating the effect of this on Canadian production: Taking the production of an average cow as 200 pounds of butter a year, our importations from Australia and New Zealand last year would keep 50,000 cows in Canada busy throughout the year, and allowing 10 cows for each farm, would establish 5,000 farms in this Dominion. There is a spread, as everybody knows, between the winter and summer prices for milk. There is evidence of that right here in the city where the difference is 40 cents per 100 pounds. In Montreal the spread is 90 cents per 100 pounds. The dairymen in Australia and New Zealand have a decided advantage over us because their climate allows their cattle to graze out the year round, consequently they can produce more cheaply than we can in Canada. Yet we are giving them the advantage of our market in this country at a cent a pound. At a season of the year when the costs of production in Canada are at the highest we allow Australian and New Zealand butter to enter Canada and damage the dairy industry in this country. In the countries named their summer is in operation at this time; it is their flush season. Protests have been entered from all the dairy councils throughout Canada against this unfair competition but nothing has been done to rectify the evil. In addition to the injustice already complained of the government allows Australian meat to come in at half a cent a pound, and it is a well known fact that the Australian government pays a bonus of over $2 on every carcass of beef shipped out of that country. That is sufficient to pay the freight when that commodity is shipped to our own shores. Is it a fair deal to the farmers in this country to be put up against competition of that kind? I submit that it is not.

We imported eggs to the value of $1,826,782 last year, mostly from the United States, Britain and China, but we do not export many eggs to the United States because that country collects a duty of 8 cents a dozen upon our eggs while we allow their eggs to enter this country at 3 cents a dozen. In the same way we cannot avail ourselves of the butter market in New York. When butter was selling in Montreal at 37 and 38 cents a pound it was priced in New York at 50 cents a pound. Why did we not send our butter to New York? For the reason that the United States protects their farmers and dairymen by imposing a duty of 12 cents a pound on our butter thus making it impossible for it to enter.

Mr. BENNETT: And our price is that much less.

Mr. EDWARDS (Frontenac): Yes, our price is that much less. I am not going to discuss the various trade agreements entered into by this government. Suffice it to say that Canada has lost out in every agreement which this government has made with other countries. We lost out in the case of Australia. We not only lost through a reduction in our exports to that country while their exports to us increased, but we have had to pay from $1,500,000 to $2,000,000 extra in duties on imported raisins. That was part of the deal. We lost again in the case of New Zealand, our favourable balance with that country decreasing by more than $5,000,000 in one year. The same story is true in regard to our treaty with France, an unfavourable trade balance of $8,500,000 increasing to $13,500,000. As regards the West India agreement, a balance in our favour of $500,000 was changed in one year, by the magic touch of this government.

by way of a trade arrangement, into an unfavourable trade balance to the tune of $2,000,000, and yet we are subsidizing steamers to carry their products to Canada.

Mr. WILFRID GIROUARD (Drummond-Arthabaska) (Translation): Mr. Speaker, the hon. member for Frontenac-Addington (Mr. Edwards) who has just spoken is well known in the riding which I have the honour to represent. We notice that he still continues to occupy a seat on the front benches of the opposition and takes a leading part in the proceedings of his party. He has broached a great number of subjects and I do not intend to follow him in all his rambles. I simply wish to make a note of the admission which he made at the outset of his speech; that in the latter part of June, 1926, when Mr. Meighen grabbed power in violation of constitutional practice, he did not have the confidence of the people of this country, and therefore had no right to take over the reins of government. That was then our contention, and the people at the last general elections were of the same opinion. This is the reason why the hon. member for Frontenac-Addington occupies again a seat on the wrong side of the house.

Allow me, Mr. Speaker, to now congratulate the hon. Minister of Finance (Mr. Robb) on his statement as to our financial situation. Ever since he has been at the head of this important department, the country has had but praise for his administration which has given the government an opportunity, thanks to the substantial reduction in taxation, to introduce measures favourable to the country's development and progress. I listened quite attentively to the various speeches delivered by members of the opposition, and I may state that the whole debate has shown how very acceptable this budget was to the whole country. Two amendments were moved, on which we shall be called upon to vote. One, which is really but a request to increase the tariff, is put forward by the official opposition—it bears with it a pleasant smile for the large interests—the other, without any consideration whatsoever for the needs of our industries, takes the government to task for not having reduced the tariff sufficiently. It seems to me that the task of preparing and putting into practice a fiscal policy consistent with the needs of a country like ours presents the greatest difficulties. Faced with these two clashing amendments, Sir, one can readily see all the wisdom and foresight of the leaders of the Liberal party who intend to give the country a policy which will be most fair towards the claims of the various provinces, but which will also take into consideration the needs of the great mass of consumers of this country and the necessity of protecting our industries. Therefore, the present budget, like all those which the hon. Minister of Finance (Mr. Robb) has brought down in this house, is one that we can call truly Liberal.

The opposition, through their leader, have proclaimed that this year at least it would forsake the old beaten tracks where it was in danger of being engulfed and would bring into the discussion of the country's affairs a constructive criticism. We were therefore prepared to listen to some announcement which would have given us hope that it would break with the past. We looked, listened, waited, but nothing happened; in vain did we wait. It is—Mr. Speaker, you have heard them before—always the same complaints repeated with the same lack of sincerity. The opposition seems always depressed, it traces before our eyes such gloomy pictures that, at times, I wonder if it would not rejoice itself, for purely political purposes, in seeing a less flourishing state of things in this country. The opposition is well aware—one must give it credit—that years and years will elapse before it can sit to your right, Sir; but is this a reason to utter but empty complaints and wish to revive this campaign of disparagement, which can only depreciate Canada in the eyes of other countries. Instead of talking at random of mills closing, why does the opposition not rejoice with us and the people of this country, at the prodigious trade boom which took place in 1927?

To-day, our country, so far as the importance and value of its international trade is concerned, occupies one of the first places among the nations of the world, under the present economical rule our industrial development has made great strides. Thus for the period comprised between April 1 and December 31, 1927, our total trade amounted to $1,793,000,000, of which $823,000,000 is for imports, while we have exported goods amounting to $970,000,000, leaving a favourable trade balance of $147,000,000. Why does not the opposition, who so often boast of their broadmindedness, set aside for once their party spirit so as to congratulate the government on the considerable reduction which has been effected in the debt of the country? Why not cease criticizing—which would be depressing if it were taken seriously—seeing that never since the war our finances have shown up so well? Yet, Sir, if there is anyone in this country who should rejoice of this improvement, it is the opposition for they are responsible for the enor-

mous debt contracted from 1914 to 1921. Within the last five years the debt has decreased by more than $144,000,000; revenues now exceed expenditures; a cash sum of $47,000,000 has been paid by the government to meet bonds maturing in 1927, and by this transaction the government economizes $3,000,000 each year on the interest alone. These are the conditions which make possible a reduction of ten per cent on the income tax, and a reduction of twenty-five per cent on sales tax. The government, although in no way hampering the progress of the country, wished to practise economy and took the means to curtail expenditures. To have a clear idea of this, we have but to remember that in 1921 the Conservative government were spending $528,000,000, and that in 1927, these expenditures diminished by more than $163,000,000. That is evidence of the good administration of the present government which more than ever has the confidence of the people.

The Liberal party has fulfilled the pledge given in 1921: drag Canada out of the chaos where the Conservative administrations had plunged it. Our finances are now in excellent shape and the future of our country is more alluring than ever, especially if we take into consideration that we are but at the beginning of a period which, by its prosperity and activity, gives us the most assured guarantees of a constant development and progress.

Another question to which I want to refer is the farm loans. One will readily recall that the present government had introduced, during the course of the 1926 session, a bill in relation to agriculture which had been passed by the two houses. Unfortunately, the Governor General of that day, acting in concert with certain members of the Conservative party, had made the signing of it impossible, thus delaying for a year the enactment of legislation destined to efficaciously help the farming class by the means of long term loans. The Liberal party again brought down this bill during the session of 1927, and I wish to state, sir, that the farmers of the riding I represent greatly rejoiced at hearing that this measure had been adopted. I wish to congratulate the Quebec government who, at their present session, will bring down the necessary legislation to insure its operation. This shows clearly the desire of both the Quebec and Ottawa Liberal governments, to unite their efforts in order to favour the farming class of our province.

Mr. RHEAUME (Translation): Hear, hear!

[Mr. Girouard.]

Mr. GIROUARD (Translation): May I now, Sir, draw the attention of this house to certain events which happened in the course of last year, and especially to the importance attached to the visit of certain high officials who have visited Canada since last session.

I must say that, personally, it is not without certain apprehension that I see ministers or other officials of the departments for Foreign Affairs or Secretary of State for the Dominions, arriving from London. Their right to visit our country is not disputed; they are welcome to admire its beauty and note the marvellous development which is taking place from year to year.

I think, however, that our welcome should be rather a cold one when—to carry out an idea of propaganda which, I am inclined to think, is not the product of a Canadian's brain—we are told what line of conduct our country should follow under certain circumstances. One would really be led to believe from what they say, that we are unable to manage our own affairs, unless we conform to suggestions not in keeping with the needs and destinies of the Canadian people.

The Mail and Empire of Toronto, recently charged the right hon. Prime Minister (Mr. Mackenzie King) and the hon. Minister of Justice (Mr. Lapointe), with trying to draw us away from the British ties, because of their attitude at the last imperial conference, but, sir, one of the reasons which justified the confidence of the large majority of the people in my county, was their wish and desire proudly expressed to see our country represented by men who, by their words, acts and line of conduct in the past, had proved that they were worthy to represent and assert the Canadian viewpoint.

The policy of the Liberal party—and it should be accepted, I think, by all those who are broadminded and are moved by patriotism—is to create for the country we live in, the most complete autonomy, both at home and outside. Those who come to visit us should bear this in mind.

Mr. Ewart, an authority on constitutional law, speaking of Mr. Amery's visit and his propaganda, stated that Mr. Amery—being fully aware of the advantages which his government would reap by being able to control in case of war, the financial and military resources of Canada—had tried and was trying to create a state of things which would make certain this control. Is it necessary to add, sir, that we should oppose such an attempt; that there is cause to ask all these high officials to travel less or at least to travel elsewhere than here, when the purport of such visits is to spread imperialistic propaganda. Mr.

Amery works in the interest of his government, but is there not cause to wonder at the fact that members of the cabinet in London can thus absent themselves for months, when in their own country there are so many important and intricate questions capable of taking up all their time and attention. We also must preoccupy ourselves with the interests which are our own. We equally have questions and problems to solve, bearing in mind our needs, geographical situation, aspirations and future as a Canadian nation.

Mr. T. H. STINSON (Victoria, Ont.): Mr. Speaker, the budget speech of the Finance minister (Mr. Robb) grows in importance to the people of Canada year by year, and is awaited with anticipation and concern by increasing numbers. It is unfortunate that this should be the case as there should be some settled policy upon which the business of this country can be built up, instead of being on the basis of a yearly tenure only.

The problem of the tariff has been one of the most persistent and controversial in Canadian history, affecting as it does the well-being and prosperity directly or indirectly of every citizen. As early as 1876 Sir Wilfrid Laurier declared himself a moderate protectionist, admitting that protection was a matter of necessity for a young nation in order that it may attain the full development of its own resources. The national policy as enunciated by Sir John A. Macdonald in 1878 was to benefit and foster the products of the farm, the mine, the forest, the sea, and to give employment to our labourers, and thus build up all the interests of this great Dominion. The importance of manufacturers in our national well-being is strikingly indicated by our population figures. Since 1891 our urban population has steadily increased until now it is one-half of our total population. Apart from the actual number of factory employees it is obvious that in any city or town the wholesale and retail merchants, the banks, the professions, the real estate agents, and the municipality itself are largely dependent upon the factory as the dynamo of their prosperity. If the factory is ruined by trade reverses, the city and town must suffer the same fate. Consequently any ill-timed and thoughtless tariff change is a matter of vital concern to the city and town dweller. He is as directly interested in the tariff as the manufacturer, and surely nothing should be done to endanger the well-being of nearly half our population.

It should be the purpose of the government to direct and mould the business policy of our country for the development of the natural resources, and thus give employment to our citizens. A nation cannot exist without people, people cannot exist without homes, and homes cannot be maintained without money; and money can only be obtained by the multitude by work and labour. Therefore, if a government fails in its duty to so direct its policy as to foster and provide work and labour at fair remuneration, it fails in its duty to the people.

The test of a good budget should then be: What does it contain to create industry in order that the foundation of the nation may be maintained in the building up of happy and contented homes? Does the present budget contain one tariff change that will develop a job capable of employing an additional Canadian boy in Canada or bringing one exiled Canadian back from the United States?

It is agreed on all sides that our great need is population, and if that is the case, the government must find ways and means of employing the population we have and making new jobs for those we desire to add to our population. Consequently the efforts of the government should be bent to the task of creating work in Canada, and our efforts should be directed towards building up a balanced population. The farmer says: If you bring in more farmers and settle them on the land you are creating more competition for me which will help to lessen the price of my product. The labourer says: If you bring in more labourers, there will be more competition for the available jobs in Canada. Therefore it is necessary to build up a balanced population to a point where Canada will present a fairly harmonious economic unit—where the burden of taxation may be so distributed over more shoulders that it bears lightly upon all: where our vast over-expanded transportation machine may be operated efficiently and economically, and where local consumption of industrial products may be large enough to give industry and consumer the benefit of savings incidental to quantity production. We cannot overlook the fact that the first duty of a young nation is to make itself economically secure.

It is time Canada took stock of herself, of her resources and her institutions, and commenced to formulate national policies in keeping with her peculiar conditions and limitations. There is somewhere a point in population where Canada as a business and productive unit would function under reasonably normal overhead cost, which point can be approximately ascertained. The goal should be to maintain by a vigorous immigration policy, and when the time comes by a "closed door" policy, a fairly balanced population in terms of occupation and to

sustain the proper equilibrium by wise legislation and executive direction, so far as such may legitimately and effectively be done. We should strive to reach our effective minimum population. Where is that point? We have a mile of railway for every 178 inhabitants; the United States has one mile for every 400. This would indicate railway efficiency when we reach a population approximately twice as great as we now have. The same proportion no doubt would apply to the balance of our public facilities and plant. In a general way we are equipped as we stand for a population double of that we now possess.

A study of the economic value to Canada of a new settler is illuminating. Incidentally it is shown that over 163 million dollars have been brought to this country by immigrants. Professor Irving Fisher calculates that the capitalized productive value of the average individual to the state is $3,000. What Canada and many other countries have suffered from during recent years, and what has given rise to general unemployment, is not necessarily over-population but unbalanced production. With untold mineral and forest wealth, and with millions of acres of the world's richest agricultural lands lying idle and undeveloped while the world is clamouring for food, surely there should be no widespread unemployment if corrective methods were employed by our governments. All our great natural resources are of little value to the nation until developed by the genius of man. Could not the unemployed workers of the British Isles be set to work in that development if our government would bend its energies towards making some arrangement with the British Government in some way and under certain conditions to supply the millions of dollars necessary over a period of years for this purpose? Ingenuity, foresight and energy could no doubt work out a solution for the development of our natural resources in Canada with British capital.

In considering the social value of the citizen we cannot overlook his performance as a consumer of the commodities produced within the state. This has an important bearing on employment and general prosperity. Canadian industry produces goods of a gross value of 2,781 million dollars. Of this Canada exports goods amounting to 453 million dollars. The balance divided by population leaves an annual per capita consumption of manufactured articles of $243.30. This clearly demonstrates the enormous value of the home markets to Canadian labour and industry and incidentally the vast significance to be attached to a policy having for its object the augmentation of Canada's consuming population. Every man, woman and child added to our population is a potential consumer to the extent of $243.30 of manufactured goods.

Mass production is the essential element in successful modern industry. Canadian agriculture will suffer by reason of inflated prices leading to a higher production cost until our general consuming population reaches a point where our industries can function more effectively and thus reduce commodity prices resulting in a lower cost of farm operation and living all round. Until we can bring about a spectacular increase in population, the present handicap of high commodity and operating costs cannot be removed. The present policy of this government of striking at industry here and there, a policy which curtails expansion, retards development, and drives money into safe investments of government bonds instead of into industry, will never solve the question, and imports will never make a market here for what the farmer has to sell. The home market now absorbs 837 million dollars' worth of agricultural products as against our export market of 600 millions. The per capita consumption of farm products in Canada amounts to $87.50. The western farmer producing almost entirely for export receives little benefit from the home consumption of farm products, but with our population doubled, the domestic market would loom up as a very important factor in his sales. At present he is at the mercy of overseas countries, which are now striving with every nerve and with more or less success to promote decreasd agricultural imports. At any time he may be virtually closed out by tariff walls, as happened to his animal products in the United States. There is every indication that he may in a short time have to compete in the Liverpool market with Russian wheat. This would be a serious thing to our western farmers; consequently if a larger home market can be created for him it will be greatly to his advantage.

The policy of the government of this country should be to protect our farmers and give them the full benefit of our home market. The farmer in this country to-day is competing with his fellow farmers in other countries under conditions of absolute unfairness. The product of the foreign farmer is brought into this country under a relatively low tariff, or none at all, while he is forbidden access to other countries save over a tariff wall. The farmer must now surely realize that he was sacrificed by the present government in the negotiation of the Australian treaty, and which treaty was afterwards extended to New

Zealand without our getting any corresponding compensation from New Zealand. At the time this treaty was negotiated the general duty on butter coming into Canada was 4 cents per pound, which by the treaty was reduced to 1 cent. The Australian government also fostered a scheme among its farmers to pay them a bonus of 6 cents per pound on all butter exported, to which fund the farmers of Australia contributed. With this bonus fund and the decreased duty our market has been flooded with Australian butter. The bonus fund allows the Australian to carry his butter to Vancouver without cost, as the amount of the bonus pays the transportation charges. Australian and New Zealand butter can be shipped on a through rate from Vancouver to Montreal at $2.30 per 100 pounds. The rate for the British Columbia producer to Montreal is $3.58½ per 100 pounds, so you observe the Australian can ship to Montreal, pay the freight and 1 cent per pound for duty and lay it down for 28½ cents per 100 pounds less than our British Columbia producer. Saskatchewan and Alberta are similarily affected by this unfair competition. The western provinces were building up a large dairy industry prior to this unfair competition. In 1910 Saskatchewan produced 1,548,000 pounds of butter. In 1925 this had increased to 15,946,000 pounds. Saskatchewan producers are now feeling this unfair competition, with the result that their production was some 4,000,000 pounds less in 1927 than it was in 1926. The same story is told of Alberta, and the decrease in butter production between the years 1926 and 1927 is quite as much as in Saskatchewan. If the average Canadian cow produced 200 pounds per year, the production of some 10,000,000 pounds now imported from Australia and New Zealand in one year would keep 50,000 cows busy the year round in Canada, and would give jobs to a large number of people in caring for the cows and the handling of the product. Why should this government put millions of dollars in the pockets of the farmers of Australia and New Zealand to the detriment of our own farmers? The United States maintains a duty against us of 12 cents per pound on butter, with the result that we only shipped 17,774 pounds of butter to them in 1926. They are out to protect their own farmers and keep the home market for their own people. If we kept our home market in butter for our own farmers there could be occupied an additional four or five thousand farms in the Dominion of Canada.

Now again, if it is the duty of a government to formulate a policy to create work and labour in its own country, then I should like to call the attention of the government to another industry that can be saved to Canada and a payroll built up here instead of being built up in the United States. The duty on our wheat entering the United States is 42 cents per bushel, while we maintain a duty of 12 cents per bushel against the United States. There is a large export business for flour ground from Canadian hard wheat, and the United States government, interested in helping industry and keeping payrolls in the United States, allows Canadian wheat to be brought in and milled in bond in the United States and shipped out to compete with the Canadian flour in the world market to our disadvantage. By section 311 of the Tariff Act of the United States, and under treasury regulations relating to bonded warehouses, wheat may be imported into the United States without the payment of revenue or duty on the condition that the flour product is exported. Under general customs regulations a refund or drawback of 99 per cent of the duty paid may be obtained when the product of imported wheat is exported, but to secure the drawback under these conditions the flour exported must contain a mixture of at least 30 per cent of the product of domestic wheat. The quantity of Canadian wheat milled under drawback regulations is not large, so the chief problem arises in connection with the milling in bond provisions, which offer a much more favourable opportunity to the United States millers.

Milling in bond has been increasing by leaps and bounds. The quantity milled from July 1921 to June 1922 was 6,172,837 bushels; for the same months in 1922 and 1923, 9,280,787 bushels; for the same months in 1923 and 1924, 13,904,837 bushels; and from July 1, 1927, to January 28, 1928, 10,000,000 bushels, which makes the quantity now over 15,000,000 bushels per year. The flour product of this quantity of wheat would be in excess of 3,200,000 barrels of flour, while the offal by-product would be 118,000 tons. During that period 3,200,000 barrels of flour made from straight Canadian wheat were sold abroad under United States trade names in direct competition with the product of Canadian mills. In the same twelve months Canada exported to countries other than the United States 12,000,000 barrels of flour.

Out of a total demand abroad for 15,000,000 barrels of flour of Canadian quality, United States millers supplied no less than 20 per cent with free Canadian wheat for this export trade. United States mills have certain advantages in rates and positions which enable them to sell in competition

with Canadian mills. The United States miller has an advantage over the Canadian miller by reason of the fact that a mill at Buffalo pays lower transportation costs on Canadian wheat than does any eastern Canadian mill. The offal from the grinding of the Canadian wheat in the United States has a splendid home market where there is a deficiency of the product. From the mill to the seaboard the United States miller at Lake Erie points has an advantage under existing freight tariffs, due to his position, of 2½ cents per 100 pounds in freight rates. This difference in export cost of 5 cents per barrel alone makes it possible for him to take away business from Canadian mills. What does it mean to Canada?

Manufacturers' costs of converting wheat into flour, including labour, selling expense and overhead, but not including the cost of bags, may be safely estimated at 65 cents per barrel. At this rate the cost on 3,000,000 barrels would be $1,950,000. This amount is paid out in the United States in the year instead of being distributed to labour and capital in Canada. If Canada had milled the additional quantity, our railway companies would have moved 15,000,000 bushels of wheat to Canadian mills and would have moved 3,000,000 barrels of flour and 118,000 tons of offal from Canadian mills, whereas this wheat actually moved direct by water from Fort William and Port Arthur to the United States ports, chiefly in United States lake vessels, and no part of the product afterwards used Canadian routes. The loss to Canadian railway companies on the movement of the wheat to the mills and the flour to the seaboard is in excess of $1,500,000; on the 118,000 tons of offal, if distributed in Canada, it would be $679,000, or if exported, $550,000.

Since 1921 one of the largest milling industries in the world has been built up at Buffalo. The wheat that was formerly brought from Fort William and the Georgian bay route and by rail from Midland through Lindsay and Belleville to the seaboard, is now being carried by American boats to American ports and our railways are losing that advantage. Lindsay, which is a Canadian National divisional point, is suffering in railway employment by reason of the fact that our grain is going to Buffalo and is also being routed other than through Canadian ports. Surely our Canadian National Railway needs all the business the government can put in its way. Wages paid by the Canadian National at Lindsay in 1927 were some $200,000 less than the wages paid in 1921. An additional output of 3,000,000 barrels of flour for our Canadian mills would mean an increase of approximately 15 per cent on the total output of all merchant mills in Canada, which would have a very marked effect on costs and prices from which Canadian consumers would have benefited because of the keen competition among Canadian mills for the domestic trade. This would also have enabled the millers further to extend their markets abroad for Canadian flour by meeting competitive prices. Canada loses the advantage of the sale of this flour under Canadian trade names. It is exported as a United States domestic flour and helps that country to retain its reputation in the world market for the best grade of flour, and the effect on Canada is unfavourable. In selling, the United States miller may represent the flour as a product of Canadian wheat or he may not. If he does not, the impression is created that perfect substitutes for Canadian wheat and flour can be found in another country and that these Canadian products have not therefore the special values that may be justly claimed for them.

At six o'clock the house took recess.

After Recess

The house resumed at eight o'clock.

Mr. STINSON: Mr. Speaker, when the house rose at six o'clock I was discussing at some length the importation of our wheat into the United States duty free for the purpose of milling in bond. The question of the by-product is very important. The bran and shorts produced in the United States from this Canadian wheat amounts to some 118,000 tons, and Canadian dairy and live stock interests lose the opportunity to use this large supply of the best of all feeding stuffs. The effect of a larger output would be reflected back in the cost to the farmer. To encourage the development of Canadian dairy interests there should be available a superabundant supply of bran and shorts at as cheap a price as possible. To-day the farmer is paying $35 per ton for bran. All these direct and indirect losses to Canada when measured in dollars represent a sum total so large that the matter must be recognized as being of national concern.

The magnitude and importance of the Canadian milling industry is clearly shown by the returns published in the Canada Year Book. The capital employed in 434 flour mills is upwards of $65,000,000; salaries and wages paid exceed $7,000,000. The purchasing power of the industry as represented by the amount paid out for materials and supplies is upwards

of $125,000,000, and the value of the product is upwards of $150,000,000—a net difference between the two of $25,000,000, which represents the values created in Canada. This industry ranks second to the pulp and paper industry in value of products.

An export duty on wheat could not in any way have a prejudicial effect on the price of Canadian wheat, nor would it in any way affect the Canadian farmer other than to his advantage. The prosperity of the Canadian farmer is fundamental to the development and success of the milling industry, and in advocating this duty I do so in the belief that it would not depress prices or restrict opportunities for sale by the primary producer. On the other hand I think it would strengthen the position of Canadian products with advantage to every Canadian industry. If this flour were consumed in the United States, which it is not, it would mean that a market for Canadian wheat which otherwise has been limited and uncertain would be enlarged by the use of wheat in that way. But under existing conditions no increase in the demand for Canadian wheat is brought about. If there is no increase in consumptive demand, there can be no effect on the basis of prices. The United States miller cannot be as substantial a support to the market as the Canadian miller, since the former can drop out of the business the moment he finds it equally profitable to grind United States wheat, while the Canadian miller must always be a bidder for Canadian wheat. It is by special laws and regulations of the government of the United States that the American miller has been put in a position to do this business. It is the policy of that government to give all the employment possible to United States labour and capital in its milling industry, even when the main product is not required and is even denied access to the domestic markets.

The principle of export duties has already received recognition in Canada. An export duty on electric power is not different in kind from an export duty on wheat for milling in bond in another country, nor are the reasons for the former any stronger than those for the latter, as imports of Canadian wheat into the United States for actual consumption in that country are absolutely negligible under the present tariff and merely permit the export of a little more United States wheat or flour in competition with Canadian products abroad. The general application of an export duty would not in such case be open to objection on the ground that it might restrict the market for Canadian products.

Let me read a paragraph from a letter written by a Canadian now living in New York and looking after the export business of one of our Canadian companies:

> You will recall that I wrote some time ago about the situation in Cuba and that the United States mills were getting all the business there on account of the preferential tariff of 35 cents per barrel which the Cuban customs authorities granted on all shipments from American mills, whether the flour was made from Canadian or American wheat. In order to compete we were obliged to buy our flour for Cuba from Buffalo mills and in the past six months have bought about 60,000 barrels.

That milling company is not using to-day more than fifty per cent of its capacity by reason of this unfair competition. No Canadian flour enters the United States for consumption, as their duty against our flour is $1.04 per 100 pounds, while the duty Canada imposes is 50 cents per barrel. Their duty shuts out our flour, while we imported from the United States in 1927 some 45,860 barrels of flour. Why discriminate against our farmers to this extent?

It is surely time that the people of Canada should think in terms of a Canada first policy for the development of our iron and other mineral deposits, our coal deposits, our forests and our water-powers, which development will bring at the same time settlers to our fertile acres which have earned for Canada the title of "the bread basket of the world". Why should we not bend our energies towards finding ways and means of developing the Alberta coal fields and creating a market for that coal in Ontario, thus keeping many millions of dollars at work at home instead of supplying them to the United States workers?

Ontario is importing annually approximately three million tons of anthracite coal from the American coal fields, whereas the province of Alberta has 14½ per cent of the world supply; 21 per cent of all the coal on the North American continent; 72 per cent of all the coal in the British Empire and 89 per cent of all the coal in Canada. In fact her resources are sufficient to supply Canada's needs for the next eighteen centuries.

There would be three great advantages in procuring Alberta coal for Ontario. First, a constant supply of coal for Ontario would be assured. Then empty grain and box cars, idle on sidings during a period of from three to six months during the year when the grain was not moving, could be utilized, thus benefiting the national railway. Finally, the transportation of coal by rail would be productive of more westbound freight and hence greater revenue for the national railway, as well as more employment, which is one of our ever present problems.

The province of Ontario has been spending one hundred millions annually in the United States for coal—thirty millions for anthracite, and seventy millions for bituminous coal. Bankers inform us that money has a turnover from three to ten times in every year, consequently we are making available for circulation in American channels three hundred million dollars annually from the coal which we are purchasing there. We must bear in mind that a large part of the railway cost is labour, that 75 per cent of the cost of mining coal is labour and that the money, spent in the United States last year, namely 30 millions of dollars for anthracite, if spent for Canadian coal transported over Canadian roads would have provided twenty thousand jobs for men at $1,500 per year in this country, and in addition would have provided a purchasing power in our western provinces with which they could have bought manufactured goods from Ontario and Quebec. On the same basis if you calculate the number of jobs which would be provided if we purchased seventy millions dollars worth of coal in Nova Scotia, now purchased in the United States, another forty-six thousand jobs would be provided for workmen in Canada.

Surely a duty rests upon the government to find ways and means of providing a freight rate so that this coal can be brought in to the province of Ontario, when you consider the great benefits to be obtained from the same. If the hundred million dollars which is now being spent year by year by the people of Ontario for coal which they are purchasing in the United States was spent in Canada, sixty-six thousand more jobs could be provided in the Dominion and taking five people to the family an additional 330,000 people could be kept here. The purchasing power of Nova Scotia and Alberta for manufactured goods made in Ontario and Quebec would then be tremendously increased, and the national railway benefited by the increased westbound freight which must necessarily be created, and which would be carried at a profitable rate. We have no coal problem in Canada; our problem is a problem of transportation, and transportation only. It is a problem which this government should find a solution for, and I sincerely trust it will tackle and solve it in the near future.

Striking at industry will never develop a nation. This country must have a protective tariff so long as the other nations maintain one, and the sooner the government comes out boldly in the matter and preaches what it partially practises the better for all concerned. This year's budget estimates that more revenue will be raised from the tariff duties than before, and yet you hear sounded from the government side of the house occasionally such expressions as the "death knell of protection," which unsettles, hampers, and curtails industrial development.

We are also told that the government has reduced taxation. What is the fact? The money to be raised by the budget comes from the people; the amount to be raised is $7,500,000 more than the amount raised in 1927. We have the same number of people from which to extract this money, consequently the people who paid in taxes last year the money necessary to run the country are called upon to pay this year $7,500,000 more than a year ago. There cannot be any reduction unless you have more people to pay the taxes or the government reduces the amount to be spent.

I should like to see the government give consideration to the poorly paid country postmasters and rural mail carriers. These parties give efficient and honest public service and are insufficiently remunerated for the services performed. I should like to see the government grant a further sum for the relief of Home Bank sufferers who come within the classification as laid down in the statute and who have not been paid by reason of the fund being exhausted before their claims were reached. All those in the same class should be treated alike. Further I should like to see the road grants re-established to the provinces in order that the ever increasing tourist industry may be further developed.

As citizens of Canada let us strive for a balanced population in terms of occupation. Let us give consideration to the things necessary for the development of agriculture, our mines, our forests, our fisheries and our factories, and thus lay the foundation for a great nation such as our natural resources are capable of supporting. Let us build that development on a basis fair and equitable to all in order that we may have a happy and contented people where everyone may have free scope for individual enterprise and individual development. To-day the opportunity Canada offers to men of mettle, of imagination, and of enterprise is greater than ever before.

I heartily endorse and support the amendment moved by the hon. member for St. Lawrence-St. George (Mr. Cahan).

Mr. D. F. KELLNER (Athabaska): Mr. Speaker, I believe it used to be a custom for an hon. member when he rose to speak to deal with the points made by the preceding speaker. The hon. gentleman who has just resumed his seat (Mr. Stinson) dis-

cussed the affairs of Canada in such a manner that I should hardly like to cover the same ground without a little more preparation than I have been able to give to the subject. I desire, however, to concur in the views which he expressed in so far as they apply to a national coal policy, to federal assistance for highways, and to increased payments to country postmasters. To all these matters I think it is the duty of the government to give serious attention.

In addition to the privilege to which I have already referred, I assume we are also free to make comments on the utterances of speakers at an earlier period in the debate. I observed this afternoon that the Minister of Trade and Commerce (Mr. Malcolm), discussing the economic conditions throughout Canada, stated that we had re-established our credit and our commerce as no other country in the world has done. I cannot for the life of me see how he arrives at that conclusion because the credit of Canada was never seriously impaired so far as I know. On the other hand there are countries apparently doing well to-day which practically had no credit or no commerce when the war was over. So it certainly is not by means of comparison that the minister arrives at that conclusion.

One hon. gentleman, discussing during this debate the emigration of Canadians to the United States, attributed the movement to the blue ruin speeches of Conservatives. It is my opinion that if all the oratorical powers possessed by the government and their Liberal-Progressive friends were united to those of the Conservative party they would not drive one person in a million out of Canada. Some other reason than party speeches must be found for the exodus of Canadians to the country to the south. This exodus, permit me to say, is a matter of vital concern. I think we are making a big mistake if we do not take drastic measures in an attempt to retain our sons and daughters within our own borders.

An hon. gentleman referred to the Minister of Finance (Mr. Robb) as a man of courage and integrity. I wish to express my approval of that statement, especially in so far as it applies to the quality of courage. I think the minister had a good deal of courage when he pursued the policy he did notwithstanding the applications of the Consumer's League, and of the Saskatchewan section of the United Farmers of Canada for reductions in the tariff. I think it is pretty generally known that both those organizations made very forceful appeals to the minister for a reduction of the tariff, but in bringing down the budget he did not see fit to grant them any particular relief. It must be admitted that there is a tendency towards reduction in the tariff. If you look through the tariff items you will see there is a reduction of duty on artificial hair, either curled or uncurled. Another item provides for a reduction in stay laces, and still another for a reduction in boots and shoes. I presume that is dealing with the subject from the top down.

Still another hon. member, discussing the unfavourable condition that confronts agriculturists in this country to-day, suggested that it was caused by lack of labour, lack of credit and the purchase of luxuries. As to his suggestion that it is due to lack of labour or lack of credit—and one is more or less bound up with the other—I agree with him; but as regards the purchase of luxuries, anybody who knows anything about farming conditions, particularly in the frontier districts, will have to admit that more luxury can be seen in one city block than in a whole township out in the country. Something may be said in regard to the farmer not buying luxuries or getting along without them, but certainly there can be no logical criticism that hardships are due to purchasing luxuries.

Since this budget has been brought down we have heard a great deal of discussion as to whether or not there has been any reduction in the national debt. I think it is pretty generally conceded that if you consider the railway obligations, there has not been any reduction, and if you ignore them, there has. In view, however, of the fact that it has been repeatedly stated that we are reducing our national debt more rapidly than any other country, it occurs to me that the only way in which we can come to a logical decision on that point is by making comparisons. If we compare our achievements with those of other nations we should be able to decide whether or not we are making due progress, and for that purpose the countries we are accustomed to use are the United States and Great Britain. I find that in Canada since 1920 we have reduced our public debt by $98,965,000; England has reduced hers by £222,945,000, and the United States have reduced theirs by $5,787,000,000. In other words, Canada has made a reduction of something less than $100,000,000, the United Kingdom a reduction of practically $1,000,000,000, and the United States a reduction of $5,787,000,000, so that our ratio of reduction is very much less than that of either the United States or England. Of course there are extenuating conditions in both countries, but, in my opinion at least,

the United Kingdom had a very much more difficult position to face than either of the other countries under review. For instance, she had to make a readjustment in trade. Her foreign commerce was largely gone when the war was over and she had to cope with an unemployment situation with which neither of the other countries had anything to compare. It has been necessary for her to spend millions of dollars in doles to her unemployed, and along with that she was disappointed in her foreign loans. A large number of countries which owed to the United Kingdom money, which unquestionably it was thought would be repaid in order to meet her carrying cost, did not make payment, and it was a marvellous occurrence that the United Kingdom was able to reduce her indebtedness to the extent she did. The United States also had their problems, not so outstanding of course as those of the mother country, but they too were disappointed in their foreign loans. They had not the handicap of unemployment to the same degree as other countries, but they had to make a readjustment in their whole trade structure. On the other hand Canada has suffered somewhat, but not to the extent that either of the other countries has. She has been a large shipper of farm commodities and of the necessities of life, and regardless of the financial situation in which the other countries find themselves, they invariably have to purchase those commodities. Our problems have been much less than those of the other countries that I have mentioned, and certainly our achievments have been far less than theirs.

Suggestions are frequently made by the Minister of Finance, and others, who are not wholly in accord with him as to ways and means of paying off the national debt. The minister seems to take the view that the outstanding accomplishment which he can offer to the people of Canada to-day is that of refunding our loans, and by that process he hopes greatly to reduce the amount of interest that we shall have to pay. The present leader of the Conservative party (Mr. Bennett) last year advanced a suggestion which I am a little sorry has not been tried out, because I believe, if it were taken up with a reasonable amount of energy, results would follow.

While I am on that point I should like to suggest that there may be other ways which have been overlooked of making payments on our national debt. At this moment the amount of Dominion notes in circulation is very small—$172,000,000—and against that we have a gold reserve of $100,885,000, which covers not only Dominion notes but savings in savings banks. I do not know what percentage of it should be attributed to our note circulation, but I know there is something less than fifty cents on the dollar—to be accurate, between 42 and 43 cents on the dollar—in gold held in the treasury against our note circulation. At the present time we have in Canada gold-producing mines that are mining and shipping abroad quite a considerable quantity of gold. I wonder what would be the matter with the government making a purchase of say $25,000,000 worth of that gold and paying for it with Dominion notes, and then issuing another $25,000,000 against that gold reserve. In that way you are not changing by one iota the amount of gold behind your note issues; consequently the argument we usually hear that you are going to inflate the currency will not hold because you are not inflating it; you will have precisely the same amount of gold behind your issue that you have to-day. Furthermore, with that $50,000,000 of note circulation we would have a smaller note issue than we had in 1924 or 1923 or practically any year preceding that from the time the war started. You would have a smaller note issue; you would have the same amount of gold behind your issue, and therefore you could not be accused of inflating your issue. On the other hand you would have at your disposal $50,000,000 which would not bear any interest whatever, and as power is given to the government to do that if they see fit, there is no reason in the world why they should not do it.

No debate on a budget in this house would be complete without a discussion of the tariff. Formerly it used to dwindle down to debate on the merits or demerits of a tariff, but this year I notice that members are getting a little away from that. The other evening a Liberal-Progressive member said that this was the beginning of a reduction anyway, and I wondered why he did not stay with the Prime Minister's suggestions of last year or the year before that it was a step in the right direction. But I cannot help wondering and more or less marvelling at the attitude the government is taking in claiming that its popularity was based largely on the budget of 1926, because it brought down a budget providing for reductions in the tariff. If we are to take the words of the Minister of Trade and Commerce (Mr. Malcolm), he told us this afternoon about one industry in connection with which the tariff had been reduced and the output and the number of employees had been increased. Then he told us about another industry where the opposite had taken place where the tariff had not been touched and yet the industry had gone on

to better production. From that I take it that it does not matter one iota whether the tariff is touched or not, and if a great deal of popularity accrues to the government for reducing the tariff, it seems to me that they should reduce it.

There is one thing in connection with the tariff which I would certainly like to see carried out. We have a low tariff government in power, and I wish they had the courage of their convictions and would make a reasonable reduction in the tariff. If they are not satisfied to do that, I am not too sure that it would not be a good idea to elect a Conservative government and see if they would have the courage of their convictions and increase the tariff.

I have often wondered if it would not be possible to consider this whole matter of the tariff on a different basis entirely from what we have been doing. The discussion usually develops into a great argument whether tariff protection or free trade is most beneficial to the country, although it has been repeated time and again that there are practically no free trade advocates. I do not think we shall ever get anywhere by conducting a debate of that kind other than possibly to determine which are the more able debaters. As has been pointed out on numerous occasions, the history of both parties since confederation shows that both Liberal and Conservative governments have adhered to about the same tariff policy, so I presume we may take it for granted that so long as we follow the course we have been following in the past there will never be any material change in the customs tariff.

But suppose, on the other hand, these customs duties were levied on a basis of controlled price—and what I mean by that is that you make it known to the producer of an article made in Canada that you are prepared to give him protection upon one condition, and that is that the selling price of that article is in line with the selling price in other countries. After the 1926 budget was brought down, the Liberal government were very quick to go out through the country and point to the great reductions they had made in the automobile duties, and they tried to take a great deal of credit to themselves for doing that. But to-day, Mr. Speaker, the price of the Ford car in Canada is twenty-six per cent higher than it is in the United States. The element of protection was not changed one iota by those reductions in the tariff. When we used to point out in former days that the Ford car or any other car sold on both sides of the line was sold at a higher price in Canada than in the United States, it was quite a common reply to say that the Canadian car was a better car than the American, that it contained equipment that you did not get in the American car. That argument will not go now, because when the new Ford car came out this year hundreds of orders were taken on the model sent over here from the United States; in fact, the Canadian factory was not operating at the time they were taking orders for the Canadian Ford car. It seems to me that those who advocate protection are going to have a real job on their hands to convince the people of Canada that they should pay $600 for a car in Canada that costs $400 in the United States. I do not believe the people of this country will ever come to a frame of mind when they will sanction such a disparity, but it seems to me that the results which we hope for from tariff protection could be obtained if we went to the manufacturer—I mention the automobile just for the sake of convenience—and said: Your industry will be protected provided you are prepared to put your product on the Canadian market at a price in line with the price for the same article in the United States market, and unless you get into line with that price we are going to lift this tariff and permit the entry of the foreign product. That policy need not necessarily be limited to one commodity; I do not see why it could not be worked out to cover practically everything. It seems to me that anyone who understands the present tariff regulations and their application could easily work out a scheme that would carry out the suggestion I have made.

The Minister of Finance, speaking on the budget made a very extensive comment on the favourable trade balance, and took considerable credit to the government for that. In my opinion his statement was misleading. I do not think we can issue an accurate statement of our trade development if we pay absolutely no attention whatever to the interest on our public debt; for that is one debt that must certainly be considered in the finances of any country. I do not believe the statement that was put on Hansard by the minister in any way at all presents to the people of Canada the true financial situation as it exists. If we do not take into consideration the interest on our foreign loans we are certainly overlooking an essential factor which imposes a considerable burden of taxation upon the average individual in this country.

There is another matter in that connection. Frequently the discussion would lead one to believe that trade is carried on between nations, and that some outstanding achievement has

been brought about by the activities of the government. There may be some truth in that suggestion, but there is a whole lot in it that is not true. Trade takes place between individuals, not between countries at all, and if individuals are prosperous there will be a large trade; if individuals are not prosperous there will be a small trade. For the government to claim that any prosperity we may have in Canada is due to their efforts is to claim something that they would have a good deal of trouble in substantiating. We have had several foreign visitors of more or less distinction in this country within recent months, among others, Hon. Herbert Hoover of the United States, and Premier Baldwin of Great Britain; and it is a remarkable thing that in the speeches they have made since they returned to their native land both have given credit to the cooperative organizations of the United Farmers for the better conditions in Canada. I think any government or any individual that wants to be fair must give a certain proportion of the credit for that betterment of conditions to the co-operative marketing organizations in western Canada. Mr. Hoover in his speech on returning to his native land said that he believed the farmers of the United States would benefit to the extent of at least twenty-five cents a bushel in the sale of their wheat in the current crop year—not because of anything they had done themselves but because the Canadian farmers had organized a pool for marketing their product. Now if our Canadian wheat pool is worth twenty-five cents a bushel to the American producer I do not think there is any question that it is worth a whole lot more to the Canadian producer, and when the Canadian producer benefits to that extent in the sale of his crop, undoubtedly that improvement is going to be reflected in the trade of the nation. Premier Baldwin stated that the producers in Canada had discovered a way of looking after themselves, and he pointed to the fact that whereas England was paying doles to her unemployed, the people of Canada had the habit of going out and solving their problems for themselves. He commented favourably upon our organization and was not at all stingy in the compliments he paid to it.

Another very unsatisfactory condition in western Canada is the lack of credit for those engaged in agriculture. The present branch bank system does not pretend to cater to the needs of our farmers in the west, particularly those in the frontier districts. I have known a farmer with sufficient assets to entitle him to a substantial loan refused an advance of a few dollars on the ground that "he was outside their loaning area." I do not know just how far he was outside their loaning area, but the fact that a farmer who carries on a considerable business, whose reputation for honesty is good, and who has ample assets to secure a loan, cannot go into a bank in western Canada and borrow a few dollars, is certainly not a desirable state of affairs, and I do not believe we shall ever meet the credit requirements of western Canada until we introduce legislation which will provide for the establishment of small banks with a capitalization running from $10,000 to $15,000. I am well aware that a lot of people will get very much excited about such a suggestion and will point to the number of small banks that have gone broke, especially in the United States. Well, sir, I am not so sure that that is any greater calamity than having a lot of our farmers go broke simply because they cannot get any credit, although their assets are sufficient to justify a loan. Besides, the limited capitalization of the type of bank that I have in mind would necessarily limit the extent of the loss in case of failure.

Nearly every hon. member who has so far taken part in this debate has paid some attention to immigration, and I suppose I would be very remiss if I, too, did not deal with this subject. At the present time our federal and provincial governments, our railway companies, and numerous other organizations are engaged in immigration activities. So far it seems to me that their combined achievements have amounted to about this: Year in and year out a certain number of our people in western Canada are leaving their farms for various reasons, but usually because they are not making sufficient money to justify their holding on. The efforts of our various immigration agencies may have resulted in enough immigrants being brought in to take the place of those who have left Canada, in other words, we may have kept pace with this loss, but certainly I do not think we are ahead of the game. Our immigration program is costing from eight to ten million dollars a year. I wonder if we would not make real progress if we spent a like amount in bettering conditions on the farms of western Canada. I have in mind the assistance that was given to a number of immigrants who settled in my constituency; homes were built for them, land was broken, wells were put down, and they were given equipment to start farming. That is all very well, but I would point out that the native born Canadian who is farming beside those people can get absolutely no consideration whatever from our immigration authorities; or

from our government he could not even find a bank out there to lend him enough money to pay his taxes. It does seem to me that if you are going to ignore absolutely our people in this way—I should not like to stop at the native born, but I think they are entitled to first consideration—there is no hope of bringing in a great number of immigrants and retaining them. And in view of the fact that the United States quota law applies to all but native born Canadians, it is apparent that for the future those of our immigrants who are dissatisfied with their prospects in this country will not be able to go over into the states, and the only ones who will not be stopped at the boundary line will be our native born. So it would not surprise me at all if eventually we reach the point where we will no longer be able to speak of our native born—they will all be in the United States.

There may be those in this house—I hope there are not—who think that the immigrants we are now bringing in are equal to the men and women born in the Dominion. I am not prepared to admit that, and never will be. Within a short distance of this city, down through Ontario, there have been raised what I believe to be the most moral and the most physically fit, and the most intelligent people in all the world. I have in my recollection a family down there that I knew well. There were six sons, and if they laid themselves down they would form a line about forty-one feet in length. They would weigh upwards of two hundred pounds apiece. Six better samples of physically fitness could not be found in this or any other country. Five of those boys are now resident in the United States. That fact alone is, I think, something of which we should be thoroughly ashamed. And they were a very moral people. You could go into home after home any morning and you would find them starting the day with a chapter from the holy book, and at night, too, there would be family prayer before they went to bed. In that whole community I very much doubt if a single person has troubled our criminal courts. Compare their record with what happens in many of our cities, where you will find that most of the offences have been committed by people ninety per cent of whom were admitted to this country within the last three years. Then there is a greater cost in educating the children of these immigrants. In a school in my own district a school teacher had a class of thirty children, sixteen of whom could not speak the English language. Does anyone for a moment suggest that those children can make the same progress educationally as English-speaking children? And is it fair to the teacher to expect her to have to devote a large portion of her time to teaching those pupils the tongue which they must understand before they can take up their school work? I hope when the estimates of the Immigration department are being considered this house will see to it that whatever help is extended to foreign immigrants along the lines I have mentioned shall also be extended to any Canadians who require it.

Mr. R. E. RYERSON (Brantford City): Mr. Speaker, I have no desire to appear as a pessimist, or in any way to minimize the prosperity of this country wherever that prosperity is in evidence; but, sir, claiming to possess some knowledge of business conditions and of the bitter problems of many of those living in the industrial centres of this country, I regret that I am forced to the conclusion that in this matter the boasted prosperity is unevenly divided and a large portion of our population have no share in it. The real prosperity of any country cannot be measured by the wealth of the few or by the statements and reports of banks and other financial institutions, but rather by the happiness and contentment of the large masses of her people.

Sir, many industrial centres in Canada have suffered in the past in different ways as a result of the tariff tinkering policy of this government—a policy which more and more would appear to be a deliberate, studied plan, conceived and carried out with a view to embarrassing and crippling the manufacturing industries of this country. And may I ask, to what purpose this policy of destruction? My answer would be—to meet the demands of a group in this house who maintain this government in power and who upon every occasion advocate the wiping out of every shred of tariff protection save that which protects their own interests. This system of selecting one important industry after another for attack has resulted in a general feeling of doubt and uncertainty throughout the manufacturing trade as to which will be the next to suffer.

We are told repeatedly by hon. members opposite that the tariff reductions in connection with farm implements and automobiles has not injured these industries; that the free entry of and drawbacks on parts and materials which go into the manufacture of these articles have fully offset the reductions in tariff. To what extent this may be true only the heads of these industries can answer. But, Sir, what about the steel and iron industries affected, and the thousands of men employed in these industries and in the plants turning out castings

and parts? Surely there can be no doubt as to the injury in this respect. Many of these plants are now idle or working part time and their employees scattered.

In correctly estimating the effect of tariff reductions on the farm implement industry this important fact should be given full consideration: Prior to 1924, when the last revision took place, this industry was greatly depressed and in a bad way, largely as a result of previous attacks in the way of tariff reductions, in which cases the compensation allowed in the way of drawbacks and free entry of materials was not sufficient to offset the tariff reductions. Many of the small plants were crippled, dividends were cut, or ceased entirely, and it was only by economics in management, resulting in half time employment, reduced staffs and reduced wages, that the larger and stronger plants were able to survive.

Further relating to this matter I have before me a report issued by the Department of Trade and Commerce which therefore should be correct, giving a summary of the trade of Canada for the years 1926-27. I have also added the figures which I received from the same source for 1925, in which will be found a record of the total imports into Canada of farm implements during these three years, as follows:

For the year 1925.. ..	$11,234,839
For the year 1926.. ..	17,630,949
For the year 1927.. ..	26,101,338

In other words, a total for the three years of the enormous sum of $54,967,126. It will also be noted that the increase in the year 1926 over that of 1925 was $6,396,110, and in 1927 over the same year, $14,866,499. These figures should furnish food for thought to every hon. member in this house and to the country generally. The startling increase in imports in this one industry, following so closely upon the almost entire wiping out of tariff protection, leads to but one conclusion if this policy is continued and extended, namely, the ultimate crippling and wiping out of all manufacturing industries. On the other hand, sir, taking this one industry as an example, a policy that will retain to our own manufacturers as far as possible the home market, would undoubtedly result in the great growth and development of this country, which I am sure we all desire, and which would be followed up by a real prosperity in which all classes of our citizens would share. Further, sir, to my mind, it would go a long way towards a solution of the immigration and emigration problems of which we have heard so much during this debate. Who in all this land, Mr. Speaker, would suffer by reason of such a policy? I contend that the retention of our home markets would so increase production and decrease manufacturing costs that prices to the consumer would at least be no higher; in many cases they would be lower. The increased population and decent living wage for the workingmen and women, which would follow would provide additional markets for all farm products and greatly assist and stimulate that industry.

I have no intention, Mr. Speaker, of criticizing the intricate, technical and confusing schedules of the tariff changes contained in the budget. The full effect of many of them upon the industries concerned can be determined only by time and experience. However, I presume they are the results of investigation and study by the tariff board, with the able assistance of the talented gentleman who poses as the representative of that phantom organization, "The Consumers' League," but who, I am credibly informed, in reality represents only a small group of Liberal and Progressive members of this house who sponsor and finance his position.

I had intended to refer at some length to the woollen industry, but, Sir, the entire case for this industry has been so clearly and ably set forth in the speech of my hon. friend from South Waterloo (Mr. Edwards) that little more remains to be said. The branch of the woollen industry confined to the weaving of blankets and woollen fabrics, and the spinning of yarns for the same, has for the past few years suffered largely as a result of insufficient tariff protection under the British preferential tariff. And may I at this point make my attitude quite clear on the question of the British preference? I am in full accord with a policy of preference in trade, not only with Great Britain but with all members of the empire. At the same time I contend that this preference should be mutual, and not to the disadvantage or injury of any Canadian industry. In all cases of tariff preference care should be taken to see to it that the items in the general tariff are high enough to allow for the preference and still maintain a reasonable protection of our own product. Many of these plants were forced out of business or temporarily closed, and fully 40 per cent of the looms were idle during the past year. Practically all plants now operating are working at not more than 50 per cent capacity. The combined woollen industry appealed to the tariff board and were given a hearing. The particular branch I have mentioned placed all the facts in their case before that board, and were confident that some measure of relief would be granted them in the budget. What consideration did

they receive at the hands of the Minister of Finance? There is not one thing of benefit in this budget for them. On the other hand, the free entry of yarns which they now spin themselves may have the effect of bringing about the scrapping of that portion of their plant which is now used in the preparation and spinning of yarns, and in throwing out of employment those engaged in this process.

Now, Mr. Speaker, I should like to refer briefly to the proposed changes in the tariff schedules under item 1060, which provides a drawback of 80 per cent. The item is as follows:

Newsprint paper, machine finished book grades of paper, not coated, coated or super-calendered book grades of paper, when imported under tariff items 197, 197a, or 198a.

When used exclusively in the production in Canada of magazines or periodicals, including farm journals, printed, published and issued at regular intervals, and enjoying second-class postal privileges, containing critical, informative and descriptive articles on various subjects, current topics, political and other news or reviews, criticism or other informative matter, or fiction, being bound, wire stitched or otherwise fastened together.

No doubt this change is proposed in the interests of the publishers of the papers and magazines enumerated, but, sir, may I point out that if we wipe out 80 per cent of the protection on this product, the American paper industry will benefit at the expense of our own paper mills. As having a direct bearing upon the subject I should like to quote a portion of an article published in the columns of the Mail and Empire of January 26, under the signature of a prominent and much esteemed lady resident of Brantford, which deals with this very matter in an intelligent and illuminating manner. I regret that time will not permit me to read the whole article, but the important part is as follows:

To the Editor of The Mail and Empire:

SIR,—

A trade report from Ottawa in to-day's (Monday's) Mail and Empire dealing with Canada's decreased exports and increased imports during December, showing a drop in our favourable trade balance of nine million dollars, in the month, prompts me to offer for publication a letter, written by myself and published in Saturday's edition of our local paper. It is as follows:

"In a recent industrial edition of the Milwaukee Sentinel is an advertisement by a Wisconsin paper company which has branches in several cities in the state and also in Port Arthur, Ont. It is entitled 'The Story of Consolidated Newsprint', beginning thus: 'From the first bites of the axes in the hands of sturdy Canadian woodsmen 'Consolidated' trained men guide the spruce pulpwood on its journey to the paper machines, etc., etc.' This newsprint concern represents but one phase of Winconsin's marvellous industrial prosperity, which is largely contributed to by Canada and Canadians who are content to remain 'hewers of wood and drawers of water' to Uncle Sam. In the Fox river valley, Wisconsin, between Appleton and Green Bay, are 37 of the largest paper mills in the United States, turning out not only newsprint but every grade and kind of paper commodity, and great fortunes have been based on the industry. The story of the poor school teacher who 15 years ago left a $1,200 job to go into papermaking and who now controls a fortune of $18,000,000 is no secret, and he is but one of many millionaires in Wisconsin, Michigan, New York and Maine who in a few years made their fortune by small initial investments in the pulpwood and paper business. Of the twenty million dollars paid last year to the 14,000 workers in the 59 papermaking establishments of the state, which turned out 100 million dollars worth of paper in the year, I venture to say that not one-sixteenth of one per cent of those wages was spent upon imported goods of any sort. United States manufacturers, backed up by the rest of the people and insisting upon being protected by a sane tariff policy, would supply all their needs. Whereas, according to our Dominion Bureau of Statistics, the people of Canada last year spent eleven million dollars on imported paper alone! This astounding fact in face of that other indisputable fact that the forest wealth of Canada from Nova Scotia to Vancouver Island is being depleted, exploited and exported by the huge pulpwood and paper manufacturers of the United States."

In concluding my remarks, Mr. Speaker, I desire to direct the attention of the Minister of Finance and the government to the lack of relief in this budget for an important industry which clearly placed its position before the tariff advisory board and the government, and which is now threatened with disaster. I refer to the binder twine industry, and in this connection I desire to read two resolutions which were passed by the Brantford Board of Trade and the Brantford City Council. Perhaps I may be permitted simply to place these resolutions on Hansard.

Mr. SPEAKER: It will require the unanimous consent of the house.

Mr. RYERSON: Very well; I will read them. The first is a resolution passed by the Brantford Board of Trade, as follows:

Whereas the prosperity of Canada depends, in no small degree, to continuity of employment and a fair wage to its industrial workers;

And whereas in recent years there has been a determined effort by powerful foreign interests to flood the Canadian market with commodities produced in countries where the scale of wages and standard of living are much lower than in Canada;

And whereas believing that justice to Canadian manufacturers and Canadian industrial workers demands a steady domestic market under fair competitive conditions;

And whereas the Brantford Board of Trade believes that certain industries in Brantford are adversely affected by these conditions:—

Now therefore the council of the Brantford Board of Trade urges that the Canadian gov-

ernment and dominion tariff commission investigate fully and impartially all instances where large quantities of goods produced in foreign countries under unfair conditions are dumped on the Canadian market, and that measures be taken to prevent irreparable injury to Canadian industries.

The resolution which was passed by the city council has reference to the Brantford Cordage Company, the largest manufacturers of binder twine in the British Empire and one of the largest industrial concerns in the city of Brantford. It is as follows:

Whereas it has been brought to the attention of this council that the said company is manufacturing at a disadvantage and is subject to unfair foreign competition;

And whereas it is desirous that all assistance possible should be given the said company to obtain relief from this dumping of foreign product on our market.

It is resolved that in the opinion of this council it is desirable that the federal government be requested to take immediate action to give relief to an industry the loss of which would have disastrous effect on the industrial situation of our city, and that copies of this resolution be forwarded to the Hon. Minister of Trade and Commerce and Robert E. Ryerson, our local representative in the federal legislature.

In conclusion I appeal to the Minister of Finance to give consideration to these resolutions and to the interests of the industries concerned before it is too late.

Mr. M. E. MAYBEE (Northumberland, Ont.): Mr. Speaker, I am very sorry to see so many empty benches on the government side this evening.

Mr. LAPOINTE: What about the empty benches on your own side?

Mr. MAYBEE: The remarks which I wish to make deal with a matter of very great importance and I should have been very glad to have all the members of the government hear them. Much discussion has taken place concerning the present budget, but the questions at issue are so important and affect my constituency as well as the country at large to such an extent that I could not let the opportunity pass without making some comments relative to it. It seems to me that there is an apparent reluctance on the part of hon. gentlemen opposite to attempt to defend the pronouncement as set forth in the budget.

I should like every hon. member to behold for a moment a picture which impresses itself on my mind. I can see the industries of this country drawn up in a line, a defenceless line, with the basic industry of agriculture forming the background. I also see the adopted policy of the government with their guns trained on this line of industries. First there is sniping at an industry here and then sniping at an industry there, the shot in every case passing through the industry in the foreground and lodging in the agricultural industry immediately beyond. Sometimes only a right wing or a left wing is lopped off, but the effect is always to injure agriculture. For the business of the agriculturist is to feed the workingman and his family and to supply certain raw materials to various industries. When these industries are prejudicially affected, and men and women are thrown out of employment, less produce is accepted from the farmer. The latest bomb fired by the administration in its budget will dismember the left wing of the woollen industry—the right wing having been shot off by a previous budget of this government—and will complete the demolition of the sheep breeding industry.

From all time two factors have stood out preëminently, so far as production is concerned, in agriculture: First, fertility of the soil, and second, freedom from noxious weeds. In connection with the first point I may say that sheep are unsurpassed by any live stock as a fertilizing agency. In the second instance, the Department of Agriculture is spending money in devising ways to eradicate weeds, including decoctions of chemicals, but the pasturing of 25 sheep on every 200 acres would eradicate more weeds than all the chemicals discovered. And yet for all that, the sheep industry is doomed to destruction under this administration. We have unlimited grazing lands, and even on rough hilly land, where other stock would perish the sheep do well. We Canadians, perhaps more than any other country in the world of like importance, require woollen products for clothing, but this government puts a premium on the importation of silks to clothe our wives and daughters, and delivers a blow to the woollen industry.

I am informed by prominent sheep breeders that any class or breed of sheep can be raised in this country. In confirmation of these remarks, I shall read a letter recently received by a member of this house from Mr. Robert Miller,—ex-president of the Toronto industrial exhibition, a recognized authority on stock breeding and a leading agriculturist of Canada—with full authority to make its contents public. Mr. Miller says in part:

It is my belief that sheep are at once the most necessary and under a fair chance, the most profitable animals on the farm. Many times I have said truthfully that there had not been a year in my experience that sheep had not paid a profit on my farm. That was some years ago when I was importing great numbers and breeding as many as my land would support. For years I have not kept any sheep, because of the uncertainty of the market, because of the neglect of those in position to

do so, to hinder trash of all kinds being sold as all wool. Great quantities of mutton have been coming from New Zealand and Australia so that our market has been most changeable and unreliable. All this has made sheep breeding and feeding the most changeable and unreliable of all farm operations. One year it would be good and the next year the very opposite, so much so that many like myself had to change to something else or lose what we had saved.

James Douglas of Caledonia has been quoted in the press as stating that the Australian treaty is the last straw, and it looks to me that way. Mr. Douglas is one of our most prominent farmers and breeders and he has been most successful as a cattle breeder and was also very successful with sheep. In conversation with him a short time ago, I asked him about the interviews reported and he said it was true, and he believed if a change did not take place he would have to quit keeping sheep.

It seems to me a great pity that an industry in which so many families were engaged in a small way, in many cases their only profit making animals being their small numbers of sheep, a very few cows and some hens, should have their whole hopes blasted as they have been by the Australian and New Zealand treaties.

The very best people that we have in this country are the modest and quiet living people in country places, who by their industry, frugality and economy rear their children, give them their little education, provide their food and their clothing from the lambs that they produce, from the wool, the butter and eggs that they can spare. While this is being done they are building character into the children that will make great men of them, big men that will take the foremost positions in world affairs.

It was humble people like that, that laid the foundation of this country, and if their fondest hopes are to be attained, if this country is to become the great nation that they hoped and prayed for, then the men and women that are to build the superstructure on the foundation they laid must come from that same source.

Men calling themselves statesmen have attacked the very homes of those people and traded the little chance and preference they had in their own Canadian markets away to other countries, so that men in big business might make their business bigger yet. They have sacrificed many thousands of our best and most deserving for the benefit of the mighty few that are well able to take care of themselves.

In spite of the fact that sheep are no longer to be relied on as profitable directly, I believe that I with many others will have to keep more of them in order to destroy the weeds that are fast taking possession of our fields since sheep have been discarded.

In Great Britain sheep have been the mainstay of the farmer and the farms. Without them they could not fertilize their farms, they could not keep them clean and they could not pay their rents. We have just as good land and climate here for the rearing of sheep as they have in Great Britain and we should have as good a market here if the people knew that mutton and lamb is the most wholesome food that human beings can have and if they knew that it is, when bred right, fed right, and prepared right, the greatest luxury too.

Then I wish to read a few passages from a letter written by the vice-president of a woollen industry in my constituency. The gentleman in question says in part:

We were very disappointed in reviewing the tariff schedule to see that nothing has been done in a constructive way to alleviate the present deplorable condition under which the woollen industry is trying to operate.

It had been felt that after placing before the advisory tariff committee the manufacturers' position, some assistance would have been given to the woollen cloth manufacturers, instead of which we have received another very definite set back by the entry into Canada, free, woollen fabric in the gray weighing six ounces. This finally disposes of the flannel business for which the Campbellford mill has been justly famous for a number of years. We have endeavoured in the past few years to make a certain amount of flannel to keep the citizens of Campbellford employed and this was only accomplished at a loss to the company, but with the additional reduction in the tariff it is impossible for us to carry it. This is one more fabric that has been lost to the Canadian industry.

This is the industry which this government is sacrificing, with the result that hundreds of men and women are thrown out of employment and are leaving for the United States if they can find the wherewithal to take them there.

The following figures were compiled and submitted by the Canadian Woollen and Knit Goods Association:

Raw wool imported and retained for manufacture in Canada

Year	Imported pounds	Domestic pounds
1922..	12,412,914	20,204,567
1923..	17,156,902	9,855,972
1924..	18,376,652	9,530,337
1925..	13,544,482	9,484,454
1926..	13,292,727	9,038,233

This shows a steady decline in the manufacture of woollen goods. In 1923, it was found in 124 mills that an average of 40 per cent of the machinery was idle and undoubtedly more is idle at the present time, but this government will relieve this situation by admitting machinery free. In 1926, $43,000,000 worth of woollen and knitted goods were imported. If this had been manufactured in Canada in addition to what was manufactured here, all our Canadian mills would have been working day and night. Let us compare the policy of this government with that of the Minister of Agriculture of Ontario, as set out in the following:

Hon. John S. Martin, Minister of Agriculture for Ontario, informed the members of the Ontario Sheep Breeders' Association, at their recent annual meeting in Toronto, that the government, in order to encourage sheep raising, is prepared to supply groups of farmers with ewes, pure-bred rams and expert advice on their handling. Farmers desiring this

assistance must organize themselves into groups. To each member of a club the government will give eight good ewes and the free service of a pure-bred ram for two years. Preference will be given to clubs whose members agree on the same breed of sheep. Payment for the original flock will start the second year, when the government will be allowed to choose three lambs from the increase. This payment of three lambs will continue for four years, when a farmer will receive full title to his flock. The government expects this policy will help to reduce the weed menace.

After a commission had investigated the cost of production in Great Britain as compared with that in Canada, the Hon. Mr. Fielding said on the floor of this house in 1904, as reported in Hansard, volume 3, at page 4365:

They—

Meaning the manufacturers in other countries.

—are not worrying about the good of the people of Canada. They send goods here with the hope and the expectation that they will crush out the native Canadian industries. And with the Canadian industries crushed out what would happen? The end of cheapness would come, and the beginning of dearness would be at hand. Artificial cheapness obtained to-day under such conditions, at the expense of dearness at a very near day in the future, is not a system of which we could approve or which any of us on either side of the house could encourage.

Yet we find this government encouraging it. A so-called tariff advisory board has been instituted by this administration to investigate these matters, but it has proven to be a patronage committee rather than a tariff commission. It has degenerated into an absolute farce along with the civil service commission, but, withal, costing this country hundreds of thousands of dollars.

The dumping of fruit and garden products on our markets continues. If you walk down the streets of any of our towns or cities you will find on display in the windows of stores apples from Washington and Oregon, and vegetables from Mexico and other southern countries. No finer apples or vegetables can be produced than are grown in the constituency which I represent as well as in scores of other places in Canada, and yet we are debarred from the markets of the United States. It is within the jurisdiction of this administration to preserve this market for the benefit of our producers and to stop this dumping, and I would suggest that, if the wealthy wish to eat out of season dainties that are produced in this country, they should be invited to contribute to our national treasury.

The dairy industry appears to have been singled out for a broadside "barrage" from this government, and I should like to call the attention of hon. members to the fact that the county of Northumberland is noted for its production of high-class dairy products. Last year it stood second in eastern Ontario in the production of first grade and specials on cheese, a number of makers scoring one hundred per cent. The dairy industry is suffering from serious and unjust competition on account of the Australian treaty whereby butter from Australia and New Zealand is entering this country on a payment of a duty of one cent per pound. This butter is produced under summer conditions with no overhead expense with which the dairymen in this country are confronted for costly buildings and winter feeding, and the Australian dairymen receive assistance by way of a bounty of six cents per pound on exportations. One result in my county—and I am sure the same thing prevails in many other sections—is that hundreds of splendid dairy cattle have been sold and shipped across the line. The outcome will be greater importations of butter this year, with the dairymen being gradually forced out of business. It seems remarkable that this government would negotiate a treaty whereby Australia could increase at will the duty on automobiles coming from this country, and yet this government is unable to rescue the dairymen of Canada. It appears that the treaty has been of no advantage to either country and very disastrous to Canada. Even the Canadian Council of Agriculture, an avowed low tariff organization, is strong in its condemnation of the treaty.

The United States tariff commission has found that it costs 35.5 cents more to produce a gallon of cream and 4.3 cents more to produce a gallon of milk in the United States than it does in Canada. The present duty on cream going into the United States is 20 cents per gallon and on milk it is 2½ cents per gallon. The National Milk Producers of the United States are demanding an increase of fifty per cent in the duty and it is within the power of the president of the United States to grant this. This would make the duty 30 cents a gallon on cream and 3¾ cents a gallon on milk. In all probability this request will be granted and, if congress takes a hand in the matter, the duty will likely be still further increased. This will be disastrous to milk production along the boundary where scores of cheese factories, on account of the advantage of this market, have been closed and disorganized, and it shows the futility of depending upon foreign markets and sacrificing the home market. If the figures are correct, the difference in the cost of production shows the high state of efficiency of the Canadian dairyman; but what advantage is this if he

is to be taken out and shot before daylight? In 1926 we exported to the United States more than 7,000,000 gallons of milk, valued at $1,245,392, and 5,374,131 gallons of cream, valued at $8,050,912. If we lose this market, what then? I have no criticism to offer of the United States government, but I feel that we should at least have our own home market.

In regard to our immigration policy, I think it is generally conceded that before this country can achieve that prosperity and prominence that is absolutely within the confines of possibility, we must have more population; in fact, if we had sufficient population in this country, profitably employed, many of our greatest problems would be automatically solved. The present government are spending huge sums of money to bring settlers to this country, only to pass them out through the back door to the United States. But what is infinitely worse is that they are not giving our own boys and girls the advantages which they are offering to the foreigners, and while one of our own is worth many foreigners in the progress of this country, they too are going to the country to the south of us. Sir Robert Falconer, President of Toronto University, in his report on the university, is quoted as follows:

> It is not unreasonable for people to complain that many Canadian university graduates are going to the United States, according to Sir Robert Falconer, President of the University of Toronto.
>
> Graduates of Toronto are to be found in every state in the union, says Sir Robert Falconer in the president's report in the university, and he continues: "It would seem that a fair estimate of the number of our graduates of the past decade of Canadian birth who are at present in the United States is between 900 and 1,000, that is to say about 11 per cent of the total. Though this number is too large for the healthful growth of our country, it is, I believe, much smaller proportionally than in other walks of life."
>
> The large post-war classes, Sir Robert believes, could not rapidly be absorbed in Canada during the time of readjustment and there is not much doubt but the exodus in those years was greater than normal. Nevertheless, the condition is considered so serious that Sir Robert Falconer advises, "that every effort should be furthered by means of employment agencies and otherwise that will hold out to our graduating classes the opportunities of our own land."

In my humble judgment this government is working at the wrong end to accomplish any satisfactory results.

A national policy must be inaugurated in this country to develop our natural resources, and enable us to export our products in the finished state instead of, as at present, in the raw state. The export of 1,500,000 cords of raw pulpwood last year brought us $15,000,000. Now if this quantity of pulpwood had been manufactured into finished paper products in Canada it would have brought us anywhere from $90,000,000 to $150,000,000. If the $7,000,000 worth of raw asbestos that we shipped to the United States last year had been manufactured into finished products in Canada before being shipped out of this country, we would have received $77,000,000 for it. The difference in these amounts would have been largely made up of wages. If our nickel, copper and other minerals had been converted into finished products in Canada last year they would have brought us many millions of dollars. With our imports steadily increasing and our exports rapidly declining, with a population of nine million importing goods to the value of nearly three million dollars a day, with our own Canadian investors buying government and municipal securities rather than investing in Canadian industrial enterprises, how can we expect British capital to be invested in this country? As his gracious majesty the King was pleased to say, "Canada has slept long enough; it is time to wake up."

As a national policy for Canada the Montreal Daily Star has put forward in concise phraseology a suggestion which is worthy of consideration, as follows:

> 1st—Apply the system of protection in full measure to secure the home market for the producer.
>
> 2nd—Bonus the manufacturer on his exports to enable him to undersell trade rivals in foreign countries.
>
> 3rd—By a rigid system of inspection compel the manufacturer to sell for home consumption at cost with a restricted margin of profit to be determined by an independent tribunal when the policy in inaugurated, and thus convince the consumer that he is not being called upon to pay the equivalent of the duty.
>
> 4th—Provide strict preventive laws carrying heavy penalties for the evasion of the enactments governing the strict application of this policy.
>
> Critics may maintain that such a policy is revolutionary. It is revolutionary, but Canada has been stagnating too long, increasing our population at a snail's pace while our neighbours under a tariff that is almost prohibitive have been going forward by leaps and bounds, exporting to the countries of the world on a tremendous scale.

In conclusion, Mr. Speaker, when our needs are so urgent as they are at present, I wish to say as emphatically as I can that it is imperative that the government consider suggestions from some other source if they have no progressive policy of their own to offer.

Mr. ARTHUR DENIS (St. Denis) (Translation): Mr. Speaker, before submitting to the house the few remarks which I intend to make on the budget, I wish to let the hon.

member for Fort William (Mr. Manion), know, that I belong, and I am proud of belonging to this society of mutual admiration, of which the hon. Minister of Finance (Mr. Robb), forms part. It is worth as much, to say the least, as the one to which he belongs. Our society does not aim at undermining the good name of our country. I shall, Sir, strongly advise the member for Fort William to read the speeches of his friends, but especially his own and he will find therein the evidence to which I allude.

I shall now broach the budget proposal. For my part, I am quite satisfied, and I wish to congratulate the hon. Minister of Finance and assure him that the electors of my riding whom I have the honour to represent, share my satisfaction. Let me, Sir, however, warn the Minister of Finance, that, should he continue giving the country a so able and prosperous administration, my majority which was 16,000, at the last general elections, will increase to 20,000 at the next elections. To please, Sir, our friends to your left—and it is quite true—I shall say that Providence must have helped you to obtain such a success. It must be admitted that your task was most trying, you had to overcome a thousand difficulties that our good friends the Conservatives had created by their administration of speculation, favouritism and false patriotism. Providence, however, must not be charged with all their misdeeds; let us rather acknowledge that they proved unworthy of its protection. Fortunately for the country and the taxpayers, in 1921 by the will of the people, the Liberals came into power, and in a few years brought back to the country peace and prosperity, which we had lost under the Conservative rule. This year the hon. Minister of Finance apprises us of the fact that notwithstanding the reduction of taxation which took place last year, the public debt has been reduced by nearly $39,000,000 or $144,750,000 in five years. Is not this result, Mr. Speaker, of a nature to rejoice us? One must be unfair towards the hon. Minister of Finance and the present government not to congratulate them on their success. The government did not only content themselves with reducing the national debt, with obtaining surpluses in the administration of the country's affairs; but it has done more, this year again, it has reduced the sales tax and the income tax by $19,000,000, or so, thereby relieving the taxpayers who are overburdened with taxation to pay off debts contracted by our friends the Conservatives. I could moreover mention a number of other reductions which have been carried out by this government, but I shall not further take up the time of the house. I should not like however to resume my seat without saying a few words in regard to certain questions which have drawn my attention both in and out of this house.

For a number of years, the scheme of the St. Lawrence waterways from Montreal to the great lakes has been discussed. Many opinions for and against this scheme have been expressed. Commissions have been appointed to study it; but I do not think that there has been a commission appointed to study the necessity of such a project. Certain persons, it is true, have expressed their views on the subject, but I wish to state in this house, that their reasons are not sufficient to carry this scheme through. Must we build this St. Lawrence waterways with the sole object of booming immigration and giving work to the new comers. I think there should be more weighty reasons to justify such a large expenditure. The national viewpoint must be borne in mind. I must congratulate the government on the foresight it displays in coming to the conclusion that this scheme needs further study; it might, perhaps, jeopardize the country's greatest interests.

There is another question which I would like to discuss: it is that of immigration. I think it is the government's duty not to bring into the country people who will in no way help in its development and prosperity. It is not the number but the quality which we should seek. We must deny the entrance of this country to people who would displace those who have made their home here. We must first find work for those who live side by side with us, we must help them to acquire some of the ease and comforts of life.

Before resuming by seat, Mr. Speaker, I wish to also ask the government to reconsider the request of the delegation which came to Ottawa in order to have the tax on corporations of public utilities removed, as for instance the tax on the Montreal Light, Heat and Power Consolidated. It is unfair to the province of Quebec to have these companies pay a tax, because after all it is paid indirectly by the ratepayers of the province. I think that all citizens called upon to pay taxes should be on equal terms. I can understand the government's hesitation in removing these taxes because, at first, this company did not seem to be actuated by truly patriotic sentiments. A company which pays taxes to the amount of $800,000, should be the first to try and help along their customers, and I think that had the company first reduced its rates, the government would be more disposed to remove those taxes and act fairly,

not only towards the citizens of Montreal, but towards all citizens of that province.

Mr. Speaker, in closing my remarks, I wish to again let the government know how I feel elated with the budget proposal. I was once more impressed with the fact, that the true champions and guardians of the Canadian nation, are to be found on this side of the house and not on the other side; I realized that if patriotism exists among the hon. members of this house, it is to be found in the Liberal camp.

Our Conservative friends met a few months ago, at Winnipeg, in a congress which has become famous. The people of Canada expected another political program from our opponents, however nothing turned up. They were satisfied with gilding over their old idols so as to present them again to the people of this country. I fear very much that at the next general elections the same success awaits them. They may keep up criticizing the Liberal policy, making incendiary speeches and thus ruining the country's good name, but I am convinced that the people are better informed than they think, and are in a position to appreciate the efforts and unceasing work of the present government in order to look after the welfare and prosperity of all Canadians.

Mr. SPEAKER: Is the house ready for the question?

Mr. GUTHRIE: Mr. Speaker, it is about ten o'clock, and I know the arrangement between the whips is to continue the debate. I would therefore suggest that this is the right time for adjournment.

Mr. LAPOINTE: But somebody must move the adjournment of the debate.

Mr. GUTHRIE: I understand there was an arrangement as to that.

Some hon. MEMBERS: Question.

Mr. CASGRAIN: It is early yet.

Mr. LAPOINTE: It is not yet ten o'clock.

Some hon. MEMBERS: Question.

Mr. CHARTERS: It was understood, Mr. Speaker, that at the conclusion of the hon. member's speech the Minister of Railways would move the adjournment of the debate.

Mr. GUTHRIE: We were notified that he would move the adjournment of the debate.

Mr. LAPOINTE: But not before ten o'clock.

Mr. SPEAKER: Is the house ready for the question?

Mr. SPENCER: There is an understanding between the whips that the debate shall continue for a day or two because several hon. members wish to speak. As I understand, there is a large party at government house to-night, and probably several hon. gentlemen are absent on that account.

Mr. CASGRAIN: It was understood that the debate should proceed a little longer to-night, but apparently some hon. members who were to have spoken are attending certain functions—I do not know where—and consequently are not ready to proceed. Under the circumstances someone might move the adjournment of the debate.

On motion of Mr. Charters the debate was adjourned.

On motion of Mr. Lapointe the house adjourned at 9.55 p.m.

Wednesday, February 29, 1928

The house met at three o'clock.

INDUSTRIAL AND INTERNATIONAL RELATIONS

Mr. C. R. McINTOSH (North Battleford) presented the first report of the select standing committee on industrial and international relations as follows:

Your committee recommend that 750 copies in English and 250 copies in French of papers and records of evidence to be taken be printed, and that standing order 64 be suspended in connection therewith.

Mr. McIntosh moved that the report be concurred in.

Motion agreed to.

PRIVATE BILLS COMMITTEE

Second report of the select standing committee on miscellaneous private bills.—Mr. Parent.

BANKING AND COMMERCE COMMITTEE

Mr. F. W. HAY (North Perth) presented the first report of the select standing committee on banking and commerce as follows:

Your committee recommend that 750 copies in English and 250 copies in French of their proceedings and evidence which may be taken respecting consideration of the improvement of the banking system of Canada be printed from day to day for the use of the committee and of the House of Commons, and that standing order 64 be suspended in connection therewith.

Mr. Hay moved that the report be concurred in.

Motion agreed to.

PRIVILEGE—MR. FORKE

Hon. ROBERT FORKE (Minister of Immigration and Colonization): I rise to a question of privilege. As reported on page 851 of yesterday's Hansard the hon. member for Frontenac-Addington (Mr. Edwards), speaking of the closing days of the session of 1926, made this remark:

> The present Minister of Immigration and Colonization (Mr. Forke) gave his solemn written pledge to the Governor General that he would stay with the session and with the government until the business of the session was finished and supply voted. It is also true that the pledge was violated.

This is an entire misstatement of the facts and were I permitted under the rules of parliament to do so, I would use a very much stronger term. No pledge was ever asked of me and no pledge was ever given. Mr. Meighen was sworn in as Prime Minister of this country before I ever saw the Governor General. The Governor General asked no pledge; I gave none. He did give me some information in confidence, a confidence which I have never violated.

PRIVILEGE—MR. ESLING

Mr. W. K. ESLING (West Kootenay): I rise to a question of privilege. Under date of August 5, 1927, there is a despatch from Victoria, British Columbia, stating:

> Definite arrangements for a survey to map out the route of the Golden-Revelstoke road were made at a conference here this morning between Hon. Dr. J. H. King, federal Minister of Health and Hon. W. H. Sutherland, provincial Minister of Public Works.

That is for British Columbia. The despatch proceeds:

> The province and the Dominion will undertake the surveys jointly under present plans.

Then under date of February 14 of this year there is another despatch from Victoria stating:

> Construction work on the Revelstoke-Golden highway will be commenced during the present season.

On February 16 I placed on the order paper two direct questions.

Mr. SPEAKER: I should like the hon. member to understand that so far I do not see any question of privilege. Is there in those statements anything which affects the hon. member personally?

Mr. ESLING: Yes. I am just coming to it. It is a question of the veracity of one of the members of this house. I placed on the order paper these two direct questions:

> 1. Did the federal government or any department thereof, enter into any agreement with the government of British Columbia, during the year 1927, for the survey of the road between Revelstoke and Golden in British Columbia?
> 2. If not, has an agreement for such a survey in the present year been arranged for?

After eleven days I get the answer simply:

> The subject is under discussion.

I consider that I am entitled to a direct answer to a direct question.

Mr. SPEAKER: This question might come up before the estimates are taken up, but no question of privilege is involved.

Hon. R. B. BENNETT: Mr. Speaker, there is involved in this a question of the privileges of this house, not a question of the privilege of individuals. The rule is clear that when an answer is given to a question which affects the honour of this house, or when a minister of a provincial government makes a statement which is at variance with that, we have a right as members to raise the question of the privilege of the house when its honour is impugned by the answer to that question.

Mr. LAPOINTE: Surely there is no question of privilege in that. The hon. gentleman has asked a question, which has been answered, and then he quotes an item in a newspaper which says that something else may be the case. Where is the privilege in that?

Mr. BENNETT: No. The answer was given a year ago by the minister himself in the province.

Mr. LAPOINTE: I assume that the person who furnished the answer—

Mr. BENNETT: The minister says it was concluded by the province?

Mr. LAPOINTE: Which minister? It is the newspaper that says that.

Mr. STEWART (Edmonton): As the minister who furnished the answer, speaking for the federal government—

Mr. BENNETT: It is not concluded then?

Mr. STEWART (Edmonton): —I say the answer I gave is in accordance with the facts.

Mr. BENNETT: That is what is wanted.

Hon. J. H. KING (Minister of Soldiers' Civil Re-establishment): Just because I happen to be the minister from British Columbia, and knowing that my hon. friend from West Kootenay (Mr. Esling) has directed his question at me, I would say for his information

and that of the house that there were conferences between myself representing the federal government and the Minister of Public Works in the province of British Columbia.

Mr. BENNETT: Mr. Speaker, the discussion that is taking place now is wholly out of order.

Mr. KING (Kootenay): I think I have the right to answer.

Mr. SPEAKER: Order. There is nothing before the house so far, and my ruling is that according to the authorities there is no question of privilege involved.

TARIFF ADVISORY BOARD

SEASONABLE FRUIT AND VEGETABLE TARIFF INQUIRY

Hon. J. A. ROBB (Minister of Finance): Yesterday the hon. leader of the opposition (Mr. Bennett) asked for the evidence taken by the tariff advisory board in the fruit and vegetable inquiry. The hearing of this application has not yet been completed, but I have copies of the evidence taken by the board in the last three hearings which I now table.

Mr. BENNETT: Thank you.

JOINT COMMITTEE ON PRINTING

Right Hon. W. L. Mackenzie King (Prime Minister) moved:

That a message be sent to the Senate to acquaint their Honours that this house has substituted the name of Mr. Price for that of Mr. MacLaren on the select standing committee on printing.

Motion agreed to.

LAKE OF THE WOODS REGULATION ACT, 1921 REPEAL

On the order:

First reading of bill to facilitate the provision of storage in Lac Seul in the province of Ontario, and to repeal the Lake of the Woods Regulation Act, 1921:

Hon. CHARLES A. STEWART (Minister of the Interior): With respect to this bill, Mr. Speaker, as it involves an expenditure of public money, I presume that it should be preceded by a resolution, and I therefore ask that this order be dropped. I will give notice of proceeding with the matter by way of a resolution.

Order dropped.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

HALIFAX PIER NO. 9—AMERICAN COAL

Mr. SMITH (Cumberland):

1. What portions of pier No. 9, in the city of Halifax, Nova Scotia, are leased?
2. By whom are said portions leased?
3. To whom are said portions leased?
4. Was any quantity of American coal unloaded at this pier during 1927 for any department of the government or any other person or persons?
5. If so, for whom?

Mr. DUNNING:

1. Two areas of 17,000 square feet each.
2. His Majesty the King, as represented by the Minister of Railways and Canals.
3. Alfred T. O'Leary and S. Cunard & Co., Limited.
4. Not by the Canadian National railways or the Department of Railways and Canals. No information as to coal handled by lessees.

COVE ISLAND RADIO BEACON

Mr. THOMPSON:

In view of the marine disaster of last fall on the great lakes, and to make navigation of these lakes safer, is it the intention of the government to establish forthwith a life-saving station on Cove island in the channel connecting lake Huron and Georgian bay, and to install there a position or direction finder?

Mr. CARDIN: Decision has been taken to establish a radio beacon on Cove island.

EGG IMPORTATIONS

Mr. GOTT:

1. How many eggs were imported into Canada during 1927?
2. Where from?
3. What amount from each country?

Mr. MALCOLM:

Imports of Eggs into Canada during the Calendar Year 1927

Countries Whence Imported	Eggs in the Shell		Eggs, n.o.p.	
	Quantity	Value	Quantity	Value
	Dozen	$	Pound	$
United Kingdom	85	197	70,994	17,760
United States	3,171,116	1,382,516	728,918	177,862
China	125	35	1,224,927	267,153
Germany	—	—	200	122
Hong Kong	55,315	21,414	—	—
Newfoundland	4	2	—	—
Total	3,226,645	1,404,164	2,025,039	462,897

PICTOU—CHARLOTTETOWN STEAM SERVICE

Mr. MACDONALD (Kings):

1. What steamer or steamers were engaged in the service between Pictou, Nova Scotia, and Charlottetown, Prince Edward Island, during the season of 1927?
2. What amount of subsidy was paid for this service, and to whom?
3. What was the total traffic carried on this service: (a) freight; (b) passengers; (c) automobiles?
4. What was the total of receipts from carriage of such traffic, including mails and express?
5. Has contract for this service been renewed for the season of 1928?
6. If not, what is the intention of the department with regard to it?

Mr. MALCOLM:

1. S.S. Hochelaga.
2. $35,000.
3. (a) 554.07 tons of freight; (b) 6,060 passengers; (c) 882 automobiles.
4. All particulars of receipts and expenditures on subsidized steamship services are considered by the department to be confidential.
5. The present contract does not terminate until November 30 1928.
6. Answered by No. 5.

QUESTIONS PASSED AS ORDERS FOR RETURNS

BOVINE TUBERCULOSIS—RESTRICTED AREAS

Mr. GARLAND (Bow River):

1. What was the total cost of the enforcement of the restricted area plan to date?
2. What is the total area covered in the plan?
3. What is the total number of cattle inspected?
4. What is the total number of cattle in Canada?

Mr. GARLAND (Bow River): Mr. Speaker, I cannot for the life of me see any justification for having this question passed as an order for return, but I shall not raise any objection if the minister will undertake to see that the replies are brought down as quickly as possible.

Mr. MOTHERWELL: The first section of the question entails a tremendous amount of work and we have been working on it ever since it appeared on the order paper. It will take a considerable time longer before the information will be ready, and that is why we do not want the question to remain on the order paper; there is no advantage in having it there under the circumstances. The information asked for involves so much work that it will probably be more than a week before it is completed.

[Mr. Malcolm.]

Mr. GARLAND (Bow River): As the minister probably understands, this is a question which must be answered if there is to be any intelligent discussion of his estimates, and I trust he will have the answer down before his estimates are brought up.

TARIFF ADVISORY BOARD

Mr. SPENCE (Parkdale):

1. What amount has been paid in: (a) salary; (b) expenses and allowances; (1) during the fiscal year ending 31st March, 1927, and, (2) during the period from the 1st April, 1927, to January 31, 1928, to the chairman of the tariff advisory board?
2. What amount has been paid in: (a) salary; (b) expenses and allowances, to each member of the tariff advisory board during the periods mentioned in above question?
3. What staff is employed by the tariff advisory board?
4. What are their names, date of appointment and salaries?

UNOPPOSED MOTIONS FOR PAPERS

ENGLISHTOWN—INGONISH FERRY MAIL CARRIER

Mr. JOHNSTONE (Cape Breton):

For a copy of all documents and correspondence on file in the Post Office department concerning the dismissal of the mail carrier between Englishtown and Ingonish Ferry, Victoria county, Cape Breton, including all complaints, if any, received by said department.

IVERA FARM POSTMASTERSHIP

Mr. JOHNSTONE (Cape Breton):

For a copy of all documents and correspondence on file in the Post Office department concerning the dismissal of Malcolm McRae, and the appointment of the new postmaster at "Ivera Farm" post office, Upper Middle River, Victoria county, Cape Breton, Nova Scotia.

NATIONAL REVENUE DEPARTMENT —SEIZURES

Mr. W. G. McQUARRIE (New Westminster) moved:

For a return of seizures from 1925 to 1928 inclusive, by the Department of National Revenue, or the former Department of Customs and Excise, showing the following particulars:—

1. (a) the date of each seizure; (b) the description of the property seized; (c) the value of the property seized.
2. The person from whom each seizure was made.
3. The person by whom each seizure was made.
4. The penalties imposed in respect of each seizure.
5. How the seized property in each case was disposed of, and the amounts, if any, realized out of the same.
6. The cost of making each seizure and of holding the seized property.
7. In respect to each seizure, the amount of moiety awarded, and to whom awarded.

Hon. J. A. ROBB (Minister of Finance): In the absence of the Minister of National Revenue (Mr. Euler) I would say there is no objection to this motion being passed, subject of course to the reservation that some confidential payments may have been made to people who gave information.

Mr. BENNETT: I think that is perfectly reasonable.

Motion agreed to.

Mr. W. G. McQUARRIE (New Westminster) moved:

For a return in respect of seizures by the Department of National Revenue or the former Department of Customs and Excise from 1925 to 1928 inclusive, showing the following particulars:—

1. The name of each person employed by the department for the purposes of seizures.
2. The locality in which each person making seizures acted on behalf of the department.
3. The salary of each such person and his expenses in 1925, 1926, 1927, and 1928.
4. (a) The number and value of seizures made in 1925, 1926, 1927, and 1928, by each person; (b) and the penalties imposed in each case.

Hon. J. A. ROBB (Minister of Finance): There is no objection to this motion passing, subject to the reservation I made with regard to the previous motion.

Motion agreed to.

RELATIONS WITH SOVIET RUSSIA

On the orders of the day:

Mr. A. A HEAPS (Winnipeg North): On the 16th of February the house passed a motion asking for the production of all papers regarding the breaking off of relations between Canada and soviet Russia. Has the minister received any reply from the imperial government regarding that matter?

Right Hon. W. L. MACKENZIE KING (Prime Minister): I am as anxious as my hon. friend to receive a reply, but I am sorry to have to tell him that none has come as yet. I will send another communication.

SALARIES OF RURAL POSTMASTERS

On the orders of the day:

Mr. W. T. LUCAS (Camrose): Mr. Speaker, when Canada returned to penny postage the salaries of country postmasters were lowered by reducing the commission on the sale of stamps. I should like to ask the Postmaster General (Mr. Veniot), if he has remedied this situation; and if so, has he made any provision for an increase in the salaries of these postmasters?

Mr. SPEAKER: Notice should be given of such a question.

NOTICE OF COMMITTEE MEETINGS

On the orders of the day:

Sir GEORGE PERLEY (Argenteuil): Mr. Speaker, I should like to call your attention and the attention of the house to the question of notice of meetings of committees. I know there is nothing in the rules in regard to it, but it seems to me that we should have at least twenty-four hours' notice of these meetings. I hold in my hand two notices of meetings of committees held this morning. I am a member of those committees, but these notices were not in my box at three o'clock yesterday afternoon. I submit it is not fair to members of committees of the house that they should be given such short notice, and I would suggest that at least twenty-four hours' notice be given of these meetings.

Right Hon. W. L. MACKENZIE KING (Prime Minister): I speak subject to correction, but my impression is the notices of meetings of committees appear in the votes and proceedings. If my hon. friend will look at the votes and proceedings from day to day he will, I think, get the the twenty-four hours' notice which he desires.

Sir GEORGE PERLEY: The notices of these committee meetings are contained in the votes and proceedings of yesterday, but we did not receive these votes and proceedings until to-day. There is no notice of these meetings in Monday's issue.

Mr. MACKENZIE KING: I think my hon. friend will find that the notices were published in the votes and proceedings of Monday as well as in yesterday's issue. Nevertheless, Mr. Speaker, it would be advisable to have the notices sent to the post office as quickly as possible.

Sir GEORGE PERLEY: They are not in my copy of Monday's votes and proceedings.

Mr. MACKENZIE KING: I will send my hon. friend my copy.

TOBACCO GROWING INDUSTRY

On the orders of the day:

Mr. E. J. GOTT (South Essex): Mr. Speaker, yesterday, in his absence, I put a question to the Minister of Agriculture (Mr. Motherwell). It related to the tobacco growing industry in western Ontario. I should like to know if he is now prepared to give me the information I then asked for.

Mr. SPEAKER: The question should be placed on the order paper.

Hon. W. R. MOTHERWELL (Minister of Agriculture): Will my hon. friend repeat the question?

Mr. GOTT: I want to know what attitude the government is taking in appointing a commission to investigate the condition of the tobacco growing industry in western Ontario, what proposals are contemplated in regard to handling the situation, and upon whose recommendation the commissioners were appointed.

Mr. MOTHERWELL: Mr. Speaker, I think that is a very proper question to put on the order paper.

THE BUDGET

DEBATE ON ANNUAL FINANCIAL STATEMENT OF MINISTER OF FINANCE

The house resumed from Tuesday February 28 consideration of the motion of Hon. J. A. Robb (Minister of Finance), that Mr. Speaker do now leave the chair for the house to go into committee of ways and means, the proposed amendment thereto of Mr. Cahan and the amendment to the amendment of Mr. Fansher (East Lambton).

Mr. THOMAS CANTLEY (Pictou): Mr. Speaker, the budget proposals of the hon. Minister of Finance (Mr. Robb) now being discussed—

Some hon. MEMBERS: Louder.

Mr. SPEAKER: Order please. There is too much conversation in the house; I cannot hear the hon. gentleman.

Mr. CANTLEY: Mr. Speaker, the budget of the hon. Minister of Finance now being discussed by all sections of the house does not suit me either as to what the minister proposes or as to what he has omitted from its provisions; in short I do not like it at all and I wish now to state why I do not like it.

First: It fails to give fair and necessary protection to important industries which would, if properly safeguarded, provide a large measure of employment for our people. Another reason for my dislike is that the minister attempts to save an important industry from the disabilities which this budget imposes on it by lowering or removing the duty on some of the material employed in that particular industry here again resorting to the tactics employed in the case of the agricultural implement industry, and later the automobile industry, when, in each case, one of the great basic industries of this country was sacrificed in the effort to save from extinction industries he had directly attacked by the tariff changes then introduced. And, mark this, that in most, if not all of recent Liberal budget changes, the industries most hurt were those basic industries, particularly those of my native province—coal and steel. These were most unfairly and flagrantly attacked and a quite indefensible advantage given industry located in another province.

I am sorry the Minister of Finance is not in the house, as I desire to make some further remarks that I think should be of interest to him. The minister, I am convinced, is not naturally a hard-hearted tyrant or wholly indifferent to the claims of those engaged in industries outside of his native province. Rather, I choose, to think that his seeming indifference and total failure to give any practical assistance to the coal, iron and steel industries, is due to a lack of knowledge of the facts, and failure to appreciate their importance or the scope and magnitude of the injury which the policy of the Liberal government has inflicted on the chiefest industry of my native province, Nova Scotia.

The hon. member for St. Lawrence-St George on Monday of last week referred to the steel situation and gave the house some startling facts as to the position of the industry, supporting his arguments by figures as to employment and production and the dire effect of the policy of the government as regards what undoubtedly is the greatest basic manufacturing industry of this country, and I shall not weary the house with a repetition of the facts, figures and arguments so ably presented by him at that time.

But may I now further direct the attention of the Finance minister to the matter and remind him that in 1913 we had in Canada twenty-three more or less active blast furnaces. Of these, nine were situated in Nova Scotia, three in Quebec, and eleven in Ontario. Of these, only three, or possibly, to-day, four are in operation.

Our imports of raw iron and steel are now more than double what they were in 1923, when they were, in round figures, 123 millions of dollars; in 1924, 140 millions; 1926, 158 million, and last year—1927—approached a quarter of a billion of dollars, or, to be exact, $248,151,564. May I also remind him that in 1924 there was mined and smelted in Canada a million and a half tons of Ontario iron ore, and last year not a single ton.

Ontario blast furnaces are now depending on and are smelting iron ore mined in the United States, aided in one instance at least by the lowest railway rate in existence on this continent. Not a ton of Canadian ore is now mined in the central provinces of

Canada and this, despite the fact that both Quebec and Ontario have vast deposits of workable ores situate in many cases close to the main trunk lines of these provinces.

Our Nova Scotia blast furnaces work entirely on Wabana red hematite ores which lie some 400 miles from the harbour of Sydney, Cape Breton, where at Sydney Mines and Sydney, our great iron and steel producing plants are situate.

Now, I want to refer to the tariff. I have in my hand the customs tariff of Canada for 1907, with amendments. It is twenty-one years old. It contains more amendments than original items, and it is very difficult without the expenditure of a large amount of time to determine from this book what the tariff is on any particular item of goods imported into this country. It is a crying disgrace to the two ministers interested, the Minister of Finance (Mr. Robb), who fixes the duty, and the Minister of National Revenue (Mr. Euler), who collects it. We have a tariff commission which is supposted to have been operating for nearly two years, and I hope the ministers will give them something practical to do, because up to the present time I know of nothing practical they have done. They might take in hand the revision of this document, which is a disgrace to the country. And I say this without any fear of contradiction.

If we had a logical iron and steel tariff we should not have a condition of affairs under which pig iron is given a duty of $2.50 a ton and billets made from pig iron, converted first into steel in the melting furnace and afterwards put through the rolling mill, is given a lower protection than that which is accorded the raw material from which it is made. The duty on steel billets is actually 11 per cent less than it is on pig iron. The conversion of pig iron into steel billets costs probably about $10 a ton. This outlay includes the fuel used as producer gas in the open hearth furnace and in the reheating furnace, as well as expenses connected with repairs, scrap losses and so forth. All these are elements which enter into the conversion of pig iron into steel billets, and notwithstanding this considerable expenditure the fact is, as I have stated, that the duty on the finished product, the billets, is about 11 per cent less than that on the raw material, pig iron.

I will ask the house to consider the sectional factors of the tariff. Pig iron is made in Nova Scotia, in Hamilton, and in Algoma. The Nova Scotia producer uses coke made from domestic coal produced by the miners of that province, while the Hamilton and the Algoma iron and steel plants use United States coal, receiving a drawback of 99 per cent on the duty. Let us consider the situation from this point of view. On each ton of pig iron made Algoma spends within the Dominion, say $2.50, Hamilton about $3 and Nova Scotia about $9. It follows from this that the labour involved in the production of pig iron in Nova Scotia is three times as great as in the case of Ontario, and in spite of this fact the Nova Scotia product enjoys only the same rate of duty. We put three times as much labour into the production of pig iron as the manufacturers employ in Ontario and we have exactly the same protection, so that in effect the Nova Scotia coal miners and a large body of iron and steel workers have absolutely no protection whatever. Let us take another case. One Ontario manufacturer gets duty free spring steel, his raw material, for use in his factory, and he had on his output a protection of 25 per cent; a Nova Scotia manufacturer, using exactly the same grade and size and kind of steel, pays a duty of $6 a ton and has a protection on his harrow teeth of 6 per cent. Is there anything fair as between these two cases? I ask the house to consider our position, due to the provisions of a sectional and unscientific tariff, under which relatively unimportant secondary industries requiring little equipment are able to import raw material at the low rate of duty of 5 per cent—in one case duty free—while enjoying a protection of 25 per cent and in some cases 30 per cent. I will give an instance. Take tariff item No. 383, iron and steel skelp sheared or rolled in grooves, duty 5 per cent. I want to point out two different features in relation to this item. Under the general tariff the rate of duty is $7. The ordinary consumer of iron of this class pays $7 a ton while, on the other hand, the manufacturer of pipe imports it in the form of steel skelp in one case at 5 per cent and in the other duty free. This 5 per cent skelp duty is the same under the British preference, the intermediate and the general tariff.

Mr. CHAPLIN: Will the hon. member give the meaning of the word skelp, so that the house may understand the matter more clearly?

Mr. CANTLEY: Skelp is the trade name given by steel and pipe makers to strips of steel intended to be rolled or drawn through dies in the forming of ordinary merchant pipe. If I want to produce pipe with an internal diameter of one inch, I purchase or roll, as the case may be, a bar of steel, say, one-eighth of an inch thick and say four inches wide. For larger pipes I roll the steel wider, and for still larger pipes wider still, and so on, using an increasingly heavier material. The

material may be rolled to the width and thickness suggested, or it may be rolled first in the form of sheet steel of the required thickness and afterwards sheared to the desired width. Material produced in either of these forms is known to the trade as steel skelp for pipe making. I am at present referring to an industry which is able to import skelp at a duty of 5 per cent while it is protected by a tariff ranging from 27½ to 30 per cent. I contend that there is class discrimination in this matter, and I say this for the reason that if material of exactly the same dimensions is imported by the users of steel for any other purpose they pay $700 per ton under the general tariff, whereas the concern which is using it for the manufacture of pipe gets it at 5 per cent and enjoys a protection on his pipe by way of a duty of 27½ to 30 per cent. The products of the furnaces, forges and mills in Germany, of all continental Europe, and the surplus of the United States, are in this case accorded equal treatment with the British product, the principle of preferential treatment being entirely ignored. The whole productive capacity of Great Britain, of Europe and of the United States is placed at the disposal of the merchant mill operator and the steel pipe producers of Montreal and elsewhere, and they are able to import steel billets and steel skelp at the lowest possible world's figure, assisted by ballast rates of freight, the product being admitted into Canada at a duty of 5 per cent, irrespective of any interests save their own. It would appear to be a matter of no concern to the Minister of Finance or to the government that our Nova Scotia coal miners are to-day idle, or that many of our blast furnaces, coal washeries, open hearth furnaces and the great steel producing plants, each unit costing millions of dollars, are silent, with thousands of former operatives idle. On the other hand, the pipe manufacturers, whose raw material is imported skelp and whose operations are often carried on in a building little more than a glorified shed, equipped with a few small heating furnaces possibly using waste gas from the city gas works and requiring only the simplest type of machinery, enjoy a protection of 30 per cent under the general tariff and 27½ per cent under the intermediate tariff. This merchant pipe so produced and so protected by the tariff finds itself in the centre of the consuming area of Canada and in the chief distributing centres of this country with a consequent low distribution cost.

The whole tariff history of the world cannot supply such concrete evidence of the total lack of a rational tariff policy or a more unfair, unjust and illogical application of the taxing powers resting in the Minister of Finance. I invite the minister to consider all the facts relative to item 383; his commissioner of taxation has been thoroughly acquainted with the situation for a long time, and can readily give him all necessary information.

In 1920 the investment in primary iron and steel plants in the Dominion amounted to $120,000,000 in round figures, or 18 per cent of the total manufacturing investment of Canada; by 1926 this had fallen to about $86,000,000, or 14½ per cent of our total manufacturing investment. In 1920 the value of our primary iron and steel products was about $139,000,000, or 21 per cent of the entire manufacturing production for that year, while during the three years 1924, 1925 and 1926 the value of these primary iron and steel products had fallen to an average of less than $37,000,000, or a drop of 70 per cent. To put it in another way, the value of the primary products of iron and steel in 1926 was only 8¼ per cent of the entire industrial production of this country. Looking at it from still another point of view, about 92 per cent of the value of the secondary iron and steel products of Canada is based on the fabrication of raw forms of iron and steel imported into this country, while some of these secondary products enjoy the highest rates of duty imposed by our tariff.

The fundamental value of this great Canadian industry lies in the pig iron and steel produced; in other words the products of our blast furnaces, open hearth plants and rolling mills which should and under a properly graded tariff would provide the raw material for the secondary metal industries. I should like at this point to place on record the relative positions of the primary and secondary divisions of the industry as shown by the operatives employed and the wages paid during the years 1920 and 1926. The figures are as follows:

	1920		1926	
	Persons employed	Wages and salaries paid	Persons employed	Wages and salaries paid
Blast furnaces and steel mills	13,874	22,824,530	6,014	8,934,536
Subsidiary plants	101,887	135,860,417	75,400	125,229,867

As shown by these figures, the secondary plants are about holding their own with regard to earning power, but certainly this is not the case with the blast furnaces and rolling mills.

I invite the Minister of Labour to consider the fact that in 1913 Canada had nineteen blast furnace stacks in operation with only five idle, while to-day we have but four producing furnaces, with 80 per cent of the investment and employment capacity of Canada's iron and steel industry idle and unremunerative. This has been the case for several years past, and the wages earned have been only 40 per cent of those earned six years before. Is not the Minister of Labour (Mr. Heenan), interested in that situation? Let the minister ask the people of Sydney Mines, Glace Bay, Sydney, New Glasgow and Trenton to give him the facts with regard to empty houses, municipal bank overdrafts, distress assistance and the emigration of thousands of our best artisans, and having done this, I ask him to impress upon the Minister of Finance the gravity of our position.

Then I would invite the government to consider the matter from another angle. In Nova Scotia we did all the pioneer working out of the intricate and difficult problems of the steel trade as it is now practised in this Dominion, and I would remind the house that pioneering in industry is expensive. The first open hearth steel plant in Canada was put into operation at New Glasgow, Nova Scotia, in 1882, when the Scotia Company, to give it the short local name, in August of that year made the first open hearth steel and poured the first steel ingot produced in Canada. Here I would like to pay a tribute to the courage, faith, indomitable energy and Scottish persistence of three men, all natives of New Glasgow, who were the real fathers of the steel trade in Canada. They successfully overcame all the pioneering difficulties which came up in the establishment of the steel industry based on the use of native ores, fluxes and fuel, aided wholly by native workers. I refer to the late Graham Fraser, George Forrest Mackay and Simon A. Fraser, men with whom it was my great privilege to be intimately associated over a long period of years.

The New Glasgow Iron, Coal and Railway Company, organized by Graham Fraser and some intimate friends in 1890, shipped abroad trial lots of Pictou coal. These were not hand samples, bag samples or ton lots, but consisted of some hundreds of tons. This coal was sent to the Westphalen or black country district of Germany, where exhaustive washing and coking tests were carried ont. The knowledge thus gained enabled us to determine the type of washery and coke ovens best suited to our fuel conditions. This information was put into practical effect in 1891, at Ferrona in the county of Pictou, where the first commercial coal washer and also the first rectangular retort coke ovens designed to produce blast furnace coke from washed coal were built and put into successful operation. This coal washery and these ovens were the first of their type on the North American continent. Ten years later followed the great development at Sydney and Sydney Mines, where eight modern blast furnaces with coal washing and coke oven equipment and by-product plants were established. During the war these plants first produced the toluol which made possible our great contribution to the demands for explosives for our armies and those of our allies from 1915 until the end of the war. Connected with these blast furnace plants, situated one on each side of Sydney Harbour, are seventeen open hearth melting furnaces with capacities of fifty, seventy and one hundred tons, some of which are of the most modern design on this continent. Those at Sydney Mines are fitted with secondary plant for fluid compression of steel, where great hydraulic presses exert a pressure of 4,000 tons per square inch on the plastic steel contained in reinforced ingot moulds thus displacing the inert gases and consolidating the metal, eliminating blow holes and surface cracks, and ensuring a more homogeneous, better and safer material for railway car and locomotive axles and large marine forgings, giving to these a degree of safety and dependability not otherwise obtainable. This magnificent plant with its accompanying ore piers, coal washers, coke ovens and blast furnaces, and refractory brick works, representing an outlay of many millions of dollars, and half our coal mining capacity, is to-day all idle, with a consequent lack of employment, lessened purchasing power for our people, less traffic for our railways, and a loss of one-half the population from a town of 10,000 people boasting large brick public schools with modern public utilities of water, lighting, sewerage and tram car service. There, where formerly visible and tangible evidences of success, optimism and progress prevailed, depression, discontent and despair now exist, due, Mr. Speaker, to the fundamental change in the former tariff structure of this country. These changes at first were small, but were followed year by year by others, all of the same unpatriotic and fundamentally vicious type, and all gradually but surely producing their dire effects on the great basic industry

of Canada. This is the situation which now exists and which the Finance minister to-day refuses or neglects to remedy in the slightest degree. He fiddles with cotton threads and offers our coal and steel workers duty free foreign woollen yarns with which to darn their mitts and moccasins, while they and the spinners of Canadian yarns go idle and in want. And that, Mr. Speaker, is the sum total of the relief offered the coal and steel industries by the tariff changes which the Finance minister has just presented to the house.

The facts as to the position of the iron and steel industry, and the paralyzing effect of the tariff, discriminating as it does against this Nova Scotian industry, were presented to the tariff advisory board on May 26, 1926, now nearly two years ago, but, so far nothing is known as to the action taken by the board or the advice given by them. Meanwhile, incalculable loss of capital and wages has resulted, population has declined, distress, disappointment and unrest have followed, and we are yet without even any suggestion of sympathy or practical help from the Finance minister or the government.

As to coal, I shall not delay the house with any lengthy reference to the coal mining industry of Nova Scotia, the main facts as to which have already been fully put before the house, but will merely say that that industry as now carried on in Canada does not provide the continuity of employment desirable and necessary to the well being of those employed in it, and a radical readjustment of our dealing with the industry is imperative.

I should like to draw the attention of the house to a considered statement made by the Dominion Bureau of Statistics at the suggestion of the royal commission on maritime disabilities, which directs attention to the intimate connection between the coal and steel industries and the population of Nova Scotia.

Coal mining, while carried on in Nova Scotia for more than a century, received its greatest stimulus when the steel industry was taken up, first at New Glasgow in 1882 and further extended in 1891, followed by a great advance in production in 1900, due to the construction of large iron and steel plants on both sides of Sydney Harbour.

The relative importance of Nova Scotia as a producer of coal and steel is shown by the fact that up to about 1880 virtually all the Canadian coal output came from Nova Scotia, and up to a still later date, or about 1895, virtually all the pig iron and steel produced in Canada was made in Nova Scotia. Now while the tendency of later years has been to diminish the relative importance of Nova Scotia as a factor in coal, iron and steel production in Canada, it cannot be forgotten that these allied and basic national industries first attained importance in Nova Scotia. It is the chief misfortune of that province to be overshadowed now by the more rapid, if more superficial, progress of central Canada, greatly due to unfair legislation.

The extent to which the Nova Scotia coal and steel industry has suffered may be gauged by constrasting the continuous increase in the coal output of the province for twenty years prior to the great war and the disappointingly opposite trend shown since the close of the war, which downward trend is largely a reflex of the difficulties attending steel manufacture in Nova Scotia, arising out of unsatisfactory and unfair tariff and railway freight conditions. Notwithstanding these discouraging features the striking fact is that the only local increase in population that has occurred in Nova Scotia since confederation was due to and associated wth the coal and steel industries.

The increase of population in the municipalities in which the coal and steel operations were carried on during the thirty years period between 1891 and 1921 was approximately 74,000 persons. The total increase of population in the province between these two decades was 73,000, namely, an increase from 450,000 to 523,000. I ask hon. members to note this: but for the increase in the coal and steel districts, there would have been no growth in the population of Nova Scotia during the past thirty or forty years. The growth of the coal industry has created several new towns and greatly enlarged others, something which has not occurred in connection with any other industry in that province. But the emigration from the maritime provinces, and especially, from Nova Scotia, has cancelled the combined increase due to immigration and natural increase. But for the employment and the creation and distribution of wealth connected with the coal and steel industries, with which undoubtedly is associated all the growth in population in Nova Scotia in forty years, the emigration from Nova Scotia would have been even greater than it has been. The census of 1931 in all probability will reveal a decline in the population of such towns as Sydney Mines, Sydney, New Glasgow, and Trenton, which have been affected by the lack of employment in the steel industry, and to a lesser but no means negligible extent in the coal industry. This fact makes still more understandable the real sense of fear that assails the Nova Scotian who witnesses the decline year by year of the steel industry and the effect of this decline upon the production of coal.

These startling facts should command the attention of our friends in other sections of the Dominion, and especially the government, and my respected friend, the hon. Finance minister to whom I appeal primarily. It is to him we look for that succor and relief which he can give, and that without permanent injury to any legitimate Canadian industry.

We on this side of the house are sometimes taxed with failure to present any constructive suggestions although we indulge in criticism of the government. The Finance minister intimated that he would welcome any workable plan looking to provision for a sinking fund or any suggestion that will contribute to the earlier retirement of our national debt. I now venture to suggest that he impose a duty of a dollar and a half per ton on all coal and coke imported into Canada. That duty would not exceed, say, 20 to 25 per cent ad valorem, taking the average value of such fuel at the point of entry, and the total tax collected could be placed to the credit of a sinking fund for the extinguishing of the national debt. Were this done, the minister would be able to retire annually from that source say twenty-five or thirty millions of dollars of our outstanding national obligations. Of course the sum thus available for debt reduction would be gradually lessened in proportion as our domestic coal replaced imported fuel. A further great advantage would be to increase largely the range of consumption of Canadian coal, develop our own enormous western coal deposits, provide employment for a large mining population, go far to prevent seasonal unemployment in our eastern mining districts, and within a reasonable time put Canada in an independent position in the vital matter of fuel for both domestic and industrial purposes.

Mr. RALSTON: How does my hon. friend propose to keep out American coal and at the same time collect duties to be applied to the reduction of the national debt?

Mr. CANTLEY: I will answer that. I have said that the amount available would gradually diminish as we replaced foreign coal with coal mined in Canada. That statement stands. Were this proposal adopted, the bonus on coke as provided by bill No. 123 of 1927, to encourage the production of domestic fuel from coal mined in Canada, might be abandoned, it is of no practical use anyway. This suggested rate of duty may appear unduly burdensome to our Quebec and Ontario friends; but perhaps I may be permitted to remind them that they have been the greatest gainers by the protective policy of the past and such as yet remains of that policy, and they have enjoyed a measure of prosperity not shared to anything like the same degree by the outlying provinces, either those of the east or those of the west. May not we, therefore, now appeal to their generosity and ask them to aid their less fortunate compatriots? Further, I know I can appeal to the deep and oft expressed sentiment of Quebec and Ontario as to Canadian unity and remind them that the consolidation of this great Dominion can be assured only by the removal of recognized handicaps and the providing of opportunity for each of the provinces to develop their natural resources and to provide adequate outlets for the energies of their people.

In conclusion I have just this to say:

In view of the past history of the coal, iron and steel industries of Nova Scotia, and the important contribution those industries and the men who created and developed them have made to the national and industrial life of Canada; in consideration of the gravity of the present position of those industries and those dependent on them, I again appeal to the Finance minister to amend his budget proposals now before the house and to give to these great Nova Scotia industries the protection and assistance necessary to their successful operation and due them by virtue of their primary importance to Canada, and of the prosperity and contentment of so large a portion of our maritime population, whose well being, I am convinced, is desired by our compatriots in every province of this Dominion.

Hon. CHARLES A. DUNNING (Minister of Railways and Canals): Mr. Speaker, I am sure the hon. member for Pictou (Mr. Cantley) will forgive me if I do not follow his speech in detail. It is one of the same general type as the others that have come from members on that side of the house, and in my general discussion of the subject matter of one of them I need make reference but rarely to any individual speech, because they are practically all along the same line, dealing with the same matters in precisely the same way.

I think it is due to the Minister of Finance (Mr. Robb) to say that few men have been privileged to present to parliament a succession of such satisfactory budgets as those which have become known from coast to coast in Canada as "Robb" budgets. The man on the street finds it much easier to understand the mind of the present Minister of Finance and what the present Minister of Finance has for an objective, than is usually the case in connection with budget statements by min-

isters of finance. I need not refer to the respect in which the Minister of Finance is held in this house. Every member on both sides will agree that his genial personality and his fine treatment of all of us are universally admired and respected. We may not all agree with him. I usually do; members on the other side do not; but in the references which have been made to the minister personally, the respect in which he is held by all parties in this house is apparent.

In criticism of the budget there has been constant repetition from the other side of the house of the statement made by the hon. member for St. Lawrence-St. George (Mr. Cahan), in opening the debate, regarding the treatment by the Minister of Finance of the debt due by the Canadian National Railways to the public. Other speakers, notably the hon. member for Leeds (Mr. Stewart), have developed the same theme along similar lines. In fact the hon. member for Leeds went so far as to say that the present Minister of Finance had adopted a different method from that of Mr. Fielding in the treatment of railway financing in the budget speech. Previously the accusation by the hon. member for St. Lawrence-St. George was that a different method had been adopted from that followed by the Conservative government in 1921-22. I shall endeavour to deal with both. The hon. member for Leeds showed that Mr. Fielding, in considering the decrease or increase of public debt, took into account cash advances to the railway. That I think is correct. May I point out to my hon. friends opposite that the present Minister of Finance does exactly the same thing, and has done exactly the same right along? The fact of the matter is that all the debt of the Canadian National Railways to the people of Canada is now treated as part of the net debt of the Dominion. All the debt of the Canadian National Railways to the outside public is not and has never been treated as part of the net debt of Canada by any minister of finance or any government, and I propose later to discuss the reasons why.

What the hon. member for St. Lawrence-St. George referred to the other day—and the hon. member for Leeds sought to support his contention—was the guarantees of the Dominion on railway account. The hon. member for St. Lawrence-St. George said—and I think I am quoting him correctly—that on a proper basis of accounting the bond guarantees on railway account would have appeared as a direct liability of the government of Canada. Those, I think, are his exact words. That argument was not supported by the quotation from Mr. Fielding's budget speech of 1922-23 quoted by the hon. member for Leeds, because it so happened that in 1922-23 there were no railway guarantees and during the present fiscal year there have been no cash advances on railway account. The hon. member for Leeds therefore cannot properly compare the two cases. Let me for a moment quote the hon. member for Leeds. This is what he said:

> The explanation is found in the fact that in the year 1923 an amendment to the Canadian National Railways Act was passed, permitting the government to guarantee securities issued on behalf of the system; and since that legislation was enacted the government have adopted the principle of guaranteeing the obligations of the national railways and then forgetting all about it when coming to deal with the liabilities of Canada at the end of the year.

Mr. HANSON: Hear, hear.

Mr. DUNNING: My hon. friend says "hear, hear." Like the hon. member for Leeds he seeks to make it appear that the present government has altered the accounting method of the Department of Finance to enable it to make a better showing. That is what my hon. friend meant.

Mr. HANSON: The minister forgot about it in presenting his budget.

Mr. DUNNING: For my hon. friend's information I should like to state that the change in the form of the estimates to provide that advances to the railways might be made in the form of cash or by way of guarantees, or partly in cash and partly by guarantees, in the discretion of the governor in council, was made for the first time in the fiscal year 1921-22 by the government of which my hon. friend was a supporter. The general form of that estimate and the general treatment of the matter has been continued, and very properly continued, I submit, by the present Minister of Finance (Mr. Robb).

I might also call attention for the benefit of my hon. friend from York-Sunbury (Mr. Hanson) to the fact that during the fiscal year 1921-1922, when the government of which he was a supporter, a Conservative government, was in power there were guaranteed loans for Canadian National railway account in March, July and September of that year, totalling $61,000,000, floated by the Conservative government, not one dollar of which was taken into account as increasing the net public debt, nor were the statutory guarantees of the same government in previous years. I cite these facts, Mr. Speaker, not for the purpose of criticizing our predecessors in office, but simply to demonstrate that the practice has not been changed. My hon.

friend produced a certificate of one of the leading firms of chartered accountants in Canada to demonstrate that fact. Does anyone argue that the firm of P. S. Ross & Sons would give a certificate to that effect if it were not true. Does anyone argue that a firm of auditors of their reputation, a firm which I believe I am correct in saying has been engaged by the province of Nova Scotia, the province of New Brunswick, and many large business organizations in this country—

Mr. STEWART (Leeds): Would the minister allow me a question?

Mr. DUNNING: If the Speaker will allow me the time I take to answer it, yes.

Mr. STEWART (Leeds): How much of that 1921 guarantee to which the minister refers was for refunding of existing obligations?

Mr. DUNNING: I do not think I have the figures of refunding here but a large portion of the amount in any case was not for refunding, and if I follow my hon. friend from St. Lawrence-St. George correctly, he would not draw any distinction in his treatment whether it was for refunding or not. He would have it all charged to the net debt of Canada without any distinction whatsoever.

Now as to the propriety of the matter, for, after all, we are here considering the business of this country, is this a correct business procedure, no matter whether or not the Conservative government did it, no matter whether the Liberal government continued the practice? The question is, is it a sound and a correct procedure? I submit that it is a quite correct procedure on the ground, first, that it is a procedure which is followed by every single government in Canada with respect to similar undertakings. I would cite first the government of the province of Ontario, which has outstanding a very large amount, some fifty million dollars, of securities guaranteeing the financing of the Ontario Hydro-Electric Commission, a public-ownership utility analagous in some degree at least to our Canadian National Railways.

Mr. RYCKMAN: They have assets for every dollar of guarantees.

Mr. BENNETT: There is the answer.

Mr. DUNNING: I will come back to my hon. friend in a moment. I am not saying, not for one moment, that they do not have assets for every dollar of guarantees. The same method is followed with respect to every guarantee behind a public utility in every province in Canada.

Mr. STEWART (Leeds): Would the minister permit me a question?

Mr. DUNNING: I am ready to answer the question, if I am allowed the extra time.

Mr. SPEAKER: It is not within my privilege to extend the time of any hon. member. I have to see that the forty-minute rule is observed.

Mr. DUNNING: If I am not to be allowed the time I hope my hon. friends will allow me to use my own forty minutes, not that I do not like interruptions.

Mr. MANION: We were all up against that, you know.

Mr. DUNNING: With regard to the Ontario hydro, exactly the same policy is followed by the government of the province of Ontario. The hydro debt guaranteed by the government is not taken into account as part of the net debt of the province.

May I go further in connection with the province of Ontario and say that the example of the Dominion with respect to railway financing has been thought so highly of by the government of that province that a short time ago, in 1925, the Ontario government amended the Timiskaming and Northern Ontario Railway Act to give power to the government of Ontario to do with the Timiskaming and Northern Ontario railway exactly as we are doing with the Canadian National railway. Not only that, Mr. Speaker, but during the current year, $6,000,000 of Timiskaming and Northern Ontario railway bonds, the bonds of the provincial government-owned railway in the province of Ontario, have been issued by the Timiskaming and Northern Ontario railway commission and guaranteed by the province of Ontario.

Mr. McGIBBON: The railway is paying the interest.

Mr. DUNNING: My hon. friend at last sees it. That indeed is the whole point. That portion of the debt of the Canadian National Railways which is owed to the government of Canada, and upon which the taxpayers of Canada as such are paying interest, is a part of the net public debt. That portion of the debt of the Canadian National Railways which is owed to the public and on which the railway is earning the interest, is not a part of the net debt of Canada, but is a charge against the railway. Every province of Canada—I need not take up my time to run over all the examples—treats similar institutions in a similar manner. There might be some criticism if any part of the Canadian National indebtedness to this government did not ap-

pear as part of the net public debt, but there can surely be no valid criticism of the proceedure of not charging against the net public debt of this country moneys on which as stated by my hon. friend from Muskoka (Mr. McGibbon), the railway itself earns the interest and pays it.

Mr. BENNETT: The only trouble is that it does not.

Mr. DUNNING: My hon. friend will have an opportunity to prove that before the special committee. I can only say this: My hon. friend the Minister of Finance sits by my side at this moment and he has not this year paid out of the public treasury interest on any part of the Canadian National debt due to the public.

Mr. BENNETT: He lent them $15,000,000.

Mr. DUNNING: Will my hon. friend please permit me to make my speech? He will be unlimited himself as to time.

Mr. BENNETT: I apologise; I am very sorry.

Mr. DUNNING: After all, Mr. Speaker, what is the objective of the attacks to which I have been referring? The objective is to attempt to deprive the Minister of Finance and this government of the credit which the statement of the independent auditors gives to the Minister of Finance for having reduced the net deadweight debt of this country by $106,000,000 in five years. After all, Mr. Speaker, it is clear to the average man at least that the taxpayers of Canada are to-day paying interest on $106,000,000 less than they were paying interest on five years ago, and that so far as the Canadian National railways are concerned they are earning now year by year sufficient to pay interest on their obligations due to the public. After all, Mr. Speaker, the deadweight debt of this country is represented very largely by the wastage of the war, leaving behind it no tangible assets which can be taken into a balance sheet, although, of course, we have the great asset of personal liberty and all of those things we cherish, which, while they cannot be taken into a balance sheet, are, nevertheless, very important intangible assets for the people of a nation to enjoy. Our deadweight debt, I say, largely consists of the wastage of war. On the other hand, the increase in the Canadian National railway indebtedness to the public represents this nation's investment in the peaceful development of Canada—branch lines, betterments of all sorts, new equipment—and the road, as I say, is now earning sufficient to meet the interest payments upon its obligations due to the public.

What is this new investment of money in the Canadian National accomplishing for Canada? It is facilitating the development of the country and producing more business for the railway; and instead of being an added load upon the public, the railway is increasingly able, out of its earnings, to bear the charges on the debt due to the public.

Mr. HANSON: Does that apply to the Intercolonial railway and the Transcontinental?

Some hon. MEMBERS: Order.

Mr. DUNNING: It applies to the Canadian National Railways.

Now I want to refer shortly to the Conservative amendment to the budget—a very interesting amendment. My own opinion of it is very well expressed in an editorial which I will quote for the benefit of the house. My opinion could not have been better expressed if I had written the editorial myself; but it is not my production, it is from that well-known Tory publication, the Financial Times of Montreal. This is the opinion of St. James street:

> The budget amendment presented by the Conservative opposition at Ottawa is of course intended for the constituencies rather than for parliament. It is drafted with extraordinary dexterity, so as neither to mention nor to hint at protection, except in the case of certain agricultural industries; so that Conservative orators in Saskatchewan will be able to talk as if nothing was further from the minds of their party leaders than the making of any increases in the tariff except on butter from Australia and eggs from China, while in Ontario the same speakers or their colleagues will naturally take it for granted that "providing increased employment in Canada" means putting up the tariff on everything that Canadians import.

That, Mr. Speaker, expresses in a few words my opinion of the Conservative amendment. And I submit this to the judgment of the house, that every speech we have listened to from hon. gentlemen opposite, in spite of the omission of the word "protection" from the amendment, has been the old, old plea of higher and higher protection—the one remedy which my hon. friends put forward for every disease, or every imagined disease, of the body politic. If unemployment is the disease, my hon. friends have taken hours to tell us that higher protection would cure it. If our immigration is not sufficient, my hon. friends say higher protection will build up the country.

Mr. CANTLEY: So it will.

Mr. DUNNING: I am glad my hon. friend agrees, but I regret he did not put it in his amendment. Perhaps, while he is interrupting, he might explain whether his proposal to put a duty of $1.50 a ton on coal has the support of the Conservative party.

Mr. CANTLEY: I hope so.

Mr. DUNNING: If people are leaving Canada in too great numbers, my hon. friends say: Raise the tariff higher and keep them here. In fact every ill from which this country suffers, or is said to suffer as stated by my hon. friends opposite, is, they say, curable by the application of higher tariff taxation. While my hon. friends in this house are speaking in that fashion, their very amendment is being quoted back in the province of Saskatchewan as evidence that the Conservative party has at last abandoned the principle of higher protection as the cure for all our ills.

Mr. CHAPLIN: I suppose—

Mr. SPEAKER: Order.

Mr. DUNNING: My hon. friend will have his opportunity. I have only forty minutes in which to give him his medicine. I sat and listened to my hon. friend from Fort William (Mr. Manion) with the utmost cheerfulness.

Mr. MANION: And, incidentally, interrupted several times.

Mr. SPEAKER: Order.

Mr. DUNNING: If the people of western Canada ever require to be convinced that the present government is a low tariff government, surely the speeches that have been delivered in this debate from across the way carry conviction along that line. If we are not a low tariff government, why in the world are we taking the abuse from across the way for ruining every industry in the country by lowering the tariff; or, in the alternative, allowing them to be ruined because we refuse to raise the tariff sky high in order to keep them going? A low tariff government indeed! We have heard speech after speech from across the way which can only be described as excellent immigration propaganda for the United States. That country is painted by hon. members opposite in such glowing colours, and Canada in such dismal colours, that the effect is actually to encourage our people to go there.

Now, Mr. Speaker, I am not in the business of boosting immigration to the United States, so I have been making a little examination of the newspapers of that country and culling a few extracts from them in order to demonstrate what are the real conditions there comparative to the conditions in this country, which, according to my hon. friends, is so miserable a place to be in. I find that a committee of the United States senate reported only the other day that conditions in the Pennsylvania coal belt are a "blot upon American civilization." The report states:

> The committee found men, women and children living in hovels which are more unsanitary than modern swine pens. They are breeding places for sickness and crime.

And this, Sir, in the heart of the country which my hon. friends opposite depict as so alluring to our Canadian population, taking them away in their thousands to live under conditions of that sort!

The New York Charity Organization Society recently made an announcement in the press that it is receiving more calls for help from the unemployed than at any time since the war, and that it has found it necessary to borrow a substantial sum to enable it to meet its obligations.

The New York State Labour Department reports a net decrease during 1927 of 66,000 factory wage earners in the state, and in December its employment index number dropped almost a full point below the level of December, 1921.

The United States federal Department of Labour reports factory employment throughout the whole of the United States as about 5 per cent less last autumn than during the same months of 1926.

A comparison of the percentages of employment as between these two countries certainly does not bear out the contention of my hon. friends that the United States is a good place to go to, and that Canada is such a poor place to stay in. I should like to put on record the percentages of employment figures given by the departments of Labour of both countries from 1921 on, which will illustrate the growth of employment in Canada and the decrease of employment in the United States:

	Canada	United States
1921..	81.1	85.1
1922..	81.6	88.4
1923..	89.3	100.
1924..	85.3	90.3
1925..	86.	91.2
1926..	92.1	91.9
1927..	95.6	88.5

Mr. MANION: Most of our unemployed have gone across the line.

Mr. DUNNING: Again, the Bureau of Labour statistics of Illinois reports a decline of 8 per cent in industrial employment in that state during the year, with the total

number of wage earners at the lowest point since 1921. In reply to my hon. friend's interjection, there would not be so many Canadians going across to the United States if he and his colleagues did not depict it as such an alluring country to go to.

Some hon. MEMBERS: Oh, oh.

Mr. SPEAKER: Order.

Mr. DUNNING: I am glad my hon. friends appreciate it. A recent Associated Press despatch from Chicago, which appeared in all Canadian newspapers, stated that bread lines were forming in that city such as had not been seen since 1913. Will anyone who knows the condition of United States agriculture argue for one moment that the state of that industry in the country to the south of us is more prosperous than the state of Canadian agriculture? No observer will argue for a moment that the United States farmer is in a better economic position to-day than the Canadian farmer, although many of us are dissatisfied, and properly so, with the present economic condition of Canadian agriculture. Nevertheless, looking across the line we must come to the conclusion that the only thing which keeps thousands and tens of thousands of American farmers from coming to our Canadian west is the load of debt which they have around their necks and which precludes the possibility of their getting a reasonably good start in a new country.

The last United States quotation I want to use is the statement recently made by the Roger Babson statistical organization, one of the most important statistical organizations of the United States, that Canada presents the most favourable opportunities for business and industry during the year 1928. While speeches from directly opposite represent high protection as the great cureall, the subamendment moved by the four parties in the corner, and the speeches of the members supporting it, express dissatisfaction that the tariff reductions were not greater, and also criticize the reduction in the income tax. Apparently the only agreement between the parties in the far corner and the Conservative party is with regard to the sales tax; both of them, having noticed the policy of the Minister of Finance in that respect, desire to anticipate him and take credit in the future for what is the declared and actual policy of the government.

I should like to deal at some length with the criticism offered by my hon. friend from St. Lawrence-St. George respecting the sales tax, and his repetition of the same old misrepresentation that this government has doubled it. As a matter of fact, my hon. friend does know, I think, that under the sales tax as it existed at the time the Conservative government was in power pyramiding of the tax was not only possible but actually did take place. To quote the rate of the surtax as it was then as against the rate now in force is not telling the whole story. My hon. friend from St. Lawrence-St. George lectured the Minister of Finance on not revealing the whole of the truth; yet, in almost the next sentence, he fell into the same error himself. Notable instances will occur to the mind of every hon. member who has studied the matter; illustrations of pyramiding were given to the house at the time, showing for instance that before reaching the consumer, in the case of woollen clothing, the sales tax could be and actually was pyramided to 15 per cent, while in the case of boots and shoes it reached 12¾ per cent, and on many other commodities an amount three or four times the rate indicated. The reform introduced by this government was the application of the tax once; there was no pyramiding. The people, therefore, knew what they would have to pay. In this regard my hon. friend does not treat us with his accustomed fairness.

Reference has been made to the Dominion-provincial conference, and that brings me to the subject of the income tax. Many comparisons have been made by speakers in various quarters of the house between this country and Great Britain in the matter of direct taxation. It has been stated that Great Britain derives a large proportion of its revenue from inheritance and income taxes and that the policy of this government is bad in that respect by reason of a slight reduction in the income tax. Might I ask critics on this point to be fair enough to remember that in Great Britain there is one self-contained government for the whole country, levying taxation in all its forms, so far as governmental taxes are concerned, whereas in Canada we have a federal system of government with two classes of taxing bodies but actually ten taxing bodies in all. My hon. friends know also that in this country succession duties are levied by the provincial governments; it is within the power of the provinces to levy succession duties and they do derive a considerable amount of revenue from that source. Indeed, it is implied in the British North America Act that the provinces shall use the method of direct taxation for the raising of revenues for provincial purposes.

Mr. LAPOINTE: They cannot use any other method.

Mr. DUNNING: No. The specific form of revenue allocated to the Dominion is indirect taxation, the federal government not being excluded from the application of the other method.

Mr. BENNETT: Or any other form.

Mr. DUNNING: Yes. But that very fact introduces a very complicated situation with regard to taxation in this country as compared with any country in which there is the single form of government instead of the federal. At the last Dominion-provincial conference it became quite apparent that there was not one province which did not object to what was called the invasion by the Dominion of fields of taxation properly provincial. This was the subject of a lengthy discussion, and every province took the ground that so far as possible the Dominion government should work in a direction which would leave the provinces free to secure their revenues, for provincial and local purposes, by the method to which they are limited by the terms of the British North America Act. I for one would not advocate, and I do not advocate, that the Dominion should surrender or leave the field of income taxation as relating to corporations. That is indeed our greatest source of revenue under the income tax; $32,000,000 out of $48,000,000 comes from corporations. In the nature of things the Dominion is, in my judgment, the proper body to tax the income of corporations, inasmuch as corporations secure their income from all parts of the country. Moreover, it would be difficult indeed successfully and equitably to apply provincial taxation of corporations. On the other hand, there is much to be said for the contention made by some of the provinces that, so far as income taxation of individuals is concerned, the provinces should have the full field. I am not in a position to propound a definite policy in this respect, but I do say that it is worthy of consideration by the members of this house. We have a responsibility in relation to the federal system of government which obtains in this country; we have a measure of responsibility to the provinces. On the other hand, we must retain adequate sources of taxation in order to enable us to meet the interest on our war debt and to carry on the business of the Dominion as a whole. In this matter I think it would be useful to the Minister of Finance if, on an occasion like this, the members of the house, regardless of party, would turn their attention to the question of the relationship between fields of taxation by the Dominion, on the one hand, and by the provinces on the other.

As to the criticism which has been uttered with respect to the intimation by the Minister of Finance that in future it was proposed to ask that all goods coming in, taking advantage of the British preference, should have a 50 per cent British or empire content, I desire to say just this: the Minister of Finance gave that intimation in no sense intending thereby to limit the British preference in the slightest degree. We do know, however, indeed many members of the house are aware, that people on the continent of Europe are at the present time, by means fraudulent or semi-fraudulent, using the British preference in order to get their goods into this country. Some hon. gentleman in the far corner—I forget who it was—instanced the possibility that the raising of the limit to 50 per cent might have the effect of debarring British goods. I can assure my hon. friend on the authority of the Minister of Finance that there is no intention to permit it to be used for any such purpose, and if as a result of experience it is found necessary to provide a different percentage of content for different classes of goods, as other British dominions have done, it is quite within the competency of the government to work out the solution along those lines.

Just before I conclude I would like to say a few words with reference to group government, which was advocated so forcibly, so wittily and so cleverly yesterday by my hon. friend from Southeast Grey (Miss Macphail). I will not attempt to follow her in any sense; We always enjoy her witticisms even at our own expense, but with respect to this advocacy of group government I do believe it is time the people of Canada realized and faced what group government means and what it would mean to this country. We were told by my hon. friend that it is a Progressive measure but, Mr. Speaker, I regard it as one of the most reactionary moves it would be possible to make. Is this a new thing? Why, Mr. Speaker, Europe is trying now to overcome the effects of group government in many countries. The development of this so-called group system has gone so far in Italy as to produce a chaos sufficient to make the people even welcome a dictator, and it produced the same result in Spain. I know my hon. friend will say she does not mean that kind of group; she means an economic group, but she did not explain how she would prevent people from organizing under any group, name or designation. If we have a Labour group, a Progressive group or a Farmer group, why not a Catholic group, a Methodist group and a Presbyterian group? That system has been the curse of Europe.

Certainly the party system has demerits, but an impartial examination of the history of those countries which have tried this group system reveals the weakness of the very position adopted by my hon. friend. What does she say? She says what they want is a little group in that corner of the house just large enough to bludgeon the larger group across the floor into carrying out their wishes, and in so saying she poses as an advocate of democracy! I say, Mr. Speaker, that group government is the negation of democracy. Then I know my hon. friend will say that she means cooperative government. That is a very good phrase, but we have an example of cooperative government in this house to-day, and the men who are cooperating receive nothing but abuse from hon. members in the far corner. There are some men in this house who, while holding strong views with respect to fiscal policy and other matters of principle, believe they can best accomplish their duty to this country by cooperating with others who are substantially like-minded, to move the wheel of progress forward even a little. They do not sit up on the fence and howl like my hon. friends in the opposite corner.

In conclusion—and I say this with the utmost good humour—I would not deny my hon. friends the right to organize in any way they see fit, but I would point out that once the virus of the group system starts to spread in this country it will be found to be a great breeder; it reproduces very rapidly. The experience of years in Europe indicates that once there is a division beyond two or three parties in a great parliament it soon spreads until government is only possible by a species of log-rolling and dealing which I feel sure would be repugnant to the Canadian people and would not redound to the credit of the country.

Some hon. MEMBERS: Oh, oh.

Mr. CHAPLIN: We have experienced an example of it.

Mr. DUNNING: My hon. friends opposite laugh at very little; they forget the spectacle which they presented on this side of the house such a short time ago. Surely that should make my friends reasonably humble and reasonably courteous to those of us who only hand back a very little of what we have received from across the way. We are very patient.

I know you have been very generous with me with regard to my time limit, Mr. Speaker, presumably because of the interruptions I have received, but in conclusion I would say that in my judgment the country is satisfied with the policy enunciated for this year by the Minister of Finance and with the continuance of his past policy of reducing taxation and at the same time reducing the dead weight of debt which lies so heavily on the country.

Mr. H. C. HOCKEN (Toronto West Centre): Mr. Speaker,—

Some hon. MEMBERS: Oh, oh.

Mr. HOCKEN: The hon. gentlemen opposite flatter me. I have very little to say.

Some hon. MEMBERS: Oh, oh.

Mr. HOCKEN: I highly appreciate this compliment; but before commencing what I have to say on the budget I should like to depart from my usual practice in one regard. As a rule I do not scatter compliments over the house, because I assume that those who speak so well are satisfied with their performance and are not anxious to receive any flattery. I should like, however, to compliment very highly the hon. member for Southeast Grey (Miss Macphail) on her speech yesterday. I have listened to many speeches in this house in the course of which the Progressives have attempted to justify their existence, but I have never heard it elucidated so clearly as was the case yesterday. I could not help thinking, Sir, that if the Progressive group which entered this house in 1921 had possessed the sincerity and courage displayed yesterday by the hon. member, they might have been a formidable influence in the affairs of Canada. But the hon. member was frank enough to tell us that the group were so strongly divided in their political allegiance as between the two great parties that dissension was the predominant feature of their councils for several years in this house. Whether or not we agree with the hon. member she has at least given us cause to think and has perhaps helped us understand why she is in the house, whether or not anyone else holding similar views follows her. I appreciate the evident sincerity and earnestness of the hon. member, even though I may differ very sharply with some of her views.

Now I want to discuss for a few moments, the subject of immigration. I am glad the minister is in the house because I do not want to say anything that will add to his perplexities. I have a great deal of sympathy for the difficulties which confront him, and what I shall say will be said in kindness and in an admonitory way, with the idea of endeavouring to advise him somewhat as to certain changes that should be made. First

of all I wish to direct the attention of the minister to an incident which occurred during yesterday's debate. In four or five different places Hansard reports the minister as stating that the act forbids him to give a permit in such a case as that of Mrs. McConachie and her baby. I want to read, sir, section 4 of the Immigration Act and regulations, not for the purpose of criticizing the minister but in the hope of informing him as to just what powers he possesses. The clause in question reads as follows:

> The minister may issue a written permit authorizing any person to enter Canada, or having entered or landed in Canada to remain therein without being subject to the provisions of this act.
>
> Such permit shall be in the form A of the schedule to this act, and shall be expressed to be in force for a specified period only, but it may at any time be extended or cancelled by the minister in writing; and such extension or cancellation shall be in the form B of the schedule to this act.

These schedules are set out in the final pages of the act. Perhaps the minister has overlooked the powers given to him by the act, because if that act means what it says he certainly has the power to issue a permit for the admission of Mrs. McConachie and her child.

Mr. KING (Kootenay): For a specified period.

Mr. MANION: The minister said yesterday he could not do it at all.

Mr. HOCKEN: According to Hansard the minister said yesterday:

> Mr. Forke: The act forbids me to admit that girl.
>
> Mr. Cahan: But it gives the power to issue a special permit.
>
> Mr. Forke: No, it does not.

Having set the minister right in that regard, I hope he will do what I am sure his humanity prompts him to do, issue a permit to Mrs. McConachie and her baby.

I wish to talk for a few minutes, Mr. Speaker, about child immigration. I have spoken to a good many agriculturists on this question and there is general agreement among them that the very best type of immigrants that can be brought into this country are the young men and women who are more likely to go on the farms and more easily adjust themselves to the conditions in Canada than older people are. There is a difficulty in inducing adults with families to emigrate because of the disinclination of men settled in England to remove from a locality where they are firmly planted and come to Canada with young children. Such people suffer from homesickness and loneliness in their new environment, which makes it difficult for them to become absorbed in the country until after the expiration of a long period of time. They are never quite satisfied that they are going to stay in the country until they have been here three or four years. That is not the case with young people or children who come out here as immigrants. In the case of children they go to a Canadian school, are brought up as Canadian children are, and are taken into homes and taught occupations enabling them to take their places in the social and industrial life of the country. If they come out at a later age, say at the age of sixteen, eighteen or twenty, they are very easily provided for on farms. If they begin the occupation of agriculture at the adolescent period they are more likely to continue in it than any other class of people that come here. This fact is fully recognized in an order in council that was passed in 1920. I find it set out very fully in that order in council that because this class of immigrants was so desirable, the grant paid to receiving and distributing homes taking juvenile immigrants should be raised to $1,000 for every one hundred children brought out, or $10 instead of $2 per capita, and for every additional one hundred the grant was $5 per capita. The Immigration department of 1920 was fully seized, therefore, of the value of children as immigrants to this country, otherwise it would not have increased the amount paid for their care and maintenance. That is an entirely different policy to the one which prevails in the Immigration department to-day. I want to refer particularly to the recent instruction issued with respect to this class of immigrants—I do not think it is a regulation of the department or that it is any part of the act. I have searched in vain to find anything in the act or in orders in council prohibiting children under the age of fourteen years from coming to this country. So far as I can learn—I will allow the minister to correct me if I am wrong—the instruction in question was issued by the deputy minister of the department.

Mr. FORKE: No, it is an instruction from the minister.

Mr. HOCKEN: It is an instruction from the minister?

Mr. FORKE: Yes.

Mr. HOCKEN: It is not a regulation?

Mr. FORKE: It is a regulation.

Mr. HOCKEN: It is a regulation? I have not been able to find it. If it is a regulation I think it should be repealed with the least

possible delay. It strikes particularly at two or three agencies that have been bringing out children to this country for fifty or sixty years, and whose record is so good that it cannot be impugned even by those who have a settled determination to do so. I speak particularly of the Barnardo Homes, an institution which has been in existence for sixty years. That institution has brought to this country about 100,000 children. It has a record of every child brought out from the day the institution started until the present time, and the minister or any person else may go to the filing department at their headquarters, which is one-third the size of this chamber, and turn that record up for himself. That indicates a care and assistance on the part of these homes which I think is worthy of all praise. This institution has brought out thousands of boys and girls, has educated them, has taken care of them until they reached the age of 21 years; and many of them to-day occupy positions in high walks of life. A not inconsiderable number of the girls have married into splendid homes and are taking their part in the life of this country as well as those of native birth. From all I can gather, the attack upon the Barnardo Homes has been started by Charlotte Whitton, at whose instigation I do not propose to say. If I am not mistaken she is paid by the government of Canada as secretary of the child welfare council. Here is an employee of the department who goes to Toronto and tries to dig up such information as will warrant the prohibition of these children from coming to Canada. She reports to the child welfare council that a large number of children who claim to have been the wards of the Barnardo Homes have been in hospital, that some of them are unmarried, some immoral, and some feeble-minded. This statement is broadcast throughout Canada as a result of the actions of a paid official of this country. No more serious or slanderous statements could be made than have been made against this home, and by some form of manipulation that I do not understand it was possible to get a professor of the university of Toronto to support this attack upon the Barnardo Homes, an attack which was unfair and for which, when the matter was brought to the attention of the professor, he felt bound to apologize. I should like to read to the house the apology that Professor MacPhee sent to the Barnardo Homes for the injustice he had done them and the injury he had attempted to do to their institution. This is a long document, but the gist of it occurs in the last two paragraphs which I will read in order to put them on the record. Professor MacPhee, after his attention had been drawn to the inaccuracies and to the injustice that he had done to this institution and an apology was demanded, wrote this:

That which makes me regret the publicity I have caused in this matter is that all but three of the cases came to Canada before Mr. and Mrs. Hobday were appointed as Canadian manager and lady superintendent, and before Professor Carless offered his distinguished services as medical director to the organization.

And I particularly desire that the house, or such of the house as is present, will take note of this:

I am assured from conversation with these authorities that changes have been made in the method of study and selection of cases which will provide as effective guarantees as are humanly possible that Canada will get only physically and mentally fit boys and girls from this source. Coming as my statement did after these safeguards have been set up, and referring as I did to cases which were brought out before their regime, my action was both ungracious and discourteous.

Yet it is upon the statements of the man who makes this humble apology that the Department of Immigraton has acted in preventing the entry to this country of children under fourteen years of age. I submit that apology in itself is as complete a vindication of the work of the Barnardo Homes as anything could be. I should like, however, to add to that the statement of Sir Robert Falconer, President of Toronto university, the president under whom Professor MacPhee is working. Sir Robert Falconer wrote this to Mr. Hobday:

I have to thank you for your letter and the advanced copy of the advertisement which appeared this morning in the press containing an apology from Professor MacPhee in regard to sweeping statements that he made as to the results of the work of Doctor Barnardo's homes. I greatly regret that a member of our staff should have given currency, without such accurate investigation as one would expect from a professor in a scientific field, to statements which have brought criticism of the good work of Doctor Barnardo's homes. I hope, however, that his honourable and perfectly frank apology will in some way counteract the harm that has been done.

There is only one way in which the harm that has been done can be counteracted, and that is for the Minister of Immigration and his department to repeal this regulation, or instruction, or whatever it may be called, against the entry to this counry of children selected in the old country by the Barnardo Homes organization. It is, I think, reasonably clear that the action of the department rested upon statements made by Miss Charlotte Whitton and Professor MacPhee, and if I am not mistaken she felt herself backed up by what this eminent professor had published; so that the whole thing rests upon

statements made by Professor MacPhee, for which he apologizes publicly and in connection with which the president of his university hopes the apology will be sufficient to counteract the harm. There has been no satisfactory reply to all this attack from the secretary of the child welfare council; she has evaded the letters that have been written to her, and she has refused to be as courteous as Professor MacPhee and make the same kind of apology. But if the Department of Immigration listens to the advice of representatives of voluntary organizations—because this is a voluntary organization with a paid secretary, paid by the government of Canada—and neglects to take the proper steps to inform itself as to the actual conditions that exist, it must be said that the department is acting in a very inefficient manner.

There is no better class of immigrants to bring to this country than the children, and no organization that could be created could be more careful in its selection, more serious in its supervision, or hope to have better results than those which have been obtained by Dr. Barnardo's homes. For the department to step in and by regulation or instruction to stop the work into which millions of pounds have been put in the old country and into which hundreds of thousands of dollars are going every year in the interest of both the empire and the children themselves, is not in line with the expressed desire to populate the country with those who are likely to become good citizens. I have had a good deal of experience in my position in the city of Toronto with the wards of this home; I have had them, both boys and girls, in my employ, and I can testify in this house that they are at least equal to and in many cases above the average of children born of Canadian parents in Canada. When the home has such a record as that, why the department should attempt to stop this flow of children who will within the next few years be wage earners and productive citizens of Canada, is beyond my comprehension. If the Minister of Immigration will go over his own experience, if he will recall those who have come out through that agency—and he must have known many of them—and will consider what they have done in the way of good citizenship, I think he will agree with me that that particular instruction should be repealed and that that steady flow of prospective good Canadian citizens should be allowed to be resumed.

I have one other criticism, and that is with regard to the treatment that has been meted out to the Salvation Army by the department. No other agency operating for the settlement of newcomers to Canada has been so efficient and successful as the Salvation Army. They do their work in a very scientific way. They do not pick any boy off the street and send him out, but they first give him a course of training. They maintain in the old country homes where these boys or young men can go for a stated period and learn all the elementary procedure of operating farms. That costs them a great deal of money, and I presume they get some grants on that account from the British government. But I say that the army, having given such splendid results as it has, is entitled to all the assistance and support that this federal government can see its way clear to give.

The excuse that was given for withdrawing the grant to the Salvation Army is to my mind quite inadequate. Let us suppose that the army does require that those it brings out shall contribute something by way of repayment for some of the training given them. That does not affect the value of their work to Canada. It simply gives to them additional resources with which to bring a larger number to this country. The young people that they bring out here know the conditions under which they are coming; they have no complaint; indeed they have no ground for complaint, because this thing is not done under cover. Everybody concerned is dealt with frankly, and if the army can do that kind of work for Canada I submit that no $25,000 the government can spend will produce such splendid results. It will produce much better results than the $50,000 that is proposed to be given to the different provinces for repatriation. You are going to spend $50,000 in the province of Ontario to try to repatriate those who have gone away. I venture to say that that $50,000 will be pretty well thrown away for all the good that will result from its expenditure. If the young men who have left Ontario for the United States want to come back, they will come back. They cannot be coaxed back except by the assurance of employment and by some evidence that will show them that conditions here are going to be better than when they left. If they are engaged in steady employment at good wages in the United States it will take a good deal of persuasion to induce them to come back to Canada—the land where they were born, it is true, but the land where they could not get a living and which they had to leave and go across the border. To my mind there is no justification whatever for withdrawing that grant.

I just want to point out in conclusion, Mr. Speaker—and I have not consumed anything like my forty minutes—that those two organizations are one hundred per cent British, and if there is any immigration agency that ought to be encouraged I submit that it is the British immigration agency. Instead of running all over Europe to get men to come out here and settle on the scrub lands of the west, it would be better for this country to bring out that surplus young population who can fit into the life of Canada and in a very short time, almost at once, find themselves adjusted to the conditions under which we live here. But why these two one hundred per cent British agencies should be penalized on such flimsy excuses, and on falsehoods, I am not able to comprehend. I say to the minister, having due regard for all his difficulties and sympathizing with the perplexities of the position in which he finds himself—and I know they are very great—that he should take these two organizations into his careful consideration. He ought to make some endeavour to find out what proportion of the immigrants they have brought out have made good; he could get reports from the army and from private homes. If he will look at this thing in a sympathetic way I am satisfied that the future will produce more Canadian citizens of that age than it will produce of adults that we are trying to bring out under the three thousand family scheme. I am not going to criticize the three thousand family scheme because I think it ought to be a splendid thing, and I congratulate the minister upon its adoption; but if we want to be sure that those we bring out will stay, we have to get them young, and the younger the better, in my opinion, so long as they are not infants. When they come here, bring them under the sympathetic care of earnest Christian men and women who will teach them at school and in church, and give them moral training. That is the class of people that we ought to try to bring to Canada. I venture to say that hundreds of thousands, if not millions, of that class living in the British Isles are available to come here if the proper measures are taken to bring them out. But, above all, see to it that those who are striving to accomplish this end shall not be strangled by departmental regulations.

Mr. H. E. SPENCER (Battle River): In rising to take part in this debate I wish first of all to congratulate the Minister of Finance (Mr. Robb), on the fact that he has been able to balance the budget this year and, according to his figures, show a credit of $54,815,000. I congratulate him upon this surplus as I would congratulate the farmer who has been fortunate enough to have a good crop. It may be possible that it is through his good cultivation, but probably it is because of the fact that the rain and the sunshine came at the proper times and the crop grew. I think that irrespective of what Finance minister and what government had been in power under present business conditions we should have had a surplus, and therefore I think the Finance minister is fortunate in being in power at a time when business is good.

As we have a surplus of over $54,000,000, I should think the Minister of Finance might give some thought to being a little more generous towards those provinces, whether in the east or in the west, which are having difficulty in meeting their budgets, and which, if they pass legislation for old age pensions will be forced under the legislation we passed here last year to dip into their own treasuries, whether they can afford it or not if they are going to take advantage of that act. I have always claimed that the old age pension scheme should be a wholly federal one, instead of half federal and half provincial. With this surplus of over $54,000,000, I think the Minister of Finance might have looked with a kindly eye upon giving the provinces more help in this respect.

Much has been said about prosperity, and those supporting the government who have spoken have laid a great deal of stress upon the country's condition. I would ask the government what they regard as real prosperity? Is it the fact that we have a large export market? Is it the fact that we have a few more hundreds of men who are in a position by reason of their large incomes to pay income tax? Is it the fact that we have more bank loans? Or is it the fact that the rank and file of the people of this country are socially and financially better off? I had placed in my hands yesterday a pamphlet published by the Canadian Council of Child Welfare. On looking through it I was surprised to find the following statements, headed, "Present Day Facts for Thinking Canadians:"

"Of 232,205 children born in Canada last year, 7,091 were still born; 23,671 died before their first birthday; 30,973 died before their fifth birthday; 1,314 mothers died in childbirth. Yet the greater number of these deaths was preventable."

The front page of the pamphlet has this announcement:

Last year Canada lost 38,064 children under five years of age.

Now, Mr. Speaker, it seems to me that if that condition of things exists we cannot say that the country is prosperous. If this pamphlet is false, it should be suppressed;

if it is true, then I think action should be taken at once by the proper department of government to remedy this deplorable state of affairs

During the course of the debate a good deal has been said about taxation, and the Minister of Finance claims that taxation has been reduced during the Liberal administration. Looking at figures compiled by the Bureau of Statistics, I find that although in some years there has been a reduction, yet on the whole there has been a gradual increase in taxation. Let me give the figures for 1922 and 1927:

	1922	1927
Customs and excise duties collected..	$158,397,292	$210,600,000

Taking the total taxation collected, including special war taxes, we find that in 1922 the figure was $409,784,066, while five years later it amounted to $470,997,041. These figures would seem to contradict the claim made on behalf of the government that taxation has been reduced.

I submit, Mr. Speaker, that if taxation is to be reduced—as it well might be with the surpluses at the disposal of the Minister of Finance—the only fair procedure would be first of all to reduce those taxes which will bring about a lower cost of living—tariff taxes; secondly, the reduction of the sales tax should be considered; and last, the income tax. Unfortunately the Minister of Finance has decided to grant relief in respect to the income tax first. In my view he should begin by reducing those taxes that would relieve the rank and file of the people, and so make it easier for the family man to carry on. The following figures in regard to income tax will, I think, be of interest to the house:

Individual Income Taxpayers, Fiscal Year 1926-27

Amount of income	Number of taxpayers	Percentage of all taxpayers	Amount of tax paid	Percentage of all taxes paid	Average tax paid by each individual
Under $6,000..	97,171	83.75	2,306,965	12.79	23.74
$6,000 to $30,000..	17,992	15.51	8,078,362	44.77	44.90
$30,000 to $50,000..	574	.49	3,073,375	17.03	5,354.31
$50,000 and over..	294	.25	4,718,891	26.15	16,050.65
	116,029	100.00	18,043,261	100.00	

I take it to be the business of a government to legislate in the best interests of the rank and file of the people rather than for a special few. We all need three specific things: food, clothing, and shelter. Until all our people have those three essentials with a reasonable standard of living, only the minimum of taxation should be imposed. The Minister of Finance has seen fit to grant the greatest relief to the 116,029 citizens of this country who are in the enjoyment of incomes ranging from $3,000 to $50,000 and over, and surely they have enough and to spare to provide the necessaries of life.

With reference to the balance sheet placed before us by the Minister of Finance, I observe that there is an increase in the revenue of the Post Office department amounting to $1,930,831. I congratulate the Postmaster General (Mr. Veniot) on this excellent showing, and I sincerely hope that he will now give more consideration to the providing of postal services in the outlying districts of the Dominion. Another item of interest has to do with the Canada Grain Act. Under this head the estimated revenue is given at $2,600,000, an increase of $17,016. It has been intimated more than once by hon. members who do not happen to live in western Canada, and know nothing of the grain trade, that the cost of administrating the grain act is met from the coffers of the federal government, and that therefore all Canada helps to pay this cost, which is incurred for the benefit of the grain growers of the western provinces. Let me reassure any hon. gentleman who still labours under this delusion that any such suggestion is not at all in accordance with the facts; the cost of administrating the grain act is borne entirely by the grain growers of Canada.

With regard to expenditures, Mr. Speaker, I notice that the largest item is for the interest on the public debt, $128,700,000. The second largest item is the annual cost of past wars, not including interest, which amounts to $47,500,000. It is therefore on these two items that we should fix our best attention, and should try to find ways and means of reducing them. We must realize that merely because peace is signed the effects of war are not over. We are having to raise nearly half a million a day to meet the huge cost of past wars, and I want to remind the government and the Minister of Finance that the increase of $6,000,000 in the estimates in connection with military defence this year will not in any way protect Canada from war nor keep her out of it for one single day.

Another item which is of interest is included under maritime freight rates, the estimated amount required being $3,843,000. The amount estimated by the Minister of Railways a year ago was about $2,000,000. It has grown, as we in this corner of the house feared it would. I will not comment on this amount given to the maritime provinces, which is in the nature of an extra subsidy, but I think that every province in the Dominion, whether old or new, which is struggling to make both ends meet, with a thin population and with huge expenditures brought about very often through no fault of their own, should be given similar consideration.

There is another item, assets written off as non-active, including soldier land settlement loans amounting to $14,000,000 and the revaluation of soldier lands involving an amount to be written off of $8,000,000. On the resale of stock and equipment on the farms which have reverted to the board—these farms have been sold, according to the Minister of Finance, although some 3,000 properties remain to be disposed of—the expected loss is some $6,000,000. Besides this we have to remember that in 1922 we wrote off some $11,000,000 interest in connection with this same undertaking. It is about time we realized that there has been something wrong either in the initiation of this vast scheme or in the carrying out of it. I am not going to criticize any of these rebates so far as relief to returned soldiers is concerned, but I do want to say a word with respect to the launching of the scheme. Governments that claim to be all powerful should have known, when the scheme was launched, that deflation would ensue in 1920 and 1921, which deflation has been really the cause of many losses sustained by the country under this scheme. Governments have access to all the expert advice they desire, and they should have known, if they did not, that the deflation would take place. If they did know this, then the scheme should not have been launched, particularly as we are sinking a hundred million dollars into it. If they did not know, then they have to admit that governments only play second fiddle to finance, because finance certainly brought about the deflation in 1920 and 1921.

Much is said in the budget regarding our favourable trade balance. What does it mean? From this corner various speeches have been made, pointing out that a country might have a very large trade balance in its favour and yet exist under a very low standard of living. In quoting the extent of our exports and imports—and there is a large margin in exports—we have to remember that out of Canadian investments abroad we bring into Canada only about $63,000,000, while foreign investments in Canada have a call on this country of about $254,000,000. The balance has to be made up in goods sent out of the Dominion, and therefore when we simply put exports against imports in actual goods it is no proof that this country is in a particularly healthy state. Allow me to quote from the Minister of Finance, where he says:

> But it is also apparent that our ability to produce still exceeds our capacity to consume by a broad margin, and that our exporters annually market over a billion dollars of goods in other lands.

I wish the minister had gone a little further and pointed out how, under the rapid development of science and invention, more goods are being turned out per day, per week, per month and per year than were manufactured in the past, and with less man power. In other words we are rapidly lifting the work from men's shoulders and having it done by machines. I would the minister had pointed out that every industrial country is up against this same problem. It has been shown by well known economists that, inasmuch as the money paid in cost cannot possibly buy back the goods at cost plus profit, constituting price, every country has a problem on its hands.

When in England last summer I visited, amongst many factories and foundries, one establishment at Sheffield where I learned what tremendous changes are taking place in industry. This was a steel concern which had built in 1919 a very up to date plant, where in one shop alone they could turn out eight hundred tons of steel a day. They easily got orders because they could produce cheaply. Two other large firms at once built similar factories and Germany soon followed suit, with the result that last summer when I visited the plants they were lying idle several days of the week because there was no demand for the quantity of steel that was being turned out. Anyone who visits industrial establishments in the old country, in the United States or in Canada will find that in these various factories there are the most complicated machines doing the work required with very few men in attendance. One can visualize only a few years hence factories being run with the aid of exceedingly few overseers. In my opinion this is one of our greatest problems, and in future budgets I hope this will be placed before the house by the minister.

We know that the economic struggle now going on between the different countries to

find markets for their goods is simply an economic war, and in this connection I would quote a few words from a letter written from one of the colleges of Oxford, England, which I noticed in the Ottawa Citizen this morning:

> The underlying causes of war, it is generally agreed, are economic, the actual political state of war following commercial antagonisms. The last war is a notable illustration. Germany had to find an outlet for the bursting industrial activity of her people. These economic conditions pre-existing, the war mentality was soon created and its logical outcome ensued.
>
> Do not present world conditions contain, in embyro at least, even more potent seeds of conflict? And are not these underlying causes of war to be found at the very root of our industrial structure?

We must know that the economic war being carried on by every country to find markets in other countries is leading in only one direction, and I am sorry that this condition is not faced openly in this House of Commons.

The Minister of Finance stated that Canadians were returning from the United States, but his statement did not seem to be accepted by a number of hon. members opposite him. I would like to make a suggestion which I believe would help keep some of our people in Canada: I think we should give Canadians from far eastern and central provinces the same opportunity to look over the western part of Canada, so far as railway fares are concerned, that we now give to people coming from other countries. It is quite natural that a man who has not a large surplus of pocket money, and who is not content with his present conditions, should pay a small fee to get into the United States when he cannot afford the somewhat heavy fare to western Canada, and I believe if assistance were given these men we would retain a great many of them in this country.

A few days ago the Minister of Finance stated that there were $220,835,000 of Dominion notes outstanding as of December 31, 1927, while bank notes in circulation at the same date amounted to $182,747,000, intimating that we have a surplus of Dominion notes in circulation. I questioned that statement at the time and said:

> Did not the greater part of that $220,000,000 comprise notes of large denominations used by the banks alone?

To this question the minister replied:

> It meets the requirements of the country and the government receives a revenue for it.

Not being content with that answer, I placed some questions on the order paper which gave very valuable information; the figures show the following:

Total Dominion notes, Dec. 31, 1927	$220,808,365
Total Dominion notes Dec. 31, 1927, in circulation comprising—25c., $1, $2, $4, $5, $50, $500, $1,000	34,369,943
Balance being "legals" ($5,000 and $50,000) used between banks only	$186,438,422
Bank notes in circulation Dec. 31, 1927 (as stated by the Finance Minister Feb. 13, 1928)	182,747,000
Amount of Dominion notes in circulation, as above	34,369,943
Balance being amount of private bank notes over Dominion Government notes in circulation	$148,377,057

Why should not the Dominion of Canada exercise its right to put more notes in circulation than are used by the private banks? Why give over a special privilege, which can save a good deal of money to the taxpayers of this country, to private interests? I would like to point out that a Dominion note and a Dominion bond are based on exactly the same assets; they each carry a government guarantee, the only difference being that one bears interest while the other does not. The more Dominion notes we can safely put into circulation instead of bonds, the more money is going to be saved to the taxpayers of this country.

Let me here advance another suggestion which I have made before and which in former years the minister has been kind enough to promise to consider. I hope this year he will go even further than that. My suggestion is that he should offer a little higher interest on the savings in the post office savings bank, which carries a government guarantee. In that way I am sure he will get millions of dollars at a very low rate of interest should he need to borrow money in that way.

I would now ask you to call it six o'clock, Mr. Speaker.

At six o'clock the house adjourned without question put, pursuant to standing order.

Thursday, March 1, 1928

The house met at three o'clock.

REPORT

Audit of the accounts of the national committee for the celebration of the diamond jubilee of confederation.—Mr. Mackenzie King.

EXCISE ACT AMENDMENT

Hon. W. D. EULER (Minister of National Revenue) moved for leave to introduce Bill No. 54, to amend the Excise Act.

Mr. CAHAN: Explain.

Mr. EULER: The object of the bill is merely to make certain changes in connection with the better administration of the Excise Act. There are only three clauses in the bill, the chief of which is to give to the department the power to cancel licenses of brewers and distillers. That power we did not have before, and it is proposed now to take it. That is practically all there is in the bill.

Motion agreed to and bill read the first time.

RAILWAY ACT AMENDMENT

Mr. G. H. PETTIT (Welland) moved for leave to introduce Bill No. 55, to amend the Railway Act.

Mr. DUNNING: Explain.

Mr. PETTIT: The object of the bill is to amend section 308 of the Railway Act, chapter 170 of the revised statutes of Canada, 1927, by providing that the whistle shall be sounded twice more than is provided by the section. The section now requires that the whistle shall be sounded at least eighty rods from a level railway crossing, and the amendment proposes that the whistle shall be again sounded midway, that is, 660 feet from the crossing and also 330 feet from the crossing.

Motion agreed to and bill read the first time.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

ST.-PAUL DE BUTON POSTMASTER

Mr. CAHAN:

1. Who is the postmaster at St. Paul de Buton, county of Montmagny, Quebec?
2. When was he appointed and on whose recommendation?
3. Did any returned soldier apply for the position?
4. And if so, why did he not receive the appointment?

Mr. RINFRET:

1. Joseph A. Talbot.
2. (a) January 16th, 1928; (b) As a result of local competition.
3. Yes, one Joseph Elzear Adam.
4. Unsatisfactory reports received regarding character and financial standing.

JOLIETTE POSTMASTER

Mr. CAHAN:

1. Why is the permanent appointment of a postmaster at Joliette, Quebec, still delayed?
2. What were the recommendations, if any, made by the Civil Service Commission in relation thereto?
3. Has the Postmaster General been informed that the present acting postmaster at Joliette, Quebec, is otherwise employed as a merchant and manager of a wood company, and that he is not devoting himself to the work of the said post office?
4. Have complaints been received against the said acting postmaster at Joliette, Quebec, and if so, will an enquiry be ordered in respect thereto?

Mr. RINFRET:

1. Awaiting the report of the district superintendent on the oral examination of the applicants.
2. That all the candidates must be examined by one inspector in order that the ratings may be uniform.
3. Inspectors' reports state: September 9, 1926, Mr. Breton "actually conducts tea, crockery and wood business"; August 16, 1927, Mr. Breton "has been and is now a successful business man with interests in Joliette and other parts of the province"; February 8, 1928, "Mr. Breton reported early in April at the Joliette post office to learn duties and was sworn in as acting postmaster on the 28th of the same month. Since then, the office has been in his full charge and under his constant control." Also: "Mr. Breton is in charge and has been since April, 1927. He apparently is giving all round satisfaction, will hand over his business affairs to his son."
4. Yes, inquiry has already been made.

DUTY ON NURSERY STOCK

Mr. BARBER:

1. What is the rate of duty against nursery stock entering Canada: (a) from the United States; and (b) from Holland?
2. What is the rate of duty against the following Canadian products entering the United States: (a) nursery stock; (b) fresh fruits and vegetables?
3. Is there at present any embargo against nursery stock or fresh fruits and vegetables entering the United States from Canada?

Mr. RINFRET:

1.

	Holland	United States
Extract-Tariff item 79:		
Seedling stock for grafting, viz.:		
Plum, pear, peach and other fruit trees..	Free	Free

	Holland	United States
Tariff item 81:		
Trees, viz.: Apple, cherry, peach, pear, plum and quince, of all kinds, and small peach trees known as June buds, each..	2 cts.	3 cts.
Tariff item 82:		
Grape vines; gooseberry, raspberry, currant and rose bushes; fruit plants, n.o.p.; trees, plants and shrubs, commonly known as nursery stock, n.o.p..	15 p.c.	20 p.c.

The rates shown under the heading "Holland" apply to articles covered by the above mentioned tariff items which are the growth and production of Holland when they are regularly invoiced and are conveyed without transhipment from a port of Holland or from a port of a country enjoying the benefits of the British Preferential or Intermediate Tariffs into a sea or river port of Canada.

2. (a) Nursery stock.

Par. 752. Seedlings and cuttings of Manetti, multiflora, brier, rugosa, and other rose stock, all the foregoing not more than three years old, $2 per thousand; rose plants, budded, grafted, or grown on their own roots, 4 cents each; cuttings, seedlings, and grafted or budded plants of other deciduous or evergreen ornamental trees, shrubs, or vines, and all nursery or greenhouse stock, not specially provided for, 25 per centum ad valorem.

Par. 753. Seedlings, layers, and cuttings of apple, cherry, pear, plum, quince, and other fruit stock, $2 per thousand and seedlings of grapes, currants, gooseberries, or other fruit vines, plants or bushes, 25 per centum ad valorem.

Par. 1642. Plants, trees, shrubs, roots, seed cane, seeds, and other material for planting, imported by the Department of Agriculture or the United States Botanic Garden, exempt from duty.

Ex. Par. 1682. Tea plants, exempt from duty.

(b) Fresh fruits and vegetables.

Par. 734. Apples, green or ripe, 25 cents per bushel of 50 pounds.

Par. 735. Apricots, green, ripe, one-half of 1 cent per pound.

Par. 736. Berries, edible, in their natural condition, 1¼ cents per pound.

Par. 737. Cherries, in their natural state, 2 cents per pound.

Par. 740. Figs, fresh, 2 cents per pound.

Par. 741. Dates, fresh, 1 cent per pound.

Par. 742. Grapes in bulk, crates, barrels or other packages, 25 cents per cubic foot of such bulk or the capacity of the packages, according as imported; currants, zante or other, 2 cents per pound.

Par. 743. Lemons, 2 cents per pound; limes, in their natural state, and oranges, 1 cent per pound, grapefruit, 1 cent per pound.

Par. 744. Olives in brine, green, 20 cents per gallon; ripe, 20 cents per gallon; pitted or stuffed, 30 cents per gallon; dried ripe olives, 4 cents per pound.

Par. 745. Peaches and pears, green, ripe, one-half of one cent per pound.

Par. 746. Pineapples, 22½ cents per crate of one and ninety-six one-hundredths cubic feet; in bulk, three-fourths of 1 cent each.

Par. 747. Plums, green, ripe, one-half of 1 cent per pound.

Par. 749. Fruits in their natural state, and not specially provided for, 25 per centum ad valorem.

Par. 1517. Bananas, green or ripe, exempt from duty.

Par. 763. Beans, not specially provided for, green or unripe, one-half of 1 cent per pound.

Par. 764. Sugar beets, 80 cents per ton; other beets, 17 per centum ad valorem.

Par. 765. Lentils, one-half of 1 cent per pound; lupines, one-half of 1 cent per pound.

Par. 766. Mushrooms, fresh, 45 per centum ad valorem; truffles, fresh, 25 per centum ad valorem.

Par. 767. Peas, green, 1 cent per pound.

Par. 768. Onions, 1 cent per pound; garlic, 2 cents per pound.

Par. 769. White or Irish potatoes, 50 cents per 100 pounds.

Par. 770. Tomatoes in their natural state, one-half of 1 cent per pound.

Par. 771. Turnips, 12 cents per 100 pounds.

Par. 772. Vegetables in their natural state, not specially provided for, 25 per centum ad valorem, provided, that in the assessment of duties on vegetables no segregation or allowance of any kind shall be made for foreign matter or impurities mixed therewith.

Nursery Stock

3. The importation into the United States of Christmas trees and Christmas greenery such as laurel, holly, etc., from certain sections of southern Quebec is prohibited on account of the gypsy moth. (U.S.D.A. Quar. No. 57.)

The importation into the United States of currants and gooseberry plants and five-leaved pines from all portions of Canada, is prohibited on account of the white pine blister rust disease. (U.S.D.A. Quar. No. 7.)

Native grown nursery stock, other than plants indicated above, may be imported into the United States, provided the importer has secured a permit from the federal horticultural board, Washington, D.C., and the shipment is accompanied by a certificate of inspection indicating that the plants covered by the certificate are free from pests and disease, and also a certificate of origin. (U.S.D.A. Quar. No. 37.)

Fresh fruits and vegetables.

There is no restriction on the importation into the United States of fresh fruits and vegetables of Canadian origin, but such importations may not be forwarded by mail. (U.S.D.A. Quar. No. 56.)

Other products.

The importation into the United States of corn, broom corn, sorghums and other related plants is prohibited from all portions of Canada on account of the European corn borer. Provision is made, however, for the importation of clean shelled corn, clean seed of broom corn, and broom corn for manufacturing purposes, provided the importer secures a permit from the federal horticultural board, Washington, D.C., and the shipment is accompanied by a certificate indicating that the products covered by the certificate have been inspected and found free from infestation by the European corn borer. (U.S.D.A. Quar. No. 41.)

RETURNED SOLDIERS ON HOUSE OF COMMONS STAFF

Mr. PRICE:

1. How many returned soldiers are employed on the permanent staff of the House of Commons?
2. How many temporary employees are engaged during the present session?
3. How many of them are returned men?

Mr. SPEAKER:

No. 1. 7; No. 2. 333; No. 3. 55.

QUESTION PASSED AS ORDER FOR RETURN

BOVINE TUBERCULOSIS RESTRICTED AREAS IN NOVA SCOTIA

Mr. DUFF:

1. What is the total number of signatures of cattle owners, received to date, to petitions, asking for the establishment of a bovine tuberculosis restricted area in the whole province of Nova Scotia?
2. How many head of cattle have been subjected to the tuberculin test in Nova Scotia?

[Mr. Rinfret.]

