Mr. ROBB: It meets the requirements of the country and the government receives a revenue for it. As regards advances under the Finance and Bank Acts, since 1914-15 we have received a total of $16,831,894 from the banks for circulation charges and $14,402,129 as special tax, a total of $31,334,023. It is true that under the Finance Act the government has no authority to loan directly to the customer, and in the light of the experience which the government has had in connection with loans made for seed grain in the west, and under the Soldier Settlement Board throughout Canada, it is a good thing that we have not that authority. We have, however, authority to make loans to the banks on certain securities stipulated, and any bank requiring funds has no difficulty in getting all the money needed to carry on the general affairs of the country. The proof that the banks have no difficulty in getting money lies in the fact that conditions throughout the country are good. No one is complaining that there is any insufficiency of funds. We did hear, however, from the hon. member who presented the resolution a complaint to the effect that Canadian banks were doing business in other countries, sending Canadian money out of the country, while in the very next breath some other hon. gentleman complained that money was coming into Canada. This shows the difficulty of trying to satisfy everyone. You will see large headlines in the press asking the question, "Why allow foreign capital to come into this country?" and at the same time somebody gets up in this house and declares that we should not allow our capital to go out. Now there is a happy medium, and while I repeat I have no objection to the resolution being studied by the banking and commerce committee, I must say I have a decided objection to advertising to the world at large that Canada has not a national banking system.

Mr. EVANS: Does the minister not take into account the fact that the great debt which the farmers of the west owe the government for seed and feed during the season of 1915 particularly is due not to any banking system but to the fact that the price of wheat in 1917 was set at 50 per cent of its value? May I remind him that when the group which I charge with having the power of inflation and deflation decided upon deflation, wheat was the first thing that dropped, with the result that we had 2,000 farmers fewer between 1925 and 1926.

Mr. ROBB: I am Scotch, and I will answer the hon. gentleman's question by asking another. Would the banks have been in any better position had they loaned the money?

Mr. SPEAKER: Am I to understand that there is an amendment?

Mr. WOODSWORTH: In harmony with the criticism made by the hon. member for Swift Current (Mr. Bothwell), and if it is acceptable to him, I would move:

That in the opinion of this house the time has come for the consideration of the establishment of a publicly controlled national system of banking.

Mr. SPEAKER: Without reading the amendment, I would point out to the hon. member that he cannot amend his own motion.

Mr. IRVINE: As I desire to discuss this matter, Mr. Speaker, I suggest that you call it six o'clock.

Mr. SPEAKER: In the meantime I must declare the amendment out of order.

Mr. WOODSWORTH: It is not my amendment, Mr. Speaker; the suggestion it conveys was made by the Minister of Finance.

At six o'clock the house took recess.

After Recess

The house resumed at eight o'clock.

Mr. WILLIAM IRVINE (Wetaskiwin): In rising to speak very briefly to the motion before the house I wish to congratulate the hon. member for Winnipeg North Centre (Mr.

Woodsworth) upon his very admirable presentation of the theme, one which it is not easy to present to parliament in the short time in which he had to dispose of it. I wish also to say that I agree with the hon. member for Swift Current (Mr. Bothwell) in the exception he took to the wording of the resolution. Next I want to congratulate the Minister of Finance (Mr. Robb) for the very reasonable attitude which he adopted towards the proposal. I think he indicated that with certain modifications he would not oppose this resolution going to the committee. I think, Sir, that that is a very reasonable attitude. No one will deny that the subject in itself is one which covers a very wide field indeed, one which by its very nature is extremely technical, and that it would be very difficult for the house to discuss a subject of this kind and arrive at any conclusion that would be of service in the future. So that the committee is the only hope in a subject of this kind. This does not, of course, presuppose that the committee will find very much the matter, but it will afford us an opportunity of discussing the subject and investigating it thoroughly.

Now I desire before moving the amendment —which I hope will meet with the approval of the minister, for I have tried to draft it to meet the objections which he offered—to refer very briefly to some of the suggestions that the Minister of Finance made; because I do think that some of his remarks go perhaps a little beyond what he intended. Indeed, I doubt whether he would be willing to admit some of the implications of his remarks. The minister objected to the idea going forth that Canada did not have a national banking system. Now it may be that our banking system is a national system that may be what is the matter with our banking system, but I have never at any time thought that the mere nationalization of anything would cure it. I am not sure that the nationalization of our banking system, even if it were a fact or if we contemplated it, would be sufficient to meet the requirements of Canada to-day, having regard to her condition generally from an economic and an industrial point of view. I do not think that the question is so much who is carrying on the banking; the question is rather what is being done. I do not make a plea now for the nationalization of the system. I make a plea for service from the system, I want to see that system functioning in its proper relationship to the economic demands of the nation. I do not care whether that is done by a private bank or by a national bank. I do not even care if our bankers make some profit out of the transaction. The great trouble does not lie in the profits they make; it lies in their control of a necessity of our economic life, and a control which is not always an intelligent one. During our investigations of recent years the bankers who appear before the standing committee frankly admitted to us that they did not understand the economic significance of finance. They understand, of course, the technique of banking; they are masters of finance in that respect, but they have, by their own confession, admitted that they do not understand the economic significance of finance. So that the greatest difficulty comes when they retard credit at times when credit ought to be released, and they release credit at the very moment when it ought to be retarded because they have not studied the economic side of the question. There, in my opinion, is where the big difficulty lies: not in the management of our banks, be it private or public, but rather in the fact that they are not being allowed to function in their proper relationship to the industrial demands of the country. On the other hand I do not think the minister really means to say that we have a national system at the present time. We certainly have not a national system in the ordinary sense of the term "national". Our system is national in a territorial sense, because our banks have branches scattered all over the Dominion, and our system may be regarded as a national system in so far as our banks have control over the economic life of the state; there is no doubt about that. We also have a national system in so far as the banks enjoy a privilege conferred upon them by parliament, and we may have a national system from some other points of view. But to say that we have a national banking system in the same sense that we have a national railway system—I do not think for one moment the minister really means that.

There is one other point which the minister mentioned upon which I wish to touch. He compared the credit of Canada with that of Australia when the two countries attempted to sell their bonds abroad. I am not in a position to know what are the respective positions of the two countries in that regard. I could however very easily see why the credit of Australia might be impaired by financiers abroad if it be true that Australia has taken a step towards breaking the monopoly of finance in that country. That in itself might be a very good reason. However, I have not the figures, and therefore I must accept what the minister says in that regard without comment.

The point I want to emphasize more particularly is in regard to what the minister said with respect to the soldiers' civil re-establishment scheme. He characterized that

as a loan on the part of the Dominion of Canada along banking lines. Of course the minister knows very well that that is not the character of that transaction.

Mr. ROBB: My hon. friend speaks of soldiers' civil re-establishment. What I was speaking of was the soldier settlement board.

Mr. IRVINE: I accept the correction of the hon. minister. The loan even in that regard was not a banking loan of the type we usually consider banking business. That loan, if the minister wishes to call it so—I do not accept for a moment that it is so, but for the sake of argument assuming that it is a loan, I want to point out to the minister just why it met with such disastrous results as he has indicated, and I do not think the minister will attempt to say that my analysis is wrong because the facts are too patent to admit of contradiction. Is it or is it not a fact that the money in that loan to the soldier settlement board was expended largely upon lands which were purchased at the time when we were at the peak of inflation, and that the settlers were expected to repay that loan when the prices they received for the commodities which they produced had dropped to the very bottom in a period of deflation? To expect them to repay the loan under such conditions was on the very face of it ridiculous. But I want to inquire how it happened that we had inflation, and how it happened that we had deflation.

What were the peculiar circumstances which made the one hundred cent dollar of Canada in one year worth only forty-five cents the next year? To make a long story short, that occurred because we did not have intelligent financial control in Canada. That is why it happened. And who had the control, sir? The bankers' association had control, and those were the fruits of their work. The minister indicates that we have in the treasury board an institution which functions in exactly the same capacity as a federal reserve system would function. If that is so does the minister accept responsibility for the difference between inflation and deflation which occurred in the transaction to which he referred as a failure in national banking? If I recall aright, both the present Minister of Finance and the preceding Minister of Finance refused to accept any responsibility in that regard. I think I am also right in saying that the bankers who were examined before the parliamentary committee in the investigation which took place on the credit question also refused to accept any responsibility for that situation. Since neither the treasury board nor the bankers' association will accept responsibility for what takes place through the instrument which they are both supposed to be handling, I can only come to the conclusion that there is nobody handling it, that it is handling itself, that it is simply running wild, that there is no control.

Some hon. member said that we were wanting easier money, more credit let loose. At the moment I am not so sure but that we want less credit let loose. There is just as much harm in too much credit as in too little credit. Let there be no mistake about what we want in this regard. We want control. We do not want this thing to run wild either in one direction or in the other.

Mr. DUNNING: Can the hon. member tell us how those countries got along with respect to inflation and deflation which had the type of state banking which he is discussing?

Mr. IRVINE: I am not advocating a national banking system. I thought I made that clear at the outset of my remarks, when I said as clearly as I could that perhaps what was the matter with the system we have in Canada now was that it is a national system; for the minister has said that it is. I do not for one moment think that if you nationalize the system we have now it would be any more efficient. What is wrong is that nothing is being done so far as control is concerned. Who is controlling this matter, and what is being done? Nothing whatever so far as control is concerned; and my authority for making that statement is the refusal of the Minister of Finance during the period of depression to accept responsibility for that depression, and the refusal of the representatives of the bankers' association before the parliamentary committee to accept any responsibility at all for that situation. I repeat that if both the treasury board and the bankers' association refuse to accept responsibility either for inflation or deflation, then I must conclude, as every other person must who thinks about the matter, that there is not any agency controlling the financial system of Canada, and I say it is control that we want. We are not asking that any institution shall let loose too much credit, or too little credit. We believe this is a mathematical problem, that the data necessary to arrive at a correct conclusion is not beyond the possibility of human intelligence to get, and that if it is within the grasp of human intelligence, that then the dread conditions which have followed both inflation and deflation ought to be stopped, and this parliament ought to accept the responsibility for stopping it.

This subject, as I have said, covers a very wide field. A very wide field has already been covered by previous speakers, and to make any specific pronouncement would require a very great deal of technique which I do not intend to ask the house to listen to at this time. I will have something further to say on this question when it arrives at the proper place for that kind of consideration, and that is in the committee. I shall not weary the house with any further remarks, but in the hope that the amendment I am about to propose will meet the objection raised by the Minister of Finance when he spoke to the resolution, I move:

That the resolution be amended by striking out all the words after the word "come" in the second line, and inserting therefor the following:

"For the consideration of the improvement of our banking system, and that the banking and commerce committee be instructed to study possible improvements and report thereon."

Mr. F. S. CAHILL (Pontiac): I crave your indulgence, Mr. Speaker, and the indulgence of the house for a moment while I extend to my hon. friend from West Calgary (Mr. Bennett) my congratulations on his elevation to the honourable position of leader of the Conservative party. I trust he may live long to enjoy that distinction, and that he may long remain a leader of his majesty's loyal opposition.

I am glad that the Minister of Finance (Mr. Robb) has agreed to send to committee the resolution moved by the hon. member for Winnipeg North Centre (Mr. Woodsworth). That the present banking system of Canada is inadequate to the needs of Canada is becoming apparent to a great many people throughout the country. I think the leader of the opposition will also agree with the resolution, at least to some extent. The other day he dwelt on the fact that we were losing many people from Canada. He lamented the emigration which has been taking place for some years, and I think if he will study this question of Canadian banking he will find the cause, in a great measure, of the emigration. The present system of banking, centralized as it is, will not permit of the development of Canadian resources by the Canadian people. Those who have given any study to governments or the organization of society have always attempted to get as far away as possible from centralized authority and centralized control; yet we permit that system in Canada in our banking.