3. How many head of cattle have been slaughtered as a result of reaction to the test?
4. What is the number of cattle so slaughtered in each county in Nova Scotia?
5. What is the number of signatures received to petitions, as referred to, from each county in Nova Scotia?
6. What is the total cost to date of the establishment of restricted areas in Nova Scotia?
7. What is the total amount paid or due owners of cattle slaughtered in Nova Scotia under this policy?
8. What is the result of and report on the immunilogical preventive, curative and transmissibility work of the research councils and other bodies in reference to tuberculosis?
9. What was the amount expended during the last fiscal year upon such research work?

ST. LAWRENCE WATERWAY

On the orders of the day:

Hon. R. B. BENNETT (Leader of the Opposition): Mr. Speaker, before the orders of the day are called, I should like to direct the attention of the right hon. the Prime Minister to an item published by a very reliable news service bureau at Washington which reads:

American Letter 495

February 25, 1928.

We learn from Ottawa that the Canadian government has notified Washington of its readiness to go ahead with conversations preparatory to the signing of a convention looking toward construction of the Great Lakes-St. Lawrence waterway. The Canadian note contains no important stipulations to which the American government is likely to take exception.

I should like to ask the Prime Minister whether such a note has been despatched, and if so, if he will lay it on the table at the earliest possible moment on the theory that the Canadian people are more entitled to this knowledge than a news bureau.

Right Hon. W. L. MACKENZIE KING (Prime Minister): In reply to my hon. friend I would say that the item which he has just read is without foundation in fact.

Hon. R. J. MANION (Fort William): Might I interject that I was informed on pretty good authority, not that this had gone through just in the way the despatch says, but that the Canadian government had sent a communication to Washington, and that a reply was on the way from Washington. If such is the case, would the Prime Minister have both notes tabled as soon as possible?

Mr. MACKENZIE KING: If my hon. friend will tell me his authority, I will tell him whether it is worth while. No communication of the kind indicated exists to my

knowledge, and I know of no note of the kind on the way back. The whole thing is imaginary.

CANADIAN NATIONAL RAILWAYS REPORT

On the orders of the day:

Hon. R. B. BENNETT (Leader of the Opposition): I should like to ask my hon. friend the Minister of Railways and Canals (Mr. Dunning), now that two months have passed, when we may expect the report of the Canadian National Railways for 1927 to be tabled. It should be done at an early date.

Hon. CHARLES A. DUNNING (Minister of Railways): I was asking the president about the report just this morning. The audit is proceeding as rapidly as possible, and the president informs me that he hopes to be able to supply me with the accounts early next week. As soon as he does so, the report will be tabled. This is a little earlier than it is usually tabled.

Mr. BENNETT: It is two months now.

PRIVILEGE—MR. EDWARDS (Frontenac)

On the orders of the day:

Hon. J. W. EDWARDS (Frontenac-Addington): Mr. Speaker, yesterday the hon. Minister of Immigration and Colonization (Mr. Forke) questioned the accuracy of certain statements which I had made in my speech of the day before and intimated his regret that under the rules of the house he was not permitted to express his opinion in language as strong as he would like.

I wish also to express regret that under the rules of the house I have no other alternative at the present time but to accept the hon. gentleman's statement. Time will disclose whether his statements or mine are more worthy of credibility.

BUSINESS OF THE HOUSE

FORTY MINUTE RULE—ALLOWANCE FOR INTERRUPTIONS

On the orders of the day:

Mr. A. W. NEILL (Comox-Alberni): Mr. Speaker, I rise to a question of privilege—and I think it is one that is really in order, for it affects not only myself personally but every member of this house, except possibly two. It refers to the interruption of the rules of the house as regards debate. In Hansard of yesterday at page 889 we find an hon. member asking the Minister of Railways (Mr. Dunning) a question, to which he replies:

> I am ready to answer the question, if I am allowed the extra time.
>
> Mr. Speaker: It is not within my privilege to extend the time of any hon. member. I have to see that the forty-minute rule is observed.

My point of privilege is, that that is in direct contradiction to the understanding under which the rule was passed last session. By referring to Hansard of last year, repeated references will be found to the understanding that interruptions would be allowed for. Hon. members will remember that I opposed the introduction and passing of the rule, and I canvassed members in support of my opposition, but I was met with this objection: The rule won't hurt us because we have been told that interruptions will be allowed for. At page 1437 of Hansard of March 22, 1927, the hon. member for North Winnipeg (Mr. Heaps) is reported as follows:

> I desire to know if, under this rule—
>
> That is, the forty-minute rule.
>
> —a member is to be allowed for the time taken up by interruptions.
>
> Mr. Speaker: I may be allowed, not to take part in the debate, but to explain. Whenever closure is invoked the time taken up by any interruptions of a member is credited to his twenty minutes. It is an unwritten rule in congress, for instance, where similar restrictions are in force, to allow a congressman extra time for interruptions.

On the strength of that and other similar statements, with which I will not detain the house, there is no question that these assurances were a material factor in getting the forty-minute rule accepted, and I submit that they should be given effect to now.

Sir GEORGE PERLEY (Argenteuil): Mr. Speaker, in support of what the hon. member for Comox-Alberni (Mr. Neill) has said, I may add that that was the understanding in the committee last year when we discussed the rule for a considerable time. Not only so, but this understanding to my mind is impliedly confirmed by the rule itself:

> No member . . . . shall speak for more than forty minutes at a time in any debate.

Well, if a member is interrupted by questions being put to him, he surely cannot be said to be speaking at that particular time, and therefore I do not see how the time so taken from him should count in his forty minutes.

Mr. NEILL: Hear, hear.

Sir GEORGE PERLEY: My feeling is that interruptions of the proper kind are for the good of debate, and that no attempt should be made to stop them provided that the member who has the floor is willing to be

so interrupted. I think if Your Honour would use your discretion in that way it would be perfectly proper that the time during which a member is interrupted should not count in his forty minutes as he certainly cannot be said to be speaking during the time that he is being interrupted.

Mr. SPEAKER: May I be allowed to remind the house that there is another rule, No. 12, section 3 of which states positively:

When a member is speaking, no member shall pass between him and the chair, nor interrupt him, except to raise a point of order.

Now, I am familiar enough with the amenities of debate to know that when the member who has the floor accepts an interruption, and is willing to answer it, there can be no objection to the interruption. Furthermore, it goes without saying that he must be credited with the time lost in answering such interruption. But I would ask hon. members to bear in mind that when interruptions become—shall I say?—riotous, that is, when they come from all parts of the house, the hon. member who has the floor cannot make an intelligible speech, and therefore I would ask the house to see to it that the debates are carried on in such a manner as to obviate confusion. For my part, I do not object to an interruption, but when the hon. member addressing the house has to meet so many interruptions that he does not know where to begin or where to end, I think it is time for the Speaker to intervene. Let us not defeat the forty-minute rule. It is a good rule.

Hon. CHARLES A. DUNNING (Minister of Railways): On the basis of your ruling to-day, as contrasted with your ruling yesterday, Mr. Speaker, I think I am entitled to about ten minutes more time.

Mr. NEILL: Mr. Speaker, I was only asking that the rule be enforced in accordance with the assurances given last year.

Mr. SPEAKER: To give effect to the forty-minute rule I shall have to prevent all interruptions according to section 3 of rule 12.

THE BUDGET

DEBATE ON ANNUAL FINANCIAL STATEMENT OF MINISTER OF FINANCE

The house resumed from Wednesday, February 29 consideration of the motion of Hon. J. A. Robb (Minister of Finance), that Mr. Speaker do now leave the chair for the house to go into committee of ways and means, the proposed amendment thereto of Mr. Cahan and the amendment to the amendment of Mr. Fansher (East Lambton).

[Sir George Perley.]

Mr. H. E. SPENCER (Battle River): Mr. Speaker, when the house rose at six o'clock last night I was advocating that more Dominion notes be put into circulation to take the place of the bank notes of our chartered banks, and so save considerable money to the Dominion. I also recommended that a higher rate of interest should be paid on deposits in the post office savings banks, with the idea of effecting a saving to the government on their borrowings.

I come now to the last phase of my address. This seventh budget of a Liberal administration is, I think I am safe in saying, fairly satisfactory to the hon. members of the Conservative party, but is not at all satisfactory to a very large number of the government's supporters, and certainly cannot be accepted by the members of the groups in this corner of the house. Several hon. members have said that the government has tinkered with the tariff in the latest budget proposals. No less than 122 items of the tariff have been struck out and 159 substituted. Taking it all in all, a study of the tariff discloses that whatever benefit is to flow from this tinkering will be to the advantage of the manufacturers rather than the consumers of this country.

As a basis for what I am about to say, may I be permitted to read a resolution which was passed at the convention of the Liberal party held in Ottawa in 1919. It is as follows:

That the best interests of Canada demand that substantial reductions of the burdens of customs taxation be made, with a view to the accomplishing of two purposes of the highest importance; first, diminishing the high cost of living which presses so severely on the masses of the people; second, reducing the cost of the instruments of production in the industries based on the natural resources of the Dominion, the vigorous development of which is essential to the progress and prosperity of our country.

That to these ends, wheat, wheat flour, all products of wheat, the principal articles of food, farm implements, and machinery, farm tractors, mining, flour and saw-mill machinery and repair parts thereof, roughly and partly dressed lumber, gasoline, illuminating, lubricating and fuel oils, nets, net twines, fishermen's equipments, cements and fertilizers should be free from customs duties as well as the raw material entering into the same.

That a revision downward of the tariff should be made whereby substantial reductions should be effected in the duties on wearing apparel and footwear, and on other articles of general consumption other than luxuries, as well as the raw material entering into the manufacture of the same.

That the British preference be increased to 50 per cent of the general tariff.

And the Liberal party hereby pledges itself to implement by legislation the provisions of this resolution when returned to power.

I want the house to visualize for a moment the extent to which that important resolution has been carried out by the Liberal party since they came into power. I admit that a portion of it has been carried out, but only under pressure from certain groups in this house when the government found themselves in a very difficult position and were struggling to keep power. This resolution, this program, this platform, has been preached day in and day out, year in and year out by the Liberal party from one end of the country to the other. It has not been preached very much in this house. It is a good device for getting votes, but so far as the government is concerned it is not something upon which to base legislation.

I desire to put on record the tariff clause enunciated to the house a few days ago by the hon. member for St. Lawrence-St. George (Mr. Cahan). Paragraph 5 of his statement reads:

> 5. The reduction of the customs tariff or the imposition of higher excise taxes, whenever and wherever necessary, to prevent the immoral use or abuse of the existing tariff, or any unfair advantage being taken of the tariff, as for example by those who would resort to profiteering by exacting unduly high prices for their products from domestic consumers, under the protecting elements of the existing tariff.

I know perfectly well that hon. members on the government side will say, as the Minister of Railways (Mr. Dunning) said yesterday, "Oh well, they don't mean that; they won't keep their promise." If that is so, I ask, what is the difference between the two parties? The Liberals say that the Conservatives will not keep their promises, but we know full well as a matter of fact, from the experience of the last few years, that the Liberals do not keep theirs.

The Minister of Railways, in addressing the house yesterday, said some pretty harsh things with respect to the smaller groups in this house. Other hon. members have also said harsh things, and bitter things were said in 1926 when the small group of twenty-three were in a most difficult position, holding, to use the common phrase, the balance of power. It was said that these twenty-three would be entirely wiped out at the ensuing election. But the people of this country are realizing that more and more they must turn to independent groups, and so much is that the fact that at the following election, not only was every one of those members returned, but eight more were added to their number. Of the thirty-one that were returned, ten of them, for reasons best known to themselves, took their seats on the government side of the house, not as part of the government members but among them. In my opinion, if those members had stayed in their old position we should to-day have a very different budget from that which we are now discussing. To use the words of the Minister of Railways, I suppose log-rolling is a good deal easier on that side of the house. We hope our confreres who have left us, temporarily as we trust, will some time come back. I am very much afraid, however, it is another case of the old story about the lady who took a ride on the tiger.

There is not the slightest doubt about this fact, that the budget is not at all acceptable to the majority in this house, had hon. members what they consider real freedom in the expression of their opinions. If, for instance, we had a set term of years for parliament and there was no possible chance of going to the country in the event of the budget being defeated, if moreover each hon. member had the opportunity, and took advantage of it, of expressing his absolute opinion with regard to this budget, I am confident that it would not meet with the approval of the majority. Unfortunately, however, under our present parliamentary rules and usages I do not suppose there is a single member on the government side belonging to the Liberal party, irrespective of the degree in which he dislikes the budget, who will stand in his place and vote against it. I say, therefore, that there is a tremendous responsibility at the door of those ten members who sit on the government side of the house because, whatever we do from this corner, we cannot without their support, be successful in trying to get the government to carry out its own program. As this budget does not carry out the expressed promises of the government in the past, and does not give relief to the masses of the people. I find myself compelled to support the sub-amendment.

Hon. J. H. KING (Minister of Soldiers' Civil Re-establishment): It is not my intention to discuss at length the merits of the Robb budget. Our colleague in the government, the Minister of Finance (Mr. Robb), has been, I think, particularly fortunate in all his budgets, and the Robb budget to-day is looked upon by the Canadian people as probably no budgets have been under other administrations in times gone by. My hon. friend who has just taken his seat (Mr. Spencer) read a resolution which was brought before a convention of Liberals in 1919 and I am very glad he did so. He suggested that the government had nibbled at this resolution but had not carried it out. We know better than that, and the people of Canada know better, because the items mentioned in that resolution

have all, I think, been dealt with by this parliament during the time the present Prime Minister (Mr. Mackenzie King) has been leading this party. I know, coming from the province of British Columbia, that those engaged in the saw milling business, in mining, in fishing, and in agriculture do appreciate the fact that the government acted upon that resolution, and that their action has been helpful to these primary industries. And it is due to the fact that these primary industries have been thus enabled to flourish that we have to-day in Canada the condition of prosperity that exists.

The resolution to which my hon. friend has referred, and which Liberals can claim to have received throughout the country the endorsement of those engaged in primary industries, brings to mind the peculiarities of this debate. Experience is supposed to be a good teacher, but apparently hon. gentlemen opposite will not be taught, because during this debate we have heard the same arguments as were advanced every year from 1921 to 1925, all attempting to show that on account of the Liberal party Canada was not a good country to live in and that therefore many young Canadians were going to the United States. Hon. gentlemen opposite have advertised that fact through the medium of the press of this country, the United States, and abroad, and have left the impression that they as a party advocate that our young people should leave Canada to go to the United States and enjoy greater prosperity there.

An hon. MEMBER: That is not correct.

Mr. KING (Kootenay): That is the only assumption to be taken.

Mr. BENNETT: It is untrue.

Mr. KING (Kootenay): That point was very well dealt with by my hon. friend and colleague the Minister of Trade and Commerce (Mr. Malcolm). One peculiar thing about history is that it repeats itself, and fortunately for the Liberal party history is now repeating itself again. The only time during the history of Canada when our young people were not seeking employment in the United States was when Sir Wilfrid Laurier headed the government of this country, and we have reason to believe that the policies instituted by this government are bringing about a repetition of that very important condition.

My hon. friends opposite held a national convention during the fall of last year in the city of Winnipeg.

An hon. MEMBER: It was a dandy, too.

[Mr. J. H. King.]

Mr. KING (Kootenay): I agree with my hon. friend; it was a dandy convention, and as a result we now have our good friend the hon. member for West Calgary (Mr. Bennett) as leader of the opposition. With the Prime Minister and other members of this government I congratulate hon. gentlemen opposite on their selection of the man who now occupies that position. But is it not rather amazing both to the people of Canada and the members of this house that during the course of this debate we have not had one reference, to my knowledge—and I have been fairly constant in my attendance—to the resolutions passed at that convention as indicating the policy of the Conservative party? Our friends opposite are here to advocate the policies of their party, but we are told by one who is in close touch with them that these resolutions were not intended to outline the policy of the Conservative party but were merely passed for the purpose of being used in those localities where they would receive popularity. To prove my assertion I have only to refer to the resolution passed by that convention with reference to oriental immigration, which was sponsored by the Conservative members from British Columbia. I make that reference because there never has been an election in British Columbia since 1900, provincial or federal, during which the Conservative party have advocated a white British Columbia, and hon. gentlemen opposite cannot point to one act of the Borden government or of the Meighen government either before or after the war by which they undertook to control that immigration.

Mr. LAPOINTE: Do not all speak at once.

Mr. KING (Kootenay): No, they will not speak. But despite the advice of some of the older statesmen who had some knowledge of conditions within the empire, this convention passed the resolution in order that the Conservative party might go to British Columbia and say, "Here is what we stand for."

Mr. ESLING: What would you say in British Columbia?

Mr. KING (Kootenay): I have always stood for a reasonable and sound policy in that regard.

Mr. HOCKEN: We have not found that out.

Mr. KING (Kootenay): It will be found in the history of Canada that the only party which attempted to deal with this question was the party led by Sir Wilfrid Laurier and

later by Right Hon. W. L. Mackenzie King.

Now, Mr. Speaker, it is not my intention to go into the question of the budget, but during the debate several references have been made to a service recently established in Great Britain and on the continent of Europe. I refer to the medical examination service which was established by the Department of Health of Canada in cooperation and in conference with the Department of Immigration. This service was not entered into hurriedly but was undertaken in the light of experience and suggestions coming from the various provincial governments to the effect that they were not satisfied with the service which was then engaged in this work Under the Immigration Act we have a section known as the prohibited classes, and section (a) deals with those known as idiots, imbeciles, feeble-minded persons, epileptics, insane persons or persons who have been insane at any time previously; these people are prohibited from entering Canada under this section. Section (b) prohibits those who are suffering from certain diseases, which it is not necessary for me to enumerate. Section (c) prohibits the dumb and blind, but makes provision that these people may be allowed to enter Canada if, in the opinion of the board of inquiry, they have sufficient means or an occupation which will permit them to establish themselves in this country. There are a number of sections, running from (a) to (o), all under these prohibited classes.

Mr. HOCKEN: Tell us about the permits.

Mr. KING (Kootenay): I am coming to that shortly; my hon. friend made a statement yesterday with which I propose to deal.

The provincial governments have complained from time to time with regard to the service rendered. Previously we had been examining the immigrants at the point of debarkation; they came off the ship and the railway trains were waiting for them. It was the duty of the officers of the department to examine these immigrants before allowing them to board the trains, while it was naturally desired to get them to their destinations as quickly as possible, and it was found by experience that that examination could not be satisfactory or complete. From time to time the Department of Immigration as well as other departments of the government received complaints from the various provincial governments, and I am going to place on Hansard some of the statements made by various officers of the provincial governments. First we have a statement by Dr. Laidlaw, now deceased, who was formerly an officer of the Department of Health of Alberta, in which he says:

> We have at the present time in our mental hospitals in the province of Alberta 1,076 out of a population of 588,000. Of these, roughly speaking, 70 per cent were foreign born. Of this 70 per cent, 29 per cent came from Europe and 40 per cent from Great Britain, Ireland and the United States. The cost of maintaining these people in our province was about $250,000 or about $235 each for the year.

Dr. Seymour, of Saskatchewan, who is well known in public health circles throughout Canada made this statement;

> The conditions in my province—

That is his province—

> —are very similar with the exception that I believe the proportion of foreign born in our mental institutions in Saskatchewan is a little larger.

Then we come to Dr. McCullough, of Ontario. He cannot give the figures showing the proportion of foreign born in the institutions of Ontario, but he says:

> I do know that in the unorganized territory of the province where we are obliged to take care of contagious diseases, nearly all the people who appeal to us for admission to the sanitorium for tuberculosis have foreign names.

Then we have a statement from Dr. Dunlop, who is in the hospital for the insane, feeble minded and epileptic of the province of Ontario. He says, speaking of the year 1922:

> The proportion of those admitted born in Canada was 62 per cent. The proportion of the foreign born was 32 per cent. Many of the foreign born came from southern and eastern Europe. In 1922, we had 110 persons admitted who came from that part of the world and the cost of maintaining them was over $40,000. Very few of this class have any means, but become public paupers to be supported by the taxpayers of Ontario. One wonders, when dealing with this subject, how long such an immigration policy should continue, and why the people of Ontario should be taxed to maintain such an alien element, who rarely become permanent assets but are simply floating liabilities.

Dr. Desloges, of the public health service of the province of Quebec furnishes figures showing that in the St. Jean de Dieu insane hospital, there were 93 foreign born patients whose mental abnormality could have been detected prior to embarkation, and that at the Verdun insane institution there are 60 similar cases. Then we have a report by Dr. Young, British Columbia, in which he says:

> During the fiscal year which closed March 31, 1925, there were 461 patients admitted to the provincial mental hospital at Essondale, B.C. Of these 38.8 per cent were born in the British Empire outside of Canada, 4.3 were Orientals, all other countries contributing 23.2 per cent.

The following is an extract from British Columbia's report of the mental hospitals for the year ended March 31, 1924:

We hear from time to time discussion as to the nationality of our mental cases and find it linked up in many erroneous ways. Of those admitted during the period of this report 133 or 29.7 per cent were born in Canada; 314 or 70.3 per cent being born in other countries. As much has been said about immigration and the open door for new citizens from other countries, I have analyzed this 70 per cent and find they were contributed as follows:

Great Britain

England	110
Scotland	45
Ireland	21

A total of 176 or 39.3 per cent of the total admissions.

Oriental

India	1
China	20
Japan	2

A total of 23 or 5.1 per cent of the total admissions.

United States	45

Or 10 per cent of the total admissions.

Then we have a statement made by Dr. Edward Ryan. My hon. friend from Toronto West Centre (Mr. Hocken) will recognize who Dr. Ryan is. He is an officer of the provincial government, a psychiatrist of note, and he has this to say; I am reading it especially for my hon. friend's benefit:

May I direct your attention to what doubtless has been brought before you and often, namely, that a large number of patients in our hospitals are foreign born defectives. Many of these have been brought out by the Barnardo Home, St. George's Home and various other organizations of this character. In the vast number of cases, the stigma of degeneracy and defectivity are quite apparent.

Under the system formerly used we were not giving the protection which they recently asked for to the provinces who have to maintain institutions of this character, and it was on their suggestion that the question of medical inspection at the point of embarkation instead of the point of debarkation was considered by this government. We had representations from the various provincial governments, with statistics that could not be refuted, showing that there were many coming to our shores who were not entitled to admission under our law. Conferences were held between the Department of Immigration and the Department of Public Health to see if some plan could not be devised under which those who could not be permitted to enter under our regulations could not be detected at the start and would not have to be returned from the point of debarkation. I think all will agree that in principle this idea is sound. The government did not approach the consideration of this matter without realizing that there were difficulties in the way, and we asked that there should be a conference between the public departments interested and those who are directly interested in the transportation of these individuals, that is to say the steamship and railway companies. Accordingly a conference took place on May 7 in the office of the Minister of Immigration at which the following departments and companies were represented:

Department of Immigration:—Hon. Mr. Forke, Mr. Egan, Mr. Blair and Mr. Jolliffe.
Department of Health:—Dr. Clark, Dr. Page and Dr. Jeffs, our London representative.
Canadian National Railways:—J. S. McGowan and A. A. Gardiner.
Canadian Pacific Railway:—Mr. Walter Maughan, Mr. W. G. Annable, Mr. J. N. K. MacAlister.
Cunard, Anchor and Anchor-Donaldson Lines:—F. J. McClure and A. Randles.
White Star Line:—H. Bjorkland.
North German Lloyd:—P. Stenz and J. Eykman.
Holland American Line:—Fred M. Vaz.
French Line:—A. Labelle.
Swedish-American Line:—Arne Holquist.

At that conference it was agreed that this service would be established. The point was raised that in the establishment of such a service there might be delay in the medical examination, that it would not be found feasible to place men in Europe and in Great Britain who would be able to conduct the examination with efficiency and despatch. That possibility was recognized not only by those engaged in the transportation of these people but also by the departmental officers. When the matter was brought to my attention I recommended that the officers who were placed at various points should be able to obtain the assistance of local men if conditions so warranted them. This plan has only been in operation since November last and we have placed some eighteen or twenty men in Great Britain and on the continent. We have met the difficulties that were anticipated. Wherever there is congestion and it is not possible for our officer to act with sufficient expedition he is employing extra assistance. I believe the service now rendered will be to the advantage of the transportation companies and of the people of Canada.

Why do I say this? Because under our old system we found that in 1923-24 the number of rejections on arrival at Canadian ports was 130. Then we find that some 649 immigrants who had gone to their proposed residences were deported. This was not only a great expense to the country but also a great inconvenience and hardship to those

who were being deported. The same thing is true in 1924-25 and in 1925-26. In each year it was found that there were certain individuals detected at the point of deportation and others who were deported after they had arrived at their point of destination.

Under the assisted immigration scheme whereby the immigrant from Great Britain was assisted not only by the British government but by the government of Canada, we established a form of medical inspection in Great Britain for that class of immigrant, employing a rostrum of local doctors. The evidence as brought out by the operation in the year 1926, will, I think, confirm the action of the government in establishing this service abroad. We find that out of approximately 115,000 immigrants who arrived at Canada's ocean ports, 33 were certified as being mentally defective, 41 as having loathsome or contagious diseases, principally tuberculosis or trachoma, and 619 as being physically defective, representing in all a little more than one-half of one per cent of the total number passing medical line inspection. I wish to contrast this with the 20,000 who came forward under the assisted passage scheme and were inspected in Great Britain. It was shown that of the prospective immigrants medically examined overseas prior to embarkation, who were required to undergo compulsory examination because they were receiving financial assistance, 182 were certified as being mentally defective, 195 as having loathsome or contagious diseases, and 1,784 as being physically defective. In other words, under the intensive examination, proportionately nearly twenty times as many mentally and physically defective persons were detected prior to embarkation as were detected on arrival in Canada through the medium of medical line inspection.

Certain references have been made in the past to the service that we are endeavouring to install or develop in the old country to control this condition of affairs. The London Times has taken exception to the Canadian people having medical representatives in London. They have indicated that this will probably slow up the emigration of Britishers to Canada, and in an article published within the last few days they state:

> It is feared in the coming season as a result of new regulations, emigration from Great Britain to Canada will be reduced by as much as from thirty to fifty per cent.

The article goes on to state that we are carrying out those examinations in unsuitable places. I will deal with that in a few words. They seem also to take exception to the installation in Great Britain of Canadian doctors who would pass upon the prospective emigrant. I do not know why this exception should be taken. If we are to be represented abroad in order that the provisions of the Immigration Act shall be carried out, surely we are entitled to have our own officers to interpret and make effective that act.

There have also been suggestions in the press that harsh treatment has been meted out to one poor unfortunate person who came to this country as an assisted immigrant in December of last year. I am referring to the case about which the hon. member for Toronto West Centre (Mr. Hocken) spoke yesterday. I am not going to repeat the name, because I think it is unfair to that family that their name should be canvassed abroad in Canada as having one mentally defective child. I propose however to give the history of that case in order that we may see whether the Department of Health and the Department of Immigration have fallen down, or whether they have maintained not their law but the law this parliament has passed. These individuals arrived in Halifax in December last. The medical officer, following the usual practice, boarded the ship and examined the passengers. He found a family of five children, one child, as he put it, for the cause of detention, "observation mental and impetigo." The child was fourteen months old, the oldest member of the family being twelve years old. The other four children were apparently mentally and physically normal.

Mr. GOTT: That is the age of the McConachie child.

Mr. KING (Kootenay): If my hon. friend wants to advertise it he can do so. I do not propose to do so.

Mr. RYERSON: Just as well not.

Mr. KING (Kootenay): I think it would be better if my hon. friends opposite would not advertise it.

Mr. GOTT: It would be better for the government.

Mr. KING (Kootenay): No. My hon. friends are entirely wrong and I think I can show that they are wrong. I think the people of Canada will agree that the officer of the Department of Health did his duty in reporting this case to the immigration department. My hon. friends will not take exception to that. If they are prepared to take exception to it, they should move for the deletion from the Immigration Act of that section which deals with the mentally defective. They will not do so.

Mr. EDWARDS (Frontenac): Is that section 3?

Mr. KING (Kootenay): The examining physician, Dr. Rutherford, found that this type was what is known as the Mongolian type. It is not necessary for me to describe that type in the house. He certified that this child was feeble-minded, would continue to be, and there was no hope for recovery.

Mr. HOCKEN: How does he know that?

Mr. KING (Kootenay): On account of the type. He also recommended that a fine be imposed on the steamship company for bringing this child because it could be easily detected as that type on embarkation or on the way over.

Mr. BENNETT: What do the medical men in Great Britain say?

Mr. KING (Kootenay): I will give that in a moment. This child, as I understand and am informed, was not allowed to land in Canada. The mother and the child were transported back from Halifax on another steamer, and on their arrival in Great Britain they were examined by our officers in London. I will give my hon. friend the reference in regard to that. Medical evidence was given before the board of inquiry at Halifax—there was a board of inquiry—and the report of Dr. Rutherford was sent to Dr. Jeffs, a representative of the department in London, England. A wire was sent to Dr. Jeffs, as follows:

> Referring correspondence re this party last December. Strong representations made to immigration against Halifax decision. Wish you could arrange soon possible to have competent re-examination made and report.

These people arrived back in London, and then we have this letter from Dr. Jeffs:

> I examined the above named in this office yesterday in the presence of Dr. Clark—

Dr. Clark is the Assistant Deputy Minister of Health. He, Dr. Jeffs, and Dr. Parney were the three Canadian doctors who made the examination when the family got back to the old country:

> —and we concur entirely in the report submitted by Dr. Rutherford.

It may be all right for my hon. friend to express his sympathy, and he has no greater sympathy than I have or the Minister of Immigration (Mr. Forke) for this family in the circumstances in which they find themselves—

Mr. McGIBBON: I hope you have a better way of showing your sympathy.

[Mr. J. H. King.]

Mr. KING (Kootenay): I do not know that my hon. friend has really grasped the point yet. Does he think it was a better way of showing sympathy to get up in the House of Commons and deal with this case as it has been dealt with here? I will be able to convince him and convince the house I think that that was a mistake, and was not a service to that family.

Now why did Doctor Rutherford refuse admittance to this child? He did it under section 3, paragraph (a), of the Immigration Act, which absolutely prohibits that type of individual from coming into Canada. My hon. friend from Toronto West Centre (Mr. Hocken) said yesterday that under section 4 the minister had the right to admit the child under special permit. He read part of the section, as follows:

> The minister may issue a written permit authorizing any person to enter Canada, or having entered or landed in Canada to remain therein without being subject to the provisions of this act.

The act goes on further to provide:

> Such permit shall be in the form A of the schedule to this act, and shall be expressed to be in force for a specified period only—

Mr. HOCKEN: I read that.

Mr. KING (Kootenay): It goes on:

> —but it may at any time be extended or cancelled by the minister in writing. Such extension or cancellation shall be in the form AA of the schedule to this act.

That is subsection 1 of section 4. Subsection 2 of section 4 provides, and I ask my hon. friends to get this section:

> A return of all such permits with particulars and names therefor, issued during the year, shall be made by the minister to parliament within thirty days of its meeting.

Why is that provision there? It is in order that parliament may judge whether that section of the act is being properly carried out.

Mr. MANION: And not abused.

Mr. KING (Kootenay): Then section 18, which is the controlling section, and which my hon. friend failed to read, deals with cases where no appeal is allowed from the board. That is the section under which the Minister of Immigration dealt with this case, and he is quite right in saying that he had no authority to admit the child. Section 18 provides:

> There shall be no appeal from the decision of such board of inquiry as to the rejection and deportation of immigrants, passengers or other persons seeking to land in Canada, when such decision is based upon a certificate of the examining medical officer to the effect that such immigrants, passengers or other persons are afflicted with any loathsome disease, or with a

disease which may become dangerous to the public health, or that they come within any of the following prohibted classes, namely, idiots, imbeciles, feeble-minded persons, epileptics and insane persons: Provided always that Canadian citizens and persons who have Canadian domicile shall be permitted to land in Canada as a matter of right.

The history of this case is this. That child arrived on the steamer. The officer went on board and detected the child and said: This child cannot come in under section 3. Having given that decision, and the board of inquiry having made their inquiry, the minister was precluded under section 18 from exercising the discretion he might have had if the medical officer had failed to report and do his duty.

Mr. EDWARDS (Frontenac): What then is the purpose of section 4 in the act?

Mr. KING (Kootenay): It has been found in practice, and I suppose this section was put in for that purpose, that people have passed through our lines of medical inspection and have gone on to their points of destination, and there have made associations which were able to bring from time to time certain suggestions to the minister that it would be a great hardship and very unfortunate, and not in the public interest, to deport an immigrant. That is why section 4 is there, to give the minister discretion. But this case having been detected on the steamer, and the medical officer having made his report, and the board of inquiry having made their report, the minister was precluded under section 18 from exercising the discretion he would otherwise have had under section 4.

I make this statement because I think the attack that has been made on the Minister of Immigration is very unfair. As far as I am concerned as Minister of Health I am prepared to take full responsibility for the decision of Doctor Rutherford in this case. I will go further and state for the benefit of those who may have any doubts about this case that if it is considered necessary I will have another examination made by competent men in Great Britain who are outside of our service altogether, and if it is found that this child should be admitted to Canada under our laws and regulations, there will be nothing put in the way of allowing that child to enter Canada and join the other members of the family.

Mr. McGIBBON: Was this child not examined previous to coming to Canada?

Mr. KING (Kootenay): No. The curious thing about that is that the report shows and the mother states that although the mother and the four children were examined, the baby was not examined.

Mr. MANION: Even in these circumstances could not the Minister of Immigration have overruled the regulations because of the special circumstances regarding the family and permitted this child to remain here for six months?

Mr. KING (Kootenay): I do not think so. It is an unfortunate condition. This is not the only case in Canada; there are other cases. On account of the medical officer having detected this child on shipboard and having reported the condition to the officers of the Immigration department, and the board of inquiry having sat on the case, the Minister of Immigration was precluded from exercising his discretion and it was necessary to return this child.

Mr. I. D. MACDOUGALL (Inverness): Before I essay to offer a comment on the budget presented to parliament by the Minister of Finance (Mr. Robb) I desire to refer briefly to the address delivered in this chamber yesterday by the Minister of Railways and Canals (Mr. Dunning). I do so not to criticize him for of all the men who sit on the government benches there is none for whom I have a higher regard than for the hon. gentleman who occupies the portfolio of railways and canals. Yesterday during the course of his very excellent speech, and all his speeches are excellent, he made a very vitriolic attack on the members of the Progressive group. As I listened to that attack the thought passed through my mind, How fleeting is memory, and how base is ingratitude! We who sat in this house in 1925 listened to far different speeches from hon. gentlemen opposite. Neither the Minister of Railways, nor any other supporter of the government down to the humblest back-bencher, in reference to that group took the position which the hon. minister himself adopted yesterday. From every corner of the government side there were flung at that group bouquets, panegyrics and laudations. Some of them went so far as to say that the Progressives were more advanced Liberals than the Liberals led by the Right Hon. W. L. Mackenzie King, that their own party had strayed away from the narrow path of rectitude, and that the Progressives represented the real Liberalism so sorely needed by this country. Our friends opposite were so accommodating that they were willing for the Progressives to vote lack of confidence in the government, but they implored them not to vote the Liberal party out of

power. As a result of those very friendly advances I am afraid that some members of the Progressive group were actually spoiled, as to-day we have, for example, the spectacle of the hon. member for Rosetown (Mr. Evans) arrogating to himself a monopoly of all public morality and all private virtue. Nevertheless, those blandishments were effective in 1926 when the government, in defiance of the popular will, were attempting to hang on to power by their eyelashes. But to-day the mask is thrown off, and we are told by a responsible spokesman of the government, the Minister of Railways, what the Liberal party really think of the Progressives. Henceforth my friends to the left and my friends in the Labour group know that whenever an organized labour or farmer nominee appears in an election his head will be hit by a bludgeon wielded by the Minister of Railways and his associates in the Liberal ranks. However, that quarrel is between the government and the Progressives.

May I congratulate the Minister of Finance on the masterly—might I say?—adroit manner in which he has presented his budget. It is said of individuals that they mellow with advancing years and their prejudices become less pronounced. Well, that is hardly true of the hon. minister, because in the presentation of his budget he made an excellent political speech, and I can well understand that my hon. friend from South Huron (Mr. McMillan) will be quoting some of the figures there given—not for the information of the Canadian people, but rather to baffle them—whenever he is addressing the electors of his riding. As I say, I admire the adroit manner in which the Minister of Finance presented his budget. Speaking of the national debt, for example, he made no reference whatever to the first year and three months of office of the Liberal party—during which, making no allowance whatever for the obligations incurred on behalf of the Canadian National Railways, we had an increase in the national debt of $49,000,000. No, he commenced his five-year period after the lapse of that year and three months.

Then he declared that taxation had been substantially reduced. I saw my hon. friend the Minister of Railways (Mr. Dunning) smile blandly as he heard the announcement—he always does smile blandly, but I think he smiled rather more blandly than usual on that occasion, because he knows differently. And there was tumultuous applause from the back benchers on the Liberal side.

[Mr. Macdougall.]

Mr. CASGRAIN: And the front benchers too.

Mr. MACDOUGALL: Yes, and the front benchers also. Now, what is the situation in regard to taxation? First, what are taxes? They are merely the amount of money collected by the government from the people either directly or indirectly. If you compare the amount of money taken from the people by the government that held power from 1916 to 1921 with the amount collected during the five-year period selected by the Minister of Finance, you will find that in this latter period the Liberal government extracted from the people in the form of direct and indirect taxes $416,000,000 more than was collected by their predecessors between 1916 and 1921—and two of those were war years. In other words, Mr. Speaker, for every single day that this government have held office they have increased the volume of taxation by $189,000. It is quite true that they did reduce certain specific taxes, but it is also quite true that in the majority of cases they had first raised those taxes. For instance, the Minister of Finance announced with great satisfaction that the government had brought the sales tax down to 3 per cent. That is, after labouring for six years they have brought the sales tax down to the point where they found it under a Conservative government in 1921. Then the minister says, in effect, to the Canadian people: Behold me, may I not stick a feather in my cap and crow, for see what I have accomplished in six years.

During the course of this debate we have had frequent references to the condition of the country, whether or not it is prosperous. In this connection certain hon. gentlemen opposite took a very extreme stand. According to them the millenium has at last arrived—Canada is literally a land overflowing with milk and honey; we are basking in the sunshine of prosperity. Certain other hon. gentlemen on this side of the house, not so friendly to the administration, seemed to adopt the ancient attitude that "no good can come out of Nazareth."—that no good works can be performed and no progress achieved under a Grit government. May I be pardoned, Mr. Speaker, if I dissociate myself from both of those views? In medio stat virtus is an ancient dictum, and probably as true as it is old. Whether Canada is prosperous or not will depend very largely on what constitutes a prosperous state. To say that Canada is prosperous because of a reported surplus in national bookkeeping is a dangerous, and oft times a fatal, mistake. A surplus is often illusory like Paddy's flea—when you go to put your finger on it you find it is not there.

Nor, sir, must we judge the prosperity and progress of a country by the annual reports of its large financial institutions. When all is said and done the only correct norm by which to judge real national progress and prosperity is by the conditions existing in the average humble home of the masses. If you want to find a proper standard of living by which to judge the prosperity of a land, you must go, not to the mart, to the financial institution or the mansion of the rich: you must go rather into the homes of the poor. Scotland's national poet might have had nations as well as individuals in mind when he penned these words so full of wholesome philosophy:

> To make a happy fireside clime
> To weans and wife:
> This is the true pathos, and
> Sublime of human life.

Let us see how much happier this government has made the fireside climes of the poor people of this country? There are only two ways in which they could have assisted the poor, namely, by inaugurating and keeping in force policies which would ensure to these people a continuity of employment at good wages, and also by instituting policies which would tend to reduce the cost of living in this land. Let us inquire what has happened in this regard. In 1922 the cost of living for a family budget, including foods, rent, clothing and so forth, was $20.67 per week. In December of last year it was $21.37, a slight increase. In other words, the government have not made happier fireside climes for the poor people of Canada so far as the cost of living is concerned. Well do I remember how the right hon. the leader of the government (Mr. Mackenzie King) used to bewail the condition of the poor. His heart used to bleed for the poor when he was in opposition, and he deplored the condition of the masses of the people who had such terrible burdens strapped to their shoulders. But what about wages? Someone may say that even if the cost of living has increased during the last six years wages have increased also, and that consequently the million industrial workers in Canada are better off. Let me point out in this respect that only 2 per cent of the industries of Canada employing over 200 men have not reduced wages during the last six years under this government. There were reductions in wages in 98 per cent of the industries employing more than the number of men I have stated, and some of these reductions ran as high as 50 per cent. That is the situation in regard to wages. Sixty per cent of the one million industrial workers in Canada to-day are receiving on an average only $17 a week, while the cost of living is $21.37. That is the happy fireside clime which this Liberal government has made for the poor people of Canada during the last five or six years.

We talk a lot about immigration, but it is impossible for us to stimulate immigration. it is needless to expect immigrants to come to Canada, until we are first in a position to take care of our own industrial workers. Let us institute in this country a policy which will revive and tone up industry, a policy under which the working men of Canada can secure continuity of employment and receive good wages. That would be the best immigration advertisement we could give the world. After all, when you go to look for immigrants you do not expect to find them in the ranks of plutocracy; you do not expect wealthy men with large estates in Britain and other countries to come to Canada. You are looking for the poor man who is coming in search of work, and if you cannot provide him with work you will not get him. In the matter of immigration, as in all others, charity should begin at home. Let us first take care of our own industrial workers. Then if we have work to offer in this country, let us go to the United States where there are thousands of Canadian boys and girls, in Boston, New York, Detroit and other cities, and let us try to bring them back. If we have anything in Canada to offer, let us offer it first to our own people. I say that without wishing to disparage those who come from other lands. We want the right kind of immigrants to come to this country, but employment should be provided first for our own people before we undertake to recruit the ranks of the unemployed by bringing in immigrants when we have nothing for them to do. I would suggest that we make an earnest effort to bring back the boys and girls who have left the country. Let no one say that these young people went away because of the wanderlust. A very small percentage of them may have left through that impulse, but the real reason for the departure of the majority of them was the fact that they could not get employment in their native land. Offer them that employment to-morrow and they will return; and I am sure they would make better citizens than any immigrants we could bring from any foreign country. They have that spark of patriotism which they derive from being sons of the soil. After we have stimulated industry by means of a policy which will give employment to our own people, then in the matter of immigration I would urge that we make a thorough study of the work of our immigration agents in all parts of the world. Let us see what they are doing or whether they are doing

anything, and let us have a report on immigration. Let us take immigration out of politics. I do not wish to be in any way offensive; I do not wish to wound the tender sensibilities of any man in this house; I do not wish to be caustic in my remarks regarding the Minister of Immigration. But I do submit that you cannot get blood out of a turnip; you cannot get constructive ideas from a tabula rasa. If, therefore, we want to get results let us have at the head of the immigration department a man who is alive from the neck up.

Coming from the maritime provinces, I can say that conditions there are somewhat better to-day than during the last six years. I am glad to be able to make that statement and I am prouder still of the fact that I was one of the number who started the movement to secure the rights of those provinces, which movement to some extent has resulted in improved conditions. There is no doubt that the recommendations of the Duncan report which have been so far carried out have assisted the people of the maritime provinces very materially, and more important than anything else, perhaps, has been the psychological effect. But I notice that hon. gentlemen from the maritime provinces supporting the government in this house—they are very few and they will be fewer the next time—when speaking, both in the house and outside, seem to take to themselves the whole credit for the movement which culminated in securing for the maritime provinces some of the rights to which they are entitled under confederation. I do not wish to play politics in this matter because, while the movement was given the support of the Conservatives in the maritimes, it also received the support of many Liberals. It was not, however, at first accorded the support of those who are the political leaders of Liberalism in the maritime provinces. It was not given the support of a single Liberal newspaper there, and from 1920 on, when the rights of the maritime provinces were being urged, those who said that conditions were deplorable, those who pointed out that our rights within confederation were being denied, were criticized, abused and derided in the Liberal press. We were depicted as pessimists, as blue ruinists, as maritime wreckers, and in the words of the hon. member for Antigonish-Guysborough (Mr. Duff), the whole business was Tory propaganda. But, sir, those who started that fight went into it with determniation, and they saw it through; they crystallized public opinion throughout the length and breadth of Canada in favour of the legitimate rights of the maritime provinces within confederation. That public opinion could not be ignored even by the government, and as a result a commission was appointed to investigate the needs of the maritime provinces. The head of that commission was Sir Andrew Rae Duncan, who was first introduced to the maritime provinces by Hon. Edgar Nelson Rhodes, Premier of Nova Scotia, who had previously brought him to Canada to settle the coal strike in Nova Scotia. That commission was appointed; it went down to the maritime provinces, and I would remind this house that the commission did not pluck its findings out of the atmosphere, but went there as a tribunal to hear the case of the maritimes. A good case was presented, and every bit of evidence given before that commission was presented by representatives of the Conservative party in the maritimes. The only Liberals who appeared before that tribunal were a few men who came to plead the cause of secession, and I do not believe they were even representative of the Liberal party in the maritime provinces, at least, to be charitable I hope they were not.

At all events, as a result of this agitation and the masterly presentation of the case by Hon. Edgar Nelson Rhodes, Hon. J. B. M. Baxter, and the then Premier of Prince Edward Island, the findings of the Duncan commission were made and presented to the government, but as yet they have not been all fulfilled. One of them is of primary importance to the province of Nova Scotia; it vitally affects the industrial life of that province, and as yet it has not been dealt with in any shape or form. The Prime Minister gave his assurance that the recommendations contained in the Duncan report would be carried out in full; that has not been done as yet. Then, as though to make assurance doubly sure the Postmaster General (Mr. Veniot), the Don Quixote of New Brunswick politics, went down to St. John and delivered a speech in connection with the proposed bounty to the steel industry as recommended by the Duncan commission on page 38 of the report. In that speech the Postmaster General said that within the course of a few weeks an announcement would be made which would make every Nova Scotian feel glad. This announcement was to be in connection with the steel industry, and everyone interpreted that to mean an announcement to be delivered in the budget. It may be that the hon. gentleman was misquoted, as public men sometimes are; perhaps what he intended to say was that the budget would be brought down and that it would make every maritimer mad. However, we had the assurance of the Postmaster General that something would be done, and we had the assurance of the Prime

Minister that something would be done with respect to the steel industry. So far nothing has been done.

Just at this point, Mr. Speaker, I wish to point out to the house the importance of the steel industry to Canada or to the industrial life of any nation. It will be found that the industrial life of a nation is bound up with its steel and its coal. If we consider the industrial history of those nations which to-day occupy prominent places in the world with respect to power, influence, wealth and population, we will find that in every case they owe their commercial and industrial greatness to their vast deposits of coal and their steel industries. I might also point out that the Nova Scotia industry is the only steel industry having all its roots in British soil, the only one indigenous to the British Empire. As great and important as that industry is in times of peace it is much more so in times of war, and are we going to allow that industry to suffer atrophy and die? Would this government or any other Canadian government care to have the iron ore deposits of Newfoundland taken over by Americans? That is a situation which may come about if the industry is not properly fostered and protected. We are demanding that the plighted word of the Prime Minister be carried out with regard to the Duncan report; we demand that the assurance given by the Postmaster General be put into force and that this industry be assisted in the manner suggested by the Duncan report.

Let me point out the situation, Mr. Speaker, with regard to the steel industry in Sydney. My hon. friend the Postmaster General said an announcement would be forthcoming which would make every maritimer glad. Well, the budget does not contain anything for the Nova Scotia steel industry. Will it make the people of Nova Scotia glad, or will it make them mad, to know that six out of seven blast furnaces situated in Sydney are to remain idle, as has been the case ever since this government came into power? Will it make the people of Nova Scotia glad to know that the Sydney steel industry, which to-day is working at only thirty per cent capacity, will continue so to work? Will it make the people of Nova Scotia glad to know that the shutters will remain on the windows of the homes of those workers who have invested all their savings in their little houses at Sydney Mines and Trenton? I fail to see that this budget will do very much for the steel industry of the maritime provinces, and before it is too late, before that industry is completely ruined, I appeal to the government of the day to do what they should do and what they are decently bound to do by the professions of the Prime Minister of this country. I appeal to the government to assist this industry in accordance with the report of the Duncan commission.

In the province of Nova Scotia, as in the province of Alberta, we are very vitally interested in the question of a national fuel policy. A short time ago the Minister of Railways and Canals (Mr. Dunning)) asked what a national fuel policy was, just as his leader once asked what maritime rights were. I wish I had been in the house at the time, but I will answer that question now by saying that a national fuel policy is one under which Canadian coal will be burned, as far as humanly possible, by Canadian railways, Canadian industries and on Canadian hearthstones. In advocating such a policy we in the maritimes join with you in Alberta; it is a crying shame and little less than a disgrace that $100,000,000 of good Canadian money should be sent to the United States year by year to give employment to American miners while our own miners in Alberta and Nova Scotia go idle, often leaving their wives and families without bread. I say that is a situation which should be corrected, and I sincerely hope that some effort will be made by this government to cope with that question. They have done nothing so far; we have brought up the question in this house time and time again, but absolutely nothing has been done. This government should go into conference with the accredited representatives of the Nova Scotia and Alberta governments and find out just what could be done to widen the zones of distribution for Alberta and Nova Scotia coal. I throw this out as a suggestion in the hope that the government will bestir themselves and do something for the solution of this problem which is, in the truest and best sense of the word, a national one.

Now although we are a little bit better satisfied in the maritime provinces on account of the somewhat more or less successful issue of the fight which we put up for maritime rights, I may say that the people of the maritime provinces have other requirements to be met besides those which have received attention under the report of the Duncan commission. We need an extensive program of branch line railway construction. In Nova Scotia four different branch lines at least are a necessity, because our transportation facilities are altogether inadequate. One is needed in the county of Richmond, one in the county of Colchester, one in Guys-

borough, and one particularly in the county which I have the honour to represent and of which I wish to speak for a moment. I have the privilege of representing in this parliament a county which, perhaps, is just as rich in potential wealth as any county in this Dominion. It is estimated that we have in that county over two billion tons of coal, we have a variety of other mineral wealth, we have agricultural wealth, and our fisheries are very important. But unfortunately, there are in that county only sixty miles of railway extending from Point Tupper to the town of Inverness. The other half of the county, containing extensive mineral wealth, important fisheries and excellent farming facilities, has no transportation facilities whatever. I appeal to the government, when they are making provision for the construction of branch railway lines, to give some consideration to the question of extending the railroad in question from Inverness to Cheticamp in order that the great deposits of mineral wealth already referred to may be developed, and that the people may attain a greater degree of progress and prosperity than it is now possible for them to enjoy owing to the lack of transportation.

Now, Mr. Speaker, my time is about up. But before I conclude there is one thought which I wish to express; it comes to me, perhaps, on account of the reference to my native county. If you visit that county you will not be impressed with industrial development owing to the failure of the government to adopt any policy calculated to bring that about. You will not be struck with the transportation facilities because the present government has failed to provide them. But there is one thing with which you will not fail to be impressed, and that is the spirit of cooperation, of amity, and of friendship which exists between the different races in that county. Four races are represented among the people—Irish, French, English and Scotch. Although of different racial origin, the people always co-operate and work together; and perhaps the most edifying thing is to see the rose, the fleur de lis, the thistle and the shamrock side by side and giving their sweetly blending aroma to that county, which claims those races as its own. That is the picture I should like to draw of Canada as a whole. We have different races, we have different groups, and different views; but when all is said and done—although we may not think so with the government at present in office—we have certainly a great country, a country of vast possibilities, a country which should present a myriad of opportunities to young Canadians so that they may play their part in helping this country to achieve its great and exalted destiny. I would ask in conclusion, that no matter to what party we give our political allegiance in Canada we should spread the message of confidence in our own country, the message of faith in its resources. I would ask further that we should try to spread the message of goodwill amongst our people so that no matter how they may differ in their outlook they may live at peace with their neighbours and cooperate to achieve the happy realization of our common hopes and wishes.

Mr. EDMOND G. ODETTE (East Essex): Mr. Speaker, before I entered the portals of this house I used to marvel at the arguments of hon. gentlemen opposite in criticizing the budget brought down by the present Minister of Finance (Mr. Robb). This year I have marvelled anew at the contentions of hon. gentlemen opposite, particularly those on the front benches, who have undertaken to criticize the budget we are now considering. For instance the hon. member for St. Lawrence-St. George (Mr. Cahan), criticized the head of the Canadian National Railways. That hon. gentleman is an outstanding member of the legal profession, an ornament to the Canadian bar. Nevertheless he undertook to delve into the realms of railroad administration. Then there was the hon. member for Fort William, a soldier of renown, who criticized the department charged with the re-establishment of returned soldiers on the ground of increased expenditure. The same hon. member, who is a physician of distinction, and who saw service overseas, attempted to make a diagnosis of the ills of the automobile industry. We thus had two professional gentlemen criticizing the administration of public business in channels foreign to those with which they are supposed to be familiar. Finally one of the Toronto members, an outstanding business man, while engaged in the criticism of the budget, entered upon a consideration of the restaurant business.

Mr. CHAPLIN: It sounded pretty bad too.

Mr. ODETTE: I shall have a word to say to the ex-minister from Lincoln before I conclude. The argument has been advanced by hon. gentlemen opposite that there is no surplus, and that our debt has not been reduced. These contentions were dealt with very effectively yesterday by the hon. Minister of Railways and Canals (Mr. Dunning). Now, in business, we are interested in quick results and tangible assets. Not one member opposite stated that the surplus of $55,000,000 did not

exist. Well, it is a fact that that surplus does exist, and the estimates brought down cover appropriations to the extent of only $7,000,000 more than last year. Any school boy with a rudimentary knowledge of arithmetic can see, in the face of existing conditions, that this country is in a pretty healthy condition.

We find the hon. member for Fort William criticizing the government for appointing commissions and the hon. member for South Cape Breton (Mr. MacDonald) asking the government to appoint another commission to study unemployment in his county. How is the government going to please hon. gentlemen opposite when one of them asks for a reduction in the number of commissions and criticizes them for appointing such bodies at all, and another gentleman on the same side asks for the appointment of still another commission with respect to his own district?

The hon. member for Fort William took credit to himself for uttering a "destructive" speech, as he called it. I may say that as a new member I am amazed that any member of the Canadian parliament would take credit to himself for uttering a destructive speech. I want to tell the hon. member that the people of Canada would be inclined to consider his speech humorous rather than destructive.

Mr. MANION: The only way to deal with this government is humorously.

Mr. ODETTE: I regret very much the hon. member for South Essex (Mr. Gott) was not in his seat when the hon. member for Fort William quoted the lines "Me and Gott."

Mr. GOTT: What does the hon. gentleman mean to be inferred from that?

Mr. ODETTE: The hon. member for South Essex was not in the house or he would know the inference.

Mr. GOTT: What inference does he wish to draw?

Mr. ODETTE: The hon. member for Fort William—

Mr. GOTT: I should like to have that retracted, Mr. Speaker.

Mr. ODETTE: I will answer the hon. member for South Essex. The hon. member for Fort William in his speech the other night—

Mr. GOTT: That is not the point at all. What is the inference?

Mr. ODETTE: I appeal to you, Mr. Speaker. I will tell the hon. gentleman the inference later on.

Mr. GOTT: That is an insult to the intelligence of this house. I ask that the remark be retracted.

Mr. SPEAKER (Mr. Marcil): Unless the hon. gentleman wants to rise to a point of order, he cannot interrupt now.

Mr. GOTT: I want to know from the hon. member for East Essex what inference he wishes the house to draw from his remark.

Mr. ODETTE: The hon. member for South Essex can draw his own inference.

Mr. GOTT: I rise to a point of order. I demand that this remark be withdrawn.

Mr. SPEAKER (Mr. Marcil): I do not think there is any point of order.

Mr. GOTT: What right has the hon. member to ask this house to draw an inference?

Mr. ODETTE: If it will appease the hon. member for South Essex, I want to say that I think the hon. member for Fort William can disabuse his mind if he thinks that I have anything but the kindest feelings for both of my hon. friends.

Mr. GOTT: The hon. gentleman has no desire to answer the question I ask.

Mr. ODETTE: I appeal to you, Mr. Speaker; all my time will be taken up with interruptions from the hon. member for South Essex.

Mr. GOTT: The hon member for East Essex will not use nearly all his time, have no fear.

Mr. ODETTE: The hon. member for Fort William was particularly concerned in regard to the motor car industry and he quoted statistics proving, I imagine to his satisfaction, that the motor car industry in Canada was not in a healthy condition. Not wishing to have happen to me what happened to the hon. member for South Perth (Mr. Sanderson) when the hon. member for Fort William appealed to the chair, I will recall to the recollection of the house the figures quoted by the hon. member for Fort William and the words used by the hon. member for St. Lawrence-St. George and I will say they were the truth but not the whole truth. The hon. member for Fort William stated that motor car production in Canada had decreased by 13 per cent. That is true. He stated that the export of motor cars from Canada had decreased by 23 per cent. That is true. He further stated that the importation of motor cars into Canada had increased by 28 per cent. That is true. The production of motor cars in Canada decreased during the last year

for one reason and one reason only. The largest manufacturer of motor cars in the British Empire, the Ford Motor Company, was engaged in the gigantic task of bringing out an entirely new model and for nine months of last year the factory did not produce a single new car. Therefore, when we study these figures and when I tell the house that the production of the Ford Motor Company in 1926 amounted to over 50 per cent of the entire motor car production in Canada; that the Ford Motor Company produced more than all the other manufacturers combined, it will be realized that this apparent decrease of 13 per cent is really an increase on the part of the other motor car manufacturers of Canada. The decrease in exportation of cars is explained in the same way. More than 50 per cent of the production of the Ford Motor Company is for export and, consequently, if they were not producing cars, the exportation of cars from Canada naturally slumped. The increased importation of cars is explained likewise. Canadian purchasers of motor cars, being unable to purchase Ford motor cars, purchased cheaper cars made in the United States and brought them here.

The motor car industry at the present moment seems to be in very good shape. The Ford Motor Company is increasing its production daily and of course is increasing the number of men employed by it. General Motors last year spent nearly $2,000,000 in factory extensions in the city of Oshawa, and may I say to the hon. member for Lincoln (Mr. Chaplin) that the General Motors plant located in the city of Walkerville is now in operation. I was twitted last year and asked why this plant was idle. May I ease his mind by telling him that the plant is now in operation and employing several hundred men? May I ease the mind of the hon. member for Southeast Grey (Miss Macphail) who recently paid a visit to my constituency? She said that hundreds of men were standing without the gates of the General Motors plant looking for employment and hoping and praying that the plant would start operations.

Miss MACPHAIL: I do not think I used the word "pray."

Mr. ODETTE: At all events they were looking for work. That plant is now in operation and those several hundred men, I imagine, are employed, because I hold in my hand a statement prepared by the Border Cities chambers of commerce which says that employment last week in the border cities was 474 greater than it was the week previous. Therefore I imagine those men have found employment. The Chrysler Motor Car Company in Windsor is engaged at the present time in building new factory additions runnning well over a million dollars. In the city of Toronto the Willys-Overland Company are spending over a million dollars in new factory buildings to build motor cars in Canada. In the town from which I come, a concern engaged in the production of motor car parts has just recently completed a new factory costing between $200,000 and $250,000 to make motor car parts for Canadian cars. Let me relieve the mind of the hon. member for Fort William by quoting a statement by Mr. R. S. McLaughlin, president of General Motors, in regard to the automobile industry in Canada. This is what he said between Christmas of 1927 and the New Year in an annual review prepared by the Montreal Gazette:

> Important steps were taken during 1927 to increase the content of Canadian labour and materials in cars fabricated in this country. Contracts involving millions of dollars for parts and materials were let for the first time in Canada. In 1926 it was said that 100,000 persons in the Dominion were dependent on the automotive and allied industries. In 1928 it is probable that there will be half again as many, exclusive of the thousands who are involved in the sale and servicing of cars through dealer organizations from coast to coast. There seems little doubt that the coming year will be notable not only for the passing of the million mark in automobile registrations but for the setting up of new records of production in the automotive industry in the Dominion.

I think the people of Canada will be more inclined to accept the opinion of R. S. McLaughlin than that of the hon. member for Fort William.

Mr. MANION: Might I inform my hon. friend that it was not my opinion, but the opinion of the Department of Trade and Commerce of this government. That is what I quoted.

Mr. ODETTE: I have disseminated what I think is the whole truth.

Mr. MANION: Instruct the minister.

Mr. ODETTE: The minister is not in the motor car business, and I am, and probably I know the conditions existing in that industry. The hon. member for Fort William (Mr. Manion) spoke of hotels being built throughout Canada to house foreign agents.

Mr. MANION: I did not say that at all. Someone else may have, but I did not mention hotels.

Mr. ODETTE: I am sorry, but the statement was made by some hon. gentleman opposite. Let me say that in Windsor, hotels are being built, and apartment houses, and not to house foreign agents. If hon. gentle-

men would look closer, they would find that these foreign agents are tourists who have come over to Canada to visit this country, and they have not come here with any idea of robbing us, but rather to leave in this country many millions of dollars. Not only are hotels and apartment houses being built in Windsor and the border cities, but a large ramp garage is being erected there, and a large storage warehouse. A factory manufacturing electric refrigerators has also started in the border cities. A concern manufacturing golf balls is also starting there. Tobacco factories are being erected in the district from which I come.

Mr. GOTT: How many tobacco factories?

Mr. ODETTE: We will say a tobacco factory. A concern to manufacture aeroplanes was organized last week in the border cities.

Mr. GOTT: Don't forget the new post office at Windsor.

Mr. ODETTE: I hope the members in the southeast corner of the house will not deem the district I represent ungodly when I tell them that a large factory to manufacture playing cards was completed there a week ago, and again with a fear of having my district called ungodly—

Miss MACPHAIL: Do we look as righteous as that?

Mr. ODETTE: I hope not. A brewery has recently started in operation, and may I ask the hon. member for Fort William kindly to remember them when his commission is placing orders. Last but not least the Canadian Steel Corporation, the Canadian branch of the United States Steel Corporation, have started the production of steel in two large factories in Ojibway.

Mr. HEAPS: Do they want protection?

Mr. ODETTE: I do not know that anyone representing that company has been here making representations of any kind. In any event, they have announced that they are starting their plants in Ojibway and will manufacture steel in Canada.

Mr. GOTT: That was years ago.

Mr. ODETTE: Would hon. gentlemen opposite have the people in my district start woollen mills? The industries that I have enumerated are actually in operation or about to commence operations. Would you have us build woollen mills when in 1926 the American Woollen Company, of the United States, the largest manufacturers of woollen goods on this continent, lost $12,000,000 in one year?

Concern has been expressed by hon. gentlemen opposite that the reduction in the sales tax will not be passed on to the consumer. Last year when I spoke, the hon. member for Rosetown (Mr. Evans) questioned whether the tax reduction on matches would be passed on to the consumer. I ask any hon. member if it is not a fact that matches are cheaper in Canada to-day than they were a year ago. I believe that the reduction in the sales tax will be passed on to the consumer, probably not in the case of an article costing ten or twenty-five cents, but let me call the attention of the house to this fact, that a motor car at a wholesale list price of $1,000 can be purchased in the city of Ottawa to-day ten dollars cheaper than it could be bought before the budget was brought down. It has been suggested, and I believe it is proposed in the amendment, that the sales tax should be removed in its entirety. Last year when I spoke on the floor of this house I advocated that the sales tax be entirely removed. Some hon. member may ask, why was it not removed? It was not removed for good and sufficient reasons. The wholesalers and retailers of Canada have their shelves stocked with goods, and if the sales tax were suddenly removed, they would sustain a loss. I want to say, however, that I believe the sales tax will be entirely removed and will be in the limbo of forgotten things before hon. gentlemen opposite ever occupy these benches.

The district from which I come has I think received this budget rather well. My own particular district of East Essex seems to approve generally of this budget, and I think my constituency is fairly representative of the country.

Mr. GOTT: Would the hon. gentleman permit a question? He has referred at least a dozen times to "my constituency." I wish to tell him that he has only a lease on that constituency; it is not his.

Mr. ODETTE: Probably I have a longer lease on mine than the hon. member for South Essex (Mr. Gott) has on his.

Mr. GOTT: The hon. member for East Essex is not sincere in that remark.

Mr. ODETTE: I repeat, Mr. Speaker, that the budget has been well received in East Essex, and I think that East Essex is quite representative of Canada. It is largely industrial and agricultural.

We have heard a great deal of criticism of the budget, but very little has been of a constructive nature. In the district from which I come may I say that politics are forgotten as soon as the elections are over and religion never enters into the picture at

all. The farmer and the manufacturer get along hand in hand; I think the hon. member for South Essex will bear me out in that.

Mr. GOTT: That is the first real remark you have made to-day.

Mr. ODETTE: I am sorry the hon. member for East Toronto (Mr. Ryckman) is not in his seat. I would not enter into a discussion with him as to the management of restaurants, but probably all members of this house are not aware of the fact that the hon. member for East Toronto is president of one of the largest rubber manufacturing companies in this country, and his industry was complimented by the Minister of Trade and Commerce (Mr. Malcolm) for not taking full advantage of the tariff, for not hiding behind the tariff. That is a most commendable thing, but why should not his company sell their tires for eight or ten per cent above the American price when crude rubber and raw cotton enter Canada free? The hon. member to whom I refer is president of the Dunlop Tire and Rubber Company. May I quote the remarks of another gentleman engaged in the rubber business, Mr. F. A. Seiberling, who has been a leader in the rubber industry of the world for the past twenty-five years. Mr. Seiberling has recently organized a company in Canada, and this is what he has to say regarding Canada's new technique of living:

> A short time ago I had the privilege of taking part in the organization of the Seiberling Rubber Company of Canada, and of experiencing the friendliness of a Canadian welcome to a new enterprise.
>
> I had an opportunity to study Canadian life at close range, and to compare my present observations with impressions gained upon a previous visit some years ago.
>
> It seems to me that something has happened to Canadian people—something I can only describe as a new technique of living. They work harder and play more intensely, travel faster, live a fuller, richer life than ever before.
>
> Perhaps all this is due to the fact that life in general is moving at a faster pace. It may be the natural reaction to a national feeling of optimism that comes from good crops, greater industrial developments, enviable achievements in the mining world.
>
> Perhaps it is the result of living in an atmosphere of prosperity pointing to a decidedly promising future.
>
> Whatever is the cause, wherever lie the reasons, Canada gives to visitors a profound impression of cheerfulness, enterprise and lusty, vigorous growth—an impression that is winning for her the pronounced respect and interest of the whole world.

Will hon. members please compare those remarks with the remarks of another leader in the rubber industry, the hon. member for East Toronto (Mr. Ryckman).

[Mr. Odette.]

During the course of this debate we have heard a great deal about the ills of Canada, and I think something should be said as to how we can cure some of them. In my opinion the main requisite is cooperation. The hon. member for East Lambton (Mr. Fansher) who moved the subamendment desires, I imagine, to do what he can for the Dominion generally, and particularly for his constituents. Might I ask him what part he has played in connection with the troubles of the tobacco growers in southwestern Ontario? Members of parliament representing ridings in southwestern Ontario, regardless of their political affiliations, are working hand in hand to assist the tobacco growers to market an unsold crop of nine or ten million pounds of tobacco. The hon. member for East Lambton was notified of meetings to be held for the purpose of finding a solution of these troubles. Members on this side representing West Elgin (Mr. Hepburn) and Kent (Mr. Rutherford), and members on the Conservative side—the hon. member for South Essex (Mr. Gott) the hon. member for West Essex (Mr. Robinson) and myself—joined hands in the effort to solve the problem, with the result that the Ontario tobacco pool, a cooperative marketing organization, was formed. Just to show hon. members in the southeast corner that all manufacturers are not brigands, I hold in my hand a letter from a farmer in Essex county, a director of the new pool, urging me to be present at a meeting of the pool. These are his words:

> We must have you present, for in this district you are considered the father of the tobacco pool.

Miss MACPHAIL: That farmer would not be a Liberal?

Mr. ODETTE: I do not think so.

Miss MACPHAIL: It sounds like one.

Mr. ODETTE: Well, probably all the farmers down there are Liberals. What I mean to imply is this: I do believe that the manufacturers and business men generally should cooperate with the farmers of this country, because after all if our farmers are not prosperous the wheels of our factories are not turning. I would ask hon. members to visit Essex county. I am satisfied they would find what I state to be true. We do believe in cooperation, we do believe in unity. We have heard a lot about national and racial unity. Let me make a plea for occupational or vocational unity. In the part of the country that I come from the Border Cities chamber of commerce is working in the closest cooperation with the Farm Bureau

of Essex county. We recognize no race distinction, no distinction of creed, no distinction of vocation in Essex county; and I trust that that feeling will pervade the entire Dominion. I believe that if we had more of the spirit of cooperation not only in this house but throughout the whole country Canada would be much better off.

In conclusion, Mr. Speaker, may I say that the budget brought down by the hon. Minister of Finance was well received in my district. I believe it was well received throughout the Dominion. May I say to him that if in the succeeding years of the life of this parliament he brings down similar budgets providing for lower and lower taxation, I do not think that hon gentlemen opposite need get ready to move over here for some time to come.

Mr. ECCLES J. GOTT (South Essex): Mr. Speaker, when the hon. member for East Essex (Mr. Odette), in the course of his speech was complaining of not having enough time, I ventured to interrupt and tell him that I did not think he would consume his full forty minutes. I did so because I know him so well—I know how he is inclined to exaggerate.

My first remark in reply to the hon. gentleman, significant though it may be, is the result of the inference that I draw from his words. I tell him that I am not a traitor to tradition, and I think his speech this afternoon is his first preparation for hangman's day.

Mr. SPEAKER: I hope that is not to be taken literally.

Mr. GOTT: That is the inference I draw from my hon. friend's speech, and at any time I can convey it to him privately, but he well knows what I mean. The budget speech of the Minister of Finance (Mr. Robb), has caused me keen disappointment, due to the fact that the government has failed to take cognizance of, or even to recognize, the most alarming and unfortunate condition that has ever faced the agricultural industry of western Ontario. Although in possession of firsthand knowledge of the deplorable and pitiable circumstances that surround the tobacco growing industry in western Ontario, the government has failed to take action. The Minister of Agriculture (Mr. Motherwell) made two personal visits to the tobacco growing section; his deputy, Dr. Grisdale, made three or more visits, and they recognized instantly the appalling situation that confronts our tobacco growers of that section, and more particularly those in the riding that I have the honour to represent. They were privileged to meet in the city of Chatham five thousand tobacco growers clamouring for assistance. The main meeting held in the theatre was made up of nearly two thousand men, while the overflow meeting in the armouries filled the building to capacity. I do not want to charge the Minister of Agriculture with being insincere—I hold him in too high esteem and regard him as being too sincere to suggest that he and other hon. members opposite would seek to strengthen their political standing through the misfortunes of others. But I do hope that if the time ever comes during my term as a servant of the people that my success depends upon the misfortunes of others I will go down to ignominious defeat.

Mr. HEPBURN: Explain.

Mr. GOTT: I will explain something later to the hon. member for East Elgin.

Mr. HEPBURN: Mr. Speaker, there is no member for East Elgin; there is no such constituency.

Mr. GOTT: I am very glad to answer any questions, but in making his interjection the hon. member did not act properly. He did not rise to make it.

Mr. HEPBURN: Where is the hon. member for East Elgin?

Mr. GOTT: Pardon me if I misname the hon. gentleman's constituency. Is Elgin correct?

Mr. HEPBURN: No; the hon. member is not right yet. His geography is wrong; it is West Elgin.

Mr. GOTT: The question is one that should not be tainted with party politics, and I am disappointed that hon. members on the government benches—

Mr. McMILLAN: I rise to a point of order.

An hon. MEMBER: Shut up.

Mr. SPEAKER: What is the point of order?

Mr. McMILLAN: The hon. gentleman is reading his speech.

Mr. GOTT: The question is one that should not be tainted with party politics, and I am disappointed that hon. members on the government benches, who took such an active part in the tobacco campaign in western Ontario, did not accept the opportunity of drawing forcibly to the attention of this parliament the true condition. I say the true condition, for I believe that had these hon. gentlemen supported me, as I had hoped they would,

when they had an opportunity on the speech from the throne, such a strong plea could have been presented as would have compelled the hon. the Minister of Finance to recognize our just recommendations.

I ask the hon. member for Kent (Mr. Rutherford); I ask the hon. member for West Elgin (Mr. Hepburn); I ask the hon. member for Norfolk-Elgin (Mr. Taylor); and I ask the hon. member for East Essex (Mr. Odette): How can they justify to their constituents, for whom their hearts bled but two short months ago—how can they justify their silence in this parliament? Was there nothing that the government could do? Was there nothing that the government should do? Apparently my presentation of the situation did not meet with the approval of these hon. gentlemen, and I realized that being in the opposition my effort was wasted unless I could stir the representatives of the tobacco growing constituencies either to support or to oppose my recommendations. But not a word. They were loud and outspoken on the hustings, but in parliament, where consideration could be given and remedies applied, they at once became disinterested representatives.

Now let me ask these hon. gentlemen whether they approve or disapprove of the recommendations that I made to the government? Or were they interested enough in the problem to read my remarks? Let me ask them to give an expression one way or the other on the three recommendations that I made:

1. A more extensive cooperative marketing system;

2. A reduction of the excise tax on cigars and cigarettes;

3. A higher duty on flue cured and other tobacco entering Canada from foreign countries.

These are the three major factors that enter into the solution of our tobacco problem. I asked for these conscientiously believing that each and every one was paramount to the solution of our troubles.

The excise on cigarettes is enormous—so excessive that we are sending hundreds of thousands of dollars annually to turn the wheels of industry in a foreign country, and bootlegging in cigarettes is flourishing. The manufacturer loses, the grower loses, the labourer loses, and our money goes out of the country never to return; and our laws force the average cigarette smoker at the border to hold our customs laws in contempt. Newspapers have contained articles from time to time on the desire of our Canadian authorities to cooperate with the United States government—through certain exports—which would facilitate better law enforcement in the United States. Let me say to our authorities that we can obtain something in return for this extension if we ask it. We could ask that concessions be extended on an equal basis, and thereby we might be able to ascertain who the Canadians are that make such huge purchases of cigarettes in the city of Detroit and elsewhere. We might also be able to obtain from the large department stores information as to who are their best Canadian customers, and the extent of their purchases. Department stores in Detroit have dressing rooms, not especially for Canadians, but practically for them, in which Canadian women, and prominent Canadian women too, change or conceal their newly purchased garments in preparation for the contravention of the Canadian Customs laws, which follows Canadian purchases in American cities.

Getting back to the "bubble" budget—a budget that seems to have had Nero as the fiddler while Rome burned, a budget wherein I fail to see a provision that is of material assistance to any section of Canada—I would ask the Minister of Finance whether he is in any sense governed by the recommendations of the tariff board and if so, to what extent? Did the tariff board recommend a reduction in excise on cigars or cigarettes? Did the tariff board recommend a seasonal tariff on fruits and vegetables? If so, why was the minister not governed by the recommendation of the board? The board had volumes of evidence to substantiate the institution of a reasonable and seasonal tariff on fruits and vegetables. If the board did not make the recommendation, then I say that in view of the solicitation they had, and the evidence that was placed before them, they are an expensive and useless instrument and should be discharged. If the board did not recommend a reduction in excise on cigars and cigarettes, then, Mr. Speaker, I desire to repeat that, in view of the representations they had, they are useless and expensive, and harmful to some of the better interests of our great Dominion.

As regards tobacco products, I quote from the Canada Year Book:

Re: Tobacco Products

1901

Per capita consumption of tobacco: 2.375 pounds.
Per capita taxation on tobacco: $0.86.4.
Taxation per pound per capita: $0.36.4.

1926

Per capita consumption of tobacco: 3.468 pounds.
Per capita taxation on tobacco: $3.11.8.
Taxation per pound per capita: $0.90.2.

Increase, 1901 to 1926 in tobacco taxation per pound per capita: $0.53.8, which is 148 per cent increase.

We therefore find:

Tax increase on liquors, per gallon per capita: 53 per cent.
Tax increase on tobacco, per pound per capita: 148 per cent.

Hence the consumer of tobacco has been severely penalized, and the time has come when, if the tobacco industry is to survive, the government must give some relief in the form of reduced taxation; otherwise the government must admit that they care but little for one of the largest industries in the Dominion of Canada. I will submit statistics to prove the size of the manufacturing section of the industry, and try to impress upon the Finance minister, if such a thing is possible, the handicap under which they operate as regards imposts levied and maintained by our Dominion government, from which the Finance minister has no desire to grant them any relief at the most critical time in their existence.

A spirit of optimism apparently prevailed in the fall of 1927, and the Canadian Cigar and Tobacco Journal, published in Toronto, contained in its October number the glaring headlines:

Cigar Industry Gains Receptive Hearing in Ottawa and Hopes Run High.

The only fault I find with that headline is that the word "receptive" probably should have been "deceptive." The article is as follows:

Hopes now are higher than at any time in recent years for a reduction in cigar taxation which will be sufficiently substantial to reduce prices and increase consumption.

Taking their case for the first time to the new tariff board on Tuesday, September 20, the cigar manufacturers laid before that body a brief which quite evidently won its sympathy. It was in some respects the most elaborate brief which they have yet prepared and possibly the most elaborate the new board has received. Statistics obtained from a variety of sources have been compiled by Mr. C. S. Richardson into a convincing statement of the cigar manufacturers' case; short, pointed, logical yet complete in every respect.

The brief itself and the drafts which accompanied it are reproduced just as presented on the following five pages of this issue. One little detail which indicated the care taken to make their case impressive is the fact that the applicants went to the expense of having the brief set up in type and printed, giving an ample and readable supply, not only for members and officials of the board, but for members of the customs and finance staffs as well as for press representatives.

So complete was the brief that practically nothing in the way of supplementary oral evidence was needed. A general discussion followed which had more to do with ways and means that with information.

This is too lengthy to quote further.

Canada's cigar industry is back to a production basis of a quarter century ago; factories are reduced in number by sixty per cent; trade is staggering under economic burdens which react adversely to the government and its revenue. This, in brief, is a picture of present day conditions in the cigar business in Canada. By itself, the cigar industry is not a dying one, yet it is being slowly strangled by conditions beyond its control, conditions which had their being in 1914 when war time levies were imposed on it for war taxation purposes, levies which have been added to and continued to the present. The proper readjustment of these duties will afford a great measure of relief to the entire industry from grower to manufacturer, without seriously lessening the revenue derived by the government. The schedule proposed by the manufacturers, while not drastic, affords some measure of relief and should go a long way in the rehabilitation of the industry.

A word picture of present day conditions has been presented, and a relief measure likewise has been brought forward for consideration. High lights of the dual presentation tell their own story and bring their own answer. On one hand we have "more than 42 per cent reduction since war tax imposed." There were 253 cigar factories in 1913 and 106 in 1927. and Canadians are smoking only one-quarter as many cigars per capita as Americans. Scores of old cigar firms have been eliminated from business and government revenues seriously curtailed. On the other side, we find United States duties cut in half in 1926, with 500,000,000 increase in production in the first year of the new United States taxes. There was a 50 per cent cut in American duties with a reduction of only 11 per cent in revenue, and Canadian leaf growers are benefiting by the lower taxes.

This is a precedent to support the claim of the cigar manufacturers for lower taxes, and there are records to substantiate their contentions. The United States, like Canada, sought to bolster revenue returns by increasing its duty on cigars, but notwithstanding the comparatively favourable condition of the trade in the United States, the war time levies throttled not only the industry but actually the government revenue. The United States gave relief by a 50 per cent cut in 1926, and to-day the big bulk of the cigars consumed in the United States are taxed at a lower rate per thousand than they were fifteen years ago.

With this as a precedent, Mr. Speaker, and with uncontrovertible figures of the Inland Revenue department showing a drop from

294,772,000 in 1913 to 173,912,000 in 1927 to back their claim they have confidently placed before the tariff board a long list of requests, all of which are reasonable. I am unable to put them on Hansard; I have not time to read into the record, but they are contained in the brief, given to that wonderful body, the tariff board.

Since the opening of the present century the cigar production of Canada has shown a tremendous fluctuation having gone from 141,000,000 in 1901 to the high level of 294,000,000 and back to 166,000,000. The production has been:

1901	141,096,000
1902	151,780,000
1903	168,290,000
1904	180,485,000
1905	186,110,000
1906	193,827,000
1907	154,253,000
1908	200,133,000
1909	192,105,000
1910	205,820,000
1911	227,585,000
1912	252,718,000
1913	294,772,000
1914	288,220,000
1915	236,867,000
1916	207,648,000
1917	239,752,000
1918	254,446,000
1919	223,295,000
1920	270,108,000
1921	214,263,000
1922	176,983,000
1923	182,677,000
1924	195,662,000
1925	166,851,000
1926	173,477,000
1927	173,912,000

In 1914, immediately following the entry of Canada into the world war, the first increase in duties was imposed. It was a $1 increase on the previous tax of $2 per thousand. For three years that remained, but in 1917 the duty was doubled to $6 per thousand. This, too, was a direct war measure, specified as such and imposed as such. In the budget of 1922 the excise duty was reduced again to $3 per thousand, but the surcharges of excise tax now in force were then imposed. Now everything but the five cent cigars—those which sell to the trade under $40 per thousand—pays a tax even higher than before on account of the sales tax provision, which has been levied in its varied amounts against the duty-paid price of the cigars.

That wonderful responsibility-dodger, the tariff board, also heard the request of the cigarette manufacturers for a decrease in taxes, and a decrease in taxation is the only answer to the smuggling of American cigarettes. It is a question of whether Canada wants to help its retailers earn legitimate profits or whether it prefers to make law breakers out of peaceful citizens. It is certainly doing the latter; thousands of Canadian women as well as men, girls as well as boys, have deliberately defrauded our customs department of duties on smuggled cigarettes. It is being done every day, at every port, and without very much inconvenience to anyone except the Canadian retailer. He is making hardly any money on Canadian cigarettes, and he is losing money on the smuggled United States product.

Canada's merchant marine competes with steamers of other countries on a price basis, and every effort is made to bring down the price in order to get the business. The same principle should be applied in all departments; we should not force on one department the burdens and inefficiency of others. But that will be the state of affairs so long as taxation forces prices in a home country to be so high above the prices of another country that the cigarettes of the latter are preferred, and citizens will wilfully make lawbreakers of themselves in order to obtain them.

Reports of the Dominion Bureau of Statistics show that in 1923 there were 148 factories in Canada employing 8,700 people manufacturing tobacco, the total value of the output being $59,840,010. This represents the total costs of operating the 148 factories reporting:

Merchandise cost of goods:			
Imported raw leaf	$ 9,415,291		
Domestic raw leaf	4,519,690		
All other tobacco	21,236		
Total raw tobacco		$13,956,217	
Other ingredients		816,487	
Total merchandise cost of goods			$14,772,704
Manufacturing costs:			
Salaries	2,956,689		
Wages	4,610,984		
Fuel	135,001		
Miscellaneous	5,982,407		
Total manufacturing costs			13,685,081

Wraps, containers, etc.:		
Lead and tinfoil	276,775	
Cigarette paper, cigar bands	172,854	
Cigar boxes	540,311	
Shipping cases, etc	319,089	
Boxes, cartons, wraps, labels	766,358	
All other materials	103,387	
Total wraps, labels and containers		3,178,774
Customs and excise:		
Customs on imported leaf	6,208,399	
Excise on domestic leaf	31,181	
Excise on manufactured	322,954	
Excise on smoking tobacco	2,591,017	
Excise on chewing and snuff	1,447,312	
Excise on cigars	915,116	
Excise on cigarettes	13,884,488	
Total customs and excise		25,400,467
Total cost of manufactured tobacco		$57,037,026

The first item in the last group, duty on imported leaf, amounting to $6,208,399, could be eliminated by a higher tariff. There would then be no importation, and our Canadian growers would produce the leaf.

Some hon. MEMBERS: Louder.

Mr. GOTT: That is not an intelligent interruption. I am sorry the Liberal members from western Ontario are adopting the attitude they do with respect to such a very serious question as this.

Mr. HEPBURN: What was the interruption?

Mr. GOTT: I did not hear it; it was not audible.

Mr. HEPBURN: Then what are you complaining about?

An hon. MEMBER: It was not even sensible.

Mr. GOTT: My hon. friend sitting near me suggests that it was not even sensible. Continuing my subject may I say that the amount of capital invested in the industry is given as $44,348,333. Of this only $8,213,094 was in fixed assets such as land, buildings, fixtures, machinery and tools. The balance, $36,133,239, was in materials on hand, stocks in process, cash, and trading and operating accounts.

Some idea of the cost of the raw leaf to the factories and of the prices received for the manufactured product is shown by the following quotations of the 1925 business:

	Lbs. used	Price paid	Price per lb.
Imported raw leaf	15,234,855	$ 9,415,291	61.8 cents
Domestic raw leaf	15,259,693	4,519,690	29.6 cents
	30,494,548		

Products	Lbs. manufactured	Value	Value per lb.
Chewing—plug	5,707,632	$ 5,711,878	$1.0007
Chewing—other	356,671	372,372	
Smoking—plug	3,134,342	3,393,820	1.0827
Smoking—package	11,247,195	13,595,674	1.2088
Smoking—twist	55,348	27,248	.4923
Smoking—leaf	4,015,006	1,272,575	.3169
Smoking—other	19,000	7,760	.4084
Snuff	724,429	872,985	1.2050
Cigars (number)	174,286,000	10,442,351	.0599 each
Cigarettes (number)	2,079,036,000	23,964,031	.0115 each
Stems and cuttings		25,425	
All other products		153,891	
Total		59,840,010	

The values just given are, of course, factory values. The price to the consumer would include these values plus the cost of distribution through the wholesale and retail trades. The per capita consumption of tobacco in Canada is given by the Canada Year Book as 3.12 pounds.

As shown by the figures which I have quoted, the cost of manufacturing tobacco in Canada for 1923 was $57,037,026, the cus-

toms and excise taxes on tobacco collected from manufacturers in that year being $25,400,467 and on cigarettes alone, $13,884,488. This does not take into account the manufactured tobacco products imported.

There were 2,079,036,000 cigarettes manufactured in Canada during the 12 months of 1925. During the same period it has been estimated that 750,000,000 cigarettes were smuggled into Canada from the United States. This computation is not authoritative, merely an estimate by one who claims to have some inside information. There is no way to determine definitely the illegal consumption of cigarettes in Canada. The following are the import duties on tobacco entering Canada:

(Import Duties on Tobacco Entering Canada)

Duty on raw leaf unstemmed, 40 cents per pound.

Duty on cigarettes, $4.10 per pound plus 25 per cent of invoice value.

Duty on cigars per pound plus 25 per cent of invoice value.

Duty on smoking tobacco, 95 cents per pound.

Duty on chewing tobacco or plug tobacco, 90 cents per pound.

Duty on snuff, 90 cents per pound.

The excise duties on manufactured tobacco are as follows:

(Excise Duty on Manufactured Tobacco)

On smoking mixtures, 20 cents per pound.

On cigars, $3 per M.

On cigars in boxes of 5-6, $4 per M.

On cigarettes weighing less than 3 pounds per M., $6 per M.

On cigarettes weighing 3 pounds or over per M., $11 per M.

A sales tax of 5 per cent is levied on all tobacco. On the home manufactured product the tax is levied on the wholesale value. On imported manufactured tobacco the 5 per cent tax is levied on the cost of the goods duty paid.

Now, Mr. Speaker, I have given a comprehensive but in no ways detailed account of the tobacco problem in Canada to-day as concerns the manufacturer and others. Time does not permit further detail, but to say the least the whole tobacco question in Canada from the grower to the consumer is deep in the quagmire, and will remain there to the detriment of the best farming section in Canada unless the government acts at once, and that through order in council, now that it has failed completely to make any provision in the budget.

I have outlined during the debate on the speech from the throne and on this "bubble" budget, some of the ills of the farmer, the manufacturer and the consumer, but with proper cooperation from the government all these drawbacks can be overcome.

[Mr. Gott.]

Let me suggest, and sincerely suggest, the following as the proper course to pursue: Keep out the United States raw leaf by a higher duty; increase the output of Canadian cigars by a reduction in excise; keep the Canadian cigarette trade in Canada by a reduction in excise on cigarettes, which would be conducive to the elimination of the cigarette bootlegger and would provide more business for the manufacturer, more work for the labourer and mechanic, and a much increased market for the tobacco grower. If this were done 40,000,000 pounds of Canadian tobacco would be used by the Canadian manufacturers yearly, which is equal to the largest yield ever yet produced in Canada, and our increased production from year to year could be taken to the British market in which we can firmly establish ourselves by the production of a quality of tobacco which has already won and is winning favour in the British market.

I have the honour, Mr. Speaker, to represent in this house a farming community, the most progressive constituency in Canada and the most intensive and diversified farming constituency in Canada, and speaking for the farmers of South Essex, whose very existence depends upon protection and whose progress has been very seriously interfered with by unfair competition through the importation of cheap American produce from the United States, I make a special appeal to the government for fairness and justice to this riding, where farm land values are higher than in any other farming community in Canada, without exception. American produce has been permitted to drive Canadian produce from the market. Our home grown vegetables and fruit stocks are allowed to decay, while our market is supplied from the United States at one-third the duty at which we can supply their market. The loss to Canadian growers amounts to millions of dollars annually and the industry is blighted by unfair competition. The preservation of our market garden industry means increased buying powers to the extent of millions of dollars for large sections of Canadian people, to the ultimate benefit of the entire country, while the consumer as well as the producer will reap the profit, and have the opportunity in many sections of the country to purchase direct from the farmer, eliminating the middleman and having produce fresh from the fields. The farmers of Essex county do not seek to exploit our markets to the detriment of the consumer, but they claim the right to place Canadian vegetables and fruits on the tables of the Canadian consuming public.

At six o'clock the house took recess.

After Recess

The house resumed at eight o'clock.

Mr. GOTT: The state of Ohio has recently presented what is known as a farm relief plan, which was advanced by the Ohio farm bureau federation. The plan seems to have real merit and, in addition to being sponsored by the Ohio farm bureau federation, has the backing of the executive committee of the Ohio state grange. The plan is for giving equality to agriculture. It is claimed:

1. That the plan would give benefits to farmers on crops of which a surplus is produced.
2. That it would discourage over-production.
3. That it would afford protection against competing commodities.
4. That it would not discriminate against some groups of farmers in favour of others.
5. That it would not set up intricate machinery for its operation.
6. That it would encourage cooperative marketing.
7. That it would safeguard the treasury and the cooperatives against loss.

The outline of the plan is as follows—and I would suggest that in the interest of agriculture in our Dominion a study of the newly instituted Ohio plan be made to ascertain its merits:

1. A federal farm board, headed by the secretary of agriculture, to act (in like manner as the federal reserve board) in the stabilization of markets, in general supervision of other boards set up, and to be in charge of federal funds appropriated for marketing purposes.
2. Advisory councils for each commodity, to be selected by the federal farm board, members to be nominated by recognized co-operatives. These councils to find the facts as to each particular commodity and present them to the public and the farmer-grower.
3. Commodity stabilization corporations to be set up for each commodity to centralize control and responsibility. These to be formed from the co-operatives handling the same commodity and be selected by the co-operatives subscribing to the capital stock of the commodity stabilization corporation.
4. $300,000,000 revolving fund; $50,000,000 to be loaned to co-operatives to purchase plants or loaned on physical properties already owned by co-operatives; $250,000,000 to be loaned for the purchase of farm products by the commodity stabilization corporations upon approval of the federal farm bureau.
6. The federal farm board to be required to find the average yearly production of farm commodities of which the United States produces a surplus for export and the estimated production for the current year. The full amount of the debenture to apply only in the crop years in which the surplus is the average or below the average. When the yearly production is estimated by the federal farm board to be above the average, then the debenture to be reduced in proportion that the year's production exceeds the yearly average.
7. All imported agricultural products, which compete with United States agricultural products, either directly or indirectly, to bear a sufficient tariff rate to afford the home product protection, and, at the same time, furnish additional revenues to assist in caring for the debentures issued.
8. A tariff commission, or some other body, to be created, given the duty of finding the estimated added cost, by reason of the application of the debenture, of the production of animal products, and the president to be given power to increase the tariff on these animal products in the proportion as the debenture plan increases their cost of production.

No country, Mr. Speaker, can be built up on free trade or low tariff. Resources cannot be developed; and to be properly developed they must be developed by those most vitally interested and concerned.

Was there ever a time in the history of the world when a certain section of a great country was crying aloud for industrial expansion and development like western Canada is to-day? Huge coal resources of unknown depths await development. It is one of the most fertile and most abundant producing wheat sections in the whole world, producing the finest grade and the finest quality of grade wheat in the world, and millions of bushels leave that great country unground.

The need of the west to-day is immigration. To have immigration we must or should have employment, to have employment we must have industry and if the God-given, ever-abundant resources of western Canada are to be properly developed it will be by and through a network of industrial activities reaching to all sections of that land of opportunity.

Go west, young man—go west. How often have we heard the admonition, but that admonition is not so freely given to-day since free trade proclivities took hold of the people there, which is bound to have, if it has not already had, a disheartening and bad effect on a country so badly in need of industrial expansion as much as any section of any country in the world to-day.

The prosperity that has been enjoyed by the western Canadian people has not come through free trade, tariff tinkering, or a lowering of duties, but by and through a protective policy; and what the west needs to-day, as do all farming communities in Canada, is not the removal of the tariff duties but the implementing of certain duties and protection for the produce of the farm and the product of the farmer's labour.

If the farmer is worth having in Canada, his produce and the product of his labour is worth having, retaining and protecting, with a policy

quite similar in effect to that of our closest competitor, the United States. In 1924, alone $494,349,000 of farm produce and foodstuffs were imported from the United States, and despite this the Canadian farmer is not standing up for his just rights in asking and demanding that these importations, to some extent at least, should cease. These high importations are of produce and foodstuffs which could and would have been produced in Canada had the proper protective policy for the farmer been in operation.

The farmers in Canada, many of them, have taken the wrong view, and it is time that they began to realize that in a protective policy, and in that alone is the only reasonable cure and sure remedy for the serious ills which face them. Heretofore there has been a movement seeking tariff changes, which will wreck the industrial structure of our centres if granted, and which gives not a thought to the proper side of the solution that would revolutionize the most basic industry in our land.

The west is the land of opportunity, a wonderful section of the greatest dominion in the greatest empire the world has ever known, and to the people of that great country I say: Do not be led astray through improper conviction, no matter how attained. Study your economic ends from the viewpoint of a sure, certain and sound progress which will ultimately lead to an industrial expansion, the network of which will make western Canada the livest, busiest and most progressive section of our great Dominion, free from dissension, and content to be and remain the hive of industry that it should be, taking and maintaining its place along with and among the leading industrial, commercial and progressive sections of the British Empire, where coal can be supplied direct and at short haul from the abundant mines of the province of Alberta.

Mr. GROTE STIRLING (Yale): I do not propose at the outset to deal at any length with the tariff proposals except, in passing, to express the acknowledgments of the onion growers for the provisions which will enable them to bring onion plants freely into Canada. The reason why this schedule was applied for was that these minute plants, no thicker than a bristle, are not produced in Canada; they are produced in a warmer climate to the south. They are used in lieu of seed, which seed does come in free, and they are used to plant out a certain number of acres in the onion growing district in the southern valleys of British Columbia with the object that a portion of the tonnage may reach the market early, and so reduce the tonnage which has to come forward at the time of the main crop in September and October.

[Mr. Gott.]

The marketing of our perishable products continues to be the greatest problem. Some progress has been made of recent years, but until that difficulty is surmounted it will not be possible for the producer really to earn a decent living, nor can that development which has taken place be extended lucratively. It is no longer a question of whether these fruits and vegetables can be grown in southern British Columbia; for that has been demonstrated at provincial, dominion and imperial exhibitions. It has even been demonstrated on more than one occasion that the premier dessert apple of the whole British Empire is grown in that country. But the difficulties are not yet all surmounted. Under the co-operative movement, progress was made, but from the very fact that the cooperative movement received a considerable amount of support, and that the smaller amount of crop to be sold was handled by the independent shippers, an unfair share of the difficulties of marketing remained with the cooperative shippers. Let me illustrate.

British Columbia has always looked upon the three prairie provinces as its domestic market, and it has been the attempt of each of the independent shippers, although marketing but a very small fraction of the total crop, to get rid of their produce in that market rather than have to bear their share of the export market. Our apples, for instance, have to go west to the Pacific cost, round by sea through the Panama, and thence to the European markets, where they come into competition with the apples from the three western states on the Pacific coast. That area where the fruit grows in Washington, Idaho, and Oregon is but a continuation in the United States of the similar area in British Columbia. They produce seven times what we produce and our apples have to compete in the open export markets of Europe with theirs. As a consequenece, the independent shipper, each marketing so small a quantity, was more than often successful in getting rid of that quantity on the more lucrative prairie market, leaving an altogether unfair burden on the co-operatives with the amount they had to market.

Progress was made also by means of round table conferences between the cooperative shippers and the independent shippers, but the agreements so arrived at always fell down on one point, and that was that there was no means of enforcing the arrangements arrived at. However, in 1925 and 1926 there was harmonious working between the co-operatives and the more responsible of the independents, but no sooner had orderly marketing arrangements been made in the domestic market than

some independent within the independents, some grower-shipper marketing but two or three cars, or, worse still, several small shippers marketing small quantities, would send their cars rolling into those markets in regard to which arrangements had been made in an orderly fashion, and chaos resulted. An attempt would be made by telegraph to cut off those rolling cars, to deflect them perhaps to Swift Current or north to Edmonton, but in each of those centres of marketing there was an adequate quantity of fruit coming forward, and chaos followed there also. I think it is quite evident that the only possible mode of success is through orderly marketing. Chaotic marketing never produced any good for any part of the industry, and the trouble almost invariably was that when waste occurred it had to be borne by the producer.

Last winter another scheme was tried. I want to refer to this new plan at short length, because although it has not primary connection with this parliament, it has secondary connection, and it has received a certain amount of criticism, some of which I consider as being founded on a lack of knowledge. A federation of shippers was formed under an act of the British Columbia legislature. The act was not a government measure; the bill was put forward by a private member; it received a good deal of attention; was hammered into shape in the legislature, and was finally passed by a considerable majority. It was a very good thing, I think, that the attempt to include in the measure other kinds of produce, such as milk, was not entertained. This new scheme was the result of work among the fruit growers in the Okanagan valley, and I think it would have been a great pity if other perishable products had been brought within the scope of the act, which of course was of an experimental nature.

The federation of shippers appoints two members to a committee of direction of three, one representing the co-operative movement, the other representing the independent shippers, and the third, who is also its chairman, is appointed by the provincial government. In the few minutes at my disposal there is not time to go in detail into this measure, but I will define the chief functions of the committee under three heads. In the first place, the committee of direction issues licenses to shippers of fruits and vegetables within its prescribed area without which no shipper may ship; in the second place, the committee directs the distribution of the crops; in the third place, after the most careful examination it announces at what minimum price each variety and grade of fruit or vegetable shall start on the market.

Now, it is evident that before the committee can form an opinion as to these matters it must do a very considerable amount of work, and I think that undobtedly the main credit for whatever success has been attained in the first year of the committee's operations is due to the Hon. F. M. Black, at one time provincial treasurer of Manitoba, selected by the government of British Columbia to act as chairman. He and his colleagues entered an empty office—empty except for furniture, paper and ink—in Kelowna on May 31, 1927. They there and then prepared their plans to create the machinery under which the committee should operate and endeavour to instil some degree of confidence into the whole industry—the producer, the broker, the jobber, the retailer and the consumer. They had most carefully to examine the territory from which they were going to draw the produce, and they had also most carefully to consider the markets into which they would direct shipments. They had not only to obtain estimates of the crops, they had continually to revise those estimates week by week and month by month, making such alterations as climatic and other conditions might dictate. So well has that committee of direction functioned in its first year that confidence was immediately present in the mind of the trade.

And this has tended towards orderly marketing. As an illustration of what I mean by that term, let me point out that the committee divided the three prairie provinces into certain marketing centres. Taking Regina as a typical centre, in the districts to which Regina distributes, under the ordinary marketing conditions the idea would be to send in a certain number of cars of, we will say, McIntosh apples in regular rotation. Under the chaotic conditions of previous years, no sooner had such an arrangement been made than an independent shipper or a grower-shipper, or someone else who had not the general good of the industry at heart, would "roll" some extra cars, and everything would be upset. Under the committee of direction such a chaotic condition cannot prevail, because the shipper is told what he may ship and when he may ship it, and the minimum price at which he may sell. It follows that the broker knows what fruit is coming forward, and when the jobber knows definitely the quantity and price he is not afraid to buy ahead, for he knows there will be no fruit rolling in on consignments.

Just exactly what the consumer has paid during the last season compared with prices that prevailed in preceding seasons is extremely difficult to arrive at. I had hoped to

be able to place on record a comparative statement, but the kinds of fruit are so many, the varieties are so diverse, and the quantity of those varieties has fluctuated so much from year to year that I have not found it possible actually to compare one year with another. However, I think I am within the truth in saying that whereas the producer has received a rather better price in the past than in the previous shipping seasons, the consumer in Canada eating British Columbia fruit has not paid more than the average price of the four preceding years.

As further evidence that there was not very much wrong with the price charged, I should like to record the quantity of the British Columbia fruit which has found its way to the other provinces this year. These figures refer to apples only; it would be impossible to include all the other fruits and vegetables in this statement: British Columbia, 264,971 boxes; Alberta, 550,992; Saskatchewan, 693,077; Manitoba, 355,175; Ontario, 177,994; the rest of Canada, 108,250, or a total of 2,150,459 boxes marketed in Canada. There were 596,250 boxes exported, which is about 20 per cent of the total crop. A less quantity had to be exported in 1927-1928 than in a good many of the preceding years, which is all to the advantage of the producer. Some of the criticism which has been levelled at this worthy experiment came from the mouth of the chairman of the Advisory Board on Tariff and Taxation, and one of the pretty strong statements he made was that it did away with competition. Now I do not agree in any sense whatever that it does away with competition. In the first place, had the coöperative movement of past years received the backing of 100 per cent of the growers, or anywhere near it, there would have been just as much control of price under that union as there is under this committee of direction, and I very much doubt whether a coöperative movement amongst one set of farmers would have been described as price control such as would be harmful to the consumer. I would point out also that Ontario is only too anxious to see, as a result of this committee of direction in British Columbia, the price of this produce rising in the prairie markets, because Ontario is sitting on the other doorstep from us of the prairie provinces and therefore is, as I say, only too anxious to get its produce into those markets.

I should be glad if the critics of what we are attempting to do to help the producer would realize just exactly what it is that we are trying to do. It is a problem of some magnitude. We are endeavouring to sell, as much as we possibly can, perishable products which we have to carry very considerable distances at correspondingly high freight rates, protecting that produce from heat in summer and from cold in winter and distributing it without glut or shortage, so that when it reaches the end of its journey it may give satisfaction to the consumer both as to quality, price and variety. I think it is a noteworthy event that a bold experiment such as I have just described—this committee of direction—has been tried out and that in six months the committee did succeed in creating machinery of an entirely novel character, has carried out the direction of one season's fruit and vegetables in very considerable quantities, and has succeeded also in restoring in the whole industry that confidence which was so badly lacking.

To pass on for a few moments to more general matters connected with the budget, it appears to me that after the Minister of Finance (Mr. Robb) has given birth to yet another budget it must afford him a certain amount of amusement to sit in his seat day after day and hear criticisms levelled at that budget from all directions. He hears the farmer asking for higher income tax. The farmer as a rule pays but little income tax. The Minister sees in the press of Montreal, for several days prior to the bringing down of the budget, the requirements of industry in the form of reduced income tax, the manufacturers arguing that, as the farmer pays but little income tax, there is no reason why they should pay so much. He hears the farmer appealing for a complete cessation of the sales tax. The farmer has to pay a certain amount to the national revenue on every purchase he makes of clothing, say, for himself, his wife or his children. The manufacturer, on the other hand, asks the Minister of Finance, if he is going to cut the sales tax at all, to shave it very gradually so that the quantities of goods on his shelf shall not be badly hurt and so that the amount that will have to be deducted from the price may be very minute. The consumer, on the other hand, wants to have it cut all at once so that it will be necessary for the manufacturer to pass on to him the reduction in the sales tax. And so the Minister of Finance listens to all of these various requests made of him and he reflects, amongst other things, what a wonderful aggregation the Liberal party is —the Liberal party which has foundations somewhat similar to the feet of the image that Nebuchadnezzar saw in his dream, feet of iron and clay. Forty members from Quebec signed a petition appealing for greater protection on market produce and potatoes; they

wanted that protection raised to the height of the United States tariff. They have not got that protection. The seasonal tariff application has never been brought down; no report has been made of it. The government seems to pay very little attention indeed to the reports which the tariff board does bring down. We see from the return asked for by the hon. member for Acadia (Mr. Gardiner) that of only one case, amongst all these matters reported on, has the government taken cognizance in its budget proposal. I wonder whether there is some connection between that and the difficulty in reporting, which the chairman refers to in his report. He says that:

> Difficulty exists as to determining the nature of the advice we are presumed by the order in council to tender to the minister.

To get over that difficulty he finds that the best mode of advising the minister is to pass on the transcripts with only "explanatory comment". What a deadly phrase—explanatory comment. One can imagine a particular application being described as one of no merit whatever—it might even be of benefit to some Conservative industries. This other application, on the other hand, is one of great merit because it is quite possible that Wabasso Cottons may be able to decrease their expenditures and increase their profits. It is truly a wonderful method of handing a report on to a government from a board of inquiry, so different indeed from the method proposed under the Conservative tariff board, which was to publish its findings. Explanatory comment! In much that way, I should imagine, the Cheka gives its views to the bolshevist government in Russia when it is endeavouring to remove some of the middle class workers to more salubrious climes.

It will be noticed that the Quebec fruit and vegetable grower not only is not to receive that assistance from the tariff for which he has appealed, but he finds in opposition to himself, within that wonderful Liberal party, a vociferous, earnest, not very large in number, group of ardent free traders. They lose no opportunity of preaching their gospel, and they probably mean exactly what they preach. That I do not agree with the view they express does not interest them and does not really matter, but it is worthy of note that last session the hon. member for Weyburn (Mr. Young) did what he could to bring about the repeal of clause 47a of the Customs Act, as it was then constituted. He did not succeed, so he returned to the charge this session and proposed a resolution which would bring about the repeal of the section now called 43 of the revised statutes, which, if repealed, would remove the machinery which enables the dumping clause of the customs tariff to operate. I would ask my hon. friends from Quebec whether they are fully satisfied that they are safe with regard to the dumping clause? My own idea is that the hon. member for Weyburn is so pertinacious that he would not allow his resolution to be twice called and then pass into limbo unless he had come to an understanding with the government, and I wonder very much whether the forty members from the province of Quebec who signed that petition really look upon the situation with equanimity. That such is not wholly the case I think is evident from a resolution which I believe has been sent to all the federal members from Quebec as well as to myself, and I do not know how many other hon. members. As it is interesting in this connection, when we are discussing the brotherly love which exists between two branches of the great Liberal family, I want to put it on record:

> Whereas the vegetable, fruit and poultry industries are entitled to as much protection as all other industries, and
>
> Whereas section 43 of the Customs Act, Revised Statutes, gives them this needed protection by authorizing the Minister of National Revenue to set the fair market values for customs purposes and so prevent the surplus of production being imported from United States at prices below such fair market value, and
>
> Whereas the withdrawal of said section would have, as immediate result, the curtailing of production and would leave the producers of perishable products without the protection against dumping which is afforded every industry, and
>
> Whereas we have reason to presume that several prairie members of parliament look favourably at the withdrawal of said section 43 and may move a resolution to this effect:
>
> It is moved and unanimously resolved that the Quebec Farmers' Association; the Quebec Catholic Farmers' Union, as well as the Quebec Market Gardeners' Society, representing an aggregation of over 15,000 farmers, wish to draw the kind attention of the Minister of National Revenue and of the representatives of this province in the federal parliament to the great importance of this section 43 and to respectfully solicit your influence to prevent its withdrawal from the Customs Act.
>
> Quebec Market Gardeners' Society.
> Quebec United Farmers' Association.
> Quebec Catholic Farmers' Union.

I am naturally at one with my hon. friends from Quebec and with the members of the fruit and vegetable growers' associations which are so much interested in this protection, because I am equally in need of it. I earnestly hope that on this occasion the victory will lie with my protectionist friends from the province of Quebec rather than with that section of freetraders sitting to their right.

We do not know anything in particular with regard to the policy of this government in carrying out the development of our natural assets, but I am glad to see that the minister has brought down a resolution which favours carrying on for three years longer the Copper Bounties Act. That act was passed in 1923, and has been made use of. Naturally the maximum results would not be produced immediately, but from the figures showing the amounts which have been paid it is certain that it has had a beneficial effect. It was introduced for the purpose of carrying on the refining of Canadian copper to the very end of the process before that copper is used in Canada, the bounty not being payable on refined copper going out of this country. The figures showing the amount paid under this bounty are as follows:

1924-25..	$ 14,551 75
1925-26..	14,822 67
1926-27..	164,242 30
1927-28 to Feb. 4..	73,604 92

Those figures demonstrate that a considerable quantity of the copper used in Canada has been refined within our own borders. This, of course, has carried with it the advantages of increased employment and the turning over of Canadian dollars, because this means that in all probability some 30,000,000 pounds of copper have been refined and used in Canada.

British Columbia produces more copper than any other province of Canada. In the southwest corner of the constituency of Yale, which I have the honour to represent, on top of the mountain behind Princeton, in the Similkameen valley there is the Copper Mountain mine. You can stand on the edge of the glory hole on top of the mountain and look into the pit and watch the lumps of ore which have been blasted out of the earth guided and barred through the chutes until they get into the mine cars which are run through the tunnel and sent down the wire rope-way to the tipple. There they are tipped into railway cars which run around the mountain to the mill at Allenby, where, first by crushing and then by flotation, the ore is reduced to concentrates. Again I am glad to notice that the minister has allowed the free entry of potassium xanthate, which is an obscure chemical for which I endeavoured to obtain free entry a few years ago. This chemical is not produced in Canada; it is only used in this one process and allowing it free entry would tend to knock a fraction of a cent per pound off the production cost of that copper. Sixty tons of ore from the glory hole are turned into three and a half tons of concentrates in the Allenby mill; those concentrates are carried by a Canadian railway three hundred or four hundred miles east to the smelter at Trail, where they are put through the refining process and, to use the trade term, turned into one ton of refined copper in the form of wire bars. These wire bars again continue east and are taken to the rolling mill at Brockville where they are rolled into copper bars; from Brockville they continue their journey to Montreal, where they are drawn into copper wire, and that copper wire is used in the different industries of Canada. With that object lesson before them, I hope the government will see to it that that copper bounty is continued at least until the time when a very much increased production takes place in Manitoba and Ontario.

I hope the government will also reveal to us as soon as possible what its policy is with regard to the refining of other of Canada's resources. The fact was revealed to us that when the international waterways treaty was being negotiated, the United States said to Canada: Yes, we will make a treaty with you, but we will allow no discussion whatever on the subject of lake Michigan. They admitted that the waters of lake Michigan were on a level with the waters of lake Erie, but old glory floated over the former lake and they said they would allow no discussion as to that stretch of water. Their attitude did not hide the fact that a certain quantity of water was being taken out of that lake, out of these boundary waters, and turned into another watershed altogether. It passes the bounds of my belief, Mr. Speaker, that the engineers of that day could have been oblivious of the fact that that diversion of water would do damage to the harbours of Canada, and still more to the great waterway that leads to the sea from Montreal. However, the government of that day, whether it could help the fact or not, bowed to the decision of the United States and the treaty was made, and possibly as a quid pro quo an extra amount of water was used by Canada at Niagara. The situation to-day is entirely different. The United States wants Canadian co-operation to develop water power on the St. Lawrence river. They want that water power to increase the power in their industries in the state of New York, a part of the products of which industries will come back into the markets of Canada to compete with our goods. Further than that the United States want our pulpwood, they want our nickel, they want our lead, they want various things that Canada has to offer. Has the government a policy to offer the people of Canada, a policy based on a vision of the future, a policy which will enable the assets to which I have referred to be retained until

a proper return is made, until we can negotiate, until we can barter, so that these assets shall not pass out of our possession without our getting full value for them? I do not think, Mr. Speaker, there is any matter which this government could put forward to the people of Canada which would give greater satisfaction from one end of the country to the other than the declaration of a policy that will tend to increase the production of our resources and effect their ultimate refinement within the boundaries of Canada.

Mr. GEORGE SPOTTON (North Huron): Mr. Speaker, in attempting to address the house for the first time I am sure I shall have your kindly sympathy, and if I transgress any parliamentary rule I know you will reprove me in a fatherly fashion.

Inasmuch as this is my first appearance in parliament I suppose it would be quite in order for me to congratulate you, Mr. Speaker, upon your re-election as speaker of the house. From what I have observed you have always displayed the most admirable qualities of heart and head, and have always held the scales of justice evenly. May I take this opportunity also to thank all the members of the house for the kindly manner in which they have received me.

A feeling of deep regret and sorrow creeps over me when I realize that I am simply filling out the term of the late lamented John W. King, who was elected for the constituency of North Huron in the federal election of 1926. The late Mr. King and I were opponents in 1921 when the Progressive movement was at its height. We were again opponents in 1925 when the courts had to decide who should take a seat in this house. Whether in the heat of election, or otherwise, I found the late lamented member a man who stood four-square to all the winds that blow. I am sure, Mr. Speaker, that in voicing my own feeling with respect to him who was called home I am expressing the sentiments of everyone in North Huron. We feel that our county is the poorer for his death and that Canada has lost one of her noblest sons.

In the few remarks I purpose making I hope that my friends on this side will not expect too much from me, and I trust that even if hon. gentlemen opposite do not agree with me they will at least be sympathetic. I wish to tell them that I am always open to conviction.

We have been hearing a great deal of late about a deliverance which has been heralded from the Atlantic to the Pacific as the Robb budget. It appears that the budget is an annual event, and opinions differ a great deal with respect to it. Evidently the present government feel that every time the budget comes down there must be some tinkering with the tariff. I should like to see a tariff which would possess some element of permanency and remain in operation for at least a period of five or ten years so that the manufacturers of this country would know where they stood and would not always have a club held over their heads.

When I look into the faces of some of the ministers who visited our riding during the last election I recall the fact that I was told on the hustings that I had some nerve to be a candidate for the great Liberal-Conservative party because that party had no leader. The Prime Minister (Mr. Mackenzie King) himself when he came to the constituency with his troop emphasized the idea very strongly that it was rather audacious on my part as an humble citizen, a native son of Huron, to put myself up as a candidate because I had no leader. Well, we reminded him, Mr. Speaker, that he had directed the affairs of this government from the gallery for a time. We reminded him also that we had as temporary leader a parliamentarian of wide experience, and if that gentleman was to be permanent leader I would be quite satisfied and so would my constituents. I was asked whether I was going to follow a man from Calgary or from Montreal or from Guelph.

Mr. LAPOINTE: Or Fort William.

Mr. SPOTTON: Or Fort William. But my people decided that even if we never had a leader they would trust me to come to the House of Commons rather than a follower of the King administration. It was a most childish argument because I had an able house leader who was not going to desert the party and within nineteen days of my election we were meeting in Winnipeg to select a permanent leader, so I was not going to be an orphan for very long. They wanted to know who was my leader. Let them take a look at him now. We have a leader of the Liberal-Conservative party who is a worthy successor to the great leaders of the past, a man of wide business experience, of the highest legal attainments, of ripe education, a trained parliamentarian, a man of whose service the president of one of our greatest banks could say along with the rest of the directors that they had lost a man whose business experience nationally and internationally was such a great asset that they will suffer an irreparable loss; and the people

of Canada will say at the earliest opportunity that a man of that type will make a good business manager for this Dominion.

It has been heralded throughout Canada that the Robb budgets have been very popular. I am not boasting; neither on various public platforms nor in private have I boasted of our victory in North Huron. I have been defeated and I have taken my defeat gracefully; I was elected and I took my election modestly; but the latest tribunal to which the Robb budget was submitted was in North Huron on September 12 last. When the Prime Minister came to my constituency he was paraded down our streets with the calliope ahead, and there was with him a stripe of cabinet minister to suit every stripe of elector in my constituency. The matter was placed in this way before the electors by the Prime Minister: "You have an admirable county"—and so we have. The hon. member for South Huron (Mr. McMillan) and I can at least agree with the Prime Minister that the county of Huron is the greatest county in Canada, a little country in itself. We have shipping interests, manufacturing interests, fishing interests; we have great agricultural lands and the finest type of people in this Dominion. There we have practically every class of people that are interested in any great Robb budget. The King administration will not say for a moment that the Robb budget was not fairly placed before the electorate of North Huron. I read this from the Goderich Signal, a Liberal paper:

> The ministerial party included the Hon. Lucien Cannon, Solicitor General; Hon. J. C. Elliott, Minister of Public Works; Hon. James Malcolm, Minister of Trade and Commerce.
>
> These were just at the one meeting.
>
> Others on the platform were F. G. Sanderson, M.P., South Perth; Wellington Hay, M.P., North Perth; M. F. Hepburn, M.P., West Elgin; W. H. Taylor, M.P. Norfolk-Elgin; Thomas McMillan, M.P., South Huron; W. T. Goodison, M.P., West Lambton; Dr. W. A. Hall, M.P., South Bruce; Senator Rankin, of Stratford; T. Cayley, M.P., South Oxford: W. G. Raymond, ex-M.P., Brantford.

And hosts of others. That was the first shot, Wingham in the afternoon and Goderich at night. We were glad that many of these men stayed in the riding for several weeks. We were pleased to welcome members from all parts of Ontario and even a couple from Quebec. These men were valiant fighters and I have no complaint against them because they had a perfect right to come into our riding. They brought in excellent organizers, some of whom had been there for the six months previous, but as we drew nearer to the election there came along those fellows who could not look you just as clearly in the eye as could our good friends opposite. The King administration presented the Robb budget and the jury of North Huron spoke. Of course our friends of the government will say: This was an accident; it was a three-cornered contest; that is, like-minded Liberals and Progressives were split and the Tories slipped in between. That is why they keep on whistling to keep their courage up, like the boy going through the cemetery at night. But the fact remains that in 1925, John W. King, a life-long Liberal, stood on the platform and said he was one hundred per cent Progressive, and the Prime Minister of this country sent in a secret message which was placed in every Liberal home telling them to get behind John W. King; that he was as good a supporter of the government as any Liberal. This was supplemented by Liberal organizers and Liberal sinews of war. The contest was so close that the county judge awarded me the seat and the high court judge reversed his decision. So it was not any great accident that occurred on September 12th of last year. If we turn back to the votes in 1896, 1900, 1904, and 1911 in the municipalities which comprise the new riding of North Huron and in which Judge Lewis, Mr. Bowman and Doctor Chisholm used to run, the results were as near a tie as you could get. Just a few months before our by-election on September 12th last, a Liberal member was elected in North Huron —the identical riding which I represent—in the Ontario elections by over 2,000 of a majority. Therefore our friends can take any cold comfort they like. They may point to the war-time election of 1917, but at that time our citizens, regardless of politics, were supporting the Union government. I mention this just to show that when the Robb budget was presented to the jury of North Huron, it received a fair testing out and the Prime Minister said that he would take it as a commendation or a condemnation. In addition to that we had these high pressure salesmen in the riding.

I was twitted with not having a leader, but the Prime Minister only thinks he is leading. He is just being pushed around. If you ask him were he is going, he says: Ask the crowd behind. This administration reminds me of the "Maid of the Mist" down at Niagara Falls. It starts out and it just goes around in a circle: it is not propelled in any way, it is just carried here and there wherever the current takes it, and it lands back at the place it started from. But they are one of the best advertising agencies that Canada ever

had, the best advertising agency that I know, and they are so busy advertising that they forget to do a little work. Abraham Lincoln once said of an opponent in a law court who was making a great deal of fuss over nothing, that his friend reminded him of a boat on the Sangamon river that puffed and snorted about. It had a five-foot boiler and a seven-foot whistle, and every time the whistle blew the boat stopped. This administration, it appears to me, are so busy blowing their whistle that they have not had much time to bring forward any real legislation to assist the people in North Huron or elsewhere.

We are told that we have great prosperity in Canada. After the King meeting at Goderich I met a fellow outside and he was counting his money. I said to him: "What are you doing here, Bill?" "Well," he says, "I was a poor man when I went into that meeting but I am a rich man now." He says, "I know I must be because they told me I was, and I have been looking at my one dollar bills and I thought they would have become tens, and I have been looking at my twos and I thought they would have become twenties, and I have been looking at my fives and I thought they would have become fifties, and," he says, "I had a ten and I thought it would have become a hundred, but" he says, "they are here just as they were." He wrote me afterwards that when he returned home he asked his wife if they were prosperous and she said, "No, there are many things which I would like to get. It is costing more to live and we are not getting any more money than we did a few years ago. It may be all right for the very rich in this country, but so far as we are concerned there is no great prosperity here."

Lest I forget, I would just like to tell right now about a class of people who certainly are not prosperous, and that is the rural mail carriers in my riding. The Postmaster General is prosperous, his deputy may be prosperous, the men in his department may be prosperous, but the rural mail carriers in my riding are not prosperous. I cannot understand how in the whole civil service of the Dominion of Canada the poor fellows who drive the old mare and go over the snow banks every day on his majesty's service are the only ones that have to stand up every four years and be shot at, and hired at starvation wages. I know the Postmaster General (Mr. Veniot) will say that we put the routes up to tender, and why do they tender if they do not want the job? I want to say that if the postmaster generalship were advertised to-night, I believe the Postmaster General would take three or four thousand dollars less a year to hold the job.

Mr. VENIOT: That has always been the case under my hon. friend's government.

Mr. SPOTTON: But my friends were defeated. They were chastised for their sins. I am not living in the past, and I commit sins enough myself without having to carry the load of all my relatives. The Conservative party is now in opposition; it has been purged, and we have shaken off the old clothes.

There is one innovation the Postmaster General has made. He has put more politics per square inch into the postal service than all his predecessors ever did. In the town of Goderich, rural route No. 6, Goderich—get that, Mr. Postmaster General—a man there carried His Majesty's mail for fifteen years, and there was not a kicker on the whole mail route; they all love him. He performed little services for them coming in and out of town. He was put up to be shot at. They advertised this job. A new man comes along and applies at the same salary as the old faithful servant was receiving, and the Postmaster General has not backbone enough and is not British enough to say: "Well done, you good servant. You have been with us a long time, and I will give you the job." No, sir, his department writes to the defeated Liberal candidate in North Huron to ask, Who shall get this job? If the Postmaster General wants any more concrete examples, I will give them to him. I am going to be very modest with him to-night, because I have not had time to dig and delve very much.

Mr. VENIOT: He is not asking to be spared.

Mr. SPOTTON: I will leave it to this house and to the people of Canada if a man who has carried his majesty's mail for fifteen years, and is prepared to go on doing it as cheaply as a new man, should be thrown aside, and the department write to the defeated Liberal candidate to see who's who.

I see the member for North Perth (Mr. Hay), in the house. I do not know whether this route lies in North or South Perth, but I noticed in the press an article that a man was brought up in the city of Stratford by the society for the Prevention of Cruelty to Animals. His horse was in such a condition that the Humane Society took action against him. But when the case came up in the police court and the magistrate found out that he was carrying his majesty's mail daily, keeping up a horse and rig and trying to support a

family on $1.75 a day, he dismissed the case. This is no hearsay. I wrote the police magistrate at Stratford and asked him to send me an authoritative clipping from the newspaper, and I have his letter and the clipping here. The same thing has happened on the suburban routes around the city of London, where men have been brought up who were carrying his majesty's mails franked by cabinet ministers and the rest of us who are receiving more salaries than we are worth. With these poor fellows who are carrying the mails, it is just another case of the man who does the most work getting the least money. The Postmaster General, of course laughs at this. I remember in the chemistry room we used to manufacture a certain thing which caused laughter. But, Mr. Speaker, this is no laughing matter.

As I may not be in the house when the estimates come up, and as the sky seems to be the limit, I should like to make a little plea to the cabinet ministers present on behalf of Goderich harbour. No doubt the country has heard that Goderich has a harbour. That is not part of the Robb budget, but it assisted and supplemented the support given to the Robb budget in North Huron. At a meeting in Goderich Mayor MacEwan presented an address of welcome to the Prime Minister, and this is what the Prime Minister said, according to the Liberal newspaper:

> The government of which I have the honour to be the head has paid considerable attention to Goderich harbour—

Then, of course, some of the cabinet ministers sitting there smiled very graciously, you know, as he was speaking; they did not say a word:

> —and in the future the government must continue to pay considerable attention to the harbour here. As head of the government I am pleased, however, to note in the address with which you have welcomed me words of appreciation of the government's work in this connection. Usually things of this kind are taken for granted.

And they should be, Mr. Speaker. Just at this point I wish to say that I hold no brief for our friends to my left, but an unkind attack was made on them yesterday by the Minister of Railways (Mr. Dunning). Oh, how kind and sympathetic he was with like-minded people so long as he needed them, during that period of log-rolling and dickering and dealing, to keep him in power in this house, but the moment he did not need them he scolded them most roundly. On behalf of my friends to my left, I wish to say that the campaign for the United Farmers of Ontario candidate was conducted largely by the brilliant and able lady who represents Southeast Grey in this house (Miss Macphail), and they fought in the open; they said the same thing in the country school house that they said at Goderich and in the town of Wingham. But not so with my friends opposite. The Minister of Railways stands up and characterizes us as high protectionists. I was branded as a high protectionist in the campaign; I am not. Some say, as the Globe says that: "follow your convictions" is just as good a slogan as "follow your leader." There have been times when I have not been able to follow my political leader, and that time may come again.

I wish to say, sir, that in my riding, owing to the high pressure salemanship of cabinet ministers calling on all local manufacturers with that bludgeon called the Robb budget, this Liberal paper was able to say that all the manufacturers and captains of industry, regardless of their politics, were behind the King administration. And yet they had their friends going in and out of the farmers' homes calling me a "high protectionist", and a "friend of the manufacturer", and, as I say, the Liberal paper boldly stated that all the captains of industry of Goderich were supporting the King administration. I think the time has about come when this advertising agency will not be able to run with the hare and hunt with the hounds; that they will not be able to pose as protectionists in the towns and cities, and then try to hold us up to ridicule in the rural sections as high protectionists. I represent a farming constituency, and of 274 delegates at our nominating convention I suppose 240 were farmers. I was opposed by a farmer, but the farmers of the constituency said they would trust me to present their case in the House of Commons. I believe that the manufacturer and the farmer are interdependent, I believe that what is good for one will eventually be good for the other; but let me say, as I have said in North Huron, if there ever comes a time when their interests clash, then I am on the side of the farmers and the labouring men of my riding.

I was reading, Mr. Speaker, what our Prime Minister said, that usually these things were taken for granted, but of course they were gifts from a benign government. Let me give his words:

> Usually things of this kind are taken for granted, and it is pleasant therefore to have the government's efforts appreciated as you here in Goderich have appreciated them.

Another gentleman who followed the Prime Minister said:

> If you expect the government to be sympathetic with you, you should show your sympathy with them.

As the hon. member for Southeast Grey (Miss Macphail) knows, it was a joke throughout the riding as to whether the Goderich harbour was to receive one quarter, one half, three-quarters of a million, or a million a year. Anyway, the people of Goderich were canvassed from house to house and told that industry would lag if the Liberal candidate was not elected, so much so that in the town itself a change of nine hundred votes was made in favour of the Liberal candidate. So you cannot blame Goderich for what the rest of the riding has done. Everything you promised Goderich, Goderich deserves. Goderich harbour is the greatest receiving port in the upper lakes. These figures, taken from the records of the lake shippers' clearance association, bear out my statement that Goderich leads among upper lake ports:

	Bushels

I repeat, Mr. Speaker, Goderich harbour is the greatest receiving port in the upper lakes. It needs public money spent upon it, no matter what political party is in power. Everything that these gentlemen promised publicly, and everything their cohorts promised in private canvassing is all right; I have no objection to it. Goderich needs to be dealt with liberally—and I find in the estimates they have allotted us $9,000! Why, sir, they spent more than that in one ward of my riding. There is a revote of $66,000, making with this $9,000, a total of $75,000. That $66,000 is what the government at another time told the people of Goderich they were to get, but they did not get it. But I know that the Minister of Public Works (Mr. Elliott) appreciates the position. I do not believe that either in public or in private he made any promise about what the government would do about Goderich harbour. But I do know that hangers on, canvassers and other cabinet ministers who had to make good smiled and let it be known that money would be spent there in plenty. Now we ask for Goderich harbour an expenditure which its national importance demands. We ask the government to keep faith to honour their campaign managers' pledges. I am not speaking now unkindly of the hon. member for North Bruce (Mr. Malcolm). We are proud of the three cabinet ministers from western Ontario. Their constituencies all border around mine, and they are all estimable and capable gentlemen; we are proud of them; they are the best men that could be found within the Liberal ranks. But I cannot forbear a comparison of what is contained in the estimates for public works in North Bruce. Kincardine, where there is nothing but a couple of fishing boats and a few canoes—a passenger boat or a freight boat never enters the harbour except to bring in a little bit of coal—Kincardine got about $16,000 last year. Port Bruce—I do not know where it is, although I know every foot of North Bruce—got $1,023.68. Saugeen river, where they fish only with pole and line, got $8,994.48. Southampton—never a cargo went out of there since Adam was a boy—got $4,999.21. Stokes bay—where a man has a saw mill—got $3,950.60. I have no complaints about these expenditures, but if the riding of North Bruce is entitled to that amount of money, with no shipping whatever, what should Goderich harbour receive? Judging by what North Bruce got last year and again this year, I may tell my friends in confidence that it looks like a general election. These expenditures are a pretty good barometer.

Now, Mr. Speaker, I should like to add a word about immigration, but as the committee on agriculture and colonization will deal with

that—and at the present rate of going it will be the last couple of days of the session—I had better not attempt to deal with it. I have been attending the committee, and I may frankly say that no progress is being made, the work is not being taken up seriously, and it looks to me as though the government was not very anxious that we should reach an investigation of the Immigration department. Immigration is a big problem that will take a long time to consider. A good many people will have to be called to give evidence, and therefore I think that a more permanent committee would be better able to deal with it.

We are told that there is a great deal of prosperity throughout the country, but each member, regardless of politics, says it cannot be found in his constituency. My hon. friend from Temiscouata (Mr. Pouliot) said that while in his riding the people are equally as prosperous as hon. members opposite would have us believe is the case in the country generally, the boys in his riding went to the United States to make money so they could come back and pay off the mortgage on the old man's house.

Mr. CASGRAIN: He said they were coming back.

Mr. SPOTTON: We have also been told that we are emigration agents for the United States. Now, Mr. Speaker, if I had a son twenty-one years old, fully equipped for life, and he came to me and said: "Dad, all my friends who have gone to the United States have made good, and those who have remained here are getting along indifferently with no bright prospects," I would be torn between my love for British institutions and the material welfare of my son. But why should I? For I fancy that about the only time the Prime Minister of Canada (Mr. Mackenzie King) ever went out to seek a living he went to the United States.

Mr. J. C. BRADY (Skeena): After I heard the splendid address of the hon. member for North Huron (Mr. Spotton), I could not help believing but that the Postmaster General (Mr. Veniot) had been dropping a lot of orange peels in the path of the various ministers of his own cabinet.

Mr. ERNST: Banana peels.

Mr. BRADY: In rising to offer my contribution to the debate on the budget I do so at least after some study and reflection, and any criticism I now offer has not for its object personal aggrandizement nor party politics. My remarks will be in strict accordance with the rules of debate, the purpose of which is a contest between two opposing sides on a definite question, in this instance a question of such vital import to the people of Canada that every representative in parliament has a moral obligation to discuss it.

The immediate purpose of the debate which has now continued for a few weeks is to find out as far as is humanly possible whether the budget on which the present government has staked its reputation is one that satisfies the needs and aspirations of the Canadian people at the present time. The question, therefore, is clear and well defined: Is this budget, which was praised so loudly last evening by the Minister of Railways (Mr. Dunning) as well as by other government supporters, a budget which by its excellence, and its promise of economic expansion, in keeping with Canada's possibilities Is it a budget that will receive the support not merely of this house but also of the people of Canada? After studying it, I contend that the budget defines nothing, convinces no one, and confuses many. Even the most ardent devotees of the government, who in this house and in the press support it, do not, if we are to judge by their comments, endorse the budget as if it were intrinsically sound. The great mass of the Canadian people, when they come thoroughly to understand it, will not be satisfied with it. Nor do I think that the hon. the Minister of Finance (Mr. Robb) who sponsored the budget considers it sound himself. As the minister read the budget speech the other day I felt that he was merely the instrument of master minds who had for their object not the good of the people of Canada but the desire to remain in office and hold the reins of government. That was the thought that struck me, and there came to my mind at the time a verse in Spencer's Faerie Queene wherein Archimago, the enchantor, could confuse all who came within his environment. The words that I recall appear in canto 2, and I think they will be understood by everyone in this house:

> He then devised himself how to disguise;
> For by his mighty science he could take
> As many forms and shapes in seeming wise,
> As ever Proteus to himself did make.
> Sometimes a fowl, sometimes a fish in lake,
> Now like a fox, now like a dragon fell,
> That of himself he oft for fear would quake,
> And oft would flie away.

The conviction that this budget is not in keeping with the spirit of the Canadian people in this great moment of need deepened as I heard more of the debate. When I heard the hon. member for St. Lawrence-St. George (Mr. Cahan), the hon. member for South Waterloo (Mr. Edwards), the hon. member for Parry Sound (Mr. Arthurs), and, later on,

members to my left, particularly the hon. member for Southeast Grey (Miss Macphail), I was more convinced that the budget would never attain the limit of the possibilities which the government expects of it. There are members of this government and sections of the Liberal press who are accusing the Conservative party of injuring the Dominion in the eyes of the world by daring to assert that Canada is not enjoying to the full the prosperity which is suggested in the budget. That there is prosperity in Canada we all admit; that it is as general as the budget implies we deny. I contend, and I hope to prove my contention in the few minutes at my disposal, that under the present Liberal government Canada's prosperity is neither as general as it is painted nor as widespread as it should be. Canada should be a land of opportunity for all and not a land of opportunity for some, as the present government—and hon. gentlemen opposite know it—is making her. We on this side of the house as well as members of the government take pride in our country; we as well as they want our children to live in Canada and enjoy to the full the blessings of life. We deplore the fact that the future of this country is being endangered by the lack of policy of the present government, or rather the destructive tendency of that so-called policy which, is certainly not constructive. The onus of proving this prosperity lies with the government, but so far they have failed to prove their assertion, and the consensus of public opinion is against their contention. Anyone who has a knowledge of the conditions prevailing to-day throughout a great part of Canada—I might even say over the length and breadth of Canada—must admit that our young industries are being strangled, our settlement checked and our sons and daughters driven to take up foreign citizenship by force of circumstance. I therefore believe, sir, that the hour has come when the people of Canada should know once and for all whether the Liberal government is the working man's government, as they desire to be known. I am going to make a statement now which no member of this house can contradict, and I think once it is established it will decide exactly the difference of policy between the opposition and the government. That statement, sir, is that any policy which by its operation is sending our people out to assume foreign citizenship, by which our country is made the poorer, and the other country "irridentist" stands condemned; while any policy which keeps our man power within Canada and adds to our population the best type of immigrants from other countries, must receive universal approbation. I ask this house and the people of Canada which of these policies is now in force. Prosperity has been spoken of not only to-day but in the years past. In the palmiest days of the Roman Empire prosperity was often mentioned; Rome was the centre of wealth while the common people were kept in poverty, little more than slaves. The same was true in France before the days of the French revolution.

I wish to say here that the policy of the Liberal government with regard to immigration and the development of our natural resources is a setback to the future of this country. I ask any right thinking man or woman to ponder this question for a moment; upon what do our provinces depend? They depend upon their natural resources and their development. From Nova Scotia with its coal, its iron and its steel to British Columbia with its forest products, its mines and its fisheries, this is true. What is the government doing to help Canada develop these resources to the utmost and produce the finished article in our own country? My answer is that the government is doing very little. Under our present immigration scheme we are taking in raw material in shape of unskilled labour from other countries, but we are sending out to foreign countries our highly trained, technical young men and women. They naturally go to the United States where greater opportunities exist, and there they assist in the finishing of our raw materials. After this is done the finished products are sent back to us, and our country is thus prevented from developing as it should and we do not reap the benefit of the initiative, vigor and scholarship of the products of our schools and universities.

We must remember that we are spending millions of dollars to-day in the education of our young people. We only need to consider the nine provinces to see how much money is being spent in training our boyhood and girlhood in our universities to take up technical work, particularly in science and industrial chemistry. After they have received this training, what happens? They go to these places where their knowledge will be of service, and I say that any policy which does not have as one of its main attributes the retention of these highly trained young men and women deserves the censure of all right thinking people.

Referring to the question of immigration, which was lightly touched upon a few moments ago, as an echo of the McConachie case which occupied the attention of the people of this country a week ago I have another example which is very interesting. I

have the name and address of the father, and will give them to the Minister of Immigration if he so wishes. When this record is given to the house to-night, and when it reaches the outside world, the people will stand amazed to see how far we have gone along a path which is making us a shame and a disgrace to the thinking world. Here is the case. The father came to Canada from Scotland as a high class engineer and entered the employ of the Canadian Pacific Railway. He has a wife and three children, and they sold their home and also came out to Canada. The little boy was four years of age; I saw his photograph to-day, and it can be shown to any member of the government who may desire to see it. For twenty-eight years I was a teacher in this country and other parts of the British Empire and I think I should know at least something about boys and their mentality and intelligence. What happened? A lady doctor and her supernumerary put that child through an intelligence test to determine whether or not he was fitted to enter Canada. Four tests were given him, and I challenge any member of the government to say that the answers of that child were such as to indicate that he was subnormal. The lady doctor, whose name was given me, took a one cent piece from her purse and showed it to the child born in Scotland.

Some hon. MEMBERS: Oh, oh.

Mr. BRADY: As I say, she placed the cent before the child and asked what it was; the child answered that it was a penny. That was one black mark. The second test was this: A medical or surgical instrument was placed by the lady doctor upon the table, and the child was asked what it was. The child looked with intent eyes at the outline of the mechanism and said "It is a pipe." It was very much like a smoking pipe to that child. That was black mark No. 2.

An hon. MEMBER: What was the instrument?

Mr. BRADY: I do not know what it was. The third test was the display of a picture of a kangaroo. The child was asked what it was and he answered that it was a dog. Black mark No. 3.

Mr. CAHAN: How old was the child?

Mr. BRADY: The child was four years of age. Now, sir, in the light of this farce in which we are becoming the laughing stock of the world, I ask any member of this house what faith they would place in the McConachie test. If such things happen here and happen there it is apparent the hour has come when we should demand the adoption of a different policy. We should show that we possess intelligence and know how to handle cases of this sort.

Mr. EDWARDS (Frontenac): Was the child shipped out of the country?

Mr. BRADY: The mother was kept in the deportation quarters for three weeks. She had to pay her board bill and was finally shipped back with her child to Scotland. This was the information given to me. I have the name and address of my informant, and if the government desire any further information it will be forthcoming.

Now, sir, I wish to deal with some statements made by the Finance Minister. I should like to quote his actual words because I feel that out of those words I shall be able to condemn the government for not carrying out what they say is sound administration. In delivering the budget speech the Minister of Finance quoted the opinion of a British economist named McCulloch:

> The greater productiveness of industry and the greater well-being of the community are the real sinking funds which a wise government should exert itself to build up and encourage.

And again:

> Thus by policies beneficial to all parts of Canada, national development both in industry and population, has been encouraged. Canadians are returning home . . . and Canada is once more building solidly for the future.

And again:

> Work and thrift are the only sure roads to success.

Now, sir, I think that the Minister of Finance was the victim of some master mind, as is evident in these words just read, because I declare to-night that as regards British Columbia, and as regards the constituency that I represent, the fulfilment of that program has not taken place. I will prove, when the estimates come up again, that instead of looking to the well-being of the community, and looking to the development and support of our industries, the government pursued the very opposite course, or at least those did who were responsible for carrying out the very things suggested by the policy as enunciated above. The greater productiveness of industry! I want to tell the house to-night that I live in the heart of one of the greatest fishing communities as well as one of the greatest mining districts in Canada. Further, I say this,—that the day is not far distant when British Columbia will play a part on the Pacific similar to the part played by Great Britain on the Atlan-

tic as a great centre of commerce. We have got the great Pacific along our coast, we have got the Orient at our door. Prince Rupert is 480 miles nearer the orient with its 480,000,000 of population in the Chinese Empire, and its 65,000,000 in Japan. I say, sir, that if ever the hour comes when I shall be called upon to decide between the working people, the common people, as we say, and any class my lot shall be cast with them to the end. What is this government doing? They say they are the friends of the working man. Sir, they took out from the estimates the necessary appropriation to give to the fishing folk of Prince Rupert a little paltry shelter for their boats during the winter season. Where is the romance which should exist in the hearts of the government ministers? Where is the love of adventure with which they should be inspired? Have they never thought for a moment of the fishermen out on the deep amid grave dangers and perils, constantly risking their lives, their families never certain that they will return to their homes? I stand here as a representative of those people. Is it possible that in a country like ours that the word democracy, painted in vivid colours on the emblems of all who claim to represent Liberalism, is misunderstood by the Cabinet ministers. Is it possible that this government refuses to give to these people the things so necessary to render their lot less hard? Sir, the failure to minister to the wants of these people is a crime.

I went through the mining districts in my constituency. I did so because I wished to give to this house statements which could be substantiated and not statements which were untrue. I will give you an outline of the conditions which prevailed (written down on the very day I went there) at Stewart. I went up to Stewart because the people asked me to come and see the congestion at their wharves. I went so that I might honestly note and report the conditions which prevailed there, and here is what I found: The Mogul, a large ore carrier, had been in midstream for twenty-four hours. Five times the boat had to leave the wharf to go out to mid stream, each removal involving an expenditure of $48, besides great loss of time, because the Union steamship boats and the Canadian National Railway boats were coming in on their regular service, and these boats are not always on schedule time. Furthermore, that same boat could not deposit on that wharf the necessary supplies so essential for the mines. A thousand cases of gasoline could not be landed there owing to the congestion which prevailed, The wharf was laden with coal, steel for the mines, concentrates, and gasoline cans, and the Mogul had to take back for the next trip, five days later, 500 cans of gasoline that could not go on the wharf. And yet the government call upon the people to work and to practise thrift. The pioneers up there are fighting to-day for their very existence. They work long hours, they toil from early morn until late at night; and I say that if this government had the heart to recognize what was necessary for those people, we the representatives would not be compelled to stand up here and demand these necessities; we should be doing something else and legislating along other lines for the improvement of the public welfare.

I have still a minute and I have something more to say. I come from a great country, a land where the old British stock is practically predominant. In the old days, long before the birth of Vancouver or Victoria, there were along the Skeena and the Stuart rivers, great Hudson Bay forts, trade routes. These were there a hundred years before the Canadian National thundered through the Yellowhead pass on its way to the port of Prince Rupert. I should like to let the people of Canada know that this particular part of central British Columbia is replete with wonderful natural resources. It is only fourteen years ago that this particular part of British Columbia was connected up by the Canadian National from the port of Prince Rupert to the outer parts of Canada, and yet we have in that city a port second to none in this Dominion. We have there a port that, when the St. Lawrence was closed last winter, was open for grain boats to come and go all the winter months and it is an open port at all times and all hours throughout the whole twelve months. We have a great dry dock costing some millions of money but lying practically idle because of the fact that the government do not see fit to realize that they could, through that port, capture the oriental trade, a goal which to-day should be the ambition of the Canadian people. We have there a great ocean dock eight hundred feet long, but practically no use is made of it. What should we do? Do you not think, sir, the one great thing to-day in a national policy is the development of our seaports? The whole history of the world centres around its waterways. Study the history of rivers, harbours, lakes and seashores and you find the history of the world and of the progress of civilization. It should be the bounden duty of every government; it should be one of the chief platforms in any policy, to make use to-day of the gifts that we possess, where much money has been spent and where the conveniences are available, to develop our ports and make use of them as a means of

encouraging foreign trade and building up our domestic markets. This, I think, is the chief duty of any government.

In conclusion let me say that whatever little good the budget possesses, has been recognized. The income tax and one or two other things have been reduced, but there are throughout Canada many people who never had the chance of having a reduction in their income tax.

Mr. I. D. COTNAM (North Renfrew): Mr. Speaker, in rising to address the House of Commons on the present budget I wish to state at the outset that I will vote against it. Like so many other things that this government has presented to this house, it is a dud. It is a milkless, creamless, butterless and breadless budget for the great masses of the working people. I have been in the house now for three sessions; I have listened to three speeches from the throne and to the delivery of three budgets by the present Minister of Finance (Mr. Robb). In the three speeches from the throne and also in the three budget speeches this government has been endeavouring to tell the people that this country is in an exceedingly prosperous condition. This reminds me of that old adage "Methinks the lady doth protest too much." Why, this very afternoon, in an address delivered by the hon. member for East Essex (Mr. Odette), he tended to stress the fact that there was a great industrial boom in his constituency. I hold in my hand a report taken from the Border Cities Star of Windsor under date of February 13, 1928, and stating:

> So many people are applying for work at the city hall these days that the mayor's office has become pretty much of an employment bureau.

That is right across the line from the hon. member for East Essex. Furthermore, the man who made that statement is a Mr. Blake Winter, who, I understand, ran on the Liberal ticket in East Essex in 1925; consequently I assume the government will accept that report as true. Yet we have the hon. member trying to tell us in the house this afternoon that in his constituency everything is in a condition of industrial boom. I fail to see where you can have an industrial boom with everything prosperous and at the same time have an ex-Liberal candidate telling us that there is practically a bread line and people seeking for employment right across the border from the hon. member's own city.

Mr. ODETTE: Is the hon. member sure of the name? I do not know of any Mr. Blake ever running in Essex county.

Mr. COTNAM: Alderman E. Blake Winter, acting mayor.

[Mr. Brady.]

Mr. ODETTE: That is different.

Mr. COTNAM: I presume my hon. friend will accept him even on that name. While all the members on the government side who have spoken in this debate and members of the government themselves have stressed the prosperity which they allege to prevail in this Dominion, I have noticed that all this prosperity is present in the abstract. Not a single member has stood up in his place and said that in his particular constituency industrial conditions are excellent; that the people are busy; that the working men have full pockets, and that the larders of the women are well stocked with food and the other necessaries of life. This government is a government by statistics. When you try to pin them down to hard facts, every member of the government immediately turns to statistics to support the spurious case which they want to present to the people. Why, the Prime Minister (Mr. Mackenzie King) in his first address in the house this year took almost three and a half hours, and most of that time was consumed in giving statistics to prove to the people of this country that they were prosperous. I, for one, prefer the method of the late revered leader of the Liberal party, Sir Wilfrid Laurier, who said that if a people were truly prosperous it was not necessary to quote statistics, that when the man in the street put his hand in his pocket he knew whether or not he was prosperous. While banking institutions may be prosperous, while certain sections of this country may be prosperous, while the farmers of this country, due to their own work and thrift, may be in a more or less prosperous condition, while the pulp and paper industry is probably prosperous to-day, by the test of Sir Wilfrid Laurier the working people of this country, the great mass of the people, are not in a prosperous condition, or are not as prosperous as they should be.

Why, this government says, we are reducing taxation. But, Mr. Speaker, if you look over the estimates for the last five years you will find that year after year there has been a steady increase in expenditure on the part of this government. Year after year this government has been collecting more and more money from the taxpayers. True the government have taken off some of the nuisance taxes which they themselves imposed. They have brought the sales tax back to three per cent, the point where it was when they came into office in 1921. But I maintain that if this government economized as they should do, and economized as the people of this country demand, they could have taken off the sales tax entirely and have got rid of

the nuisance taxes years ago. Anyone who looks over the estimates even for this current year will agree, I think I am quite safe in saying, that this government could cut down their expenditure by fifty to seventy-five million dollars a year without one public service in the country suffering thereby, if they were willing to cut out their political patronage to political heelers and hangers-on and give the country a good straight square and honest deal in the matter of government. It is a strange thing how the government can expect this country to grow and prosper—and to me it seems impossible—in the face of the fact that in the last five years they have spent over two billion dollars in administering the public affairs of only nine millions of people. I cannot understand how we can prosper when this government are spending at least $40 per capita per annum for every man, woman and child in the Dominion. It does not matter how they get the money out of the pockets of the people, whether by direct or indirect taxation; the fact remains that the people of Canada must pay the bill. You can cut down your sales tax, cut down your income tax, cut down all your taxes, but if you continue in the aggregate to collect more revenue than you have been collecting in the past, the people of Canada must eventually pay the piper, and they are paying it to-day.

Yes, the government have reduced the income tax. I do not think that helps the labouring man in this country very much. The hon. member for East Essex, when speaking this afternoon, said that if you bought an automobile in the city of Ottawa to-day, now that the reduced sales tax is in effect, you could buy it ten dollars cheaper than before this budget came into effect. But I ask you, how many working people in this country are to-day living on less than $1,000 a year? I venture to say that probably sixty per cent of the labouring classes in this country are earning less than $1,000 a year, and they are not buying motor cars, I can tell you, to say nothing about benefiting by a reduction in the income tax. I do not believe in this reduction in the income tax. I believe the income tax should be collected, and collected from the people who are able to pay. The people who have the money in their pockets have the right to pay; it is their duty to contribute to the running expenses of this country instead of the government collecting a sales tax from the little fellow who can earn only $2 or $2.50 per day.

In 1921 we had the Prime Minister—at that time he was leader of the opposition—in my constituency. He came there all arrayed in battle armour, equipped with sword and shield, and he was going to slay a number of dragons that were then in the way. The present Prime Minister in opposition was a wonderful tilter at imaginary evils. They must slay that dragon, he said, of the high cost of living. The poor consumer in this country was paying more than he should have to pay for the necessities of life. Where is the cost of living to-day? Why, it is higher to-day than when the Prime Minister was touring the Dominion in 1921, and I do not now hear him raising his voice against the high cost of living.

Another thing of which he complained was that the Conservative government was a government by order in council. But yet this government, which, according to a return tabled last year, had passed 25,000 orders in council from the time they came into power up until last year, have I presume up to now passed 35,000 or 40,000 orders in council, and the Prime Minister never raises his voice against that evil which was so rampant in this country in 1921.

The Prime Minister was also going to reform the senate. He has been in office now for six years, and reformation of the senate so far as the Prime Minister and his cabinet are concerned, is as far away as it was at the time of the flood. However, he did perhaps take one step towards the reformation of the senate when he appointed the ex-Minister of Customs and Excise in this country, a man who had assisted in defrauding—

Mr. SPEAKER: Order. It is not permissible to reflect upon any hon. member of the other chamber.

Mr. COTNAM: Well, Mr. Speaker, he was appointed to the senate. He was accused—if I may use that word—of bringing the department of which he was the head into disrepute.

We have another problem to-day, a problem that has been mentioned over and over again, and with which is interwoven all the future life of the Dominion, a problem which we cannot get away from however much we may try. I refer to the immigration problem. According to a return tabled the other day, we have brought into the Dominion, during the years this government has been in office, over eight hundred thousand immigrants. To this number must be added the natural increase, which should give a very largely augmented population. But has our population increased? On the contrary, there is a net loss of 60,000 to the U.S.A. in the past year. Where are those immigrants? The Minister of Railways (Mr. Dunning),

speaking in this debate yesterday, said that we, in mentioning the fact that certain of our people were going across the line, were acting as advance agents for the immigration authorities of the United States. Well, that does not say much for the personnel of this government: How does that state of affairs fit in with their prosperity cry? I would give the Minister of Railways or any of his colleagues credit for a little more sense than to believe that, although we suffered a net loss last year of sixty thousand Canadians to the United States, everything is prosperous here, wages are good, industries are booming, and agriculture is about as profitable as it could be made. Why were these sixty thousand Canadians foolish enough to forego the pleasant conditions depicted by the government and move across to settle in such a country as the Minister of Railways painted yesterday with the help of newspaper reports? Well, it is the same old story; when the government want to cover up their deficiencies and ignore the facts they quote statistics and newspaper reports. Yet it cannot be denied that last year we lost sixty thousand Canadians to the United States. What are we doing to make good this loss? We are bringing in people from outside, people who in many cases know nothing about our traditions, our language, our customs. This is a sin and a shame, and I say it is a reproach to the government that they cannot find a solution of the problem. It is not up to us to find a solution; it is up to this government. I claim that the fiscal policy of the administration and their attitude generally towards our industries are responsible for driving our native-born across the line. The government must provide the remedy for this evil, otherwise the Dominion can never grow and develop as she would if we had in office a party capable of dealing in a statesmanlike way with this and other national problems.

I have in my constituency, Mr. Speaker, English, Irish, Scotch, French-Canadians, Germans, Poles and people of other nationalities, and they are living and working together in peace and harmony. I wish we had more of them. I should like to see more German immigrants brought in since the ban has been lifted on their entry, because they make most desirable citizens. They are thrifty, honest, hard-working, and they make a success of whatever they take in hand. I repeat, I wish I had more of them in my constituency. But no matter how many immigrants we may bring in, or what nationality they may be, they cannot in the nature of things make good the loss of our native-born. I believe this is a problem for the mothers of Canada, and that they are going to have a great deal to do with its solution. It will be for them to say whether their children are to get at the hands of this government a square deal, whether conditions are to be such that their children when they arrive at adolescence will be assured an opportunity of securing useful and profitable vocations which will enable them to remain in the land of their birth. The government accuse the Conservative party of not having any policy to prevent this exodus to the United States. Well, what is the policy of the Liberal party in this regard? Have they any solution to offer that will be satisfactory to the people of Canada?

I can heartily sympathize with the hon. member for North Huron (Mr. Spotton), for in my last election my riding also was invaded by cabinet ministers. I think the first minister to come in was the genial gentleman who presides over the Department of Marine and Fisheries (Mr. Cardin). Let me tell it to the marines: he did not do me very much harm. The next minister to arrive was his good-natured colleague, the Minister of Railways and Canals. Harm? No, I think he did me some good. He spoke about the customs scandal something along these lines: The customs scandal does not amount to very much —why, you know, you ladies would all like to smuggle a pair of silk stockings or a few little handkerchiefs, or something like that, so really there is not very much in the charges after all. I suppose he meant that if the crime was not very serious it was not much of a sin in his eyes; but he shocked the moral sensibilities of the people by preaching such a doctrine.

Mr. DUNNING: Mr. Speaker, I do not usually object, but my hon. friend is quoting me entirely wrong. As a matter of fact, in the course of several speeches, I discussed the moral attitude of the public towards the whole question, and not at all along the lines indicated by my hon. friend.

Mr. COTNAM: Perhaps the Minister of Railways was only discussing it in an ironical fashion.

Mr. DUNNING: No, Mr. Speaker. I must protest. My speeches are of record, and my hon. friend did not hear them. I made speeches, and they were reported correctly, and they were not along the lines indicated by him.

Mr. COTNAM: I took the report from the Liberal paper published in the constituency.

Mr. DUNNING: Has he got it?

Mr. COTNAM: Perhaps the minister will repudiate his own newspaper?

Mr. DUNNING: If you read it incorrectly, yes.

Mr. COTNAM: I think I can read correctly—

Mr. DUNNING: Go ahead.

Mr. COTNAM: —most of the time. In passing, let me say that I always like to see the Minister of Railways get up in a debate, because he is a fighter. I am Irish myself and I like a scrap.

Mr. CASGRAIN: That is the best part of yourself.

Mr. COTNAM: But the Minister of Railways is imbued with some peculiar ideas. I think he must have brought some of his free trade ideas with him when he came to this country and he has not yet been able to adapt himself to conditions such as he finds them even in the great western land. I thought he went rather out of his way yesterday to make a somewhat wanton attack on the members who sit in the southeast of the chamber. I have had Progressives in my riding and I will always give them credit for this, that in whatever else I may not be able to agree with them I do believe that they are honest in their convictions and that they try to do what they think is right.

Mr. DUNNING: Hear, hear.

Mr. COTNAM: And the Minister of Railways yesterday impugned the motives of the group who sit in that corner.

Mr. DUNNING: I used no words capable of such an interpretation—no such words at all.

Mr. CANTLEY: You are thin-skinned.

Mr. DUNNING: It is a matter of truth, a matter of record.

Mr. CASGRAIN: He merely stated bare facts.

Mr. COTNAM: I have only forty minutes, and interruptions curtail the time at my disposal. I am quite willing to leave it to the house, and even to members on the minister's side, to read Hansard and see what he did say. Perhaps the minister himself has not read Hansard and is not aware of what he said yesterday. I should not wonder, if he read Hansard, that he himself would be surprised to discover what he said. He went a little too far and said just a little bit more than perhaps some of his colleagues were anxious to have him say. However, that is my personal opinion.

Mr. MOTHERWELL: It sounded all right here.

Mr. EDWARDS (Frontenac): Is that your private or your public opinion?

Mr. MOTHERWELL: Both.

Mr. COTNAM: I do not know what the people would have done if the genial Minister of Agriculture had told the agricultural community of my constituency just how the Australian treaty worked out to their advantage. Possibly, had he done so, it would have meant three or four hundred more of a majority for me. I should like him to go into my constituency and tell the mixed farmers of that riding how the treaty is operating to their benefit.

Mr. MOTHERWELL: I am busy elsewhere.

Mr. COTNAM: I have here a report of a conference of the National Dairy Council of Canada and I find, looking over this report, that there were present at that meeting of the council the Prime Minister (Mr. Mackenzie King), the Hon. W. R. Motherwell, Minister of Agriculture, the Hon. W. D. Euler, Minister of National Revenue, the Hon. J. A. Robb, Minister of Finance, the Hon. Charles A. Dunning, Minister of Railways, the Hon. Charles Stewart, Minister of the Interior, the Hon. J. C. Elliott, Minister of Public Works and the Hon. James Malcolm, Minister of Trade and Commerce. An appeal was made to the members of the cabinet asking them to rescind the trade arrangement which had been made with Australia in that treaty. I wonder what the government intends to do about it. I notice in this report that in the Minister of Agriculture's own province over twenty dairy organizations closed their doors last fall.

Mr. MOTHERWELL: There are not twenty in it.

Mr. COTNAM: The report of the council says so.

Mr. MOTHERWELL: Not in my constituency.

Mr. COTNAM: I did not say in your constituency.

Mr. MOTHERWELL: Yes, you did.

Mr. COTNAM: I said, in the province of Saskatchewan. At any rate, the dairy farmers and the mixed farmers of this country have not been getting a square deal from this gov-

ernment. The farmers of my constituency have not been getting a square deal from them, and I submit the time has come when the government should look after the interests of our own farmers first and not the interests of the farmers of Australia and New Zealand. This government, through their ratification of the Australian trade agreement, have practically turned the Dominion of Canada into an importer, so far at least as butter is concerned. Whereas we had an exportable surplus of 24,000,000 pounds of butter in the year 1925, this year, according to this report from which I have read, this country will be importing in the neighbourhood of 10,000,000 pounds of butter, to the detriment of the dairy farmers of Canada. In order to give concessions to automobile parts manufacturers and to the pulp and paper industries of the country, the government penalized the dairy farmers. They also penalized the consumers, for whom their hearts bleed so often, making them pay, instead of a duty of two-thirds of a cent per pound on raisins, a duty of three cents per pound. The result is that we have brought in no more Australian raisins, but about 40,000,000 pounds last year from the United States, to the great disadvantage of the bakers and consumers of Canada. I received circulars from bakers in my town pointing out that on account of the increase in the price of raisins they were compelled to pay so much more for their product that they had to take the additional sum out of their own pockets because they could not raise the price of their product. The fact is that the consumers of Canada paid last year in round figures $1,500,000 more than they should have done in order to make possible the trade agreement with the Commonwealth of Australia for which the people of this Dominion received practically nothing in return. The Conservative party in this house fought that Australian treaty in 1925 and again in 1926. Indeed, the ex-member for South Oxford brought in an amendment to the budget calling on the government to repudiate the treaty.

Another gentleman came to my riding during the election to tell the electors how to vote. I refer to the present Canadian minister at Washington, a man who could not get a constituency of his own in the country. A man who could not represent the people of one constituency is sent by this government to represent all Canada at Washington. I wonder where he got his mandate, and what was the reason for his appointment. I listened to him as he tried to explain at that meeting how it was that the agricultural implement business had not been interfered with by the tariff tinkering of this government. He did not tell the people that he got back in protection, through drawbacks, as much as he had or more than he had before, while the little fellow was obliged to pay for the concessions which were made to allow the Massey Harris implement works to carry on. Exactly the same method was adopted in connection with the automobile industry when the duty was lowered on automobiles.

Then last, but by no means least, we had in my riding the Prime Minister himself in the year 1926. I shall always be pleased, and I am sure the people of that constituency will also at all times be pleased, to receive with open arms the Prime Minister of this country, to whatever party he may belong, because we hold the office in high respect. The Prime Minister received a nice bouquet of roses and had a sweet little girl to kiss, but, apart from that, I do not know that he did very much harm or very much good to the cause he represented. He had with him, however, a gentleman whom I will not name but who did us a great deal of good. This gentleman came forward and said, "When in the whole history of this Dominion, or of any other country for that matter, had a man ever received back from the government a cheque for $300 on account of income tax? Well, I had the pleasure of receiving such a cheque the other day as a result of the Robb budget." The people in that constituency, the working people, the masses who are earning not more than five, six or seven hundred dollars a year, came to the conclusion that if that man could receive $300 back from the government on income tax he was well able to pay it into the revenue of the country. They said, "We do not want a government like that; they have retained the sales tax and taken the tax off the little fellow who is earning his $2 or $2.50 per day." In other words, I guess I had the experience of the hon. member for North Huron, and I would just like to add this word of warning to the government for the future. Apparently the people of this country are afraid of the cabinet, when they hunt in packs; if only one appeared it might be all right, but when they run together the people say as the Duke of Wellington said before Waterloo, "They scare me." The voters of that riding and the voters of North Huron were scared of them when they ran in packs.

I wish to draw one matter to the attention of the Postmaster General (Mr. Veniot), again following the lead of the hon. member for North Huron. I believe it is a crying shame and disgrace to this country to-day that our rural mail carriers do not receive

more remuneration for the services they render. I have several of these men in my constituency, and I am sure every rural member will agree with me when I say that these men are inadequately paid for the work they do. They face storms and all kinds of weather, travelling over all kinds of roads in order to give the people of this country a mail service, and surely there should be some way of devising a system whereby these mail carriers might receive adequate remuneration for the work they do. I do hope the Postmaster General will find some means of dealing with that problem.

There is just one other matter about which I would like to speak. I think the Minister of Finance first started the cry that the Conservative party stands for higher, higher and still higher protection; I heard the minister make that statement in this house last year and the year before, and as he spoke his voice went up the scale accordingly. Last year and this year I find the Minister of Railways and Canals joining in the same duet; yesterday in the house he stated that this was a part of the policy of the Conservative party —which it is not. This party is not asking and never has asked for higher protection; the Conservative party is asking for a square deal for the Canadian people. We believe that we should have a tariff sufficient to protect the farmers, the labouring people and the great masses of the people, and we believe that a tariff so adjusted and so modified as to give no one an undue advantage will work for the benefit of this country. We do not advocate a high tariff; an adequate tariff is what we desire. We do not ask it for the manufacturers alone but for every class and section of this country, and it is because this government has no fixed fiscal policy that we are to-day floundering in our present condition. We have a tariff board, which was appointed by this government, and how is that board composed? First we had an ex-minister of railways as chairman. Where did he learn anything about matters pertaining to the tariff? For the present chairman of the board we have an ex-lobbyist for the old Mackenzie and Mann interests which were once predominant in this country. What do we get from this tariff board? They have been in existence over a year and a half and we have had absolutely nothing from them; they are simply acting as a buffer between this government and the people, to give the government something behind which they can hide.

And then the Minister of Finance tells the people it is necessary to economize. Why, Mr. Speaker, I always thought economy, like charity, began at home. I should think it would be up to this government to give the people a few object lessons in economy. The minister says the watchwords must be work and thrift, but the people in my constituency cannot work any harder and they cannot be any thriftier; the farmers and labourers get up at four or five o'clock in the morning, long before the Minister of Finance stirs from his comfortable bed; they work all through the day with perhaps an hour for lnuch and sometimes continue far into the night. It takes them sixteen or eighteen hours a day to make a living and to keep things going.

Mr. SPEAKER: Time.

On motion of Mr. Kennedy the debate was adjourned.

On motion of Mr. Lapointe the house adjourned at 10.38 p.m.

Friday, March 2, 1928

The house met at three o'clock.

PRIVATE BILLS

FIRST READINGS

Bill No. 56, An Act respecting the Sun Life Assurance Company of Canada.—Sir Eugene Fiset.

Bill No. 57, An Act respecting The Edmonton, Dunvegan and British Columbia Railway Company.—Mr. Kennedy.

INDUSTRIAL AND INTERNATIONAL RELATIONS

Hon. ERNEST LAPOINTE (Minister of Justice) moved:

That the name of Mr. Chevrier be substituted for that of Mr. Laflamme on the committee on industrial and international relations.

Motion agreed to.

REPORT

Memorandum prepared by Monsieur P. De Vuyst, director-general of the Department of Agriculture in Belgium, for the Belgium committee of propaganda in favour of the International Agriculture Institute of Rome, Italy. —Mr. Speaker.

DEPARTMENT OF NATIONAL REVENUE

AUDITOR'S REPORT ON REORGANIZATION

Hon. R. B. BENNETT (Leader of the Opposition): Might I inquire if the government will be good enough to have printed the report of the auditors, Messrs. Clarkson, Gordon and Dilworth, with respect to the customs inquiry?

It is rather an important document, its preparation involved an expenditure of some $50,000 or more, and hon. members find it difficult to comprehend it without having copies before them. In the light of the legislation about to be introduced and the estimates, we should like to have copies of the report available, and I trust the government will make the necessary arrangements to have it printed at an early date.

Hon. W. D. EULER (Minister of National Revenue): The report is voluminous, but there is no objection whatever to printing it.

PRIVILEGE—MR. POULIOT

Mr. JEAN FRANÇOIS POULIOT: Mr. Speaker, I rise to a question of privilege. Last night I listened with great interest to the speech of my hon. friend from North Huron (Mr. Spotton) in the course of which he said:

> My hon. friend from Temiscouata said that while in his riding the people are equally as prosperous as hon. members opposite would have us believe is the case in the country generally the boys in his riding went to the United States to make money so that they could come back and pay off the mortgage on the old man's house.

One might conclude that what the hon. member refers to happened last week. Well, I may be allowed to inform the house that those boys went to the States while the Tories were in power, and they came back under the present regime.

HUDSON STRAITS AERIAL SURVEY

MISSING AVIATORS

Mr. A. F. TOTZKE (Humboldt): Mr. Speaker, in the absence of the hon. Minister of Marine and Fisheries (Mr. Cardin) may I ask the hon. Minister of Railways (Mr. Dunning) if word has been received of the missing aviators who have been engaged in an aerial survey of ice conditions in the Hudson straits?

Hon. CHARLES A. DUNNING (Minister of Railways and Canals): The Minister of Marine and Fisheries advised me this morning that the missing aviators had been found and are now safely back at their base at Port Burwell.

THE BUDGET

DEBATE ON ANNUAL FINANCIAL STATEMENT OF MINISTER OF FINANCE

The house resumed from Thursday, March 1, consideration of the motion of Hon. J. A. Robb (Minister of Finance), that Mr. Speaker do now leave the chair for the house to go into committee of ways and means, the proposed amendment thereto of Mr. Cahan and the amendment to the amendment of Mr. Fansher (East Lambton).

Mr. D. M. KENNEDY (Peace River): Mr. Speaker, the budget proposals of the Minister of Finance (Mr. Robb) relatng to taxation have not so far met with a great deal of favour from any quarter of this house. The Minister of Trade and Commerce (Mr. Malcolm) stated last Tuesday that he was glad to be able to congratulate his colleague on the statement of Canada's business which he had presented for the past year. But apart from such general remarks, there has not been very much favourable comment from either side of the house, especially from hon. members to your right, sir, with regard to the taxation proposals of the budget. In his reference to his colleague's statement of Canada's business, the hon. Minister of Trade and Commerce (Mr. Malcolm) asked:

> What percentage of this credit is due to the self-reliance and industry of our people, what percentage to the acts of a benign Providence, and what to the actions of the government seems, however, to be a matter for debate.

Without seeking to fix the percentage of credit, Mr. Speaker, I would say that Providence has been generous to us during the last three years; our people have been very industrious; and I think we will have to admit that the Minister of Finance is a careful administrator.

Now, as far as my time will allow, I wish to deal with the taxation proposals contained in the budget. We have four main sources of taxation revenue: Customs, excise, sales tax and income tax, and it is as the budget proposals affect the taxation levied that I am particularly interested. I have not heard much comment so far in this debate, especially from the government side, on these taxation proposals. We have discussed many things which in my judgment are not directly related to the budget or connected with budgeting, but there seems to be a tendency to avoid any reference to the actual changes in taxation as proposed. As one of the members of this group I have been very much interested in some of the kindly criticism that has been levelled against us in this corner and against our amendment. I was very much interested in the speech made by the hon. member for South Huron (Mr. McMillan). He stated that he had a hard job to understand just why we were sitting on this side of the house, and he came to the conclusion, after reading our amendment, that there was no reason at all why we should sit on this side and that even he himself

had stronger reasons for differing with the government than those set forth in our amendment.

The hon. member for Provencher (Mr. Beaubien) delivered a remarkable speech. He said in his closing words:

> I intend to vote for honest and practical legislation—for the budget.

But what was his analysis of that budget which led him to that sublime conclusion? First:

> The tariff resolutions which the Minister of Finance has presented to the house are confusing. I do not believe that all the lawyers in Philadelphia could understand them, and I am not going to discuss them because they are too confusing. I would point out, however, that there seems to be a joker in the proposals submitted by the Minister of Finance, and that joker is in the changing of the numbers of the schedule. Let me cite just one example in order to make my point clear.

Then he cites items 526 and 575. He goes on:

> In the new schedules which the minister has brought down that is changed to item No. 545, and in changing the item they have inserted the words, "for use exclusively in the manufacture of",—

He asks that the words: "For use exclusively in the manufacture of," be struck out. So that the general public of Canada will get the same advantages as the manufacturers when it comes to importing material. He objects to the reduction in the income tax:

> The reduction in the income tax, I am frank to say, does not please me.

These are his references to the direct proposals of the budget. Then he goes on to discuss the amendments. He says that some of us over here are anxious to rock the boat as it is safe. I would remind him that some of us rocked the boat when it was not safe, and if the matter is urgent enough and important enough we are prepared to do it again. The only reference which the hon. member for Provencher makes to the proposals of the budget he makes in condemnation of or in opposition to them. But he sums up his remarks by stating that he is prepared to vote "for honest, practical legislation—for the budget." I would point out that the hon. gentleman is the only member of the group known as Liberal-Progressives in this house who has so far spoken on this budget. I should like to know whether we are to take his attitude on the budget as representing that of the Liberal-Progressives. I am interested in this because I have a great deal of respect for the Liberal-Progressives and I should be glad to hear more of them tell the house what they actually think of these budget proposals before the division is called on the amendments and on the budget itself. We are not infallible. We have been criticizing the budget and we are anxious to hear from some of those gentlemen, who have very much the same point of view as ourselves with regard to matters of taxation, as to the ground on which they will justify voting for the budget and against our amendment.

We heard also from the Minister of Railways (Mr. Dunning). That hon. gentleman in his speech on Wednesday did not come any nearer discussing the actual taxation proposals or the change in them than to refer to the income tax and to the increase in the British preference. On the latter point he had this to say:

> As to the criticism which has been uttered with respect to the intimation by the Minister of Finance that in future it was proposed to ask that all goods coming in, taking advantage of the British preference, should have a 50 per cent British or empire content, I desire to say just this: the Minister of Finance gave that intimation in no sense intending thereby to limit the British preference in the slightest degree.

Whatever the Minister of Finance's intention may have been, the change is bound to limit the goods that will come in, when we increase the rate from 25 to 50 per cent. It is just as sure as if you raised the standard of wheat. You will have less of that grade than if the standard were lower. I cannot understand why the Minister of Railways should have pursued that line of reasoning. Of course he took a slap at the group system. This has nothing at all to do with the budget as a matter of fact, but as regards the statement made by the Minister of Railways on the floor of this house and in some parts of the country as well, if we are to believe the newspaper reports, that we in this corner of the house wanted and did attempt to bludgeon the government, I have this to say: If our efforts can be properly described as bludgeoning—I do not think they can be, but if so—then I declare, and I invite anyone to challenge the assertion, that the only attempt we have made in this house in that direction have been attempts to keep the Liberal party true to the pledges which they made to the people of this Dominion. If bludgeoning is justified at all it is justified in a case of that kind. The minister said the other night that the hon. member for Southeast Grey had called that method democracy. Well, a betrayal of promises such as we have witnessed for a number of years in this country by the Liberal party is certainly something that is not in the best in-

terests of democracy; and if we who have claimed to believe in the same principles that have been thus repudiated did not take every opportunity to keep the Liberal party true to its promises, we should also be untrue to democracy and to the people who sent us here.

I am not going to quote this time the Liberal or the Progressive platforms. When I was a youth I was once taken out to some evangelistic meetings in the north of Scotland and I remember an old evangelist stating there were some parts of Scotland he did not like to visit because the people were gospel-hardened. I wondered whether it is worth while quoting these platforms any more. Are the people across the floor gospel-hardened so far as these promises are concerned? I hope that is not so.

Mr. COOTE: I am afraid it is.

Mr. KENNEDY: The Minister of Railways said something about cooperation. I remember reading in the press after the last election that there had been a meeting of the Liberal-Progressive group in the west. They reported that they were willing that the Minister of Immigration (Mr. Forke) should enter the cabinet because the policies of the two groups, Liberals and Liberal-Progressives, were similar. The Minister of Railways stated the other night that we had co-operation in this house between the two groups. After all, he is in power because of that system; he is in power as a result of co-operation between the two groups. I was glad to hear the minister say he was pleased with the co-operation which has been received from that group, but I wish some of the members of that group would tell us whether they are also pleased with the cooperation they have received from the treasury benches in carrying out legislation based on the policies on which they were both elected. I believe they owe that to their constituents, to this house and to the country, because I do not think they are fair to themselves if they vote without giving some explanation. As I understand the word "cooperate" it means to work together for a common object. What is the common object? Is it this budget, the budget of last year or both together? The views of the three prairie provinces on fiscal matters are well known; the farmers represent a large proportion of the population of those provinces, and if you find a group of farmers expressing themselves with regard to the income tax and the tariff you can be pretty sure of their sentiments. I do not want to take time to quote resolutions from the Canadian Council of Agriculture and other farm bodies, but I believe the people who sent their representatives here from the three prairie provinces hold the same opinions with regard to taxation and budgeting in this Dominion. They are opposed to the indirect system of tariff taxation as they are opposed to decreases in the income tax.

Some of the newspapers of Canada have stated that the farmers are opposed to any reduction in the income tax because they do not pay that tax. Well, Mr. Speaker, possibly some of us would have come under the income tax had it not been for the exemption we were allowed, but notwithstanding that exemption I want to say that most of us are very anxious to-day to reach the point where we will have to pay income tax. If the farmers have not been paying income tax it is because they do not receive the incomes in spite of their long hours of work, the hardships which they endure and the practical conscription of the labour of both their wives and families.

The Minister of Railways referred to the sales tax and said that on this point the Conservatives and ourselves agreed. That is not so, and I am surprised that the minister did not read the amendment more carefully. I am strongly opposed to wiping out entirely the sales tax, not because I believe it is a good tax but because I believe it is better than the tariff. Under the sales tax we have pyramiding; not all the revenue collected goes into the treasury, but the tariff also pyramids and in addition possibly two or three dollars go into the pockets of private individuals for every dollar which is received by the federal treasury. The sales tax, on the other hand, does not lend itself to that evil.

The hon. member for Provencher (Mr. Beaubien), asked the Minister of Finance, because he was a kindly gentleman, to strike out of the proposed tariff schedule the words "for use exclusively for the manufacture of". I want to say to the hon. member for Provencher and to other members of this house who have been studying the tariff that we have not been tied down to a policy of protection in this country at all. No, indeed; we have had an arrangement of protection and free trade whereby the manufacturers get protection on their finished products and a low tariff or no tariff at all on the raw material they need to buy. They secure the benefits of both policies while we, on the other hand, suffer the disadvantages of both, and that is why we intend to fight until we get at least a more equitable arrangement. If the Minister of Finance in-

tends to strike out those words in these proposals he will need something more than a kindly heart to carry him through. The tariff schedules as proposed by the minister are planned in my judgment to help a few large manufacturers at the expense of the general public and the smaller manufacturers, especially those manufacturing hats and caps.

In the first place we have a reclassification; under the old items a certain rate of duty was provided on a certain line of goods, such as clothing or blankets. The old item would apply to cotton and woollen blankets, or to cotton handkerchiefs, linen handkerchiefs and silk handkerchiefs as the case might be. Now an attempt is made to divide those items as between cotton, flax, hemp and jute, wool, silk, and art silk. At the beginning of this schedule the tariff is changed on some articles of a general character to suit certain industries, and while some of these changes are not extensive others are very important. In the time at my disposal it would be impossible for me to go through all these items, but I intend to examine some of these proposals in some detail to show where the advantage lies. It may be dry work, but I believe it worth while to do at least enough of it to show the general way in which the tariff has been revised.

We have two concessions to the fruit and vegetable growers in the proposed budget changes. The first is in item 87b:

Small onion plants, grown from seeds and imported for bona fide transplanting or propagation purposes only.

The other concession is under item 219a:

Non-alcoholic preparations or chemicals for disinfecting, dipping or spraying.

Last night I was rather interested in the remarks of the hon. member for Yale (Mr. Stirling). He started out by approving of this reduction in connection with onion plants, but then he advocated protection when it came to the sale of the onions. That is another illustration of the desire to profit by both policies, and it shows that human nature is pretty much the same on both sides of the house. The onion growers last year were referred to by the Minister of Railways in a rather scornful fashion; I remember he said they wanted protection, and that there were only three hundred onion growers in the Dominion of Canada. However, I congratulate the Minister of Finance on taking this method of helping them instead of increasing the protection already afforded.

Item 192a is a concession to the paper mills, and here is a case where these mills are given tariff reductions in order to assist them. We have made considerable sacrifices in this Dominion to help the paper industry, but these manufacturers are now anxious to benefit by a lower tariff or a lack of tariff when they want to buy anything which enters into the manufacture of their finished product. As the trade returns are made up it is impossible to find out just what the importation of these articles amounted to for the year 1926, the last year for which we have returns.

Now I come to item 267b which is a very important one. The old item 267a read as follows:

Crude petroleum in its natural state, .7900 specific gravity or heavier at 60 degrees temperature, when imported by oil refiners to be refined in their own factories: British preferential tariff, free; intermediate tariff, free; general tariff, free.

The new item in the tariff reads as follows:

267b: Crude petroleum not in its natural state .725 specific gravity or heavier at 60 degrees temperature, when imported by oil refineries to be refined in their own factories: British preferential tariff, free; intermediate tariff, free; general tariff, free.

On and after July 1, 1931, those rates will be per gallon: British preferential tariff $\frac{3}{10}$ cent, intermediate tariff $\frac{4}{10}$ cent, general tariff $\frac{1}{2}$ cent. Of crude petroleum, gas oils other than naptha, benzine and gasoline lighter than .8235 but not less than .775 specific gravity at 60 degrees temperature, the imports for the year ending March 31, 1926 were 1,884,348 gallons, valued at $118,181 on which a duty of $28,265.23 was collected under the general tariff. In the case of crude petroleum in its natural state, .7900 specific gravity or heavier at 60 degrees temperature, when imported by oil refiners to be refined in their own factories, the imports amounted to 470,574,100 gallons, valued at $25,672,481.

The budget proposals will now allow to come in free until July 1, 1931, crude petroleum not in its natural state, .725 specific gravity or heavier at 60 degrees temperature, when imported by oil refiners, to be refined in their own factories. This will allow partial refinement of crude petroleum in the United States, Peru, or Mexico, countries from which it has been imported, and the importation to Canada without duty until July 1, 1931. This is a concession to oil companies without any reduction in the duty in the finished products. It is the first intimation I have had that the oil companies were in distress. It appears that we are going to allow them to refine not 1,884,000 gallons of oil, but 470,000,000, and to bring that amount of oil in annually without paying duty up to July 1, 1931. The protection on most of the finished products of

petroleum runs from 1 cent per gallon to 2½ cents per gallon, and from 12½ per cent under the British preference to 32½ per cent under the general tariff.

Then we have some concessions to the mining industry. In item 438a the duties are reduced on locomotives and motor cars for railways and tramways, of a class or kind adapted for underground haulage for use only in mining operations. Motor cars for railways and tramways above ground are still subject to the old duties.

Item 453h is also a concession to mining, or to the Canadian General Electric Company which imports mine hoists, assembles them here, and then sells them to the trade. The reductions here are from 15, 25 and 27½ per cent respectively to 10, 15 and 20 per cent. There appears to have been imported into Canada under the old item "electric apparatus, n.o.p.," apparatus to the amount of $3,078,286, on which duty amounting to $827,187.27 was collected. However, we are going to cut that down materially in order to help the Canadian General Electric Company.

There are also reductions to the mining industry in item 208d where the old rates of 15 per cent, 17½ per cent and 17½ per cent; and of 15 per cent, 20 per cent and 22½ per cent, become in each case free. Also in the case of item 453g, which is not shown in the proposed and present tariff tabled by the Minister of Finance, where the reductions are from 15 per cent, 25 per cent and 27½ per cent, to 10 per cent, 12½ per cent and 15 per cent. In addition there are several other items in which it is proposed to give reductions in the tariff to help the mining industry.

I wish now to call the attention of the house to item 442 relating to printing presses and certain machines. The old rates were 5 per cent, 10 per cent and 10 per cent. The new rates are free, 5 per cent and 5 per cent. There is added to this item:

Stereotypers' and typecasters' blankets and press blankets used in covering cylinders on rotary printing presses, of a class or kind not made in Canada.

Press blankets are added at the following rates: free, 5 per cent and 10 per cent where formerly the rates stood under the four items: 15, 20, 27½, 25 per cent under the British preference; 17½ per cent, 27½ per cent, 35 per cent and 32½ per cent, under the intermediate; and 20 per cent, 30 per cent, 35 per cent and 35 per cent, under the general tariff. In connection with this item we should possibly consider drawback item No. 1060:

Newsprint paper, machine finished book grades of paper, not coated, coated or super-calendered book grades of paper, when imported under tariff items 197, 197a, or 198a, a drawback of 99 per cent.

Possibly these items, taken into consideration with the fact that newspaper printing presses of not less value than $1,500 each by retail, of a class or kind not made in Canada are free under all tariffs, has something to do with the favourable editorial comment on the budget from the Atlantic to the Pacific, to which the Minister of Trade and Commerce referred on Tuesday.

Of printing presses and lithographic presses, we had imports in 1926 of a value of $947,213. The duty collected amounted to $93,146.60, the collections from the general tariff tax being $91,571.90; and from the preferential tax, $1,574.70.

The imports for the year ending March 31, 1926, of book and printing paper, not coated, suitable for printing of books, papers and catalogues, amounted to 3,810,300 pounds, valued at $334,986, on which total duty was paid of $74,420. The general tariff collections were $59,150.75; intermediate tariff, $1,884.11; preferential tariff, $13,385.85.

This is no doubt the response of the government to the application of Mr. Chipman of the Grain Growers Guide, coupled with demands of others, printers and publishers, for protection of Canadian magazines. I presume this concession is an effort to keep them from moving to Buffalo. Well, I congratulate the minister on the method of assistance. Instead of imposing a duty on advertising he gave a reduction of duty on the materials used in the production of papers and magazines. But, Mr. Speaker, I wonder if all the papers and magazines benefiting by this reduction in duties and the application of a drawback to their industry will try to assist their readers to get the same benefits. It is a peculiar circumstance that the onion growers and the printers should get relief by tariff reductions and drawbacks on their raw material after having carried on a rather strenuous campaign for tariff protection on their finished products. I wonder if the farmers of this country have been going at things the wrong way by asking for tariff reduction. Will it be necessary for them first to ally themselves with the protectionists before they will succeed in getting the party that has always promised drastic tariff revision downward to move? In any case why should the farmers carry the burden of both protection and free trade—protection on what he buys and free trade on what he sells, while the manufacturer gets very low duties on what he buys, while he gets the benefit of free trade on the raw material that he needs and protection on the finished article he has to sell. But to people who come along

and say: We do not care which you give us: we prefer protection but we will take free trade on raw material if you will not give us protection. The government turns around and says: We will not give you protection but we will give you some of the benefits of free trade, drawbacks and reductions in duty. The parties on that side of the house are trading too much on the fact that we cannot get together with the Conservatives. Let me tell them that, if this sort of thing continues, they will find they are suffering from a delusion. It is not a very big step for the people of the west, and particularly the people of Alberta, to say that if we cannot get tariff reductions in a general way—and it looks as if that were the case—the only thing for us to do is to go and make the very best possible deal with the protectionists and see what they can do for us. I agree that the policy of the Liberal party and the Progressive party across the way is the right one, but why should we indefinitely accept all the disadvantages of free trade and protection and at the same time get none of the advantages of either?

Why is it that the dairy farmers of the west are to-day shouting for the abolition of the Australian treaty? It is because they have wakened up to the fact that the Minister of Finance and the government, in proposing that treaty, asked the dairy industry and the farmers of the west to meet subsidized competition from Australia, to protect Australian raisin growers and to create favourable marketing conditions in the Australian market for the pulp and paper and motor car interests? That is a first class example of applying the disadvantages, if you like, of free trade for the farmer and passing along the advantages to some other interest outside of the country altogether.

I want now to come to the cotton schedules. I have under my hand an application made by the Wabasso Company, Limited, of Three Rivers, Que. to the tariff board. They ask that clause 530 of the tariff reading—

> Coir and coir yarn: raw cotton or cotton wool not dyed: cotton yarns, number 40 and finer.

—be taken off the free list. They ask that this commodity which has been coming in free, be made dutiable in order to protect them because they are producing this kind of commodity at a loss. This is a very important item. At page 168 of the Trade of Canada for the year ending March 31, 1926, I find the following:

> Imports of yarn, cotton, No. 40 and finer, free.
> Amount, 2,732,069 pounds.
> Value, $2,580,014.

In items 521 to 522a we have a general levelling of rates. The former rates on such goods as batts and batting are lower by about 10 per cent. Rates on cotton yarns, formerly dutiable, are reduced by about 5 per cent, and rates on cotton yarns, formerly free, are now made dutiable at rates from 10 to 22½ per cent. In 1926 we imported cotton yarn, free, to the amount of 66,702 pounds valued at $53,764 and cotton yarns, dutiable, dyed or not, to the amount of 331,293 pounds valued at $178,528. The duty collected amounted to $39,601.67. The reductions given under these items are as follows:

	British preference	Intermediate	General
Cotton yarns not exceeding 20's	5%	7½%	5%
Cotton yarns exceeding 20's but not exceeding 40's	2½%	7½%	2½%

While on cotton yarns in the items that I have just mentioned we have general reductions averaging about 3 per cent on goods totalling under $2,000,000, there are general increases of about 8 or 9 per cent on goods that were formerly free valued at about $3,000,000. That is one of the chief illustrations of what these tariff reductions, so-called, mean to us. Throughout the whole cotton schedules we have innumerable articles taken off the free list, innumerable articles that the manufacturer wants for manufacturing purposes with tariff reductions; but in practically every case the tariff increases are greater than the tariff reductions, and in many of the cases the items that used to come in free are much larger in volume than the items on which we have reductions.

This budget and the tariff schedules dealing with cotton, like the other schedules, mean a tariff revision not in favour of tariff for revenue as we have been told the Liberals would revise the tariff, but purely on a protective basis with the idea of protecting the manufacturers of those goods in the Dominion of Canada. As regards this budget, the old claim that the Liberals stand for tariff for revenue while the Conservatives stand for tariff for protection, cannot be maintained. All through the schedules there is a great deal of confusion. Somebody endeavoured to give us a tariff revision and made a very bad job of it so far as clearness is concerned.

Mr. SPEAKER: The hon. gentleman's time is up.

Hon. S. F. TOLMIE (Victoria, B.C.): Mr. Speaker, I have listened with a good deal of interest to what has been said in the

course of this debate, and it is rather difficult at this late stage to present to the house any thoughts that have not already been dealt with to some extent. Before proceeding with my remarks on the budget, let me say that my attention has been drawn to some observations made by the hon. member for East Essex (Mr. Odette) last evening when he stated:

> Last but not least the Canadian Steel Corporation, the Canadian branch of the United States Steel Corporation, have started the production of steel in two large factories in Ojibway.

An hon. member wired to the Canadian Steel Corporation as follows asking for confirmation:

> Has Canadian Steel Corporation started the production of steel at Ojibway?
>
> Eccles J. Gott.

The reply from the Canadian Steel Corporation reads:

> Message received. No.

I have been listening to remarks from different corners of the house and I think I have at least solved one thing and that is that, when a man either comes into this country from the outside or graduates from college or school in Canada and is ambitious, energetic, thrifty, capable and accumulates a little money round about him at, say the age of fifty years, he is promptly classed as a capitalist to be fired at by tax collectors and certain groups of men who perhaps have not been quite so successful and who have not gathered this world's goods about them. Listening the other day to the hon. member for Rosetown (Mr. Evans), when he drew that very blue picture of the farmers in Saskatchewan who he claimed had been "shot at" for a long time by the manufacturers and the capitalists, I could not help thinking of a number of these farmers who have appeared on the Pacific coast, having made enough money from their farms in Saskatchewan to retire for life and come out on the Pacific coast and enjoy themselves, spending their time fishing when the fish are willing, playing golf and generally having a good time. These men are welcomed by us in Victoria and along the Pacific coast. We are very glad indeed to see them, and we would like to have more of them. Glancing across the house, too, I notice that the representatives from Saskatchewan are a very prosperous looking lot of men and capable of holding up their end in this house, and I come to the conclusion that after all these people at the coast that I refer to and these gentlemen across the floor must be just a few who have got away from the manufacturer and the capitalist. I have heard the hon. member for Rosetown speaking along these lines on several occasions, and I have been living in hopes that some day I would have the pleasure of seeing him out on one of our golf courses, rigged up in plus fours and all the usual paraphernalia, chasing the elusive pill over the course and inhaling the ozone of the Pacific coast. After he had enjoyed himself out there for a week or two and mixed with these retired capitalists, farmers and manufacturers, I am sure he would think that they are not such a bad lot after all. We need all these classes in Canada. We need the farmer, and he should have all the advantages that we can give him. We need the manufacturer, and we also need the capitalist very badly indeed, and we want him to expend his capital within the confines of this country, and in British Columbia particularly, if we can induce him to come out there.

I was sorry to notice in some of the newspapers, after some remarks made in this house, an effort to give the impression that the Conservative party was opposed to the Canadian National Railways. This is absurd on the face of it, because the Canadian National Railways were brought into being by the action of the Conservative party, and this party has supported them through thick and thin until now the Canadian National is one of the most important organizations in the country. It has a great deal to do with the development of this country, just as has the Canadian Pacific, and in British Columbia we appreciate what they are doing there. They have a very fine lot of men in charge of the Canadian National railways—and they have improved their service very greatly as regards the handling of both freight and passengers. They can rest assured that the Conservative party will stand strongly behind them and see that they get fair play under all conditions.

The other day, listening to the Minister of Trade and Commerce (Mr. Malcolm) stressing the fact that there was seasonal unemployment in Canada, I could not help wondering just how he ever expected to have anything else under the Liberal policy. Why, in the matter of the attempt to have our northern dairymen produce butter on one cent protection as compared with a country where spring conditions exist, let me say that no less than 103,000 cows were shipped out of Ontario in 1927. Now to take care of that number of cows, at least 5,000 men would be employed. Where did they go when those cows left this country? Either they went to the cities and joined the unemployed, or

probably they went to the United States. While the minister stressed the fact that this unemployment was seasonal, he offered no remedies whatever. I want to say that British Columbia is very much interested in this question, for the reason that thousands of harvesters are shipped out to the prairies from the east during the harvest season, and a great many of these men drift across the mountains and to the Pacific coast, seriously interfering with the labour men who are there. The labour men on the Pacific coast are men who in many cases have their own homes and have to pay taxes, and yet they have to meet with this unfair competition. Those who are unemployed and are needing support of some kind during the winter months have to be carried by our province, and by the municipalities and the cities. The minister in his remarks clearly indicated that this was a Dominion-wide problem. The Conservatives, Mr. Speaker, have a lurking idea that if they could get into power and introduce their policy of running Canada for the benefit of Canadians, this situation would be alleviated to a very great extent. But if the Liberals are going to remain in power they should devise ways and means of taking care of those who are bound to be unemployed as a result of the Liberal policy.

The Home Bank legislation is another matter to which I would like to refer briefly in passing. The house will remember that this bank failed some time ago, and that certain sums were voted by this house for the purpose of relieving a certain number of the depositors to the extent of some 35 per cent of their loss. The bill passed this house but was thrown out by the Senate, and later an amended bill was put through, and the result has been that the funds voted at that time have not proved sufficient for the purpose, that while some early applicants have received their 35 per cent, others have received much less, and some none at all, although they are just as deserving as those who have been paid. It is estimated that a further $450,000 will be necessary to carry out the intention of parliament in the act which was passed in 1925, and I would call the attention of the government to the necessity of taking action along this line at this present session if possible, in order to carry out the intention of parliament and act in good faith with these people.

While the government has been emphasizing the necessity of extended markets and the establishment of embassies in different parts of the world—certainly the extension of our markets is quite O.K., and I endorse it to the fullest extent—still I feel that we are not making the best use of the opportunities offered to us in Canada. I feel that we should make a very thorough survey of our opportunities for development in industry and also in agriculture, that we should carefully examine the list of imports coming in from the United States and select those articles which we can produce here at a profit, and then concentrate on their production with a view to keeping that money at home for the use of our Canadian people and alleviating the seasonal unemployment that was referred to by the Minister of Trade and Commerce.

There is another matter in connection with the development of our industries in Canada which is very important indeed. In a country like this, with a sparse population and long hauls, the freight bills which it is necessary to pay for the handling of these products is a very important factor indeed, and the nearer to the point of production we can get our goods consumed, the more there will be for the producer. We recognize that the farmer today is facing many disadvantages to which he was not subjected some years ago. He is facing greater costs, because labour has been sensible enough to form unions for its own protection, and it has raised the standards of living in this country, which is very much to be approved. By organizing in this way they have been able to provide themselves with comfortable homes which they were not able to possess some years ago. But all this has added to the cost of living for the farmer and the cost of carrying on his work. In addition, the farmer has experienced some increase in farm wages, but on the other hand he is in some cases receiving greater prices for his products. The buying power of the man who is working for wages has increased, and he is now paying bigger prices for the products he requires than he did before. The farmer, too, might help himself in this regard and vastly improve his condition. In the first place, the average dairy cow in Canada yields 150 pounds of butter fat per year. We have many cows that are producing very much more than that. The milk product alone of our average cow would be less than 3,000 pounds, while we have other cows that have produced over 30,000 pounds, showing the difference between the very good and the very bad. In addition to that, we find that thousands of our cattle in very thin condition are rushed to market in the various centres where stockyards are located, such as Calgary, Vancouver, Edmonton, Winnipeg, Toronto, Montreal, with the result that they lose a great deal through lack of weight, and fetch poor prices. The farmer by improving these conditions can place himself in a much more favourable posi-

tion. Of the average animals for beef that go through our inspection abattoirs, let me say that only ten per cent are good enough in quality to compete with the Argentine beef which is shipped to the London market, showing that we have yet to do a great deal in improving the quality of our product. The farmer might take a generous view of the situation and do this just as an act of mercy to the poor Canadian consumer.

We all recognize the fact that nothing is of more importance to Canada than to place agriculture on a good, sound, prosperous basis. To do that we must remove as far as possible the farmer's disabilities. The budget promises nothing in this direction. The Canadian farmer is faced by the competition of the farmer in the southern United States, Mexico and California, who ships his products much earlier in the season, and has the further advantage of cheap Mexican labour. Mexicans cross by the thousand every year to work in the vegetable and fruit growing districts of the southern states, so that the Canadian farmer has to face the competition of fruits and vegetables produced under peon labour conditions. Then again the man down there very often will have a few acres devoted to a certain class of vegetables and sell the main portion of his crop to good advantage in his own market and rush the tail end of his crop to this country, to compete with the producer here who is just getting his first crop on the market. The same thing is true of fruit and eggs. We have prayed to the government for protection along these lines ever since the passing of the Fordney tariff, but without result. The very last failure on the part of this government to show its appreciation of agriculture and its importance to the country was to ask our farmers to produce butter with a protection of only one cent a pound, while butter is produced on the grass and brought up here at a season of the year when our winter production is at the highest peak of cost. Yet our farmers are asked to produce butter under those conditions with a protection of only one cent a pound, while their competitors in the United States receive twelve cents a pound protection for their goods.

One branch of our agriculture has been seriously neglected for many years. It is a very valuable branch of the industry and is essential to the development of this country. I refer to the sheep industry. We know the value of sheep, the cleaning effect they have on the farm; for they consume weeds and everything good to eat in the form of green food. They are produced at a very low cost, and they save the farmer many a long trip to the country store for meat. Another point in their favour is that they yield two crops during the year—a crop of wool and a crop of lamb. Still another point in favour of the sheep industry is that a farmer can go into it with very little outlay indeed. Sheep will do well in any part of Canada, for we are not affected by drought as they are in Australia and some other countries. The achievements of our breeders at the various exhibitions are simply an index of what can be done here in raising sheep of the finest quality. We all know Colonel McEwen, of Ontario, who on several occasions has won the first prize at the Chicago International Exhibition for the best carload of lambs, produced in and shipped from Canada.

We have done very little in a real way to support the sheep industry, and the figures I am about to give the house will be very interesting in this connection. While we have given prizes at exhibitions to encourage our farmers to produce better sheep, while we have formed sheep clubs in various parts of the country, while we have distributed pure bred sires—and all this has had some effect, yet the general effect, taking the whole Dominion into consideration, is seen in the fact that the development of the industry during the last fifty-six years is nothing to be proud of. For instance, our sheep population in 1871 was 3,155,509; in 1927 the estimated figure was only 3,262,706, indicating that there is something radically wrong with our sheep industry because we have had immense increases in our cattle, in our horses—so long as horses were in use—and in swine, poultry and so forth, but with regard to our sheep we are practically where we were fifty-seven years ago.

What is that something that is radically wrong? Apparently it is the fact that our wool has been unprotected for very many years—I think perhaps over the whole of this period. Let us compare this for a moment with conditions in the United States. They have had a tariff on wool since 1816, except for a short period during the war. They took off their tariff in 1913 because there was a great demand for wool probably anticipating what was going to happen, and by 1921 the United States was simply flooded with wool of all kinds. The tariff was put on again in 1921, running from 15 to 45 cents a pound. The sheep population of the United States now stands at 44,455,000, the increase being 6.5 per cent during last year, or nearly as much as the whole sheep population of Canada, while our sheep population is, as I have said, practically the same as it was

fifty-seven years ago with free trade in wool prevailing here. That fact alone should occasion a good deal of thought.

Now, this country is capable of carrying more sheep than the United States. We have a vast grazing area, and we can build up a huge industry just as soon as the government comes to the conclusion that it must run this country for the benefit of the people who live here and pay the taxes. While we can grow sheep in any part of the Dominion, and grow them to perfection, I think we have in the province of British Columbia one of the greatest potential sheep areas on the continent of North America. I make this statement without fear of contradiction, for I have been connected with agriculture all my life and have travelled over the greater part of this continent. In 1871 statements were made by prominent easterners that the Canadian Pacific Railway would never get enough traffic to pay for the axle grease used in the operation of the road. We were also told that all the capital in the British Empire could not complete the road and operate it after it was built. At that time the country west of the Alberta boundary was described as a "sea of mountains." Well that sea of mountains has proven to be a tremendous asset. In the first place, we have there a crop which we can reap every year—scenery. We are selling it to the tourists of the world to the extent of millions of dollars a year. And there is one very important feature about this crop: all you have to do is to reap it; it was sown years and years ago. It is there and will remain a valuable asset just as long as any of us are interested. Then we have in those mountains vast mineral deposits, having sold only last year over seventy million dollars' worth of minerals in the province of British Columbia. In addition to that, we have in the valleys and foothills a potential sheep country second to none anywhere. We have there about 160,000,000 acres of range land, about 100,000,000 acres of timber range, and 60,000,000 of open range, all ideal for live stock conditions, and much of it excellent for the production of sheep. Sheep there can not only graze on the grass but they can also browse under conditions that they enjoy so much and under which they thrive very well.

Let us glance for a moment at the United States by way of comparison. Their new range is about exhausted; they have about reached their peak in the production of sheep at present cost, and any increase in their flocks now will have to be carried out largely on the farms and consequently at added cost of production. Their present ranges have been over-stocked to a considerable extent. The four states lying just south of British Columbia—Montana, Idaho, Washington and Oregon—a little larger in area than the province of British Columbia, are using about 69.75 per cent of their available range, while British Columbia, with 160,000,000 acres, is to-day using only 6.25. Government experts in British Columbia advise us that we have sufficient arable land in the country to winter feed all the live stock that could be raised on that 160,000,000 acres. What is the value of the live stock at present using the British Columbia ranges? Only $12,000,000; and if all that range were put into use the potential value would be $240,000,000. The feeding season in British Columbia has no very serious difficulties. We feed from three to four months, depending upon conditions. I am speaking of range sheep. The period is three or four months, the longer period when there is a severe winter. It requires from two to three pounds of good hay per day to carry sheep over the winter, and not so much when the range is open in a mild winter. At the present time there are less than 100,000 sheep in British Columbia. One farmer with whom I was speaking a short time before I left told me that his lambs had averaged last fall, 80 pounds each. Some of the flocks on the range clip as high as 10 pounds of wool per ewe. One rancher sold his lamb crop for $30,000 last year, and these were produced on grass in the province which has been going to waste for hundreds of years. We have millions of acres of land available for production of sheep.

Predatory animals are not a serious menace. The usual method of coping with them out there is to trap them, poison them, or employ other destructive methods; the plan during the winter season is to trap over the range which will be used the following year. By so doing, many of the predatory animals are got rid of. We have good dog laws, and they are so arranged that they can immediately be put into effect upon a district being designated a sheep district. There is a splendid opportunity for the production of pure bred sheep in Canada and good prices are obtained for Canadian sheep. One of our Ontario breeders two years ago sold a single animal for $1,000. Our sheep are now known throughout the world. We have been shipping across the Pacific and to the United States and other places for many years.

As regards the production of fine wool, it has been said that Canadians are unable to produce wool of as fine a quality as that produced in Australia. This is perhaps true in regard to some specially fine merino grades,

but I am sure that research and careful breeding and feeding would bring satisfactory results; and in a province like British Columbia, where we have a varied climate and varied soils and conditions, it would be quite possible by careful handling to produce wools of a fine quality. This presents an opportunity for our research bureau to carry out some investigation along these lines.

I ask you, Mr. Speaker, is it not good business to develop our opportunities at home—just such opportunities as I have been describing? I am quite convinced that with a well organized effort, and going after it persistently and carefully on a well laid plan, we could add greatly to our agricultural wealth in Canada through the development of the sheep industry. We should encourage the manufacture of wool in this country. After all, our first business in carrying on the government of Canada is to care for the wants of this country; let us put our own business on a good sound basis and we can go further afield later on.

Besides the fact that our wool growers face world-wide competition without any protection, the Minister of Finance (Mr. Robb), in the very budget we have under consideration at the moment, has removed all restrictions on rags, waste and trash of various kinds coming into Canada. It is bad enough to use our own rags and trash and waste of every description, having such material made into shoddy to compete with the local producer. But why should we accommodate ourselves to the rest of the world? What have we to do with their rags and trash? It would be better for us to produce wool from live sheep and make clothing than to use rags and trash coming from other countries.

Taking the budget as a whole, I must say that the Minister of Finance has certainly been very generous with other parts of the world; he has been more generous with foreign countries than with Canada, instead of building up Canada first.

Mr. M. F. HEPBURN (West Elgin): In his introductory remarks the hon. gentleman who has just taken his seat (Mr. Tolmie), referred to the statement made yesterday by the hon. member for East Essex (Mr. Odette), to the effect that the United States Steel Corporation had begun production in their steel plants at Ojibway. If the hon. member will look more closely he will see, further down the page, that the hon. member said:

> In any event, they have announced that they are starting their plants in Ojibway and will manufacture steel in Canada. . . . The industries that I have enumerated are actually in operation or about to commence operation.
>
> [Mr. Tolmie.]

The hon. member for South Essex (Mr. Gott), stretched the point somewhat finely, but the fact remains that these two plants are being prepared for production and the company have announced that production will begin shortly.

Mr. GOTT: The company says that there is no production; that is the wire.

Mr. HEPBURN: They are about to begin production.

Mr. GOTT: They say not.

Mr. HEPBURN: It is obvious that if they build a plant they intend to produce something. At any rate the point has been pretty finely drawn. Now, I have followed with considerable interest this debate so far as it has gone, and I cannot help feeling that a good deal of time is lost in these discussions which follow the budget speech and the speech from the throne. Probably it would be better if we were to follow the example set by Great Britain in this regard and shorten these debates to three or four days each, devoting more time to the discussion of the estimates and bills coming before the house. In these debates, however, we are able to hear discussed in this house the many diversified problems of the country and to elicit the views of various members representing constituencies throughout Canada. In the past week, I fear, the members of this house have been bending their energies more in the direction of delivering fine campaign speeches than of giving constructive suggestions to the government of the day. In referring to speeches given by members of the opposition, I desire to congratulate the hon. member for North Huron (Mr. Spotton), on his very able and fluent address delivered last night, and in passing I would also compliment my good friend the hon. member for South Essex (Mr. Gott), upon the efficient manner in which he read his speech to the house yesterday.

I feel that the bulk of the Conservative members have been very fair in their criticism and we have heard some very able and constructive addresses. Particularly would I refer to the two young members from the maritime provinces who sit across the floor, the hon. member for Inverness (Mr. Macdougall) and the hon. member for Queens-Lunenburg (Mr. Ernst); and coupled with their names I would mention that of my good friend the hon. member for Hants-Kings (Mr. Ilsley), who sits behind me, and whom I would congratulate. It reflects credit on the people of the maritimes that they should send such men to parliament.

Coming down to the four parties who sit in the southeast corner of the house, they consider themselves bound together by a common ideal and by an equal status, in no way subordinate one to the other. They are all obsessed with the one idea that they have no politics. Politics, Mr. Speaker, is defined as the science of government, and when they say they have no politics I have no quarrel with them. I do say, however, that we in this corner of the house have been subjected to severe arraignments, admonitions, charges of betrayal and insincerity, and if it were not for the fact that those charges go beyond this house I would consider it beneath my dignity to even reply. I feel, however, that if we allow them to go unanswered we will probably earn the contempt of hon. members opposite, and rightly so. On Tuesday last we were favoured with a very eloquent phillipic, if I may use the term, by the hon. member for Southeast Grey (Miss Macphail). Speeches by the hon. member are not uncommon in western Ontario and even in the west, because she has the habit of making periodic crusades over the country seeking whom she may devour and incidentally, and as a side line, making the world safe for democracy. I am sure that when her forty minute allowance expired she had few unuttered thoughts in her mind so far as the evils of the Liberal party were concerned and to those of us sitting on this side of the house who were the objects of her attack on that particular occasion I am sure that not even exceeding the old age pensions the forty minute rule appeared to be the most humanitarian legislation ever enforced in this house.

Mr. CHAPLIN: That applies now, also.

Mr. HEPBURN: Take your medicine. In her ramifications the hon. member for Southeast Grey took the opportunity to criticize the educational system of this country, as she usually does when speaking. I quote her very words:

> I should like to know why some fellow, with a fossilized brain sitting in some office in some government service, should direct the kind of education which the children of farmers are to have. . . .

Miss MACPHAIL: I say it again.

Mr. HEPBURN: In the Parliamentary Guide, which speaks of the great and the near-great in this house, I find that the hon. member has a school teacher's certificate, which no doubt qualifies her to make such observations with regard to those at the head of the educational system in our province. I would suggest to the hon. member for Fort Willian (Mr. Manion), by reason of the fact that he has found a way to get on the payroll of the Ontario government, that he see the Premier of Ontario, who is also the Minister of Education, and find out if a place cannot be made for the hon. member for Southeast Grey as Minister of Education for this province. I do not think she would have any scruples in having her indemnity supplemented by $7,500 per year; that is one of the ideals she has discarded since coming to this house, and she is now willing to take as much money as anyone else in the house.

Miss MACPHAIL: I feel that I am worth it now.

Mr. HEPBURN: Possibly; I am not disputing that. The hon. member has her own opinions on that point. I hope however, that she will not see fit to write such sentiments to the school children of the county of Grey, as she usually does. I recall that she gained a good deal of publicity some time ago by school circular letters, and I believe these sentiments would be dangerous doctrines to implant in the fertile minds of our school children. It would sow the seeds of disrespect for educational authority.

The hon. member advocates occupational group government. It is a peculiar thing that in the province of Ontario, which I believe is on a par with any other province in ability, integrity and good judgment, only one member advocates such form of government. It is an old, worn-out method, and I do not believe it is applicable to the conditions existing to-day. It is all very well to make an appeal to prejudice, but I say in all sincerity that if you cannot cooperate in a riding and send someone to represent all interests here our system is of no avail. How can you send a farmer to represent farmers and a doctor to represent the doctors and expect them to cooperate here? I believe cooperation should begin right in the constituency. I do not believe for a moment that the views of the hon. member really reflect the sentiments of the people of the county of Grey.

Mr. IRVINE: May I ask the hon. member a question?

Mr. HEPBURN: I am in an amiable mood; you may ask anything.

Mr. IRVINE: Would the hon. gentleman explain how a western farmer, who is busy every day, could cooperate with an eastern manufacturer in his constituency?

Mr. HEPBURN: I would ask my hon. friend if he is a farmer?

Mr. IRVINE: Yes, I am.

Mr. HEPBURN: That is all I want to know; I will deal with your question later on.

Mr. IRVINE: Do not forget it.

Mr. HEPBURN: You may recall it to my attention if I forget. This idea of occupational group government is not understood by a hundred people in this country. If you selected a dozen people in the county of Grey and asked them what occupational group government meant, I doubt if one could tell you. From that fact my deduction is that the ideas of the hon. member are not endorsed by the people of Grey, and I believe her election can be attributed to the novelty of voting for the only lady member of this house. I believe I would be tempted to vote for her myself if I resided in her constituency.

Miss MACPHAIL: I am not so badly in need of votes.

Mr. HEPBURN: Unfortunately the hon. member cannot help who votes for her. However, as I was saying I do not believe the hon. member represents the views of the riding, and I do not think she represents the sentiments of the women of Canada. In a speech the other day she said, "I hate housework, I abhor it." That was not the sentiment of the women who helped pioneer this country, and who deserve all the credit we can give them for the heritage we have received.

Mr. GOTT: Will the hon. member permit a question? He said the hon. member for South Essex had the audacity to read his speech, and I would ask the hon. member if he is not reading his own speech.

Mr. HEPBURN: No, I am simply referring to notes and I am quoting from a press report as well. The fact remains that they are still selling wedding rings, so I take it that the hon. member neither represents the sentiments of her riding nor the sentiments of the women of this country.

Miss MACPHAIL: Must wedding rings and housework necessarily mean the same thing?

Mr. HEPBURN: You do not know anything about it and it would take too long to explain. The hon. member went on to say:

> I know so many men who in their own homes like to be little gods, dispensing justice and mercy.

I am sorry she has that biased opinion; I think perhaps she got it from her association with the hon. members who sit around her, because that is exactly the attitude which they maintain in this house.

Mr. SPEAKMAN: A Daniel come to judgment!

Mr. HEPBURN: I am glad you do not like it. It is a relief to this country that those hon. members sitting opposite, having extreme views, are not in a position to put them into effect, because I think that would be a very expensive experiment for this country.

Miss MACPHAIL: Mr. Speaker, I believe the hon. member who is speaking should tell where he obtained the quotation which he last gave the house. He referred to a speech made by myself as though it had been made in this house.

Mr. HEPBURN: The speech to which I refer was delivered before the Lions club in Ottawa.

Miss MACPHAIL: I believe it was titled a humorous speech, if the hon. member would read it all.

Mr. HEPBURN: It was a speech, at all events. It is a good thing that in this country we have men of outstanding ability in the cabinet, men who have proved their ability in administrative work before entering the cabinet, and I think it is as vexing to the country as to the members on this side of the house to see hon. members opposite cloak themselves in that sanctimonious air, tilt their noses upward and point fingers of scorn in our direction. In particular the Progressive members on this side of the house have been censured, but I want to say that the Progressive members over here are cooperating with the government and are accepting the responsibility of government, and their efforts are bearing fruit. Hon. members opposite do not want the responsibility of government, if they will only be frank and tell us their real purpose in the house. The Minister of Railways described it exactly the other day, I believe, when he said hon. members opposite want the balance of power in this house to be able to bludgeon the government into submission. They do not want a democracy; they want an autocracy with themselves in the saddle, and that is their real purpose here. Those hon. members in question trade on prejudices, and sow the seed of disrespect for public men and public institutions. They must necessarily be fomenting some imaginary grievance constantly to justify their existence. I would refer here to the hon. member for Mackenzie (Mr. Campbell) who in this house

on Monday charged this government with holding office by fraud and deception. I do not know how much the hon. member knows about fraud himself, but I can vouch that that what he knew about deception cost him $1,500 in the civil courts last summer when twelve men on a jury refused to believe his word given under oath. In the session of 1926, his voice was raised in righteous indignation in protesting against the Moses Asiz case where a stay of prison sentence was granted allowing a man to start a gaol sentence in the fall instead of in the spring.

Mr. KENNEDY: Does the hon. member approve of the Asiz case?

Mr. HEPBURN: I am merely pointing out the inconsistency of hon. members opposite. I am glad it is having its effect. It is time that some action along this line was taken. Otherwise my hon. friends would go on and sin even more grievously. I am not familiar with the merits of the Asiz case, or the one I am about to cite, but at the time the hon. member for Mackenzie was censuring the government for its actions in this regard he too had successfully pleaded with the department for a stay of jail sentence for a bootlegger regularly convicted in his own riding. It was exactly a parallel case. Consistency is indeed a rare jewel with the hon. member. He practised for political effect the very thing which he denounced.

I should like also to make a passing reference to the hon. member for Bow River (Mr. Garland). He has on various occasions severely criticized this government for its tardiness in bringing down low tariff legislation. He does not believe in special privileges. He is, I believe, a free trader. A few days ago he made a very eloquent plea in this house for the coal industry in his riding, which I am given to understand is owned largely by American capitalists who charge $5 per ton at the mines in Alberta while at the mines in the United States they only charge $2.25 per ton. May I read a few passages from the address of this ardent low tariff man who, I take it, shudders at the thought of any industry not standing on its own feet. My hon. friend said:

> Before I go on with the details of the discussion on this particular point I would like, in passing, to remind the house that in the year 1926 alone Canada expended for foreign fuel and also for freight charges on that fuel to transport it to Canada about $114,000,000.

An hon. MEMBER: What are you quoting from?

Mr. HEPBURN: From page 111 of Hansard, under date of February 2, last. The hon. member goes on to say:

> The central provinces in 1926 paid out for household coal and freight thereon no less than $52,000,000.

Mr. IRVINE: Is the hon. gentleman in order in quoting from a previous debate of this session?

Mr. HEPBURN: It hurts a little now, does it?

Mr. SPEAKER: The hon. member is not in order in quoting from a previous debate during the same session.

Mr. HEPBURN: Very good, Mr. Speaker. But may I say that the hon. member for Bow River made a very compassionate appeal for the coal industry in his riding. He does not ask for the imposition of a duty, as hon. members opposite for the maritime provinces have the courage to do, but he asks that there be a statutory freight rate fixed for Alberta coal. I fear greatly for the political consistency of the free trader member for Bow River. I am afraid he is slipping. The technical experts of both our great transcontinental systems have declared that Alberta coal cannot be profitably hauled to Ontario at a rate that will allow it to compete in Ontario markets. Now, Mr. Speaker, I submit that there are few of us in this house sufficiently versed in technical railway matters to dispute their word. Again the Board of Railway Commissioners themselves, after a very careful investigation, with the assistance of able railway men, found that a fair rate would be $10.07 with actual out of pocket costs $7.22. And our hon. friend takes it upon himself to put these amateurs of railway men on the right track. One thing about the hon. member for Bow River, he certainly is not suffering from that common ailment known as inferiority complex. I have here a clipping from the St. Thomas Times Journal which contains a character sketch of the hon. member for Bow River. I do not know whether this information was supplied by the hon. gentleman himself but if he was the publicity man, he did his duty well. The sketch tells how the hon. gentleman once hired out as a river driver without any previous knowledge of what a peavey or what a pike pole was. It is customary evidently for him to take on jobs he knows nothing about. I should like to remind him in passing that there is a very considerable difference between floating down a river on a log and trying to dictate to the heads of the great transcontinental railway systems of this country. After reading his speech, I was struck at what a loss this country sustained when we hired Sir Henry Thornton instead of the member for Bow River to

pull the Canadian National Railways out of the rut. With a wave of the hand my hon. friend sweeps all the findings of the railway experts into the discard, and by his own figures, arrives at the conclusion that $5.45 is the proper rate. Then he makes a very definite statement. He says that at that rate nobody questions that Alberta coal can be brought down to Ontario to sell in competition with American anthracite. Let me tell the hon. member that even at that figure allowing the average cost of $5 per ton at the mine and $5.45 for freight, which will cost $10.45 at Toronto, experiments show that the coal is lacking in burning qualities as compared with American anthracite. It would take roughtly 1½ tons of Alberta coal to equal the one ton of American. Hence, the equivalent in Alberta coal would cost $15.67 in Toronto or $3.67 above the American price. Even with this fictitious rate set by the hon. member they could not compete. We in Ontario and Quebec use about 4,000,000 tons of domestic coal a year, and I do not think the bringing in of Alberta coal is feasible. I think it would mean the granting of an annual subsidy of something like $40,000,000 to the railways. The whole thing is out of the question, and the hon. member's only object is to foment some little agitation or dangle some little bait in front of his electors. If the hon. member desires to be fair, he should come right out in the open and agitate for a direct subsidy, and I think I know enough about human nature to feel at least that he could find a way to ease his conscience sufficiently to accept such a subsidy. In fact I think he would be willing to take a high tariff —low tariff mixture with a little subsidy thrown in if he thought he could bring home the bacon to his constituents and get them feeding out of the public trough. I would also add for his information that bituminous coal can be laid down at St. Thomas and London for $6.45 per ton duty paid, and that the Alberta coal costing $5 per ton at the mine would have a serious time competing with it. Of course the hon. member must surely know that for the present the transporting of Alberta coal to Ontario is neither feasible nor possible. But it is good political bait, fine stuff, and so our astute political friend who has no politics makes political capital over an impossible situation.

One thing, I admire at least is the candour of the maritime Conservative members. They call a spade a spade, and want protection and increased duty on coal. But before they get protection they ought to explain to us why they do not use their own coal in Nova Scotia, since there was imported into that province last year 132,945 tons.

I am interested in the sub-amendment of the hon. member for East Lambton (Mr. Fansher). There is one thing I can say about the mover of the sub-amendment. I believe he is sincere and probably reflects the political opinions of the vast majority of his constituency. I think we all try to do that. I believe every member of this house is influenced in his tariff views, regardless of his convictions, by the economic interests he represents. Thus we see Toronto represented in this house by high protectionists. They very seldom slip from the narrow path. But they did on one occasion. They went to Winnipeg and their minds became permeated with the low tariff talk of the breezy westerner, and they completely omitted the sacred word "protection" from the platform as drawn up. The only man who had the courage to get up and protest against this was the hon. member for Toronto Northwest (Mr. Church), but his protest was of no more avail than his famous controversy with the megaphone. When they came back home the Tory members of Toronto had a hard time placating the boys who did not go out to Winnipeg and meet the breezy westerners. The Financial Post had to take a hand in the matter and they came to the rescue of those who had wandered from the righteous path. In an editorial dated October 28th that paper said:

> The press of Canada is still attempting to digest the Conservative platform expressed in resolution at the Winnipeg convention. The platform is proving to be exceedingly indigestible. It was, of course, a platform containing many pompous imbecilities, and fortunately for Canada, no one seriously expects the Conservatives to stand by every promise in that platform. An attempt was made to please every section of the country and every class in the country; to steal thunder from the Liberals, and take the wind out of the sails of the Progressives; to make many concessions without incurring any serious enmities. Of course, no platform can be drawn that will accomplish such an impossible task. If public attention were not diverted so largely to discussion of the new leader and to the Meighen-Ferguson row, the platform would bring down the storm of ridicule it merits. As it is further examined in clear detachment from the atmosphere of the convention it is likely to be accepted by Liberals and Conservatives alike, as no adequate expression of the political viewpoint of Canadian Conservatism.

I said a minute ago that we all try to reflect and do reflect the economic needs of our constituencies. That is why we have free traders from the west and high tariff men from the cities. We have also a peculiar mixture: we have a rural constituency represented in this house by a high protectionist,

my good friend the hon. member for South Essex (Mr. Gott). He declares that he is a protectionist. So he is and I say in all sincerity that he surely reflects the tariff sentiments of the people of his riding. I was sorry yesterday that a little controversy arose between the two members for Essex, the hon. member for East Essex (Mr. Odette) and the hon. member for South Essex, because hitherto they have been good friends. It arose over a very little, innocent remark which was intended to be humorous and I ask the indulgence of the house and of the hon. member for South Essex while I read a little poem that was sent to me a moment ago by some budding Shakespeare in this corner of the house, dealing with this matter. It has a little political significance and I would preface my remarks by assuring the hon. member that what I am about to say of him in a few minutes is quite harmless and I would ask him to take this little article as a soft pillow with a brick in it:

Mr. "Gott" got very hot,
And wanted Odette to mention what,
He meant when he said "Me and Gott",
He asked what he inferred,
Gott was caught right on the spot,
And said Odette was talking rot,
The Speaker said, "you're off your dot
Go way back and sit down"
Gott, still hot, said "What"? Why not?
All my tobacco's gone to pot.
The budget hit us such a swat,
We're surely out of luck,
So where? And why? And when? And what?
Would you advise we do for Gott?

Mr. GOTT: That is all rot. What has that to do with the budget?

Mr. HEPBURN: It is just getting in the hon. member's good graces. I said that the hon. member represents one of the most intensive agricultural sections of the Dominion of Canada, that he is a protectionist and that the farmers of that constituency are protectionists. They grow early fruits, vegetables, onions, beans and other farm products which require considerable labour and which can be grown only in parts of Canada where climatic conditions are suitable. These people are now clamouring for protection. When their application was before the tariff board they submitted evidence and there is some merit to their claim. They ask: Why should we be required to buy our necessities of life in a market enhanced in value by tariff protection? Why should we have to buy in the dearest market and sell in the cheapest? As a concrete example, the Department of Agriculture estimated that it cost $2.50 to produce a bushel of beans. In the last fiscal year 595 thousand bushels of beans were imported into Canada at prices as low as $1.53 a bushel, our principal competitors being Belgium and Japan. Were I in favour of protection at all —and I am not prepared to make such a declaration—I would apply it to the basic producers if I applied it anywhere. I would say this in regard to protection that from now on any revision of the tariff as it applies to manufactured articles should be downward. Our tariff troubles began, we might as well face the situation squarely, with the introduction of the national policy. We started out on a wrong foundation and we have been wrong ever since. We bolstered up industry and we are now paying the price. The trouble is that to-day industry has become so complicated and interlocked through tariff protection that it is very hard to make any definite change in the tariff without affecting many industries. That is the reason why the government to-day cannot accept the extreme views of hon. members opposite. They may be right in theory but it cannot be put into practice and the hon. members know that if they were sitting on this side of the house they would not carry out the radical ideas which they expound upon the floor of this house and in regard to which they cast the insinuation against us that we are not sincere in our views. The government has not gone far enough to suit some; it has gone too far to suit others, so that it is probable it has found the happy medium between the two extreme wings without catering too much to either.

A few years ago the manufacturers raised quite a howl when the tariff was cut on agricultural implements, but this government has always carefully considered its tariff moves in such a way that it has never hurt industry seriously because it has been able to draw the line of demarcation between tariffs that are used for exploitation and tariffs that are really and truly protecting a legitimate industry in this country. The implement manufacturers despite the fact that the hon. members for Hamilton and members for other industrial centres where such plants are located protested loudly against tariff reductions, showed last year the greatest profits in their history, the reason being that when they lowered the price so that the farmers could buy their implements they did a bigger volume of business and the industry progressed. There is no need to discuss the automobile tariff reductions, but I may say that I admired the courage of the hon. member for Southeast Grey (Miss Macphail) when she stood up before a delegation of wild, wild women who protested against the tariff change and said that she could not see eye to eye with them on tariff matters.

Miss MACPHAIL: They were not wild at all. They were just ordinary women.

Mr. HEPBURN: I should like now to deal with the budget itself. I am going to vote against the amendment of the hon. member for East Lambton (Mr. Fansher) because I do not hold his extreme views, and I have more in common with the budget itself than with his amendment, although he probably moved it in all sincerity.

I am not so partisan as to say that I swallow the budget in its entirety. I do not think any budget could be brought down that would suit any party or any ten members. You have to take the thing in a broad aspect. You cannot disagree on some minor points and agree on others. You are either for it or against it. I have every reason to congratulate the government on their splendid administrative record. I say in all sincerity and I believe I voice the sentiments of the constituency of West Elgin that the people there are in entire accord with the good administration of this government. It is pleasing to see our trade expanding, our debt and taxes being reduced and our prosperity increasing. These are factors to be taken into consideration before anyone thinks of voting against this particular budget. Because of the financial blunders of the Union government and the Borden government which preceded it, the soldiers who left our shores and fought in France, came back to find the country in debt for practically 100 per cent of the war. In fact these men had to share their burden of the tax for the salary of $1.10 a day which they drew while in the trenches in France.

Mr. ADSHEAD: Fight and pay both.

Mr. HEPBURN: Yes. During the war millionaires in Canada sprang up like mushrooms and there should not be any undue haste in endeavouring to depart entirely from the principle of the income tax. These men should be made to bear a portion of the taxes for some time to come. I realize that there are reasons in favour of the abolition of the income tax. We know that while we can tax capitalists in this country, there is a great country to the south where taxation is lower and as there is no way of keeping them in this country and as there is a multiplication of income taxation here, municipal, provincial and federal, we have every reason to believe many of these men will go out of the country and be out of our sphere of taxation forever. That must be taken into consideration, but before any further move is made in regard to a reduction of the income tax, the matter should be carefully considered because I happen at the present time to be sitting on a special committee of this house investigating the problems of returned soldiers and my opinion is that we are only on the fringe of what our pension bill will ultimately be. I think the hon. member for East Calgary (Mr. Adshead) who sits across the floor will agree with me that it has been the history of most countries that they do not reach the peak of their pension costs until many years after the war is over. I am not a pessimist, but I would not be surprised to see the pension bill of this country mount up to double the present cost and that within the next fifteen or twenty years. There are in Canada thousands of returned men whose health has been undermined by the hardships which they endured in France, and the government of the day, whatever it happens to be, cannot escape the responsibility of taking care of those men.

I want to deal for a moment or two with our friends of the official opposition. The chief criticism of our Conservative friends that is levelled against the government is the bugaboo about the emigration of Canadians to the United States.

It is true that in years past Canadians did go to the United States, and they will continue to go in the years to come. Likewise Americans have come to Canada in years past; I believe that since 1921, 169,000 Americans have come to this country, and I presume they will keep on coming in the future. I do not think there is anything to be alarmed about, because there will always be this exchange of people between the two countries. It is obvious that when we are enjoying good times in Canada, such as we usually do under a Liberal government, there is less likelihood of our people emigrating, and more likelihood of people immigrating to this country. I think if our friends of the official opposition are really sincere in their efforts to stop the exodus to the United States they ought to see to it that this government is kept in power for a long time in order that good times may continue, and not be interrupted by the advent of the Conservative regime.

We who live near the American border feel that the United States has reached the peak of her development; with her great man power and immense gold reserves, she cannot remain neutral. Capital will seek new fields for investment and labour will follow. In this regard I think the proximity of the United States to Canada is a great asset to us. Already in northern Ontario, northern Quebec, and in the west, principally in Manitoba, the mining industry is feeling the bene-

ficial results of the influx of Americans and American capital. The immigrant who comes here from the United States with capital of his own, who comes unsolicited, is a very desirable immigrant. Only the other day I read that in the American west there were thousands of American farmers with capital only awaiting the coming of spring to move to western Canada and buy farms. For that reason I think the very friendliest of relations should exist, as they have in the past, between Canada and the United States. The bright star on the horizon for Canadian agriculture is the prospective market in the United States for our high class products. The United States is rapidly changing from a food-exporting to a food-importing country. I have a press clipping here which I shall not read because I do not like to have my hon. friend from South Essex glaring at me when I am reading—

Mr. GOTT: You have read it all.

Mr. HEPBURN: The Minister of Agriculture for the province of Ontario is what I consider a very candid Conservative, and I have a great deal of admiration and respect for him. He represents in the Ontario house the constituency next my own, and I value his friendship. Speaking in southern Ontario only a short time ago he said that he hoped the time would soon come when the tariff barriers between Canada and the United States would be swept aside because there was the future market for Canadian agriculture, and upon our ability to market our goods in the United States depended to a very great extent the prosperity of Canadian agriculture. Trade figures show that we are becoming firmly established in that market despite the fact that we have the Fordney tariff applied against us because of the defeat of reciprocity in 1911. We are still suffering from the loss of that agreement. The question of improving trade relations between the two countries is of paramount importance, and for that reason I think it is of even greater importance that we should have in power in Canada a government which is on friendly terms with the American people and that we should see to it that our friends of the Conservative party who have been very prone to stir up international prejudice between the two countries are kept out of power. They coined a phrase in 1911, "No truck or trade with the Yankees." That jarred on American sensibilities. A few days ago we had a visit from Secretary Kellogg of the United States, and I was glad that while he was in the chamber no Conservative member was enunciating that part of the Winnipeg policy in favour of an all-Canadian waterway, in contravention of our international agreement established through one hundred years of common usage. I was mighty pleased that the hon. member for Northwest Toronto (Mr. Church) was out of his seat at the time and was not delivering one of his usual orations in condemnation of our official representative at Washington. I was pleased also that a debate on the purchase of our legation at Washington such as we had last year was not taking place, because if anything ever cheapened the Conservative party in the minds of the American people it was the debate carried on here last year in opposition to the purchase of that legation. We all know that it was purely a business transaction which would have been carried out whatever government was in power, that even our friends across the floor would have done the same thing had they been in power. The Conservatives used the purchase of that legation as a bit of propaganda, fanned the flame of opposition to white heat, and did not confine their opposition to this chamber, but broadcast their remarks all over the country.

A few nights ago we had a discussion in this house precipitated by the hon. member for St. Lawrence-St. George (Mr. Cahan) on the Chicago drainage canal. I am not allowed to read from Hansard, but I want to say that the leader of the opposition (Mr. Bennett) on that occasion dived into past history for the benefit of the present generation, revived the words of ex-President Roosevelt in connection with the famous Alaskan boundary dispute, when Roosevelt stated that if necessary American troops would be used to draw the line if other methods failed. That I think was very poor policy on the part of the hon. gentleman because his words would be broadcast all over the United States the next day. The feeling is growing in that country that the Liberal party in Canada is more friendly towards the people of the United States than the Conservative party, which never loses an opportunity to jar on the sensibilities of the Americans. I am very sorry that I am not allowed to read the very eloquent reply that was made at that time by our admired leader the Prime Minister of Canada. The viewpoint is now generally held among many classes of people in this country that such Tory tactics are poor business; I refer to the retail merchants, the wholesalers, and even the manufacturers.

Coming as I do from southern Ontario I know the magnitude of the American tourist traffic.

Mr. W. E. TUMMON (South Hastings): Mr. Speaker, in taking part in this debate I purpose dealing with only one question. I wish to deal for a while with the movement of Canadians to and from the United States, and particularly so because in the budget speech delivered by the hon. Minister of Finance (Mr. Robb) on February 16 he declared that Canadians were returning home and that Canada was once more building solidly for the future. He wished, I presume, to convey the impression to this house and to the country at large that Canadians were returning in increasing numbers, and that that condition, if such condition exists, was the result of the policies of this government.

Not only is Canada in a unique position because of her situation alongside the highly developed industrial, commercial and agricultural country to the south of us, but also on account of the immigration laws of the United States. Under the strict quota law of the United States, immigrants are not allowed to enter from any other country to a greater extent in one year than two per cent of that nationality resident in the United States, as revealed by their census of 1890, with the exception of two countries, Canada to the north and Mexico to the south; and if newspaper reports are any indication it would appear that that quota law may soon be applied to Mexico and perhaps to Canada. For I believe that at the present time, there is a bill before congress which proposes to make the people of all countries in this hemisphere subject to the quota conditions. The Toronto Globe, in an editorial in its issue of February 28 last, after pointing out that the inclusion of Canada under the quota provisions, would probably reduce to one-third the number of Canadian born going to the United States, gives its opinion of the effect upon Canada of bringing this country under the quota. It says:

> In the long run the result would be the cutting off of Boston's export of shoes to Canada, of the silks, cottons and dress fabrics of New England, and the motor cars of Detroit, and the making at home of the goods that young Canadians now go abroad to produce. The readjustment might be painful for a time, but Canada has had similar economic problems to face under the operation of the McKinley, Dingley and Fordney tariffs. If Canadian workers, as well as Canadian goods, are to encounter laws of exclusion, we shall find ways of living comfortably in a more self-contained way at home, and of competing effectively against American products in the open markets of the world. David's chances in that form of warfare are quite as good as Goliath's.

Now, I am not expressing any opinion as to the advisability or otherwise of Canada being brought under the quota law. I am simply referring to the condition which the Globe pictures would happen if this country were so affected. If that is the condition that would follow here, then I wonder why we do not unite now to bring about that condition as the law is to-day without waiting seemingly to be forced into the position forecast by the Globe. It is the condition that we on this side of the house have been contending for and believe should be maintained here in order to counteract the effect of the present United States quota law in its relation to Canada. I cannot, however, agree that such a readjustment might be painful, nor can I subscribe to the inference contained in the editorial that boots, shoes, silks, cottons, dress fabrics, motor cars, and other products of the United States should be permitted to come into Canada in exchange for the easy entrance of our native-born into that country. If that is the inference to be drawn, or if that is the condition to-day, then I think the exchange is most unbalanced, unfair, and wholly one-sided. I think, however, that the Globe in its editorial now admits that it is much better to build up a nation in Canada than to try to build up a nation elsewhere.

Coming back to the condition in Canada, as a result of the United States quota law, and without wishing to discuss the reasons which prompted the United States government to enact that law, it must not be forgotten that it created for us a condition which I think we cannot afford to overlook; for I consider it constitutes one of the most serious problems with which we have to contend. In short, the United States decided that she would no longer attempt to absorb unrestricted immigration, and she practically closed her doors, but she left the door wide open with respect to our native-born; for the quota applies only to those of our people who have become Canadians by adoption or naturalization. The result is that the United States opens its doors to our Canadian-born, the very type of citizens we must retain, if we are to maintain that strong British-Canadian sentiment that we so much admire and that is so essential to the full development of the Dominion. In other words, the United States are getting from this country the highest type of immigrant that it is possible to obtain—those born on the North American continent, speaking the same language, and for the most part holding the same traditions and used to freedom of political thought and action along constitutional lines. In short, they are the most easily assimilated and the very highest type of citizen that any country could wish to

have. I repeat, sir, that this is one of the most serious problems with which Canada has to deal.

What is the government doing to cope with the situation? I have sat in this house going on three sessions, and I have yet to hear the Prime Minister (Mr. Mackenzie King) or any member of his cabinet say that they are doing anything to meet this problem—a problem so grave that it demands the most serious attention not only of the government but of every member of this house. I do not believe the time will ever come when there will not be a certain degree of coming and going between the people of the two countries, but I do believe the number of native-born citizens that Canada has been called upon to lose to the United States during the past few years is out of all proportion to the number that one might reasonably expect to leave this country. At page 8 of the report of the Department of Immigration and Colonization will be found some figures of the number of Canadian citizens who, the department claims, have returned from the United States during the past three fiscal years. I have heard some comment outside this house as to just how much value should be attached to those figures, but they are the only records we have, and I am willing to take them for what they are worth. We are told that for the fiscal years 1925, 1926 and 1927 there have returned to Canada 125,974 Canadian-born, 13,915 British subjects who had acquired Canadian domicile before going to the United States, and 8,064 naturalized Canadian citizens—the total returning to Canada during that period being 147,953. We are glad to know that some have returned, but the trouble is that for every one that returns, from two to three are going to the United States. Wishing to know what the first ten months of this fiscal year would show, I made inquiries at the Department of Immigration and Colonization. I am told that for the ten months of this fiscal year, April 1 to January 30, a total of 35,405 Canadian citizens of all classes have returned. Knowing these figures, let us compare the first ten months of this fiscal year, 1927-28, with the corresponding ten months of the three previous fiscal years. In the first ten months of the fiscal year 1924-25 there returned 39,032; in 1925-26, 37,863; in 1926-27, 50,898; and in the first ten months of 1927-28, as I have stated, 35,405. This statement of the department shows that fewer Canadians of all classes returned to Canada from the United States during the first ten months of the fiscal year ending 1928 than in the corresponding ten months of any of the three previous years: less than the corresponding ten months of 1924-25 by 3,527; less than the corresponding ten months of 1925-26, by 2,458; and less than the corresponding ten months of 1926-27, by 15,493.

Let us make a further comparison. In the absence of figures for February and March to complete the year 1927-28, let us take the average number who have returned in these two months during the three previous years and apply them to this year. We find it gives a total of 42,125. When all the figures for the year are available I think it will be found, indeed, that 42,125 will be more than the number who will have returned, for in the month of January just past there came back only 1,683, the smallest number to return in any one month since the Department of Immigration and Colonization undertook in April, 1924, to keep records. However, taking the estimate for the twelve months as 42,125, the comparison may be made as follows: This year there will be less than 1924-25 by 1,650; less than in 1925-26 by 5,096; and less than in 1926-27 by 14,835.

This does not seem to indicate that Canadians are returning in increasing numbers. But these figures of the Department of Immigration furnish some further very interesting information. We find that, over the entire 46 months of which we have record, the months which show the largest numbers returning from the United States were the months from November, 1925, to September, 1926. You will recall that those were the months following the election of 1925, that election from which emerged the Conservative party with 116 members. In that parliament the Conservative party had the largest group and the indications were that before very long—it was only a matter of time—the party would be afforded an opportunity of putting its policies into effect. Canadians, therefore, began to return immediately thereafter, in increasing numbers and continued to return in large numbers up until the election of 1926, immediately after which they began to fall off. The election of 1925 took place on October 29 and in the first month following the election, November, 4,331 returned in comparison with 2,993 for October, while in December, the second month after the election, the number returning was 7,923. The records of the department show that out of a total number of Canadians who have returned to Canada during the past forty-five months about 35 per cent returned in the eleven months that separated the elections of 1925 and 1926.

Mr. FORKE: What are you reading from?

Mr. BENNETT: Your report.

Mr. TUMMON: I am giving the figures from the report, I have them all here, and inasmuch as the minister challenges my statement I will give them in detail. In order to make this point absolutely clear I propose to compare the corresponding eleven months previous to the 1925 election and the corresponding eleven months following the 1926 election with the eleven months that intervened between the two elections. I have the figures all here in tabulated form and I will put them on Hansard. I will ask hon. members to note that after the month the first number will refer to that month previous to the election of 1925, while the second figure will be for the same month between the two elections, and the last figure for the month following the 1926 election:

Month	Before the 1925 election	Between the elections	After the 1926 election
November	3,186	4,331	3,286
December	3,165	7,923	3,289
January	1,715	4,334	2,297
February	2,012	4,167	2,397
March	2,731	5,191	3,662
April	2,995	6,918	4,209
May	3,211	7,999	5,561
June	2,935	6,084	4,738
July	3,029	6,487	3,530
August	3,667	6,281	3,814
September	2,445	4,221	3,531
	31,091	63,936	40,314

Thus for the eleven months intervening between the elections of 1925 and 1926 there was an increase of 32,845 Canadians returning home over the number returning in the corresponding eleven months before the election of 1925, and an increase of 23,622 over the number returning in the corresponding eleven months following the election of 1926, when this government was returned to office. This demonstrates beyond doubt that Canadians in the United States believed that the policies of the Conservative party would provide them with jobs in Canada, or would at least increase their opportunities to find profitable employment here. At the same time, it demonstrates that the policies of this government are not having the effect of bringing Canadians back from the United States in increasing numbers, as the Minister of Finance evidently wishes the house and the country to believe. I ask the minister and the government to look carefully into this matter, and by so doing I am convinced that they will see that this problem is not being dealt with. Then I hope they will try to find some effective means of meeting this condition, because until that is done it is useless for the

Minister of Railways and Canals (Mr. Dunning) and the Minister of Health (Mr. King) to attempt to argue that the speeches of hon. gentlemen on this side of the house are responsible for Canadians going to the United States. In so doing they are simply acknowledging and broadcasting their own incapacity and that of the government of which they form a part to deal with this question. I would also remind the government of the sentiments expressed in this house during a previous debate by the present leader of the opposition (Mr. Bennett) who stated in effect that the problem is not one of simply getting settlers to go on the land but one of conserving our present population.

Mr. J. F. WHITE (London): Mr. Speaker, in my contribution to this debate I wish to speak particularly with regard to the tariff changes which have been made at various times, and I desire also to make some comparisons of the results of these changes over a rather extended period. I was very much interested in the passages between the hon. member for South Essex (Mr. Gott), the hon. member for East Essex (Mr. Odette), and the hon. member for West Elgin (Mr. Hepburn) with regard to the steel industry, because I have also something to say in that regard. The differences of opinion which arose between the hon. members evidently had their foundation in the policy adopted by the United States Steel Corporation with regard to the question of manufacturing in Canada. I have here a copy of Hardware and Metal, a trade publication under date of February 25, 1928, and without comment I will read a news item which appears as coming from New York:

> James A. Farrel, president United States Steel Corporation, commenting on Montreal despatches indicating that the corporation was establishing branches to make all their present products in Canada, said that such plans were not contemplated. The wire plant now being finished at Ojibway, Ontario, near Windsor, merely represents the removal of machinery from, and abandonment of the Hamilton, Ontario, wire plant.

Since 1922, when the present government assumed office, we have had seven budgets presented to this house. In each of these budgets changes were made in the customs tariff, the most notable being the changes in the textile items this year, the changes in the automobile items of 1926 and the changes in the agricultural implement items of 1924. In all of these changes the tendency has been to lower the duty on the manufactured article and then to compensate the manufacturer by passing on the reduction to the makers of the raw materials entering into the finished article. In other words, the primary producers are

penalized. This year the change has been made in the textile group, and it is rather hard to say just what the result will be; I suppose time alone will tell. As far as I can judge, some kinds of cotton products have received an increased protection, while wool, which was reduced some years ago, has suffered a further reduction this year. It would appear that these changes will make it harder for Canadians to carry on business and will perhaps restrict the spinning of yarn, since yarn is on the free list. If the production of spun yarn declines, of course it means the curtailment of labour and additional unemployment, and the Canadian farmer also loses part of the market for his wool and his foodstuffs in industrial centres. Thus, Mr. Speaker, the need for wider markets becomes apparent, and it is questionable whether the consumer will benefit in the long run by these changes. I am unable to say, and I do not believe anyone in this house can say, how it will work out.

Now I wish to refer to the changes which were made in 1926. In that year the automobile duties were reduced on cars valued at $1,200 and less by 15 per cent and on cars over that figure by 7½ per cent. Then, meeting with much opposition from the manufacturers of automobiles and also from labour, the government softened the effect of the change by a 25 per cent drawback on all material entering into the manufacture of cars, also abolishing the 5 per cent luxury tax. The net result was that the automobile manufacturers were left in almost the same position, with the duty reduced by perhaps 5 per cent, and the blow fell on the producer of the raw material, as in other cases which I will cite later. The loss of the luxury tax affected the public treasury also, of course. This is just another case of passing the loss on to the primary producer, but in spite of all this our production of automobiles fell off by 13 per cent last year, while our importations increased by 28 per cent and our exports declined by 23 per cent. It has been said that the decline in the production of automobiles last year was due to the fact that the Ford Motor Company was not producing automobiles. That is a very interesting explanation of the case but it hardly stands inspection, because in 1925, before the reduction in the duty, there were 8,800 automobiles imported into Canada, while in 1926, eight months of which came after the budget of 1926 was brought down, reducing the duty, our importation increased to 14,900 automobiles, or an increase of 70 per cent. There is no doubt that in the history of nearly every industrial activity there comes a time, after it becomes firmly established, when duties may be reduced, and it may be that in time the reduction in the duty on automobiles will be a benefit to the industry and to the consumers generally. Our short experience, however, from the date of the budget which reduced the duty on automobiles until the present, is not very reassuring.

Hon. members on the other side of the house refer with a great deal of satisfaction to the reduction in duty on automobiles. One of them, in his enthusiasm, said the duties had been reduced and there were now more cars in Canada than ever before, but he did not say where the cars came from. The questions for Canadians to consider are where the automobiles come from; whether Canadian materials entered into their production; how many Canadians earned a livelihood from their manufacture and how many more Canadians might have been employed if this importation had not taken place. Other questions are whether the purchase of more cars abroad helped create an adverse financial balance; whether it built up foreign industries at the expense of our Canadian industries, and whether it tended to restrict the demand for foodstuffs in Canadian cities. There is still another question; did the purchase of these automobiles abroad create a reciprocal market in the country from which they were purchased? No, Mr. Speaker; the market was largely closed to us by the Fordney-McCumber tariff, and by more recent increases, so that at present Canadian farm products are to a great extent refused entry into the United States, and the amount marketed there is but a fraction of what it was in 1921. I would refer the house to the Commercial Intelligence Journal of February 25 of this year, a publication of the Department of Trade and Commerce, which shows, in a long list of products of the farm, our loss in this market. In the month of January, 1921 our exports of farm products to the United States were valued at $12,650,000, while in January, 1928, that figure had dropped to $2,870,000. It also shows that in the year 1921 our sales to the United States were $108,346,000, and in the year 1928 they had dwindled to $30,701,000, or a loss of the market to the extent of 87.3 per cent. The Canadians take the rebuff without any apparent sign of protest, and they continue to buy in the United States, as they did last year, to the tune of an adverse balance of trade amounting to $232,000,000.

Now, Mr. Speaker, I wish to speak about the reductions in the budget of 1924, and they concern particularly the reductions on agricultural implements. On account of the lapse of time a comparison of prices may give us a better appreciation of the general effects

of the changes made by that budget. Hon. members who were in parliament in 1924 will probably remember the debate on the budget of that year and the protest of the then Liberal member for Brantford against the reduction of duties. He, it will be remembered, in common with the present Minister of National Revenue (Mr. Euler) and some other members of the Liberal party voted against their party on that budget. The then member for Brantford stated that he considered the tariff was at the irreducible minimum without the reductions then proposed, and it seems as though subsequent events have confirmed that view. The Liberal government came into power in the last few days of 1921 or the early days of 1922. There has been an all round reduction in 1924 of the customs duties of from 5 to 12½ per cent on agricultural implements. By the same budget, the sales tax, which in 1922 stood at 3 per cent, was abolished. Various materials used in the production of these implements have been reduced to a 6 per cent duty, including bolts and nuts, paints and oils, canvas and things of that kind. Iron and steel used in manufacture were placed on the free list or subject to a 99 per cent drawback. Most of the articles affected were placed on the free list. What is the result? To-day agricultural implements are selling at quite as high or at somewhat higher prices than were charged in 1922 when the Liberal government came into power. In order to demonstrate this, I wish to read the following comparisons of prices, and I may say that these are Ontario prices for deliveries at London, Hamilton and Ottawa, and they are taken from the price list of the International Harvester Company.

		1922	1928
Binders and mowers: Duty was reduced by Liberal government in 1924 from 10 per cent to 6 per cent and sales tax abolished.	7 ft. binder—no attachments	$235 00	$237 00
	6 ft. heavy mower	99 00	98 50
Cultivators, harrows, rakes and drills: Reduced from 12½ per cent to 7½ per cent, and sales tax abolished.	6 ft. cultivator with 9 stiff teeth	92 00	96 00
	7 ft. harrow—14 disc—3 horse	62 00	66 00
Drills: Single disc, 13 disc—2 horse.		147 00	154 00
Western—20 marker combination.	4 pulley hitch	214 00	232 00
10 ft., horse, dump rake, 32 teeth.		52 00	54 00
Hay tedders and hay loaders: Duty reduced from 15 per cent to 10 per cent, and sales tax abolished.	Combined side rake and tedder	121 00	131 50
	Hay loader, steel windrow, with forecarriage	116 00	125 00
Ploughs: Duty reduced from 15 per cent to 10 per cent and sales tax abolished.	No. 121 walking plough—9″ share	23 50	21 50
Land rollers: Duty reduced from 15 per cent to 10 per cent, and sales tax abolished.	8′ 2″ wide	113 00	98 00
Farm wagons: Duty reduced from 17½ per cent to 10 per cent, and sales tax abolished.	Wagon—3¼ skein 2½ x ½ tires	110 00	107 00

This list includes a list of twelve machines of average size and those largely used by Ontario farmers. The total selling price of the list in 1922 was $1,384.50 and in 1928, $1,420. This is an increase of about 2½ per cent, in spite of the reduction in duty and the removal of the sales tax.

The question of the cost of materials, the cost of steel, the cost of labour, may be raised. I would say that they were about the same when this budget was brought down as they were in 1922. Steel on the basis of Pittsburgh prices is a little higher while labour is a little lower, but on the whole together they are about the same. Many claims have been made from the other side of the house as to reductions in the price of agricultural implements. I am not dealing with the increases that occurred during the regime of the Liberal party: I am not dealing with the 100 per cent increase they put on the sales tax, but I am comparing the prices of 1922 with those of the present date.

I should like to make a little further comparison as to the trend of the agricultural implement business and then consider the effect of the tariff on the primary industries or those which supply the raw material to manufacturers of implements. The fact that we imported in 1927 the largest amount in dollars' worth of agricultural implements in our history aroused my curiosity as to what pro-

portion of Canada's needs we were supplying from Canadian factories. The bureau of statistics keeps a record of the value of farm implements made, and a record of exports and imports. Without encumbering Hansard with needless figures, I should like to quote the result of my comparison in percentages. I found that in 1922, the year in which the Liberal party took office, Canada had supplied herself from her own workships with 63 per cent of the agricultural implements she used and consequently she imported 37 per cent.

Mr. BENNETT: Is that the calendar year?

Mr. WHITE (London): The fiscal year. As the manufacturers' records are not complete for 1927 I was compelled to take the figures for 1926, and I found that whereas in 1922 the percentages were 63 per cent for Canadian manufacture and 37 per cent for imports; in 1926 goods of Canadian manufacture used in Canada amounted to only 54 per cent of the total while imports had risen to 46 per cent. There should be a great deal of significance in these figures. There was 9 per cent less manufactured in Canada or just that much more lost to the Canadian workmen and manufacturing establishments, particularly to the workmen, as I shall try to show a little later on. There was 9 per cent more of our needs imported, and yet agricultural implements were no cheaper in 1926 than they were in 1922, in which year we manufactured 63 per cent of our requirements. That is the record as regards agricultural implements to the end of 1926. In 1926 imports and exports of agricultural implements stood at about the same figure, or at about $13,000,000 for each, but in 1927 our imports increased to over $26,000,000, exceeding our exports by $9,500,000. It will be no surprise to me if, when the figures for 1927 are completed, the proportions will be about fifty-fifty—in other words, that Canada is supplying herself now with only one-half of the agricultural implements she uses.

While we have many Canadian manufacturers making agricultural implements, there are two very large companies which are outstanding and which make the bulk of the production. I refer to the International Harvester Company, which has a branch factory in Hamilton, the main office being in Chicago, and to the Massey-Harris Company of Toronto, which has a factory at Batavia and which has recently acquired the J. I. Case Company of Racine, Wisconsin.

Mr. BENNETT: Also one in France.

Mr. WHITE (London): One in France, and also one in Australia. That was due to the Australians imposing a heavy duty on agricultural implements, so that the Massey-Harris people moved to Australia and started manufacturing there. In view of the fact that the Canadian activities of these companies are merely branch plants, it does not make any particular difference to the companies themselves whether their manufacture of implements is carried on in Canada or in the United States. There is no doubt they will carry it on in the cheapest market.

At six o'clock the house took recess.

After Recess

The house resumed at eight o'clock.

Mr. WHITE (London): Mr. Speaker, when the house rose at six o'clock I had completed that part of my remarks in which I showed that notwithstanding the reduction of 5 to 12½ per cent in duty and the abolition of the sales tax on agricultural implements by the budget of 1924, the price of implements to-day is higher than it was in 1922 when the Liberal government took office. My purpose was to show that when duties are reduced beyond a certain point there is no benefit derived by the consumer, and also that it may and does do harm to many of the industries concerned.

I wish to proceed a little further and consider the effect of the tariff reductions of 1924 on the manufacture of steel and goods of that sort used in the making of implements. Pig iron and rolled steel, of course, are the principal raw materials for the manufacture of agricultural implements. There is also a long list of small items in which steel plays a very large part.

The ordinary general tariff on steel is $7 per ton. It is a specific duty; it does not vary with the price. Prior to 1924 many items had been reduced from time to time until the duty on steel for agricultural implements for domestic use had been reduced by drawbacks to 30, 40 and sometimes 50 per cent, to about $4 per ton. The steel used in making agricultural implements for export was subject to a drawback of 99 per cent. By the budget of 1924 all the steel used in agricultural implements was put on the free list, and all other materials such as bolts, rivets, canvas and things of that kind were put in an item covered by six per cent duty. From this side of the house we protested against that reduction, claiming that it was excessive, that there had been no comprehensive study made of the whole situation, and advising the ministry of the damage we thought would be done to the Canadian iron and steel industry.

No claims had been made as to excessive profits being made, and there had been no complaints, so far as I know, as to there being any combination in restraint of trade in that industry. The government, however, at the instance of the Minister of Finance, swept away the small duties that still remained, with the result that thousands of tons of steel, which mills in Canada are equipped to make, came and are still coming into this country. In the fiscal year ending March, 1925, steel under tariff item 445a came into Canada to the amount of 14,460 tons; in 1926 that had increased to 43,700 tons, in 1927 about the same amount, and for the ten months ending January 31st of this year the imports were 39,000 tons, or at the rate of 47,000 tons for the year.

In addition to that, materials on the six per cent list, largely made of steel, have been coming into Canada during all these years at the rate of about $2,500,000 per year, and last year the figure was $2,600,000, if I remember correctly.

All this has had its effect upon the unemployment situation and its effect upon the migration of our people. The loss which has been suffered by the steel companies is another item which must be reckoned with.

The maritime steel and coal situation has been pretty well discussed in this house and I think hon. gentlemen are fairly well conversant with it, but besides the companies in the maritime provinces there are two other large producers of steel in Canada, as well as many smaller mills scattered throughout the Dominion. One of those larger mills is the Lake Superior Corporation, which has been struggling for years, and last year showed a substantial loss. The other large producer, the Steel Company of Canada, is the only one in the industry in Canada which seems to be making progress. That company is a combination of fourteen or fifteen different companies which before their amalgamation were competing with each other for the Canadian business. A merger or trust, if you like, was formed. Of course I know these words are anathema to Liberals and Progressives alike. We have heard them get up in this house and rail against combines, mergers and trusts, and yet they are quite ready, when the steel industry is concerned, to get up and quote the Steel Company of Canada as a reason why the steel business in this country needs no consideration.

The Steel Company of Canada manufactures many lines from pig iron through all the various operations, including steel ingots, bars, pipe, wire, horse shoes, bolts and nuts, nails, screws, tacks and lead products. Many of these lines have not been affected by the tariff changes. For example, wire nails still pay a duty of $12 per ton, pipe a duty of 30 per cent, and tacks 35 per cent. The Steel Company of Canada also have practically free entry for their fuel. It comes in subject to a drawback of 99 per cent under tariff item 1019 for the manufacture of coke to be used in the melting of metals. The company make coal into coke, and in the process gas, of course, is generated. This gas is used to reheat their steel for use in the finishing mills, consequently they get their fuel in free of duty. There is another thing possibly in their favour. They bring the iron ore down the lakes to Point Edward and then transport it by rail to Hamilton, a distance of about 140 miles, and in so doing I am told they have a very favourable freight rate, in fact the lowest freight rate per ton mile on the American continent. It is so low that even if anything like an approximate rate could be applied to Alberta coal the very optimistic computation of the hon. member for Bow River (Mr. Garland) might be realized. And yet the Steel Company of Canada with all these advantages cannot stem the ever-increasing tide of imports, records of which appear in the government statistics.

Now, Mr. Speaker, just a word on the production of pig iron and steel in Canada. I will compare the production of last year with that of 1913, the year before the war, to show our relative position to-day. In 1913 our pig iron production was 1,015,000 tons; in 1927, 710,000—a decrease of 30 per cent. In the same period the United States increased their production by 27 per cent. In ingots and castings the figures are similar; our production declined 26 per cent while that of the United States increased 45 per cent. Our trade balance in iron and steel with our neighbours is distinctly and increasingly adverse. In 1925 there was an adverse balance of $53,000,000; in 1926, $87,000,000; in 1927, $175,000,000.

In view of this it is pertinent to ask, what solution has the government for this situation—a situation largely induced by its own ill-advised acts. So far as I can discover they offer no solution. They have treated the basic industry of manufacturing iron and steel to drawbacks of duty on automobile materials; 99 per cent drawback on spring steel for automobile springs, and 25 per cent on all other steel. They have also put agricultural implement steel on the free list. We on this side of the house have entered our protest repeatedly against this policy. The report of the Duncan commission, issued on September 23, 1926, urges action, and I should like to

quote section 25, which will be found at page 37 of the report. It is headed, Steel and Customs Tariff, and is as follows:

It was submitted that the tendency of the tariff, as affected by successive alterations, has been to lessen the protection upon the primary products of iron and steel and to encourage their importation from other countries as being the raw materials of iron and steel-fabricating and finishing industries in Canada.

In respect of this matter, we do not conceive it to be our duty to express any opinion, since the question is, as we were informed by the chairman of the Tariff Advisory Board, who met us at our request, at the present moment under the consideration of that board. But we do regard it as our duty to record that the significance of this industry to the maritime provinces was forcibly brought home to us, not only in the manufacturing towns we visited in the maritimes but also throughout the agricultural districts of the maritimes. We record this in order to emphasize the need for prompt action.

Now, Mr. Speaker, after the lapse of one and a half years from the date of that report the government have advanced no remedy for the situation, they have not even shown a disposition to retrace their steps, and in the nature of things it will be another year before any relief is in sight. It is quite possible that some of those interested in this basic industry will have passed out of the picture before any relief arrives. But perhaps I should make an exception in favour of one member of the government, the Minister of Trade and Commerce (Mr. Malcolm). He has suggested that British manufacturers might establish branch plants in Canada. I should like to direct the hon. gentleman's attention to the case of one British company that made the experiment. At the close of the war the Baldwin Steel Company, who have been manufacturing steel sheets in Swansea, Wales, for half a century, installed a sheet mill in Toronto. They found on proceeding to manufacture and market their product that it was an unprofitable venture, on account of steel sheets for galvanizing being on the free list. Thereupon they shut down the plant, and it remained idle for about three years. In 1925, despairing of any tariff relief, they scrapped part of the plant, and last winter they took out the mills and shipped them to England. Now, if Canadians cannot make a success in this basic industry, it would appear from the experience of the Baldwin Company that an English branch factory has no better chance of success here.

I have previously referred to the fact that coal is allowed into Canada free of duty for making coke. This is not an advantage to Nova Scotia. There are only two steel mills concerned in this particular item, and they have the benefit of practically free entry for their coal—a 99 per cent drawback. There are other smaller mills in Canada which compete with these two large concerns, and they have to pay duty on their coal. The fact is that no coke is used in their process, and so they cannot come under the drawback provided for in item 1019. One of these concerns is in my city, and the other is in Selkirk, Manitoba. Up to 1925 the duty on bituminous slack coal was 14 cents per ton. During that session it was increased to 50 cents per ton, and the Minister of Finance stated that he expected this would provide about a million dollars additional revenue. This, of course, was for the most part a burden put on Ontario, but Ontario accepted it without a murmur. Alberta coal has been tried out by the Manitoba concern and found to be unsuitable. They and the other smaller mills use United States coal, and so they have now to pay a duty of 50 cents per ton and compete in the market with the larger mills that have free entry for their coal. This is not just; it is a discrimination as between plants in the same lines of business. In company with hon. members from Winnipeg and the hon. member for Selkirk I have made representations to the Minister of Finance and urged him to bring down some measure to relieve the situation. I hope when the resolutions are being considered that an additional resolution will be introduced by the minister for the purpose.

Now, Mr. Speaker, the government have expressed no concern as to unemployment. There are no items in the budget to provide any relief, and in the speech from the throne they were silent on this subject. It seems to me that proposed reductions in the tariff are about all the answer the government have given to the request for jobs on behalf of our unemployed Canadians. This, of course, brings the matter closely to the amendment moved by the hon. member for St. Lawrence-St. George (Mr. Cahan). It is becoming a by-word amongst the smaller communities and amongst industries, that as soon as the budgets of the present Minister of Finance are brought down these communities and industries which have not been interfered with breathe a sigh of relief.

I am sorry, sir, that my time is exhausted. I had other items to bring to the attention of the house, but I will deal with them on some other occasion.

Mr. R. K. ANDERSON (Halton): I fear I cannot compliment the Minister of Finance (Mr. Robb) on the presentation of his fifth budget. When I listened to him as he delivered that budget I felt that it was a rather

innocent document, but on reading it over carefully I discovered that it had potentialities for good and evil, and after studying a little more carefully I decided that the evil predominated. Now the public of Canada are studying budgets a little bit more than they used to, and well they may, because the budget has become an instrument in the hands of the minister to make or break people in their struggle for a living.

The budgets of the present Minister of Finance have two striking characteristics that did not appear in the budgets of previous ministers in that office. They are characteristics that are very disturbing to business men, characteristics that drive capital into hiding and retard progress. The first to which I refer is the instability of the tariff. It has become proverbial that no longer have the business men of Canada any security or any idea what the budget may bring forth each year. In 1923 the Right Hon. Mr. Fielding, in delivering his budget, pointed out how essential it was to have tariff stability. At page 2648 of Hansard of that year he is reported as follows: "It is desirable that an assurance of tariff stability should be given to business men * * * * * I think that the tariff as it now stands is fair and reasonable and business men should be able to carry on without the fear of further changes." That is not the condition to-day. It would appear to me that the Minister of Finance has lost his perspective in relation to budgets. He fails to visualize Canada as a whole and to make his budget in the interests of the country. The budget is in his case framed entirely for political effect in the interests of the present government, of which he is a member. Business men throughout Canada will not remain in business under present conditions. Men of ability and of business foresight prefer to watch and wait, to put their capital in hiding in some safe place rather than to use it in expanding industry in this country.

The budget of the Minister of Finance reveals another characteristic, the second one, which to my mind is serious from the standpoint of Canadian industry. The minister has a peculiar habit of paying unwelcome compliments to the industries of Ontario every second year. In 1924 he attacked the agricultural implement industry, and one peculiar fact about that incident was the very docile manner in which the affected industry took the reductions in the tariff. They made no particular protest, which created in my mind the suspicion that they knew what was coming. Some engaged in that industry were very near to the government and it would seem that they got an inkling of what was about to happen and therefore began preparing for the event from 1922 to 1924. Later on I will give my reasons for so thinking. In 1926 the blow came to the automobile industry; it came like a bolt from the blue. There was consternation and the automobile manufacturers came to Ottawa and made their peace with the Minister of Finance, a peace that was satisfactory to him and expensive to the industry. Now in 1928 the textile industry is attacked. In 1923 an increase of 10 per cent in the British preference was given, which had a serious effect on the textile industry of this country, and in 1928 this second attack will be injurious to certain sections of the business. I intend to show that these are largely Ontario industries that are receiving the unwelcome attention of the Minister of Finance and of the government.

Speaking of the attentions of the Minister of Finance to the province of Ontario, it would seem to me that statesmanship is at a rather low ebb in Canada if a province like Ontario or any other province is to be coerced in this manner and used for political purposes, merely because that province is not sending to this government the support which they think it ought to send. I would ask the Minister of Trade and Commerce (Mr. Malcolm), if he were in his seat, a gentleman who enjoys a protection of thirty per cent on his own industry—

An hon. MEMBER: Thirty-five per cent.

Mr. ANDERSON (Halton): No, thirty per cent, I think, on the manufacture of furniture. I say I would ask that gentleman how he can consistently remain in the present government and see other industries treated differently from his own. The Minister of National Revenue (Mr. Euler) has spoken in this house on various occasions and he appears to be consistently in favour of protection, particularly on industries in his own constituency. I believe he is a protectionist. I would ask him also how he can consistently stay in the government while reductions in duty on various industries in Ontario are being made for political reasons. I do not know how the Minister of Public Works (Mr. Elliott) feels about it; I do not know whether he is a free trader or not. He also, however, comes from the province of Ontario. I say therefore that these three men ought to raise their voice in protest against the treatment which the province of Ontario has been receiving.

I remember quite well, when the present Prime Minister (Mr. Mackenzie King) came into this house in 1920 as Leader of the Opposition, how he raised his voice many a time

declaring his ultra democracy, telling the house what a democrat he was. He believed that the people should rule. Yet in eight short years he branches out as an autocrat, trying to coerce Ontario through the Minister of Finance. The Globe newspaper, for nearly fifty years, has carried on one of its pages this dictum of Junius:

> The subject who is truly loyal to the chief magistrate will neither advise nor submit to arbitrary measures.

Yet we find the Prime Minister and the Minister of Finance using arbitrary measures on the province of Ontario.

The reductions which we find in this budget contain nothing at all for the average man in this country. Any one fortunate enough to enjoy a personal income large enough to come under the provisions of the income tax act is quite willing to pay that tax, but as there are only comparatively few of these people in Canada that particular reduction helps no one who really needs help. We can say the same thing about the sales tax; the reduction of one cent on the dollar may help the retail trade but it will never reach the ultimate consumer and he will reap no benefit from it whatever. The labouring man, the artisan, the farmer and the professional man will not be helped in any way by this reduction in the sales tax. Therefore these two items are of no interest to the average Canadian. The Minister of Finance stressed the fact that he was reducing taxation in Canada, stating that $19,000,000 would be handed back to the people this year. Not a cent of that money will go back to the average man, who really needs the reductions. Those who will be benefited are those who do not need help.

With regard to the claim made by the government that they have reduced taxation I wish to submit a comparison of the taxes levied by the Conservative government in the five-year period previous to 1922 and those levied by the Liberal government for the five-year period subsequent to 1922, leaving that year out of consideration. According to the consolidated revenue fund, which represents the taxation levied upon the people of Canada, the figures are as follows:

	Conservative government		Liberal government
1917..	$ 232,701,294	1923..	$ 394,614,900
1918..	260,778,952	1924..	396,837,682
1919..	312,946,747	1925..	346,834,479
1920..	349,746,334	1926..	380,745,505
1921..	434,386,536	1927..	398,695,776
	$1,590,559,863		$1,917,728,342

So, in comparing the five-year periods, it will be seen that the Liberal government extracted from the pockets of the people $327,168,479 more than the Conservatives, which is equal to $179,270 for every day the Liberal government were in office. That does not look very much like a reduction in taxation, nor does it look very much like economy, because the government spent all that money in conducting the business of the country.

Every time this government change the tariff they stimulate the importation of foreign goods into Canada and thus injure our own industry, while every reduction in duties is followed by a flow of emigrants from Canada to some other country, in search of work. This government appear to me to be implementing their tariff policy of 1919, in which they said they believed in a reduction of the British preference to 50 per cent of the general tariff; I believe the Minister of Finance is at that point now, and in some instances is below the 50 per cent level. I believe he is going still further in the direction of the Progressive policy of free trade with England; at any rate, he is nearing the point where we shall have a tariff for revenue only, which appears to be the Liberal policy to-day. Not only is the minister making reductions in the general tariff; he is also going around to the back door and giving preferential treatment to certain favoured nations, something of which the people are scarcely aware.

In connection with this budget there are certain things which particularly affect my own county of Halton. There is a little item in the tariff which will have the effect of giving an 80 per cent drawback on certain papers used in the publication of magazines. In this province we have mills which manufacture coated paper suitable for magazine publications. This is largely an Ontario industry, and in 1925 the duty was 35 per cent. An 80 per cent drawback will reduce that protection to 7 per cent. Ontario produces 66.3 per cent of this material, the balance coming from Quebec and New Brunswick, so it is a matter of vital importance to this province. These mills are seriously affected by this budget; their protection is practically eliminated, and I would suggest that the government give very serious consideration to the representations which I understand these manufacturers are making. We have a coated paper mill in the county of Halton; it is an important industry there, with quite a large number of employees and having a considerable amount of capital invested in it, and if this budget goes into effect it is possible that that industry will go partly out of business. I believe the manufacturers of this product have presented their case to the tariff advisory board, but in spite of their representations that board has

recommended this reduction to the government. Probably that is only to be expected, when you consider that at the head of the tariff board is a man who has free trade ideas, and who probably thinks of nothing else.

We also have three woollen mills in my county, and one of these will be seriously affected by this budget. I have mislaid my notes and a letter in this regard, but the factory to which I have reference is a spinning mill in my own town. The reduction in the duty on dry spun yarn and the free importation of yarn will injuriously affect that industry. They manufacture yarns, woollens and worsted yarns for the manufacture of carpets and so forth. The manager claims that this will take away almost their total protection, that he is hampered under existing conditions, that he has lost two large orders for the present year because he could not meet the British price. Wages in that particular industry in England are about $5 per week, while in the same industry in Canada the wages are $10 per week. This is a very serious handicap and that industry is unable to meet the competition coming from the old land. This loss of business is going to be seriously felt. Quite a number of families will have no means of earning a living; they depend for a livelihood upon that industry in that particular town. It is a very serious matter for them and I too would ask the government to take into their earnest consideration the representations made on behalf of that industry before the tariff advisory board showing the conditions under which they are operating in Canada. It is worth while for the government to consider these representations, because although the industry is in the province of Ontario it represents 82 per cent of the business in the whole of Canada.

Then we have another industry in the province of Ontario with which I intend to deal, although the conditions with respect to it were very fully explained by the hon. member for London (Mr. White). My hon. friend is an expert in regard to the iron and steel industry and so was able to speak with authority upon this subject, but I will present the view of the man on the street who does not understand the industry, and I will try to show how the conditions affect the average farmer who buys the implements made by the agricultural implement industry, which is largely an Ontario industry. The capital employed in this industry in Canada in 1921 was $100,285,000, and in 1925, $81,861,000, a decrease of $18,424,000, as a result of the tariff policy of this government. The number of factories operated in Canada in 1921 was 90. The number operated in 1925 was 61, a reduction of 29. In 1921 the employees numbered 9,198 as against 7,669 in 1925, a decrease of 1,529. In 1921 the amount paid wages was $11,805,000 as against $9,089,000, a reduction of $2,716,000, largely in the province of Ontario.

Taking up the matter of production in Canada—and I am taking this from page 102 of the iron and steel report of the bureau of statistics for 1925—the production in Canada in 1920 amounted to $50,301,000. In 1925 the value had dropped to $24,770,000, quite a large reduction. The capital invested in 1925 amounted to $81,861,000. Of the factories operating in Canada in 1925, 43 out of 61 were located in the province of Ontario. Out of the total number of 7,559 employees in all Canada, 7,143 were employed in Ontario, or 95 per cent of the total. Of the total capital of $81,861,000, the capital invested in Ontario amounted to $79,115,000, or 97 per cent. Out of a production of 24,770,000 for the whole of Canada the production in Ontario was 23,311,000, or 95 per cent, showing the extent to which the industry is an Ontario one.

Now in order to make a comparison of the prices of agricultural implements between 1921 and 1926, the following table is interesting:

RETAIL PRICES OF AGRICULTURAL IMPLEMENTS

Implement	Price 1 payment Oct. 1st, 1921	Duty	Sales tax	Price ¼ cash; one payment Oct. 1st, 1926	Duty	Sales tax	Increase
	$ cts.	per cent	per cent	$ cts.	per cent		$ cts.
Six ft. binder	219 00	12½	3	230 00	6	nil	11 50
Mower, 5 ft., heavy	93 00	12½	3	96 50	6	"	3 50
Mower, 6 ft., heavy	95 50	12½	3	98 50	6	"	3 00
Reaper, 5 ft., 2 horse	135 50	12½	3	138 00	6	"	3 00
Horse dump hay rake, 8 ft., 26 teeth, steel wheels	47 00	15	3	50 50	7½	"	3 50
Hay tedder, 8 fork	82 00	20	3	85 50	10	"	3 50
Hay loader, steel windrows, fore carriage	112 00	20	3	125 00 (26) 123 00	10	.....	11 00
Manure spreader, 2 horse, No. 5	187 00	15	3	171 00	7½	(decrease)	16 00
Hoe drill, 2 horse hitch	125 00	15	3	131 00	7½	nil	6 00
Field cultivator, 6 ft., 12 spring teeth, 2 or 3 horse	77 00	15	3	82 00	7½	"	5 00
Land roller, 6 ft. 27 in	63 00	20	3	68 00	10	"	5 00
Disk harrow, 12 disks, 16 inch, 2 horse	45 00	20	3	50 50	10	.....	5 50

Now the situation which these figures disclose is somewhat peculiar. I have placed these figures on Hansard to show just how much benefit the farmers of the Dominion of Canada received from the reductions in duty and the elimination of the sales tax as between 1921 and 1926. It is very interesting reading indeed and it requires some explanation, not only from the government but from the industry itself. The question will naturally be asked what the cause was of the increase in prices in those years. That is why I say there is some suspicion that the implement industry had some knowledge of what was going to happen. Prices increased very materially between 1921 and 1924. The following figures compared with those already given indicate the increase of price:

Price List of November, 1923
(One-quarter cash, balance October 1st)

Binders, 5 ft	$253 00
Binder, 6 ft	253 00
Mower, 5 ft. heavy	105 00
Mower, 6 ft heavy	107 00
Horse dump rake, 8 ft., 26 teeth steel wheels	54 50
Reaper, 5 ft., 2 horse	153 00
Hay tedder, 8 fork	92 00
Hay loader, steel windrow and fore-carriage	130 00
Manure spreader, 2 horse	187 00
Hoe drill, 2 horse, 11	147 00
Cultivator, 6 ft., 12 spring teeth, 2 or 3 horse	90 00
Land roller, 6 ft. 27 in	77 50

In 1924 the government gave the manufacturers the advantage resulting from reduction in duties and the removal of the 5 per cent sales tax, but it is evident that the manufacturer did not pass along to the farmer the reduction of the customs duties in 1924 nor since.

Now as to iron and steel products. I had the curiosity to look up the prices between 1921 and 1924 and I find on page 46 of the publication of the Dominion Bureau of Statistics, Iron and Steel Products of 1925, the following, giving the average index number of prices for the years 1921 to 1925 for all steel products that went into the manufacture of agricultural implements. In 1921 the average price was 185.7. In 1922 it was 151.8; in 1923, 168; in 1924, 161; in 1925, 151.4. That is the index figure in 1921 was 185.7 as against 161 in 1924, or 24.7 higher in the former year than in the latter. Does that look as if agricultural implements should have been higher in 1924 than they were in 1921?

Mr. EVANS: Who furnished those figures?

Mr. ANDERSON (Halton): I just told the hon. gentleman, if he had been listening.

Mr. EVANS: I was not in at the time.

Mr. ANDERSON (Halton): I got them from the Report of Iron and Steel Products of 1925, Dominion Bureau of Statistics. If the hon. gentleman will look at page 46 he will find all the figures there. It gives the prices of commodities that enter into the manufacture of agricultural implements:

Commodities	1921	1924
Steel merchants' bars per ton, f.o.b. plant	$64 08	$57 50

Quite a considerable reduction.

Steel bars, round and square, per cwt..	$ 2 96	$ 2 67
Spring steel, per cwt.. ..	5 54	5 48
Pig iron No. 1 foundry, per long ton..	35 96	29 26
Steel billets, per ton.. ..	44 79	43 61

This shows that all the raw and other materials that went into the production of the agricultural implements of the Dominion of Canada were materially reduced in price in 1924, and yet in the face of those reductions there was an increase in the price of those articles of from 12 to 20 per cent. How does the industry explain the difference in the prices between 1921 and 1924? It is unexplainable. The manufacturers were getting ready for a reduction in the duty so that in 1924, when it did come, they could show a reduction for 1925 to deceive the farmer into thinking he was getting a tariff reduction which he did not receive.

It might be claimed that an increase in wages had something to do with this condition and that wages were very much higher in 1924 than in 1921. I have taken the following table from the report of the Department of Labour of 1927, the index number for 1913 being 100. For the metal trades index number for wages are as follows:

Year	Index number
1921..	186.8
1922..	173.7
1923..	174.9
1924..	175.5

Therefore wages were lower in 1924 in the metal trades than they were in 1921, so that it cannot be said that the increased price is due to wage increases because it is not. There was a reduction of 11.3 in 1924 from 1921 and a reduction of 11.4 in 1925 from 1921, yet we find everyone of these implements has been increased in price to the Canadian farmer. The budget of 1924 put a great deal of raw material on the free list, giving the industry a considerable advantage over 1921 but this has not been reflected in the price of agricultural implements to the Canadian farmer. An explanation should be given of this peculiar condition.

In 1922 imports of agricultural implements amounted to $7,718,000 and in 1927 the amount had risen to $18,946,000, so that we are importing almost two and one-half times as much as we did in 1921. That is a result of the reduction in the tariff and yet no benefit has accrued to the farmer. Our exports in 1922 amounted to $5,345,000 and in 1927 to $17,412,000, so that we were exporting more as well. The industry may say that a reduction in the production in Canada between 1921 and 1926 or 1927 accounts for some of the increased price, but I find, on looking up the Canadian production in 1927, it was equal to what it was in 1921. Consequently, a reduction in the production of agricultural implements is not a cause of the increased price.

In 1922 duties collected that went into the Dominion treasury amounted to $889,167 on agricultural implements, and let us remember that that was on an importation of $7,718,000 worth of goods. In 1925 duties collected fell to $392,314 on an importation of $6,494,000, while in 1927 duties collected amounted to $944,893 on an importation of $18,946,000, so that the duty collected in 1927 was very little more than it was in 1921 although in 1921 less than half as much was imported as in 1927. What does that mean? It means simply this, that duties that formerly in 1921 went into the treasury of the Dominion of Canada, went into the pockets of manufacturers of agricultural implements. We looked for it to go into the pockets of the farmer but it has not gone there. He has had to pay more for his agricultural implements so that he did not receive the benefit of it. It did not go into the Dominion treasury. Where did it go? There is only one other place for it to go.

In 1925 there was a loss to the Dominion treasury of $762,000 that did not go to the farmer. In 1926 there was a loss to the treasury of $1,651,000 that did not go to the farmer. In 1927 there was a loss to the treasury of $2,285,000 that did not go to the farmer. The only conclusion to which any man can come is that the improved condition of the agricultural implement industry in Canada is due to the money that should have gone into the Dominion treasury. I should like to know where any free trader can find in the implement industry an argument in favour of free trade. Surely it is an argument in favour of protection, because at least the treasury would not have been depleted of that amount of money and under protection the farmer received his implements at considerably less than he does in 1927 under almost free trade conditions.

Mr. D. J. COWAN (Port Arthur-Thunder Bay): Mr. Speaker, my contribution to the debate on this occasion will perhaps be somewhat coloured by my residence in northern Ontario in the heart of the mineral area which is now producing practically untold wealth for the people of this country. Hon. members who have had an opportunity of travelling across Canada will no doubt have noticed that large extensive territory apparently barren

and forbidding in appearance but most inviting to those who live there, in the northern part of Ontario from North Bay across country to the boundary of Manitoba. Hon. members and delegates who attended the Winnipeg convention would have an opportunity of seeing that territory. I refer by the way to that great convention where we selected not only our leader but the gentleman who will be the next prime minister of Canada.

The scarcity of ideas on the budget, conjoined with the anaemic character of the speech from the throne, gives the opposition very little opportunity to discuss to advantage the public questions of the day. Perhaps this government is in the rather unfortunate position of having applied to it the time-honoured saying of Hooker, "that even ministers of good things are like torches, light to others, but waste and destruction to themselves". It appears to me from my examination of the budget that this government is beginning to look backwards instead of forwards, and in a young country such as ours with the mineral and agricultural wealth we have to be developed, the government I think should have some suggestion which might be made use of in further developing and enriching this country. At the risk of repetition and being tedious I desire to offer some contribution to this debate in the course of which I shall make suggestions which I hope the government will see fit to adopt. I care not who gets the credit for it; I am only anxious that the mineral wealth of northern Ontario should be developed.

That northern country hon. members do know has come into prominence during the last few years. It is only a matter of a few years since even as wise and efficient an administrator as the late Sir James Whitney referred to that country as the land of the blasted pine and stunted poplar. But that day, gentlemen, has long since passed. I know of no other country in the world that has such opportunities for young men, and I desire to address my self to that question with the idea of pointing out the opportunities for the young manhood of this country to find a means of livelihood and of acquiring wealth in that new area.

The stage is set by nature for a development of mineral wealth in Canada unparallelel in world history, whether for magnitude or rapidity. We live in a country more lavishly endowed with undeveloped riches than any other in the world. Where can you point to a natural treasure house, still substantially unexplored, to equal the Laurentian plateau, that area of over 2,000,000 square miles, all underlain by a Precambrian formation; found wherever its surface has been scratched "to be rich in all the minerals, common or rare that are used in the arts,"—I am quoting from the Department of Mines report, 1924— and proven capable, from the few odd spots which have been developed, of yielding gold alone to the value of two and a half million dollars a month? Truly there is no country in the world that can approach Canada in undeveloped natural resources. In water power, in minerals, in agriculture, in pulpwood, four of the greatest assets a country can possess, Canada leads the world.

I have not the time to discuss this budget from the point of view of the agriculturist. That point of view has been ably and vigorously championed by all parties in this house depending, somewhat of course, upon the political party to which the speaker belonged. I do say, however, that I think the agricultural members of this house and the farmers of this country are taking a very short sighted view when they do not assist in the development of our industrial plants and in the development of our mineral wealth, which would provide them with a home market in Canada for their products.

I have not the time to discuss the question of water powers. Everyone knows the tremendous progress that has been made along the line of developing the white coal that never burns up. There are other features that I have not the time to deal with, but I intend to devote a few minutes to a discussion of the mineral wealth of this northern country.

History shows that continued and increasing prosperity has never come to a country save through pre-eminence in sources of industrial power, in precious metals, or in agriculture. Equally true is it that great natural resources, once adequately and energetically developed, have never failed to bring great wealth to their possessors.

Europe has already developed most of her resources; some of her minerals were exhausted a thousand years ago; even her coal is nearing its limit. Our neighbour across the border is developing fast, and with what profit to her citizens! Canada, far richer than any other country in the beginning, is still virtually undeveloped. For Canada is young. Only forty-one years ago the last spike was driven in her first transcontinental railroad. Only thirty years ago the first gold was found in Klondyke. Only twenty years ago two of her great provinces west of the area I have been speaking of were marked out and given the status of provinces in this Dominion.

We realize to-day the significance of the statement that this north country now

possesses a purchasing power of nearly a hundred million dollars annually. The government railway which traverses this strip is, along the Quebec-Cochrane section, now paying 90 per cent of its operating costs Think of the possibilities when real development begins! A billion dollars has come out of the four leading mining camps in this area already. Mining is closing the gap. To-day there is activity almost all along that thin red line of communication. Prominent authorities expect that the next twenty-five years will see this thin line broadened out into a strip at least one hundred miles deep—well populated, and continually pouring out riches to our country and providing work for our smelters, our furnaces and our workshops.

Look at the map. Trace the line of present activity, from the Flin Flon mine in Manitoba, to the deposits near Bulldog lake, Red lake, Woman lake, Narrow lake, Savant lake, Armstrong, Beardmore, Jellicoe, Tashota, Kashabowie, where the old Huronian is reopening Macqua—through the great established camps of Cobalt, Kirkland lake, and Porcupine—on through Rouyn to lake St. John. The gap is closing. It is symptomatic of the part that our buried wealth has played, and will play to an increasing extent, in the economic consolidation of the country.

The digging of new wealth from the earth is a fundamental industry. The recovery of mineral wealth rounds out our ability to prosper. It goes on winter, spring, summer and fall, producing regular national income, paying regular wages, offering full time occupation supplying raw materials to our other industries, independent of season and of weather. There is little marketing effort needed to sell gold or silver; they possess an intrinsic value, whether sold or held. The world demands our minerals; and the demand is growing. It is Canada's opportunity and duty to meet that demand.

Mining is now the third largest of our primary industries; but it would have been difficult to persuade the average man thirty years ago that, apart from the placer (surface) mines in the Yukon and British Columbia, and a little copper in the eastern townships of Quebec, and some gold in Nova Scotia, Canada contained any worth while deposits of gold, silver, or other precious metals. Even as late as 1910 hon. members will recall with what distrust the Hollinger, the McIntyre and other mines in northern Ontario were regarded. Do we really appreciate these great mineral resources? Our ores will undoubtedly prove phenomenally rich and abundant. As a matter of fact we possess the greatest single exposure in the Precambrian formation in the world.

As I have stated, there is abundant mineral wealth there. In 1923, when Mr. Drury was premier, the Ontario government appointed a commission to inquire into and report upon the development of the iron ore industry of the province. On the basis of that report the provincial government took measures to develop the industry. But before I go into that question may I say that in 1913 there were in Canada twenty-two blast furnaces, but in the autumn of 1927 these had dwindled to four. What has been the situation? It seemed for a time as if the iron ore industry was on a sound basis. That was due to the legislation passed by the government of the late Sir Wilfrid Laurier putting in force a bounty system, under which up to 1921 there was paid out in subsidies a total of eighteen million dollars. Apparently that aid enabled the industry to carry on successfully, but from 1921 the bounty ceased.

I was very glad to hear the remarks of the hon. member for Pictou (Mr. Cantley) delivered in the course of this debate, for he is an authority on the subject. While formerly we had to import only $143,000,000 of iron ore and its products, last year we brought in $240,000,000 worth, and we did not mine an ounce of iron ore. Now, hon. members will recognize that that is not a healthy situation. We spent $240,000,000 to import mineral although we have abundant deposits. As I said a moment ago, in 1913 we had twenty-two blast furnaces in operation, while to-day there are only four. Of these two are at Sydney, one at Hamilton and the other at Sault Ste. Marie. This decline, of course, reflects itself in the number of men employed, and whereas in 1913 there were 1,589 men at work in our blast furnaces, in 1925 the average number was down to 656, and it is still less this year.

When I spoke on the address in reply to the speech from the throne, I urged that the government should supplement the legislation enacted by the legislature of Ontario, and I now propose to give the house a quotation from the provincial statute. It is known as the Iron Ore Bounty Act, 1924, and its purpose is set out in section 3, as follows:

> 3. The treasurer of the province of Ontario may under the authority of such regulations as may be made from time to time by the lieutenant-governor in council, and out of moneys appropriated by the legislature for the purpose, pay a bounty to the miners or producers of iron ore which shall be raised or mined in the province of Ontario for a period of ten years from the date of the coming into force of this act, at the rate of one-half of one cent for every unit of metallic iron contained in every ton of such ore, in the manner following, that is to say:—

(a) on low grade iron ore when the same has been concentrated, treated or beneficiated in Ontario by mechanical means and delivered at any iron blast furnace or other works for the production of pig iron or steel and for use in the same;

(b) on iron ore in the natural or unbeneficated condition when delivered at any blast furnace or other works for the production of pig iron or steel in the province of Ontario, and for use in the same.

It would seem to me, Mr. Speaker, that it is the duty of the government to take this question in hand. The idea was that the federal government would pay an amount equal to the bounty provided by the provincial statute which I have just quoted, and so make it worth while for the industry to be developed.

Mr. RALSTON: Does the hon. gentleman happen to have the figures showing how much has been paid out under the Ontario act?

Mr. COWAN: I am sorry that I cannot give the figures.

Mr. SIMPSON: Nothing has been paid out yet.

Mr. COWAN: Now, as to the imposition of an import duty. It is apparent that the $242,000,000 which in 1926 was added to the value of iron and steel products by the manufacturing activities in Canada was gained chiefly by the fabrication and finishing of imported materials, and that the contribution of materials of Canadian origin is becoming smaller by degrees and beautifully less to an extent that, if continued a few years longer, will render any Canadian contribution nonexistent. I think, too, it has been fairly well established that the importation of these raw or semi-finished materials has been aided by the lowering or complete omission of import duties in the most important instances of usage; but it is not true, as has been stated, that this favouring of importations from outside—so far as the products of blast furnaces and rolling mills is concerned—is required because of the inability of Canadian plants to furnish them. The record of idle blast furnaces, of unemployed men, and of declining production of primary products within Canada, are sufficient proof to the contrary.

I am not wedded to either scheme, whether an import duty should be placed on raw materials coming in from the United States, whether a bounty should be paid whereby our own iron mines would be developed, or whether a bounty should be paid to our blast furnaces; but I do suspect that the free importation of raw material has conduced to the destruction of this industry.

Mr. RALSTON: Including coal?

Mr. COWAN: That brings up another phase of the subject. I understand this to be the fact, that the furnaces at Sydney, Hamilton and the Soo bring in American coal.

Mr. CANTLEY: Not Sydney.

Mr. COWAN: Well, the other two bring in American coal, on which they have a drawback of 99 per cent.

Mr. RALSTON: The hon. gentleman does not suggest that the drawback on coal used in the smelting and melting of metals causes injury so far as Ontario is concerned?

Mr. COWAN: I think my hon. friend is right, provided Canadian coal cannot be used; but if Canadian coal is adapted for that purpose, then without doubt it should be used, and the miners either in Alberta or Nova Scotia benefited to that extent.

Now it is impossible to develop these mines properly without the aid of capital. Some hon. members may believe that labour is the important feature. I am more interested in the immigration of capital than of labour at the present time. We see the curious spectacle of men of Canadian origin living in Canada using their money to develop industries in Mexico and South America and other foreign countries, when there are plenty of opportunities for the investment of their capital in Canadian industry. And in the getting in of capital that provides jobs for immigrants in pulp and paper and mining and power development, what we get is this: we get labour into industries which, unlike farming, are not seasonable industries. Mining has three eight-hour shifts a day and pulp and paper three, and for that reason there is a large quantity of work, but best of all, twelve months of the year round. Most of us know that if labour is going to keep the flour barrel full in the corner of the kitchen, it must have twelve months' employment. That is what the development of our natural resources does, and that is not saying anything detrimental to our wonderful farming industry. I believe if Canada, without losing one bushel of her wonderful western wheat crop, can continue to develop her mining industry, now more than half the annual value of the wheat crop; if she can continue to develop her pulp and paper industry, now more than half the annual value of the wheat crop, to the limit of the market to absorb that paper; if she can continue to develop her white coal that never goes on strike, then I say to you she is marching along the lines towards that destiny that these rich natural resources entitle her to among the nations of the world.

What would be the effect so far as the Canadian National Railways and the Canadian Pacific are concerned? As I stated a moment ago, the area to which I refer is that barren stretch extending along northern Ontario. In the United States, we find, forty per cent of the revenue derived by class A railway is obtained from the haulage of mineral products. That is a feature not to be overlooked in this country. Now, the Canadian National and the Canadian Pacific railways are our two largest single employers of labour. They also use a considerable quantity of coal. I believe that thirty per cent of the coal used in Canada is consumed by these two systems. I do not know this as a fact, but I sincerely trust that our Canadian railways are using Canadian coal wherever possible. As regards the Canadian National Railways, I must say that, so far as I have been able to observe in our community, the system is well managed. There has been development in that railway—something of which we are all glad: the esprit de corps among the employees and the desire to give good service to the public are commendable. There is evidently a desire on the part of the employees to have the system become a nation-making entity, binding east and west together. I do not know the president, but I understand that those in the service of the company, from the officers down, are endeavouring to give satisfactory service.

I do not intend to enlarge on the question of our immigration, but I am concerned about the conservation of our population. It is far better to provide jobs in Canada for those men whom we now have here rather than to seek, at great expenditure, to bring in people from the older lands and from continental Europe. It would be far better for us to develop our mining industries in this country with a view to providing employment for our own people, who would be paid in Canadian money and who would live in Canada.

Reverting to the question of capital, is it not capital going into this north country development which alone can widen out the thin red line along the two transcontinentals north of lake Superior, heretofore, a barrier between east and west? Is it not resources development in Alberta and British Columbia we require on the one side of the prairie and is it not resources development in north-eastern Saskatchewan and Manitoba on the other side of the prairie? Is it not more smelters and oil fields? Is it not more zinc development which exists in immense deposits in the Precambrian north of Saskatchewan and gold and copper in Manitoba, all allied with cheap power development? Is it not these we require to create home markets on the prairies and diversified industry, which embraces mining, farming and manufacturing? Is it not research benefiting both the farmer and the manufacturer? Is it not resources development that all Canadians can meet on common ground? Is it not, after all, the building of Canada basically level through these sound economic methods that will meet the complex needs of this, a complex age? It certainly is, sir, as surely as the needle points to the pole.

The policy of this or any other government in power should be to grapple with these difficulties and to consider the suggestions that have been put forward, and not a policy of evading the question and postponing consideration. We should have a general policy for the whole of Canada, a policy of activity to promote our national welfare, with zeal for imperial relations.

I want to refer to the act in regard to bounties in order to show that this is not a new system so far as Canada is concerned. In 1923 this parliament passed what is known as the Copper Bounties Act, which contains the following provision:

> The governor in council may authorize the payment out of the consolidated revenue fund of the following bounties on copper bars or rods manufactured in Canada and sold for consumption therein, from copper produced in Canada from ore mined in Canada, during the periods and at the rates following, that is to say:
>
> From the 12th day of May, 1923, to the 30th day of June 1924, both inclusive, one and one-half cents per pound.

I will not give the other dates; they vary from year to year. The last, however, are:

> From the 1st day of July 1927 to the 30th day of June 1928, both inclusive, one-half of one cent per pound.

It is to be observed in this connection that the provisions of the act will expire on the first day of July of this year. I do not quote the act for the purpose of suggesting whether it be continued or not, but I do believe that it has conduced to the building up of one of the largest smelters in British Columbia. I quote it simply to show that the principle is not new and that where it has been adopted it has proved of great service in the development of our mineral wealth. I trust, therefore, that these suggestions, which mean so much to that northern country and incidentally to the Dominion at large, will be adopted by this government. As I say, the system is not new, but even if it were new surely this government, which has displayed such a total lack of leadership in other things, might be induced to take up the question and deal with it at the present session.

New times demand new measures and new men.
The world advances and in time outgrows the laws which in our father's day seemed just.
And doubtless after us some purer schemes will be shaped out by men more wise than we,
Made wiser by the steady growth of truth.

Mr. A. B. THOMPSON (East Simcoe): The budget as brought down by the Minister of Finance (Mr. Robb) is to a large extent but a repetition of former budgets brought down by him, in that whilst no very radical change is made in the tariff it still pursues the old policy of tariff tinkering, hitting one industry here, hitting another there, and creating in the manufacturing world a feeling of unrest, dissatisfaction and instability. One of the manufacturers in my riding has written me that as a result of the tariff changes brought down by the Minister of Finance there will be a decrease in the spinning of worsted yarns in his plant of about 40 per cent, thereby throwing out of employment a certain number of men and women. In addition to that I believe when one industry is affected it hurts other industries, thus reducing the market for Canadian products. I make this statement, sir, that in the past few years this government has done absolutely nothing for the development of the manufacturing industries of our country.

In common with the other speakers who have preceded me on this side of the house I desire to express my regret that no provision has been made for the abolition of the sales tax within the calendar year. This tax falls equally upon the rich and the poor and is in defiance of that well known principle of taxation, that the taxes should be paid by those who have the ability and the means to pay them.

Having in my riding of East Simcoe the two important lake ports of Midland and Port McNicoll, I should like to bring to the attention of this government the opportunity which exists for the building up of great industries in that portion of the country which will mean increased freights for our railways, larger cargoes for our freight boats, employment for a large number of men, larger payrolls throughout the country and in addition the return to this country of many thousands of Canadians who have been forced to a foreign country to earn that livelihood which has been denied them in Canada.

In the Georgian bay district, until a few years ago the lumbering industry was large and flourishing, giving employment to many thousands of men, paying in wages hundreds of thousands of dollars and giving in its industrial centres a splendid market to the farmer for his products. But, sir, I regret to say that that industry is rapidly vanishing, and that places which a few years ago were centres of activity are to-day scenes of enforced idleness. If this government can bring about a change which will result in renewed activity in these and other districts similarly affected I consider it their duty to do so.

The remedy is so simple that one wonders at the delay in applying it; perhaps its very simplicity is the reason for this neglect. To-day, Mr. Speaker, Canada is a large contributor to the building up of Buffalo and other United States lake ports, to the detriment of the lake ports of our own country. Large flour mills and storage warehouses are being built in Buffalo, involving the expenditure of millions of dollars, and this industry largely owes its existence to Canadian wheat. If a national Canadian policy were adopted, all this activity would be carried on in the lake ports of our own country. To-day Buffalo is producing more flour than any other city in the world, and one-half the wheat received at that port comes from Canada. The United States imposes a duty of 42 cents per bushel on Canadian wheat; if Buffalo had to pay 42 cents per bushel on the wheat it gets from Canada that wheat would soon be turned back into Canadian channels, but the United States are very clever; they take great care in looking after the interests of their own people. The United States made an agreement with Buffalo and other lake ports permitting them to mill all the Canadian wheat they desired in bond, without paying a cent of duty so long as the flour was exported. Canadian wheat going through Buffalo is not dutiable if passed on to the seaboard for the purpose of export to foreign lands, but Buffalo and other United States cities may buy all the Canadian wheat they desire, manufacture it into flour and sell it abroad in competition with Canadian export flour. That is a splendid arrangement for the United States. The American duty prevents Canadian wheat from competing with American wheat but it does not prevent Canadian wheat, transformed into American flour, from competing with Canadian flour in the markets of the world.

What is the remedy? What means can we employ to keep Canadian wheat in our own country for transportation and for milling? The answer is simple; we should impose an export duty on that wheat, making it sufficiently high to protect our own industry. The United States duty against Canadian wheat is 42 cents a bushel, while our duty against American wheat is 12 cents a bushel.

Make the export duty 30 cents what will be the result? We shall have much more freight for our railways; larger cargoes for our vessels; an increased manufacture of flour in our mills; much more work for Canadians in our own country; increased payrolls and the retention in Canada for our farmers, live stock breeders and dairymen of the bran and shorts so much needed in these industries. It is estimated that during the last year Buffalo received 15,000,000 bushels of Canadian wheat for the purpose of milling in bond. Fifteen million bushels of wheat will produce 3,200,000 barrels of flour and 118,000 tons of offal, bran and shorts. The cost of converting wheat into flour, including overhead, is figured at 65 cents a barrel. Now 3,200,000 barrels at 65 cents per barrel amounts to $2,080,000, which represents the amount of wages paid to labour in the United States instead of in Canada. The loss to our railway companies in moving 15,000,000 bushels of wheat to Canadian mills and 3,200,000 barrels of flour to the seaboard is in excess of $1,500,000. Furthermore the sum lost through our transportation agencies not moving the 118,000 tons of bran and shorts referred to, would if distributed over Canada, represent a total of $675,000. If these products were shipped to the seaboard for export the earnings would represent some $550,000. The wheat milled in Buffalo is moved there from Port Arthur and Fort William, and no part of the product subsequently is carried by Canadian railways. A large part of our Canadian wheat instead of coming down to Midland and Port McNicoll for transhipment to our seaboard goes to Buffalo. That wheat is carried by United States boats and routed through American ports instead of Canadian ports, with the result that our railways lose a considerable amount of freight. Now, sir, if these advantages can be secured for Canada by the imposition of an export duty on our wheat, as I believe they can, surely we should not hesitate to adopt that policy. I trust, therefore, that the government will consider the advisability of imposing an export duty on wheat in view of the beneficial results which such a duty will bring to this country.

Before taking my seat I should like to say a word on behalf of the sailors who man the boats which carry grain from Fort William and Port Arthur to the southern lake ports. We all remember the loss of four fine freighters last fall with a sad loss of life in two cases. I have spoken with one of the officers of the wrecked ship Agawa, and as one listened to the tale of the hardships endured by the crews of these vessels and the daring resourcefulness they displayed in saving themselves from drowning or perishing from the cold, one could not but admire the courage and heroism of those men and be proud of them as true Canadians. I would appeal to the Minister of Marine and Fisheries (Mr. Cardin) to see to it that every possible means is taken to protect the lives of our sailors engaged in this hazardous occupation. In my opinion no work is so important as that. During the late fall the navigation of the great lakes is both difficult and dangerous—dangerous because of the storms that generally prevail in the late weeks of November and the early weeks of December, and difficult because the decks of vessels are covered with ice, the hatches are frozen down and the equipment largely disabled owing to ice conditions. On behalf of these men and their wives and children I would urge the minister to see that every possible precaution is taken by the establishment of life-saving stations, the installing of direction finders, and the adoption of other safeguards whereby the occupation of these men may be rendered less hazardous than it is at present.

Mr. J. A. FRASER (Cariboo): Mr. Speaker, I find myself in agreement with the statement of the majority of the speakers who have preceded me that there is not much virtue in the budget which has been submitted by the Minister of Finance (Mr. Robb). And by the way, the small amount of commendation which the budget is drawing from the free traders on the opposite side of the house, is, in my opinion, rather remarkable. What has become of the lambs from Saskatchewan during the present debate? Have we heard from any of them? Is it possible that they see their pre-election promises unfulfilled in this budget? What is the reason for the silence which prevails in that quarter of the house? I should like to see some members from Saskatchewan answer the question

Now while I see no ray of hope in this budget for the improvement of labour conditions in Canada, there is one industry which affords cause for a good deal of satisfaction. I refer to the mining industry. This industry is receiving more consideration from year to year, and I am pleased to say that it shows some degree of progress. For instance we find that the production of the mining industry in 1926 amounted to $240,437,000, as against a total production in 1927 of $241,773,000, or an increase in mineral production of 1½ million dollars. The industry, I am told, employs in the neighbourhood of 83,600

people throughout the Dominion, and it is very satisfactory to see it in such a flourishing condition as the figures disclose. During the past year high records have been achieved in the production of several of the most important minerals which are found in Canada. That high production applies to gold, copper, lead, zinc, cement, gypsum, lime, natural gas and petroleum. In copper we have produced 140,000,000 pounds, of which the province of British Columbia produced 92,000,000 pounds. The production of gold has increased from $36,250,000 to $37,750,000; and lead from 283,000,000 pounds to 308,000,000 pounds; zinc from 150,000,000 pounds to 160,000,000 pounds. Now that is a very satisfactory state of affairs, but I give no credit to the present government for this heightened production or these improved conditions in the mining industry, for the reason that the industry is not under the direction of the federal government at all. The provincial government are responsible for all effort in regard to the production of minerals; they have to take in hand and lead this industry step by step, and the industry gets practically no assistance from the federal government. As a matter of fact this government spends $1.60 out of every $1,000 of total expenditure. How does a government expect to get credit for a condition of affairs of that kind? It would be a pretty good proposition for this government to consider a policy of bonusing an industry so important as the mining industry. If they would take into consideration a proposition to give to each province a bonus of one per cent of the total production of minerals in that particular province, they would be doing something for the mining industry. At the present time I see them doing nothing. Their efforts are not responsible for increasing the production in the mining industry. A government which is spending only $1.60 of its revenue out of every $1,000 that is spent is not doing very much to help it.

I want to take up another angle of the matter. So far I have been speaking of the primary industry of mining, but there is a very important industry which follows the primary industry and that is the secondary or manufacturing industry in all its branches. That covers a very wide field touching many different industries and people. It is an industry which should be giving a great deal more occupation to the Canadian people than it is doing at the present time and one which, if the government would establish a proper policy, would no doubt quickly respond to intelligent treatment. Let me point out to the house for a few minutes the relation that the mineral manufacturing industry has to the trade of this country. I find that our trade returns comprise nine main classes under which our total trade falls, and the mining industry occupies three of those classes: First, iron and its products; second, non-ferrous metals and, third, non-metallic minerals. I want to give the house an outline of this industry as it relates to our trade covering the two years 1926 and 1927. The figures of our imports of iron and its products are as follows:

Year	Imports
1926	$217,480,000
1927	247,840,000

An increase of $30,360,000, or 14.4 per cent. Mark you, Mr. Speaker, that a very large proportion of the value of these imports is accounted for in articles of iron and steel which have been manufactured outside of this country and imported. These are the figures for the non-ferrous metals:

Year	Imports
1926	$50,105,000
1927	59,074,000

Or an increase of 17.8 per cent. These are the figures for the non-metallic minerals:

Year	Imports
1926	$151,952,000
1927	158,414,000

Or an increase of 5 per cent. The totals for these three classes are as follows:

Year	Imports
1926	$418,537,000
1927	465,329,000

Or an increase of $46,791,000, or 11.1 per cent in the three classes. Let us turn now to the exports under the same headings. These are accounted for mainly by our raw materials which we are digging up out of our mines and sending out of the country. The figures are as follows:

	Year	Exports
Iron and its products	1926	$76,587,000
	1927	70,146,000
Non-ferrous metals	1926	85,182,000
	1927	85,021,000

A very small decrease of $161,000, or 2 per cent.

	Year	Exports
Non-metallic minerals	1926	$26,313,60[illegible]
	1927	27,171,528

Or an increase of $857,926, or 3.1 per cent, the only class of our exports showing an increase. Note the tendency: Imports all on the increase; exports, except one item, on the decrease. We are importing manufactured articles at an increasing rate and exporting our raw materials at a decreasing rate. Our total mineral imports increased $46,791,000 while our exports decreased $5,421,000, leaving

a difference to be made up in other trades or by money sent out of this country to the amount of $52,213,000. Our total mineral imports for 1927 amounted to $465,329,000 and our exports to $183,339,000 leaving a balance of about $282,989,000 to be made up by the exportation of other articles or the sending of cash out of the country. Thus there is in the mining and manufacturing industry of Canada a difference by way of an adverse trade balance of about $283,000,000 which has to be made up by the exportation of products of some other kind, or by money sent out of the country to pay the bills for goods which we have imported, goods which might have been fabricated out of all these minerals by our people instead of the raw materials being sent out of the country to be manufactured and then re-imported for the use of our people. That state of affairs is not satisfactory to this country. Our mineral trade is not giving Canada the stimulus it should be giving to it. Two years ago when I pointed out this situation on the floor of this house for the first time, the difference between exports and imports was about $150,000,000 of an adverse trade, and now, two short years afterwards, that adverse trade has grown to $283,000,000. That is an alarming increase of an adverse balance of trade which should be looked after by this government. While I am alarmed at this state of affairs, it seems to me I am not the only person in Canada who has noticed this trend of events, because I find that the Minister of Trade and Commerce (Mr. Malcolm) must have been hearing whisperings in the mulberry leaves or someone had been pointing out to him this trend of events, because he apparently armed himself with an array of statistics and proceeded to the centre of industrial activity in this country, the city of Toronto where he endeavoured to explain to the board of trade, to his own satisfaction and to theirs, that there was nothing very dangerous in this trend of increasing imports and decreasing exports. I find the speech reported in the Toronto Saturday Night of December 31st last, and I would recommend hon. members to read it, for it is both readable and very instructive. After a considerable discussion of questions upon which I am not going to touch he proceeds to point out that the increase in our imports during the last year amounted to $87,000,000, and then he goes on to explain away that nobody should be alarmed about this condition of affairs.

In the first place he points out that $30,000,000 of this amount is accounted for under the heading of iron and its products. I have already touched upon that, and my figure was $30,360,000. But taking his $30,000,000, that leaves $57,000,000 still to be accounted for. I am not going to analyze very closely that remaining $57,000,000. I am taking his statement that it is made up very largely of luxury imports—imported by a prosperous people, remember—and raw materials. In fact, he speaks of our imports of raw materials increasing over the year before by $25,500,000. The Minister of Finance presented the same idea to this country when he delivered his budget speech in 1927, for, it may be remembered that, in explanation of the large increase in importations, he said in his cryptic way, "A busy Canada requires increasing quantities of raw products for its factories." The Minister of Trade and Commerce agrees with the Minister of Finance, and he indicates to the people of Canada that it is these raw materials that are required by our factories that account for so large a proportion of our increased imports.

The Minister of Trade and Commerce then goes on to point out that $9,000,000 is made up of increasing imports of beverages, and $11,000,000 by fruits and vegetables, making $20,000,000 under those two heads. I have not had time to go into that very carefully, but I would advise hon. members who are interested to examine it closely before accepting that as the final word to be said on the matter.

As I say, the Minister of Trade and Commerce claimed that $25,500,000 was accounted for by increasing imports of raw materials. That statement is scarcely in accordance with the facts, because I find that in support of it the minister says in the first place, that the imports of cane sugar account for an increase of $7,000,000. Now, to start with, there is no such item in the trade returns as cane sugar, but I find from the trade returns that there is an increase in the total sugar importation of $7,000,000. But a lot of manufactured articles enter into that $7,000,000 of imports. The raw sugar imported, which of course, is the only raw material in this case, increased by only $4,000,000. So he falls down there $3,000,000 in his analysis of the increase in imports, because it is not $7,000,000 of raw sugar, but only $4,000,000 of an increase.

He then goes on to say that there has been an increase in the imports of undressed fur of $2,500,000. I am not going to question that except to say that I have had considerable experience in the raw fur trade myself. The exports of raw fur have increased from $18,000,000 to $23,000,000, but I maintain that that increase is accounted for by the value of

the fur, not by an increase in quantity. I know perfectly well from my connection with that trade that there was a substantial increase in the value of all furs during that time, so the minister's explanation of that $2,500,000 increase in regard to furs does not amount to very much.

Coming back to the question of sugar, I have admitted that $4,000,000 more of raw sugar was imported into this country than during the previous year, while the minister claims an increase of $7,000,000. Notwithstanding the fact that there is an increase in value of $4,000,000, what do we find when we look at the quantities of sugar that have been imported? In 1926 we imported 11,275,929 hundred-weight of sugar; in 1927, 9,836,667 hundredweight, or a decrease of 1,439,322 hundredweight. I submit with all deference that a decrease in the quantity of the raw material imported is of much more importance to this country than an increase in the value of the raw material imported, and confirmatory of that, when you turn to the exports of raw sugar, what do you find? They absolutely confirm the opinion that would be drawn from these figures, that the sugar industry was not as properous as it was the preceding year. We find that the exports of sugar have been reduced from 2,878,732 hundredweight in 1926 to 2,074,729 hundredweight, or a decrease of 804,003 hundredweight, or 30 per cent.

Another industry which uses a large amount of raw material is the cotton industry. We imported in 1926, 137,500,000 pounds, and in 1927, 133,500,000 pounds, or a decrease of 4,000,000 pounds in one year. On the other hand, when you look at our imports of the manufactured article, you find exactly the reverse condition obtaining; that is, the importations of cotton yarns have been increasing in quantity, as follows:

Cottons				
Imports		1926	1927	Increase
Cotton yarns	Lbs.	3,212,000	3,695,000	485,000
Cotton fabrics (bleached)	yards	9,682,000	10,800,000	1,180,000
Cotton fabrics (dyed)	yards	39,140,000	42,672,000	3,352,000
Wearing apparel		$2,314,000	$2,372,000	Increase $58,000
Fabrics printed	yards	9,244,000	9,213,000	Decrease 31,000 (or ⅓ of 1%)

On the other hand, our exports of the same material decreased from $871,000 to $735,000, or a decrease of $136,000.

The total amount of flax, hemp and jute imported in 1926 was $15,932,000; in 1927, $14,694,000, or a decrease of $1,238,000. On the other hand, jute cloth and canvas, which are the manufactured articles from those raw materials, were imported to the extent of 89,813,000 yards in 1926 and 97,660,000 yards in 1927, or an increase over the importations in 1926 of 7,847,000 yards. But the exports of our flax fibre have dropped from 8,470 hundredweights in 1926 to 3,670 hundredweights, in 1927, or a decrease of 4,800 hundredweights—practically cut in two.

Then let me direct attention to our woollen industry—an industry which a number of hon. members have already dealt with in this debate. I find that our imports of raw wool in 1927 had decreased by 1,102,000 pounds, while our imports of woollen yarns had increased 351,000 pounds. Our importations of carpets and rugs increased 672,000 square yards; tweeds 36,000 square yards; worsteds and suitings, 321,500 square yards. In this schedule we have one item the imports of which have decreased by 57,000 square yards—I refer to dress goods to be dyed. Our exports of raw wool have risen from 4,791,000 pounds in 1926 to 11,178,000 pounds in 1927, or an increase of 6,387,000 pounds. It will be noticed that we have a decrease in our imports and an increase in our exports of raw wool. Does that look as if our woollen industry was expanding in the same ratio as our production of wool? I should think not.

Now, I have pointed out that our raw sugar imports for manufacture have decreased by 1,439,000 hundredweights, raw cotton by 4,000,000 pounds, flax, hemp and jute by $1,300,000, and raw wool by 1,200,000 pounds. I ask hon. members: Can they not see these home industries expanding? Can they not see the smoke stacks multiplying throughout the land? Can they not see the development of power to keep pace with our expanding industry? I submit that our industries show in every single instance a decrease in importations of raw material and an increase in importations of the finished article. That is the trend throughout all the schedules I have dealt with.

It is the trend of business throughout the whole Dominion as far as I have been able to discover.

Having taken the minister's bubble of increasing imports of raw materials and burst it, I want now to deal with his attempted explanation of the increase of $30,000,000 in the importation of iron and its products. In this connection let me read from the article in Saturday Night to which I have just referred, in so far as it pertains to his explanation and his attempt to convince our people how little they should be alarmed about this importation. Here it is:

> The remaining issue is that of the importation of industrial equipment, an issue intimately bound up with the increase of 30 million dollars in the imports of iron and its products. In a community like Canada it is of the utmost importance that iron and its products, the chief articles of industrial equipment, should be available as freely and as quickly as possible. In view of our great variety of manufacturing industries and the manifold types of machinery which they use as their industrial equipment, it is impossible to expect that all this varied machinery should be produced within the country in the early stages of its development.
>
> Conceivably many industries might be compelled to use equipment made in Canada, but the desirability of enabling the producers of this country to secure their machinery at the lowest possible cost has been recognized by many governments. In 1918 the then government placed low-priced farm tractors on the free list.

That is, if you steal a sheep I can do the same.

> The present government since its formation has lowered the duty on agricultural implements, many other implements of production and motor cars. This importation of machinery and industrial equipment on easy terms is of enormous advantage to the bulk of our producers and has been shown to be so by the general prosperity which has followed, the adoption of this policy, as is reflected in the financial standing of the industries affected in each case.

Will those hon. members who are particularly interested in our iron and steel industry please listen to this:

> Are we now to delay or to retard the accelerating industrial expansion of the Dominion by discouraging the importation of industrial equipment, when there is scarcely a large manufacturer in Canada who is not using equipment of such a specialized character that it would be impossible to produce it for our limited demand except at prohibitive cost? Far from it; the great increase in our imports of iron and its products will be the source of increased production in the near future, and to check it would be disastrous.

And again I ask hon. members who are interested in the iron and steel industry to note the minister's words:

> There is enough demand in Canada at present for articles of iron and steel to keep our existing domestic plants busy so that our additional demands must need be imported from other countries.

Now, let me take that up seriatim.

> In a community like Canada it is of the utmost importance that iron and its products, the chief articles of industrial equipment, should be available as freely and as quickly as possible.

Well, why not encourage our people to provide them as freely and quickly as possible? When we required these things in the pressing time of war whom did we turn to? Did we bring these commodities in, or did we turn our own people loose to manufacture them? I submit that a policy which is good in war time is easily adaptable to peace time. Then the hon. minister proceeds:

> In view of the great variety of manufacturing industries and the manifold types of machinery which they use as their industrial equipment, it is impossible to expect that all this varied machinery should be produced within the country in the early stages of its development.

I want to ask the hon. minister if we are really in the early stages of our development. I thought that we have had the national policy for fifty years, and that it had given a pretty good account of itself during our expansive period in the eighties, again from 1900 to 1910, and again during the war years. Did we not find it pretty handy to have this iron and steel industry in the years between 1913 and 1918? Did we not find it good business to turn to our own people to provide these products for us. Why not turn to them now? The hon. minister the other day admitted on the floor of this house that after all our own people are the best on earth to do business with. This being so, I should like to know why he does not give them an opportunity to earn their living in their native country instead of importing this machinery because, as he suggests, "We are in the early stages of our development." And then he continues:

> In 1918 the then government placed low-priced farm tractors on the free list.

Of course, it was not this government, it was the other government. Well, that is quite true, I believe a certain class of farm tractors was put on the free list by that government in 1918, and very likely for it they got the support of our free trade friends. But what has been the result? It is strange, Mr. Speaker, how the chickens come home to roost. Only two or three days ago I noticed in the press an article telling us that a trainload of fifty-three cars of farm tractors was being hauled to the prairie provinces. From where? From the works of the International Harvester Company in Chicago, if you please. Now, farm

tractors are required for the development of this country, and that being so, why not encourage our own people to build these tractors in Canada? Then he goes on:

> The present government since its formation has lowered the duty on agricultural implements.

Yes, this government has reduced the duty on farm machinery—with what result? Our imports of farm implements in 1926 were $17,325,000 and in 1927 $25,782,000, or an increase of $8,457,000. That is to say, the increase in our imports in that period amounted to 48 per cent. What about exports, on the other hand? In 1926 our exports of farm implements totalled $17,318,700, whereas in 1927 they amounted to $16,701,500, or a decrease of $617,200—that is to say, 3½ per cent. Here again we have an increase in imports of manufactured articles and a decrease in business when we attempt to sell these things abroad. Where is our agricultural implement business going to? Then take motor cars. It would make one weep, Mr. Speaker, to look into our motor car business and examine the returns of our imports and exports issued by this same Minister of Trade and Commerce. Let us take vehicles, for example. In 1926 we imported vehicles to the extent of $54,038,000—surely enough. That ought to be enough of imports of vehicles, embracing almost entirely motor cars. But apparently the government did not think these imports were large enough, and so we find in 1927 that they had increased to $65,431,000, or an increase of $11,392,000, or 21 per cent. And what do we find in the matter of exports so far as vehicles are concerned? In 1926 our exports of vehicles amounted to $39,430,000 whereas in 1927 they had declined to $33,758,000, a decrease of $5,672,000, or 16 per cent. In imports we find an increase of 21 per cent and in exports a decrease of 16 per cent. Surely that is providing work for the people of this country.

The writer of the article from which I have been quoting goes on to say:

> There is enough demand in Canada at present for articles of iron and steel to keep our existing domestic plants busy so that our additional demands must need be imported from other countries.

Well, that is the final blow to the industry. There we have a straight-cut declaration of policy on the part of the government, a positive intimation that they have absolutely no consideration for the iron and steel industry of this country. We must get our supplies from outside because we are not capable of producing them here. That is an unequivocal indication of the intention of the government to destroy the iron and steel industry in all its branches, lock, stock and barrel. Hon. gentlemen from the maritimes and from Ontario who are asking for more protection for iron and steel so that the industry may be built up in order to provide work for the people of this country may just as well kiss the business good-bye and forget all about it until we get a new government, one upon whom we can count.

The Minister of Agriculture (Mr. Motherwell) is taking a hand in this affair also.

Mr. MOTHERWELL: Just looking on.

Mr. FRASER: He gets excited about imports and exports; once in a while he is much exercised in this regard. An important delegation from the National Dairy Council of Saskatchewan a short time ago presented to him certain facts in regard to the cream and butter industry, and now I am giving him information concerning other industries. All these industries are going in the same direction; they are all going to the bow-wows on account of this government's policy. The Minister of Agriculture, good natured soul that he is, came to Ottawa after they had made this declaration, and when he realized that the dairymen were alarmed at the state of the industry, he poured oil upon the troubled waters by giving these people exactly the same assurance as the Minister of Trade and Commerce has been giving to the people of Toronto: "Don't be afraid. Our imports are increasing and our exports decreasing, it is true, but all is well with the industry." Yes, all will be well with the industry when the government succeeds in having the whole business transferred across the line to the other side. In the last two years the Minister of Agriculture has altered the basis of this industry from an export of 24,000,000 pounds to an import this year of 10,000,000 pounds.

And the same thing is true in regard to any other business you like to mention. Let us take boots and shoes, for example. In 1926 we imported 802,744 pairs as compared with 805,532 pairs in 1927, or an increase of 2,788; while our exports have dropped from 110,534 pairs in 1926 to 87,634 pairs in 1927, or a decrease of 22,900 pairs.

In the matter of fish, our imports in 1926 totalled $2,376,800 and in 1927, $2,995,500, or an increase of $618,700; and our exports of fish declined from $35,984,000 in 1926 to $33,109,000 in 1927, or a decrease of $2,875,000. Apparently there is no end to the trend of events which all point to the total disappearance of industry from this country. Is it any

wonder that there is an exodus of people from Canada and that we are looking for immigrants to take the place of the capable citizens we are losing?

Let me give you the figures relating to wood products. In 1926 our imports were $9,335,947 and in 1927 $10,571,878, or an increase of $1,235,931: that is to say, 13 per cent. And so far as exports of wood products are concerned, there has been a decline from $54,174,989 in 1926 to $48,817,326 in 1927, a decrease of $5,357,663, or 10 per cent.

Then we have the fruit industry; exactly the same state of affairs exists in this business. Our imports of fruits in 1926 totalled $29,550,000 and in 1927, $32,820,000, an increase of $3,270,000, or 11 per cent; while our exports in 1926 amounted to $8,512,000 as compared with $5,539,000 in 1927, a decrease of $2,973,000, or 34 per cent.

The same thing is true of butter, which I mentioned a few minutes ago. And as regards cheese, our imports have increased 48 per cent. Those who are interested in the dairy industry will note that fact—an increase of 48 per cent in our imports of cheese, notwithstanding the fact that this country used to be the leading cheese producer in the world. It will take just one year more of this government's administration to wipe out the industry, and there will be no cheese factories left. But while there has been an increase of 48 per cent in our imports of cheese, our exports of the same commodity have declined by 15.9 per cent. The same thing is true, again, of eggs: our imports have increased by 7 per cent while there has been a decrease in exports of 148 per cent. Is it any wonder at all that the people of this country are getting tired of the present government? How long will it take the government to put Canadians out of business entirely and force them to cross the line, whether they want to go or not?

I have almost finished, Mr. Speaker. I believe I have two minutes left and in that time I will try to discuss a more pleasing subject, one which the government probably would rather listen to. I want to call their attention to conditions in the Peace River country. There is no denying the fact that in the Peace River district there is presented a great opportunity to bring in a population which would very rapidly enhance the prosperity of that part of the Dominion, because we have there a very fertile and productive territory.

[Mr. Fraser.]

Mr. SPEAKER: The hon. member's time is up.

On motion of Mr. Glen the debate was adjourned.

On motion of Mr. Lapointe the house adjourned at 10.30 p.m.

Monday, March 5, 1928

The house met at three o'clock.

DEPARTMENT OF NATIONAL REVENUE

AUDITORS REPORT ON REORGANIZATION

Hon. ERNEST LAPOINTE (Minister of Justice) moved:

That 400 copies in English and 200 copies in French of the report of Messrs. Clarkson, Gordon & Dilworth respecting the reorganization of the Department of National Revenue be printed forthwith, and that standing order 64 be suspended in relation thereto.

Motion agreed to.

PEACE RIVER RAILWAY OUTLET

Hon. CHARLES A. DUNNING (Minister of Railways): A week or two ago the hon. member for Peace River (Mr. Kennedy), asked whether I could table a copy of the engineers' report upon the Peace River pass as a possible western outlet from the Peace River country. I have obtained a copy of the report and table it herewith.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

WAREHOUSE AT CRIBBINS POINT

Mr. BELL (St. John):

1. Is there a warehouse at Cribbins Point, Antigonish county, Nova Scotia, owned by the Public Works Department?
2. If so, what was the cost of said building?
3. How much was spent for repairs on said building during the years 1925, 1926, 1927?
4. For what purpose was this building intended?
5. Is the department now receiving a rental for said building, and, if so, how much?
6. What is the name of party now using said building, and what rental is paid by him, if any?
7. Have the fishermen of this district access to and part use of the building?
8. If so, on what conditions?

Mr. ELLIOTT:

1. No.

2 to 8. Answered by No. 1.

BOARD OF GRAIN COMMISSIONERS

Mr. COOTE:

What was the revenue and expenditure of the board of grain commissioners in connection with the inspection and weighing of grain during each of the last three crop years?

Mr. MALCOLM:

Revenue: 1925, $1,304,145.66; 1926, $1,745,-189.38; 1927, $1,631,181.45.

Expenditure: 1925, $1,069,379.56; 1926, $1,275,-068.56; 1927, $1,637,594.46.

MR. D. B. HANNA

Mr. HEAPS:

1. Does Mr. D. B. Hanna draw any pension through the Department of Railways and Canals?
2. If so, what is the amount?

Mr. DUNNING:

1. No.
2. Answered by No. 1.

BREAKWATER AT RUSTICO

Mr. MACDONALD (Kings):

1. Has a contract been let for repairs to the breakwater at Rustico, Prince Edward Island?
2. What is the nature of the work undertaken, and the amount of said contract?
3. What are the names of all tenderers in connection with this work, and the amount of each respective tender?

Mr. ELLIOTT:

1. Yes.
2. (a) The rebuilding of the outer portion of the breakwater for a length of 280 feet immediately inward of the outer block, and a width of 21 feet, and also the reconstruction of the headblock. (b) Approximately $21,584 (unit prices).
3. Andrew Martin, Bloomfield, P.E.I., $21,-584 (unit prices); Farley and Grant, Ottawa, Ont. $22,643 (unit prices); Everett McLeod & Duncan MacKenzie, French River, P.E.I., $22,767.50 (unit prices); Henry James Phillips, Charlottetown, P.E.I., $28,446.50 (unit prices).

CANADIAN NATIONAL RAILWAYS—CASH ADVANCES

Mr. STEWART (Leeds):

1. What is the amount of cash advanced (exclusive of guarantees) to the Canadian National Railways by the Dominion of Canada in each of the fiscal years 1925-26, 1926-27, and 1927-28 (to date)?
2. What is the amount of securities issued by the Canadian National Railways and guaranteed by the Dominion of Canada in each of said fiscal years?
3. What is the amount of unguaranteed securities issued by the Canadian National Railways in each of said fiscal years?

Mr. DUNNING:

1. Government Loans: 1925-26, $10,000,000; 1926-27, $10,000,000; 1927-28, —
2. Guaranteed securities: 1925-26, —; 1926-27, $34,879,252.86*; 1927-28, $65,000,000.
3. Unguaranteed securities: 1925-26,—; 1926-27,—; 1927-28, $18,396,000.

*By Act 17, George V, chap. 7, an issue of Canadian National Railway Company 1927 guaranteed debenture stock carrying the guarantee of the Dominion, of date March 21, 1927, was issued in exchange for Grand Trunk Pacific perpetual 4 per cent debenture stock, par value £7,176,801.

MAILS BETWEEN TRACADIE AND CHATHAM

Mr. HANSON:

1. When will the present contract for the carriage of His Majesty's mails between Tracadie and Chatham, New Brunswick, terminate?
2. Who is the present contractor, and what is his remuneration per annum?
3. Has the present contract been renewed without asking for new tenders?
4. If so, on whose authority and for what reason?
5. Is it a fact that a responsible resident of Tracadie, New Brunswick, is willing to enter into a firm contract for the performance of this mail service at a figure $400 per annum less than paid to the present contractor?
6. Will the Post Office Department give assurances that this contract will be put up to public tender before being renewed?
7. If not, why?

Mr. VENIOT:

1. 30 June, 1932.
2. Euchariste Arseneau, $4,800.
3. Yes.
4. The Postmaster General authorized a renewal on existing terms and conditions. This contractor has been reported as efficient, the service adequate and the cost reasonable.
5. The Post Office Department has no information to this effect.
6 and 7. See answer to No. 4.

QUESTIONS PASSED AS ORDERS FOR RETURNS

IMMIGRANTS IN 1927

Mr. EVANS:

1. How many immigrants came into Canada during the year ending December 31, 1927?
2. Of what nationality were these comprised?
3. To what occupation did they go?
4. What religious denominations did they claim?
5. How many people went from Canada to the United States other than tourists?
6. How many returned to Canada other than tourists?

7. How many of the immigrants of 1926 are settled on farms: (a) for themselves; (b) as hired men and women?

8. What was the total cost of the Immigration department during the year ending 1927?

MAIL ROUTES IN COLCHESTER

Mr. MacNUTT:

1. How many mail carrier routes are now maintained in the county of Colchester?
2. What points do these cover?
3. What is the mileage of each?
4. What is the name of contractor?
5. Are these daily, bi-weekly, or tri-weekly for each route?
6. What is the remuneration paid for each route?
7. What is the average cost per mile where one-horse conveyance is used?
8. What is the average cost per mile where two-horse or motor conveyance is used?

FAMILIES FROM GREAT BRITAIN

Mr. ROSS (Kingston):

1. How many families have been admitted to Canada under the policy to bring 3,000 families from Great Britain to Canada?
2. When was this policy inaugurated?
3. How many persons from the Hebrides Islands were settled in Alberta under government policy or approval?
4. How many of those persons are now in residence in Alberta?
5. Where have the other persons removed to and for what reason?

UNOPPOSED MOTION FOR PAPERS

L. L. BASSHAM

Mr. CAMPBELL:

For a copy of all correspondence, letters, and other documents in connection with the dismissal of L. L. Bassham from the position of postmaster at Annette, Saskatchewan, and similar papers in connection with the appointment of his successor.

ESTIMATES OF DEPARTMENT OF AGRICULTURE

On the orders of the day:

Mr. ROBERT GARDINER (Acadia): When the agricultural estimates were before the committee of the whole a few days ago items 44 and 46 were allowed to stand over. May I ask the Minister of Agriculture (Mr. Motherwell) whether it would be possible for him to have printed for the information of members, the various items that go to make up these particular two?

Hon. W. R. MOTHERWELL (Minister of Agriculture): I will look into the request and see what it involves.

[Mr. Evans.]

AIRPLANE FACILITIES AT VANCOUVER

Mr. L. J. LADNER (South Vancouver): I wish to ask the government whether I am warranted in expressing felicitations to them on their decision to establish at or near Vancouver, facilities, similar to those at Montreal, for the landing of airplanes, seaplanes and dirigibles.

Hon. J. L. RALSTON (Minister of National Defence): Is the hon. gentleman asking whether plans are being made to establish a landing place?

Mr. LADNER: The question is whether plans are being considered or whether any decision has been arrived at to establish at or near Vancouver the facilities I have mentioned.

Mr. RALSTON: No.

Mr. LAPOINTE: He doesn't deserve felicitations.

PRIVILEGE—MR. CAMPBELL

On the orders of the day:

Mr. M. N. CAMPBELL (Mackenzie): I find in Hansard of March 2, the following reference to myself made by the hon. member for West Elgin (Mr. Hepburn):

> In the session of 1926 his voice was raised in righteous indignation in protesting against the Moses Asiz case where a stay of prison sentence was granted allowing a man to start a jail sentence in the fall instead of in the spring. . . . . At the time the hon. member for Mackenzie was censuring the government for its actions in this regard he too had successfully pleaded with the department for a stay of jail sentence for a bootlegger regularly convicted in his own riding.

The hon. member is possessed of a very vivid imagination and in this instance he used it to the limit. I have never at any time, either in this house or out of it, either publicly or privately, criticized the then Minister of Customs, the Hon. Mr. Boivin, or any other member of the governmenet in connection with the Moses Asiz case. Indeed, sir, if one will refer to my remarks at page 5015 of Hansard of June 25, 1926, it will be found that I made myself very clear with respect to the government. I pointed out that if there were no more charges against the government than those against the then Minister of Customs, the late Hon. Mr. Boivin, I should be prepared to vote confidence in the administration. I made no reference either then or at any other time to the Moses Asiz case. Further, may I point out that the farmer, on whose behalf I pleaded with the Clemency branch of the Department

of Justice for time to get his crop in and pay the fine, was not even charged with the crime of bootlegging; his was a very minor offence. The hon. member goes further and makes some reference to a case now before the courts of the land. I will not repeat the impropriety of which he was guilty, and discuss the merits of that case in this house at the present time further than to say this, that when the matter has been publicly discussed and all the facts are known it will be found that these facts will reflect serious discredit on the party to which the hon. member belongs.

THE BUDGET

DEBATE ON ANNUAL FINANCIAL STATEMENT OF MINISTER OF FINANCE

The house resumed from Friday, March 2, consideration of the motion of Hon. J. A. Robb, (Minister of Finance), that Mr. Speaker do now leave the chair for the house to go into committee of ways and means, the proposed amendment thereto of Mr. Cahan, and the amendment to the amendment of Mr. Fansher (East Lambton).

Mr. J. A. GLEN (Marquette): I am quite sure that the Minister of Finance (Mr. Robb) will expect no bouquets from me to-day for the proposals contained in his budget speech, but that need not prevent me from extending to him my sincere sympathy in the discharge of the high duties of his office. He is a somewhat paradoxical gentleman, and as he sits and listens to criticisms of his budget speech he must come to the conclusion that he is of all members of the house the despoiler and the destroyer of our economic system. Yet it is a peculiar and remarkable thing that of all the members of this house there is none more trusted and more fully respected; he is certainly one of the greatest assets of this government to-day.

I propose to address myself more particularly to the two amendments which have been moved, the first by the hon. member for St. Lawrence-St. George (Mr. Cahan) which is as follows:

> This house regrets that the measures proposed by the government do not tend to provide increased employment in Canada, nor to induce the return of Canadians to their native land, nor to prevent the continued emigration of our people to the United States; and that they make no provisions for the preservation of our domestic markets for Canadian farm and dairy products, nor for the effective development of the natural resources of the country, nor for the abolition of the sales tax by the 1st of January, 1929—

It will be noted that the hon. member makes no reference to the reduction in the rate of income tax. He stated at the beginning of his speech that his was—

> . . . . the task of replying to that address and of setting forth as best I can the views and policy of the Conservative party in this house and in the country on the several matters enunciated by the Minister of Finance . . . .

In the course of his speech the hon. member made some slight and casual references to the income tax, in one of which he admitted that the reductions in the income and sales taxes were reductions of special war taxes, and from the lack of comment on these reductions in the amendment I assume, as this house is entitled to assume, that the Conservative party are in favour of the reductions proposed. I intend to deal with that proposal later on, in its proper place. By this amendment the hon. member deplores the fact that the proposed measures do not tend to promote increased employment in Canada, to induce the return of Canadians to this country or to prevent the emigration of our people and I assume from the phraseology employed that this is intended to cover three major proposals, the latter two of which are related and should really form one.

I have carefully read the speech of the hon. gentleman in order to ascertain the remedies proposed by his party to overcome these defects, and so far as I can ascertain he proposes to meet these difficulties by the application of certain principles which he enunciated in the course of his speech, and which will be found in Hansard of Monday, February 20. I have not time to read these nor do I think it necessary to deal with them seriatim; they are couched in the usual form of convention resolutions dealing with matters of policy. They are broad enough to cover the Dominon of Canada; they are wide enough to embrace every body, political, religious and social, and they are deep enough to justify their application by any party in whatever way is found most convenient. Unfortunately for the hon. gentleman, however, they were framed in a setting which portrayed a picture entirely different from that conveyed by their verbiage; I think there was no necessity for so many words, because I am satisfied that one word alone would have conveyed the whole meaning, and that word is "protection." If that is not the meaning of the resolutions, and if that is not the method by which the unemployment and the immigration problems are to be settled, then the hon. gentleman has missed the import of all the speeches made from his side of the house.

With that principle I do not agree, nor do those who sit around me. Consider paragraph 4 of these principles, which is as follows:

The stabilization in Canada of the costs of living and the costs of implements of production on such comparatively low bases as will enable our people, in producing and selling our surplus of national products abroad, to compete advantageously with the products of foreign countries in our common markets abroad.

That is exactly what we in the west have been striving for during many years, and we have found that to be contrary to the policies adopted by the party to which the hon. gentleman belongs. The west has advocated free trade on those articles which comprise the essentials of living and the means of production, at the same time not denying to the east the same advantages. So far as I know, no one denies the east the advantage of free trade; no one wishes to deprive the manufacturers of their right to the raw material which enters into their finished product.

Let me quote a few examples to show how the manufacturers have made use of this principle. You will find that they are entitled to a drawback of 99 per cent on rolled iron, rolled steel and pig iron when used in the manufacture of mowing machines, reapers, harvesters, binders and attachments for binders. They are also entitled to a drawback of 99 per cent on steel used in the manufacture of cutlery, files, augers, auger bits, bit braces, hammers, axes, hatchets, scythes, reaping hooks, hoes, hay or straw knives, agricultural forks, hand rakes, skates, stove trimmings, bicycle chains and windmills. Manufacturers who import malleable iron castings or steel shafting for use exclusively in the manufacture of mowing machines, harvesters, self binding or without binders, binding attachments, reapers and complete parts thereof, cultivators, harrows, horse rakes, seed drills, manure spreaders, weeders and complete parts thereof, ploughs and complete parts thereof, wind stackers and threshing machine separators including baggers, weighers and self feeders therefor and complete parts thereof, spraying machines, fruit or vegetable grinding machines, incubators, brooders, jimmy hooks, shears, hay grain cutters, fanning mills, milking machines and so on are entitled to a drawback of 80 per cent. All materials entering into the cost of the manufacture of binder twine or twine for harvest binders, when imported for such use exclusively by manufacturers manufacturing such twine only are entitled to a drawback of 99 per cent.

These finished articles include many of the implements of production. Under our tariff laws the manufacturer is entitled to a drawback on the materials used by him in the manufacture of these implements; in many cases he pays a duty of only one per cent. This is a fundamental free trade policy; the manufacturer requires it and no one gainsays his right to it, but there is no known method by which the farmer can secure such a drawback, and consequently he can only work for relief by way of lower duties. Surely there is something inconsistent and illogical in the system which permits the manufacturer to accept a free trade policy in the initial processes of his business but to deny that policy when he imposes a duty on his finished article, which duty must be paid by the farmer who has no drawback and who cannot add to the price of his product. The consumer says that if it is necessary this should be done, but I am sure the hon. member for St. Lawrence-St. George will agree that it should not be done on the ex-parte statement of the manufacturers alone. We say to them: Prove your claim before the tribunal which has been constituted, namely, the tariff advisory board, and when it is proved then, and then only, shall the remedy be applied.

The latter part of the amendment moved by the hon. member for St. Lawrence-St. George (Mr. Cahan) regrets that there are no provisions—

—for the preservation of our domestic markets for Canadian farm and dairy products nor for the effective development of the natural resources of the country, nor for the abolition of the sales tax by the 1st of January, 1929.

The hon. member does not deal at any length with any of these propositions, and I shall follow his example. I will merely say that the arguments advanced by the hon. gentleman on the question of markets, if he will pardon me for saying so were not very convincing. I shall deal with the question of the sales tax later. In my view, therefore, there is nothing that I can hope for by supporting the amendment of the hon. member. It seems to me that its form and its enunciation are more academic than real. It may be good doctrine from the point of view of the hon. member, and he may believe it, but it is not sufficient to convince me, and I shall therefore oppose the amendment. I come now to the sub-amendment of the hon. member for East Lambton (Mr. Fansher), which reads as follows:

This house regrets that the government proposes further reductions in the income tax, thus making a serious departure from the principle of direct taxation; that the proposed revision of the customs tariff is inadequate to bring effective relief to the consuming public; and that the sales tax on the necessaries of life has not been eliminated.

Now the subamendment is in a different class from the amendment in that it is categorical in its terms and concrete in its application. I will deal in the first instance with the second part of it as to the revision of the customs tariff. I am not convinced that the sweeping charge made has been proved either by the mover in his fair and able address, or by subsequent speakers fair or unfair. These schedules are still unintelligible to the ordinary member, and the extraordinary member who does understand them has not revealed himself. There is need of investigation before definite conclusions can be arrived at, but I think that some general conclusions can be stated on part at least of the schedules. Prior to the introduction of the budget I, like others, was struck by this fact, namely, the absolute lack of press or other propaganda for increased or higher duties; even Besco was unwontedly silent. There may have been other causes, but I feel that at least one of the causes was the demolition of the applications of the manufacturers before the tariff board. I have always said that this question of tariff reform could not and cannot be understood until the question has been properly presented and properly published. We are now in the position where evidence can be presented, and only at this session can it now be published. I am going to suggest to the Minister of Finance that the evidence of the tariff board should be published in the form of a daily Hansard for the information of members and the public generally. After all the tariff board is a public body maintained at public expense, and its work should certainly be available to the public. Its principal function I understand is to get facts. I can only get these facts when applications are made for a hearing. In view of this it seems to me that it is altogether too early to decry the work of the board. It is only beginning to function, and if the government wishes the board to function as it should, and if it wishes to remove the suspicion which has been voiced in this house that the board is only a smoke screen for the government, it can easily dispel that suspicion by the publication of the records of the board.

Now, sir, I have, like most hon. members, considered as carefully as I could the question of the proposed changes in the tariff schedules submitted by the Minister of Finance. I realize that a number of these proposals are for the purpose of reclassification and enumeration of different items, tending to give a more scientific and more understandable tariff schedule. To that idea no one will take exception, and I do not think it would be unwise to suggest a revision of the whole of the customs schedule. I realize in some degree what that means but as, in the last analysis, the government must depend upon supplies for the carrying on of public business, and as the largest part of our revenue is derived from customs, the undertaking would only be what might be called in ordinary mercantile establishments good business. Now apart from this classification I think it can be shown that there are a number of items, affecting cottons and linens principally, on which reductions are made in the existing tariff; and I think there are one or two instances which show increases. But I will not presume definitely to pronounce upon these items in this forty minute speech; when the budget goes to committee I shall take whatever opportunity presents itself to ascertain precisely the truth of the statement I have just made. The Minister of Finance has stated on his authority as a member of the government that there have been downward revisions. That statement from one in his position must be accepted as correct, failing evidence to the contrary, and so far as I have heard or read no one as yet has endeavoured to prove the contrary.

I am further strengthened in my viewpoint by this fact, that if no downward revision has been made, then one would imagine that the industries affected would have no complaint, and hon. members opposite who support protection and the sheltered industries would have acquiesced. I took the trouble to search Hansard and learn what has been said by hon. members, and I find that the member for South Waterloo (Mr. Edwards) said on the 23rd of February, as reported at page 731 of Hansard, referring to the Minister of National Revenue (Mr. Euler):

> He is an able native son of our county. But with the influence which I presume he has with this government it seems to me that he might have been a little more successful in protecting some of the industries which are established in the southern part of the county and which have been very badly hit by this budget. I refer more particularly to the textile industries, those of woven cloths and worsteds.

And the hon. member for Fort William (Mr. Manion), an apostle of high protection, said on the 21st February, as reported at page 656 of Hansard:

> While the tariff changes may seem minor when one looks at them first, already from reports coming in to members of this house who have in their constituencies mills which are affected by these tariff changes, it looks as if serious injury was once again going to be done by this government to the industrial life of this country.

Further on he says:

As time goes on, the government and the people of this country will find that the reductions in the present tariff, though minor in appearance, will do more injury to the industrial life of our country—

That is the opinion of this hon. member, and what have the industries affected said or done? I have not asked for nor obtained any names, but I am informed that numerous representations have been made by the woollen industry against the changes in the customs tariff rates. Some of these have been made in person, others by letter or telegram, and the burden of the complaint is that the revision will mean that they will have to close up their plants. Various textile manufacturers have objected to the changes on the ground that they require more and more protection. Paper manufacturers have interviewed the Minister of Finance and have protested against the eighty per cent drawback on paper used in the production of magazines. Cordage manufacturers have sent delegations protesting against the reductions. Chemical industries have interviewed the Minister of Finance and protests have also been received from them.

In view of these gloomy anticipations which, in my judgment, are only a repetition of the honk of the automobile, it seems to me that the sub-amendment is inadequate on this point, and its real meaning is that the budget has not gone far enough in its downward revision. But I must assume in the light of present knowledge, that the manufacturers who ought to know their own business are convinced that the proposed alterations have a downward tendency and consequently that revision will have an effect on the price to the consumer. As I said at the beginning, I am not here to hand out any bouquets to the Minister of Finance and I do not think he would expect them from me. These revisions are not what I hoped for; they are considerably less than I expected, and I would certainly have been much more satisfied with greater cuts. I am not unmindful of the fact that the present Minister of Finance, in his budgets since 1922 and in his dealings with tariff, cannot surely be charged with serving the cause of protection, but that whatever revisions have been made have been consistently downward. Only on Saturday morning I happened to receive in the mail the February issue of the Journal of Commerce which somewhat goes to support what I have said. This Journal of Commerce is a review of industry, commerce and finance, published monthly from the Garden City Press at Gardenvale, Quebec.

[Mr. Glen.]

An hon. MEMBER: A Tory paper.

Mr. GLEN: Certainly a Tory paper. In its February issue this is what it says:

Evidently the federal government has decided to maintain the fiscal policy inaugurated in 1922 and continue to build up a market for Canadian products in foreign countries in preference to the home market—in fact, at the expense of the home market. This is the fiscal policy of the internationalist, the socialist and the pacifist—the person who hopes that some day international boundaries will disappear; and feels that only under such circumstances will the peace of the world be no longer endangered by tariffs and trade wars.

Further on it says:

A Policy of Disturbance

The reductions in the rate of import tariffs and the institution of drawbacks of duty made by the federal government, announced in the budget a few days ago, are far-reaching in the disturbance they will cause to Canadian industry. They are made in the name of the consumer; but they will cause much curtailment of employment and reduction in wages, which will lessen the consumer's ability to buy, without effecting an appreciable decrease in prices. They are not what the Canadian producer asked for. They are just the opposite. They are what the internationalistic mind considered necessary to keep Canada moving in the direction of its idealistic goal of free trade.

May I say, however, that an article such as that in a paper published wholly, I would say, in the interests of protection, can only be some commendation to the Minister of Finance and to our point of view that there is a reduction and a downward revision of the tariff, but may I also say in all kindness that the large measure of support which the government has hitherto received is attributable to the fact that the people of the west believe and expect, as the years go on, that further and larger reductions in tariff will be achieved with benefit to the consuming public of Canada, and without injury to the manufacturing industries.

I wish now to deal with the other two subjects mentioned in the subamendment, namely, the income tax and the sales tax. The mover of the subamendment was eminently fair in his presentation, imputing no motives and certainly giving no indication that the amendment was carefully drawn to embarrass old-time colleagues. I can hardly say the same of the speech of the hon. member for Vegreville (Mr. Luchkovich), a new member who has met these members only since he came here. I gather that the hon member attends church and reads the Bible, but he goes even further than our old friend Mark Twain, who is said to have once humorously remarked that he never went to church for the reason that he hated to hear anyone

speak more than himself. But the hon. member for Vegreville when he goes to church not only listens but wishes to dictate to the clergyman in the pulpit what text he shall preach from, for he gave to my esteemed colleague the hon. member for Lisgar (Mr. Brown) a text for his speech. I would only say this, plagiarizing an old country statesman, that there is nothing more ludicrous than the spectacle of the dwarf assuming the mantle of the giant, strutting and declaiming before the footlights.

The hon. member for Mackenzie (Mr. Campbell) has also seen fit to read a lecture to some who sit on this side of the house and particularly the Minister of Immigration (Mr. Forke). I would have imagined he would have produced better authority than extracts from newspaper reports of the speeches of the Minister of Immigration, because it is well known that during last summer the hon. member was chiefly engaged in denying newspaper reports. I would not like to say very much with regard to the speech of the hon. member for Southeast Grey (Miss Macphail). I listened with delight to her speech, which was witty and clever, but the only fault I found with it was that it contained no argument. In fact I thought in her speech she had demonstrated that age-old time-worn reason sometimes given by women when they do not wish to enter into details and they say, "Just because." She does not like the Conservatives. She does not like the Liberals. She does not like us. She does not like the budget. Why? Just because.

With regard to the proposed reduction of the income tax, let me say frankly—and I have never feared to face any issue—that I view it with disfavour and especially I have serious misgivings as to the policy so far meagrely stated by the Minister of Finance and by the government. If the few words of the Minister of Finance indicate a policy, I gather that it is in the minds of the government to withdraw altogether from the field of individual income taxation, leaving that field to the provinces. There are in the precis of the interprovincial conference some bald statements which leave a great deal to be filled in. There is no indication that this question was seriously stressed by the provincial members attending, although it may have been, but I wish to point out as seriously as I can that it would be a departure from principle to withdraw from this field with a consequent loss of revenue increasing as the years go on, and it would result in one of two things. If our country should again have a period of stress and distress, not necessarily caused by war, and there arises the need for revenue, where would the government of that day look for it? They would have again to impose the income tax or place the burden of producing revenue upon the customs tariff. Who suffers most during periods of distress? To ask the question is to answer it. The common people will be again asked to bear the load of increased duties while the affluent appreciably escape. The income tax was imposed for the payment of war debts. This house has been regaled with figures of that debt, and I shall not enlarge upon it except to say that until that debt has been paid, or sufficiently so as to be within the reach of the ordinary revenue of the country, the elimination of that field of taxation should not be sanctioned. If the provinces feel the necessity of broadening their bases of taxation, then surely there is the way out. Let the Dominion retain control of the income tax on individuals and pay to the provinces the amount so collected within the provinces, less the cost of administration, always assuming, of course, that the Dominion government can afford to relinquish the revenue derived from that tax. I trust that we shall hear from the government as to what is intended regarding the corporation tax. No mention has been made of it, but certainly both as to the individual and the corporation tax we should have a statement of policy from the government.

With regard to the sales tax, at first glance at the amendments I was inclined to agree with the demand contained in them, but I was rather disturbed to learn that the revenue derived from the sales tax and the manufacturers tax, better known as the luxury tax, for the year 1926-27 was $94,908,237, and the estimated revenue for 1927-28 was given to me as $82,000,000, or a difference of $12,908,237, arising from the proposed reductions in this budget. The thought naturally arises in my mind, from what source can this be replaced? I cannot imagine that the Finance minister will extract revenue from the country in the same manner that a conjurer extracts articles from a hat, and supposing, which is not unreasonable, that a deficit occurs in next year's budget; with these taxes eliminated, where would the Finance minister go for revenue? He would want to do one of two things—either reimpose the sales tax, or raise the customs duties. Both of these would be opposed by the mover of the sub-amendment and by the mover of the original amendment, and those supporting the Conservative amendment, in the event of a deficit, would hail it as a further evidence of the need of protection. But both would be wrong. I prefer the sales tax, which can be seen and traced, and

which is in form direct taxation, rather than the indirect form of taxation by means of customs duties.

In looking at the subamendment, which asks for support on the ground that the sales tax on the necessaries of life has not been eliminated, I notice that it does not go so far as the original amendment, which asks for its complete abolition by January 1, 1929. I thought it well to look over the list of articles which are to-day exempt from the sales tax, and which I find in the Canadian Almanac for 1928, at page 119. I there found that the following articles embracing many of the necessities of life and implements of production are exempt:

Bread, butter, cheese, coffee beans, corn meal, eggs, fish, flour, foods cereal, fruit canned, lard, meats and poultry, milk, oatmeal—

I am glad oatmeal is exempt. Also agricultural implements are exempt as follows:

Binder twine, binding attachments and parts, drain tiles for agricultural purposes; engines, gasoline and portable; fanning mills, feed for calf, cattle, hogs and poultry, fence posts, fertilizer, forks pronged, fuel of all kinds, furs, gas, harness and parts, hay, hoes, logs, machinery of different kinds, milking machines, mowing machines and parts, paper, seed drills and parts. Shoes exempt 50 per cent, sleighs, spades, wagons, wool.

In all, there are over 300 exemptions.

Now in view of the loss of revenue which would accrue by the abolition of the tax as indicated in the original amendment, and the fact that so many of the necessities of life are already exempt from its operation, I think the Finance minister has proposed the soundest method in proposing to eliminate this tax by degrees.

I have endeavoured, Mr. Speaker, to state as precisely as I can in the short time at my disposal the provisions in the budget which can be supported. I have tried to show that support of the subamendment would require me to acquiesce in the provision "that the proposed revision of the customs tariff is inadequate to bring effective relief to the consuming public". I cannot support that conclusion, although I agree with the sentiments expressed, and do most heartily wish there had been more reductions than are indicated. I would point out that the amendment does not deny that there are reductions, but that they do not go far enough. I realize that the reduction of the income tax rate may betoken a departure from a principle which I think this House has not agreed to, and which, so far as I know, has not been a subject of discussion in the country. It is altogether probable—I would imagine it imperative—that some pronouncement in that regard will be made by the government.

[Mr. Glen.]

In conclusion, I would like to refer for a moment to what was said by the hon. member for Peace River (Mr. Kennedy). I was astounded when I heard the hon. member suggest the other day that there was a possibility of a deal being consummated by the Alberta members with the protectionists. I wonder if he was speaking for himself, or was really endeavouring to voice the opinions of the west. May I say that the members sitting on this side representing western constituencies are unalterably opposed to any such deal, and further, that I believe the hon. member is wholly and absolutely mistaken, in supposing that the people of the west would countenance such a proposal. The greatest condemnation of the speech of the hon. member was the tremendous applause it received from the Conservative benches. They know, as most people in the west know, that such a deal would be in the nature of that known as robbing Peter to pay Paul, Paul representing the protectionsts. I will say this, however, that I believe such a scheme would obtain the hearty support of the hon. members for Mackenzie (Mr. Campbell), Camrose (Mr. Lucas), and Kindersley (Mr. Carmichael). I am sure they would put no obstacles in the way of the consummation of an alliance so unholy. It would in my judgment be the death knell of all the hopes of the west. I cannot help but think it might well be expressed in the words of the old limerick:

There was a young lady of Riga
Went out for a ride on a tiger,
They came back from the ride,
With the lady inside,
And a smile on the face of the tiger!

Mr. IRVINE: Look at the smile now!

Mr. GARLAND (Bow River): That is what happened to the Liberal-Progressives.