We are told that ours is a wonderful banking system, that it is the best in the world. I think possibly, Mr. Speaker, that is because we know no other banking system, because we were brought up with it. We are preached to from time to time and told that ours is a wonderful system, and as we have had no experience with any other we are naturally inclined to believe ours must be a good one. But any system of banking that will centralize the finances of the country in one or two cities cannot possibly be a good one for a country as extensive as ours is in point of area. It is just as necessary to have a financial structure in the country as it is to have engineers. My hon. friend who has moved the resolution and myself might build a railway from here to Winnipeg without an engineer. It would be a mighty poor railway, I admit, but it would be possible to do it. Now, we are attempting to do the same thing in our finances—that is, to build a financial structure in Canada without trained financiers. You will say we have trained financiers and excellent bankers. I agree that we have some, but they are altogether too limited in number. Outside of the two great cities of Toronto and Montreal, you have in Canada practically no trained bankers. You have scarcely a man in a bank in Canada who is competent to give financial advice to his clients, or to the young people growing up in the country, who need the assistance, the aid and the advice of trained bankers. Under our system the banks employ boys, some from the high schools, others from the country store, and some who have not had even that training. In a few years they are themselves managers of branches of the bank, where their only function is to collect money from depositors in the district in which they are located and forward it either to Montreal or to Toronto.

I do not agree with much that was said by my hon. friend opposite about the banks not wanting to lend money. Every bank in the world is just as anxious to lend money as any man who is entitled to credit is to get that credit. Money is absolutely useless to a bank unless the bank can lend it. The bank cannot afford to pay three per cent on deposits and not lend that money; they must do it in order to make a profit; so that I have no quarrel with the banks so far as lending money is concerned. The quarrel I have with the present system is that the money is accumulated only in two large centres, and there are no facilities for lending money except in those two centres. As a result of that condition the banks, not having, as I say, the facilities to make loans other than in these cities, were forced to make improvident loans and suffer great losses, which brought down the number of banks from about thirty to something like ten or twelve. If you study the system you

will readily understand that a bank with four or five hundred branches could not possibly delegate to four or five hundred people the power of the central bank or the power of making loans. Necessarily they must consult with the head office. There must be some head to the institution, and the head is located only in two centres for all of our banks. It is not so much the bankers that are at fault; it is the banking system and the system of establishing branches which will not permit of the development of the natural resources throughout the country.

The Minister of Finance pointed out that we do not have the failures that they have in other countries—I presume he had in mind the failures in the United States. Our banking system has very often been compared to that of the United States, where they have a system of small and large banks throughout the country. True, they have had many trifling failures, but these would not compare with the failures of our banks in any instance that I know of. They have had numerous failures throughout the agricultural districts of the United States in the past few years, but they were only small failures and dealt only with the money of the people in the community in which the bank was situated.

We are also told that this is an elastic system which admits of making large loans to the large mergers. Well, Mr. Speaker, there is something more required in Canada than banking facilities to take care of the large mergers. We want something that will take care of the young Canadian who is growing to manhood and attempting to develop industry in Canada, but who never has an opportunity of talking to a real banker during his younger days, and until he has reached the stage where he can go to Toronto or Montreal and consult with the real bankers of the Dominion there, and only there, he can never hope to establish a credit for himself. We all know that credit is the one essential to success in business, that no man can possibly succeed to any extent in business until by good management and integrity of conduct he has developed the confidence of his associates in his ability and straightforwardness. I repeat, he never reaches that stage because he has no banker to consult with. If he wants to finance an enterprise in Canada he must do one of two things, go either to Toronto or to Montreal where the head offices of our chartered banks are located; otherwise he has no chance of talking to the financial people in this country.

The banking system of the United States—a system that is condemned in some quarters—has succeeded, Mr. Speaker, in developing every resource in every local community in the union. You cannot go from the Canadian boundary to Mexico or from Maine to California and find any resource capable of being profitably developed without being able immediately to get the necessary money right at hand. In Canada it is impossible to do this, and I fear that as a result our banking system has got us to the position where we are very little better off to-day than the people of Mexico. Twenty-five or thirty years ago they were quite willing to transact business with the Americans. They were willing to sell them their natural resources. It was all done legitimately and above board. But the Mexicans found later that they had sacrificed their resources and lost their control to outside people. Well, Mr. Speaker, we are coming to the same position. I read with interest a pamphlet issued periodically by the Canadian Pacific Railway Company. It contains a lot of valuable information and is well worth perusal by every hon. member. One number points out that in 1913 Canada owned only 30 per cent of her national debt, that is, the bonds were in Canadian hands; but in 1923 or 1924 we owned practically 70 per cent—representing, I presume, in the neighbourhood of seven or eight hundred million dollars. The writer also points out that in recent years three or four billion dollars of outside money has been invested in Canada.

Now, I want again to say a word to my hon. friend the Minister of Finance on this point. To my mind, it is not good business to sell to the Canadian people our low-priced government bonds, for it follows that the Canadian who is attempting to develop industry must go elsewhere and pay high prices for his money. It would be much better for the minister to float his bonds outside Canada, and thus leave our domestic funds for the development of our natural resources. We find that great sums of money are being spent here. I am glad to see it, it is a good thing to have the capital available, but it should be spent under Canadian management, if possible; and it would be possible had we had a system of banking that would have developed a number of financiers of this country. They would have been able to finance such enterprises through Canadian banks, and also through outside banks with the help of Canadian banks. How much better this would be for the Dominion than selling our natural resources to outsiders, who will take the dividend cheque out of the country and give us the labourers' cheque—the dinner pail. I regret to have to say so, but we are fast approaching the stage where we will have the opportunity of carrying the dinner

pail instead of cutting the dividend coupon, and I think our banks are more responsible for that undesirable condition that any other agency in Canada.

An hon. MEMBER: Except the government.

Mr. CAHILL: Perhaps so; perhaps the government should have amended the Bank Act long ago in such a way that it would have been useful to the Canadian people. I cannot convince myself, Mr. Speaker, and I doubt if I could convince you or any person else in this house, that the Canadian people are not just as bright, just as energetic and just as able as any other people that we know of in the world. Why should we put ourselves in the position of having to take second place in our own country to others who come in here? I do not believe they are any smarter than Canadians, but they have a system of finance in which they are trained, just as our people are trained in any other profession. We lack that training, we cannot have it under our present banking system, and until we change that system there will be no practical advance in Canada. I agree with my hon. friend the leader of the opposition that we have made no real progress in the last twenty or thirty years. True, we have gained somewhat in population. But how? We have simply traded our Canadian-born for a foreign population. I do not blame the present government, I do not blame the past government, but I do say that the time has come to study the whole question with a view to the good of Canada, let the suggestion come from where it may. If we do not, if we continue along present lines, there will soon be mighty few Canadians left in the country, for, as I have said, we have maintained our population so far by importing people whom we at least claim are not quite as good as our native-born.

This condition, Mr. Speaker, has gone on for years and years. It is only coming to a head now with the formation of gigantic mergers. It is only now we are beginning to realize that the Canadian has not developed his natural resources; it is only now we are beginning to realize that locally our natural resources have not been developed; it is only now we are coming to realize that our money is going to Toronto or Montreal, if not to New York; and if it is not too late to study the question, it is certainly not a moment too early. Therefore I hope, Sir, that the government will offer every facility for the study of this whole question, and will lend their assistance in devising ways and means of bringing about a better financial structure for Canada through a better banking system, and so give to the Canadian his proper heritage instead of forcing him to leave his own country to seek a livelihood.

Mr. SPEAKER: Is the house ready for the question?

Some hon. MEMBERS: Carried.

Mr. SPEAKER: I declare the main motion, as amended, carried.

Motion (Mr. Woodsworth) as amended agreed to.

NATIONAL RESEARCH INSTITUTE

Mr. E. J. GARLAND (Bow River) moved:

That, in the opinion of this house, the time is now come when the further development of our country requires the establishment of a national research institute, and that this should be undertaken by the Dominion government.

He said: Mr. Speaker, my chief excuse, if excuse be needed, for addressing the house on this subject to-night is the apathy of the public on the need for a national research institute. The whole trend of my discourse I hope will be in the direction of sympathetic cooperation with what I understand the government has in mind. At the outset let me congratulate the Minister of Trade and Commerce (Mr. Malcolm) on the statement—which I understand is correct—that there is to be included this year a large item in the estimates for the establishment of such an institute. I am not sure that I altogether agree that the amount proposed to be provided will be enough, but it is going to be a very healthy start in the right direction. It took the war to shatter the complacency not only of Canada but of England in regard to the matter of research. Prior to that time both countries had drifted along without worrying very much about what research meant, what it might do for the country, or anything else. Many of us had grasped theoretically the idea that Germany's great industrial progress was the result of the application of research to industry. It was not, however, I say, until the war itself that England and subsequently Canada realized the value of research in the development of their own resources and in the organization of their own industries.

We established a national research council and to that council belongs a great deal of credit for having maintained public interest during the years that have elapsed. It is true they have had a tremendous task. Public interest started waning in 1918 and it continued waning until a series of articles appearing in the press in 1927 again brought this question before the public. The amount that

is to be expended on this kind of an institute must from the very outset be adequate. At the present time research work is to a limited extent being carried on within our departments of government; our universities are trying to do something along that line, and a few of our larger manufacturing concerns maintain laboratories. But the government services are necessarily largely curtailed and localised; the work of the universities is almost entirely local, and the work of both the government and universities prior to this time has been diffused because of the necessity of carrying on partly educational work as well as research work at the same time. There is in Canada practically not one gentleman who is carrying on research work who is devoting his entire time to it. The other day I picked up an article that was printed in the Canadian Forum and I find that view supported by this statement,

> Scientists in the direct employ of industry in this country are still occupied more largely with regulatory duties than with research. In fine, it is true that with pitifully few exceptions, there are no scientists in Canada whose whole business is research. Almost all are able to devote to research only what dregs of time and energy are left over from other important and often multifarious duties.

Mr. McGIBBON: Does the hon. gentleman mean that in the broadest sense or in regard only to industrial research?

Mr. GARLAND (Bow River): I am dealing with research in its broadest sense.

Mr. McGIBBON: Then that statement is absolutely wrong.

Mr. GARLAND (Bow River): This article, which was written by an expert on this matter, appeared in the last issue, February 28, of the Canadian Forum, and my information, so far as I can ascertain it from others —professors, economists and some members of the research council itself—is to the effect that the number of scientists in Canada who are devoting their entire time, with assistance from either a government or a university, to purely scientific research work is almost negligible. We need them at the work. We have had a few illustrations of what they can do, and if we want to get some idea of the value to the country, one cannot do better than quote Professor McLennan himself in this regard. He says:

> Protection—

To which my hon. friends to the right are very much devoted.

> —is a defensive measure, a necessary defensive measure at times, but if you are going to win real and lasting victories the national policy that I would give you is "Science in the civil service and science in industry."

[Mr. E. J. Garland.]

I venture to say that greater progress will be made and greater happiness and greater contentment be secured for our people by the application of that policy than by any other that our statesmen can put into operation.

On this question of financing an institute it will not be necessary for me to go into very many illustrations covering the argument for the need of extensive expenditure. I will quote just one. A certain professor of chemistry in Germany, referring to a particularly beautiful and valuable piece of research work accomplished by a German investigator at the Kaiser Wilhelm Institute, states that he estimates that this one investigator must have employed over one hundred pounds of phospho-tungstic acid alone, to say nothing of other reagents in the course of this one investigation. Hon. members will understand just what is involved when they learn that phospho-tungstic acid costs about $24.50 a pound. Many other illustrations of that character could be given, and therefore we cannot afford to be niggardly in the amounts we propose to vote for research work from this time onward. In fact, it will turn research veritably into a farce if you limit your reasearch expenditure to a certain small specified sum per annum.

Germany, as we all know, is to-day just one large producing factory, the reason being the application of scientific research for years to industry and to her natural resources. In pre-war days Germany was the one great country that stood out pre-eminently in this direction, and she was the only one that had fully realized the importance of research and its relation to industry. The result was that slowly, relentlessly, her industrial products were competing to a greater and greater degree in the markets of the world with the products of other countries. A gradual realization of this fact was evident, I say, even before the war, but the war itself brought upon us a definite realization of the steps Germany had taken and the strides she had advanced in that direction. We can well remember—I remember it myself as a young man in a university —seeing our colleagues as they graduated leaving Edinburgh university, English universities, even Irish universities, to take post-graduate courses in Germany, in Vienna and so on. We did not have the facilities; we were not interested to the degree they were over there in this kind of work, and we had not provided, with the same enormous quantities of money, research institutes in the old country. A condition of affairs almost identical to that exists in Canada to-day. Our graduating students are leaving us every year in order to take post-graduate courses,

for instance, in Wisconsin, to name one university, and I could name others. It is a tribute to the generosity and hospitality of our neighbours that the facilities of those universities are thrown open to our students without any restrictions or any advance in cost of tuition.

As I said, we have been standing still. The German government and German scientists have, during the years that followed the war, even intensified their pre-war scientific efforts. As an illustration, practically all the work done in the hydrogenation of coal, that is the production of oil and other products, is now being worked out in Germany. England, within the last year or two, has turned her attention also to this important phase of research; but although an Englishman was the first to discover the possibilities in this direction, it fell to Germany's magnificently equipped research institutes to carry into practical effect the discoveries he had made.

We have also a demonstration of the value of scientific research in the production of synthetic methyl alcohol as it is being done in Germany. This is one of the most important products of modern industry. So far advanced are the Germans to-day that they are selling in New York a synthetic article at 48 cents a gallon, a cheaper price than that at which the Americans can produce it from wood. This gives one some conception of the steps that can be made through the application of industrial research to industry. I need not cite other instances of German pre-eminence. They have stolen our steel and pig iron market in the United States. They have complete control of the tartaric acid market to-day, and they make nitrates in Germany, under scientific processes, more cheaply than the Chileans can dig them out of the ground. That is a great tribute to scientific research.

As I have already intimated, Great Britain has been almost as backward in this connection as we have in Canada. Prior to the war England's interest was rather dilatory and academic. In 1913, in that immense nation, only £4,000 was voted by the government as a grant to science; only $20,000 in all England voted as assistance to scientific research. In 1916 the national reseach council was established; it was needed because they had to solve certain problems arising after the war, and since that time this has become a very definite department of government, which in 1926 spent £515,000 in addition to the amounts of money spent by the army and navy on scientific work. In 1926 England employed 2,500 research students in universities and schools, while in 1914 the total government grant for higher education was only £336,000. By the way, it is interesting to note in this connection that Canada, with her relatively small population and scattered area, is voting and has been voting almost as much money for technical education through our federal government, as was voted by England. In that year, we voted £220,000 for technical education, through our federal government. In 1925, however, the situation was realized, and England devoted £1,500,000 to this purpose; the incomes of the universities had increased, through grants, donations and foundations, from £970,000 to over £3,500,000, and the larger part of this increase was being spent on the establishment of research laboratories in connection with the universities, and in the extension of scholarships.

The results are already showing. Sometimes, Mr. Speaker, we find hon. gentlemen in this house and in the other chamber who are critical of expenditures in connection with matters of this kind; they refer to them as merely experimental or academic flub-dub. Practical results are what would appear to be of account to such materialistic or superpractical minds. Therefore we might consider the results in England. The expenditure of £400,000 on fuel research in 1926 brought an annual saving in gas production alone in England of over £500,000 a year. Let us consider another illustration. According to a government report, research costing a very small amount has increased the value of industrial plants engaged in the electrical industry, based on increases in production, by £4,000,000, and the annual saving in one industry alone as the result of the elimination of waste by the application of research is £1,100,000 a year.

Then, as another illustration of the value of work of this kind to a nation, let us consider what has happened in Japan. I do not think there is a member in this house who has not viewed with intense interest, possibly with some alarm but certainly with a certain amount of admiration, the amazing progress made by Japan from a condition of almost industrial obscurity to one of practically first rank, or at least to that of a nation holding high rank as compared with the productive competitive nations of the world. One asks how she did it, how Japan was able to attain such a result so quickly; and I hope hon. members of the house will listen with interest to Japan's record. I take my hat off to that country in this regard; it is one of the most amazing records I have ever read. No other nation has risen so rapidly. One scientist has said, "I have not seen any country where the

same intensity of purpose on the part of educational institutions and governmental departments is being applied to ensure the industrial success of the nation."

First of all, Japan has a complete system of vocational schools located at strategic points in every industrial centre. Then, the six imperial universities of Japan are state supported. We have not a single university in Canada, so far as I know, which is supported by the state, while in Japan they have six. They have also sixty-nine scientific research institutes, agricultural and industrial, forty-five of which are definitely under the government and subject to annual grants from the government of Japan. These plants employ 1,102 experts and 2,214 scientific assistants, a total of 3,316 expert scientists devoting their entire energy to the development of the resources of Japan, to the organization of industry and to the elimination of waste. Then there is another way in which this country has taken the lead. Every year three hundred of the most brilliant students in the Japanese universities are selected and sent abroad, at the expense of the government, to study conditions in other countries, mainly in Germany, Great Britain, the United States and France, with the object, of course, of keeping the Japanese people informed of and in contact with the most recent developments and advances in science and technology throughout the world. Japan has spent and is spending, on the travelling scholarships alone, the enormous sum of $600,000 every year.

What have we been doing? We have nothing that holds a candle to the attempts being made by Japan to develop her own industry. The United States, our nearest neighbour and our greatest competitor in foreign trade, stands out as another example of what we might be doing in this direction; the United States comes next to Germany in sensing the importance of industrial research and education and their relation to productive business. That country realizes it and is applying it so intensively that in certain sections of the United States to-day there is a fear that the trend is rather too much in the direction of industrial research and not enough in the direction of research in pure science. First, the United States has a national bureau of standards, mines and chemistry, really three separate bureaux, on which they annually spend $3,300,000. Then there is the national research council, which is endowed to the extent of $5,000,000. There are research schools developed in every leading university in the United States, and they have over 2,000 travelling scholarships. Technical schools are established in most of the industrial centres, and are on a very high plane especially with regard to laboratory equipment. There are three hundred industrial firms owning their own industrial laboratories, and some of these companies spend as high as $10,000,000 a year on research work. In addition to that, we have the immense Mellon institute, which is also heavily endowed, and which last year spent about $600,000 in research work, of which all but $60,000 was contributed by industrial concerns. Just by the way, it is worthy of note that the motivating genius who made possible the establishment of the Mellon institute was a Canadian, born at Brantford, Ontario, and educated at Toronto university. This is simply another illustration of the fact, so well presented to the house by my hon. friend from Pontiac (Mr. Cahill) a moment ago, that we have the brains and intelligence in this country, but we have not yet learned to apply them either in banking or in research work.

In addition to all the other agencies I have cited, we have of course in the United States the Rockefeller and Carnegie foundations, the first of which is endowed to the extent of $160,000,000, which is largely devoted to research work in science and medicine; and all the great universities have agricultural facilities on a research basis. Mr. Hoover has said, "There was spent in the United States of America last year"—that is, 1926—"approximately $200,000,000 on industrial research, taking all organizations into consideration, and in addition $10,000,000 more on pure science." He was so greatly impressed with the small amount being devoted to research in pure science that for months he placed his entire personal effort behind a drive to establish a foundation of $20,000,000 to further research work in pure science. I may say that in 1926 the bureau of standards conducted, for industry and for the departments of government, 180,000 tests of materials, involving over 600,000 exact scientific determinations. This work cost over $2,000,000. In addition, industries paid out $500,000, through industrial fellowships for the purpose of solving their own problems in laboratories established by the United States under the bureau of standards. The services of the Mellon institute and of the bureau of standards are rendered to all the small industries of the United States, as well as to industries that are unable out of their own financial payroll to undertake the expense

of maintaining individual laboratories and carrying on individual research.

Then I have, Mr. Speaker, to note that a commodity known as furfural, a sort of by-product, a curiosity that knocked around laboratories when I was a boy and cost about $30 a pound, is now manufactured at a cost of 15 cents a pound, and is made from oat husks and corn stalks. And it may be said that this peculiar commodity furfural, manufactured at this cost, enters into some thirty or forty of the most important products of United States factories, spreading all the way from gun cotton to phonograph playing records and tobacco flavouring. If you can imagine the spread of industries embraced in the territory between gun cotton and tobacco flavouring you have some conception of the application of this one commodity to industry generally. The DuPont Powder Company in the United States spent $6,000,000 in research over a period of years, and their report shows that the profit on this expenditure amounts to $82,000,000. They have made $82,000,000 by spending $6,000,000. Mr. Hoover says that research and standardization work of the bureau, in simplifying manufacturing processes and eliminating waste is worth $600,000,000 a year. Capitalize that amount at five per cent and you have an addition to the national assets of well over twelve billion.

Doctor Tory, writing in an article recently, stated:

> It may be said that science and research have added to the national assets of the United States alone in thirty-five years an amount not less than fifty billion of dollars.

And in those thirty-five years we have been standing still—outside of a little departmental work which we conduct on a poverty stricken basis we have been standing still. What few results have been attained in the sacrificing of their own time and energy to research work have redounded to the credit of our enthusiastic and ambitious Canadians; but I repeat that during the thirty-five years that have just elapsed, Canada, in relation to the industrial research progress of other nations, has relatively been standing still. Here is the record. In spite of the handicaps of a scattered population and the lack of population density we have done well in primary and secondary education, fully as well as any other country. Our agricultural colleges rank just as high. Our schools of applied science are fairly good. Our university work in pure science is good, to a point. But now we come to the stage in industrial research where a man must be trained to the point where he can undertake the solution of the major problems. But what facilities have we for the development of these men? None. Up to the period of graduation our people have as good an opportunity as those of any other nation, but all this does not fit them for the real work to-day; it does not fit them for real research work. After your graduation you have to have at least three to four years' experience in one of the best equipped and most scientifically conducted research institutions. We have not got them, but I hope we are going to get them; and that is one of the chief reasons why we find the majority of our best graduates, inspired by a desire for higher training, going abroad. Naturally because of the financial cost many who might be well fitted to undertake this higher training are unable to secure it at all; they cannot afford to go abroad.