Mr. GLEN: May I say to the hon. members who have lectured us so frequently in this debate, that we seek neither their commendation nor fear their recriminations. We believe that the interests of the west are as safe in our hands as theirs. We do not propose to make a political gesture on this budget for home consumption, even at the risk of being misunderstood. Nothing would be easier from the point of view of safe tactics than to vote for the subamendment; but it would be only a gesture.

Mr. W. A. BOYS (North Simcoe): Mr. Speaker, I do not think I should commence my speech without expressing to my friends opposite my appreciation of the measure of applause which they have given me on this occasion—I suppose it is because I seldom trespass upon the good nature of the house.

As I have said on previous occasions, during my years as chief whip of the Conservative party, I thought silence was golden, and I imagine my hon. friend the government whip (Mr. Casgrain) will probably agree with me in that.

My main purpose in rising to take part in the debate is to discuss the merits and demerits of free trade and protection in connection with certain Canadian industries. But before doing so I wish to say a word or two upon three or four matters which have been engaging the attention of the house. First, I shall touch on the question of the right of the Minister of Immigration (Mr. Forke) to issue permits under the provisions of the Immigration Act.

If I required any excuse, Mr. Speaker, for touching upon this subject, it would be found in the invitation given by the minister himself to the lawyer members to express their views. If the rules of the house permitted, I should be glad to read what was said during the dialogue which took place between the hon. member for Frontenac-Addington (Mr. Edwards) and the Minister of Immigration and the Minister of Health (Mr. King) last Tuesday, February 28. But I think my recollection is accurate when I say that the Minister of Immigration stated distinctly that he had not authority under the act to issue a permit in the case under discussion. If I am wrong in that I shall be glad to give him an opportunity of correcting me, for I can assure him that I have not the slightest desire to mis-state anything he said in the discussion. In this view he was supported by the Minister of Health, and evidently it was thought that what had then been said was insufficient, for two days afterwards the Minister of Health himself made a speech dealing with the matter. To summarize the position, both ministers are of opinion that under the act the Minister of Immigration has no right to issue a permit.

In the discussion last Tuesday nothing was said about section 18, but in his speech the Minister of Health says that is the controlling section, and because of it there is no right to issue a permit. I am sure, Mr. Speaker, we will all agree upon this, that if ever there was a case that merited the exercise of favourable discretion on the part of the Minister of Immigration—if he has that discretion—it certainly was the case in question. I do not think for one moment that the minister would want to separate a baby of fourteen months old from its mother, nor, on the other hand, the mother and baby from the father and the other four little members of the family. I am sure the whole house is agreed upon that proposition. It therefore brings us to a direct discussion as to the power of the minister under the act. To properly consider the question it will be necessary for me to quote one or two sections. Under section 3 we find this provision:

> No immigrant, passenger or other person, unless he is a Canadian citizen, or has Canadian domicile, shall be permitted to enter or land in Canada, or in case of having landed in or entered Canada, shall be permitted to remain therein, who belongs to any of the following classes, hereinafter called "prohibited classes":—

Then follow the various classes, and the main class is found in subsection (a):

> Idiots, imbeciles, feeble-minded persons, epileptics, insane persons, and persons who have been insane at any time previously;

Then follows a subsection with respect to diseased persons, and so on, which I need not trouble the house with. Now let me quote section 4:

> The minister may issue a written permit authorizing any person to enter Canada, or having entered or landed in Canada to remain therein without being subject to the provisions of this act. Such permit shall be in the form A of the schedule to this act, and shall be expressed to be force for a specified period only, but it may at any time be extended or cancelled by the minister in writing; and such extension or cancellation shall be in the form B of the schedule to this act.

Then follows a subsection No. 2 providing for returns of such permits to parliament.

Now then, the Minister of Health, to whom up to date has fallen the lot of giving the house the benefit of the law on the subject, says that the controlling section is section 18. Any person who reads the act will see that this section has not the slightest bearing upon a case of this kind because it deals with cases where an appeal is to be taken from the decision of the board of inquiry. There was no appeal in this case. The child never landed, but was compelled to return to Scotland with its mother. So section 18 has not the slightest bearing upon the case. I am ready to admit that had the parents of the child appealed from the decision of the board of inquiry to the minister, under that section the child could not have been admitted. But, sir, there was no appeal taken, and the section has no application whatsoever. Therefore we are driven to a consideration of section 3 and section 4. Let us again consider section 4:

> The minister may issue a written permit authorizing any person to enter Canada, or having entered or landed in Canada to remain therein—

And here are the important words:

—without being subject to the provisions of this act.

Even if section 18 had any bearing upon the case, its application is absolutely excluded by the provisions of this section; but it has no bearing whatever. Supposing we read section 4 this way:

The minister may issue a written permit authorizing any person to enter Canada, or having entered or landed in Canada to remain therein regardless of the provisions of section 18.

That is exactly the meaning of the section. Undoubtedly under section 4 the minister has the right to issue a permit. He is not sitting in appeal; therefore the other provisions of the act do not apply.

In dealing with the other features of the case the minister, in the course of the discussion, said that he would not admit a feeble-minded girl. Why does he say that? Does he think there is any distinction in the act between a feeble-minded girl and a feeble-minded boy? If so, I say there is none whatever. I do not know why he thought fit to make that interjection. If he could give a permit for the entry of any feeble-minded person, he could have issued a permit in this case. The minister invited the lawyer members of the house to express their opinion. I would suggest that the minister ask an opinion from the Justice department—not as to section 18, because it has no application; let him ask whether or not he could have issued a permit in this case where no appeal was being taken under the provisions of the act. I venture to say he will never produce in this house a written opinion from the Justice department favouring his contention.

Mr. FORKE: Are you in favour of admitting feeble-minded girls?

Mr. BOYS: I say again to the minister that we have nothing to do with feeble-minded girls as distinguished from feeble-minded boys.

Mr. FORKE: Or feeble-minded boys?

Mr. BOYS: I am not here to express my views upon the subject, I am trying to discuss, pursuant to the minister's invitation, the provisions of the act with regard to the matter.

Now, Mr. Speaker, let me deal with the motion, the amendment, and the subamendment before the house. So far as the subamendment is concerned, there is only one feature that I would not be glad to support; that is the middle feature. I had better read it all:

The government proposes further reductions in the income tax, thus making a serious departure from the principle of direct taxation; that the proposed revision of the customs tariff is inadequate to bring effective relief to the consuming public; and that the sales tax on the necessaries of life has not been eliminated.

So far as I am concerned I benefit to some extent by a reduction in the income tax. But this benefit is not anything like as important as many people think. On an income of $10,000 it means $23; on an income of $5,000, half that sum, and above that income in proportion. I would much prefer to do without that benefit, and, speaking purely from a selfish standpoint, I am inclined to think I would benefit more by the abolition of the sales tax. But whether I would or would not, I am absolutely in favour of the total abolition of the sales tax at the earliest possible date, and I am in accord with the suggestion made on behalf of this policy in the amendment. And when the time comes and the revenues of the country permit a reduction in income tax, by all means let us have it; but let the first tax to be abolished be the sales tax, thereby benefiting not the few, who can afford to pay, but all the people of the land. I could not favour the middle portion of the subamendment because it would be contrary to the protective principle with which I agree. I could not support the subamendment for the further reason that it entirely abolishes the amendment of my own party and that in itself would be a sufficient justification for my voting against it.

A word as to the Home Bank. In the riding I represent to-day there is not, I think, a person who will benefit by anything further that may be done in connection with the Home Bank depositors, but in the riding I formerly represented, prior to 1925, that is, South Simcoe, there were over 1,300 depositors with total deposits of nearly $400,000. It was undoubtedly the intention to give the 35 per cent to all depositors of $500 and less, and all of over $500 who were what is known as needy or deserving cases; but unfortunately the amount estimated to be necessary for the purpose was inadequate and I understand that it now requires something like $400,000 more—

Mr. ROBB: My hon. friend will allow me to correct him. The government provided sufficient but in the other house it was reduced.

Mr. BOYS: I am not making political capital out of it; I quite agree that it was done in the Senate. What I desire to do is to convey to the minister and to the house my own views regarding the matter, from an equitable standpoint, and because I cer-

tainly was interested in the 1,300 odd depositors in South Simcoe alone who had on deposit the amount I have mentioned, I feel it my duty to bring the matter up. It would be manifestly inequitable if they were not all treated alike. I think, therefore, that whatever sum may be necessary to give them all 35 per cent that item should be provided for in the estimates, and it will certainly have my heartiest support.

I want now to refer to the Canadian National Railways. During the last two or three years a persistent effort has been made to suggest to the people of the country that the Conservative party is not, at any rate 100 per cent, behind the Canadian National system. I may say that in my own election in 1926 this question was brought up,. and the Minister of Finance will recall the circumstance, for he honoured us with a visit in the town of Collingwood. An effort was made locally during that campaign to prejudice the electors of my own town against me in this regard. The town is a divisional point where there are six or seven hundred railway employees. I am glad to say that those employees, fully knowing my attitude towards the national railway, paid no attention to the efforts which were put forth both in speeches and in print. Anyone who knows anything at all about the matter is perfectly aware that there would be no Canadian National railway system in Canada to-day had it not been for the Conservative party, whose legislation it was that took over the Canadian Northern and the Grand Trunk, consolidating both and thereby creating the Canadian National Railways. After the election of 1921, when our friends opposite took power, I well remember at first how this matter was viewed. There was not one of those hon. gentlemen who would stand up and declare himself absolutely in favour of the Canadian National Railways; the attitude was, "We will give it a fair trial." But the proposition of the Conservative party was so sound that hon. gentlemen opposite have not only given it a fair trial but now want to claim the parentage of the child.

Mr. HOCKEN: The government claims to be the stepfather.

Mr. BOYS: I must hurry now. I am afraid I shall not have time to cover the whole ground.

Mr. CASGRAIN: Take your time.

Mr. BOYS: I will come now to the question of free trade and the tariff. I hold no brief whatever for the manufacturer; I am not interested in any manner whatsoever in any manufacturing industry in Canada. But so far as I am concerned I do favour adequate protection. I repudiate the suggestion that the party to which I belong are high protectionists, although I believe there are cases where a higher protection would result in lower prices, and in that respect I should think the principle would accord with the views of any hon. member. I feel I have a peculiar right to discuss the question of protection inasmuch as I was elected twice upon that issue and it fell to my lot to be opposed, both in 1925 and 1926 by no less a person, than the Hon. E. C. Drury, the leader of the Progressive party in the province of Ontario, ex-Prime Minister of Ontario, past master of the Ontario Grange, and, until a few days ago, president of the Progressive party itself. He is perhaps one of the ablest, and certainly one of the most outstanding free traders in the Dominion. The Hon. Mr. Drury challenged me to a joint debate and as a matter of fact we had two debates, one in the town of Barrie and one in Collingwood, the subject under discussion being the tariff. We each had, all told, an hour, and perhaps it is not amiss for me to say that I doubt whether in any country town there have ever been two more largely attended meetings. In my own town the armory was jammed; there were over 4,000 people present. And in the skating rink in the town of Collingwood the attendance was also exceptional, many being unable to gain admittance. I may add that a good many persons came from beyond the confines of the county of Simcoe, expecting no doubt a scrap of some sort. We discussed the tariff, and I will take this opportunity of showing to the house some articles that played a very important part, particularly in the election of 1926. I made it my business to have a friend of mine attend the meetings of my opponent to find out just what he was saying to the people, and I ascertained that he was going about with a small general stock of merchandise comprising ladies' dresses, ladies' silk stockings and hardware of varied descriptions, including two hammers. These hammers are well known in the county of Simcoe and fairly well known in the province of Ontario, but I do not suppose they are quite so well known in other portions of the Dominion or in the House of Commons. I have these hammers here and I thought the house might be interested to have a look at them. They were utilized for the purpose of exterminating me politically in those two elections. They have a history and it is necessary that I should give that history if the house is fully to appreciate what took place. I noticed that during the last week of the campaign of 1925 they were not displayed. I really did not know at that time why their use was discontinued, but for some reason or other they were abandoned. Now

Mr. Drury's argument was this: "Here is a hammer made in the United States, price $1.65; and here is another hammer made in St. Catharines, Canada, price $1.75". As I say, this is Mr. Drury's argument, which I am illustrating in my own humble way. He was much more dramatic than I can be. He said, "If it were not for the tariff you would be able to buy this American hammer for $1.35 instead of $1.65". Of course, he received warm applause; the argument created great satisfaction among the farming community then present. I heard no more about the hammers during the last week of the campaign but after the election I heard something about them. I found that they were available. Mr. Drury had not bought them; he had only borrowed them, and having had the full use of them for a month he returned them. Having ascertained that they had been restored to the place whence they had come, I inquired whether I could purchase them and was informed that, like any other article in the store, they were for sale. I promptly said, they are mine, and I bought and paid for them. That hon. gentleman went around for three or four weeks telling the people that this hammer was made in the United States, and if it were not for our tariff it could be bought for $1.35, while the other hammer was made in Canada. On both these hammers, however, stamped in the plainest possible lettering, we find the words, "Made in Canada." They are here for anyone to see, and they were there at the time to be seen. Mr. Drury's explanation, when finally cornered, was that he thought one was made in the United States. To be fair to him, he was apparently deceived by that little tag, but how in the name of goodness he could carry these hammers around for two or three weeks, producing them in the well lighted halls of North Simcoe, and fail to observe those words "Made in Canada " is beyond me. I do not suggest for one moment that he did it deliberately; I cannot think Mr. Drury would do that, but it is in keeping with many other fallacious arguments advanced by Mr. Drury and those who think with him on the question of free trade.

In deciding to what particular industries I should direct my attention, I wanted to get some which affected the rural population as much as, if not more than, the urban population, and I wanted to get two on the free list and two on the protected list. I think the arguments I am about to advance can be applied to a great many other industries, but the ones I have selected, rightly or wrongly, are those two standard industries with which all free traders deal and with which Mr. Drury dealt in the debates we had together. I refer to binder twine and cream separators. The other two articles, both highly protected with a duty of 30 per cent, are rubber and leather.

The stock argument of the free trader is that the tariff is a tax and invariably the tariff raises prices; that is the argument we have to meet. In the election of 1925, before I knew the story of these hammers, I answered Mr. Drury in this way: If the tariff is a tax and always raises prices, and since the United States of America is one of the most highly protected nations in the world, why do you want free entry of their goods into Canada? If your argument is right the prices would be high and you would only secure the free entry of high-priced goods. That is what I cannot understand about many free traders; they want to get United States products into this country, while no one will dispute the fact that the United States is one of the most highly protected countries in the world. Therefore, if the tariff is a tax surely the articles produced in the United States under this high protection must be high priced, and how are the people of Canada to gain by their free admission?

Now let us analyze the binder twine business. Binder twine was put on the free list in 1898, and we will see what were the imports of binder twine from that time on:

Year	Pounds
1895	2,036,409
1900	8,016,688
1905	11,405,052
1910	22,161,179
1915	28,577,030
1920	16,304,497
1921	34,755,071
1922	46,758,792
1923	49,990,387
1924	54,427,211
1925	26,576,587
1926	47,629,886

Then let us consider the production from 1920 to 1926 I could give this at greater detail, but I do not believe anything is to be gained by so doing, because there is not much variation in the figures. The total production during those years was as follows:

Year	Pounds
1920	40,548,845
1921	37,206,502
1922	31,891,713
1923	43,145,520
1924	57,420,864
1925	48,224,782
1926	58,431,083

If you take away from the total production the amount of the exports you will find that in every year with the exception of two,

more binder twine was imported into Canada than the amount of Canadian binder twine consumed. Perhaps I should also show the effect upon prices:

Year	Cents per pound
1913	9
1914	9
1915	8
1916	10
1917	17
1918	22
1919	22
1920	20
1921	17
1922	12
1923	11
1924	12
1925	14
1926	14

The house will see that free trade did not reduce the price of binder twine, but that as a matter of fact the price was raised and is now much higher.

What was the effect upon the industry? Is there anything that should succeed in Canada better than the binder twine industry? I can hardly imagine what it might be, unless it were the furniture industry. I am absolutely consistent in that also; I say a duty of 30 per cent on furniture is all right. That is my view and I hope to demonstrate it before I get through. I have not the slightest reference to my friend the minister, who was very fair and whose figures are very favourable to my argument. What happened to the binder twine industry? Prior to binder twine being placed on the free list a great many companies in Canada were manufacturing that article; I have not counted them, but I am going to show the house what happened. Remember that binder twine was placed on the free list in 1898:

Ayton Cordage Company, Ayton, Ontario, liquidated 1903.

Canada Flax and Fibre Company, Lachine, Quebec, liquidated 1911.

Canadian Cordage and Manufacturing Company, Peterborough, Ontario, liquidated 1910.

Chatham Binder Twine Company, Chatham, Ontario, liquidated 1904.

Brandon Cordage Company, Brandon, Manitoba, liquidated 1904.

Ferguson Brothers, Kingston, Ontario, liquidated 1902.

Frontenac Cordage, Kingston, Ontario, liquidated 1905.

McKenzie & Company, Valleyfield, Quebec, liquidated 1908.

Perth Flax and Cordage Company, Stratford, Ontario, liquidated 1906.

Walkerton Binder Twine Company, Walkerton, Ontario, liquidated 1903.

Welford Brothers, London, Ontario, liquidated 1902.

James Brown and Son, Quebec, Quebec, dismantled.

A. Main and Son, Hamilton, Ontario, dismantled.

Thomas Connor and Sons, St. John, N.B., dismantled.

A. W. Morris and Brothers, Port Hope, Ontario, dismantled.

James Lochrie, Toronto, Ontario, closed.

Richelieu Cordage Company, St. John, Quebec, closed.

Bannerman Brothers, Lachute, Quebec, burned.

Farmers' Binder Twine Company, Brantford, Ontario, burned.

That left three up until two years ago, namely the Consumers' Cordage Company of Montreal and Dartmouth; the Plymouth Cordage Company of Welland and the Brantford Cordage Company of Brantford, and the latest information is that in 1926 the Dartmouth plant of the Consumers' Cordage Company ceased to manufacture binder twine, while in July, 1927, the Montreal plant of that company also ceased the manufacture of this article. That leaves only two. I understand there has been something of a controversy during the last few months in the Ottawa Citizen on this very question, and in this connection I would like to quote in part from a letter which appears in the Ottawa Citizen under date of February 7, 1928, over the signature of the Brantford Cordage Company. It was suggested that this business was not as well managed as it might be, and this letter is the answer of the company:

> The business is still under the active management of Mr. C. L. Messecar, under whose direction the business was built up from small beginnings until it has become the largest binder twine plant in the British Empire . . . . the present difficult situation is entirely the result of new competition that has arisen from Holland and Germany.

The closing paragraph of the letter is as follows:

> We have spoken to many representatives of western farmers' organizations and wherever the matter has been explained to them, they have agreed with us that some action should be taken and we trust this explanation will make our position clear. We can assure you there is nothing in the way of good management or handling of the business that can overcome the present handicap, for every other mill operating in Canada is suffering in the same way and one mill has recently closed and been dismantled, and the others, like ourselves, are operating with the hope that something will be done; but if nothing is done, it is not reasonable to think that any mill can continue indefinitely to operate at a loss.
>
> Yours truly,
>
> The Brantford Cordage Co., Limited.
>
> Jan. 31, 1928.

And this is one of the two remaining industries, and the largest one in the British Empire. That letter practically says "If something is not done we will go out of business too". And yet we have people who

suggest that there should be free trade in the case of an industry such as this which is absolutely suited to the country and which could make money under proper tariff conditions.

Mr. MILLAR: Are not these two companies producing more now than was being produced in Canada in 1898?

Mr. BOYS: I am not in a position to give my hon. friend that information. I do not carry all these figures in my head. In any event I do not think it is necessary. The story I have told should satisfy even my hon. friend who desires to see this particular industry flourish in Canada.

Now let me go on and deal with cream separators, which is another industry operating under free trade. The following were the imports in the seven years from 1920 to 1927 inclusive:

1920	$749,022
1921	956,785
1922	314,202
1923	229,656
1924	509,973
1925	408,787
1926	724,794
1927	997,548

May I tell the house, Mr. Speaker, that every figure I am giving is taken either from figures supplied by the Trade and Commerce department, or from sworn evidence before the tariff advisory board, which evidence is available to the public. The Minister of Trade and Commerce has cited in connection with rubber industry more favourable figures than I intend to give. Now let me give figures of the production of cream separators for the same period:

1920	$1,683,634
1921	934,923
1922	727,655
1923	854,067
1924	724,909
1925	816,468
1926	1,096,215

If you add to that the bowls which are imported as well you will find that the latest returns would indicate about a fifty-fifty division of the trade. Is there anyone who would suggest that if these binder twine and cream separator companies had enjoyed the benefit of the Canadian market that they would not have been able to operate to capacity, with corresponding low overhead charges, and that prices would have been much lower? But the main thing, perhaps, is that we would have had thousands of workmen living in Canada, receiving their wages in Canada and spending their money in Canada.

[Mr. Boys.]

Let me pass on to other industries. The information I have already given tends to bear out, I think, what I have suggested, that protection leads in the majority of cases, I will not say always, to lower prices.

The rubber industry in this country enjoys the benefit of a general tariff of 35 per cent. The Minister of Trade and Commerce told the house the other night that not in connection with a single tire of any size whatever made in Canada did the price reach more than 8 per cent higher than the corresponding United States price.

Mr. BANCROFT: What is the tariff in the United States?

Mr. BOYS: What has that to do with my argument? I am just stating that the tariff in Canada is 35 per cent, in favour of the manufacturer, and if the suggestion is that the tariff is a tax, and raises prices, and that the manufacturer here takes advantage of the tariff would you not expect to see his price at least 25 per cent to 35 per cent higher than the American price for the same article? I have here a list of every tire which is made in this country and there is not one in the whole list which shows a higher price to the extent of even 10 per cent. The Minister of Trade and Commerce said there were none higher than 8 per cent, but I have to admit that in the price list for October 1, 1927, which I have, there are two or three which do run slightly over 9 per cent, but almost all of them are 5 per cent. Let us take the Ford tire. I presume there is no tire which is more generally used than the Ford tire. Take a 30 x 3½ and the United States price for that tire—I am now giving the dealer's prices; I think we will all agree that we should not take any other price because we know that the retail prices vary; the further a man is from the market and the smaller his sales, the higher his price must be, so to get a fair comparison we will take the dealer's prices—and the United States price to dealers is $8.13. That same tire is made and sold in Canada for $7.16. It is made from the same patent, the same moulds, the same compounds and chemicals and under the same specifications. And yet our free trade friends tell us that the tariff is a tax and is responsible for increased prices. If this information is right where is the man who can honestly and fairly make such an argument as that? It may be that he can find some illustration to support his argument, I do not say there are none, but here is a great industry which has no more reason to succeed in Canada than the binder twine or the cream separator industry—the raw material is imported in all

cases, and this is the result it has achieved: That is to say that tires are sold in the United States at higher prices than in Canada. Take a 30 x 3 tire, the price in the United States is $7.35 and the Canadian price is $6.13. In the first of the prices I have given the Canadian price is 19.9 per cent less than the American price. These are all Goodyear tires—American tires made in the Goodyear factory in the United States and tires made in the Goodyear factory which has been established in Canada just outside of Toronto. Now take another size, 32 x 4. There is a difference against Canada of 8.84 per cent. In the size 33 x 4½, the difference is 5.32 per cent against Canada. In the case of another tire 32 x 4 the difference is 5.36 per cent. Take another one 33 x 4, the difference is 5.36 per cent against Canada. Then there is one 34 x 4½ and the percentage is 5.41 against Canada. In the case of another one 34 x 5, there is a percentage of 5.21 against Canada and in the case of a size 36 x 6, there is a percentage against Canada of 5.50. The Canadian manufacturer is only taking advantage of a fraction of the 35 per cent that he could take if he wanted to use the tariff to boost prices. You may ask why a difference should be found in this variation in the prices of tires? Well, there are somewhat different conditions to be met with in this country. We have worse roads than they have in the United States. The roads in the fall and spring, and during the winter, are hard on tires, and I am told that the Canadian tire is really a slightly heavier tire, and for that reason a slightly better tire. I do not know whether that is the information my hon. friend the Minister of Trade and Commerce has or not, but that is the information I have received. However, it is not necessary to the argument, because, as I have already said, they only take advantage of the tariff to the extent of about 5 per cent in any event. If time permitted, I could give other instances, showing that the Canadian price is lower than the American price. Take for example, conveyor belting—28 once duck, 20 inches wide, 4-ply, ⅛ inch face, 100 feet. The Canadian price is $198.20, and the United States price $210.80. I am not going through this list. I would ask the house to accept my statement that in the majority of cases, not in all, the Canadian price is lower. In the case of rubber boots, and so on, prices in the catalogue of Sears, Roebuck & Company, one of the largest United States houses, are compared with those of the T. Eaton Company as the Canadian house, and the same thing applies there. If the house will permit me to put some of these tables on Hansard, I shall be glad to do so.

Mr. SPEAKER: Unfortunately the hon. gentleman's time is up.

Mr. BOYS: I am very sorry but I must bow to this rule which I favoured but at the moment regret.

Hon. J. L. RALSTON (Minister of National Defence): Mr. Speaker, having regard to the experience of the two hon. members who have preceded me, I do not propose to take up the time of the house or my own time with any introduction, but I shall go directly to the matters which I wish to discuss. Before proceeding with my remarks, let me suggest to the house that, in view of the policy which has been enunciated by the hon. member for North Simcoe (Mr. Boys) who has just sat down, it is rather surprising that I can find nowhere in the "swivel-chair" tariff resolution which was passed in Winnipeg any suggestion that either binder twine or cream separators should be made dutiable. I find further that my hon. friends opposite, in passing their resolution, have endeavoured at least to give the impression that:

> It is desirable in the national interest that in such revisions of the tariff the cost of living and the cost of the implements used in the production of whatever nature should be given special and attentive study.

Whatever that may mean, it at least would not mean that binder twine, which has been on the free list since 1900, should now have a duty imposed on it, and that cream separators, which I think were put on the free list during the regime of my hon. friends opposite, should have a duty imposed upon them. My hon. friends, if they thought protection was a good thing, have had ample opportunity from 1911 to 1921 to impose a duty on binder twine and cream separators. I rather suspect my good friend who leads the opposition and who comes from West Calgary (Mr. Bennett) would not regard that as a sound political move, regardless of the fact that his lieutenant behind him suggests that it may be sound economics.

I wish to discuss just one or two things which have been said in the course of the debate with regard to the position of Canada. Like other hon. members I have felt that there have been a good many sombre reflections in connection with conditions existing in this country and I should like to refer to the matter of the cost of living. Nothing is more important to those who propose to take up their residence in any country than to ascertain what conditions are respecting this thing known as the cost of living. When the hon. member for St. Lawrence-St. George (Mr. Cahan), who I am sorry is not in his place today, suggested that the cost of living is higher in Canada than in the United States, and

when the hon. member for Inverness (Mr. Macdougall) gave figures to indicate that the cost of living had increased since 1921, I hastened to look up the record in order to find out whether either of them was right. I am glad to be in a position to correct the statements made by both of these hon. gentlemen on this very important subject. The hon. member for St. Lawrence-St. George said that the government should do everything possible—

—to reduce the average cost of living in this country which is "so high in comparison with the cost of living in the same state of society across the border."

I have secured the figures of a food budget of articles in common everyday use, and I find that in 1925 that budget came to $8.70 in Canada and $10.46 in the United States. I have had that revised in accordance with present day prices and I find that the figures for 1927 amount to $9.63 for Canada and $11.44 for the United States; in other words, a difference in favour of Canada of nearly 20 per cent. The hon. member for Inverness stated in his speech:

"In 1922 the cost of living for a family budget, including foods, rent, clothing, and so forth, was $20.67 per week. In December of last year it was $21.37, a slight increase. In other words, the government have not made happier fireside climes for the poor people of Canada."

My good friend who gave the figure of $20.67 for 1922 had selected the month of July, 1922, and had attempted to compare that with the month of December, 1927. Perhaps my hon. friend missed the column, but I think it would have been better if he had looked at the figures for January, 1922, which show the cost of living for a week as $21.52, and the figure for December, 1927, is $21.37, so that there is a slight decrease. I am not, however, taking months; I think it is much fairer, when we are trying to ascertain the cost of living and to advertise to the prospective immigrant what conditions are in Canada, that we should tell him what the cost of living is for a year. The average for 1921 was $22.70, and for 1927, $21.20; in other words, the cost of living has declined.

Mr. CLARK: What was it in 1922, 1923 and 1924?

Mr. RALSTON: My hon. friend knows, and there are gentlemen within the sound of my voice who know, that farm products and food products were almost at their lowest ebb in 1922 and there was not very much room for prosperity for either the artisan or the farmer in that particular year. I am pointing out that the period under comparison from 1921 to 1927 shows a marked decrease in the cost of living. An index figure which has been prepared by the bureau of statistics shows that not only for food but for rent, fuel, and everything else that enters into the cost of living, the figure was 167 for 1921 and 152 for 1927, and the general barometer, namely, the general average of wages, which my hon. friend suggested had gone down very materially, was 182.4 in 1922 and 184.3 in 1927. My hon. friends speak a great deal about employment. The index figure for general employment in 1922 was 87.9, bearing out what I have said about conditions which existed then; and in 1927 it was 103.4.

Mr. ERNST: Why does the minister take figures for 1922 in relation to employment and wages, and figures for 1921 in relation to the cost of living?

Mr. RALSTON: I cannot tell my hon. friend at the moment what the 1921 figures are. I should be glad to get the other figures or to have my hon, friend give them.

As regards this matter of advertising Canada, the hon. member for Fort William (Mr. Manion), who is generally an optimist, I think rather threw a wet blanket over this house and he certainly did not play the part he generally does in advertising Canada when he made his reference to "thousands of closed plants from the Atlantic to the Pacific." I do not think that is a fair statement. I think the hon. gentleman, perhaps in the heat of his enthusiasm, went further than he intended. But I would point out that these things are not good advertising for Canada, and I think my colleague the Minister of Railways (Mr. Dunning) has quite truly said that no better propaganda could be used by United States immigration agents, and more than that by immigration agents from other dominions of the British Empire who are seeking immigrants from the old country. If they are able to show that responsible members of the House of Commons make these statements regarding conditions in Canada, it seems to me we put into their hands an argument which they cannot fail to use for the benefit of settlement in their own country.

I make these references only in passing because there are one or two matters with which I want to deal in regard to the steel industry, the fishing industry and general tariff matters mentioned in the budget.

Tabulations have been made and issued showing what has been done and what remains to be done under the document known as the Duncan report, and from time to time it has been suggested that a large percentage of the recommendations still remain to be

carried out. I am not going into details in connection with that report to-day except for the purpose of introducing a few words that I have to say with regard to the steel industry.

These tabluations have treated every matter mentioned in the Duncan report as of equal value: they have had no regard whatever to any sense of proportion. Now there are major matters dealt with in the Duncan report, and there are minor matters, and I want to point out that the five major matters dealt with in that report are:

1. Freight rates,
2. Money grants,
3. Coking plants,
4. Statutory harbour commissions,
5. The steel and coal industry generally.

I want to say to this house and to the province of Nova Scotia that in so far as the first four subjects are concerned, with the exception of the general financial revision which was suggested in the speech from the throne, they have practically all been dealt with as far as they legislatively can be. There still remains the matter of the steel and coal industry outside of the matter of coking plants, and that is what I desire to deal with now.

A good deal of talk is made in this country and has been heard in this house in regard to blast furnaces and as to the primary activities of the steel industry having gone down remarkably in the last few years. The hon. member for St. Lawrence-St. George the other day read a most doleful statement with regard to blast furnaces. I also heard my hon. friend from Port Arthur-Thunder Bay (Mr. Cowan) make the statement that there were 22 blast furnaces in operation in 1913 and only 4 to-day. I understand that my good friend the leader of the opposition (Mr. Bennett), speaking in Montreal a day or two ago, referred to the blast furnace industry as having been seriously depleted.

Mr. BENNETT: The steel industry, I said.

Mr. RALSTON: But all these gentlemen failed to note that there were two periods of government between 1913 and 1927, namely 1912 to 1922 and 1922 to 1927, and when I tell them that the blast furnace industry was worse in so far as employment and production was concerned in 1921, I think it will be seen that perhaps my hon. friends have not paid as much attention as they should have to the effect of the argument when it comes to deciding which party should govern this country. The period is taken from 1913 to 1927, the figures are given, and that is all that is suggested. Now I want to give the figures.

In 1913 the number of men employed in that industry was 1,589. My hon. friend from St. Lawrence-St. George gave the figure for 1925 as 656, but he did not say that in 1921 there were only 614, and he did not say that in 1927 there was an increase of 20 per cent, or 734.

With regard to production, and that is a very much more important item than how many furnaces are working part of the time, I find that the annual production of pig iron in 1913 was roughly 1,000,000 tons; in 1921, 593,000 tons; in 1927, 907,000 tons. So our friends, if they want to find out what happened to the steel and blast furnace industry, will have to go back to the years between 1911 and 1921.

Mr. CLARK: Why not take the year 1920 instead?

Mr. RALSTON: Perhaps my hon. friend will permit me to make my speech; I do not trouble the house very often.

I want to give my hon. friends another figure, and that is with regard to the balance of trade in steel products. My hon. friend from St. Lawrence-St. George suggests that we have a very large adverse balance of trade in steel products. In 1912 the adverse balance was $101,000,000; in 1921 that had grown to $169,000,000; and in 1927 it was back again to $106,000,000.

I want to say a word or two for the benefit of my hon. friend from Pictou (Mr. Cantley) who knows more about the steel industry I suppose in five minutes than I can hope to know in my lifetime, but I have the temerity to suggest one or two figures and to make one or two statements as to what the records show.

It is suggested that the steel industry has gone to the demnition bow-wows because of the fact that there was a drawback put on the duty on agricultural implements. I want to remind my hon. friend—I know he is fair enough to admit it—that the steel industry in Nova Scotia never got its real foundation until the legislation of 1897 which was introduced by the Hon. Mr. Fielding in this house, and I think he will also agree with me that from that time on the steel industry in Nova Scotia prospered. Mr. Fielding gave assistance to the industry first in 1897 for a period of five years. In 1899 this assistance was made continuous for another five years, but at a diminishing rate. In 1903 he increased

the diminishing rate of assistance which was being given, and in 1907 he gave a further extension of that assistance.

I also want to point out to my hon. friends who are very solicitous about the use of Canadian ore that Mr. Fielding was the one who introduced legislation in 1907 providing for special assistance to any industry which would use Canadian ore. But what do we find? Our friends opposite came into power early in 1912, and did they revive the assistance which Mr. Fielding had given? Not a bit of it. Did they repeal the rebate on material used in the manufacture of agricultural implements? Not a bit of it. They left the rebate there; they left the industry without the assistance which the Liberals had given. I make no complaint whatever about their not cancelling the drawback on agricultural implements, but surely they should not complain of Liberal policy when they are the ones who did not raise a finger to help the steel industry in any practical way.

Further than that, I find that they did do something else to the steel industry in 1914. A further drawback was introduced whereby wire rods were practically put on the free list, because a drawback of 99 per cent was given. The result has been that most of the iron for wire fencing of certain gauges has come in and has been used under that drawback, and thousands of tons are being imported at the present time. That was under the Conservative administration. I make no complaint about it whatever. It is along the line of Liberal policy, which is to do the best it can for the industries of this country and at the same time to encourage the primary producers. That was the policy which Mr. Fielding introduced. The steel industry, judging by experience, cannot hope for much help from my hon. friends opposite. A good many tears are being shed, but they amount to nothing more than tears when it comes to the matter of practical assistance.

The other evening one hon. gentleman said that farm tractors were put on the free list in 1918, and the imports of farm tractors have grown tremendously, from $2,000,000 in 1925, to $5,900,000 in 1926, and $8,021,000 in 1927. I am not complaining about that. It has meant cheap tractors for the farmers, but do not let my friends opposite weep and wail on behalf of the steel industry when they were the party who made these reductions.

Mr. BENNETT: I suppose the war had nothing to do with it?

Mr. RALSTON: I am not talking about the war at all: I am talking about the steel industry.

[Mr. Ralston.]

Mr. BENNETT: So was I.

Mr. RALSTON: I want to say a word with regard to the present situation. The steel industry, as I said, was dealt with in the Duncan report. I do not think anybody in this country regards the steel industry as being absolutely defunct. The records of the price of stock of the Steel Company of Canada do not so indicate, but there are primary industries, in Nova Scotia particularly, which do not enjoy the same advantages which the industries of central Canada have. The Nova Scotia industries are a long way from the market. They constitute the only self-contained British industry on the continent, and you can judge of the importance of the industry to Nova Scotia, when I tell you that 50 per cent of the assessment under the Workmen's Compensation Act is paid by the coal and steel industry. The Duncan commission heard evidence in connection with that industry and made their recommendations, and their recommendation was that the steel industry of Nova Scotia should be given similar assistance to that given the steel industries of central Canada. These steel industries are given a rebate of 99 per cent of the duty on coal used in the melting and smelting of metals. That was their recommendation. There has been a good deal of talk in this house and in the country as to why the government has not implemented that particular recommendation. I would would remind hon. members of what was said at the time. Speaking in this house on March 18 last the Prime Minister said:

> Owing to the existing uncertainty of conditions surrounding the iron and steel industry in the maritimes, the government does not feel in the position to make at present any pronouncement with respect to the commission's recommendations of a renewal of the system granting bounties with respect to steel when Canadian coal is used in its manufacture.

It will be remembered that for the last year and a half the industry has been in the throes of litigation. To announce that assistance would be given to the steel industry, with two parties contesting for its control, would simply mean throwing something extra into the ring to be contested for; on the other hand, to announce that no assistance would be given would be to throw the industry on the bargain counter. Therefore the government did not make any pronouncement whatever. That position was amply supported, not simply by Liberals but by Conservatives as well, in the press of Nova Scotia. I have in my hand a statement made by the Hon. G. S. Harrington, Minister of Public Works and

Mines in Nova Scotia, published a day or two after the Prime Minister's statement in this house. Mr. Harrington said:

There will be general regret that the present disturbed condition of the steel and coal industry has led the government to defer beneficial action toward it in keeping with the report. It is no secret, however, that a very general organization of this industry is requisite. At present it appears to be passing through the unsettled stages essential towards that end. It is to be hoped that very shortly it will emerge in a condition that will merit and obtain for it consideration as a great national asset as necessary to the rest of Canada as it is beneficial to Nova Scotia.

The Halifax Herald of the same date said:

It is not necessary to discuss the present litigation affecting the steel industry in support of such an attitude—

Meaning the attitude of the government.

—the necessity for this reservation is self-evident.

A similar statement appeared in the Sydney Post of March 21. I submit, Mr. Speaker, that these references amply confirm the soundness of government's position. Only recently has the announcement come that litigation has been terminated and that control of this great industry has definitely passed into the hands of a new and strong financial group. But there still remain certain things to be done. It seems to me that it is in the interest of this industry and in the interest of the Dominion that—first, there should be unity between the coal and the steel businesses. Secondly, there should be a shrinkage of the capital so that the industry will have an opportunity of earning a dividend on some reasonable investment. Thirdly, the unwieldy organization should be simplified. It now consists of some fourteen companies. Fourthly, there ought to be co-operation by the provincial and municipal authorities in the work of building up this great industry. With the litigation ended and these conditions met, the way will be open for serious consideration by the federal government of the presentation of the real and legitimate needs of the industry.

Now, Mr. Speaker, I want to say a word in respect to the fishing industry dealt with by my hon. friend from Queens-Lunenburg (Mr. Ernst). I regret that he should have seen fit in the course of the debate to suggest that political considerations dictated the sittings of the commission which is now investigating the fisheries of the maritimes provinces. Let me say to him and other hon. members that the places where the commission was to sit were selected solely with the desire that the commission should get just as close as possible to those engaged in the industry so that every man might have an opportunity of presenting his arguments or views. The idea was that the fishermen of the maritime provinces and a portion of Quebec—which was also included—should have an opportunity of being heard. The commission got to work in October, and even though the weather was inclement they proceeded with their inquiry, their desire being to have their report ready for this house at this session. The commission held over forty sittings, travelled sixty days and heard 818 witnesses. Naturally a good deal of expense was incurred, because the commission undertook to pay the expenses of witnesses, delegates elected at meetings of fishermen all over the maritime provinces, in order that their views might be presented. The commission will, I hope, be able to present its report in a very short time, and as one interested in our fisheries I look forward with a great deal of confidence indeed to the findings which it will make, because, as I have said, the fishermen have had as never before an opportunity to present their needs, their problems and their difficulties, and I am sure they will say that they have received a most sympathetic hearing from the commission.

My hon. friend from Queens-Lunenburg made some suggestions in regard to improving conditions affecting the fisheries. He mentioned the matter of trawlers. I take it from what he said that he is not against the trawler, that his only complaint is that trawlers which are not really of Canadian register are operating as Canadian trawlers. I assume that if that condition is remedied my hon. friend is favourable to the trawler.

Mr. ERNST: The hon. minister cannot draw that inference.

Mr. RALSTON: I notice my hon. friend was very careful not to declare himself the other day.

Mr. ERNST: I am waiting for the commission's report.

Mr. RALSTON: If my hon. friend does complain, he should look back to the period between 1911 and 1921, because that is when the trawlers began to operate in Nova Scotia. Then was his opportunity to protest while the business was in its infancy.

Mr. MACDONALD (West Cape Breton): May I ask the minister a question?

Mr. RALSTON: If my hon. friend will not take too long.

Mr. MACDONALD (West Cape Breton): Is my hon. friend aware of the fact that trawlers were on the coast in 1908, 1909, 1910, 1911 and 1912?

Mr. RALSTON: I have just said that between 1911 and 1921 was the first time, so far as I know, when trawlers operated actively and successfully. Only two trawlers were operating in 1908, 1909 and 1910 and they were failures.

Mr. ERNST: To increase fish production during the war.

Mr. RALSTON: At that time there were two trawlers; then in 1918 they had increased to eight. There are only ten to-day. If my hon. friend was anxious to deal with these trawlers—I doubt it—his party had an opportunity during that long time.

Mr. ERNST: Will my hon. friend permit just one more question?

Mr. RALSTON: My hon. friend must allow me to proceed. He suggested a constructive policy and urged that there should be efficient inspection. I think he knows that efficient inspection has been inaugurated and in active practice during the past few years, and last year a further advance was made. My hon. friend advocates collection boats. He knows that collection boats were put on last year and are working actively, particularly on the eastern shores of Nova Scotia. He speaks of experimental stations, and says that we are only "scratching the surface" in that regard. I think my hon. friend did himself an injustice in that respect, because he knows the experimental station which was started by the present Minister of Marine and Fisheries (Mr. Cardin) at Halifax is regarded as a model, not simply in North America but in England as well. The empire marketing board has specially mentioned the experimental station started by the government of Canada, and a request has come from the Imperial Economic Commission that the services of Dr. Huntsman —who is in charge of this experimental station—be loaned to Great Britain.

With regard to education, we have already established a fisheries course at Dalhousie university with the degree of bachelor of science in subjects affecting fisheries. I am glad to be able to tell this house that about two weeks ago nineteen young men returned to their homes in Nova Scotia after a six weeks' course under the system of scholarships promoted by this government, in order that they might apply to their work not only practical but scientific knowledge respecting the fishing industry. Those young men returned home convinced that the fishing industry will be best developed if scientific education goes hand in hand with practical work. They will be crusaders in this work. If I mistake not the idea is to increase the scholarships to fifty for the next course.

As to co-operative marketing, my hon. friend knows, I think, that that is essentially a matter within the jurisdiction of the provinces. I would remind him that years ago a Liberal government in Nova Scotia put upon the statute books of the province an act providing for the free incorporation of fishermen who want to work together co-operatively.

With respect to radio, my hon. friend is quite right. The hon. member for Antigonish-Guysborough (Mr. Duff) was the first one to suggest that the fishing boats be equipped with radio receiving apparatus. Last year, at the hon. member's suggestion, an offer was made to the fishermen of Nova Scotia to broadcast weather reports, but the schooner owners felt that they could not equip their boats. This year, I understand, the offer is being repeated and it is probable that radio broadcasting of weather reports and bulletins will be afforded the fishermen and that the receiving apparatus will be installed on the vessels.

The hon. member also suggests that we should have wider markets. As was suggested last year when the announcement was made by the Prime Minister with regard to the recommendations contained in the Duncan report it does seem unfortunate that our friends should find out so late that after all wider markets are what we need most to encourage all industry. We had an opportunity in 1911 to secure wider markets for Nova Scotia but we did not take advantage of it, and ever since we have been looking for the chance to develop wider avenues of trade. I would remind my hon. friends opposite that in 1923 the then Minister of Finance, the Right Hon. Mr. Fielding, inserted in our tariff laws a provision that the governor in council might authorize negotiations with any authorized representative of the government of the United States with a view to the making of a commercial agreement between the two countries that might be deemed mutually beneficial. May I also point out that Mr. Fielding also provided that any time the United States reduced their duty on certain natural products, including fish, then the governor in council was empowered to do the same. This constitutes a standing offer in the direction of developing wider markets. I would remind the house further that we have a legation at Washington, and while this is an international question such as one cannot very well discuss here in so short a time, I hope it may be possible eventually to come to some satisfactory arrangement. I do not think it can be questioned for a moment that the

Liberal party and the Liberal government have done all in their power to secure wider markets not only for the fishery products of Canada but for our other natural products as well. In order to find markets for the products of our fisheries, the Liberal government, in 1908, I believe, undertook to pay one-third of the express rates on fish coming west. That arrangement continued until 1918 when our Conservative friends abolished it. It had proved most beneficial, as shown by the fact that our fisheries products coming west increased 300 per cent in that period. But once again a Liberal government came to the assistance of the fishery industry last session by the 20 per cent freight rate reduction.

Now, may I tell hon. gentlemen what we are doing in the matter of markets. In 1923 our shipments of fresh and frozen fresh fish to points beyond the maritime provinces totalled 35,452,138 pounds, and in 1926, 49,612,366 pounds, or an increase of 40 per cent. The shipments of fresh and smoked fish by the Canadian National Railways have increased from 7,000 tons odd in 1921 to some 15,000 tons in 1926, while by express there has been an increase from 8,000,000 pounds in 1921 to 12,000,000 pounds odd in 1926. It is obvious, therefore, that we are doing something practical for the fishing industry. We cannot discount the problems and difficulties which face the fishing industry of the maritime provinces to-day, and the constructive policies which we have put in force have indicated, I think, how fully we realize the importance of the industry. When I think of these men and of the work to which they have devoted their lives, I do not dolefully picture, as some hon. members have done, village after village of silent streets and boarded windows; rather do I see men working hard and earnestly, endeavouring to do their utmost to earn a living at a vocation which is by no means easy, but at the same time exhibiting the spirit which has characterised generation after generation of our seafaring men. Let me assure the house that it is in the improving of the conditions under which these men labour, and in the effort to help them to overcome their difficulties, that we are seriously engaged at the present time. The adversity of the fishermen is the adversity of the Dominion, and similarly the prosperity of the fishermen is the prosperity of the country as a whole. That is the reason why the government is so earnestly facing the situation and trying by every means in its power to help.

Now I want to say a word with regard to the general provisions of the budget, which has been thoroughly discussed, almost every hon. member who has spoken having touched upon many phases of it. I should like to gather up a few of the thoughts that occur to me regarding the general effect of the budget from every point of view. My hon. friend from Queens-Lunenburg wanted to know what the budget contained for the fishing industry, for agriculture, and for the various other industries. My reply is that there is in this budget just what has been in every other budget brought down by the Liberal government since it assumed office in 1922: a lessening of the burden of taxation generally; special relief for those engaged in our basic industries and for the implements which they use in production; substantial relief from taxation of those articles which make up the necessaries of life; consideration for those who are least able to bear the burden of taxation; and the recognition that no one section of the community, or no one occupation can claim the benefit of special privileges. I have had necessarily to condense the outstanding results of this government's tariff legislation, and now I may indicate something of what has been done for each of our various industries.

What do we find in the case of agriculture? There has been a 100 per cent reduction of the sales tax on all essential implements for tilling the soil and gathering the crops, and in addition there have been placed on the free list such articles as mowers, harvesters, reapers, cultivators, harrows, manure spreaders and seed drills. Then there is the 99 per cent drawback on materials for the manufacture of general farm implements, besides a 100 per cent reduction of the sales tax and a reduction of from 33 to 75 per cent on labour-saving machinery for modern farming, the tariff rate now being the minimum. There have also been reductions of 100 per cent of the sales tax and of the tariff on fertiliers and spraying preparations, and a cancellation of the sales tax on feeds of all sorts and on general farm products. So much for agriculture.

What about mining? There has been a 100 per cent reduction in the sales tax on all machinery and equipment for the extraction of minerals from their natural state, and a reduction of approximately 40 per cent on all essential machinery.

So far as logging and lumbering operations are concerned, there has been a 100 per cent reduction in the sales tax and a tariff reduction of 33⅓ per cent on machinery and equipment for logging and sawing up to the finished lumber.

As regards fishing, there have been the following reductions: 100 per cent in the sales tax on all essential materials and equipment;

100 per cent in the tariff on fishermen's rope for all purposes up to 1½ inches; 40 per cent reduction in the tariff on oiled clothing; and 33⅓ per cent reduction in the tariff on motor engines and parts.

And in the interests of the great mass of our population, including all the others I have enumerated, we find that there has been a complete cancellation of the sales tax on the most essential foods and 50 per cent on others. My hon. friend from Marquette (Mr. Glen) in his admirable speech, gave a list of them. In addition to this, there have been reductions on the following commodities: 35 per cent on raw and refined sugar; 12½ per cent on cotton, woollen and flannel fabrics; 33⅓ per cent on mitts; 20 per cent on woollen socks and stockings; 25 per cent on heavy woollen underwear; 33⅓ per cent on cotton blankets; 25 per cent on sheets, table cloths, pillow cases, towels and other household cottons, and 50 per cent in the sales tax on boots and shoes. At the same time, what has happened to our industries? Have they been injuriously affected? Let me give some of the figures in regard to the number of employees engaged, and the value of the products turned out in the year 1922 as compared with the year 1926. In 1922 we find that there were 474,000 employees in all industries in Canada, producing goods to the value of $2,482,000,000, while in 1926 the number of employees had increased to 550,000 and the value of the products of industry to $3,250,000,000.

Some hon. gentleman the other evening complained of the damage done to the agricultural implement industry and he made reference to the extent of our imports under this head. I, on my part, desired to know how many implements we were producing in Canada, because after all that is the barometer: we probably have to import some owing to the extensive activities in our agricultural pursuits. In 1922 we employed in this industry 6,221 workmen and in 1926 10,091; and in the former year we made implements to the value of $18,240,000 while in 1926 the value of these products had increased to $38,269,214. As regards boots and shoes, in 1922 the industry gave employment to 13,702 workmen and in 1926, 15,016; and while the value of the products in 1922 was $45,503,858, in 1926 it was $49,096,000.

So far as mineral production is concerned, my hon. friends opposite have had a good deal to say regarding the present condition of the industry. They declare that there is no mineral production going on.

Mr. BENNETT: No one said that.

[Mr. Ralston.]

Mr. RALSTON: Hon. gentlemen have repeatedly stated that mineral production is not being encouraged.

Mr. BENNETT: That is another thing altogether.

Mr. RALSTON: Let me inform the house that the peak of mineral production was reached in 1927, with a total value of $242,000,000. In connection with our estimated surplus for this year I would remind my hon. friends that no less a sum than $14,000,000 has been written off in connection with the revaluation of lands under the soldier settlement scheme, and we still have a balance on the right side of the ledger of $38,000,000; and as regards our foreign trade, there has been an increase in the total from $1,501,731,000, the figure for the year 1922, to $2,298,466,000 in 1927, or an increase of 53 per cent.

Surely the facts I have cited must convince the house that the Minister of Finance has kept faith with the people of Canada. Geography and climate have set for the founders and builders of this nation a great problem; they have created vast difficulties. Scattered along the 3,000 miles of narrow territory are communities of men and women each with difficulties peculiar to their own vocation and locality. To keep faith with all parts of the Dominion requires courage, sympathy, judgment and sincerity. I believe that not only this house but the people of this country as well will agree that my hon. friend the Minister of Finance possesses these qualities to a marked degree.

I want to remind my hon. friend that not only must the government keep faith; not only must the Minister of Finance keep faith, but the people of Canada must keep faith one with the other. There must be mutual tolerance and mutual forbearance regarding the various problems which present themselves in their various callings and localities. To turn over the pages of this budget and simply look for those items which will give a direct and particular advantage to any individual industry or locality is not and never can be the test. I say that a study of this budget and of the budgets which have preceded it will show the same principles in all; consideration for the masses, relief from taxation, stimulation of production and encouragement of industry, and so long as these principles are maintained in our budgets no class or section of Canada need have any fear. In a word, Mr. Speaker, I think we can regard this budget as a stimulating new chapter in that book of "all-Canada" budgets which have been

brought down by the Liberal government since 1922; I believe it will be received in that spirit by all parts of Canada and that it will receive genuine support not only in this house but throughout the Dominion as a whole.

Mr. A. W. NEILL (Comox-Alberni): Mr. Speaker, I hope you will excuse me if I do not appear to address myself so much to you as to the hands of the clock, which haunt me with the ghastly record of how quickly the few minutes allotted to me are passing away. With regard to the budget, if everything which has been said in its favour is true it is indeed a thing beloved of God; if, however, everything which has been said against it is true it is what the man in the street would call a holy terror. After listening to the extreme views on both sides of the question for nearly three weeks, I have decided to believe neither side. At any rate, the budget is a fait accompli now; it has been brought down and the government have a majority with which to pass it, so time will show the result. I would prefer now to discuss one or two points on which the policy of the government has not yet been declared, in the hope that when they come to formulate a policy they will at least give some consideration to the views of British Columbia, which I propose to express.

The first thing with which I wish to deal is the Australian treaty, and I must say I am surprised that the Minister of Finance (Mr. Robb) has not thrown the Australian treaty in our faces and cancelled it long before this, referring particularly to the members from British Columbia. After a great deal of trouble he negotiated a treaty calculated to promote trade for one of the great industries in Ontario, for the paper industry of Canada and particularly for the pulp and paper and fish industries of British Columbia, with the promise that further negotiations would include lumber, which was very desirable. But, with the exception of myself, I cannot recall having heard one word of appreciation of that action of the government, and particularly of the Minister of Finance, coming from hon. gentlemen opposite, whose constituents have been so vitally benefited by this particular treaty. Those benefits will increase in the future, because a treaty does not produce results in a moment; it takes time for its effects to become fully developed. The hon. members from Vancouver in particular have come here annually opposing that treaty; in fact they voted unanimously in support of a want of confidence motion based primarily on the Australian treaty. Vancouver is the port through which 92 per cent of the import trade with Australia passes as well as 36 per cent of the export trade; Vancouver is the headquarters of the big interests connected with the fish, lumber and pulp and paper industries, which reckon their investments not in millions but in hundreds of millions or dollars; but these members, although knowing the benefits which have been derived from the Australian treaty, come here shedding crocodile tears because, forsooth, they say harm is being done to the dairying interests by that treaty. They say that the price of butter has been lower in consequence, although it happens to be a matter of fact that the price of butter has gone up instead of down, due to causes entirely apart from the Australian treaty. But what is a little trifle like that when it is a question of some party advantage? Well, might I paraphrase those well-known words and say, "What can they know of Country, who only Party know?" That is the situation to-day.

Three or four years ago, after a good deal of effort, we succeeded in passing a measure for the protection of the dairying industry by doing away with the sale and manufacture of oleomargarine. I appealed then to hon. gentlemen opposite to vote for the measure on the basis of protection, but did they do so? Not at all; their concern then was the working man of Vancouver. They said he must have a cheap spread for his children's bread; they were the urban representatives then and must have regard for the working man. Very well; let us apply the same argument to the suggestion that the Australian treaty would reduce the price of butter, although that has not proved to be the case. Let us suppose that the treaty had that effect; according to their argument, would this not be an advantage to those workers for whose welfare they were so solicitous a few years ago? But that does not seem to work. Is it a fact that as far as they are concerned the working man is only entitled to oleomargarine on his children's bread, and should not have butter? Probably it all comes down to this; when it comes to a question of party advantage the workman, the dairyman and everyone else gets the go-by.

That is what these hon. members say here, but what do they say at home? Their speech is very modified there. Probably they will deny having said anything I might attribute to them, but I have with me some statements appearing in the Vancouver Province, the best and biggest newspaper in the west. This is a strong Conservative paper and it is also very

fair, much more so than the candidates it supports. During the election campaign the Vancouver Province stated that the negotiation of the Australian treaty was the brighest gem in the record of the King administration, and one of which they might well be proud. That statement was not published during a time of peace, but in the midst of an election campaign. I also have another editorial which appeared as late as last January, in which they said that if British Columbia wants the treaty retained, the British Columbia members would do well to make their wishes known emphatically. Have we heard them? I have not. Another Conservative paper in British Columbia states that the cancellation of the treaty would be a disaster. Have we heard that view expressed from the opposition benches? I have not. Party politics become of greater importance than the interests of British Columbia.

The results of the operation of the treaty are alleged to have been unsatisfactory, but in the twenty-four months after that treaty came into operation we increased our exports to Australia by thirty per cent; and as I have said, a treaty does not work like putting a penny into a slot machine; it takes time to reach the maximum benefits. However, we have had an increase of thirty per cent in our export trade; I have not taken the import trade into consideration, because our exports are the more valuable to us. The fish and pulp and paper industries of Canada, which largely means British Columbia exported to Australia in that period $9,500,000 worth of goods, and as most expenditures of that size naturally do, that resulted in increased work and stimulated industry. In fact, it stimulated the fishing industry so much in the direction of canning the more common grades of salmon, that the government, which had never taken any action in that direction before, were forced to place restrictions on the canners, because the British Columbia waters were being overfished in regard to these grades. That was one instance alone. The pulp and paper towns were busy and the bush was full of workers. Hon. members know how trade acts and reacts. Well, this wave of business extended to the coal industry. We cannot pack $9,500,000 worth of stuff in a canoe and take it to Australia. So it had to be shipped, and the ships carrying those commodities had to have coal, and the coal was mined in our district. Thus work was given to shipping, to coal miners, to workers in the bush, and in the paper mills and the fishing industry. Then these workers provided a ready and profitable market for vegetables, for fresh butter, for fresh cream and ice cream and for fresh milk for those engaged in the dairy industry in that particular vicinity, and anybody acquainted with farming knows that that is a far better market than sending butter to Liverpool to compete there with the products of the world.

A great hue and cry was raised by these same hon. gentlemen—in support of this I can quote from the speeches they delivered in my district during the election—to the effect that the egg industry of British Columbia was going to be ruined on account of this disastrous treaty. As a matter of fact I do not believe a single dozen of eggs has come in under the treaty. But that did not prevent the hue and cry that went up at the time. As far as Australian butter is concerned, the danger was not great of hurting the industry in British Columbia or in Canada provided that the dumping duty, of which I will speak later, was maintained. In 1926 the importations of butter into Canada from Australia amounted to 2½ million pounds. In 1927 owing to the dumping duty being imposed it had dropped to 800,000 pounds.

The National Dairy Association have presented three resolutions to the government. The first one asks that the Australian treaty as applied to New Zealand be cancelled. I am heartily in agreement with that and I will give my reasons later. The second resolution asks that the dumping clause be applied, on all butter sent from Australia to Canada either on direct sale or consignment as long as the Paterson scheme of bonusing exists. I agree with that suggestion and I will go further. I suggest that the dumping clause should be strengthened. I have reason to believe that the Paterson scheme will fail. It created such fictitious prices in Australia that New Zealand also sent its butter into that market, so I believe Australia may abandon the Paterson scheme altogether. I am in favour, I care not who calls me protectionist, of the maintenance and the judicious use of the dumping clause. It may be said that the dumping clause is dangerous. So is a revolver dangerous; in the wrong hands. A revolver is a very handy thing to have in the middle of the night when you hear a burglar moving downstairs. It should be used with discretion and so should the dumping clause. In any event I believe it should be there to be applied when needed. You remember the missionary in the days when Indians used to scalp settlers, who said that he was not afraid because the Lord would take care of him until his time came, but some friend said "Yes, that is all very well, but how is it that whenever you go out

you take a particularly vicious looking shotgun with you?" His reply was, "That's all right, I'm not inconsistent. The Lord will take care of me, but supposing I happen to meet an Indian at a time when I had not my shotgun, and his time had come, what would the Lord think of me for not having the machinery to carry out his will?" The same illustration might be applied here. When we need the dumping clause let us have it on the back premises ready to be applied whenever occasion demands. I am strongly in favour of the maintenance of the dumping clause for general use, applied very discreetly, and in favour of its application in the present instance.

The third resolution asked that the Australian treaty be done away with altogether. I am flatly and entirely opposed to that. You do not burn your house down because there are mice in the basement. Because some phase of the treaty has operated unfairly to Canada the remedy is not to do away with the treaty, which has untold potentialities in the way of trade for the whole of this Dominion. Moreover if the first and second resolutions I have quoted were brought into effect, there would be no need for the third resolution at all. I repeat that I am entirely against doing away with the Australian treaty.

Coming back now to the first resolution asking for the abolition of the Australian treaty as applied to New Zealand. That feature of the treaty was never introduced into this house; if it had been I should not have supported it. It was put into effect by order in council and I am against it. I understand it was intended as a sort of quid pro quo for the preference they had given us. Well, that is possibly true, but it is too high a price to pay for such a concession, and in any event it is not fair that one industry should have to bear the whole brunt of the effect of the arrangement. The real danger in connection with this Australian treaty is entirely from New Zealand, and I would support the immediate cancellation of the arrangements so far as New Zealand concerned. It may be said, and I have been accused of it before, that I have been making a protectionist speech. I care not what epithet is applied, I am only applying the principle of common sense to conditions as they happen to exist. I believe that like the Sabbath, the tariff was made for man and not man for the tariff. So much as regards the Australian treaty. My suggestions in that regard are: that we should keep the treaty for the benefit of the big industries of British Columbia and the workers thereof; that we should keep the dumping clause and strengthen it if necessary; that we should cancel the treaty as regards New Zealand. These are my own views I think they are the views of my constituents, and I challenge any member from British Columbia to say that the carrying out of such a policy would not inure to the general benefit of the province of British Columbia.

I want now to speak for a moment on the subject of immigration. To begin with, of course, being a British Columbian, I will touch on the oriental question, but briefly. It is true that we were promised oriental exclusion when the oriental resolution was going through this house in 1922. We were told then that the words "effective restriction" would have the same effect as exclusion. That promise has not been carried out in its entirety. I will admit all that has been said by the hon. Minister of Health (Mr. King), when he said the Conservative party had done nothing along those lines, and that the Liberal party were entitled to the credit of having passed the Chinese Exclusion Act in 1924. They also made regulations which have resulted in the control of the fishing industry passing from the Orientals to the white people. Furthermore, they got the Japanese "gentleman's agreement" cut down so that the immigration under it amounted to 150 labourers annually instead of 450. But that is not enough. We want more. We want the abolition of the "gentleman's agreement" altogether or its material alteration. We object to allowing women to come in practically unrestricted, and also to putting the control of immigration into the hands of a foreign nation instead of retaining it in our own hands. I know that negotiations have been going on to amend that "gentleman's agreement", but I declare here that I am not satisfied that our officials have exhibited the energy they should have in pressing forward our view of the matter. Orientals will stand us off as long as they can, but if we keep the whip hand and exercise the proper amount of pressure I have no doubt we shall achieve a satisfactory result. I give all credit to the statement of the Prime Minister the other day when he said that there were interimperial reasons why we should do nothing that would appear to be offensive, also that we do a large trade with the orient and hope to do more. I admit that, but I do not admit a contention made by the hon. member for Fraser Valley (Mr. Barber) the other day when he spoke in this debate. I agree with much of what that hon. gentleman said, but I do not agree with his statement that the United States have lost no trade by their somewhat offensive language in con-

nection with this matter of oriental immigration. They have lost an enormous quantity of trade. We do not want to lose any trade if we can help it, but nevertheless I take my stand with him that under any consideration we must adhere to our vision of a white Canada and I hope the government will lose no time in having the gentleman's agreement" properly altered.

Now as regards immigration generally, I wish to say, and I am sure that I shall receive small sympathy when I do so, that I am a heretic to the conventional ideas of both sides of the house. I do not agree with the immigration policy of either party. I oppose the policy of the Conservatives which I know. I am not quite so clear as to what the Liberal policy is, but to the extent to which it is indicated by the methods by which they have attempted to carry it out, I do not agree with it. Where does this cry for a vigorous immigration policy come from? It is a sonorous phrase and it sounds very nicely but where does it come from? If we track it down to its origin, it comes from the shipping interests, from the railway interests, and from the big employers of labour, who hope by that means to form a great bank of idle labour, of ignorant alien labour, which by its ignorance of our tongue and its inability to express itself at the polls will be always a cheap, submissive source of supply for them. One would suppose that the very obviousness of their self-interest would largely detract from the strength of their representations, but it does not seem to be so. And forsooth, this class of immigrants is to be assisted to come here at enormous expense. I have been a worker practically all my life; I now represent a large number of workingmen and women, and I fiercely resent the idea that they should be taxed in order to bring in workers to compete with them in the often congested labour market in which they seek to make a living. We talk about protection. Is there protection of the workingman there in regard to the only thing he has to sell? His labour, is it protected? We talk about free trade. Is that free trade in labour? No, it goes far beyond that; it is fifty degrees below the zero of free trade when you ask a man to pay to bring in a competitor to compete with him.

Another method I object to—it is not a method; it is a phantasy—the belief that we can bring labourers in from southern Europe, from the sunny towns of Italy, to work on farms in western Canada. The other day I met in Toronto a man who had come out under this assisted passage scheme to work on a farm in the west. I asked him how he landed in Toronto and he said: "I got off the train in Montreal and asked a policeman where the train for Toronto was and I got on it. What can you do about it?" I said: "You can be deported." He said: "It would be hard to find me." He never went near the prairies. I have no doubt he figures in a statement made recently by hon. members opposite when they drew a picture of so many agricultural labourers being imported into the prairie provinces in a given period and of how in the next census they were not there, and they immediately jumped to the conclusion that these people had gone to the United States. That is not the case. This man and thousands like him have gone not to the United States, but to Toronto, and I presume they are shown there as part of the natural increase. It results in Toronto getting a reputation for fecundity to which it is not entitled. I am against this system, not because it is wrong but because it is impossible and you cannot enforce it. When this investigation into the immigration department is carried out, I venture to predict that it will be found that the heads of the department are not grafters but clean men, and that a good deal of the unpopularity from which they are suffering today is because they have loyally and steadfastly set their faces against political and other pressure from outside seeking to bring in immigrants at so much a head.

It may be said: Why, this man wants to stop all immigration! Not at all. My policy is simple and fair and it has the great advantage of being enforceable. I would allow two classes of immigration: I would allow into Canada every white British subject, sound in body and mind, who pays his own passage here. The fact that he has been able to scrape together the money to come here, as I did, as an immigrant, will guaranteee in some sort that he has some stamina and is likely to make good under the different and somewhat difficult conditions in which he will find himself in this country. As regards the continent of Europe, I would impose a very strict quota, what is known as a family quota; that is, that no one could come in except someone who was an immediate relative of the man in this country who nominated him. An alien who comes here and fails to make good would not likely want to bring in his relations; but when an alien comes here and makes a good citizen, as many of them do, his son or his brother is also likely to make a good citizen, and at any rate the fact that he would be responsible for his maintenance for a certain period and furnish him with work, would guarantee that the man would not likely be a waster. I would allow that small family quota.

There is nothing sensational, phenomenal or spectacular about this policy. Sometimes statesmanship consists in doing the obvious and I am asking only that we should imitate our neighbours to the south who have had four or five generations of experience before us in this matter. They have tried the open door and they are now trying the quota system. They wish they had tried the quota system sooner, and I notice that when they deal with the quota, they strengthen it rather than make it slacker.

Another feature of my policy is that the millions that are now being spent in this futile immigration policy we should be able to use in improving the conditions of the farmer, making them more attractive, and especially by research and other methods endeavouring to do away with seasonal unemployment and to promote all-the-year-round work. In addition we would be able, out of those millions to provide old age pensions and unemployment insurance, things that the very best kind of British settler we want in western Canada is accustomed to to-day and is reluctant to leave; and he does not care to go to a country where these advantages are not before him. If we provided these, we would be more likely to get the best class of immigrant we want.

As regards immigration to the United States, of which we have heard so much nonsense—I think that is a parliamentary word—the large centres will always attract population from the smaller ones and the country districts. That has been the case from the time of Aristotle and it will be so for all time. Let me take Scotland as an illustration. Scotland is a small and in some regards a poor country and it has an enormous export of young men and women. They go largely to England and indeed all over the world. That naturally depletes the population. What do we do about such a situation? Do we howl to the government: Save us; stop the young blood from going away? Not a bit of it. Do we howl to the government about bringing in aliens from somewhere else to fill up the gaps? No. The Scotch take the very sensible method of going in for bigger and better families. In the family of which I was a member and in the families in which my father and mother were respectively members—three families in all—there were thirty-seven children, and that was no exceptional thing at all in Scotland at that time. It was in that way that Scotland dealt with the loss of her young people and the method possesses three virtues beloved of the Scottish race. First of all, it was economical; second, it was profitable and, third, it was pleasant.

I have in my hand a pamphlet called Immigration and Population got up by some of the best scientists in the United States, scientists employed not to secure an ex parte statement as we do out of figures, but to get the truth and nothing but the truth. They went very thoroughly into the whole situation; they took different periods and states and so on, and this is the conclusion they came to. They said that after a certain point had been reached—and I will indicate that point in a minute—this is what they found:

> Except for brief periods, immigration will not increase the population—

That is rather startling.

> —above the figure it will reach without immigration. . . . If we admit those from other lands we shall decrease by a like number those who will be born of those now here.

They end up with this statement:

> The question for cold-blooded consideration by the American of to-day is this: Do you want the soil inherited by your son or by the son of one who now toils in a foreign land?

That question applies with equal force to the Canadian. What happens once that certain point is reached is this: The birth rate of the local people, so to speak, of the people in America or Canada declines in exact proportion to the immigration. What is that certain point? It is proved beyond doubt by statistics that cannot be denied—and I have submitted this to professors and other learned men and statisticians and they say it is true—in the United States the change took place the moment the supply of readily available cheap land which would produce food for practically nothing was exhausted. Of course if you pour immigration into an empty country, it is bound to be good for that country; but when the saturation point is reached, when there is no more good accessible land to be had for nothing, it is like pouring water into a pail; you may change the water in the pail but you will never get it any fuller. It might be said that our conditions are different. Yes, but where have we cheap accessible lands to be had for nothing? Only in the Peace river country and that is not really accessible. In the method I have suggested we would have at first, unlimited immigration from Great Britain, which would meet that situation. If these things are true, and they have not been contradicted, we have been spending millions for immigrants to come to Canada which will not increase our numbers, and will merely change the complexion of our population.

These are my views on the Australian treaty and on the immigration question. I am prepared to support this or any other govern-

ment which will bring down a policy of that kind. I do not think I have been verbose or wasted much time in discussing these matters. I want to discuss now the biggest problem in British Columbia, and that is in connection with our fishing industry, but I cannot tackle it to-day on account of the forty minute rule. It is surely a bad rule that prevents a representative of the people discussing a matter of great importance to his constituents at the proper time, and this is the proper time. We were told that there was to be a new heaven and a new earth when this new rule was introduced. We have had two debates since, not particularly contentious, and both have lasted longer than they did before. We have had the spectacle of three or four cabinet ministers cut off in the apex of their arguments, in the very crux of what they were explaining. They had been attacked and they were defending themselves, explaining matters about their department that we had a right to know and which the house and the country had a right to know, and yet they were cut off in the very midst of their argument by this new rule. We also have this situation, that forty or eighty or a hundred men can attack a cabinet minister for forty minutes each, equivalent to eleven days of sitting, and then he has only forty minutes to reply to the one hundred members, or less than half a minute to devote to each. He must be a superman if he can do it. I hope that we shall realize the real dangers of this rule and that with your full consent, Mr. Speaker, it will be relegated to the oblivion from which it came, unwept, unhonoured and unsung.

At six o'clock the house took recess.

After Recess

The house resumed at eight o'clock.

Mr. G. R. GEARY (South Toronto): Mr. Speaker, what a change is here! Time was when the hon. Minister of Finance (Mr. Robb), on making his budget speech could look for, and did get, a pleasant chorus of praise from all the benches to your right, sir, and from those in the far corner on this side of the chamber. In some way or another the burden of that chorus of praise is changing; there is an ever-widening rift within the lute. The hon. minister might have expected from the official opposition searching criticism because sharp differences of principle are involved; but his own supporters, straight-line Liberals, damn this budget with faint praise, and the Liberal-Progressive party—adopted or kidnapped adjunct of the Liberal party—for the most part have sat in sullen silence, until this afternoon the hon. member for Marquette (Mr. Glen) did essay a few apologetic reasons for supporting the budget; our hon. friends, the contingent from Saskatchewan, never in the house noted for being inarticulate, to say the least, have sat strangely quiet; the group on my left has protested with some force and vehemence—and that, I am afraid, is the "most unkindest cut of all". My hon. friend will remember how in other days his party and that group were

> Two souls with but a single thought,
> Two hearts that beat as one.

But now, Mr. Speaker, that group has torn the mask of smiling friendship from the government's face and at long last has awakened to a true understanding of its methods. Hon. members will recollect how this government once had the habit firmly fixed of being saved in parlous times by the hon. gentlemen, not forgetting the hon. lady, who sit to my left. Have those happy days gone forever?

An hon. MEMBER: It looks like it.

Mr. GEARY: Or are they to return? I rather think the government hope that it is a temporary eclipse only and that the light of favour will shine again. The government has experience upon which to base that hope. But perhaps, to change the simile; the pitcher has gone once too often to the well.

My hon. friend from Mackenzie (Mr. Campbell) has told the house how the siren voice of the Prime Minister has seduced these Liberals of Manitoba—or Liberal-Progressives, as they call themselves—from their allegiance, how that same voice has lured them to destruction—to destruction that is inevitable when one abandons principle. I am wondering what these Liberal-Progressives are going to say to their ardent free-traders back home. And so with the Saskatchewan contingent, I wonder what they are going to say; are they going to excuse their voting for this "fence-mending" budget by declaring that they made themselves, privately, a thorn in the side of the government? Are they going to tell of the desperate struggles in ministers' rooms and behind the closed doors of caucus to get a different sort of budget?

The hon. member for Weyburn (Mr. Young) is not in his seat. I should like to have him explain the strangeness of the coincidence in regard to his motion to repeal the dumping clause of the Customs Act. It was at the top of the list, called for hearing time and again, if my memory serves me aright, but in some mysterious way it disappeared from the order paper the day before the budget was brought down, and by some

magic reappeared the day after. Had that anything to do with the feelings of Saskatchewan with regard to the budget? Are the Saskatchewan members of the opinion that what they thought were the policies of the Liberal government have been treated fairly in the budget? I should be very much surprised to know that all is unanimity between the government and the Saskatchewan group. I wonder if my friend from North Battleford (Mr. McIntosh) will explain his vote on the budget by telling his constituents at some great meeting in the "little red school-house" how opposed he was to it; how, to be sure, he did vote for a 10 per cent reduction in the income tax, but that that was only because he was able to make to this house the brilliant suggestion that the money would be replaced by voluntary contributions towards the extinction of the national debt.

My hon. friend from East Calgary (Mr. Adshead) is pained over ths betrayal of Liberal principles, or so-called Liberal principles. But why shed his few but friendly tears at this stage? The betrayal began in 1897 and was evidenced in the very first budget of a new-coming Liberal government. The Conservative party had been swept from office just one short year before, and "the funeral baked meats were scarcely cold" when the Liberal government espoused the policy of the Conservative party, and has never had the strength to depart in fact from that policy, although it has—notably in convention of 1919, and on platform after platform, as instanced by my hon. friend from Mackenzie—set itself up as being the advocate and proponent of something entirely different. Is it any wonder, Mr. Speaker, that the groups in this house have come almost to the point of parting with this government, with its actions, its broken pledges, so fresh in their minds?

What is the result, Mr. Speaker, of this wavering by the government from year to year on its tariff policy? Simply that its policy, if it can at all be called a policy, is in a welter of uncertainty, that there is nothing stable, and there can be nothing stable, in such a policy because it is founded on no principle and has not as a basis conviction. There is no sense, there is no stability in a situation such as this, and small wonder it is that not only are murmurs heard but open revolt is seen. Without going over again a situation which has been repeatedly explained in this house, I may cite two familiar instances which will readily occur to the recollection of hon. members. It was in 1924 that the government made a magnificent gesture in the budget speech by reducing the duty on agricultural implements. There was a great objection to that reduction, a considerable outcry. The matter was the subject of a good deal of discussion between the government and some other people. Ostensibly the reduction in the duty was intended to effect a reduction in the retail price to the consumer, which reduction in price, judging from the illuminating speech which we heard the other night from the hon. member for London (Mr. White), has not at all eventuated. And the object further was to take from the manufacturer the undue profits which it was said he was making. Well, the manfacturers had something to say before that reduction finally passed into law and the result was that the chiefest of all these came from these conferences with the government, perfectly pleased and content, and in due course of time he became a minister of the government and, so far as we know, has lived happily ever after despite that handicap. In the net result, if there was any reduction in price to the consumer—and my hon. friend from London shows that there has been no reduction—it was effected, while ostensibly by a reduction in the tariff, in reality, after negotiation, by a reinstatement of that reduction by other means which placated the manufacturers. There was another magnificent gesture in 1926 at the instance of the hon. member for Macleod (Mr. Coote), the duty on automobiles being reduced in that year. That reduction was made with a good deal of eclat and considerable support was expected for the government in consequence. Thousands of workmen came to the city of Ottawa to protest and the Minister of Finance (Mr. Robb) struck an attitude:

> Come one, come all! this rock shall fly,
> From its firm base as soon as I.

Or, to use his own words, "I will stick to my guns." Did he stick to his guns? No; more conferences and more meetings in private, and at the end of these conferences the manufacturer emerged with a smile of complete satisfaction. If there has been any reduction in fact in the price to the retail consumer on these particular products that reduction has been effected at the expense of the general funds of the Dominion.

I submit that the same lack of principle is carried into the budget now before us. Hon. members have analyzed that budget with a special knowledge which I myself do not possess and I am glad to be saved any difficulty on that score. Suffice it to say that if you take the case of the big weaving man, any reduction which he has been given—and such reduction does not appear clear in many instances, but if he has been given a reduction

—he has received it at the expense of a charge upon the spinning man below him. There seems to be no definite principle. A mill in St. Mary, I think it is, the constituency of an hon. member opposite receives a benefit; a mill in Hespeler is sadly damaged; here the axe falls and there a benefit is given. Somebody gets something out of it and somebody else is hurt. Where can the system be found? No one on the government side of the house has attempted to explain the schedules in this budget and probably none of them can. But this fact does stand out, that it is by no means certain that any reduction has been made; there is the certainty that any reduction made will not find its way to the consumer. And this much we gather from the schedules, that if the big man is hurt in one respect he is recompensed by having the load shouldered by some unfortunate below him.

There has been called to my attention an item which I think is worth more than a casual glance. There is a salt belt—it may have been mentioned before but I apologise for not having been in the house throughout the whole of the session—a belt through the western part of Ontario, beginning, I think, in the riding of the Minister of Trade and Commerce (Mr. Malcolm), and extending southerly, bending a little off until it gets into the county of Elgin. Incidentally it passes through several constituencies represented by hon. members in this house, all of which constituencies, if my memory serves me, are by some coincidence represented, with the exception of one or two, by hon. gentlemen on the government benches. An application was made for an increase in the duty on salt. Now that is a staple household necessity and it was a bit thick even for this government to put a duty on salt. But something had to be done, for the government was sorely pressed. And what was done? The same old trick once again—the duty was taken off the coal used in the manufacture of salt.

I instance these matters not for the mere sake of repeating things that have been said before but to make a point which is clear to myself. And I make this point on my own responsibility. It is this: The whole system of taking care of unfortunate industries by drawback reductions in duty, rebate of sales tax and devices of that sort is wrong, and it is wrong no matter who has practised it in the past or who practises it now, because to my mind it is the wrong form for protection to take. If protection is good, if it is a valid and sound proposition, then it should be carried out in the open; protection should not be got at by devious methods or by devices such as my hon. friends on the government benches practise.

In the framing of a budget, I take it, there are two principles which in the large may be followed. There is in the first place the principle of free trade, and I submit without discussing the matter further that, the late Adam Smith and the hon. member for Rosetown (Mr. Evans), to the contrary notwithstanding, the principle is unsound. But even admitting it to be sound in general, were conditions untrammelled by circumstances, it is certainly unsound and impracticable in the condition in which Canada finds itself to-day. Apparently that is not the policy of all the members of the government; I have not heard from the Minister of Immigration (Mr. Forke) or the Minister of the Interior (Mr. Stewart), who have been heard in other days to say something quite different, together with the Minister of Agriculture (Mr. Motherwell); they have not spoken this time. The Minister of Railways (Mr. Dunning) has said he is not a free trader, however, so we may take it that one member at least of the government denies the free trade proposition. Then we have on the other extreme the doctrine of protection, and with that I wish to deal very shortly in a few moments. I may say now, however, that in its national policy the Liberal-Conservative party has protected, does protect and intends to protect where protection is proper under this system, and that protection will be extended where necessary to all branches of industry in this Dominion.

The government have taken neither of these obvious courses, but have chosen to follow what they call the middle course, although it is beyond me how there can be such a thing with any sanity to it. They say they are between the high tariff and the low tariff, but on my assumption no tariff is high which does not protect where protection is justified and no tariff is low which does more than protect in a like case. On those words of low tariff and high tariff, without reason, logic or anything to back them up, the main distinction has been drawn by our opponents between ourselves and other parties throughout this Dominion. To take a middle course with no guiding principle is to veer and shift with the wind and tide, trying to navigate without a compass. In such a case the temptation is strong to take practical politics as a guide, and I submit to you, sir, and to this house that that is just what the government have done; they have succumbed to that temptation and have even gone further. They have raised practical politics almost to a principle, and I

think I am not going too far when I say that in their handling of the tariff policy of this country we find the very apotheosis of political expendiency. With the government attempting to drift a course, so to speak, between extremes, as they choose to say, we cannot look for anything certain or anything stable; it will always be that way with this government. They have done so before and they will do it again; we know what they have done and what their ideas are in that respect and we know that the same thing will occur again; the government have their past before them.

We have been criticized perhaps more strongly in the west than in other parts of this country, and in many ways I can well understand the attitude of the western farmer. I can appreciate, although perhaps not quite fully, the difficulties with which he finds himself confronted. In this generation he is a pioneer breaking new ground, two, three or perhaps more generations after our forefathers, those hardy spirits of his own kind who pioneered in the central provinces. From our grandfathers and grandmothers we know the privations and the hardships which must be endured in a new country, and we know that through the initial struggles of our ancestors we in the central provinces have succeeded to a settled and prosperous land, with a diversity of opportunity which was not available to them in their day and generation. The time of transition has been long with us, three or more generations, and by analogy the time of transition in the western provinces would be equally long. I take it, however, that as all in this house have the interests of Canada at heart, they will all use their best endeavours, as they see the light, to make that transition period in the case of our western country shorter than it has been in the central provinces.

While the man who took up his land in the west faced with a light heart and a sense of adventure the development of that country, and probably for himself alone could continue with great joy the life that it entails, he has others to think of. He is married and there are children, and I can understand the feeling almost of bitterness when he sees that his wife has to face the privations and hardships incidental to land settlement and that his children are deprived of perhaps all the opportunities which the more settled parts of the country afford. It is no wonder that such a man cannot settle himself with patience and resignation to the task he has before him. In the east, in the central provinces he sees what appears to be affluence, while hardship is his lot and that of his family, and in these circumstances I think the western farmer was an easy prey to misrepresentation of the Conservative policy of protection.

I speak of that policy as having been misrepresented. We have been assailed as a party of high tariff; a tariff high and yet higher; as high as Haman's gallows, if you please, but that is not true. The word "protection" has been used by people who do not want to give the right impression as being protection for some special interest or special person to the end that he may acquire undue profits as the result of his labour. Again, Mr. Speaker, I say that is not true. I am not at all concerned with the manufacturer beyond seeing that he has a fair chance in the struggle to get a fair return for his capital, his energy, his skill and ability. I am concerned for his workmen, that there shall be security in industrial life and a decent living wage. They call us the party of big interests, but to those who know the texture of the Conservative party in Ontario, for instance, that is not understandable. The people of the province of Ontario would be called radicals by my hon. friends opposite from Quebec; we own the business of generating, transmitting and distributing electrical energy practically throughout the province of Ontario, with the result that we are able to give it to the consumer at cost. We own and operate our own steam railway. In my own city of Toronto we not only control the distribution of electrical energy but we own our own street railway transportation system, our waterworks and even our abattoir, and these services go to the people at cost.

In this house last year, Mr. Speaker, the Conservative party made a stronger appeal for a workable and fair old age pension scheme than did any other party. Because we believe in that principle, and because we believe that old age pensions should come into effect, we suggested and we stand by, the only method which could absolutely ensure fairly and at once the application of the policy, of paying the whole cost ourselves out of the Dominion treasury.

The opposition led, and took a substantial share in, the victory which followed, in the fight for public control of the water rights of the Ottawa river during the last session of parliament. And yet we are called the party of the big interests, whereas through the whole history of the Conservative party the object of its policy has been towards not the big interests, whatever they may be, but towards the amelioration of the lot of the common

people, and that is what we are standing for to-day. The big interests! St. James street! Do they like the Conservatives of Ontario? They do not. And still one would think we could not be trusted to formulate a proper protective policy that would conserve the interests of the common people.

I have little to add, but to my mind, Mr. Speaker, the only way of distributing the burden of taxation derived indirectly from the customs tariff in this country is under a principle that is definite. I submit to the house that principle is the principle of protection, safeguarded and carried into effect in the way I have suggested—by so controlling the customs duty that no one shall profit unduly. That has been stated time and time again, and was restated the other day by the hon. member for St. Lawrence-St. George. An application of that principle could be made in this way—and I am not attempting to discuss it in detail—this is an instance of what might be done: Supposing it is found during the time parliament is not in session that someone is taking an unfair advantage of the duty. There should be power to the government, on the recommendation of a properly constituted tariff board, to reduce or do away with the duty, just as in the opposite case we have on our statute book a law giving the governor in council power to invoke the dumping clause. That could be done and would be done, and you would then do away with the present system with all the opportunities that call to the government to make use of the tariff to suit the political exigencies of the moment.

I am not one of those who think that the opposition of the farmers to the payment of income tax is based on unworthy reasons. I do agree that if a farmer does not pay income tax it is because he has not got the income which calls for payment. I take it that the farmer is an honest man and in whatever part of the country he may be he desires to pay his fair share towards the upkeep and the management of this country. While the farmer does not pay taxation through the income tax he pays it to perhaps some extent through the sales tax, a tax that we can infer is on its way to abolition, but he pays largely by indirect taxation through the customs tariff. We must have customs duties, and since the farmer must pay his share of taxation through those duties, I take it the question which concerns him is: Am I paying my fair share and nothing more? The policy of the Conservative party—that of protection with the safeguards I have indicated—is the only policy I submit that will ensure his paying his fair share and no more. This is a general discussion, perhaps too general, on the subject of the budget, but it goes to a principle. It goes to a principle that has been misrepresented as I have indicated. And can one feel any other desire but that of granting to the farmer his rights? He cannot. Nor can we forget the artisan, the man who works in the shop or in the factory. He surely has his rights. He has the right to stay in this country and earn his living here and not be harried back and forth at the whim of an inconstant government. It is for the working man who depends upon the manufacturer that this party stands when it advocates, as it does advocate, a policy of protection on the lines described.

There is one other phase of this tariff question which to my mind goes deeply to the root of this whole matter, and that is the question of our national life. Customs duties are with us to stay. We have to have them and the burden of taxation should be distributed on some proper and equitable basis. I take it that the house will agree with me that customs duties should be imposed upon some definite principle. This party believes that that principle is the principle of protection. Each man must decide for himself, which policy is best, but in deciding, remember that it has been demonstrated, and fully demonstrated, that lack of protection, where protection is justifiable, means, slowly perhaps, but inevitably, the disintegration of the agricultural and industrial life of this country. What follows? The drift that we see to-day, more and more pronounced, towards the south; the infiltration of United States methods, commercial and political; the substitution of United States ideals, culture, and education, and of their principles of law and justice and order for those principles under which we have lived so happily; the loosening of Canadian national spirit. In short, Mr. Speaker, it means the surrender of our national life so that we will become citizens at large and men without a country. I know well that there are some who think there is nothing but good in such an outcome as that, men who look forward to internationalism. But I am of those, and they are many, who do not want to give up their Canadianism, who cannot give up their citizenship in the British Empire. There are those of us who are even sentimental enough to feel a thrill at the sight of our country's flag, a joy and a pride in being Canadians. To those, Mr. Speaker, it is worth while to struggle and to make sacrifices in order to build up rather than destroy the national life of Canada, worth while to feel, and to think, and to work with heart, and

with mind, and with strength, so that this vast and splendid land will be, and will remain for all time to come, our country, ours and our children's.

Mr. WILLIAM IRVINE (Wetaskiwin): Mr. Speaker, I think when I announce to the house that it is not my intention to make an attempt to deal with the budget in detail, I shall have a special claim for the undivided attention of this assembly. We have listened for a considerable period to the discussion pro and con of the budget. I am not going to discuss it, first, because what I might have said about it has already been said well and often; second, because a tariff policy for this country is a pretty well settled proposition, both parties being agreed that it must be continued, and third, because I have never been able to work up enthusiasm over a discussion of the means of collecting taxation as being any possible solution for an economic problem. So for these reasons I shall turn my attention rather to the remarks of the Minister of Railways (Mr. Dunning) in his speech the other evening when he made a special attack upon what he called group government and upon the principles which underlie the movement of which I have the honour to be a representative in this house.

I might also make reference to other hon. members opposite who made an attempt to follow the course of the minister in this regard. For instance an attack was made upon the hon. member for Southeast Grey (Miss Macphail) by the hon. member for West Elgin (Mr. Hepburn). I think I can answer that hon. gentleman's attack by just a single sentence. As I have said, the hon. member for West Elgin attempted to reply to the hon. member for Southeast Grey. I would describe that episode as Ian Maclaren described an insignificant and pompous character in Drumtochty. He said he was the "verra image o' a bantam cock fleeing in the face o' judgment." Mr. Speaker, I say, let him flee. The hon. member for Southeast Grey is quite capable of taking care of herself and it is not necessary that I should rush to her assistance, but I cannot let pass the opportunity of making a remark with regard to the speech of the hon. member for Marquette (Mr. Glen). I think his speech of this afternoon was the most naive, skilful and masterly evasion that it has ever been my humiliation to listen to. After he had declared that he did not know what was in the budget, he indicated that he was going to support it. After having criticized the hon. member for Southeast Grey for having that female type of mind which does not require a reason, he says: "I am going to vote for the budget," and when we inquire why, he says, "Because." I should like to take the time to restate the argument of the hon. member for Southeast Grey. I am sorry that it escaped the attention of the hon. member for Marquette and I think he ought to read it again because, if he can answer the argument of the hon. member for Southeast Grey, he owes it to this house and to his party to do so. The facts which she marshalled from the history of the party are sufficient absolutely to condemn it and I think her argument needs to be answered.

I turn my attention to the minister in question and I shall deal with his argument a little more thoroughly, not because I regard it as being in any manner destructive of the political position which this group holds, but rather because the high position which the minister occupies in this house lends to his argument an authority which a close examination of the subject matter would not warrant. When a minister of the crown is headlined across the country as having wiped out the argument for group government, there are those who may give credence to the announcement. He reminds me of Maud, who, having got married, went on her honeymoon and elected to go a long sea voyage. She said to herself that she and her husband would act as though they had been for many sea voyages together, but the husband, having noticed a long line of life buoys lashed to the rail, inquired of the skipper why he had taken all these spare tires. The minister posed as a student of political economy and political history; but when we come to examine his argument, no matter how well he may have posed, his remarks will spoil the show. I want, however, to congratulate him on his astuteness, for it were better for the Liberal party of this country that the people in general should concentrate their attention upon the alleged dangers of group government than that they should fasten their eyes upon the actual government of the day and the budget which is being discussed at the present time.

I desire also to congratulate him upon his astuteness in another matter. He has discovered that the birth of group organizations constitutes the only formidable challenge that the party system of which he is the protagonist has ever had in this country. I should like to point out to the minister in the terms of Fox that the people of Canada have emerged from the euthanasia of politics; that they have got over their apathy in respect to public matters and that they have given up that acquiescence to things as they are; in short

that they have recognized with Disraeli the drollery of the thing called representative government.

I want to confine my remarks to the minister's reference which was a criticism of the United Farmers movement. First of all let me point out that when he charges us, if his statement be regarded on his part as a charge, with believing in group government, I do not know of any single instance when as a group we have proclaimed our belief in group government. I know of no declaration of our annual convention at any time upon which the minister could pin his accusation, if indeed he regards it as being such. In view, however, of our group system of organization, we might regard group government as a fairly logical implication, and if it is, we shall not run away from it. But I merely want to point out that our movement stands for something far more important than group government. The United Farmers movement is an awakening of the people to a sense of personal and collective responsibility in respect to democratic citizenship, and the election of members to this house is only one small phase of that citizenship duty. Deeper and far more fundamental than political action as it is commonly understood, is economic action, and I think that the economic action which has been taken by our movement in the west has been so important and far-reaching in its possibilities, so spectacular in its achievement, as to require no further comment in that regard. We are concerned not less with the social life of our various communities. We are concerned with the securing of that measure of human happiness which alone can make life worth while and which leads us to take an active interest in such matters as education, the health of the people and the moral and social life of the community. Briefly stated, we regard our movement as the means by and through which we shall be able to make our contribution to the building up and developing of an intelligent civilization. There is no democratic action, regardless of the phase of life with which it may be concerned, which is outside of the scope of our movement's interest. That our group may be efficient as a democratic unit in an intelligently organized state, we regard certain things as being of vital importance. These I shall enumerate, and comment upon the most important of them.

First of all, we believe in organization because we do not think that an unorganized people can go anywhere even if they know where they want to go. We believe in organization because a mob can only do one thing, and that is to follow a leader whoever he may be, and the leader as a rule with the most attractive shibboleth and the most money and advertising gets the largest number of votes. We believe that organization is essential, and so we have striven to build up one that is real and alive.

We believe, next, that in order that we may know where we are going it is well to have a little education, and so education is of great importance to our movement in the west.

Next to this comes our principle of co-operation. I notice that some hon. members of this house have indicated by their remarks in this regard that they entertain rather peculiar notions of what cooperation means. I wish I had the time to deal with it as thoroughly as I should like, but I must pass over it speedily with only a few remarks.

We believe in cooperation because we have discovered that competition has become destructive. There was a time, of course, when the competition which to-day has become destructive was the only thing that could be. To-day, however, competition internationally has become so destructive that the nation which wins a war is the one which loses most. Competition has become so destructive in industrial warfare as practically to mean the destruction of the industry concerned, and both organized men and organized capital lose. I refer to one case which has come before this house on several occasions to prove my point—the Besco case. There you had organized capital fighting organized workers, and they fought with each other until the industry was threatened with destruction, if not actually destroyed. That is what competition does to-day; it has reached the destructive stage. Competition in this house has become destructive. This is a tug of war; this is not a government, and we who are in this corner sometimes grab the coat tails of hon. gentlemen to our right, and sometimes slip across the floor and pull on the coat tails of hon. gentlemen opposite. This is not what I would regard as an intelligent assembly bent on carrying out the business of this country in a cooperative way. If it satisfies hon. gentlemen, I suppose I shall have to take it whether I want it or not, but surely I am permitted to say that it does not satisfy me. Cooperation presupposes a higher common interest than I have ever heard voiced by either party in this house. It presupposes also that the entire civilization of which we form a part should have an intelligent aim. Has our Canadian civilization an intelligent aim? If so, this parliament has not discovered it, for I have not found a pulling of all together towards any common aim. Professor Jacks once gave an illustration which I will use here.

He told of looking from a skyscraper hotel down into the streets of Detroit, where he saw a great number of motor cars going north, south, east and west. He realized as he looked down upon them that each one was going some place by itself, but when he took them all together they were not going any place at all. That is a pretty fair picture of our Canadian civilization. We have a great number of groups in this country, despite that hon. gentlemen opposite have not yet recognized that fact. We have organized manufacturers, organized bankers, organized preachers, organized farmers, organized bootblacks, and heaven knows how many others we have. Each one of them by itself knows where it is going, or thinks it does, but when we take them all together, can any hon. gentleman tell me where they are going? I say that civilization has to have some intelligent aim so far as Canada is concerned, and that aim cannot be discovered in the spirit of antagonism and conflict for power which incessantly occupies the attention of this parliament. Cooperation, it is said by hon. members, cannot be practicable because the selfish interests of each group will always force that group to try to gain the masterful position. I want to say that that is a narrow view of the situation. I am not going to deny that selfish interest is there, and that it is the dominating factor, for it is by that selfish interest that we are going to get cooperation.

Let me give another illustration. I want you to think of a mine, a railway company, and a farming community. It is the selfish interest of the mine to get as much wheat for as little coal as possible. It is the selfish interest of the farming community to get as much coal for as little wheat as possible. It is the interest of the railway company to get as much wheat and coal as payment for services, in return for as little hauling as possible. Let us suppose that these three economic groups which we have in our country to-day are fighting amongst themselves and that two of them combine to impose conditions which are insufferable upon the other. What happens? If they impose on the coal mine, the railway company does not have any coal to supply its power and it has no coal to haul. It cannot, then, haul any wheat either, and the farmer will freeze to death. So there is a minimum of well being below which no functional group in the community can be allowed to sink without destroying the best interests of all the other groups. So the very selfish interests of each group is that which I bank upon, if I may be permitted to use that term, to bring about co-operation.

Let me stop here to say that to-day the conflict which exists between parties in this house is the greatest hindrance to the idea of co-operation. It stultifies its very spirit; in fact, it kills it at birth.

Next we believe in the stability of our organization. If we are going to build an organization through which we can function as citizens it will have to become stabilized, and we discovered that the economic interest was the most intimate, the most vital, the most permanent, and the most universal that we could find, and upon that we based our organization. It is because of that very fact that the Alberta organization has withstood the attacks and the shibboleths of the party system for a number of successive elections.

Our next principle is that we invite all other economic groups in the state to do as we are doing—to organize, to equip themselves with the knowledge required for intelligent co-operative effort, to understand the interlocking interests of all, and fix upon some real, intelligent aim for our civilization.

I turn now to deal specifically with our political activities, since they were the centre of the attack by the Minister of Railways. It is only reasonable that a group organized for the purpose of discharging the full duties of citizenship should not neglect its political obligations. What standard of efficiency of citizenship can we expect from people who only mark a ballot once in four years and leave the rest to somebody else? We do not regard that as being a very high ideal of democratic citizenship. But apart from the duty, and apart from the logical course we would have followed anyway, we were forced into this political action by the conditions of the party system. I refer here to the historic sketch given by the hon. member for Southeast Grey (Miss Macphail). The facts which she placed before the house on that subject cannot be gainsaid. Suffice it to say that if the party system had had sufficient virility, had had that resiliency or elasticity which belongs to life so that it could have accommodated itself to the changes which over a centruy of industrial development forced upon the country, the story of our movement might have been a very different one. And so if the party system never did any good thing but this one it has served Canada by forcing economic groups into this parliament.

We are opposed, Mr. Speaker, to the party system. We not only do not wish to play

the game; we wish to change the game. I will state briefly why we oppose the party system. We oppose it, first, because of its failure, as I have just indicated, to adapt itself to a new set of conditions which were not apparent at its inception. I must not stop to develop that thought, but I will give an illustration to make my point clear. I want hon. members to think of a farmer who went out to homestead with a team of old grey mares and a set of double harness. After a few years he found himself with four other horses, but he still has the old set of double harness and no new harness for the new horses. So he just lets the four run around to do as they like while he goes ahead ploughing with the two. That is what we are doing in a parliamentary way, but we are not as handy as the farmer: We hitch our horses up tail to tail; he hitches his so that they both pull the same way. To continue the simile, we started with two old nags, and we still have the old set of double harness, which your honour calls "procedure" and other nice terms. But to-day we find we have a number of other horses—some may call them mules—and yet we have only the old set of double harness, with the result that these other horses run free without a fraction of responsibility. I realize that it is easy for any member of the government to tell us we have not any responsibility when we suggest certain legislation. But that is not our fault; we are not shirking it; we are denied it; and yet we are sent here with the same authority that the hon. ministers on the treasury benches enjoy.

We oppose the party system because so far as we can gather its chief aim is to gain power. We regard power as of such infinite importance that no government or group or party has a right to monopolize it; it is dangerous to place it in their hands, no matter how good they may be.

We oppose the party system because the conflict necessary to gain power is disrupting and inimical to the best interests of the state. We oppose the party system because that very conflict is undermining the confidence of the Canadian people in all government whatsoever, and undermining it to the extent that it is paving the way for a bloody revolution as the only means of redress.

Some hon. MEMBERS: Oh, oh.

Mr. IRVINE: My hon. friends opposite must accept their share of responsibility for that, and before I am through I think they will be glad to do it silently. The party in power put itself in that position, first of all, by an open disregard of the pledges upon which it secured the support of the people.

Think of the clear statements which party leaders make in respect to each other during elections. Last election and the one before what happened? The leader of the one party went out and told the people of Canada that the policy of the other party was rotten, that its leaders were lacking in integrity and that it was unsafe to entrust the affairs of Canada to that party. The other party leader went out and said the same thing. Now, sir, when the Conservative leader speaks the Conservatives believe him; when the Liberal leader speaks the Liberals believe him. I believe them both. Here are the horns of the dilemma. What these hon. gentlemen say at elections times is either true or not true. If it is true—and they are both truthful gentlemen; I am not referring to the present leader of the opposition, for he has not yet had a chance, I am referring to the former leader of the opposition and the one before that—if what those hon. gentlemen have said is true, then Canada is in a very bad way. And if what the party leaders said of each other is not true, Canada is in a worse way. There is the position in which you have placed intelligent people. It cannot be denied that party propaganda is laying foundations for a bloody revolution, and while party spokesmen charge that to the bolsheviks, I place the responsibility on your own doorstep. You are the men who are developing the revolutionary spirit in this country, if, indeed, there is such a spirit developing.

Now, let me turn to a positive statement of our political principles. First I lay down a political principle which I do not think any hon. gentleman will challenge for one moment. It is this, that the economic interests form the dominating power in political policy anywhere, any time. In this regard let me give the origin of the two parties whose members are now listening to me. The party to my right was a group organization, an economic group. And what was that group? It was the landlords of England struggling to regain some of the influence lost at the collapse of feudalism who organized a political party called the Tory party to look after their interests in the House of Commons. Those who might perhaps disagree with that statement I refer to a very definite declaration by Trevelyan in his History of the Nineteenth Century. Referring to 1689, he says: "Power was left in the hands of the landed aristocracy, with the municipal oligarchies as its congenial instruments." Shortly after the industrial revolution the rising manufacturing and merchant classes found that they required representatives in the House of Commons, and they organized the

Whig party—a group organization. Now you say, "If that is so, why do you object to them?" That is a very fair question. I will tell you why I object. Because after a century of development with interlocking directorates we find that these two groups came together; but when they merged they did not destroy the two old parties, for they discovered they could handle these parties splendidly for their own interests; in other words, they would not put all the eggs in one basket, but a few eggs in each basket. When one party succeeded the other in office the people thought that they had a real change of government, but they had not, because the invisible power controlled both parties. I instance this budget, the last budget, the budget before that, and all the budgets for the past sixty years as the outstanding proof of that statement, that both parties seem to be controlled either by a masterly influence in that regard, or else this tariff business is a really good policy. This latter the Liberal party denies, but it must be one or the other. I will leave them to answer which of the two it is.

Next, we believe that if this principle I have laid down is sound, then the only true national policy that can be hammered out on the anvil of any parliament must come from the direct representatives of all the economic interests of the state, and not by some single group.

Then we believe in making practical the theory of democratic control which is preached by both parties. As a group we do this because we are a workable unit. The party system is not a workable unit. It is too unwieldy, even if it were a stable organization the people lose control of it because of its very size. At this point I would quote what Warbasse has to say in Co-operative Democracy:

> The function of a democracy is to protect itself from the wise men who would save it, the fools that would destroy it, the politicians that would betray it; and retain to itself the right of working out its own salvation.

We finance our political movement, and thus control our policy and our members. I claim no particular morality for our method, and I admit it frankly, there is no more morality in it than in the methods of hon. gentlemen opposite. But I am speaking of a different type of organization, and I owe my allegiance to the farmers movement just as hon. gentlemen opposite owe theirs to a party system.

Now, the application of scientific principles to practical government is another thing which we would seek to establish. I cannot go into the details of that, but I should like to tell the house that the hon. member for Macleod (Mr. Coote) will deal with this subject, perhaps to-morrow or the day following, and I invite hon. members to see what suggestions he has to make in that regard.

As regards the application of this economic principle in practical government, perhaps I might give another illustration to support my argument. Let us suppose two chemists in Ottawa studying the contents of a bottle filled with a particular compound—

Some hon. MEMBERS: Oh, oh.

Mr. IRVINE: Not the kind of stuff you are thinking about. They begin arguing about the actual elements in this compound, and what the result would be if it were applied to the hair of someone's head. One chemist, we shall assume, says the compound is such and such and if you apply it to the head it will remove all the hair; the other chemist says the compound is something very different, and he believes the application of it would cause two hairs to grow where one grew before. And so they argue the point for sixty years; the bottle is still there; and while men's hairs have come and hairs have gone no one knows what the result would be if this remedy were tried. Would anyone dream of calling such men scientists? Yet right in this house we have a state of things similar to this. One of our great political chemists says that the fiscal compound over which the two parties in this country have been arguing for so long will cause prosperity to grow where there was no prosperity before in Canada; the other political chemist affirms the very opposite. Thus they have argued for the past sixty years. But what would genuine chemists do in a case such as I have suggested? They would retire to the laboratory, analyze the compound, element after element, tagging each, and they would put an end to vain argument. Then having arrived at what they considered a sound conclusion, they would look for a dog on which to try this compound; they would make an experiment to see whether the compound would take the hair off the dog or put more hair on it. And so in politics. For sixty years we have argued the question, and there is not a man, woman or child from Halifax to Vancouver who knows what would happen if the tariff policies of the two parties were fully applied. If given a hundred years in which to argue the matter I venture to say that, by this static method, we should be no wiser at the end of that time than we are now. I suggest to my hon. friends that they look for a political dog on which to try their theory to see whether it will work. Let us

get down to something decisive and stop arguing, because the argument which has been going on for the last sixty years is certainly not creative; it is not getting us anywhere at all.

I come to the last principle I wish to discuss, the principle of cooperation. We stand for the instituting of cooperation for justice as a substitute for the present party conflict for power. I cannot stop to develop this point because I have something more to say directly to the minister anent his remarks. What I said of cooperation in general a few moments ago will apply in particular to political action. I turn my attention now more directly to the Minister of Railways, taking the order in which he presented his remarks to the house.

In the first place he says that group government is a bad thing because there are groups in Europe. I think the minister went far enough in that connection; indeed he might have been called to order when he termed the leader of the government of Italy a dictator and suggested that other governments in the European countries were not very efficient. I am not, of course, interested in safeguarding the reputation of Mr. Mussolini, nor am I especially interested in any of the governments of Europe. Nevertheless, it seems to me that the minister was not very discreet, to say the least, in his implication. Apart from this, however, the groups of Europe are not analagous to the group I have been discussing to-night; the European groups are hopelessly tied up with the old party idea, just as my hon. friends opposite are. The reason we have trouble in this house is that the government will not recognize we are here. And we are here. One of the first characteristics of a scientific attitude of mind is that it recognizes a fact when it exists, and the existence of this group in this house is an outstanding fact which hon. gentlemen opposite have not yet recognized. That is why the minister has had to roll logs, although I admit that the government has not had any heavy rolling to do this year.

Coming to Europe, let me say that the minister might have found far better examples of the group system if he had been acquainted with the history of the country from which he came. If he is acquainted with that history, as probably he is, then he failed to take note of the groups in the old land. I would refer him to the little group called the Council of London, designated as a group of shopkeepers, who defied both king and parliament and laid the basis of that most popular if nebulous idea of British justice and freedom. I would point to the group that brought a little order out of chaos in the days of Peel; I would point to the Irish group in the House of Commons; I would point to the Labour group in the British parliament—all splendid illustrations which the hon. gentleman might have found had he wanted to look for real examples. But he chose to take Europe because he thinks our people are afraid of Europe. Let me say on behalf of Europe, however, that the governments of France, Germany, Italy and Spain are just as clean, just as democratic and just as efficient as the government of which my hon. friend who spoke is a member.

Let me turn to another point. The hon. gentleman said, "If we allow these economic groups to develop, bless your heart, we do not know where it will end, because we may have a religious group." He was afraid that there might be a Catholic group or a Presbyterian group or a Methodist group. He forgets that the Methodist church is no longer in existence in Canada. However, may I point out to him that there have been religious groups in all parties, and I am not denying them the right to exist. The clergy of England had a very great deal to do with organizing the party of which my hon. friend is a member—and with the other party as well. I understand also that one of the most potent religious groups in Canada is represented at this moment in my hon. friend's party, and if he considers that group inimical to the best interests of the country I challenge him to throw it out of his party and see what will happen.

Mr. POWER: What group is that—the Orangemen?

Mr. IRVINE: I am glad my hon. friend asks that question because I can tell him that there is a religious group in the other party on this side of the house. And these two religious groups have been on the top of every political fight in this country for years. I say, therefore, to the minister that he is not going to hang any religious groups around the neck of the economic group of this country; those religious groups belong to the party system if they belong to any. Let me remind him that our group is not on the defensive; the party system is. The minister therefore will have to do a lot more defending before he goes much further.

And now I come to the last charge; the minister declares that the group system will lead to log-rolling. This is a term from the lexicon of partyism which I confess I do not understand; I do not know what it means. One hon. gentleman suggested to me that it meant, "If you will scratch my back I

will scratch yours." If that is its meaning, I am sure the skin must be off my hon. friend's back by this time. As I say, I do not know what log-rolling means, as used by the minister; but if it means anything bad, evidently he knows what it is, and he does not like it. If the term has reference to the groups in this house, then I will tell him again that it has been necessary for him to practise the art of log-rolling only because the party system has refused to recognize any other method of dealing with honourable men who come here and try to serve the interests of the country as a whole.

Let me conclude by saying this: While I do not expect hon. gentlemen on either side of the house to agree with all I have said to-night, I hope they will go so far as to admit that there is something fundamentally wrong with the system we are practising in this house at the present time, and that if possible they will get together long enough to shade off the most pernicious phases of the party system and give us a chance to work together for Canada. I want to see some great economic principle around which we may all rally in the spirit of co-operation, a principle that will permit us to breathe the spirit of patriotism, a principle that will hold us all by some common appeal, and not this eternal wrangling over nothing and getting nowhere.

Mr. LESLIE G. BELL (St. Antoine): Mr. Speaker, I always enjoy listening to the splendid oratory of the hon. member for Wetaskiwin (Mr. Irvine); at least we will all agree that he is an able advocate of the group system of government. But unfortunately he reminds me also of a great orator whom I heard advocating a third party system of government while I was a student at college in Michigan. I do not know what became of the group he was advocating, but I do know that the two great party system in the United States of America, still exists.

The budget debate is the time when we take stock of the affairs of our country. Hon. members opposite have given this house and the country the impression that we are on the crest of a great wave of prosperity, and it is noteworthy that all speeches made by those hon. members have laid strees on the word "prosperity". The Liberal party have sought to broadcast the fact that the policies they inaugurated are meeting with the favourable endorsation of all classes in this country, and we on this side of the house have been chided about the use of the word "protection". I mention this, for fear my hon. friends on the government benches may think our party are trying to get away from the word, "protection", used in its proper sense, but nothing is further from our thoughts. We have been criticized for speaking in any other way than that of boosting the present condition of affairs; members who have ventured even a mild criticism have been chastised by hon. members opposite; we have been accused of being responsible for the migration of hundreds of thousands of Canadians to that great neighbouring country to our south, all because of our criticisms of the present inefficient government, and our belief that the country is not prosperous. We are led to believe that the problems facing the country have been solved at last and that a sure remedy has been found in the free trade-low tariff policy inaugurated by hon. members opposite. We have heard some startling revelations concerning our wonderful financial outlook; we have been told that prosperity is no longer around the corner but that at last she has made her smiling presence known, and our native sons, daughters, and relatives are returning to have a share in that prosperity. The Minister of Finance (Mr. Robb), if not aware of the fact and even though his usual modesty forbids his acknowledging it, must surely consider himself the saviour of his country after the flattering remarks concerning him and which hon. members of the government have showered upon him. The Minister of Railways and Canals (Mr. Dunning) finds Saskatchewan farmers literally rolling in wealth; the Minister of Trade and Commerce (Mr. Malcolm) also sees the golden vision but reluctantly, out of one eye, he also sees a little unemployment, which he calls "seasonal unemployment". The Prime Minister (Mr. Mackenzie King) as Minister of External Affairs, proposes to spend the savings of the budget in Tokyo and Paris, while the Minister of Public Works (Mr. Elliott) stands with the bag wide open ready to accept what remains, to spend it recklessly in public works and other institutions throughout the country, not always in keeping, as we know, with the country's needs.

Accepting the statement of the Minister of Finance in the budget as correct, that our prosperity is definitely assured, I would not hesitate to congratulate the Minister of Finance and the government on such an achievement were it not for the fact that certain figures puzzle my admittedly limited capacity in financial matters. I regret that I cannot see my way clear to join in the voluminous though rather discordant chorus of national prosperity. For instance, I find that although we have heard a good deal of

boasting about the foreign trade of Canada the total imports and exports for the fiscal year 1927 amount to only $2,298,465,647, whereas for the last two years of the Conservative regime the figures were $2,351,186,832 in 1920 and $2,351,187,332 in 1921, or an increase in both these years of about $52,000,000. Again, if my hon. friends opposite would compare the figures relating to foreign trade for the last six years of Conservative government with the past six years of Liberal government they will find that our total exports from 1916 to 1921 inclusive amounted to $7,310,533,075, while from 1922 to 1927 inclusive the figure is $6,435,621,059. Our total imports for 1916 to 1921 inclusive amounted to $5,542,583,300, while for 1922 to 1927 inclusive they amounted to $5,198,804,217. In other words, during the last six years of Conservative rule our favourable balance of exports over imports amount to $1,867,949,775, while under Liberal rule for the last six years the balance was $1,236,816,842, or a matter of $631,132,933 of a more favourable trade balance under the Conservative regime than under Liberal rule. If we look to the net debt of our country we find another strange thing; we see that when the Conservatives went out of power in 1921 the net debt of Canada amounted to only $2,340,878,984, while by the end of 1927 we find the net debt increased by some $7,000,000, the exact figure of the net national debt being $2,347,834,370. The Minister of Finance has sedulously overlooked the fact that the net debt of the country under the Liberal rule, from the time the Conservatives left power, was increased to the maximum amount of $2,453,776,869 in 1923. The debt was increased by $112,897,885 before they started to reduce it, and yet the one outstanding feature of the budget is the boast of the present government that they are reducing the net debt of the country. Furthermore, it must be borne in mind that this present government have collected from the taxpayers of Canada over a billion dollars in war tax revenue alone and as yet they have not succeeded in reducing the net debt of the country by a single dollar, as I have already pointed out.

Then let us consider the tax reductions outlined in the budget. Hon. members of the government point with some pride to the recent reduction in the sales tax; so let us consider that for a moment. A war time government, Conservative or Union as you will, inaugurated a sales tax of one per cent in 1920, increasing it in 1921 to 3 per cent on certain articles. Like most other war governments they were turned out of office after they had made a good job of their herculean task, and their successors, the present Liberal government, upon assuming office immediately told the people with a smile that they were increasing the sales tax to 6 per cent. This was in 1922. The people accepted this ultimatum; they had no other choice. In the presentation of the 1923 budget, the rate of the sales tax was adjusted to a uniform 6 per cent, with certain exemptions on raw furs, drain tiles for agricultural purposes, and other articles. In 1924 there was a reduction in the sales tax from 6 per cent to 5 per cent, with certain exemptions on text books and certain articles of production. In 1925 more exemptions were added to the list but there were no reductions in the rates. These exemptions included vegetable plants, shoe lasts, and patterns, dies for boots and shoes, fishing boat engines and well-digging machinery. In 1926 there was no reduction in the sales tax. The reductions in that year in income tax were supposed to be most gratifying to the public, and accordingly there were no reductions. In the present budget the sales tax is reduced another 25 per cent, bringing it down to the rate that prevailed when the present government assumed office in 1921. And yet hon. gentlemen opposite tell us that this government is reducing the sales tax, while we on this side are supposed to accept the statement without question.

I have reviewed the reductions which were made in the sales tax from the year 1922 to the present year 1928 and the facts speak for themselves; the present sales tax rate is the same rate as prevailed when they assumed office. On the other hand the Liberal administration meanwhile has been taking a great deal of money, some hundreds of thousands of dollars in fact, from the people every year through this unjustifiable increase of sales tax and burdening the Canadian consumer, with this extra taxation.

Now, looking to the general conditions which prevail in this country, and the claim which is made with respect to prosperity, I would refer hon. gentlemen opposite to the commercial failures which have taken place in Canada during the present government's term of office. When one considers these figures he is astounded. The high water mark for commercial failures took place when this government assumed office. There were 3,925 commercial failures in 1922, the first year the Liberal government took office, whereas in the previous year, 1921, there were only 1,739. The wave of prosperity which has inundated this country during the Liberal administration of six years has drowned some 15,248 branches of business, compared with 7,939 during the last six years of the Conservative regime from

1916 to 1921 inclusive. In 1924 more manufacturers went out of business and double the number of traders succumbed to the great Liberal wave of prosperity ushered in by them in 1922, than under the previous six years of the Conservative administration.

If hon. gentlemen opposite want exact information as to whether business depression or confidence prevails in this country, they should look to the Canada Year Book for 1926. There they will find during every one of the years from 1916 to 1921 inclusive under the heading of "business confidence" the business conducted truly expressed the confidence of the Canadian people. On the other hand if they will look at the succeeding years from 1922 to 1926 inclusive, the latter being the last year given, they will find that business was indicated as being in a depressed state. Only in the year 1926 do we find this is not a fact. This may not appear to hon. gentlemen opposite as a very good barometer for indicating whether or not the country is prosperous at present, but to my mind and sense of reason, when 1827 commercial enterprises covering trade, manufacture, agriculture, logging and fishing, mining, construction, transportation and finance go to the wall, to use the language of the street, a number greater by hundreds than occurred during the previous Conservative regime, and bearing in mind also that there were less in number to go under each year, business conditions at present are not good. However, Providence has been kind to the present government during its term of office. During each year there has been an addition of from 100 to 175 million bushels to the wheat crop. The greatest oat crop in the history of Canada was witnessed in 1922. Likewise, barley had its greatest crop in 1924, and there was the greatest crop of rye in 1922. The enormous amounts realized from these bumper crops should have helped the government a great deal in making business conditions better—and yet, they are worse.

Let us come now to what the government has done for the workingmen of this country. When the present government assumed office it promised that it would do a great deal for the workingmen of Canada. Hon. gentlemen opposite chide us about being the rich man's party. We pride ourselves, however, that we are as strongly for the workingman as we are for the manufacturer or any other class of the community. Four questions naturally arise in discussing what this government has done for the workingmen of Canada. They are these: First, has the present government during its term of office reduced the cost of living? Has it relieved unemployment? Has it raised the workingman's wages? Has it improved the position of the family circle of the working man during its regime? Hon. gentlemen opposite throughout the country at the beginning of an election campaign always claimed that they were going to reduce the cost of living to the workingman, and it was on the strength of this promise that they received the votes of a great many workingmen. Now let us look at the facts. At the outset, let us again recall, the Liberal Government came into power at the beginning of 1922. I have in my hand the last copy of the Labour Gazette of February 28. I have the budget for a family of five covering the staple foods and the average prices in sixty cities in Canada. Let us compare the figures in 1921, or the beginning of January, 1922, with the prices of foodstuffs in January, 1928: Two pounds of sirloin beef in January, 1922, cost the workingman 54.6 cents. In January, 1928, the cost to the workingman was 62.8 cents. Shoulder beef likewise has risen in price from 30.4 to 36.4. There has been a corresponding increase in veal. So it is all down the list. Lard is dearer, cheese, bread, flour, rolled oats, tea and coffee. Pork and eggs are the only things that are cheaper. I assume that eggs are cheaper because of the importation of eggs from foreign countries, such as China. The total cost per week for a family of five under the present Liberal government is $11.19 compared with the cost when the Conservatives left office of $11.03, so that this government has not succeeded in reducing the cost of living for the workingman. These figures given in the Labour Gazette do not include the cost of clothing, recreation, doctor's or dentist's bills, school fees, or contributions for church purposes.

I might as well, at this very moment, although I intended to do so later on, when dealing with unemployment, refer to the serious conditions that the workingman to-day finds himself trying to meet, in this so-called period of prosperity which our hon. friends opposite would lead us to believe is here. How can the workingman believe in prosperity when he is working to-day, on half pay, in many cases, with many months of unemployment and a family to support, and when very few, if any, workingmen can live on this suppositious budget

Nor has the present government raised the workingman's wages. In 1921, the last year of the Conservative regime, the index number giving the average wages for six trades was 186.1. In 1920 it was 192.1. Under the Liberal regime the workingman's wages have

declined until the index number has now gravitated to 175.9. The index numbers in regard to other lines of employment are as follows:

	1921 Index No.	1926 Index No.
Common factory labour.. ..	190.6	187.3
Miscellaneous factory trades..	202.1	196.7
Lumbering wages..	202.7	180.8

In 1920, wages in miscellaneous factory trades were at their peak, 216.8 and so were lumbering wages, 202.7. Wages of railwaymen are to-day lower than they were in 1921, and wages of the coal miners of Nova Scotia, Alberta and Vancouver island have also dropped considerably. Coal mining labourers underground are to-day receiving from 55 cents to $2.64 less per day's work; millers are receiving $10 per week less in the flour mills, and all hands employed in furniture factories are reciving less per day's or per hour's work as compared with 1921. In the city of Montreal blacksmiths, machinists, iron moulders and sheet metal workers are to-day receiving lower wages than in 1921. That is the condition of the workingman as regards his wages under this prosperity regime of the present government.

Has the present government relieved unemployment? The present position of unemployment throughout the Dominion is summarized in the February 1928 issue of the Labour Gazette and I am going to read these extracts for the purpose of having them on record. On page 187 of the February issue of the Labour Gazette I find this statement:

> The most noticeable recessions occurred among Vancouver workmen, 10.7 per cent of whom were idle in November as compared with 14.3 per cent in December, a change of 3.6 per cent, followed by percentage increases in idleness of 2.9 in St. John, 2.7 in both Edmonton and Halifax, 2.4 in Toronto, 2.1 in Winnipeg, 1.7 in Regina, and 1.1 in Montreal. Toronto was the only city to record a slight increase in employment over December, 1926, while in all other cities an adverse situation prevailed.

The same Labour Gazette further reports the situation by provinces as follows:

> Nova Scotia
>
> During the month of December, 1927, positions offered through employment offices in Nova Scotia were 12 per cent less than in the preceding month and nearly 18 per cent less than during the corresponding month of 1926. Placements declined nearly 10 per cent in comparison with November and 15 per cent when compared with December, 1926.
>
> New Brunswick
>
> There was a decline of over 20 per cent in the number of positions offered through employment offices in New Brunswick during December when compared with the preceding month, and of 25 per cent in comparison with the corresponding month of 1926. Placements were over 5 per cent less than in November and 16 per cent below December, 1926.
>
> Quebec
>
> The demand for workers as indicated by orders listed at employment offices in the province of Quebec during the month of December declined nearly 50 per cent when compared with the preceding month and nearly 12 per cent in comparison with the corresponding month of 1926. Placements were nearly 41 per cent less than in November and over 8 per cent in excess of December, 1926.
>
> Ontario
>
> During December employment offices in Ontario received orders for nearly 15 per cent less workers than in the preceding month and also in the corresponding month of 1926. There was a decline of nearly 10 per cent in placements when compared with November and over 13 per cent in comparison with December, 1926.

In Manitoba, Saskatchewan, Alberta and British Columbia there are similar reports as to present conditions in connection with unemployment. The Dominion Bureau of Statistics tabulated returns from 6,177 firms showing a decrease in the payrolls from 886,836 persons on December 1, 1927, to 826,736 persons on January 1, 1928, or a decrease of 60,100, or 6.8 per cent. While we are talking about prosperity during the budget debate, this table shows the increase in the number of men unemployed in January of this year as compared with the previous month of December:

	More men unemployed in January than in December
Maritime provinces..	1,452
Quebec..	24,672
Ontario..	23,896
Prairie provinces..	3,178
British Columbia..	7,102

As regards the city of Montreal I quote from the Montreal Gazette of February 21, as follows:

> Unemployment relief is among the most serious problems which the Financial Federation of the Montreal Council of Social Agencies has to face.
>
> At the sixth annual meeting the secretary revealed a deficit of $3,000 for the year 1927 over and above the $6,000 appropriated. In 1928, $6,000 was again appropriated for unemployment relief and after two months have passed, over $4,000 had been expended. The deficit this year will be much greater.

The Minister of Railways and Canals spoke of prosperity and I presume he referred to his own province of Saskatchewan. I read from the Montreal Gazette of March 2, 1928, a portion of a report of the Saskatchewan Farmers' Convention held at Saskatoon on the first of March, as follows:

George F. Edwards, director of the organization's research department, had this to say:

"From statements made by city officials and those that are responsible for distributing relief throughout this province there is no doubt that the rigorous immigration policy engaged in by the Federal government and transportation companies last year has been the cause of a tremendous amount of suffering and hardships to thousands who were brought to Canada through highly-coloured statements and representations."

As regards the unemployment situation in Montreal, let me refer to the Meurling Refuge. I find that the number of men cared for in that institution in January, 1928, was 17,218 as compared with 9,193 in January, 1927. The Meurling Refuge is a very fine building maintained by the city of Montreal for homeless, destitute men; how homeless and destitute they are can best be gathered when it is realized that these men go in at 6 p.m. and are given two slices of bread and a cup of coffee. They then have to undress and turn in their clothes to be fumigated, after which they line up and pass in to the shower baths. As each man enters, a man ladles out some soft soap which he slaps on the heads of the destitute men and they stay under the shower until the soap has dissolved. They are then handed a towel, after which they are given a night shirt and retire to their beds, from which they are aroused at an early hour, given two more pieces of bread and a cup of coffee and turned out into the streets for another day. The place is well conducted and is considered by many to be the best thing of its kind on the continent, but it will be understood that no man goes there if he can find any possible method of avoiding it.

Nevertheless, an average of 600 men a night made use of the city of Montreal's refuge at a time when the government index figures for employment were the highest on record for the month of January. These figures illustrate better than anything else that the government's fiscal policy is failing to provide for our population. There can be no true prosperity under conditions where over 17,000 free beds for destitute men have to be provided in one place alone.

In another office, on St. James street, Montreal, crowds of ex-soldiers can be seen daily asking for charity provided through a "tag day," and in another, about a stone's throw away, nearly 400 families have received unemployment relief. In Ottawa, right at the door of parliament, the charitable societies are overburdened with the demands upon them for relief by families in distress through unemployment. In Winnipeg the distress has been so intense that the government has been asked to contribute to relief work, a request which the Prime Minister has refused.

It is not my intention, Mr. Speaker, in speaking of the unemployment situation, in any way to advertise Canada adversely. I think that what is responsible for the number of unemployed at the present time is the policy which this government has persisted in of not allowing Canadian workmen the opportunity to work in Canadian factories, working up Canadian goods, so that Canadian men and Canadian women, wherever they are situated, may buy Canadian goods made by Canadian workmen at home. I hope it will never be the fate of the Conservative party, because it would also be the fate of a great country, to give way to the demands of any party group or of any section and do away with protection. We look across that boundary of 3,000 miles and see over there a country with a population of 120 millions, a country that is applying a quota law in order to prevent immigrants coming in there and enjoying the fruits of prosperity in that country, and yet Canada under the present Liberal government with its low tariff or free trade policy, or whatever you like to call it, cannot induce immigrants to come to this country even from our own British dominions without paying their transportation charges and practically holding out positions for them when they arrive. What is wrong with this government? What is wrong with Canada? There is nothing wrong with Canada. The trouble is with the fiscal policy of this government, and until that has been remedied, conditions in this country will be no better. What is the use of talking about reducing the war debt, or reducing the national debt of this country? This government is accomplishing neither, and at the same time we are losing every day and almost every hour our own stalwart sons and daughters to a foreign land, from which possibly they will never return. Is there any way in which we can remedy these conditions?

An hon. MEMBER: Change the government.

Mr. BELL (St. Antoine): Change the government—that seems to be the only way. One would think that the people of the west, whether they belong to the farmers' group or any other group, would realize that until they plant the factory beside the farm there never will be prosperity in this country. I do not know what the farmers want from the Conservative party. The Conservative party have always tried to please the farmers so far

as is humanly possible. Railways have been built under the Conservative regime, although our friends opposite would try to make every one believe that they are the only ones who are building all the railroads in the country. The farmers of the west have got the best wheat lands in the world, and they have re-received them at the cheapest price. We cannot move the wheat lands closer to the ocean or afford to give them much better transportation facilities, and until there is cooperation between the farmer and the manufacturer, and particularly between the farmer and the labouring men in the factories, there is always going to be trouble in solving the problems of this country.

It amuses me sometimes to hear my hon. friends to my left talk about the consumers and producers in this country. To hear them talk you would think that the farmers were the only consumers. But in what way can the farmer compare as a consumer with the workingman in the factory in our big manufacturing cities? These workingmen are the real consumers. They take the products produced by the farmer, the butter, the cheese, the eggs, and all his other products, and they are willing to pay his price provided they have the money in their pockets with which to buy them. When hon. gentlemen to my left speak of poverty and about the farmers being up against it, let me tell them that I could take them to my own constituency in Montreal and show them conditions which no farmer in western Canada or in eastern Canada has ever experienced. I could show them the condition of families who have not 160 acres of land to live on, who have not their own house over their heads, and worse still, who have not even enough to pay one day's rent. I could show them children and whole families living almost wholly on bread without butter; and yet we hear so much from the Progressives to my left of the conditions under which the farmers of this country are living, as if they were the only ones that legislation should provide for. I am the last to advocate the group system of government but if any class requires remedial legislation the first who should have asked for it and received it is the labouring class, who have not experienced under the Liberal government this prosperity which hon. members opposite are trying to demonstrate. Unfortunately the unemployment situation and the conditions of the workingmen avail them nothing under the present government's policy, and there are no indications that for them, prosperity is here.

[Mr. L. G. Bell.]

Mr. J. L. BROWN (Lisgar): I shall not take time to follow at any length the hon. gentleman who has just sat down (Mr. Bell). His concluding remarks, however, indicate that he is badly in need of information in regard to the condition and position of the farmers of this country. He asks, in what respect does the farmer as a consumer differ from the labouring man? He seems to have no conception of the fact that the farmer who is operating a well equipped farm has spent many thousands of dollars upon equipment and expensive material which the labouring man in the city knows nothing of.

An hon. MEMBER: And has not the money to buy.

Mr. BROWN: In reply to the hon. member, I say that the farmer has spent that money; he has not been able to keep it.

I want to refer to an incident that took place in the house this afternoon. The hon. member for North Simcoe (Mr. Boys) produced a couple of hammers. I do not know why he bought them in the first place, and I do not know why he produced them in the house. Let me say that in my judgment I do not think he got the worth of his money when he bought them, certainly not so far as regards the effect that he produced in this house. It seemed to me it fell rather flat. If the hon. member proved anything he simply proved that Mr. Drury was an honest man, who, when he found that the evidence he had in his hand did not support the contentions he was making, refused to use that evidence any further. But the fact that Mr. Drury did not have the evidence at his command is no reason to suppose that his contention was not correct. It would be quite possible to produce evidence in abundance to support the contention which I believe Mr. Drury was making. Indeed on one occasion I travelled down from the west in company with a commercial traveller who was well versed in the hardware business and well acquainted with the sale of tools on both sides of the line. He gave me very clear evidence of the great difference that prevails in regard to the price of tools on different sides of the line. I myself for a number of years lived in close proximity to the border, and if there is one class of goods on which there is a large difference between the price in the United States and that in Canada it is small hardware, a sample of which the hon. member produced this afternoon. If you want evidence of that fact all you have to do is to go to Woolworth's stores in this city and you will find they are called, five, ten and fifteen cent stores. I think I am

probably correct in saying that there is scarcely an article in their stores that is sold for fifteen cents that is not sold in the Woolworth stores on the other side for ten cents. That may seem to be a small thing in itself, but remember it is a difference of fifty per cent. Perhaps some of us will remember an incident in this house some years ago when an hon. member produced a teapot in a very dramatic manner, and for many years afterwards he was known as "teapot Blain." I imagine that the hon. member for North Simcoe will in the future be known as "hammer Boys."

The hon. member also dealt with binder twine. I do not know in whose behalf he was speaking, but I would suggest that he also is in need of further light upon the subject. We have sometimes heard it stated in this house that the truth has been told, but not the whole truth. I do not propose to question the accuracy of the figures submitted by the hon. member, but I do assert that he did not tell us the whole truth; for in his analysis of the problem he omitted one of the most important factors. When he undertook to establish certain facts in regard to the prices of binder twine in former years and to-day, he omitted one of the most essential factors—the price of the raw material. Oh, I have heard the argument before. My opponent in the last election used it in my hearing on one occasion, but it does not make much impression in the west. He used the argument that has been advanced here to-day, that at a certain time there were so many binder twine factories in Canada that binder twine was put upon the free list, and now we have fewer factories and we are paying a higher price than we did then. It is the old fallacy we have to combat—post hoc, propter hoc; a certain thing has happened, and then when another thing happens it is the result of the first. We meet that fallacy again and again from the other side of the house, but particularly was it in evidence to-day when the hon. member used it in regard to binder twine. True, the price of binder twine is higher to-day, and has been consistently higher during the last few years, than it was for a period of years before. But I say the hon. member failed to take into account a very important factor—the price of the raw material. If he wants to investigate the matter further he will find what is familiar to everybody who knows enough about the matter to discuss it in public, that the price of the raw material is controlled by a New York syndicate in conjunction with Central American governments, the latter controlling the raw supply. That may not in itself account for the entire increase in the price of binder twine, although to-day binder twine is very much cheaper than it was a few years ago, but not of course down to the price at which it was twenty years ago, perhaps. But that very factor will account in very large measure for the increase in price. It is true, of course, that the general scale of prices has been raised, and that the price of labour is also very much higher than it used to be, but in itself the control of the raw material accounts very largely for the increase in the price of binder twine. I shall not go into the matter further. The hon. member for Selkirk (Mr. Bancroft) my esteemed deskmate, has made a special study of this question and is in possession of information which will be very valuable to this house and which will refute some of the arguments advanced by the hon. member for North Simcoe.

I am sorry that the hon. member for Frontenac-Addington (Mr. Edwards) is not in his seat, because there are three things he hates more than everything else, first, the member for Labelle (Mr. Bourassa), secondly, the Minister of Immigration (Mr. Forke), and, third, the United Grain Growers. Well, I should like to tell him that the United Grain Growers Company is the controlling factor in the price of binder twine on the prairies to-day. It handles binder twine to the amount of nine million pounds yearly, and I think even the enemies of that company in the west will be willing to give credit to it for controlling the price of that very necessary article.

I do not propose to deal with the budget at any great length, Mr. Speaker. I do, however, want to refer to the income tax It was a matter of great regret to me when I heard it announced that the income tax was to be reduced. I have expressed myself on that matter in no uncertain terms in the past, and I have not seen fit to change my mind. I have never been able to work up any great feeling of indignation in regard to what is spoken of as the double tax. In many cases, perhaps not all, the corporation tax can easily be charged to overhead and passed on to the ultimate consumer, in which event there is no reason why the individual recipient of dividends from the company should not also be taxed. Nor have I any particular sympathy for the young unmarried man who has an exemption of $1,500, and further exemptions if he has dependents, who is required to pay income tax on the balance of his salary. And I cannot work up any particular sympathy for the married couple who have an exemption of $3,000 to $500 for every child under eighteen—

Mr. ROBB: Twenty-one this year.

Mr. BROWN: —under twenty-one if they also have to pay income tax on their additional income. Even in the case of men who are most easily reached, the salaried men—and we admit they are the most easily reached—I cannot think they are subjected to any particular hardship. If they have no children and are wasting their time on poodle dogs, there is no particular reason to regard them as objects of sympathy when they have an exemption of $3,000.

I am going to make a statement, Mr Speaker, that I think will probably put me in the class of heretics. We hear a great deal said about tax reduction. Honestly I do not think we can properly look forward to tax reduction, certainly not in the volume of taxation. I know our hon. friends across the way do not seem at times to be able to distinguish between volume and rate of taxation; at least they persistently confuse the two. I think it quite possible that the rate of taxation may be reduced in some cases with advantage to the revenue, but I do not think this country will ever be able to get along with any less revenue than it has today. I believe we shall require more and more revenue as the years go by. When the committee that is now discussing the pensions of returned men makes its report I am satisfied we shall realize we have only begun to touch the pensions problem. I am quite prepared to believe that as the years go by the amount required for soldiers' pensions will increase by very large proportions. I served on that committee the first session I was in parliament in 1922. It was an amazement to me to find that officers of the pension board, medical men, took the view they sometimes expressed in regard to attributability to service. It seems so perfectly evident to a layman that a man who endured the great stress of war must of necessity have suffered to some extent disability for life that I could not understand the position taken even by medical men. I believe there is a change in point of view; I believe it is coming to be recognized that many of these men, men who perhaps were not wounded, are largely to be classed as among the wastage of war. I have in mind one young man who, when I first knew him, was strong and vigorous, and who when he came back gave every appearance of being a physical wreck; yet he never had a scratch. In my opinion there are many men in the same condition. It seems to me, therefore, that when we come to consider the question of revenue in relation to pensions we shall find that this reduction of taxation is nothing more than a pious wish which we should like to have realized but which we shall find among the impossibilities.

I want now to refer to a suggestion which was made by the hon. member for Peace River (Mr. Kennedy) as to the possibility of forming an alliance with the Conservative party. Such things have not been unknown, Mr. Speaker, when two extreme bodies come together and remain together for a time. Yes, Mr. Speaker, from the time when the Herodians and the Pharisees conspired to destroy the founder of Christianity down to the present time we can find illustrations of extremists coming together to overcome the moderate-minded men. They unite for purposes of destruction, but I wonder whether it would be possible for them to unite for purposes of construction. Let me tell my hon. friends over there that nothing would give the Conservative party greater pleasure than to seduce them into taking the position enunciated by the hon. member for Peace River. It is the one thing I have persistently and consistently tried to warn our farmers against —the temptation to fall for the principle of protection. By and large, the farmer cannot be benefited by a protective tariff. The American farmers have found that out. They succumbed to the temptation to seek higher tariffs and they were under that delusion for years; but they have now begun to find out that it was a delusion—a snare and a delusion. They are therefore seeking relief in such uneconomic measures as the McNary-Haugen bill. I say, nothing would give the Conservative party greater satisfaction than that they should be able to seduce hon. members in the opposite corner into taking the course indicated. I have no doubt that some of them are willing to go. As the hon. member for Marquette (Mr. Glen) pointed out this afternoon, there were four of them who in the session of 1926, in the first vote cast in that parliament, gave evidence of a preference for the Conservative party. How many more of them may yet follow I do not know. But what about the lady? Surely they will not forsake the lady member. Her plebeian soul could not stand to be associated with the "snobbish" Conservatives. Surely they cannot forsake her; that would never do. I want Hansard to put that word "snobbish" in quotation marks; otherwise it might give offence to some good Conservatives back home who are my personal friends.

I want now to refer to another item in the tariff, an item upon which some hon. members in the southeast corner have made remarks; I refer to item 267b. Is it not a strange situation to see the hon. member for Rose-

town (Mr. Evans) and the hon. member for Peace River associated with the Imperial Oil Company in opposition to this particular item? Yet such is the case. But perhaps on second thought it is not so strange; perhaps this is the first step in the direction of that alliance which has been suggested. Who knows? I wish to quote in this connection the hon. member for Rosetown:

> Again, under item 167b I find a most amazing thing, the full import of which is not readily discerned. As far as I can see, the government has given notice to all small oil refining companies, and to those contemplating entering the business, to get out and stay out.

I will not quote the hon. member for Peace River in this regard; his remarks were made a day or two ago and they are somewhat lengthy. What he said was part of the general argument in relation to finished products and raw materials. But his position is there stated. Now what is the reason for this change? I have taken some trouble to look into the matter. I find that an application was made to the tariff board by a representative of one of the small oil companies to bring about the change. The situation, as I understand it, is something like this—I will try to give a picture of it. The large oil companies, with their expensive equipment and a good market for the by-products, are able to use the absolutely crude petroleum, while the smaller companies, without that equipment and with a more limited market for their by-products, cannot use such petroleum to advantage. The base of their operations lies in a product which has already passed through one process in refining, the technical term for which I believe is oil tops. This particular product has been coming in under a duty of three-tenths of one cent per gallon under the British preference, fourth-tenths of one cent under the intermediate tariff, and a half cent under the general. I am informed that in the actual application of the Customs Act they have been paying the same duty as on the finished product, so that instead of this being what the hon. member has depicted it, a notice to the small oil companies to "get out and stay out." It is absolutely the reverse. Again, let me express the keen regret I feel at seeing the hon. member for Rosetown associated with the Imperial Oil Company, which I understand has put in a protest recently against this item.

Mr. BENNETT: Not against the item but against the wording.

Mr. BROWN: It is only an indication of the need for more complete information in regard to the many items in this budget, which information we shall no doubt receive when we are in committee. I am told that the analysis made by the hon. member for Peace River of some of the other items is no more accurate than in the case of this particular one, 267b.

Now just a word in regard to group government or the balance of power theory. These two terms may be synonymous or they may be antagonistic to each other; I do not pretend to know. However, I will discuss the question under the head of the balance of power theory. I am willing to pursue inquiry into the question how far independent members may be given freedom of expression as to when a government should consider itself defeated and when not. This theory of that balance of power seems illogical to me because it cannot be universally applied. It may be very well for one or two to occupy that position and sit on the fence, but everyone cannot do it; some people must assume responsibility. The theory is absurd; and I do not use that term in an offensive way but rather as Euclid used it when, in pursuing certain lines of reasoning, he arrived at a conclusion which did violence to the axioms he laid down. In such cases the conclusion was absurd, and I use the same term with reference to this particular theory. It is absurd because, in order to make it effective at all, it pre-supposes the existence of two major parties both of which are abhorrent to those who have adopted the theory. I do not want to use any such rough term as bludgeoning, but it does seem to me absurd to think this could be adopted as a permanent principle under which to carry on government, although it might meet a temporary situation. I call to mind a little rhyme we used to say when we were children, which went something like this:

> The lion and the unicorn,
> Fighting for the crown;
> Up jumped a little dog
> And knocked them all down.

Who represents the lion and who the unicorn I do not presume to say, but I do know who wishes to take the part of the little dog.

Our friends tell us that the session of 1926 was an ideal session, just what they wanted. Well, Mr. Speaker, I am not usually averse to a scrap, but I do not think either this house or the country would consider the session of 1926 to be ideal. It was not ideal to see hon. members opposite at that time; I can scarcely describe their condition. A lioness robbed of her whelps is not to be compared with the attitude of mind exhibited by hon. gentlemen opposite, and I even believe the hon. members with whom I was more intimately associated at that time will not say that the

conditions within our own ranks were so absolutely ideal that we would have liked to have them remain that way.

Miss MACPHAIL: They are now.

Mr. BROWN: And so are ours, for that matter. Now they tell us we had a splendid program of legislation that year. Did we? It is true that we had a perfectly honourable arrangement with regard to a legislative program, an arrangement that was well known to the country, and we advanced that legislation to certain stages but we did not get it through. What was the reason? Well, Mr. Speaker, it is well known that when we all voted with the government there was a majority of twelve; when the five members who expressed a Conservative preference in the first vote opposed the government that majority was reduced to two. In addition to that there were always one or two on the ragged edge, so when the test vote came on the amendment moved by the hon. member for Winnipeg North Centre (Mr. Woodsworth) to the amendment of the hon. member for Vancouver Centre (Mr. Stevens) to the customs report, what was the position? We lost two more votes.

I have no criticism to offer as against the hon. gentlemen who saw fit to take that position. They may have been right or wrong; I am willing to admit that it was a question in which great moral issues were involved, and I am willing to concede that it was a question on which men governed by a high standard of morality might have taken one or the other of two positions. I am quite willing to concede all that, but the fact remains that because these members took that postion we did not get the legislation we desired. But our friends say we got the legislation in 1927. That is true, but we had to run the gauntlet of a general election first, and you are never sure what the result of an election may be. If it had not been for the absolutely stupid tactics of our friends opposite from the time that session opened until it closed they might have been occupying seats on this side of the house and then what would have become of the legislation? I think it hardly safe to count on their following along the same lines. Of course hon. gentlemen opposite may be able to learn; they have reorganized their board of strategy and they may do better than they did before, but it is not a safe thing to bank on. So I say we did not get the legislation in that particular session, and I want to say also that if this much-reviled little group had taken the same position on the budget last year we would not have had the legislation yet; last session would have been as barren as the previous one.

Now, I am told that my time is going very rapidly.

An hon. MEMBER: Go on.

Mr. BROWN: That would be all very well, if I only could. However, I want to suggest to our friends that perhaps they have not looked into this problem in all its aspects. I know they have given a great deal of consideration to government in its legislative aspects, but I have never yet heard a single suggestion from those advocating group government as to how an executive is to be formed. Mr. Henry Wood has not told us, and from none of his followers have I heard how they propose to form an executive to carry on the functions of government. If they have any ideas on this phase of the question the general public have not been given the benefit of their deliberations. To quote the Ottawa Citizen, however, while the Liberal-Progressive may not be "the last word in political intelligence", at least they have given some thought to this problem. I came across a little book in the library the other day, from which I propose to read a few extracts. I do not say that I agree with this in every respect but it will at least be interesting to hon. members opposite. This little book is one of a series of Chronicles of Canada, dealing with the winning of popular government in Canada. It deals with the few years immediately following the rebellion of 1837, after Lord Durham had made out his report and Mr. Poulett Thomson, afterwards Lord Sydenham, was sent out to Canada to try to put into effect the principles which Lord Durham had recommended. He speaks of his visit to Lower Canada, where he found no government at all, and then he proceeded to Upper Canada, and at this point I quote:

> At Toronto Thomson found a totally different set of conditions. Here was a constitution functioning and a legislature in session; but what a legislature! Split into half a dozen little cliques and factions, it was trying to work with no cabinet, no opposition, no party system—an ideal state of things to which some critics of present conditions would like to return.

In the same connection I read another extract; an election was held, and the result was as follows:

> The results were known early in April. They were as follows: For the government, twenty-four members; French, twenty; Moderate Reformers, twenty; Ultra-Reformers, five; Compact party, five; doubtful, seven. The curse of petty faction was not lifted, nor the machinery of two-party government really installed, for it was quite possible for several of these groups to combine in voting down government measures without having sufficient cohesion among themselves to form a ministry and assume control.

Then we have another sentence further:

Mankind has a pathetic faith in the efficacy of political machinery, remade or remodelled, to grind out happiness and bring in the age of gold.

But in order to show that I hold the balance evenly, I am going to give another extract to which perhaps those charged with the responsibilities of government might give heed:

Parliamentary procedure, as they have it in England, was a new thing in Canada. In Great Britain the government does not always resign when defeated on a vote, nor does the opposition defeat the government when it has no power to form an alternative government.

One more quotation. I give this for the benefit of the hon. member for Vegreville (Mr. Luchkovich)—I am sorry he is not in his place. He delivered an address the other day which was well worth listening to. It is true it had the character or quality of an essay, but seeing that the hon. member's native tongue is not English, he is to be congratulated upon his facility of expression in the English language. The passage I am going to read is not pertinent to the subject under discussion, but I will read it for one reason:

Complete freedom to manage its own affairs should, if logic were strictly followed, separate the colony from the mother country; but the British genius for compromise has met the difficulty in a thoroughly British way by avoiding any precise and rigid definition of the relations existing between the mother country and the daughter state.

This is a little apart from the subject, but I have always felt that our greatest danger lies in attempts at too exact definition. I want to refer to what is spoken of here as "the British genius for compromise". The hon. member for Vegreville read us a lecture on compromise. There should be a distinction between compromise on moral grounds and compromise on questions which are, after all, matters of expediency. When moral issues are involved a man must say: Here I take my stand, I take none else. But the great majority of the questions that we have to consider do not come within that category. They are matters on which there may very well be an honest difference of opinion between men equally anxious to reach a solution of our problems. I have no hesitation in saying that the essence of democratic government is compromise. If there is no willingness to compromise then we find ourselves between autocracy on the one hand and anarchy on the other. If we are going to carry on democratic government there must be a willingness to compromise. That does not mean the renunciation of any great moral principles to which a man commits himself.

There are other things I should like to have said but I find I shall have to refrain from doing so on the present occasion. I wish, however, to conclude with a reference to our position in this parliament. The hon. member for Marquette used words that I heartily endorse, that we should be moved neither by taunts nor by recrimination. We are charged with having forsaken our principles. Hon. members will remember that there is a difference between principles and methods that are employed to give effect to these principles. We may honestly admit that at one time we had in view the formation of a great party that would express our views. But when we talked of that, we got no help whatever from the members representing the United Farmers of Alberta, and absolutely none from the hon. member for Southeast Grey (Miss Macphail). I am simply stating facts. They may have been right, we may have been wrong, but I am simply stating the facts. There was another breach in the third session of the last parliament when the "Ginger" group broke away and did not come to our meetings. When I got home, I was told: We sent you fellows down there to work together. I never was reproached for not joining the ginger group, but it was charged against me that we were not able to preserve unity.

I said, Mr. Speaker, that there should be a distinction between principles and the methods that are employed to give effect to these principles. We have taken our position here. We are each one of us responsible to our constituents. I have no indication up to the present that I have not been expressing the will of the men who sent me here. I believe the hon. members associated with me are, like myself, anxious to express not only their own views but are anxious to do what their people would like them to do. Happily so far we have been able to make these two duties coincide. Again I say, Mr. Speaker, that though there may have been a choice of different means, there is no forsaking of principles.

I am going to close with a somewhat homely illustration. Just before I came away from home I had to sell some pigs. I had them in a pen sixteen feet square. It was not arranged so that I could run them through a chute into my sleigh, so I had to take another method. I got a rope and my method was to try to get a noose round the head of the pig and then a half-hitch round the body. When you have got a pig hitched that way you have got a real hitch. I had a man helping me who was not as experienced as I was, and when I got the noose over the

head of the pig he began to pull. The result was that the pig got the rope off his head, but by a little judicious manoeuvring and scratching the pig I managed to get the rope round his body. Mr. Speaker, we are scratching the pig. There may be one or two stubborn ones that we may have to knock down with a club, but I think we have the majority of them pretty well under control.

On motion of Mr. Barber the debate was adjourned.

On motion of Mr. Lapointe the house adjourned at 10.40 p.m.

Tuesday, March 6, 1928

The house met at three o'clock.

PRIVATE BILLS

FIRST READINGS

Bill No. 58, to incorporate the London and Port Burwell Railway Company.—Mr. Taylor.

Bill No. 59, to incorporate The Federal Loan Company.—Mr. Lang.

Bill No. 60, respecting the Canadian Surety Company.—Mr. Hocken.

REPORTS OF COMMITTEES

Second and third reports of the select standing committee on agriculture and colonization. —Mr. Kay.

First report of the select standing committee on standing orders.—Mr. Morin (St. Hyacinthe-Rouville).

CANADIAN NATIONAL RAILWAYS

PRELIMINARY STATEMENT OF ACCOUNTS

Hon. CHARLES A. DUNNING (Minister of Railways and Canals): Mr. Speaker I desire to lay on the table a preliminary statement of the accounts of the Canadian National Railways for the year 1927.

RAILWAYS AND SHIPPING COMMITTEE

Mr. DUNNING moved:

That standing order 63, of the House of Commons, relating to the appointment of select standing committees of the house, be amended by adding to the select standing committees of the house for the present session a select standing committee on railways and shipping owned, operated and controlled by the government, to which will be referred the accounts and the estimates of the Canadian National Railways and the Canadian Government Merchant Marine for the present session, for consideration and for report to the house, provided, however, that nothing in this resolution shall be construed to curtail in any way the full right of discussion in committee of supply; and that the said committee consist of Messrs. Bell (St. Antoine), Cantley, Chaplin, Drayton, Duff, Dunning, Fiset, Goodison, Harris, Jelliff, Jenkins, McLean (Melfort), Milne, Power and Stevens.

He said: The resolution is identical with resolutions of former years in this regard.

Hon. R. B. BENNETT (Leader of the Opposition): The statement tabled by the Minister of Railways (Mr. Dunning), purports to be a preliminary report, and I think we should have the final report if we are to deal with the matter effectively. In addition to that, the motion refers the estimate to the committee, as in previous years, and I think it might also be desirable to refer the report to the committee. Otherwise there may be some difficulty in dealing with it, and I think it was so intended in the first instance.

Mr. DUNNING: It is so intended.

Mr. BENNETT: The motion does not say so.

Mr. DUNNING: As I indicated last week, the government requested the Canadian National Railways to supply the accounts as soon as possible, and this preliminary statement merely lacks the certificate; some of the checking is not finished as yet, but I hope by the time the committee gets to work next week the final audited statement will be ready together with the estimates. As my hon. friend has suggested, both these documents are submitted to the committee, and I must confess that I adopted precisely the form of previous years without scrutinizing it at all closely in that regard. The intention certainly is to submit the report as well as the estimates to the special committee.

Mr. BENNETT: I think, perhaps, the motion ought to read that the report of the company and the estimates for the current year be referred to the committee.

Mr. DUNNING: The motion certainly ought to read that way.

Mr. SPEAKER: Shall the motion pass subject to this understanding?

Mr. T. L. CHURCH (Toronto Northwest): Motions similar to this have been made every year for the past three years and the Minister of Railways, whoever he happened to be, has always offered a plausible excuse for adopting that plan, namely, that an opportunity would be afforded for discussion when the report of the committee was presented later on. But that is not the way the matter works out in practice. There is no more reason why a select committee should be appointed to consider the estimates of the

Department of Railways, or of the Canadian National Railways, than there is for pursuing a similar course in regard to the estimates of the Post Office Department, the Department of National Revenue or any other branch of the public service. The proper way to consider the estimates as a whole is to appoint a number of estimate committees to supervise the estimates of the various departments, then summon the officials before those committees and ask for detailed explanations of the public expenditures. The present system of trying to audit the estimates in committee of the whole is an inefficient and antiquated one and is only a post mortem method. One of my reasons for objecting to the present motion is that when the course which it recommends is adopted the report of that committee does not come back to the house until an advanced hour in the morning of the day of prorogation, when there is not the faintest possibility of intelligent discussion. The committee is just a whitewashing one. When it is appointed and is carrying on its sittings you cannot get any information there of real value in regard to this great public undertaking known as the Canadian National Railways. Not only should the capital expenditures of the system be thoroughly investigated, but the entire administration of the railway, and the operation of those deficit-producing lines in the United States with which it is affiliated, should be brought under review. But nothing of that kind occurs. Really it seems that the president of this system, Sir Henry Thornton, has very little to do. Recently he took a month's holiday in Mexico. Tomorrow he may be on a mission to Peru, or to Bogota. In the course of time he will have visited the seven seas and whatever capitals are located on them. It is useless for a member of parliament, acting in the interests of his constituents, to try to get any information with respect to the operation and administration of this railway. In the Ontario legislature, where the estimates of that great public undertaking the Hydro Electric Power Commission are under review, they would not think of passing any such resolution as this and shunting it all off on a committee on whitewash. The functions of this committee are purely and simply of a whitewashing character. Its report will be brought down in the dying hours of the session and no opportunity whatever will be afforded of criticizing the railway policy of the government. In connection with the administration of the Canadian National Railways one would think that if any appointments needed to be made Canadians would be chosen but they have been ignored. The graduate of a law school in connection with Yale university, Mr. Gaston, was brought over to fill an important position which could have been filled just as efficiently by some one of the many returned soldiers affiliated with Canadian law firms. If you pass this resolution you might just as well pass the whole of the estimates without any inquiry at all. The people of this country are not satisfied with the entire administration of this so-called publicly owned road. It is not a publicly owned road at all, and the head of the system makes a political football of the fuel question in the interest of coal barons in the United States. It has become a popular method on the part of this government to refer embarrassing questions to special committees and courts. And what is the result? You cannot get information from ministers in the house, and you cannot get it when you attend these committees. The St. Lawrence waterways question is also being made a political football. That question has been referred to the run of the law courts, and the Lord knows when it will come back; perhaps two or three months before the next general election which will likely take place two or three years hence. In France and in the United States the estimates of the public departments are considered by certain special estimate committees, and as a result those estimates are carefully scrutinized. The estimates of the national railway are referred to a special committee, and nothing further is heard about them. The report is brought down within an hour or two of prorogration when intelligent consideration or discussion is out of the question. Personally I prefer the system followed in France and the United States and it should be made to apply to all departments generally. The practice we follow is simply to hold a post mortem after the money has been spent. Parliament, under the plan followed here, has no control whatever of the estimates of the Canadian National Railways. We want to overhaul our methods of considering estimates and adopt the committee system as a whole brought up to date as in France where the officials can appear before these committees and give information and not single out the Canadian National Railways for this special treatment.

Mr. H. C. HOCKEN (Toronto West Centre): With regard to the hon. gentleman's objection to the estimates of the Canadian National Railways going to this committee I have nothing to say, but I do resent on behalf of my constituents his continued attacks upon the administration of that railway. I can

tell the house that the many speeches my hon. friend has made against the national railway do not represent the sentiment of one per cent of the people of the city from which he comes. I can state without hesitation that the people of Toronto, to the extent of 99 per cent, are favourable to the national railway. When my hon. friend gets up and denounces the administration of the railways, as he has done not only to-day but on former occasions, I feel that it is my duty to inform the house as to the real sentiments of the city from which we both come. He can curse Sir Henry Thornton as much as he likes; that may be his opinion of him; but I do not want to sit, and I do not think I should, sit here quietly, and let it go abroad that the opinions he expresses are those of the people of the city of Toronto. To me it comes as a surprise that my hon. friend who has represented himself as the great protagonist of the public operation of utilities, who on almost every occasion that he stands in this house praises the great work of Sir Adam Beck—and I entirely agree with his sentiments in that regard—should attempt to belittle and discredit the operation of the greatest national utility we have in the Dominion of Canada. If there is under public ownership and management any organization that should receive the support of the people of Canada, it is the national railways. We have over a billion dollars invested in that enterprise, and it is our duty, as I see it—and I know many manufacturers and freight shippers in Toronto feel it to be their duty—to do what we can to make this railway a success. I think it will be found on examination of the freight traffic from Toronto that that city has contributed as much if not more than any other part of the Dominion of Canada to the success of this railway. I am not speaking of the west which has enormous quantities of traffic, great bulk cargoes of grain to ship, but I am speaking of a city where there are innumerable men shipping freight and travelling as passengers on this railway. If the people of our city were not sympathetic to this enterprise; if they did not really desire its success, they would not patronize it to the extent they do. That very fact refutes the attacks which my hon. friend makes upon the management of the national railways. I have no brief for the railways, but I have a brief for the city of Toronto and I do not want it to go abroad uncontradicted that the sentiments expressed by my hon. friend are held by any considerable number of the people of Toronto.

Mr. CHURCH: Mr. Speaker—

[Mr. Hocken.]

Mr. SPEAKER: The hon. gentleman has already spoken on this motion. He can speak only once.

Motion agreed to.

Mr. SPEAKER: It is understood that a new motion will be presented with the estimates. Is that the agreement?

STANDING ORDERS

Mr. L. S. R. MORIN (St. Hyacinthe-Rouville) moved:

That the first report of the select standing committee on standing orders be concurred in

Motion agreed to.

AGRICULTURE AND COLONIZATION

Mr. W. F. KAY (Brome-Missisquoi): With the unanimous consent of the house I beg to move:

That the third report of the select standing committee on agriculture and colonization presented this day be concurred in.

Mr. SPEAKER: By leave of the house.

Motion agreed to.

PRIVILEGE—MR. EDWARDS (Frontenac)

On the orders of the day:

Hon. J. W. EDWARDS (Frontenac): I rise to a question of privilege. One week ago to-day in the course of my remarks on the budget I made certain statements which were vigorously repudiated by the Minister of Immigration and Colonization (Mr. Forke). Certain comments which have been made by the press with regard to that statement, I think, place me in an entirely wrong light and I desire in a few words to justify the statement I made. On the 28th day of June, 1926, Premier King tendered to His Excellency the Governor General his resignation which was accepted, and the Governor General called on the Right Hon. Arthur Meighen, who signified his willingness to attempt to form an administration. The next morning, Tuesday, June 29, the Progressives met in caucus and passed this resolution:

Motion agreed to by Progressive group:
That we assist the new administration in completing the business of the session;

That we are in agreement of the necessity of continuing the investigation into the Customs and Excise department by a judicial commission;

We believe it advisable that no dissolution should take place until the judicial commission has finished its investigation in the Customs and Excise department and that parliament be summoned to deal with the report.

The present Minister of Immigration and Colonization stated, as reported in the Globe

of July 5, 1926, that the above resolution was passed by the Progressives and given to him for his guidance. I make the statement that he conveyed to His Excellency the Governor General the attitude of the Progressives as indicated in that resolution and, what is of more importance, since it appeared in the press, was the fact that it was conveyed to the people of Canada generally. That is my warrant and that is the pledge to which I refer. You can call it pledge, contract, undertaking, or whatever you like; I do not wish to quibble on terms. That is the pledge to which I refer and which I regard as a pledge. It was written and, therefore, a written pledge. It was endorsed by all the Progressives including the leader of the Progressives and, therefore, by the minister himself.

Mr. DUNNING: How does the hon. member know?

Mr. EDWARDS (Frontenac): I have the assurance of the hon. gentleman himself and also of other members of the party to that effect. In support of my second statement that that pledge was violated, I say that all you have to do is to scrutinize the votes taken on June 29, June 30 and July 1, which show conclusively that not once in any of those votes—

Mr. SPEAKER: I think the hon. gentleman is going further than a question of privilege.

Mr. EDWARDS (Frontenac): I respectfully submit that I was charged with making a misstatement in saying that a pledge had been violated. Surely I have a right to say in what respect I was warranted in making that statement and then letting the people judge of the facts. I say that the votes taken on June 29, June 30 and July 1, clearly indicate that not only did the leader of the Progressives at that time not assist the new administration in advancing the business of the session, but on every occasion he did all he could to prevent that administration from carrying on.

Mr. SPEAKER: Order. If the hon. gentleman will allow me, he made a statement in the course of his remarks, and the hon. Minister of Immigration (Mr. Forke) also made a statement in reply to the hon. gentleman. According to parliamentary authorities, when a statement is made in the house it is bound to be accepted by every member of the house. I cannot allow explanations of the meaning of all the words and declarations used to be brought up on questions of privilege. It would create a vicious circle which could not settle the question in any event. The hon. gentleman made a clear-cut statement; the hon. Minister of Immigration has also made a clear-cut statement, and in my judgment the incident is closed.

Mr. EDWARDS (Frontenac): I just want—

Some hon. MEMBERS: Order.

Mr. EDWARDS (Frontenac): I presume the Speaker is presiding. I quite agree with you, Mr. Speaker, that I must accept the statement of any hon. gentlemen in this house, but I would call your attention to the fact that I do not have to accept the statements made by a newspaper, and I was replying to the newspaper's misrepresentation of my attitude.

Mr. BENNETT: I think, Sir, you overlook the fact that the Minister of Immigration and Colonization rose to a question of privilege and denied a certain statement. The document that authenticated the statement made by the hon. member for Frontenac-Addington (Mr. Edwards) was then produced by him to show that the memory of the minister was at fault. That is the story.

Mr. LAPOINTE: My hon. friend is not serious.

Mr. FORKE: As a matter of privilege, I rise to ask if this is to be the last word on the subject. Have I no right to reply to the statements made by the hon. gentleman?

Mr. SPEAKER: There is no debate on a question of privilege, but, of course, if the hon. gentleman rises to a question of privilege he can be heard at any time.

Mr. FORKE: I repeat again on a question of privilege that the hon. member for Frontenac-Addington has made a complete mis-statement of the facts.

Some hon. MEMBERS: Order.

Mr. BENNETT: He read from the document you took.

Mr. FORKE: Shall I say the statements are true—

Mr. BENNETT: Certainly they are true.

Mr. FORKE —when I know they are a mis-statement of the facts? I cannot see where I am wrong. My character to a certain extent is at stake in regard to the statements that have been made. My friends in the other corner of the house know exactly what took place and I put it to them —to any member over there, to get on his

feet and say that a resolution was passed instructing me to take certain proceedings with the Governor General.

Mr. BENNETT: That is not what was said.

Mr. FORKE: I hope my hon. friend the leader of the opposition (Mr. Bennett) wants to see justice done in this matter.

Mr. BENNETT: Hear, hear.

Mr. FORKE: I hope he is not holding a brief for anybody. I may say that during the last election a four-page pamphlet was published headed, "Forke double-crosses Mr. Meighen. He double-crossed the Governor General."

Mr. EDWARDS (Frontenac): I rise to a point of order.

Some hon. MEMBERS: Order.

Mr. EDWARDS (Frontenac): If you want it, you can have it. You are not going to have it all your own way.

Mr. SPEAKER: Order. The name of the Governor General must not be introduced into the debate. We have had personal explanations from both hon. members, and the house can judge of the matter. I regard the incident as closed.

PRIVILEGE—MR. CHURCH

On the orders of the day:

Mr. T. L. CHURCH (Toronto Northwest): I rise to a question of privilege. I wish to call the attention of the house to an editorial in the Orange Sentinel of March 1st on the Mexican question, stating that I was ill-advised to press a vote. I do not know whether anyone ever reads that paper or not—I do not very much—but this editorial, which I am not allowed to read, refers to my motion regarding the Mexico question. Might I say in reply that I had one motion on the order paper, and had I put my other motion on the order paper it would have gone to the bottom of the list, with thirty-seven others ahead of it, and would not have come up again this session. The hon. member for Toronto West Centre (Mr. Hocken) is an expert at the hit-and-run game—

Mr. SPEAKER: Order. On no question of privilege and on no other question is an hon. gentleman allowed to attack another hon. gentleman.

Mr. CHURCH: I rise to a question of privilege, Mr. Speaker, in regard to certain remarks that were made this afternoon upon another question by the hon. member for Toronto West Centre.

Mr. SPEAKER: Order. If the hon. gentleman refers to the question which came up this afternoon on the motion to refer the estimates of the Canadian National Railways to a special committee, the hon. gentleman objected to that motion. The hon. member for Toronto West Centre (Mr. Hocken) was in favour of the motion and made certain remarks, but there was nothing in them which I heard which could give rise to a question of privilege. I would say to the hon. gentleman that if we are to conduct the affairs of the house in a sane way, we should not prolong these rambles about remarks made by another speaker.

Mr. CHURCH: I rise to a point of order, Mr. Speaker. I contend that our parliamentary text books on procedure and also your rulings from the dead text books of the past, have been very largely abolished by our new status. I think it is a very proper question of privilege that I am raising. The statement has been made that I attacked the railway. What I was attacking was the method of appointing the committee.

Mr. SPEAKER: There is no question of privilege there. There would be a question of privilege if the hon. gentleman's character had been attacked, but there was nothing of the kind in the speech delivered this afternoon by the hon. member for Toronto West Centre.

PRIVILEGE—MR. GOTT

Mr. E. J. GOTT (South Essex): I rise to a question of privilege, Mr. Speaker. The hon. member for West Elgin, speaking in this debate, said at page 960 of Hansard:

> The hon. member for South Essex (Mr. Gott), stretched the point somewhat finely, but the fact remains that these two plants are being prepared for production and the company have announced that production will begin shortly.

Mr. SPEAKER: There is no question of privilege there.

Mr. GOTT: Just a moment.

Mr. SPEAKER: It is a question of fact; that is all.

Mr. GOTT: I want a correction to be made.

Mr. SPEAKER: That is not a question of privilege.

Mr. GOTT: The Hansard report goes on:

Mr. Gott: The company says that there is no production; that is the wire.
Mr. Hepburn: They are about to begin production.
Mr. Gott: They say not.

I want it understood that if this utterance was made from this section of the house it was not made by the member for South Essex, because there is nine million dollars invested there, and the hon. member for South Essex knows as well as the residents of Windsor that they will proceed only when a duty on steel is established.

Some hon. MEMBERS: Order.

NEWFOUNDLAND DELEGATION

On the orders of the day:

Mr. PETER McGIBBON (Muskoka-Ontario): Mr. Speaker, I rise to ask a question, based on an article that appeared in the Toronto Daily Star of Saturday last, headed, "Movement is Reported to Have Newfoundland Enter Confederation." One paragraph reads as follows:

A delegation of Newfoundland citizens, bearing with them the tacit authority of the government to express its views, is expected to reach Ottawa shortly in order to discuss this matter.

I would like to ask the Prime Minister if there is any authority for this report, and if so, when the delegation comes, will he give it a sympathetic hearing.

Right Hon. W. L. MACKENZIE KING (Prime Minister): I have heard nothing from any source, other than that which my hon. friend has just quoted, which would indicate that a deputation is coming. If any deputation does come, it will receive the same consideration and courtesy that is extended to every deputation.

THE BUDGET

DEBATE ON ANNUAL FINANCIAL STATEMENT OF MINISTER OF FINANCE

The house resumed from Monday, March 5, consideration of the motion of Hon. J. A. Robb, (Minister of Finance), that Mr. Speaker do now leave the chair for the house to go into committee of ways and means, the proposed amendment thereto of Mr. Cahan, and the amendment to the amendment of Mr. Fansher (East Lambton).

Mr. H. J. BARBER (Fraser Valley): Mr. Speaker, I rise in a somewhat tense atmosphere to resume the debate on the budget. But first of all let me say that the proposed amendment of the rule limiting speeches to forty minutes appeals very much to me. Those of us who sat in this house during the session of 1926 will, I am sure, agree that this would be a welcome change.

The budget has been termed by some a shadow budget; by others a shift budget. My sympathy immediately goes out to the hon. Minister of Finance (Mr. Robb), for whom personally we all have the greatest admiration. Consider for a moment the trouble he has had in framing this budget, for he had to try to satisfy the different viewpoints of the supporters of the government: the free-trade section—those who have continued to sound the "death knell of protection;" the wing that calls for a tariff for revenue only, and the other section demanding adequate protection along certain lines. In his endeavour to conciliate these conflicting views he has produced a budget that in my opinion will confer no particular benefit on the Canadian people.

It is not my intention to go fully into the budget proposals, as I wish to deal with a matter that has not been taken into consideration by the government, but before doing so I purpose to devote a few minutes to the subject of tax reduction. There is no doubt that the reduction of the income tax and corporation tax has been well received by some of our people. We are all acquainted with the history of the sales tax, and it was dealt with yesterday by some hon. gentlemen. This tax was raised from three to six cents by the government when it took office. Shortly afterwards our friends opposite began to claim credit for what they termed great reductions in the sales tax; first it was reduced 16⅔ per cent, then 20 per cent, and this year a further reduction of 25 per cent has been heralded throughout the country. But after all these so-called great reductions we find that to-day the sales tax is at 3 per cent—exactly where it stood six years ago when the Liberal party succeeded to power. I think we all agree that the sales tax bears very heavily on the great masses of the people, and if the burden of taxation is to be lightened, as the government promised some time ago, then I think this tax should be completely wiped out.

The Minister of Finance tells us that of course we must expect a continuance of certain taxes as long as we have a war debt. As to this, I agree with my friends to the left that the one tax that should be continued is the income tax. But I will go further; I say that the proceeds of this tax should be earmarked and applied to reducing the war debt. We are told by the minister that the general debt has been decreased this year by some thirty-eight million dollars. At the same time the estimated collections of income tax

he places at fifty-five million dollars. I think it very unfair that the revenue raised through the income tax should be expended on public works and the establishing of embassies in foreign countries.

As to the reduction of the national debt, a subject that has been discussed pro and con throughout this debate, I think the fairest statement in regard to it was given by the hon. member for St. Lawrence-St. George (Mr. Cahan), which will be found at page 617 of Hansard:

> The net debt of Canada on March 31, 1927, was $2,726,298,717, showing on the face of the accounts a reduction of $41,896,729.33 in the net debt over that of the preceding year. And yet the national railway indebtedness to the public only, increased in 1927 by $46,000,000.

The reply to the claim that the government has reduced taxation is given by the Minister of Finance himself when he states that the increase in the amount of taxes collected amounts to $10,420,728 over last year, or a little over $1.10 per capita. In this connection I am reminded of the remarks of an hon. member the other day, and I think the Minister of Railways (Mr. Dunning) would agree that he is not a Tory. He reminded us that in 1921-22 under the Conservative administration the total taxation collected amounted to $317,000,000. The Minister of Finance estimates that for the year 1927-28, $357,000,000 will be collected. In other words, this year the government expects to collect $40,000,000 more from the people than the Conservative administration did in their last year of office.

The Minister of Finance has termed this a thrift budget. The government have been talking thrift and economy for some time, but they continue to increase expenditures each year. I would refer the house to his statement as set out at page 535 of unrevised Hansard, where under the heading of ordinary expenditures it will be seen that there is an increase over last year of $14,181,827, under special expenditure, an increase of $2,156,600, and under capital expenditure an increase of $1,846,308, the total under these three headings being $18,184,735—representing in the neighbourhood of two dollars increased expenditure per head of our population. The estimates for the coming year show similar increases, and during this fiscal year, 1928-29, the government will expend every day no less than $1,095,000.

I find that the tariff changes in this as in all other budgets of this government are calculated to encourage importations, curtail opportunities for employment in home industries, and lessen the importance of the home market to Canadian producers. This continual tinkering with the tariff has done more to disorganize industry and discourage capital than has anything else. It is a policy of uncertainty. I think the time has long since come when there should be marked in red on our calendar another day, the day when the budget speech is brought down. The people of this country look forward with great anxiety to that date. I might liken it to a man up on a charge of murder. He looks forward with dreadful anticipation to the conclusion of his trial and the return of the verdict, awaiting either the passing of sentence or release. In the meantime he does not know whether he is to be discharged or sentenced to prison for life or to hang by the neck until he is dead.

There is nothing in this budget calculated to encourage our great primary industries. In this regard I was interested in the simile offered by the hon. member for Southeast Grey (Miss Macphail) the other day, when she compared the well being of a country to a tree, agriculture and the other primary industries forming the roots and the secondary industries the branches. If the roots are injured then of course the tree withers and dies. I fear that some of the branches of our national tree are withering to-day. For a few minutes I propose to discuss some of the branches, but first I would refer to one of the roots, the great industry of agriculture. Let us take dairying, which is one of the most important. The dairymen of this country, I want to point out, have no eight hour law; they work from early morning until late at night. Nor have they any weeks of holidays; they cannot put their cattle in cold storage and elevators and travel south; they must be on the job all the time. The total investment in this business is some $900,000,000 and it gives employment to half a million people. We have in this Dominion over three million producing dairy cows and the total dairy production amounts to $250,000,000, being greater than that of the mining industry of which we are so proud. One would naturally expect such an important industry to receive every encouragement at the hands of the government, but the greatest blow it has been given has been the Australian treaty which was entered into by our friends opposite in 1925. We have an excellent illustration of the effect of reduced tariffs when in this instance we find that the treaty not only resulted in a lowering of the duty against Australian and New Zealand products from four cents to one cent, but also forced the Americans, in order to protect themselves,

to raise their tariff from eight to twelve cents, thus excluding us from their market.

Prior to this trade arrangement we exported considerable quantities of butter to the United States. In the year 1925 we exported 24,553,000 pounds, importing in that same year 193,341 pounds, leaving a net surplus for export of over 24,000,000 pounds. Since the coming into force of the treaty our exports have gradually diminished while our imports have increased. According to the statement issued by the Department of Trade and Commerce, December 31 last, we exported $1,068,610 worth of butter, chiefly on consignment to Great Britain, and imported $3,892,640 in 1927. In other words, we imported over three times as much butter as we exported. As to production, I have been unable to secure the figures for 1927 but I am advised that they are in course of preparation. I fear they will show a great decrease in production. Monthly bulletin No. 232, giving agricultural statistics, shows that we produced 272,000,000 pounds of butter in 1926 and further, as between the two years 1925 and 1926, a decrease of 5,000,000 pounds in production of dairy butter and an increase in creamery butter of 7,700,000 pounds, or a total increase of 1.01 per cent. It has been argued that the price of butter retailed in Canada has been higher since the coming into effect of the treaty. This is an unfair way to look at the question; we should consider, not the retail price, but what the dairymen receive for their product in this country. In this connection I desire again to refer to this bulletin on agricultural statistics. We find that the dairymen of Canada received in the year 1925 $95,136,896 for their butter, while in 1926 they received $90,006,167; with an increased production of 1.01 per cent they received $5,130,729 less for their butter in 1926 than they did the previous year.

Under this agreement thousands of pounds of butter from New Zealand and Australia have reached the Vancouver and British Columbia markets. At the same time I feel that British Columbia has not been so hard hit as other portions of the country, particularly the prairie provinces. The dairymen of the Fraser valley market their product principally in the form of fresh milk. During the year 1927 they produced in the district 12,500,000 gallons. Of this volume 7,000,000 gallons took the form of fluid milk while 5,500,000 gallons were disposed of as products manufactured from milk, chiefly butter. The returns received from milk sold in fluid form were considerably higher than the returns received from milk sold in the form of butter, the relative returns being 24 cents per gallon and 16 cents per gallon respectively.

The great problem facing the organization of the Fraser valley to-day is the loss through surplus which must be marketed in the form of butter, cheese and other products. Under present conditions, if the dairymen of Fraser valley had to depend on butter prices for their product they would all go out of business. A few years ago, I remember, a large quantity of Alberta butter was sold on the British Columbia markets, and I may say a very popular brand it was. Now it is replaced by New Zealand and Australian butter. No part of this country has been harder hit by this Australian treaty than the prairie provinces. The farmers of those provinces have been urged for some years to go into mixed farming and they were making rapid strides in dairying. Two years ago in the province of Saskatchewan there was more butter made every week during the winter months than was consumed. At the present time that province is producing less than 50,000 pounds per week, with a weekly consumption of 200,000 pounds. Twenty butter factories which have been in operation for years have been closed. These conditions, I believe, apply generally to Alberta as well. We find that Calgary has had to import fresh cream from Vancouver for table use. It is said that thousands of prairie farmers let their hired help go in the fall owing to the fact that they are not milking their cows. This is a serious state of affairs in this industry, and it has all been brought about by the policy of hon. gentlemen opposite.

I have here some resolutions of protest submitted to this government and as I see the Minister of Agriculture (Mr. Motherwell) in his seat I wish to bring them to his attention. First there is the National Dairy Council, whose views are on record. This organization met the Minister of Agriculture and other members of the government on November 29 last and presented the following resolution:

> That the order in council applying schedule 2 of the Australian trade agreement to New Zealand be rescinded at once;
>
> That the dumping clause be immedately applied on all butter sent from Australia to Canada on consignment as well as on direct sale;
>
> That the Australian trade agreement be terminated as provided in the Australian Trade Agreement Act, 1925.

A similar resolution was forwarded by the British Columbia Dairymen's Association, which met in Nanaimo on February 22, and we have also received protests from a meeting of western dairymen which took place at Regina on February 10. Now I turn to the Minister of Agriculture; I say to him that the dairymen of this country want to know

what he is going to do about this question; he can no longer turn a deaf ear to these protests. I would ask the minister if he can give us some assurance that the wishes of the dairymen will be carried out. He does not reply. I am sorry the Minister of Finance is not in his seat, because I believe he was the father of this child, and his usual comeback is, "What about paper, salmon, and other products of British Columbia?" I can only say that I do not consider even those products safe under this treaty, because it appears that under this agreement Australia has certain powers which we do not have; their preferential and intermediate tariffs are subject to change from time to time without reference to the wishes of this country. Recently the Australian government made a change with regard to the tariff on automobiles, by revising that part of the agreement dealing with those items. They increased the preferred rate and the general rate by 5 per cent and 7½ per cent respectively, and the manager of General Motors Corporation says that any benefit they received from that treaty has been taken away.

The trouble is that when this agreement was entered into, so far as agricultural products were concerned we had nothing to trade. As you all know, under that agreement Australia was allowed a preference of 3 cents under our general tariff; if our general tariff had been raised to what it should have been and the tariff on butter increased to 8 cents or 9 cents there would have been no trouble. When the tariff was left at 4 cents, however, the 3 cent preference only allowed a protection of one cent per pound, and our markets have been flooded with Australian and New Zealand butter.

Mr. ADSHEAD: May I ask a question? Can my hon. friend tell me who is the greatest importer of New Zealand butter and also the difference in the tariff on butter as between Australia and New Zealand?

Mr. BARBER: In my forty minutes I have not time to go into that, but my hon. friend is one who would refuse to raise that butter tariff. At the same time, this government raised the tariff on currants and raisins from a half cent to three cents, in order to protect the growers of Australia.

Now let us look at this industry from another angle. To-day we are assisting other industries throughout this country, so would it not be only fair to assist this industry which is working under altogether different conditions? We should give them at least sufficient protection to meet the difference in the cost of production which is due to climatic conditions in other countries. Just think what it would mean; under the one cent tariff we imported last year 11,208,819 pounds of butter, or 1,348,167 pounds more than we imported during the previous year. If this butter were produced in Canada it would mean 125,000 more dairy cows with an increased production totalling about $3,500,000; it would mean stabilizing the market and would result in the employment of about 15,000 more people. The home market would be increased and our own good Canadian money would be kept in circulation in this country.

Then there is another important industry to which I wish to refer, and that is the poultry industry. That is a very important branch of agriculture and one which should receive every consideration and assistance at the hands of the government. During the last few years Canadian poultrymen have established world records of performance, and they made an excellent showing at the great poultry congress which was held in this city last year. To-day they are greatly handicapped not only through the lack of protection but also because of the uncertainty which exists under the policy of this government. I have here a wire which was sent to an hon. member of this house under date of February 29, which will illustrate how this uncertainty handicaps our poultrymen. This wire was sent from Duncan, British Columbia, addressed to Mr. C. H. Dickie, M.P.:

> We are advised effort being made to reduce tariff on American eggs but have received no definite information. Please investigate and advise us promptly. We are opposed to a reduction.

That is signed by the Cowichan Creamery. The poultrymen to the south of the line have the advantage of climatic conditions, lower feed and labour costs and a tariff which protects them from unfair competition, while a low Canadian tariff permits them to invade our market with their surplus stocks. We imported from the United States last year under the three cent tariff over 3,000,000 dozen eggs in shell. In addition to that we imported 1,691,359 pounds of eggs from the orient and other countries, mostly canned, which would equal about 1,130,000 dozen eggs in shell. This makes a total of 4,248,513 dozen eggs which were pushed on the Canadian market last year to compete with our own good Canadian product. According to the Bureau of Statistics we have a poultry population of over 46,000,000, with a commercial production of about 237,000,000 dozen eggs. Let us consider this industry as we consider the dairying industry; if we produced in Canada the number of

eggs imported last year it would mean 850,000 more poultry, and if we allow 1,000 to a farm this would mean 850 additional farms and employment for perhaps 2,000 more people.

Another branch to which I wish to refer is the production of young fruit trees, rose bushes, shrubs, fruits and vegetables which will grow in Canada. I think we will all agree that this is a business which can readily be carried on in this country and which should be encouraged. This is an industry which would add to the future prosperity of this country; we have the climate, the soil, the knowledge and the desire and the government have it within their power to make this business a success. Those engaged in this business have to meet very unfair competition due to large importations from foreign countries. If we consider nursery stock we find that about 75 per cent of the cost of production is labour, and our labour cost is about two and a half times that of our competitors in foreign countries. Here is an industry which might profitably employ hundreds of people if we had sufficient protection to compensate for the difference in labour cost. For instance, 75 per cent of the cost of growing a rose bush is in the labour; skilled labourers in Holland get from twelve to fifteen cents per hour, while in Canada the same labour is paid from thirty cent to fifty cents per hour, so it is easy to figure out the difference in cost. As a result of this wide difference we imported 1,129,918 rose bushes from Holland in 1926, in addition, shrubs valued at $159,530 and 272,390 fruit trees. These fruit trees came from the United States almost exclusively, and there again we have unfair labour competition. The price of these trees is largely fixed by the cost of negro labour in the south, where living conditions are the very cheapest and where the standards of living are not to be compared with those in Canada.

Last year we imported into this country fresh fruits to the value of $24,685,221, of which about one-fifth could have been produced in Canada. During the same year we imported fresh vegetables to the value of $5,685,221, of which $4,682,259 worth, could have produced in this country. That gives us a total importation of fresh fruits and vegetables valued at about $9,550,000 which can be and are being produced in this country. It is estimated that we have over 90,000 fruit and vegetable farms which produced in Canada last year in a commercial way about $47,718,000 worth of fruit and vegetables. Think of what it would mean to Canada if our imports of these products, corresponding to 20 per cent of our total production, were produced in this country. Suppose the average production per farm is $1,000, which I believe is a high figure, it would mean 9,550 more farms and a considerable increase in employment in Canada.

Last year we imported $857,583 worth of apples. Why should this be necessary? No finer apple is produced than the Canadian apple. Over $500,000 worth of peaches were imported into Canada. Why is this necessary? Where do you get a finer flavoured peach than that of the Niagara peninsula? The only place I know is British Columbia. The same thing applies to pears, of which the imports amounted to $855,274; strawberries, with imports of $668,417; cherries, with imports to the amount of $120,912; and plums of which $475,226 worth were imported.

In vegetables we find the same thing occurring. Large quantities of new potatoes are usually imported early in the spring at a very high price, with the result that the Canadian crop, which is of even higher food value than the imported product cannot be sold or only at a very low figure. This government does not recognize this industry even to the extent of a seasonal tariff. The vegetable and fruit growers express themselves as deeply disappointed that no steps have beeen taken to protect them against the inrush of earlier products from the United States. Many representations were made to the tariff board and the government on behalf of the growers in the maritime provinces, Quebec, Ontario and British Columbia.

In dealing with the dairy, poultry, fruit and nursery industries I have tried to make it plain that under the present policy these industries are hampered—that in order to ensure their growth and development they must be protected to the extent at least of the difference between Canadian and foreign conditions and especially foreign labour costs. I do not say that protection is a panacea for all our ills, but I am convinced that under reasonable protection it is quite feasible to produce in this country, for domestic consumption, a large amount of the commodities which we now import from foreign lands. I say "reasonable" protection because that is exactly what the Conservative party stands for. This party has been misrepresented throughout this country as a party of high protection, of sky-high protection. We remember the campaign which the Minister of Railways (Mr. Dunning) and his lieutenants carried on through the prairie provinces in the last two elections. "Vote for the Conservative candidate", he said, "if you want still higher protection and everything that goes with it." The result was that in that campaign he was very successful, but he was not as successful when he crossed the Rocky mountains.

In connection with the matter of protection I wish to refer to some remarks made by the hon. member for Mackenzie (Mr. Campbell). I do not think that hon. gentleman can be accused of being a protectionist, or of belonging to our party. However, on page 810 of Hansard the hon. gentleman is reported as having spoken as follows:

> For the five years from 1917 to 1921 inclusive the average rate of duty on dutiable imports was 21.9, while for the five years from 1922 to 1926 inclusive, under this administration, the average rate of duty collected on dutiable imports was 24.06, or a difference under the late Conservative administration of 2.16 lower.

So, according to the hon. member for Mackenzie, our record does not show that we are a high tariff party. Stability is what we need in this country, and under the system we are pursuing to-day we are giving employment to thousands of workers in foreign countries instead of providing work for our own people at a fair wage. Under the present system we are denuding this country of its raw material, and we are driving our own people to other countries. We all admit that immigration is our great problem. Is there any better solution of that problem than to make Canada a better country to live in, create conditions such as will encourage the investment of capital and the development of our natural resources, thus providing more work for our own people and building up a home market for Canadian producers. I say that people do not as a rule leave their homeland simply for a change of air and scenery; they leave in order to better their condition. Make Canada more attractive, make Canada a country that will appeal to these people, and instead of having to spend millions every year to bring immigrants to this country, we shall have them knocking at our doors clamouring for admittance.

Hon. ERNEST LAPOINTE (Minister of Justice): Mr. Speaker, it has been my privilege to attend all the sittings of the house since this debate began. In a way it was a sort of professional duty but it was very interesting in many respects. I am more than ever convinced of the truth of the saying of a great English parliamentarian, that the House of Commons is the most tolerant institution in the world. I only wish the people of Canada could have been present during the course of the debate and have listened, as I have listened, to the extremely opposite and contradictory arguments which have been presented by both parties opposite with respect to the budget brought down by the Minister of Finance (Mr. Robb). All hon. gentlemen criticizing the budget agree on one point. It is that there is no constructive policy displayed by the government. The difficulty is that what is constructive in one part of the house is regarded as destructive in another quarter of the chamber. If the people of the country could have, as I have said, listened to everything that has been uttered here it would be easy for them to draw their own conclusions.

Mr. Speaker, the amendment and the sub-amendment are innocent looking creatures deserving of very little attention. The amendment, like its big brother the tariff resolution of the Winnipeg conference, is an emasculated political instrument disowning the very word of protection, deprived of all strength, virility, and even significant meaning. It is such a mild and soft expression of policy that one is amazed at the bitterness and violence of the speeches which have been made in support of it. Of course violent arguments and violent speeches from each end of that side of the chamber defeated the purposes of the respective parties. While sitting here quietly, with not much to do, I took the trouble to gather up some of the shrapnel which was launched against the administration, and I want to exhibit this shrapnel to the people of the country in order to illustrate the conditions as they exist in the house. As we say in French, "A tout seigneur tout honneur." I will begin with my hon. friend from Fort William (Mr. Manion). The hon. gentleman is a fine speaker, I am always fond of listening to him. Perhaps he is a little bitter. For some time it was my impression that he was trying to make his new associates forget that he was ever a Liberal. That was long ago.

Mr. MANION: They have forgotten it long ago.

Mr. LAPOINTE: Here are the words of my hon. friend, taken from page 656 of Hansard:

> While the tariff changes may seem minor when one looks at them first, already from reports coming in to members of this house who have in their constituencies mills which are affected by these tariff changes, it looks as if serious injury was once again going to be done by this government to the industrial life of this country.

Further on he says:

> As time goes on, the government and the people of this country will find that the reductions in the present tariff, though minor in appearance will do more injury to the industrial life of our country and drive still greater numbers of our people to the country to the south of us to earn their living which they are denied here at home.

Mr. GOTT: Hear, hear.

Mr. LAPOINTE: I am glad my hon friend over there cheers. Immediately after-

wards the hon. member for Last Mountain (Mr. Fansher) said, as reported on page 673 of Hansard:

So far as I have been able to ascertain from the closest scrutiny of the budget, particularly as it affects the customs tariff, there is practically no reduction that will benefit the great mass of consumers and the producers of this country.

Some hon. MEMBERS: Hear, hear.

Mr. LAPOINTE: Now my hon. friends are cheering on the other side. The hon. member says later on:

Hon. gentlemen from Manitoba are the doorkeepers, as it were, of western Canada. Are they going to assist us, or are they going to be instrumental in opening the doors to further burdens and to the laying of greater stress and strain on the agricultural industry? I hope not.

Then came a violent offensive on the part of the hon. member for Toronto Northwest (Mr. Church). He had many chapters and I am going to select only a few of them. He said:

Woe be it to the maritime provinces when they deal with some of their industries! Woe be it to the industries of the province of Quebec! . . . .

The main tariff changes in this magnificent budget with its twelve pages of schedules affect the cotton and woollen industry. I have no doubt that one reason for these twelve pages of tinkering is due to the fact that the government, in anticipation of a general election two or three years hence are making a nice little gesture to the gentlemen on our left in anticipation of a larger vote west of the great lakes. . . .

It is just digging up material for the free traders. The tariff board to-day, in my opinion, is composed of nothing but a lot of spade and shovel men who are digging up a lot of facts about free trade for the government to destroy protection and trying to foist free trade on the people. The farmers of this country do not believe in the policy of free trade, and yet the government are going to destroy every industry in Ontario and Quebec before they get through with this Yankee fad, the tariff board. . . .

To-day this government with its free trade gesture is in effect telling our youth: "Go south, young men." . . . .

The expulsion of the Acadians was nothing to the expulsion of 600,000 Canadians by this tariff policy.

There are many others of the same kind but I am afraid time will not permit me to quote my friend from Toronto at greater length. To that the hon. gentleman for East Lambton (Mr. Fansher) says:

As I say, the government appealed to the country saying: Why divide the low tariff element? But in this budget they have simply tinkered up the old tariff wall, taking off a stone here and replacing it somewhere else, and taking one from there and putting it in the place of the one they took away. They have given the old tariff wall a coat of whitewash and they have still kept the old barbed wire entanglement known as the dumping clause on top of the tariff wall.

Then the hon. member for Muskoka-Ontario (Mr. McGibbon)—and I am pleased to call him my friend—comes along and says this as reported on page 698 of Hansard:

There we see again the baneful influence of this government, and how its policy is going to strangle the woollen industry and possibly drive more mills out of business. I ask you, Mr. Speaker, I ask any man of intelligence and common sense, why do we crucify our Canadian industries that are giving work to our own people? For the life of me I cannot understand it.

Very fortunately the hon. member for Rosetown (Mr. Evans) came to the rescue and he says, as reported on page 737:

Taking it altogether, this budget is a rich man's feast. The money cost to the public through trade penalties has not been at all lessened, and the moral hazard has not been abated in any way. . . .

The parliament of Canada is the highest court in the land, the place from which one would suppose justice would emanate for all alike, but the present government, after having taken every possible means to inform themselves on the evil system of trade penalties, now come forth with a budget in defiance of that knowledge. This has given a direct challenge to the primary producers and workers of this nation; it has challenged the farmers to organize for political action, and it is even an invitation to the workers to strike for justice. . . .

Again, the farming class of Canada has been farmed by the capitalistic class of this Dominion for the last forty years, and all governments of Canada for the last forty years, irrespective of party, have done the same thing. In this respect the present budget is no different from the budgets which have been presented in former years, but it does stamp this government as being composed of men who are willing to continue the sweated labour on the farms of Canada of our women and children, to say nothing of our men, to swell the profits of those who, through their henchmen in this house, proclaim their indolence—

Pardon me for not finishing the sentence. Immediately after that speech the hon. member for South Cape Breton (Mr. MacDonald) rose and, before starting to discuss the budget, he could not help saying this out of the kindness of his heart:

Having listened to the last two speakers, I rather sympathize with the Minister of Finance. They attacked him from entirely different angles, but I do not think he should have very much trouble in deciding which of the two criticisms is deserving of consideration.

His sympathy was not very practical because he started to do the same thing and abused the Minister of Finance. Then the hon. member for Dufferin-Simcoe (Mr. Rowe) said, as reported on page 830:

The people of this Dominion have been viewing with alarm the attitude of the government towards the manufacturing industries of this country. . . .

The budget may be pleasing to those who are interested in a low tariff: the Minister of Finance calls it a reclassification, but whether you describe it thus, or whether you call it a ratification or a modification or a lowering of the tariff or tariff tinkering, the effect will be the same; it will be felt just as injuriously by industries throughout the Dominion.

The hon. member for Mackenzie (Mr. Campbell) then came forward and said:

The more I examine the budget the more I realize that the tariff is not reduced at all; it is actually raised.

He continued:

To-day I no longer wonder; I am quite convinced from these figures that as between the two old parties the low tariff party sits to our right while the high tariff party occupies the benches opposite, including in their ranks the hon. members from Saskatchewan and Manitoba.

Mr. CAMPBELL: Hear, hear.

Mr. LAPOINTE: He said:

To-day I no longer wonder.

So far as I am concerned I do not wonder any longer why he was not opposed by the Conservative party at election time. The hon. member for Brant (Mr. Smoke), as reported on page 834 of Hansard, said:

If it differs at all, the system of the present government is worse than the Soviet system. As I understand the Soviet system, they confiscate, but do not destroy; they leave facilities for production practically unimpaired, and production still goes on, while by the system adopted by this government capital is entirely destroyed. This government will be known to posterity as bolshevists or worse. No name can more accurately describe it.

Then my good, kind friend, the hon. member for Southeast Grey (Miss Macphail) comes to our help and says:

There is no real reduction in the tariff. No one knows that better than the Minister of Finance.

Shall I quote the hon. member for Brantford (Mr. Ryerson), who said that all the industries were going to be ruined? I am afraid my time is slipping by and I want to say something else. The hon. member for Battle River (Mr. Spencer) said immediately afterwards:

Taking it all in all, a study of the tariff discloses that whatever benefit is to flow from this tinkering will be to the advantage of the manufacturers rather than the consumers of this country.

The hon. member for Halton (Mr. Anderson) said this:

Every time this government change the tariff they stimulate the importation of foreign goods into Canada and thus injure our own industry, while every reduction in taxation is followed by a flow of emigrants from Canada to some other country, in search of work.

This government appear to be implementing their tariff policy of 1919—

Listen to that, my friends over there!

—in which they said they believed in a reduction of the British preference to 50 per cent of the general tariff; I believe the Minister of Finance is at that point now, and in some instances is below the 50 per cent level. I believe he is going still further in the direction of the Progressive policy of free trade with England; at any rate, he is nearing the point where we shall have a tariff for revenue only, which appears to be the Liberal policy to-day. Not only is the minister making reductions in the general tariff; he is also going around to the back door and giving preferential treatment to certain favoured nations something of which the people are scarcely aware.

Then my hon. friend from Peace River (Mr. Kennedy), speaking in this debate a day or so ago, said:

The tariff schedules as proposed by the minister are planned, in my judgment, to help a few large manufacturers at the expense of the general public, and the smaller manufacturers, especially those manufacturing hats and caps.

He said something else, but I have to proceed. I could not catch all that was said yesterday by my hon. friend from Wetaskiwin (Mr. Irvine), and I must ask his pardon for that. I know that some of my friends here were alarmed at the reductions in the tariff, but my hon. friend from Wetaskiwin last night said that such a refusal on the part of the government to do what they should do in the matter of reductions in the tariff was conducive to a bloody revolution of some kind or other. My hon. friend said at the time, I remember, that the charges made by the Conservative party during the last election campaign against the Liberals, and the charges made by the Liberals against the Conservatives, were both true. I may say to my hon. friend that obviously the two contradictory expressions of opinion that I have just read, coming from different parts of the house, cannot both be true. As a matter of fact, I think they are both untrue. We have reduced the tariff, and we have not ruined any industry.

May I say, Mr. Speaker, that an offensive carried on by such opposing forces can only be of a negative and destructive character, and if they could succeed, what would be the result? If they could paralyze the government of the country at the present time, what could take its place? Such methods of warfare, if victorious, would transform parliament into what I might call a crystallized deadlock. We are attacked from both sides in that contradictory manner because we are

here representing the whole of the people of Canada. We are entrusted with the duty of considering and dealing with the interests of the whole people at large, and not of any one class or of any one section of the community.

I would not like to say anything unpleasant to my friends in the extreme corner of the house. Reference has been made to the session of 1926. Let me tell you, Mr. Speaker, that I shall always cherish the memory of that session of 1926. It began well; it proceeded well; and it ended well; and the election that followed also ended well. We had co-operation with hon. gentlemen over there which was above-board, and I can only say that, so far as I was concerned, I was always pleased with the relations that we had with those hon. gentlemen. I have more in common with them, so far as big policies are concerned, than I have with my hon. friends immediately opposite, and if we had to run this country on the basis of groups, I think I would try to qualify in the farming community in order to be with them rather than with other hon. gentlemen in this house. But I do not believe in that form of government.

An hon. MEMBER: You have it over there now.

Mr. LAPOINTE: My hon. friend the alarm clock over there might perhaps listen to me. I do not believe in class or group government. You cannot represent the mind of the nation as a great world entity on the basis of functions or occupations. A member of parliament must impress upon himself or herself first the duty of thinking in the interests of the community as a whole, and then of his or her trade or class interest as it is not inconsistent with the interests of the whole nation. Mere class or occupational representation, as advocated by my hon. friend from Southeast Grey (Miss Macphail), is the reverse of such principle, and impresses upon a member that his or her trade is his or her politics. It is organized selfishness.

May I add that when members of a party or of a group are not in power, and in fact are not likely ever to be in power—I do not mean this offensively at all because they themselves have said that they would not like to be in power—it is easy to propound all sorts of cures for every evil, real or imaginary, without any risk of having to apply the prescription. They preach knowing that they will never be called upon to practise. They may score occasionally, but they will forgive me for saying that there is no great glory in the success achieved by that method. As those of us who speak the French language say, "La critique est aisée, l'art est difficile." We have a huge country. We have sectional interests which are not identical, which, in fact, in many cases are widely different. Those who are entrusted with public functions are trustees, not for one class, not for one section of the country, but for the whole people and the country at large, and it is their duty to try to find what are the causes of divergence of opinions and even of interests, and try to find, if possible, the concessions which it may be desirable to give or to obtain.

Some members have said that they are sick of the word compromise. Mr. Speaker, compromise has been the policy upon which this country was built. The confederation of Canada is based upon compromise; it could not continue without compromise. The British Empire is founded upon a compromise. The peace of the world is based upon compromise. It is impossible for any group or for any association, nay, even for any country, to get its own way in all matters. There must be compromise with others. That is the only way to achieve success.

Now I come to my hon. friends directly opposite. I have made allusion to the Winnipeg convention. With many of the resolutions adopted there I would not agree, but one act of the convention I commend—the choice of the party leader. They selected a fine leader, a man of courage and strong convictions, and well able to express those convictions. He is an excellent type of Canadian manhood. Having said that, he will forgive me if I express my disappointment that he did not as a first assertion of strong Canadian leadership put an end to the campaign carried on by his party during the last few years against Canada, Canadians and conditions generally in this country. I was hoping that he would discountenance his followers in their campaign of belittling and misrepresenting Canada in the eyes of the world. Why glorify the United States at the expense of Canada? Why should hon. gentlemen describe the United States as a land where young Canadians can find gold and honey while here they meet taxes, unemployment and starvation? Sir, we do not ask from them fair play for the government, we do not ask for even elementary justice; let them ascribe the progress and prosperity of the Dominion to Providence if they prefer to do so; but we do ask them not to say anything that may hurt the name and the credit of Canada. It might not be out of place for the committee which is going to study immigration to make a recommendation in that respect.

But, Mr. Speaker, it is not true that Canada has any cause to envy other countries, and certainly it is not true that Canada has any reason to envy the United States. I need only remind you, sir, that it was not until the United States had a population of seventy-five million that their total trade was equal to that of Canada's to-day. Recently I came across an article in the organ of the Canadian Manufacturers Association, Industrial Canada, written by Mr. Alex. Marshall, who is manager of the Commercial Intelligence Department of the association, in which he deplores this tendency. I should like to quote the whole article, but my time is vanishing rapidly and I must content myself with these few words:

Just take a look at the other side of the picture for a minute. In leather, United States exports forty-one cents per capita, Canada ninety-seven cents. In meats, United States exports eighty-two cents, Canada $2.77. In wheat and flour, United States exports $2.36, Canada $39.97. The Canadian gross total is fifty per cent greater than the United States gross total. In copper and its manufactures United States exports $1.17, and Canada $1.46.

Here is another extract:

The total per capita exports of all lines from the United States is $39.62, from Canada, $122.57.

If you want the gross totals for all industries I have them in this article:

$4,771,000,000 for United States, $1,225,000,000 for Canada. Canada is one-twelfth in population as compared with the United States, and one-fourth in exports.

I have an editorial before me which appeared in The Chronicle, a publication by banking, insurance and finance of Montreal deploring this campaign, but I have no time to read it. I also have under my hand Bradstreet's of last week as to the conditions of unemployment in the United States, confirming the reports of widespread unemployment made by state labour bureaus, unemployment agencies and relief organizations at various places. The employment index compiled by the Bureau of Labour Statistics of the Department of Labour for January fell to the lowest point for any month since April, 1922. The index number was given as 84.2, a drop of 1.1 per cent from December and of 5.5 per cent from January a year ago. The Bureau of Labour Statistics' index of payroll totals for January was 85.8, a decrease of 3.9 per cent from the preceding month and of 5.5 per cent from the like month a year ago. This was the lowest point reached by the payroll index since August, 1924.

Mr. DUNNING: In the United States.

[Mr. Lapointe]

Mr. LAPOINTE: In the United States. But my friends over there say: We are carrying on this campaign for the purpose of attacking the fiscal policy of this government. One of their arguments to which I wish to address myself is that Canada is the only country in the world that has reduced its tariff since the war. They are right. And we are proud of it. They claim that eighty countries have raised their tariff—they may be right—and that Canada has adopted what they call "the foolish policy of tariff reduction." I repeat, we are proud of it. But is that a foolish policy? Mr. Speaker, the League of Nations at its assembly of 1926 decided to summon an economic conference of all the nations of the world. The reason given, as I read it, was:

The assembly of the League of Nations declared itself "firmly resolved to seek all possible means of establishing peace throughout the world" and affirmed its conviction that "economic peace will largely contribute to security among the nations."

In the economic conference at Geneva in the spring of 1927 fifty nations were represented. They discussed economic world conditions, and here is what I find in the report of the conference. I will read only a couple of sentences.

Mr. BENNETT: You might read that on the stability of tariffs.

Mr. LAPOINTE: My friend will read it all.

Mr. BENNETT: I have.

Mr. LAPOINTE: My friend complained the other day that the documents concerning the League of Nations are not sufficiently published in Canada. I wish this report might reach every Canadian home.

Mr. BENNETT: Hear, hear.

Mr. LAPOINTE: Let me quote the report:

The evidence before the conference, which is contained in the documentation or in the statements made by the members of the conference, shows that the recovery from the effects of the war has been unduly delayed and that the foreign commerce of all nations is in greater or less degree seriously hampered by existing obstacles to trade.

The conference notes with satisfaction that some of the most injurious forms of obstruction that prevailed immediately after the war have been removed. To this fact must be attributed in part the recovery of world trade which has so far been achieved.

Tariffs, on the other hand, which in recent years have shown a tendency to rise, are for the most part higher than before the war, and are at present one of the chief barriers to trade. The increase in most countries is almost wholly due to higher duties on manufactured articles.

Further, the report states:

The conference recognize that the removal or substantial reduction of customs barriers cannot be brought about suddenly without causing dislocation but it is of opinion that governments should immediately prepare plans for removing or diminishing by successive stages those barriers that gravely hamper trade, starting with those duties which have been imposed to counteract the effect of disturbances that are now past.

In conclusion the conference recommends:

(1) That nations should take steps forthwith to remove or diminish those tariff barriers that gravely hamper trade, starting with those which have been imposed to counteract the effects of disturbances raising out of the war.

(2) That states should proceed to the conclusion of commercial treaties on lines and under conditions calculated to ensure the attainment of the aims mentioned herein.

I read the speech of one of the German delegates who stated emphatically that economic troubles have been the cause of wars in many instances and that blood has been shed throughout the world because gentlemen wanted to have their high dividends kept and preserved.

Mr. CAHAN: That has always been the German excuse for war.

Mr. LAPOINTE: I beg my hon. friend's pardon; I will refer to him in a moment. The recommendation of the conference was submitted at the last assembly of the League of Nations in 1927 and unanimously adopted, and there the Canadian delegate could rise proudly and declare that Canada was the only nation that had anticipated that report.

Mr. CAHAN: The hon. gentleman has never had the courage to—

Some hon. MEMBERS: Order.

Mr. LAPOINTE: I have so much affection for my hon. friend that I should be sorry to excite his ire in any way whatever.

Mr. CAHAN: —to submit these things to parliament for its consideration, instead of concealing them behind the back of parliament.

Mr. LAPOINTE: If my hon. friend desires to make a speech, if he thinks it will conduce to proper parliamentary procedure, let him do so.

Mr. CAHAN: I was merely replying to the hon. gentleman's comment upon my assertion—

Some hon. MEMBERS: Order.

Mr. CAHAN: I say, he has never had the courage to submit to parliament the findings of the conference.

Some hon. MEMBERS: Order.

Mr. LAPOINTE: I am pleased at this manifestation on the part of my hon. friend. Let me tell him that in this, as in other matters, Canada has taken the leadership and we are not ashamed of the fact.

Mr. CAHAN: You never—

Some hon. MEMBERS: Order.

Mr. LAPOINTE: Canada has taken the leadership, I say, in many directions—for instance, in instituting the International Joint Waterways Commission, where the grievances and the troubles arising between two neighbouring countries can be adjusted peaceably. Canada has taken the leadership in many other ways. There are hon. gentlemen who think that we should be riveted to the past. My hon. friend said the other day that the Prime Minister (Mr. Mackenzie King) and the Minister of Finance (Mr. Robb) were intellectually incapable of seizing his point. Well, I know that my hon. friend has great intellectual ability and I admire him. But unfortunately on some questions he is a Tory of the worst kind, rooted in the past, and if I could be instrumental in uprooting him I would feel that I had rendered valuable service to my country. Speaking on the address the hon. gentleman referred to certain imperial legislation with reference to the merchant marine, the Admiralty Act and other laws, and he said: "Gentlemen on the other side want this legislation removed; but what will take the place of these laws?" Mr. Speaker, let me tell my hon. friend that their place will be taken by Canadian legislation, by Canadian laws enacted by Canadian public men and carried out by Canadian public officials for the protection of Canadians.

Mr. BENNETT: With the Canadian navy, I suppose.

Mr. LAPOINTE: My hon. friend, too, is interrupting me. I am sorry my time is drawing to a close, but my hon. friend made certain remarks in a speech in Montreal on Saturday and I should like to discuss them for a moment. He stated, as reported in the Montreal Standard:

Take iron and steel with the vast deposits in this country. When this present government came into power we bought only 37 per cent of our iron and steel. Now plants were closed down and men who should be employed were workless because we bought elsewhere. In agricultural implements Canadians who should be working making them here were working elsewhere and we were importing more and more of these implements. What should be done?

Well, Mr. Speaker, I think that the first thing that should be done should be to relate

the facts as they are. The Conservatives went out of power in 1921. The first Liberal budget came down in May 1922. The fiscal year, ending March 31st of that year, was the last year in which Conservative fiscal policies were enforced. My hon. friend ought to give statistics to these Conservative women in Montreal.

Mr. BENNETT: I will give them in this house.

Mr. CASGRAIN: He paid them compliments.

Mr. LAPOINTE: Take the iron and steel industry of Canada. In 1922 there were 77,077 employees and in 1926 103,510—in 1926, when all these plants were closed, according to my hon. friend.

Mr. BENNETT: I did not say that.

Mr. LAPOINTE: The wages in 1921 were $98,363,983 and in 1926, when conditions were so bad that our people had to go to the United States, they amounted to $137,640,065. My hon. friend referred also to the agricultural implement industry. In 1922—

Mr. SPEAKER: Time.

Mr. LAPOINTE: I am sorry; perhaps I shall have another opportunity to give the figures.

Mr. R. K. SMITH (Cumberland): This is the second time I have had the great privilege and honour in this house of following the eloquent hon. minister (Mr. Lapointe), who has just spoken. I listened with a great deal of pleasure to the first twenty minutes of his remarks—and they were the best part of his speech—in which he quoted extracts from speeches delivered by hon. members on this side of the house. I waited patiently and very attentively to see whether the minister would quote the speech on the budget by the Minister of Immigration (Mr. Forke) either of this year or last. That speech was not quoted and will not likely be quoted by any hon. member opposite because he refuses to speak on these budgets.

I would not undertake to follow in detail the speech of the Minister of Justice, but I might say this with respect to his criticisms of us on our attitude towards the so-called prosperity of this Dominion. I often wonder whether the government of the country, by threats and by attempted ridicule, seeks to gag the members of the opposition for their attacks on its administration of the Dominion's affairs and the country's general condition. I should like to turn back the pages of Hansard—I have never done so, but I am sure I should not be disappointed—and find out just what the attitude of hon. gentlemen opposite was towards the then government when they themselves were in opposition. I am sure it will be found that they were just as energetic and just as strong in their criticism of the Conservative party as we are critical of the government to-day.

Now, Mr. Speaker, in a very humble way I am going to endeavour to answer as best I can some of the statements made yesterday by the Minister of National Defence (Mr. Ralston), and in so doing I should like it to be understood that what I have to say will be said in the very best spirit and with every mark of friendliness and respect for the high position which he now holds, remembering the brilliant lawyer he is and the gallant soldier he was. The minister commenced his speech by a reference to the bounty on steel in Canada, and I would base my comments on the reference, which will be found in yesterday's Hansard. The minister said:

> It is suggested that the steel industry has gone to the demnition bow-wows because of the fact that there was a drawback put on the duty on agricultural implements. I want to remind my hon. friend—

Referring to the hon. member for Pictou (Mr. Cantley).

> —that the steel industry in Nova Scotia never got its real foundation until the legislation of 1897, which was introduced by the Hon. Mr. Fielding in this house, and I think he will also agree with me that from that time on the steel industry in Nova Scotia prospered. Mr. Fielding gave assistance to the industry first in 1897 for a period of five years. In 1899 this assistance was made continuous for another five years, but at a diminishing rate.

I want to say that Mr. Fielding did not give the first assistance to the steel industry in the province of Nova Scotia in 1897. The first assistance to the steel industry by way of bounty was given in 1883 by the then Conservative government, and these were further extended in 1894 and, I believe, in 1895. It is quite true that after the Liberal party came into power in 1896 there were more generous increases made in connection with these bounties in the budget of 1897, but that was only after a slashing cut had been made in the tariff on iron and steel—as one hon. member says, a cut of 50 per cent. These bounties were to take the place of that cut, as was explained at the time by the then Minister of Finance, but they were to last only for five years, starting at a certain level and gradually diminishing. The tariff was always sure and dependable, and the steel industry knew exactly where they stood, but under these bounties they could not be certain of their protection. It is true that the bounties were

renewed from time to time by the Liberal government, but, in 1911 the then Minister of Finance, Mr. Fielding, stated that the steel industry of this country had reached the point where bounties were no longer necessary, and that as they expired they would be abolished. I find that in the session of 1911 a question was asked by a member of the house in this connection, to which an answer was given by Mr. Fielding. This will be found at page 6614 of volume 4 of the debates of the House of Commons for the session of 1910-11, and is as follows:

I would like the Minister of Finance to make some plain statement with regard to the renewal of the bounties on iron and steel wire, rods, et cetera. I listened with a great deal of interest to his utterance this afternoon upon that question. Rumour has it, and one cannot turn a deaf ear altogether to rumour, that the minister has under consideration the renewal of these bounties. I would ask him, as he did not make himself very plain upon that subject this afternoon, and did not even mention that he had under consideration the renewal of these bounties, if he would make a plain statement as to whether he is considering the renewal of the bounties on iron and steel and if so when he proposes to make a statement to the house upon that subject.

To that question Mr. Fielding replied as follows:

The bounties on a number of articles of iron and steel expired on the 31st of December last past. The bounties on iron rods will expire on the 1st of July ensuing. There is no intention on the part of the government of renewing them.

Mr. Fielding also stated that the bonusing of the steel industry had not cost the Dominion treasury one dollar through these bounties; the extra duties which were collected more than offset the amount the government paid out in bounties, and I think he mentioned two places in particular, New Glasgow and Sydney where these duties were collected which substantiated this statement. I should like the house to know that these bounties were not inaugurated by the Liberal party at all, also that in 1911, as stated by Mr. Fielding, the policy of that party was to abolish the bounties. The steel industry in Nova Scotia received its start and commenced to grow under the Conservative policy. It is true that it expanded later on, as all other industries usually do in course of time, but the real credit for giving this industry a chance to start must be given to the Conservative party. If any hon. member of the house is particularly interested in the question of the bounties on steel, I would refer them to a question answered most fully in the senate debates of February 27, 1912, in which is included a complete table of the bounties granted, to whom the money was paid and how long they were continued.

The Minister of National Defence also made reference to the fact that the maritime provinces lost their best chance when they turned down the reciprocity pact of 1911, and I am speaking now with particular reference to coal, because other hon. members on this side of the house will deal with the fisheries and other matters. Coal is an important and basic industry in the province of Nova Scotia, as you all know, and is on the free list in the United States under the Fordney-McCumber tariff of 1922. As hon. members know, however, an exception is made with reference to countries which have tariffs against the United States as we have; the United States tariff will seek the tariff level of those countries. In this connection I would refer anyone interested to paragraph 1548 of the United States tariff, page 76. We have the same opportunity now to take advantage of reciprocal free trade in coal with the United States that we had in 1911 in other natural products if we wish to take it, and wipe out all duties. I ask the government, and I ask the Minister of National Defence, whether they or he would be in favour now of wiping out the duty on coal, thereby allowing American coal to enter Canada and our coal to enter the United States free of duty. That weapon is in the hands of the government; they could inaugurate such a policy immediately. I hope they will not do so, because it is our policy to secure an increase in duty for the industry, and I hope that some day we shall get it. It is within the power of the government to have free trade in coal between Canada and the United States, if they so desire. I ask the government, would they adopt such a policy to-day? They say we did not do so in the reciprocity election of 1911 in other natural products, but will they do so now with regard to coal? I ask the question in vain; there is no answer.

Mr. GUTHRIE: It is a very hard question for them to answer.

Mr. SMITH (Cumberland): The Minister of National Defence mentioned other things with respect to the steel industry, and what was to be done under the Duncan commission report. We were led to believe last year when the Prime Minister (Mr. Mackenzie King) made a statement in connection with the report of the Duncan commission that the report of that commission would be implemented in its entirety. That was the impression that was conveyed to all of us and to the country, and the phraseology adopted by the Prime Minister at that time certainly

led me to that conclusion. But I drew the inference from the speech of the Minister of National Defence yesterday—I do not wish to misquote him in the least, and if I am making a misstatement I want to be set right—that the government had not made any commitments with respect to implementing the Duncan commission report in that connection; that there has been no definite promise in that regard, and that no serious consideration will be given to the question of bounties on steel, as recommended, until certain conditions are met and adhered to. That, Mr. Speaker, is the impression I gained from the minister's speech and I hope it is wrong. That is certainly not the impression of the people of the maritime provinces, it was not the impression I gathered last session when this matter was under discussion. We expected that when Besco was unscrambled, and when some particular group had secured control of the affairs of the company so that it could be properly managed, something would be done for the steel industry by way of a bounty as set forth in the Duncan commission report.

The Postmaster General (Mr. Veniot) made a very straightforward statement in the city of St. John on the eighteenth of last January when he said that the matter of a bounty to the Sydney steel plant would be divulged in a few weeks in a manner that would make every maritimer proud. What are we to understand from these two statements, that of the Minister of National Defence, and that of the Postmaster General to which I have just referred? Are we to understand that nothing will be done for the steel industry in the province of Nova Scotia before certain conditions are met and adhered to as set out yesterday by the Minister of National Defence or are we to understand, as stated by the Postmaster General, that something will be done in the very near future that will make every maritime province citizen proud? These are the things we should like to know, and we have a right to the information. There are conflicting statements between two ministers of the crown on this important matter and it is scarcely fair to these gentlemen themselves, to say nothing of the people in the maritime provinces, not to have a decisive answer from the government in this connection. There never was a time in the province of Nova Scotia when the steel industry needed assistance more urgently than it does to-day, and resolutions in favour of such assistance are being passed by public bodies throughout the province. Boards of trade are taking the question up and forwarding resolutions to the government. Hon. gentlemen opposite blame us for weeping and wailing in connection with the question of maritime rights. Do they expect us simply to come here and have our pictures taken, or do they think we should give expression to the thoughts and the wishes of the people of Nova Scotia who sent us here? We are not going to be gagged by any talk of that character, which is nothing more or less than a cheap variety of balderdash. One of the resolutions referred to was passed by the Lunenburg board of trade, and you would be surprised to know, Mr. Speaker, that the president of that body, who signed the resolution calling upon the government for immediate action towards implementing the recommendations of the Duncan commission report, is none other than the president of the Liberal Association for the province of Nova Scotia. A copy of this resolution has been forwarded to the Prime Minister, the Premier of the province of Nova Scotia, the member for Antigonish-Guysborough (Mr. Duff), the member for Queens-Lunenburg (Mr. Ernst) and others. Another resolution to the same effect has been passed by the board of trade in the city of Halifax. While in the board of trade at one particular city there may be a preponderance of one political opinion, and in the board of trade of another locality a preponderance of political opinion of an opposite character, I should judge from the resolution forwarded from the town of Lunenburg at least that the majority of the members of the board of trade there are not of the same political faith as those who sit on this side of the house. The situation as regards the steel industry in the province of Nova Scotia is critical; it never was more critical, and the need of government assistance, as I have already said, is urgent. There is talk about prosperity in this country, but men who cannot get employment do not take much stock in that kind of talk.

The Minister of National Defence said yesterday something to the effect that the steel industry in the Dominion could not be so badly off because the Canada Steel Company appeared to be quite prosperous. Quite so. The Canada Steel Company enjoys a protection of between 30 and 35 per cent, in addition to being located at an excellent distributing point where it enjoys easy access to ready markets.

Mr. CANTLEY: And gets a bounty as well.

Mr. SMITH (Cumberland): Yes, a bounty as well, as my hon. friend points out. Down in our part of the country the industry is manufacturing primary steel, not the finished article, and enjoys a protection

of only about 9 per cent. The Canada Steel Company is so situated that it can take advantage of what is called the wave of prosperity, which only exists in spots here and there throughout the country. On the other hand in our part of the country we enjoy no such advantage, because the government has provided no facilities to help us. I think it is the right of those of us who are here as members to place these matters before the house. If we did not do so we would be shirking our duty, especially when boards of trade and others are pressing upon the government to give some relief to this industry, and our functions and duties as members of parliament, particularly those who happen to be on the opposition side of the house, would be, if the government had its way, simply to come into this chamber and sit and listen. In all sincerity I ask the Minister of National Defence (Mr. Ralston), for whom I have the greatest respect and admiration as a man, to see that something is undertaken by the government without further delay to grant to the steel industry in Nova Scotia what was recommended by the Duncan report and what the people of that province thought they were going to get as soon as the British Empire Steel Corporation was in a position where it could be properly controlled.

Another statement was made by the Minister of National Defence with respect to the inflated value of the stock of the British Empire Steel Corporation. It is quite true that the paper value was inflated; the company was over-capitalized, as was admitted by all; but still this was only an inflation on paper. The company never paid any dividends on the common stock and I do not think they paid any dividends on the second preferred stock, so that whatever inflation there was in that company was only a paper inflation. Surely that could not be a reason for refusing assistance. To say that because there was some kind of paper inflation in that company you cannot do anything because it will only be throwing another bone into the ring for somebody to fight for, or placing on the bargain counter something which will further embarrass the situation, does not seem to me to be sound reasoning, and now I think this company is in a position where, if it can get some government assistance, the assistance which was recommended and which the people of Nova Scotia expected it to receive, it will have a chance for its life. If not, I doubt whether it will survive.

In the east we feel somewhat perplexed and have rather gloomy apprehensions over the government's attitude towards industries in eastern Canada. If the government succeed, by the methods which they have been adopting in the last budget, in preserving any sort of co-ordination in this country, they will do something that has never before been successfully achieved in this country by similar tactics and policies. The only benefit that we in eastern Canada derive from this budget is a reduction in the sales tax, and I admit that we get a little benefit there. There is not in the budget one other thing that I know of by which we in the maritime provinces benefit. We are willing and anxious to abolish the sales tax, to do away with all these taxes that bear so heavily on the shoulders of our working people, and the abolition of the sales tax is the basis of the amendment which was moved by the hon. member for St. Lawrence-St. George (Mr. Cahan). Hon. members opposite made a great hue and cry against certain Conservative members who voted against the budget in this house a couple of years ago because it contained some good things and, in our opinion, some bad things. I wonder if they will vote to-day for our amendment, which certainly contains a good thing for the working class in this Dominion. It seems to me that it would be a splendid thing to go to the people and say: We have relieved you of a great burden by abolishing the sales tax. I wonder if those same hon. members who were so critical of our attitude then will be with us to-day and will vote for an amendment which we propose. Wait and see. If at least two Liberal members from Nova Scotia are true to form, I think we can get a couple of votes for our amendment.

The question of the coal industry has been so thoroughly gone into on many occasions by different members on this side of the house that it would be a waste of time on my part to take up the matter in detail this afternoon.

Mr. ILSLEY: What is the hon. member's remedy for the situation in respect to the coal industry in Nova Scotia?

Mr. SMITH (Cumberland): If my hon. friend will look at the speech delivered by me on the address, he will find that very point elaborated.

Mr. ILSLEY: Do not elaborate it. Just state it.

Mr. SMITH (Cumberland): I will state it. In the first place my hon. friend has the impression that it is tariff protection alone that we are after in order to cure this situation

That is not the case. The tariff is only one factor, although in my opinion it is the most important factor. We must have a higher tariff on coal.

Mr. ILSLEY: How much?

Mr. SMITH (Cumberland): Enough to shut out United States coal. It may be $1.50 or $1 a ton. I remember that my hon. friend last year interjected the remark that a tariff of $6 a ton would be required—that information, I believe, was supplied by the fuel board—to shut out United States coal from Canada; but that did not apply particularly to the coal of eastern Canada; it had especial reference to coal in other portions of the Dominion. Beside the question of an increase in the duty there is the question of lower and still lower freight rates, subventions for shipments west of Montreal and the establishment and government assistance of coking plants that will be compelled to use all Canadian coal. It seems to me that is the basis of a national fuel policy in this Dominion. I was glad indeed to hear the remarks of the hon. member for Inverness (Mr. Macdougall) the other night in answer to the remarks of the Minister of Railways (Mr. Dunning) who said in effect that he did not know just what a national fuel policy was. It cannot be explained in any better way than was done by the hon. member for Inverness a few days ago.

Mr. ILSLEY: Did my hon. friend ever make any computation as to how much the reduction in freight rates and the subventions should be in order to effect what he desires?

Mr. SMITH (Cumberland): I have not made an accurate computation, and the question of the computation is, in my opinion, of secondary importance. The question of shutting out United States coal that comes in and destroys our Canadian market, that puts our Canadian miners out of work that disrupts mining conditions, especially in a province like Nova Scotia, is the question of primary importance. United States coal can be shut out and we should proceed to do that. We can develop a coal market in this Dominion and mine and sell our own coal here, instead of sending over $100,000,000 to the United States every year to buy foreign coal.

Of course, I know that some will say that the coal industry in Nova Scotia is not economically sound. The Minister of Immigration is reported to have so stated in the city of Toronto a few years ago. The simple fact is that if it is said there are mines there which are not economically sound to operate you can say that of every industry in Canada that enjoys the least bit of protection. You could have said that about the great steel industry in the United States when it began. You could have said that the American policy relating to steel was not economically sound in shutting out all foreigners from their market in order to develop the steel industry in that country. You can say that of every industry that enjoys the least bit of protection, but in the long run the industry will develop, with protection just like the steel industry in the United States has developed, to a point where it is not only economically sound, but where it can outdo the world both in price, production, and the marketing of its products. If we develop in Canada a national fuel policy, can any reasonable person doubt but that there will be a decrease in the quantity of coal we import and a corresponding reduction in the price of the product? Last year we imported nearly twenty million tons of coal; we use in Canada a little over thirty million tons. The coal industry in this Dominion represents in money invested about $150,000,000. Are we going to allow this industry, which has been stagnating for years, and which is of a spasmodic character as to its operation to die simply because it is claimed by some theorists to be economically unsound? I think not. I think the lesson of the United States steel industry is as pertinent as anything could be. Give our industry a chance to get on its feet; give it a market for a while to see what it can do. As to its being economically sound or unsound, let us first give it a trial, even if it takes $6 a ton—and it certainly would not take anything like that, but if it needs $1.50 a ton, as was suggested by the hon. member for Pictou, the industry should receive that assistance; and then with lower and still lower freight rates, with subventions west of Montreal, with coking plants established which will be compelled to use one hundred per cent Canadian coal, I think we can hope to revive this industry.

It will be said, what about the British Columbia coal fields? That has been mentioned in this house by the hon. member for Comox-Alberni (Mr. Neill). The British Columbia coal fields sell about half a million tons of coal a year to a district in the United States which is very far removed from the coal fields of that country, and no matter what the tariff was, British Columbia could hardly lose that market, owing to its distance from the United States coal mines and the long rail haul that would be necessary to enable the consumers in that section of the country to the south to get American coal.

Laying that aside for a moment, I make this suggestion—I have not perhaps given it the thought I should have done before presenting it to the house, and I therefore leave it just as a suggestion. In Australia, one of our sister dominions, they have a policy under the Paterson scheme, of bonusing Australian butter to the extent of six cents a pound. I maintain that in this country, if it is necessary to the development of a national coal and fuel policy, and also to the protection of the mines in every portion of the Dominion, including British Columbia, we could well afford to pay the difference between the present duty and what the duty might be when it is fixed at a point high enough to keep out American coal. We must take drastic steps to stop the importation of American coal into this country. The increased importations are alarming; they are mounting higher and higher every year.

Mr. ILSLEY: Is it not true that the coal mines of Nova Scotia produced about one million more tons in 1927 than in 1926?

Mr. SMITH (Cumberland): It is quite true that there has been an increase in the coal mine production of Nova Scotia. That is due in a small part to the gradual regaining of the Montreal market, which was lost during the war. There will probably continue to be a slight increase in the production of coal mined in the province of Nova Scotia because we may regain even a little more of that market, but I say that we should have all of that market, and we have only about half of it to-day. Instead of producing between six and seven million tons a year in Nova Scotia, we should be producing twelve million tons.

The Minister of Justice when he was speaking said, in substance, that the policy of the government was to lower the tariff without injuring any legitimate industry in this country. For his benefit I should like to read a communication which is in direct contradiction to the remarks of the hon. minister. It is a letter I received from the Oxford Woollen Mills, of the town of Oxford, Nova Scotia. It reads:

> We were stunned to read the portion of the Robb budget dealing with the textile industry.

Mr. SPEAKER: Time.

Mr. MAXIME RAYMOND (Beauharnois) (Translation): Mr. Speaker, the hon. Minister of Finance (Mr. Robb) concluded his speech on the budget by advising economy. I think we all agree in admitting that he himself gave the example by his brief speech. In less than thirty-five minutes, he gave a clear and precise statement of Canada's financial and economic conditions; he showed with figures and facts to back it, that our finances were gradually improving and that, generally speaking, the country's affairs were prosperous. His statement, clear as to what relates to the past, optimistic as to the future, is of a nature to rejoice and encourage us.

Even though his speech was brief, it lacked neither value nor interest on that account—he however furnished matter for a long debate, and really I would have hesitated to rise at this phase of the debate, if it were not for the fact that the discussion on the budget proposals affords one of the few opportunities to members who sit in the rear of the ministerial benches to publicly express their views and put forth the suggestions which they believe to be in the general interest.

The study of the budget proposals shows that, under the Liberal administration, which followed those of the hons. Borden and Meighen, the period of deficits gave way to one of surpluses, our credit has been re-established, and from the economic viewpoint, Canada occupies one of the most enviable places among the nations of the world. In opposition to this state of affairs, those who aspire to replace the present administration have had but criticisms to offer and nothing to suggest. It is moreover the candid admission of the hon. member for Fort William (Mr. Manion). Most of these critics have already been answered and I shall content myself with stating that in all public or private administration, the important factor is that revenues should exceed expenditures. That is how we distinguish a good administration from a bad one, and great credit must be given to the present administration for having succeeded in balancing the budget and keeping it balanced, while decreasing our debt and the rates of taxation.

The hon. member for St. Lawrence-St. George (Mr. Cahan) moved an amendment in which regrets alone are expressed. One cannot carry on a government with these, and I confess that simply voting to pass regrets does not move me much. He regrets that the sales tax was not entirely wiped out. Yet, the hon. member is sufficiently acquainted with business methods to know that this total elimination would have brought on confusion in trade and bankruptcy among a great number of business concerns. Therefore, it is not to be thought of or desirable, and the Minister of Finance was quite wise in gradually decreasing it. He also regrets that the government does not find more work for our people. Is he not the one who taunted

the government for having reduced the tariff on automobiles, reductions which increased production and gave more work to our people. Finally, he regrets the unemployment, the emigration of our people and the absence of immigration. As regards unemployment, reports are contradictory; however, I note that it exists among our neighbours, the United States, a country that the opposition often take a delight to cite as an example of prosperity. I read in the Boston Post of February 8 last, that according to the incorporated Labour Bureau they, at present, estimate the number of unemployed in the United States at 4,000,000. As to emigration, it is established that it is gradually dwindling down, and that a large number of those who had left are returning.

However, what may be the case, it is important that we should know the real causes, so that we may be able to apply the best remedy. I shall not discuss the universal remedy of the Conservatives, which is protection; it is to them what Pain Killer was long ago in our rural districts, a cure-all.

The emigration of our people to the United States since 1919, is the ransom of war. Think over it, and you will find that war, the badly managed and exaggerated participation in it, is the principal and real cause of the exodus of our people to the United States. It took from our rural districts the young men to send them either to the battlefields or to cities, in the munition works. After demobilization, a great number who had borne arms, having acquired a liking for travelling and adventure, refused to return to the land. While those who had gone to work in the cities, in the munition shops, found themselves without work. They had acquired a taste for city life, large salaries, luxury, but they had lost the one for the soil, and neither would they return to the farm. Owing to our exaggerated participation, wasteful and unforeseeing administration during that period, when the government carried on simply with borrowed capital instead of taxing war profiteers, trade and business were depressed; we were left with an enormous public debt, our currency had depreciated; while the United States which had entered the conflict a long time after us and in proportion to their means, found themselves in a far better economic situation. Their industries had not been disturbed and their currency was at par. It was then that we witnessed these young men, who had left the land, take the roads leading to the neighbouring republic.

Add to this the vilifying discouraging campaign, and forecasts of ruin by the Conservatives, and you will find therein the principal causes of the emigration of our people to the United States. Our friends in the opposition are rather late in giving the alarm. It is a war debt that we are paying off; it is a sequel to their acts. Note that between 1900 and 1914, United States citizens were immigrating to Canada. Farmers from Kansas, Dakota and Minnesota, had sold their farms at good prices to come to Western Canada and purchase other farms on better terms. A good proportion of the immigration during that period came from the United States.

The best means to stop emigration, and relieve unemployment if it exists, would be to bring the people back to the land. How are we to do it? By a campaign of education: Point out the beauties of rural life; show the advantages of owning property to counterbalance the desire for pleasures which the city offers. Through the efficient help of our public authorities, in establishing farm credits, allowing farmers long term loans to help them to establish themselves on farms, short term loans to purchase live stock and necessary implements, and current loans for the purchase of seeds and fertilizers. Our Rural Credit is a great step in that respect; with experience, it can possibly be improved and provide for all cases of need. Let the government grant, to city people who have previously lived in the country, the same advantages and even more than to strangers; let the government offer to transport free the families of people wishing to settle in the west or in more remote parts of their province, where, with the help of long term loans, they may settle decently and cultivate those lands. Our generosity, I think, should first be extended to our own people.

By teaching the art of agriculture in a way that it can be understood by all, and which includes new and more remunerative methods of farming. Take for instance Denmark, a small country forty five times smaller than the province of Quebec, but with the same population, where they specialize in dairy farming, they have succeeded in increasing the butter production, since 1891, at the rate of 249 per cent, while the number of cows have increased only 29 per cent. Let us give our farmers every possible chance of success.

Let us now deal with the question of immigration, a question both economic and social which should be borne in mind by all those who take an interest in the country's future.

For those who see in the rapid increase of the population, an opportunity to increase

their fortune, the selection of immigrants carries no weight; but to those whose aim is higher and better, who foresee the more populated Canada of to-morrow, co-operating in the common work of civilization, they find matter to ponder over and they advise caution. Hence, two schools: one would open wide the gates to immigrants, the other—and I congratulate the government of belonging to the latter—would restrict immigration.

The vastness and wealth of our country are not questioned, yet our population is not in proportion with our natural resources. How are we to increase it? By natural increase? It would be the best means which could be advocated, it is the normal development of a country; but it is found too slow a method. By immigration? That is another way, but what kind of immigration? To have no restriction would have the effect to draw the scum of other countries, the undesirable, the habitual unemployed, who would come and overcrowd our cities, and who always end by crowding the hospials or jails, and become a charge to society. Moreover, if national unity be considered, the peopling of Canada through the means of an intense immigration, is not desirable. A certain proportion must be kept between natural increase and increase by immigration; time must be given to assimilate the new element.

At six o'clock the house took recess.

After Recess

The house resumed at eight o'clock.

Mr. RAYMOND (Beauharnois) (Translation): Mr. Speaker, at six o'clock, I was discussing immigration as a means of increasing our population. What population do we wish to increase? Urban or rural population? Our immigration policy should be the one which the interests of the country demands. Now, Canada's interest requires that our immigration policy should develop agriculture.

Is it a question of supplying labour for industry? No. Modern machinery tends to do away more and more with manual labour, yet greatly increasing the output. It is the soil which requires workers. Let our efforts tend in that direction. Let us bear in mind that agriculture is at the basis of the economic life of a country. It is the soil which feeds us. Agricultural nations are, for their existence, independent of men and events, while industrial nations are entirely dependent on both. For instance, look at England, a country seventy-five per cent industrial, with its unemployment crisis. Moreover, prosperity of trade depends upon the purchasing power of farmers. So much said for the economic side of the question.

Turning now to the social and national viewpoint, we still have an interest in drawing to our shores a rural immigration, which is more assimilable and more stable. Those who come to cultivate the land remain on it permanently, it enchains them. The same cannot be said of the workman who roams from one country to another. The foreigner, in the city, is always an unsettled workman. Things are very different with the farmer who builds a home, invests his capital and founds a family. "Farmers", said Bonald, "are rooted to the soil; the others are but placed there."

Since the interests of the country demand a farming immigration, let us seek it where it is to be found. Many would prefer bringing over British subjects. Quite right. But subject to their being of the class of immigrants which we need. I am in no way opposed to British immigration, but let us be logical. When you look for farmers, you do not especially seek them from the most industrialized nation, the one that is the least given to farming. England, far from being able to send over farmers, needs them herself. She has not enough. It is not race that should guide us in such matters, but the personal worth of the immigrants. France, since the war, has become a country for immigrants so as to fill up the voids left and therefore has little to offer in that respect; but we could find excellent farmers in Belgium, Slovakia, an essentially farming country, in Norway whose people have already brought wealth to Minnesota and Dakota. What we need are genuine farmers and not camouflaged ones, and I would suggest that each immigrant entering Canada, should have an identification card, showing his trade, professional or farming occupation, so to keep track of him.

Let our immigration policy be essentially Canadian, founded only on the needs and interests of Canada, and not based on that of other countries. Let us not take the risk of our country becoming the dumping grounds of the globe by opening too wide our doors; let this policy be one of welcome, but at the same time strict, selective of individuals but not of races. To give our country strength and prosperity, we must have industrious, healthy and orderly people, citizens desirous of making Canada their only country, and who, blending with the mass, will help us to make a great, united and free country both internally and externally, composed of various races who, without denying their origin, will give us the advantage of their genius and of their best traditions, so as to form "the Canadian nation" whose English, French,

Scotch, Irish and all other names will but be their christian name, "Canadian" will be their family one.

Mr. Speaker, I now wish to draw the attention of the hon. Minister of Defence (Mr. Ralston), to the proposed increase in the estimates of his department. That is a subject which does not seem to trouble the members of the opposition. I am not aware that we are threatened with war. Quite the contrary, nations are talking of peace, disarmament and are even signing treaties to that purpose. Our geographical situation is an additional guarantee of our security. Why then increase the expenditures of the Department of Defence? Economy is advocated. Quite so. Let us first apply it to the expenditures which are not productive. Let us bear in mind that we have numerous needs, and that we must see to those that are most urgent.

We have voted large sums to develop the west, to help the maritime provinces and to accommodate Ontario. The province of Quebec, I think, has been most reasonable in her requests, notwithstanding the useful, if not urgent work, which the development of her territory necessitates. For instance, the construction of a railway in the Gaspé peninsula is strongly urged, it is needed to open up that part of the country which is rich in farming lands, forests, mines, fisheries and water-falls. It would be unfair to put off the carrying out of these works for unnecessary expenditures.

I am not prejudging the question. When the time comes to discuss in detail the estimates, the Minister of Defence will, I trust, furnish us with satisfactory explanations. For the present I am just calling attention.

The hon. member for East Lambton (Mr. Fansher), by a subamendment, has protested against the cutting down of the income tax. Although I am in favour of the income tax, I believe that gradually, as our revenues and finances will permit, there must also be tax reduction on that score.

However, if the Minister of Finance is willing to relieve every one a little from the burden of taxation, it must have been noticed that he was not disposed to acquiesce to every claim.

Some time ago, a delegation headed by Sir Herbert Holt, president of the Montreal Light, Heat and Power Co., came before the Minister of Finance to request an exemption from the federal tax, in favour of this company, which sells electricity, gas and a number of other things. Many, among those who are not in touch with the affairs of the company, must have been favourably impressed to see Sir Herbert Holt, great financier, director of at least one hundred and thirty five companies, —we are informed by the hon. member for Winnipeg North Centre (Mr. Woodsworth)— leaving his business to come and plead, not in his own behalf or that of the company of which he is the principal shareholder, but in favour of the poor consumer of the city of Montreal, who may be a victim of an injustice. He even pledged himself to have the consumer benefit from the exemption of this tax. What a laudable act! In his annual address, at the general meeting of the shareholders of the company, on the first February last, he also requested the federal members to use their influence to have this injustice cease.

The hon. Minister of Finance, after giving the matter due consideration, did not think proper to agree to their request and the day following the budget, Mr. Norris, vice-president of the company, proclaimed again that it was an injustice and appealed to all the citizens to protest. Let us examine, with your permission, the grievances invoked, and let us judge if there is an injustice done and if so, by whom was it committed.

The injustice would appear to come from the fact that the Ontario Hydro-Electric Company, which sells electricity in Ontario, pays no income tax. That is a fact, it pays no taxes, for the very good reason that it makes no profit. If the Montreal, Light and Power Company will do likewise and sell its electricity at cost price, it will not pay any tax. That is my first point!

There are in Ontario other private companies, for instance, the Ottawa Electric Co., which sell electricity and pay an income tax. Why should the Montreal Light, Heat and Power Co., not pay its income tax then, and where is the injustice? That is my second point!

The Montreal Light, Heat and Power Co., does not only sell electricity to the citizens of Montreal, but it also sells some to the United States, through the intermediary of the Cedar Rapids Co., of which it holds the capital stock, and it thus realizes profits. Why should it not pay taxes on this revenue? And where is the injustice? That is my third point!

The Montreal Light, Heat and Power Co., does not only sell electricity, but it also sells gas, and if I am not mistaken, it sells to the poor Montreal consumer, four or five times more gas than electricity. The Hydro-Electric does not sell gas. All companies that sell gas in Ontario are privately owned and pay income tax. Why should the Montreal, Light,

Heat and Power Co., not pay the income tax then? And where is the injustice? That is my fourth point!

The Montreal Light, Heat and Power Co. does not only sell electricity and gas, but it also carries on other business. It sells coal, stoves, lamps, toasters and other goods. It has even a number of stores in Montreal and elsewhere. All commercial houses in similar business pay income tax. Why should the Montreal Light, Heat and Power Co. not pay also her income tax and where is the injustice? That is my fifth point!

Not only that: Look up its financial statement for 1927, you will find that it has in its assets nearly $15,000,000 in investments, on which it draws revenues. Why should the Montreal Light, Heat and Power Co. not pay income tax on those revenues like all others, and where is the injustice? That is my sixth point!

If we were to exempt the Montreal Light, Heat and Power Co. from the income tax, to be fair, we would have to exempt the private owned companies of Ontario and elsewhere which sell electricity; to exempt all companies which sell gas; to exempt all merchants who sell coal, stoves, lamps and other articles that the Montreal Light, Heat and Power Co. sell —why not then all merchants—to exempt all those whose revenues are the outcome of investments. In other words, we would have to wipe out the income tax.

The president and vice-president mentioned a very high figure, representing the income tax paid by the company, and the impression gathered from this statement, was that the tax was collected on the sole profit realized on the sale of electricity in the city of Montreal, which is not so. Deduct all the profits which it realizes on the sale of electricity to the United States, on the sale of gas, on the business of the various articles which it sells, on its investments for an amount of over $15,000,000, and you will see that the amount of income tax which it really pays, in regard to the electricity which it sells to the Montreal consumer, is not very high.

I do not doubt the sincerity of those who accompanied Sir Herbert Holt when they interviewed the Minister of Finance, to request the exemption from the income tax, but when we are aware of the manipulation carried on by this company for the last twenty-five years: increased capital, splitting of shares, change in name and juggling with figures, we have a right to question the motives of Sir Herbert Holt and his company and not put it down to philanthrophy.

If the consumer pays too high a price for electricity in the city of Montreal, and in fact he does, it is not on account of the federal tax paid by the company, but to the exorbitant profits made at the consumer's expense; and when, under the plea that an Ontario company, the Hydro Electric Company, is not taxed, for among others, the good reason that it makes no profits, it asks for an exemption of taxes on the profits realized, not only on the electricity sold to the citizens of Montreal, but on that sold to the United States, on the sale of gas and other articles in the various branches of commerce, also on its investments, it simply wants to ward off the public's suspicions who rightly claim lower rates for electricity.

Are you aware of what profits were distributed among its shareholders within the last twenty-five years? It is the direct successor of the Royal Electric Co., which was doing business ,in 1901, with a capital of $3,000,000; the latter's stock with the help of a good deal of "water" was diluted to the amount of $63,000,000. Through transactions carried on by Sir Herbert Holt, and share splittings, any person holding in 1901, a hnudred shares in the Royal Electric Co., for which he is supposed to have paid $10,000, now without having disbursed an additional cent, is holder of 2,250 ordinary shares, which on the stock exchange are quoted at $90 per share, and are worth $202,500, without mentioning a bonus of 750 preferred shares distributed in 1926, and which the company repurchased at $50 per share, that is $37,500, beside all the dividends paid to that shareholder since 1901, at a rate varying between 8 per cent and 60 per cent, on his initial investment. The profits of that company are so large, that it is obliged to conceal them under the guise of contingent funds: $500,000, insurance funds; $1,000,000, depreciation funds, indefinite amounts; investments and call loans about $15,000,000. Its current assets for 1927, exceed by $6,000,000 that of the year 1926.

If you now look up the financial statements of the company, you will note that each year, the president, Sir Herbert Holt, never forgets to state in his yearly address, "that the practice of the company is to share the profits with its consumers and to sell its products at a minimum rate, and he always hopes that, if business continues good, the consumers will, in the near future, be given lower rates." As you can readily see, the sharing is not with the consumer, but to his detriment. I think that the consumer has a better guarantee of getting his share of the tax paid on the sale of electricity in Montreal by the company, when the money is safely in the hands of the government.

That is how the company deals with the citizens of Montreal in regard to profits. Now, let us examine rates and see how it expresses its sympathy to the Montreal citizens.

Its sympathy consists in selling to the citizens of Montreal, electricity at the rate of 3½ cents per k.w.h.; while it sells it to the citizens of Westmount, at the rate of 2 cents per k.w.h., that is to say 75 per cent dearer to the Montreal people. The Ottawa Electric Co. of Ontario, which pays the income tax, sells its electricity to the consumer at the average rate of 1¼ cent.

Its sympathy for the Montreal people further consists in offering electricity, for industrial purposes, at the rate of $15 per h.p., to the Ontario Hydro Electric Co., which resells it at $22, while the former sells the same electricity to Montreal people at the rate of $35 per h.p.

Its sympathy also consists in exporting to the United States, through the intermediary of the Cedar Rapids Co., of which it is the sole stockholder, electricity at a lower rate, that is $12 per h.p.

Its sympathy is still further expressed by forcing the consumer to lend it money, which amounts, at present, to $800,000. Are you aware that a Montreal citizen can neither purchase gas nor electricity without first depositing $5 or $10.

That is its sympathy for the poor consumer. This deposit remains there until the discontinuation of the service, that is to say until his death. And what interest is he paid? Three per cent not yearly, but only when the deposit is withdrawn. Instead of borrowing money at the rate of 5 per cent, it forces the consumer to lend it the money at 3 per cent, and if you figure out what $800,000 represents in interest, you may judge what amount it holds without interest at the expense of the poor consumer.

I think you will admit that Sir Herbert Holt and his company, the Montreal Light, Heat and Power, are not entitled to pass as benefactors to the consumer, and you will not be astonished that the Minister of Finance did not seriously consider their request. When the government collect in the way of taxes, a small part of the profits which the company makes, they remedy, in a slight measure, the injustice that the company does every day to the Montreal consumer.

Mr. DAVID SPENCE (Parkdale): Mr. Speaker, I have listened to a great many speeches in this house and I must confess that many of them have been of a high standard and a constructive nature. I am sorry that my lack of ability will not enable me to preserve that high standard, I not having had much experience in speech making. I congratulate the hon. member who has just sat down (Mr. Raymond). He will be happy now —I wish I were in his shoes.

[Mr. Raymond.]

I congratulate also the hon Minister of Justice (Mr. Lapointe). We all recognize his wonderful ability and appreciate his power in this house. I love indeed his sense of humour, and maybe his sarcasm at times. However, notwithstanding his contention that the government has not ruined Canadian industry, may I say that it has. And when you ruin industry you ruin the business world, of which I have some knowledge. Why, the government has tried to control operations both domestic and foreign, by land and by sea. A few years ago you will remember, sir, the government attempted to put a fleet of boats on the ocean to compete with the merchant marine of the world, and so cut down freight rates for cattle and wheat, in order to make our honourable farmers believe it was doing something for them. Well, sir, you might as well try to fight a battleship with a canoe as put into commission the class of boats the government intended to subsidize in its attempt to cut down ocean freight rates, and had it not been for the members on this side of the house putting up a strong and vigorous objection, the country to-day would be losing thousands of dollars in that hopeless enterprise. Undoubtedly every time you attempt to change the old channels through which business has been done successfully for many years, you are interfering with business and upsetting the business world.

Now, Mr. Speaker, hon. members on the government side argue that we of the official opposition are the cause of the people leaving Canada. May I say, sir, there is nothing to it. Canadians who to-day are on the American side have every confidence in the Conservative party. During the election of 1925 in my own riding I read many letters from parents of young boys and young girls who were working in the States praying me to do everything possible to defeat the King administration. I said a moment ago that the Canadian people have demonstrated their faith in the Conservative party. As proof of my statement I point to the fact that during the month of the general election in 1925 and for the eleven months following more of our people returned to the Dominion than in any similar period since, and of those more than 40 per cent came in the eleven months after the election, from November to the September following. That shows whether or not the people have absolute faith in the Conservative party. So why should we not stand up here and tell the truth to the people? Why should the people be humbugged and camouflaged?

I do not intend to worry the house with figures or statistics. Figures sometimes lie, and statistics are not always correct. My

intention is to make some observations regarding the present administration, observations which may be considered in the nature of criticism. First, I wish to congratulate the government on having in the party a minister so capable of manipulating the budget that it is said to be supported by all classes of people. But the present budget, just like its predecessors, is gotten up for the express purpose of keeping the party in power, regardless of conditions throughout the Dominion. What we need to-day is a business administration, instead of a government that seizes every opportunity to evade responsibility. Since 1921 we have been getting government by special commissions and special committees too numerous to mention, at considerable cost to the country. Of course the administration has always seen to it that a majority of its supporters were placed on each special commission and special committee so that they would report as directed, that majority being in sympathy with the government's proposals. It is simply humbugging parliament and the Canadian people. Barnum once said that you might fool some of the people all the time and all the people some of the time, but you could not fool all the people all the time. Well, that is the only thing this government has succeeded in doing. Instead of wasting so much time concocting and manipulating schemes in connection with the budget purely for the purpose of keeping themselves in power, why do the government not submit a program of constructive ideas, some satisfactory agenda for the consideration of parliament? This may be considered radical coming from the Tory side, but let me say right here that I am no politician; my interest is Canada first. I do not believe in playing politics too much, and there is altogether too much politics played, particularly on the other side of the house. What we need is something that would enable us to make the best of our opportunities and not to throw away all our chances of promoting the prosperity of this country. I am confident that if the government took the members of this parliament into their confidence and asked for suggestions and advice as to the best means of promoting the welfare of Canada, the members on this side of the house would offer such advice in all sincerity, and the government would benefit more by that advice than they do from that of ministers in charge of departments. If the government are not directly asked for information they will scarcely volunteer it. That is the way politics has been played in the past at any rate.

The budget presented by the government this year seems to have acted as an opiate on hon. members on the other side of the house; most of them have been lulled to sleep and have slept until yesterday and to-day. The first evidence of any real pep that we have so far seen on the other side was injected into the debate to-day by the Minister of Justice. Are hon. members opposite afraid to offer suggestions or make demands of their party leaders? Hon. gentlemen on the other side apparently are satisfied simply because the Minister of Finance (Mr. Robb) has made certain statements which are supported by the Minister of Justice, the ablest representative of the government. I am not at all decrying the ability of the Minister of Finance, but the budget contains no suggestions that will make for the development of the country. It seems to be altogether of a destructive character.

I am going to offer some suggestions by way of a new system of obtaining information and of ensuring our rights as representatives of the people, and I hope the government will consider these suggestions. Why should not members of this house have an opportunity this year to express their views regarding the development of the St. Lawrence waterway? Why, and what is the reason? Where is the hidden hand that has prevented us from discussing that question? I have an idea myself as to what we may expect, if not in the near future, certainly at some time, and hon. members may well wonder what will happen. Again, what is to prevent the government giving some assistance in the building of good roads through a contribution each year? And for purposes of exploring and developing the natural resources of this country a stated amount should be included in the estimates annually. That is the sort of system which would be followed in the conduct of business anywhere, and some business tactics should be adopted in government as well as in business administration. We should have also some sound system of immigration and colonization whereby we might retain our own Canadians and provide them with employment at home. If the government would only seek information and advice on this side of the house they would benefit considerably more than by indulging in criticism of the opposition. We have a serious problem to face in our endeavour to keep our Canadians in Canada. I say to hon. gentlemen opposite, "You are the government and you should do something. You are in power; we are not." If I were on the other side I would make the same criticism for the con-

sideration of our own party. These are all matters that call for earnest consideration.

This government has tinkered with tariffs and meddled with the business world to such an extent that people in business have no pleasure being there; they would sooner get out. The government have made treaties with foreign countries altogether to the detriment of this Dominion. Our negotiators have not been capable in holding their own. If I were on a committee negotiating a treaty with any country and I did not get the best of it, or at least a square deal, there would be no treaty. But in nearly every case our treaties have been to the disadvantage of this country. A treaty is a business proposition and we have a right to get the best deal possible. But we are not building up our trade under the treaties negotiated by this government.

Let me discuss for a moment or two the French treaty—and I will touch only those phases of it of which I know something. That treaty came into effect a few years ago; I will not bother the house with figures because they sometimes lie and I might make a mistake. Well, what have we got from it? The French treaty, generally speaking, has been a bad thing for Canada. I am connected with the fruit business and am therefore in a position to make the statement that this particular industry has been considerably injured by the treaty. Take our cherry business, for example. Since the French treaty came into force the great wholesale extract manufacturers and retail ice cream people have been bringing cherries from Italy and France by the carload and in casks at a cheaper rate than our people can grow this fruit. Many years ago we had a splendid cherry business in Canada, and I know what I am talking about because I have been in the industry for thirty-seven or thirty-eight years. We had a very good market for cherries but since the treaty has been in operation it has practically ruined the trade and the growers can scarcely meet cost of production. A few years ago there were magnificent orchards of Montmorency cherries; to-day they are being cut down with the axe. This is one industry that has been destroyed by the French treaty.

Then there is the silverskin onion business. Silverskin onions used to be a high class commodity for pickling purposes, used extensively by such people as Heinz; but under the French treaty these onions ready dressed for packing in bottles have been coming into the country from Holland at the rate of four cents per pound, while no grower in Canada can produce them at that figure; it takes at least five or five and a half cents a pound to grow this vegetable here. This is the effect which the French treaty has had upon the fruit and vegetable growers of Canada. Is it not clear, Mr. Speaker, that this is too young a country to be making treaties with the older lands? In the last ten years we have developed the silverskin onion business and the requirements of the industry are considerable. It needs great care and attention to dry them if the right colour is to be obtained, and there must be suitable buildings in case of wet weather outside. Obviously, therefore, a great deal of bother is involved, so that the man producing them deserves the best consideration that can be shown him. But owing to the French treaty the business has gone to pieces.

The Australian treaty, too, has been very injurious to this country; we all know what the effect has been on our dairy industry. This industry has undoubtedly been seriously discouraged since the treaty has been in force and eventually it will be wiped out unless something is done and done in the very near future. The sheep industry also is practically ruined.

Some hon. MEMBERS: Oh, oh.

Mr. SPENCE: Hon. gentlemen laugh, but if they know nothing about business conditions in Canada I can assure them that there are those who do know. Due to the Australian treaty and the consequent lack of protection, the woollen business of Canada has been badly affected. Let me tell hon. gentlemen opposite that even the party who preceded them, the Conservative party, never gave the producers of sheep and sheep products the consideration they should have received; they should have had protection on raw wool years ago. But under the Australian treaty the business is suffering so seriously that it will not be long now before the only thing we shall have to eat will be Australian mutton. We shall not be able to produce a lamb chop in Canada; that will be a luxury reserved entirely for the millionaire.

In 1922 the present government started tinkering with our tariff. They first lowered the duty on textiles and then they reduced it on farm implements, in order to please certain interests and to obtain their support in this house. They then allowed raw material to come in free when used in the manufacture of farm implements, this being done also to please certain interests such as the Massey-Harris people. We all know how famous this concern is and how much money it has cost this country. That was the beginning of the interference with the tariff. At the same time, by lowering the duty on raw materials entering into the manufacture of farm imple-

ments we ruined many factories which made parts for such people as the Massey-Harris Company. We hurt the workers in Canada and no one received any benefit, not even the farmers; those members of this house who are farmers and my hon. friends to my left will agree that there was no reduction in the price of farm implements.

Then this government decided to reduce the duty on automobiles, and they compromised again; you all know what they did, but I will just repeat it. They lowered the duty on automobiles to please their friends in this house, then lowered the duty on certain parts entering Canada and reduced the excise tax, which still held their friends who made automobiles. As you see, they were trying to keep in power all the time regardless of what happened to this country, and all the time they were losing revenue. My own idea is that the simplest, sanest and easiest way to keep this country running is by a customs tariff, and I would eliminate half the other taxes if I had anything to do with it. By tinkering with the automobile business we caused many more cars to be imported into Canada, which naturally reduced employment as well. There again the government followed the same system of knocking down and building up, in the meantime losing revenue.

Then the government lowered the duty on certain lines of cotton goods from 37½ per cent to 30 per cent, afterwards allowing certain raw materials to come in free, which built the protection up to 40 per cent again. I received that information from a gentleman who is in the business, so I know I am making a true statement. The desire of the government, of course, was to please those friends who are in the cotton business by allowing the raw material to come in free and those friends are about the only ones who benefited; no one else could benefit by manipulations of that kind. Then the governnment decided to allow machinery for woollen mills to enter Canada free, when two-thirds of the machinery already in this country is idle. From still another standpoint that is absolutely unfair, because many manufacturers who paid duty on the machinery they brought into Canada will be forced to write off hundreds of thousands of dollars from their capital accounts. That is an absolute injustice to the industry.

I suppose by appointing two plenipotentiaries to foreign countries the government expect to put Canada on the map, but to my mind this is pure vanity and a woeful waste of public money. To me it would seem to be inviting trouble to send a minister from Canada to Tokyo, and I would suggest that the better plan would be to let John Bull continue to represent us.

Our tariff system is antiquated and unsatisfactory. Since the war the whole world has become revolutionized, and there is no reason why there should not be a revolution in our tariff system. Why not adopt a tariff system similar to that in force in the United States? I am glad to see the minister in his seat; perhaps he will consider that suggestion. The hon. member for Fort William (Mr. Manion) gave an illustration the other day of what happened to a mutual friend in Toronto who tried to build up a little business in Detroit. He shipped a consignment of dry goods to Detroit on which the duty was only 50 per cent, but before they were cleared through the customs house, by some system of manipulation, the duty was raised to 90 per cent and my friend in Toronto was forced to pay the return express on the goods. We should have some such elastic tariff system with someone in charge who knows how to operate it. I am not attempting to disparage the present minister, because I think he has done more to straighten out the customs business than anyone else, but I could give you many instances of embargoes which have been placed against our goods by the United States. About two years ago the Americans came to Canada and started to raise the price of potatoes; we wondered what was going to happen and where we were to get our supplies, because they had carloads of potatoes at the border and everywhere else ready to ship into the United States. I was afraid I could not get a sufficient supply in Ontario so I made a trip to Winnipeg, and not satisfied with going into the wholesale fruit and vegetable district I went to the stock yards, where I got in touch with a number of drovers from whom I started to purchase forty or fifty cars of potatoes. I was to complete my arrangements the following day, but when I came back to the Vipond wholesale house I received a wire from my own people telling me to "lay off" the potatoes, that the market had dropped fifty cents and the United States had raised an embargo against them. That is the system they have adopted, and you can never hope to get any business in the United States except the business they do not want themselves. In the yards at Winnipeg there were over fifty cars of potatoes ready to go to the United States, and the people who had bought them lost forty cents or fifty cents a bag; we were left "holding the bag" as usual.

I know something about fruit and vegetables. The fruit and vegetable growers and others interested in the distribution of these

products waited on the government some time ago asking for increased protection. I do not hesitate to use the word "protection" because that is absolutely what I mean, and I understand the Minister of Agriculture (Mr. Motherwell) promised them a seasonal tariff. Did they get it? No, they only got the promise, which they always get from this government. A seasonal tariff, Mr. Speaker, is one which is high during the time when we have plenty of these products in our own country, thus preventing American fruit and vegetables from being shipped over here and killing the market. Then, when our own production is exhausted, the tariff is reduced in any way necessary to give the consumers of this country an opportunity to have a continuous supply of fresh vegetables. At the beginning of our season, however, starting with strawberries and asparagus and running right through the peach season, we should have a seasonable tariff, and I demand that the Minister of National Revenue take this into consideration, because it is the only thing that can save us. Competing as we do with states such as California, Tennessee, Louisiana, Texas, North and South Carolina, Maryland and others, where they grow from one to three crops a year more easily than our fruit growers can produce one crop, I say it is an unfair thing to allow these states to send their products to Canada when our own fruit and vegetables are plentiful, and we have a right to protect that industry as well as the Massey-Harris concern or any automobile factory.

Canada at one time had a fair market for farm produce in the United States, before the Fordney-McCumber tariff went through. I have shipped a good many cars of produce to the United States, and I was always compelled to pay both the freight and duty on every car I shipped. We do not follow that practice in Canada. In the year 1921 we sold the United States farm produce to the value of about $191,000,000, real farm produce dug out of the ground. In 1927, however, we only sold $64,000,000 worth of farm products to the United States, or a drop of almost $130,000,000 in that six year period. Are we to continue our folly of allowing the United States to send fruit and vegetables to Canada without more protection or consideration for the growers in Canada?

Let me remind my hon. friends from the province of Quebec that this applies to their province as well as to mine. Their farms are small and they produce mostly vegetables; their only market is the home market, and if they deplete the population of industrial centres such as Montreal and other smaller places, what will happen to the market? There will be none. The same thing applies to Ontario, starting with Toronto and finishing at Niagara Falls; if the population decreases the market is gone; not only that, but the value of the land between Toronto and Niagara Falls is cut in two. The United States is a great producing country itself, and you cannot get anything in there while they are able to produce plenty of goods for their own market, and as a rule they are always able to do so. Once in a while they find themselves a little short, but that very seldom happens. Climatic conditions affect the production in some parts of the country but if there is a shortage in any particular district shipments are made from another part of the country in order to fill the demand. A few years ago, I think it was in 1918, the United States put an embargo on products coming from Holland, France and England. They would not allow them into the country, and a propaganda was begun there to raise the products in question at home and keep the products of other countries out, thus retaining the money expended on those products in their own country. We should take a leaf out of the United States book.

Under the same heading I will mention something of value to the wholesale trade that we have been asking for for years. It is something which I advocated in this house in 1922 and 1923—I refer to the imposition of a specific duty. What I mean by a specific duty is so much per pound, per crate, per box or per barrel, as the case may be. I pointed out on the occasions referred to that the trouble with the ad valorem duty is that dealers, if they so desire, may get special invoices for customs purposes only. At that time trucking from border points such as Buffalo was common, and there was not much chance for customs officials to check heavily loaded cars. However, that trouble has been eliminated or nearly so by customs checking up closely. Those who imported in car lots found it impossible to compete with the truck system.

For other reasons I still demand a specific duty. Customs regulations to-day are very severe and hard to understand, and the trade is continually getting new regulations which are not understood by those engaged in the business as a whole. Importers are put to a lot of expense and trouble getting advice, and nobody can afford to keep a lawyer on the job continually. No appraiser can give a ruling that is definite, and I may say that this applies to some officials higher up, in fact customs officials differ themselves as to certain rulings. The solution of the problem is to adopt the specific duty which will

eliminate all misunderstanding, and simplify the work at the customs house. Let me give an illustration of this: If you have a carload of any commodity containing any number of packages and the duty is 50 cents a box there can be no misunderstanding. If there is any dispute as to weight the railway freight bill can be used. Therefore I say, Mr. Speaker, a specific duty will lessen the cost and expedite the work of the customs officials. There will not be as many officials needed because the work will have been simplified to such an extent.

I come now to the question of the dumping duty. I am not advocating that that duty should be abolished, but I hate to see the Americans getting the advantage of it. They made many thousands of dollars last year. Take, for instance, a car of California peaches that is quoted to you at a rate of 70 cents. It would be much cheaper in the long run if you were to buy at 80 cents. The Americans know what the fair market value of our product is. They quote you the price of peaches at so much and you might as well take them at 80 cents as pay 65 or 70 cents. It costs you more in the long run if you buy them for 65 or 70 cents than if you buy them for 80.

Then, again, take the purchase of celery or lettuce. You can, we will say, buy a car at the rate of $1 and they will quote you a rate of $1.50. You will accept the latter rate because the trade finds it better to follow the line of least resistance. The other day we had an interview with certain customs officials and we asked for a certain ruling provided the trade carried out all the customs requirements at the point of entry. We asked if we could be guaranteed any protection in the event of meeting all these requirements and we were told "No, you have no protection." I say that there would be none of these difficulties in the operation of the customs regulations if there was a specific duty imposed on all products.

Another matter of which we complain is interference with the old channel through which business has been proceeding. This may arise in connection with a ruling in the customs. If you buy a car of cabbage and it is shipped from the point where it is grown, it is often rolled out on to the railway because there is no place to keep it, and it is kept in movement. The result is that in the case of a car of cabbage the freight from California to Chicago is added to the cost, and then you are charged duty on the freight as well as on the goods.

There is another cause of complaint in the matter of the buying of rolling cars, where the duty is charged on the freight paid. No dealer will buy any more, and this will mean a loss of business to the Canadian national railways because they haul 75 per cent of these commodities which come into the city of Toronto; and the dealers lose as well.

Coming now to the continual claims on the part of the government that prosperity prevails in Canada and that the credit is due to them, I wish to say that if we had real prosperity every one of us would realize the fact. Prosperity comes periodically regardless of governments. I do not admit that real prosperity exists in Canada. There are too many unemployed here; too many failures in the business world, too many mergers and amalgamations, for me to say that we have real prosperity. The boom we hear so much about in large office buildings financed by American capital and promoted by speculative builders is no sign of prosperity. Stock market booming is even a less convincing sign. If we had real prosperity, business men would be using up all their energy trying to keep pace with the increase of business. It is a case of chasing business to-day, not of trying to keep pace with it. I would rather see our factories filled with workers than see our buildings filled with agents selling foreign goods and thus doing our own workers out of jobs, or filled with promoters of all kinds, gambling in stocks that are not sound and that are deceiving the Canadian people. I hope the latter state of affairs is not what my hon. friends opposite consider prosperity. The government claim that they are reducing taxation, but I cannot see how that is the case when taxes collected during the last five years are greater than in the five years previous. That is not my idea of a reduction in taxation.

With all our wonderful resources, with a land flowing with milk and honey, why should this country be lagging behind with a population of nine to ten million people and with not even the ordinary increase in our population? We have the best class of men and women in the world; they are hardy, healthy and they should be happy; they are nearly all educated and fit for any job, but still this government has been moving along in the same lackadaisical way for the last seven years, fooling the people and keeping in power being their first consideration. If people engaged in industry and commerce paid as little attention to their business as this government does to the country's business, they would soon wind up in the poorhouse, but there is sufficient money in the treasury to keep everything going, and the people pay.

Our educational system throughout Canada is fairly good. I know it is good in my province. We are spending millions of dollars in Ontario educating the youth of our country to develop the industries of the United States of America, thus saving Uncle Sam a good deal of money. After graduating from our universities, our boys and girls, for want of an opportunity to make a living, are leaving Canada. This is due principally to the exportation of our natural resources instead of having them manufactured into the finished article in this country. That is something that deserves our serious consideration. Freight rates are higher on the finished article and a distribution of our finished products by our own railways all over Canada would enable our railways to pay their way and employ more people. To-day we get only the low rates on the raw material and that is one of the principal reasons why the railways of Canada are not paying at present.

As someone else has said, I do not want to accuse the government of doing nothing. I wish to commend the Minister of Railways (Mr. Dunning) for his action in diverting the Hudson bay terminal to Fort Churchill in place of Port Nelson. I also wish to thank the government for the return of natural resources to the prairie provinces. If that has not been already done, I hope it will be done immediately.

I am glad to know that the revenue from customs is increasing, due no doubt to a proper administration, and I will say that we are getting proper administration to-day. But that proper administration was brought about by the hon. member for Vancouver Centre (Mr. Stevens) who has made Canada millions of money and who has received no credit for doing so. I will say this—and I know somebody will criticize me for saying it—the Canadian people in this case did not appreciate the hon. member's sacrifice, but this country has reaped a large benefit and now the administration will go on and the customs laws will be enforced by the hon. gentleman who is at present in charge. I did expect this year that the government would assist in the elimination of smuggling by lowering excise duties on cigars, cigarettes and tobacco. We are losing revenue, particularly on cigarettes. I am satisfied that smuggling in cigarettes cannot be stopped and we might just as well make up our minds that we can no more enforce the law so as to stop cigarette smuggling than we could enforce the Ontario Temperance Act in Ontario, when it was the law of the province.

Mr. SPEAKER: The hon. member's time is up.

[Mr. Spence.]

Mr. G. G. COOTE (Macleod): Mr. Speaker, I feel myself at a disadvantage to-night in following two such entertainers as the Minister of Justice (Mr. Lapointe) and the hon. member for Parkdale (Mr. Spence). I must say in all sincerity that with all his humour the hon. member for Parkdale has endeavoured to make some constructive suggestions to the government. The Minister of Justice this afternoon amused the house and himself by reading numerous extracts which eminently suited his purpose to show conflicting criticisms directed at the government's budget from the Conservative and the Independent members of this house. He then declared, I think rather categorically, that the government represented all the people and all the interests of Canada, but he failed to offer for the benefit either of those whom he represents, or of the members of the house, any analysis of the budget or its effect on the people or the country.

Mr. LAPOINTE: I had only forty minutes.

Mr. COOTE: I have been in this house for six sessions and I have never yet listened to a budget debate in which so little attempt has been made on the part of the government or its supporters to analyze the proposals of the budget or to explain just what they mean or what would be their effect upon the people of the country. In fact, as regards receiving any enlightenment from members of the government as to these proposals, the debate might as well have closed the day following the delivery of the budget speech and the vote might then have been taken. I do not however think the time has been entirely wasted. Some very interesting speeches have been delivered and some constructive suggestions have been offered during the debate.

Personally I feel that this budget covers too much ground for me to deal with it in detail in the space of forty minutes. First of all the budget includes a financial statement of the country for the past fiscal year, as well as a statement of the public debt, the railway finances, et cetera. In addition it contains a proposal to reduce the sales tax, a further proposal to reduce the income tax and a proposal to strike out 122 items from the customs tariff schedules and to substitute 159 new items, as well as to strike out 4 items of drawbacks of customs duties and to insert 10 new items. I should like to suggest that it is not necessary that all these proposals should be grouped together and the house compelled to concur in all these matters. I suggest that the financial statement should be given to the house by itself; that the

house should be allowed to go into committee of the whole to consider the statement, or that the statement be referred to the public accounts committee without our having to agree to a resolution which proposes a reduction of the sales tax, a reduction of the income tax and between 160 and 170 changes in the customs tariff schedules. I suggest that if the minister wishes to introduce a reduction in the sales tax, it should be introduced in the ordinary way by resolution to be followed by a bill. The same procedure should be followed in the case of reducing the income tax, and also, I think, in regard to the minister's proposals in connection with the customs tariff. If this procedure were adopted, we could decide each proposal on its merits and the votes of the members would be recorded upon each proposal. But under this budget system, members who are absolutely opposed to any reduction in the income tax are being forced into the position of either voting in favour of the reduction or of defeating the budget, which we all understand means the defeat of the government, to be followed by the dissolution of parliament and a general election. It is unfair to the members of this house that they should be placed in that position. To my mind the democratic and businesslike thing to do would be to introduce each item separately and let each one be decided on its merits. I think the principle which I am advocating underlies the rule which was quoted by the Prime Minister (Mr. Mackenzie King) a few days ago in regard to the motion of the hon. member for Toronto Northwest (Mr. Church), which rule provides that papers shall be called for only on one subject at a time.

The speech of the Minister of Finance in delivering the budget was in my opinion much too short. He was not limited to forty minutes. He gave no reason for reducing the income tax; he dealt with that matter in a very few words. He gave no reason for reducing the sales tax; he dealt with that matter in less than two lines of Hansard. He did not say why the sales tax should be reduced; he did not say why it should not be abolished; he did not say whether it would not be wise to reduce it on the necessaries of life and leave it on the luxuries. I think the minister might also have given us some more information in regard to his tariff changes. As I said before, he has struck out 126 items in the tariff and inserted 169, with scarcely any explanation as to the effect of these changes. He dealt with that subject in one page of Hansard. I repeat, the minister was not limited to forty minutes like the rest of us, and I think he might have enlightened the house in regard to this matter—that is, if he knows just what the effect will be. As these changes have been made, I understand, as the result of the inquiries of the advisory board on tariff and taxation, I suggest that the minister might have the chairman of the board on the floor of the house to act as his deputy when these resolutions are being considered in committee of the whole. I think it as well to intimate to the minister now that the house will need a good deal of explanation in regard to some of these items.

Last year the minister gave as a reason for not making any changes in the customs tariff the fact that the tariff advisory board had not reported on the matters which had been referred to them, and he implied that he would make no changes in the tariff unless and until this board had reported on them. I should like to remind him that this is an advisory board on tariff and taxation, and if he takes the attitude that the tariff should not be changed until the board has inquired into and reported on the proposed changes, why does he take a different attitude in regard to taxation? Has the question of reducing the income tax or the sales tax been referred to the board? If not, why not?—especially as it seems to be the intention of the minister to eliminate both these taxes in the course of a period of years. I notice that when the hon. member for South Perth (Mr. Sanderson) was speaking he said he hoped that next year or the year after the income tax would be wiped out, and he hoped the sales tax would be wiped out entirely next year. I wonder why he did not, as a good Liberal, also express himself in favour of the customs tariff being wiped out, so that we should all be in the happy position of having to pay no taxes, except a little excise tax on liquors and tobacco, which the hon. member for Parkdale (Mr. Spence) wishes to have reduced; and it may be he is quite right.

Mr. SPENCE: And make more money.

Mr. COOTE: But as the hon. member (Mr. Sanderson) did not suggest wiping out the customs tariff, I presume he is in agreement with the hon. member for Parkdale and is in favour of raising all the revenue through the operation of the customs tariff. Surely this is a strange doctrine to be preached by a Liberal. I suggest to the Minister of Finance that he ask the advisory board on tariff and taxation to inquire into and report on the application and the administration of the income tax, as to whether the schedules are equitable, whether they are fair as between different incomes, and whether it is a greater brake on the wheels of business than a tax on

commodities, such as the sales tax and the tariff tax. The income tax has been persistently attacked by an organization calling itself the Retail Trade Bureau of Canada. Personally I should like to know who these people are that operate under that name, and I now invite them to inform the public, and especially the members of this house, whom they deluge with their circulars, who they are, just how many retailers they actually represent, and where they secure the necessary funds to carry on this intensive propaganda.

Mr. GARLAND (Bow River): And how much their incomes are.

Mr. COOTE: I have met very few retailers who are opposed to the income tax. I believe most of the objection to the income tax could be overcome by proper changes in its application. The statement has often been made in this house that farmers are not paying their share of the income tax. I would like to see the advisory board on tariff and taxation investigate very thoroughly the administration of the Income War Tax Act to find out whether the farmers or any other class of people in Canada are not paying their income tax. Personally I want to see the act so administered that all who are liable shall pay.

I should also like to have the board report on the advisability of changing the application of the tax so that taxpayers should be assessed on their incomes over a period of three years. This matter has repeatedly been brought to the attention of the Minister of Finance, but so far we do not seem to have been able to make any impression upon him. We have brought to his attention cases where farmers, and ranchers particularly—there may be others—have incurred a loss in two or more successive years, and the next year, having an income which made them liable under the Income Tax Act, have had to pay the tax although the profit in the good year was not sufficient to make up the deficit in the two previous years. There have been cases where a man has been assessed for income tax whose whole profits from the year's crop have been paid to the bank to cover the deficits incurred in previous years, and where the assessed was unable to borrow money to pay his tax. I have even heard of a case where a man was threatened with suit by the Income Tax department because he had not under these peculiar circumstances paid the tax. I would like to see the board investigate this whole income tax question very thoroughly.

[Mr. Coote.]

I wish now to draw the attention of the minister to one tax which he has overlooked and to a situation which certainly calls for some action on his part. I refer to the excise tax on automobiles. In 1926 the tariff on motor cars imported from the United States was reduced from 35 to 20 per cent. In the discussion which then took place, and which is recorded in Hansard of 1926, page 3663, the late Minister of Customs, Mr. Boivin, estimated that it cost the individual consumer who imported a car from the United States approximately five per cent in addition to the twenty per cent customs tariff. This is owing to the fact that there was at that time in the United States an excise tax of 5 per cent payable by the purchaser of an individual car, and he had also to purchase a license for the car before it could be driven out of the country. The new prices on Ford cars which became effective after the budget of 1926 were 25 per cent higher in Canada than in the United States. Proof of this will be found on page 3663 of Hansard of 1926. On June 7, 1926, the present Minister of Finance introduced a bill to amend the Special War Revenue Act, to provide for the removal of the excise tax of 5 per cent from cars produced in Canada and valued at less than $1,200. When putting through the measure the minister was twitted by his Conservative opponents with handing back with his left hand 5 per cent of the protection that he had taken away with his right hand. In reply, he assured the house that he would not allow the manufacturers of automobiles to take any advantage of this 5 per cent. I will quote his own words as recorded in Hansard of 1926 at page 4133:

> I hold in my hand a letter from the automobile manufacturers of Canada guaranteeing that they will pass this on to the Canadian people, and that the purchaser of a Canadian car will have all this reduction in the excise tax. . . . . I repeat that we have the promise of the associated automobile manufacturers of Canada, of all the manufacturers of automobiles in Canada—it will be found on Hansard to-morrow morning—that they will pass this excise reduction on to the Canadian purchaser,—

I hope the house will take note of the following words:

> —and I serve notice on them now, in the presence of my friends, that if they do not live up to that agreement we will find means of placing them in a position where they will have to do so or meet competition of the world.

I have recently secured information as to the Canadian price and the United States price of certain cars valued at less than $1,200 which are being made and sold in Canada by some of the automobile manufacturers who signed the letter referred to by the Minister

of Finance. I may say that I found considerable difficulty in securing the factory price in Canada of some makes of cars, but I have here the prices of five different makes which are represented among the firms who signed that letter. If I have the permission of the house I will place this statement on Hansard; it is not very long:

	Canadian price	U.S. price	Increase	Percentage of increase
Ford roadster	$495	$385	$110	28.6
Ford coupe	510	395	115	29.1
Ford tudor	640	495	145	29.3
Ford fordor	740	570	170	29.8
Sport coupe	710	550	160	29.
Chevrolet roadster	625	495	130	26.2
Chevrolet touring	625	495	130	26.2
Chevrolet coupe	740	595	145	24.3
Chevrolet coach	740	585	155	26.4
Chevrolet sedan	835	675	160	23.7
Chevrolet Imp. sedan	890	715	175	24.4
Whippet coach	695	535	160	29.9
Erskine six coach	995	735	260	35.4
Chrysler "52" coupe	870	670	200	29.8
Chrysler "52" 2-door sedan	880	670	210	31.3

May I say that this list shows that Ford cars are now approximately 30 per cent higher in Canada than they are in the United States; Chevrolet cars about 25½ per cent higher; Whippet coach—the only car of this make on which I could get a price—29.9 per cent higher; Erskine coach 35.4 per cent higher; Chrysler coupe 29.8 per cent higher; Chrysler sedan 31.3 per cent higher. I think the prices which I have quoted are ample proof that our automobile manufacturers, with the exception of the Chevrolet people, are taking advantage of this removal of the excise tax on Canadian made cars and are not passing the benefit on to the consumer. I have read what the Minister of Finance said he would do under these circumstances. Perhaps I might read the last sentence again just to remind him of this:

> I serve notice on them now, in the presence of my friends, that if they do not live up to that agreement we will find means of placing them in a position where they will have to do so, or meet competition of the world.

I do not expect an immediate answer from the minister, but I do think the house should know what he is going to do about it before these resolutions are disposed of. There seem to be two courses open to him: either remove the tax from imported cars as well as Canadian made cars, or replace the tax on Canadian made cars. If he replaces the tax on Canadian made cars, I think the proceeds should be turned over to the provinces to be used by them in the building of highways. Personally I see no more reason for imposing an excise tax on automobiles than on most articles which are in general use to-day, unless the money is to be used in the building of good roads.

During the fiscal years 1919 to 1927 the federal government has collected in excise tax on automobiles $34,722,000. During these years approximately twenty million dollars has been paid to the provinces to be used in the building of highways. As the federal government does not contribute in any other way towards road building, I think it is nothing but fair that all the excise tax collected should be turned over to the provinces for this purpose. There is no greater need throughout Canada to-day than for improved highways. I believe that is the general opinion of the members of this house. I would suggest to the minister that if he feels he does not need this ten per cent which he is taking off the income tax, he should use it to co-operate with the provinces in the building of a national highway. We claim to have now reached the status of a nation, but we have not a highway on which we can drive from one side of Canada to the other without passing through the United States. This ten per cent of the income tax, if spent on the building of such a highway, would mean a considerable increase in employment and a resultant improvement in general business conditions many times greater than will be secured by the return of the ten per cent to income taxpayers. I am informed that since 1917 the federal government in the United States has granted $650,000,000 in aid to highway construction, while our government has given $20,000,000. I suggest that a good way for the government to celebrate the jubilee of confederation would be to build a national highway from Halifax to Vancouver, and call it the jubilee highway.

Now, Mr. Speaker, I purpose to speak on two or three matters not mentioned in the budget, but they entail an expenditure of a small amount of money. so I presume it

is appropriate to discuss them at this time. In 1925 a bill was passed through this house to give certain relief to the depositors of the defunct Home bank. The bill was amended in the senate, and at a conference between the house and the Senate an amendment was agreed to providing that 35 per cent should be paid on claims under $500, and a further 35 per cent on claims under that amount where the depositors could show that they were in need. Mr. Clarkson, one of the joint liquidators, was called hurriedly before the senate committee and asked on the spur of the moment to give an estimate of the probable amount which would be required to carry out the bill as amended. The amount as finally voted was fixed in accordance with this estimate at three million dollars. Most of this money has been paid out by the liquidators, but it would require a further sum of approximately $450,000 to pay the 35 per cent on claims which were approved. Unless such a sum is provided by parliament some of the cases where the depositors are in need cannot be paid. It is very clear that it was the intention of parliament to provide for 35 per cent to be paid on the class of claims I have already mentioned, and I think this house would be remiss in its duty if it did not make provision for payment of that amount. This is a matter which, under the rules of the house, rests entirely with the government. I am sure that if hon. members were given a chance to express their opinion on this matter free of party control they would certainly vote that the money be paid. I would urge upon the government that this amount be placed in the supplementary estimates so that the liquidators will be able to pay the balance of these claims.

I want to refer for a moment to the meagre salaries paid to some of our lower salaried postmasters. I am informed that statistics gathered by the Postmasters Association show that 10,000 postmasters are receiving from 20 cents to $2 a day, out of which all expenses of office must be paid by the postmaster. At the present time this represents a living wage of from $60 to $620 a year for all the responsibility these people are called upon to assume. The government demands honesty and efficiency in the handling of the mails; yet it pays a salary which is beggarly. An application has recently been made to this government by the judges of Canada for an increase in their salaries. If the judges require an increase then the postmasters require it a hundred times more. A little investigation into the conditions under which postmasters work, and the long hours which they have to put in, would make anyone realize that these men are not being fairly dealt with at the present time. We sometimes see in the press the comments of judges on the meagre salaries being paid bank clerks; but while I agree with these criticisms which are often expressed, I think the banks are doing handsomely for their clerks compared with the way in which this government is paying some of the lower salaried postmasters.

I want also to say just a few words regarding unemployment relief. In a country such as Canada there is bound to be a certain amount of unemployment in the winter time. I am led to speak on this matter because twice within the last three days I have been stopped on the street and asked by a man to give him the price of a meal. These men in both cases looked as though they were quite willing to work. One man assured me that he had walked from Ottawa to Britannia and back looking for a job shovelling snow and he could not get one that day. These men, unless they are to starve or be put in gaol—neither of which we wish to see—must be taken care of by the municipality, and it is the duty of the government to resume the policy of sharing with the municipalities this cost of relief for the unemployed. This policy was pursued by this government in the year 1926-27 when they paid out approximately $77,000 to the municipalities for that year. Surely this amount is so small that the government does not need to haggle over the matter. May I quote a few words from the Manitoba government's report on this subject:

> The control of the immigration stream is in federal hands and it would seem reasonable to demand that at least a share of the cost of relief made necessary by unemployment caused by immigration should be paid by the dominion government.

The minister in his budget speech made reference to the fact that Canadians were returning home, and I could not help but wonder whether it was the millionaires returning because of the income tax reduction. In every budget debate which has taken place since I first came to this house as a member, the exodus of Canadians to the United States has been discussed at great length, at greater length perhaps than any other subject apart from the tariff. In my opinion the primary cause which is at the bottom of this condition has not been discussed in this house. There is only an invisible line dividing Canada and the United States; the soil and climate in those districts adjacent to the boundary are very similar and the reason why people leave one country to go to the other is mainly to better their economic condition. The economic position of the people is affected not only by the natural resources, soil and climate, but also

by the artificial conditions which are determined by the legislation of the country and the control of finance and credit.

I wish to compare for a few minutes the control of legislation in Canada and the United States. In Canada the control of legislation is autocratic. In this house a private member cannot even introduce any bill which entails the expenditure of public moneys. He cannot even amend such a bill, even though it is to save the government a little revenue. We had a demonstration of this last year when the hon. member for Winnipeg North Centre (Mr. Woodsworth) moved that the reduction of ten per cent in the income tax should be limited to incomes of $10,000 and under. That motion was declared out of order, and, strange to say, the members of this house upheld that decision. The member may, of course, introduce any other public bill, but the rules of the House of Commons are such that, in my six years' experience in this house, I can remember only one such public bill that ever finally passed and became law, and in that case the government set a special time for the bill to be given a third reading. The Prime Minister selects the cabinet; he can also dismiss them at will, so that it amounts to this; no legislation can be passed here unless it has the express approval of the Prime Minister. Under our system and the rules of the house, the absolute control of legislation is vested in the Prime Minister, and practically all the legislation passed by this house, exclusive of private bills, has originated in the cabinet. This is not the most objectionable feature of our system. The fact that the Prime Minister holds in his hands the power of dissolution of parliament at any time makes him an autocrat; in this case, makes him King in fact as well as in name.

Comparing our system with that in effect in the United States: generally speaking any member of congress may introduce any bill which in his opinion is in the interest of his constituents. If he can secure the support of a sufficient number of members of congress and of the upper house his bill may become law whether the president approves of it or not. True, the president may veto the bill, but if it be passed again with sufficient majority it becomes law in spite of his opposition. In the United States a large part of the legislation which is passed originates with the members elected by the people. In Canada practically all legislation of a public nature must originate with a prime minister, who secures the position because he was chosen leader by a party convention. In the United States the members of congress are elected for a term of four years. Any member can vote for what he thinks is right; he cannot be sent home at the whim of the president, even if a measure favoured by the president is defeated. In Canada the Prime Minister has the power to dissolve the House of Commons any time he takes the notion. All of our members are more or less familiar with the threat that "if a government measure is defeated parliament will be dissolved."

The people's representatives have very little to say under this system of government. The government brings in a measure and says in effect, "if this measure does not go through we will dissolve this house." Naturally, unless it is a particularly obnoxious bill, it will go through. In some cases the cabinet possibly does get the approval of its own caucus, but I will venture the assertion that they did not do that with this budget. Did the government supporters or the group co-operating with them decide what the contents of this budget should be? I hope they are not responsible for it. If they are we may as well give up hope of any progressive legislation coming from that side of the house. I wish the people of Canada really to understand the situation that exists here; they would then see how difficult it is for their representatives to do anything worth while in their behalf. The Finance minister prepares his budget with the greatest secrecy; nothing which it contains is allowed to leak out until he actually delivers his speech in parliament; then the house must accept it or it will be considered a defeat of the government to be followed by a dissolution of parliament and a general election. This is very largely true of the work of the whole session; the cabinet introduce whatever legislation they see fit and the members sitting on that side of the house are supposed to support that legislation in all cases. Party discipline is so rigid that it is almost an unknown thing for a member of the party in power to even suggest a reduction in any item in the estimates. In making this statement I would call to my support Hon. Herbert Marler, whose remarks will be found at page 527 of Hansard for 1925. Mr. Marler was at that time the member for St. Lawrence-St. George, and he said:

> Perhaps on this side of the house I am looked upon as a black sheep or a yellow dog if I dare to suggest to the minister that I would like certain information on a particular item. It is exremely unpleasant to ask ministers on your own side of the house for particular information. It is a most unheard-of action on the part of any member on this side to dare suggest that a vote be cut down, or that certain action be taken with regard to it, or dare even to suggest that he should exercise his own intelligence in voting the money of the people.

That was the opinion of Mr. Marler, who was a very able member of this house. Under this system a private member, and especially a member of the party in power, is reduced to the status of a sort of glorified errand boy. I hope I may say this without giving offence, because I think we are all pretty much in the same position. A member can spend most of his time in Ottawa running errands to the various departments for his constituents, making an occasional speech on the budget and voting for all government measures. Surely no one would question the fact that we could get legislation more in the interests of the people if members of this house had the same opportunity of securing legislation as that enjoyed by members of congress, and I think it also safe to assume that the brains of parliament are not confined to the party in power and that the brains of the party in power are not confined to the cabinet.

If the system in the House of Commons is bad, that which obtains in the Senate is even worse. Members of that chamber are appointed not because of their ability but as a reward for services rendered to their party; they are appointed for life and are responsible to no one. They can block any legislation, with the exception of supply, and in the main they are representative of the reactionary element throughout the country. What chance have we to progress under these conditions? I consider this system to be at the root of many of our problems to-day. You may ask, "If this is the case why did not our people insist on changing the system?" The answer is because this system suits the parties, and the party leaders kept the people entertained with their discussions over the tariff and similar things. The older people were such ardent Liberals or Conservatives and were so engrossed in their party warfare that they never thought of improving the system, while the young people found it easier to cross the boundary line and secure a position than to stay here and fight against the disadvantages of such a system.

I would like to make it very clear that I am not advocating the adoption of the United States system of government. I have compared some features of their system with the Canadian system, because of the time which has been spent in this house comparing their tariffs and other matters with similar matters in this country; but I should like also to make it clear that I do want such changes made in our system as will give the representative chosen by the people power to initiate legislation, and to secure the removal from the hands of the Prime Minister of the power of dissolution of parliament. Let us get away from that worn-out tradition that the defeat of a government measure by the house should be followed by the resignation of the government or the dissolution of parliament. Personally I should like to see a fixed term of four years for parliament, but as that would necessitate a change in the British North America Act possibly we cannot get that in my lifetime, because we are told Ontario and Quebec oppose it.

If I have time, Mr. Speaker, I should like to compare the control of finance in the two countries, although I shall have to do so in about two minutes. In Canada four banks control approximately 80 per cent of the banking and credit business of the entire country, while in the United States every city and town has its own bank owned and controlled by men whose interests are centred in the community. Their bank can grow only as the community grows, so naturally they do their best to retain all the bright and capable young people in their own community. If we are concerned about keeping our young people in Canada why not reform the system of government and give the representatives of the people a chance to do something for them? Let us remodel our banking system to make it serve the needs of the people in the outlying parts of the Dominion as well as those living in the vicinity of Toronto and Montreal. In my opinion it will be hard to secure any effective change in the banking system of this country until we make some change in our system of government and in the rules of this house.

In conclusion, Mr. Speaker, I would say that I am opposed to this budget because it will reduce the income tax, which I believe to be the best method we now have for the collection of taxes. I object to the reduction of the sales tax on certain articles which we class as luxuries. I also object to the proposal to double the percentage of empire labour and material cost required on goods receiving the British preference.

Mr. DEPUTY SPEAKER: Time.

Mr. DUNCAN SINCLAIR (North Wellington): Mr. Speaker, in opening my few remarks on the budget and the amendments thereto I wish to congratulate you on your re-election as Speaker of this house, and I hope that on this, my first attempt to speak, I shall have your kindly sympathy. I promise faithfully that I will be under the wire before the flag falls. I also wish to thank hon. members on both sides of the house for their kindness to myself since coming here. Like the old Scottish preacher who once said in opening

his sermon, "My dear friends, I want to say something before I begin," I should like to thank the Minister of Railways (Mr. Dunning) and the Minister of Finance (Mr. Robb) for the splendid assistance they gave me in the last election. I was very sorry to be so busy in the election that I was not at home when they visited my vicinity, but if they will only send me word next time they come I will be there to meet them and receive them in a hospitable manner.

I had no intention of making a speech this session, but in looking over the speech from the throne and the budget as brought down by the Minister of Finance I decided this was my time to get in, because I could scarcely say less than is contained in either the speech from the throne or the budget. With regard to the budget and the amendment thereto, I must say that I am heartily in favour of the amendment as proposed by the hon. member for St. Lawrence-St. George (Mr. Cahan). I regret that the budget does not contain a remedy for the unemployment existing in Canada, that no attempt is made to induce our boys and girls to return to their native land, and that there is nothing which will prevent the continuance of the alarming exodus to the United States. The budget contains no provision for the preservation of our own market for farm and dairy products, does not provide for the development of the natural resources of this country and does not abolish the sales tax. I suggest to the Minister of Finance and the government that the time has come when there should be no more tinkering with the tariff, a process which inevitably causes injury both to the manufacturers and to the farmers of this country. What I mean by that is that I think the tariff should be left as it is for at least the life of one parliament. Before I ever went into politics I remember how the managers of factories and the people who had their money invested in these industries were kept in a continual state of apprehension because they did not know what this government was going to do, or what industry would next be attacked.

I would suggest to the Minister of Finance that if he had outlined in the budget a national fuel policy for Canada, a national iron and steel policy for Canada, a national pulp and paper policy for Canada; if he had outlined policies whereby our natural resources could be turned into finished products in Canadian factories by Canadian workmen, he would have solved many of the problems which confront us to-day, and the Minister of Immigration and Colonization (Mr. Forke) would not be condemned, as he is being condemned now, for conditions which have been brought about by the foolishness of this government. There is no doubt at all that our young people are leaving Canada in large numbers. There must be some reason for it, and there must be some remedy for it. Why not apply the remedy and stop the exodus from Canada of some of our best and brightest minds? Recently when crossing the border I got into conversation with a gentleman on the train. He asked me where I came from, and I replied, from Canada. During the journey I noticed some big factory buildings and asked him what industries they housed. He said they were pulp and paper mills. I asked, "Where do you get your pulpwood?" He replied, "From you foolish Canadians." "What do you mean?" I said. He replied, "Exactly what I said. If we could not get this pulpwood from Canada we could not manufacture it here." "What would that mean?" I inquired. He replied, "We would have to go to Canada." Now the question I ask is: Why not bring them to Canada? I would simply give notice to every pulp and paper manufacturer in the United States who gets his supply of pulpwood from Canada that one year from to-day the exportation of this pulpwood will not be permitted, and that they must be prepared to manufacture it in this country. These industries would thus be compelled to establish themselves in Canada and our boys and girls employed in those mills would return with them.

I wish now to make a few remarks on the Australian treaty as it affects our farmers. I cannot understand the attitude of the Minister of Agriculture and the government in this matter. I recall how the former member for South Oxford, Mr. Sutherland, pleaded with the government not to ratify this treaty. He warned them what would happen if they did so. What he predicted would come to pass if that treaty were ratified has happened. I am absolutely opposed to the enactment of any law which injures the dairymen or the woollen industry of this country, whether introduced by a Liberal or by a Conservative government. I well recollect when every farmer in my own constituency kept from ten to twenty-five sheep. But they are not keeping them now. What is the cause of that? The government must be aware of this falling off. There must be a remedy for it, and it is up to the government to provide that remedy. The facts given to the house the other day by the hon. member for Victoria B.C. (Mr. Tolmie) should convince the government that something should be done, and done at once

to save the sheep industry and the woollen industry. After reading the speech of the hon. member for Victoria, I was rather surprised to get in my mail a circular from the Civil Service Association which contained the following notice:

Civil Service of Canada
Position Vacant

Applications are invited from residents of the province of Ontario qualified for the position of

District Sheep Promoter—$2,040 per Annum.

The circular does not say whether the district sheep promoter is to have a McLaughlin-Buick or a Ford car. I expect that he will have one. The minister will surely give him a Ford car, although he himself drives a McLaughlin-Buick. Just think of the government employing a man at this salary when the responsibility for the condition of that industry lies in the government itself! They spoil the woollen business and then they try to get some person to jack it up. It is a sad thing that only one-third of the woollen and worsted goods used in Canada is supplied by Canadian mills, and that the remaining two-thirds are imported. We could and we should grow enough wool in this country to supply all our needs.

I wish now to say something about the dairy industry. In order to show the condition of that industry in my own riding I am going to read to the house extracts from communications from the creamery men of North Wellington, showing what effects the Australian treaty has had on the dairy industry there. I will also place on record the importations from Australia and New Zealand under the treaty. I think we all agree that up to the time the Australian treaty came into effect the dairy industry was one of the finest industries in this Dominion, and thanks are due to the Dominion and the provincial governments in the past for the assistance they have always given this industry. Unfortunately the present government entered into this treaty with Australia. I am sorry the Minister of Agriculture (Mr. Motherwell) is so little interested in the dairy industry that he is busily engaged in talking with hon. members around him. I suppose he was very busy talking when this treaty was made, and that is why he allowed it to go through.

Some hon. MEMBERS: Order.

Mr. SINCLAIR (North Wellington): I now wish to give some figures showing the importations of butter from Australia and New Zealand. They are as follows:

Importation of Butter

Before the treaty

Australia, 12 months ending December, 1925, 278 pounds; value $110.

New Zealand, 12 months ending December, 1925, 53,424 pounds; value $21,583.

After the treaty

Australia, 12 months ending December 1926, 2,995,740 pounds; value $1,095,988.

New Zealand, 12 months ending December 1926, 3,193,382 pounds; value $1,260,788.

Australia, January, 1926, 473,200 pounds; value $181,645.

New Zealand, January, 1926, 570,185 pounds; value $203,870.

Australia, January, 1927, pounds nil; value nil.

New Zealand, January, 1927, 729,288 pounds; value $244,898.

Australia, 12 months, 1927, 376,096 pounds; value $135,160.

New Zealand, 12 months, 1927, 8,714,985 pounds; value $3,023,801.

Australia, January, 1928, 248,584 pounds; value $92,628.

New Zealand, January, 1928, 3,183,289 pounds; value $1,126,291.

With respect to the 278 pounds of Australian butter shipped during the twelve months ending December, 1925, the Minister of Agriculture, it seems to me, must have asked the Australians to send over a sample shipment, with the promise that if the butter was of good quality he would try to get them a good market in Canada. But to my mind the saddest thing of all is that in the month of January, 1928, New Zealand shipped into Canada 3,183,289 pounds of butter valued at $1,126,291. I should like to ask the Minister of Agriculture whether he is representing the farmers of Canada or the farmers of Australia.

Mr. MOTHERWELL: May I ask my hon. friend a question?

Mr. SINCLAIR (Wellington): I have never interrupted an hon. member and I have never interjected a question during an hon. member's speech. I will give the Minister of Agriculture a hint,—he is indulging in sleep, perfect sleep, from which it is time for him to wake. What was the excuse that the Minister of Agriculture made to the National Dairy Council? This is what he said:

Now we got a preference in the Australian market for certain exports like paper and pulp and motor cars, what are we to give in exchange that would be of some value to them? Supposing the present items were eliminated, what would you suggest to take the place of butter?

I should think the Minister of Agriculture of any government is and should be the farmer's friend. Just imagine the Minister of Agriculture of this government sacrificing the interests of the farmer for motor cars, pulp and paper! I suppose the Minister of Agri-

culture has a copy of every letter I hold in my hand, but just to show the house how the people in my constituency view the Australian treaty, I wish to read a few extracts from letters which I have received. The first one reads:

We just wish to draw your attention to the serious condition of the creamery butter industry in Canada. Up to 1926 we had a growing butter industry, which was developing into one of the leading industries of the country. Then the duty was reduced on the importation of butter, and the farmers to-day cannot afford to meet the competition of New Zealand and are cutting down on butter production, as fast as they reasonably can.

This is from one of the leading creamery men in my riding, and the saddest part of it is this paragraph in his letter:

To-day large numbers of female calves are being vealed because there is more money in producing veal than there is in producing butter, with the result that not only our present production is being lowered, but our future for years to come is being scarificed, in the shortage created by vealing the female calves. To add to this shortage a great many of our best milch cows are being bought up for the American market.

I would suggest that the government should give us the same protection as we had before so as to put us on even footing with other countries. The second letter is from another creamery man in my riding who says:

Beg leave to say that we feel that this treaty is not in the best interests of Canada, and especially not the producer of cream, who has to produce cream under entirely different conditions than that of Australia or New Zealand, whose climate permits the production of cream at much less expense, than the Canadian farmer can produce it, who has to stable feed at least six months of the year. There is no doubt about it that the effect of this butter being dumped on our market certainly has a bad effect on the price of the butter to the producer. In 1926 when this treaty became effective the butter market broke twenty cents per pound. This meant severe loss to the farming industry, and we believe that in the best interest of Canada as a whole that the same duty on butter coming into Canada from any country should be equal to the duty that we pay if we have to export any to Australia, New Zealand, or the United States. We trust that you will in the interests of your constituents and the Canadian farmer as a whole vote to have the tariff on butter from New Zealand and Australia placed at six cents per pound, the same as we have to pay on our butter going there.

This is a letter from another creamery man in my riding:

I might say in regard to New Zealand and Australian butter coming into Canada, we should have at least eight cents a pound protection, on account of the bonus that they receive. They allow them to sell their butter cheaper in Canada than in New Zealand or Australia. I think that if we had eight cents duty on butter coming in it would be a great help to the farmers of this country, as well as the creamery men. I think we would be able to pay the farmers about four cents a pound more for butter fat at present, if it was not for this butter being dumped in here, as I can buy New Zealand butter cheaper in Toronto to-day than I can buy Canadian made butter.

This is another one from a man who holds office in the Canadian Creamery Association of Ontario. He says:

At our executive and annual meetings this question has been brought up and I feel safe in saying that at the present time eighty per cent of the creamery men of Ontario are against the Australian treaty tariff as it now stands.

This morning I received the following resolution from the Ontario Milk and Cream Producers Association:

The Ontario Milk and Cream Producers Association desires to place itself on record as being decidedly opposed to the clause or clauses in the Australian treaty which permit butter to be imported into Canada at the low tariff rate of one cent per pound, thus creating a situation that places the Canadian producer under very unfair competition and making it extremely difficult for him to carry on his business at a profit. Experience with the treaty so far has shown that Canadian dairying is working under a severe handicap, because of it and unless some remedial measures are undertaken, the butter producing industry of the Dominion cannot make the progress it should.

It does not seem reasonable that an agricultural country like Canada should import large quantities of butter while an industrial country like the United States is able to produce nearly all the butter it requires. I would therefore in all sincerity ask the Minister of Agriculture to lose no time in seeing that the Canadian farmer at least has the home market for his own product.

Let me say just a word about my own riding of North Wellington, which I think is the finest riding in the Dominion of Canada. We have a rural constituency comprising great big Irish, German, Scotch and English farmers and business men, and they saw fit to send your humble servant to this house to represent them. We do not ask the government for very much, but I would just remind the Minister of Public Works (Mr. Elliott), who I am sorry is not in his seat, that I see no mention of North Wellington in his estimates. We need post office buildings at Arthur, Drayton, Moorefield and Clifford, and I hope to see some provision made for these, or at least some of them, in his supplementary estimates. I am sure it was entirely an oversight on his part and not at all intentional that they were not included in the main estimates. I might tell him right now that I would just as soon he

built a post office in the village of Arthur this year. It might help the government and it will not hurt me, because I am very anxious that the village of Arthur should have a post office.

In conclusion I hope and trust that we shall all work together, Liberals and Conservatives, United Farmers of Ontario and Progressives, Labour and Independent members, to make and keep Canada as it always has been, the brightest gem in Britain's crown.

Mr. J. L. ILSLEY (Hants-Kings): Mr. Speaker, I trust that the hon. gentleman who has just taken his seat (Mr. Sinclair) will not consider it presumptuous in me, one of the younger members of the house, to congratulate him upon what I believe to be his maiden speech in this house. I enjoyed very much what I could hear of his speech. I cannot say that I agree with all the sentiments he expressed, but I certainly consider his effort to have been very creditable.

From what I could hear of the opening of his remarks he laid emphasis on the thing that has been stressed so much and so often by hon. gentlemen on the other side of the house, and that is the matter of emigration from the Dominion of Canada to the United States. As that is one of the main lines of attack upon the budget which has been pursued by the Conservative party, I hope to refer to it later in my remarks.

First of all I want to congratulate the Minister of Finance (Mr. Robb) upon the budget and upon the series of budgets for which he has been responsible as Finance minister. The most complimentary thing that I can say is this, that by the series of Robb budgets which have been brought down to this parliament during the last few years the minister has proved himself a worthy successor of that great Nova Scotian who preceded him, the Right Hon. Mr. Fielding; and in saying that I am paying him the highest compliment I can think of.

As I said before, the main line of attack that has been made upon this budget from the other side of the house has been based upon the proposition that it lowers the tariff too much. I have listened with very much interest to the addresses that have been made in an attempt to support that proposition, and I note that my hon. friends opposite single out this year the spinning branch of the woollen industry as that which will be most injured by the tariff reductions. The best speech, if I may be permitted to say so, that has been made on the other side of the house upon that phase of the subject was that of the hon. member for South Waterloo (Mr. Edwards). I read his speech, and the letters from the manufacturers which were quoted therein, and I note that they do not make any specific or unqualified prediction of disaster to the industry; they simply state their fears as to what may take place. I think, Mr. Speaker, that the people of this country will not be convinced by that. They will feel that these predictions are to be placed in the same category as the predictions of ruin and disaster that were made by the Conservative party at the time the agricultural implement duties were reduced, and in the same class as those other predictions of disaster which were made when the automobile duties were reduced. We all know that those reductions were not succeeded by worse times in those industries, but by better times, and I think the people of this country will come to the conclusion that the same will be the case in regard to the reduction of duties provided for in the present budget.

Regarding the main argument of hon. gentlemen opposite, that the tariff policy of this government has been driving our young men and women to the United States in great numbers, I am prepared to admit that from some parts of Canada there is considerable emigration to the United States. There is in my own constituency; there has been during the last few years. But, Mr. Speaker, I deny that lowering of tariffs has been in any measure responsible for driving these people to the United States, and I also deny that the raising of the general tariff level would in any measure result in their return.

Take the condition in my own constituency. There we have had five bad apple years in succession. If we had five good apple years, or even two good apple years, when conditions were favourable in the apple industry there would be a vast change in the conditions there. As the house knows, the apple growers of the Annapolis valley sell the greater part of their apples abroad in competition with the world, and particularly in competition with the exportable surplus of American and also English fruit. Now in competing with the apple growers of New York state we in the Annapolis valley have certain advantages, especially in the cost of barrels, of labour, and of fertilizers, which, due very largely to the policy of this government in putting fertilizers on the free list is lower in the Annapolis valley than in New York state; but on a considerable list of other articles, on some farm implements, on some tools and other hardware, on some spraying materials and other farm materials, the cost, based as it seems to be in many instances upon the

American price plus the Canadian duty, is greater in Annapolis valley than in New York state. If any person is interested in pursuing this subject in detail he will find it dealt with at pages 108 to 111 of a recent publication entitled The Maritime Provinces since Confederation, published by the Dominion Bureau of Statistics. The Nova Scotia farmer has to pay substantially more than his American competitor for power sprayers, disc harrows, mowing machines, horse rakes, potato diggers, potato planters, manure spreaders, lime sowers, grain and fertilizer drills, spring tooth harrows, tractors, trucks, some spraying materials, and almost all other farm materials such as middlings, bran, cornmeal, coal oil, gasoline, tires, not to mention motor cars and equipment. It is obvious that if you increase the customs tariff on these articles, which I understand is the proposal of hon. gentlemen opposite, you are going to increase the cost of production to the apple producers in the Annapolis, Cornwallis, Gaspereau and Avon valleys of Nova Scotia. If you go to any farmer in those districts and ask him why he is not doing as well as he did before the war, he will tell you that the cost of production has gone up disproportionately to the price he is receiving for his products. It is obvious that any policy which results in a general increase in that cost of production, any policy which will result in increasing the spread between his costs and the costs of his New York state competitor, is not going to make conditions any better in the Annapolis valley. As a matter of fact it will make conditions very much worse, and you will have two persons leaving the locality for the United States where you have one at the present time. I think that constituency is fairly representative of a great many rural constituencies in Canada. Higher tariffs as a cure for conditions in a constituency such as that, so far as emigration is concerned, would be a joke, or perhaps I should say, a tragedy

As a matter of fact we do not have to depend upon our reasoning or upon logic to a proper conclusion as to what effect a higher tariff would have upon emigration. If there was one period in the history of Canada when conditions should have been ideal so far as the emigration problem is concerned, according to the arguments of hon. gentlemen opposite it was the period between 1879, when the national policy came into force, and 1896, when the Conservative party went out of power. There you had a government favourable to the protection of home industry, a government whose avowed policy was to furnish jobs for Canadian workmen. You had no inquisitive consumers' league to cope with, no fussy tariff board. If the manufacturer wanted protection he simply went to the Finance minister and got what he desired. What was the result? If the reasoning of hon. gentlemen opposite is valid and sound, surely we would expect that there would be practically no emigration from Canada during that period, and yet the records show that there was no period in the history of Canada, before or since, when emigration was as great as during that very period.

My hon. friends opposite are talking against the government because, they contend, its policy is leading to emigration. I tell them their talk is as nothing compared with what was said by Sir Richard Cartwright and his colleagues in the early nineties after the census of 1891. Sir Richard Cartwright placed facts before the House of Commons to show that in the decade between 1881 and 1891 there was an exodus from the Dominion amounting to 1,460,000 persons, or 146,000 a year for ten years on end. That was the condition during that halcyon period. Why, in the province of Nova Scotia the population, which according to the census returns was 440,000 in 1881, had increased to only 450,000 in 1891. But it is a matter of history that the census of 1891 was conducted fraudulently and showed tens of thousands more people in the province than were actually there. If anyone wishes to check this I would refer him to the speech made by Sir Frederick Borden, then the member for King's County, in the House of Commons on June 12, 1894, in which he shows that whole families were transplanted from the Cornwallis and Annapolis valleys to the New England states, and yet they were shown in the census returns as still living in the province. As a matter of fact our population was stationary at that time, notwithstanding a high birth rate and considerable immigration. It was stationary in New Brunswick—even the census did not show an increase. It was stationary in Prince Edward Island—even the census did not show an increase. In the book to which I have referred, issued recently by the Dominion Bureau of Statistics, it is said that the total emigration from the maritime provinces between 1881 and 1891 exceeded 103,000 and between 1891 and 1901 it exceeded 111,000. It was not until after 1901, when the results of the Laurier policies began to be felt, that the emigration from the maritime provinces was substantially reduced.

It is for these reasons, reasons that I might call historical as well as mathematical, that I say the cure-all prescribed by hon. gentlemen opposite would in fact be no cure at all. If we had applied what I understand to be the

remedy suggested by my hon. friends opposite, a scientific tariff, so-called, that is, a tariff which adequately protects the simpler and raw forms of products from foreign competition—the remedy suggested by my hon. friend from Cumberland (Mr. Smith) this afternoon; he said he was advocating a tariff on coal which would absolutely keep out American coal—if we had a tariff like that, increasing as our goods become more highly processed and reaching its maximum when the goods become most highly processed, it would mean a tariff amounting to 60, 70 and 75 per cent in the latter case. Such a tariff would be so crushing to our primary producers that it would depopulate whole countrysides, let alone solve the problem of immigration!

The remedy in the maritime provinces is not to be found along those lines. So far as the rural sections are concerned, I suggested, in a speech that I made in the house a month or so ago two or three things which I thought the government ought to try to do in the direction of developing foreign markets. I was paid the compliment of being very severely criticized by the Halifax Herald, a Conservative newspaper in Nova Scotia. This paper said that I was simply repeating old party shibboleths, without any regard to their applicability to the conditions actually in existence in the province. But in answer to that criticism I want to put on record a little evidence. In Nova Scotia it has been admitted for many years, by both Liberals and Conservatives, that one of our greatest needs is wider markets. I refer to the submission of the claims of Nova Scotia made by the Rhodes government to the Duncan commission. At page 167 I find this:

> It undoubtedly called for great sacrifice on the part of the farmers of this province to forego the advantage of the American market, as Nova Scotia is especially adapted to the production of vegetables, fruits and like perishable products which find a ready sale in the industrial centres of the New England states.

As a matter of fact, the Rhodes government has appointed a marketing representative to develop those New England markets in the person of Professor Cumming, the Secretary of Agriculture in Nova Scotia under the old Liberal government. The Liberal leader, Mr. Chisholm, made some criticism of Secretary Cumming being sent there on that mission, but the Halifax Herald, on February 18th, 1928, defending the appointment, had this to say:

> Mr. Chisholm explains that his complaint that the former Secretary for Agriculture had been "degraded to the position of a commercial traveller to Boston" was a slip of the tongue, as doubtless it was, though a somewhat unfortunate one.

[Mr. Ilsley.]

Our own view is that that is not the point at all. A lapsus linguae is no "hanging matter", even if it is a trifle embarrassing. But just why it should be suggested that Dr. Cumming has in any way been "degraded" is a little more than we can understand. Finding markets for the products of Nova Scotia farms and orchards and dairies is just about the most honourable and most useful work in which any man could engage.

This from the very paper which states that no wider markets are necessary! Now, as a matter of fact, the expansion of markets which I suggested was the Cuban market for potatoes and the German market for apples. Anyone who denies the value of those markets is simply ignorant of conditions existing in the business or is misrepresenting the facts. There is no doubt about the value of those markets among the people who themselves are actually engaged in the production of apples and potatoes.

Now, Mr. Speaker, I wish to deal briefly with a few of the attacks that have been made upon the budget, more particularly by the Conservative members from my own native province. I have always understood that a budget, while being a statement of the estimated revenues and expenditures for the ensuing year, is primarily a program of taxation. I know that the greatest budgets ever brought down in the British House of Commons, the budgets of Mr. Gladstone in the early sixties, were certainly programs of taxation which were designed to interfere as little as possible with the flow of trade in its natural channels. These budgets were succeeded by periods of great prosperity in England, in fact of greater prosperity than England had theretofore enjoyed. But the conception of a budget held by my hon. friends on the other side from the province of Nova Scotia is essentially and fundamentally different. They seem to think that it should contain something for themselves or their constituents. They say: What is there in it for us; what is there in it for this industry; what is there in it for this business? They seem to feel that the budget is a sort of Christmas tree and ought to be hung with prize packages and gifts for their constituencies. They seem to feel that the Minister of Finance is a sort of Santa Claus and if he does not stuff their stockings full of presents he is deserving of the very greatest censure from the Dominion. Now I think I am as sincerely desirous of seeing the province of Nova Scotia advance as anyone else, but I must differ emphatically from that fundamental conception of what a budget is. What do the Nova Scotia Conservatives suggest? I do submit that for the most part their suggestions are impracticable. We heard this

afternoon from the hon. member for Cumberland. How does that hon. gentleman propose to solve the coal problem in the province of Nova Scotia? He says he would solve it first by the imposition of a duty high enough to keep out eighteen or twenty million tons of American coal, but on second reflection he admitted that, the Dominion fuel board having stated that it would have to be a duty of about $6 a ton, that amount was not necessary to protect the mines of Nova Scotia. Apparently he wants protection only so far as Nova Scotia is concerned; he is interested in Nova Scotia alone. He also advocated a reduction in freight rates and, as he said, still more reductions. He advocated subventions and increased bonuses to the coking plants. He said that the coking plants should be compelled, probably by making it penal to disobey the statute, to use Nova Scotia coal. These are the remedies he suggests for the difficulties of the coal industry of Nova Scotia. I asked him whether that industry had not increased its output last year by a million tons and he admitted that it had, but he thought the increase should be greater still. Perhaps it should be, but my hon. friend has failed to put his finger upon the true trouble in the coal industry of Nova Scotia. That trouble is lack of winter employment; the trouble is seasonal unemployment in the industry. The thing to which the government should direct its attention is a solution for the problem of seasonal unemployment. The companies themselves asked for the coking plant legislation of last session and stated that it would be sufficient. I am hoping that the coking plant legislation will meet the problem because it is directed to the trouble there, and it seems to me idle for any member to stand up and ask for great subventions and bonuses and reductions in freight rates unless he is prepared to tell the house something about what these proposals would involve in the way of cost. I am sure I should not have the effrontery to demand all these things unless I could give at least an approximate estimate of what they would cost the people of the Dominion.

While on this question I want to correct my hon. friend in regard to two or three misstatements of fact—misstatements which I have no doubt were inadvertent. He wanted to know whether those of us on this side would favour the reciprocity pact in respect of coal and have coal admitted free into Canada as into the United States. The hon. member should know that this was not part of the reciprocity pact of 1911. That pact provided for a 45 cent per ton duty on coal other than slack entering the United States and Canada, the duty on slack being left exactly where it was at that time. My hon. friend also spent a great deal of time endeavouring to take credit to the Conservatives for the steel bounties. I am not greatly interested in these historic controversies as to which party deserves the credit, but since we are on the subject I may as well give the house two or three facts. The assistance which was given the coal industry prior to 1897 was infinitesimal and insignificant. In 1887 there were only 19,000 tons of steel produced in Nova Scotia; in 1896 only 32,000 tons. But by 1911 there were 390,000 tons produced in the province, showing that the assistance given the industry during that later period really amounted to something and was neither infinitesimal nor insignificant as it had been during the earlier period. My hon. friends are very ready to come to this government and declare that they must have this and that and the other. The hon. member for Queens-Lunenburg (Mr. Ernst) said that the banks of the Lahave river were being denuded of pulpwood and he asked what the government was going to do about it. What was the Minister of Finance going to do about this pulpwood which was being shipped to the United States? I would sugguest that the responsibility rests primarily not upon the shoulders of the Minister of Finance or of this government but upon the people of the hon. gentleman's constituency. They might do just as the people of my constituency did in a similar situation: they put their money up and built a pulp mill on the shores of the Avon river in the town of Hantsport, and that mill will handle the pulpwood produced there and prevent its going to the United States.

Mr. ERNST: Of what use would a pulp mill be when the timber tracts are owned by a United States corporation? I should like to know.

Mr. ILSLEY: As my hon. friend knows, one of his friends, Mr. Barnjum, on the eve of the election of 1925, promised to build one there.

Mr. ERNST: It is near realization, but not on the Lahave; it is on the Mersey.

Mr. ILSLEY: We at any rate built one in our constituency, and we did not do so in fulfilment of pre-election promises either.

Hon. gentlemen from Nova Scotia talk blue ruin in this house; they say that conditions are frightful. I would refer you, Mr. Speaker, to what my hon. friend from Queens-Lunenburg had to say the other day about the fishing industry. But in the province of

Nova Scotia they sing an entirely different song, and in order to explain the difference I want to give the house a little bit of political history in Nova Scotia in recent years. The question of secession has been brought up in this house two or three times, but in this debate it has been mentioned only by one hon. gentleman, the member for Queens-Lunenburg, who has gone out of his way to introduce it into the discussion. He says I intimated that he was a secessionist. I never intimated anything of the sort.

Mr. ERNST: Sectionalist.

Mr. ILSLEY: Is Hansard wrong?

Mr. ERNST: Yes, it is corrected in the revised Hansard.

Mr. ILSLEY: I am going by unrevised Hansard. The context, however, shows that my hon. friend must have had reference to secession, because he goes on to talk about the policy of the Halifax Chronicle and declares that secession never received support from members on his side of the house. What then was he talking about if not secession? But I am not particularly concerned about having the matter cleared up, although I think it is just as well to have the record straight. Let me say that there is not a member on this side of the house who has ever advocated secession in the province of Nova Scotia. But the same is not true of hon. gentlemen to the left of the Speaker. I would refer to that chapter in the history of the Conservative party in the province of Nova Scotia in the year 1923 with reference to this question. In that year the Conservative opposition in the Nova Scotia legislature sponsored and introduced a motion known as the Corning resolution, the last recital of which I wish to read:

> And whereas, Nova Scotia if an independent, self-governing British dominion, would be able to protect its farmers, fishermen and industrial workers through tariff measures and trade treaties, thus preserving its home markets and furnishing employment to its people and profitable investment for capital, and build up the enterprise and population of the province.
>
> Therefore resolved, that in the opinion of this house a vote of the electors of Nova Scotia should be taken by way of referendum for the purpose of ascertaining whether the people of this province favour its withdrawal from confederation and the reconstitution of Nova Scotia as an independent, self-governing British dominion.

Every Liberal member voted against that resolution; every Conservative member voted for it. And amongst the Conservative members who voted for the resolution, according to the Journals of the House of Assembly of Nova Scotia, at page 262—the vote was taken on April 20, 1923—I find the name of the same Mr. Macdonald who pounds his desk so vigorously on the other side of the house when he considers that hon. gentlemen opposite make a point.

Mr. ERNST: Will the hon. gentleman permit a question? On what did Mr. Fielding conduct his campaign in 1882?

Mr. ILSLEY: I am not talking about events at the time of confederation or twenty years after confederation; I am talking about what happened within the last five years in Nova Scotia. Now we come down a little later in the history of politics in that province, to the provincial election of 1925, and I want to tell the house this because it bears directly on the question of emigration and immigration. Early in 1925 we had a provincial election which was largely fought on the emigration question. Hon. E. N. Rhodes entered provincial politics in that year. The Conservative campaign was based on this, that the cause of the emigration from the province of Nova Scotia was the policy of the provincial Liberal government for the last forty-three years; in other words emigration was definitely taken out of the field of Dominion responsibility and made a provincial responsibility by the Conservative party at that time. They promised that if they were returned to power they would "bring the boys back;" that slogan was then coined by the Conservative party, and I can remember picking up issues of the Halifax Herald and reading those very touching full page advertisements. I remember particularly an advertisement which represented some travellers going along a New England highway. In the distance they heard strains of music; four men were singing:

> There's a long long trail a-winding,
> Into the land of my dreams;
> Where the nightingales are singing
> And a white moon beams.

Upon investigation they found that these four men were Nova Scotians, singing this song with sobs in their voices and tears in their eyes. When the travellers asked them, "If you love your native province so much, why do you not go back?" Their answer was that forty-three years of Liberal misrule had driven them away and made them exiles from their native land, and they had to wait for a change in government before going back. We have had the change of government in Nova Scotia, but Mr. Rhodes and his government have not brought back the boys.

If you want a testimonial as to conditions in the province of Nova Scotia just listen to

the blue ruin song we hear in this house. You do not hear that down in Nova Scotia, because the Rhodes government are trying in every way to convince the people that they have fulfilled even a one-hundredth part of their pre-election promises. They have discovered since assuming office that emigration is not a provincial responsibility, and since then they have sought to throw the onus back on the shoulders of the Dominion government. Consequently we have these members from Nova Scotia asking for all sorts of things entirely without regard to the financial burden which will be thrown upon the government, simply making it appear that the whole thing is a Dominion responsibility. I will admit that this government have some responsibility in these matters, and as a Liberal I am proud of the manner in which they are assuming that responsibility.

Let us consider the legislative program of last session. I know the hon. member for Inverness (Mr. Macdougall) said the other day that the Conservatives were responsible for that program, and again I am not going to argue very much about who is entitled to the credit; but let us keep the record straight. Every member of this house knows that that legislative program would not have been enacted and could not have received the support of the entire country as it did if it had not been based upon the findings of an independent, non-partisan, judicial commission of inquiry. I refer to the Duncan commission, and every member of this house knows that the Duncan commission would not have been appointed if the hon. member for Inverness and his associates had had their way. They are all on record, each one of them, as opposing the appointment of any kind of commission.

Mr. MACDOUGALL: My hon. friend says we are on record as opposing that commission.

Mr. ILSLEY: Is my hon. friend asking a question?

Mr. MACDOUGALL: I rise to a question of privilege. I desire to say that the hon. gentleman has misrepresented the case, although I do not say he has done it purposely. The stand we took was this—

Mr. SPEAKER: Order. There is no question of privilege.

Mr. ILSLEY: Mr. Speaker, their utterances are on Hansard; I gathered them together and placed them on Hansard myself in a speech which I made last year. All the hon. members were in the house at that time; the hon. member for South Cape Breton (Mr. MacDonald), the hon. member for Pictou (Mr. Cantley), and the junior member for Halifax (Mr. Quinn) among others. They all opposed the appointment of that commission, and yet the hon. member for Inverness seeks to take credit in this house for the findings which were made and for the legislative program based on those findings. The government appointed that commission in the teeth of the opposition of those hon. gentlemen and in the face of their derision and contempt, and the government are now trying to carry out and are carrying out those findings as rapidly as it is practicable to do so. Now it ill becomes hon. gentlemen opposite to come into this house and try to take credit for what the Mackenzie King government have attempted to do and are doing for the people of the maritime provinces.

Mr. MACDOUGALL: Would the hon. gentleman permit a question? Would he tell the house who submitted the evidence before that commission, upon which those findings were based?

Mr. ILSLEY: If I remember correctly several hundred witnesses were examined before that commission.

Now, Mr. Speaker, I have not very much more to say. I did intend, if I had time, to deal with another class of attackss upon the budget, particularly those made by the Progressive party. Their attacks, as the Minister of Justice (Mr. Lapointe) pointed out this afternoon, are diametrically opposed to those which have been made by the Conservative official opposition, but I think I will not go into that question to-night. It involves a discussion of the practicability and possibility of group government in this country; it involves a discussion as to the lines of cleavage between the parties; it involves the question of whether compromise is or is not a necessity of government in Canada, and I will reserve that for some future time.

In conclusion, Mr. Speaker, I can only say what follows from my remarks, that I shall certainly vote against these two amendments and in support of the resolution.

On motion of Mr. Bourassa the debate was adjourned.

On motion of Mr. Lapointe the house adjourned at 10.50 p.m.

56103—69

Wednesday, March 7, 1928

The house met at three o'clock.

WORLD ECONOMIC CONFERENCE AT GENEVA

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, I beg to lay on the table the report of the Canadian delegates to the world economic conference, May, 1927; also a copy of the final report of the same conference. I may say to my hon. friend from St. Lawrence-St. George (Mr. Cahan) that the delay in tabling the reports was caused by the translation of the documents into French. The French translation, unfortunately, was not ready until this morning. I move:

That five hundred copies in English and three hundred copies in French of the report of the Canadian delagates to the world economic conference, of May, 1927, be printed forthwith, and that standing order 64 be suspended in relation thereto.

Motion agreed to.

Mr. MACKENZIE KING moved:

That five hundred copies in English and three hundred copies in French of the final report of the world economic conference in Geneva, May, 1927, be printed forthwith, and that standing order 64 be suspended in relation thereto.

Motion agreed to.

NIAGARA GORGE BRIDGE COMPANY

Mr. F. WELLINGTON HAY (North Perth) moved that in accordance with the recommendation contained in the third report of the select standing committee on miscellaneous bills the fees and charges paid on Bill No. 25, to incorporate Niagara Gorge Bridge Company be refunded.

Mr. SPEAKER: I would ask the hon. gentleman if there has been a report tabled on this matter?

Mr. HAY: I could not say, Your Honour, as to that.

Mr. SPEAKER: I cannot accept the motion without a report. The motion will have to stand.

Motion stands.

LIVE STOCK AND LIVE STOCK PRODUCTS ACT AMENDMENT

Hon. W. R. MOTHERWELL (Minister of Agriculture) moved for leave to introduce Bill No. 61 to amend the Live Stock and Live Stock Products Act.

Mr. TOLMIE: Explain.

[Mr. Bourassa.]

Mr. MOTHERWELL: This bill has for its purpose the providing of a system of grading beef voluntarily, either for export or for home consumption.

Motion agreed to and bill read the first time.

VALIDATION OF ORDERS IN COUNCIL

Hon. CHARLES A. STEWART (Minister of the Interior) moved for leave to introduce Bill No. 62 relating to the submission to parliament of certain regulations and orders in council.

Mr. GUTHRIE: Explain.

Mr. STEWART (Edmonton): The object of this bill is to give validity to certain orders in council and regulations passed from the year 1906 onward to about 1915 or 1916, the omission being that these documents were not reported to the house as provided for by law.

MR. GUTHRIE: What kind of orders in council and regulations were they?

Mr. STEWART (Edmonton): They have reference to the Railway Belt Water Act, chap. 47 of the statutes of 1912, the Dominion Forestry Reserves and Parks Act, the Dominion Lands Act, the Rocky Mountains Park Act, and the Yukon Act.

Motion agreed to and bill read the first time.

QUESTIONS

(Questions answered orally are indicated by an asterisk).

PAYMENTS FOR PRIVATE CARS

Mr. WOODSWORTH:

1. During the past five years, what amounts have been paid to the C.P.R. and the C.N.R. respectively, for carrying special cars for: (a) cabinet ministers; (b) the Governor General; (c) official visitors?

2. In case of free service by the Canadian National, what would be the value of such service according to commercial rates, for each class mentioned above?

Mr. RINFRET:

Department of External Affairs:

1. (a) No information; (b) no information; (c) 1922-23, C.P.R., no amount paid, C.N.R., $1,148.95; 1923-24, no payments made either to C.P.R. or C.N.R.; 1924-25, no payments made either to C.P.R. or C.N.R.; 1925-26, no payments made either to C.P.R. or C.N.R.; 1926-27, No payments made either to C.P.R. or C.N.R.

2. No information in this department.

Privy Council department:

1. (c) Paid Canadian Pacific railway:

1927—Official visitors..	$ 2,465 94
Paid Canadian National railways:	
1925—Official visitors..	747 02
1927—Official visitors..	10,529 28
Total..	$13,742 24

2. No information.

Department of Railways and Canals:

1. (a) Nothing; (b) nothing; (c) nothing.

2. No separate record is kept of such movement by the railway management, and to take out this information would necessitate a special and particular search of all train service records of every division of the entire Canadian National system over a period of five years. This would take so much time, and cost so much money, that the management noes not consider it in the public interest to undertake the work.

Department Secretary of State:

1. (a) $2,145.30 (C.N.R.) upon the occasion of the reception and (b) installation of the Governor General in October, 1926; (c) none.

2. No information.

PRINCE EDWARD ISLAND—PAYMENTS FOR LEGAL SERVICES

Mr. MACDONALD (Kings):

1. What is the total amount by the various departments of the government for legal services, in the province of Prince Edward Island, during the calendar year 1927?

2. What are the names of the parties to whom said moneys were paid, the department making the payments and the nature of service rendered in each case?

Mr. RINFRET:

Department of Agriculture:

1. $89.40.

2. J. J. Johnston, $47.55—prosecuting on account of infraction of egg regulations; Geo. J. Tweedy, $41.85—services re search of title, etc., of Fitzgerald property.

Department of National Revenue:

1.

Customs and Excise Division..	$1,526 45
Income Tax division..	35 86
Total..	$1,562 31

2. S. S. Hessian, Montague, P.E.I.; Saunders & Campbell, Summerside, P.E.I.; G. S. Inman, Charlottetown, P.E.I.; A. C. Saunders, Summerside, P.E.I.; McKinnon & McNeill, Charlottetown, P.E.I.; N. McLeod, Summerside, P.E.I. Professional services in each case. Bell and Tanton, Summerside, P.E.I., for services in connection with collection of Income Taxes.

Department of Marine and Fisheries:

1 and 2. $20 paid to Heath Strong, K.C., re prosecution of Vernon Boyles for violation of fishery laws.

Department of Public Works:

1. $55.40.

2. G. S. Inman, Charlottetown, legal services re purchase of wharf property at Stanley Bridge, $42.05; Albert C. Saunders, Summerside, legal services re purchase of site for Kensington public building, $13.35.

Department of Immigration and Colonization:

1. Payments by the soldier settlement board to the extent of $105.45.

2. S. S. Hessian, $83.50; Stewart and Lewis, $21.95; both of which amounts were paid in connection wth the purchase of farms for settlers.

REPRESENTATION OF NOVA SCOTIA

On the question:

Mr. SMITH (Cumberland):

What steps, if any, have been taken by the government to give Nova Scotia its full representation in the House of Commons, as provided for under the terms of the British North America Act, which, according to the population of Quebec (excluding Abitibi) at the last Dominion census entitles us to fifteen members, while we were allotted only fourteen members under the last Redistribution Act?

Mr. SPEAKER: I think this question will have to be redrafted. According to standing order 44, first paragraph:

Questions may be placed on the order paper seeking information from the ministers of the crown relating to public affairs; and from other members relating to any bill, motion, or other public matter connected with the business of the house, in which such members may be concerned; but in putting any such question or in replying to the same no argument or opinion is to be offered, nor any facts stated, except as far as may be necessary to explain the same.

The hon. member will note that the question he offered is not in accordance with standing order 44 as it states an opinion. I would therefore ask him kindly to re-draft his question.

Mr. SMITH (Cumberland): I asked this question at a previous sitting on the orders of the day, and on the suggestion of the Prime Minister I put the question on the order paper.

Mr. SPEAKER: I am sure the hon. gentleman acted in perfect good faith, but he will see that the question being oral, it may be that the right hon. gentleman suggested that it should be put on the order paper. If the

hon. gentleman will kindly re-draft his question in accordance with rule 44, it will be answered.

Question dropped.

ALBERTA COAL LANDS

Mr. ADSHEAD:

How many acres of coal lands are there in the province of Alberta to which patents in fee simple have been issued?

Mr. STEWART (Edmonton): I think I have given the hon. gentleman the information requested and I would ask him to drop the question.

Mr. GUTHRIE: The rest of us want to know the answer.

Mr. STEWART (Edmonton): All right, I shall be glad to bring it down.

Question stands.

INDIAN SCHOOLS

Mr. HOCKEN:

1. Has the government bought, or agreed to buy, any industrial or boarding school used on behalf of Indians in the treaty, at or near or on any Indian reserve in the provinces of Saskatchewan, Alberta, or Manitoba?
2. If so, from whom, how much was paid for them, and when was the vote submitted to parliament?
3. Is the government now under any obligation to buy any more schools of this class, and from whom?
4. By whom was the price settled, and on what basis?
5. Were independent valuations made of them, and by whom?
6. At the time that these schools were built, did the persons or organizations building them have any authority from the department or Indians to establish or build such a school?

Mr. STEWART (Edmonton):

1. Yes.

2. Muscowequans Indian residential school at Lestock, Sask., from the Oblate Fathers: $55,000: session 1923.

Round Lake Indian residential school at Stockholm, Sask., from the Presbyterian Church and Rev. H. MacKay: $23,000: session 1923.

Pine Creek Indian residential school at Camperville, Man., from the Oblate Fathers: $89,000: session 1924.

Cowessess Indian residential school at Marieval, Sask., from the Oblate Fathers: $70,000: session 1925.

3. No.

4. By the department and the church authorities, after valuation.

5. Yes—

Muscowequans—R. W. Caswell, Saskatoon, Sask.

[Mr. Speaker.]

Round Lake—L. Thomson, Wolseley, Sask.

Pine Creek—F. C. Hamilton, Winnipeg, Man.

Cowessess—S. O. Holden, Indian Head, Sask.

6. Yes.

RADIO—NEW BRUNSWICK LICENSES

Mr. HANSON:

1. How many persons residing in New Brunswick have been fined during the year ending February 20, 1928, for not having a radio license?
2. How many informations have been laid against residents of New Brunswick during the same period for the said offence?
3. How many of said informations have been withdrawn?
4. How many informations for the same offence during the said period have been laid against residents of the county of Madawaska?
5. How many convictions have been recorded against residents of the county of Madawaska during said period?
6. How many informations against residents of the county of Madawaska have been withdrawn during the said period?
7. If any such have been withdrawn, on whose representations?
8. Were any representations made by any member of the provincial legislature?
9. If so, by whom?

Mr. CARDIN:

1. 21.
2. 42.
3. 21
4. 21.
5. Nil.
6. 21.
7. Prosecutions were withdrawn after it had been established that persons had applied for licenses and were unable to obtain them owing to the fact that the person selling licenses at Edmundston did not at the time have a supply of license forms on hand.
8. Not to the Department of Marine and Fisheries.
9. Answered by No. 8.

PRINCE RUPERT RANGE FINDING FACILITIES

Mr. BRADY:

1. Has any complaints been made to the Minister of Marine and Fisheries or to any official of the government on behalf of several masters of vessels carrying grain from port of Prince Rupert to Europe who complained of having suffered inconvenience and loss of time through the services of a range finding station not being available close to the port of Prince Rupert?
2. Has the Department of Marine and Fisheries been requested to establish such range finding station?
3. If so, is it the intention of the minister to accede to the request?

Mr. CARDIN:

1. Yes (by the Prince Rupert board of trade).

2. Yes.

3. There is already a radio station established and working on Digby island, at the entrance to Prince Rupert harbour, for communication with vessels entering and leaving Prince Rupert.

ARMISTICE DAY

Mr. BARBER:

In view of the request of the Canadian Legion, is it the intention of the government to declare November 11 (Armistice day), a national holiday?

Mr. MACKENZIE KING: The matter is under consideration.

MALONECK POSTMASTERSHIP

Mr. CAMPBELL:

1. What were the reasons for the dismissal of Mr. W. S. Jones from the position of postmaster at Maloneck, Saskatchewan?

2. On whose recommendation was this dismissal made?

Mr. VENIOT:

1. Mr. Jones was dismissed in order to place post office in its former location, which was more suitable.

2. When change of location was made the present postmistress was recommended by a number of residents whose request was forwarded through Mr. George McPhee, M.P.

TRANSLATION—FRENCH SPEECHES

Mr. CAMPBELL:

Why was the speech of the honourable member for Laprairie-Napierville (Mr. Lanctôt) delivered in this house on April 11 last not translated into English and sent out to subscribers of the unrevised Hansard in accordance with the resolution passed by this house March 9, 1921?

Mr. SPEAKER: The resolution of March 9, 1921, directs that speeches delivered in the French language be translated and printed on the Monday following delivery. The speech of the hon. member for Laprairie-Napierville (Mr. Lanctôt) was delivered on April 11, 1927, and translated, but prorogation intervening on Thursday, April 14, no issue of Hansard appeared on the following Monday The translation does appear in the revised edition of the Official Report of Debates.

SMITHERS POSTMASTERSHIP

Mr. BRADY:

1. Who is the present postmaster in Smithers, British Columbia?

2. When was he appointed?

3. What is his salary?

4. What was the revenue from said post office during year ending 1927?

Mr. VENIOT:

1. J. M. Adams.

2. 15th June, 1917.

3. Total remuneration, including commissions and allowances for current year is approximately $2,250.

4. Revenue for year ended 31st March, 1927, was $4,329.46.

HOUSE OF COMMONS STAFF

Mr. BOUCHARD:

1. What are the names of the returned soldiers employed on the permanent staff of the House of Commons?

2. What are their present occupations?

3. How many male and female employees are there on the temporary staff of the House of Commons?

Mr. SPEAKER:

1. Lt. Col. H. W. Bowie, Sergeant-at-Arms; Maurice Ollivier, Joint Law Clerk; Marcel Gabard, Editor of French Debates; Lt. Col. R. Girard, Debates Translator; P. M. Bernard, Debates Translator; J. P. Chevrier, Debates Translator; H. Vallières, Debates Translator; H. A. Charbonneau, Assistant Chief Messenger; Andrew Fairnie, Messenger.

2. Answered by No. 1.

3. 155 male; 178 female.

QUESTION PASSED AS ORDER FOR RETURN

MCCONACHIE CASE

Mr. ROSS (Kingston):

1. For what reasons was the McConachie child refused admission to Canada at the port of Halifax?

2. What officer recommended the rejection of the above mentioned child?

3. When was the father of this child admitted to Canada?

4. At what port did he enter?

5. How has he been employed since his admission to Canada?

6. What medical officer examined this child in the old country previous to sailing for Canada?

UNOPPOSED MOTIONS FOR PAPERS

VICTORY HOSIERY MILLS, REGISTERED

Mr. MORIN (St. Hyacinthe):

For a copy of all correspondence, telegrams, communications, and other documents on file in the Department of National Revenue, concerning a claim for drawback on a consignment of wool imported from Great Britain by Victory Hosiery Mills, Registered, of St. Hyacinthe.

OIL REGULATIONS

Mr. GARLAND (Bow River):

For a copy of all orders in council passed during the last seven years which deal with oil regulations.

UNITED STATES EMPLOYMENT SITUATION

On the orders of the day:

Mr. A. L. BEAUBIEN (Provencher): I desire to ask a question based on the following despatch from New York which appeared in the morning edition of the Ottawa Citizen:

Police to-day quelled a disturbance by five hundred men and boys who stormed the twelfth floor offices of a downtown concern in answer to newspaper advertisement for a sixteen dollar a week job.

Will the Minister of Immigration and Colonization (Mr. Forke) be kind enough to ask his officials at the border to notify any Canadians, who intend going to the United States after hearing this debate, of the terrible unemployment situation in that country?

Mr. SPEAKER: The hon. gentleman should give notice of his question.

LOUISBURG WIRELESS STATION

On the orders of the day:

Mr. WILLIAM DUFF (Antigonish-Guysborough): In view of the fact that Nova Scotia fishing vessels are now being equipped with radio receiving sets, and further in view of the fact that the main portion of the fleet will sail next week, is it the intention of the government to open the Louisburg station immediately to broadcast weather reports and other news, and if so, when?

Hon. P. J. A. CARDIN (Minister of Marine and Fisheries): That broadcasting station has not yet been opened because we have not received the equipment. We did not buy the equipment because no information had come to us that the fishermen were ready to instal receiving sets on their vessels. But lately representations have been made by the fishermen that they are ready to instal receiving sets on their vessels. We have therefore ordered the necessary equipment for that station, and as soon as that equipment is received and installed we will start broadcasting weather conditions from that station.

REPARATIONS COMMISSION

On the orders of the day:

Mr. J. A. CLARK (Vancouver-Burrard): Will the Secretary of State kindly lay on the table the report of the reparations commission?

Hon. FERNAND RINFRET (Secretary of State): I hope to be able to do so very soon.

[Mr. E. J. Garland.]

THE BUDGET

DEBATE ON ANNUAL FINANCIAL STATEMENT OF MINISTER OF FINANCE

The house resumed from Tuesday March 6 consideration of the motion of Hon. J. A. Robb (Minister of Finance), that Mr. Speaker do now leave the chair for the house to go into committee of ways and means, the proposed amendment thereto of Mr. Cahan and the amendment to the amendment of Mr. Fansher (East Lambton).

Mr. HENRI BOURASSA (Labelle): Mr. Speaker, I deprecate the idea of prolonging for a single moment this long protracted debate. At the same time, in justice to the people who are kind enough to have some degree of confidence in me, whether they reside in my constituency or elsewhere, I feel bound to explain the vote which I am going to give at the end of this debate. I propose to vote, first, for the subamendment presented by the hon. member for East Lambton (Mr. Fansher), second, against the amendment presented by my excellent friend the hon. member for St. Lawrence-St. George (Mr. Cahan)—

Some hon. MEMBERS: Hear, hear.

Mr. BOURASSA: I am glad to hear for once the good old Tory party applaud anything I say. Third, I propose to vote for the motion of the Minister of Finance (Mr. Robb), and I propose to do this in the very spirit that has been evinced by members sitting in this corner of the house, the Progressives. I wish to co-operate, first, with the groups with which I feel myself more in sympathy, namely, the Progressive group and the Labour group, not because I agree with everything they propound, but because it seems to me that they are playing in our political life, especially with regard to economic and social matters, a very useful role from which members of both parties, or even men wandering in no man's land as I am, can derive some benefit. Then I propose, in the same spirit of co-operation, to help the Liberal party rather than the Tory party as at present constituted; and in this latter form of co-operation, which I propose to give as long as matters and parties stand as they are at present, I propose to co-operate with liberal-minded Liberals to counteract the influence of Tory-minded Liberals who sit to my left. What has brought me into trouble once in a while in the past with the good old Liberal party, was precisely the penetration in the minds of several members of that party of some of the Tory heresies. My dear old

friend, Sir Wilfrid Laurier, used to say: "Never mind all the harm that Bourassa is doing to our party. There is one thing I am sure of—he will never be a Tory." I cannot bring my mind to the point, which I am afraid my excellent friend the hon. member for Peace River (Mr. Kennedy), is on the verge of reaching, that if you find something wrong with some people, you must ally yourself with people in whom you find no right at all. I cannot see any logic in that, and as between the two parties as at present constituted and inspired, I intend to stand for the lesser evil of the two.

With regard to the budget, I am not so much interested in it, if at all, as being the legal machinery for squeezing money out of the people's pockets and spending it to the advantage or disadvantage of the country, but rather in its possible and probable effects upon the various currents of social and economic life of the nation.

It seems to me—at least my little study of history has convinced me of this—that what has made British policy and British administration, especially under the broad-minded influences of such men as Bright, Cobden and Gladstone, was that they were not so much concerned with getting and spending the people's money as with attending to the needs of all classes of the people while carrying on their duty as administrators of public funds.

Let us take first the taxation system, and first of all the tariff. I speak quite freely on this matter because I have never professed to be a free-trader on principle. I well remember the time when, at my first election, I refused to endorse the program of my party one article of which was to wipe out every vestige of protection; not that I believed in protection, but I did not think it was then possible to effect an economic revolution by a stroke of the pen. I could not bring my mind to the point of promising to the people something which I considered could not be done. But with the passing of time I have come to the conclusion that protection as an economic policy, and the levying of customs duties as the principal means of filling up the treasury of the country, are unsound and contrary to the true social interests of the people. My objection to protection grows from year to year as I see its results, and first with regard to the self-consciousness of the population. Most people in our country, or in any other country afflicted with a high tariff, do not realize the amount of money which they pay either into the public treasury, or still worse, into the private purses of the protected industries.

Second, holding the views I have as to the social requirements of every country, and especially of a young country like ours, in need of a large and growing population adapted to its conditions, I consider that every form of taxation which strikes primarily at the family, and particularly the large family, is the worst form of taxation. The levying of customs duties and the payment of indirect taxation is precisely that portion of our taxation which is most heavily borne by large families, and the most ignored by the very people who pay most of it.

Then with regard to industry itself, the tendency—I will not say in every case, or in every country, or with every industry—but the general tendency of a protective policy is to make the manufacturer who plants his industry, and makes it grow under the protection of an artificial instrument, sluggardly and backward in his process of manufacturing. Of course, our friends on the other side of the house, British as they are, but so thoroughly Yankee in their mentality, always quote as an example the great republic to the south; but they forget that American industry, American manufacturers and American distributors of articles manufactured under a highly protective tariff, sell those goods in an open and free market of one hundred and twenty million consumers, whilst in Canada, on the contrary, so long as our consuming population remains what it is, the tendency of our manufacturers is to give to the consuming public their products more or less as they come, without much care as to the process by which they are manufactured. It is sufficient to have travelled several times in foreign countries to find out that several articles that are produced by our manufacturers do not come up in workmanship and finish to the standard of goods manufactured either in low-tariff countries like England or in high-tariff countries like Germany.

Another objection I have to the maintenance of the protective policy in Canada is precisely one which appeals most, it appears, to the Minister of Trade and Commerce (Mr. Malcolm), to whose very able speech I listened with much interest. May I say by way of parenthesis that the minister, so far as my humble self is concerned, has done something which rarely happens in our parliament? He has changed a vote in this house; he persuaded me to vote for the amendment of the hon. member for East Lambton (Mr. Fansher). I cannot bring myself to the point of enthusiasm which the hon. gentleman has developed for protection that not only helps in developing the natural resources of Canada but helps also in the creation and maintenance in Canada of artificial industries, the products of which are

imposed upon our people at higher prices than they are worth, simply because of the maintenance of a tariff policy which has been denounced for twenty-five years at least by the party to which I belonged for a number of years, and with which I wish to co-operate, but in the hope that they will gradually abandon their tariff policy to come nearer the Liberal policy that we advocated together.

Strange to say, in the recital which the hon. gentleman gave of these magnificent artificial industries prospering under our tariff, he mentioned, if I remember aright, the cotton industry. Of course, no cotton will ever be grown on the soil of Canada. He also mentioned the rubber industry. But strange to say, he made no mention of the woollen industry. While having no principles on these matters, being somewhat in the same state of mind as my good friend and neighbour (Mr. Neill)—who is not here at the moment, but whose speech of yesterday I have read with much interest—I think that if some protection is needed it should be especially for those industries which make or could make use of Canadian products. With regard to the woollen industry I agree largely with the argument that was presented to us by the hon. member for South Waterloo (Mr. Edwards) a few days ago. But I would make any protection granted to the woollen industry in this country conditional upon their making use of Canadian wool, and that protection should not cover that part of their industry which uses imported foreign wool.

Likewise with regard to sugar, I would be in favour of some form of protection being given to the sugar industry, provided the sugar refiners were forced or induced to make use of beets grown on Canadian soil, rather than sugar cane grown in Cuba or in other islands in the south. It is in that manner that France, Germany and Belgium have built up a magnificent natural industry which helps the beet grower, the manufacturer of sugar and the public also, and has freed those countries from the monopoly exercised for many years by the sugar cane growers of America.

Mention has been made in this debate about encouraging the building of pulp and paper mills to manufacture our pulpwood. Well, taking the situation generally in Canada, from the little knowledge I have of it—and I have some knowledge because the constituency I represent is one of the large suppliers of pulpwood—I think we have all the large industries in this regard that the paper consuming market will be able to stand, not just now, but a few years hence. Every informed man, every man interested in the making and trading of paper, realizes that, thanks to the rivalry of those two or three great trusts that are dividing between themselves the wood of our forests and our water powers, we are approaching a crisis in the industry. Therefore, I do not say, let us encourage the building of more paper mills; I say, rather, let us look after the small individual, the small taxpayer, let us give a chance to the settlers, to the owners of small forest reserves, thousands of whom are still endeavouring to carry on in the forest lands or in the colonization parts of New Brunswick, of Quebec, of Ontario, but who find no market for the by-products of their wood. After studying the investigations that have been made during the last thirty years I sincerely believe that Canada, and especially the three provinces just mentioned, is every year losing millions of dollars worth of wood, which is simply being allowed to rot on the ground because there is no other industry yet created or encouraged in Canada but the saw mill, the pulp mill or the paper mill; and these do not make use of such by-products.

Just a few days ago I met a young enterprising chap living in my constituency who, having cut wood for others for several years, decided to do something for himself. He went to Europe and visited the various countries where they make the fullest use of all kinds of wood. He bought the necessary machinery for the purpose he had in view, instruments for the transformation of the by-products of wood, and returned to Canada. In due time that machinery reached this side, and he was charged something like 35 per cent duty. I claim, sir, that this is not an intelligent policy. We should give every encouragement to the small industrialist to make use of the by-products, which are nothing to the large concerns, but which mean much to the farmer, to the settler, to the small jobber—as we call him in Quebec and Ontario—and thus help the development of local industries of which we have so much need.

And here comes my fifth objection to the protectionist policy as it has been applied by all governments and parties in this country during the last fifty years. It has not only created an unbalanced industry, but it has gradually deprived various portions of our provinces of the small industries which were centres of social and economic life and concentrated those industries in the large manufacturing cities of Ontario and Quebec. Here my opinion is supported, as far as the maritime provinces are concerned, not by a rabid free trader, not by any exponent of the old theories of British and Canadian Liberalism

—at least in our party conventions of the past—but by one of the most distinguished members of the Tory party, a man who held a portfolio in the Unionist government, Mr. McCurdy. Time and time again he has made some very striking arguments against the application of the so-called national policy, going to the length of stating that it had ruined the maritime provinces, that it had deprived those provinces of their legitimate economic development and transferred their industries to the great manufacturing centres of Ontario and Quebec.

Not only does this policy work towards the concentration of industry, it also works towards a concentration of wealth. Sir, I do not think I am a pessimist. In spite of my white hair I have kept a good deal of the optimism of youth, but I really consider with a pang of fear the apparent aloofness with which most of our public men, our publicists, our leaders of thought, regard or disregard that tremendous growth of industrialism, I will not say supported, but handicapped by those atrocious processes of over-capitalization which now are practically putting the whole of Canada in the hands of a few trusts. The men in control of those trusts not only hold the strings of the public and private purse, but at the same time they are creating an artificial wealth, a fraudulent wealth, a wealth which does not arise from labour, which does not arise from the mental exertions of men, but which is simply created by a fraudulent abuse of law and public confidence in such a manner that for an industry which demands, let us say, $20,000,000 in capitalization, $60,000,000 worth of paper will be issued. Of this, some $20,000,000 will be distributed to the gamblers on the stock exchange or others who will pay ready cash for paper which is worth nothing, and another third will be distributed among the swindlers as common shares, and the public will have to make good the dividends upon that so-called capitalization, which is nothing but a steal at the expense both of Canada and its citizens.