The national research council in Canada has done splendid work; it tried partly to meet this condition by founding a series of scholarships a few years ago and spending some $40,000 a year for the last few years in respect to this particular problem. Since 1917, 155 men have been trained in this direction, and 80 per cent of these are employed in Canadian industries, educational institutions, and a few of the departments of government service. The research council spends about $60,000 a year now on assisted researches. These assisted researches are carried on chiefly in the universities, are of a scattered nature and, of course, are local in their application, for the most part at least. The most important of these researches—we know it well in Manitoba, and in western Canada—has been research in the direction of the eradication of cereal rust, and I do not think that any more important problem now places itself in front of the people or the government of Canada. It is something that will save the farmers of western Canada from a gigantic annual loss as the result of rust. One expert has estimated that western Canada—and of course, therefore, all Canada—suffered a loss of twenty odd millions a year through the encroachments of rust on the grain crop. This problem is really technical and in my opinion can only be solved if we will devote the necessary amount of money to it. The university of Minnesota, sixty years old, has a fully organized graduate school, and now covers the whole field of science. To-day the university of Minnesota, with a population in the state less than that of some of our Canadian provinces—note that, less than the population of some of our Canadian provinces—is paying large sums annually to promote this work and has been so generous, as I said a little while ago, as to throw its doors open to our own graduate students in

order that they may be fitted for the higher work later on. The same with the state of Wisconsin; both these universities extend to us every facility. Now if Canada is to maintain her place as a productive nation in competition with the rest of the world she must recognize the absolute importance of the application of industrial research to industry. We cannot hope to keep pace with what is going on in other nations, we cannot hope to eliminate the waste now going on in the industries of this country; we cannnot hope fully to develop our own resources until we have learned to apply research to our own particular province. So far we have been largely waiting for the results of experiment by other nations. We cannot continue as a self-respecting nation if we are going to allow that state of affairs to be prolonged. Canadian industries are practically entirely dependent upon laboratories outside of Canada to certify, for example, to the suitability to our needs of equipment manufactured in this country. The bureau of standards in Chicago is the place to which we send for rulings as to standardization in respect to practically all our own manufacturing requirements.

It is stated that many Canadian manufacturers are contributing to researches carried out in the United States. I think that is possibly true. Let me say that as soon as our research institute is established in Canada large sums of money will be needed to help advance its welfare. In short, Mr. Speaker, we need a standardization service, a bureau of standards that will be of service and of use to the whole Dominion. We need scientific research in industrial and in general economic development. We need a place where research for individual industries may be properly carried out at their request and on their financing. We need the co-ordination, through the institute, of research work in all the provinces. All the results of research should be freely available to anyone who is in a position to undertake the commercial production of whatever commodity may have resulted from that research. I do not think I can be blamed if I lay great stress on that last point. If this research institute in Canada, even at the request of an industry—for the sake of illustration, let us say the pulp and paper industry—applies itself to the solution of a problem affecting that industry, and the result of that solution given to the pulp and paper industry is of enormous practical value in the production of their products, enabling them to reap enormous profits, I say, Mr. Speaker, that if this government is going to turn over for the use of industry an institute which will be financed in part at least by public funds and whose very existence will be due to public funds, no results of the work of that institute should be used for the exploitation of the people of Canada.

Doctor Browne, who is chief of the United States chemistry bureau, says that lignin, a substance found in straw, offers as many methods of utilization as coal tar, and hon. members will remember that coal tar is the product of which the great German dye stuff industry was built. Some ten thousand derivatives are extracted from coal tar. If Doctor Browne, who is a scientific research chemist of the highest order in the United States, states that our wheat straw is capable of producing as many valuable derivatives as that, surely it is worth while for us to establish a research institute to find out whether or not we can turn straw to useful purposes.

Last year the total amount of money spent in Canada on research was $250,000; in the United States $50,000,000; and in Great Britain, $25,000,000. These figures stand out in very vivid contrast—Canada $250,000, the United States, $50,000,000. Hon. gentlemen to my right say yes, but look at the tremendous population of the United States. All right; if we were to finance a research institute in Canada on the basis of the proportion of our population to that of the United States, we would spend this year $4,540,000. Let me say frankly, Mr. Speaker, that if the Minister of Finance wants money to be spent intelligently upon the establishment and maintenance of a research institute in this country, I will give him my hearty support. That is one thing in respect to which I do not think we can afford to be niggardly or to economize.

This House of Commons in 1921 passed a bill recommending the establishment of a research institute in Canada, pointing out that the assets of Canada could probably be increased ten times over by the application of research to industry. That was seven years ago. What happened to the bill? It went to the other chamber, where it was quickly destroyed, and in the speeches that were made in that chamber the reason given for its destruction was that we were too poor to try to increase our national wealth ten times over by research work.

As I said a moment ago, wheat rust alone costs this country $25,000,000. There are ten thousand square miles of the heaviest oil-containing tar sands in the world in northern Alberta, in the Mackenzie river basin, containing enough oil to supply the world's fuel re-

quirements for two thousand years if we could only find out how to extract it. We buy $38,000,000 worth of petroleum and petroleum products every year from the United States, and leave this vast supply up there untouched until industrial research can be applied to its extraction. We have vast deposits of low grade iron ore in Canada, and we are buying $34,000,000 worth of iron ore and iron ore products from the United States. Some attempt has been made, but not nearly the attempt that should be made, to discover some method of utilizing that low grade iron ore so that we can build up an industry in Canada.

Another problem that has been carried to a conclusion in Germany, is the liquefaction of lignite coals. Their brown lignites are not at all analogous to our black lignites of western Canada, but if the same amount of energy and the same brains and amount of money were applied to this problem as it confronts us, our lignite problem in the west would be solved just as Germany has solved hers.

I do not wish to delay the house very much longer. I should like to put on record a statement made by Doctor H. M. Tory, president of the university of Alberta, and president of the Honorary Advisory Council for Scientific and Industrial Research. He says:

> I express to you the full conviction of my mind, based on much study, when I say to you that if we would throw off the mantle of pessimism and the inferiority complex which has possessed us, and risk the use of the trained and trainable intelligence of our own people, in one generation we would add to the national assets of our country the equivalent of our national debt. It can be done, if we have faith in ourselves, faith in each other, and the vision to step out with a forward look.
>
> What is the alternative? I say to you that ignorance will damn any nation. As sure as the sun rises in the heavens, if we refuse the way of knowledge—the only sure way to the future—we shall become a nation of peasants and traders, doing the work of the world for other people, while our national assets go to swell the coffers of men more enterprising than ourselves.

Those words of Doctor Tory might well conclude this very brief discussion of the resolution, but I am going to make one little appeal to those men—I do not think there are many in this house—whose minds may still be in doubt on this question. Is there a man who would dare to put a dollar valuation on the discovery of anaesthetics, the result of scientific research? Who could place a dollar valuation on what that has saved suffering humanity, or who would dare put a dollar valuation on antiseptic surgery? Again, take the internal combustion engine, upon the discovery of which the whole automobile industry was founded. Take Faraday's discovery of the magnetic field—Faraday, the son of a little shoemaker in England, working in his home-made laboratory and discovering the action of an electrical current upon a little paper disc? Faraday did not know what he had discovered, and it is said that when Gladstone came down to see his discovery and asked him, "What is the good of it?" Faraday replied, "Perhaps you can tax it". It was upon that discovery of Faraday's that there was built up the gigantic electrical industry that stretches throughout the entire world to-day, that lights our homes and brings in the radio, that heats our furnaces and does our toast on the breakfast table in a hurry. But Faraday did not know what he had discovered. Is it not worth while then to apply research to your problems, and are you not more likely to find a solution when you have a definite problem before you to solve?

In conclusion, I plead with those who labour and are heavily burdened with too much wealth in Canada to visualize this thing in the interests of the nation as well as their own souls. Monuments on tombstones after they are dead will be but little gratification if they have not the opportunity of looking back upon what they have left behind, but if they can leave their vast and sometimes honestly gotten gains to the establishment and assistance of a research institute, then even the souls that have gone might be able to look back with pride upon the work that is being done on earth. I commend the resolution to the House, Mr. Speaker.

Mr. PETER McGIBBON (Muskoka-Ontario): It was not my intention, Mr. Speaker, to take part in this debate until a few moments ago, and I rise now principally for two reasons. First, I want to contradict a statement made by the previous speaker (Mr. Garland) that there is not a single man in Canada engaged in pure science. Second, I want to congratulate the government, especially the Minister of Trade and Commerce (Mr. Malcolm) and the Minister of the Interior (Mr. Stewart), for the support they have given to this cause for a good many years. It is now nearly ten years since I first raised my voice in this parliament on behalf of scientific and industrial research, and as the years have gone by I have been more and and more impressed not only by the desirability but by the absolute necessity of Canada's indulging in some such form of assistance as is now proposed.

My criticism of the government on this particular occasion is two-fold. First, they are six or seven years too late; and secondly, the support which they are giving to scientific and industrial research is far too meagre. I

believe the Minister of Trade and Commerce is going to ask parliament to vote something like three-quarters of a million dollars for this purpose. If he had doubled, trebled, or quadrupled that amount, it would be more in keeping with the necessities of the case. The time has long since come when this country and every other country must use to the fullest possible extent all the advantages of science in order to keep pace with the other countries of the world. And in that connection, Mr. Speaker, I should not want it to go out to the world in the language of the hon. member for Bow River (Mr. Garland) that the great country of Canada has not been able to produce a scientist; that the universities of this country have not made it possible for a single man in Canada to devote his or her whole time to science. I think, Sir, he must be sadly ignorant of the history of his own country, sadly ignorant of the history of his own province. I recall to his mind certain names which have recently been placed on the honour roll of accomplishment in scientific research—such men as Professor Collip, of Alberta university, one of the principal assistants to Doctor Banting in perfecting the insulin discovery; Professor McCallum, of McGill university; Doctor Banting himself, of Toronto university and Professor Macleod, all of whom are devoting all their time and energy to scientific research. I should like to remind my hon. friend that Professor McCallum has made discoveries which have been recognized the world over. He has been offered the presidency of five universities and he is now devoting all his time to fundamental science at McGill.

Indeed, I do not have to go further than the city of Ottawa. May I direct attention to the discoveries of Doctor Watson and the work he is doing? Need I recall the fact that this government is completing a $70,000 building across the river, and also the remarkable result which Doctor Watson recently achieved in reducing an expenditure of $47,000 in connection with dourine compensation, first to $300 and later to $70? Might I call attention to the work done in the Department of Agriculture in developing the different grades of grain, a work which has meant millions of dollars of value to this country? I do this only to show that Canadians have not been behind in this field; that we have within our own borders men of intelligence, industry and ability in scientific and industrial research.

I should like to ask my hon. friend too, Sir, if he heard anything about the work of Canadians during the war. Are the scientists of Canada behind those of other countries? I should like to remind him of the great task placed on the shoulders of one Canadian during the war, a task equal if not superior to that performed by any other man during that period: I refer to the closing of the strait of Dover against submarines, a task which was given to a Canadian. Gathering about him a staff of Canadians, he and his assistants worked some twelve or fifteen months; the strait of Dover was closed in August, 1917, and not a submarine went through after that. What had been applied there could also be applied in the North sea, we are told, except for one portion which was too deep, and that could be looked after by other means.

I could refer also to the work of a Canadian in connection with the submarine telephone, a thing of inestimable value. I could recall the work in Toronto of Doctor Banting, who within the last few years discovered the secret of the treatment of diabetes. That was something scientists all over the world had been looking for, and it fell to the lot of a Canadian to make the discovery, one of inestimable value to mankind not only in the relief of suffering but in the prolonging of human life; and every year a man's life is prolonged through the application of that remedy means a natural source of revenue to the country.

I might go on, if time would permit, and point out to my hon. friend, to the house and to the country what the different pathologists, the great seekers of the unknown in all the universities of Canada, have been doing in the past, and to show to him that much as we admire immigrants, who come to our shores, we are not prepared to admit that the native born subject is inferior to any man on earth.

I should like to congratulate the government upon the steps which they are taking in this matter. For ten years I have preached this doctrine in the house. I believe that for every dollar they expend they will receive ten-fold in return. I could give the house illustrations which I have put on Hansard in the past of the great returns which have been made on the money invested in scientific and industrial research. I could tell you, for example, of a discovery made by a firm in the American republic to the south where, by improving the grade of yeast, that single firm has saved $500,000 a year. I could refer you to the great Pasteur, and not only in the realm of medicine and surgery; I could tell you about his scientific work in France in connection with the silk worm, splenic fern and with wines

and other discoveries. The eminent Huxley stated that his three discoveries created enough wealth for the French republic to pay off the debt for the Franco-Prussian war.

I could take you to the great industries of Canada and show you their magnitude. We have a fishing industry bringing in about $40,000,000 a year, and we are told by scientists that the waste of oil from the by-products is twenty-five per cent of the total value of the fish. I could point to the waste products of the saw mills and pulp mills and show you the possibilities of creating wealth from material that is now thrown away. I sat on a committee which gathered evidence some years ago, and we were told by scientists that an ordinary load of sawdust would produce ten gallons of ethyl alcohol, while one bushel of grain would only produce about three. Here is an opportunity for utilization of an absolute waste of the industries of this country to-day, material which is largely thrown into our streams and swamps. I could tell you of vast industries that were created during the war. For instance, Mr. Speaker, you will remember that early in the struggle our scientists told us that if Great Britain would only shut off the imports of cotton into Germany the war would be over in six months. When public opinion was brought to the point, and the blockade was put in force, what was the result? Germany put her scientists to work and from cellulose they developed a product to take the place of cotton—and the war went on. I could tell you that when Germany's imports of potash salts were restricted —and, of course, as everyone knows, these form the basis of fertilizers and other important things—the scientists of that country by an electrical process extracted nitrogen from the air and rendered Germany independent of the imported salts. I could tell you about the great artificial silk industry of this country which has been developed, how under pressure and through chemical processes cellulose is converted into artificial silk. Thus I might go on with one industry after another of the Dominion and show how their development has been due to the application of science, and point out the possibilities of the future in this direction. This, sir, is the duty before the government. The waste in our forests to-day is awful to contemplate. In the heart of the country I come from you will see hemlock bark, which in past years was used for the tanning of leather, now allowed to rot, the cost of transporting it to the markets being prohibitive. Some years ago I pointed out to the research council the possibility of extracting the tanning material from the bark by commercial processes. So far it has not been successfully done. But you can take countries like Germany, the United States and Great Britain and note how the application of science to industrial research has brought about remarkable developments in various industries.

Again, Mr. Speaker, I congratulate the government, because it is one of the few times that I can agree with its policy. Particularly do I congratulate my friend the Minister of Trade and Commerce that at last he has had the courage to make a start on this path. I very heartily support him and the government in this policy. My only criticism to-night is that instead of asking for $750,000 they should bring down a requisition for at least $3,000,000. They will need the money in the next two or three years, and they know it. Then why not make a start, and make it with courage, and so give our industries the advantage of the latest scientific research? Let us put them on an equal footing with the industries of other countries. In a word, let us develop Canada for Canadians.

Hon. JAMES MALCOLM (Minister of Trade and Commerce): Mr. Speaker, I do not wish to delay the house at any length to-night, but there are one or two observations that I should like to make now that this resolution presents the opportunity. Naturally it is very gratifying for a member of the government to have the support which has been given me by my hon. friend from Bow River (Mr. Garland) and my hon. friend from Muskoka (Mr. McGibbon). Indeed, I doubt if any other subject has met, or will meet, with as general approval from the house as the subject of the development of scientific and industrial research.

For many years outstanding men in this house have advocated increased expenditure on industrial research. Mr. Hume Cronyn raised his voice in this chamber on many occasions in season and out of season in his efforts to impress upon us the necessity of greater expenditure in this regard, and I believe the time has come when the public conscience has been awakened to an extent that will justify a forward movement in this field of endeavour.

May I compliment my friends from Bow River and Muskoka for having covered a great deal of the subject, which relieves me of the necessity of reviewing it to-night. I wish consequently to point out just two things. First, I appreciate the sincere criticism of my friend from Muskoka that we are not asking for a large enough vote. Let

me tell him that the $750,000 is being asked at the request of the national scientific and industrial research council. After going over the whole matter with that body it was estimated that it would take about three million dollars during a period of five or ten years to construct the laboratories necessary at the capital to carry on this work. It was further felt however that in this year's program it was not possible to spend a greater sum for the first unit of the buildings than appears in the estimates. The council also asked for an increase from $170,000 to $300,000 for administrative purposes for the current year. That increase appears in our estimates. Thus in doing what we propose we are acting on the advice of the only body in Canada which is in a position to advise us. It is true we might have asked the house to vote a larger sum of money, but it could not be advantageously expended this year. The house must remember this fact, that the building up of the executive of the research council is a comparatively easy matter; we have many able public men in the Dominion who will be glad to join the board of the research council and give it the benefit of their advice. The building up of a trained staff to operate the laboratories, however, is a matter which will require time and very careful selection. At the moment there is not an unlimited number of men available with the necessary scientific knowledge to go into the pure science of the many subjects which we will undoubtedly have to take up, and the development of the laboratories will therefore of necessity be progressive. I hope in this connection that from year to year we shall be coming to parliament asking for ever-increasing sums of money as the work develops. I wish, too, to point out that there is a very considerable amount of scientific work being done by the various departments of government, and that this work will have gradually to be amalgamated with the work of the main laboratories. That amalgamation will take time, and the scientific men in the various government departments will gradually find themselves, as opportunities occur, working under one head. That is what we shall try to accomplish.

Now, as to any possible overlapping between federal and provincial endeavours in this field, may I say this? It is the opinion and advice of the national research council that Canada has within the various provinces many research problems which are entirely local. The council feels that from its vote it may be able to assist in research work on such local problems by contributions to a university situated within the province. In that way provincial governments themselves, if they choose to vote further sums of money, will have such local research work under their own observation, so to speak. Without going into a discussion of the coal problem, we know that we have very great fields of coal. We know that our Alberta coal is high in moisture content, and we know that one of the difficulties in coking our Nova Scotia coal is that it is high in sulphur content. Each of these problems is distinctly different. One can be studied at Dalhousie university, the other at the university of Alberta in Edmonton. The research council is quite conversant with the fact that such problems will probably have to be allocated to the different universities throughout the country.

May I now say a word, Mr. Speaker, with regard to the remarks of my friend from Bow River (Mr. Garland)? The hon. member stated and, I think, incorrectly, as the hon. member for Muskoka-Ontario (Mr. McGibbon) mentioned, that there has not been a great deal of research work done in Canada, I would point out to my hon. friend that private industry in Canada in many cases has done some very valuable research work. The work that is being done at McGill university with the support of the pulp and paper industry has put the pulp and paper industry in Canada to the very forefront of that industry throughout the world. That has been done without direct government assistance, though it is true that the Minister of the Interior (Mr. Stewart) has made some contributions toward a building or the maintenance of a building and has cooperated in the work in every possible way.

Let me mention another instance. The Department of Mines of the Dominion of Canada has done some work that is rather interesting, and if I can find a letter which I have on my desk and which came unsolicited a few days ago, it will reveal to the house some of the very valuable work which has been done. A high grade magnesite ore exists in Austria, and prior to the war magnesite was imported from that country as a refractory for open hearth steel furnaces. During the war a magnesite industry was developed in Canada from a low grade ore, but after the war the lower grade ore was unable to compete with the Austrian magnesite which again came on the market. Those interested in the development of this work here appealed to the research council; a great deal of study was given to the subject, and as a result of that research we have now reached the point where these men say that the

Canadian market is being almost completely supplied with Canadian magnesite and a growing export market is being developed in Great Britain and the United States. Thus one of our natural resources is being developed and a large part of the result of that growth flows along export lines. That this has been made possible is due largely to assistance received from the national research council.

I do not want to weary the house by reciting all the work that has been done in connection with agricultural research but it has been considerable. Neither do I want to review all the work that has been done in mining research, but I can assure the house it also has been considerable. I might refer to the benefit we have received from research work done in the United States. Indeed, we have been very fortunate in being able to get the benefits of research carried on by other countries, though I do not know that we should be particularly proud of our being in such a position.

In this regard I desire to make a remark with which all members on this side of the house may not agree. The development of our natural resources is very important; taking a raw product and putting it into a more highly finished state is always essential to the wealth of a nation. Any man realizes that pig iron does not bring as high a price as watch springs. But there is another feature about research: when a need arises and there is a potential market in a nation for a certain product, that product will be manufactured within the nation even though the raw material has to come from the four corners of the globe. Let me illustrate this. Some men say that industry should be indigenous to a country. Very well. Can anyone tell me why it is that Canada imports raw rubber from another part of the empire on the opposite side of the world; imports long fibre cotton from Egypt, brings a heavy commodity half-way around the world to this continent, brings it indeed to the centre of the continent, fabricates it there and then ships rubber tires and rubber shoes to the value of many millions a year back to the country of origin of the raw material? How did that come about? Not only do we do that, but we produce these commodities here at a price comparable with that in any other country in the world. This is more than taking coals to Newcastle. It is bringing coals from Newcastle and shipping them back after they have been re-processed by intelligent labour and science. That is what it means. Research has built up the rubber industry from the milk which was found in the rubber trees to the tires and all the other multitudinous products which are made of rubber. Rubber has revolutionized our methods of transportation. Rubber has contributed to the progress of the world probably as much as any other raw commodity to which science has been applied. But science, while it has built up the rubber industry in Canada to the extent of production per annum to the value of $100,000,000, has done so by working on a product which Canadian industry has brought from the four corners of the earth for the service of the Canadian people.

In appealing, therefore, for a vote for industrial and scientific research, I appeal not only on the ground of the development of our own raw material which we inevitably have to export to some extent in some form, but also on the ground that if we have to export some of our nickel ore, for instance, to a country that wants to make its own nickel products, we should also develop our own nickel for our own needs to the greatest possible extent in Canada. But on the same basis we need to apply science to those raw materials of other countries which we desire to import in order to develop within this country the production of articles which we require for consumption here. I know I do not need to appeal further on this matter.

I am most heartily in accord with the resolution of the hon. member for Bow River, as I feel every member of this house is, and I only hope that the thought thrown out by that hon. member with regard to the support of industry will be heeded by those engaged in industry. The Dominion government owes it to the people to supply the scientific knowledge, the laboratories, the equipment. Industry itself directly benefits, but the consumer benefits also and so does the country as a whole. The past shows that industry itself in the United States has been particularly generous to science and I feel that Canadian industry will respond in the same way.

If the benefits of scientific research in other countries were obtainable in Canada free; if we could get all the scientific knowledge we wanted from Germany, Great Britain and the United States for nothing; if we did not need to spend a dollar to learn all we require to know with regard to science in industry, I should still be in favour of voting money for industrial research. The opportunities in this Dominion of Canada for work in pure science, for work on specific problems, are so great that if we vote the necessary money we shall create opportunities in scientific work for

probably 50 per cent of the graduates of our universities, and we shall be doing something which we can well afford to do by the expenditure of federal money, namely, provide occupation at home for our scientists.

I may say for the information of the house that it is the intention of the government to erect in Ottawa on a ten-acre plot secured without cost from the Department of Agriculture, the first unit of a national research laboratory, and a central power plant as well. This will bring the first unit of the laboratory close to the experimental farm, and will give the officials at the farm the benefit of the research work done there in connection with agricultural science.

May I say further that it is the intention of the government to have the national research council work on all problems with regard to all industries, and if the people in any particular industry think the work of the council is to be devoted exclusively to that industry, they are mistaken. There is further research work to be done in agriculture, as well as in connection with our fisheries and our mines, and as the work goes on and as the house becomes better informed as to what is being done by the research council, I think it will be very interesting to listen to the debates, because I believe many valuable suggestions will come from members of the house who apparently are so whole-heartedly in support of this work.

Mr. TOLMIE: May I ask a question? I should like to know if anything is being done by the research council in connection with the utilization of waste material left in the woods after the logs have been removed?