Then if to these instances, which may be common to us and to other countries, you couple the fact that day by day a larger proportion of the natural resources of those industries, national in their scope, and a large proportion of that wealth, real or fictitious, legitimate or fraudulent, is passing from the hands of Canadians into the hands of foreigners, and especially of Americans, I say it is high time that those men who cry out—some sincerely, others for electoral consumption—Wave the flag! God save the king!—it is high time, I repeat, for them to say: Let us save Canada for Canadians. Let us not encourage foreign financiers and their political tools by handing over to them the inheritance of generations of Canadians, a national inheritance that it is our duty to transmit to our descendants; let us not have it sold to a handful of American speculators who come here, pick up associates among politicians of all parties, purchase the goodwill and the advertisement columns of the newspapers of this country, and are gradually preparing the economic absorption of Canada by the great country to the south of us. Any man who has any knowledge of human nature or of history should be aware that no country situated as Canada is, alongside a country constituted as the United States, has ever been able to resist political annexation and national absorption once it had allowed all the sources of its economic life to pass into the hands of the masters of finance, the masters of policy and the masters of industry of the larger country. This is a further reason why I am in full sympathy with the small membership of the Labour group, a group which is not numerous but which enunciates and propounds some ideas that, while perhaps not agreeable to you or to me, have been courageously and consistently expressed. That group, I say, has had the courage consistently to demonstrate that by losing sight of these factors of economic life we are running the risk of a danger which possibly we may realize when it is too late to meet it.

Another objection I have to the maintenance of the protective system as applied to a country like ours is its effect upon the masses of the people. No one who has given even a little time to a consideration of the conditions under which the labouring masses have worked for centuries can help a feeling of pain in comparing the situation of thousands and hundreds of thousands of men and women labouring in this year of our Lord 1928, under a so-called democratic system of government, with the conditions under which labourers and artisans of the twelfth and thirteenth centuries existed. Then, in the small local organization, the common labourer served a hard apprenticeship; nevertheless he lived a family life with his patron. He learned all the essentials of his craft and from an apprentice he grew to be a companion. After he had acquired a knowledge of all the intricacies of his work, he made his chef d'œuvre and took rank among the masters of his art or craft. To-day hundreds of thousands of our economic slaves toil away in large industries in which they are nothing more and nothing less than annexes to the piece of machinery in conjunction with which they work. Take a shoe factory,

for example. In the province of Quebec there are thousands of men and women working in these factories; one will operate this machine and another that machine; they will concentrate their attention upon this or that part of a pair of shoes. But not one of them can make a pair of shoes. And the same is true of all other large industries; this is the condition of modern industrialism. This is the condition which has been brought about by the conjunction of a highly protectionist or industrializing policy with the state of things introduced by the replacement of small craft by large industry.

Now I offer a word in regard to our population problem, and in this connection I express my belief with the utmost sincerity and without any desire of offending my Conservative friends. But taking conditions as I know them, especially in the province of Quebec, having lived as I have done for half a century alternately in the city and in the country, I thoroughly believe that the over-industrialization of Ontario and Quebec, the concentration, as I have described it, of industries in a few large centres, has done more to uproot our rural population from the land, transplanting them first into these industrial centres and then directing them on to the United States. I do not believe that an upward revision of our tariff would remedy the plague of emigration to the United States, with which we have had to cope in the past and which is so serious at the present time. Not only would such an upward revision of the tariff not solve the problem, but I really believe that if we want to keep our population at home, if we want to preserve as much as we can the ethnical, the moral, the intellectual and the economic integrity of this country, we should endeavour, not to imitate our American neighbours but on the contrary to make it quite clear to our people and to every other people on earth that, while entertaining sentiments of friendship with our neighbours, we have pride enough and confidence enough in the geniality of our Canadians, in that splendid combination of French and English traditions, to create in Canada an entity which, while perhaps comparatively small in numbers, will develop harmoniously. To this end, I say, our fiscal policy must not be a weak replica of that of the United States, nor on the other hand must it be a servile imitation of the British policy; it must be a Canadian policy inspired by a thorough knowledge of Canadian conditions and adapted to the needs of the Canadian people. If we do this we shall come to the same conclusion at which my Progressive friends have arrived, perhaps from a somewhat selfish point of view

[Mr. Bourassa.]

—because we are all more or less moved by self-interest. The hon. member for Wetaskiwin (Mr. Irvine) was candid enough to express this in the magnificent speech he delivered the other day. At any rate, if these selfish views coincide with the interests of Canada, why refuse to accept them because they happen to be put forward by a group which is neither Liberal nor Conservative? Why should not this great party welcome such ideas, thus demonstrating that it is broad enough to propound a true national policy comprising the best ideas that may be obtained, from whatever source they come?

If we want to develop Canada economically on a solid basis, our attention must be directed primarily to rural problems and to the maintenance of our population on the farms. We must create such living conditions as will render the farmers of Canada, east and west, to whatever race they belong and whatever language they speak, a happier people. We must make Canada a happier place to live in than the United States. Some manufacturers may cry out, some financiers who like to speculate, not so much in industry as in the incorporation of companies and the amalgamation of trusts; and they may purchase some complacent papers to denounce your policy. But if you stick to it with courage and intelligence, you will reap, in the hearts and minds and finally in the votes of sound thinking Canadians, a compensation far greater than you will need to offset such contempt as you may receive at the hands of sharks who have no object in view save to enrich themselves with the assistance of this party or that group—and even with my own help if they could get it.

For all these reasons, therefore, I support the subamendment. I support it because it expresses the desire for a prompter and more adequate reduction in the tariff. And for the same reason I am unable to support the amendment though it was presented by a very dear friend of mine. I read the hon. gentleman's speech with a great deal of interest, as I read all his deliverances. But while reading it I could not help recalling the time, many years ago, when I was still interested in sports. His speech, coupled with the motion at the end, appeared to me as the strenuous exertions of a stout football player endeavouring to kick a soap bubble. In that gassy motion the word "protection" does not appear. But knowing, as I have known for thirty years, the good old Tory party, I am sure that if the nigger is not in front of the wood pile he is behind it, if not in it; and I am afraid that until the wood pile is burned down and until the nigger gets

what he deserves—that is to say, until he is hanged to the nearest cherry tree—I cannot trust either the nigger, or the wood pile, or even my excellent friends, among them the hon. member for St. Lawrence-St. George (Mr. Cahan), who usually stands in front of the pile because he, at least, is open-minded and open-mouthed.

But there is one point upon which I would like to repeat the warning I took the liberty of giving my Progressive friends a year or two ago. Holding the views they do with regard to protection, and being more sanguine than I am of doing away with the tariff as soon as possible, how is it that they still cling to their old shibboleth of an increased British preference? In the budget this year we find a measure similar to that adopted by the government of Australia; on all goods imported under the so-called British preference it is stipulated that they must contain material or labour of the country of their supposed origin to the extent of 50 per cent of their value. I advocated the introduction of some such measure last year, or the year before; and this is one of the reasons why I am going to support the budget. I will not enlarge upon that however, beyond saying this: Do not my friends realize that by adhering to the British preference they are playing into the hands of the arch-pontiffs of protection in Canada, England and the world over? Do they not realize that this is the great hope of that handful of men who have inherited the glorious though disputed memory of the great Joseph Chamberlain, the most outstanding of whom at present is that imperial visitor whom we had the honour of receiving some weeks ago? I refer to Mr. Amery, who has been going around the world advocating the policy to which these gentlemen appear to be attached. Do not my friends realize that the reasons why the English protectionists stick to that policy and do all they can to coax and flatter the dominions into its adoption and maintenance, is because therein lies their only hope of ever bringing the British people to the support of protection, which the British nation rejected in disgust under the clear-sighted guidance of Cobden and Bright, whose memory, still cherished by the true English Liberal, is openly cursed or disdained by the English protectionist?

There is something more than that. Mention has been made, I think by the hon. member for Southeast Grey (Miss Macphail) and by my friend the Minister of Justice (Mr. Lapointe), to the attitude taken by the economic conference at Geneva with regard to the tariff question. May I inform the house that I had the great advantage of being in London before the program presented to the Geneva conference was given to the press. I met the gentleman who prepared that program, whose name is of course well known as one of the noted economists of the day, not only in the British Empire but throughout the world. Sir George Paish was kind enough to give me an advance copy of that program as well as copies of the answers received from the representatives of the largest financial institutions in the various countries of Europe. In reading over that correspondence I was struck with the objection raised by the French and the Italians.

My friend the Minister of Justice was unfortunate enough to quote a German; before the war the word of a German would have gone a long way with the Tories, because the Tories in this country as well as in England were the greatest admirers of everything German. Since the war, however, they have changed, in their expressions at least, although I do not know of any single Tory in Canada or in England refusing to deal with a German when there is a good bargain to be made.

The Italians and the French, however, were the first to raise an objection, and they made in effect this answer to Sir George Paish: "As long as in any of the contracting parties at Geneva, or between them and some of their political associates such as Great Britain and the dominions, a system of imperial or national preference is maintained, it is useless to talk of a tariff reduction the world over". This is quite obvious. Foreign nations do not want to be trapped in this regard into anything similar to the so-called truce policy launched by Mr. Winston Churchill in naval matters, before the war, when on the one hand he offered Germany a truce in ship building and on the other, by secret correspondence with the dominion governments, encouraged the construction of those ships which the British government pledged themselves not to build. So long as we maintain the principle that as between British and foreign nations we disregard the law of free trade or freer trade, so long will it be impossible to bring the foreigner to agree with us on a general, world-wide reduction of tariffs.

Now, sir, passing to the other items of taxation under these proposals, I will content myself by saying briefly that I approve in a general way of the reductions made by the Minister of Finance, with some few objections. I have already told the house the injustices which occur under the sales tax, by which some small manufacturers, operating

in small centres for the benefit of the farmers who surround them, are placed at a disadvantage. Of course they will benefit by these reductions, but once more in all friendship I ask the Minister of Finance to try to see his way clear to exempt entirely from the imposition of that tax those small manufacturers who make use of the by-products of wood, for example, to help the farmers in the surrounding country. Surely they are not such serious rivals to the great lumber industries or the pulp industries, which are capitalized at millions of dollars, that they cannot be left free of that tax.

From the same social point of view I approve of the further reduction in income tax in favour of families having to support invalid dependents, and I hope this means an exemption of $500 for each invalid supported by the father.

Mr. SPEAKER: Time is up.

Mr. BOURASSA: Is it? I am glad, for your sake and for my hon. friends.

Some hon. MEMBERS: Oh, oh.

Mr. BOURASSA: And I especially thank hon. members of the opposition for the great applause they have given a speech which may help them reconsider some of their views.

Mr. W. G. McQUARRIE (New Westminster): Mr. Speaker, it is with some degree of regret that I rise to take part in this debate, and I do so because of a certain peculiar circumstance. It is not a pleasant experience to be asked to resign one's seat in this house, and particularly is that so when, as in my case, I have had the honour to represent a splendid constituency for over ten years and have been successful in four general elections. Nevertheless, this is a contingency which I may have to face.

There are some comforting features of the problem, however, which I may also mention. First, the suggestion does not come from any of my own constituents; again, I am not the only member involved, because all the members representing British Columbia constituencies are in the same position, and in the third place the suggestion is not due to any sins of commission or of omission on my part, but results from the failure of this government to take effective action in a matter which is deemed by the people of British Columbia to be of vital importance.

I have come to the conclusion that I should take this house into my confidence. A short time ago I received a communication from an organization in British Columbia, the United Farmers of Canada, British Columbia section, which is stated to be 100 per cent farmer and 100 per cent co-operative. This communication is dated at Sayward, Vancouver island, 11th February, 1928, and is addressed to the hon. the Premier, hon. ministers of the crown, and members of the legislature of British Columbia, now in session at Victoria, B.C. It reads as follows:

Gentlemen:

Whereas, the legislature of this province has for many years expressed itself as being in favour of the total exclusion of orientals; and where as the legislature is supposed to represent the views of the people; and whereas, by the recent statements of the Hon. A. M. Manson, attorney general of this province, oriental penetration is more menacing at the present time than at any other period in the history of British Columbia; and whereas federal members who represent the electors of this province in the House of Commons at Ottawa, have moved for an exclusion act to apply to orientals; and whereas the Hon. Mackenzie King, Premier of Canada, and hon. leader of the Liberal party, has expressed himself as being against the passing of an exclusion act, we, the British Columbia section of the United Farmers of Canada, hereby request that the Hon. Dr. MacLean, Premier of British Columbia and leader of the government now in power in British Columbia, do move at the present sitting of the house, and that Mr. R. H. Pooley, house leader of the Conservative party, do second the following motion:

"That it is the opinion of the legislature now in session, that in the interest of this province, it is necessary to forcibly draw the attention of the people of Canada to the seriousness of oriental penetration into the social and business life of British Columbia, and to show to the federal government in Ottawa, that British Columbia is determined to have enacted an exclusion law; and also to give the electors of this province an opportunity to express themselves on this important issue; that the present legislature recommends and requests all federal members representing British Columbia at Ottawa, to immediately resign their seats as members of parliament and return to the people for re-election on the excluison act issue."

Now, Mr. Speaker, had it not been necessary to reply immediately to this communication I might have taken the oportunity of conferring with you as to the proper answer I should make, but owing to the fact that my speaking in this debate has been delayed I had to acknowledge the communication without consulting with you. I did so on February 22, and said this:

I beg to acknowledge receipt of your circular letter of the 11th instant, for which I thank you. As I see it, the idea behind the suggested resolution set out in your circular is that to show to the federal government at Ottawa that British Columbia is determined to have enacted an exclusion law, the legislature of the province of British Columbia should recommend and request all federal members representing British Columbia at Ottawa, to immediately resign their seats as members of parliament and return to the people for re-election on the exclusion act.

With all due deference to the enthusiasm and bona fides of your members, it seems to me that your proposal should be reconsidered,

as I am afraid it would be impossible to gain anything for the cause of oriental exclusion by taking the course you suggest. As a matter of fact, twelve of the fourteen members representing British Columbia are Conservatives, and are pledged to support oriental exclusion. The only other two members are the Hon. Dr. J. H. King and Mr. Neill; the latter has come out very many times in favour of exclusion, and it seems to me you should direct your attention to the Hon. Dr. J. H. King and ask for his resignation. It might be possible to hold a contest such as you suggest in Dr. King's constituency, as he, of course, supports the Prime Minister who says openly that he is not in favour of exclusion.

I would be pleased to have further advices from you in this matter.

Now the hon. Minister of Health and Soldiers' Civil Re-establishment, speaking on March 1 in this debate, had something to say on oriental exclusion, and I think he tried to give the house the impression that the people of British Columbia were very well satisfied with the action which had been taken by this government in connection with orientals. He referred to our Winnipeg convention, and said it was a dandy convention. Well, so it was a splendid convention. It was attended by some fifteen or sixteen hundred delegates from all over Canada, and at some of the meetings there was an attendance of over five thousand people. It was a splendid convention, a very enthusiastic convention, and a very satisfactory one in many ways, particularly in the selection of a leader of whom we are all proud. The hon. minister (Mr. King, Kootenay) said on the occasion referred to:

I have only to refer to the resolution passed by that convention with reference to oriental immigration which was sponsored by the Conservative members from British Columbia.

I can tell the hon. minister, who of course was not present at the convention, that the resolution in question was sponsored by more than the members from British Columbia. The question of immigration was referred to a committee consisting of some eighty men and women representing all the different parts of Canada, and this resolution was brought in by them. If I remember correctly its adoption was moved by the Attorney General of New Brunswick. It was supported, as I say, almost generally in the convention. Only one voice was raised against it, that of Sir George Foster, that staunch Canadian statesman, who for many years has been one of the leading figures in our history, and for whom we have all the greatest respect. Sir George Foster did not object to the idea of keeping out the orientals but he did object to the use of the word "exclusion."

Mr. MACKENZIE KING: That is my objection too.

Mr. McQUARRIE: The Prime Minister says that is his objection. Well, so far as that goes I do not know that anything objectionable will be found in the resolution itself. I have a copy of it here.

Mr. KING (Kootenay): The resolution seeks to prevent people from coming into the country.

Mr. McQUARRIE: If the minister will control himself for a few moments I will read part of this resolution. I am not going to read it all because there are some eight items altogether and only one deals with the matter we are discussing now. This is how it runs:

Whereas, the present Dominion government's immigration and colonization policy has proved a failure both as to its plan of admission, distribution and administration—

I suppose the minister will agree to that.

Therefore resolved, that Canada adopt an aggressive system of immigration based upon the selective principle and with that end in view efforts be directed to . . . .

8. Oriental exclusion.

Now there is nothing in that resolution which says that any measure which may be brought in should be labelled "exclusion law." It is not so at all.

Mr. MACKENZIE KING: May I ask my hon. friend if he agreed with the interpretation he is now putting on the resolution?

Mr. McQUARRIE: Certainly.

Mr. MACKENZIE KING: That is as far as he wishes to go, is it?

Mr. McQUARRIE: Certainly.

Mr. MACKENZIE KING: Then we are not very far apart.

Mr. CLARK: What other interpretation could they put on it?

Mr. McQUARRIE: That has always been our interpretation.

Mr. MACKENZIE KING: Then we are not very far apart.

Mr. McQUARRIE: Perhaps the Prime Minister will not agree with me later on. It seems to me that we are quite a distance apart. All we are contending for in British Columbia is that orientals should be kept out of our country. We do not care whether you call this exclusion or prohibition or anything at all, so long as they are kept out, and this resolution goes only so far as to say that efforts should be directed towards oriental exclusion, which means keeping them out. On May 8, 1922, this house had a full dress

debate on the question of oriental exclusion, and through the kindness and consideration of the Prime Minister a whole day and a whole evening were devoted to that question. I am not going to deal exhaustively with what was said on our side or what was said by the Prime Minister and his supporters. Anyone who is interested can look up the debate of May 8, 1922, and read the discussion for himself. But what happened on that occasion was that every Conservative member who was in this chamber at the time voted in favour of my resolution, which was one calling for oriental exclusion. The government introduced an amendment which called for effective restriction, and that was passed. The house was willing to give the government an opportunity of carrying out some measures of effective restriction. How has that satisfied the people of British Columbia? How has it worked out? The Minister of Soldiers' Civil Re-establishment (Mr. King) also said:

> I make that reference because there never has been an election in British Columbia since 1900, provincial or federal, during which the Conservative party have advocated a white British Columbia.

Mr. KING (Kootenay): Will my hon. friend read on?

Mr. McQUARRIE: That is what my hon. friend says. I am not going to read his whole speech, but I take issue with the minister and I say that in no election, Dominion or provincial, since 1900 or even prior to that time, has any Conservative candidate ever advocated any other policy than that of a white British Columbia.

Mr. KING (Kootenay): But my hon. friend fails to tell the house they advocate that when they are in opposition, but when they are in power they do not act and they have done nothing to bring about exclusion.

Mr. McQUARRIE: We have not been in power for some time.

Mr. KING (Kootenay): The Conservative party was in power for a long time.

Mr. McQUARRIE: When I first came into this house the condition I found was that the people of the east were not entirely familiar with the situation which existed in British Columbia. I found that Conservative members as well as Liberal members for British Columbia had been endeavouring to impress upon the house the seriousness of the situation which then existed. I think the minister will agree that it was necessary for British Columbia members to do a considerable amount of missionary work and they did that to the best of their ability. When I first came into this house at the time of the Union government, some other questions of importance were taking up the attention of the government.

Mr. KING (Kootenay): What about the period from 1911 to 1914?

Mr. McQUARRIE: Perhaps the minister has forgotten about it, but at that time a war was in progress and I do not think the minister would suggest that, during a war such as we had on our hands then, it would have been good policy for any member from British Columbia to get up in this house and move an exclusion resolution.

Mr. KING (Kootenay): If the hon. member will read my speech he will see that I made that exception, and I suggested that between 1911 and 1914 and between 1918 and 1921 the hon. member's party had an opportunity of doing something.

Mr. McQUARRIE: I do not believe in going back into the past. I do not think any more credit is due in the past to the Conservative party in the Dominion house than to the Liberal party in reference to this question, and I do not think so far as that goes, you can find any Liberal member from British Columbia—except the minister himself who, of course, is in a very peculiar position—who is not in favour of exclusion of orientals. I have no doubt when the minister gets out on the hustings he tells the people of my province that he is in favour of a white British Columbia.

Mr. KING (Kootenay): My action will always be that followed consistently by the Liberal party. They have always been progressive.

Mr. McQUARRIE: What has happened? The orientals, particularly the Japanese, have been coming into British Columbia and they have been increasing at such a rate that the oriental question is the livest issue in the politics of that province. I find in a return, which was brought down at the request of the hon. member for Comox-Alberni (Mr. Neill) that in 1927 there were ninety-four Chinese admitted into Canada under permit, and of these forty entered as actors and actresses, four as missionaries and three as teachers. Thirty-five of the ninety-four have already left the country. In the same year, 493 Japanese entered Canada, of whom 118 were adult males, 277 adult females and 98 children. So we see they are still coming in, although the Prime Minister has stated that there are already too many orientals in British Columbia.

The Attorney General of British Columbia has been very active in regard to this oriental question. I have read in the press that discussions are going on from time to time in the provincial legislature in reference to this subject, and I have in my hand the Vancouver Daily Province of Thursday, March 1, 1928, which makes this statement—I am not going to read it all, but I will give the house a short extract. The article is dated at Victoria, March 1, and reads:

Members of the legislature, without regard to party, were invited by Attorney General Manson, Wednesday, to meet him informally and draft a resolution appealing to the parliament of Canada to halt oriental penetration into British Columbia.

To halt it, if you like:

This unexpected invitation, following the commencement of debate on the whole oriental situation, which interpreted as the government's answer to Conservative demands for oriental exclusion and the abrogation of the Canadian-Japanese treaty. What attitude the government will take in the framing of a non-political resolution on the oriental problem was not indicated definitely by the attorney general, but in a carefully-worded speech he urged the house not to embarrass the Canadian government and the British government in dealing with Asiatic peoples. He would propose a resolution, he said, which would seek to avoid any offence to the sensibilities of oriental nations, at the same time protecting the rights of British Columbia.

This sudden new turn was given to the oriental debate after C. F. Davie, Conservative of Cowichan-Newcastle, had moved his resolution calling for the abrogation of the Japanese treaty, and after W. F. Kennedy, Conservative of North Okanagan, had moved as an addition to this proposal, that the house favour the total exclusion of Asiatics from Canada.

It appears from statements that have been made in this debate that the situation in British Columbia has become most acute inasmuch as the orientals are getting into all lines of industry; they are going on to the farms and into the factories; their merchants are taking locations on the leading business streets in all the large cities and towns in British Columbia; they are entering into every walk of life in our country, and more than that, in British Columbia at the present time, according to Mr. Davie, out of every five adult males in the province one is an oriental. And still they are allowed to continue to come in. The attorney general has, as I say, been very active. He is asking for exclusion. The British Columbia legislature time after time has asked for exclusion and has also asked for the abrogation of the treaty between Great Britain and Japan which I think is known as the treaty of Commerce and Industry, which was entered into in 1911 and ratified by this house in 1913. The attorney general brought up the matter at the Dominion-provincial conference which was held in Ottawa last fall, and according to the press of British Columbia, Mr. Manson pleaded for action by the Dominion government. I have here the report of that conference. Mr. Manson says that he made the representatives present at that conference sit up and take notice, that they were not aware of the real conditions until they had heard his speech. He says:

They expressed their astonishment when I told them that whereas the increase of our own children attending school in the last three years was only six per cent, the increase of Japanese children attending was seventy-four per cent in the same period. I told them that the time was coming when British Columbia would be nothing more than a British-Oriental community, and that they must expect the yellow races to cross the rockies and invade the provinces in the east as they had done on the coast. It is no use dealing with this problem by stabbing at it with resolutions; what we want is a solution on broad national lines!

In the report of the conference issued by this government I find a reference to the same subject, at page 37, as follows:

Mr. Manson dealt briefly with the oriental problem from the standpoint of his province and of the Dominion. He advised consideration of this by the federal government.

I find in the provincial report of the conference, published in the British Columbia Public Service Bulletin, a reference to the same subject. At page 163 it says:

A great many matters affecting this province were discussed at the interprovincial conference, or taken up with the federal ministers by Hon. Dr. MacLean and Hon. A. M. Manson, Attorney General, who accompanied him to Ottawa, including the need for firm action in regard to prohibition of oriental immigration.

I do not see much difference between prohibition and exclusion. It seems to me a very strange thing indeed that this government will not pay any attention to the representations which it receives from the government of the province of British Columbia, and it is also very strange that the Minister of Soldiers' Civil Re-establishment would give this house to understand that the people of British Columbia are satisfied with present conditions.

Mr. KING (Kootenay): I have never said so.

Mr. McQUARRIE: There is another strange anomaly to which I would call attention, and that is the attitude of the attorney general of British Columbia, a strong man of the Liberal party, in regard to oriental immigration. The other day in the Supreme Court of Canada, through his counsel, Mr.

W. E. Williams, he contested the authority of the government in any way to restrict the issuance of licenses to orientals. The Minister of Soldiers' Civil Re-establishment may not be aware of that. He takes credit to this government for having done something in regard to the curtailment of the issuance of fishing licenses to orientals. I give them that credit also, but I would at the same time say that it was my privilege to move the resolution which resulted in the curtailment of such licenses. Licenses have been cut down very materially. There was a time when the orientals controlled the fisheries of British Columbia—absolutely controlled them—but now, owing to the action which has been taken, the orientals are not getting as many licenses as they would like to have, and the number of orientals in the industry has been materially reduced. What will happen if the contention of the attorney general of British Columbia is correct? It will mean that the regulations which have been passed are bad. It will mean that any oriental in British Columbia who is a British subject, and desires to do so, may obtain a license to fish. I have here extracts from the factum of Mr. Williams, counsel for the province of British Columbia.

Dealing first with the right to receive a license to fish, he said:

> It is submitted that all subjects of the king, resident in Canada, have the right to fish in tidal waters.

He goes on to cite the authorities, and then proceeds:

> It is not yet quite clear that the capacity in parliament to regulate fisheries enables parliament in the case of tidal water fisheries (where the right is a public right) to abrogate the right.

And again the authorities are cited.

Mr. STIRLING: Who is Mr. Williams?

Mr. McQUARRIE: I believe he is a law partner of the attorney general.

Mr. KING (Kootenay): Was.

Mr. McQUARRIE: I notice in the last Vancouver telephone directory the name of the firm Williams, Manson & Gonzales. However, I accept the statement of the minister that Mr. Williams is no longer the law partner of the attorney general, and in any event I do not comment upon that at all. He continues:

> If parliament is "the competent legislature" to abrogate the public right of fishing, by first abrogating the right parliament could then confer a discretion upon the minister to refuse a license to fish, because the public would then have no rights in the matter beyond what parliament saw fit to give.

[Mr. McQuarrie.]

This course has not been adopted. The public right of fishing has not been abrogated. The right exists, and no discretion has been reposed in the minister to refuse a license to fish.

And he quotes section 45 of the Fisheries Act. He goes on:

> It is submitted that all the regulations submitted in question 3 are ultra vires of section 45 of the Fisheries Act. Subsection (e) does not enable the minister to refuse a license where the right to fish exists. There is a duty upon the minister to issue the license to any applicant who has a right to fish.

So I say it seems to me that there is something wrong in the attitude both of the provincial government and the Dominion government in regard to oriental matters, because on the one hand we have the Dominion government refusing to keep out orientals, and on the other we have the provincial government ready to give orientals the right to fish in Canadian waters.

Now, Mr. Speaker, I wish to assure you that the attitude of the people of British Columbia towards orientals is not based upon any racial dislike or any failure to appreciate their good qualities, and when your honour goes to Tokyo as the first Canadian ambassador—for such is the rumour—I hope you will represent to the government and people of Japan that we have a great admiration for their nationals—provided of course they stay in their own country. I might mention other rumours that are circulating. We have heard, for instance, that the Minister of Justice (Mr. Lapointe) is to go to the supreme court bench; we have heard that the Solicitor General (Mr. Cannon) is to become Minister of Justice; we have heard that the Minister of Agriculture (Mr. Motherwell) will consent to go to one place only—the Senate, and we have heard that the Minister of Immigration (Mr. Forke) is to go back to the farm. But to return to the oriental question. It is demanding the attention of students and scholars from one end of Canada to the other. Only the other day I read with considerable interest the report of a speech made by Sir Arthur Currie, president of McGill university. While he takes issue with the Conservative party on the use of the word "exclusion," yet all his arguments point conclusively to the necessity for an exclusion law. He said:

> For the sake of the past and for the sake of the future, we are the people who must be the judges of the kind of civilization we hope to perpetuate in this land of ours.

I have under my hand a letter from Dean Brock of the university of British Columbia. Recently he attended a meeting of scientists in Japan at the invitation of the Japanese

government. To him was assigned the duty of speaking on the oriental question from the standpoint of Canada, and he told the conference very frankly the position which we take. Later on I heard him speak on this subject at a meeting of the Kiwanis Club in Vancouver, and I asked him if he would kindly give me a letter explaining exactly the Japanese stand in this regard. He wrote me under date of November 30, 1927. I cannot read the whole letter, but I will give the house those parts which are pertinent to the question:

The Japanese who attended the conference now recognize, and I think it may be taken for granted that their government will recognize—

1. That we have perfectly justified and satisfactory reasons for not wanting immigrants from Japan, and that these reasons are no reflection upon the honour of Japan or the qualities of the Japanese.

Recognizing the validity of these arguments, the leader of the Japanese in the discussion of this question, told me that they were very glad to have had this frank discussion; that they had not understood; that they now not only understood, but understood sympathetically, and that under similar circumstances the Japanese would take a similar position.

2. They recognize that emigration to America is no solution of their overpopulation problem, so there is no compelling reason for Japan to be interested in such emigration.

3. They have no desire for their nationals to go to a country where they are not wanted.

I would call the attention of the Prime Minister particularly to the fourth paragraph:

4. They have no objection to stopping emigration completely, if we want that.

Now, I ask, why has not the Prime Minister been able to make an agreement with Japan to stop absolutely the emigration of their nationals to Canada? Dean Brock says that if the Japanese were in the same position they would do exactly what we want done. That is borne out by an article that I read the other day in the Literary Digest for February 11, 1928. It is headed, "The Cry of 'Asia for the Asiatics'", and this paragraph will no doubt interest hon. members:

Domination of the orient by European and American forces is the reason given for the frequent raising of the cry: "Asia for the Asiatics", and it appears that the endeavour to unite the various peoples in Asia in a league to combat foreign influence reveals itself every so often in a Pan-Asiatic Congress. One such is recorded in the Calcutta Amrita Bazar Patrika as being held at Nantao, a suburb of Shanghai, and it is claimed that these meetings were attended by representatives from all Asiatic countries with the exception of the Philippines and Indo-China. Mr. Imasatu, who presided at the sessions, is said to have been "trained in the school of the late Count Okuma, whose life-long slogan was 'Asia for the Asiatics.'"

And the article sets out the resolutions which were passed at the conference, including the following:

With a view to serve humanity, the conference recommends that Asia, the cradle of religions, should send out religious missions to Europe, America, Africa, Australia, and other countries to convert the people. The conference, recommends unity among Asiatic nations, so that they, by mutual co-operation, may defend themselves against imperial aggression.

With a view to improving the conditions of the Asiatic nations, the conference recommends better commercial relations among the different nations of Asia.

Now, if we went to Japan we would not be allowed the same privileges that the Japanese enjoy in this country. In passing, may I say that there seems to be no good reason in the world why we should have an exclusion law against the Chinese, of which the Minister of Soldiers' Civil Re-establishment is so proud, when we are afraid to pass a similar law against the Japanese.

Mr. AIME LANGLOIS (Chambly-Verchères) (Translation): Mr. Speaker, I wish to add my congratulations to those already conveyed to the government for the excellent results of their administration as expressed in the budget proposals of the hon. Minister of Finance (Mr. Robb).

He apprises us of the great improvement realized in the economic situation of our national railways, of an important decrease in the country's debt, and of an appreciable reduction of the burden of taxes weighing on the Canadian ratepayers.

These results, clearly proved by statistics, have often been referred to in the house, during the course of this debate, so that I deem it useless to mention them again.

I am not far from the truth in stating that public opinion, generally speaking, is satisfied, and, I think that I am quite in order when submitting as evidence the approval of the Liberal press and a few Conservative newspapers, as for instance, the Ottawa Journal, the Gazette and the Montreal Star.

It is true that in connection with the reduction of taxation, our friends in the opposition delight in recalling that these taxes had been levied by the Liberals themselves. They, however, forget intentionally to mention that conditions in the country rendered these taxes necessary when the Liberals were recalled to power at the beginning of 1922. The last year of the Meighen administration, which comprised but nine months of the fiscal year, was liquidated by a deficit of more than $80,000,000. The previous year, the Meighen administration left a deficit of more than $90,000,000 to be

looked after. It was therefore evident that unless we allowed the deficits to accumulate, and destroy the confidence and credit of the country, we had to balance the budget and put in order a bad situation which had not been created by the Liberals.

It is therefore only fair to give due credit to the government for the relief given to tax payers by the lightening of their burden of taxes.

We must equally give it due credit for having dissipated forever the whisper of death which certain newspapers contended was hovering over the country.

During the last few years, each time the budget was brought down—the opposition foresaw the ruin of trade, industry and agriculture, because of the Liberal policy. It is interesting to compare these forecasts made in the house, especially during the course of the last two sessions, with the results which followed. It is a fact, Mr. Speaker, as mentioned in the budget speech, "that the annual statements, within the last years, of the leaders in finance and industry have revealed a great progress and a genuine prosperity in the country." The statistics in regard to our trade are most satisfactory. Our exports add up to more than a billion dollars, and our farming products are included in this for a very substantial amount. The figures showing our favourable balance of trade, compared to those of our population, place us in the front rank among the nations of the world. On the whole, our industries are also in an advantageous situation, and the daily reports of transactions on the stock exchange show up their steady progress.

The Canadian dollar, which for a time had depreciated to one-sixth and even one-fifth of its par value, has recovered its full purchasing power. Our trade treaties, which are often the object of attacks against the government, have nevertheless found for our products advantageous markets. It is a satisfaction to know that we have sold to the countries with which we have trade treaties for $79,000,000 more than we have purchased from them.

Not being able to deny the advantages of our economic situation, those who are trying to take away all merit from the government attribute the improvement to the intervention of Providence. Perhaps, they might become sceptical if, owing to this intervention and taking them at their word, we were to proclaim it a miracle.

The same scepticism haunts them, when conditions are less favourable. They then think no more of Providence but of the government, which, to their eyes is the cause of all evils.

The truth is that if the government may bear a certain responsibility when conditions are bad, it must also be given due credit when conditions are good.

An attempt is also made to prove that everything is decidedly wrong, by stating that poverty reigns among the people. It was said, very long ago, by a supreme authority: "You will always have poor people among you." All the nations of the world have verified the truth of this prophecy, and we do not escape the common lot. But when the great American nation and its wealth are constantly pointed out to us as an example, it is well to recall that in that country also, notwithstanding her policy of high protection, the majority of the people do not know what wealth is, that a considerable number of people there have difficulty in meeting their obligations, that the condition of the farmer is not so favourable as that of the Canadian farmer, and that poverty is known there as elsewhere. It is interesting to read on this subject the article "Wages and Prosperity" which appeared in the Canadian Congress Journal of February, page 17. Those who intend to go and live in the United States would do well to read this article before crossing the border.

As a whole, we have reason to be satisfied with general conditions, and to have faith in the future: our banks are sound; those who are in a position to give employment, are willing to give work, and each day we witness new enterprises springing up.

It would be proper at this time to express the wish that our great financiers, our wealthy manufacturers—induced by the eloquent remarks just made by the hon. member for Labelle (Mr. Bourassa)—improve and raise the lot of the labourer. Our tariff is harmful to no enterprise. Our manufacturers can meet competition on the home market, and they compete advantageously on foreign markets. Our organizations are thus more sound and have a better chance of developing than if their success depended solely on government protection. In fact, owing to our small population, our home market is rather restricted. We produce more than we can consume, so that we need outside markets. I am opposed to the solution which consists in opening wider the gates of our country to immigration, under the plea of developing our home market. In this century of intensive production, the increase of our population will always be exceeded by production, and the same problems will remain unsolved.

It would, perhaps, be better to restrict immigration somewhat, at least for the time being, and close the doors of this country to labourers who come to Canadian cities to replace our workmen. This restriction should last until the need of labour is felt. Of course, I am in favour of the policy which tends to open up our virgin lands; it would be wise in this regard to grant Canadians and our people living in the United States, who wish to take up new lands and make their home in Canada, the same advantages we afford to immigrants coming from Europe. What we must demand of our immigrants is that they be sound physically and morally: quality is more important than quantity. This restriction would have the effect of decreasing our emigration to the neighbouring republic, as Canadians would then have a better opportunity of making a living here.

If we placed any faith in the speeches of the opposition, we might, if we ignored history, be led to believe that the emigration of our people began under the present administration because the tariff had not been sufficiently increased. I was recently reading a pamphlet in which the author asserted that from 1880 to 1890, under the regime of the national policy of Sir John Macdonald, Canada had lost, through emigration to the United States, more than 850,000 people, and that, during the ten years of the Borden-Meighen administration, the floods of emigration had carried away 750,000 people; and that these figures had increased owing to the war, as stated yesterday by the hon. member for Beauharnois (Mr. Raymond).

When in 1919 this question was brought up in the house, the government then in power was not in a position to assure us that it had healed this wound by a high tariff, and through one of its ministers it gave this answer:

"Emigration to the United States is the result of the rapid expansion of industry and trade in the neighbouring republic and also of the numerous opportunities offered to youth to go into trade and business."

I can see there one of the reasons of the emigration of our people; I shall further add that the attraction of the American republic is increased by the fact that it is an independent nation, respectful of the freedom of its citizens, and animated by an ardent patriotism.

Canadian emigration started previous to the establishment of responsible government; the cause can be traced to the hardship of life and the lack of freedom in our country. It is therefore not proven that the protection vaunted by the Conservatives has been a sure remedy against emigration, or that the lowering of a few tariff duties by the Liberals has been one of the causes. The fiery speeches on emigration, far from bettering the situation, have but the effect of aggravating it,

In the past, politics has too easily had recourse to the art of dividing in order to govern. Our racial contentions have prevented the growth of a Canadian spirit and weakened the ties which kept our people here. At the least reverse people prepared to leave this country where the respect due to every one was ignored, where one could not live happily.

It is more than time to definitely abandon this narrow path, where too long we have lingered. At this stage, it gives me infinite pleasure to warmly thank the present administration for having carried on the Liberal work of 1896, and for having contributed in a large measure to bringing about good feeling in this country, to fostering Canadian patriotism by further asserting the autonomy of this country, by obtaining for Canada as a nation a distinct representation at the League of Nations, and by inaugurating our diplomatic representation in other countries.

Rather than sing the praise of the neighbouring country, let us celebrate ours; let us rejoice at our economic progress and let us try to emphasize it by sound legislation and the co-operation of our Scientific Research Council, which we should compose of our ablest minds, and to which we could confide the task of discovering the possibilities of success in the various spheres of life, thus facilitating the formation of new and Canadian enterprises for the general expansion and particularly rational development of our natural resources and industries connected with agriculture.

Let us not lend a deaf ear to the recriminations constantly coming from all parts of the country against the burden of taxation which weighs on us. These recriminations, while reminding us of errors of the past, implicitly tell us that more and more our policy must rest on the exclusive interests of our country.

Mr. Speaker, a state is not only a system composed of material interests; it must moreover possess a background of common thoughts. This background of common thoughts, I would wish it to be inspired by the love of Canada and consideration for the freedom and morality of the citizen and regard for his character and personality.

On that score, I am thankful to the government for what it has accomplished in the past

and I have faith in what it can do in the future; and that is why I willingly give it my support.

Mr. M. J. MALONEY (South Renfrew): I have listened for some weeks to numerous hon. gentlemen in this house discussing, with great eloquence and wonderful intelligence, the possibilities of our country. I have heard with patience, but more often with pleasure, several of my hon. friends, each with his own tale to tell, with regard to conditions as they affect the different portions of our Dominion. And I have come to the conclusion that Canada is indeed a difficult country to govern and that under ordinary circumstances the government of the day deserves commiseration rather than condemnation. If this government had really shown any effort to ameliorate conditions as they affect injuriously the great masses of our population, I for one at least should feel that it deserved our pity rather than our censure. But unfortunately one cannot sympathize with this government because—I at any rate am forced to this conclusion—it is not entitled to the pity of any citizen of the Dominion of Canada.

It is true a budget was presented to this house some weeks ago; it is true that the Minister of Finance (Mr. Robb) in presenting that budget spoke in millions. Nothing was too small for the minister in dealing with the finances of the country, and in a half apologetic way he claimed prosperity for Canada. Those of us, however, who sit face to face with the Minister of Finance, and who saw that far-away look on his face, were struck by the fact that he was looking out beyond the financial institutions of Canada, which institutions he invoked to prove his argument that Canada was prosperous. He was looking beyond the large banks and insurance companies and other financial corporations in the Dominion, looking out among the common people. He was looking to the labourers, the farmers and the merchants of Canada and the rest of the other 95 per cent of the people who make up the population and who are not benefited by this budget. For these he had no cure. He would say to the farmer, to the labourer, to the miner, to the merchant, "Look at the prosperous condition of our great banks." But these other people are not interested in this prosperity; what interests the labourer in this country is the answer to this question: "Where am I going to get a day's work with a decent day's pay?" The farmer is not interested in the millions of dollars the insurance companies and the banks are wringing out of the people of this country; he wants to know where he is going to get the money to pay the interest on the mortgage on his farm. The answer of the minister to all these men would be, "Gentlemen, I have no hope of bettering your condition financially. The only advice I have to offer you is to work; keep on working; work hard; save; be thrifty, and do not spend a dollar on the pleasures of life. In that way you will drag along all right." That is his answer to the 95 per cent of our population who are not affected beneficially by this budget. Go into the street in any section of this Dominion of Canada and talk to the average citizen, wherever you meet him. As I have said, he is not interested in the prosperity of the banks and our other big institutions; he wants to know where he is going to get work and what pay he can get for that work. Go to the miner; he is not interested in this prosperity. He would ask the Minister of Finance, "What have you done to protect the industry which is supporting myself and my family?" The minister could only answer, "I have done nothing. I advise you to work; keep on working and do not spend a cent." This is a sad picture, but it is true.

There is one thing about this budget; it has not been boomed as have recent budgets presented by this government, for the simple reason that it is a shifting budget, one which wobbles and states nothing definitely. It shows the wavering attitude of the government; it shows their fear and demonstrates that they have not the courage to grapple with the tremendous problems which confront the people of this country to-day. The minister claims that during the last four years his government have reduced the debt of Canada by $100,000,000, but he knows that during that same period our railway obligations amounted to much more than that sum, and he knows full well that those railway obligations are a black mark against the credit of Canada just as surely as any victory bond outstanding to-day.

The minister claims that this year he will reduce taxation to the extent of $19,000,000, but in an earlier paragraph in his budget speech he comes out boldly and tells the people of Canada that he expects to squeeze $10,500,000 more out of them this year than he did last year. This is the reduction in taxation. From whom is he going to squeeze this $10,500,000? Is he going to take it from those best able to pay? Is it going to come from the rich men of this country, from those drawing salaries or having incomes of $4,000, $5,000, $6,000, $8,000, or $100,000 a year? No; he knows very well that these are men of influence. Any man drawing a salary of

from $5,000 to $20,000 a year is usually a man of considerable influence in his own locality; the minister realizes that that influence may be required some day on behalf of himself or his associates, and he feels that he should get in strong with those men at present. He does so to the extent of reducing their burden by 10 per cent, so far as the income tax is concerned; he removes 10 per cent from the tax of the man who is able to pay it and shoves that additional burden on the shoulders of the man who is earning $2 a day and struggling to support his family.

The government claim to have reduced the sales tax, and they have reduced it. They have brought it back to where they found it in 1922, but in that very reduction they have again penalized the poor man as compared with the rich man. The hon. member for East Essex (Mr. Odette), in his speech a few days ago truly said that by virtue of this reduction of one per cent in the sales tax a man buying an automobile valued at $1,000 saved a ten dollar bill. That is quite true, but the hon. member forgot to bring joy to the heart of the labourer, the man earning $2 or $2.50 a day and endeavouring to support his family on that huge salary, by telling him that the next time he bought a pair of shoes for his little boy at a cost of $2 he would save two cents. If this man forgot to be thrifty for a while and became reckless enough to purchase a $5 suit of clothes for his little boy, he would save five cents. That is the reduction in the sales tax. If we must have a sales tax, Mr. Speaker, and if it is the desire of this government to maintain that tax, why not exempt boots and shoes and articles of wearing apparel? Such things as automobiles are not necessities of life; for the immense majority of the citizens of this country an automobile is a luxury, but clothing is an absolute essential. If this government are anxious to aid those who are feeling the pinch to-day they could do so very easily by removing the sales tax altogether from articles of wearing apparel, but I have no hope that this government will do so.

I am sure the trade conditions of this country are causing the government of the day some anxiety; trade figures are not quite so pleasant to read as they were a few years ago. The Minister of Finance told us the other day that in the first nine months of the present fiscal year our exports decreased by $28,000,000, and to make matters worse we were informed that our imports had increased by $56,000,000. If this continues the day is coming when Canada will be buying more than she sells, and we all know what happens to any man who spends more than he earns. That is the position in which Canada will some day find herself. I ask why such a condition should be present in this country, where we have tremendous natural resources which are capable of supplying not only our own needs but the requirements of foreign countries as well. Why should we be required to import goods which we can produce here in Canada?—it is an unfortunate thing that a large percentage of the importations into Canada are agricultural products and other foodstuffs. I do not attribute that at all to the Minister of Trade and Commerce. I believe him to be a most competent man, a sincere man, a man who is making every effort for the benefit of Canada, but he is hampered by those with whom he is associated. I believe that if the minister could act in accordance with the promptings of his own mind he would introduce a fiscal system in Canada which would abolish the condition of which I spoke a moment ago. He would bring in a fiscal system which would mean stability for our industries throughout Canada from the Atlantic to the Pacific. To-day he has protectionists on one side of him and anti-protectionists on the other, while in front of him are those who are neither protectionists nor anti-protectionists. Therefore he is hampered in his acts, and the only policy he can evolve to-day is one which contains a free trade wink for the west and a protectionist nod for the great province of Quebec.

It is true that our balance of trade is still on the right side to the extent of some millions of dollars, but it is unfortunate that that favourable balance of trade is created by virtue of the fact that we are exporting our raw materials. It is a deplorable thing that we are shipping out of Canada to be manufactured in foreign countries raw products, which should be turned into finished articles in this Dominion. Why should we allow our products to leave Canada in a raw state? We have citizens who are as intelligent as the citizens of any other land. We have artisans who are as expert and ingenious as those of any other country. Why is it then that we can not convert these raw materials into completely finished products in our own country? Some will say it is due to lack of capital. But in this country there are millions and millions of dollars lying idle, and outside of Canada there are billions of dollars awaiting a favourable opportunity for investment. Why can we not secure this money for the development of the resources of Canada? There is one reason, and one reason

only, and it is that the investor is afraid of the government we have. We have an unstable government, we have a group government, we have a government that will afford no protection of any kind to the man who is prepared to invest his money in developing our natural resources.

The tariff changes in the budget are insignificant, and I shall deal briefly with only one item, that which affects the woollen industry. I proclaim boldly that by the reduction of the duty on yarns coming into Canada, the Minister of Finance and the government are ruining the sheep growing industry in this country. Not only are they doing that but they are putting the spinning industry out of business. Furthermore, the weaving industry, an industry supposed to be benefited by this item in the tariff, will eventually be injured, because there is nothing in the wide world to prevent any private citizen supplied with yarn emanating from sweatshops in foreign countries from setting up a little plant of his own in opposition to an established Canadian industry. So even the industry referred to will eventually be injured by this tariff change. The county of Renfrew, part of which I have the honour to represent here, is admirably adapted to the growing of sheep, and the farmers of that section were hoping, as the years went by, to engage more actively in that industry. To-day the growing of wool, a most important operation, has been effectively killed by this government, and it passes my comprehension how any farmer in this house, no matter what his political affiliations may be, can stand up and defend the lowering of the duty on wool coming into Canada. This is a matter which the farmers of Canada, from one end of the country to the other, will watch very closely indeed. In addition to the wool grower and the spinning industry, there are other industries identified with the manufacture of wool. Despite what has been said by hon. gentlemen opposite to the effect that the industry has not been injuriously affected by any tariff changes, I wish to say that in the Ottawa valley at least five woollen factories have been closed down. The closing down of these five factories is undoubtedly due to tariff changes which have been brought into effect from time to time by the present administration.

All the departments of government have been under review during the last few weeks. The Post Office department has received special attention from several speakers who have preceded me, and it is in connection with some of the officers of that great department that I should like to speak for a moment. Reference has been made to post-

masters. They are an outstanding body of men, usually leaders in their own community, who are appointed because of their honesty and probity. These men—apart from those in the cities and larger towns—draw their salaries, as hon. gentlemen know, by way of commission from the revenues of the office. During the war, and for some time afterwards, the revenue of nearly every post office in the country was greatly increased because the ordinary postage stamp was employed where war tax stamps were necessary. Shortly after the conclusion of the war, for what reason I do not know, the government altered this condition. They made a change prohibiting the use of the postage stamp on cheques, or wherever a war tax stamp was required. That meant a huge reduction in the revenue of the various post offices and a consequent great diminution in the salaries of the postmasters, and this at a time when all civil servants were enjoying increases in salary. Then again, the present Postmaster General (Mr. Veniot) issued an unfair proclamation which declared that the box rents in villages and small towns would be in most cases doubled. What does that mean? It means that if you reside in a village or small town there is no letter delivery system you have to walk to the post office and pay twice the amount you formerly did for the post office box containing your mail, whereas in the large centres the mail matter is delivered absolutely free. It is true that this action raised the postal revenue somewhat and to a slight extent bettered the position of the postmasters. Now did the Postmaster General do anything further for that deserving class for whom I am pleading? He did. He guillotined politically 421 of them, and to that extent relieved the unemployment situation among his own political friends. Taking all the circumstances into consideration, the position of a postmaster in Canada to-day is not a desirable one, and if the Postmaster General continues the dismissal of this class of employee he will eventually find difficulty in getting men qualified to fill these positions.

The mail carriers are another body of officials who have received some attention and sympathetic consideration from a number of hon. gentlemen who have addressed the house in this debate. These men are performing an arduous and exacting task. Some of them are working long hours, travelling over rough roads, all in the country's service, and I have always thought that any minister, no matter how cold-blooded he might be, should blush with shame when he comes to sign his name to a contract which binds a man to perform the service these men are

performing to-day for the remuneration they are receiving. There will be, I believe, an application before the government for an increase up to $70 a mile. Why, in the United States, where they have real roads, the mail couriers receive $75 a mile as a flat rate; they have their annual holiday and they have sick leave and everything else. In Canada the courier has nothing; but if he were even secure in the contract which he signed with this government, that would perhaps be some source of satisfaction to him.

I have in mind the case of a courier in my constituency, a most excellent official, an estimable man in every way, whose only fault, whose only failing, lay in the fact that in 1926 he voted for me. He had a contract which had three and a half years to run and after that election was over, representations were made to the Postmaster General by some of his political friends in that constituency The Postmaster General was ordered to get that man, to get rid of him. What did he do? He instituted an inquiry, he had a questionnaire despatched to every box holder on the route, of whom there were some thirty in all. My information is that every one of those documents came back to the department of the Postmaster General strongly in favour of the courier who had that route, eulogizing him in every way and telling the department that the people in the district were entirely satisfied with his services. In face of that fact the Postmaster General deliberately cancelled the contract. I ask hon. members: Has it come to this in Canada, that a solemn contract entered into between the government of this country and a subject is no longer a contract, is no longer anything but a scrap of paper, to be torn up at the whim and will of a minister and some of those who advise him?

The Minister of Public Works (Mr. Elliott) has so far escaped attention for the most part in this debate, and while the matter to which I wish to refer will come under him, I do not for a moment accuse him of such reckless extravagance as will be shown by the item of which I desire to speak. It is proposed that we beautify the city of Ottawa. The Prime Minister (Mr. Mackenzie King) is, I believe, the father of that proposition. Since he moved out to Prince Albert he can think only of great, wide-open spaces, and if we continue him in his present position, a day will come when the great city of Ottawa will be wiped off the map and there will be nothing but a great, wide-open space in front of the parliament buildings. I understand it is the intention of this government to spend millions of dollars in tearing down and destroying perfectly good property in this city. We are all anxious to make Ottawa a model city; we are all anxious to beautify it so far as we possibly can; but when this goes to the extent of spending millions of dollars in pulling down and destroying property in the heart of the city, I believe that under present circumstances, with the debt and taxes the people of this country are called upon to pay, we are going too far. There are in this beautiful city many points which, at trifling expense, can be made more beautiful still, and the Prime Minister will have some trouble in defending his action in regard to the expenditure to which I refer. When he goes out among the people of Canada; when he goes out to Alberta; when he goes out to Prince Albert; when he goes down to Nova Scotia or any of the outlying sections of the country, he will have great difficulty in convincing the people there that an expenditure of $4,000,000 or $5,000,000 in the destruction of real property in Ottawa is of more importance than bringing the produce of Alberta and Nova Scotia to the central provinces. He will have difficulty in convincing the citizens of this country from the Atlantic to the Pacific that it is far better to destroy this property than to build a national highway from Halifax to Vancouver. He will have difficulty also when he comes before the citizens of Ottawa, because while many of them may favour the project, the taxpayer here is not enamoured of it; he hates to see millions of dollars of taxable property destroyed and a proportionately greater burden thrown back upon his shoulders. It is said that the Prime Minister will beautify Ottawa; that he is anxious to make Ottawa a city which will be the envy of the world. We admire him for that thought, but the stranger who comes within our gates, when he alights from the train in this city, would be far more favourably impressed by an imposing buiding than by a wide open space. An imposing building would indicate industry. Would the imagination of the visitor not be more stirred by seeing substantial buildings than by seeing park benches filled with the unemployed? So much for the question of the beautification of Ottawa.

Other matters have been touched upon by several hon. gentlemen who have spoken, but one which I might mention and which is another instance of useless expenditure is the question of the money which will be spent in establishing embassies in various foreign countries. It is proposed to establish embassies at Paris and Tokyo. Both of these, if they follow along the line laid down by

the leader of the government when he instituted the ambassadorial palace at Washington, will cost this country millions of dollars. The Prime Minister will have our ambassadors go to Tokyo and to Paris. Why? What benefit will they be to this country? Will they bring any more trade to Canada? Will they bring any wealth from those countries to assist in increasing the prosperity of our land? Not at all. Those ambassadors are going there as official representatives of this country, and if we ever have a chance to get into trouble, why, we shall have a man on the job to start it. Far better indeed if the government, instead of spending this money on embassies, would appoint half a dozen really live, up to date agents in those countries who could procure for us a market for our surplus produce which we should be able to send them in the manufactured state.

I should like to say a word to the Minister of Railways and Canals (Mr. Dunning), who made an excellent speech in this house the other day. His most effective point was the last one he made, in which he condemned group government. In that I agree with him wholly, absolutely and entirely; but I was greatly surprised that the Minister of Railways should condemn group government with the minister himself occupying an important portfolio in a group government. The bulk of the expenditure of the minister's department, so far as this section of the country is concerned, comes I believe under the management of the Canadian National Railways. Were the Minister of Railways in his seat I should like to direct his attention to the conditions as they exist in the county which I represent, and I would ask him to tell us, for the further information of the citizens of this country, who most heartily desire to know, whether the government of Canada is running the Canadian National Railways or whether the Canadian National Railways is running the government. We are anxious as loyal citizens of Canada to see the Canadian National Railways thrive and be successful in every way; but the minister who is responsible to the people should have some say in the operation of that road. Let me tell him that in the county which I have the honour to represent, between two points on the Canadian National railway system which are twenty miles apart, it takes two days to make a round trip direct; between two other points fifty miles apart it takes three days to make a round trip direct—all because of the fact that traffic from that particular line has been diverted to suit the whims of some other sections of the province. I am speaking on behalf of a district which is to-day shipping thousands and thousands of dollars worth of freight, a district which by hard labour is endeavouring to forge ahead and prosper. The people of that district are denied the railway facilities which should be theirs; the Canadian National Railway under the conditions which exist to-day does not meet the convenience of the people of that section.

Further, at one very important station on that line those who have business with the railway have been obliged during the last two years, to do business with the agents of the road in a very small box car. The station at Caldwell on the Canadian National railway was burned down some two years ago, and from that day to this no move has been made to replace it. The people of that important section of a great county, the revenue from which I am sure would pay many times over the cost of building a station, are therefore compelled to do their business with the railway in a small box car, a condition which is injurious to the health of the people, and I am sure causes great inconvenience and hardship to those entrusted with the conduct of the business of the road at that point. These are matters that I should like to bring to the attention of the Minister of Railways.

During this debate the Department of Immigration has been under review by several speakers. Last session the Minister of Immigration (Mr. Forke) was criticized, and criticized very severely. With that criticism I did not agree. The Minister of Immigration was a new man and I believed that whatever his political propensities or proclivities or changes of heart may have been, he was an honest man. He came into that department without much experience, and I felt that we should have deferred any criticism until later. That view I hold to-day. I believe that after this session is over, the Minister of Immigration will have learned something greatly to his advantage and greatly to the advantage of the important department over which he presides.

It is said that we need more immigrants in Canada. We do. Where should we first seek these immigrants? Should we go into foreign countries seeking foreigners? Our first duty, Mr. Speaker, should be to bring back to this country those of our own who have left. I have here the latest report of the registrar general for the province of Ontario, which shows that during last year he issued 17,284 birth certificates to native-born citizens of Ontario for the purpose of emigration. Those 17,284 native-born citizens of Ontario have left this country during the last year, without taking into account the thousands of others who may have been born in Quebec, the maritimes and the west.

Mr. T. W. BIRD (Nelson): Mr. Speaker, my hon. friend from South Renfrew (Mr. Maloney) has made a good speech. I admire the sturdy and robustious way in which he supports the principles of his party. However, I notice that he repeats the contention that our population is leaving us at a tremendous rate and seeking its future in the United States. I happened to receive to-day a copy of the monthly letter of the National City Bank of New York, and in paragraph 3 it deals with the unemployment situation in the United States of America. I will read the paragraph, which I think is an almost perfect answer to that part of the Conservative amendment dealing with unemployment. It says:

> One of the features of the present situation which is causing concern is the amount of unemployment. For some time it has been evident that the surplus of workers was gradually increasing, but only recently has the situation become sufficiently serious to command general attention. With the sharp slump in industry at the close of last year, employment has been cut, and both federal and state labour department reports indicate the level of active factory labour in December and January to have been the lowest since 1921.

I have read this as an answer to that part of the Conservative amendment dealing with unemployment.

At this stage of my speech, Mr. Speaker, I should be pleased if you would call it six o'clock.

Mr. SPEAKER: By leave of the house.

At six o'clock the house adjourned, without question put, pursuant to standing order.

Thursday, March 8, 1928

The house met at three o'clock.

PRIVATE BILLS COMMITTEE

Third report of the select standing committee on miscellaneous private bills.—Mr. Parent.

PROCEDURE—QUESTION MADE ORDER FOR RETURN

On the orders of the day:

Hon. HUGH GUTHRIE (South Wellington): May I address you, Mr. Speaker, on a matter of procedure in the house with respect to question No. 9 which appeared on the order paper of yesterday. When the question was called, the hon. Minister of Immigration (Mr. Forke) announced that it was an order for a return, and tabled it forthwith. I find that the question is a very brief one; the answer likewise is very brief, and there is no reason why a question and an answer such as this should not appear upon the pages of Hansard. It would be a great convenience to the members of the house if such questions did appear upon the pages of Hansard. As it is, there is but a single copy of the answer, which goes into the office of one of the clerks of the house, and it is very difficult to obtain access to it, and when a number of hon. members desire to see it, almost impossible. I would ask in regard to a question and answer of this kind, which will not take up more than half a column of Hansard, that the question and answer be printed as of to-day in the proceedings of the house. I could, I suppose, put it upon the pages of Hansard by reading it, but I have no desire to take up the time of the house in doing so, and I would ask Your Honour to direct that the question and answer be incorporated in the pages of Hansard.

Mr. SPEAKER: Of course, I am the prisoner of this little book. Standing order 44, paragraph 4, says:

> If a question is of such a nature that in the opinion of the minister who is to furnish the reply, such reply should be in the form of a return, and the minister states that he has no objection to laying such return upon the table of the house, his statement shall, unless otherwise ordered by the house—

Not by the Speaker, but "by the house":

> —be deemed an order of the house to that effect, and the same shall be entered in the votes and proceedings as such.

If the minister has no objection and the house has no objection, what the hon. member asks may be done, but I am the servant of the house.

Hon. ROBERT FORKE (Minister of Immigration and Colonization): I have no recollection at the moment as to just what the question was.

Mr. GUTHRIE: It refers to the McConachie case.

Mr. FORKE: There was no intention on my part not to have it put upon the pages of Hansard. It was sent up to me as an order for a return. I have no objection to having the question and answer read and put upon the pages of Hansard.

Mr. SPEAKER: Is it the pleasure of the house that this question and answer shall be incorporated in Hansard as tabled?

Mr. LAPOINTE: This should really have been decided yesterday, Mr. Speaker, but I have no objection at all so far as I am concerned, nor do I think the government has.

Mr. SPEAKER: By leave of the house, the question and the answer will appear in to-morrow's Hansard in full.

QUESTION

THE MCCONACHIE CASE

Mr. ROSS (Kingston):

1. For what reasons was the McConachie child refused admission to Canada at the port of Halifax?
2. What officer recommended the rejection of the above-mentioned child?
3. When was the father of this child admitted to Canada?
4. At what port did he enter?
5. How has he been employed since his admission to Canada?
6. What medical officer examined this child in the old country previous to sailing for Canada?

Mr. FORKE:

1. Margaret McConachie was refused entry to Canada because she was a prohibited immigrant under section 3, subsection (a) of the Immigration Act, mentally defective (feeble-minded).

2. A board of inquiry was held in this case and the rejection was ordered after the hearing of evidence, including that of a medical inspector at the port.

3. April 30, 1927.

4. Quebec.

5. As a miner in Nova Scotia.

6. Dr. J. Hudson Clifford, a roster doctor, of Bellshill, Lanarkshire, reported having examined the McConachie family including Margaret on November 1, 1927, and, his report being quite clear, the movement of the family to Canada was facilitated under the usual conditions; that is, subject to medical examination at the port of arrival. Margaret McConachie was not seen by any Canadian doctor prior to sailing.

BUSINESS OF THE HOUSE

REFERENCE TO COMMITTEES OF PRIVATE BILLS

On the orders of the day:

Mr. GEORGES PARENT (Quebec West): As there is already a good deal of private legislation awaiting action by the house, but which cannot be taken up while the budget debate continues, I would suggest, in order to expedite business, that the government and possibly the leader of the opposition (Mr. Bennett) could get together with a view to preparing a special motion for sending this private legislation to the various committees concerned.

Hon. ERNEST LAPOINTE (Minister of Justice): In answer to the hon. member, I do not see any private bills on the order paper for to-day, the reason probably being that the officers of the house knew that private bills could not be taken up. The question, however, raised by him will be given consideration, and if possible we might expedite the second readings of private bills.

HUDSON STRAITS AERIAL SURVEY

RECOGNITION OF HEROISM AND SKILL OF ESKIMO GUIDE

On the orders of the day:

Mr. JOHN MILLAR (Qu'Appelle): I would like to ask the government if they would be willing to give consideration to the matter of rewarding in some form or other the Eskimo guide who, through his great knowledge of the north country and great skill as a pathfinder, was able to save the lives of two intrepid airmen in the employ of the government.

Hon. J. L. RALSTON (Minister of National Defence): We have not yet had a full report regarding the parts taken by the various members of the party who were lost; we have only reports of efforts which were made by various individuals to assist in finding them. When the report is received I shall be glad to give consideration to the suggestion of my hon. friend.

THE BUDGET

DEBATE ON ANNUAL FINANCIAL STATEMENT OF MINISTER OF FINANCE

The house resumed from Wednesday, March 7, consideration of the motion of Hon. J. A. Robb (Minister of Finance), that Mr. Speaker do now leave the chair for the house to go into committee of ways and means, the proposed amendment thereto of Mr. Cahan and the amendment to the amendment of Mr. Fansher (East Lambton).

Mr. T. W. BIRD (Nelson): Mr. Speaker, as a western Progressive I was very much inerested in the speech of the hon. member for Marquette (Mr. Glen). It was a good speech but peculiar in some respects. In my reply to it I wish to avoid anything that could be interpreted as a personal attack. I have great respect for the hon. gentleman and, I may say, respect for the position he occupies. I quite realize that he and his colleagues are in the position they now occupy as much by the will of their constituents as by their own choice, and it would ill become me, or anyone else for that matter, to cast any slurs upon their motives. I think, however, I may well be pardoned if I reply to some points in his speech, especially as his remarks related to the subamendment

moved from this corner of the house. I noticed that my hon. friend did not criticize the substance of the amendment. As one who has been sent here by Progressive votes he knows only too well that that subamendment is a correct, precise expression of Progressive principles. It was these principles that created the Progressive party. It was these principles that sent sixty-five Progressive members to this house in 1921. It was these principles for which the Progressives fought over a period of four years on the floor of this house, first under the leadership of my hon. friend's predecessor in Marquette and later on under the leadership of the present Minister of Immigration (Mr. Forke). So we can well understand that my hon. friend has no objections to make to the subamendment in itself. If he objects to our moving it; if he thinks it is inopportune for us to move it, that may be attributed largely to his present hyphenated state of mind and not to any Progressive principles he may hold.

Let me turn to the reasons he gave for supporting the budget. Did he support it because of the policy of the government in respect to the income tax? Assuredly not. He knows that the policy of the government as expressed in the budget on the income tax is an unsound and un-Progressive policy. One needs only to turn to his speech of last year to find one of the best expressions of Progressive principles on that subject that one can find on any page of Hansard. No, he is not supporting the budget for its policy on the income tax. He knows that policy is wrong; that it is unjust; that it is diametrically opposed to all the Progressives have ever stood for. Is he supporting the budget because of its tariff schedule? Why, no. My hon. friend characterized the tariff schedule in the budget more severely than any other member I have heard speaking in this house. He called it unintelligible. That is an ugly epithet to apply to a budget of the Minister of Finance (Mr. Robb). We in this corner of the house agree with him, but we cannot see in that fact any reason why we should support the budget. On an examination of my hon. friend's speech it would almost seem that there is no very sound reason why he is supporting the budget.

There is however one ray of light. He tells us that he is supporting the budget because the manufacturers and their representatives on the left of the Speaker have been raising a howl about it. He has been in this house long enough to know that the manufacturers and their representatives in the house are in the habit of raising a howl about nothing at all.

Mr. MANION: I rise to a point of order. As one of the members to your left, Mr. Speaker, I object to being dubbed a representative in this house of manufacturers and I think the hon. gentleman should be compelled to withdraw that statement.

Mr. BIRD: I shall be pleased to withdraw the statement, and I hope the announcement of my hon. friend will not hurt the funds of the Conservative party at the next election.

Some hon. MEMBERS: Order.

Mr. SPEAKER: I think the hon. gentleman should withdraw that expression and not aggravate it. I must say that to characterize an hon. member of this house as being a representative of the manufacturers is rather a stigma. Such a charge, if proved, makes any member liable to a very heavy fine and even suspension. I would ask the hon. member who has unwittingly made the remark, kindly withdraw it.

Mr. BIRD. My remark was laden with no animus whatsoever. There is a well-known animal—

Mr. SPEAKER: I take it that the remark is withdrawn.

Mr. BIRD: The remark is withdrawn and I was about to say that there is a well known animal that is in the habit of biting the hand that feeds it.

Mr. MANION: I rise to a point of order. I object to this hon. gentleman referring to me as an animal that bites the hand that feeds it. The manufacturers do not feed me and I resent that remark. It is worse than the previous one.

Mr. SPEAKER: I thought the hon. gentleman had withdrawn the remark. He should withdraw it.

Mr. BIRD: I was about to say, Mr. Speaker, that my hon. friend is not that kind of animal.

Mr. SPEAKER: Biologically a man is an animal; but this is an assembly of gentlemen, and hon. members should not be characterized as animals.

Mr. BIRD: I feel a very real regret, Mr. Speaker, for having made that accidental remark. I was dealing with the remarks of my hon. friend from Marquette with regard to the attitude of my hon. friends to my right who are in close association with the manufacturers of Canada and are in the habit of expressing or re-echoing the opinions of those manufacturers on the floor of this house. I would say to my hon. friend that that is not a safe guide to follow in supporting the budget. The

other day I clipped from the Financial Post an article headed "Tariff Change Not Bothering the Cotton People." That article is a complete answer to the only reason my hon. friend gave for supporting the budget. I think this would be a good time for me to read an extract from his speech of last session. I will give only a brief excerpt, but it is a very significant one:

If we may assume with confidence that the omissions from the budget are temporary and accidental, and that future budgets will both reduce the tariff and maintain the income tax as a permanent fiscal instrument, we shall feel fully justified in voting with the government. If, on the contrary, we must assume that the government is inaugurating a new policy looking to the abolition of the income tax and making only such changes in the tariff as are dictated by expediency and not by low tariff principles, we should be compelled to vote for the amendment. Which of these courses we are to pursue can be decided in only one way—we must have from the government a categorical and incontestable statement of its position in regard to future tariff reductions. Refusal to give such a statement must inevitably be construed as an admission by the government of a desire to depart from the policy of tariff reduction.

As a commentary on that speech let me quote from the speech of the hon. Minister of Railways (Mr. Dunning) delivered in the same debate. The member for Marquette interrupted the hon. minister by saying:

I take it from what the minister said, in reply to my address of yesterday asking for some assurance from the government in the matter, that the policy of the government is in the direction of lower tariffs, and that it is not the intention to abolish the income tax as a permanent fiscal instrument. Am I right in assuming that?

This is what the Minister of Railways said in reply:

My hon. friend must not put words in my mouth. The words I used were explicit and they were words behind which every member of the government will stand. I may remind the hon. gentleman of what my hon. friend the Minister of Finance has himself said. Some people tried to hold a pistol at the head of the Minister of Finance last year, we all know with what success; and those who try the same thing again, whether friend or foe, will find the same result.

That lesson must have had its effect upon my hon. friend within the ensuing twelve months. Last year he came down with a wild west demeanour, flourishing his pistol in the face of the government; but after twelve months, having been talked to by the Minister of Railways, he comes down in a very different spirit. He has found out that it is a very naughty thing indeed for a Liberal-Progressive to be toting a pistol around and flourishing it in the face of the government which he is supporting; and it is more than naughty, it is a very silly thing indeed, because the government has got a bigger pistol than he has, and when the Minister of Railways was speaking to him last year he had that pistol in his belt, and my hon. friend knew it.

An hon. MEMBER: A cannon.

Mr. BIRD: Yes, a cannon. So much for the extraordinary defence of the budget made by my friend from Marquette.

In the time that is left for me, Mr. Speaker, I may be allowed to make a few remarks upon the subject of group representation in this house. My hon. friend from Wetaskiwin (Mr. Irvine) made a very able defence of the group system the other day, and I do not want to cover the same ground. Fortunately group representation is more than a theory to be defended. It is a fact to be explained and to be understood, a fact that may be put to varying concrete tests. and I shall for a short time invite the house to join me in putting the idea of economic group representation to certain practical tests. First of all, let us look back and ask ourselves whether the economic idea in politics is not consistent with the development of parliamentary practice under the British system of constitutional government. I want to say emphatically that for the past hundred years the economic conception in politics has dominated and moulded British political life. Before that time undoubtedly there were political parties in existence, but those parties had no relation to parties as we understand them now; they represented a purely caste system in which the people had neither part nor lot. That was the age in which the party spirit dominated English public life. We go back to the time when, after the revolution, roundhead and cavalier—blessings upon their heads! because the warfare they carried on was real—gave way to Whig and Tory. From that moment the British people were committed to three generations of stagnation, not only in their political life, but in every phase of their existence with perhaps the one exception of material progress. But so far as material progress in the eighteenth century is concerned, it was associated with such practices as most of us of British birth blush to remember. I do not need to mention the horrible slave trade. Even the material advance of England at that time was a thing to be mentioned in a hushed breath. That was the age in which party politics blighted almost everything it touched. It contaminated the very springs of British life; it did not leave even

religion, art or literature untouched. Very fortunately that period came to a sudden and inglorious end in the French revolution and in the Napoleonic wars which followed. When the smoke of battle had rolled away the young giant of democracy was discovered stretching its mighty limbs and rubbing its drowsy eyes; and the most surprising thing of all was that out of its awakening heart there gushed forth a song more entrancing than anything that had been heard since Milton sang so gloriously the song of liberty. Those were the days when not only the political life and the economic life of England witnessed a rejuvenation, but when the very heart of England revived. I say that wherever an insincere party system is clamped upon a people it contaminates everything in the national life; nor can it help doing so. If you play upon the sincerity of the people and present to them alternatives that mean nothing, sooner or later you dry up the very springs of national life. That period was the heyday of the party system, and the opinions of the Minister of Railways (Mr. Dunning) are therefore coeval with Queen Anne and her queer skirts and funny furniture. Those were the days when the party system triumphed, when party shrivelled up the soul of England. But even in those days there were people who penetrated the insincerity of parties. Dean Swift, another Irishman who believed in group government, in his story of Gulliver, pours his vitriolic scorn upon the party system of that day. Gulliver went to Lilliput where he discovered that there were two parties of the old stamp: there were the Big Endians and the Little Endians, and the only difference between them consisted in the way they broke their breakfast eggs. The Big Endians broke their eggs at the big end and the Little Endians at the little end. It is the same to-day, only the egg of contention is the tariff. Now while those two parties in Lilliput waged their silly warfare there was a neighbouring prince from Blefuscu who took advantage of the strife and bled the people white, and I have no doubt he actually contributed to the party funds on both sides. This prince represented the big interests of the day, the only interests that ever profited by an insincere party system. Well, this sort of thing went on as long as it could until one day a prophet arose who discovered in the Lilliputian bible a certain passage which ran thus: "All members of the faithful shall in future break their eggs at the convenient end." Which was the convenient end? The convenient end was the end best suited to the varying sizes of mouths in Lilliput—because in those days they sucked their eggs. In other words, the common people in those days, like the common people of to-day, were suckers. But the time had come when they would be suckers no longer. They said, "This business of breaking eggs is ours; we are the ones concerned in it and in future we will break our eggs as we like." As I say, this state of things came suddenly to an end and democracy, at the beginning of the nineteenth century, abruptly confronted the old landed aristocracy with their childish and meaningless political wrangles. Whig and Tory gave way to Liberal and Conservative early in the last century.

I am by birth and early training a Conservative, and in my younger days I was taught to revere the teachings of Burke. At the beginning of that century Burke had laid deep the true principles of Conservatism and later on in the century, in various ways, from sources which the present Liberals would not own if they knew what they were, Liberalism also took its roots. And these two parties for a generation stood for something actual and real. But the generous spirit which begot them soon evaporated and once more England was filled with the meaningless din of party shibboleths. Anyone who wants to find out what politics meant to England in the early and middle Victorian periods should take a course of reading in Carlyle and Ruskin and Matthew Arnold. The party system in England created in that country in that age nothing but a sink of misery and ugliness; there was nothing in the industrial life of England of that time for which any Christian Englishman could find any defence. This condition of things could be traced directly to the unreal party system of the age. Fortunately, however, that period had its terminus, and after the 'sixties and 'eighties, after the enfranchisement acts of those periods, the farm labourer and the industrial worker began to realize their position; and before the end of the century there arose a party on strictly economic lines, a party which stood unexpectedly on the threshold of power and peremptorily demanded entrance. England at the end of the century was therefore committed to economic politics. The advent of the Labour party into the public life of England meant the re-orientation of British political life. One of the most significant things in British experience in recent times has been the investigation set on foot by the Liberal party into the industrial and economic problems of England. The English Liberal party, wishing to rejuvenate itself and to recover something

of its old glory, wondered once more how it might capture the imagination of the British people. It found that the old party platforms had no longer any hold on the popular intelligence and therefore, at its own expense, it initiated one of the most thoroughgoing industrial inquisitions that England has ever known, with the object of placing the Liberal party squarely upon an economic basis. The "condition of England question" has at last become an economic question.

My time is going. I have dipped rather insufficiently into the past, and I should like to take a quick survey of contemporaneous political life. When we examine the countries of Europe we find that in all that continent, wherever political enlightenment really prevails, every country is a multi-party country with a strongly economic flavour. Let us consider Denmark, that wonderful little country. The other day a prominent Canadian said that "whenever he addressed an audience on agricultural topics he became obsessed with Denmark, that wonderful little country which sets an example to the rest of the world in agricultural co-operation and intensive production. That is the country to which the Canadian National Railways recently sent a delegation of five hundred farmers to see how farming should be carried on, and Denmark is a typical multi-group country. In the election of 1924 there were four groups; the Social Democrats, who came to power; the Agrarians, next in strength; the Conservatives and the Radicals. Where are the Liberals in Denmark? They do not exist, because in that country politics rest securely upon economic questions, and a curious fact is that after the election in 1921 the strength of the parties was such that the Agrarians joined hands with the Conservatives in order to form a government. That proves that some of these speakers across the way were wrong when they discounted any possible co-operation we might give the Conservative party. In Denmark the Conservatives form the citizen class in the small towns, and unlike the dwellers in the small towns of Canada they know on which side their bread is buttered; they know they derive their living from the farmers, and when it comes to economic and political questions they join hands with the farmers.

The Minister of Railways dragged in Italy and Spain, but discreetly overlooked those northern countries. Italy and Spain are the most backward countries in Europe, and the minister said the present regrettable political conditions existing in those countries was due to the group system. Mr. Speaker, the present conditions in those countries are not due to the group system but to the persistence of a party system which has outgrown its day. In 1870, when Italy adopted union, the people divided up into parties consisting of the Right, the Left and the Centre. Those parties meant something at that time, but they quickly lost touch with the people, and for generations kept the people with their noses to the grindstone. They oppressed them; they kept them illiterate and ignorant. Forty per cent of the people are illiterate, and they were kept poor beyond all imagination. That was the condition against which the people revolted, and it is to the eternal honour of those Italians that they did rebel; it shows that they have something of the old spirit in them. They went to extremes, of course, but you cannot expect a people 40 per cent of whom are illiterate and with no political experience to do things wisely. I do believe, Mr. Speaker, that those blundering failures of Italy and Spain—because Spain is in exactly the same condition—are only temporary. Surely the people who inherit the political genius of a Machiavelli and the patriotic passion of a Mazzini will win through.

I will leave consideration of the United States, although I think that country presents the greatest object lesson of what a two-party system can do to a long-suffering people. I need go no further than the speech of the Minister of Railways to prove that the country to our south, with its two parties, is not exactly a happy country in which to live. The lower classes in the United States, the working men and the farmers on the prairies, have been suffering under an intolerable oppression under that insincere two-party system. President Wilson once said of his own country, "An invisible government has erected itself above the forms of democracy." That is what special privilege is doing all the time, and in the party system it finds its easiest tool. A few generations ago, when the privileged classes found that they could no longer use the gibbet and the quartering knife, they turned to the party system and have found it even more successful in oppressing the people, because so far as the British people are concerned it is always easier to fool them than to frighten them.

I desire now to come down to the parties as we have them in this house. We do not need to go to Europe to prove that the group system has a logical and inevitable place in public life in Canada; I need only point to the Labour party, whose existence in this house for several years is sufficient proof that labour has its own point of view. What about the farmers? In 1921 and earlier the farmers felt the pinch of economic pressure;

[Mr. Bird.]

they turned to the old parties, Conservatives and Liberals, for a way out. They were something like Alice, who became lost in the woods and who wanted to find a way out. She went to ask Tweedledee and Tweedledum —Dum and Dee. I think you know what Dee stands for; Lewis Carroll was, I think, a clergyman like myself, and did not like to say. As she went along the path she found that the sign boards pointing to their houses lead in the same direction, and at last she exclaimed "Why, I do believe they both live in the same house." When she discovered them, one had a very irritating way of answering questions by saying "Nohow" while the other said "Contrariwise." So when the farmers went to the old parties and asked them to lower the tariff, the Liberals said "Nohow" and the Conservatives said "Contrariwise." In 1921 the farmers of the west were lost in the woods of economic difficulties, but when they turned to the old parties they could get no help.

Hon. HUGH GUTHRIE (South Wellington): Mr. Speaker, in the first place may I be permitted to congratulate the house on the fact that the new forty minute rule is in operation for the first time during the course of a budget debate. I am one of those who had an opportunity of listening to a great many budget debates in this house, and I express it as my opinion that the new rule is working well, and that taking the general average, the quality of the speeches delivered since this debate began has been higher than that observable in previous debates. There has been more of concentration on the part of hon. members; they have been far more concise in their remarks, and I think the speeches which have been delivered from every quarter of the house have produced a better effect generally than those which we have been accustomed to hear in former sessions. I heartily support the new rule in every respect, Sir.

Since time is limited one cannot attempt to do more than touch lightly upon some of the many aspects of the budget as presented to parliament this session. I think in some ways the method of presenting the budget in this house is open to objection; there is room for a good deal of improvement. The non-disclosure of so many important matters by the Minister of Finance may lead, in many instances, and does lead, to improper conclusions being drawn in regard to the actual financial position of the Dominion of Canada at present. No one could gather from the budget speech or from the public accounts which have been laid on the table that the most important financial commitment of this country to-day is in respect of the Canadian National Railways. It far transcends in magnitude and importance all other conditions or circumstances in connection with our national finances. Yet in the budget speech offered by my hon. friend the Minister of Finance a few days ago, only one brief paragraph is devoted to matters pertaining to the finances of the Canadian National Railways. It is true that in a single sentence the minister announced that during the past year there had been an issue of guaranteed bonds by the railway company to the amount of $65,000,000. Apart from that brief announcement there is nothing to lead either the members of this house or the people of Canada to realize that the most important financial commitments of Canada to-day are in respect to the railway system owned by the Dominion. Now my suggestion is that a financial statement of Canada should furnish fuller information in regard to the financial position of the national railway system than anything we have before us at the present time. The Minister of Finance contents himself with producing a general balance sheet of the Dominion, but that is only one page of the ledger. Side by side with that general annual balance sheet should be a balance sheet, in concise form if necessary, of the Canadian National railway system; and if both pages of the ledger were produced side by side the people of Canada, as well as the members of this house, could form a better conclusion as to the real condition of our finances than is to be derived either from the budget speech or the public accounts which was laid on the table a few days ago. I do not suggest that the Minister of Finance is either the author or the originator of the present system. My suggestion to my hon. friend the minister is simply that on the next occasion on which he is called upon to make a financial statement in this house he will see to it that the most important financial commitments of this country be not disregarded, but be laid, with some elaboration, before parliament in order that hon. members may be able to realize the exact situation. After all, we all understand that this Dominion constitutes but a single political entity. There is but one government. It is true there are many departments of that government, but the departments of government are all intimately corelated and all thoroughly interdependent. There is but one common head, one common fund, one common liability, and one common responsibility. Indeed I think I might say in the language of the Apostle Paul: While there are many members there

is but one body. "The eye cannot say unto the hand, I have no need of thee. Nor again the head to the feet, I have no need of you. And whether one member suffer all the members suffer with it." So it is with the government of Canada, responsibility of every public department finally rests in the body politic, which is the government itself.

Now this year's budget contains, perhaps, one notable feature. Since the last session of parliament the Minister of Finance has undertaken to have an audit of his departmental accounts by a firm of chartered accountants, and for the first time, I think, we find in the public accounts to-day a certificate from a firm of chartered accountants to say, that for the years 1924, 1925, 1926 and 1927 they have examined the public accounts of Canada and have found them to be correct. But there is in that same certificate an express reservation in regard to the railroad liabilities of the Dominion. That is to be noted, Mr. Speaker, and it is likewise to be noted that the audit is only extended over four years. Now during the course of the present debate the Minister of Finance was asked as to how he came to have an audit of his accounts made by chartered accountants, and in reply he said that he had seen a speech of mine in the newspapers, and had sent that speech to a firm of chartered accountants in Montreal and asked them for an audit—I do not know whether it was an audit of my speech or of the public accounts of Canada. Well, I want to tell the Minister of Finance that I have no complaint against the public accounts of Canada. I have no quarrel with this audit even. I have always accepted the public accounts as genuine and correct and I have never challenged them. What I have challenged on more than one occasion are ministerial statements made in this house and in the country in respect of those public accounts. And when ministerial statements do not agree with the public accounts I have always sided with the Auditor General and submitted that the public accounts were correct and the ministerial statements which disagreed with them were incorrect. Now if my hon. friend the Minister of Finance desires to send speeches to a firm of chartered accountants, I would suggest to him that instead of sending my speeches he send some speeches of his own and ask the accountants to make a report upon them. I refer specifically, for the information of the Minister of Finance who is now in his seat, to the speech which he delivered in this chamber on April 10, 1924 and in which he made this statement:

[Mr Guthrie.]

These two amounts, totalling $9,622,760.37, together with $20,786,349 surplus of revenue over total expenditures, reduce our net public debt, as of March 31, 1923, by the amount of $30,409,109.37.

That statement was made in this house. It appears in unrevised Hansard in these words, it apears in revised Hansard in the same words, and in a special edition of his speech prepared at the instance of the Minister of Finance and sent broadcast through the Dominion. I maintain the minister's statement is not correct, and if the minister will read his own statement and turn to the public accounts of his own department he will find that instead of having a surplus of $30,000,000 odd on March 31, 1923, the public accounts disclose that there was a deficit of approximately $31,000,000. Now let him send his speech to the chartered accountants and let them report upon it. I will grant you it is probably a mistake on the part of the Minister of Finance; he has probably made a slip.

Mr. ROBB: No, no.

Mr. GUTHRIE: He has probably made an error, but the slip or the error was rather an important one. Instead of a surplus of thirty millions the actual figures show a deficit of thirty-one millions, a difference in the public accounts of Canada of $61,000,000. The newspapers always give the speeches of the Minister of Finance great prominence. His supporters use them throughout the country on the hustings and the parrot-like propensities of his followers in this house have been fully displayed upon every political platform. They start off under the impression that the minister's statement in this house in 1924 was a correct statement. They do not know that he was $61,000,000 out in his calculation or in his statement. Why we heard very recently, in the by-election in North Huron, Liberal speakers claiming that there had been a reduction in the national debt of $166,000,000 during the last five years, notwithstanding the fact that the riding was flooded with pamphlets published by the Minister of Trade and Commerce (Mr. Malcolm) to show incidentally that in four years the reduction in the net debt of Canada was only $105,000,000. The $61,000,000 mistake of the minister made the difference. Many Liberal orators actually claimed a reduction of $166,000,000. If that election had been prolonged another couple of weeks, some Liberal orator would have had the whole national debt of Canada paid off! Why does the Minister of Finance start his accounting with the year 1924? Why does he select a thoroughly artificial, arbitrary starting point? He has been a member of the Liberal administration or the Liberal

party since they took power in this house, and he knows the attitude assumed in regard to this question by his predecessor in office, the Right Hon. Mr. Fielding.

Mr. ROBB: May I answer my hon. friend?

Mr. GUTHRIE: The minister will have a reply in this debate and he may answer then. I know the attitude assumed by the Right Hon. Mr. Fielding when he was Minister of Finance. He absolutely repudiated any responsibility for the year 1922. In his budget speech delivered in in this house on the 11th May, 1923, he referred to 1922 as a Conservative year and stated that only three months of it were under the control of the Liberal government. That is true. It was the Conservatives who prepared the estimates and arranged all the financial details for that year. Nobody would seek to charge the Liberal government with the year 1922, but Mr. Fielding always manfully assumed responsibility for the year 1923. The Liberal government had complete control of the finances of Canada for the year 1923. They prepared the estimates; they spent the money, and they are responsible for all that took place during that year, but the present minister wants to get from under in respect of 1923. What does Mr. Fielding say in regard to 1922? When he spoke in this house on the 11th of May, 1923, he had not a bad showing to make financially. He announced that he had received in ordinary revenue in 1922 $381,000,000; that he had spent in ordinary expenditure $347,000,000, and he was able to declare a surplus of $34,000,000 of revenue over expenditures. But he said that he must pay all capital and special charges which amounted to $18,000,000, and even after paying all these outgoings he was able to proclaim for 1922 an actual surplus of $16,000,000. But this is where the trouble came in. Railway financing for that year took $97,000,000 which Mr. Fielding paid out of the treasury of the Dominion of Canada, leaving a deficit in the public accounts for 1922 of $81,000,000.

What did Mr. Fielding say about the year 1923? He was also able to exhibit a very substantial surplus. He had a surplus of ordinary revenue over expenditures of over $62,000,000. Then he paid all of his capital expenditures and special expenditures amounting to $24,000,000 and he still had a balance of more than $37,500,000 for the year 1923. But again trouble arose through the national railways of Canada which called upon him to pay deficits amounting to $92,000,000, and the merchant marine amounting to $6,000,000, or a total deficit of $98,000,000, which were paid out of the treasury of Canada, leaving him after all calls had been met with a deficit of $31,000,000 for that year. Mr. Fielding delivered on that occasion his last budget speech and since that date the budget speeches in this house have been delivered by the present Minister of Finance. I have asked hon. members to note that the Minister of Finance takes as his starting point the year 1924, disregarding the fact that his predecessor always took the year 1923, as the starting point of the Liberal administration.

I come now to another branch of the question, that is in connection with the Canadian National railway finances. I received only two hours ago through the courtesy of the Minister of Railways and Canals (Mr. Dunning) a copy of the financial statement of the Canadian National Railways for the year 1927, and I have had time only to glance casually over that rather voluminous document and to satisfy myself as to certain salient features of it. I think this house received a few days ago in the speech of the hon. member for St. Lawrence-St. George (Mr. Cahan) more real and useful information and more sound criticism in regard to Dominion railway financing than it has received in this chamber in many years. I heard his speech; I afterwards read it with the greatest of interest and if in the figures which I quote I am not able to agree entirely with those quoted by him, all I can say is that I have before me the Canadian National railway report for the year 1927 which was laid on the table of the house yesterday and which he did not have an opportunity of examining when he made his speech. However any discrepancies in our figures are not very material. I was amazed when the hon. member for St. Lawrence-St. George announced in this chamber that the indebtedness of the Canadian National Railways, not to the government of Canada but to the investing public, now amounted to the enormous sum of $981,000,000. I find that in the statement just issued that figure is correct. My statements as to amounts are all made in round numbers; I am not dealing in odd figures. Of that sum of $981,000,000 which the public have as a first charge against our railways, $657,000,000 is guaranteed by the Dominion of Canada as to principal and interest, $93,000,000 is guaranteed by the various provinces and the unguaranteed portion amounts to $231,000,000. But for the whole $981,000,000 the Dominion of Canada is responsible. This country is the owner of that road subject to a prior mortgage. These bonds on maturity must be paid and the interest on them must be maintained and

paid. This country can never afford to allow any creditor of that railway system to seek to put it into liquidation or to wind it up under the Railway Act. We must protect it. Therefore in the final analysis we are responsible for $981,000,000 worth of bonds, the larger portion of which we have actually guaranteed.

But on the other side of the page what do we find? We find that in addition to that, the obligations of that railway system directly to the Dominion government are as follows:

Cash advances	$595,000,000
Unpaid interest	226,000,000
Appropriations account, government railways	436,000,000
Total, about	$1,258,000,000

Such is the claim of the government of Canada which comes subsequent to the claim of bondholders to the extent of $981,000,000, making a total indebtedness in respect of the national railways as of this date of $2,237,000,000. These figures are astounding. It is difficult to comprehend them. They bulk too large for the ordinary mind or imagination but they are the figures which are submitted to parliament by the Minister of Railways in the national railway report tabled yesterday.

What is the position to-day in regard to these railways? According to this report, the position is that the total operating revenue last year was $256,000,000, and the total operating expenses $214,000,000, and the year closed with a net revenue from operation of $42,000,000. I think we should congratulate the president and the board of management of the Canadian National Railways upon the splendid showing they have made during the past year, and of all men I think the one who should be the first to tender his thanks and congratulations to the president is my hon. friend the Minister of Finance.

What was the situation in connection with the national railway on January 1, 1923. The situation then was that the net operating revenue of the Canadian National system was $4,155,000. That figure was announced by Sir Henry Thornton in a speech in Toronto on the 13th of February last. On January 1, 1923, the net earnings of the road were $4,155,000. I pass now to 1924. A change had taken place by that time, through the efficient management of Sir Henry Thornton and his board of directors, and the net operating revenue had risen in 1924 to $18,000,000 odd—a rise in one year of $14,000,000—so that the treasury of the Dominion of Canada, which is in charge of the Minister of Finance, was relieved of railway payments that year to the amount of $14,000,000 which had to be paid out of the treasury the year before. In 1925 there was a further increase in net operating revenue to $33,000,000, as against $4,000,000 in 1923. In 1926 the net operating revenue had increased to $48,000,000, and in 1927, the year just closed, these earnings had been $42,000,000.

Now what do the figures I have just given for these four years mean? The increase in 1924 was $14,000,000, in 1925, $29,000,000, in 1926, $44,000,000, and in 1927, the year just closed, $38,000,000, or a total increase in the net earnings of the railway in those four years of $125,000,000—$125,000,000 which formerly had to be withdrawn from the treasury of the Dominion, but of which the treasury during the last four years has received the direct benefit on account of increased earnings of the road. Nobody will pretend—not the Minister of Railways, for he knows too well, nor the Minister of Finance—that this government or any member of it is entitled to a particle of credit for the improved showing made in connection with the Canadian National Railways. The management of the road is supposed to be entirely divorced from government control. It is under the absolute control, so far as management goes, of Sir Henry Thornton and his board, without government interference, and they are entitled to the full credit for the result obtained—$125,000,000 of relief for the treasury of Canada in four years. Now look at the boasts of this government and of the Minister of Finance that in the last four years they have paid off $105,000,000 of the net debt of this country—$20,000,000 less than the actual relief that they received from the Canadian National railway system under the management of Sir Henry Thornton, and under conditions which do not entitle the government to one particle of credit

Do you not think, Mr. Speaker, that in a proper financial statement presented to this house, the facts and figures I have given should be set side by side with the general financial statement showing the reductions of the national debt. The Finance minister has actually received in relief $125,000,000 from the railway, and he has paid off from the net debt of Canada in those four years only $105,000,000, and yet he calmly accepts congratulation and applause for himself and his friends accord it to him. The real fact is that the Finance minister and the Minister of Railways are endeavouring to appropriate

to themselves the credit that is due to Sir Henry Thornton. They are endeavouring to bask in the reflected glory of the president of the Canadian National Railways without there being the slightest foundation for their claiming any credit for his achievement.

But what has been going on during the last five years in financing the debts of the national railways? During the last five years the bonded indebtedness of the national railways has been climbing at an alarming pace. On December 31, 1923, the bonded indebtedness of the national railways to the public was $823,000,000; on December 31st last the bonded indebtedness to the public was $981,000,000; in other words, the bonded indebtedness of the railway has been increased in that five year period by $158,000,000, for which this country has granted its guarantee of payment both as to principal and interest in every instance—$158,000,000 of increased liabilities, and only $105,000,000 of decreased public debt in this country. Can one fairly separate the figures? Should they not be considered together? Should they not be set side by side and expounded together by the Minister of Finance to this house? Do the people of Canada or even the members of this house realize the extent to which these guarantees are growing? I met a man in Ottawa, not in this house, who asked me why it was that Canada was called upon to guarantee the bonds of the Canadian National Railways. I assume that every member of this house knows why. Because the Canadian National railway system is an insolvent system, and I am sorry to have to say that you will find, if you look at the railway statement, that on the 31st of December last it was insolvent almost to the extent of half a billion dollars, according to the statement signed by Sir Henry Thornton, the president of the road, or to be exact, the road is behind $443,000,000. Do you wonder that the railway cannot raise a dollar on its own bonds? Do you wonder that it cannot go into the money market and borrow a dollar on its own securities unless it puts up special pledges of rolling stock and the like?

Mr. DUNNING: The same as any other road.

Mr. GUTHRIE: The railway has to come to the government and get its guarantee in order to float a loan, and the moment the Finance minister puts his name on the back of one of these bonds it becomes a positive liability of the Dominion of Canada which some day the Dominion treasury will be called upon to pay. My hon. friend the Minister of Railways shakes his head. In the excellent speech which he made in this house a few days ago he said: We have followed this principle of not recognizing these guarantees as liabilities or debts because in the province of Ontario the provincial government does not recognize the guaranteed bonds of the Hydro Electric Power Commission as debts of the province.

Mr. DUNNING: No; I must beg my hon. friend's pardon.

Mr. GUTHRIE: That is the one case which the minister cited—

Mr. DUNNING: As an instance.

Mr. GUTHRIE: —in justification of the method of book-keeping adopted by this government. Let me point out to him that the cases are not parallel. This government is guaranteeing the bonds of an insolvent company; the Ontario government is guaranteeing the bonds of perhaps the strongest financial corporation in North America to-day.

Mr. DUNNING: Why do they guarantee them?

Mr. GUTHRIE: For every dollar of guarantee of Hydro Electric Power Commission securities in Ontario, there are many, many millions of dollars of physical assets in excess of the guarantee.

Mr. DUNNING: Why the guarantee then?

Mr. GUTHRIE: The guarantee is for the purpose of allowing the hydro-electric commission—it is really but an association of certain interested municipalities—to go into the money markets and be recognized as a financial institution and be in a position to secure money at the lowest possible rate of interest.

Mr. DUNNING: Exactly.

Mr. GUTHRIE: Does my hon. friend not see the distinction between guaranteeing the bonds of an insolvent institution and those of a perfectly solvent institution?

Mr. DUNNING: I do not admit that it is insolvent.

Mr. GUTHRIE: In the one case you incur liability, in the other you do not. If my hon. friend does not see the distinction I am not going to labour the matter any more, because I am satisfied that I cannot make him see it.

Now, Mr. Speaker, the point which I desire to make is this, that if credit be due to anyone in respect to the reduction of the net debt of the Dominion, that credit is directly due to the management of the Canadian National Railways; for the improved showing which they have been able to make and for the relief which for the last four years they

have been able to afford to the treasury of Canada. Without one move of the hand or one stroke of the pen by the Finance Minister or any of his colleagues, Sir Henry Thornton and his board have accomplished that feat, and to them credit is due, and to them the thanks of the country should be returned.

I have only one other observation to make, and I have but a few minutes in which to make it. There is another aspect of the budget I do wish to mention, and it is in regard to what I call the iniquitous sales tax. On a former occasion during the present session I mentioned the sales tax, and I told the Minister of Finance that so far as it was in the power of an opposition to make demands upon the government, this opposition was going to demand the abolition of the sales tax during the present session of parliament. I regret that the tax has not been abolished; it has merely been reduced to that point at which it was seven years ago when the Liberal government took office. The sales tax was imposed as purely a war measure. The war has been over for ten years, but this administration still maintains that iniquitous burden on the people of this country. My hon. friend the Finance minister may wave his hand and announce that he has made another cut in the income tax, and the wealthy men of Canada will appreciate that no doubt; but if he had wiped out the sales tax he would have conferred a benefit, not upon the wealthy, but upon the people of the Dominion least able to bear that tax. I had to smile when in delivering his budget speech the Minister of Finance came to that particular portion where he discussed the changes in tariff rates in regard to woollens. What do you think he said? Does anyone remember? These are his words:

> In revising the woollen schedules two main considerations have been kept in mind, the vital necessity for warm clothing in a climate such as ours,—

That is the first consideration, and I remember the seraphic smile that passed over his face as he slowly raised his eyes to heaven and in measured tones pronounced those solemn words. What do his changes in the woollen tariff mean to the ordinary man in the street who buys a suit of clothes? They involve a difference of about two cents a yard—all the manufacturers' profit in many instances, I grant you. That difference represents seven, eight, or nine cents on a suit of clothes, something that will never be passed on to the purchaser but will be absorbed by intermediaries. Now, cannot I warm up his heart in regard to the sales tax? I agree that ours is a cold climate in the winter season; people must wear woollen clothes. By retaining this sales tax of three per cent a man has to pay an extra ninety cents on a $30-suit of clothes. Do the people of Canada yet realize that they are paying this iniquitous tax into the treasury? Do they know that this war burden is still in force? I know the complaint is made from time to time that the retail merchants are still keeping up prices, but do the people realize that on $100 worth of purchases of boots and shoes, clothing, furniture, everything save food, they have to pay to-day $3 into the treasury of Canada to help in the reduction of the national debt? I do not believe they realize that. Four per cent they paid last year, five per cent the year before, and six per cent for a while. And with what a grand flourish the ministers of the crown announced these reductions! Last year the minister said: We have reduced the sales tax twenty per cent. It sounded like a large reduction, but it was only one per cent as a matter of fact—one cent on a dollar. The other day the minister announced: We have reduced the sales tax 25 per cent. The ordinary people thought: It must be gone this time sure. But only another cent has been shaved off the top, and for every $100 worth of clothing, hats, mitts, boots and shoes, to be worn in this cold climate of ours, three dollars must be paid into the treasury, although the war was over ten years ago. What did the minister say last session? "Why," he said, "how can I do it?"

Mr. SPEAKER: Time.

Mr. FRANK S. CAHILL (Pontiac): Mr. Speaker, I regret that the new rule compelled you to call "time" on my hon. friend from South Wellington (Mr. Guthrie), who, to my mind, has this afternoon delivered the greatest eulogy on the Liberal party that I have ever listened to. He made out a most complete case for the administration, as he usually does when he prepares his speeches. He started by saying that the members of the government were an entity, one body, and he quoted scripture to prove that every member of the cabinet was responsible for all governmental action regardless of the department in which it originated. He castigated my hon. friend from St. Lawrence-St. George (Mr. Cahan) for saying anything about the Canadian National Railways, and then he proceeded to show that under the Liberal administration, which had selected Sir Henry Thornton as the president and manager of the system, it had been brought out of the condition of chaos in which he and his party left it a few years ago, and he praised Sir

Henry Thornton for the marvellous surpluses earned by the system during the time he has been in office. If anything more were required to demonstrate the virtues of this government than the fine eulogy pronounced by my hon. friend this afternoon, I do not know where you would look for it. Certainly when you eulogize the success and progress of the Canadian National Railways, that very satisfactory condition of affairs cannot be separated from the prosperity of Canada generally.

Mr. SPOTTEN: Who built the Grand Trunk Pacific?

Mr. CAHILL: Who bought the railways under closure? My hon. friend from South Wellington, who to-day eulogized the management. He could never do that when he and his Conservative friends were in control of the Canadian National Railways. But, as the hon. member said, you cannot divorce the success of the Canadian National Railways from the prosperity of Canada; and the prosperity which he spoke of must be attributable to the government of Canada—to the government of the day. If our railways were able to earn the dividends which he mentioned, it was only because of the good government which we have had since he and his friends left office in 1921.

My hon. friends reason that the debt should include guarantees of the Canadian National Railways. I do not know what system of book-keeping they would set up in order to show that two parties were liable for the same debt. If the Canadian National Railways are earning dividends on their debt to the public, why show it in the Canadian statement of Canadian affairs? If they were not, it would have to be added, as was done in the past, as non-active securities of Canada. That was the system adopted under the Conservative regime. They showed that advances to the Canadian National Railways were non-productive, and they were classed as non-active assets; the Conservatives did not figure that they would ever be able to realize anything from them. But when the Canadian National Railway system reached the stage where it was earning interest on its debt to the public it would be impossible to show in the Canadian statement a $40,000,000 guarantee of a loan and charge that as a liability against the Dominion government, while charging the same thing against the Canadian National. There is no better way of dealing with the matter than the method followed by the Conservative party, nor is there a better method than that now pursued by the Minister of Finance (Mr. Robb). You are not telling the public anything new when you say that the government have guaranteed the stock of the Canadian National Railways; the people know that. The people also know that under this administration interest is being paid on account of the debt—something which was never known before in the history of the railways under the Conservative administration.

My hon. friend complained of the huge debt of the Canadian National Railways. I realize that it is huge. But the hon. gentleman must take responsibility for a large part of that debt: he and his colleagues in the house insisted, by closure, on paying to the owners of the stock of both railways which they took over an excessive, exorbitant price, when they could have foreclosed and saved hundreds of millions of dollars to the Canadian people. Of course, the railway is heavily loaded with debt, but to my hon. friends opposite must be charged the responsibility; it is not attributable to this government.

I notice that the party opposite are trying very hard to get into the good graces of the people again by their support of the Canadian National Railways. My hon. friend from St. Lawrence-St. George, however, apparently slipped, although he was quickly brought to time by his colleagues around him. The people of Canada know that the Canadian National Railways must be supported by public opinion if the system is to succeed, and I am very glad to see that our friends opposite are now taking the attitude that they too will deal fairly with the Canadian National.

Mr. CAHAN: Did my hon. friend learn anything to the contrary from my speech?

Mr. CAHILL: I thought I did.

Mr. CAHAN: You are entirely mistaken.

Mr. CAHILL: Perhaps I am. Now, Mr. Speaker, during this debate I have listened with great attention to the criticisms of the budget by hon. gentlemen opposite, and the more I listen the more I am impressed with the greatness of that fine Canadian leader, Sir John A. Macdonald. Sir John Macdonald was a statesman who was both farsighted and ingenious; he was responsible to a large extent for the confederation of Canada and for the construction of a line of railway from the Atlantic to the Pacific. He helped in large measure in his time to develop Canada and Canadian resources and to make the Canadian people happy in Canada. But Sir John did propound one fallacy, the fallacy that protection is a cure-all, the fallacy that you can lift yourself by your boot straps, or that a nation can tax itself rich. My hon. friends of the Conservative party have lived for fifty

years or more in a somnambulant state: they have not evolved one new idea or thought except that which they constantly repeat, that protection is a cure-all for the ills of Canada.

During that early period of railway construction there was prosperity in Canada; we know that from statistics and from the history of the time. After the construction of the Canadian Pacific railway and the settlement in the west of a nucleus of farmers who proved to the world that western Canada was a profitable country to farm in, that it was feasible to farm here,—after the construction of that road, I say, there set in the natural depression which follows construction works in any country. We waited for ten years until that other great statesman came to the front—Sir Wilfrid Laurier. After the west had been proven Sir Wilfrid Laurier undertook to fill the vacant spaces in that part of the Dominion and instituted a railway construction program which offered employment to all the people who came to Canada. Every immigrant was able to find employment, was able to take up free land: and during that period we had a great influx of immigration and a time of prosperity. But since that day there has been no immigration policy so far as the governments of Canada are concerned. The present policy could not by any stretch of the imagination be called an immigration policy: a policy of assisted immigration, bringing in people at the expense of the taxpayers of Canada, is not to be considered an immigration policy. The Conservative party had never had a shred of policy that could be called an immigration policy. After all, there is only one immigration policy. Study the question as you will, look around as you will, there is only one immigration policy for Canada or for any other country, and that is a policy that will make for the best interests of all the people. That is the kind of policy that brought people to Canada before, and that is the only policy that will bring them again. As to this cry of the lack of an immigration policy, the lack of a policy by reason of the fact that there is no protection, the people of Canada have suffered under protection for many years, and on this point I should like to see a referendum taken in Canada on the question of lower or higher tariffs, on the question of free trade or protection. I am convinced that 70 per cent of the people would be in favour of a low tariff or of free trade. In this connection I am reminded of a policy which I believe would be useful to Canada; I think it is a platform that might well be adopted by the Liberal party. I refer to these words of Lord Macaulay:

> Our rulers will best promote the improvement of the nation by strictly confining themselves to their own legitimate duties, by leaving capital to find its most lucrative course, commodities their fair price, industry and intelligence their natural reward, idleness and folly their natural punishment; by maintaining peace, by defending property, by diminishing the price of law, and by observing strict economy in every department of the state. Let the government do this: the people will assuredly do the rest.

That is a policy that might well be adopted by Canada. It is a policy that might serve as a guide for this country, a guide against legislating in favour of any class, a guide that would permit the government to legislate in such a way that all who come to Canada will have an equal opportunity to make their own living, to reap the benefits of their own efforts, without being handicapped by some of the legislation which has been on the Canadian statute books for many years.

We are handicapped in this country by our insane banking system. It is almost impossible to get people to advocate a change in that system. I have heard it remarked in the house that the only people who are opposed to the present banking system are the people who cannot get credit. It occurred to me, Mr. Speaker, that possibly those who supported the present banking system had notes coming due, and were therefore afraid to oppose the banks. However, the system is handicapping our people; it is one of the great drawbacks in the maritime provinces, one of the things which bring their representatives here year after year pleading with this government for assistance. From their association with hon. members opposite these representatives eventually came to the decision that something should be done for them by the government by taxing the people, and of course taxing themselves as well. That is a species of Tory socialism, that you can tax yourself rich. A great deal of their complaint is due to that very cause, just as the farmers in the west complained a few years ago until they evolved a plan whereby they marketed their wheat co-operatively and took conditions as they found them. By that process they have reaped more of the benefits of their labour than was previously the case. When those western farmers first attempted the co-operative movement, however, they were blocked by the banks of Canada and placed in a most awkward position. They had to go outside Canada for assistance in order to finance their undertaking, until finally the Canadian banks found they could not block them any longer and came to their aid. This system has accumulated the

finances of Canada in the two great centres of the east, and until that system is changed it is impossible to legislate in such a way as will give equal opportunities to every Canadian. Until that time comes, and some adjustments are made in our present laws, it is useless for us to spend money on an immigration policy in an attempt to bring people to Canada to work under the same handicap. They realize what they are up against before they come here, and many of them refuse to enter Canada because they know that under our present conditions we are not doing all we can for even our own people.

While I am on this subject, Mr. Speaker, there is one point I should like to develop. Ever since I have been in this house I have heard the point stressed by both parties and by the different leaders that a preference of some sort should be given to the Britisher. That might be all very well if, by that preference, you are not putting the other fellow in the position of a second rater. Every time you say you have a first choice, all others must be a secondary consideration; they must necessarily be second choices. The man who comes to this country to live is very sensitive, and when you point out to him that you have a first, a second and possibly a third choice he does not care to be placed in anything but the first class. Every man who comes to Canada should be accepted as a Canadian; he should be allowed to grow up in Canada as a Canadian without any such classification. I venture to say that many members of this house, if not a majority of the members, are not descended from people coming from the British Isles; to them you say you prefer some person else. To the German settler on the prairies, to the American settler or to the man coming from any other country but Great Britain you say: You are only second choice. I believe the Minister of Immigration (Mr. Forke), the members of the government and the members of the opposition in speaking on immigration matters should hesitate to classify any man coming to Canada as less than a first class Canadian.

If we would devote a little time and attention to really working out our problems, in a very short time we would have no immigration problem. I have listened for some weeks to a discussion of this budget, but I have failed to hear one constructive suggestion. Hon. gentlemen opposite have brought forward the old shibboleth of higher tariff, higher taxes; that is the only theory the Tory party can suggest for the ills of this country. Further taxation is to cure everything! If the parliament of Canada had devoted the time spent in this debate to an earnest attempt to find out what could be done to stop emigration, to promote immigration and to assist the people already in Canada we would be very much better off. We have taken weeks to discuss a harmless budget, an amendment offered by the opposition which means nothing, and a subamendment from the Progressive corner which I think means even less. The debate has gone on long enough, Mr. Speaker, and I do not propose to prolong it; all I wish to say is that after the excellent speech of the hon. member for South Wellington I am quite convinced that the government is in a safe position and that I shall be justified in supporting the budget presented by my hon. friend the Minister of Finance.

Mr. J. A. MACDONALD (Richmond-West Cape Breton): Mr. Speaker, I take this opportunity to say a few words with regard to the amendment to the budget moved by the hon. member for St. Lawrence-St. George (Mr. Cahan), which amendment may be taken as the policy of that portion of the house sitting immediately to your left. I do not intend to mince matters, so I may state now that it is my intention to vote against the tariff proposals of the Minister of Finance (Mr. Robb), because in them I see no solution offered for the many problems which face a large and important portion of this Dominion.

It is not my intention to take up the speech of the hon. member for Pontiac (Mr. Cahill); what I have to say will consist mainly of references to my native province and the constituency from which I come. Representing as I do a constituency on the island of Cape Breton, close to our great industrial centres; living in the heart of one of the greatest in-shore fisheries in the maritime provinces—

Some hon. MEMBERS: Louder.

Mr. MACDONALD (Cape Breton): I would ask that my hon. friends opposite maintain order when I am speaking. I have a cold at present, and I am not going to put up with too much of that sort of thing.

Mr. SPEAKER: Order.

Mr. MACDONALD (Cape Breton): As I was saying, I live in probably one of the greatest in-shore fisheries in the maritime provinces, and I feel it my duty to raise my voice in protest against the budget proposals of this government as presented by the Minister of Finance, because they offer no assistance to any of these great industries. I fully expected that at this session of the house the government would fulfil the solemn

promises which they made to the people of the maritimes on the hustings in that portion of the Dominion from time to time; practically every Liberal candidate promised definite and practical relief to the long suffering industries of the maritime provinces. The Prime Minister also made the solemn promise that he would fully implement the findings of the Duncan commission, and he made special reference to our coal and steel industries, stating that because of the uncertainty of the conditions then surrounding those industries he would defer action until a settlement was reached.

In this suggestion the majority of our maritime members concurred, and we gave our whole-hearted support to the government. During last session we on this side of the house refrained from embarrassing the government with our endeavours to secure those rights which Sir Andrew Duncan and his associates declared were ours, but we did so only because of the definite promises made by the Prime Minister that he would fully implement the findings of that important commission. This is the third budget which has been presented to this house, Mr. Speaker, which shows the complete indifference of this government to the industrial development of Nova Scotia. The budget of 1924 when first introduced purported to deprive the agricultural implement industry of a considerable proportion of the meagre tariff protection it enjoyed, and this was done at a time when unemployment was rife in many of our industrial centres. Protests poured in to the government from manufacturers of farm implements, among which the voice of Hon. Vincent Massey was undoubtedly heard. And so great was the political pressure exerted that the government granted compensation to these manufacturers by placing iron and steel on the free list when used for the production of farm machinery. The net result was that a serious blow was struck at the iron and steel industry of the province of Nova Scotia, the effects of which are only too well known to all who are acquainted with the resultant economic conditions in that province.

It is distinctly disappointing to the people of Nova Scotia that this budget contains no mention of relief to the steel or coal industry, and gives no evidence that the government has paid the slightest regard to the recommendations in the report of the Duncan commission for prompt tariff consideration for those basic industries. The only tariff change in the budget relating to coal or steel is the provision of a drawback of 99 per cent of the duty on bituminous coal used in the evaporation of salt produced in Canada.

[Mr. Macdonald (Cape Breton).]

Once again, Mr. Speaker, our Nova Scotia coal industry has been made to suffer in the interests of an industry which finds its chief centre in the province of Ontario. May I point out, Mr. Speaker, that the Duncan report contained a definite recommendation that a bounty equivalent to 50 cents per ton on Canadian coal used in the production of steel should be granted for the encouragement of both our coal and steel industries in the province of Nova Scotia. You will find that recommendation at page 38 of the report. Last year the Prime Minister excused the government's failure to implement the recommendations of the Duncan commission by pointing out the unsettled state of the Nova Scotia steel industry. This pretext no longer exists. From a statement made in this house by the hon. Minister of National Defence (Mr. Ralston) I would infer that the government definitely refuses to apply the remedy which a commission of its own creation recommended should be applied for the upbuilding of the Nova Scotia steel industry until certain additional steps are taken by the group in control of these industries. One of the minister's objections was the inflation of capitalization and the unwieldy and complex organization which groups some fourteen companies under one head. I should like to remind the Minister of National Defence that at the time this huge merger was mooted in 1920 the Liberal government of Nova Scotia of which he was then a member passed enabling legislation which brought about the creation of the very corporation which he now criticizes. If my memory serves me correctly, my hon. friend voted for the passage of that enabling legislation, and he now has the temerity to stand up in this house and take the attitude that the industrial workers of the province of Nova Scotia must continue to suffer hardship, misery and want solely on account of conditions which a Nova Scotia Liberal government, of which he was a member, were instrumental in bringing into being. I may tell my hon. friend that the very objections which he now raises were forcibly brought to the attention of his government and himself by the local opposition of which I was at that time a member, and I considered it my duty to vote against the legislation which was then enacted by the legislature.

Now, Mr. Speaker, I wish to refer to another great industry in my native province for which this budget makes no provision beyond a few items which practically have no importance or significance, and that is the fisheries of the maritime provinces. One would be led to believe from the proposals

of the present budget that such an industry did not even exist, and from the past actions of this government it is obvious that industry has never given it very much concern. Sir Andrew Rae Duncan in his report to the government claims that the fisheries of the maritimes, in extent, in quality and in value, constitute one of our most important natural resources. According to figures compiled by the Dominion Bureau of Statistics and issued by this government there are 20,000 people in Nova Scotia alone who gain their livelihood in this industry, and the market value of their products is some $12,500,000 annually. This great industry is today on the decline, especially that portion of it known as our inshore fisheries. This can be evidenced by the number of closed homes in many of our fishing districts. Since 1914, according to the returns of Mr. Ward Fisher, fisheries inspector for the province of Nova Scotia, some 10,000 persons have left the industry. The war accounted for some of these, but the great majority were compelled, on account of the meagre returns which they received for their labours, to go to the United States where, under the protection of the Fordney tariff, they could receive a remuneration and enjoy a standard of living such as was not afforded to them in their native province. The county of Richmond has suffered probably, more in this respect than any portion of the province of Nova Scotia. In 1910 the number of fishermen employed was 2,113, and 212 people in our lobster canning industry. In 1921 there were 1,752 fishermen, employed and 164 men employed in our lobster canning industry. In 1926, the latest year for which returns are available, the number of fishermen had fallen to 1,370, and in the lobster canning indusary 120, and I am afraid it will be found that later returns will bring the number of fishermen in the splendid constituency of Richmond-West Cape Breton under 1,000. In one school section alone in little over a two-months period, 33 children moved to the United States together with their parents.

This condition was brought strikingly before the government by the Duncan commission. In the session of 1927 the government promised, through the Prime Minister, to take immediate action to remedy these deplorable conditions. The Prime Minister, while stating his willingness to do everything possible for the industry, threw in the teeth of every Nova Scotian the fact that the province of Nova Scotia rejected the proposed reciprocity agreement in 1911. Is the Prime Minister aware of the fact that that agreement did not grant the province of Nova Scotia any concession in respect to fisheries that it did not enjoy from 1912 to 1922? When the Fordney tariff went into effect in 1922, it deprived Nova Scotia of a large market in the United States. What did this government do? It lamented, as at present, the defeat of reciprocity. Had it taken the initiative at that time, it would have sought out other markets in other parts of the world. The Fordney tariff rates were imposed at the instigation of the American Fishermen's Union, and this same union in 1921-22 would have compelled the high tariff government of the United States to abrogate the gentlemen's agreement which had been entered into with the Laurier-Fielding administration. This is the fate which has overtaken practically every trade treaty which Canada has entered into with the United States. The reason why the people of Nova Scotia rejected the reciprocity treaty was because they knew it could be abrogated at will; they had had the experience of what had befallen the reciprocity treaty of 1854. The people of Nova Scotia wanted something of a more definite nature than that which our Liberal friends offered. The Duncan commission asked for a separate Department of Fisheries under the head of the deputy minister, a man with practical fishing experience, who could make a survey of the industry and be in close personal touch with the conditions as they exist in the maritime provinces. On page 34 of the revised Hansard of 1927 the Prime Minister is reported as stating:

> The commission's recommendation with respect to the appointment of a deputy minister whose duties will be confined to what at present constitutes the fisheries section of the Department of Marine and Fisheries, will be carried out.

This was on the 18th March, 1927, just a year ago. This is another promise of a Liberal administration that has not yet been fulfilled. I should like to ask whether public utterances, and as in this case, very definite promises made to this house and to the country, are to be held thus lightly?

As was stated by the hon. member for Queens-Lunenburg (Mr. Ernst), the Nova Scotia inshore fishing industry in the autumn of 1927 was in such a deplorable condition that indignation meetings were held in various places and, viewing the condition of the people in the fishing districts, the clergy of the diocese of Antigonish sent a resolution to this government demanding the appointment of another commission. In this they were backed by the provincial government who helped them in every possible way to organize an effective fishermen's union. I do not intend at the present moment to go into the

order in council appointing the commission, or to dwell upon its political complexion. Suffice it for me to say that the great bulk of the fishermen of Nova Scotia do not want and, indeed, emphatically resent their industry being made a political football.

It was not my intention to speak on the fisheries until the report of the commission was brought down, but I have not the least expectation in the world that this report will be tabled during this session of the house. The commissioners are now in Montreal, housed in the Windsor hotel at the expense of this country, and they are in a quandary as to what to recommend as a solution to remedy the existing state of affairs. This industry must wait another year before anything of a definite nature is to be done and I feel that the government is only sparring for time in order to make another political gesture to the fishermen of the maritimes. May I say to my hon. friends opposite that we of the maritimes have had too many political gestures thrown our way? What we want now is definite, immediate remedial action, and if that is not forthcoming, the few seats which this government holds in the maritimes will be even fewer than they are to-day when the next appeal is made to the province of Nova Scotia.

The hon. member for Queens-Lunenburg has made to this government certain suggestions every one of which, as a representative of a fishing community, I most heartily endorse. I would go even further and ask that fish landed from foreign beam trawlers, dry fish imported from Newfoundland, and fish shipped into central Canada from the United States, pay as high a duty as Canadian fish entering the United States. I would also ask that our fishermen be given long-term loans, such as have been granted to our Canadian farmers, in order to enable the fisherman to equip himself to prosecute his calling successfully. I would suggest also that a form of fishermen's insurance be created, because, as the law exists to-day, only tonnage boats can be insured, and as the majority of our inshore fishermen do not come under this classification they have no means of protecting themselves against loss. I also strongly urge that the twenty per cent reduction recommended by the Duncan report on westbound traffic be made to apply to fish from the maritime provinces routed to United States points.

The question of transportation should be taken up by the government and greater cold storage facilities provided. The salt and dried fish industry is practically a thing of the past, and if a fresh fish industry is to be maintained in the maritimes we must have refrigerator boats and cold storage facilities. The government will tell us that this will necessitate a raid on the treasury. Let me tell my hon. friends opposite, and especially that group which sits in the far corner, that this industry has an interest in the treasury of Canada to the extent of around $4,000,000, and I feel that this money should be used for the development of cold storage facilities and cold storage transportation for the inshore fishermen of the maritime provinces. Under the Halifax award in 1873, $4,525,000 was placed at the disposal of the government of Canada for compensation due to injuries suffered by the fishing industry of the maritime provinces. From November 21, 1878 to May 17, 1882, the Dominion government had sole use of this money. In 1882 a portion of the interest on this money was by act of parliament made available in the form of bounties to the fishermen, the amount so used being $160,000 per annum. The point to note is that at five per cent per annum, which would be a reasonable interest return, the amount available for distribution should have been $226,250, without the principal being touched. Thus for forty-five years, from 1882 to 1927, the Dominion treasury has been enriched, at the expense of the fishermen of the maritimes, to the extent of $66,250 per annum. From 1878 to 1882, a period of four years during which no bounty was paid, the treasury profited to the extent of $905,000. In other words, there is a sum of accrued interest approximating over $4,000,000 rightly belonging to the fishermen of the maritime provinces. The legislature of Nova Scotia passed a resolution in 1921 supporting this contention and in the same year a similar resolution was passed by the government of Prince Edward Island. I claim that this money rightfully belongs to the maritimes and it should be either given to bonus the industry or used for facilities which will benefit the fishermen of the maritime provinces as a whole. Furthermore I contend that fishermen from the colony of Newfoundland should be precluded from sharing in this bounty when fishing aboard Nova Scotia fishing vesels during their seasonal employment in Nova Scotia fisheries.

The Minister of National Defence (Mr. Ralston) on Monday last made some reference to the fisheries of Nova Scotia. Those references consisted largely of time-worn platitudes and an attempt to belittle constructive suggestions put forward by an hon. member on this side of the house. One point in the minister's speech that stood out above all others was the studious way in which he

skated over and avoided the greatest question before the fishing industry of the province, that of the beam trawler. Not only this house but 16,000 fishermen in Nova Scotia are wondering to-day where he stands. The hon. member for Queens-Lunenburg brought to the attention of the house the fact that the fishermen of Nova Scotia, and of the eastern part in particular, have been subjected to most unfair competition by landings of fish duty free from foreign trawlers. Does the Minister of National Defence approve duty free landing of fish by trawlers owned outside of Canada? He will have an opportunity to declare himself in that regard. The people of Nova Scotia and especially our 16,000 fishermen, would like to know where he stands. Why did the minister not declare himself on a second matter of very vital importance to the fishermen of Nova Scotia, namely, that of the institution of a department of fisheries with a responsible minister at its head? From his remarks it may be inferred that he was fairly well acquainted with the evidence given before the commission, but he did not mention anything about the appointment of a deputy minister as recommended by the Duncan commission or the establishment of a department of fisheries with a responsible minister at its head.

As to the inspection of fish and fish products, the minister said this was already being done. The only inspection that is being made is an inspection of pickled fish, and this has been done in a haphazard manner, and very often by political appointees with no fitness for the position, with the result that the inspection has been practically valueless. It is true that in Canso and Hawkesbury a fresh fish inspector was appointed last summer to inspect fresh fish landings in connection with the government fish collection experiments there, but the fact remains that this was an isolated instance, and that there is to-day no such thing as the inspection and grading of fresh fish, dried fish, or smoked fish products.

The minister boasts of the scientific research which is being carried on. No one belittles the work which is being attempted, but it is only a beginning. Included under this heading are such subjects as a complete survey of our foreshore to determine the extent of our resources—for example, of our scallop beds; a study of fish life, and a determination as to when depletion begins and conservation becomes essential; experimentation in the cure, marketing and packing of all kinds of fish, and provision by the establishment of competent inspectors in fishing communities for bringing home to the practical worker the results achieved.

The hon. minister dealt with another topic, that of markets, and boasts of what has been achieved. Does he not realize that while shipments of fresh frozen fish have increased, the entire benefit has gone to a few corporations, and was very largely the result of the landings by foreign trawlers? The problem of marketing is allied to that of transportation. Markets must be developed, particularly at home, by education and devising means of transportation, so that when they are developed the benefit may be passed on to the thousands of our fishemen who await and need them, and not be swallowed up, as in the past, by the charter of a few more European trawlers.

The minister talked of progress and improvement. Where does he find that improvement? Certainly not in the conditions of the thousands of fishermen scattered along our coast line. The minister boasts of the encouragement which this government has given the industry. Let me say that if these boasts are all the hon. minister has to offer, and if we are to have only the same kind of progress and achievement during the next five years, heaven help the fishermen! Why talk of steady progress and achievement when we have lost, in twelve years, 10,000 of our fishermen?

I should like to say a few words with regard to providing medical attention for our sick fishermen. Dominion legislation provides for what is known as a sick mariners' fund, to which the owners of shipping schooners in our interprovincial coastal trade contribute. It also applies to fishermen of tonnage ships. This is of great benefit to our sick seamen. We also have the hospital ship for the care and attention of our deep sea fishermen. The Workmen's Compensation Act in our province as it stands at present cannot be taken advantage of by our inshore fishermen because they are not employers of labour. Generally the fisherman himself is the labourer, and in order to come under the Workmen's Compensation Act he must employ three or more labourers; and then he would not as an an employer be eligible himself. In any event the fee demanded by the various compensation boards is prohibitive, and if made compulsory would put the fishermen at a great disadvantage. Even then no provision would be made for sickness; accidents only would be taken care of. I have found in my fifteen years of practice among the fishermen of this country that accident is the exception. What we have to contend with is sickness brought on by the hazardous occupation which the fisherman is compelled to pursue in order to

gain a livelihood. Secondly, the fisherman, being underpaid for his services, is—together with his family—undernourished. Tuberculosis is prevalent among our fishermen; it is one of the most deadly diseases encountered in our fishing districts. Our fishing villages, located generally around our indentations and bays, are in most instances far removed from medical care. The poor fisherman, with the meagre earnings of to-day, is not in a position to secure the medical aid he requires for the protection of himself and his family. I would suggest to the government that our fishermen be placed on an equal footing in that respect with the deep sea fishermen, and that either a contributory system be adopted or a certain proportion of the Halifax award be utilized for the purpose of caring for our sick and invalid fishermen and their families.

With respect to railway transportation, I have in my hand a resolution passed by the municipal council of the county of Richmond, Cape Breton, as follows:

Whereas the fisheries of Isle Madame and contiguous waters in the county of Richmond are an invaluable asset to this municipality and the entire Dominion as well, and

Whereas the farmers of Richmond, keeping pace with the times, are conducting operations on a vaster scale than heretofore, but

Whereas many farmers from the eastern sections have left their farms being unable to carry on their agricultural activities at a profit owing to lack of railway accommodation, and

Whereas the pulpwood, gypsum and other mineral resources of the county of Richmond are boundless, but their development is impeded owing to lack of adequate railway accommodation east of St. Peter's on the Canadian National Line, therefore,

Resolved, that this council in annual session convened, hereby memorializes the federal government to extend the present line of railway to St. Peter's eastward as far as Louisburg or Sydney, and to construct a branch into Arichat, the shiretown of Richmond, to be operated in conjunction with the main trunk line inasmuch as the federal government has acquired the present line to St. Peter's making it an integral part of our Canadian National Railways system, further,

Resolved, that the said government be memorialized to refund to this municipality the amount of Ten Thousand Dollars—$10,000—borrowed to pay for the right-of-way when the said line was opened in 1903, further,

Resolved, that this council considers these demands neither unreasonable nor unjust, but the just deserts of the county of Richmond as an integral part of this great Dominion, with a right to its existence and an opportunity to work out its destiny as at present incorporated, and further,

Resolved, that copies of these resolves be forwarded to the Minister of Railways at Ottawa, and to every federal member in Nova Scotia with the request that they work in season and out of season for the consummation of these ideals so dear to our hearts and so vital to our interests.

[Mr. Macdonald (Cape Breton).]

Briefly, the resolution recommends that this government take under consideration the advisability of extending the Cape Breton railway, which now runs from Point Tupper to St. Peter's, eastward as far as Louisburg. The resolution also asks that the sum of ten thousand dollars which was borrowed by the municipality of Richmond to pay for the right of way when the Cape Breton line was built in 1903, be refunded to the municipality by the federal government, and further, that a branch of this railway be extended to Arichat, the shire town of the municipality. The construction of such a railway would be of great benefit to the fishing industry of Isle Madame, on which our shire town of Arichat is located, and also to the various fishing communities lying between St. Peter's and the town of Louisburg. The fishermen along this coast require railway transportation. A large proportion of the best farms and farming land in Cape Breton west and Richmond lies along the proposed route of this railway extension. There is available in this section of the country sufficient pulpwood to keep a 150 ton per day pulp mill going for the next forty years. This large pulpwood reserve cannot be utilized except by the construction of a railway. Almost every variety of mineral ore is to be found in this region, zinc, copper, lead, manganese, limestone, iron, coal, as well as building material. As regards some of these minerals, we are already beyond the prospecting stage. That vast quantities of zinc, lead and copper exist there, has been proven by a large corporation now carrying on operations in this district; I refer to the British Metals Corporation. They have spent upwards of $200,000 in development work in this district during the past year, and it is their intention to operate on a large scale as soon as spring opens. The industrial development of this area has been seriously hampered during the last few years owing to the lack of transportation facilities, and it is to be hoped that this government will immediately take steps to remedy the existing unsatisfactory state of affairs.

As regards the $10,000 claim which the municipality of Richmond holds against this government, I might explain that the municipality, having been refused consideration in the matter of railway facilities by both federal and provincial governments, guaranteed free right of way to any corporation that would undertake the building of a railway. A corporation was organized for this purpose, and the road was built as far as St. Peter's. The municipality of Richmond expended $10,000 in buying the freehold for the present right of way from Point Tupper to St. Peter's. The

road was completed in 1903, and was operated by the Cape Breton railway company up to 1920 when it was acquired by the federal government and incorporated into the Canadian National railway system, and the municipality of Richmond claim, together with myself, that the federal government should now reimburse the municipality for the amount of money expended in acquiring this right of way. I may say, Mr. Speaker, that I strongly support the claim.

In 1926, under the Conservative regime, I brought the matter to the attention of the acting minister of railways, with the result that a departmental official was sent into the municipality. After consultation with the municipal authorities and going into the matter personally he recommended favourably to the Railway department. I would ask the hon. Minister of Railways and Canals (Mr. Dunning) to take the matter under favourable consideration and reimburse the municipality of Richmond for the money they expended in this connection. I do not feel that we are under any obligation to the revenues of Canada for any favours granted us in this respect, for the reason that valuable rolling stock, right of way and railway rights were acquired by the federal government in 1920 for the paltry sum of $100,000, and the railway has proven under Canadian National management to have been an asset rather than an encumbrance. I have it on authority that during the last year this was one of the few branch lines that earned operating expenses and was not a burden on the Canadian National railway system or on the treasury of this country.

Mr. CHARLES B. HOWARD (Sherbrooke): Mr. Speaker, permit me for a few minutes to join with those who have preceded me in congratulating the Minister of Finance (Mr. Robb) on the splendid budget that he has again given to the people of Canada. Not only do I congratulate him on this budget, I congratulate the entire government on the success of its administration. It has frequently been said that they have been able to retain power, but it must also be said that they have been able to demonstrate by the increasing prosperity of the Dominion that Liberal principles are conducive to such general prosperity. The government have been able to provide for the necessary expenditures and at the same time reduce the net debt by $42,000,000, thus saving in interest at least $2,000,000 that otherwise would have had to be paid by our people. Even more important than this is the Finance minister's outlook on the future, for he states that on the estimated revenues for the fiscal year 1927-28 he believes that next year he will be able to make a further reduction in taxation of at least $19,000,000.

Hon. members on the other side of the house have tried hard to show—and this point was particularly stressed by the member for St. Lawrence-St. George (Mr. Cahan)—that the net debt instead of having been decreased has been increased on account of the guarantees of Canadian National Railway bonds. In this connection I wish to quote a few lines from the speech of the hon. Minister of Railways (Mr. Dunning) to make clear the situation. He said:

> All the debt of the Canadian National Railways to the people of Canada is now treated as part of the net debt of the Dominion. . . that portion of the debt of the Canadian National Railways which is owed to the public, and on which the railway is earning the interest, is not a part of the net debt of Canada, but is a charge against the railway.

And rightly so. But the hon. Minister of Railways was perhaps too considerate of hon. members opposite or too gentle in his manner to make a contrast between the condition of the Canadian National Railways to-day and in the past, something that I claim is most important to consider in the interests of the taxpayer. The facts of the case are these. In 1921 under Tory administration $42,000,000 was taken out of the pockets of the taxpayers to pay the railway deficit, while to-day the system has earned $42,000,000, enough money to pay interest on all the debentures in the hands of the public. And this in spite of the fact that between 1921 and to-day freight rates generally have been considerably reduced. As to the condition of the railways of Canada to-day, I would quote from the Montreal Star of Monday night, as follows:

> Canadian Pacific traffic earnings for the month of February show an increase of $1,608,000, while those of the Canadian National increased $2,636,797, making a combined increase of $4,244,797 over February of last year.

I was sorry to hear the hon. member for St. Lawrence-St. George criticize the Canadian National railway system and its management, but I rejoiced to-day when the hon. member for South Wellington tried to reinstate the Tory party in the confidence of the people by praising the Canadian National Railways and Sir Henry Thornton. Undoubtedly the sentiment throughout Canada is that the criticism of the hon. member for St. Lawrence-St. George was unjust and unmerited. I congratulate Sir Henry Thornton on the splendid spirit that he has engendered in his employees. I wish to pay tribuate to the employees of both our railway systems, and to assure them that the successful operation of these railways is due more to their co-operation than to any other factor.

Now, Mr. Speaker, I turn to an item in the budget that has not been referred to very much on this side of the house, and has not even been mentioned by our friends opposite, but nevertheless to my mind it is one of the most important things in the budget. On page 508 of Hansard the Minister of Finance shows that he has a surplus of nearly $55,000,000, but he has reduced the net debt of Canada by only $39,000,000. Naturally this raises the inquiry: Why is not the whole of the surplus set aside in reduction of the national debt? The explanation is simple. The government had to face a loss of nearly $16,000,000 on account of the poor administration of their predecessors. The government could not decrease the net debt of the country to the full amount of the surplus because after the war the Tory government devised a scheme to rehabilitate our returned soldiers by placing on farms those who wanted to take up farming. I do not criticize the motive; it was splendid. But I do criticize what happened. The figures in the budget show exactly what did happen. These men sent their friends throughout Canada to purchase farms, and in my own section, as well as in other sections, the prices paid were according to the degree of friendship which existed between the purchaser employed by the government and the man who had a farm for sale. As a result the government to-day is revaluing the soldier settlement lands and trying to give to the returned men, who paid a great deal more than their farms were worth, a square deal, and so in a small way recompense them for the great service they rendered their country overseas.

At this juncture I might contrast the direction of the policy of soldier re-establishment under the Tory government in 1920 and 1921 with the administration of the department under the present government. I wish to congratulate the Minister of Immigration (Mr. Forke) on the splendid work he has done and is doing in this connection. I can assure the house that in the eastern townships, in which of course I am more particularly interested, we have one of the finest committees on revaluation to be found anywhere in Canada. That committee comprises men who are not politicians but who enjoy the complete confidence of the entire district which they are endeavouring to serve. I am sure that in that section the soldiers will secure justice. And we owe them justice. The fact still remains, however, that the Minister of Finance could not further reduce the debt this year by $16,000,000 on account of the money wasted by the Tories in the purchase of those farms. One more suggestion I would offer in regard to the treatment of our soldiers. I trust that, even if it may not appear on the statute books of Canada, our government and our government officials will stretch a point, if they have to go out of their way in some cases, to give full justice to these men or to their wives, families and dependents when perhaps their case does not absolutely come within the letter of the law.

This brings me to another item in the budget speech which I wish to touch upon, namely, the refunding scheme. Everyone is cognizant of the fact that throughout Canada nearly all of the financial institutions and trust companies are quite keen on some scheme of refunding the war debt. For my part I think it would be a splendid thing, but I was pleased to read, on page 509 of Hansard, in the budget speech of the Minister of Finance, the following words:

> " I submit that until Canada is nearer the pre-war rate of taxation, annual reduction of taxes is as important as reduction of debt. Our policy is to reduce both."

With which I agree. I submit this for the consideration of every Canadian citizen: This generation, from 1914 to 1928, has suffered to pay the price of the war; in 50,000 Canadian homes there is the vacant chair which indicates their participation in the war. Some of our financial men have lost hundreds of thousands of dollars as a direct result of the war, and more than ever our working and labouring population is still bearing the brunt of the struggle. Why, then, ask this generation to curtail still further in order to pay off the debt of the country? Have we not done our share? Let us reduce taxes and use the surpluses we have each year to build up Canada and to make this country a greater place to live in than it is to-day, so that we may be able to hand on to the future a heritage worth while. Let us leave to our children's children the paying off of the war debt, seeing that we have done our share, and especially in view of the fact that it is in the best interests of this Dominion for us to leave to posterity, after we have played our part in the war, a going concern, a country greater than it is to-day.

I am reminded of the picture painted in the house the other day by the hon. member for Fort William (Mr. Manion). Certainly the hon. member was experiencing one of his off days when he depicted all the closed factories throughout Canada. As he painted that picture I wondered what he was referring to, and I came to the conclusion that possibly the hon. member for Fort

William had passed through Oshawa on the day the automobile factories were closed while the employees were in Ottawa in a delegation.

Mr. MANION: I was referring to the closed factories in my own constituency.

Mr. HOWARD: In view of the hon. gentleman's remarks, I think perhaps it might be just as well for me to cite some facts regarding my own home town, Sherbrooke, the queen city of the eastern townships, one of the most beautiful and prosperous cities in Canada, ideally located, even if it is small. I want to call the attention of the house to the fact that during the calendar year, 1927, the figures of exports to the United States alone, apart from supplies to our home market in that little section of the country known as the eastern townships of Quebec, amounted to $19,251,000. This quantity of products, through the only consular district, Sherbrooke, was sold and shipped to the country to the south of us. This mirrors the prosperity of our people. Last night I received a local newspaper in which I find that the surplus of Sherbrooke for the past year amounts to nearly $2,000,000, while the operating surplus in the electrical department, which is run under municipal ownership, is $245,000. Furthermore, the municipal tax rate in the city of Sherbrooke for the next twelve months has been reduced from 12½ to 10½ mills on the dollar. All I can say to the hon. member for Fort William is this: If next summer the hon. gentleman finds things in Canada so bad I shall be glad to have him come down through our section of the country where I promise that we will demonstrate to him that Canada is still prosperous. That the people throughout the country are patriotic has been fully shown by the wonderful celebrations which took place on July 1 last. In my own town we had on that day a celebration which was second to none in Canada.

Our farmers are coming back to their own, and I say this advisedly. I want to congratulate the Minister of Agriculture (Mr. Motherwell) on his decision to extend during the next two years the restricted area as far east as St. Francis river. We in that part of the country are affecting the markets of the United States by our exports to such an extent that I find, in another item in the newspaper, the statement that in Washington the other day a delegation of farmers insisted that the United States government should raise their tariff in order to keep out our products which are being shipped from this section of Canada. As regards unemployment, I can only say that it is practically non-existent in my town. Every member of parliament knows, from his position, how quickly men call upon him when they are out of employment; so when I say that during the last six months only two persons have interviewed me looking for jobs, the house will realize that unemployment is insignificant in Sherbrooke—that in fact it does not exist.

Now I want to say a few words regarding the tariff. And first of all I want to congratulate the tariff board on the splendid work it has done in the investigation of cases brought before it. I make this statement after careful consideration, and not as a member of parliament. On several occasions the manufacturers of my town asked me to come to Ottawa with them and sit in at the hearings of the board. I did so and was surprised to see the manufacturers putting up their case on one side and the Consumers' League, on the other side, advancing its arguments in the interest of the taxpayer. The result is that there has been worked out a scheme which is reflected in the budget and with which we are satisfied in the city of Sherbrooke, even if two of our industries had their raw material slightly increased and one of the others, in the woollen line, had yarns put on the free list. I trust however the time will come when the tariff will be taken out of politics entirely. When I look at the tariff I cannot see why we should disagree with the western members of the Liberal party or even with some of the broad-minded members in the far corner. In the city of Sherbrooke we have two silk industries manufacturing silk stockings and garments which have a protection of 25 per cent against other countries shipping similar materials into Canada. Yet the prices of their products as sold to the consumers of Canada are exactly the same as the prices for which the American manufacturer sells to the United States consumer, so our manufacturers do not take advantage of that tariff of 25 per cent. That is what I call playing the game fairly.

I would also call attention to another industry which is carried on in the city of Sherbrooke; I refer to the manufacture of tire fabrics. This industry sells practically all its output to one concern in Toronto, to which the hon. member for North Simcoe (Mr. Boys) referred the other day. He congratulated the rubber people on their extraordinary showing, and demonstrated that the small tire used on the Ford car was actually selling for less in Canada than in the United States. But I may tell the house, Mr. Speaker, that that is made possible only because an industry in Sherbrooke, employing

one thousand hands, is shipping its raw fabrics to Toronto, and in spite of a 25 per cent tariff protection the average price last year on its total output was only 6 per cent over the price in the United States. That is the policy of this party, in contrast to the policy outlined in two extraordinary speeches coming from the opposite side of the house to which I listened.

In this section of the country we use a great deal of coal; our labouring classes and our poor people all use coal, and I am going to take home a good many copies of the speeches of hon. gentlemen opposite in which they advocate a duty of $1.50 on coal coming from the United States. I want to tell the people in my constituency that the Conservative party want the people to pay $1.50 a ton more than they paid this year for their supply of coal next winter. As a matter of fact, while I am deeply interested in the working classes and the poorer people, who need the government most, I am also frank enough to say that the people in the constituency of Sherbrooke do not expect the government to feed them every morning; they are willing to work for what they get.

Now I come to the reduction in the income tax. I do not know that my ideas in this regard will coincide with the ideas of other hon. members of the house, but first I want to congratulate the Minister of Finance for the reduction he has made this year. At the same time, I want to give my opinion of what I think should be done eventually in this regard. I believe the reduction should be continued until the rate is about one-half the present rate, which I believe is too high. I should also like to see the tax on corporations reduced to 5 per cent, which is quite reasonable. Then I should like to see the exemption raised by $2,000 next year, $2,000 the year following and $2,000 the year following that, until no person in Canada with an income of less than $9,000 will be called upon to pay income tax.

In this connection there is another point which I should like to bring to the attention of the house. A number of people were fortunate enough to buy tax exempt victory bonds, but I am sure if you look around this house, you will find no one, with the exception of my deskmate and the leader of the opposition, who owns any of those bonds. However, in 1931 bonds will come due to the value of $52,000,000 from which the treasury of this country has not received a cent in taxes in the past ten years; in 1933 tax exempt bonds totalling $446,000,000 will come due, while in 1937 we shall have to redeem bonds of this class to the value of $326,000,000, making a total of $824,000,000 from which the treasury of this country has not received a cent in the past ten years.

The one thing to-day which saves Canada from bolshevism, communism and socialism, is the fact that we have never adopted the principle that everyone should pay alike; that principle is not followed by any profession in Canada. Consider the medical profession; if the leader of the opposition were taken to the hospital and operated on for appendicitis I am sure his bill would be $1,500, and rightly so. If another member of this house should undergo an operation for appendicitis he might be charged $250 by the same doctor. But if Jimmy Jones, in my town, were taken ill and rushed to the hospital and operated on, if there were any charge at all I will bet the same doctor would not charge him over $35. So I say I am glad that in Canada we have recognized the principle that those who have the most should pay the most, and therefore I am not in favour of the further reduction in the income tax. As one hon. member in the far corner said, we could relieve one hundred thousand of the income tax payers, by raising the exemption, and anyone whose income is over $9,000 deserves to pay something into the coffers of this country.

Then there is the question of prosperity in Canada. In the Financial Times of this week, which represents public opinion in the financial centres of Montreal, I find this statement with regard to Canadian stocks:

Net gain in capital value of $743,302,691.

That means there was an increase of almost a billion dollars in the value of Canadian stocks last year. I am pleased with that state of affairs, because it denotes the general prosperity of Canada, but I have just a word or two of warning to add. I have every respect for the Department of Finance, and the value of that department was demonstrated last year when a certain trust company tried to put something over on the people of this country and were not allowed to do so, because the Department of Finance said, "No, you cannot go ahead doing business unless you put more capital into your concern." I say this advisedly, that we do not want to load Canada with the burden of over-capitalization, because when stocks are split, when values are increased and water is put into the stocks there are only two possible results in a general way; either the cost of their product to the consumer is increased or the wages of the employees are lessened, and I do not want to see either of these things happen. So I hope that this government will be able in

the near future to place on the statutes of Canada a law which will provide that any corporation increasing its capital must first secure the consent of the Minister of Finance.

Now, Mr. Speaker, I will ask you to call it six o'clock.

At six o'clock the house took recess.

After Recess

The house resumed at eight o'clock.

Mr. HOWARD: To complete the argument I was advancing when the house rose at six o'clock I should like to make this statement: We all remember the famous reduction in the duty on automobiles. It is not necessary to review the facts with respect to it except to say that when a fair proposition was made to the manufacturers and they were asked to reduce the price to the Canadian consumer, of cars manufactured in Canada, they refused absolutely to do so. They persisted in maintaining the price at the American retail price, plus the Canadian duty of 35 per cent. Then this government reduced the duty on automobiles and the price dropped to exactly the amount of that reduction in duty. I would suggest again to the manufacturers of automobiles that they cut the price of their cars in Canada 15 or 20 per cent, and if they would do so that we should put back the duty to the original rate of 35 per cent in order to keep out imported automobiles, and yet give the Canadian consumer the benefit of the reduced price. I make that suggestion in the hope that the manufacturers in Canada are willing to play the game with the Canadian consumer, and with the idea that the tariff may be used to keep out American or other competition without increasing the price to the consumer in this country.

During the past two weeks we have heard in this house speech after speech criticizing what I consider a mere detail of administration. Surely in olden days the Conservative party not only indulged in criticism of the general policy of the government but suggested remedies for whatever they considered defective in that policy. The course pursued by the Conservative party to-day in regard to the McConachie case illustrates the straits to which they have descended. Now I view that particular matter in this light: I am not prepared to state that any mistake was made, but I do say this: If the government has allowed the person in question to enter Canada, I suggest, and I think we are in duty bound to do so, that the whole family be taken back to Scotland, that their home be repurchased and that they be re-established there. But in spite of the sympathy I personally feel for the family under the conditions, I am still prepared to say that we must keep up the quality of our immigration regardless of the quantity. I am not surprised considering the speeches of opposition members, that the figures of immigration are not larger than they were during the past year. Only this week the leader of the opposition (Mr. Bennett), for whom I have the greatest respect, made a speech in the city of Montreal, and I wish to read an extract from that speech as reported in the Montreal Gazette of Monday, March 5th:

> Canada selling her estate, says Hon. R. B. Bennett.

I do not believe that Canada is selling her estate. I defy any member on either side to prove that such is the case. But I would ask this question: Outside of criticism of a mere matter of detail in the particular case alluded to, what policies or general suggestions have the opposition made to the government outside of a suggestion that a duty be imposed on coal? I pay this tribute to the hon. member for Toronto Northwest (Mr. Church): he at least has the courage of his convictions to the extent that he has placed a motion on the order paper asking the government to go ahead with the deepening of the St. Lawrence waterway; but in spite of the fact that a great many hon. members opposite come from Toronto, or from that section of Ontario deeply concerned in this matter, not one single member on that side has advocated a policy that would mean increasing our immigration and increasing our prosperity.

Mr. HOCKEN: There is lots of time for that.

Mr. HOWARD: I refer particularly to the deepening of the St. Lawrence waterways. As to the remark of my hon. friend, this debate is practically over.

Mr. HOCKEN: You will hear from us about it.

Mr. HOWARD: A great many articles have been written and a great many suggestions have been advanced with respect to this proposition, and in almost every instance the only objection to it is on the score of cost and its international features. As I stated this afternoon, I am not worrying one bit about the cost to Canada. I think that as Canadians we ought to spend in the development of this country the money available in our surpluses, and if there is one thing which in my opinion would develop Canada it is the expenditure of possibly $600,000,000 on the deepening of the St. Lawrence waterway.

During the three sessions that I have had the privilege of being a member of this house I have heard hon. gentlemen opposite ask this government many times to stop Chicago from stealing the water of lake Michigan for the purpose of diverting it into the Mississippi river. If the opposition are so much concerned about the interests of Canada, let them cease criticizing the Immigration department over the McConachie case and make some constructive suggestions that would really be in the interests of this country. The diversion into the Mississippi river of 8,500 cubic feet of water per second from lake Michigan is a serious matter to Canada. When we utter those figures rapidly it does not seem to be a very serious matter, but those who are acquainted with the city of Sherbrooke know that power is developed there on the river Magog. That power has helped make Sherbrooke what it is. Now the mean flow of the Magog river is 550 or 600 cubic feet per second. In other words the water that is being taken from lake Michigan, and which belongs to Canada, is fourteen times the mean flow of the river which furnishes power to Sherbrooke. The biggest argument against this development is its international feature, but my position in that regard is that I have every faith in Canadian statesmanship and I am not the least bit afraid to treat with the United States on that subject. If that project is carried out, one thing we know it will do is put a stop to the building of a canal from Buffalo to the Hudson river and in view of the extent to which our Canadian trade is already going via New York surely it is imperative that we make every possible effort to divert this trade through Canadian channels.

As regards the power development in the St. Lawrence river I am sure that the people hardly realize, when they criticize the project, that of the total fall in the river between Kingston and Montreal only 93 feet is in the international section while 115 feet is in the all-Canadian section, so that in any case Canada stands to benefit by more than 75 per cent of the total power development. Some remarks that I made the other day on this subject were misquoted and I wish to correct that error now. If this scheme goes through we shall interest not financially but morally the large section of central United States and also the state of New York, which is interested in the power end of the scheme and they will be a large factor in stopping the Chicago steal. Speaking as a man from Quebec, I believe if the deep waterway were built for no other purpose than the fact that it will permit a development of power near the city of Montreal, that it might be a good thing to have this power in the hands of the government rather than allow it to pass into the control of private individuals.

If we are so much interested in the prosperity of our country, let us remember that in the past this prosperity has always been due to some great government work being undertaken. For instance, the time that my section of the country went ahead was when the Grand Trunk railway was built through the eastern townships. In fact from that section the people came in delegations to Montreal, the then seat of parliament, and asked the government to undertake some governmental work during that period. When the great Canadian Pacific railway was built through Canada, there was, as was stated again this afternoon, a wonderful period of prosperity. If we want a successful immigration policy; if we want to bring people into Canada; if we want to make Canada prosperous, let us go ahead with this scheme, and even if we create a false prosperity during the next ten years and spend $500,000,000 or $600,000,000, the effect will be that it will make two jobs in Canada for every man and create an employment situation such as is essential to the development of our country.

In closing, Mr. Speaker, I may say that the first budget of the Liberal administration in May, 1922, showed a deficit of $81,000,000, and to-day, after six years under this government, and including two months and thirteen days under Tory administration, there is a surplus of nearly $45,000,000. So much for Liberal administration so far!

Mr. W. K. ESLING (West Kootenay): Mr. Speaker, it has been said that when a compliment goes from those who sit on your left to those who sit on your right it should be accompanied by a brick, but to-night I am going to omit the brick and to acknowledge and to thank the Minister of National Revenue (Mr. Euler) for his courtesy in connection with a matter which materially affected a mining section of my district. Had he taken the course which the case justified and adopted stringent measures, the pay of a number of miners would have been materially affected. It would have prejudiced a number of miners working leased properties; it would have jeopardized the position of a number of creditors, and it would have retarded, at least temporarily, mining development. The minister was very considerate and generous; I may say that the matter was satisfactorily settled all round, and I am glad to be able to make this acknowledgment.

I want also to congratulate the Minister of Agriculture (Mr. Motherwell) on the successful installation of a pre-cooling plant at Wynndel, in my district. It has been a great aid to the berry and fruit growers, and while it was completed only last year it served a very effective purpose, a particular instance being cited in connection with some thirty tons of strawberries. These strawberries would otherwise have been a total loss, but they were saved by the ability to put them in this pre-cooling plant. They were processed and cooled to freezing point; then they were packed in barrels and shipped seven weeks later netting the owners some four thousand dollars. Shipments from this district, namely, the Creston district, in 1927, amounted to just over half of a million dollars; it is one of the banner fruit and berry districts of British Columbia. The yields were as follows:

Forest products..	$225,000
Fruit and vegetables..	255,000
Poultry products..	35,000
Live stock, and so on..	10,000

There were 92,376 boxes of apples shipped, which brought $133,000. And next to apples come the strawberries. Creston is a wonderful strawberry district. They pick the berries in the morning and the next morning without change of cars they are on the market at Calgary.

I have this little memorandum of production from the Creston Review which I should like to put on Hansard:

> The great revenue getter was strawberries with an outgo of 30,000 crates, for an intake of $60,000. In addition to this 15 tons went out for jam manufacture, and another 30 tons were processed and shipped to Toronto for making soda fountain cordials, flavourings, etc. Of this creditable total it must be stated that fully 75 per cent was produced at Wynndel.
>
> Of raspberries 6,716 crates were marketed, worth $15,113, and when to strawberries and raspberries is added the value of the loganberries, blackberries, gooseberries exported, Creston district can claim a 1927 berry crop worth not less than $85,000. Red and black currants, placed at 1,526 crates, were worth about $3,000.

Probably no other district in the interior of British Columbia has such splendid marketing advantages or such a promising future. Extensive reclamation projects are in view which will add materially to the vast area of fertile land in that district.

I should like to say just a few words about the budget, because that portion of any budget in any country which contains even a suggestion of reduced taxation is always a good political gesture as indeed is any measure likely to lighten an individual's financial burden; and nobody knows this better than the Minister of Finance (Mr. Robb) himself. He had experience in the last campaign; instead of going from place to place excusing and explaining and denying and defending the shortcomings and the sins of omission and commission of his colleagues and his party generally, he simply talked about reduced taxation and he got away with it. It may be very truly said that many of those who sit on your right owe their membership in this house to-night to the policy adopted by the Minister of Finance of merely talking about reduced taxation.

As regards this reduction of ten per cent in the income tax, while a ten per cent reduction sounds very fine it does not mean so much when one remembers that Canada has a population of 9,000,000 people of whom only 116,000 pay this income tax, so that practically 8,900,000 are not affected by this reduction to the extent of one penny. It means that the rank and file of the population of Canada, people earning say less than $3,000 a year, will not benefit to the extent of one penny. Nor does it mean anything to the man on the ten or twenty-acre plot of land who depends for his living on the sale of farm products, vegetables, poultry and so forth. While this cut in the tax does lessen the burden on the big fellow, I think everybody agrees that it is the big fellow who should pay the bill, and if there is one fair tax in Canada it is the income tax.

Had the budget provided for the total abolition of the sales tax by the end of 1928, as urged by the Conservative amendment, practically every wage-earner and every small farmer in the Dominion would have benefited. I think people seldom realize when they are paying a sales tax. A family of five, a man, his wife and three children, living in a moderate way, will have to pay a tax of $20 per year on their clothing, but simply because the sales tax is not marked on the bottom of the bill people fail to realize that they are paying it. Or take the case of a man who is building a house. He seldom realizes that he is paying sales tax on the materials entering into that house, whereas as a matter of fact it is estimated that sixty per cent of the cost of a $3,000 house goes into material, and on that the man is paying sales tax: in other words even under the proposed reduction in the sales tax the man who puts up a $3,000 house will still pay $52 in sales tax.

I want to speak of my own particular district for a few moments, because naturally every member is interested in emphasizing the conditions in his own district. I want to show how the tax applies in some communi

ties. In the town of Trail, for instance, during the past five years, the expenditures on dwellings, business blocks and public improvements have amounted to $2,206,000, on which sales tax amounting to $53,000 has been paid. In addition to that we have a very progressive industrial institution in that city, which in the last five years has paid approximately $180,000 in sales tax on the materials used in their construction work.

When you buy a motor car, no matter how cheap it is, you have to pay a sales tax of from $25 to $40 on the car. My district, as well as the adjoining one represented by the Minister of Health in this government (Mr. King), who is the minister for British Columbia, is composed almost entirely of wage earners and small farmers, and they would have retained a very much larger proportion of their pay cheques if the sales tax had been abolished last year as urged in the amendment moved by the leader of the opposition. He then urged the total abolition of the sales tax on clothing, and I find by Hansard of March 17, 1927, that the hon. member for East Kootenay (Mr. King), the minister for British Columbia, in whose district, as I said, there is a very large percentage of wage-earners, was not very solicitous then about the families of the wage-earners because he voted against the amendment to abolish the sales tax on the family wardrobe.

It is to be regretted that the Minister of Finance has not seen his way clear to abolish double taxation on dividends. There is one thing a young and growing country needs, and that is outside capital to aid in developing its resources. The investor is naturally prejudiced against a country in which his returns are taxed twice as compared with a country in which they are taxed only once. At the conference on taxation that was held in October last, the Dominion government was requested to discontinue the practice of double taxation, and I regret that it has not done so in this budget.

I am now going to refer to a matter which might perhaps more properly be brought up when the estimates are under discussion, but I bring it to the attention of the government now because the need is urgent. I refer to the necessity for the immediate construction of a public building in Trail. It has been announced by the government that an item for a public building in Trail will be noted in the preparation of the supplementaries, but as this must be approved by the cabinet in council, I wish to make a few observations in its support. Last session the Minister of Public Works (Mr. Elliott) said that it was the policy of the government to erect public buildings only where the accommodation was inadequate and the necessity urgent. That is a sensible and businesslike policy with which I agree, and I propose to show that the needs of Trail come under that head. There can be no excuse for not erecting a public building in Trail on the ground of lack of funds, because the Finance minister in his budget speech stated that there was a surplus of $54,000,000 and estimated revenues sufficient to meet the needs of a growing country. A site for a public building was bought and paid for in the city of Trail in September of 1925, and I have a letter and a wire here dated September 27, 1927, from the resident architect at Victoria, saying that the matter was of great urgency, as indicated by a telegram from the Public Works department at Ottawa. It was of great urgency then, Mr. Speaker—that was just four weeks before the election—but unfortunately since that time nobody in the government has been interested in the matter. According to the 1921 census the city of Trail had a population of 3,020, and that number has increased to-day to 8,500, or approximately 9,000. To show the deplorable lack of accommodation in the post office, I would point out that there are from three to five families sharin a post office box, and 500 additional boxes are needed to meet the applications on hand. Nobody wants the government to spend money foolishly, but I say that the men going off shift from the great industrial plant at Trail are entitled to adequate postal service, and the most deplorable feature in Trail at present is the post office and customs accommodation. There is located at Trail the largest metallurgical plant in the British Empire, treating lead zinc ore from the richest mine in the world. The mine has ore blocked out to a value in excess of one billion dollars. The plant produces pure gold, silver, lead, zinc, copper, antimony and by-products to a value of nearly forty million dollars a year. It furnishes 10 per cent of the world's lead supply and 7 per cent of the zinc supply. It produces daily 400 tons of lead, 300 tons of zinc and 70 tons of copper. It pays more than one per cent of Canada's total freight bill by rail and water. The company is capitalized at $15,000,000, while to-day the shares are selling on the open market at a price equivalent to a total value of $165,000,000.

The permanency of the city for which we are asking this public building is emphasized by the fact that the company has loaned its employees $700,000 for the purpose of

erecting homes. The company itself has erected a $100,000 store building, a $100,000 hospital—and, by the way, it is the last word in hospitals of its size—and contributed $35,000 to a memorial building. It has also advanced money and made possible the construction of an artificial rink at a cost of $50,000. The life of each employee is insured under the group plan. After a certain period of service with the company an employee is retired on pension. The company maintains the largest herd of pure-bred Ayrshires in the Dominion for the purpose not only of supplying the residents of Trail with milk, but of furnishing a bottle of milk every day to each of the men employed around the lead furnace. At Christmas—I just want to show you that this company is intensely human—each married employee receives a gift of $50 in cash and a turkey; each single employee a gift of $25 in cash and the equivalent of a turkey in merchandise. After three years' service an employee is given a share of stock, the market value of which to-day is $274. As I said before, it is an intensely human institution, and the pity is there are not more in Canada.

Trail's payroll is nearly $5,000,000 a year. The company, together with the community, pays annual taxes to the province and to the federal government of $2,000,000. Last year they paid into the federal treasury in taxes a sum equivalent to six times the total expenditure on federal public buildings in British Columbia, including rents, repairs, and mortgage interest on a federal purchase in Vancouver. Although the federal treasury has received this immense sum, the federal government has not in thirty years spent one solitary dollar in Trail, with the exception of the $11,000 which it paid for the purchase of the site to which I have referred. Every street in the city is paved with concrete, and the sidewalks are of cement. In the past five years the company has done construction work to the value of $7,000,000, and the city has issued building permits for dwelling houses and local improvements to the value of $2,000,000. The customs and excise duties collected in Trail for the fiscal year 1926-27 amounted to $120,000, and the post office revenue for the same fiscal year ranks Trail No. 9 out of 931 post offices in the whole province.

Now, Mr. Speaker, these facts would indicate that there is certainly good reason for urging the erection of a post office in Trail. It was only a few days ago that I received a telegram from the city council asking that the government be urged to have such a public building completed this year, as the situation is urgent. First of all, there is a lack of accommodation, and then there is urgency. The hon. Minister of Public Works stated his policy was to erect public buildings where there was a lack of accommodation, and urgent necessity. Here both conditions prevail. The telegram contains this paragraph:

> The rent of the present building has lately heavily increased, with the consequence of an increase in box rents, making these box rents higher than anywhere else.

I wish particularly to impress upon the minister the lack of accommodation. I have a letter from the Ratepayers' Association of East Trail which says:

> As the company is daily adding to its number of employees the congestion becomes greater. With so many cars in our city it is dangerous to send children after school hours and too far for our wives to make the trip,—

I may say this refers to East Trail, which is about a mile from the post office.

> —so it falls on the men to call for the mail on the way home, and they soon tire waiting in this line, and go off home without the mail.

There is further evidence of lack of accommodation. I have also the report of the post office inspector dated September 16, 1926, in which he recites:

> That there are 1,047 boxes in the Trail office; that the postmaster could rent 1,500, that he estimates in three years Trail's population will reach 12,000.

Then the inspector adds:

> I would respectfully request that a public building be proceeded with as soon as possible.

There you have the inspector himself recommending the construction of a public building as soon as possible. He also suggests that the post office contain 2,100 boxes instead of 1,047 as at present. Surely that is further evidence of lack of accommodation. He further suggests that the new building should have three times the present square feet of floor space. This is more evidence of lack of accommodation. Now let me give an extract from the Nelson Daily News, pulished at Nelson, fifty miles from Trail. In an editorial I find the following:

> The Nelson Daily News hopes that the request of the Trail board of trade for a public building will receive in this case a little more than the usual "earnest consideration".

And here is another passage from this editorial:

> There are conditions of congestion; that Trail post office is notorious.

Let me quote further from the editorial:

> The present post office quarters now rank as wholly inadequate and temporary.

In a letter dated February 3, 1927, the hon. Minister of Health of British Columbia writes me as follows:

> I am thoroughly conversant with the matters of that district, and it was with a view of giving better accommodation that I recommended the purchase of property in Trail some time ago, it being my intention to advocate the erection of a suitable building on the site.

I hope the Minister of Health (Mr. King) in meeting of the cabinet council will advocate the erection of this building.

I have another letter. It is from the deputy postmaster general:

> As to post office accommodation, the district superintendent reports that the present premises are inadequate and that a new and suitable building should be erected. A recommendation to this effect has already been forwarded to the Department of Public Works and it is understood that the matter is under consideration.

I have also a letter from the Postmaster General himself as follows:

> I may say that the construction of public buildings is a matter of policy resting with the Minister of Public Works, but I have already made representations to his department that the accommodations at present provided at Trail are totally inadequate and have urged the erection of a suitable public building.

I think I have shown that the policy of the Minister of Public Works applies to Trail.

Last year Canada celebrated its sixtieth anniversary. Flags were flying, bells were ringing, and everybody rejoiced from coast to coast. Altogether it was a wonderful celebration, one that would have gratified the fathers of confederation could they have witnessed the festivities and observed what has been accomplished in Canada in the sixty years from the time those strong and able colonial statesmen framed the act which gave us our constitution. They would have rejoiced to know that we to-day have an educational system in Canada equal to any in the world; that we have a transportation system which encircles the globe; that we have huge water power developments and industrial activities; and that we enjoy all the modern comforts of the most advanced nation. It would, I say, have been an inspiring revelation to the fathers of confederation. Following that celebration came the imperial conference, from which Canada emerged with an allegedly new constitutional status. We have been basking in the sunshine of absolute autonomy; we have been negotiating commercial treaties; and we have been sending ambassadors in every direction. All this makes a thrilling and inspiring picture to hang in the gallery of world progress, because Canada is a great and independent nation.

[Mr. Esling.]

I want to give you another picture by way of contrast. The affairs of this great and independent nation are to-day administered by a government which, without a hearing, without any charges upon which to proceed, and against the written protests of ninety per cent of a community, saw fit to remove a little country postmaster in order that they might appease the appetite of some hungry Grit who wanted to possess himself of the office, the actual remuneration of which is less than one dollar per week. There is located on the Arrow lakes in British Columbia a little community known as Renata. That community is composed of just sixty-one adult souls, all thrifty, enterprising and industrious fruit growers. In the early part of 1927 a vacancy occurred in the post office and fifty-five of these sixty-one persons signed a petition for the appointment of the storekeeper; the other applicant was a Liberal returning officer, road boss and justice of the peace. The Postmaster General must have done so inadvertently, but he appointed the storekeeper, and I have a letter which states that the Liberal returning officer made the boast that within six months he would be postmaster in that community. Well, within not six months but precisely nine weeks from the day of the appointment of the storekeeper word was received, not from the inspector, not from the department, but from the Postmaster General himself—the Postmaster General of this great and independent nation—firing that little country storekeeper whose remuneration was less than one dollar per week. The community protested; it forwarded its protest to Ottawa. But nothwithstanding that fact their representations were ignored; their protests were of no avail. As a community they got together and said, We will not go to the new post office, but will patronize the postal service of the river boats. And to show that they were in earnest, I may mention the fact that whereas the receipts of Renata post office for the last nine months under the new Liberal appointee have been $70, for the corresponding nine months of last year they amounted to $162. The people send one of their community out to the new Liberal post office to get their mail and they bring it to this little store where it is distributed.

I asked for a return of the correspondence in this matter, and naturally enough I expected the correspondence which led to the dismissal of the former postmaster. All I received was the correspondence that took place after his dismissal. There was one letter in which the statement was made that it had been deemed advisable to make the change because of a

change of site. But the site which suits the people is near the wharf, the only outlet for the community, whereas the office of the new postmaster is half a mile out of town, inconvenient to the people of the community. This is a picture which hangs in the gallery of public opinion and shows the political degeneracy of this government. I will add this, however: My personal regard for the ministers on the other side is too great to allow me to think for one moment that the majority of them would condone such a removal. But a government must be judged by the company it keeps, just like an individual. I do not know what part the minister from British Columbia played in this particular affair, but the fact remains that he was the sole survivor of the last Liberal wreck in that province, and anyone wanting a job would naturally appeal to his influence. That was why I asked for the return.

I want to say a word about mining, because of the new activity in the development of our mines. The advances which have been made in metallurgical research warrant the conclusion that it will not be long before the value of the mineral output of Canada equals that of wheat. The value of last year's wheat production was approximately $450,000,000, while last year's mineral production was valued at $241,000,000. With the advances in metallurgy we are now able to treat more complex ores and ores of lower grade, and under this development northern Ontario and Quebec as well as Manitoba will, it is fair to assume, show a healthy increase in mineral output. Experiments in the recovery and utilization of the iron content of the smelter slag are proceeding at Trail, and I hope before long we shall be turning out iron there in addition to the other products.

In this connection I should just like to say that we in Trail, in common with the rest of this Dominion, should feel extremely proud of the fact that last week, in the city of New York, Mr. S. G. Blaylock, manager of the Trail smelter, was awarded the James Douglas gold medal by the American Institute of Mining and Metallurgical Engineers for the greatest commercial achievement in metallurgy. The history of this award dates back to the time of the war, when the allies were paying 45 and 48 cents per pound for zinc, the supply of which was practically controlled by a New York syndicate. Mr. Blaylock and his research staff at the Trail smelter solved the process of separating zinc from ores, as a result of which the Trail smelter was able to supply the allies with zinc at 15 cents per pound. I think, Mr. Speaker, that if the federal Department of Mines would step on it and speed up its research department some day we might hope for equal honours to be achieved by that department.

Mr. W. T. LUCAS (Camrose): Mr. Speaker, before entering into a discussion of the budget proposals I wish to say a few words with regard to some remarks made by the hon. member for Lisgar (Mr. Brown) last evening, when he spoke of the preference for the Conservative party shown by certain hon. members in this corner during the session of 1926. In my opinion the hon. member for Lisgar is the last person in the house to bring up the question of the famous 1926 session, because one of the most humorous incidents which comes to my mind when I think of that session is the awful agony the hon. member went through whenever the fate of the Liberal party was at stake. With regard to my own position I simply wish to say that I have never attempted to make any apology for the stand I took on that occasion. I submitted that stand to the electors of my constituency, and my presence here to-day is their judgment of that stand. I am prepared to let it go at that.

Mr. BROWN: You have apologized for it since.

Mr. LUCAS: No. The hon. member for Marquette (Mr. Glen) also made reference to our attitude at that time, and imputed certain motives to members in this corner of the house. As the hon. gentleman is a comparatively new member and has no personal knowledge of what happened during the session of 1926 or the sessions preceding, his views cannot be based on personal observation. They must be taken as a reflection of the views of certain of his colleagues, and I can only regret that he saw fit to mar an otherwise skilful and well delivered address by making such ill-founded insinuations from unreliable sources. If the hon. member for Marquette will reflect on his own situation he will remember that he came to this house, as the hon. member for Nelson (Mr. Bird) well said this afternoon, full of Liberal and Progressive ideas. He had a double-barrelled pistol, loaded to the muzzle with those principles. When he pointed that double-barrelled pistol at the head of the government, however, what happened? The Minister of Railways (Mr. Dunning) rose and said, in effect, "You have your gun loaded with the wrong ammunition. That is the ammunition we use when we are talking in the country, but it is of no use in this house." So the hon. member for Marquette immediately extracted that ammunition, and we find him to-day,

meekly kneeling at the feet of the government. I think the hon. member should reflect a little before he begins to impute motives to other hon. members.

So much has already been said with regard to the budget that one finds it rather hard to uncover anything new. I feel, however, that if through the discussions which have taken place even one new suggestion may be offered or some of those suggestions already made driven home in such a way as to help in some small degree to bring about the solution of our many and varied problems, then our time will not have been wasted. I must congratulate the Minister of Finance (Mr Robb) on again being able to present a surplus to the house. The minister has been able to show a surplus ever since he took over the office which he now occupies, which is very gratifying indeed. But, Mr. Speaker, in my opinion, it would be much more gratifying if we could honestly believe that that surplus really existed, because many good arguments have been presented to show that if the method of book-keeping to-day were the same as that employed by his predecessor, Mr. Fielding, the minister would have a very substantial deficit instead of a surplus. I think the people of Canada to-day want to know the true situation. I understand that Mr. Fielding presented some seventeen budgets in this house, and we all know the respect in which he was held by the people of this country, irrespective of political feelings. Permit me to read just a short extract from the budget speech of 1923, which will be found at page 2641 of revised Hansard for that year:

> The revenue for the year was $381,952,386.99 against ordinary expenditure of $347,560,690.63. If the surplus is to be ascertained by comparing the ordinary revenue with the ordinary expenditure—and that was the time-honoured way of determining surpluses—then on that year there was a surplus of $34,391,696.36. But there was a capital expenditure of $16,295,332.55. If we take that into account, both ordinary expenditure and capital expenditure, there was still a surplus of $18,096,363.81. Then there were certain special expenditures including demobilization charges, of $1,526,583.22. So, if we take into account ordinary expenditure, capital expenditure and what is called special expenditure, there still was a surplus of $16,569,780.59. So far this is a story of surpluses; but there is a further statement to be made which quite destroys that happy picture. There were charges for advances to railways of $97,950,645.36. If we take, then, the whole expenditure for the year, ordinary, capital, special and railways, there was a deficit in that year of $81,380,864.77. After allowances for some deductions are made, the next result was that year we added to the public debt $81,256,818.04.
>
> We turn now to the year 1922-1923 which closed not many days ago. We have not the complete accounts before us, but there is sufficient information to enable us practically to announce the result. Ordinary revenue amounted to $393,619,000. These are estimates, as the figures are not absolutely final. Ordinary expenditure amounted to about $331,780,000. As between those two items there was then a surplus of $61,839,000. Capital expenditure, however, represents $14,500,000; adjustment of war claims, $6,700,000; cost of loan flotations, $3,050,000; these representing in all $24,250,000. There was thus a surplus over ordinary, capital and special expenditures, of $37,589,000. But again the railways have to be taken into account. We had to advance during that year $92,190,000 for railways, and $6,060,720 for the Canadian Government Merchant Marine, making in all for that charge, $98,250,720. This, of course, takes up all the surplus I have mentioned and leaves a large balance on the other side of the account. If we take everything into consideration for the year, the net result was that we added to the public debt in the year just closed $49,293,086. The receipt of something over $8,000,000 from the British government on exchange account helped us to keep down what otherwise would have been a larger addition to the public debt.

It will be seen, Mr. Speaker, that in 1921-22 Mr. Fielding added $97,950,645 to the expenses of that year in the shape of advances to the railways. In 1923 he again added advances to a total of $92,190,000, and in both those years he had heavy deficits. In 1924 the new Finance minister, out of a total advance to the railways of $74,550,000 added only $24,550,000 to the expenses of the year, and took care of $50,000,000 by way of guaranteed bonds, and by so doing was able to show a substantial surplus. Now what I should like to know is this: If the Finance minister followed exactly the same method of bookkeeping as his predecessor, would he have been able to show that surplus? I am not saying for one moment that the system of bookkeeping which the Finance minister adopts at the present time is a wrong system, but I do claim it is not fair to make these deductions until the Canadian National railways are recapitalized and started off with a new balance sheet, and that balance sheet placed before us when the budget is brought down. We should then be in a position to judge whether any new borrowings should be charged to public debt or not. Until this is done we shall not be able intelligently to discuss the reduction of the public debt, and until this is done the government cannot make a just claim to any such reduction.

I have a very high regard for the Finance minister. His genial personality and his fair treatment of members generally is certainly appreciated. I have also a very high regard for his ability as a politician. A man who can show surpluses where apparently no surpluses exist, a man who can juggle with

the tariff and make people believe they are getting something when they are getting very little, must certainly be given credit for cleverness. Why cannot we be frank in regard to this matter? The Liberal party in their platform of 1919, which has been read many times in this house, declared explicitly that they are in favour of free trade and a lower tariff, and yet the statement has been made, and figures quoted to prove it, that a difference of not more than one or two per cent exists on the whole between the present tariff and the tariff which prevailed under Conservative governments.