Mr. MALCOLM: I cannot answer my hon. friend's question offhand. There is an order of the house for a return, which will be tabled perhaps to-morrow, dealing with the various subjects which the research council has under consideration. It covers several pages of paper, and when it is brought down perhaps my hon. friend might look at it and find the answer to his question.

Mr. McGIBBON: I should like to ask the Minister of Trade and Commerce if he would be good enough to have a conversation with his colleague the Minister of Health (Mr. King), to see if he cannot stir the dry bones of that institution so as to get something done along these same lines.

Hon. CHARLES STEWART (Minister of the Interior): My remarks, on this occasion, will be very brief, because I expect to take part in the discussion on the next motion on the order paper, which is almost identical with that now before the house. May I say, however, in answer to the hon. member for Victoria (Mr. Tolmie), that the research work in wood products which has been conducted up to the present has been carried out by the Department of the Interior, and we have not yet commenced the study of the utilization of waste timber. We have been devoting our attention mainly to the study of wood preservatives, wood testing and kindred subjects. Through the generosity of the Canadian Pulp and Paper Association, a laboratory is being constructed at McGill university which will be partly occupied by our staff, where further scientific work will be carried on. I say it will be partly occupied by our staff, because the research work in cellulose and kindred subjects relative to the pulp and paper industry will be carried on by the professors of McGill university.

I should just like to say, Mr. Speaker, that ever since coming to Ottawa, in season and out of season, I have been a consistent advocate of a greater expenditure and a greater endeavour in scientific and industrial research. I think I realized its value from the time Doctor Saunders did so much for the wheat growers of the west when he evolved the marquis wheat; no one can estimate what that meant to our western farmers, and as I have said, from that time on my interest in scientific and industrial research has been constant. We have not been altogether idle in Canada; many interesting problems are being studied at the present time, and I will mention just one in the province of Alberta. Our own provincial university there is studying the extraction of what we think will be helium gas from the products of our own gas fields. I am not going into a discussion of what that will be worth—

Mr. BENNETT: Where is the market for it?

Mr. STEWART (Edmonton): It is an interesting problem, to see whether or not we can extract it from our own gas.

Mr. BENNETT: Why not try something more practical?

Mr. STEWART (Edmonton): I merely mention that as one of the problems under consideration. The same thing can be said about our great tar sand deposits, which were mentioned by the hon. member for Bow River (Mr. Garland).

Mr. MANION: What about iron?

Mr. STEWART (Edmonton): In connection with iron, we have gone this far in the

laboratories of the mines branch here; the slag now thrown off from the deposits at Sudbury could be economically put through a process, and the iron ore utilized. But with regard to the other problem, that of the low grade hematite ores, we have not gone very far in our research work. I may say, however, that we are keeping very closely in touch with what is being done in that connection in every other country, and we are not without hope that something may eventually be accomplished.

Mr. MANION: It is the most important problem to-day.

Mr. STEWART (Edmonton): I agree that it is one of the most important questions, but I would not put it as the most important one. There is another point which I should like to discuss, leaving out the coal question, which will come up later when the motion which follows this one on the order paper is taken up. I wish to issue an invitation to all members of this house to attend a lecture which I hope to have held here, to be given by one of our own officers in the surveys branch, which will show how we have advanced in the making of aerial surveys in Canada. We have the proud distinction at the present time of leading the world in aerial surveys, and it is my intention, for the benefit of those members of this house who may be interested, to have the officer in charge of this work give a demonstration in the railway committee room of how the work is performed, how the maps are made, and the benefits of that method of surveying as opposed to the slower and more tedious method of ground work upon which we have had to depend in the past. I know one of the hon. members opposite made a very serious charge against our map making, but we are quite prepared to demonstrate what we have been able to do in aerial photography, and I can safely say that we are not lagging behind in that field at any rate. The Minister of Trade and Commerce (Mr. Malcolm) mentioned what has been done in connection with magnesite, and there are many other matters in which the scientists of our country have made names for themselves in industrial and scientific research.

My hope is that with the establishment of these laboratories and with the greater encouragement we will be able to hold out, we can get a larger body of young men to go in for scientific work. I think it important that it should be said now that it is the hope of the national council that the universities of Canada shall be first utilized to their fullest extent, because from the universities we shall have to recruit the men to undertake the research work. They will have to be trained and educated there, and to my mind the logical thing to do is to give all these universities, no matter where they are situated, an opportunity to carry out scientific work to the fullest possible degree. Then at Ottawa there should be established a central organization to do such work as the industries of Canada may be desirous of having done, either by a direct grant from the federal government or with the assistance of Canadian industry, much on the principle followed in the bureau of standards and the Mellon institute in the United States. I think it important that we should get out to the public the idea that we are going to utilize all the facilities at present available and then create additional facilities which may not now be in existence for these purposes. Having put it on that basis I think it will appeal to the good sense of every business man in Canada, and so far as the overlapping of work is concerned, I think that can be very well avoided. We have many problems in connection with our natural resources that are awaiting, and have awaited for some considerable time, investigations that will occupy all the time needed, and take all the money and all the men that we can provide for this purpose. Other problems and other fields that are not so important to us may be undertaken by other parts of the empire.

Mr. GARLAND (Bow River): With respect to experimental work that will be carried on in behalf of industry, may we presume that, just as in the case of the Mellon institute, industry will have to meet the cost of the experiment?

Mr. STEWART (Edmonton): That is a little difficult to answer. If the investigation is directly attributable to the industry the answer would be yes; but if it relates to a matter of general importance then it will have to be undertaken by the government itself.

Mr. GARLAND (Bow River): My question had reference only to the request from a certain industry that the work in the laboratory be turned into the direction of solving a particular problem in which that industry was interested. In such a case I take it the industry would have to pay the cost of the experiment?

Mr. STEWART (Edmonton): Quite. That is the method pursued in most countries in which I have had the opportunity of making a study of this matter. It is identical with the course pursued in the United States, and I see no reason why there should be any change in that respect in Canada.

Mr. McGIBBON: In the case of duties delegated to provincial universities, will a direct voice be still maintained in Ottawa?

Mr. STEWART (Edmonton): The national council will supervise the work in order to effect co-ordination and prevent overlapping. Take the province of Manitoba, for instance, where investigation is going on now in connection with wheat rust. I merely cite the work there as an example of what can be done in that direction. It is very important to the province of Manitoba, and quite logical, that the work should be given to the province to undertake in order that it may solve the problem if that be at all possible. Not, may I say, that that fact detracts for a single moment from the general interests that we have in the subject.

That is all I have to say, Mr. Speaker, in the matter, except to add this: I welcome the speeches of all the hon. members who have expressed their views on this question. I listened with very great interest to an address by Professor McLennan in the Chateau Laurier, but unfortunately he was speaking almost entirely to technical men and I said to him then: It is not very much use talking to men who are thoroughly informed. What we want to do is to go out into the country and get the public to understand the necessity of thorough scientific research. I suggested to Professor McLennan at that time that if his lecture were delivered to an audience of business men it would have very much more effect than if delivered to technical men. I think the members of the house can spread this gospel very acceptably. If they will do that throughout the length and breadth of the country and stimulate the public interest it will strengthen public opinion in favour of granting the necessary money and the necessary encouragement, and will have the effect of promoting the development of this work in connection with our universities.

Mr. C. H. CAHAN (St. Lawrence-St. George): I think that we on this side of the house appreciate very much indeed the remarks of the Minister of Trade and Commerce (Mr. Malcolm) and if he is to have the direction and control of this work, so far as the government is concerned, I should like to suggest to him that I know of no department of human endeavour upon which large sums of money may be so uselessly and inefficiently expended as upon national research. In many parts of the United States they have attempted, by way of industrial research, to start from the elements up, thinking that it was quite unworthy of their institutions that they should profit by the results of the scientific investigations made during the past fifty years by other countries. That is one way of spending public money, or money privately contributed, most inefficiently and uselessly, and I suggest to the Minister of Trade and Commerce, or to the Minister of the Interior (Mr. Stewart), whoever may have the matter in charge, that the results of scientific research in every country of the world, except so far as it is made confidentially by private industry, is open to them to-day, and that they should profit to the utmost by the attainments and the achievements of other nations, up to the present time.

To do that Germany followed this method: She placed in every industrial country of the world some of the brightest young men out of her technical schools, keeping them abroad sometimes five, or six or seven years, to become acquainted with the most approved methods in engineering and in chemistry in which she has herself been so successful. Japan followed Germany's example. During the war I was temporarily in charge, as chairman of a board, of some seventy or eighty large engineering firms and the work which they were doing, and we had a request from the Japanese government to permit certain of their young men, whom they were sending abroad, to have access to the work which was being done and to be informed as to the results which were being accomplished. Japan placed large numbers of young men in England, in the United States, and in Canada in order that they might ascertain the methods and the processes which were being utilized to achieve certain satisfactory results, and they have profited since by the information which these young men took back with them.

I quite agree with the purport of the remarks of the Minister of Trade and Commerce. I think it is satisfactory indeed that we have a gentleman in his office with the ideals and with the wide view of industrial conditions to which he has given expression to-night. But I suggest to him that his institute or his council of national research, by whatever name it may be called, should endeavour to place before the public, and especially before the industries of Canada, the results achieved by the industries of all foreign countries in the same line of work, in so far as their attainments may be made public; and if he were to publish from time to time some leaflets showing the results of these investigations abroad similar to the commercial reports which he now issues—many of which I, though not a commercial man, find most interesting indeed, although I think

they may be improved in some respects with time—if these results were made known to our industries, it would help very much I believe in assisting our industrial research departments to achieve still better results. Further I think they should take into consideration, as they intend to do, the development of scientific research in our own educational institutions. We have, I know, in my own native province of Nova Scotia, been doing for some time very considerable advantageous and beneficial work for that community. In the city of Montreal during the last five years the provincial government, through one institution there, has been training young men as efficiently as they have ever been trained in any government institution in this country. In addition to that, there is technical training being carried on by McGill university. Those young men who are being so trained should be utilized by the council and sent abroad wherever there are industries being prosecuted that are akin to those we are undertaking here, and in which we are making research, so that they can study the processes in use abroad and bring home to us the latest scientific attainments of foreign countries for application to our industries here. We should not attempt in Canada to extend and diffuse our efforts over the whole broad field of industrial research, because to place our institutions on such a plane, and assure even moderate success, would take the entire revenues of this country; but by utilizing the information which is available to us abroad, and applying it to our own necessities, we will, I am sure, achieve the best results in the work which has been outlined by the Minister of Trade and Commerce.

Mr. T. L. CHURCH (Toronto Northwest): The resolution before the house, Mr. Speaker, asks for a national research institute. Nero never fiddled while Rome burned like this government has done on this question, and the first thing Canada should do in the way of research is to dig up an all-Canadian tariff policy that will keep Canadians in Canada and give them a job in their own country. That is the first great corner stone in a scientific and industrial research policy.

We have one useless commission now dealing with industrial and scientific research known as the tariff board, to which the main economic questions of this country have been referred. We are spending hundreds of thousands of dollars on that board, which fiddles with the tariff on behalf of the government while thousands of young Canadians go to the States in search of a job.

You can find out more about research in this country or the lack of it in the death and marriage notices in the papers than you could learn from the statements of the two ministers here to-night. Just the other day I read of a railway man 48 years of age having been killed in Toronto. One of his sons came home from Detroit just recently to get married, and now his other two sons, twenty and eighteen years of age respectively, have also come home from Detroit, where they had gone to get a job, for the funeral. These men along with thousands of other young Canadians have been driven across the border because of the lack of knowledge and study and research on the part of the government in the matter of a proper economic policy for this country. The Minister of Trade and Commerce (Mr. Malcolm) is not going the right way about solving this problem. He was in England not long ago. I wonder why he did not bring before the house the recommendations of the empire marketing board in regard to agriculture and industry of all kinds. It would have been better for him to do that than to create another large spending government department to spend money like the tariff board is doing. The government should do something practical. Let them lay down a policy of giving grants to the different universities that are carrying on research work in different lines—medicine at McGill, for instance, and science and medicine at Toronto university.