Mr. McLEAN (Melfort): What year of Conservative administration are you taking in making that comparison?

Mr. LUCAS: I am taking the average tariff.

Mr. McLEAN (Melfort): In what years?

Mr. LUCAS: If the hon. gentleman refers to the figures furnished by the bureau of statistics and takes the average tariff from about 1868, or when the first tariff was framed, and compares the averages for all those years, I think he will find that my statement will be pretty well verified.

Mr. McLEAN (Melfort): No, sir.

Mr. LUCAS: The budget of 1926 affords an excellent illustration of how this juggling with the tariff takes place. The hon. member for Macleod (Mr. Coote) brought in a resolution in 1925 asking for a reduction in the duty on automobiles. When the vote on that resolution was taken we received more support from hon. gentlemen to my right than we did from hon. members on the government side, and the records will bear me out in that statement. However, the support we received was very small. The next year the hon. member for Macleod again introduced a resolution asking for a reduction in duty on automobiles. That year the government accepted the resolution, and a straight cut of 15 per cent was made in the tariff on automobiles of $1,200 value or under. Now our Liberal friends represent to their constituents, and to the country generally, that there was a straight cut of 15 per cent in the automobile duty. They are quite right in stating that a cut of 15 per cent was made in the duty, but do we find an actual reduction of 15 per cent in the price of automobiles to-day? Only last night the hon. member for Macleod placed on Hansard the actual prices that have to be paid for automobiles, and instead of the reduction in price being 15 per cent, as claimed, it only amounts to about 5 per cent. Now from the party standpoint this may be considered good tactics, but it is certainly not a courageous or a manly way to deal with the people.

Now we come to the present budget, and at first glance one is inclined to think that the changes are fairly sweeping. But on closer examination these changes turn out to be little more than a mere reclassification, and we have not had any explanation from any member of the government yet as to just what the changes actually do mean. We find that there are 122 items struck out, and 159 items substituted. The budget looks like an attempt at window dressing in order to cover up empty shelves. This manner of dealing with the tariff reminds me of one receiving a valentine box. When one is unwrapping layer after layer of highly coloured paper, hope soars high that something worth while is within, but the hope is quickly dispelled when the contents are found to be nothing but a cigarette which quickly disapears in a few puffs of smoke. When one looks at every cut that has been made in the tariff by the present government we find that the manufacturer has been given some compensation which practically offsets the cut so far as protection is concerned. If the government finds it necessary to do this then I say that the philosophy of the Liberal party practically disappears. I have always understood that their contention as put forth to the people was that the manufacturers or the big interests were taking too great a toll out of the masses of the people, and yet while they may reduce the tariff they give some compensation which still allows those big interests the same amount of protection. If after several years in office they have found that it is not in the best interests of Canada to reduce protection, one would have no fault to find with them, if they would come out frankly and say so. I feel safe in saying that since the days of confederation no other question has received more consideration than the tariff, yet we do not seem to be any closer to a solution of it.

We now come to the question of the income tax reduction. I am absolutely opposed to that reduction, but the most serious thing in that connection is the statement of the Minister of Finance as follows:

> It is proposed that the Dominion shall continue gradually to lighten the load in the income tax field.

In my opinion the income tax is the fairest tax that has yet been devised, because it bears most heavily on those who are best able to pay it. It has already been stated in this debate that Great Britain receives a very large proportion—forty-five per cent—of her revenue from the income tax. The United

States, as has been stated, receives sixty-five per cent, while Canada receives less than fourteen per cent. If the income tax is to be lowered or wiped out, this means that we shall have to depend on the customs tariff for revenue to cover both ordinary and war expenditure and the Liberal pledges as to lowering the tariff and shifting the burden from the masses of the people will become a mere phantasy. I cannot for the life of me see how the government can propose to reduce the tariff if they are going to reduce these other modes of taxation, because we all admit that we must raise a certain amount of revenue to carry on the business of the country. We find that this year the total war revenue amounted to $146,470,000 and the total war expenditure to $164,501,000, so that we are short of raising sufficient money to pay actual war expenditure by $18,031,000. Yet the Minister of Finance proposes to make a further cut and gradually to wipe out the income tax. What does that mean? It means that we will have to raise by means of customs tariff not only the ordinary revenue but a sufficient amount to take care of war expenditure, and therefore it is not reasonable to expect that under those conditions the tariff can be reduced.

A great deal has been said about prosperity in this country, but I think one of the best tests of prosperity is to show how our population is increasing. The question of immigration is being discussed more than any other problem in Canada to-day. I have read the speech of the hon. member for Comox-Alberni (Mr. Neill) and I agree very largely with the ideas he expressed in regard to an immigration policy. His policy will be found on page 1018 of Hansard, and briefly it is that he would admit anyone of British origin, sound in body and mind.

Mr. NEILL: White.

Mr. LUCAS: Yes, white; and that he would apply the family quota to continental Europe, so that those from continental Europe who are now in Canada would have to nominate their relatives in order that they might be permitted to enter this country. If those people who are here at the present time were prosperous they would be only too glad to nominate some of their relatives to come to Canada and share that prosperity with them. He quoted from a pamphlet prepared in the United States showing that population did not increase according to the amount of immigration. I have that pamphlet in my hand. It deals with United States conditions, but I believe from figures which I will present to the house in a short time that this will apply also to Canada. The pamphlet states:

> Except for brief periods, immigration will not increase the population above the figure it will reach without immigration. . . If we admit those from other lands we shall decrease by a like number those who will be born of those now here. . . The question for cold-blooded consideration by the American of to-day is this: Do you want the soil inherited by your son or by the son of one who now toils in a foreign land?

While studying the question of immigration I secured from the bureau of statistics some figures which in my opinion are startling, and I am going to place them on Hansard. I will ask hon. members to study them and I am sure they will come to the conclusion that this problem is so serious that we as Canadians should place it above party politics and face it like men. The last Canadian census was taken in 1921, and a quinquennial census was taken of the three prairie provinces in 1926. I wish to quote figures in connection with the population of the three prairie provinces in the period between 1921 and 1926—because this is not an estimate; the figures are accurate on account of the census having been taken in those years. The figures are as follows:

Province	Population 1921	Population 1926	Actual five-year increase	Natural increase 1921-1926	New immigration 1921-1926
Manitoba	610,118	639,056	28,938	52,446	67,243
Saskatchewan	757,510	820,438	62,928	76,362	59,137
Alberta	588,454	607,599	19,145	50,216	54,545
Totals	1,956,082	2,067,093	111,011	179,024	180,925

We should have had in those provinces in 1926, counting the natural increase and the new immigration, a total population of 2,316,031. What does that mean? It means that we lost our whole natural increase of 179,024, and 69,914 out of 180,925 new immigrants, or 38.6 per cent of the new immigration. We hear a good deal about our own Canadians going across to the United States. We know the United States has a quota law against the people of other countries than Canada, and therefore I believe I am quite right in assuming that these people we have lost must have been our own Canadians who have gone across to the United States.

While the figures for the Dominion are not quite as bad as those for the three western provinces, they are still very startling. A

census was taken in 1921, and while we have only an estimate of the population of the whole Dominion for 1926, the bureau of statistics gives the following figures: Total population in 1921, 8,788,483; 1926, 9,390,000. But we had a natural increase between 1921 and 1926 of 856,682, and new immigration amounting to 667,349. When we total this up, we find that we lost our whole natural increase of 856,682, and 65,832 of our new immigration, or about ten per cent.

We find that in the three prairie provinces the number of farms occupied in 1921 and 1926 was as follows:

	Manitoba	Saskatchewan	Alberta
1921.	53,252	119,451	82,954
1926.	53,251	117,781	77,130
Decrease. .	1	1,670	5,824

What has been our general immigration policy? It has been to bring the agricultural class to this country. And yet we find after spending the amount of money we have to bring people to engage in agriculture on our western farms, that we have lost 40 per cent of our new immigration and the whole of our natural increase. Surely these figures are so startling that no one will deny that there is something wrong. We are spending a vast sum of money from our own Dominion treasury, and on top of that I venture to say that every provincial government in Canada is spending a certain amount of money, to bring in immigration. The two great railway companies and many private organizations in this country are also spending vast sums for the same purpose. While it is impossible to get the complete figures, it has been estimated that something like $10,000,000 is being spent each year in Canada to bring immigration into this country, and the result is as I have indicated.

What is the trouble? Is there anything wrong with Canada? I think every hon. gentleman will agree with me that there is not, that we have one of the finest countries in any part of the globe. Is there anything wrong with the people? I think we will answer no, because we find that our Canadians, no matter to what part of the world they may go, are able to capture the very best positions, and can hold their own either in business or in war, if necessary.

Then what is the trouble? Mr. Speaker, in my opinion the greatest curse with which this country has been afflicted has been partisan politics, where men are fighting for party instead of for the country. I believe that if those men would put the same energy into fighting for Canada as they are putting into fighting for their party we would certainly get better results. We should get back to the days of old, when none were for the party and all were for the state There are a great many problems facing Canada and I think every member will agree with me that we spend far too much of our time in bickering over party politics. I picked up a paper the other morning, and the first thing that caught my eye was "421 postmasters dismissed in Canada from October 1, 1926, to February 1, 1928." A few nights ago when we were discussing a vote that had been cut out for a post office at Camrose and one for Mahone bay, the Minister of Justice (Mr. Lapointe) justified the dropping of those items on the ground that the other party did the same thing back in 1911. What we need, Mr. Speaker, is men of the calibre of the fathers of confederation, men who will be ready to sink their party differences and work together in the interests of Canada as they did, laying the foundations of which we are all so proud, and until we have men of that calibre there is very little hope of bettering our present conditions. When one looks at these immigration figures, one realizes that we are spending all this money to bring in immigrants, millions of dollars every year, and the only result we are getting is to supplant our present population; we are changing its complexion without increasing the numbers.

I would just like in conclusion to read the advice which Premier Baldwin gave to Canada when he was over here. He said:

> Canada has an enormous future, and if it be not impertinent to say so to Canadians, I would say: The future is with you; do not be in too much of a hurry. Your country is a country for men of the north, virile races. Quality before quantity any day. Build up with the best. What does it matter if it is a hundred years, or two hundred years, or more, before your country is full? Keep the stock you have, and the men and women you have, and see to it that the coming generations are in no whit inferior to them. I have often thought that it is a dangerous thing to the morale of a nation to get rich quickly as it is to an individual. Time is all on your side. Maintain the values; maintain the standards; and may the prayer of Canada always be the prayer of the Greek sailor which has been preserved for us by Seneca: "God, You may save me if You will; You may sink me if You will; but whatever happens, I will always keep my rudder true."

Mr. ALEX T. EMBURY (Hastings-Peterborough): Mr. Speaker, this is the first time I have attempted to address the house, and I will be very brief, but I feel certain that what I have to say will be received with consideration by all the members.

Mr. LAPOINTE: Hear, hear.

Mr. EMBURY: When I add that I will detain the house for only twenty minutes, I feel sure that I have already received the commendation of hon. members. At the outset may I be permitted to say a few words about my own riding. It is a new electoral division formed by the last general redistribution, and like most of the ridings in the rural and central parts of old Ontario, it has not received that publicity in this house that has brought into more or less prominence the ridings of the prairie provinces and also of the maritimes, whose members have spoken occasionally during the last three sessions on maritime rights. I do not suppose there is a riding in the whole Dominion with more diversified resources and industries than the one which I have the honour to represent. I will briefly enumerate a few of these:

Lumbering is carried on on a considerable scale.

Before the discoveries of our great mining fields in new Ontario, northern Quebec and northern Manitoba, which have lately made Canada famous, Hastings county was the most talked-of mining district in Ontario. Iron, talc, corundum, feldspar, fluorspar and gold mines have been operated at different periods to a more or less considerable extent, and our marble deposits are among the greatest in the world. The talc mines in the Madoc district are known the world over, because practically the whole of the supply for the American continent of talc for toilet purposes is furnished by us. Italy is the only country that has talc of a quality at all approaching it.

Next come our manufacturing plants. We have at Deloro in the very central part of the riding one of the most modern, scientific and largest smelting and refining plants in operation.

I must not forget our tourist trade, which has already developed on a large scale, due to the net work of lakes among our hills—lakes stocked with game fish in abundance.

Last and greatest of all of course is our old stand-by and most important asset, mixed farming.

Now, Mr. Speaker, in spite of all these natural advantages and attractions, I cannot, like the member for North Huron (Mr. Spotton) and other Conservative members, boast of ever having had the honour of a visit from a cabinet minister, to say nothing of the Prime Minister (Mr. Mackenzie King) and his whole cabinet. They pass through on the train and do not even stop at the water tank for water. When they look at their political map they find the constituency of Hastings-Peterborough marked—barren; soil unfertile. That is true, but in one sense only, and I extend to the Prime Minister and his cabinet a cordial invitation to this interesting riding. I may say, however, that it will not be necessary to come at election time.

Now, sir, the outstanding problem of the Dominion to-day is the growth of our population. It is discussed by men in all walks of life, from great economists to the man on the street. In legislative bodies the theme is almost worn threadbare. Yet it is a fact that under present conditions no remedy seems in sight. Canada, so much talked about by ourselves and by other nations as a land of opportunity, a land of great natural resources, a land of rapidly increasing wealth, a land of unlimited possibilities in agriculture and in mining—this land, so far as population is concerned, is almost stagnant. There must be a reason for this, as there is always a reason for everything. The real and only reason is our failure to furnish employment for our own people and for newcomers from other lands. Our situation in relation to the United States is, in one respect, analogous to that of Scotland to England. Scotland has a race of people second to none in the world, but England has the population and the wealth, and always will have. But on closer study there will be found to be a vast difference in the two cases. Sixty years ago Canada looked like a mighty poor neighbour to our friends across the border; but undreamed of wealth and development in our prairie provinces, mining fields and water powers, has changed the situation entirely, and to-day we are looming large in the eyes of the world. But there is still something wrong. United States capitalists are grabbing great volumes of our best investments, while we are giving them in exchange the best of our young manhood. We spend millions of dollars on immigration schemes, but still the exodus goes on, and it will continue until a policy is devised ond put in force that will furnish work for those already here, and those who would like to emigrate here from other countries. Canada has a citizenship that averages as high as that of any country, and is vastly superior to that of most countries. It is the duty of this government, therefore, to throw aside all selfish considerations and compromises and lend its efforts wholeheartedly to a solution of this great problem.

Another subject of controversy has been the effect of the Australian treaty on the dairy industry of Canada, but not until this year, Mr. Speaker, has the situation become so acute as to cause real alarm to the whole of rural Canada as well as to the government

itself. I have before me some figures which will give a pretty accurate idea of the effect of the treaty on this great Canadian industry. I do not wish to worry the house with too much detail, and therefore I will give these figures in concise form. On December 1, 1927, there were 26,932,669 pounds of creamery butter and 660,088 pounds of dairy butter in cold storage—over 6,500,000 pounds more than the average for the preceding five five years. On the same date in 1926 we had over 7,500,000 pounds more in cold storage. On top of this there was brought into Canada from Australia in December 28,000 pounds, and from September 1 to December 31, 3,031,153 pounds; in the month of January, 1927, we received 248,584 pounds from Australia and 3,183,289 pounds from New Zealand, according to the figures supplied by the bureau of statistics. From the latest information received from leading produce men who operated with the steamship companies in Halifax and Vancouver we learn that from September 1, 1927, to February 15, 1928, 5,000 boxes, or 276,584 pounds of Australian butter and 5,437,040 pounds of New Zealand butter were received at Vancouver, and at Halifax 4,685,240 pounds of New Zealand butter. I am told that recently a steamer arrived from New Zealand with about 30,000 boxes, and that another steamer left Auckland for Vancouver on February 12 with 27,000 boxes. From this information it is estimated that the amount of butter brought in or on the water in transit will amount to about 13,500,000 pounds. Then with the several boatloads due to arrive before the end of the month, it is estimated that over 15,000,000 pounds of Australian and New Zealand butter will have come into Canada between September 1 and April 30.

Now, Mr. Speaker, it is difficult to see how our creamery men under these conditions can compete with Australia and New Zealand. If our creamery men during the coming summer are not able to operate at full capacity, it means serious loss to themselves and much lower prices to the farmers. In my riding we have an area 100 miles in length and in parts 50 miles in width, with a network of hundreds of miles of roads, travelled daily from May 1 until November with cream trucks, collecting the cream from the farmers to supply many creameries. Is it any wonder that we view with alarm the entrance of foreign butter at one cent per pound duty? Of course, I am free to admit that other provinces, especially British Columbia, benefit in other ways from the Australian treaty, but it seems that in this case the farmer is the principal sufferer from the policies of the government. I may say that during the session of 1926 those men who were most strenuous in their opposition to the treaty, and who probably most clearly saw its ultimate effect on the farmers of Ontario, met defeat at the polls. I hope that what I have said to-night will not result in my meeting a similar fate at the next election. Now, Mr. Speaker, it does seem to me that this state of affairs is undermining the very foundations and knocking out the main prop of mixed farming. Mixed farming is one of the elements that has made Ontario the richest province in the Dominion of Canada to-day. This government, by the Australian treaty, is dealing a serious blow at this time honoured and basic industry; yet there is absolute silence on the part of the ministry. Does the government intend to act, or not?

Perhaps I may be allowed to digress for a moment to say a word about group government. Let me say at the outset that I hold no brief for group or class government of any kind. Class government in Canada was a post-war condition and we shall not see it again, at least not in our time. But I cannot fail to see that there is some softening of the bitterness that has prevailed in politics from this cause, and in support of this contention I wish to quote, if I may, from the eloquent speech of the hon. member for Southeast Grey (Miss Macphail) in defence of the group to which she belongs. The hon. member says in part:

> The history of the whole attitude of the Liberal party to the new groups since 1921 has been one of protestations of friendship, which, if accepted, have proven to the honest the graveyard of their hopes and to the others a fulfilment of their treacherous plans.

She goes on to say:

> Speaking for myself, I would rather have the bitter, uncompromising, unfriendly and snobbish attitude of the Conservative party. At least it was honest and we knew where we stood. I often wonder why these Conservatives think they are so much better than other people.

On the surface this looks like a slam, but to me it looks like a little friendly slap; and this being leap year I do not think anybody would for a moment accuse the hon. member of boldness in this mild flirtation with the Conservative party. On the other hand, much more vitriolic was the attack of the Minister of Railways (Mr. Dunning) on the Progressive group, which I think showed very bad taste considering that the government of which he is now a member was held in power for years by members of that same group which he now takes particular pains to snipe at from his seat in the house. I presume he speaks for the government.

With reference to the budget, almost the first words of the Minister of Finance (Mr. Robb) are these:

> Mr. Speaker, seldom have the annual statements from leaders of finance and industry throughout Canada so generally reflected such progress and prosperity as that of the year 1927.

Granting that prosperity does exist, granting for a moment that the minister's statement is absolutely correct, I should like to know what this government had to do with this alleged prosperity. In my opinion, the provincial governments, with their extensive road policies and railroad construction into their mining fields, should be given a large share of the credit for Canada's present position in world finance and industry. Highway construction and maintenance, provincial and county, highways, and colonization road construction, have become almost as important as our railway system. Nothing but an advanced provincial policy in the construction of highways has been responsible for our large and increasing tourist trade, which is now an annual item of over $200,000,000, and is increasing at a rapid rate. But above all, the prosperity of 1927 was due to an almighty and beneficent Providence or Creator who tempered the winds and guided the rains over one of the greatest crops that Canada has ever seen.

Another statement of the Minister of Finance in his budget speech reads:

> We expect to receive from customs duties $153,600,000, an increase of $11,600,000 over the previous year; excise duties $57,000,000, an increase of $8,400,000.

This statement was received with applause by members on the government benches, as well as by their Liberal-Progressive allies. They forgot themselves for a moment. If ever a country owed an eternal debt of gratitude to any party for making it possible for the Finance minister to utter such a statement as that just quoted, this country owes that debt to the Conservative party of Canada; and I say this without trying to detract for a moment from any credit to which the present Minister of National Revenue (Mr. Euler) may be entitled.

In conclusion, Mr. Speaker, I think that the budget is a compromise on the part of the Minister of Finance between what he would like to present to the country and what his Liberal-Progressive allies on his right allowed him to present; and I also believe that the interests of this country will be better served when a party is elected which is free to guide our destinies, unhampered by the fear of offending any particular group of politicians on which it is obliged to lean for support.

[Mr. Embury.]

I have one definite suggestion to offer the government: there should be some economy practised in administration. The government is spending money lavishly, as the estimates will show. The establishment of new and unnecessary embassies, and other gigantic undertakings that are not pressing, seem a trifle out of place for a comparatively new country with a tremendous debt and so few people to pay it. If we build for the future, let us do so in proportion to our ability to meet our obligations. The motto which every government and every nation should have constantly before them is this: In time of prosperity and plenty prepare for adverse contingencies. But in this respect the motto of this government seems to be: "Sufficient unto the day is the evil thereof."

Mr. G. D. MORIN (Bagot) (Translation): Mr. Speaker, allow me, on behalf of the people of Bagot and my own, to convey to you our warmest congratulations, as well as our feelings of deep respect and admiration for the innumerable services rendered, and that you will for a long time to come, we trust, continue to render to our country through your good example and fine qualities as a statesman.

It also gives me pleasure to again pay our respects to our illustrious leader, the right hon. Prime Minister (Mr. Mackenzie King), to his worthy colleague the hon. Minister of Finance (Mr. Robb), and also to all the members of the cabinet, whose names will be handed down to posterity as types of energy, work and application.

I also wish to take the opportunity of conveying our sincere congratulations to the hon. leader of the opposition (Mr. Bennett), chosen, on October 15th last, in the city of Winnipeg, to guide the destinies of the great Conservative party. Let me assure him that if he does us the honour of a visit to our riding, he will be welcomed with as much dignity and courtesy as was his predecessor, the Right Hon. Arthur Meighen, at the time of my first election, that famous partial election in Bagot, in December 1925.

Many speeches were delivered on the budget or rather on thoughts suggested by the budget; I think we have heard about eighty-five of them. On this side of the house we claim that, on the whole, from the Atlantic to the Pacific, it was received as very good news, spreading joy and encouragement; on the other hand our opponents find in it but sorrow and desolation. To justify our joy let us, in the light of facts, briefly compare the budgets of the last five years of the Conservative party's rule, from 1917 to 1922, with the bud-

gets of the last five years of the Liberal party's regime, from 1922 to 1927. If we look in the Statistical Year Book for 1926, we find at page 795, statement 23, that the country's debt which, in 1917, was $879,186,298, had increased, in 1922, to $2,422,135,802, an increase therefore of $1,542,949,504; and that, in 1926, it had decreased to $2,389,731,099; and moreover it had still decreased in 1927, by $38,000,000. According to the same statement, the debt per capita which, in 1916, was $76.55, was increased by our opponents to $270.93, in 1922; the present government brought it down to $251.43, up to 1926. These figures illustrate why our colleagues on the other side of the house do not face squarely the financial issue of the country. It is better and indeed suits their purpose better to make a flank attack, by attributing to the kindness of Divine Providence as well as to the zeal and diligence of a young and enthusiastic nation, the great improvement in our finances. Yet, notwithstanding so obvious a success, our opponents hold this government responsible for all the grief caused by the departure or exodus of our people to the United States. Although they do not say it openly, they endeavour to show that in order to stamp out this evil, we should apply the great remedy, high protection. Let us return to the Statistical Year Book for 1926 and look up page 95, statement No. 4; we find that under the high protection regime, from 1881 to 1891, the rate of increase in the population of this country was 11.76 per cent; while under the Liberal rule, from 1901 to 1911, it was 34.17 per cent; and from 1911 to 1921, under the protectionists, it fell to 21.95 per cent. These figures are sufficient evidence and indicate quite the contrary of what our opponents are trying to show.

Instead of so much pessimism, would it not be better policy to spread hope and encouragement, to say exactly what our country is; an ideal spot for every good Canadian inhabiting it or for any person who may in the future settle here bringing with him the qualifications required to be a good Canadian. While we hear in the house much slander or calumny about our country, let us see what is said of it abroad.

In the Canadian review "Quebec" published in London by Mr. L. J. Lemieux; in quoting figures as to Canada's progress, the London editor expresses himself as follows:

> In 1926, the Dominion of Canada, with a population of about 9,500,000 people, manufactured as much as did the United States, when they had a population of 50,000,000; has as much foreign trade as had the United States when they had 76,000,000 people; mined minerals equal to the total mining output of the United States, when they had a population of 38,000,000; had a favourable trade balance of $400,000,000 (the largest of any nation in the world).

On the other hand the "National Foreign Trade Council" of New York, recently stated: That Canada surpassed every nation in regard to the increase of her trade from 1913 to 1926. The Canadian trade increase was 85 per cent, while that of American trade was but 31 per cent. At the beginning of the year, the League of Nations published a communiqué in which it is shown that the increase of wealth in Canada reached 1,100 per capita, in 1903; $2,406 in 1926; a rate or progress never reached by any nation. "Le Canada" from which this information is taken, continues as follows:

> Should not these statistics published by organizations that are not Canadian, suffice to convince us of our real prosperity.
>
> After such testimonial how could there be some one in Canada to maintain that our country is not on the path leading to prosperity and material welfare.

However, such an intense and rapid development, as well as the increasing number of motor cars in this country and in the United States with its 6,000 miles of international boundary, has created in Canada a new situation which requires more than ever the attention of our public corporations, and particularly the federal and provincial governments.

Speaking on behalf of an electoral riding almost exclusively agricultural, I submit that it is especially to the farming class that we, in this house, should, to-day, more than ever interest ourselves. We must seek the means to make farming a more paying and alluring proposition; we must, by unceasing work, filled with courage and real sympathy, better the lot of the farmer, so that all those who are at present or will become farmers, may be proud of it and happy. The out of date methods must make way, as in all other spheres, to methods more appropriate to the needs of the time. The farmer must really be protected and encouraged by a more active and effective propaganda. Steady and constant work should tend to bring back to our farms the small home industries, to improve house planning, farm management, stock breeding, general farming methods, implements and tools. Is it not evident that to help farmers is to preserve and improve the base on which rests the whole social fabric.

The farmers of my district and those of the whole country, I think, are not and will not be opposed to anything which may improve their conditions. Most of my electors are well off, but they are aware that owing to

the great changes which are taking place certain reforms are needed to ensure to their descendants all the affluence they themselves enjoy. The farming class in my riding seem to be quite satisfied of the present administration; it highly appreciates our rapid recovery from the disastrous war. The same may be said of our industries, specially those of our only town in my riding, the pretty town of Acton Vale. All are aware of the enormous difficulties which represent, for our government, the administration of such a vast country, they however humbly request, in their interest as well as in the general interest of the community, that the adequate remedy be applied.

After the ordeal of the terrible war of 1914, after perhaps other calamities less terrible and disastrous than that one we trust, our country is courageously recovering from its trials and will attain, with the concourse and application of all, its high destiny, that of becoming the most beautiful and happy country in the whole world.

The honours and success of the past being certainly the best guarantee for the future, I therefore intend, sir, to cast my vote in favour of the present administration.

Mr. ROBINSON moved the adjourment of the debate.

Mr. LAPOINTE: I have no objection, provided that this will not interfere with the arrangement to conclude the debate on Tuesday.

Mr. ROBINSON: I thought that was the arrangement between the whips.

Motion agreed to and debate adjourned.

On motion of Mr. Lapointe the house adjourned at 10.02 p.m.

Friday, March 9, 1928

The house met at three o'clock.

RAILWAY ACT AMENDMENT

INVESTIGATION OF SUBSIDIARY OF TELEPHONE OR TELEGRAPH COMPANIES

Mr. G. R. GEARY (South Toronto) moved for leave to introduce Bill No. 63, to amend the Railway Act, (Investigation of subsidiary of telephone or telegraph companies).

Mr. DUNNING: Explain.

Mr. GEARY: When an application comes before the Board of Railway Commissioners to fix the rates of a telephone or telegraph company, either by way of reduction or increase of such rates, the financial condition of the company is a matter of which the board must make itself fully aware, because on the financial condition of the company, its assets and its liabilities, its income and expenditure, is based as a rule the decision of the board as to whether the rates should be increased or reduced. It is suggested that a company such as this may conceal a certain important part of its affairs by the formation of a subsidiary company or the acquiring of another company to which that portion of its affairs may be transferred for treatment.

Under the act there is no jurisdiction in the Board of Railway Commissioners for Canada to investigate the affairs of such a company, that is of a subsidiary or acquired company such as I have described. It is beyond my comprehension why an investigation into the affairs of a company should stop at the point where that company has transferred a part of its affairs to another company which is a subsidiary or controlled company but which in reality is a part of itself. The purpose of this bill is to remove what I submit to the house is an absurdity by giving jurisdiction to the Board of Railway Commissioners to inquire into the affairs of such a subsidiary or controlled company.

Motion agreed to and bill read the first time.

ANGLO-EGYPTIAN TREATY

On the orders of the day:

Mr. J. S. WOODSWORTH (Winnipeg North Centre): I should like to ask the government if Canada has been consulted with regard to the policy of Great Britain in Egypt.

Right Hon. W. L. MACKENZIE KING (Prime Minister): I assume that my hon. friend refers to a treaty which was in the course of negotiation between Great Britain and Egypt?

Mr. WOODSWORTH: Yes.

Mr. MACKENZIE KING: The treaty to which my hon. friend has reference was a treaty being negotiated between His Majesty, as representing Great Britain and Northern Ireland, and Egypt. The Canadian government was kept informed of the progress of the negotiations.

BUSINESS OF THE HOUSE

THE BUDGET DEBATE—FORTY MINUTE RULE

On the orders of the day:

Mr. J. L. BROWN (Lisgar): Mr. Speaker, I wish to speak on what I think is properly a question of privilege. The privileges of the

house are involved, and also the special privileges that some hon. members seek to obtain. Last session we revised the rules limiting speeches to forty minutes and setting eleven o'clock as the hour of adjournment. This was done to shorten debate and expedite the business of the house—a result that we who come from a long distance and have to spend months here are very desirous to obtain. But I doubt very much whether this result will be obtained unless we curb certain practices that seem to me to have grown up during the last few weeks.

While there may be some advantages in the new rules, there are also some disadvantages. It seems to me that the new rules have encouraged the practice—I do not use the term offensively but simply for want of something more apt—of jockeying for position. We all understand why hon. members should wish to get first place on the orders of the day. It is more pleasant to speak to a full house and full galleries than to empty benches. Naturally also the member, if he has a weakness for newspaper publicity, has an opportunity to have his vanity gratified. This, I suppose, is inevitable. The reporters are probably limited to so much space, and their copy, I expect, is prepared early in the evening.

We have now been debating the budget for three weeks. In the early days of the debate it might have been allowable to adjourn early because of lack of preparation on the part of hon. members. But at this late stage there is no reason why any member should not be prepared to speak at the time assigned him by the whips. Last Monday I began to speak at ten o'clock. On Tuesday the hon. member for Hants-Kings (Mr. Ilsley) began to speak at ten o'clock. One day last week the hon. member for Battle River (Mr. Spencer) began his speech so late in the evening that he had to complete it next day. But last night, as on some former occasions, the debate was adjourned at ten o'clock. The hon. Minister of Justice (Mr. Lapointe), who was leading the house, said he had no objections if it did not interfere with the arrangement to conclude the debate next Tuesday. But the government is not the only one affected; the privileges of hon. members are interfered with. Possibly the early adjournment last night may debar some hon. member from taking part in the debate.

I realize, Mr. Speaker, that there would be some difficulty in having a hard and fast rule that you could apply with the same impartiality as the forty-minute rule; but I would suggest to the house the impropriety of any member at this late stage of the debate asking for an adjournment at ten o'clock. Could there not be a gentleman's agreement under which any member would be willing to take a sporting chance of what comes to him in the matter of time? I know it has been the custom to allow the adjournment to go to the different parties and groups in rotation, but that custom could still be observed without needlessly prolonging the time of debate or interfering with the privileges of any hon. member.

Mr. J. C. BRADY (Skeena): Mr. Speaker, I wish to draw the attention of the house to a very difficult situation that affects many of our members under the forty-minute rule. The other evening when I was speaking I sat down at the end of thirty minutes, believing that I had exhausted the time allotted to me. Of course, I had to depend upon my colleagues to let me know when my forty minutes had expired. Now, in order to facilitate the business of the house and enable hon. members to know how their time is passing, I would suggest that on the table there should be an electric button within easy reach of the Clerk by which he could indicate the passage of the forty minutes by switching on near the clocks a green light and a red light at fifteen and thirty-minute periods respectively. Then an hon. member would know when to begin his peroration. An electrician could set up such a device in a short time. It is very difficult for hon. members to keep an accurate check on the hon. gentleman who may have the floor. For instance, yesterday I timed the hon. member for South Wellington (Mr. Guthrie) and other hon. members, and found my timing did not agree with that kept by other members.

Mr. A. W. NEILL (Comox-Alberni): Mr. Speaker, might I say that this shows the utter absurdity of the rule.

Mr. SPEAKER: Of course, this is a matter for the house to decide. Personally I would not object to the green and red lights —I know the meaning of the two colours. But I should like the arrangement to be automatic so that I might depend on the clock and not on my own judgment, well remembering the words of Pope:

> 'Tis with our judgments as our watches, none
> Go just alike, yet each believes his own.

I should like every hon. member to rely on the clocks when I have to say time!" Of course, it is understood that the clocks are under the jurisdiction of the Minister of Public Works (Mr. Elliott).

THE CARILLON

CONCERTS DURING THE SESSION

On the orders of the day:

Mr. F. P. QUINN (Halifax): Mr. Speaker, in view of the fact that while parliament is in session this is the only opportunity members have of hearing the carillon, and also in view of the fact that a great number of visitors come to the capital during the session, may I ask the Prime Minister if he will take into consideration the advisability of having the carillonneur give concerts at a stated time each day? I would suggest between 2.30 and 3 p.m. Many members are fond of music, I am particularly; I love to hear the tintinnabulation of the bells.

Right Hon. W. L. MACKENZIE KING (Prime Minister): I think the suggestion of my hon. friend has much to commend it. Here again the Minister of Public Works is concerned, for he has control of the carillon. I will have a word with him and see if it cannot be arranged, if not every day, at least on certain days, to have concerts given by the carillonneur at hours which will be convenient to hon. members and the public.

THE BUDGET

DEBATE ON ANNUAL FINANCIAL STATEMENT OF MINISTER OF FINANCE

The house resumed from Thursday, March 8, consideration of the motion of Hon. J. A. Robb (Minister of Finance), that Mr. Speaker do now leave the chair for the house to go into committee of ways and means, the proposed amendment thereto of Mr. Cahan and the amendment to the amendment of Mr. Fansher (East Lambton).

Mr. S. C. ROBINSON (West Essex): Mr. Speaker, at the outset allow me to assure you that I shall not consume my full forty minutes. This debate has now been in progress for three weeks, and there is very little left for private members to say at this late stage. Therefore I shall confine myself in what I have to say to the important constituency of West Essex, which comprises the city of Windsor, the towns of Sandwich and Ojibway, and the townships of Sandwich East and Sandwich West; a constituency which is attracting the attention of the whole Dominion at the present time owing to the extensive developments now going on there.

But before I deal with my subject I should like to make a couple of references to the speech delivered last evening by the hon. member for Sherbrooke (Mr. Howard). I want to remind him that charity begins at home; and when he suggests that there should be a further cut in the price of automobiles of from 15 to 20 per cent, a reduction such as the industry could not possibly stand, it seems to me that it would be more apropos if the hon. gentleman would advise that the industries he controls in Sherbrooke, which have a protection of from 30 to 35 per cent, should suffer a similar reduction.

The hon. gentleman said that no suggestion had come from the opposition as to giving employment to the unemployed. Apparently he has not followed the debate, but as I proceed I will suggest to him where all the unemployed in Canada might be taken care of if certain policies were carried out. This unemployment problem is in my opinion the most serious we have to deal with in this country, if for no other reason than the importance of keeping our Canadians at home. A situation has prevailed in Windsor during the past two years which is new to us in the way of unemployment. There are several reasons for this. I am informed that when people from the British Isles are on the steamships crossing the Atlantic and do not know exactly where they are going to settle when they come to this country, officers, or passengers as the case may be, advise them, "Oh, go to the border cities; you will get a job there at from $4 to $5 a day". Unfortunately this has not been the case since the reduction in the automobile tariff. Further, we have another situation there for the relief of which I think we should have some assistance from the government. I refer to deportations from the United States of Canadian citizens most of whom are of foreign birth, and who entered that country illegally: when they are deported back to Canada they are dumped into Windsor and in most cases become a charge on the city. The result is that the charity funds of the municipal council of Windsor are growing by leaps and bounds to take care of these unemployed.

According to the chamber of commerce returns regarding employment in the border cities, in September, 1926, 74 firms out of 114 gave a return of 11,337 men employed. In September, 1927, the number was 8,661, showing a decrease of 2,676. I want to be fair about this, and I will say that conditions are better chiefly on account of the Ford Motor Company having started. In November, 1926, the employment figure was 11,349 and in November, 1927, 10,304, still a decrease of 1,045. In December, 1926, the figure was 11,034 and in December, 1927, 10,171, or a decrease of 863.

Referring to the question of unemployment, I wish to read certain remarks made by the Minister of Labour (Mr. Heenan) in Winnipeg. I quote the following from the Montreal Gazette:

Unemployment Problem

Heenan Gets Suggestions from Manitoba Officials

Winnipeg, February 25.—The problem of unemployment is the most gigantic task the Canadian government has to face, and the co-operation of municipal, provincial and private bodies would be necessary before it could be solved, stated Hon. Peter Heenan, federal Minister of Labor at a meeting to-day attended by members of the legislature, provincial officials, aldermen of the city and board of trade members.

Mr. Heenan promised to take the various suggestions back to Ottawa and place them before the departments involved.

I could suggest many other ways of finding employment for thousands more in the border cities, but we are faced with so many difficulties in connection with the continual tinkering with the tariff, and reductions which are made from year to year, that industry does not know where it stands. Let me give to the house a concrete illustration. In the border cities we have a drop forging plant whose expenditure on plant and machinery is some $1,500,000, and they are in competition with similar plants in the United States. Let us suppose that General Motors in the United States have from seventy to eighty different plants; they take their overhead in connection with all these plants at, say, 25 per cent, dividing it proportionately among them. The overhead in drop forging plants is higher than in any other line of industry owing to the high cost of drop forging machinery, dies, tools, et cetera. The proportion should be 75 per cent. This concern to which I have reference put in their tender for an export business in Canada on which they would get a drawback of 99 per cent. I might mention, by the way, that the drop forging plants in Canada have to import their machinery, steel, dies, tools, oil, coal, et cetera. The Canadian concern underbid the American competitors by 7½ per cent and the Americans immediately determined to meet the price and so they got the order. To my mind there should be something in the customs regulations whereby Canadian industry might be protected against such unfair competition. I submit that an expert should go into the drop forging plants in the United States to ascertain their cost of manufacturing, comparing it with the cost in the Canadian plants, taking the respective invoices. I am sure that in most cases the Canadian plant could not manufacture at the same price.

A good deal has been said about emigration from Canada. I want to give the figures from the American consular office at Windsor for the years 1926 and 1927. I have them here month by month but I will not burden the house with them. For the first six months in 1926 vises were issued to 2,357 Canadian born citizens who desired to reside permanently in the United States. In the first six months of 1927 the number was 2,090, a difference of 267. The figures for the last six months of 1927 show an entirely different state of things. For the last six months of 1926, 2,189 Canadian citizens took out vises to live in the United States whereas in the last six months of 1927 there were 4,070 or 1,881 more than in the corresponding six months of 1926.

My remedy for unemployment—and this is my answer to the hon. member for Sherbrooke (Mr. Howard)—is that if the government would cease tinkering with the tariff on agricultural machinery and automobiles, and let us manufacture our raw materials into the finished product they could find employment for 100,000 more in this country. We are continually increasing our importations of manufactured goods which should be produced in this country, and to offset that the government policy is to increase our foreign trade. We all know that the best market for the farmer and the Canadian manufacturer is our home market; we should look after that market first and develop the foreign market afterwards.

There is one other thing to which I would like to direct the attention of the Minister of Finance; I refer to old age pensions. If the government would increase the allowance under the old age pension scheme I am sure it would help the municipalities throughout the country which are at present maintaining houses of refuge and similar institutions. It would also be of great assistance to the Salvation Army and other charitable organizations, because a good many of these old people would come under the old age pension scheme and the municipalities would not have to shoulder the whole burden.

There is another suggestion I have to offer, which would benefit the border cities throughout Canada, and perhaps particularly those in Ontario. Since we have obtained a sane liquor law in Ontario many Americans who desire to enjoy greater freedom, and especially those who are British born, would like to live on the Canadian side of the border, and of course we would like to have them here. My suggestion is that if an

American citizen wishes to live in Canada, a man whose business is entirely in the United States and whose entire revenue is derived in that country, he should be allowed to bring his automobile into this country in bond. Many people who would like to come to Canada seem to find that the great stumbling block; they have to pay duty on their automobiles while their household goods are brought in free, and in many cases their automobiles are used chiefly in their business. This arrangement would be reciprocal, to a certain extent.

A great deal has been said about the automobile industry, and in that conection I would like to draw to the attention of the Minister of Finance the fact that in 1927 our importations of automobiles and parts were valued at $65,497,721. In 1926 these importations were valued at $54,305,111, which shows an increase of $11,192,611 in one year. On the floor of this house two years ago the minister stated that his policy would force automobile manufacturers doing business in Canada to establish plants here, but that has not been the case. The largest single items in the importation of automobiles were Hudson and Essex cars, the production of which does not involve one day of Canadian labour. Also in this connection it is worthy of note that the change in the tariff on automobiles has practically eliminated the Canadian manufacturer of trucks and busses from the markets of the Canadian west. The Gotfredson corporation, which up to that time doubled its business every year, now finds it very difficult to carry on. Some associates of mine, together with myself, put $35,000 into the stock of that company, which sold at $25 a share; today you cannot sell the stock. It is listed on the Toronto Stock Exchange at $8 bid and $9 asked, and there are no transactions taking place in it. I am told that in the maritime provinces and in British Columbia the United States manufacturers of trucks and buses will drive their cars a thousand or two thousand miles over muddy roads to the border; then in some cases will have a truck tow them to some customs house, and have a valuator value them as second-hand trucks or buses. In this way they will only pay duty on about one-third of the value of the car, so the Canadian manufacturers cannot compete against them. I believe that defect has been remedied to some extent, but as yet the business has not come back to the Canadian manufacturers.

Another very important item is the farm tractor, which was put on the free list as a war measure to increase production on the farms. In 1924 we imported 5,236 tractors with a total value of $3,651,502; in 1925 we imported 2,200 having a total value of $1,410,554, while in 1926 we imported 6,895 tractors, valued at $5,153,120. I have secured the figures for 1927 from the Bureau of Statistics; in that year 15,651 tractors worth $1,400 each were imported, the total value being $12,091,910. In addition to that 231 farm tractor engines were imported in 1927, and these were valued at $491,728. Surely, even if nothing else can be done, this material should be allowed into Canada free to be machined and assembled in this country, which would provide employment for a large number of workers. The Ford Motor Company, at Walkerville bought a fifty acre plot of land for the construction of a building and equipment to manufacture Ford tractors, but since tractors have been placed on the free list this company cannot compete with the parent concern in Detroit, so the matter was allowed to drop. I have no doubt, however, that if a duty were placed on tractors, as certainly should be done, the Ford company would proceed to manufacture tractors in Canada and perhaps other companies would start up in addition.

Now I would like to say just a word with regard to the tobacco industry. We held meetings in Chatham and Windsor as well as throughout the entire southwestern part of Ontario at which we had the honour of the presence of the Minister of Agriculture (Mr. Motherwell) and his deputy. These gentlemen visited that district twice, and we came to parliament expecting some result. What has happened? They have not said a word with refrence to the position of that industry to-day. Apparently the government will not take advice or suggestions coming from this side of the house, but I think it is the duty of those members representing that part of Ontario to say something on behalf of that industry. Everyone expected a reasonable reduction of the excise duty on cigarettes, which would reduce the smuggling of these articles and would greatly help the tobacco industry, but they were disappointed. There is no doubt that this should be done and also that the excise tax on cigars should be reduced. We should also raise our duty against raw leaf tobacco to the level of the United States tariff against us. It seems a shame when we consider that we import some 17,000,000 pounds of tobacco from the United States which could be very well supplied by our own farmers.

Now I would like to read a couple of extracts to show what the people of the United States think of a high protective tariff, and

what they consider it has done for the manufacturer and farmer of that country. President Coolidge speaking before the Union League of Philadelphia on November 17, 1927, regarding the benefits derived from the tariff by all classes in the United States, made the following statements:

Without the influence of a protective tariff, it would never have been possible for our country to reach its present stage of diversified development with its liberal rate of wages, its unprecedented distribution of wealth, and its high standards of living. If these conditions are to be maintained, that policy will have to be continued. In some few lines we can compete with all the world, but in general our agriculture and our industry, are compelled to make a larger outlay to provide their establishment, pay a very much higher rate of wages, and therefore find their costs of production are greater than in foreign countries.

Any material reduction in our general tariff rates would ultimately result in a drastic deflation of agricultural and industrial values, in the rate of wages, and in the standards of living. Under our present system our foreign commerce has reached the highest peace-time record and our national income has steadily increased to the enormous proportion of $90,000,000,000, for the last calendar year. This represents a volume of production and trade far in excess of that which any other country ever reached. It is the zenith of our prosperity. All of this should be considered in any appraisal of the worth of our long-established policy.

While we have placed the enterprise of the country unreservedly in private hands, we have adopted a system of government regulation and denounced by law restraints of trade and unfair practices in trade, in order that the public might have the full benefits of all fair competition and the opportunities of our commerce be equally free to all. Privilege has no place in either our political or economic system.

I quote further from the newspaper called the South Dakota Chief, published in Iroquois, which is a farming community, to the following effect:

What Protection Has done

Here is a voice from the west (The Voice of the Iroquois, S.D., Chief) raised in championship of the present tariff law:

As a matter of fact, things have turned out just as the protectionists predicted. Wages have gone up because the workers have been protected from cheap European competition. And the great assured home market has permitted the manufacturers so to increase their production and reduce manufacturing costs that the cost of living has not increased. We have therefore at this time what would seem to the theoretical economist an impossible condition—an increase in wages and a reduction in the cost of living. The theorist told us that it couldn't be done, but the theorists as a rule are free traders, internationalists and whatnot. They fail to give due weight to the American idea of standardized production.

Before closing, Mr. Speaker, I want to give a few facts regarding the Canadian Steel Corporation in Ojibway in my riding, as it has been mentioned two or three times in this house. I can assure you that I know whereof I speak because I had the honour to succeed the late Hon. W. C. Kennedy in the council of Ojibway. When the United States Steel Corporation located at Ojibway, in Essex county, and formed the Canadian Steel Corporation, it was their intention to manufacture chiefly iron and steel products, which at that time were not being produced in Canada. After expending some nine or ten million dollars, work was stopped in 1922 owing to the fact that the present government were pledged to carry out their platform of 1919, and the subsequent tinkering with the tariff in the iron and steel industry confirmed their judgment of 1922. The corporation is at the present time removing its wire mill from Hamilton to Ojibway, the only development which has taken place in recent years, to the detriment of the former city. This factory will employ from one hundred to two hundred men when working at full capacity. I can say, without fear of contradiction, that if the tariff on iron and steel is stabilized and the industry receives the protection to which it is entitled against unfair competition the Canadian Steel Corporation is only too anxious to go ahead with its project which will involve the expenditure of millions of dollars and the employment of many thousand men. My opponent in the last election stated that if the Liberals were returned to power they would force the Canadian Steel Corporation to go ahead and produce. And to use his own words they would have to "play ball or get off the diamond." This attitude influenced a large number of votes in the locality of the steel corporation. I should like to ask the government whether it is its intention to carry out that promise and if so when? I will give the government credit for carrying out the Liberal candidate's promise in the by-election of 1923 in North Essex. Mr. Healey promised at that time that if he was elected the government would construct a breakwater at Belle River. After his election the government promptly carried out the work at a cost to the people of Canada of $30,000.

There has been a good deal of publicity lately in connection with the subject of a new post office at Windsor, and I sincerely hope the government intends to go on with that work. The present post office was erected, I think, in 1879 or 1880 when Windsor was a town of 5,000 population. Now it is a city of over 65,000 and yet our postal facilities are the same as they were forty-seven years ago. Those facilities are really

a disgrace when you consider the importance of Windsor and its proximity to a large city like Detroit. There are thousands of people who come over from Detroit and send mail from the Windsor post office. Sometimes the people are crowded there like sardines in a box. The office does not possess even the necessary facilities for the writing of postcards. If I can do anything to bring about an improvement in the conditions I shall be most happy to do so. I am in accord with my colleague and friend from East Essex (Mr. Odette) who stated, I believe the present site can be sold for a price that will pay for the construction of a new post office.

There is just one more subject I wish to refer to and then I shall be through. That is the removal of the duty on coal in the interests of the salt industry. We all know that most of the salt used in Canada comes from Essex county, from the Canadian Salt Company's works, but I do not think that company ever begged the government to take the duty off coal. What they wanted was a duty to keep foreign salt out of Canada and to preserve the salt market for Canadian manufacturers.

Mr. E. C. ST-PERE (Hochelaga) (Translation): Mr. Speaker, I read somewhere that the Right Hon. Lloyd George, in the course of a lecture given in an English university, advised those who destined themselves to politics, to first begin by being good listeners. Since the outset of this debate on the budget, I endeavoured to listen well, I tried to note all the arguments which were put forth, both for and against the budget proposals. As it would take me too much time to discuss them fully and do them justice, I shall content myself with the time allotted by the new rules of the house, to review as briefly as possible the contentions of the various speakers who followed one another during the course of this debate.

I shall abstain myself from adding further compliments to the torrent of congratulations with which the hon. Minister of Finance (Mr. Robb) has been overwhelmed.

I shall only say that he simply did his duty towards our country, and that is for him the greatest satisfaction.

As every business man does, it is well to consider what have been our revenues and our expenditures during the course of the last fiscal year. I must say, together with all those who have impartially considered the state of our finances up to date, that the sound administration of the Minister of Finance has given us what all business men first expect: a surplus of revenues over expenditures. Our finances are therefore in a very sound condition.

With regard to the budget proposals, the general approval of the country amply proves that it has given satisfaction to everybody. No doubt there will be found—and that is so to speak the continual enforcing of the old proverb which says the fortunes of one make the misfortunes of another—there will be found critics who, notwithstanding the general approval, will always find fault simply for political purposes.

The wiping out of the sales tax, whatever may be said against it, has given satisfaction to the business people of this country; and as recently as last week, a great financier of Montreal told me that the gradual reduction carried out by the hon. Minister of Finance, would certainly prevent a great number of dealers suffering very appreciable losses in the sale of their goods.

The income tax was a measure imposed owing to uncontrollable events, and a great number who are at present victims are not responsible for it. I do not wish to go back and discuss war events, I never have recourse to such arguments in the course of my political campaigns, yet during the great war, I have seen in my riding some of those large manufacturers, of those so called patriots of that period, who now so loudly call for the entire wiping out of the income tax, trying to shelter themselves by paying their employees, from the president down to the humblest secretary, large bonuses, and thus avoid paying the government the necessary amounts for the upkeep of the country.

The hon. member for Sherbrooke (Mr. Howard) was telling us yesterday that the owners of large fortunes should especially be called upon to pay. I fully agree with him I even would go one step further. May I ask the hon. Minister of Finance to take good note of the remark I am now making. Young people, in my native province, are advised to practise economy, parsimony is recommended to them so as to shelter them when rainy days come. Now, I state that the limit of exemption from taxation under the income tax, should be higher than $4,000. And this is why: in our province and especially in the workmen's quarters of Montreal—I say it to their praise—the small property is held by workmen, it belongs to people who have saved, who have denied themselves all the luxuries that simple life can afford to the humblest citizen of this country, and from this taxable $4,000, the person taxed on said amount must economize for the future. He must pay from

that amount the insurance policy in prevision of rainy days, which amount he deducts so as to provide for his family in case of misfortunes. He must foresee many things. He must especially set aside savings to meet the taxes for local improvements in cities. Perhaps, you will say that these taxes for local improvements which you state he must pay each year, are deducted from his annual budget. I deny this, because in the city of Montreal, as elsewhere, local improvement taxes are payable sometimes only three or four years after the work is completed. Take the amount of $160 per year which small property owners are called upon to pay, calculate that amount for ten years ahead with compound interests, and I ask you if truly the Dominion government by taxing that little income does not by this fact give a premium to carelessness and work to unroot among us the spirit of economy which is a trait of the French Canadian people.

I now come to the remittance of the income tax to large corporations. I have never been, sir, an extremist. I consider that the large corporations should not be treated as outcasts, but to infer from this that we must, at each claim they put forth, bow our heads for political purposes and grant their claims, I say no. Quite recently, a delegation composed of the municipal authorities of Montreal and a great number of representatives of our public corporations came up to Ottawa to interview the hon. Minister of Finance. I must state that, at first, I appeared to approve the request of the Montreal Light, Heat and Power Company, but as soon as I learned the details of their operations, I changed entirely my opinion. It matters little whether it is the Montreal Light, Heat and Power Company or any other corporation which come to us to obtain a reduction in taxes, I clearly state and without restriction that I am opposed to such reduction. And why this great company known as the Montreal Light, Heat and Power Company, that large corporation distributor of power, which producing but little power—buying it as it does from various corporations and then selling it at a profit to the consumers of the city of Montreal—why this company, I say, should not pay taxes like the others. I am at a loss to say. This large industry does not limit its operation simply to the distribution of electricity, but it sells moreover a great number of house commodities, etc. It sells coal—and I shall deal squarely with it on this matter—I admit that the coke which it sells obliges in some way our population by allowing it to purchase fuel at lower prices than American anthracite. But basing ourselves on such a principle, why should we not exempt from the income tax the small merchants of Montreal who sell electric stoves, toasters, beside all the coal dealers who supply the population with the fuel needed for heating purposes?

Mr. Speaker, the hon. Minister of Finance deserves our congratulations for having taught that delegation, which came up here sometime ago, a lesson that, no doubt, made it understand that the Minister of Finance for Canada was well posted on the operations of this company, and on no account would he change his opinion that those who should pay taxes to the country—there is an economic principle involved—are those who are most capable of doing so.

One word on the tariff question. I am no more an extremist as regards the tariff than I am on other matters. I do not consider the tariff as a doctrine, but as a policy which adapts itself to circumstances. And since I am free to state it from my seat in the House of Commons, there is an industry in my riding—one making cotton goods—an industry which notwithstanding the tariff reduction of 7½% will not lose any of its profits. It is an industry very highly protected. I am speaking of the Dominion Textile Co. This year, that company made very large profits, and as from time to time it makes changes in its mills, I trust that it will not take advantage of such a circumstance to tell its employees—and, sir, its employees are for the most part people of my race—"This lowering of the tariff will bring about a decrease in your wages". When these workers threaten to strike, the company sends to the counties of the lower St. Lawrence, a new kind of recruiters who use to entice to the county of Hochelaga poorly paid workmen. It is often said that corporations have no soul. I admit it, but I ask of those who profit—I shall not say of government money—but I ask of those who profit from a protective tariff, which is a guarantee against the invasion of American cotton goods, and I shall even say against the English cotton goods, to show that they are human and pay their employees wages, which will allow them to exist and not wages which, on an average—these are statistics taken from the department of Labour—amount for each of these workers to the pitiful sum of six hundred and a few dollars per year. Our opponents, whom I take the freedom of always calling friends, like to state a little everywhere that protection, which should be adopted, would stem the tide of emigration towards the United States. I would advise them to consult the leaders of the labour unions, and ask them if they

agree with the assertions which the Conservatives advocate at present and which they always advocate, assertions which made the subject of their electoral campaign.

Strictly speaking, I represent the largest riding of workmen in Canada, and I am still wondering if some day I would receive a protest of that kind from my electors. I state that protection never safeguarded the interests of the workmen. No, protection never protected the workman. If the workman, to-day, receives protection, he owes it to the excellent organisation of the workers' unions, he owes it to his spirit of work, to his initiative, to the constant improvement in the machinery which he uses in his work and which facilitates mass production.

Our opponents further tell us that the United States are an Eden for those who emigrate there. I shall not quote to them a page of ancient history; I shall not even tell them that their arguments are refuted by statistics of a year old; let me, sir, quote from an article published on March 4 last, in the Sunday edition of the World of New York, and signed by Charles Stelzle, organiser and past superintendent of the Temple of work of New York. I shall give the English text, so that our opponents will not charge me with misrepresenting the facts and still less the text. I kindly ask my hon. colleagues of the English language to listen to it. The text reads as follows:

Based upon reports received from the Welfare Council of New York City, the President of the State Federation of Labour, the President of the Central Trades and Labour Council of New York City, the Commissioner of the Department of Licenses of New York City, the Superintendent of the Municipal Lodging House, and various welfare agencies, as well as from figures produced by the Department of Labour itself, it was demonstrated that there is "an extensive amount of unemployment, and serious distress has been caused on this account."

That there is a considerable amount of unemployment in New York City is reported by practically every agency of a social, industrial and philanthropic character. An increase in the number and the length of breadlines, the crowding of the Municipal Lodging House, the growing number of respectable-looking beggars on the streets, the great excess of situations wanted over help wanted advertisements in the daily newspapers, particularly as compared with those of recent years, the filling up of the poorer class of lodging houses, the increase in the amount of relief given by social agencies to families suffering because of the unemployment of bread-winners, the unusual amount of credit being asked for in neighborhood stores are a few of the signs which point to an increase in unemployment.

Serious Distress Caused by Situation

We are told by the Urban League, which looks after the Negro population of the city, that while in January, 1927, it had 365 applicants for every 100 jobs, in January, 1928, there were 1,175 applicants for every 100 jobs. The Y.M.C.A. and the Vocational Service for Juniors report much the same kind of a situation. Commercial employment agencies placing office and clerical help report a 100 per cent increase in the number of applicants for jobs; and the agencies for hotel and restaurant workers say that there is a stream of applicants, with no jobs available. This lack of employment is found not only among the unskilled, but in many of the skilled trades. The Amalgamated Clothing Workers, with a membership of 45,000, reports 15,000 out of work.

As is the case during every winter, large numbers of men have come to New York from rural districts and labour camps with the expectation of finding jobs. A considerable number have come from the coal fields of Pennsylvania and Ohio because of the strikes in these regions, and from New England towns where the textile industry has for so long a time been demoralized.

No One Prepares For the Cycles

In spite of the fact that unemployment comes regularly in cycles—from seven to ten years apart—scarcely anybody seems ever to get ready for its recurrence. We have conferences of the same "experts", but by the time that their program has been formulated the necessity for putting it into operation has gone by. Even the cause of unemployment seems to remain a mystery. At any rate there is a greatly diversified opinion as to what is responsible for it. Some authorities believe that it is a purely psychological situation; the Socialists charge it up to the competitive system; the politicians out of office attribute it to the Administration that is in power; at various times Wall Street has been held responsible; for a good many years it was charged up to our excess immigrant population.

Mr. Speaker, here and there, we hear that we must see that a great flood of immigrants flows into the country so as to bring back prosperity among us. I do not believe in intensive immigration. Such immigration lends itself greatly to unemployment, and as I am first a Canadian, I would ask that the immigrants—it is of little import where they come from, whether it is from England or elsewhere—who come to us disguised as farm-hands and who for the most part conceal able mechanics, must not come here—and this I have the proof every day in my riding—ready to replace at a moments notice our able mechanics, Irish, French Canadians and English, who are in this country.

Mr. CASGRAIN (Translation): Hear, hear.

Mr. ST-PERE (Translation): We have established everywhere in our various provinces technical schools; we encourage young people to follow the courses given there, and on the first occasion—I may say that sometimes partiality and unfairness has something to do with it—one of our electors or a friend that we consider and his employer considers as an able mechanic, finds himself replaced

[Mr. St. Péré.]

without notice by a mechanic who hails from Leeds or elsewhere. Canada for Canadians, always! That is why I am opposed to an intensive immigration; the cries of those who tell us here and there that Canada must be peopled by English-speaking subjects, is of little import; Canada is sufficiently vast to welcome individuals of every language and nationality. Canada will increase its population, the west will increase its population when the synods from Kingston, etc., will cease their cries that people fear French Canadian immigration in the west, when certain Canadians ill-advised, who are far from advocating national unity, will cease to try and root out, as they would do a plague, the French Canadian element from the population of certain provinces.

Mr. Speaker, I am opposed to an intensive immigration. It is quite right that we should bring in farm-help. On that score, I congratulate the Canadian National Railways for its spirit of initiative in bringing, for the farmers of Quebec, farm help speaking the language of the majority of people in that province. I also wish to congratulate certain other organizations for their efforts to increase the population of our country by bringing in desirable settlers.

The hon. member for St. Antoine (Mr. Bell) whom I might designate a sower of fear—they shot those people during the war —was saying the other day that he often met on the streets of Montreal people who asked for charity. I grew up in Montreal, I know my city better than the member for St. Antoine and I want to tell him, unfortunately for the argument which he seems to bring in support of his contention, that the only people we meet and who beg a ten cent piece for a nights' shelter or five cents for food—what is called a plate of beans— are immigrants; because those among us who are in want have no need to have recourse to begging; our splendid philanthropic societies amply suffice for their needs.

One further word on emigration. Why so much bewail over the emigration of our people. The French Canadian loves, from time to time, to change his abode. If our people had not emigrated from Quebec to other provinces, and especially to the western provinces, I am wondering if the people of the west would have large cities like they have to-day. If there had not been a Lacombe to help the Canadian Pacific in laying its steel ribbon across the western provinces, I wonder what they would have done. A kind member,—a harmless chap hailing from British Columbia—told us—and I wish to refute this error—that he also deplored the emigration of the people from Quebec to the United States. Well! that province of Quebec how one likes it each time it is required to point to it to prop up a poor argument. It is said: The people of the province of Quebec emigrate to the United States, and once there, forget their religion. Another political falsehood, another trick of politics. It is of little import that they emigrate to the United States or elsewhere, the first thought of a French Canadian is to have a home near his church, and the institutions of the French Canadians in New England and everywhere amply prove that they do neither lose their faith nor language, notwithstanding their emigration to foreign lands.

Before resuming my seat, allow me, sir, to make a few remarks with regard to our farmers. At election time, one comes to them, one endeavours to tell them that their conditions are pitiable. But under whose rule have our farmers emigrated to the United States, if it is not under that of the Conservatives? Let me put the question to the Conservatives of to-day: what have your predecessors done to stem this emigration? Nothing. Whatever was done for the farmers, to improve their lot, was done under the Liberal governments. Recently, our farmers came up to Ottawa, as a delegation, to ask the Minister of Finance, when he brings down his supplementary estimates to kindly include an item so as to meet the request presented by the association of breeders of the province of Quebec. The province of Quebec and the French Canadian members of this house are not here to beg for sympathy. We listened attentively and we generously made grants to the people of the Maritime provinces when they put forth their claims. And I tell the people of the west again that we did the same thing for them. Quebec only claims its due. Mr. Speaker, I am sorry to say so, in many parts of my province, prosperous villages are entirely deprived of railway communication; Gaspé, Bonaventure, Yamaska, and I shall even add Joliette, my native place—need railways to help in their development. I would ask the hon. Minister of Railways (Mr. Dunning), to kindly accede to our just claims. During many years people from Quebec were asked to go and settle the New Ontario and the Canadian west. There are certain districts in the west where our people settled and—I am proud to say—they are considered as farmers very much attached to their lands and hard workers. These farmers are deprived, after years of hard labour, of communication which would help them to give their families appreciable ease. I trust that the Minister of Railways will listen and grant them their just claims.

Mr. Speaker, there is another question—and I broach it with all the necessary reserve—it is the St. Lawrence waterway scheme. The government has not come to a decision in regard to this matter. Opinions in Montreal are divided on this question, and as the hon. member for Sherbrooke (Mr. Howard), stated last night, if by chance we decided to build that St. Lawrence waterway, I would ask—for that part extending along the shores of Quebec and which would supply power to many of our industries and electric light to our population—that the rights of developing these powers rest with the government, it is of little import whether it be federal or provincial. The consumers of Ottawa pay a minimum rate for lighting purposes while those of Montreal are being imposed upon.

I want to point out to this house that the statements made recently by a senator in no way pledges the members from Montreal. Let us not so quickly be led to believe that this St. Lawrence waterway scheme will join the waters of the Pactole to those of the St. Lawrence. Let us await events before coming to a definite conclusion on the subject. I shall close my remarks. From what I have heard up to now, Mr. Speaker, the party which sits to your left is a party of negation. It denies the general satisfaction of the people of Canada; that party denies the prosperity of our country; lastly it denies the worth of all competent persons who have given the government a certificate of honesty and good administration. It is the party of negation. I gladly rally to the party which is open to evidence, which is aware that Canada is not a perfect nation, but that all is susceptible of being perfected; I rally to that party which believes in not letting the light under the bushel but rather wants to have it enlighten the more, those to whom the people confided, since 1921, the care of guiding the national destinies of this country.

Mr. A. D. McRAE (Vancouver North): Mr. Speaker, I feel impelled to take up the time of the house this afternoon because so little of a constructive nature has been brought forward by the hon. Minister of Immigration and Colonization (Mr. Forke) either this year or last dealing with the very serious question of population, that I fear the country at large and even some of the hon. members might reasonably conclude that this, the greatest issue before parliament, cannot be successfully solved.

My good friend, the Minister of Immigration, in the committee on agriculture yesterday expressed his great disappointment that we on this side of the house had not put forward definite proposals for him to consider. His sincere expression indicates to me his despair,—after two years, of getting any real suggestions from his own associates. His appeal has not fallen on deaf ears.

In response to his request, I propose this afternoon to disregard all political strategy and run the risk of criticism in submitting for the consideration of the hon. minister and this house a program which I believe will restore our immigration to the favourable figures we enjoyed in the years immediately preceding the war.

The limited time at my disposal—forty minutes—permits me to submit only a general or skeleton outline of the development which I think the government should undertake I will be prepared, however, as opportunity offers to support the practicability of my proposals.

Hon members treat our population problem as a dual one—immigration and emigration. As a matter of fact, we have only one problem. Give us satisfactory immigration and we will have no emigration to worry about. In 1913, when 400,000 immigrants entered Canada, 139 000 of them came from the United States. That year only 14,165 of our people went to that country. We gained 125,000 on them in 1913. We will do it again when we get a real immigration movement under way.

In order that they may enjoy a higher status in life, over 185,000 Canadian boys and girls attended high school last year; 65,000 students were registered in our universities and colleges. Our universities are not turning out farmers. Higher education is taking our boys and girls off the farms. If they cannot find useful employment in the business structure of their own country they can always go to the United States. There—thanks to the sterling qualities they inherit from their forefathers—they receive a preference over others and are welcomed as new citizens in every city from New York to San Francisco.

I will confine my remarks to-day to the development of our unoccupied lands—our greatest natural resource. A steadily increasing agricultural population will demand and support a growing national business structure. More people on farms necessitates a corresponding increase in our cities and towns resulting in a demand for more business and professional men and women—more employment for labour of all kinds. Only in this way can our young people find the opportunities they must have if they are to remain in Canada.

Let us be practical in these matters. We must have some one to do the basic work of the country if the boy or girl of this or future generations who graduates from our educational institutions is to find congenial employment at home.

I entirely agree with the policy of confining our immigration efforts to prospective farmers and domestic servants. It is my humble opinion that we should not encourage the immigration of men or women only qualified for city life. The drift to the cities, which is one of the things we will have to contend with, will supply our city population for many years to come. In common with the United States our problem of the future will be to keep our people on the farms.

Our immigration records clearly show that we must provide employment for our incoming immigrants to assist them to get on their feet. From 1881 to 1885, when we were getting very satisfactory immigration for those days, the Canadian Pacific was under construction. Hon. members will recall that when we enjoyed our greatest prolonged period of successful immigration, from 1903 to 1913, we were carrying on a tremendous program of railway construction in this country. The National Transcontinental and the then Canadian Northern were built from coast to coast.

There is no big construction program before the country at this time. Something must be attempted if we are to take care of a large immigration. The question is what development program can we undertake which will be safe, sound, and ultimately pay the interest on the capital invested—which will not add unduly to the present burden of taxation and will at the same time afford the necessary grub-stake for our incoming settlers.

I suggest that the only program available is the development of the land on which we propose to put these new settlers, and the work which will inevitably follow such as the building of branch railways, roads, schools, villages, and the many other capital expenditures which accompany the march of settlement.

I propose that the government inaugurate on a large scale a program which will bring about the settlement of the more or less scrub and lightly timbered land which we have in such abundance in our three prairie provinces —land with wonderful, almost inexhaustible soil, and easily reached by branch railways. In provinces like Manitoba, large areas easily drained might also be included. A most conservative estimate of this character of land easily available would be 10,000,000 acres capable of supporting 65,000 families, or roughly a quarter of a million farm population. This does not, of course, include Peace River. Here there is a minimum of 30,000,000 acres, even more fertile and more easily cleared that awaits development. The Peace River can and eventually will accommodate 175,000 families or nearly three-quarters of a million farm population greater than the entire population of the province of Alberta to-day. When considering these huge figures in connection with farm settlement we must add at least one-third more for the city, town, and village population which such development will necessitate and support.

I am sure that hon. members have in mind that we should first attempt to settle the 10,000,000 acres of vacant lands adjacent to our existing railways, and with this I agree. I will deal with it later. For the moment, suffice to say that these lands when settled will add an additional 250,000 to our farming population and will mean much to the towns and villages on the existing railway lines where all modern conveniences now exist and where no new towns are necessary.

Summing up my proposal, hon. gentlemen will see that it contemplates the ultimate settlement of 50,000,000 acres of land by some 250,000 to 300,000 farmers. These, with their families, and the urban population which will be required, and the consequent developments which will follow will add 2,000,000 new people to the prairie provinces. I propose we start out to double the present population of the west. Do this and the rest of Canada will grow and prosper.

The title to the scrub lands I have referred to rests in the crown. This affords an opportunity to again advertise free homesteads. There is no inducement which compares with this: "One-hundred-and-sixty-acre farm free."

I suggest that these lands be given as homesteads to new settlers, free from all taxes for the first five years and subject only to the cost of clearing and the building of modest farm buildings.

I propose that only 80 acres, the easiest half of each homestead, be cleared leaving the balance to supply the needs of the farmer for building and for fuel. This he can clear himself later as opportunity offers. He will, however, to begin with, have 80 acres under plough, sufficient to support himself and family.

As to the cost of clearing, I have made careful enquiry into this question. It is no longer practical to clear land in the old fashioned way. The grub hoe must give way to the heavy steam breaking plough which walks through ordinary brush and scrub like so much

stubble. The operation while necessarily under government direction would be more or less a co-operative clearing scheme.

Using modern methods, confining the clearing to the easiest half of each homestead, avoiding any heavily timbered areas and prorating the expense over the district I estimate the cost on the whole would not exceed, at the most, $12.50 an acre, that is, $1,000 must be expended for clearing on each homestead. In addition, the expenditure required for the modest farm buildings—generally a log house and barn—would approximate $500 making the total of $1,500 per homestead.

I would have the government make this charge against the land. It would amount to an advance of less than $20 an acre on the cleared land, with the balance of the homestead thrown in. The average value of cultivated land in the western provinces is about $25 an acre. I leave it to the hon. members of this house to say whether the government can make this expenditure taking a first lien on the farm, with safety.

As to repayment, I suggest the adoption of a plan resembling the Irish Land Act—capitalizing the $1,500 at four and one-half per cent for the first five years, giving the settler six years to get on his feet before he is called upon to pay either interest or capital. Beginning at the end of the sixth year, the indebtedness might be spread over thirty annual instalments including interest at 4½ per cent. At the end of these payments the settler would have his title clear. I am sure it will surprise hon. members to learn the small amount of money the settler would be required to pay. Beginning at the sixth year, a payment of $114.75 per annum will give him his farm clear at the end of the period and give the country back the money advanced with interest at four and a half per cent. That is no burden for any worthy man. The government loans its credit but runs no risk. The security is always ample.

Well and energetically administered, it should be possible to complete the program I am suggesting in ten years. On this basis, I estimate that the government would be called upon to finance about $30,000,000 a year on the average, or a total of $300,000,000. Not very much of this money would be repaid in the interval; nothing at all for the first five years. The country can well afford to borrow for such a development issuing special land bonds or debentures for such time as will make it possible for repayments from the settlers, to take care of the same.

I was interested in the statement made by the hon. member for Vegreville (Mr. Luchkovich), a few evenings ago that "there was too much paternalism in our colonization work." I entirely agree with him. Many of us who have been raised in log houses take little stock in the idea that a new settler must have a frame house and a bath tub before he can set to work.

Since the war, many people seem to think that a new settler must start off with modern equipment, frame buildings and a developed farm. To do so without capital is to load him down with a mortgage which breaks his back. The successful settlement of the west was accomplished largely by men who started with a sod house.

It may appear to some hon. members that further temporary assistance would have to be provided. Conditions have not changed in western Canada so far as making a success on the farm is concerned. The new settler, while he is getting his homestead under way, must be given an opportunity to work. The adjacent harvest fields afford him two or three months' work at good wages each year, and this together with the employment he would be certain to obtain in the clearing operations which would be going on in proximity to his homestead, would tide him over. Continuous clearing, preceding settlement, the building of schools, roads, and similar public improvements, if done in a systematic way and with a view to helping the newcomer and not some contractor, will supply the additional grubstake which may be necessary for the settler while he is getting on his feet.

There is an old saying that: "God helps the man who helps himself." That is the policy for the government to follow. I am in favour of supplying the new setttler with work—not with money.

Let me say now that in all our development schemes we must extend to our own Canadian men the same privileges and advantages we offer to the newcomer. We must not fail to treat our young men as good as we do the foreigner. It would be a decided advantage to have Canadians intermingled in these communities.

I have no doubt that my proposal for the settlement of 50,000,000 acres of land in ten years with actual farmers looks like a herculean task. And so it is. Carried to its conclusion, it means 25,000,000 acres made ready for crop and eventually it would double the 40,000,000 acres under crop in the three prairie provinces last year.

But I would assure hon. members that the executive or administrative ability demanded by my scheme would not be as great as that

of the United States Steel Corporation with over a quarter of a million employees, who with their families total over one million population; or the General Motors with its 150,000 employees. Nor does it require the brains of a Henry Ford who built up a personal business employing over 150,000 men.

In all big industrial concerns, there is ever present the serious question of financing the business. No such worry attaches to the administrator of a huge colonization scheme. Parliament provides the money. That is a great difference.

Mr. CAHILL: Who pays it?

Mr. McRAE: When Canadians manage the world's greatest transportation system, the Canadian Pacific Railway; when we own and successfully operate the Canadian National Railways, with the largest mileage of any railway in the world; when we have in this country huge, successful, industrial enterprises in many lines of business, need any hon. member fear that we have no man in Canada big enough to give effect to the program for national development which I have outlined?

An hon. MEMBER: May I ask the hon. gentleman a question?

Mr. McRAE: No; I have been listening for two years to you fellows and I want you to listen to me for forty minutes.

I might point out to the government, however, that Providence cannot do this job for them. The success of such a large proposal is entirely a question of management, organization and administration. Worked out on a unit basis, this plan can soon be built up to locate 25,000 or 35,000 families a year.

It should be borne in mind, however, that once a good immigration movement gets under way it rolls up like a snowball. People will come along on their own and make their own arrangements. In a big movement probably not over 50 per cent of the immigrants would have to be provided for under the project I am suggesting. The others, attracted by the development and consequent prosperity, will locate themselves throughout the Dominion. If we handle 200,000 people a year under this government colonization program a total immigration may be anticipated of easily twice that number or equal to the maximum immigration the country ever enjoyed.

The settlement of the unoccupied lands adjacent to our railways is quite a different matter from the settlement of the crown lands with which I have been dealing. The title to the land adjacent to railway has passed from the crown to private ownership. With a big colonization movement under way the best of these lands being near railways would be taken by incoming farmers with money. However, most of the acreage is the residue after years of settlement, and some other method must be adopted if they are to be colonized within a reasonable time.

The co-operation of the provinces is essential to settle these lands. It would be unwise to adopt any scheme by which the government would purchase them from the present owners. The practical method of colonizing them is under the crop payment plan, which gives the new settler a chance to pay for the farm out of the crop.

Two things are essential, first that the price be reasonable and that the settler have a few years to get considerable acreage under crop before being called upon to divide with the owner. Three years might be a reasonable time to grant him.

The provinces can do much to popularize the crop payment plan by passing legislation which will protect the owner of the land and relieve him from the necessity of sitting on the job when threshing time comes around. Absentee landowners cannot do this. A system of government supervision might be inaugurated in this connection.

In the second place as an inducement to encourage the owner to list his land for sale at a reasonable price, the province might well offer to waive the unoccupied land tax for those who listed their land for sale at an agreed price on the crop payment plan.

The province should work out some arrangement with the municipalities whereby these new settlers would be relieved of all taxes on their land for the first five years, thus putting them on a par with the homesteader. The prospect of being relieved from having to pay taxes on his land would also go a long way to make the scheme popular with the owners. This is a small price for the province to pay for a solution of its unoccupied land problem.

A well devised crop payment plan worked out in co-operation with the province is the only logical way of settling these lands by newcomers who have their wealth in brawn and muscle and not in cash.

New settlers need help and guidance when settling in their new home. The practical and inexpensive method, the one which proved so successful in the western United States a decade ago, is the organization of community clubs. The government should encourage these local associations by an allowance based on the number of new settlers located in their

area. The compensation should be sufficient to enable the community club to maintain a paid secretary where the number of new settlers arriving justifies it. The community club can look after the needs of new settlers in their district very much better and cheaper than government inspectors. Experience has shown that these clubs develop into real colonization agencies. Enthused by the work, their members soon become active in soliciting immigration from their old homes. Something like this is necessary now that there are no longer large land companies at work keeping up interest in the community. The government might well make use of the enthusiastic residents of the towns and villages throughout the west along this line.

Mr. FORKE: We do so now.

Mr. McRAE: I am surprised that the hon. the Minister of Immigration and Colonization—a very successful farmer himself—has not seen fit to make use of the outstanding successful farmers throughout the west as colonization agents, instead of the impractical brigade he now has on the pay roll. I say "impractical" for if my information is correct, many of his men have never lived on a farm, and others have never seen the district they are trying to settle. Compare their efforts with that of a successful practical farmer, sent back to his old home to solicit immigrants among his former neighbours, asking them to come and locate in his district. Many men in the towns and villages throughout the west are qualified to make equally competent colonization agents.

Picture these men as colonizers, with definite information of the available land in their community, the people, climate and conveniences, and what is even more important, a thorough understanding of the psychology of their old neighbours. Their word would be accepted, and well it might be. There would be no misrepresentation as frequently happens in colonization work. Hon. members will appreciate there is no comparison between the effectiveness of these practical men and the immigration agent from the city who either writes from his office or at most makes only an occasional trip into the country.

This is not a new idea. We employed it in the land business in western Canada years ago. It worked then. It will work now. The present chief land commissioner of the Canadian National Railways was this kind of a farmer colonizer when he was taken off the ranch twenty-five years ago.

It should be possible to send several hundred of these colonizers to Europe and the United States every fall. Most western men have little to do in the winter. They would welcome an opportunity to visit their old homes. The cost would be small compared with the results—probably $1,500 each. Returning in the spring with their new settlers they would not only actually locate them on the land they had arranged for in advance but would continue a fatherly interest in them.

Here we have the real selection of immigrants. What chance has a ne'r-do-well to get over with this practically colonizer who knows his "no-good" friend would be sitting on his door step as soon as he got to Canada? This method of selecting immigrants is particularly applicable to those countries in Europe which do not welcome or permit our government to maintain an immigration office—countries we are now leaving largely to transportation companies. I have discussed this matter with Canadians, formerly Scandinavians, who assure me that they can go back to their old homes and bring out on an average twenty-five men, many of them with families, to settle on farms in the west.

It should not be difficult to get at least 300 of these colonizers at work every winter. Costing $1,500 apiece, it would require to finance them, less than half a million annually. These men should get at least 10,000 farmers a year including families, a total of probably 25,000 added to our population.

Hon. members should bear in mind that we now maintain all the staff that is necessary to instruct, supervise and direct these new colonization agents and to look after transportation for this increased immigration. Our principal trouble to-day is that we lack real practical men possessing the knowledge which is so necessary to get satisfactory results. Successful colonization is now an individual matter and must be conducted on that basis.

Referring to the question of provincial and federal co-operation in immigration matters, I suggest, Mr. Speaker, it is high time that our efforts in London were co-ordinated. Federal and provincial colonization officers acting on their own, competing with each other, do not make for the best results. Neither does it always place the new settler in that part of Canada where he is most likely to succeed. Not a few of our immigrants fail because they have been misplaced in this far-flung Dominion.

It has always appeared to me that our High Commissioner in London should take a much more active part, and in fact should be the overseas head of our immigration and all other overseas work. Provincial immigration agencies, if necessary or advisable, should be

housed in the same building as our federal immigration office. The High Commissioner should see that all our immigration work is harmonized and that Canadians are not unduly competing with each other.

One of the great problems in our immigration is practically disregarded. I refer to our unbalanced population—the excess of men over women—a situation which is rapidly growing worse. Immigration since the war has brought to us 170,000 more males than females. In the three prairie provinces in 1921 there was 185,000 more men than women. To-day it exceeds 200,000.

Anyone who travels through our prairie provinces; sees the desolate looking bachelor shacks by the hundreds from Winnipeg to the mountains, if he notes the adjacent more prosperous-looking homes of the farmer with a family, will realize what this unbalanced population is costing the country. On the farm one married settler is worth to the community as much as three or four bachelors—and I disclaim any intention to depreciate the honourable bachelors in this House. It is much more important to-day to bring a hundred thousand women to the prairie provinces than it is to bring in 100,000 men. Of course, it is more difficult. Nevertheless, a real effort must be made to get more women immigration.

So far no satisfactory scheme has been devised to meet this situation. A few domestic servants are brought in but not in numbers worth talking about. I suggest to the minister that he work out a real comprehensive plan and so far as humanly possible balance our immigration. He need have no fear of overdoing it.

The local colonizers I have suggested can bring back as many women as men and easily place them in their community. This, however, will only balance their effort and not help out on the 200,000 discrepancy which now exists.

I suggest to the Minister of Immigration and Colonization that he might with adequate financial assistance induce the Daughters of the Empire to take up this great work. They have chapters in almost every hamlet throughout Canada. What nobler effort could they be engaged in than transplanting throughout the Dominion, ten per cent of the two million surplus of their sex, now languishing in the British Isles. The necessity of this migration should particularly appeal to those who fear for the maintenance of British supremacy in the west. Give us British mothers and we need have no worry about the loyalty of our future generations.

Ever since the war we have discussed the problem of Imperial migration. So far little indeed has been accomplished. The London Morning Post, a very conservative English paper states the case well. They say "Very little is done, and that the situation is a standing reproach and perpetual danger to the Dominion of Canada."

They express the willingness of Great Britain to take her share in schemes for Imperial migration but that the main responsibility for doing the greatest possible service to Canada, and to the empire, is upon us, and that matters cannot rest where they are without serious consequences. Quoting from the editorial, they say:—

> An adequate scheme of settlement would involve considerable sums of money. But it is perfectly possible to solve these and other formidable difficulties when once the Dominions resolve to make it a part of their national policy to develop their resources with men of the British race.

Migration was doubtless the subject of much discussion at the last Imperial conference. Perhaps the Prime Minister will tell us why in this respect the conference has been so barren of results.

It should be possible to work out an adequate Imperial colonization scheme, when we have millions of acres of good land we want settled, and Great Britain has available both men and money.

I suggest to the government that no place in the British Empire affords a better opportunity for a big successful British migration than the Peace River country.

I want hon. members of this house, particularly from the east, to get an idea of the magnitude and the desirability of that great empire. In length it is about the distance from Windsor to Montreal with an average width of a hundred miles. In fertility and productiveness the soil is unequalled in any similar sized area in North America. The summer climate over a period of twenty years, is identical with Edmonton. The long summer days in the Peace River make it a safer crop country than much of the province of Saskatchewan already under cultivation. As for its winter, suffice to say that the hon. the Minister of Interior (Mr. Stewart) will, unless settlers interfere, soon be the largest rancher in the world. His buffalo, which roam the park-like country north of Fort Vermilion, have increased to eight thousand and I am informed had a natural increase last year of twenty-five per cent. There need be no fear of the winters in a country where buffalo and their calves can thrive throughout the year.

I fear, Mr. Speaker, that many hon. members do not appreciate the proximity of this country to the sea, which accounts for its climate. With good direct railway service, the heart of this district would be little over a calendar day's ride from the city of Vancouver. The Peace River country has been unfortunate in that two provinces undertook to provide it with transportation facilities. Neither of them completed their program and the country has been allowed to stagnate.

Railway facilities for this vast empire should be undertaken with a view to its ultimate development. Do not let us make the mistake we have made so often in the past, of building only with a view to the very near future. Peace River wants a trunk line to the sea—not a branch line outlet. We should broaden our vision. With a million people, the Peace River country will require not a single track to tide water but a double track railway to carry the product of its farms to market. Supported by proper development, the railway enterprises of both western provinces are worthy of completion.

I suggest to the government that in co-operation with the Imperial government and the provinces of Alberta and British Columbia the Peace River be developed as a great Imperial settlement.

Alberta and British Columbia together could furnish the land required for homesteads, thirty million acres. The Dominion government could finance the cost of clearing the land and erecting the necessary buildings on the basis I already proposed. Great Britain as its part in the undertaking should finance the temporary requirements of the settlers, which it does now in part.

It would be a reasonable proposal for all partners in this British migration scheme to work out, on some equitable basis, a joint guarantee of the interest for a period of twenty years of the bonds which our national railways would have to issue to enable them to take over and carry to completion the railway program of both Alberta and British Columbia including the branch lines which would be later required as settlement progressed. This would relieve the national railways from any danger of a deficit on account of this railway construction for a generation to come.

I share with my friend the hon. member for Vancouver-Burrard (Mr. Clark) his great confidence in the British race, and his belief that they can and will make good farmers. I believe, however, that the preliminary training of these Britishers should be done at home so that the misfits would be largely eliminated there. To this end the British government might see fit to transfer some of their dole funds as bonuses to induce farmers to train these prospective migrators.

Under an arrangement of this kind, almost a million men now on the farms in the British Isles could be made available for Canada. The lure of free homesteads, in a country British to the core, would attract them in large numbers.

It is not easy to establish a settlement of this magnitude, but this is the day of big undertakings. Many difficulties will arise, but the two great races who share this great Dominion have in the past solved problems much more formidable. Peace River, with all its advantages, supplied with proper railway facilities, affords us our best opportunity for development. Have we the courage to undertake it? Where are our nation builders—the worthy successors of the Macdonalds, the Cartiers, and the Lauriers of yesterday?

An article appearing in the Financial Post as of March 2nd, indicates the probable immigration program of the government for the next few years. Hon. members will see that the "Three thousand family scheme," is to be given a new dress and is to be known as the "Pioneer land settlement scheme." What hope would there be in this revamped plan with a government that has failed to complete the movement of only three thousand families in three years under the present scheme? How long is it going to take them at this rate to bring in 20,000 families as proposed? To appreciate the feebleness of this new effort it is only necessary to note that although the British wanted to send us five hundred families this year the Canadian government was unable to take care of them, and their movement is posponed until 1929. Let us be done with camouflage and makeshift. I appeal to the government to bring in an immigration program in keeping with the needs of the country.

The countries from which we will accept immigration have been dealt with very fully by hon. members during this debate. I want to say, however, that I believe it is the inherent right of every nation to decide its own racial status. I believe it is our bounden duty to posterity and to the fathers of confederation to see that, in the melting pot from which our future Canadians will be moulded, the blood of no race is allowed to enter which might undermine or weaken the blood passed down from our forefathers. Canadians must maintain the high standard they now enjoy. Ours is the right to choose; ours is the right to barr, and we should not hesitate.

In his speech earlier in the session, the Prime Minister expressed a fear that if we prohibited Japanese immigration we might interfere with the development of our trade in the far east.

Mr. Speaker, I am supposed to be a business man, interested in trade, particularly in the orient, but I have not yet reached the stage—and I hope I never will—where I am prepared, in the interest of trade or commerce, no matter how important, to jeopardize the racial status of the Canadian people. I want to see all undesirable races absolutely barred, let the price be what it may.

Mr. M. C. SENN (Haldimand): Mr. Speaker, I am sure the house must have been very strongly impressed with the constructive speech which has just been delivered by my colleague the hon. member for Vancouver North (Mr. McRae). He speaks on the subject of immigration with some authority, because I understand that for a considerable length of time prior to the war he was actively engaged in the settlement of western lands, and in particular the settlement of the Saskatchewan valley. While thus employed the hon. gentleman conducted what was perhaps the most successful land movement that has ever occurred in the west. The Minister of Immigration and Colonization (Mr. Forke) having during his two years of office failed to evolve any progressive policy, I would commend to his favourable consideration the suggestions which have been offered by my colleague, as coming from a gentleman who is eminently qualified to speak on this matter and to speak with authority.

It would be difficult at this stage of the debate to mention any phase of the tariff proposals which has not been discussed from some angle or other. Any contribution to this discussion, therefore, must necessarily be a repetition of arguments, and of facts and figures, which have already been advanced by my colleagues on this side of the house. The remarks which I have to make, consequently, will necessarily be very brief, and I can assure you, sir, that so far as I am concerned there will be no need to invoke the forty-minute rule.

Everyone I am sure must admire the clear and concise manner in which the Minister of Finance (Mr. Robb) always delivers his budget address. Unfortunately however, his budget proposals and his method of accounting are not so worthy of commendation. If I were to try to describe those proposals I would say that they were haphazard changes made in the tariff, without any consideration as to the results upon the industries affected, and not in pursuance of any governmental policy other than that of reconciling differences of opinion and quieting dissatisfaction in the Liberal ranks.

The record of succeeding budgets which have been brought down by this administration is one of constant and irritating changes in the tariff. The worst result of these changes which are constantly being made, is the lack of confidence which is evident in business circles throughout the country. Just the other day I was talking to a gentleman who is at the head of one of the large textile industries in Canada. After conversing with him for a while he told me he thought that by careful management and some changes in their methods of operation they would be able to carry on even under the handicap which has been placed on them by the present tariff changes; but there was a real note of anxiety in his voice as he told me two or three times during the conversation that he hoped these changes would be final. If there is one thing which is needed more than anything else in business circles and in industry throughout the country it is a feeling of security, but this cannot possibly be maintained unless we have permanence and stability in our tariff schedules. No business man can lay his plans for the future with any hope of sucess if he has no guarantee that his business is not likely to be disturbed and his plans thwarted by such tariff changes as have constantly taken place under this administration.

I should like to mention for a moment a fact which is so often referred to by hon. members on this side, that the Finance minister did not take into account the guarantees which have been given to the Canadian national railways when he was reckoning our national debt. The Minister of Railways (Mr. Dunning), if I am not mistaken, when speaking the other day, argued that because the government had never been called upon to pay any of the interest charges on these guarantees they should not be included in the debt. However the preliminary report of the Canadian National Railways which was tabled recently showed very clearly that the funded debt of the system had increased this year by something like $55,000,000, while the net revenues of the company were only sufficient to pay the interest charges on the bonds held by the public. On the other hand the interest on the million and a quarter dollars which has been advanced by the government in times past to the Canadian National Railways is still being added to the obligations of the system. So long as the road is not a paying proposition it is going to be very difficult for the Finance minister, or any other member

of the government, to make the public believe that these guarantees should not be included in our national debt. They know well that if these obligations were included the debt would be very much greater than the Minister of Finance has indicated, and would be many millions more than it was when this government assumed office.

It has been very amusing to me, Mr. Speaker, to listen to hon. gentlemen opposite constantly repeating the statement that the country is prosperous. Listening to this constant repetition of the word "prosperity" one would be inclined to think that the Liberal members had become disciples of that famous man Doctor Coue, who always told his patients that they should repeat over and over the old formula, "Every day in every way I am getting better and better". Hon. gentlemen opposite may think they will lead the people to believe that Canada is prosperous, but I doubt it very much. Nevertheless by this constant repetition they may be able to induce some of their own number to believe the statement. Even a casual reading of speeches which have been delivered on the other side of the house would lead one to believe that those hon. members are not quite as confident in that respect as they would endeavour to lead the house and the country to believe.

I should like to mention very briefly one or two of the speeches which have been delivered. The hon. member who moved the address in reply to the speech from the throne (Mr. Ilsley) congratulated the government upon what he chose to call the abounding prosperity in the country, but before he had proceeded very far with his remarks he made it clear that, at least in the section of the country from which he came, prosperity was not nearly so much in evidence as some would have us believe. Again the hon. member for South Huron (Mr. McMillan) congratulated the government on the prosperous condition of Canada and in the next breath told the house that he represented a rural riding and that agriculture in that particular riding and district was not at all prosperous.

The hon. member for Southeast Grey (Miss Macphail) the other day made an excellent address in the house, but I am afraid she somewhat lessened the effect of that address by her statement that members of the Conservative opposition were a party of snobs or words to that effect. I have been in this house for some years and I am sure that the hon. member who spoke in that way has always been treated by members on this side with every courtesy, with all the courtesy which has been due to her as an hon. member. Indeed it is possible she has received a greater amount of deference than the average member on account of the fact that she is the only lady member of the house. I think therefore that her remark was not very well advised, and if she had time to think it over she would never have made it. During the course of her remarks she mentioned the fact that the hon. member for South Huron had stated that the rural districts are not in a prosperous condition and she agreed with him. I find myself this afternoon, for once at least, in agreement with those two hon. members. I cannot however agree with the remedy proposed by the hon. member for South Huron for the unsatisfactory condition of agriculture in Canada. His remedy, as I understood it, was to have freer trade relations. The constituency which I have the honour to represent lies in close proximity to one of the largest manufacturing centres in this Dominion and much of the produce of the farms in that community is taken to that city and consumed there. In the constituency which I represent we have four large creameries and one of them of which I have been a patron for quite a number of years disburses annually to its patrons, the farmers of that locality, something like a million dollars in cream cheques. The bulk of the produce of that creamery is taken to that city and other cities in the vicinity where it is sold and consumed. Not only the produce of those factories but other produce of the farms is taken to those cities where it is consumed—butter, milk, cream, eggs, poultry, apples and other fruits of all kinds, potatoes and other vegetables; and considerable quantities of the meat products which are produced on the farm are taken to that city and others for consumption.

The value of the home market cannot be over-estimated. It is the greatest asset which the farmers, particularly of the province from which I come, possess to-day. Lower duties such as were suggested by the hon. member for South Huron would inevitably mean injury to industry and consequent unemployment and a lower wage scale. That lower wage scale in the end would mean considerably less in the way of buying power on the part of the people who purchase our commodities. There is no doubt that at the present time marketing is one of the most serious problems which confront the Canadian farmer. That is proven very clearly by the fact that co-operative organizations are springing up all over the country for marketing home products, and perhaps the best example which we have of that in Canada to-day is the western wheat pool. I for one

am glad indeed that the western wheat pool has proved a success, but the very success of that enterprise forms perhaps a real danger to it and to other enterprises of a similar nature. It has been the history of co-operation throughout Canada that up to a certain point in their operations organizations of this kind have always been successful; but after they have attained some measure of success their directors possibly think they have reached the point where they can branch out and undertake other lines of operations which very often lead to disaster. We have in Ontario a form of co-operation which has been successful for many years. I refer to our farmers' mutual fire insurance companies. I believe the reason for their success has been chiefly that they have been under strict government supervision and inspection and that their powers have been clearly defined by law. I would suggest to my hon. friends from the west, who are interested in the wheat pool and other similar organizations, and to the government as well, that the time must come in the near future when the operations and powers of these organizations must be defined by statute and their books must be subject to government supervision and inspection. That would add very much to the security which they would have and people who are interested in those organizations would, as a result, have greater confidence in them.

I want just for a moment to mention something that has been so often repeated in this house that it may seem like foolishness to refer to it. In connection with the problem of marketing agricultural products we have had a real case where marketing has been interfered with by freer trade relations. I refer to the Australian treaty and the preferences which have been extended to New Zealand whereby butter is coming into this country at a nominal duty of one cent per pound, where originally the duty was considerably higher. The duty on butter coming into Canada to-day is lower than similar duties in any of the other British dominions. For years prior to the ratification of this treaty the surplus of butter exports from Canada was constantly increasing; but in the three short years which have passed by since this treaty came into effect the surplus of exports has been on the decline until to-day we find there is a surplus of imports, and the change in the past three years has been approximately 35,000,000 pounds of butter. These figures have been enlarged upon at considerable length by hon. members who have already spoken and therefore I do not intend to go any further into the matter. The great danger to the industry in my judgment is not that butter is coming into Canada from these other sister dominions but that the price of butter in this country to-day is controlled by cables which are coming from those particular countries. It really makes very little difference to us whether butter is coming into the country or not so long as our farmers have to sell their butter at prices which are being quoted to Canadian dealers by cables from Australia and New Zealand. It is a common axiom of the dairy industry that producers should receive at least ten cents a pound more in the winter months than in the summer months for their butter. It is known of course that production costs are much higher in the winter than in the summer, and it is manifestly unfair to ask our farmers to compete with farmers in New Zealand and Australia who are producing butter under summer conditions the year round. So far as this treaty is concerned, I am afraid that the farmers of Canada will not agree with the member for South Huron in his contention that we should have freer trade relations to benefit agriculture.

But, Mr. Speaker, the tariff schedules as brought down in the budget proposals in regard to the woollen industry are calculated to injure another branch of agriculture, namely, the sheep industry. The placing of yarns on the free list will mean a consequent loss to the wool growers of the Dominion. It is only during the past few years that the wool growers of Canada have been able to realize a reasonable price for wool, and this is only because the sheep industry has declined to such an extent that Canadian wool is at a premium. It is estimated that the people of Canada use about eighty million pounds of wool annually. This is calculated on a grease basis, or as the wool comes from the back of the sheep. Of this, about half is used by the woollen and knitting mills of Canada, and the remainder is imported in the form of yarn, manufactured goods, or goods that are further advanced than yarn. This means that there is a demand at the present time in Canada for approximately forty million pounds of wool, of which there is produced in Canada less than eighteen million pounds. Unfortunately, as a result of the changes proposed in the budget, many more pounds of yarn are likely to be imported, which will mean a consequent diminishing of the needs of our woollen mills in the matter of raw wool, so that the present proposal to admit certain yarns free of duty will be a real detriment to the sheep industry of Canada. This is particularly unfortunate in face of the fact that the Ontario government is taking special steps and spending

money to build up the sheep industry in Ontario and induce farmers to keep more and better sheep.

Anyone who is conversant with the woollen industry will admit that the mills in Canada are just as up to date and as well equipped as those of any other country in the world. Last year while the house was in session the woollen manufacturers' association placed an exhibit of goods produced in Canada in the Chateau Laurier. Many hon. members took advantage of the opportunity to examine these goods, and I am sure that everyone was firmly convinced that the products of our Canadian mills stand second to none in the matter of quality. Yet we find that because of the cheap production costs and low price of labour in the British Isles and in France, there are lines in which our woollen mills are unable to compete with Great Britain and France because of our higher standards of living and the higher wage scale. Our wage scale is dependent very largely upon the price of labour in the country to the south of us. From time to time many of our best woollen operators have been induced to go to the United States because the mills in that country are able and willing to pay the price.

During the past year the woollen manufacturers' association made certain representations to the tariff board. In his annual address the president of the woollen manufacturers' association stated that briefs had been presented to the tariff board, showing that of woollen and worsted cloth there is a market in Canada for about $40,000,000 worth each year, and that only one third of this market is now being supplied by Canadian mills, the remaining two-thirds of the market being supplied by workers in mills in other countries. Another brief showed that of white blankets of a total of $906,000, the Canadian production was approximately $275,000 as compared with $631,000 imported—33 per cent produced in our own Canadian mills, and 67 per cent imported. Socks and stockings of wool show a total consumption in Canada of $5,396,000, the production in Canada amounting to approximately $2,800,000, while the imports amounted to approximately $2,600,000—55 per cent produced in our own Canadian mills, and 45 per cent imported. Of yarn, of a total Canadian consumption of $6,400,000, the production in Canada amounted to $2,860,000, while the imports amounted to $3,545,000—45 per cent produced in our own Canadian mills and 55 per cent imported. In regard to knitted outerwear, while it was impossible to arrive at the exact figures owing to the way in which import and production statistics were prepared, it was clear that the importations of certain classes of knitted outerwear were very heavy indeed.

There is no reason to suppose that our mills could not produce practically all of these goods which are required to meet the needs of the Canadian people, and this in turn would not only give employment to many hundreds more of our people in mills which are now either entirely or partly idle, but would also be a boon to the sheep industry.

The British manufacturer is pretty well satisfied with the tariff changes which have been proposed in regard to the woollen industry. I have before me a periodical published by the woollen industry of Great Britain, called the Weekly Wool Chart and Private Business Report, of the week of February 23, 1928, published in Bradford, England. It contains on editorial on the tariff reductions which have been brought down by the Minister of Finance which I should like to quote. It says:

> A revision of tariffs is embodied in the new Canadian budget. Greater protection has been obtained for the Canadian manufacturing industry, not by increasing the duties on fully-manufactured goods, but by reducing the duties on yarns and grey goods. Imports of yarns for weaving from the United Kingdom (formerly charged 10 per cent) will be admitted free. Dress goods, and so forth, in the grey will be admitted at 10 per cent (against 15 per cent), which automatically increases the preference from 7½ to 12½ per cent. Dyed goods continue to pay as before, except that dyed cloths weighing under 5 ounces per square yard (lustres, linings, and so forth), are to pay 5 per cent less than the present rate (24¾ per cent), the reduction also applying to France. It will be remembered that last year the Canadian manufacturers applied for increased protection, and Mr. J. H. C. Hodgson and Mr. George H. Wood went out from Bradford to give evidence before the tariff board against the application. The educational work which they did has evidently been of good service.

That is how the British manufacturer views the changes that are being made in our tariff. The British manufacturer knows as well as we do that these changes mean an increased preference for British goods in the markets of Canada, with a consequent diminishing of the sale of our own goods.

There are several changes made in the present budget which will work out very harmfully to the woollen industry, one or two of which I would like to mention. The placing of yarns for weaving, on the free list will without doubt have the effect of very seriously injuring the spinning industry in Canada. Many mills which are to-day spinning their own yarns will have to purchase the cheaper yarns coming from the British Isles if they are to compete in our markets with foreign made goods. But there is another

danger which is perhaps not quite so apparent and which the minister cannot have taken into consideration. It is that there are certain mills in the country which are both weaving and knitting. These yarns are supposedly admitted free of duty to be used for weaving alone and great care should be exercised to see that they are not used in the knitting business in competition with other mills which are spinning their own yarns for knitting purposes. Might I suggest to the minister that if he insists upon having worsted yarns for knitting coming into the country free of duty, his intention should be carried out by means of a 99 per cent drawback when it has been clearly demonstrated that these yarns have been used for weaving purposes alone.

Another tariff item which will work a great deal of harm to certain industries in the country is the placing of a duty of 15 per cent on mercerized cotton yarns coming from the Uinted States, where formerly these yarns came in free. This will be of no advantage to either the Canadian or the British manufacturer of mercerized cotton yarns. Under this item imports must still be made from the United States because even with the additional 15 per cent duty, these yarns can be imported from the United States more cheaply than they could from the British Isles.

As an example, may I furnish a quotation on what is known as double forties of C. P. mercerized cotton yarns landed from England, duty free and quoted at 89½ cents per pound, while the same goods from the United States, after paying the 15 per cent duty, are quoted at 76 cents per pound. I am told that the larger concerns using this material will be compelled to pay anywhere from ten to twenty thousand dollars a year extra for their material, and that there will be no benefit derived by any Canadian industry.

These are some instances in which the woollen trade will be adversely affected in Canada and there are others which I hope to bring to the minister's attention when the tariff resolutions are before the committee. The placing of machinery for these factories on the free list is viewed as a farce by the companies, many of which have a large amount of machinery already standing idle.

Taking into account these few features of the present budget which I have endeavoured to present to the house, I am fully in accord with the amendment to the budget as moved by the hon. member for St. Lawrence-St. George (Mr. Cahan). I cannot believe that the budget will improve the unemployment situation in Canada or relieve the position in which agriculture finds itself, and I therefore intend to support the amendment and to vote against the budget.

Mr. L. P. BANCROFT (Selkirk): Mr. Speaker, I had not intended to take part in this debate until I heard on Monday last the speech of the hon. member for North Simcoe (Mr. Boys). In that excellent speech he dealt with the binder twine industry, but from one angle only, and because of that I feel called upon to present what might be termed the other side of the case.

He asserted that the removal of the duty on binder twine in 1898 had ruined this industry. He intimated that more binder twine had been imported each year than had been consumed in Canada. He said that, of nineteen companies manufacturing binder twine in 1908, only two are manufacturing binder twine at the present time and that the Brantford Cordage Company was being forced out of business because of imports of binder twine from Holland and Germany. It might be well at this stage to look into the history of the binder twine business in Canada. Previous to 1895 binder twine carried a tariff of 12½ per cent, in 1895 this was reduced to 10 per cent; in the budget of 1897 the tariff was wiped out entirely, becoming effective January 1, 1898. In 1893 a wealthy American from New York city came to Canada and decided that the protection, 12½ per cent, was sufficient to warrant the formation of a twine and cordage combine. There were eight twine factories in operation in Canada at that time. They were merged into one corporation and six of them were closed. This all happened under 12½ per cent protection.

Mr. CASGRAIN: And the Tories were in power.

Mr. BANCROFT: Yes. The combine immediately increased the price of twine about 50 per cent. Shortly after this the federal government purchased some of the idle machinery from one of the closed factories and began making binder twine in Kingston penitentiary. About the same time the Patrons of Industry formed the Farmers' Binder Twine Company at Brantford. From 1894 to 1900 this company never paid less than 10 per cent dividend annually and in 1901, three years after the tariff had been wiped out, they paid the enormous dividend of 250 per cent. They were able to pay this abnormal dividend on account of conditions resulting from the Spanish-American war and its effect upon the stock of raw materials on hand. This large dividend paid to farmers in all parts of Ontario gave rise to the opinion that large profits could be made from the

manufacture of binder twine. Two promoters from Montreal capitalized this temporary condition in the binder twine industry by promoting companies and selling stock for the erection of binder twine factories at Walkerton, Ontario, Chatham, Ontario, and Brandon, Manitoba. Before this idea of making easy money from the manufacture of binder twine had subsided, companies were formed and mills erected at Ayton, Peterboro and Brantford. Many of these new mills were conducted by men who new little or nothing of the business, and most of them were shortlived.

As I do not intend to take the full forty minutes allotted to me, and as I am discussing only one subject, I should be very pleased, Mr. Speaker, if you would call it six o'clock.

At six o'clock the house took recess.

After Recess

The house resumed at eight o'clock.

Mr. BANCROFT: Mr. Speaker, when the house rose at six o'clock I had started to reply to that part of the speech of the hon. member for North Simcoe dealing with the binder twine industry of Canada. I had reviewed the history of that industry from the early days and had shown that prior to 1895 the binder twine industry was protected by a tariff of 12½ per cent; from 1895 to 1898 the tariff was 10 per cent and ever since January 1, 1898, it has been on the free list. I also showed that during the period when binder twine was protected by the 12½ per cent duty a combine had been built up embracing the eight factories then in existence, and that the combine had closed six of those factories, carrying on the business in the remaining two. The hon. member placed upon Hansard a list of nineteen firms which were manufacturing binder twine in 1898 and which had been forced out of business by foreign competition. The facts are that at least six of the firms named in that list were not in existence in 1898, but were established during the boom in the binder twine industry which occurred between 1898 and 1903, just after the duty had been removed. The payment of large dividends during that period by the Farmers' Binder Twine Company created the impression that a lot of money could be made in the manufacture of binder twine; clever promoters capitalized the situation and promoted the six companies I have mentioned. It was easy to sell the stock at that time, and these factories sprung up, owned and managed by men who knew little or nothing about the business. This has happened in many lines of industry during periods of prosperity, and only those that are established on a sound basis survive the first period of depression.

At least one firm named in the hon. gentleman's list was a commercial twine and cordage company, which was not equipped for making binder twine, and did not manufacture it. Five of the firms named in the hon. gentleman's list were liquidated between 1902 and 1904, yet, strange to relate, in 1904 the Plymouth Cordage Company, the oldest cordage company in America, decided to build a branch factory in Canada in the town of Welland, making an investment there of over $1,000,00. Since that time the Plymouth Company of Welland has done a uniformly successful business in binder twine.

The hon. member stated that the Consumers' Cordage Company of Montreal had ceased the manufacture of binder twine in July, 1927. This company makes rope and cordage also, and perhaps the hon. member does not know that the same machines and the same men are used for the manufacture of rope twine, which is the first process in the manufacture of rope. Such firms change frequently from the manufacture of binder twine to the making of rope twine. To state that the Consumers' Cordage Company ceased making binder twine last July does not mean that a single machine or operator has been idle. They probably cease the manufacture of binder twine about the same time each year.

Among the plants mentioned by the hon. gentleman was the Consumers' Cordage Company at Dartmouth, Nova Scotia. This plant has undoubtedly ceased to produce binder twine. So far as the Dartmouth factory is concerned, it is easy to see that it would be at a disadvantage in making twine to be used chiefly on the western prairies and in Ontario in competition with factories better situated to supply these markets. But this factory supplies us with an illuminating sidelight on the reason for demands for increased protection. Owing to the changes which have taken place in the character of ocean shipping and the substitution of steamships for sailing vessels, the market for rope and cordage in the maritimes has been greatly curtailed. The recent closing of the Dartmouth factory followed an attempt to place import duties on certain kinds of rope, to protect the Dartmouth factory at the expense of all the consumers of rope and cordage in Canada. The factory was closed entirely on grounds of economy. Evidently the concentration of the plant of the Consumers' Cordage Company in Montreal would

enable the business to be conducted on sounder lines and at lower cost, and that was the reason for closing the Dartmouth factory. Under the persuasion of the authorities of that town, however, the factory has again been put in operation. If it should be again closed, it will not be because there is not sufficient protection for binder twine, cordage and rope, but because good management of the business demands its concentration in the port of Montreal, where is naturally one of the best markets for its products.

My hon. friend referred to the Brantford Cordage Company Limited, and inferred that this was a large Canadian company which was being ruined because the tariff on binder twine had been removed in 1898. This company was not in existence in 1898 but was organized and its factory constructed when the Farmers' Binder Twine Company of Brantford was destroyed by lightning in 1901 three years after the abolition of the duty on binder twine. This company did a steadily increasing and profitable business until 1925, when the concern was reorganized and new stock issued on the assets of the company which assets included trade marks, patent rights and goodwill, amounting to nearly $1,000,000. The company's troubles seem to have begun at that date, twenty-seven years after the abolition of the duty on binder twine.

I have here a copy of the prospectus issued by the Brantford Cordage Company at the time of the reorganization of that concern. It is dated Brantford, Ontario, March 24, 1925, and is put out under the signature of the Brantford Cordage Company, Limited. I will just read one or two brief extracts from this to show that up to that time the company had been making steady and substantial progress. This paragraph is headed "Business" and I read the following:

> The proof of the exceptional quality of Brantford twines is the growth and development of our business, without tariff protection and in open competition with the world's manufacturers of binder twine, which has necessitated factory extensions from time to time until to-day we have reached an annual capacity of 20,000 tons and are the largest manufacturers of binder twine in the British Empire.

In another paragraph headed "Property" we find this:

> The completeness and convenience of the general lay-out of our mills, together with the efficiency in every detail, has enabled the company to produce its products at the lowest minimum cost, and to successfully meet all competition and steadily increase and expand the business.

There is another paragraph headed "Earnings", which reads as follows:

> The net earnings of the company, according to the certificate of Clarkson, Gordon & Dilworth, after depreciation and federal taxes for the five years ending August 31, 1924, have averaged $269,584.33 per annum.

The balance sheet as at 31st August, 1924, shown in the prospectus, discloses assets, less trade marks, patent rights and good will, of $2,913,092.08. Against these were issued preferred shares amounting to $2,850,000. This amount, plus some minor liabilities including $400,000 on account of 80,000 common shares, no par value, shows an excess of share liability over the assets named of over $990,000 and was offset by an allowance in the assets for trade marks, patent rights and good will of $993,797.05. We have no means of knowing what portion of this amount represented trade marks, patent rights and goodwill respectively; but it can scarcely be doubted that the goodwill of the vendors of the assets to the new company was valued at nearly $1,000,000 and that the new shareholders paid the vendors, either in cash or stock, for it. This is what is frequently called "watering the stock", and it is not surprising that the new company should find it hard to pay dividends upon it.

My hon. friend read an extract from a letter signed by the Brantford Cordage Company, Limited, which was published in the press of the country early in February last. Part of this letter reads:

> The present difficult situation is entirely the result of new competition that has arisen from Holland and Germany.

In this connection let me say that considerable twine has been imported from Holland in the last two seasons, but very little from Germany. I have here a copy of a reprint from the Toronto Daily Star of April 6, 1927, less than a year ago. This article tells how the Brantford Cordage Company Limited had secured an export order for $1,000,000 worth of binder twine in Russia in competition with Holland and Germany. My point is that if a Canadian company can compete with Holland and Germany in Europe, the small quantity of Holland twine imported into Canada should not seriously affect them. It is true, Mr. Speaker, that in the last three years the importations of binder twine from Holland have increased considerably, but at the same time the imports from the United States have decreased, and the total imports have decreased each year during the last three years. The imports from Holland for the fiscal year 1925-26 were 8,382,450 pounds. For 1926-27 the imports from Holland totalled 9,598,000 pounds, and from

April 1st to September 30, 1927, being the first six months of the fiscal year 1927-28 the imports from Holland rose to 11,964,300 pounds. But, Mr. Speaker, during those three years the imports from the United States had decreased. The imports from the United States for 1925-26 amounted to 39,184,480 pounds, while for 1926-27 the imports from United States dropped to 18,061,000 pounds, and for 1927-28 they fell still further to 6,910,-200 pounds. So that during the past three years the total imports into Canada have decreased considerably each year. The Brantford Cordage Company Limited has had a splendid record. It began in a small way in 1901, and to use its own words, "has steadily increased and expanded its business and extended its factory from time to time until 1925". Since then it has claimed to be in difficulties. These difficulties are of their own making. They are trying to pay dividends on too much watered stock, and the Canadian farmer is not willing to pay for such folly.

The hon. member stated that free trade had not reduced the price of binder twine, but that as a matter of fact the price was raised and is now much higher, and he has put upon Hansard a table showing the price of binder twine beginning with the year 1913. He shows binder twine to have cost 9 cents a pound in 1913 and 14 cents in 1926. Now the whole level of prices has risen in the same period. The index number of wholesale prices in Canada, as compiled by the Dominion Bureau of Statistics, shows that prices rose generally during the whole period he covered. If we take prices in 1913 as 100, prices in 1926 are represented by the number 156, or, in other words, the purchasing power of money declined between 1913 and 1926 in the ratio of 100 to 156. Binder twine costing 14 cents a pound to-day would be of the same actual value as binder twine costing 9 cents a pound in 1913; so that the rise in price shown in the hon. gentleman's table means nothing so far as free trade in or protection of binder twine is concerned. The price of binder twine bore the same relationship to general wholesale prices in 1926 as it did in 1913, and in 1927 the price was 12 cents or two cents lower than 1926. In other words, binder twine was actually cheaper in 1927 than in 1913, having regard to the variation in the purchasing power of money in these years.

That leaves out of account the great improvement in the quality of Canadian binder twine since 1913. Any hon. member who has used a grain binder over that period will bear me out in this. This improvement in quality has been brought about through the use of a better quality of fibre, and the use of improved machinery in the factories. I have a small list of figures here which I would like to have placed on Hansard in tabulated form. The table is as follows:

Canada's Production, Imports and Exports of Binder Twine

Years	Establishments making Binder Twine	Production Binder Twine (Calendar year)	Imports into Canada (Fiscal year)	Exports from Canada (Fiscal year)			Prices Sisal Binder Twine
				Canadian	Foreign	Total	
	No.	Lb.	Lb.	Lb.	Lb.	Lb.	Cents per Lb.
1895	(a)	(a)	2,036,409	(b)	(b)	(b)	3·51
1900	(a)	(a)	8,017,688	(b)	(b)	(b)	11·10
1905	8	9,719,259	11,404,052	(b)	(b)	(b)	10·7
1910	7	18,400,842	22,161,179	(b)	(b)	(b)	7·6
1915	2	969,673	28,577,030	12,281,708	35,850	12,317,558	8·6
1920	5	40,548,845	16,304,479	28,091,500	.....	28,091,500	20·2
1921	6	37,206,502	34,755,071	18,612,400	.....	18,612,400	17·3
1922	6	31,891,713	46,758,792	3,369,300	.....	3,369,300	12·4
1923	6	43,145,520	49,990,387	7,519,900	4,300	7,524,200	11·4
1924	5	57,420,864	54,427,211	13,919,300	29,500	13,948,800	12·5
1925	6	48,224,782	26,576,587	13,383,800	100	13,383,900	14·0
1926	8	58,431,083	47,629,886	9,514,400	47,300	9,561,700	14·1
1927	.....	.....	28,281,400	13,603,300	317,000	13,920,300	12·8
1928 (April to Sept. of fiscal year 1927-1928)	.....	.....	19,428,300	14,029,900	.....	.....	.....

(a) No production statistics are available in these years.
(b) No export statistics are available in these years.

The first year for which the Bureau of Statistics had figures showing production was 1905. These figures show that production has increased about six and one-half times between 1905 and 1926, while imports have increased only two and one-half times during the same period. Exports have increased a little comparing 1926 with 1905.

A study of the trade figures and the reports issued by twine manufacturers shows that this industry has expanded and prospered under free trade. Its growth compares quite favourably with other industries operating under protection over the same period of years. No mergers have been formed. The quality of the product has improved and the farmers are being supplied with a high quality twine at a reasonable price. The companies engaged in this industry have had periods of expansion and periods of depression, similar to those experienced in other industries. Naturally the binder twine industry is directly affected by the acreage sown and the character of the season. Disinterested study of conditions affecting the binder twine industry must lead to the conclusion that it has benefited from the removal of the duty as much as any single industry, operating in a country where protection is the general rule, can benefit. Its experience supports the contentions of the advocates of a low tariff and there can be no question that the results have been of considerable advantage to the grain growers of the Dominion, so much so that the imposition of a protective duty on imports of binder twine would arouse very great resentment among the farmers of Canada.

Mr. MURRAY MacLAREN (St. John-Albert): Mr. Speaker, this afternoon the hon. member for Haldimand (Mr. Senn) discussed very effectively the Australian treaty and during the course of the debate on the budget this question has also been discussed freely by those on this side of the house. I shall therefore content myself with supporting the views which the hon. member for Haldimand so well put forward. It is quite evident that farmers and dairymen from ocean to ocean are protesting against the preference of one cent per pound on Australian and New Zealand butter. I notice in this evening's paper a report that further large consignments of butter are now on their way from New Zealand to the port of Halifax. I have been informed from my own district that butter cannot be sold by farmers at a reasonable profit in competition with New Zealand and Australian butter and I venture to think that the government will not come to parliament next session without having some modification made of the Australian treaty.

I propose to say something to-night on what is an important national question, one that greatly affects Canadian trade. It affects the communications with the motherland and the sister dominions. Three years ago I ventured to speak to the house on this subject and again to-night I take the opportunity of bringing this matter before the house and directing the serious attention of hon. members to it. I would term it: Canada in relation to the cable systems and telegraph systems. In the year 1910 there were five British-owned submarine cables on the Atlantic ocean and during that year those British submarine cable companies were acquired by United States interests, so that the position then was that there were no British Atlantic cables. As we know, Great Britain took the foremost position in the early history of ocean cables and in the manufacture of cables. As I say, Great Britain in 1910 owned five cable companies but these were absorbed, leaving none owned by Great Britain. May I draw the attention of the house to a book entitled Telegraphy, Aeronautics and War by Charles Bright, who makes this statement of conditions at that time:

> After making and laying fifteen out of the seventeen cables doing service at the bottom of the Atlantic ocean, we do not now possess control over a single one! There are thirteen cables landing on the shores of the United Kingdom and Canada, every one of which is to-day under complete American control!

In the year 1914, soon after the breaking out of war, the British government took one of the German cables, and at that time there were seventeen Atlantic cables, thirteen being American, two French and two German. Of the two German lines one was taken by the British, one end being conducted into Penzance in England and the other into the port of Halifax. The remaining German line was taken by the United States and served as a means of communication between that country and Italy. The British then had one line, the German one, and in the year 1921 the British government purchased a United States cable for the sum of £570,000. It was, and is now still more so, an old cable sixty years old. The German line, not so old, is still an old cable. In the year 1921 there were two cables under British control. At the present time there are nineteen cables on the Atlantic running between America and Europe. The Western Union has eight, the Commercial Cable Company, that is the Mackay-Bennett, has six; there is the German cable—under the Americans—I have mentioned, two French cables, and two imperial cables owned by the British government—nineteen in all. I have now stated the position of the Atlantic cables.

The house is probably more familiar with the Pacific cable which is owned jointly by Great Britain and the Dominions; two-fifths by Great Britain, and one-fifth each by Aus-

tralia, New Zealand and Canada. While apparently there have been some difficulties in the last year or two in regard to management, I believe the fact is that all the dominions have earned a handsome income and surplus from the use of that cable, something like $300,000 or more a year having come to the Dominion government.

In regard to telegraphs, there are three telegraph systems in Canada, the Canadian National, the Canadian Pacific, and the Western Union. The Canadian National, starting at Vancouver, where it has cable connections, runs across the country and ends at Moncton. The Canadian Pacific, starting at Vancouver, where it has connections, runs across the country to Nova Scotia, where it has cable connections. One difference between the two lines is that the Canadian Pacific terminates on the eastern seaboard, while the Canadian National terminates at Moncton. There is a gap of 198 miles between Moncton and Halifax, where some of the cables are. That gap is not completed by the Canadian National, but the Western Union comes in there and continues from Moncton to Halifax, picking up the communications. The Western Union is the sole telegraph system in Prince Edward Island; it also is the sole system in a portion of New Brunswick and in a portion of Nova Scotia. The Western Union is an American line; it is not Canadian. If one wishes to send a cablegram from Ottawa to London and goes to the Canadian National office, the message will be sent by the Canadian National to Moncton, where it is transferred to a foreign company, the Western Union, and transmitted over an American cable. If the message is sent by the Canadian Pacific, it proceeds from Ottawa and later passes over a considerable mileage through the state of Maine, and finally reaches Halifax, where it connects with the cable. In the ordinary course, messages sent from Ottawa going Canadian Pacific are transmitted over an American cable, and messages sent by the Canadian National are transmitted over the Western Union, and go over an American cable. If the sender thinks about it and wishes it done, both companies will send the message over British cables if the sender so specifies, but it is only on request that the cable messages are sent in that way.

Three years ago, when I had the opportunity of speaking to the house, an arrangement with the Canadian National could not be effected; that is, at that time the Canadian National could not transmit a message across the Atlantic by the imperial cable because they had no connection, and they had to use the Western Union. To that extent there has been a change since that day. Messages from London to Ottawa are sent over the imperial cable, a government-owned cable, and are then transmitted over the Canadian Pacific, although it passes through a large section of the state of Maine.

Mr. CANTLEY: I am asking this question for information; but is it not a fact that the Canadian National have a working agreement with the Western Union, as a part of which agreement they have the option of taking over the lines of the Western Union in the province of Nova Scotia at any time they desire to do so?

Mr. MacLAREN: I would have to refer that question to the government.

Mr. VENIOT: They are valuating them now in the negotiations to take them over.

Mr. MacLAREN: I did not hear what the Postmaster General (Mr. Veniot) said, but so far as I know, that arrangement has not yet been completed. I am perfectly aware that I urged three years ago that it be done, but the Minister of Railways of that time did not accept the views I was putting forward, nor did he accept my criticism of his attitude at the imperial conference.

I have stated the position of the cable companies and of the telegraph system and I have pointed out what I believe to be a highly unsatisfactory condition at the present time. The Western Union, after all, is a foreign company and should not be exercising telegraph rights in this country, as contrasted with a company under British or Canadian control; and furthermore, the system is limited so far as the Western Union is concerned. It has been stated that during the past twelve months or more negotiations have been proceeding between the government and the Western Union. I hope that those negotiations will be carried to a successful conclusion, but I have not yet heard that that has been accomplished; it has certainly not been announced to the house. It is a highly important matter, and I trust that the government will go on, under all the circumstances and acquire the Western Union. This is important from our own national standpoint. The telegraph system is one around which all possible safeguards should be thrown. From diplomatic standpoint and even from a business standpoint there should be a privacy and a safeguarding against leakage which cannot be ensured under the present circumstances.

I hope the Postmaster General assured the house that that was going through. I did not hear his answer.

Mr. VENIOT: I said that negotiations were being still carried on.

Mr. MacLAREN: That is my understanding, that negotiations have been under way for a year or more—naturally, for it is a large proposition. I believe the country will approve the action of the government in taking over the Western Union, and under no ordinary circumstances should that system continue as it is. It should be linked up with our Canadian National telegraph system across the continent, and so give us direct connection with the imperial cable and the Pacific cable.

I would also draw attention to the fact that while the participation of the Canadian government in the Pacific cable has been remunerative and successful, we have no interest in any Atlantic cable.

Mr. VENIOT: Would the hon. gentleman allow me to correct him? I know he does not wish to convey a wrong impression. During the last three years our participation in the Pacific cable has not been remunerative.

Mr. MacLAREN: But previously—

Mr. VENIOT: Yes, during the war it was remunerative.

Mr. MacLAREN: —there was something like $250,000 profit.

Mr. VENIOT: During the war years.

Mr. MacLAREN: That will help to make up the average.

Mr. VENIOT: I do not wish to interrupt my hon. friend, but I think he should have this information. During the war, profits on the Pacific cable accumulated to the amount of eleven million dollars, but this money was all spent in the construction of a new cable. Consequently Canada and the other contracting parties are still faced with the whole deficit.

Mr. MacLAREN: And they have a new cable. Surely that represents a good deal as an asset; and, as I say, there were periods when the cable was operated at a handsome profit. Now a new cable is being constructed, and in any event, whether there is a profit or not, this cable is necessary from a national standpoint.

Mr. VENIOT: Certainly; you are right there.

Mr. MacLAREN: I speak now of the Atlantic. Canada has no interest in any Atlantic cable. Look at the position Great Britain is in to-day in this respect. The pioneer country in cable service, at one time owning five cables under British interests, to-day she has but two—one captured from the Germans, and the other a sixty-year-old cable bought from one of the American companies. We hear a good deal about equality of status. If we take that stand we must accept greater responsibility than we have shouldered hitherto. Surely that is clear. I venture to express the hope that the government sometime in the near future, while claiming equality of status, will also take what I might term proportional participation with Great Britain in an Atlantic cable.

Mr. VENIOT: Would the hon. member advise that in view of the developments in the beam system of transmission?

Some hon. MEMBERS: Order.

Mr. VENIOT: I am asking for information for the benefit of the house. Would the hon. member advise the participation of Canada in an Atlantic cable in view of the developments in the beam system of radio transmission?

Mr. MacLAREN: Yes, I would.

Mr. VENIOT: That is not what they are doing in England; they are advising against any further cable commitments.

Mr. MacLAREN: After all, while radio transmission is an important adjunct to cable transmission, it is a variable system; that is, it can be jammed. We need both systems, for you cannot yet depend entirely on radio. Certainly it makes an excellent supplementary method of transmission, but those who have experience in these things declare that the cable system is absolutely dependable. Therefore in reply to the question of the Postmaster General—and it is a perfectly proper one—I do hope the government will go on and make such arrangements as will ensure our having a new up-to-date cable with proportional participation by Canada in the expense incurred.

Mr. F. W. GERSHAW (Medicine Hat): Mr. Speaker, as this debate has continued several weeks it is becoming very difficult to develop any subject which has not already been pretty thoroughly discussed. I have noticed that hon. members from all quarters of the house have expressed a wish for peace, happiness and prosperity for the people of Canada, but the methods they suggest for securing that happy condition of affairs vary very much. The hon. Minister of Justice (Mr. Lapointe) a few days ago pointed out that hon. members opposite of the Conserva-

tive party and of the Progressive group had expressed entirely divergent views as to how the varying interests of Canada could be harmonized, and it seems to me that the government occupies a central position, being pushed in one direction by our Conservative friends and in the other direction by our Progressive friends.

We have in this house representatives of the two great historic parties and as well the representatives of the Progressive and Labour groups. The Liberal party has a traditional fiscal policy, as I understand it—to maintain the lowest tariff possible. True, the government is not working in that direction as fast as some of us would like, but that, I submit, is the fiscal policy of the Liberal party. And I believe that the great majority of the people are in favour of such a tariff policy. For instance, the representatives of the Progressive and Labour groups, who have been sent here by those producers and workers who did not feel that they were being properly represented by either of the old parties,—those representatives favour a low tariff. Then we have the Conservative party, who retain their traditional fiscal policy of protection. I take that for granted after reading an editorial which appeared in the Montreal Gazette on Monday, definitely stating that the policy of the Conservative party is one of protection. True, it is noticeable by the tone of the resolutions that passed at the Winnipeg convention and by the remarks of some members of the official opposition that they are to some extent departing from the policy of Sir John A. Macdonald, a policy which he contended was admirably fitted to fully develop the Dominion of Canada as it was in his day.

Now, I am convinced that a great number of our people believe that the tariff should be kept as low as possible, for very good reasons, one of these being that, as is pretty generally conceded, the price of any article or commodity increases as the tariff thereon is raised; and the hon. member for Selkirk (Mr. Bancroft) showed conclusively this afternoon that as the tariff is reduced on any article or commodity its price decreases accordingly. It seems to me that competition from within too often is not sufficient to maintain prices at their proper level, and that we need outside competition to attain this end. Then again, Canada has great natural resources, and if our industries are to be prosperous they must be based on those natural resources. It is scarcely fair for any industry to ask that it be protected to the extent of 35 or 40 per cent, for this enhances prices and the people under present conditions should not be forced to buy the products of that industry.

[Mr. Gershaw.]

I had intended to discuss the question of immigration, but it was so thoroughly dealt with this afternoon by the hon. member for Vancouver North (Mr. McRae)—and no one is better qualified than he to speak on the question—that I do not deem it necessary to do so. I was glad to hear the applause which greeted his statement that in any policy of land settlement our own young men should be given as good an opportunity to participate in its benefits as any immigrant.

We have been told that the national revenues are buoyant, that Canada is in a good position financially, and that there is very general prosperity throughout the country; and the reason I made bold to rise to-night was to suggest some ways in which those revenues might be used to great advantage. We desire to encourage the tourist business in every possible way, because it is very profitable for the Dominion, and in the near future large expenditures will be required on highways. We shall also require to continue branch railway construction. In many of our outlying districts the people have to go many miles to a market, and there is very great need for railway facilities, especially in the western part of this country. Further branch lines have been definitely promised, and the people of those districts have tried again and again to secure their fulfilment, but they are still living in hope that something will be done at no distant date. I believe much money will need to be spent in this direction. During the war and the years immediately following the war very few public buildings were constructed, and I noticed when the hon. Minister of Public Works (Mr. Elliott) was trying to get his estimates through, several members pleaded for post offices and other public buildings in their constituencies. It seems to me that in the near future a great deal of money will have to be spent for this purpose. Then again technical education will have to be supported by grants from the federal treasury. The government in the past has done a good deal in this direction, and I am sure that many of us will be sorry that the grants are not being continued. Another source of expenditure which confronts us is in aid of the various provincial governments. Many of them to-day are having great difficulty in balancing their budgets. The government of the province of Alberta has had to report a deficit in spite of pretty careful management.

An hon. member remarked the other day that Canada suffered a great deal from the war, and that around our tables there are at least fifty thousand vacant chairs. But besides those who made the supreme sacrifce we

see on our streets many returned men who still bear the scars of war service, and we know that many of them are suffering now from diseases attributable to their service overseas. The stress, the strain and the anxiety of those days is now beginning to affect the health of many of those who were fairly sound at the conclusion of hostilities. It is quite clear that more money will have to be spent for pensions. I have been told by a reliable authority that during the month of February just passed eleven hundred new claims for pensions were filed, 96 per cent being from men who had never before taken that step. Canada went wholeheartedly into the war, and took her full share of responsibility. No one regrets that, and surely no one is unwilling to do his or her share in recompensing those for the personal sacrifices which they made overseas.

No one will challenge the assertion that those best able to pay should bear a greater share of taxation, and at the present time I do not think any of us would object to paying the present rate of income taxation. In view of the great need of money to meet the expenditures to which I have drawn attention I think taxation should be reduced very gradually. It seems to me that as taxation can be reduced the customs tariff should first receive attention, then the sales tax, and last and least of all the income tax. It is hardly fair for us to compare our income tax with that of the United States. There the government obtain about 65 per cent of their revenue from income tax, while we obtain only 14 per cent. Besides, Canada was in the war from the very beginning until the armistice.

Now, as to the subamendment proposed by hon. members directly opposite, it contains much that appeals to me. The fact that the income tax has been reduced certainly is a matter for regret. The fact that the sales tax has not been eliminated is not quite so clearly a matter for regret, for I believe it would be a hardship to remove this tax all at once. It would deprive the treasury of a great deal of revenue, and it would be unfair to many retail merchants who have goods on their shelves on which they have paid the sales tax, and they would have to sell these in competition with goods purchased after the removal of the sales tax. It is true some reduction has been made in the customs tariff but, as I said before, I should like to see a greater reduction in that direction. There is much that appeals to me in the subamendment, yet I should not like to vote for it if it meant turning the government out of office.

Mr. GARLAND (Bow River): It will not turn them out; you can safely vote for it.

Mr. GERSHAW: Then much less would I be inclined to vote for it, if it means nothing. The government has a policy in which I believe, and I am fully persuaded that the country have full confidence in every member of the government.

Mr. G. T. MacNUTT (Colchester): Mr. Speaker, before proceeding to discuss the subject now before the house I desire on behalf of the hon. member for Cumberland (Mr. Smith) to read a letter which he had not finished on Wednesday last when his time expired. This letter is from the Oxford Manufacturing Company of the town of Oxford in the county of Cumberland, and is as follows:

We were stunned to read the portion of the Robb budget dealing with the textile industry. We were suspicious that the Tariff Advisory Board was but a gesture, and it has so worked out. The agricultural interests of this country were entitled to have counsel before this board, but there is no good cause why the Bradford Chamber of Commerce, representing the woollen manufacturers of England, should have anything to say as to the regulation of tariff matters of this country. From 1878 to 1897 this industry was developed to great proportions, but the demise since then has been gradual under the bane of constantly decreasing protection. The application of the manufacturers before the Tariff Advisory Board was very complete, and in addition to this a brief was presented to Hon. Mr. Robb by the Canadian Woollen and Knit Goods Manufacturers' Association, reference No. 42, touching on the tariff and conditions in this and other countries for more than one-half a century back. It should be only necessary to show that in this country we make only 30 per cent of the woollens used, but evidently the discrimination against this industry must go on. It is impossible to believe that the Tariff Advisory Board, if unfettered, could otherwise than recommend some measure of help for the manufacturers of woollen cloths. Instead of protecting the employees of this industry against foreign labour, Mr. Robb has wiped away the duty on weaving yarns, which means, but for the small number of workers employed in the weaving and finishing of the cloth, this commodity can be brought in now absolutely free. We doubt very much if the minister of the department realized this. In any case, the blow has been struck, and the end is not far away for the average woollen manufacturer. Not in twenty years have the changes in the tariff endangered the life of the woollen industry as this one.

You will note that in the case of 40's and finer yarns a small duty has been added. This is no help, of course, as only the worsted mills spin this fine. In the medium size yarns which are commonly made here the duty has been cut. We need to have our case placed before the government through a royal commission. The manufacturers should combine together and elect one man to fix prices, wages and other conditions and to see that these are adhered to.

Yours very truly,
The Oxford Manufacturing Company,
Limited.

I can quite understand, Mr. Speaker, why the hon. member for Cumberland was anxious to place this letter before the house and the country, representing as he does a constituency which has been struck harder than perhaps any other portion of the province of Nova Scotia. I am sure that as a representative of that county he does not wish to see any more smokeless chimneys left standing as monuments to the tariff tinkering of the present government.

In looking at the budget in general, as it affects the whole country, I think we should congratulate ourselves that as it has been presented it is not very revolutionary. The general public attitude seems to be that it will neither kill nor cure anybody or anything. Being a canny Scot, the Minister of Finance (Mr. Robb) has developed the habit of playing safe, but on this occasion, with so many widely divergent views to meet, his task has not been one of sun clear simplicity. He had to prepare a budget the chief object of which was to glorify the King government, and for this purpose there had to be more shadow than light in his financial statement. The arts of concealment and manipulation, the drawbacks and shifts made to get around awkward facts, make this tissue of tricks a very shallow performance. With a Barnum like belief in the general gullibility of mankind, the minister has endeavoured to ride two horses and serve two masters, and of course he will come to the inevitable fall. Someone said long ago that you can fool all the people some of the time and some of the people all the time, but you cannot fool all the people all the time, and I think that is a very true saying at this time in our history.

We regret to observe that the minister is beginning to show signs of the strain of his office, in endeavouring to reconcile the many conflicting elements which surround him. Some of these hon. members want a low tariff, some want a high tariff and some want no tariff at all. On this side of the house we are very fond of the Finance minister; we like his geniality, and we very much regret to learn that he is desirous of relinquishing his portfolio. May I make the prediction that if the minister can retain his portfolio for one or two years longer the people of this country will probably give him a much needed holiday.

I read a letter concerning the textile industry in Nova Scotia, and I think the changes in the textile schedules are the most extensive and drastic contained in the present budget. The whittling and nibbling at the steel and coal schedules have been so ably dealt with by the hon. member for Pictou (Mr. Cantley) and many other hon. members that at this time I will not attempt to make any extended reference to them, except to remind the Prime Minister once again that we in the maritime provinces accepted his pledge in good faith when he stated that the assistance recommended by the Duncan commission would be given, or at least dealt with, during the present session. It is a very disappointing situation which we face to-night. A few weeks ago the Postmaster General (Mr. Veniot) journeyed down to the city of St. John and made an announcement which is reported as follows in the press:

> The government had implemented all the recommendations of the Duncan report except two, the Valley railway project and the bounty to Sydney steel plant. The two matters were, however, receiving the serious consideration of the government, and with in a few weeks the policy would be divulged, which he thought would make every maritimer feel proud.

The Minister of National Defence (Mr. Ralston) speaking last year in the city of Sydney and elsewhere, boasted that the government had fulfilled the recommendations of the Duncan commission one hundred per cent. The utterances of these two ministers remind me of the practice which exists at present in our northern country where for a good many months of the year transportation has to be carried on with dog teams. The owners of those teams in that northern country, I am told, always have one or two loose dogs, which are trained to go out unharnessed in advance and bark in order that their barking and their activity should encourage the team doing the hauling. The barking of the two ministers referred to were given, doubtless, for the purpose of encouraging the government to do what they were pledged to carry out but which pledges I am sorry to say have not been fulfilled.

I feel disappointed that the Minister of National Defence, speaking from his place in this house a few days ago, should have stated that the government would give serious consideration to granting the assistance to the steel industry of Nova Scotia which the Duncan commission had recommended whenever the following conditions would be met:

First, there must be unity between the coal and steel companies.

Second, there must be a shrinkage of the capital so that the industry will have an opportunity of earning dividends on some reasonable investment.

Third, the unwieldly organization should be simplified. It now consists of some fourteen companies.

Fourth, there ought to be co-operation between the provincial and municipal authorities in the work of building up this great industry. With the litigation ended and these conditions met, the way will be open for serious con-

sideration by the federal government of the presentation of the real and legitimate needs of the industry.

That, Mr. Speaker, was the most disappointing announcement I have heard since coming to this house three sessions ago. A year ago among the maritime members there was a diversity of opinion regarding the action we should take at that time, and some of us dissociated ourselves from the ideas that others had expressed in that respect. To-night, after the recent statement of the Minister of National Defence, I must say that the majority of us who urged giving the government more time, in other words, to hold out the olive branch and afford the government further opportunity to deal with this question, were wrong, and those who opposed that course were right. Let me say that down in the province of Nova Scotia we all admire the Minister of National Defence as a brilliant lawyer, we admire him as a gallant soldier, but after his recent announcement we cannot admire him as a statesman or a politician. I believe that had the Minister of National Defence and the Postmaster General said to the government in regard to these great basic industries—which in my judgment means more to the people of Nova Scotia than all the other industries dealt with in the recommendations of the Duncan commission—that they would pack their trunks and go home, we would have had before us to-night legislation which would have given that industry the same fighting chance as other steel industries in Canada enjoy. I believe that the assistance which the Duncan commission recommended should be given that industry as it is the only assistance that would place it on a footing with other steel industries in Canada.

Mr. RALSTON: Will my hon. friend permit a question? Is he aware that the boards of trade and all those who made representations in connection with the Duncan commission's report stressed, as the most important part of that report, the lowering of the local freight rates?

Mr. CANTLEY: That is only one portion of the recommendation.

Mr. MacNUTT: The question of freight rates is a separate question altogether.

Mr. PARENT: That is a case where ignorance is bliss.

Mr. MacNUTT: I have here a resolution passed a few weeks ago by the board of trade of the town of Truro in the county which I have the honour to represent.

Mr. RALSTON: Was not the lowering of the local freight rates what was emphasized by boards of trade all over the provinces, who took the ground: If you can only get that it is the biggest thing of the lot?

Mr. MacNUTT: May I read the resolution to which I have referred—as I do not get the minister's interjection:

Whereas in the year 1926, Canada produced 16,457,484 tons of coal and imported 18,056,139 tons, for which importation over $100,000,000 was paid;

And whereas in the year 1926 the steel plants of Canada produced 649,390 tons of iron and steel products (less than one-half their capacity output) while in the same year 922,482 tons of foreign iron and steel were imported into Canada for which some $50,000,000 was paid;

And whereas the Duncan commission on maritime claims recognized the coal and steel industries as important national assets and recommended certain measures necessary to help establish these industries;

Therefore resolved that the parliament of Canada should adopt a national fuel steel policy which recognizes Canada's need of coal and steel and Canada's ability to fill that need, the aim of which policy being to produce in Canada the coal and steel consumed in Canada so far as that is at present possible and to take the necessary steps to secure expansion of these industries so that there may be ultimate and complete fulfilment of this national policy;

And further resolved that the recommendations of the Duncan commission on behalf of these industries should be immediately implemented.

That is all I wish to say at the present time regarding the existing situation as to the non-fulfilment of the recommendations of the Duncan commission in reference to steel. May I also refer briefly to another matter to which previous speakers have made very little reference? The Duncan commission advises the apointment of a minister or a deputy minister of fisheries, but I have heard no reference whatever by the government in regard to this appointment. It cannot be that the government lack men on that side of the house who are practical fishermen. Possibly the hon. member for Antigonish-Guysborough (Mr. Duff) has more knowledge of the fish business than any other hon. gentleman sitting on that side of the house. I remember a few short years ago that the hon. member for Antigonish-Guysborough accompanied the Premier on a speaking tour throughout Canada to the Pacific coast, and I am sure that if at that time the hon. member was of such calibre that he could occupy a position on the platforms of this country with the Prime Minister, he should be capable of filling the position of deputy minister or minister of fisheries. The people

of the maritime provinces are looking forward to the appointment of someone to fill this position. They believe that will solve many of their difficulties and, as before stated, I cannot think that it is for any lack of suitable members from the maritime provinces on that side of the house that the position has not been filled. May I suggest that before many weeks pass the position which I have indicated, that of a deputy minister or a minister of fisheries, should be filled?

I should like for a moment to refer to that portion of the amendment moved by the hon. member for St. Lawrence-St. George (Mr. Cahan), which transcends all other questions in the constituency which I have the honour to represent, as a matter of fact, in the whole province of Nova Scotia. I refer to the government having made no provision in the budget for the preservation of our domestic markets for Canadian farm and dairy products, nor any reference to legislation for the effective development of the natural resources of this country. Let me first point out that dairy farming in Nova Scotia, and particularly in the constituency which I have the honour to represent, is carried on most extensively, and notwithstanding the fact that hundreds of petitions and resolutions from all Canada have been forwarded to the government praying that the duty be increased on importations of butter from Australia and New Zealand, the government thus far have turned a deaf ear. The hon. member for Queens (Mr. Sinclair)—and I regret he is not in his seat to-night—who followed me a few weeks ago in the debate on the address, contended that prices of dairy butter had not been decreased by the importations of butter from Australia and New Zealand. In this view the hon. member for Queens is entirely at variance with the dairymen in his province and, indeed, throughout Canada. I have before me a most interesting address delivered a few days ago by Mr. J. A. Macdonald, of Charlottetown, dairy superintendent for Prince Edward Island. I think it was the hon. member for Kings (Mr. Macdonald) who referred to this matter in his speech a few weeks ago. The address is such an admirable one that I should like to see it printed and sent out to the people of this country. Mr. Macdonald, who is in the employ of the Liberal government of Prince Edward Island, closed that interesting address in the following words:

> At the present time our markets have received quite a set-back, owing to so much New Zealand butter being dumped into Canada. Up to November first, 100,000 boxes of New Zealand butter was exported to Canada, and one boat in November delivered 34,000 boxes in Halifax.
>
> New Zealand and Australia are producing, under summer conditions, and are bonused to the extent of six cents a pound. So you see why we cannot compete with that trade, and make a profit with our type of cow.

That is a statement by the dairy superintendent of Prince Edward Island.

Mr. PARENT: Where did the hon. gentleman get his statistics?

Mr. MacNUTT: I can furnish the hon. gentleman with a full copy of this speech if he will apply to me after the house adjourns.

Mr. PARENT: I do not want the hon. gentleman's speech. I should like to find out whether the statistics he is producing are correct or not.

Mr. MacNUTT: If the hon. member will contain himself a little longer I will give him some statistics from the national dairymen's association if he doubts this. Mr. Macdonald filling the position he does in the service of the government of Prince Edward Island, a position which places him in constant touch with the dairymen of that province, I will leave it to the house and to the country to decide which judgment would be most reliable, that of the dairy superintendent of Prince Edward Island, or that of the hon. member for Queens. How can that hon. gentleman honestly urge a policy so diametrically opposed to the interests of his constituents and of Canada? My hon. friend—and I regret his absence to-night—is known in that portion of the province as "Honest John".

Mr. CANTLEY: Formerly known.

Mr. MacNUTT: I may say, formerly known. Of course this was before he went into politics.

Mr. CASGRAIN: He is still called Honest John.

Mr. CANTLEY: No, "Simple John" now.

Mr. CASGRAIN: No, "Honest John."

Mr. MacNUTT: I should like to have placed on Hansard some statistics which were given in answer to some questions by the hon. member for South Oxford (Mr. Cayley) dealing with importations of butter; but I find that Hansard has already been loaded up with a great deal of the same statistics and I will let that feature pass for the present.

A few weeks ago in this house I stated that in the constituency which I represent 1,400 of our best milch cows had been shipped away, mostly to the United States. I had some doubt whether my figures were correct, so I

wired to one of the leading dairymen in my county, and the day after I made that speech I received the following reply:

Over three thousand shipped out of province Colchester alone shipped two thousand.

(Signed) C. P. BLANCHARD.

That was some weeks ago. Mr. Blanchard, I may say, is one of our leading Nova Scotia dairymen, a good friend of mine, and a good friend of the Liberal government. I also have a letter here from him informing me that the Borden Milk Company in the town of Truro have announced that if the farmers continue to dispose of their herds, the company, being unable to secure the quantity of milk that they require in their factory, will be forced out of business. The Borden Milk Factory, I may add, is the oldest condensing plant on the American continent—not in Canada alone, but on the continent of America—and I say that if such an old-established plant is driven out of the country because the farmers of the district are unable to make a profit from their herds, due to the importation of New Zealand butter, it will be another tragic addition to the already large number of silent factories and smokeless chimneys.

The hon. member for Queens (Mr. Sinclair), speaking in the debate, said that the reason the Americans were buying cows in Nova Scotia was because they could buy them cheaper. I confess they can buy them cheaper, but why is that so? It is simply because the farmers are going out of the dairy business, and their cows are being sent to the United States, where the farmers are protected to the extent of 12 cents a pound on their butter, 20 cents on a wine gallon of cream, and 2½ cents on a wine gallon of milk; and there is a bill before congress to-day proposing to increase the duty from 12 to 16 cents a pound on butter, and on cream not over 45 per cent butter fat from 20 cents, which is the present duty to 30 cents a wine gallon, and from 2½ cents, the present duty, to 7½ cents per wine gallon on milk. That is why our cows are going to the United States.

I promised an hon. gentleman who interjected a remark a while ago to give him certain figures, which I will now do. At the ninth annual meeting of the national dairy council of Canada, held in Toronto on November 21, 1922, the council voted to ask the government to terminate the Australian treaty. Only three days ago a delegation of the National Dairymen's Association of Canada, which has a membership of 250,000 and is representative of all the dairying interests in this country, waited on the government at Ottawa, and I had the pleasure of meeting the president of that association and discussing this question with him. Incorporated in the memorandum which they presented were resolutions from every dairymen's association from Nova Scotia to British Columbia, all referring to the great injury that was being done the dairying industry of Canada by the large amount of Australian and New Zealand butter which has entered Canada since September last. It was shown that at the port of Vancouver, 386,340 pounds of Australian and 6,738,000 pounds of New Zealand butter, and at Halifax 5,704,440 pounds of New Zealand butter, had arrived in this country, making a total importation of nearly 13,000,000 pounds. In addition to that, it is expected that a boat load will arrive at either port every two weeks until the end of March, which means that Canada will receive more than 15,000,000 pounds of Australian and New Zealand butter in this session alone. It was also shown that this had the effect of lowering the price of butter fat to producers from 3 to 5 cents a pound.

The memorandum also estimated that the 15,000,000 pounds of imported butter, had it been produced in Canada, at 200 pounds per cow per year, would require 75,000 cows, averaging 10 cows per farm, and would require 7,500 farms giving employment to as many farmers and their families. Canada has the lowest tariff on butter and cheese of any dominion in the British Empire, it being one cent per pound as against 12 cents per pound in Australia.

I desired to speak on the question of the natural resources of this country, but time will not permit, and I shall therefore discuss it at a later date.

Mr. E. A. PECK (Peterborough): Mr. Speaker, may I venture to tender to you my congratulations upon the change made in the rules of debate, chiefly, I believe, upon your recommendation. There has been some criticism of the new rules, but I believe they have been of considerable advantage. They have had two results: One is the elimination of the long and tedious speeches to which we were accustomed to listen, and the other is the advantage, if it is an advantage, of introducing into the debate the newer and younger members.

I wish to address a few remarks to the hon. Minister of Immigration and Colonization (Mr. Forke), who I am sorry is not in his seat at the moment, but perhaps I may venture to address him through Hansard. I want to appeal to him, as other hon. members

have done, to reverse his decision with regard to the McConachie child. As the matter now stands, unless the minister changes his decision, the result will be that husband and wife are separated, and the children do not get the advantage of the mother's help and comfort at an age when they so much need her care. The only reason why these people are compelled to be separated is because of the fact that the youngest child, a mere infant, is said to be weak-minded. If this is so, is there any harm in allowing that child to enter Canada when we get the advantage of receiving immigrants whom we need to the extent of a man, his wife, and four other children? There are weak-minded people in this country at the present time, and we are not suffering a great deal; and it will not hurt very much if another weak-minded person is allowed to come in. The minister's reason for his decision, as stated in the house, is that he is tied by regulation, but the Immigration Act is the only legislation controlling the situation, and section 4, which has already been quoted in the house, reads:

> The minister may issue a written permit authorizing any person to enter Canada or, having entered or landed in Canada, to remain therein without being subject to the provisions of this act.

The act is clear; surely there is nothing in it to prevent the minister from issuing that permit if he sees fit.

Mr. KING (Kootenay): That question came up a day or two ago and it was suggested that it be referred to the Department of Justice for a ruling. I am informed that the department has given its ruling, maintaining that section 18 is the controlling provision; and under that section the minister is not permitted to exercise discretion.

Mr. PECK: I should be very glad to see that decision. At any rate, the act seems to me to be clear enough. One would think that any lawyer or layman would infer, when an act says something, that it means what it says. It is suggested, however, that the matter is also affected by a regulation, but the regulation could scarcely be of greater force than the act itself. But even if there is a regulation that can very readily be overcome, because it must be confirmed by order in council and an order in council could be obtained changing the regulation to meet this particular case. This case is one that has excited a good deal of interest, and as the matter now stands it is a reflection upon the Dominion if these people are to remain separated. Some effort should be made to reverse the decision, and I submit that the minister should make it possible for these people to be brought together again.

I want to refer now to the question of population, and also unemployment—two matters which are closely related. There is no doubt that the country stands in need of population; everyone agrees with that. It has been stated by many leading citizens that what is needed for the development of the Dominion is an addition to population. The railway officials are strongly of that view; Sir Henry Thornton has referred to the matter several times in public addresses. Here we have two railways, efficiently managed, excellently equipped, running on time and giving good service, the officials all endeavouring to do what they can to promote the interests of their respective companies. Yet we find the Canadian National actually unable to meet its financial engagements for lack, as Sir Henry Thornton has said, of a larger population to provide increased freight and passenger traffic, which would enable him to put the railway on a better footing. Along the same line we hear from the president of the Canadian Pacific Railway Company.

Not only is our population stationary, but in the past few years a great many people have moved to the United States. That is a fact which is uncontradicted; indeed it is borne out by the government statistics. The matter is therefore one deserving the careful consideration of the government. Why should so many people in this rich country find it necessary to move to another land to make a living? It is said that we are unpatriotic in pointing out these facts. It seems to me that we should be unpatriotic if we did not point them out, the facts being as they are, with a view to obtaining, if possible, some solution for the problem which is presented to us.

The people of Canada are very favourably treated in having had assigned to them such a substantial portion of the earth's surface for management and development. Canada is a country of which we are all proud, a country embracing the northern half of the American continent, bounded by the Atlantic and the Pacific. Yet with all its wealth and untold resources, its large timber limits, its arable lands and its minerals, we seen to be at a standstill and cannot attract the population we have a right to expect. Those who have left Canada for the United States have done so for what they considered good reasons; and the foremost reason was that they were unable to find employment at home. The crying need of this country is

an opportunity for people seeking employment to obtain suitable work whereby to earn enough to maintain themselves and their families. The labour problem is a most important one for the country to cope with. And in so many respects this government has failed to give to the labourers, to those seeking employment, the protection they should have.

Let me point out how in three substantial respects this government has failed to deal with the question of labour, and failed thereby to maintain in the country the population which we should have. In the first place, Canada fails to manufacture for its own people, to the extent that it should, the natural supplies which are needed. Secondly, we allow the removal from the country, in raw or only slightly manufactured form, of the natural resources of the Dominion. And we fail to encourage the manufacture of our raw material for our own use. Let me illustrate what I mean when I say that we fail to manufacture in this country, for its own use, the natural supplies which the country needs. We imported for consumption last year over $500,000,000 of manufactured goods, a large portion of which should have been manufactured in Canada. We have been discussing the woollen industry at some length, and the claim made by those engaged in that industry for protection. Apparently the protection which existed before the proposed change in the tariff was not sufficient to conserve the woollen industry to the manufacturers of Canada, for we imported last year in woollen goods, not including raw wool, products to the value of $43,000,000. Of iron and its products our imports totalled $248,000,000. That includes automobiles and parts, $65,000,000; machinery $46,000,000; farm implements $26,000,000; engines and boilers $16,000,000. We also imported electrical apparatus to the extent of $18,000,000. All these goods, or at any rate a very large proportion of them, could have been manufactured in Canada, and as a matter of fact they would be manufactured here if the government would only give to the industries engaged in their production reasonably sufficient protection. These goods to which I have referred amount in all to $300,000,000. If only half of that amount had been manufactured in this country, estimating at 50 per cent the wages which would enter into their production, there would have been expended in Canada in employment and wages $75,000,000.

Even the farmers of Canada are not protected as they should be. One would have thought that this country was the last word in agricultural production; yet we find that under all the trade treaties, which apparently will not prove satisfactory, we imported last year, of the three items, eggs, meat and butter, $9,500,000 worth. Tobacco has been discussed in this debate; and of tobacco, unmanufactured, we imported $7,000,000. Of fresh fruits we imported $24,000,000. Of course many fruits included in these exports we do not grow in Canada; I have been unable, therefore, to make the necessary classification. At any rate, the imports of fruits of the varieties produced here form a substantial part of this amount, and certainly we could produce them in Canada.

Now I come to the question of exports. We export far too much of our raw material, material which should be worked up and manufactured in this country. Here again Canada has lost considerably by its failure to provide opportunities for labour in the manufacture of these goods. I notice that our exports of grain products amounted to $447,000,000; while metals amounted to $154,000,000; wood, unmanufactured, $101,000,000; and paper, $129,000,000, making a total export in these four classes of $831,000,000. The paper represents resources which are certainly not inexhaustible, and unmanufactured wood is in the same category. This exportation of wood and paper means a drain on our natural resources, which we shall not be able to replace within a limited time. The metals of course have gone, but we have so many opportunities of investigating the possibilities of our hidden metals in Canada that possibly we shall not feel this very seriously. Of grain, our main export was wheat, $339,000,000, and wheat flour, $60,000,000, making a total of $399,000,000. Only 8 per cent represents the manufactured article; the rest is exported in the raw condition to other countries where the work of preparing it for use provides employment for foreign labour.

Under the third head, there are industries which should be developed in this country. If this were done a large amount of employment would be provided for labour here. The coal industry is one that should be dealt with; in fact, it must be dealt with. It has been much discussed but apparently no solution for the question of moving coal from the eastern and western sections of the country to Ontario and Quebec has yet been proposed. It is, however, only a question of time before this will have to be done. It seems most unfortunate, however, that in the meantime we should be purchasing in another country the coal which we need to maintain our industries and supply our homes. We

imported last year from the United States $53,000,000 worth of coal, which under proper management could have been taken from our own mines and applied to our own industry.

I shall discuss only one of the many changes which are proposed in the tariff resolutions before the house, and I refer to this matter only because it affects an industry in my own city. I have reference to the weaving of yarn. We had some assurance last year from the government, represented at the time by the Minister of Railways (Mr. Dunning), that no attempt would be made to interfere with existing industry. The statement which was presented to the house had been carefully prepared and it was read by the Minister of Railways representing, as I say, the government. I presume it was intended to appease the Liberal-Progressive element in the house. This is what the Minister of Railways said:

> We shall move forward cautiously with the aid of knowledge of the facts secured by the tariff advisory board toward the goal of making our tariff structure bear as lightly as possible on production, industry and the people generally—

That is something of which probably all of us could approve; it is a vague, general statement. But this is more specific:

> —having always in view the greater prosperity of all the legitimate industries of Canada.

With the present proposed tariff changes before us, can it be said that these changes are made with a view to the greater prosperity of all the legitimate industries of Canada?

There has been a good deal of discussion during this debate in connection with the woollen industry, and the proposed reductions have met with a very general opposition. I refer particularly to the weaving yarns, because that is an industry which exists in my own town, employing some 180 people. There are other workers engaged in that line in my city, but they are employed in the carpet and rug business, which I understand is not affected by this tariff. What does this mean? Certainly it means that this industry in Canada will have to face increased competition, which will be a hardship on the manufacturer but will result in a greater hardship on those engaged in the shops carrying on that business. The working man is the one affected most by these tariff reductions which interfere with that industry. To the manufacturer it means a reduction in salary, a reduction in dividends and perhaps even the passing of a dividend, which is a very serious matter to him. To the worker, however, it means a reduction of wages or a lay-off from work, because he is the primary sufferer from anything which interferes with the production of the article in the manufacture of which he is engaged, and it is the workmen for whom I feel the greatest regret. I know many of them in Peterborough and I know how they have been affected already by the conditions obtaining in the woollen industry. They have not been working full time as it is, and this is simply going to add an additional hardship to those under which they have been labouring for some time past. I trust that the matter will receive further consideration before these tariff changes are adopted by the house; I believe something should be done to help those people to whom I refer.

I can only say in conclusion, Mr. Speaker, that I intend to support the amendment proposed by the hon. member for St. Lawrence-St. George (Mr. Cahan).

On motion of Mr. Laflamme the debate was adjourned.

On motion of Mr. Robb the house adjourned at 10.05 p.m.

Monday, March 12, 1928

The house met at three o'clock.

QUESTIONS

(Questions answered orally are indicated with an asterisk.)

CANADIAN NATIONAL RAILWAYS—DETROIT RIVER FRONTAGE LEASE

Mr. ROBINSON:

1. Has a lease been granted Mr. Walford, or any other party, of river front property in Walkerville or Windsor, by Canadian National Railways?
2. If so, what is the date of the lease?
3. What is the term of the lease?
4. What is the rent payable per annum?
5. For what purpose was the lease granted?

Mr. DUNNING:

1. Yes.
2. November 1, 1927.
3. Twenty years, with option of renewal for another period of twenty years.
4. $100 plus taxes.
5. Erection of warehouse.

ALBERTA COAL LEASES—RENTAL ARREARS

Mr. GARLAND (Bow River):

1. What is the total amount of arrears of rental on coal leases in the province of Alberta?
2. What is the total amount of arrears of rental on the undeveloped coal leases in the province of Alberta?

Mr. STEWART (Edmonton):

1. $187,886.93.

2. $160,512.95.

HORSE BREEDERS' CLUBS

Mr. COOTE:

1. How many horse breeders' clubs were in operation under the scheme for federal assistance to horse breeding during the fiscal year 1926-1927?

2. How many stallions of each breed were hired under this scheme?

3. In how many cases in each breed were the fees reduced by the department by changing contracts between stallion owners and clubs?

4. In how many cases were the fees increased by the department between stallion owners and clubs?

5. What amount was actually paid to clubs?

6. What was the total cost of administration of this scheme?

7. What was the total cost of inspection of horses under this scheme?

8. How many inspectors were employed and what was the total remuneration?

9. Are any inspectors employed who are in the business of buying, selling or hiring stallions under this scheme?

10. Is it necessary to inspect the same stallions year after year as is now being done?

Mr. MOTHERWELL:

1. 159.

2. Clydesdales 95, Percherons 44, Belgians 22, French Canadian 1.

3. Clydesdale 24, Percheron 8, Belgian 5.

4. None.

5. $45,909.44.

6. $4,462.27.

7. $4,462.27.

8. Three Inspectors. Remuneration at rate of $10 per day for incidental services totalled $3,010.

9. No stallions hired by inspectors. Impossible to give information regarding inspector's private business.

10. Stallions only inspected when necessary. They are not all inspected every year.

FLIN FLON MINE—TOWNSITE

Mr. CAMPBELL:

1. Has the government been approached on the question of providing a townsite at the Flin Flon mine in Manitoba?

2. Is it the purpose of the government to place this townsite on the market so that building lots may be available for sale or lease to private individuals, or, is it the intention to give the mining company a monopoly of this townsite?

Mr. STEWART (Edmonton):

1. Yes.

2. The government has not yet decided what action will be taken.

AUSTRALIAN CHEESE—IMPORTATIONS

Mr. FAFARD:

What quantity of cheese was imported from Australia since the Australian treaty is in force?

Mr. MALCOLM: 3,420 pounds.

BUTTER AND CREAM—EXPORTS 1927

Mr. FAFARD:

1. What quantity of butter and cream was exported to the United States during the year 1927?

2. What quantity of butter was exported to England during the year 1927?

3. What quantity of butter was exported to other countries during the same year?

Mr. MALCOLM:

1. Butter—Canadian produce, 330,700 pounds; Foreign produce, 800 pounds; Cream—Canadian produce, 4,044,073 gallons; Foreign produce, nil.

2. Butter (to United Kingdom)—Canadian produce, 48,700 pounds; foreign produce, nil.

3. Butter—Canadian produce, 2,316,600 pounds; foreign produce, 1,300 pounds.

POSTAL HELPERS—MONTREAL APPOINTMENTS

Mr. EDWARDS (Frontenac-Addington):

1. How many persons were appointed as postal helpers in Montreal during the months of May and June, 1925?

2. Were applications for such positions invited by the Civil Service Commission?

3. How many applications were received?

4. Were appointments made on the recommendation of the Civil Service Commission?

5. How many applications were received from men who had seen active service overseas, and how many of such men were appointed?

6. Was an application received from Mr. Waverley Talbot who had been in active service overseas and who lost a brother in the war?

7. Was Waverley Talbot appointed to a position as postal helper in Montreal, and if not, why?

Mr. VENIOT:

1. None.

2, 3, 4, 5. See answer to No. 1.

6. No.

7. See answer to No. 6.

PUBLIC WORKS DREDGES—OFFICERS LEAVE

Mr. McQUARRIE:

1. Are officers of the dredges and snagboats of the Public Works Department operating out of the port of New Westminster, allowed two weeks' annual leave with pay?

2. Are men employed on same boats allowed annual leave with pay?

3. If officers are, and men are not allowed leave, what is the reason for the discrimination?

4. On what dates during the fiscal years 1926-27 and 1927-28 did the department grant

leave of absence to Chief Engineer T. C. Walker, Public Works dredge 303: (a) annual leave; (b) sick leave; (c) special leave?

5. Did the department grant Walker permission to be absent from duty on any other days during the fiscal years 1926-27 and 1927-28?

6. If so, on what dates and for what purpose?

Mr. ELLIOTT:

1. Yes, if in continuous service for twelve months.

2. No.

3. Officers are employed by the year and other members of the crews are employed by the season at current rates. Practice followed by this department is the same as that in the mercantile marine and the Department of Marine.

4. (a) 1926-27, July 5th to July 18th, 1926. 1927-28, July 4th to July 17th, 1927. (b) Nil. (c) Nil.

5. No.

6. Answered by No. 5.

QUESTIONS PASSED AS ORDERS FOR RETURNS

INSERTION IN HANSARD OF RETURNS TABLED FORTHWITH

Mr. BENNETT: Mr. Speaker, when questions are converted into orders for returns and the returns thereto are tabled forthwith, might I ask the right hon. the Prime Minister to have the returns so tabled printed as answers to the questions that they may be available in Hansard.

Mr. MACKENZIE KING: Yes, certainly.

PUBLIC BUILDINGS—FUEL

Mr. MacDONALD (Cape Breton South):

1. From whom was the fuel purchased for the purpose of heating the Connaught building during the heating system of 1926-27?

2. What type of fuel was bought, what was price per unit, total quantity, and total cost?

3. What other expenses were incurred in heating the Connaught building during the 1926-27 season, and what was total cost of heating?

4. From whom was the fuel purchased for the purpose of heating the Hunter building during the heating season of 1926-27?

5. What type of fuel was bought, what was price per unit, total quantity, and total cost?

6. What other expenses were incurred in heating the Hunter building during the 1926-27 season, and what was total cost of heating?

7. From whom was the fuel purchased for the purpose of heating the Victoria Memorial Museum during the heating season of 1926-27?

8. What type of fuel was bought, what was price per unit, total quantity, and total cost?

9. What other expenses were incurred in heating the Victoria Memorial Museum during the 1926-27 season, and what was total cost of heating?

10. From whom was fuel purchased for the purpose of heating the Daly building during the heating season of 1926-27?

11. What type of fuel was bought, what was price per unit, total quantity, and total cost?

12. What other expenses were incurred in heating the Daly building during the 1926-27 season, and what was total cost of heating?

13. What is the cubic content of buildings served by the heating plants in the following buildings: Connaught building; Hunter building; Victoria Memorial Museum; Daly building?

PER CAPITA CONSUMPTION OF BUTTER, ETC.

Mr. EDWARDS (Frontenac-Addington):

1. What is the estimated per capita consumption in Canada of: butter, cheese, eggs, meats, potatoes, and wheat (wheat flour to be included in wheat and represented by its equivalent in bushels)?

2. In regard to each of the above for the calendar year 1927, what was the total (a) Canadian production; (b) exports from Canada; (c) imports into Canada?

3. What were the rates of duty as at December 31, 1927, imposed on each of the articles mentioned above by Canada, Australia, New Zealand, and the United States?

4. What quantities and values of each of the above articles were imported into Canada from Australia, New Zealand, and United States, and exported by Canada to those countries in the year 1927?

Mr. MALCOLM: Order for return tabled herewith.

Return to an order of the House of Commons, dated 12th March, 1928, for a return showing:

1. The estimated per capita consumption in Canada of: butter, cheese, eggs, meats, potatoes, and wheat (wheat flour to be included in wheat and represented by its equivalent in bushels).

2. In regard to each of the above for the calendar year 1927 the total (a) Canadian production; (b) exports from Canada; (c) imports into Canada.

3. The rates of duty as at December 31, 1927, imposed on each of the articles mentioned above by Canada, Australia, New Zealand, and the United States.

4. The quantities and values of each of the above articles imported into Canada from Australia, New Zealand, and United States, and exported by Canada to those countries in the year 1927.

1. Estimated per capita consumption for food of undermentioned articles in Canada:

Articles	Consumption
Butter, pounds	28.54
Cheese, pounds	3.92
Eggs, dozen	28.2
Meats, pounds	162.27
Potatoes, bushels	5.0
Wheat, bushels	4.7

2.

Canadian Production, Imports and Exports of Undermentioned Articles

Articles	(a) Production	(b) Exports Canadian Produce	Foreign Produce	(c) Imports
Butter, pounds	272,209,287	2,696,000	2,100	11,208,819
	$ 90,006,167	$ 1,068,610	$ 836	$ 3,892,640
Cheese, pounds	172,248,376	110,533,000	3,200	1,720,797
	$ 28,888,081	$ 22,012,543	$ 1,678	$ 590,364
Eggs, (in the shell), dozen	253,277,000	448,206	29,640	3,226,645
	$ 80,110,000	$ 168,063	$11,480	$ 1,404,164
Eggs, (n.o.p.), pounds	.....	.....	.....	2,025,039
	.....	.....	.....	$ 462,897
Meats	$167,127,091	$ 26,293,881	$ 2,914	$ 4,252,772
Potatoes, bushels	77,430,000	7,686,992	118	503,892
	$ 54,341,000	$ 7,855,565	$ 122	$ 800,127
Wheat (including equivalent of flour), bushels	440,024,700	296,745,437	22	445,294
	$439,340,000	$399,890,659	$ 95	$ 694,223

Import and export figures are for the calendar year 1927.
Production of eggs, potatoes and wheat for calendar year 1927.
Production of butter, cheese and meats for calendar year 1926.
Meat production figures are packing-house returns. It is estimated that an equal amount of meat is produced by slaughtering and curing operations on farms and in small local plants that do not report.

3.

Australian Customs Tariff

Item No.		British Preferential Tariff	General Tariff
41-A.	Butter and cheese ..per lb.	3 pence; but rate of 6 pence effective since November 25, 1927, under proposed tariff amendment.	3 pence; but rate of 7 pence effective since November 25, 1927, under proposed tariff amendment.
50.	Eggs, in shell ..per dozzen.	6 pence.	9 pence.
37.	Bacon and hams, partly or wholly cured ..per lb.	3 pence.	4 pence.
74-A.	Meats, poultry and game, fresh or smoked ..per lb.	2 pence.	2½ pence.
74-B.	Meats, poultry and game, potted or concentrated, including extracts of, and meat jellies ..ad val.	30 per cent.	40 per cent.
74-C.	Meats, poultry and game, preserved in tins or other airtight vessels, including the weight of liquid contents ...per lb.	2 pence.	2½ pence.
74-D.	Meats, poultry and game, preserved by cold process ..per lb.	2 pence.	3 pence.
74-E.	Meats, poultry and game, not elsewhere included in any item of the complete tariff ..per cwt. (112 lbs.).	5 shillings.	6s. 6d.

Australian Customs Tariff.—*Concluded.*

Item No.		British Preferential Tariff	General Tariff
83.	Potatoes, in their natural state.. .. .. per cwt. (112 lbs.).	1 shilling; but rate of 2s. 6d. effective since November 25, 1927, under proposed tariff amendment.	1 shilling; but rate of 2s. 6d. effective since November 25, 1927, under proposed tariff amendment.
57-A.	Wheat (not prepared or manufactured) per cental (100 lbs.).	free.	2 shillings.
58-B.	Wheaten flour.. ..per cental (100 lbs.).	free.	2s. 6d.

Great Britain and Northern Ireland and the Irish Free State are accorded the British preferential tariff. New Zealand is accorded the British preferential tariff with some modifications. Other countries are under the general tariff.

New Zealand Tariff

There is a primage duty of 1 per cent ad valorem in addition to rates quoted.

Item No.		British Preferential Tariff	General Tariff
61.	Butter, cheese, eggs (as unspecified provisions).. .. ..ad val.	20 per cent.	40 per cent.
25.	Bacon and hams.. .. ..per lb.	2 pence.	4 pence.
49.	Meats, potted or preserved.. ..ad val.	20 per cent.	40 per cent.
61.	Meats, unenumerated (as unspecified provisions).. .. ..ad val.	20 per cent.	40 per cent.
8.	Potatoes.. .. .. ..per ton (2,240 lbs.).	£1	£1
4-(2)	Wheat (unground and unmanufactured), when value is 5s. 6d. per bushel (60 lbs.).. .. ..per bushel.	1s. 3d.	1s. 3d.
	Wheat (unground and unmanufactured), when value exceeds 5s. 6d. per bushel, for each ½ penny (or fraction thereof) in excess of that value, duty to be reduced.. .. ..per bushel.	½ penny.	½ penny.
	Wheat (unground and unmanufactured), when value is less than 5s. 6d. per bushel, for each ½ penny (or fraction thereof) reduction in that value, duty to be increased.. .. .. ..per bushel.	½ penny.	½ penny.
5-(9)	Wheat flour, when value is £13 10s. per ton (2,000 lbs.)....per ton (2,000 lbs.).	£3 10s.	£3 10s.
	Wheat flour, when value exceeds £13 10s. per ton, for each shilling or fraction thereof in excess of that value, duty to be reduced.. .. ..per ton.	1 shilling.	1 shilling.
	Wheat flour, when value is less than £13 10s. per ton, for each shilling or fraction thereof reduction in that value, duty to be increased...per ton.	1 shilling.	1 shilling.

Special regulations govern wheat flour values.

The British preferential tariff applies to British dominions with some modifications for Australia and the Union of South Africa. Other countres are under the general tariff

[Mr. Malcolm.]

United States Tariff

709. Butter, 12 cents per pound.

710. Cheese by whatever name known, having the eye formation characteristic of the Swiss or Emmenthaler type, 7½ cents per pound, but not less than 37½ per centum ad valorem. Other cheese, 5 cents per pound, but not less than 25 per centum ad valorem.

713. Eggs of poultry, in the shell, 8 cents per dozen.

701. Fresh beef and veal, 3 cents per pound.

702. Fresh mutton and goat meat, 2½ cents per pound; fresh lamb, 4 cents per pound.

703. Fresh pork, three-fourths of 1 cent per pound; bacon, hams, and shoulders, and other pork, prepared or preserved, 2 cents per pound.

704. Reindeer meat, venison and other game (except birds) not specially provided for, 4 cents per pound.

706. Meats, fresh, prepared, or preserved, not specially provided for, 20 per centum ad valorem.

712. Birds, dead, dressed or undressed: Poultry, 6 cents per pound; all other, 8 cents per pound; all the foregoing, prepared or preserved in any manner and not specially provided for, 35 per centum ad velorem.

769. White or Irish potatoes, 50 cents per one hundred pounds.

729. Wheat, 42 cents per bushel of sixty pounds; wheat flour, $1.04 per one hundred pounds.

4.

UNOPPOSED MOTIONS FOR PAPERS

IMPOSITION OR ABROGATION OF DUTY ON FISH

Mr. ERNST:

For a copy of all correspondence, letters, telegrams, or other documents of whatsoever nature, between the Department of Customs, the Department of Marine and Fisheries, the Department of Trade and Commerce, the Department of Justice, and/or any other department of the government, and any person or persons, corporation or corporations, respecting the imposition or abrogation of duty on fish landed in Canada by steam trawlers other than those of Canadian registry; and for a copy of all or any orders in council in relation thereto.

OTTAWA BUILDINGS RENTED BY GOVERNMENT

Mr. COOTE:

For a return showing the number of buildings rented by the government in Ottawa; the names of buildings, if any; the parties from whom they are rented; the term for which they are rented; the amount of floor space, if known, and the annual rental in each case.

LAKE ST. FRANCIS WATER-POWER

Mr. CAHAN:

For a copy of all applications which have been made for licenses, permits, or any other form of authorization by the government, or any department thereof, for permission to divert the waters of lake St. Francis by a canal or canals, and to discharge such waters so diverted into lake St. Louis for the purpose of thereby producing or generating hydro-electric energy, with a copy of the reports thereon by the engineers or other experts of any department of government, and also a copy of all department reports, orders in council, documents, and correspondence relating thereto, with a copy, so far as available, of all general maps or plans of such proposed diversions of waters and of the hydro-electric works proposed to be constructed in connection therewith.

INVESTIGATIONS BY MR. PLOUFFE

Mr. SIMPSON:

For a return showing—1. The number of investigations made by Joseph A. S. Plouffe, of Sudbury, under his commission dated March 24, 1926, appointing him a commissioner to investigate charges of political partizanship against government employees in the province of Ontario.