I should just like to quote one paragraph of the report of the empire marketing board of London, England, and suggest to the two ministers who have spoken to-night that if they want to do something practical along the line of scientific and industrial research they should provide the members of this house with a copy of that report, and act on its recommendations. Here is that board's recommendation on research:—

> The board has made no attempt itself to engage directly in scientific research. Its proper part was seen clearly from the outset to be that of fortifying existing scientific institutions in such measure as would enable them to intensify or develop their work, and of making possible the establishment of new institutions to meet new and proven needs. Moreover, in deciding upon the allocation of grants for research, the board has consistently been guided by the different government organizations, whether at home or overseas, that were best qualified to advise it.

I suggest to the minister that instead of providing another large institute he should utilize the organizations that are already in existence carrying on scientific research, namely, the universities. There is in Toronto one scientific organization that has been in

existence for from forty to fifty years—the Canadian institute on College street.

As I said when speaking in the house on this question two or three years ago, everybody agrees with the necessity for scientific research. As Premier Baldwin of Great Britain says, "shock absorbers" are necessary in industry. Take the radio, for instance. As I said in a speech on the budget in 1926, from which I now quote, "it almost ousted the phonograph, but the makers of the latter instrument were forced to make a better product, and it kept its place. Gas illumination was almost ruined by electric light, and the gas mantle saved it. Nickel companies were satisfied to produce for warfare purposes only, but now they are turning to many useful domestic lines. Coal fuel is in a bad way; this industry had no shock absorbers because it was of the opinion that it had a perpetual monopoly, when along came petroleum and gasoline. Great Britain, United States, Germany and Canada are countries where the coal business is in a bad way. The by-products of coal can and should be utilized, and will give larger profits than the raw product itself; I predict that in twenty years every coal mine in the country will make liquid fuel at the mine. According to the Montreal papers the Canadian Pacific Railway have placed orders for more coal burning locomotives, but the oil burning car has come to stay. A new type of gasoline which is now being put on the market will revolutionize the type of motors used in automobiles. The vast future of nitrogen will cause a great upheaval in agriculture. Every industry is being revolutionized by new scientific discoveries. If business is not associated with scientific men, business will go to the wall. The national research council is doing good work, and can keep industry informed of what is going on. It can show the time to draw in on one business and expand on another, and any banker should know how that information will affect industry."

If the minister wants to do something practical in scientific research, let him give grants on a standard basis and let him help the universities that are carrying on this work. Two years ago practically the entire class in electrical engineering at one of our large universities had to go to the United States to look for jobs, notwithstanding the magnificent development of our water powers. The government should lay down the basis and specifications on this question on which universities could get grants. Many of our most brilliant students who have won the highest honours in medicine, scientific chemistry, and other branches of scientific work, have to take menial jobs as cooks and waiters on the boats on the great lakes and the St. Lawrence in the summertime; they should be engaged on research work by a government policy. So I appeal to the minister to do something practical and give more money to the universities and hospitals and science schools, which have been pioneers in research work.

We have listened to a good many speeches on scientific research to-night. There are too many of these Neros fiddling on their violins to the tune of scientific research, about which they know nothing. A proper tariff policy would do more for this country in one week than any other agency I know of for scientific and industrial research.

Scientific industrial research can do nothing to aid the manufacturers of Canada without at the same time helping the manufacturers of the United States, and any money that we spend on scientific research work in this country will benefit also the people of the United States. As I said before, the main research we want is a research which will keep our raw materials in our own country, and a research for a tariff policy which will stop the spending in the United States of $600,000,000 of Canadian money for high priced American goods from that country, many of which are made out of our raw materials. We pay for these goods in the raw materials of our country. These raw materials will soon be gone, unless we find a scientific research and industrial tariff policy that will provide employment for the men of Canada, 88,000 of whom are driven out of Canada and sent to the United States every year. These 600,000 Canadians—or 88,000 per year, as I have figured it out—have had an overdose of research work and have gone to the States to look for a job. What do these 600,000 noble Romans care for the violin playing of the Neros on the government side who fiddle with this question here? How will this scientific research proposal now benefit them? I think the government should co-ordinate its work in this direction with the scientific research work of the universities, in reference not only to medicine and manufactures, but to electricity, chemistry, and by-products as well, and instead of imposing on the taxpayers of the country another large government department with a lot of officials, it would be far better if the government adopted the policy of the empire marketing board in England, where the government lays down a

specification for the universities, where those engaged in industrial and scientific research can qualify for grants.

It seems the government policy of the country so far is search and research to discover capital on the seven seas where we have not an ambassador. That is the limit of our research. I commend the wisdom of the member who brought this matter before the house, but I believe you would get far better results from a policy that would hand the money to universities and other departments I have named, to spend on a standard government plan and specification. I believe the main research which the country wants is a research policy that will frame a Canadian tariff that will provide work in Canada for the Canadians, so that we can keep our young men at home. A large number of Canadian graduates of universities go to the States annually to make a living, not only in chemistry, but in other trades and professions. We would get far better results if we could formulate a Canadian tariff and economic policy that would keep them at home.

Mr. THOMAS CANTLEY (Pictou): I hesitate at such a late hour to join in the general discussion, but I have listened with a great deal of interest to practically every member who has spoken on the matter before the house, and with the exception of perhaps my hon. friend who has just resumed his seat (Mr. Church) the discussion has been along practical lines. I should like to ask the Minister of Trade and Commerce (Mr. Malcolm) what he has in his mind as to what the government will do in regard to industrial research. I was much interested in the remarks of the hon. member for Bow River (Mr. Garland) who made an excellent speech. His only error was that of exaggeration, and he did exaggerate, which I think greatly weakened his case. We in this country, in common with the mother country, have made progress mainly through the old road to progress, which is by trial and error. In that way was worked out for us nine-tenths of the problems in the industrial fields. The pioneers in industry in this country, as in other countries, wrought out without scientific research, and in most cases without scientific knowledge, a great many of the fundamental problems of this country, as was also done in other countries.

Take the steel business. I go back forty years in my experience in connection with that business, the only one I can claim to have any practical knowledge of. About the year 1888 we in New Glasgow changed over from acid to basic steel manufacture. We had to get a refractory furnace lining that was basic, or either basic or neutral. Where did we get the material? We actually brought dolomite from Great Britain when we had millions of tons of it within two or three miles of our furnaces. We afterwards brought magnesite from Austria, and I remember well the problem we had to meet and solve at that time, when we actually paid as much as 28 cents each for nine by four and a half inch bricks. Few people are familiar with the history of the conditions incident to those early days. These problems are now all worked out, but we then had to work them out very largely without the assistance which is now proposed to be given to industry.

Our progress in all branches of industry in the future should be very much greater than it has been in the past; I have not any doubt it will be, and it ought to be. Some questions were brought up as to unused raw materials, and our friend from Bow River referred to tar sands. Then our attention was directed by other speakers as to what might be got out of sawdust and hemlock bark. The problem connected with these products is largely a matter of transportation, that is the question to be solved in regard to the treatment and utilization of products of that kind. Scientific research will not solve that problem. We know that we can extract the oil from the tar sands, but the difficulty is that these sands are so far removed from where the product can be used, and the sands so much disseminated, that it is primarly a question of transportation and not of treatment. I hope the minister will make a little faster progress than, as I gather from his remarks, he is likely to make.

The other point I would like to stress is this: I think it would be of some advantage to him and great advantage to the country to take counsel with some of the practical men in industry. The difficulty with all these scientific gentlemen is that they are inclined to run higher and higher and deeper and deeper into scientific questions and overlook the practical questions that lie under our feet, which are really the important ones. If you will consider all the great advances made in the mechanical arts I think you will find that in the majority of cases they have been wrought not by scientific men in colleges, but by the practical men in intimate touch with the work that lay before them day by day. Take Colt and Bessemer, take Thomas and Gilchrist, Martin, Riley, and all the great men in the iron industry: not one of them was a scientific man, and for the most part they were practical workers who mixed brains and

observation with their daily work. These facts must not be forgotten. If the minister is to make a success of the enterprise upon which we are now embarking, I think he will gain enormously if, before finally deciding the details of the establishment, he will take counsel with men who have a practical knowledge of the many problems that confront them in the various industries of the country which he plans to serve by his project of scientific research.

Hon. R. B. BENNETT (Leader of the Opposition): Mr. Speaker, I desire to direct attention to the fact that the resolution now under consideration does not involve the payment of public moneys for the purposes mentioned by the minister. Therefore I do not propose at this time to discuss the matter, reserving it for the moment when the estimates are under consideration. But this I do desire to say: I do not think the country is ready to see the duplication of these activities established in all parts of the Dominion. There are several state or provincial universities actively engaged in this work; there is one in British Columbia, one in Alberta, one in Saskatchewan, one in Manitoba, and one in the great province of Ontario. To each of those universities large sums of money are voted from year to year, and very considerable portions of that money are devoted to the purposes of industrial and other research. Instances were mentioned to-night as to the methods pursued and the results obtained in some of the provinces by virtue of those expenditures. But if we are to establish at Ottawa a national research institute for the whole of Canada, as the minister suggests, we must be extremely careful that we do not duplicate the activities already existing, and expend money for purposes for which money is already being spent in other places.

For instance—although perhaps this is not the time to discuss it—the Minister of the Interior (Mr. Stewart) spoke of what was being done in the pulp and paper industry. I think when the matter is investigated it will be found that it is an effort on the part of the Dominion government to duplicate what is being done so well at McGill university. Again, the work that is being done in this city with respect to animal husbandry has produced wonderful results, but similar work on another scale is being done in all the provinces. Then take the work that is being carried on in the Connaught laboratories, a very valuable work—I have not the time to discuss it now. In short, in every part of Canada you will find research work being conducted, and we must be careful not to duplicate those efforts if we are to make this undertaking the success that we all hope it will be.

But what my friend from St. Lawrence-St. George (Mr. Cahan) said is, I submit, much more to the point. Having at our disposal the advantage of the wide knowledge obtained by the hundred and ten millions of people to the south of us at an expenditure of fifty million dollars and more per annum, and of the experiments carried on in Germany, it does occur to me that one of the first things we should do is to expend public moneys for the purpose of ensuring that the knowledge thus obtained in other parts of the world shall be made available for our own people. That, it seems to me, is one of the great uses of this industrial research bureau. There is a tendency—not confined to Canada alone—when you place certain persons in authority, and give them the opportunity, for them to endeavour to extend their activities and to carry on their operations over a very wide field. That I think is something we have all experienced.

While perhaps it is not the exact moment for me to make these observations, in view of what the Minister of Trade and Commerce has said to-night, I venture to suggest that a very earnest effort be made to see to it that whatever experiments are carried out and whatever research is undertaken will be something of a practical character and that the results will be made available to the Canadian people. We should utilize not only the knowledge which we ourselves obtain, but also the wide knowledge available to us by reason of the researches and experiments conducted in other countries. I could give my own experience of coming in contact with men from foreign lands who were visiting this and other British dominions merely for the purpose of ascertaining what knowledge had been obtained by experiments and research work in order to utilize it in their own country. That is important. I desire to add my voice to what has been said by my hon. friend from St. Lawrence-St. George as to the desirability of careful scrutiny of every effort that is being made to ensure that we utilize not only our best brains for scientific effort in this country, but also the methods and the wonderful knowledge that has come to us from other countries.