2. A list giving the names, addresses and occupations of employees whose conduct was investigated, together with a copy of the report of the commissioner in each case.

3. A statement showing the salary allowance and travelling expenses paid or to be paid to Mr. Plouffe in connection with the said investigation.

ORIENTAL IMMIGRATION

Mr. McQUARRIE:

For a copy of all correspondence, letters, telegrams or other documents which have passed between the government of the province of British Columbia and the federal government, or between any ministers, deputy ministers or other officials of the said governments, respectively, since the 8th day of May, 1922, in reference to oriental immigration or in reference to curtailing activities of orientals already in Canada.

BOLSHEVIST COMMUNIST OR ANARCHIST SCHOOLS

Mr. GUERIN:

For a copy of all correspondence, letters, telegrams, reports, memoranda, or other documents of whatever nature between the government, any department or any officer, with regard to bolshevist, communist or anarchist schools in Canada.

Mr. LAPOINTE: Mr. Speaker, such correspondence as is mentioned in this motion is of a highly confidential nature, and it would not be in the public interest to publish it. Therefore I would ask my hon. friend to agree to the motion being dropped.

Mr. GUERIN: I have no alternative, Mr. Speaker, but to withdraw the motion.

Mr. DEPUTY SPEAKER: Dropped.

PROFITS OF INDUSTRIAL ORGANIZATIONS

On the motion of Mr. Kennedy:

For a return showing—

1. All increases made to capital from profits in the form of stock dividends or in any other form whatsoever.

2. The profits reported by all industrial organizations as to: (a) gross profits (per cent) on nominal capital; (b) gross profits (per cent) on actual cash invested in each case exclusive of bonus stock dividends; (c) net profits (per cent) as to nominal capital; (d) net profits (per cent) on actual cash invested in each case exclusive of bonus stock dividends.

Mr. MACKENZIE KING: I think the motion had better stand until the Minister of Finance (Mr. Robb) is here. In the meantime, however, I may observe that I doubt very much whether it would be possible, even if the government were to consent, to the resolution being carried, to obtain the information which is requested. The order is a pretty large one.

Motion stands.

SITUATION IN IRAK

On the orders of the day:

Mr. H. B. ADSHEAD (East Calgary): Has any communication passed between the Dominion government and the British government in connection with the trouble in Irak?

Right Hon. W. L. MACKENZIE KING (Prime Minister): There are communications on the subject.

Mr. ADSHEAD: Will they be tabled?

Mr. MACKENZIE KING: Their object is to keep the government informed on the question and I imagine the British government would regard them as confidential. However, I shall be pleased to communicate with the British government and if there is no objection to their being brought down they will be tabled.

ANTI-ORIENTAL PROPAGANADA

On the orders of the day:

Mr. J. S. WOODSWORTH (Winnipeg North Centre): A number of hon. members have been receiving anti-oriental propaganda through the mails. I notice one communication under the question "Must B.C. Secede?" The argument centers around the following statement:

The Dominion collects the head tax while the province of British Columbia carries the burden.

Is it true that a head tax is collected on any of the various groups of orientals who are here or on those who may be entering Canada?

Right Hon. W. L. MACKENZIE KING (Prime Minister): As I recollect, a few sessions ago this parliament passed an act abolishing the head tax. There is therefore no head tax to collect.

QUESTIONS—ANSWERS IN DUPLICATE FOR MEMBERS

On the orders of the day:

Mr. W. G. McQUARRIE (New Westminster): With reference to questions which are answered, may I ask that if possible copies of the answers be furnished at the time the original documents are tabled? Otherwise hon. members have to wait until the next day before they can ascertain what the answers are.

Right Hon. W. L. MACKENZIE KING (Prime Minister): As a general rule questions are answered in duplicate or triplicate, the purpose being to have hon. members supplied with copies. If this rule is not followed it is an oversight which will be remedied.

Mr. McQUARRIE: I asked to-day for a copy of an answer to a question of mine and I was informed that I could not get it.

Mr. MACKENZIE KING: Was the question answered?

Mr. McQUARRIE: Yes.

Mr. MACKENZIE KING: I understand the page is distributing the answers at the present moment.

Mr. McQUARRIE: I sent one of the boys for a copy and he said he could not get it.

Mr. LAPOINTE: The boy was wrong.

MALONECK POST OFFICE

On the orders of the day:

Mr. M. N. CAMPBELL (Mackenzie): On February 13 this house passed an order standing in my name for a copy of all correspondence, letters and other documents in connection with the removal of the post office of Maloneck, Saskatchewan, from the residence of Mr. W. S. Jones to another part of the district. The papers I have received, under "Sessional papers, 145," are obviously incomplete, and I placed a question on the order paper. The answer appears in Hansard of March 7 and it shows very clearly that other papers in addition to these are in the hands of the department. I would ask that the order of the house be carried out.

Hon. P. J. VENIOT (Postmaster General): What is the number of the order?

Mr. CAMPBELL: The number of the order is Reference 25, Sessional Paper 145.

FRENCH TARIFF

On the orders of the day:

Hon. R. B. BENNETT (Leader of the Opposition): I desire to ask the Minister of Trade and Commerce (Mr. Malcolm) whether or not, as a result of the new tariff law passed by the republic of France with respect to importations of Canadian goods, the commercial treaty between Canada and France is thereby abrogated.

Hon. JAMES MALCOLM (Minister of Trade and Commerce): I have no intimation that the treaty between Canada and France will be abrogated as a result of the new French tariff.

DEPARTMENT OF THE INTERIOR

REPORT OF MR. ALEXANDER SMITH, K.C.

On the orders of the day:

Hon. R. B. BENNETT (Leader of the Opposition): When will my hon. friend, the Minister of the Interior (Mr. Stewart), lay on the table Mr. Alexander Smith's report on Department of Interior affairs?

Hon. CHARLES STEWART (Minister of the Interior): The report has not yet been presented. I inquired this morning and was informed that it will be submitted some day this week, when I shall be glad to table it.

THE BUDGET

DEBATE ON ANNUAL FINANCIAL STATEMENT OF MINISTER OF FINANCE

The house resumed from Friday, March 9, consideration of the motion of Hon. J. A Robb (Minister of Finance), that Mr. Speaker do now leave the chair for the house to go into committee of ways and means, the proposed amendment thereto of Mr. Cahan and the amendment to the amendment of Mr. Fansher (East Lambton).

Mr. LEO K. LAFLAMME (Montmagny) (Translation): Mr. Speaker, I had a notion of making use of the English language to express the few remarks that I wished to make to-day. However, when I think that there are still, in this house especially, hon. members who propound the fallacy of a one language country, I deemed it my duty to make use of my native tongue, in order to prove to them that we are really living in a bilingual country.

I do not presume at this stage of the debate, to put forth entirely new arguments or to be the first to discuss certain phases of the budget speech. However, I cannot let the opportunity slip by of congratulating the hon. Minister of Finance (Mr. Robb), on his budget proposals, also the government on the present state of affairs, as the favourable financial statement of the country shows. On the whole, the great majority of Canadian people are satisfied with the situation such as it is. An outstanding proof of this, is the numerous speeches of our Conservative friends who attempt to destroy, by the multiplicity of incongruous and incoherent criticisms, often without foundation, the good effect of the present budget proposals. I may state that in my riding most of the people are satisfied, realizing that our government has made genuine efforts to remedy the difficult situation in which our opponents had left the country's finances, in 1921. Confidence again was restored the moment they heard that the hon. Minister of Finance (Mr. Robb), was announcing surpluses, for instance that of $42,000,000 for this year. The decrease of the national debt by $105,000,000, in the course of the last five years of the Liberal regime, is not of a nature to shatter the hopes of Canadians. Once more our people breathe easier. Realizing the enormity of a debt created not only by an exaggerated participation in the war, but by the wastefulness of public money, by a government caring little for the time-honoured interests of the people, Canadians now understand better the wisdom they showed in placing their hopes in the Liberal party. In the past, it was under the Liberal rule that the people saw prosperity give rise to the hope of a brilliant century for Canada. To-day, they rejoice in seeing those who advocated a liberal policy for the masses, tackling a depressing financial situation, struggling courageously to solve the problem, while giving the greatest possible relief by decreasing the taxes.

According to our Conservative friends, the people are not justified in placing their confidence in this administration. Everything is going wrong, they say. Yet, if we study the financial statements of the various institutions, we find that last year was a very prosperous one. I am going to quote from the Canadian Pacific's review "Agricultural and Industrial Progress in Canada" of February last:

> The increasing ability of Canada to absorb her own bonds has been a feature of the past few years as the energetic efforts of the post-war period bore fruit in greater prosperity for the Dominion and its people.

A little further on:

> Canada has worked energetically and steadily to overcome the handicaps resulting from her participation in the war, and it is gratifying to note the reward of such effort. Youthful and with her wealth of resources barely tapped, Canada is a wealthy nation. Considering she has but finally emerged from the depression and, in the opinion of industrial and financial leaders is on the threshold of an era of unparalleled development, the future holds boundless possibilities for her and her people.

But I think enough has been said to establish that Canada is on the road to the greatest prosperity ever experienced.

Our opponents seem to nurse a grudge against the department of Immigration. Although they have only discovered the case of McConachie—a case deserving sympathy—they blame the hon. Minister of Immigration (Mr. Forke), because all the efforts of the department were of no avail in keeping all the immigrants here, and stemming, at the same time, the emigration of our people. On this score—I have already had occasion of pointing it out—I see no necessity of bringing here more immigrants unless they are genuine settlers, capable of becoming true Canadians. I fail to understand why it is necessary to bring here young Englishmen and teach them to love farming.

First, very few of those born among the industrial classes, succeed on the farm. I rather think that something ought to be done to encourage those of our people who, for one cause or another, wish to continue farming life somewhere outside their native province. By making grants to transportation companies who are more interested in numbers than in quality, we still persist in the error which strikes us to-day, in that connection: consider-

able sums are spent and we do not reap the benefit expected. First and above all, let us give Canadians the same facilities as we give to foreigners.

Rural credit is certainly called upon to render appreciable services to the farming class. We already have, in the province of Quebec, an admirable institution: the "Caisses populaires" (people's savings banks)—which I would like to see better understood and more numerous—which have rendered and are still rendering great services to our farmers.

There is also our educational system which, especially in the business colleges, does not lend itself sufficiently to the training of young people for the farm. We have noted this deficiency and the harm wrought, and we are trying to remedy it. All depends on this: teach the young men to cultivate a taste for the land because it is the principal wealth, the national domain, pre-eminently; endeavour to have then understand its primary usefulness; impress on them what better returns they may have from the land, by having recourse to better methods. That is the ideal towards which our educational system should tend.

How many times have I noted the benefit derived from the putting into practice of the modern teachings on agriculture? The success of one would make the hesitation of others fade away and, by the means of examples, in a few years we would be astonished to see the improvement which has taken place. Speaking more especially in behalf of my district, I would ask the hon. Minister of Agriculture (Mr. Motherwell), not to discontinue the services of the Seed Control Board, at Quebec. Our farmers have already greatly benefited from it. If they are somewhat backward in taking advantage of these services, we must not forget that we should proceed slowly in the propaganda of modern methods of farming, if we wish their success.

I can but congratulate the hon. Minister of Agriculture (Mr. Motherwell) and his department, which encourages sheep raising by granting subsidies.

The hon. member for Parkdale (Mr. Spence), was rather in a humorous mood the other day, and seemed to be sympathetic as to the lot of the Quebec farmers, which was in contrast to certain statements made previous to the Winnipeg convention, last autumn. He said:

> But under the Australian treaty the business is suffering so seriously that it will not be long now before the only thing we shall have to eat will be Australian mutton. We shall not be able to produce a lamb chop in Canada; that will be a luxury reserved entirely for the millionaire.

I might tell the hon. member for Parkdale (Mr. Spence) that, thanks to the assistance given by the department of Agriculture, our people in Quebec have understood the advantage there was for them to take up sheep raising, and that in my county, the four central parishes—Notre-Dame-du-Rosaire especially—made a start, not very long ago, in raising sheep; last year their sheep were graded as first quality on the Montreal market. They will not rest satisfied even at that, this year we shall have a finer and larger number of sheep.

To help to increase our population and keep our people in this country, the governments—federal and provincial—must unite in a strenuous educational campaign. They will soon notice that the money thus spent is not a loss, and with the same assistance granted to Canadian settlers, special personal transportation rates and free grants of land as well as pecuniary or farming assistance during the first years, the problem will have soon lost of its magnitude.

I see no necessity of accepting the suggestions prompted by our interested and distinguished visitors—among others the Secretary of State for Dominion Affairs—who seems to want to direct our course in immigration matters. Our authorities are sufficiently well posted to know what should be done to solve our problems. As for us, we have not the boldness to suggest a solution to the problems which these visitors have themselves in their own country.

Our opponents have done much talking about ruin, unemployment, closed mills and further works stopping after the budget was put into force. Unemployment is far more felt in other countries than it is among us, and to give weight to what the hon. members on this side of the house have said in regard to the United States, we have the statement of the Prime Minister of England, made in the House of Commons, on February 13, last: that there were a million unemployed in England. It is true, that in the town of Montmagny, within my riding, the doors of a large plant have been closed since a few years, but I have no fear of stating that it is not because we have had no protection. It would be desirable that its doors opened again, and if the government—not by raising the tariff—could help us, we should feel very thankful. There are others which are prosperous, esepecially since the Liberal party is in power. The fears of a certain manufacturer that the coming into power of the Liberals would mean the closing of his factory

doors have been changed into unbounded hopes, since in 1927 he enlarged his plant and intends to further extend it this year.

Again referring to the criticisms of the Conservatives: according to statistics, the dairy industry has increased in 1927. Milk production amounted to 13,407,340,237 pounds against 12,651,388,490 pounds in 1926. Moreover the amount of cream amounted to 4,148,469,498 pounds and that of butter 2,223,950,000 pounds. Our best market is the United States. Still quoting the Canadian Pacific's review on this matter, we find that the statements of our opponents do not coincide with actual facts:

So far from anything being wrong with the Canadian dairy industry, it is in sound shape, being worth, according to estimate, $250,000,000 per year, which makes it one of the most valuable branches of Canadian agriculture. The existing situation and that forecast justify considerable expansion, and that Canadian dairymen are awakening to the opportunity is frequently made apparent. The number of cows on farms in Canada in 1927 showed a gratifying increase, while the Dominions recently produced a new world champion producer in butter fat. Both Ontario and Quebec dairymen have formed associations the better to engage in the shipment of milk and cream to the United States. There is unquestionably a profitable future ahead for those engaging or coming to engage in dairy production in Canada.

They bitterly complained that our favourable balance of trade had decreased in 1927. If it is but $131,218,843 this year, there is no cause for alarm. Quoting again from the same source, we find the explanation:

The reduction in this balance occasions no uneasiness, but on the contrary is accepted as a healthy sign since it is stated to be accountable to the great increase in construction in Canada. The purchase of machinery and construction material has swelled imports, while many people have been engaged in building construction who would otherwise be producing goods for export.

Like the hon. member for Beauharnois (Mr. Raymond) did, I wish to draw the attention of the hon. minister for Defence (Mr. Ralston), to the proposed estimates of his department. No doubt, we must adopt modern means, such as aviation, but let us not increase our expenditure as regards to armament, when other countries speak of disarmament and when England reduces its estimates in that respect, let us not increase our estimates to make up for England's deficiency on that score. If we have too much money, let us think of Quebec. Our province has not had its due share in railways.

As to the income tax, I think that we cannot possibly dispense with it now. We have to pay off a large debt and everybody has to contribute. Personally, I am in favour of increasing the limit of exemption so that those who have large incomes will pay their share. Everybody must understand his responsibilities. The farmer more than any has felt the depreciation in values after the war, he was the first to accept the accomplished fact. Industries were longer in doing so; sooner or later they will have to accept it. In the meantime industries must help more than any other in carrying our burdens. I am not opposed to the legitimate and even substantial profits of enterprises, but again we must be fair and not have the consumer, after all, pay what the income tax collects from them on their profits.

I entirely approve of what has been said by the hon. member for Beauharnois (Mr. Raymond), and the hon. member for Hochelaga (Mr. St-Père), in regard to the income tax of corporations, especially those which sell electricity. On that score in my own town of Montmagny, the Quebec Power obliges us to pay 8 cents per K.W.H. for the lighting service. Everybody knows the enormous profits of these companies, and I congratulate the Minister of Finance (Mr. Robb), for not having granted their request this year. I am somewhat astonished to read, in the Montreal Herald of March 9, the following warning:

We warn the government that there is a rising tide of indignation in the province of Quebec against this discrimination. Quebec is willing, and always has been willing, to contribute its fair share to the general expenses of the Dominion, but it will not calmly submit to being imposed upon.

Mr. POULIOT (Translation): They know nothing about it.

Mr. LAFLAMME (Translation): I do not believe that this warning expresses really the popular feeling of the province of Quebec.

Mr. LAPOINTE (Translation): Hear, hear!

Mr. LAFLAMME (Translation): On the contrary, if newspapers like the Herald carry on their campaign in favour of this corporation, they will certainly come in conflict later on with the popular wishes. I think that they are wrong in trying to increase their profits, and should they obtain this exemption of income tax, they will not make the Quebec consumer benefit by it.

I shall close my remarks, Mr. Speaker. For the last three weeks the hon. Minister of Finance has heard many criticisms: they are an indication of the general feeling of satisfaction. However, we know very little of the new Conservative program which was adopted in Winnipeg. Are we to believe what a true Conservative said after the convention and which appears in the Montreal Star:

The thing is so obvious as a supposed vote-catcher as to be laughable. To placate the west the convention even went to the length

of endorsing the Hudson Bay railway. Outside the delegates from Manitoba and Saskatchewan it is quite safe to say that at least nine-tenths of the delegates do not believe in it. They know, in fact, that it is doomed to failure, and yet they voted for it. The convention expressed the most solicitous regard for labour and the returned soldier—all very well, but obviously with a purpose, and so throughout the entire gamut. I am a Conservative of nearly fifty years standing. I have shared in the glories of victories, if not at all in the spoils, and taken the defeats with the grace that sportsmen are supposed to possess, but I do not like hypocrisy. As a Canadian, I do sincerely trust that some time or another a party will have sense and courage enough to be sincere, win or lose.

The falsity of our opponents contrasts with the government's sincerity which will be approved by the great majority of Canadian people, for whom the Liberal party has always worked.

Sir GEORGE H. PERLEY (Argenteuil): Mr. Speaker, in the first place, as one of the older members of this house, may I be permitted to express my satisfaction with the way this budget debate has been carried on. I think we may say in all sincerity that the speeches have been very well delivered, and I wonder if the forty minute rule may not have something to do with that. The Speaker of this house was chairman of the committee which had to do with the revision of the rules last year, and I was glad to be a member of that committee and to assist in solving some of the problems which came up. The result was very satisfactory, with all members of the committee joining in an unanimous report to this house. As far as I can judge the forty minute rule has been very successful, and as it is better understood by the members of the house I believe it will produce even better results in the future. It will help produce compact speeches; in many cases hon. members will confine themselves to perhaps two or three points in connection with the subject under discussion, which they will amplify and argue in full, and in that way we will have really better debates than we had under the old rules. This debate has lasted quite a long time, but I have known other debates in this house which were longer. I think I am safe in saying, however, that in no other budget debate in this house have so many hon. members taken part, and I take it that that is all for the best; it is well that even the government should hear the opinions of members from all parts of this great Dominion.

Before proceeding further, Mr. Speaker, I want to extend my compliments to the hon. member for North Vancouver (Mr. McRae). Last Friday evening he made a very remarkable speech in this house, dealing with the question of immigration. This is really the greatest problem before the country to-day; how are we to get more people on the land in this great country of ours? The hon. member made a very constructive speech which should be of assistance in considering this question, even though his views may not commend themselves to everyone in this house. Before I go on to comment on his speech, the mere mention of his name reminds me of a convention which took place in Winnipeg last fall of which you, Mr. Speaker may have heard. In preparing for that convention a great many prominent Conservatives throughout this Dominion gave of their time and energy to make it as successful as possible, but I think it is not too much to say that no man in Canada did more than the hon. member for North Vancouver to the end that the convention might be well organized and satisfactorily carried through in every way. I can hardly believe it, but I have heard that some of our friends on the Liberal side were hoping that this convention would be a failure; if that were the case they must have suffered a grievous disappointment.

I cannot speak too highly of the way in which the citizens of Winnipeg helped us in our work. It was naturally a matter of civic pride with those living in that city that this convention should be a success, in order that Winnipeg might become known as a city where big conventions could be held, and in order that they might secure other conventions in the future. So the citizens of that city did everything in their power to help things along. I also wish to say a word in this connection in appreciation of the newspapers of this Dominion. All newspapers throughout Canada gave full reports and made kindly comments with regard to this Conservative convention. We naturally expected that treatment from the newspapers supporting the Conservative party, but I am happy to say that the Liberal newspapers also gave us fair play, and I hope I may be forgiven if I particularly mention the Manitoba Free Press. The reports appearing in that paper were very fair and very full, and therefore on my own behalf and I think on behalf of the other members on this side of the house, I tender the thanks of the Conservative party to the press of this country for the way in which they reported that very successful convention.

Referring again to the speech of the hon. member for North Vancouver, I have already said that I consider this problem of immigration to be probably the greatest question facing us to-day, and as far as I have been able to judge, up to the present the government have been simply marking time. The hon. member for North Vancouver has had special experience in connection with all mat-

ters of immigration and successful colonization in the northwest, and he has now brought forward a constructive program; although we on this side are in the cold seats of the opposition, he was willing and we were willing that the government should have the benefit of his ideas, which we hope will result beneficially to the country as a whole. We hope that since this constructive program has been suggested, the government will wake up and really do something on this important question.

I wish to express in this connection a personal opinion as to the best kind of immigration for Canada, which I formed while I was in the old country. I think we should endeavour to get young people here in as large numbers as possible. I believe the increase of population in the British Isles is between four and five hundred thousand a year, which means that that number of young people become of age every year. Now the best time at which to teach boys and girls our Canadian ways and make them fit for life in this Dominion is to take them when they are from sixteen to twenty years of age. If we did that I think we would bring about good results so far as this country is concerned. Not long before I left England I was invited in my official capacity to the prize day at the Blue Coat school which used to be located in London, but some years ago was removed into the country, and is now, in one of the counties on the road leading from London to Brighton. Now I was impressed very much with the fine lot of lads at the Blue Coat school, and the school authorities told me they would like very much to make an arrangement with Canada under which these young people could be taught Canadian farming ways at the school itself. The school possessed quite a lot of land of its own, and I understood from the managers that they were prepared to have these lands used for teaching Canadian farming methods to the pupils, provided the Canadian government would send the teachers and pay them for that purpose. I suggest to the Minister of Immigration and Colonization (Mr. Forke) that he think this matter over and prepare a plan under which young people could first be trained in Canadian ways and farming methods on the other side, and then brought here and helped to settle on the land.

During this debate there has been considerable discussion as to whether or not the indebtedness of the Canadian National Railways should be incorporated in the annual statement of the Minister of Finance showing the liabilities of the Dominion itself. Personally, I am firmly of the opinion that it should be. The hon. member for St. Lawrence-St. George (Mr. Cahan) discussed this particular matter very fully in the speech which he made immediately after the introduction of the budget, and I would not therefore take it up except that I wish to make some comments with regard to certain statements made by the Minister of Railways (Mr. Dunning) in his speech when he also discussed this matter. If hon. members will refer to page 889 of Hansard they will find that the Minister of Railways is reported to have spoken as follows:

> That portion of the debt of the Canadian National Railways which is owed to the public, and on which the railway is earning the interest, is not a part of the net debt of Canada, but is a charge against the railway.

Certainly that is quite correct. It is not included in the net debt of Canada. It is in the first instance a charge against the Canadian National Railways, but certainly should appear as part of the gross debt of this Dominion. Then on the other side of the account there should be such a valuation of the railway as would appear to be a reasonable value at the time the accounts were issued. That is the manner in which every corporation that I know anything about keeps its accounts. Items are included on both sides of the ledger whenever full and complete statements are made. To show that this is so I have in my hand a copy of the return the chartered banks made for the period ending December 31st last. This statement is presented to the Minister of Finance, and I am sure it is made in the way that he regards as correct. Now in that statement you will find on the debit side among the liabilities of the bank, letters of credit outstanding, and on the other side of the account liabilities of customers under letters of credit. If the argument of the Minister of Railways is sound, that these liabilities of the Canadian National Railways should not appear in the annual statement of the Dominion, why should the banks think it proper to include in their statement their liabilities under letters of credit? No account could be better secured than those letters of credit are. They are issued against merchandise and goods shipped from all parts of the world, and if there is any account properly secured it would be these letters of credit. Therefore I say there should appear on one side of the balance sheet of the country the liabilities of the Canadian National Railways, and on the other side such a valuation of the railway as might appear reasonable at the time the statement was presented. For a man to issue notes or guarantees, and pay no attention to them, is a pretty short sighted policy. No person in

ordinary business life could adopt that course without landing in serious trouble. A few years ago a friend of mine in Ottawa carried on a small business that yielded a reasonable amount of money, but unfortunately he went into an investment or speculation out in the west with some of his friends, financed entirely by promissory notes. This man went to the bank one day in the ordinary course of business to get some credit in the usual way. He did not include in his statement these guarantees or notes which he had given for the new undertaking out in the west, and the manager said to him, "Are you not interested in such and such a business away from here?" He said, "Oh yes, but those notes are a charge on a property out there, therefore I did not consider they should be included as a liability in connection with my business here." Naturally, the bank would not consider such a statement and it was well they did not, because in the end this man had to pay the notes and lost the investment he had made. To present a statement of affairs of the country without making any mention in it whatever of the liabilities of the Dominion in connection with the Canadian National Railways, is to bury one's head in the sand like the ostrich and ignore the facts.

At the same page of Hansard from which I quoted before, namely, page 889 the Minister of Railways is also reported as saying:

> That portion of the debt of the Canadian National Railways which is owed to the government of Canada, and upon which the taxpayers of Canada as such are paying interest, is a part of the net public debt. That portion of the debt of the Canadian National Railways which is owed to the public and on which the railway is earning the interest, is not a part of the net debt of Canada, but is a charge against the railway.

In order to make my point clear I have repeated one statement by the minister. Then at page 932, at the top of the second column, he says, in referring to the fact that none of the money advanced to the Canadian National Railways last year was charged in the government accounts:

> Because it so happened that in 1922-23 there were no railway guarantees and during the present fiscal year there have been no cash advances on railway account.

To my mind, Mr. Speaker, that statement in itself shows the impropriety of the present plan of keeping the accounts. It gives out to the public misleading statements. Last year the minister says that there were no cash advances, but as a matter of fact the Canadian National Railways increased its funded debt last year by some $50,000,000. According to the Minister of Railways, the Minister of Finance had it in his hands either to advance this money in cash from the Dominion treasury, in which case it would appear in the Dominion accounts, or to guarantee the securities of the Canadian National, in which case the Minister of Railways claims that the Finance minister did not have to show it in the public accounts.

Mr. DUNNING: I must object to that. The guarantees of the Minister of Finance in regard to the Canadian National Railways are shown in the public accounts; they are schedule 5 of the balance sheet. My hon. friend, in attributing the statement he did to me, was not distinguishing between the terms net debt and public accounts.

Sir GEORGE PERLEY: Perhaps I inadvertently used the term public accounts. As a matter of fact, if the money is advanced in cash to the railway by the Minister of Finance, it appears in the ordinary balance sheet of the Dominion, but if it is provided by way of guarantees, it appears only in the accounts of the Canadian National Railways.

Mr. DUNNING: No. It appears in a schedule of the balance sheet, in the public accounts of Canada.

Sir GEORGE PERLEY: It does not appear as part of the net debt of the Dominion itself.

Mr. DUNNING: That is right.

Sir GEORGE PERLEY: In other words, if this amount of approximately $50,000,000 which was guaranteed by the Minister of Finance last year for the Canadian National Railways, had been advanced in cash to the railway, then the whole surplus claimed by the hon. Minister of Finance, and more, would have disappeared during the past year. And yet the gross liabilities of this Dominion, direct and indirect are exactly the same in either case. I ask you, Mr. Speaker, whether under this system of keeping the accounts it is not possible that some Finance minister some day may be tempted to put out misleading statements? In other words, the Minister of Finance has it in his own hands either to advance the cash for the requirements of the Canadian National Railways, which would appear in the net debt of the Dominion, or to guarantee the bonds of the Canadian National Railways, which would not appear in the net debt of the Dominion. I can imagine some Minister of Finance saying in the middle of the year, along in September, when it is usually necessary to raise some money for the purpose of financing, "Shall I provide this money in cash out of the coffers of the Dominion exchequer, or shall I guar-

antee the bonds of the Canadian National Railways? If I provide this money in cash out of the Dominion exchequer, I am going to have to show a deficit next year in my budget speech, but if I provide it by guarantees, then I shall be able to show a surplus in my next budget speech." I claim and submit, Mr. Speaker, that irrespective of party this question of keeping the accounts should be straightened out and put in proper shape. The accounts should be kept just as would be done in the case of any large corporation in this country. I know it is argued that the system here is followed by other governments in this country, but to my mind that does not make it right.

Mr. DUNNING: And by my hon. friend's government.

Sir GEORGE PERLEY: I expected that. We always get the tu quoque argument. But we on this side of the house are always trying to learn something, while hon. gentlemen opposite do not seem to wish to learn.

Now a few words with regard to the argument put forward the other day by my hon. friend the Minister of Justice (Mr. Lapointe). I was rather surprised to find a gentleman of his ability and capacity making use of that old campaign trick with which we are all familiar, of putting up a dummy and then knocking it down. When we first go into a campaign, probably we all use that trick, but as we get older we often find that it is wiser to drop it. At page 1055 of Hansard the hon. Minister of Justice says:

> I was hoping that he (the leader of the opposition) would discountenance his followers in their campaign of belittling and misrepresenting Canada in the eyes of the world. Why glorify the United States at the expense of Canada?

The hon. gentleman knows as well as I do there is no foundation for any suggestion of that kind. What right has the hon. Minister of Justice to say or even to suggest that we on this side are belittling Canada? That is an argument which is used in this country at elections, but it seems to me it might well be dropped. I ask you, Mr. Speaker, I ask anyone who will answer in a conscientious way, whether there are any more loyal Canadians than we who sit on the left of Your Honour. I for one am proud of Canada, and proud of what we have accomplished in this country. I lived in England for eight years, in a very responsible position. I had an interesting time and a great deal of work to do, and I was glad to do anything I could during those war years, but my wife and I always looked forward to the day when we might come back to our old home, and as soon as the opportunity offered we came back here, because we think this is the best country in the world in which we can live, and I certainly do not like the Minister of Justice to suggest anything different.

We on this side of the house, Mr. Speaker, are rather tired of having the government relying upon Providence alone for the blessings this country enjoys. It seems to us that it is high time the government did something to try and make Canada an even better country to live in; that they tried to make use of the raw materials and opportunities for development in this country, to give more work for our Canadian boys and girls, and to increase our population. I for one do not like the present conditions under which we are spending money to teach our boys and girls in our schools, and then to have them find no opportunity for their talents here, and leave this country and go elsewhere to make a living. They are our best raw material and we ought to do everything we possibly can to keep them here, and to make as much work and provide as many opportunities for them as possible, and I suggest to the government that they get busy and make a real effort to provide more work for our people at home, both on the farms and in the factories. Instead of taking this view of the case, the Minister of Justice prefers, as I judge from what he says, although I hope I am wrong, to ship out our raw material, and he apparently glories in that fact because I find on page 1056 of Hansard, the following extract which he read from some publication:

> The total per capita exports of all lines from the United States is $39.62, from Canada, $122.57.

He glories in that fact; he boasts of it. I take the other view. Our exports are largely of raw materials, whereas United States exports of raw materials are less in proportion to population. Why? Because they use them up in their own country, thus providing work for their own people. Therefore, rather than glory in the fact that we export more raw materials than the United States do in proportion to population, the government should endeavour to stop some of this exportation of raw material and have it made into more highly finished products, thus keeping at home many of our young people who are now going away.

I humbly submit that the government should consider adopting the plan that we on this side of the house advocate of making our laws in such a way that we shall manufacture in this country everything we can instead of buying it largely from the United States. It is not fair that in our competition

with our friends across the line, because they are and I am sure they always will be friends of ours, we should be handicapped by their very heavy tariff and at the same time by the fact that under our lower tariff they are able to ship goods into this country while we cannot ship goods into theirs. In this connection I wish particularly to refer to the farmers and fruit growers. I spoke of this at a previous session and I feel very strongly on the point. I believe the Minister of Agriculture (Mr. Motherwell) thinks as I do that this home market of ours should be kept as much as possible for our own home growers. The purpose of the Conservative policy, as I take it, to encourage our industries is twofold. One idea is to provide more work for the people in our factories and the other is to provide in our own country a greater market for our farmers and fruit growers. My constituency is an agricultural one with several industries which keep up the towns, and in that way the people who live in the towns are first-class customers at good prices for the products of the farms round about. I need hardly say to you, Mr. Speaker—and everybody will agree in this—that whatever we grow in this country is the best that grows anywhere. It matters not whether we talk about apples, potatoes or people—they are the best that are grown anywhere and able to stand up against competition in any part of the world. But is it just that farmers and fruit growers in this northern climate should be subjected to unfair competition from southern countries where it costs less to produce these articles?

Under the present tariff laws in the United States the president or some committee has power to increase the duties when necessity warrants. I have known cases of this kind where some Canadians have worked up an export market in the United States. A very glaring one that occurred last year was that of a clothing manufacturer in Toronto. They had worked up a market in Detroit even under the high tariff but they found that they could make the business pay. This was discovered by customs officials in the United States and a shipment which was sent out on an order from the Toronto house to Detroit was stopped at the border and the tariff was raised before the shipment could be delivered. We should not submit to treatment such as that.

Mr. GOTT: They can impose an embargo if they see fit.

Sir GEORGE PERLEY: My hon. friend tells me that they could put on an embargo if they saw fit. I am not one of those who advocate a sky-high tariff, but in this trade competition between us and our friends and neighbours to the south, I think it is the duty of this parliament and this government to give our people as much opportunity as possible to do business and to earn their living.

The following incident is a small matter but these little things show how the wind blows. This is an extract from the Ottawa Citizen of Friday or Saturday last:

> Pickles and sauces served on the tables in the parliamentary restaurant in the House of Commons were yesterday found by a delegation from the Canadian Horticultural Council to be manufactured in the United States. The delegation waited on government authorities and brought this fact to their attention, with the request that the government "practise what it preaches"—use goods made in Canada. Both pickles and sauces are manufactured in Canada.

Could anything be more ludicrous than that we should use in our own parliamentary restaurant pickles and sauces made in the United States?

Mr. GARLAND (Bow River): May I suggest one thing more ludicrous—protectionists wearing Italian felt hats.

Sir GEORGE PERLEY: I take it that my hon. friend is in favour of the produce of the farms of this country being used here as much as possible. He will agree with me in that, at all events. The government may say: Oh, that is a matter for the committee that administers the restaurant. But as a matter of fact the government supporters control that committee; they are in a majority on the committee on the restaurant, and if they gave instructions that there were to be no more of these articles used unless they were made in Canada, their orders would be carried out.

I lived at the Chateau Laurier for several years and canned fruit is something I use a good deal of. I did not have many things to grumble about at the Chateau Laurier, but I certainly did complain because I could not get from them any peaches except United States peaches. We raise in this country better peaches than they do in California or Oregon, and why the Canadian National Railways should supply what is really a government hotel with fruit from across the line when we have better fruit in Canada, is something I have always failed to understand. In other words I take the ground that particularly in regard to the products of the farm and the competition with farmers and fruit growers in the United States, steps should be taken to protect our growers in order that they may have their home market for themselves when they are denied an opportunity to sell their produce across the line. The Department of

Agriculture of this government has quite properly urged a campaign for the use of Canadian products. Why do they not do it themselves? Surely they should be the first to set us an example. We vote $30,000 a year to run the parliamentary restaurant. I have not ascertained if all the appropriation was used last year. But surely the government, and especially my friend the Minister of Agriculture, who goes up and down the country urging on the people the wisdom—with which I agree—of using Canadian products, might at least practise what they preach.

Hon. W. R. MOTHERWELL (Minister of Agriculture): Mr. Speaker, until this morning I had hoped to keep out of this already too long-drawn-out debate, but when I learned that I could have a period of forty minutes or less without prolonging the debate in the aggregate, I thought I would take advantage of it.

So far as the budget proper is concerned, with the naked eye I cannot see that any indentations have been made in it during the three weeks it has been under bombardment. I think the budget is just as popular throughout the country to-day as when it was first launched. Then why deal with it any further?

Before considering a number of the statements on immigration and dairying that have been made in the course of this debate, let me refer to the concluding remarks of the hon. member for Argenteuil (Sir George Perley) who has just resumed his seat. Pickles and sauces! A serious matter indeed,—if 't were true. But I am sorry to tell my hon. friend that the statement is not true, according to what Mr. George tells me. He was in my office the other day and expressed great concern about the impression that had been created that pickles made in the United States were being served in the parliamentary restaurant. He assured me that this is not the case.

Sir GEORGE PERLEY: I am glad to hear it.

Mr. MOTHERWELL: I am sorry to spoil my hon. friend's little story. He and his friends must be in a pretty bad pickle when they have to resort to such criticism. I am afraid I may have to spoil some more of their little stories and castles in the air before I am through.

Now then, as to immigration. This, I admit, is a very important question. Apparently one of the chief complaints has been made by my hon. friend from Halifax (Mr. Quinn), and reiterated by twenty or thirty of his associates. It concerns a certain family that was detained at Halifax, with the result that two of its members were not allowed to land. But there is a much larger question at stake than the hardship entailed on this individual family. Shall we keep out the prohibited classes, or shall we let them in? There are something like twenty-five or thirty prohibited classes mentioned in section 3 of the Immigration Act—imbeciles, the feeble-minded, idiots, epileptics, prostitutes and pimps—whatever those are; these are all prohibited. Now, if I understand the complaints against the Minister of Immigration (Mr. Forke), some at least of these prohibited classes should have been let in, and the treatment of the McConachie family has raised the question. But, as I say, a much larger question is involved. Why should these prohibited classes be allowed to enter the Dominion? I do not care whether the law prohibits their entry or not, or even if the Minister of Immigration has discretion to let them in,—did he not do the right thing in keeping this class of people out? While I was a provincial minister, acting in the Department of Labour and in the Department of Health, I had to deport a considerable number of immigrants from Saskatchewan. I found after sifting them down as closely as possible that some of the no-goods gain entry once in a while, and they have to be deported. Then why deliberately permit these prohibited classes to come in?—the classes that I have described. There is a big issue at stake. If I interpret correctly the position taken by my hon. friend from Halifax and other hon. members of the opposition, they are asking that the two members of the McConachie family—one prohibited—to whom I have referred should have been allowed to land. If we are to allow the simple-minded to come in then what about the idiots, the imbeciles, the epileptics, and the others specified in section 3—fifteen or twenty prohibited classes? If one is allowed to enter, why not two; and if two, why not a thousand? If you allow one of the prohibited classes to come in, the whole twenty classes can come in. There we take issue with our friends on the other side. We feel sorry for these unfortunates, but, nevertheless, we believe that, as in the past, they should be kept out. There can be no compromise on this question.

Mr. EDWARDS (Frontenac): The Minister of Immigration let in—

Mr. MOTHERWELL: I have my forty minutes, please; after that you can talk as much as you like. These people must be either on the other side of the Atlantic or on this side; you cannot compromise by dropping

[*Sir George Perley.*]

them in mid-Atlantic. Therefore if my hon. friends opposite are complaining of the action of the Minister of Immigration in leaving those people on the other side of the Atlantic, it is evident that they want to have them on this side. Well, every party to its taste.

Mr. EDWARDS: The Minister of Immigration—

Some hon. MEMBERS: Order.

Mr. MOTHERWELL: I have sat here for three weeks listening to the dope sent over from my hon. friend's side. Now they should be able to sit still for forty minutes; I have had to sit still for nearly forty days.

I could not deal with the question of immigration without at least making reference to the very excellent speech of the hon. member for North Vancouver (Mr. McRae). I hardly know how to go at this question.

Some hon. MEMBERS: Hear, hear.

Mr. MOTHERWELL: Hold on! He who cheers last will cheer best. I have known my hon. friend for twenty-five years. I had the pleasure of knowing the Davidson, McRae Company way back in 1902. But that was an entirely different proposition from the one the hon. gentleman promulgated on Friday. Half of it was one dollar an acre land, and the other half free homesteads, making the average fifty-cent an acre land. How could anybody lose on that proposition? It was like going down hill with the wind in your back. Anybody could propose such a scheme and succeed with it. Now, the basis of the hon. gentleman's proposal last Friday was that a large block of scrub land should be dealt with on the basis of being cleared at $12.50 an acre. Do you know anybody, Mr. Speaker, who could clean that land at $12.50 an acre? I do not. That is just a little more than double the cost of preparing open prairie land for the seed drill. How can you clean scrub land for $6.50 an acre over and above the cost of cleaning straight prairie land? It is absolutely impossible. But taking the figure just as my hon. friend gave it, it entails an expenditure of $300,000,000. Well, I know it will be successful in one respect; it will succeed in preventing my good friend the Minister of Finance (Mr. Robb) from having any more surpluses to report to this house. Three hundred million dollars? It will cost twice that much, if I know anything about the cost of cleaning scrub land. If my good friend has the faith in his proposition that he appears to have, I would suggest that he bring it before the agricultural committee where the other immigration problems are being sifted. I should like to hear what some of the hard-handed and hard-headed farmers on that committee would have to say regarding this big scheme. I have watched the development of large enterprises like this, and I have never seen one of them succeed where the government had to step in, clear the land and build a house on it—never yet. In Ontario shortly after the war was over the government of the province went into a big land settlement scheme at Kapuskasing for returned men. I am not adversely criticizing the provincial government; we all wanted to do these things for the returned men. But what is the condition of affairs to-day? The land now is practically deserted by the original occupants. I am not going to say anything about the soldier settlement proposition except to point out that if we amplify the scheme in the manner suggested we shall be obliged to add to the public debt by hundreds of millions of dollars. We have already spent a hundred millions, and I mention this fact for this reason. My hon. friends will say, "That is the way the Liberals manage things. If the Conservatives were in power and there were a proper administration with a real live wire at the head of affairs these things would not happen." But whose was the soldier settlement scheme? Let me point out that we have just written off $16,000,000 as a result of bad buying and poor management during the Tory administration, and another $10,000,000 in relation to live stock and equipment. If, therefore, we can salvage 50 cents on the dollar from the scheme we shall have reason to consider ourselves pretty lucky. Now that was their plan; and what evidence have we that the present proposal would be any better in face of the experience we have had? I know of no other such scheme since settlement first began on the North American continent; nor am I aware of any country in the world where governments have developed lands in this bonanza fashion but the people got their fingers badly burned in consequence. That is our experience. I would rather speak approvingly of the scheme, because I know that the first enterprise with which my hon. friend was associated, the Saskatchewan Land Valley Company, was a magnificent proposition. But how much support did it get from the other side? It was depicted by the Tories as the blackest thing that ever emanated from a government. And now hon. gentlemen are taking that proposition as their ideal. There you had an average of 50 cents an acre as compared with this proposal of $12.50. Why, twice that amount of money will not clear off the heavy scrub land in the northern parts of the prairie provinces.

I had an opportunity of visiting Peace River and I know something about it. It is

this propensity for leaping before looking that resulted in running the Hudson Bay railway into that open switch at Port Nelson—anything to get rid of the proposition. I shall have to deal with this question later on but, as I say, there was an evidence of a desire to get rid of the question by any means at all. Any plan would suffice so long as they could get to salt water. That was their hurry-up policy; that was their headlong proposition; and I would beseech this house to beware of Tory schemes of this kind, for they have invariably turned out badly. Now what are we ourselves doing in connection with Peace River development? Are we doing anything? To hear my good friends talk one would imagine that we were sitting comfortably here and merely wearing out our chairs from day to day.

Some hon. MEMBERS: Oh, oh.

Mr. MOTHERWELL: Well, we have been doing so but it is my hon. friends who have kept up the pace and not we. We believe in the Peace River; I do not think there is any finer part of the country, if developed, than that territory. I was charmed with it and I admired the men who were hanging on. Possibly my admiration was inspired by the fact that I myself hung on similarly for over twenty years before I had the satisfaction of seeing railway communication established. I did feel quite buoyant and hopeful for the future of that country when I paid it a visit. Well, I ask, what are we doing? Since coming into the house I have received a hastily prepared statement from the Railway department—not from the Minister of Railways (Mr. Dunning), as he was not here during the full period mentioned, but a statement prepared by his staff who are more familiar with the whole proposition in its earlier stage.

Some hon. MEMBERS: Oh, oh.

Mr. MOTHERWELL: Hon. members laugh; I hope they do not expect the Minister of Railways to be acquainted with all the details of the proposition dating away back to 1921. My hon. friends should have waited until I had concluded the sentence. Here is the statement I have received. In 1921—and this, bear in mind, was during the period when the Crowsnest rates were suspended by my hon. friends on the other side, that legislation having been passed in 1919—the rate from Grande Prairie to Fort William per hundred pounds was, in 1921, 59 cents. In 1922 it was 45 cents. Paranthetically I would point out that changes in freight rates downwards, due to some specific policy or action on the part of this government, have been invariably opposed by hon. gentlemen opposite. In September 1922, for some reason that does not appear on the face of it, the rate was increased to 49 cents, but in January, 1924, it was reduced to 43 cents; and in September, 1925, it was further reduced to 35½ cents. This meant a total reduction in the rate from Grande Prairie to Fort William per hundred pounds during that period of 24½ cents. Let us take the freight rate from Grande Prairie to Vancouver during the same period. In 1921 it was 54 cents; in 1922, 48 cents; in 1923, 43 cents; on January 19, 1924, 40½ cents; on January 29, 1924, 39½ cents and in September, 1925, 29½ cents; while on September 15, 1925, it was 28 cents. This represents a total reduction per hundred pounds from Grande Prairie to Vancouver of 30½ cents; in other words, the rate was more than cut in two. That would permit the farmers of Grande Prairie to carry on while the country was developing and tonnage improving in order to warrant an outlet to the Pacific. We believe that two things must run concurrently; we must prepare for an outlet to the Pacific, which undoubtedly will come; and simultaneously with that preparation we as a government must make it possible for the farmers there to carry on with a reasonable profit on their efforts. And this is the best means towards that end. We must reduce freight rates to that extent and thus reduce the cost of production of every bushel of grain. I may say that settlement is taking place rapidly there, and not settlement of the feeble-minded either, but of strong, sturdy vigorous men and women. These people are going into that country and making it the envy of the whole continent. Herman Trelle went there as a young man, an engineer, and going in for farming he was able eventually to capture first prizes on the continent in both wheat and oats. He did this two years ago, and where did he get his wheat? He got it from the experimental farm in Ottawa. That one single man has done and will continue to do more for the Peace River country than all the hot air artists you could pack on the Tory side between now and the end of the session.

I think I have covered the immigration question. I have no authority on behalf of my colleague, the Minister of Immigration (Mr. Forke), to speak with reference to the committee on agriculture and colonization, but inasmuch as I have what I may term a half interest with him in this matter I will undertake to afford all the facilities I can, even to the extent of burying some of my

own bills, if my hon. friend from North Vancouver (Mr. McRae) will come forward and develop his proposition. Our friends are willing that we should give it consideration, but I want to see a little more about it before committing myself. They are perpared to have us receive credit for it, but before they can expect us to buy a pig in a poke I think we may reasonably ask my hon. friend to disclose and develop his scheme. I am ready to give him all the time he desires for the purpose. In the meantime, that is all we can do and we shall pass on to something else.

Our friends have taken umbrage at the Australian treaty. Well, of course, you cannot buy a market without paying for it; somebody has to pay. When the British preference was first established in 1897 it could not be done without somebody's toes being hurt a little. But in the main it was good for Canada. In the main the Australian treaty is good for Canada, and we hope it is good for Australia as well. This government, led by the Prime Minister, are strongly in favour of developing interimperial trade, as I am sure we all are, and you cannot do that except at an occasional cost to some one. You would almost think, Mr. Speaker, that it was actually a crime to eat good Australian or New Zealand butter; apparently our hon. friends would rather have the people of Canada eating oleomargarine. I remember one of the first remarks I ever made in this house; it was not from this seat, but from somewhere in this vicinity, and it had to do with this question of oleomargarine. My hon. friend from West York (Sir Henry Drayton), whom we are glad to see back in his seat looking well and happy, was very much entertained by the discussion which then took place, and he can probably recall it quite well.

Mr. BENNETT: He is equally entertained to-day, I should say.

Mr. MOTHERWELL: I have a list of the importations from the Antipodes for the last twenty years, and during every year we have had occasion to import more or less Antipodean butter into Canada to eke out our own supply during the winter months. Is that a crime? During the last year of the Liberal administration, in 1911, 903,821 pounds of butter were imported, while during the first year of the Conservative administration in 1912 the figure jumped to 2,241,584 pounds. I am not going to blame them for that; if they had no butter for their bread they did well to get it wherever they could, and they were so anxious to get it that they supplemented the butter with oleomargarine. Then in 1913 the importation jumped to 6,116,134 pounds; in 1914 it amounted to 6,959,757 pounds, and this country seemed to survive all right. That has gone on year by year. For the first ten months of this year we imported 8,228,986 pounds of butter, and I anticipate that before the year is over the figure will be even larger. Where is the crime in that? The funny part of it is that our friends opposite are pleading largely on behalf of the urban population of this country; they tell us they are getting butter too cheaply. I can understand the objection of the farmers to the Australian treaty, but I cannot understand the urban people objecting to good Australian butter at about two cents less per pound. As I have said, I can well understand the objection of the farmer, but to judge the relative policies of the two parties on this one issue you must not take any isolated item; you must deal with the whole policy of the government. Therefore, when you size up the policy of our friends opposite, you must consider that policy not only in relation to the importation of butter but also in regard to the free importation of oleomargarine and its ingredients. Imagine Tories letting anything in free! However, they were partial to this concoction of intestinal fats and southern oils which was called oleomargarine, and the ingredients were allowed in free. Then you must also remember that when the treaty with the West Indies was negotiated, Canada received a specific preference of one and one-half cents per pound on butter. Consequently, when you consider the policies of the two parties, you must agree that our policy is infinitely preferable to the one inaugurated by our predecessors. I do not suppose my hon. friends want any more of these figures, so I will say nothing more than that during every one of the past twenty years more or less Australian butter came into Canada, and no one thinks it is a crime. As a matter of fact, in this treaty there is a provision by which, upon six months' notice, either party may amend or abrogate it, so it is not a fixture from now to eternity. It does not seem to be doing the urban people any harm, whatever effect it may have on our rural population.

Now I would like to refer to some matters on which the leader of the opposition touched in his initial speech, which was a very good one. I will not quote him, but he was in no better humour than were his followers. He did go so far as to admit that there was a certain amount of temporary prosperity in the country, but he did not like the way that prosperity was obtained. He did not like

the great mining development, for instance, because it was so hard on the mines; he did not like the development in our pulp and paper industry because it was so hard on the forests, and he did not like the big crops, apparently, because they were so hard on the land. He might have said with greater truth that he did not like the result of the last election, because it was so hard on the Tories. In that speech he sought to leave the impression, or at least he stated, that he was friendly to the Hudson Bay railway. As the old saying goes, save us from our friends! I remember the time he went down to Portage la Prairie to help out his late lamented leader, and instead of helping him he drove home the last nail in the lid of the coffin of that leader, which has not been raised since.

Mr. BENNETT: I now rise to a question of privilege.

Mr. MOTHERWELL: That was the effect of the speech.

Mr. SPEAKER: Order.

Mr. BENNETT: The statement attributed to me in the newspapers at Portage la Prairie was contradicted before I had even left that town, and after the expenditure of much time and energy I induced every newspaper in Canada to publish a withdrawal and a denial of the accuracy of the statement now attributed to me by the Minister of Agriculture. That was done by the Canadian press. Any such suggestion as that now made is absolutely false in toto.

Mr. MOTHERWELL: I did not say anything about what the press said, did I?

Mr. BENNETT: You stated what I said.

Mr. MOTHERWELL: I venture the guess that every western man who went out campaigning in that election, unless he happened to be in collusion with my hon. friends opposite, had a sheaf of Hansard statements made by hon. gentlemen opposite with regard to the Hudson Bay railway. If they did not have those statements, I will now give them. Here is the statement made by my hon. friend on June 9 of 1926, which will be found at page 4293 of Hansard.

> But from the information I have I could not under any circumstances vote to extend the railway a single foot beyond the present end of steel.

That was then at Kettle Rapids, ninety-two miles from Hudson bay.

> I could not vote to send the railway to Nelson.

[Mr. Motherwell.]

Strictly speaking, I could not do so either. That is the statement made by my hon. friend the leader of the opposition. Perhaps I had better read that again:

> But from the information I have I could not under any circumstances vote to extend the railway a single foot beyond the present end of steel.

Mr. DUNNING: When was that speech delivered?

Mr. MOTHERWELL: On June 9, 1926, in connection with the vote of $3,000,000. Then another statement was made which I do not need to read in its entirety, unless my hon. friend will say I am taking isolated statements and leaving a wrong impression: I will fix that up later, by quoting some of the colleagues of my hon. friend. My hon. friend said later:

> I believe the whole matter is impracticable.

He was then referring to the Hudson Bay railway. If my hon. friends wish, I will read the whole quotation, but I notice that half of my forty minutes is gone now, and perhaps they will let me proceed. Here is what Mr Bury said; He was then Conservative member for Edmonton. Speaking immediately after my hon. friend he said:

> I would not now have risen to speak but for the fact that the member for North Battleford (Mr. McIntosh)—with the best intentions in the world I have no doubt, and being himself assured of the truth of what he said—told the committee that the whole of the west was solidly behind this proposition, and he specifically mentioned the province of Alberta.

Then Mr. Bury goes on to say:

> Now, I cannot let that statement go unchallenged, because there is at least one member—and indeed the house has heard another in the person of the member for West Calgary (Mr. Bennett)—

My hon. friend across the way—

> —who does not believe in the project of the Hudson bay route as a grain route.

There is no equivocation about that. His own colleague, Mr. Bury, interprets what he thought the hon. member said and repeats it. Therefore I am not putting any strained interpretation on what my hon. friend says. There are his words in black and white. There was not a speaker in the whole of western Canada but was aware of these words and read them at the various meetings. And when my hon. friend had the audacity to go to Portage la Prairie he could not expect any better result than that his leader would drop in his tracks. There could be no other result and it was the same with all the rest of the Tory candidates in Manitoba. Is there anything else my hon. friend would like to deny? I think the hon.

gentleman got up in too big a hurry. It seems to me my hon. friend was protesting before there was anything to protest about.

Seeing that we are on the Hudson Bay railway, and my hon. friend expressed a keen desire to clean up any suspicions which he said existed around the Immigration department I wonder if he has it in mind to clear up the suspicion a great many people have felt as to why the Hudson Bay railway was sent to Nelson? If he has any such desire all he has to do is to ask for an investigation and I think he will get it. I have no right to make that statement on behalf of the Minister of Railways or the government, but I think my hon. friend ought to try to get an investigation. I think it would do my hon. friend good to have an inquiry. Then he would find out why six millions of money were squandered. He would find out why a sand sucker was sent up there when there was no sand to suck, and why it is still there resting on an artificial island. I do not attribute the blame for this to the engineers in charge, nor to the late minister, Mr. Cochrane, but to the ministry of that day. By all means let us have another investigation. My hon. friend did not get much out of the customs, or immigration investigation, and he may as well try a third shot, and I think I can assure him that he will get more of a kick or backfire out of the third than from the preceding ones.

I have only ten minutes left, but it will not require that much time to answer all the allegations of hon. gentlemen opposite. I was just going to make a few remarks about the wonderful convention held at Winnipeg. We were all interested in it. It is a fine thing for a government to have a good opposition, and we have got a good opposition leader. In my estimation the Conservatives got the best man for the party; it is certainly best for the country and best for the Liberal party that he is the opposition leader. I do not say that with any unkind intention towards my hon. friend (Mr. Bennett); I think the hon. gentleman is a credit to this house. But the platform of the party is a bird. They have recanted nearly all of their professions of the past. I had a newspaper report of the platform here but I have mislaid it for a moment; I think it has crawled under the desk. I have tried on three different occasions to get a copy of the Conservative platform in concise form from the offices of my hon. friends, but I did not succeed, and only this morning in reply to my request, I was told the platform was away somewhere being revised and, believe me, I certainly think it needs revision. The implements of production are now the subject of concern to my hon. friends opposite, and the consumer also is to be looked after. And yet in the same breath they are going to stand firmly by the national policy which dates back for fifty years. How can my hon. friends have two policies? They seem to be trying to look to the east and at the west at one and and the same moment. When they get down here they forget all about the Winnipeg platform. No sooner have the echoes of that great convention died away in the distance than they hike down here leaving their poor baby to bleach its bones on the silent prairie. We all remember when they were disputing during the convention about the Hamilton speech of the former leader of the party at the Winnipeg convention. They had on that question a little internal difficulty, but while the fight lasted, "Oh, oh, it was a lovely war!" The resolutions passed at that convention numbered twenty-four in all, but out of the entire number I have not been able to find a single one that you could hang your hat on, or that would be of any good to the country. They have a resolution about the St. Lawrence waterway. My hon. friends opposite are in favour of that project, but it must be a national undertaking, not an international one. How could it be a national undertaking when the international portion is almost all in the United States? At Winnipeg they also resoluted in favour of the completion of the Hudson Bay railway. At last they have come to that conclusion. They were not always of that opinion, but now they have recanted and have come out in favour of the project at a time when they are not needed.

For years we of the Liberal party fought for the restoration of the Crowsnest pass rates in the face of the Conservative opposition. At the Winnipeg convention, in deference to western sentiment, my hon. friends opposite came out in favour of the statutory rates on grain. Talk about the reform party! Here is a party which has reformed late in the day, but as the old adage has it "better late than never."

My hon. friends in one of their resolutions favour the development of Canadian ports and the giving of the British preference to all goods entering those ports. In advocating these policies they are just three years behind the times. We have got all these matters attended to. Of all the aggregations of inocuous ideas I ever set my eyes on the platform enunciated at Winnipeg is the limit. Of course we all know what it is intended for. It is a gesture on the part of the east for the purpose of deceiving the west. You will re-

member that for twenty long years only one Tory from the province of Saskatchewan ever gained the federal house. Is it any wonder that my hon. friends would get down on their marrow bones and commit themselves to almost anything in order to improve on that showing? But have you heard my hon. friends advocating these resolutions here? There was one action of the convention which we approve of, and that was in the choice of a leader. But I have not heard any one of the resolutions dealing with the tariff, the Hudson Bay railway, the Crowsnest pass railway rates or other matters referred to here in a commendatory way, or in any way at all as far as I know. Why are my hon. friends so silent about those resolutions? It is true that the hon. member for North Vancouver (Mr. McRae) delivered a speech on Friday dealing with immigration, but the Conservative platform is now in cold storage and will stay there so far as my hon. friends opposite from the east are concerned.

I am not going to take up the whole of my forty minutes.

Some hon. MEMBERS: Go on.

Mr. MOTHERWELL: No, I have said all I wanted to say. I will close with the statement that if I have been unfair to the leader of the opposition in any way I hope he will set me right when he speaks to-morrow.

Mr. L. J. LADNER (Vancouver South): Mr. Speaker, although the Minister of Agriculture (Mr. Motherwell) may have been disappointed in the terms of the Conservative platform, I am sure his hopes with respect to the leader of our party to-morrow will be amply fulfilled. Before entering upon the subject matter of my remarks, which concern chiefly a provincial question of British Columbia in relationship to the federal government, I want to take this opportunity of making a reference to the passing of a lifelong personal friend and political opponent, the late Hon. John Oliver, formerly premier of British Columbia. His sterling, honest character, his strong and rugged personality, his keen intellect and vigorous mind, and his great devotion to his adopted province gained for the late Mr. Oliver the admiration and respect of not only the people of British Columbia but all his political opponents. In his passing last summer the people of Canada have lost a fine public servant whom we all miss and for whom there will always remain in the hearts and memories of his fellow citizens the deepest affection and regard. I wanted to make these few observations with regard to the late premier because in British Columbia he was held in the very highest esteem.

The purpose of my remarks to-day is to review briefly the question of British Columbia's claim for better terms, its relationship to the treatment given to the other provinces, and the findings of the Hon. Mr. Justice Martin who, as commissioner, has placed before us an interim report. The Hon. Mr. Justice Martin finds in respect to British Columbia that:

> Justice requires that the province be placed in the same position as the other provinces with respect to a great national undertaking and the lands conveyed to the Dominion for the purpose, namely, the railway belt and the Peace river block, be restored to the province.

I wish also to take this opportunity to commend the government for appointing this commission, but I should like to remind them that the functions of the commission were greatly circumscribed and did not cover the matter of adjustment of subsidy, regarding which British Columbia has a very important and just claim. They likewise omitted to cover one or two other questions of long-standing grievance in our province. In view of references made in two former speeches from the throne but never followed by action on the part of the government, I am sure that members from western Canada, where the question of natural resources is one of concern and should be one of legislation, will be interested in that phase of the question to which I am about to refer.

Confederation as consumated in 1867 is a political and economic union by the federal system of government under a new constitution of colonies possessing their own sovereign rights, which, within the scope of the British North America Act, they still retain as provinces. To get at the root of this question of the right of the provinces to their natural resources, we must consider for a moment the question of what is known under our constitution as the public domain. Before the western provinces became partners in confederation, that vast area of public domain was vested in the crown, subject to such rights as had been granted by charter or license to trading companies such as the Hudson's Bay company and the North West Trading company. British principles with regard to public domain are very ancient and well known to all colonies and dominions. The public domain, that is lands unappropriated, has been and still remains vested in the crown; but when a government is formed to take control of the country, it secures—and these are the two essentials—first, the administration of the

public domain and, second, the beneficial interest therein. This principle has been accepted in every British self-governing country and in the whole of Canada with the exception of western Canada, which has been denied these constitutional rights by the federal authorities.

When confederation took place in 1867 these principles were recognized by the four constituent provinces, Ontario, Quebec, New Brunswick and Nova Scotia, and were perpetuated by section 109 of the British North America Act. Under that section the beneficial control of the public domain was vested in the several provinces. If you examine the constitutional history of New Zealand, Newfoundland, the provinces of the Australian commonwealth, South Africa and every other self-governing dominion, you will find that each government, whether federal, state or provincial, has, upon organization, been granted the administration and beneficial control of its public domain. That feature of the constitutional relationship between the provinces and the dominion is fundamental to the rights of the provinces. When confederation took place, we had of course a great area of land known as our public domain. The four provinces constituted about 500,000,000 acres of this land, but apart from those 500,000,000 acres there were in the neighbourhood of 2,000,000,000 acres which constituted the public domain still remaining with the federal authority. By legislation in 1898 and 1912 the province of Ontario received 150,000,000 acres more than it had at the time of confederation, making a total of 261,000,000 or practically doubling its size. In those lands all the rest of Canada had a proprietary interest. The province of Quebec is now nearly four times as large as it was at the time of confederation. It had 124,000,000 acres originally, but by legislation of 1898 and 1912 this territory was increased to 452,000,000 acres. Likewise in the province of Manitoba there was a considerable increase. My contention is that those additions were part and parcel of the right and title of every province constituting confederation and every province which was admitted under the terms of the British North America Act. What do we find? In these new areas added to the provinces of Ontario and Quebec there is an enormous wealth developed especially in mines and forests, and the revenues to the provincial governments have been likewise greatly increased. These are things which should warrant my fellow members from Ontario and Quebec in giving consideration to the claims which are made by not only British Columbia but the three prairie provinces.

I come now to the particular problem of British Columbia. In 1849 Vancouver Island was granted by letters patent to the Hudson's Bay company, but it reverted by purchase in 1858. The mainland of British Columbia had been licensed for certain purposes to the Hudson's Bay company and it had likewise reverted, so that by the time the province joined confederation in 1871, British Columbia was in possession of its public domain, and all the soverign rights, within the confines of the boundaries of British Columbia. By the act of 1871 our province became a member of confederation and under that act certain lands known as the Dominion railway belt were conveyed to the Dominion government in trust for certain specific purposes, namely, to aid by a forty mile belt across Canada in the construction of the Canadian Pacific railway, the building of which was part and parcel of the terms under which British Columbia was willing to unite with the other provinces.

Then followed a number of events into which time does not permit me to go, events and acts on the part of the federal government denying or failing in their obligations to carry out the terms of union of 1871. I would draw the attention of hon. members to the peculiar political position that existed at that time. The scheme of financing the Canadian Pacific railway was changed in 1880 by the Canadian Pacific railway syndicate. The original scheme was the granting of a strip of land twenty miles on either side of the railway right across Canada from Vancouver into Ontario, but by the new proposal the Canadian Pacific was to receive 25,000,000 acres of land in alternate sections, all situate in the northwest territories, together with a cash allowance of $25,000,000, although the cash subsidies ultimately amounted to $62,250,000. When that change took place, the railway lands, by virtue of the trust under which the Dominion government held them, should properly have reverted to the province of British Columbia. In fact, the province of Ontario passed an order in council, but it never became effective, to enable the transfer of the lands by virtue of that arrangement, and the government of Canada took steps to introduce legislation for setting aside a forty mile strip right across the prairies in respect of the Canadian Pacific. Now the claim which the province of British Columbia makes is that the failure of that trust, in that the lands were never used for that purpose, entitles the province to a return of their lands, seeing that Ontario and the government of Canada kept their lands.

Without going into details, I should like to refer to the second claim that we have, which relates to the lands in the Peace river block. In 1874, when the government changed and a Liberal government came into power, terrific opposition to the completion of the Canadian Pacific railway developed, and men like Hon. Edward Blake and other leaders of that time were strongly opposed to complying with the demand of British Columbia. In 1884 under the Settlement Act, by reason of the peculiar political situation the province of British Columbia was obliged to make further concessions, and these concessions were to give further lands called "lieu lands" in the Peace river block, presumably to take the place of the lands in the railway belt along the Canadian Pacific railway which were not good for agriculture, although the terms under which these lands were granted made no reference to the lands being good for agriculture or not. As a result, the province was forced to part with another 3,500,000 acres. Then by the same act the province had to part with another 2,000,000 acres of land to bring about the construction of what is called the E. & N., the Esquimalt and Nanaimo railway on Vancouver island, a railway which was to have been constructed under the general scheme in connection with the terms of union. The disputes had been referred to Lord Carnarvon, and what was known as the Carnarvon award was given in 1874, by which the Dominion government was to build that railway. The Dominion government refused to carry out that award, and further negotiations took place, as a result of which the Dominion government offered to the province of British Columbia $750,000. The Dominion government failed to carry that out, and so these claims have accumulated—first, the Dominion railway belt, second, that of the Peace river block, third, that of the E. & N. railway belt, and then this $750,000 and lastly, the readjustment of our subsidy.

I wish to draw the attention of hon. members of the house to the extraordinary situation with respect to the subsidies paid to the province of British Columbia and the other provinces. I desire to quote from a memorandum prepared by R. E. Gosnell, who has done wonderful work in this connection starting as far back as 1891. He has continued exhaustive investigation under different governments and produced a great deal of valuable data. Mr. Gosnell says:

> In 1906 British Columbia's total subsidies amounted to $307,000. In 1906, the first year in which subsidies were paid to Alberta as a province, the following payments are debited to her in the public accounts:

[Mr. Ladner.]

Allowance for government	$ 50,000
Allowance of 80 cents per head	200,000
Debt allowance	405,375
Allowance for public buildings	93,750
In lieu of public lands	375,000
	$1,124,125

In the same year a re-adjustment of subsidies generally was made, and Alberta and Saskatchewan came within the new schedule, although newly formed and without having borne the heat and burden of the years previously as other provinces had done. The allowance for government was raised to $190,000. In 1926, the payments made to Alberta and British Columbia were respectively:

Alberta

Allowance for government	$ 190,000
Per capita allowance	516,560
Debt allowance, interest on	405,375
Allowance in lieu of public lands	562,500
	$1,674,455

British Columbia

Allowance for government	$ 190,000
Per capita allowance	419,666
Compensation for lands in railway belt	100,000
Debt allowance	29,817
	$ 738,483

Or a difference as between the provinces of almost $1,000,000. Time does not permit me to give other examples, but they are numerous. As a matter of fact, in estimating the expenditures made by the Dominion government with respect to British Columbia since 1871 and the contributions made by the province of the Dominion treasury, we find a balance in favour of the province of British Columbia of over $150,000,000. I would point out with regard to the construction of the Canadian Pacific railway that it was first contemplated that it would be a failure and a heavy expense to the rest of Canada, but the fact is that the railway proved just the reverse; it proved a great success; it proved to be a system of national importance without which there could not have been Canada as we have it to-day.

Following the Settlement Act of 1884 and the completion of the railway, the people of British Columbia at once realized that the superior political and economic prestige of eastern Canada had forced the small population of British Columbia to accept terms which were not only unfair and unjust but were in direct breach of the terms under which British Columbia joined confederation; and so as early as 1891 and 1894 and 1895, we find articles appearing in the local newspapers complaining of this injustice, particularly several strong articles written by our friend R. E. Gosnell. By 1901 public opinion had become fairly strong with respect to this problem and Hon. James Dunsmuir, Premier of

British Columbia, and Mr. Eberts, presented their views to council at Ottawa: In 1902 Messrs. Prior and Eberts, and again in 1903 the late Charles Wilson, K.C., and R. F. Green, now Senator Green, appeared and presented their views to the Ottawa government. By 1906 the question had assumed primary importance in the public mind of British Columbia, and we find that Sir Richard McBride prepared an exhaustive memorandum on the subject, which was presented to the interprovincial conference of 1906. By the power of his advocacy, the strength of his personality, and the justice of his cause, he was able to prevail upon the conference and the government of that day to make a special grant to the province of $100,000 per year for a period of ten years making in all $1,000,000. This was the first tangible recognition which the federal authorities had given to the claims of British Columbia.

In 1907 Sir Richard McBride went to London to endeavour to secure an alteration in the terms of certain legislation which was then being presented to the imperial house. He succeeded in having eliminated the words "final and unalterable" which otherwise would have forever stopped the people of British Columbia from asserting their claims before the parliament of Canada. Upon his return—and I refer to this phase to indicate the importance of the question in the public mind—he was given a great welcome. This is apparent by a glance at the newspapers of that day. I have before me some of the original clippings, and this is a specimen of the headings:

Premier McBride Welcomed on his Return from London.

British Columbia's Chief Executive was given a most enthusiastic reception in Vancouver last night—Greetings of goodwill showered upon him by Thousands of Loyal Citizens.

The London Times also printed a column describing Sir Richard's work and its results. In 1907, speaking on July 19, he made the following statement, which I commend to the consideration of the government and to the people of Canada:

I say again, ladies and gentlemen, this is not a party question. I am not talking as a Conservative to Conservatives, but as a Canadian to Canadians. I say to the people of British Columbia that they should legitimately follow up their grievances and carry them to Ottawa.

We are here to-day, Mr. Speaker, the successors in public trust of Sir Richard McBride to "carry these grievances to Ottawa." Some of these grievances will be removed to a considerable extent if the report of Mr. Justice Martin is implemented in legislation.

I wish now to show the connecting events between 1907 and the present time. In 1913 the Borden government appointed the Lash-Bodwell commission to inquire into the claims of the province, but owing to the war that commission did not function. In 1918 an interprovincial conference was held, but the claims of British Columbia were not on the agenda. The Hon. Mr. Oliver and the Hon. Mr. Pattullo were present, but the conference dealt almost entirely with the question of the natural resources of the prairie provinces, and the claims of British Columbia did not receive consideration. During the four years following practically nothing was done. The Liberal party came into power in British Columbia in 1916. From then until 1922 scarcely any move was made with respect to this important question. In the session of this parliament, after a conference with my fellow-members, including the hon. member for Victoria (Mr. Tolmie), I presented to this house on the 22nd and 23rd of March, 1922, an historic review of the case for British Columbia with regard to its claim for better treatment, going very carefully into all the different features. We then urged upon the federal government that they should take some action, either by appointing a royal commission or by returning these lands to the province. However, no action was taken. Another four years passed by, and finally on January 26, 1926, after another conference with the hon. member for Victoria and my other fellow-members, I placed before the people in the press a proposal for the solution of this claim. I have not time to go into the details, but it involved the settlement of the Peace river district, the taking over of the government railways of Alberta and British Columbia, and a grant of lands to the railways to indemnify them against possible loss. The proposal also requested the Dominion government to consider the claim which British Columbia had for a return of the Dominion railway belt as well as the Peace river block and the making of the adjustments which we demanded. Again nothing was done, and on January 28, 1926, the hon. Mr. Oliver replied to my proposal and intimated that his government also was willing to take action in the matter. Then on February 3, 1926, the hon. member for Burrard (Mr. Clark) presented a formal motion for the return of the Dominion railway belt and the Peace river block. Still the government took no action. On February 6, 1926, in a prepared speech delivered in the city of Vancouver before the Canadian Club, the late Mr. Oliver for the first time, on behalf of his government, advocated and thereby accepted the policy for which the Conservative

party had been fighting for years, and stated his intention to press the case of British Columbia before the government at Ottawa. The matter was further discussed by myself in the house on February 19. Various newspaper reports and editorial comments followed, but nothing was done by either the federal government or the provincial government.

In November, 1926, a Conservative convention was held at Kamloops, and to its credit—and to the satisfaction of the people of British Columbia—this enthusiastic convention of 542 delegates unanimously offered the provincial leadership to our distinguished fellow-member for Victoria. As an act of service to the party and to the country he accepted the leadership, although it will involve the sacrifice of setting aside his opportunities in the parliament of Canada. Immediately thereafter the hon. gentleman, realizing the importance of the claims of British Columbia for better terms, placed on the order paper a formal resolution, not at that stage asking for a return of the Dominion railway land and the Peace river block and the other adjustments, but appreciating how complicated these questions were, he urged that a royal commission should be appointed with power to inquire into and report upon the claims of the province of British Columbia with respect to the Dominion railway belt, the Peace river block, Indian lands, annual subsidy and any other matters in dispute between the province and the Dominion of Canada. That resolution remained on the order paper for some months. On January 10, 1927, the late Mr. Oliver placed on the order paper of the provincial house a resolution formally declaring that his government would support vigorous action along constitutional lines for the purpose of securing for the province of British Columbia just and equitable treatment from the government of Canada. At that time the Minister of the Interior (Mr. Stewart) became interested, and a series of conferences took place between him and the hon. member for Victoria, myself, and other Conservative members. As a result the government agreed that if the hon. member for Victoria would drop his resolution they would appoint a royal commission. And here I want to commend the administration for the broad and equitable spirit in which they accepted the proposal of the hon. member for Victoria. They took action and on March 14 an order in council, No. P.C. 422 was passed appointing the hon. Mr. Justice Martin of Regina, a judge of the court of appeal of Saskatchewan, a commissioner to inquire into this question. His instructions were:

[Mr. Ladner.]

To receive and inquire into the arguments of the government of the province of British Columbia in support of its claim for the reconveyance to the province by the government of Canada of the land conveyed by the province to the Dominion pursuant to paragraph 11 of the terms of union, and such evidence as may be material to the consideration of such claim by the government of Canada, and to report his findings thereupon to your excellency in council.

Let me point out, Mr. Speaker, that the commissioner was very much circumscribed in his activities, unlike the maritime commission, which was instructed to inquire into any question in respect to which the maritime provinces felt they had a grievance. The commissioner had no authority to inquire into and did not deal with the question of the provincial subsidies nor the Esquimalt and Nanaimo railway land grant on Vancouver island, but he made certain findings, and I read the concluding words of his report:

The situation, in my opinion, requires that the subject be dealt with keeping in mind the broad principles of fairness and justice which should always characterize the dealings of Canada with her provinces. When, therefore, it appears that British Columbia has not only contributed, as part of Canada, its share of the cost of the undertaking, but has also conveyed to the Dominion, for the furtherance of the construction of the railway large tracts of land, and that no other province contributed lands for the purpose, justice requires that the province be placed in the same position as the other provinces with respect to a great national undertaking, and the lands conveyed to the Dominion for the purpose, namely, the railway belt and the Peace river block, restored to the province. Moreover, the province has now all the resources within its boundaries with the exception of these lands, and has the machinery necessary for their administration.

All the citizens of British Columbia appreciate the findings of the commission, but they would appreciate still more legislation from this government to carry into effect the recommendations of the commission. Let us consider for a moment the attitude which the two parties have taken respectively in regard to this question and the long and tedious fight that has been put up for better terms for that province. We find that at conventions of the Liberal party in British Columbia in 1915, 1920 and 1924 there was never any reference to the subject, either by resolution or declaration of a policy. No policy was adopted by that party. On the other hand, we find that from 1901 to 1927 the Conservative party has constantly and aggressively advocated the claims of British Columbia for better terms. I refer particularly to the convention of the Conservative party in British Columbia in 1907. In that year the first plank of the platform was:

The members of this convention desire to place themselves on record as emphatically

endorsing the course of the government of British Columbia in connection with the advocacy of better terms for this province. They hereby pledge themselves to strongly support the continuation of the struggle for better terms until brought to a successful issue, and the rights of the province fully secured.

Again in 1926, at the time the hon. member for Victoria was elected to the leadership of the Conservative party in that province, a series of resolutions were passed strongly advocating action endorsing the traditional policy of the party in connection with British Columbia's demand for better terms. I will not take time now to read these resolutions, which are to be found in the report. But immediately on the arrival of the hon. member for Victoria in Ottawa a resolution was placed on the order paper requesting the appointment of a commission, and to the credit of the government that commission was granted.

And now in closing may I ask the government not only that they carry out by legislation the finidings of this commission, but that they give consideration to the equally important question of subsidies to the province. I believe this question has been discussed at different interprovincial conferences, and I venture to think it will be discussed at the next interprovincial conference. So far, however, nothing has been gained, and British Columbia remains the most unfairly treated of the provinces. I would remind you again, Mr. Speaker, of the great concessions which have been given to the two older sister provinces of the Dominion, Ontario and Quebec. Ontario, to-day, is practically two and a half times the size of that province at the time of confederation, while Quebec has increased to nearly four times the size it was then, notwithstanding that no quid pro quo has ever been given to the federal government. The lands whereby these two provinces have been increased are lands in which every other province in the Dominion has a proprietary interest, and I remind the house that, from these great additions that have been given to the two provinces in question, enormous revenues from royalties on minerals and forests have accrued to the provincial treasuries. I think that hon. members and the government will realize the fairness and the equity of British Columbia's claim to better consideration when it comes to a readjustment of the question of subsidies.

Mr. K. A. BLATCHFORD (East Edmonton): I hesitate to make my first speech in the House of Commons and I trust that hon. members will bear with me under the circumstances. I have no set speech to deliver, nor have I prepared anything particularly; but I take it for granted that I was elected to come here and give to the house my opinion on questions as they appear to me. Naturally I shall spend most of my time discussing matters pertaining to western Canada. There are very few Liberals in the house from the west and I have been sometimes criticized for being absent on many occasions. Hon. members must bear in mind, however, that there are only two private Liberal members here from Alberta, British Columbia, the Yukon and the Northwest Territories, so that when anybody wants to write to a Liberal he usually writes either to the hon. member for Medicine Hat (Mr. Gershaw) or to myself.

I regret very much not having heard the speech delivered the other day by the hon. member for Vancouver North (Mr. McRae). From a reading of the hon. member's address as reported in the newspapers and in Hansard it appears to be a masterpiece; and on paper the scheme suggested by the hon. gentleman seems on the surface to be a fine business proposition. Of course, when one says "three hundred millions" rapidly it does not strike one as being so enormous a sum. But when you undertake to collect $300,000,000 from the people and the settlers of the country, I know one man at least who will object; and I know, besides, a lot of pioneer homesteaders in the west who will refuse to subscribe to such a proposition. I quite agree that the hon. member for Vancouver North could carry out such a project to a satisfactory conclusion; he is a big business man and has undertaken such schemes before. But I, like him, believe that the homestead law is the most obsolete, antiquated, old-fashioned piece of legislation on the statute books of Canada to-day. What do you suppose you have to do, under present regulations, to get 160 acres of land? You put up $10 with the government against that 160 acres, on which you must sleep six months of the year; and you must do this for three years. You sleep on it six months of the year for three years, break fifteen acres, put up a shack, eat flapjacks, and finally come out a blithering idiot. It is not life; it is worse. The poor bachelor who goes there returns broken-hearted and broken in health, and the man who would take a woman to such a place to live under the conditions that obtain is not a man. I went through the mill and I know; I bet my $10 against the 160 acres and I won. I did it to see whether it could be done. There are some homesteaders to-day who are prosperous men, who might say, "You do not know anything about farming now." Well, I may not know so much about it now, but I may say that I was born on a farm; I went to the west in a Red River cart, and I saw that country grow from a bald-headed

prairie to a place dotted with cities and towns, with ribbons of steel in every direction, and telephone and telegraph lines gradually going up everywhere. I know, therefore, what the early pioneer had to contend with in those days, and I can picture to myself very well what the pioneer in the Peace River district has to put up with when homesteading.

Now I will submit a proposition which, while some people may laugh at it, I believe can be worked out with careful consideration. Let me state it in a nutshell. Give any man or woman 160 acres of land on the strength of a guarantee to the government that they will break and fence 50 acres, build a house and barn according to plans and specifications laid down by the government, and at the end of three years secure clear title to the property. This is not impossible, because a man working for the railway or in a bank could stay on his job and have the work supervised by government managers of some description. At the end of three years he would have a farm worth not $1,500, the amount he would have to pay in improvements, but worth, if the country were settled, $5,000. Under present regulations however, a man wishing to acquire such a farm would have to quit his job and go on the farm, sleeping there, as I said before, for six months, so that when he came back he would find his job filled—in short, he would be fired. I think a scheme of that kind could be worked out to advantage; there are people in Ottawa to-day who would gladly invest in a savings bank proposition of that nature, because if there is anything a person likes to talk about it is owning a piece of land, a ranch or a farm.

With reference to the $300,000,000 which the hon. member for North Vancouver proposes to gather in taxes, that could be used to good advantage if it were necessary—and it is necessary to a great extent—in building railways to the coast; to build an outlet; in building branch lines, which are badly needed; in building terminal elevators in the interior, of the Peace river country as well as on the Pacific coast. To-day farmers are hauling their grain from fifty to one hundred miles in four-horse sleighs to Spirit River, Grande Prairie and Peace River at a cost of 35 to 50 cents per bushel. I will ask the hon. member for Peace River (Mr. Kennedy) if this is not so. When the farmers arrive at the rail head the elevators are very often blocked; they have no place for their grain, and the grain buyers have control of the situation so far as grades and prices are concerned. Terminals should be built in the interior where they have limited elevator space, and on the Peace river, a big, navigable stream; coal bunkers should be built on the Pacific coast for Alberta coal—the greatest coal fields in existence.

In addition to that, a great deal of this money could be used in assisting immigration into western Canada. We now assist immigrants from Great Britain, why should we not assist our own Canadians first, along with those who have gone to the United States? They are the cream of the earth, as we all know; they have gone to the United States during hard times but they are anxious to come back and would be glad to do so if they had a little assistance and a farm ready for them to work on. If an immigrant comes to this country with $500 or $1,000, he has enough capital to buy a team of horses, a plough and a wagon; he can go to work and get his crop off the first year, and fifty acres will support him if he is not too extravagant. I believe something should be done to bring back the Canadians who have gone to the United States; our own native sons should be assisted first, and then we should go to foreign fields. I do not think we should go abroad and spend a great deal of money in immigration when we have people here in Canada only waiting for a chance to go on the farms; they usually make good farmers.

I would go even further than the hon. member for North Vancouver has gone in opening up the west and the northwest. I have talked it over with the Minister of the Interior (Mr. Stewart), and I suggest that the doors of the Northwest Territories be opened wide, and that persons interested in mineral development be allowed to enter that country and survey it thoroughly. I would suggest also that the country be checker-boarded as is done for homesteading; that 5,000 square miles be set aside for any man or group of men who will put up a $50,000 bond with the government and guarantee to spend $50,000 within three years. That man naturally would need a hydroplane with which to take his prospectors into the country; the day of the prospector with pick and shovel and grubstake on his back has gone. I worked in the Kootenay country in the early days when the prospectors who went into those hills were young fellows, but to-day they are all old men; the young chaps do not follow the former system. With the checker-board idea of developing the Northwest Territories, which no doubt is the best mineral belt in the world, every man or company taking over 5,000 square miles of land would need a hydroplane with which to transport his prospectors and his grubstakes, and the work

would have to be done in the summer time. The prospector staking a claim would have an interest of 10 per cent in any mineral wealth discovered, which would give him some protection. It would not be fair to a company to spend money exploring the wilderness only to have some of his employees take the best mine and leave him high and dry. I am quite sure that if the Minister of the Interior will agree to a proposition along this line which has been already submitted to him the result will be the opening up of the Northwest Territories in ten or fifteen years instead of the one hundred years it will take under present conditions. I am sure parties could be sent in from Hudson bay to work west, and I have a guarantee from a firm worth millions of dollars, that they will put in other parties from the head of Slave lake and Bear lake to work east. As conditions are at present, even if a man discovers a mine it is no good to him out there in the great open spaces where only Eskimos live. You have to discover many mines, and if a high pressure survey were made you might discover sufficient mineral wealth to justify the construction of a railway from Nelson through to the head of Bear lake or Slave lake, where you have water transportation to the outside world. I feel inclined to submit such a proposition to the government and to ask them to give it some consideration. Personally I would support it, and if it were worked out in detail I think every member in the house would be in favour of it.

The oil regulations should be treated in the same way, because there is no doubt that Alberta has great oil resources. At the present time there is an oil well 1,500 miles north of Edmonton, or the same distance north of Edmonton that San Francisco is south of that city. This oil well was discovered quite a number of years ago, but it has been capped ever since because there is no way of using the oil and no way of getting it out to market. The oil regulations are so tied up with red tape that the big companies refuse to go into the Alberta field, and I would suggest that those companies be allowed certain territories in which they would agree to place a deep-drilling rig to test the area getting protection for a period of six months, so that gamblers could not jump in and stake leases next to the well. You must protect capital to a certain extent; while I do not believe in too much protection we must have fair play, and I am sure all these problems could be worked out in a way which would tend to the early development of the mineral and oil resources of the northwest.

Now, I would like to say just a word with regard to coal rates. I have been pleading with the government for reduced rates for a number of years and I was surprised to hear some of the members on my own side oppose the establishment of a rate from Alberta to Ontario. My good friend from Moose Jaw (Mr. Ross) had the nerve to get up and object to any rate being put into effect while he was sitting in this house. When the Hudson Bay vote came before the house last year it was supported by the Alberta members, although we do not expect to derive a great deal of benefit from the completion of that railway; some day it may be used for shipping cattle, but I am afraid it will not carry a great deal of our grain. At any rate we supported that vote, but now the hon. member for Moose Jaw objects to any rate on coal being established. The hon. member for Comox-Alberni (Mr. Neill) also objected. Can you imagine a man living on Vancouver island objecting to a coal rate being established east of the Rocky mountains? Our mines produce coal equal in quality to any you will find on the Pacific coast within 500 or 600 miles of British Columbia; we have never tried to invade that market because we were trying to enter Ontario first, which would naturally relieve the pressure so far as the coast market on the coast is concerned. The hon. member for Comox-Alberni, however, says, "No, no coal rate for Alberta coal to eastern Canada". I will tell him now, in the king's English, that so far as I am concerned, and speaking for the operators in Alberta, we are going into the British Columbia market whether he likes it or not, if we do not get into the Ontario market. We are making application to the railway board, but we have refrained from proceeding any further because you cannot ride two horses at once, and we thought we would ride into Ontario first.

Mr. NEILL: And then you will invade the other field.

Mr. BLATCHFORD: Certainly.

Mr. NEILL: That is just what I object to.

Mr. BLATCHFORD: We are going into that field anyway.

Now I would like to say a word or two with regard to immigration. I think the Minister of Immigration (Mr. Forke) has a big job to handle, and in my opinion he is handling it pretty well. Everybody is trying to advise the minister. Everybody has a friend he wants to bring into the country, and the minister is worried to death at all times.

I repeat that I think he is making a very good job in handling the situation under the present circumstances. According to railway figures we have a great field to populate with people that want to go on the land. It is a well known economic railroad law that it is not possible for railroads to be remunerative unless the population per mile of railway is 400 or over. In Great Britain the population per mile of railway is something like 2,000, but of course the conditions over there are entirely different from what they are here. Conditions in Australia and the United States, especially the latter, are similar to those in Canada. As far as population is concerned, Australia is in a somewhat similar position to Canada, as Australia's population per mile of railway is 250. Canada's is about 225 or 226, while the United States has 250 per mile. Of course in the eastern section of Canada the population per mile of railway is satisfactory, but, taking the country as a whole it amounts to only 225 or 226. While in some parts of the east there are more than 400 people per mile, yet in the west and other outlying districts there are not more than 126, and in some sections even less. It is recognized that each settler, once he is permanently located, is worth from $500 to $700 per year to the railroad. England has a population of about 700 per square mile, Scotland 160, France 187, Belguim 658, Germany 348, Denmark 220, and other European countries in proportion. Of course, in those countries the population is so great that they are not able to produce sufficient to feed the people and importation is necessary. The United States, however, which is quite able to produce sufficient for its own requirements, and even more, has 35 people per square mile. There is a vast difference between the density of population in Europe and in the United States. We all admit that if the United States is able to provide for the requirements of 35 people per square mile, Canada should be able to do the same. The population of Canada per square mile is less than three people—not crowded, you will admit. As Canada is larger in area than the United States, if we had the same number of people per square mile, namely, 35, Canada would have a population of 126,000,000 people. Now I feel like using the words uttered by the Speaker when he finishes prayer every day in this house. I feel like saying "Let the doors be opened." Let the capital flow into the country, bring in immigration, open up the mineral regions in the Northwest Territories, and then Canada will be placed on the map as a country in the eyes of the other nations of the world.

At six o'clock the house took recess.

[Mr. Blatchford.]

After Recess

The house resumed at eight o'clock.

Mr. O. B. PRICE (Westmorland): Mr. Speaker, before offering any comment on the budget as presented by the Minister of Finance (Mr. Robb), I should like to make a few observations in regard to the remarks made by the Minister of Railways and Canals (Mr. Dunning) a few days ago concerning the gateways at Ste. Rosalie and St. John, with which he coupled the party to which I belong, the Conservative party, and as regards which he left with the house the impression that we, as supporters of his majesty's loyal opposition, were opposed to the closing of those gateways. I can speak only for myself, but I may say that the people of the maritime provinces have always had a deep appreciation for the Minister of Railways, particularly since he has pointed out what the aims of the people of the maritime provinces have been in the past and now that he has told us what they will be in the future. The minister observed when he first came to this house, or possibly before he had taken his seat, that the people of the maritime provinces had three things in view: to be born in the maritime provinces, a free ride on the Intercolonial railway, and to die in the maritime provinces. I am sure that those kind remarks of the minister will not be forgotten in the very near future, and we thank him sincerely for his observations.

Mr. DUNNING: I suppose it is unnecessary for me to deny that again.

Mr. PRICE: With regard to those gateways which existed in years gone by, for reasons which have already been pointed out by the minister, I might say that the amalgamation under the direction of the Right Hon. Arthur Meighen, of these railways as the Canadian National system under the management of Mr. D. B. Hanna had taken such form, and the mileage of these railways and the vast territory which they served, made the national railways of such dimensions, that it was not necessary perhaps further to continue the gateways. I have been against the opening of these gateways. I believe the Intercolonial, which is a portion of the Canadian National railways, is entitled to every bit of business it can get. It is the people's railway and we wish to see the people's railway flourish. I believe it will flourish in the future, although it has not done so in the past.

I wish also to make some observations with regard to the present direction of that railway or the policies which are being carried

out. The management have made a good start, but a little more activity on the part of the men connected with the industrial and colonization departments would do much to bring about better conditions and make the branch lines better feeders than they are to-day. There is not sufficient co-operation between the farmers of this country and the railway officials. It is true that in the past very little attention has been paid to the farmers, but I believe the railway officials should become acquainted with them. They should go into the country districts and assist them in the difficulties with which they are contending at the present time. Better co-operation would exist and better results would obtain if that relationship were promoted a little further and more activity shown along those lines. I am sure there are hon. members on both sides of the house who realize that in their constituencies there are matters with regard to railway sidings, loading platforms, and so on, where if a little more elasticity were shown and a little more consideration given to the people who are endeavouring to patronize the railway as best they can, the result would be very much in the interests of the country and the railway.

I have in mind at the present time an instance in my constituency at a small place called Fawcett Hill, on a branch of the Canadian National. At that place there has been built by a creamery company a small storage plant, a cement block building, which is really a credit to the locality. These people have endeavoured from time to time to have a loading platform built, and while there are, as we all know, rules and regulations governing the erection of platforms, the placing of sidings or whatever other construction may be in the interests of the people and for their service, at the same time the railway might afford these people a better opportunity of loading their freight. During the past few months they have not had an opportunity of placing their freight on the railway owing to the fact that this loading platform has not been constructed. There is another reason why they have not been able to give the railway any business. They are willing to go to almost any length to get a market for their produce. This creamery company have had in storage for the last three months creamery butter which they are unable to unload owing to the fact that at Halifax, where they usually sell their butter to wholesalers, they have had to compete with butter from New Zealand. In this connection these people have been handicapped both through lack of facilities and through a lack of market due to the policy of the present Minister of Agriculture (Mr. Motherwell). I do not know just how the minister feels about the matter, but he certainly cannot be very much elated over the fact that these people have been seeking a market and cannot get one. This does not stand to the credit of the minister, and he should make some provision whereby these people will get relief.

Let me read this resolution passed by the farmers of my district in connection with this matter of butter:

> Resolved, that the New Brunswick Farmers' and Dairymen's Association endorse the resolution passed unanimously by the New Brunswick Dairymen United on January 9, 1926, asking the Canadian government to restore the customs duty on butter entering Canada from Australia as it was previous to the Australian trade treaty agreement effective October 1, 1925, and order in council allowing the New Zealand butter and cheese the same privilege.
>
> Further resolved, that the dumping clause be immediately applied on all butter coming in from Australia and New Zealand, whether on direct sales or on consignment.

At the annual meeting of the Farmers' and Dairymen's Association held in Moncton, March 3, 1928, the following resolution was adopted:

> That in the opinion of this assembly the sale of the New Zealand and Australian butter competing with our farmers is disastrous to the best interest not only of the farming avocation of this province, but to the best interest of Canada as well.
>
> JOHN E. WOOD,
> Chairman,
> R. R. No. 2 Moncton.
>
> FERDINAND E. BOURGEOIS,
> Secretary,
> St. Anselme, N.B.

There is another matter with regard to the importation of New Zealand butter. I do not know whether it is correct or not, but the statement has been made that preservatives are allowed to be put in this imported butter. That is not permitted in Canada.

This afternoon the Minister of Agriculture made an attack upon the Conservative party for permitting the importation and manufacture of oleomargarine in Canada. I do not think the minister's remarks were becoming to a man holding the position he does. The use of oleomargarine was permitted as a war measure on account of the shortage of fats. The Canadian and British troups used oleomargarine solely because butter was not obtainable. Oleomargarine was later voted out of this country in the House of Commons here, and that settled it so far as the Conservative party is concerned. Oleomargarine is not butter, but it was a good substitute for the man who was not able to buy butter at

a high price, and the right to buy it is granted in every country in the world except Canada. On the other hand, the competition with New Zealand and Australian butter is a great menace to the dairy trade of this country, particularly because grass butter, which has always a better flavour, is brought into competition with our own winter products. It is packed and sold by experts in the business, and while in one year the consumption of oleo fell from fourteen million pounds to two and three quarter million pounds as butter became cheaper, the importation of Australian and New Zealand butter is vastly increasing in volume, and is proving a real menace at only one cent per pound protection.

The Minister of Agriculture, however, told us nothing about his famous rancid butter bill, which he introduced on May 7, 1923, and in which he proposed that butter in all stages of putridity should be allowed to be taken into establishments where it would be thoroughly laundered. The process which was proposed was to melt it by heating, skim off what filth they could, wash it several times with clean water, churn it with milk to give it the lactic acid flavour which all butter possesses, colour it to make it look like butter, granulate it by spraying it with cold water when hot, so that it would have the butter fracture; then cut it into blocks and sell it for butter.

Mr. MOTHERWELL: You should have had that typewritten. You could read it better than the handwriting of the hon. member for Victoria.

Mr. TOLMIE: You cannot show my handwriting on that.

Mr. PRICE: The peculiarity about this rancid butter was that the worse it smelled, the cheaper you could buy it. But in the process of putrefaction which it had gone through, the fat cells would be broken down and its keeping qualities impaired. Note what injury this would be to our export butter trade in the event of this butter being mixed with some other butter and sold for export. While the minister makes a great row and treats us to some of his farm yard buffoonery this afternoon, he says nothing about his famous stinking butter bill, which gave him a reputation much like the proposed process butter from one end of Canada to the other.

The hon. Minister of Railways, speaking in the House of Commons, on February 29th, referred to a committee of the United States senate and quoted from their report as to conditions existing in the Pennsylvania coal belt, which he described as a "blot upon American civilization". The report states:

> The committee found men, women and children living in hovels, which are more unsanitary than modern swine pens—they are breeding places for sickness and crime.

The minister went on to point out the industrial depression in the United States. I would warn the minister that his remarks concerning that country may not meet with the approval of his leader, whose friendliness to the country to the south of us is well-known. He may consider it dangerous to utter such statements as they may lead up to the severance of diplomatic relations. But of course we have our minister plenipotentiary at Washington, whose services could be requisitioned. I would suggest that the Minister of Railways keep tab on the situation, note whether the government of the United States can devise any means for overcoming those conditions, and report back to the house.

We all know what has occurred in Canada as a result of tinkering with the tariff in the last few years by the present government. The Minister of Railways has spoken of conditions in the United States. I wonder if he would care to hear something about the conditions in Canada, which apparently he has not heard of. I quote from the Canadian Congress Journal:

> The city of Vancouver has warned workers against going there and has found it necessary to undertake numerous relief works. Winnipeg reports practically 80 per cent of building trade employees out of work, with many others who have crowded in from the western farms totally unprovided for. Toronto reports the greatest list of unemployed registered at the employment service offices for many years past and attributes this to workers being attracted to that city by false reports of a building boom. The Ottawa press comments upon the significance of nearly a thousand workers being on hand at a few hours notice seeking to earn a little money by a removal of snow after a recent severe storm and states that this shows conclusively the existence of severe unemployment in that city. Montreal federated charities report their services overtaxed and find themselves unable to cope with the destitution in that city caused by continuous unemployment. Again, thousands of miners in Nova Scotia are being forced to look to their unions and the public for relief and at the time of writing both the federal and provincial governments are being urged by the municipalities in that district to take immediate action to relieve the situation; and so on throughout the country.

But I presume, Mr. Speaker, you might as well appeal to a Japanese wayside idol as to this government.

The woollen industry has been very fully discussed by hon. members who are thoroughly familiar with it, and they have referred to the fact that many factories have had to

close down since this administration began to tinker with the tariff. Every hon. member opposite knows this pretty well. But the government will not alter its course except temporarily in order to retain the support of certain hon. members. An appeal was made to the Minister of Finance on behalf of the Consumers' Cordage Company of Dartmouth, pointing out the dire need for tariff relief by way of a very moderate duty on half inch rope and under. The reply was that it would be turning a complete somersault to adjust the tariff to the extent requested.

I shall not attempt to enumerate all the factories that have suffered as a result of the tariff tinkering of this government; for it would take several hours to do so, but I may mention a few for the information of the house that have closed down: Canadian Western Woollen Mills, Vancouver, closed in 1926; Renfrew Woollen Mills, Renfrew, in 1927; the Gulf Textiles Ltd., Isle Verte, Quebec, in 1924; Amherst Woollen Mills, Amherst, N.S., in 1923; Ernestown Woollen Mills, Odessa, Ontario, in 1927; Hawthorne Mills Ltd., Carleton Place, Ontario, in 1927; Pembroke Woollen Co., Pembroke, Ontario, in 1925; T. H. Taylor & Co., Chatham, Ontario, in 1925; Harris & Co., Rockwood, Ontario, in 1925.

Mr. POULIOT: May I ask the hon. gentleman a question?

Mr. PRICE: Boyd, Caldwell & Co., Appleton, Ontario, closed down in 1925; Boyd, Caldwell & Co., Lanark, Ontario, in 1925 also; Randle Bros., Meaford, Ontario, in 1924; Shawville Woollen Mills, Shawville, Quebec, in 1926; Harrison Bros., Owen Sound, Ontario. also in 1926; Collies Ltd., Kingston, Ontario, in 1924; Albert E. Morrison, Brownsburg, Quebec, in 1927; Clarke Blanket Co., Dundas, Ontario, in 1926; Philip Dontigney, Arnprior, Ontario, in 1927; O'Hare & Sons, Midland, Ontario; Baltimore Woollen Mills, Baltimore, Ontario; Madoc Woollen Mills, Madoc, Ontario, in 1927. There are also woollen cloth mills operating about half of their spinning and weaving machinery in Perth, Toronto, Campbellford, Almonte, Cape St. Ignace, Simcoe, Brantford, Paris, Wellesley, Way's Mills, Oxford, Moncton, St. Croix, Bracebridge, Preston, Warwick, Merrickville, Lindsay, Dundas, Barrington, Chicoutimi, Glen Williams, Sherbrooke, Water's Falls, Elmira, Upper Stewiacke, Benmiller, Athens, Chesley, Trenholm, Renfrew and Joliette. Many of these are operating at a loss. For instance, the Humphrey Woollen Mills at Moncton have been running at a loss ever since the government started tinkering with the tariff.

Mr. POULIOT: May I say a word?

Mr. SPEAKER: Order.

Mr. PRICE: The proprietor has kept his mill running to give the people employment, but this has been possible only by reducing the number of working hours, with of course a consequent reduction in the wages earned. Several other institutions have had to adopt a similar course as a result of the serious tariff tinkering since this administration has been in office. I wonder, sir, if the government pay any attention to the closing down of these factories. What investigation is made as to their failure? Is a record kept of the Canadian employees who find it necessary owing to the closing of our factories to cross the border to the United States? Not one factory should close without an investigation being made and a remedy, if possible, applied to bring about its reopening. If the government would care to accept a suggestion, I would propose that they take this course. I think it is due the people of Canada that we should seek to utilize the skilled labourers whom we train; employment should be provided for them in their native country. On many occasions mothers and fathers come to me imploring me to find employment for their sons and daughters. These young people have been educated in our institutions, and we have some very excellent ones in my constituency—Mount Allison university and the university of St. Joseph. Mechanics who have served their time in the Canadian National railway shops at Moncton are forced to seek a livelihood to the south. The best that the Canadian National Railways can do for them under the condition brought about by this tariff tinkering is to furnish those young men, after they complete their apprenticeship as machinists, painters, boilermakers, carpenters, and so forth, with a pass to the boundary line. Under the Liberal-Conservative administration which preceded this government 90 per cent of those young men were taken care of in the Moncton shops. The payroll at that time was far and away above the payroll which now obtains both in the general offices and in the shops at Moncton. To-day we have thousands of dollars' worth worth of machinery idle in a city where the best railway cars in the country can be manufactured. I notice the hon. Minister of Railways (Mr. Dunning) smiles. Apparently he does not see the serious side of this state of affairs, but I really think, sir, that the hon. minister is suffering from a contraction of the muscles about the oral cavity. For the sake of his health I would recommend that some medical friend on his own side take

him in hand; but if there is no one available among his colleagues, I would remind him that we have an ample supply of medical gentlemen on this side of the house.

The people to whom I have referred, Mr. Speaker, would like to be employed in their own country, they would like to remain at home. There is one thing that will enable them to do this—the protection of our factories in the same way as their competitors are protected in the United States. That is what our industries are suffering from to-day, lack of protection. An example of how thoroughly the government of the United States protects its industries was cited by an hon. member on this side of the house a few days ago. He told the house how a shipment of Canadian materials was held in bond in the United States until the duty had been raised to such a point that the Canadian manufacturer had to take back the shipment, the price under the higher duty being prohibitive to his customer. Let me give the house a quotation from Toronto Saturday Night of November 14, 1925. This is not up to date, but it will give hon. members some idea of the procedure followed by the United States authorities in preserving their home market for their own manufacturers. I could give other citations, but I do not desire to detain the house. This is from the columns of Saturday Night:

> For instance, a Canadian house manufacturing Christmas cards had managed to pick up quite a trade south of the international boundary under a duty of fifteen per cent. However, this was not for long, as keen United States business men in the same line of trade called the attention of the proper official to the situation and instantly the import duty into the United States was raised to forty-five per cent and the Canadian manufacturer found himself out in the cold.
>
> Stapells-Fletcher, Limited, are Canadian manufacturers of ladies' dresses. An enterprising salesman while calling on the Windsor, Ont., trade resolved to venture into Detroit with the idea that perhaps he might land an order, even if the duty against him was fifty per cent. He did and came back jubilant. The gowns were shipped to Detroit, but alas they never got any farther than the customs house, for there the shipment was met by a special appraiser who instantly jumped the duty from fifty to ninety per cent, and the order in due course found its way back into the warehouse of the Canadian manufacturer.
>
> To quote one more instance, though no doubt firms by the dozen have had a similar experience. A. T. Reid & Co. manufacture neckware and dress accessories. Orders were taken in United States under the fifty per cent duty then ruling. But upon making delivery it was found that it had been suddenly raised to ninety per cent thus shutting them out of the market.
>
> Of course we have no right to complain over what Uncle Sam does with his tariff. That is solely his own business. However we may, I think, legitimately take issue with the manner in which we freely import like goods from the United States. For instance, in the fiscal year 1924 Uncle Sam sent us in cotton, silk and woollen clothing, designed for women and children, goods to the value of $4,318,000. Just the sort of things that our Canadian manufacturers were trying to sell in the United States. In the fiscal year 1925 the importation of a like class of clothing from the United States amounted to $4,069,000. Of course these figures take no account of smuggled goods of like character that have been pouring into this country.
>
> Under the circumstances it seems to me that in justice to our own people, and in view of the action of the United States customs department which makes it quite impossible for Canadian manufacturing concerns to invade the United States trade, our citizen workmen are entitled to the home market.

As against that policy pursued in the United States, their promptness of action and their desire to throw a protecting arm around their industries in order to keep them going and to retain their own labourers at home, giving employment to all their mechanics, what condition do we find in Nova Scotia, for example? There is the concern which I mentioned a few minutes ago, the Consumers' Cordage Company of Dartmouth, Nova Scotia, which is a subsidiary of a Montreal house. This company has been operating there for some years and employs about 200 workmen, a great many of them skilled mechanics. A request has been made of this administration for some protection on half inch rope—

Mr. RALSTON: May I ask the hon. gentleman a question?

Mr. PRICE: I will not be interrupted.

Mr. RALSTON: Is the hon. member in favour of a duty on fishermen's rope?

Mr. PRICE: Has the matter been adjusted? Have they been given protection?

Mr. RALSTON: I am simply asking whether the hon. member is in favour of imposing a duty on fishermen's rope.

Mr. PRICE: My time is going and I must proceed. In this case some protection might have proved beneficial, but so far as I know nothing has been done to alleviate the condition. Industrial expansion of any appreciative character will never materialise under the policy pursued by this government. It is a policy which is not in harmony with development; it is a "leave it to George" policy. It is disinterested.

In my opinion the government has been riding two horses, and those whom hon. gentlemen opposite have thought to be asleep are finding them out. I recall only a session or two ago when the lobbies were filled with members from the front benches of the present

administration all endeavouring to induce hon. gentlemen who sit in the far corner of the house to co-operate with them; but now that the government has secured a majority in the house over all its attitude is somewhat different and there is a tearing-away, a breach with these hon. gentlemen, which it will not be very easy for my hon. friends opposite to fix up. This government, I say, is riding for a fall; its day is coming. The government has called itself the "full dinner pail" party, and hon. members of that party appeal to the masses on that slogan. I know this for a fact because the appeal has been made time and again in my district: "We are the full dinner pail party". This is their advertisement on the billboards. But the remarkable thing about this "full dinner pail" party is that they always wait for some relief committee to fill the pail. They claim to be with the masses but they are not following the masses that are going across the line into the United States at the present time.

Now I want to say a few words with regard to the oil and gas industry.

Some hon. MEMBERS: Oh, oh.

Mr. PRICE: Hon. gentlemen opposite are laughing; I hope they are enjoying themselves, because what I have given them is certainly quite interesting and I have no doubt they will profit by it. While the proposed drawback of 50 per cent on seamless casing will bring a little relief to those oil companies using such material, no provision is made for an additional drawback on lap-welded casing, which is of a standard used but not manufactured in Canada and which I submit should be admitted duty free. Where certain materials are required for the development of our natural resources, in any case where that machinery is not manufactured in the Dominion and is needed for the rapid development of industry, I am of the opinion that we should admit these materials into the country free of duty. I do not think that there should be any discrimination as between one concern and another. It is not necessary for the shale oil people to dig down thousands of feet into the earth in order to ascertain the nature of the material that lies there and to discover whether or not it will give certain desired results. They import their machinery after determining the quality of their material. They have their material right at hand on the surface and by analysis are enabled to tell whether the oil is of a paying quality or not and whether it exists in commercial quantity in the shale. On the other hand, the oil fields operator has to import drilling machinery to explore and discover his oil or gas, doing so at an enormous expense and risk without any assurance of a return. And he pays a duty on all machinery used. Why should there be this discrimination? If machinery for obtaining by-products from shale enters the country duty free, I think the machinery for refining native crude oil should also enter free. We should give every opportunity to British capital to invest in industry here. British capital is only awaiting the opportunity if conditions are made equitable. If they are given a fifty-fifty deal they will come and spend their money in Canada. Near my constituency, across the river, the Acadia Syndicate Company of London, England, has spent millions of dollars, all British capital, in the development of oil and gas. The company requires special machinery in this country for the refining of oil and for the securing of by-products from the oil wells. We have self-pumping oil wells which are capable of producing some of the finest lubricating oils, kerosene, gasolene and other lubricants to be found anywhere in the world. In my opinion every opportunity should be afforded these people to expand, seeing that they are willing to spend money, and that they have endeavoured to test the different manufacturing materials in Canada in the way of casing, and so forth, entering into the development of these natural products of ours. They have tried the supplies of the manufacturers in Canada but some of these materials are not satisfactory for the operation of the wells. Therefore I believe the government would be well advised to allow these tools and drills which are necessary in the development of our natural resources to be brought in free of duty. The New Brunswick Gas and Oil Fields Limited have spent enormous sums of money in the discovery of oil and gas, and they have had to pay a high duty on material not actually made in Canada in order to exploit those fields. In addition, if this company desire to do their own refining and obtain the by-products, again they have to pay a high duty on refining machinery not made in Canada. The federal government should allow all machinery used in connection with exploratory work for oil to come in duty free. This would be a welcome encouragement to those engaged in the search for oil, and in a measure would help make up for the withdrawal of the bounty previously paid by the federal government on all oil produced. There is no doubt that in the future oil will become one of Canada's greatest assets, and it is my opinion that everything should be done to encourage the development of our oil fields, in order that wealth from that source may be

quickly obtained. Every assistance should be rendered to encourage the construction of refineries for the purpose of refining our own oil, with a view to making Canada independent of all other countries in that respect.

Before closing, sir, since I believe I have a few moments left, I should like to say a word in regard to the sales tax. Every head line reader throughout the country has seen this featured as a twenty-five per cent reduction, while as a matter of fact the reduction amounts only to one per cent. That means that on every $100 worth of material such as clothing and boots and shoes purchased by the man earning perhaps 30 cents an hour, he has to pay $3 through this tax. It has been stated time and again that this administration have reduced the sales tax, but we all know the history of that legislation. They wrung their hands and shouted "murder" when the sales tax was fixed at 3 per cent, but as soon as they came into power they raised it first to 4 per cent, then to 5 per cent and finally to 6 per cent. Now it is back to 3 per cent, and they claim credit for having reduced it.

Mr. LOUIS M. AUGER (Prescott) (Translation): Mr. Speaker, it affords me much pleasure to convey, in my mother tongue, to the hon. Minister of Finance (Mr. Robb) my very sincere congratulations on his budget proposals. It is but proper that a French voice from Ontario should join in the chorus of praises which arise all over Canada to celebrate the present administration, in order to show that the French element of this country, wherever it is found, can appreciate and support their truly national policy. The people of the riding which I have the honour to represent, rejoice in seeing the budget balance of $54,000,000, the decrease of $41,000,000 in the national debt and a reduction of about $19,000,000 in taxation.

Canada's prosperity is so obvious that even our opponents do not try to deny it. They will contend, however, that it must be attributed to Providence rather than to the wisdom of the government, or again they will contend that this prosperity is not enjoyed by all classes and localities. Mr. Speaker, since everybody acknowledges the very notable improvement in our economic situation since 1921, there is no need of discussing it, but when it is a case of pointing out the cause, I differ in opinion with the loyal opposition.

Our Conservative friends forget that the most important factor of any prosperity, is the power of human energy which, after all, is the efficient cause of all production. To increase its value by stimulating its courage and enthusiasm, is so to speak increasing its efficiency. I am happy to state that our government has thoroughly understood its duty and that not only has it soundly administered the affairs of the state, but moreover it has made it a point to encourage the people in their various activities, by giving proof of a national spirit, truly comforting and of a nature to inspire confidence and enthusiasm. Is it a question of internal problems, it kindly takes into consideration the grievances of each, grants what is just, stops dissensions, and restores union and harmony. Abroad, it asserts that Canada is a nation, it shows it in a better light, more beautiful, more united, stronger and freer, by making her take in modern civilization a part worthy of the highest aspirations. By concessions to the west and the maritime provinces, it has strengthened the ties of confederation; by its attitude at the imperial conference, it has increased our constitutional liberties; by the appointment of ambassadors at Washington, Paris, Tokyo, and by the election of Canada to the council of the League of Nations, it has established that equality of status with England herself was not vain words, but that we were at last the absolute masters of our destinies. Then, the celebration of the sixtieth anniversary of confederation, stately and glorified by the presence of princes and illustrious guests, flattered the fancy of the people, and added to other events, convinced us that men truly patriotic were guiding the country's destinies.

In spite of what has been said in the house by members of the Conservative party, beginnig with their leader, the people have acknowledged that Canada has moved forward with gigantic strides towards her high destinies as a nation. They understand that what is left of the colonial laws is of a nature to preserve the British spirit in our legislation, but in no way can it possibly influence them in their actions to promote or protect their own interests. Their beautiful Canada, for which they make so many sacrifices and express so many ardent wishes of felicity and grandeur, their beautiful country with its healthy climate and commensurable natural resources, sung by the poets and splendidly described in the speeches of the hon. leader of the opposition previous to this session; their beautiful country, I say, does no more appear to them as a subordinate part of another country. It is a free country which courageously takes its place at the great council of nations, and as step by step it moves forward, it is actuated by a sense of pride, courage, and manhood. They are proud of belonging to that nation which makes itself respected and known everywhere, and which, for the last five years has

gained more prestige than any other nation of the world. They feel in their veins flowing the proud blood of a free, prosperous and happy nation.

I know that it is impossible to appreciate exactly at its just value, what is worth to the country the true Canadian spirit which animates the government. However, statistics tell us that crops have been more abundant and our production has increased, as well as our trade with other nations. Everything points out that the Canadian has toiled more and better.

Hence, the prosperity we enjoy; however, one must be most unfair not to acknowledge the government's co-operation, and the hon. member for Fort William (Mr. Manion), in vain may hold contrary views, he will not succeed in rousing the people, by persisting in closing his eyes to light. No doubt, Providence was kind to us and we are glad to acknowledge it, for it is a further guarantee that the destinies of the nation are in good hands. It is a comfort to us to know that our opponents deny us their co-operation and advice. At least Providence seconds our efforts, and as long as it is with us, we can well dispense with their co-operation. But if Providence is with us, who can be with our opponents? Whence comes this unfair and pessimistic criticism? Does the soul of their late leader whine in their sonorous trumpets? Or is it perchance Pluto himself? Why this sad note trumpetted both in this country and abroad, representing Canada like a vast cemetery, where are buried deep the nation's hopes? Why sow despondency and fear? Do they realize the harm done to their country? If mistakes have been made in the administration, why magnify them and then show them up as serious and difficult problems to solve? Are they not aware that all is not perfect in this world but subject to improvement. No government would care to boast of enacting perfect legislation, but it gives proof of a rare gift when it states and invites, like the Prime Minister did in his speech on the address, any suggestion which, by amendments, would improve this legislation.

One can criticize without debasing the character of our public men, without decreasing their prestige and that of the country without preaching (défaitisme) "defeatism".

If some of our laws are defective, let us revise them and let us comfort the people by showing them the benefits of the amended legislation. It is this enlightened, broad and constructive criticism which has placed the Prime Minister in the position he so well fills to-day. As long as our opponents will not endeavour to emulate his example, the people will keep them away from power, as factors of misery and despondency.

The government has always aimed at stimulating enthusiasm and to-day it reaps the benefits: a production per capita which surpasses that of all other countries, the largest trade per capita in the whole world and sufficient revenues to meet all the needs of the administration, and to make allowance for reduction in taxation and decrease in the national debt.

Does this mean that the government has complied with all demands? We cannot satisfy everybody at the same time and our opponents should not forget that it is easier to destroy than to construct. In fact, it is moving slowly but surely and if one considers the difficulties it had to meet: a country divided and discouraged by the phantom of ruin, an unceasing obstruction by the senate and the opposition, when one considers these circumstances, one must admit that a gigantic task has been accomplished. It has restored confidence to all citizens, whether English, Scotch, Irish or French, it has given them a taste of the joys which union brings. It has killed (défaitisme) "defeatism", it has made a Canada united and powerful in its freedom, happiness and prosperity.

Mr. LAPOINTE (Translation): Hear, hear!

Mr. AUGER (Translation): The effects of the budget proposals will further activate the agricultural industries of this country. Any decrease in taxation, whether it be excise, customs, income or sales tax, must benefit all classes, but especially the poor and labouring classes.

Some MEMBERS (Translation): Hear, hear!

Mr. AUGER (Translation): Mr. Speaker I wish to join with those who have requested the government to take a greater interest in the humbler classes of this country, in the farmer and workmen. The Canadian farmer and workman are at the base of our prosperity and they deserve our utmost consideration, because the most appreciable wealth of a nation, is that class which depends for a living on manual labour and which is not humiliated by work and does not disdain it.

I agree with the members of the opposition in saying that their lot can be improved, but on the other hand I wish to be fair towards the present administration. A wise revision of the tariff, both of Customs and Excise, had the effect of increasing produc-

tion, lowering the cost of living and giving more work to our people, while advantageous trade treaties opened up the world's profitable markets to our farm and manufactured products.

The result was a gradual increase in our products and trade, and better living conditions for the farmer and workman. It is therefore not astonishing that we have not the number of unemployed as other countries have, even that of the United States which our Conservative friends delight in praising to us. There is yet much to be accomplished but those who allowed profiteers to hoard the people's money and prevented a general and equitable distribution of prosperity, should not hamper our constructive work.

They are sufficiently guilty, by their exaggerated participation in the war, and wasteful administration, without disparaging the notable improvement in the lot of our labouring classes. Canada is recovering rapidly.

If we read the statements of the various financial and commercial institutions, the time seems far off when cries of distress rose from everyone's lips.

An optimistic note is heard over the entire country the echo of which reaches the humblest abode. Conditions are easier for the workman to earn a living because there is more work and more money, and the farmer by improving his agricultural methods and taking a greater interest in the dairy industry earns more substantial profits. Our opponents admit it, but they discovered statistics showing that there is a migrating flow of our people towards the United States, and the responsibility is placed at our door. They should be the last to mention it because it is under their rule from 1881 to 1891, that Canada lost the greatest number of her sons by the exodus to the United States, and the losses we are sustaining now are but the sad sequel of their poor administration. If they cannot keep their tongue quiet, they should at least be fair and acknowledge this fact.

They should also mention that there exists a natural migration that no one will ever stem. There is a continuous to and fro movement between the two countries; on both sides we meet with visitors, and if there are people who leave us to establish themselves in the United States, there are also some who return to us disenchanted, deceived as they were by the speeches of our opponents, who described to them a country better than theirs. As for us, we conform our policy to our desire of keeping our people, and welcoming back those we have lost. Statistics tell us that we have succeeded, in

a large measure. How sarcastic, sir, are the speeches of the leader of the opposition and his followers when they talk of the great problem of increasing our population, and offer protection as a sure cure to all evils! Lighten the burden by putting it on the shoulders of a greater number of people is, indeed, a bright idea which could only see light in a highly imaginative mind. But to state in their speeches that Canada cannot support her present population which is forced to leave for the United States, and in the same breath ask to increase it, without knowing how to keep it in the country, for me, it savours highly of ridicule. If they are sincere and truly believe that our rural or labouring population cannot further exist in our country, why do they advocate that we should spend millions of dollars to bring in other people? They tell us as their leader did, in his speech at the Chateau Laurier, on January 24 last, that immigration comes in the front door and our own people leave by the back door! Did they, however, have the common sense of closing this back door by which escapes the manhood of Canada.

If such are the conditions, and if the tears they shed over those departing are genuine, why not be logical and not state that the money spent to increase our population should be spent in Canada, so as to improve the condition of the Canadian and keep him at home.

It is futile to seek elsewhere for a more vigorous race than ours, and if conditions in Canada are such that the sons of its pioneers can no further exist, it is more than time to cry out: Halt! cease spending the money of Canadians outside of Canada to entice an immigration which will not remain here. Why do they not advocate using all the money spent on immigration to improve the lot of the Canadian?

I read with much pleasure the speech of the hon. member for Vancouver North (Mr. McRae); I would have enjoyed hearing his words on the lips of his leader and friends.

That would be a loyal and patriotic opposition which would stand up and demand that we spend all our money in Canada, for the Canadians, as long as effective means are not found to stem the exodus of our people to the United States. Why not be frank, about it if they are sincere. Why do they have more regard for the manufacturer and British immigrant? Without attacking immigration,—wherever it may come from—and the manufacturers who, after all, help in the development of this country, I think it is ridiculous to increase or keep up a tariff which might

jeopardize our trade with other nations. We need the nations of the world to market our products, but we must so arrange things as not to harm our basic industries, among which agriculture is the first.

Mr. Speaker, I shall warn the government to be on its guard against all ideas which emanate from the other side of the house, but especially these big immigration schemes of the leader of the opposition and his followers. His speeches, of which three quarters are on immigration and emigration, have alarmed public opinion and it would be dangerous to support their suggestions. Canadians are not opposed to immigration; however, they wish first to retain their people, and to be frank, they do not take kindly to the policy of the leader of the Conservative party who advocates the spending of their money, not to improve their condition, but to bring to our shores immigrants who will replace them on the land, at the mills, in commercial enterprises and even in the civil service.

Although their financial standing has improved, they have pressing needs which must be met. Here, they request railway branch lines to link settlements, industrial and mining development areas to the large centres; there, lower freight rates; in other parts, necessary public buildings. It is only fair that these requests should take precedence over those of the leader of the opposition and his immigrants. For instance, I know that we can improve the lot of the Ontario farmer, because the provincial government obliges him to pay the larger share of the cost of construction and upkeep of highways, and I would suggest to the members of my province, who are on the opposition side and have shed tears over the budget proposals, that they dry their tears and join in the efforts of the rural delegation which, three weeks ago, urged their friend the prime minister of our province, to make a more equitable distribution of taxes and thus relieve the farmers.

As to the federal sphere, I have no doubt that our government will continue to relieve the farmer of the burden of taxation which weighs heavily on him. The tariff readjustment is proceeding slowly if you wish, but with caution and safety, with all due deference to extremists, who in one corner of the house state that it is proceeding too quickly and goes too far, while in the other corner we hear that it is too long delayed.

In the near future when signing trade treaties, our government will think, as in the past, of the farmer, and it will provide new markets for his products. Moreover, it will help the farmer in settling his sons on fallow lands, by offering them the same advantages which the British settlers have under the Empire Settlement Scheme.

Mr. Speaker, the farming population, which I have the honour to represent, expect much of the truly patriotic men who are at the helm of Dominion affairs, and especially, they hope to see the reform of that policy, which gives to English people greater advantages than our people have in the settlement of fallow lands. They are aware that the government has already amended the immigration act by restricting it to immigrants sound of body and mind.

They now request it to go one step further, and give the preference to Canadian settlers rather than to those from Great Britain.

Should this preference be impossible to grant, at least let us be given equal treatment. Those who have already made sacrifices for Canada have special rights that no one can ignore without danger for the future. There are susceptibilities which should not be provoked, and knowing that they are the masters of this vast country for which they have toiled and shed their blood, Canadians do not willingly submit to the regulation which gives to immigrants preference over them. Moreover, what immigrant with common sense will come to live and settle his children in a country where the latter will be discriminated against. If we wish to increase our population, we must grant the privileges of settlement to Canadians only, so that there may be advantages for the present and future citizens to remain in this country.

A policy of intensive settlement favouring Canadian citizens is, in my opinion, the practical way of stemming the desertion of the soil and the exodus to the United States, of entirely wiping out unemployment and, lastly, attracting that wave of European immigration in which the leader of the opposition places his hopes for the future of the country.

Canadian soil belongs to Canadians. Let us therefore set it aside for the Canadian farmer or labourer who wants to cultivate it. Let us place at his disposal and that of his heirs the vast natural resources that his ancestors jealously guarded for him. Then let us give him transportation facilities and advantageous markets. The spending of $20,000,000 to help the settler and the Canadian farmer would draw more immigrants than $40,000,000 spent in coaxing them.

After all human energy is Canada's greatest wealth, and the humblest Canadian is a far more precious jewel than all our combined natural resources which will place our coun-

try in the future, in the foremost rank of nations. Let our government pursue its policy of national progress. There is but one solid basis upon which we can build up the great Canada of to-morrow; it is upon that of a prosperous farming population, happy and jealous of its professional occupation and its country.

When Canadians are perfectly satisfied, and write to their friends overseas that they enjoy here perfect happiness, when the sons of farmers look upon their fathers professional occupation as the most beautiful and consoling one, when the workmen in cities look forth to the land to insure the existence of their family, then, we can open wide our doors to the immigrants who are physically fit and mentally well balanced. We can then open them very wide because great numbers will come. Let them come, in preference, from the British Isles, if they adapt themselves better to our conditions of life, but wherever they come from or whoever they be, they must conform to the Prime Minister's ruling, that is be strictly sound of body and soul.

I wish to congratulate the hon. Minister of Immigration (Mr. Forke) and his officials connected with the rigid application of this regulation, because those who have in view the Canada of to-morrow and the important part it will be called upon to play in the future civilization, are of the opinion that we should take no risk. Our burden is sufficiently heavy without having to carry that of others, and in order that the immigrant be an asset to Canada, he must be strictly sound of body and soul.

"The twentieth century will be Canada's century," according to a very clear-sighted prophecy, but it must especially be that of Canadians. Because the statesmen at the helm of the present administration show a truly enlightened patriotism, I shall support the well balanced budget of the hon. Minister of Finance, and I do it with the assurance that I am thus serving the interests of my riding and country.

Contrary to what we are to infer from the statement of the hon. member for Southeast Gray (Miss Macphail), there is no discipline in the Liberal party which forces its followers to vote for what they believe to be against the best interests of the country.

The party, for us, is the channel conveying our convictions, and we sacrifice ourselves only to better carry out the great principles that we cherish in common. The hon. member for Southeast Grey, has leagued herself with a group of members to propound certain ideas;

[Mr. Auger.]

she is wrong in reproaching us for doing likewise and insinuating that we have lost the freedom of thought and action, because we are affiliated to the Liberal party. The Liberal party's history goes back, so to speak, to the first days of the English rule, and it has traditions which link it very closely to the people of Canada. The Liberal party loves Canada, it loves the poor classes of our country, because it identified itself, at critical moments of our history, with their sorrows and difficulties. That party has no past to disown and it views the future serenely, because the leaders of to-day are worthy of their forebears. It is false to contend that we are traitors to the great principles of freedom and justice which always were at the basis of our political program.

However, we are enemies of disorder, and if we are slow in putting into practice the reforms which we advocated when in the opposition, it is because we do not wish to cause great confusion, we want order in our progress.

I shall recall to the house that in 1911, we made an appeal to the people on a question of trade reciprocity with the United States and we fell from power owing to not receiving the necessary co-operation from those who shared our ideas. I want to caution those Progressives from the west who are thinking of joining the Conservative party, that they will gain nothing by it, unless it be to prejudice the more the cause they have taken up.

Some MEMBERS: (Translation): Hear, hear!

Mr. AUGER (Translation): Co-operation is necessary to-day as yesterday, and to place in power a government of high protection might bring tardy but useless regrets to the sincere friends of a low tariff. We are moving slowly but nevertheless we are moving forward in the path traced by our illustrious predecessors, guided by the same standard and faithful to the principles for which we have fought and fallen, but to which we have never been traitors. If the progress on this path is difficult, slow and perilous, we are not downhearted, remembering the saying "Every thing comes to him who waits."

The Liberal party has undertaken to balance the finances of the country and to restore order, union, peace, harmony and prosperity. Its task is not completed, but what it has already accomplished reassures us for the future. Let those who love their country support us in the work of national restoration.

Whatever may be the profession, whether that of doctor, lawyer, financier, manufacturer, farmer or labourer, our ranks are wide enough to include all ideas and all occupations.

The standard of the Liberal party, is not the standard of a class, a race, a language or a religion, it is the standard of the whole Canadian people, united in a spirit of co-operation, justice, mutual respect, peace and harmony.

Mr. F. P. QUINN (Halifax): Mr. Speaker, it was not my intention to take part in this debate, but I observed this afternoon while listening to the wonderful address of the Minister of Agriculture (Mr. Motherwell) that he appeared to amuse the Minister of Immigration and Colonization greatly. For the first time this session I saw the Minister of Immigration and Colonization smile. Now the Minister of Agriculture did not add anything of importance to the debate. During his remarks he scouted all round. He seemed to take particular interest in the Winnipeg convention and the platform adopted there. He also seemed very much interested in the selection of a leader of the Liberal-Conservative party, and tendered his congratulations to the hon. gentleman who was selected to undertake the duties and responsibilities of that high office. He strove to assist the Minister of Immigration and Colonization by touching on a case which has been dealt with at different times during the present debate and the one which preceded it, but he did not go very much into details. May I say that I was rather surprised and disappointed at the class of cases in which he included the McConachie child? I will not cite the different classes, because hon. members remember them well. The McConachie case has, up to the present time, elicited many expressions of sympathy and surprise. I am in receipt of letters every day from different people, and from various societies and organizations, expressing sympathy with the family affected.

An hon. MEMBER: Why?

Mr. QUINN: An hon. gentleman asks why. Because of the attitude adopted by this government in dealing with the McConachie family. This government has acclaimed Canada as a land of tremendous possibilities and wonderful opportunities for the immigrant. These glowing expressions undoubtedly reached the ears of our friend McConachie; accordingly he obtained a passage and came to this country where he provided a home for himself and family. Had he followed the example of others who brought their household goods and families with them, McConachie would have been an established citizen of Canada to-day and would have had his family with him. It was only due to circumstance that the infant which figures in this case was born in Scotland instead of in Canada. All hon. members know—the hon. Minister of Immigration and Colonization and the Minister of Health (Mr. King, Kootenay) know it well—that McConachie was here eighteen months, and his child was fourteen months old when it arrived in this country. I ask the Minister of Immigration and Colonization—and he can answer the question when he pleases; he can answer it now if he prefers, although it will encroach upon the forty minutes allotted to me—what necessity there was for the unholy haste in deporting the McConachie infant? Does he reply? No. I say "unholy," and I mean it; when I use that word I know what I am saying. I have been told on good authority that the Minister of National Defence (Mr. Ralston) obtained permission to detain the child in Halifax for another week in order to enable it to undergo a further medical examination. I know that McConachie wired from Halifax on Saturday asking to have the child examined by a specialist, and I know the Catholic immigration chaplain at Halifax telephoned to the Cunard Steamship Company, whose vessel brought the family to this country, and they agreed to keep the family at their expense for another week. That information was forwarded to the immigration agent, Mr. Barnstead, and also to his assistant, Mr. Hetherington, but before the chaplain reached the pier the mother and child had been placed on board the steamer. Now where is the human touch, where is the sympathy, where is the judgment of my hon. friend the Minister of Immigration and Deportation? Now we have this family separated, the mother and infant having no home in Scotland to go back to as everything has been sold out. I have under my hand a letter from the secretary of the Overseas Settlement for British Women, Canton House, Westminster, London. She states:

> I met Mrs. McConachie on her return to this country and arranged for her to stay at a hotel in London for the night.

She had no home in Lanarkshire to go to and so she had to stay in this hotel in London for the night.

> She was at this office all the next day and we sent her to her relatives at Belfast the next night.

That is where Mrs. McConachie is to-day. This poor woman, distracted and heartbroken, is now trying to arrange to place the infant

child in a children's home in Belfast so that she can come out to Canada and join her husband and four children. I ask of the Minister of Immigration: It is too late yet to deal with this McConachie case and admit the woman and her child? In view of public opinion, in view of the way in which this case has been commented upon, I feel he will have the unanimous endorsation of the people of Canada if he sends for that woman and her infant to come here. As I said once before in this house, it seems inhuman and ungrateful treatment to accord to a British soldier who was willing to sacrifice his all in the struggle for freedom and democracy.

I have among others a letter from a Presbyterian minister who was for eighteen years doing welfare work, particularly settlement work, and he expresses the desire that the McConachie family be reunited. Might I draw to the attention of the minister a letter from the Canadian prisoners welfare association of Montraal. That association is willing now to place a bond in the hands of the minister guaranteeing that this child will never become a charge upon the government or the people of Canada. Now will the minister bring back the child? This matter has been dealt with thoroughly. The Minister of Health (Mr. King) contributed his quota to the debate and he was answered very effectively by the hon. member for North Simcoe (Mr. Boys) who dealt with the matter from the legal standpoint. I ask the Minister of Immigration once more—and that is all I intend to say on this matter—in view of the fact that 140 similar cases have been allowed to enter this country on permit, will he not grant the same conditions to the McConachie child?

The cordage industry of Dartmouth has already been touched on by the hon. member for Westmorland (Mr. Price), but I should like to say a few words in connection with it because it is in my constituency. This company have been struggling along for some years, but in the last few years, because of lack of tariff protection they have found it practically impossible to survive. This whole matter has been fully explained to the Minister of Finance (Mr. Robb) and the tariff board have all the data in connection with the industry. At the present time manilla rope up to one and one-half inch in circumference is admitted free when for use in the fisheries, under customs tariff item 682, and rope over this size, regardless of whether it is for the fisheries or not, is dutiable at 20 per cent British preference, 22½ per cent intermediate tariff, and 25 per cent general tariff under item 548. The budget proposals, however for some reason carry a new item, 539:

Cordage, exceeding one inch in circumference, wholly of vegetable fibres, n.o.p.

This is dutiable at the rate of 20 per cent British preference, 22½ per cent intermediate, and 25 per cent general tariff. At first glance it would appear that the minister intended to give this poor down trodden industry half a loaf at least, by reducing the free size to one inch, but on examining the customs tariff I discover a joker. On page 514 of Hansard of February 16, the Minister of Finance gave a list of tariff items that were cancelled by the revision of the tariff, and I find that item 682 is not listed among those cancelled, so in reality the free rope continues and the new item 539 is only for us to look at through rose-coloured glasses, something not unusual under the present budget. Why this was done we, of course, can hardly expect a reason, but if it was not the intention of the government to do anything for this industry, why do they not come out and say they have no intention of helping one of the oldest Canadian industries, one of the last industries in the maritime provinces, instead of letting them slowly but surely bleed to death? This industry in Dartmouth alone has about five hundred people depending upon it, and if the industry is allowed to go to ruin, what are the heads of these families to do? Most of them have spent their whole life in it and they cannot now go out and seek employment elsewhere in Canada. The younger employees can, of course, follow the crowd and go across the line to the United States. The cordage industry is contributing more than its share and this government will do a great justice to the maritime provinces by keeping the industry going. With the amount of fishing that is carried on it is essential that an industry of this kind should be kept in operation, if only for emergency purposes. Where would this country be in case of war if industries such as this are allowed to go to the wall, as they certainly will do with these continual tariff changes that are not even made from a practical standpoint?

While the hon. member for Westmorland (Mr. Price) was speaking, the Minister of National Defence (Mr. Ralston) interjected a question and the hon. member, could not hear him. The minister asked the hon. member for Westmorland if he was agreeable to imposing a duty on fishermen's rope. The minister well knows that the maritime members were in caucus when delegations from Halifax and Dartmouth boards of trade were here and the

whole matter was discussed, and some questions to which the hon. member referred were brought to our attention. But while the matter was under discussion, while it was being debated, while we were trying to find ways and means of keeping that industry in the town of Dartmouth and at the same time safeguarding the interests of the fishermen of the maritime provinces, a telegram was received and read at our meeting from the vice-president of the Consumers' Cordage Company stating that they were prepared to guarantee that, in the event of a duty being imposed on rope from one and one-half inches downwards, the price to the fishermen of the maritime provinces would never be greater than the price of rope to the fishermen of the United States.

Mr. RALSTON: Was that guarantee accepted as satisfactory by the gentlemen who were present at that caucus?

Mr. QUINN: It was a guarantee from the vice-president of the Consumers' Cordage Company, and I consider it binding.

Mr. RALSTON: Was it considered a sufficient guarantee by the fishermen?

Mr. QUINN: My hon. friend is a good lawyer. I am not; and he need not think he is going to inveigle me into any legal question.

Mr. RALSTON: I thought perhaps the fishermen might be interested; that is all.

Mr. QUINN: The fishermen are interested. My hon. friend comes from a fishing constituency, Shelburne-Yarmouth and he well knows that the fishermen of Nova Scotia will buy American rope in preference to Canadian, and the same thing applies to other articles.

Mr. RALSTON: But I do not know that the fishermen of Nova Scotia will accept the guarantee of the vice-president of a company expressed in a telegram to some private individual.

Mr. QUINN: It was not expressed to a private individual. That telegram was sent—

Mr. RALSTON: To whom?

Mr. QUINN: To be handed over to the maritime committee.

Mr. RALSTON: To whom was it sent?

Mr. QUINN: It was sent to a representative here of the Consumers' Cordage Company for the purpose of being read at this meeting. I have the telegram in my possession if the minister wants to see it.

Mr. RALSTON: Oh, I have seen it. I thought it was poor protection for the fishermen, that is all.

Mr. QUINN: Why does not the minister come out and state exactly where he stands in this matter?

Mr. RALSTON: I am waiting to hear my hon. friend; he has the floor. I have stated that I am not for imposing a duty on fishermen's rope, if my hon. friend wants to know.

Mr. QUINN: Even at the sacrifice of 500 people in Dartmouth?

Mr. RALSTON: I was not speaking of any sacrifice.

Mr. QUINN: That is what I am asking about.

Mr. RALSTON: That industry is going on in Dartmouth, and the head of the industry has declared they are going to stay in Dartmouth.

Mr. QUINN: No thanks due to this government.

Mr. RALSTON: We are not asking for thanks.

Mr. QUINN: I will tell you why they decided to stay in Dartmouth.

Mr. STEWART (Edmonton): We have heard these bluffs before.

Mr. QUINN: It is no bluff. I will tell this house why the Consumers' Cordage Company has decided to stay in Dartmouth. It is because the town of Dartmouth has relieved them of all taxation. There is a sacrifice on the part of the town of Dartmouth.

Mr. RALSTON: For a limited period.

Mr. QUINN: Yes, and at the end of that period they can take the matter up again.

Mr. RALSTON: But perhaps, they might come and threaten to close down again.

Mr. QUINN: Perhaps. Suppose they do make a threat. I have no interest in the Consumers' Cordage Company, absolutely none, but I have an interest in 500 people in Dartmouth. My hon. friend might play fair and let us know just where he stands as between the fishermen and the people of Dartmouth.

Mr. RALSTON: I have told my hon. friend once; I cannot make it any clearer. But I do object to my hon. friend suggesting that I am not playing fair. I do not think that is parliamentary.

Mr. QUINN: I played fair with the hon. gentleman when he was taking advantage of his forty minutes. I did not interrupt.

Mr. RALSTON: I thought my hon. friend was asking me a question.

Mr. QUINN: I was drawing attention to the question you asked of the hon. member for Westmorland (Mr. Price), and I was just answering it.

Mr. RALSTON: I am afraid the answer was not satisfactory.

Mr. QUINN: I think the house will be satisfied. There is another matter. I have here a letter from the Nova Scotia Bedding Company of Windsor Junction. I might say right here that they are no political friends of mine, but they were of the minister. They wish to draw attention to the duty on jute cloth in rough state as provided for in this budget. They say:

We use considerable of this material for wrapping round bales of mattresses when shipping them. Formerly it came in from the United States free of duty. The customs officials advise us now that there is a duty of 30 per cent on it when coming from the United States.

I draw the attention of my friends in the far corner of the house to that. They go on to say:

We think this is going too fast. There is none of this material made in Canada.

I would ask the Minister of Finance, what was the reason for the imposition of this duty? Can he explain satisfactorily to this house why a duty of 30 per cent is imposed on this article that is used by manufacturers and others in this country, when there is no industry in Canada making it? Can the Finance minister or any hon. gentleman opposite give the house a satisfactory answer? No? I ask my hon. friend the Minister of National Defence to use his influence to have this item changed. Stephen Brothers, of Windsor Junction, are friends of his.

The Minister of Agriculture this afternoon spoke of everything almost except the things which directly concern him. He spoke of the Winnipeg convention and the new Conservative leader, he elaborated on immigration, spoke of oleomargarine and I do not know what else. Why did he not devote his time—and he could very well have used the whole forty minutes that way—to matters concerning his own department?

Mr. MOTHERWELL: Nova Scotia?

Mr. QUINN: No, agriculture.

Mr. MOTHERWELL: Agriculture was not attacked very much.

[Mr. Ralston.]

Mr. QUINN: It was not? I have heard it attacked several times in the course of this debate.

Mr. MOTHERWELL: Where from?

Mr. QUINN: The hon. member for Colchester (Mr. MacNutt) for one.

Mr. MOTHERWELL: You have to consider where it comes from a little bit.

Mr. QUINN: I have in my hand a memorandum from the National Dairy Council of Canada presented to the Dominion government. My hon. friend should be interested in that.

Mr. MOTHERWELL: That is a good place for it to come from.

Mr. QUINN: This memorandum is addressed to the president and members of the privy council, and reads:

The National Dairy Council of Canada desires respectfully to present some further observations and requests on the Australian trade agreement. That on the 29th day of November, 1927 the national dairy council made certain representations to your honourable body on the said Australian trade agreement and order in council re New Zealand, which allows butter from these countries to enter Canada at one cent per pound duty and showed that in consequence of the Australian trade agreement the dairy industry of Canada suffers.

At the same time, the national dairy council in its memorandum respectfully requested as follows:

1. That the order in council applying schedule 2 of the Australian trade agreement to New Zealand be rescinded at once;

2. That the dumping clause be immediately applied on all butter sent from Australia to Canada on consignment as well as on direct sale;

3. That the Australian trade agreement be terminated as provided in the Australian trade agreement Act 1925.

That, so far, the government has taken no action on the foregoing request.

Therefore we again respectfully present the following observations:

1. That the national dairy council is representative of all the dairy interests in Canada, of which the milk and cream producers are by far the greater number.

2. That these producers are insistent in their demands, that the government grant the foregoing request of the national dairy council as voiced in the following resolutions, passed in almost every case by the producers sections, and later endorsed by the creamery men and others at dairy conventions recently held throughout Canada.

Then follow the resolutions. I shall read only one, from the dairymen's association of Nova Scotia:

Be it resolved that the Nova Scotia dairymen's association in annual session assembled in Truro, January 17-18, 1928, reaffirm the

action of this association in passing a resolution at the annual convention, January 19-20, 1927, asking the government to cancel the clause of the Australian treaty which allows butter to enter Canada at the rate of 1 cent per pound duty, and cheese free, and restore to the dairy farmer that which was taken from him by the signing of this treaty and the order in council allowing New Zealand butter and cheese to enter Canada at the same rate of duty as Australian.

Further resolved that we request that the dumping clause be at once applied to all butter coming into Canada from New Zealand and Australia whether on direct sale or on consignment.

The memorandum includes resolutions from the Nova Scotia farmers' association, the New Brunswick farmers' and dairymen's association, the Manitoba dairy association, the Alberta dairy association, the Saskatchewan dairy association, British Columbia dairymen's association, Comox creamery association, Western Canada live stock union, Canadian produce association, and the Ontario milk producers' association. They are all in the same strain. Why does the Minister of Agriculture pay no heed to the demands of this very important industry, as presented from every province?

Mr. MOTHERWELL: I did.

Mr. QUINN: Where is the relief? What have you done?

Mr. MOTHERWELL: My hon. friend could not have been in the house this afternoon.

Mr. QUINN: Yes, I was here this afternoon, but I gleaned very little from the minister's address. I quote from the last paragraph of the memorandum:

From latest information available for the calendar year 1927, a reduced make of butter in Canada is reported from four provinces and in a large measure is due to the large quantities of butter that have come into Canada from Australia and New Zealand. This is particularly true in the prairie provinces and Ontario as follows:

	1927 Pounds	Decrease
Manitoba..	14,231,026	1,218,330
Saskatchewan.. .	11,955,533	4,637,234
Alberta..	19,912,533	3,487,466
Ontario..	59,800,000	2,500,000
Total decrease..		11,843,030

Butter imported into Canada from February 1, 1927, to January 31, 1928:

Further according to figures tabled in the House of Commons on February 13, by Hon. Mr. Euler (see Hansard page 404), for the twelve months ending January 31 last, 3,620,698 pounds of butter from Australia and 15,142,616 pounds from New Zealand, a total of 18,763,314 pounds entered Canada for home consumption. British Columbia was the heaviest consumer.

This 15,000,000 pounds of butter produced in Canada, at 200 pounds butter per cow per year would take 75,000 cows, at ten cows per farm would take 7,500 farms, giving employment to as many farmers and their families.

Now, Mr. Speaker, I ask why should the government spend hundreds of thousands of dollars advertising to the world what a wonderful agricultural country we have in the face of an opportunity such as this? Right now they might establish 7,500 farms, giving employment to 7,500 farmers and their families, by taking the necessary measures to safeguard our dairy industry . But the same old policy is continued, the same old practice goes on of bringing immigrants in at the front door and letting them out at the back.

The hon. member for Hants-Kings (Mr. Ilsley) in his contribution to this debate rather lectured us on this side of the house when he dealt with the present administration in Nova Scotia, and he referred to the slogan of the Conservative party in 1925, "bring the boys back." It is true that up to the present not many boys have come back; but let me tell my hon. friend that a sincere effort is being made to bring them back and so to improve conditions in the province that no others will migrate to the United States; which is more than he can claim for the predecessors of the Rhodes government. We have in Nova Scotia to-day a well-administered Department of Natural Resources, and everything possible is being done to keep the farmer and his family on the land. Only last week Premier Rhodes announced in the local legislature that arrangements had been made to establish a large pulp and paper mill in Nova Scotia. I know my hon. friend would like to say that a promise of this kind was made in 1925. Yes, it was made by a gentleman who was returned as a supporter of the Rhodes government. He gave a pledge to his constituents that if the promise was not fulfilled he would resign his seat within twelve months. He kept his word. It would be better for the public life of this country if members of parliament and others were more particular in redeeming their promises We have the assurance of Premier Rhodes that the mill will be established, that plans are completed and work will immediately go ahead, which will provide employment for a thousand men in the province. Contrast that with anything done by the predecessors of the present provincial administration. The pulp mill will manufacture from 250 to 400 tons of pulp and paper a day. This means the the development of a big industry in the province.

May I enlist the support of my hon. friend and other hon. members from Nova Scotia who sit opposite in trying to

retain our present industries? I have already referred to the industry at Dartmouth. My hon. friend has expressed his views as a supporter of the government, but again I ask him to use his influence in conjunction with the hon. Minister of National Defence and the hon. member for Antigonish-Guysborough (Mr. Duff) to do everything possible to protect this industry as well as other industries in Nova Scotia. Let him and his colleagues adopt the British motto; What we have we hold. I am not playing politics. I make this request because I owe it as a duty to my people in Nova Scotia, and particularly I owe it as a duty to the five hundred Canadians, most of them born and bred in the province, who if this industry is closed down will have to cross the border and join many of their brothers and sisters who have already been forced to seek their livelihood in the United States. Once more I ask my hon. friends from Nova Scotia who sit opposite to bend all their energies to prevent that and other industries in our native province from closing down, and so safeguard the interests of our people.

Mr. J. J. E. GUERIN (St. Ann): Mr. Speaker, it was not my intention to address the house to-night, but the eloquence of my fellow-countryman who has just sat down (Mr. Quinn) in connection with the case which has attained such prominence in this debate has left me no alternative. I share his sympathy for the family, but I do not think he rightly appreciates what was wrong with the McConachie child. From what I can gather, this child is a cretin; that is, an infant born without a thyroid gland. This gland governs the development, mental as well as physical, of the child. Consequently, the child was born an idiot, and nothing could possibly change its condition; it was born an idiot and is bound to continue so. It is not difficult to diagnose the malady, for it has peculiar characteristics. To begin with, the skull is enlarged with a receding forehead, the mouth droops, the tongue protrudes, the eyes glare into vacancy, spittle is constantly running down the cheeks, and wherever the child is placed it is absolutely unconscious of its surroundings. So far as intelligence is concerned, the child is practically born dead. I profoundly sympathize with the parents, but at the same time, dura lex sed lex. You cannot change the law, and if no latitude is permitted, I do not think it was ever intended to admit idiots. Consequently there is nothing to be done.

Mr. QUINN: I understand my hon. friend is a medical man. May I say that I saw the child personally and was informed that the symptoms that have been described were not apparent.

Mr. GUERIN: It is a question of appreciation. With his training and experience in other matters the hon. gentleman may be an excellent judge of some things, but I submit that a physician who practises medicine and who is prepared to stake his reputation as an officer of the government that such a disease exists in a particular instance must be believed We must take his word.

Mr. QUINN: Why did not the two medical men on the other side, the doctor on the roster and the doctor in Glasgow, observe these things?

Mr. GUERIN: It shows the wisdom of the government's new policy in sending Canadian physicians to the other side to vouch for these facts. There has been considerable argument on the part of hon. gentlemen opposite against the extravagance of the government in sending Canadian physicians to determine the health of proposed immigrants, but I think this is a case that proves the wisdom of the government, for it shows that there will be no possibility of contradiction in the future. Once immigrants are passed by one of our own physicians they will naturally be accepted by this country. If the expectation of life in the case of a child were brief it might be all right to admit it; but the fact is that children of this description live for many years. They grow up to the age of twenty or thirty, continuing in the same state of infantile decrepitude as when they were born. They acquire the faculty of eating and drinking but they remain permanently in a condition of oblivion so far as everything around them is concerned. I do not for one moment wish to imply that I have not every possible sympathy with the parents of such a child; but there is a very serious principle involved, and if we are going to admit immigrants of that class there should be something in the law to permit it. The law is there and it cannot be altered unless someone is prepared to shoulder the responsibility. As regards the insane, I may point out that the asylums will not admit a child in this category even supposing that child is grown in years. An insane person, to be admitted into an asylum, must be dangerous to himself or to his neighbours or must be a cause of public scandal. An infant proper, or a grown-up infant, if we may use that expression, does not come within this category, and such a child becomes a load on its parents; it must be looked after, nursed and coddled during the

full term of its existence. And strange to say, children of this class receive more love and affection and more attention from everyone in the family than any of their brothers or sisters who are in full possession of their senses. To have a child of this sort in the house is therefore a misfortune beyond description.

I do not intend to suggest how the question should be solved but I do not see how the Minister of Immigration, under the circumstances, could possibly think of admitting a person in that state. As I say, the child is unconscious of its surroundings, and it would not do it any harm, if the father were in a position to pay for its upkeep, to leave it in Scotland whence it came. The question has been treated from a sentimental standpoint ever since it came up; it has not been considered on its merits. I always thought the Irish were very fond of grievances, but last night's Star makes this out to be a grievance of Scotland. The Minister of Immigration ought to have sympathy with the people coming from that particular part of the empire and I do not fancy that the fact that this child was of Scotch origin militated against it. On the contrary, probably the majority of the members of our cabinet would look with favour on anything that might be done in its behalf if the question were considered from a national point of view. This, however, is a case where the law must be observed and I fail to see how the minister could have acted otherwise than he did.

It seems to me that the determination to call attention to this matter openly, and to discuss in this manner things appertaining to immigration and emigration, is not doing any great good for Canada. I do not think that this is a question that should be debated publicly and discussed as it has been. It is undoubtedly a misfortune, and if those who feel so sympathetic towards the McConachie family would only contribute a sufficient amount to place the child beyond want and to provide it with proper surroundings in its native town, the parents would lose nothing, inasmuch as if the child were violent they would have been obliged to put it away. Seeing that it is unable to do anything for itself, it naturally should be put in some place where it can be given proper care and attention such as an unfortunate child of this kind requires.

We have been hearing a good deal about emigration to the United States. The argument on this question is most injurious to the country and those who are discussing the matter in the way we have heard it debated are doing no good to Canada. No doubt we are bothered by a certain class of immigrants who cannot be detected by medical examination; I refer to that class who come to this country for the express purpose of creating trouble. In the large centres they are to be found in considerable numbers, preaching bolshevism, socialism and all kinds of discontent with the country generally. It would be a good thing indeed if the government would do something towards sending these people back to the countries from which they came, thus relieving us of the danger of having Canadians imbued with false ideas. These people turn out in Montreal on the first of May with the red rosette, but they do not carry the British flag; they do not carry the flag of the country. They are beyond the law so far as our country is concerned. The same thing prevailed in Italy until Mussolini took charge of things, but by the judicious administration of palma-Christi, otherwise known as castor oil, they were brought to their senses. I think if our mounted police were provided with a liberal supply of castor oil and attended these meetings which take place throughout Montreal and other cities, and on their own responsibility, with the approval of the Minister of Justice, administered about half a pint of that drug, it would put these men in such a condition that they would not be able to continue their obstruction very long. Perhaps it would be better than punishing them by prison terms, because judging from what I saw on May 1 in Montreal they are becoming rather numerous, and in my opinion they are an absolute threat to the community. We must look after the interests of our own country, and if we allow this sort of thing to go on we are just sowing seeds of trouble which will manifest itself in no uncertain way. I think it would be well to take this matter into consideration as far as the teachers of bolshevism and anarchy are concerned, which would relieve us of the threat which is constantly directed against this country.

I had no intention of saying anything tonight, but the eloquence which was displayed and the sympathy which was excited by the hon. gentleman who preceded me made me feel that I should say just one word with reference to this McConachie case. It is not that I have anything but the deepest sympathy for the family, but it is a very easy matter for them to separate themselves from that poor unfortunate child. The baby would never be any the wiser, and the family would be much better off.

Mr. G. H. PETTIT (Welland): Mr. Speaker, in rising to make a few remarks in this budget debate I realize that the ground has been covered very fully and very ably

by those who have already spoken, more particularly by hon. members on this side of the house. I am prompted, sir, to make these remarks because of the fact that so many constituencies have been heard from through their representatives, and I felt that the county of Welland, which I have the honour to represent, should not remain silent.

For your information, sir, I should like to tell you some things about the splendid and important county of Welland which you may not already know. It is a border county in the Niagara district; within its confines are two cities, Niagara Falls and Welland. There are also four towns, two villages, two very splendid fruit farming districts, namely, the townships of Pelham and Stamford, and six general agricultural townships. It is the cradle of hydro-electric power and a great industrial centre. For the information of the government I may say that in those two fruit farming townships those who engage in the growing of early fruits and vegetables are one in the desire for a duty—and a good high duty—on early fruits and vegetables imported from the United States. There are a number of producers of these things in these townships and the industry is developing.

There are quite a number of nurseries in Pelham township well and widely known—foremost among them the Fonthill Nurseries, Ltd., and Brown Bros. Co., Nurserymen, Ltd. The horticulturists of Canada are entitled to and should be given proper protection against foreign importations of nursery stock, shrubs, bulbs, etc. I respectfully but strongly urge this protection.

I may also say for the information of the house and the public at large—and I think hon. members of the house will be delighted to hear this—that the large foreign population in the county of Welland, those naturalized and those not, are loyal citizens, loyal to our institutions and British connections, and law abiding citizens generally, with the exception perhaps of a small class of Russians. There are, of course, a few bad people among them, but we have bad people in our own race. It would do your hearts good, gentlemen, to see at the different gatherings of these people how the little boys and girls sing the national anthem, and the Maple Leaf Forever, and O Canada, with all the vim and vigor they possess. The older people also take part to the extent of their ability to do so. The British flag graces their halls; they take part in all the public processions with the British flag at their head, and they also join in celebrating anniversary of the armistice. So I am glad and proud to be able to tell this house that the foreign population in my district are loyal to our British institutions and laws generally and good citizens.

Now, sir, I wish to refer hurriedly and in a general way to a few of the matters which have been already touched upon, and the first of these is the sales tax. We appreciate the action which the government took last session when this sales tax was reduced somewhat, even though the reduction was small, and the same holds good this year. I do feel, however, as other members on this side of the house feel, and I believe in this I voice the sentiments of the people of my constituency, that the sales tax should have been taken off entirely. Let me also say that I view with a great deal of satisfaction the appointment of a committee of this house, which committee is now sitting, to look into the problems of the returned soldiers with the view of bringing in legislation for their benefit. I sincerely trust that this legislation will be as broad and as favourable as possible in order that these returned men may always receive the benefit of any doubt which may exist in particular cases.

I also wish to espouse the cause of the rural mail carriers of the country at large. I do not think there is a more faithful or a harder working class of government employees than the rural and urban mail carriers. Practically all of them are married men with families and I appeal to the government to put them, the rural mail carriers on a proper basis. The work should not be let under tender. The remuneration should be at least $1,400 a year where the mileage warrants it, and even that is little enough. The remuneration ought to be on the basis of $70 per mile.

I wish to take this opportunity of stating that my constituents and myself favour the Canadian National Railways as now organized and brought into being by the Conservative party. I am glad to pay tribute to the management in bringing order out of chaos, and placing the system in the splendid position it now occupies. I have every confidence that within a very few years the system will be established on a paying basis.

I was delighted to hear the other day in the house the statement from a member of the government that a large appropriation was being granted in aid of research work. I have been very much interested in that work for a great many years. I do not claim by any means to be an authority on the subject, but I have always felt that research work should be undertaken in this country to a greater extent than has been the case in the past. I look forward to the achievement of

great results from the aid granted by parliament for this work from an agricultural and industrial point of view. There are men of ability in this country who can bring these researches to a successful conclusion, but we must take great care that in this work there is proper co-ordination of effort. I was very much surprised and interested upon reading an article the other day to find that this country suffers a loss of about $20,000,000 a year owing to grain rust. Now if that one source of loss alone can be overcome by industrial research it will be well worth the expenditure incurred. As the representative of the county of Welland I shall take great pleasure in supporting the government in making liberal grants from time to time in aid of research work.

I am rather troubled in mind about the woollen industry. I think it has been very severely hit by the action of the government in the past in granting such a large preference in favour of Great Britain. I am a strong believer in interimperial trade, and the building up of trade within the Empire, but I do not think we should do so at the expense of such an important one of our own industries, especially when allied branches of industry will be injuriously affected. If the woollen industry were in a thriving condition to-day and developing as it should, wool would be required from the farmers and this would be of help to them in raising sheep. The grazing of sheep fertilizes the land and keeps down weeds, and through the raising of sheep the farmer has mutton and lamb for the market. So that when we do anything to injure the woollen industry it reacts in various directions and hurts other industries which are dependent upon it, notably that of sheep raising.

I am a strong believer in the adoption of a national fuel policy for Canada. I should like to see the government establish what may be called an out of pocket rate, say $5 or $6 a ton, for the delivery of coal from Alberta and Nova Scotia to the central portions of this Dominion, and Ontario in particular. What is called an inclusive rate, which would be in the neighbourhood, I understand of nine or ten dollars, should be fixed for the railways, and any difference between that and the out of pocket cost should be met from the national exchequer. If we do that, I believe coal can be delivered and sold to the consumers in Ontario at a rate of from $13 to $14 per ton. This winter I have been purchasing coal in the city of Welland for $14.75 a ton, and I have not paid less than $14 a ton for some years. I would cheerfully continue to pay that amount if it would be of help in developing the coal industry in Canada. If we do not get to work now and inaugurate a national fuel policy we run great danger of suffering from a prolonged strike in the United States, or the possibility of that country enforcing an embargo on coal. Where should we be in the case of either of these eventualities, and we were not able to draw supplies from domestic sources? We ought to take time by the forelock in this matter, and provide against every possible contingency. The objection has been raised that the course which I have advocated would mean the expenditure of a great many million dollars from the national exchequer. In reply to that argument I would point out that we should be able to retain in Canada the many millions of dollars which now go out of the country for the purchase of foreign coal. In addition our railways would derive an immense revenue from the carriage of Canadian coal, our coal mines would be enormously developed, and employment would be given to a great number of workingmen. It was pointed out the other day in this house that when the Hamilton and the Sault steel industries used American coal in their operations they received a drawback of 99 per cent. I was wondering why industries of this character should not be given a drawback on the price of their coal if they obtained it from Alberta and Nova Scotia.

I am heartily in favour of the course suggested by the hon. member for East Simcoe (Mr. Thompson) when he spoke the other day on the subject of flour. I favour an export duty on wheat going to the United States so as to compel the manufacture of wheat into flour on this side. Our wheat is going to Buffalo in larger quantities each year; Buffalo is fast becoming the milling centre of the continent through the shipping of our wheat to that point and the milling of it into flour there, and I therefore strongly support and advocate an export duty on wheat going to the United States for milling purposes so that instead it may be made into flour on this side, thus building up the flour milling industry in Canada and giving employment.

I come now to the matter of immigration, which has been and is still a very serious and complex question. I have given it a great deal of thought and I have often wondered how on earth it can be solved with advantage to this country. I have often wondered, although I do not say I believe in it, if it would not be better to throw open the doors to all persons from Europe who are mentally

and physically perfectly fit and of good character and willing to work hard until this country has a population of, say fifteen or twenty millions, and then apply the quota system. I was led to that conclusion by this way of reasoning: that every person who comes into this country has to be fed, clothed and housed. He is a consumer, and he is also more or less a producer. If the doors were thrown open and these people, mentally and physically fit and willing to work, came in, you would start the wheels of industry going. Economics is a funny thing. It does not take much to start it going the right way, and it does not take much to start it going the wrong way. I am, however, a believer first and foremost in the predominance of the British race in this country as against people from continental Europe or elsewhere, and that the great preponderance of immigrants into Canada should be of the British race. But there is that question, and perhaps the bold and startling scheme advanced by the hon. member for North Vancouver (Mr. McRae) will solve this question. It was very startling to me and highly interesting, but in a matter of such importance, such magnitude, as immigration, we have reached the point where we realize that population is what this country must have and that we must do something bold and startling. I for one as an ordinary citizen of Canada would cheerfully, on behalf of myself and my family, contribute to the consequent increase in taxation for the carrying out of that splendid scheme, as I consider it to be. We should all so far as possible sink our party differences in endeavouring to arrive at a solution of this immigration question. If the scheme of the hon. member for North Vancouver could be adopted and a commission or board appointed such as the one that manages the Canadian National Railways, with that hon. member at its head having the ability and capacity for organization and administration that he has, and the scheme were administered by that board free from politics, I think it would work out splendidly, and very quickly this country would get the immigration it desires and go ahead by leaps and bounds. As a result of the carrying out of a proper immigration policy we would have a fair-sized population in a short number of years. With this increased population, with a more largely industrialized west and a fuller development of the mineral wealth of northern Ontario, this country would go forward very rapidly and a large number of our problems and difficulties would be solved and overcome.

Of course, to my mind, in addition to all that we require, for the more rapid progress of Canada, to have stability of tariff, a well-settled fiscal policy, so that there may be a certainty of things, and people, especially in industrial lines, can govern themselves accordingly. With an adequate protective policy and an increased population, this Canada with our united efforts will move forward to the great destiny that certainly lies ahead of it, the destiny of being a very important, if not the most important part of the British Empire and an influential nation in world affairs. Already we have a seat in the League of Nations and that is the thin edge of the wedge of Canada's influence in world affairs. I can easily visualize in the future years Canada being, as I said, not only the most important part of the British Empire but one of the great nations of the world and of large influence in world affairs in promoting and bringing about peace and the advancement of civilization generally. The vastness of our country, the large population that will in time dwell here, its great resources and the character of the people in the nature of things ensure that.

Mr. T. E. KAISER (Ontario): Mr. Speaker, I can assure you and this house that I have no particularly set speech to deliver on this occasion. I know that the house and the whole of Canada are at this moment waiting to hear the deliverance of that distinguished statesman who is now recognized as leader of the Conservative party (Mr. Bennett), in the Dominion of Canada. Undoubtedly an equal number of Canadians are waiting to hear the reply by the distinguished gentleman who for the present occupies the position of Prime Minister (Mr. Mackenzie King), of this great Dominion. For that reason I assume that not very many are interested in what I may have to say. I have, however, been pressed to take part in this debate, and in order to get back at those who induced me to speak I am going to say something.

First I should like to say a word in reply to the sympathetic remarks of my hon. friend from St. Ann (Mr. Guerin) in regard to the McConachie case. I have been taught, and I learned to be governed by that teaching, not to attempt to diagnose a case at too great a distance, and I was rather surprised that my good friend from St. Ann was able to diagnose this case right across the Atlantic. I prefer for the moment to accept the findings of the medical men who actually examined this particular child.

Having sat in this house for two or three years, I have heard hon. members speak of about 240 constituencies as being the biggest or greatest in Canada, and I am therefore

afraid to say very much about the constituency I represent, because I might follow their lead and then people outside of Canada would gather that there were 245 constituencies in this country and each one was the biggest and the greatest in Canada. If I say nothing about my constituency I am glad to know that I shall have a distinguished guide in that respect, and that is the Prime Minister. I have never heard him say that he represented the greatest constituency in this Dominion although he does represent a great constituency at the present time. I am inclined to think that he is what they call a perambulating representative. He has represented North Waterloo and North York, and then he moved from the Yorks to the Princes, representing Prince, in Prince Edward Island, and then Prince Albert, in Saskatchewan. I am afraid that he might next undertake to represent some south constituency, and perhaps be nominated to represent South Ontario. I do not know what the result would be in that case.

Some hon. MEMBERS: We do.

Mr. KAISER: We have had two or three visits from the distinguished Prime Minister of this country, in the last two elections, and before. Once, when my election hung in the balance, the Prime Minister visited the constituency and gave an oration, and I was told immediately afterwards that I need not worry about getting elected. During the next election he came again and made another oration, far more brilliant than the previous one, but as soon as it was over I was assured again that I need have no fear of the consequences. I had a rather peculiar experience in my last election. I had pitted against me a gentleman who to-day occupies a high position in this country as head of the tariff board, a very important position. We got into a very remarkable contest, and while I won the election and he lost, he was able to pull out a $12,000 a year job, while I receive only $4,000. He gave to the world a new epigram, namely, "It is more blessed to lose than to win". I propose to say something about the tariff board before I am through.

I wish to say a word about one of the greatest questions facing this country to-day, and before very long it will take the centre of the platform in this country. I refer to the national debt of Canada. Unfortunately or fortunately, as the case may be, the Dominion of Canada is placed side by side with the great American republic. When we on this side of the line take lightly some of our difficulties, we should cast our eyes across the line and ask ourselves what is this great country to the south of us doing in regard to some of these matters? Think of this for a moment. In 1919 the national debt of the United States was, in round figures, $25,000,000,000; 1920, $24,000,000,000; 1921, $23,000,000,000; 1922, $22,000,000,000; 1923, $22,000,000,000; 1924, $21,000,000,000; 1925, $20,000,000,000; and in 1926, $19,000,000,000. In other words, they reduced their debt from $25,000,000,000 to $19,000,000,000 between 1919 and 1926.

But that is not the whole story. Their debt now is reduced almost to $16,000,000,000, I understand, but whatever it may be, we must remember that the United States has placed on England, $4,700,000,000, upon France almost $3,000,000,000, and under the Dawes report she has placed on the countries in Europe an amount of her debt equal to $11,000,000,000. Take that $11,000,000,000 from the $16,000,000,000, and only $5,000,000,000 remains as the national debt resting upon the United States, and that is being reduced at the rate of $1,000,000,000 a year. How are we going to stand five or six years from now, if we have not in the meantime been reducing our national debt by some systematic method; when we are placed in competition with a country right at our doors that has absolutely wiped out her national debt or has placed it upon other countries? What would be the use of a five or ten per cent tariff then? I claim that one of the most important things for this Dominion to do at this moment is to consider seriously the question of reducing our national debt. We have no country upon which we can unload a single dollar. We must pay off our debt solely through our energy and the genius of our men and the wealth of our resources. When this question of the national debt came up in the budget the Finance minister undertook to pass over it by quoting from an author who has been dead for seventy or eighty years. I marvel at times how the governing body in this country undertake to fortify some of their fallacies by delving into the museums of our country, dragging forth authorities of 150 or 200 years ago, and quoting them for present-day directions. The thing is absurd. Just to illustrate my meaning, I was curious to know who this McCulloch was whom the Finance minister quoted the other day, and I find that he has been dead pretty nearly a hundred years. And I observe, too, that the Finance minister did not read all that he said about national debts. The Finance minister quoted him as saying there should be no sinking fund and no taking care of the debt, but I read the next paragraph to that, just to show you the difference in the minds of men to-day as compared with the minds of men who lived one or two hundred years ago. He says:

We have previously endeavoured to show that it would be advantageous to maintain during peace a surplus revenue of some two, three, or five millions a year. We should do this, not so much in the view of reducing the debt, though that is a consideration not to be left entirely out of view, as of increasing our security, and enabling proper measures to be devised, in the event of our being engaged in war, for defraying its expense.

This philosopher said that the great thing for the British Empire to do before it got rid of the national debt was to lay by some ready cash in order to prepare for the next war. Why did not the Minister of Finance explain the mentality of the man whom he quoted in regard to the treatment of our national debt? This man seemed to think he could look down through generations to come and tell exactly what was going to happen, and advise us how we should handle our national debt. But listen to the views of this philosopher on the development of democracy. I wonder what those who are behind the "flapper votes" in England think of this great philosopher's views on the franchise as it should obtain in England. Let me quote:

In a political point of view the late events in America are pregnant with instruction. The system of low or universal suffrage, of allowing the representatives of the nation to be chosen by a numerical majority, including the lowest classes, could not have been anywhere tried under such favourable circumstances as in the United States, and yet the result has been most deplorable. It has made the mob paramount, thrown the government into the most incompetent hands, and filled the whole country with jobbing and abuses of all sorts. Many of those best acquainted with the people think the crisis will terminate in a military despotism. But whether that be so or not, the experience of the United States is a warning to all nations to beware how they reduce the elective franchise. The Americans are neither better nor worse than others, and the abuses by which they are disgraced would be quite as rampant on this side of the Atlantic were the members of our legislature elected under a similar system.

That indicates the kind of mind that existed fifty years ago. And yet this philosopher is being quoted to-day by the Minister of Finance as a guide in dealing with the national debt!

Now, I consider it important to bring to the attention of the house the strange workings of this strange aggregate known as the "tariff board." They investigated the salt belt, starting somewhere near Kincardine, where the Minister of Trade and Commerce (Mr. Malcolm) comes from, then it perambulates through half a dozen Liberal constituencies and finally winds up near where the Minister of Public Works (Mr. Elliott) comes from. Now, a body of men connected with this salt industry came before the tariff board and made the following application:

[Mr. Kaiser.]

Application by the Salt Producers Association for cancellation of the item providing free salt for sea or gulf fishing; for increase of duty on salt imported in bags, barrels or other coverings or in bulk; for the imposition of the same rates of duty on containers filled with salt as applies on empty containers; and for increased duties on free-running table salt.

These business men in a business way put forward a business proposition. They did not complain that they were hard up, they did not say that their business was lagging. They simply said: We have a wonderful salt deposit in our section of the country, but we are hampered in our operations by salt coming in from the United States, from Germany and from the United Kingdom; we claim that if this salt were subject to a duty we would have the full advantage of our home market, we could operate to the full extent of our capacity and we could employ twice as many men. They did not say that they wanted to make more money, but they simply said they were working only 50 per cent of their capacity. Then the mystifying work began. In this house there is something we see on the table, but there is also a game going on under the table that we do not see. When this matter came before this house all we know is that somebody got in contact with the Minister of Finance, with the result that the government said to the salt producers' association: We will grand a rebate of 99 per cent on the coal that you use in the preparation of your salt. That is the most ridiculous line that was ever written into a budget. I will tell you why. It illustrates the difference between the Conservative view and the Liberal view in handling such a mater. We say that the industry should be considered. Here is a means by which 500 families representing 2,500 people could be retained in Canada if the request for the imposition of a duty on salt were granted. But the Liberal mind says: We must fix up the industrialists; we will allow them every January to come down to parliament and by drawbacks take out of the cash box about $5,000 apiece. There are about ten factories engaged in the salt industry in western Ontario, and in the aggregate they turn out 200,000 tons of salt annually. It requires about 100,000 tons of coal to produce this salt. Fifty cents a ton on the coal means a drawback of about $50,000 which is divided up among these ten men. But they did not want it. They are sportsmen, and they take more pride in developing their industry than in getting a $5,000 drawback. That drawback did not add one solitary factory to our industrial development; it did not result in the employment of one additional workman. Two days ago the Canadian Salt Company issued their

annual statement from their offices in Montreal, from which it appears that notwithstanding the fact that they have been able to operate only at half their capacity they earned 13½ per cent on their capital. Before the tariff board it was shown that the salt manufacturers combined made 25 per cent on their capital. It was not a little drawback that they wanted. Like the good, honest, solid Canadians that I have always found in our industrial captains, they took far more pride in the development of their business and in the employment of fellow-Canadians than in securing the few paltry dollars offered them in drawbacks.

Then there is another matter that requires a little investigation in connection with this drawback game. Let me give the house this statement:

Statement showing the total amount paid for customs drawbacks, annually, back to March 31st 1921, and in five year periods preceding that.

Fiscal year 1927-28 (11 months to Feb. 29/28)	**$11,338,738 14**
Fiscal year 1926-27	14,639,450 94
Fiscal year 1925-26	14,706,419 28
Fiscal year 1924-25	10,610,742 77
Fiscal year 1923-24	11,719,152 44
Fiscal year 1922-23	13,400,508 25
Fiscal year 1921-22	10,741,682 04
Fiscal year 1920-21	12,839,914 41
Five year periods.	
Fiscal year 1915-16	3,599,844 77
Fiscal year 1910-11	789,395 27
Fiscal year 1905-06	242,853 77
Fiscal year 1900-01	138,947 80
Fiscal year 1895-96	149,218 27
Fiscal year 1890-91	134,388 86

Previous to 1890-91 no separate record of paid Drawbacks appears to have been kept.

I can quite appreciate the fact that a drawback is justifiable and perfectly sound from a national point of view. If a man brings in his raw material from a foreign country and manufactures it in Canada and then exports the finished product he is entitled to drawback. And the law permits it. But when it comes to giving drawbacks to some people in lieu of some other things they would like to have, it seems to me that this is absolutely wrong. What should this country do? Only one thing: the people should get rid of a government which fails to take advantage of the opportunities that offer; they want to do away with a job-killing government and replace it with a job-making administration. Read the remarks of the president of the Bank of Montreal a few days ago and you will get an idea of what should be the immigration policy of this country. From time immemorial people have moved from one country to another for one of two reasons; either to improve their position or to find employment. If this government only had sufficient faith in the country and could be induced to change its course and adopt a policy of protection, and provide that protection openly and honestly at the front door instead of at the back door, endeavouring thereby to provide employment for those people who are already in Canada as well as for others who might wish to come—if this were done we could dispense with a minister of immigration altogether.

The chief business before the country today is to undertake by every means possible to provide work for the people. Someone will ask, what about the automobile business in Oshawa? The government amended the tariff in this industry and I do not propose to say much on that score. The change was intended to effect great results. But what has happened? People generally do not realise it, but there has been an increase of 28 per cent in importations of automobiles into Canada, every one of which could have been manufactured in this country by Canadian workmen. This would have provided employment for 2,000 men. Reckoning five members to a family, this would mean 10,000 of a population who might have been retained in the country. But by one stroke of the pen the government drives from our shores all these people and then calls upon the Minister of Immigration to tour the world in search of 10,000 others to come in and take their place. The government, so to speak, are pouring material in at the top of the sack while it is running out at the bottom. If they only had sufficient common sense to sew up the hole at the bottom of the sack they would save all the loss that is now going on. The most pathetic thing I have ever witnessed was a village which was destroyed by tariff changes. Would any other country be guilty of such a thing? I venture to say you would not find the United States government following any course which would result in the shutting down of a single industry or the closing-up of a single home resulting in the exodus of its population. This sort of thing must come to an end in Canada. The government must have a change of heart or it will be the business of the people of this Dominion to put in a government who will see to it that sufficient work is provided for all.

On motion of Mr. Bennett the debate was adjourned.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.

END OF VOLUME I.