There is just one difficulty. I think we should not have too high hopes and expectations with respect to this matter. I remember during the war the representatives of a great American firm coming into our far west to

look over some very valuable mineral deposits there. They were convinced that during the war they could be made very valuable, but they stated frankly that our limited population meant that the by-products would be without a market. It does occur to me that when we are dealing with tar sands hundreds of miles in the northern part of Alberta, we must always remember that as long as we have near at hand raw products that can be made available at lesser cost than the far-away raw products, the former will have the preference. That is a fact we must always bear in mind in a country such as ours with a limited population.

I do not intend to discuss the matter further, Mr. Speaker, than to say that the effort which the government is now making is a tardy recognition of the untiring zeal that characterized the efforts of Mr. Hume Cronyn, to whom the Minister of Trade and Commerce has referred, and of those who in that day constituted the government of Canada to promote an intelligent and lively interest in the problems of scientific research. Let me repeat, I do trust that there will be no duplication of effort, that money will not be improperly expended as it may be by reason of the tendency of human nature to extend its efforts over wider areas than are consistent with the attainment of the best results; and above all, that we utilize the moneys available for the purpose of making known to Canadians the achievements of scientists in other parts of the world to discover how best to deal with industrial and other problems.

Motion agreed to.

LIGNITE AND BITUMINOUS COAL

UTILIZATION BY CONVERSION INTO CRUDE OIL AND OTHER COMMODITIES

Mr. T. E. KAISER (Ontario) moved:

That, in the opinion of this house, the government of the Dominion of Canada should immediately initiate such measures and take such other steps as may be necessary to bring about the utilization and transport of our vast deposits of lignite and bituminous coal, by their conversion into crude oil and other valuable commodities of every day life.

He said: Mr. Speaker, the subject of this resolution is attracting a great deal of attention not only of the people of Canada who happen to have been studying it, but also those of other countries. It seems to me fitting on my part to say that I have been interested in this subject more or less for a number of years, having some twenty years ago associated myself with the undertaking of producing gas for the city of Oshawa. That association induced me to make a study of the chemistry of coal. During recent years, especially the last twelve months, certain matters brought to the attention of the people of Canada have aroused a tremendous interest in the subject. In order that we may visualize our interests in it as Canadian people I would draw the attention of the house to certain facts which confront me. In the first place the Dominion of Canada has a deposit of 1,250 billion tons of coal. This is a tremendous figure. In 1890 a commission in England undertook to investigate the quantity of coal there was in England and it found that there was a deposit of 100 billion tons of coal in that country, so that for every ton of coal that England ever possessed the Dominion of Canada can lay down twelve and one-half tons. From sixteen to twenty per cent of the coal of the world is contained within Canada. That is a tremendous thought.

The next thought is that we import 480 million gallons of oil and 58 million gallons of gasoline per annum. What have we in the way of production in this Dominion? For every 100 barrels of oil used in this country only one is produced here. The next thought that impels me to say something on this subject is that, in spite of all that we may say there is coming over Canada and the United States a great change in the method of heating our houses in the cities and in regard to the general consumption of coal. The use of fuel oil is a matter that commands our attention. I find, for instance, that about seven per cent of the heating in Toronto is by oil and oil furnaces. Mr. Taylor, the head of the coal industry of the United States, has placed himself on record in this regard, that for heating purposes in that country oil has taken the place of coal to such an extent that in one year, 1925, it has displaced 200 million tons of coal. We are therefore confronted with the increasing use of fuel oil, its convenience and its fascinating features, and with the fact that we have very little of it in Canada.

Let us look at this matter from another point of view. We complain of so much coal being imported from the United States. It is not the coal that we object to: it is the adverse balance of trade of $216,000,000; that we wish to restore by using our own coal, and that from a sentimental point of view we would prefer to use our own. But we are not making any headway towards a balance of trade if we simply change from the consumption of coal to the consumption of oil, if the oil comes from the United States of America. In 1927 a metallurgical congress was held in this Dominion, and among

the men who came here was Sir Robert Horn who told us that the British Empire uses 11 million tons of oil a year. He also said that the whole empire produced only 3 million tons of oil and that we depended upon other countries for the remaining 8 million tons of oil per annum. He along with Sir Richard Redmayne pointed out that within the Dominion of Canada we had deposits, vast, wonderful, beyond all measure, from which possibly the oil used in the British Empire might be found in the future.

Let me come now to another point. I agree with a great deal of what has been said with regard to research, but I would point out that as regards the matter which I am trying to discuss the world has passed the period of research. We are not discussing to-night something that is yet to be discovered; we are going to confine our attention for a few moments to something that is already found. The matter is one not of research but of the application of knowledge which has been evolved by other people in other parts of the world. In 1926 at Pittsburgh the congress of bituminous coal people gathered and a German named Frederick Bergius appeared upon the scene, who read a paper entitled "The liquefaction and hydrogenation of coal." This paper attracted the attention of the scientific world and to-day his statements and findings are matters of world interest. In 1921 he came to Canada and obtained a patent for a process which he had evolved. In 1923 he again came to Canada and took out another patent. In 1926 he came to Canada once more and took out a third patent. This patent was with regard to processes which he had evolved and the details of which he announced in Pittsburgh in November, 1926. I am not prepared to say that the findings of Bergius constitute the last word in the evolution of this great question, but I am prepared to say that what Frederick Bergius discovered and what he evolved is a matter of first-rate, vast importance to this and every other country. If I am mistaken in saying that—and I might be—my mistake is shared by some very practical and important people. Is it not marvellous to think that the Standard Oil Company of New Jersey, managed by probably the best and most astute business men in the United States, should have gone to Germany and purchased from Bergius the right to manufacture oil from coal in the whole of the United States? It is a marvellous thing that Germany should have backed this process with $500,000 the first year, increasing the amount year by year; it is a marvellous thing if the best business minds of England have been deceived in this matter, because in writing to Bergius and asking certain details in regard to this process, he referred me to a syndicate in England known as the British Bergius Syndicate, which bought the patent right to produce oil from coal in the whole British Empire. I was curious to learn who was at the back of this particular move in England. A friend of mine in London sent me the prospectus of the company which has taken over these patents and now holds them for the Dominion of Canada, and I find that the company is capitalized at $275,000,000, so there is something substantial in it. At the head of the company is Right Hon. Sir Alfred Mond, who is well known in Canada and who is regarded as a first class business man all over the world. Associated with him are such men as Sir Harry McGowan, Right Hon. Lord Ashfield, Sir John Brunner, a name well known in business circles, the Marquis of Reading, P.C., G.C.B., G.C.V.O., G.M.S.I., G.M.I.E., and others; so it will be seen that leading business men of the British Empire are behind this process.

I would like to say just a word or two in regard to the process itself. For a great number of years chemists have been endeavouring to produce oil out of coal by what is commonly called the breaking-down process, but this man Bergius got it in his mind that this end could be attained by a synthetic method. A ton of coal was found to consist of sixteen parts of carbon to one part of hydrogen, while oil consists of eight parts of carbon to one part of hydrogen. Other scientists undertook to reduce the carbon content, but Bergius injected hydrogen and raised the hydrogen content to produce the oil in this way, and he succeeded to the extent of having his process backed by millions of dollars in Germany. He now has a plant in that country which is expected to turn out this year 100,000,000 gallons of crude oil, which will then be put through the distillation process. It has been found that a quality of coal suitable to this process will produce 30 per cent of gasoline, 30 per cent of fuel oil, 30 per cent of lubricating oil, and will leave a residue of only 10 per cent. The statement points out that this process will apply to any kind of coal except anthracite, but it has a particular application to lignite, and he has found that in putting even lignite coal through his process there are many varieties of that class of coal which require minor changes in the process.

I suppose technical details would be wearisome at this time of night, but I do say that it strikes me as wrong that anyone outside of Canada should secure a patent which will tie up some of the natural resources of this coun-

try and prevent the application thereto of our own genius and talent. I claim that in this case the government should have an option on this particular process, because if it turns out in the way anticipated it will have a tremendous application in this country. We should look upon our natural resources as assets to be developed—I believe the people of Canada are getting a little tired of hearing politicians speak of our great resources, and so on, ad libitum. We should undertake to do something with those resources.

Mr. SPEAKER: It is now eleven o'clock. The hon. gentleman will retain his position on the next private members' day.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.

Tuesday, February 14, 1928

The house met at three o'clock.

PATENT ACT AMENDMENT BILL

The house resumed from February 10 consideration in committee on Bill No. 7 to amend the Patent Act. Mr. Rinfret.—Mr. Johnston in the chair:

On section 1—Manufacture for reasonable requirements.

Hon. FERNAND RINFRET (Secretary of State): When we were discussing this section the other day reference was made to the words:

Not less than one year after the thirteenth day of June one thousand nine hundred and twenty-three.

It was pointed out quite properly that this revision was perfectly obsolete. I may say that it was intended in this act to reproduce the exact wording of the revised statutes. I quite admit it has no meaning at all. At the same time, if we adopt the other phrase, "one year after the passing of this act" it may be misconstrued, and may be interpreted to mean that we intend to give an additional year to the holder of the patent. I move that we rescind the amendment made the other day, and strike out the words: "and not less than one year after the thirteenth day of June one thousand nine hundred and twenty-three."

Mr. CHURCH: Will the minister tell me what he proposes to do, now that he has struck out the amendment, in regard to having in Canada a national patent and trade mark policy? On looking up the records I find that under this section over 90 per cent of the trade marks are owned by aliens. My point is that all these patents which deal with the raw materials or natural resources of Canada should be under the control of Canadians. The commissioner of patents should be given power to require that these patents shall stay in Canada and that the product shall be manufactured in Canada for the time limit of one year. I find in other countries where similar legislation is in force, what they call a national policy, and provision is made for the revocation of a patent in such cases. What is the result to-day of this patent law which we have in Canada? Has there been any revocation? I do not believe there has been a single revocation. An American citizen comes into Canada, goes to the patent office and files his application under this section or some other section. He procures his patent, goes to the United States with the patent in his pocket, takes the raw material from Canada and manufactures it in the United States.

In the case of the radio and motor car business, if we had a law providing that all the work should be done in Canada, it would create employment for our people. You cannot go to Washington and secure a patent, and then take the profits accruing therefrom out of the country, for there they have a national policy in the patent office, a policy that applies also in other departments of the United States government. To-day we have no brakes to control patentees, and I am confident that a return to the house will show that over ninety per cent of our patents and trademarks are held by other than British subjects. If this bill is the best the government can do in consolidating our patent act, the sooner we make a patent law after the American pattern the better it will be for Canada.

Mr. RINFRET: Mr. Chairman, as I explained the other day, the object of this bill is to bring our patent act into conformity with the decisions arrived at by the countries which met at The Hague international conference. On Friday the committee was quite agreeable to the bill. I think my hon. friend will agree that when a patent is granted we should see to it that within a reasonable time the patentee manufactures under his patent for the benefit of the country.

Mr. CHURCH: I would remind the minister that this bill is now before the parliament of Canada, not The Hague conference. I appeal to him as a Canadian interested in the development of our natural resources to see to it that we have in our patent law a national policy that will ensure the patented

article being manufactured in Canada for at least a year, to give Canadians a chance of employment. Our present patent law is driving our people across the border to work up our raw materials there.

The CHAIRMAN: When this bill was last before the committee clause 1 was amended. In line 8 the words:

—thirteenth day of June one thousand nine hundred and twenty-three—

were stricken out, and the words:

—after the passing of this act

substituted. The minister now moves that the amendment be rescinded and the words in the seventh and following lines:

and not less than one year after the thirteenth day of June one thousand nine hundred and twenty-three

be struck out.

Amendment agreed to.

Section as amended agreed to.

Mr. RINFRET: I now ask, Mr. Chairman, that we revert to clause 2, where the same situation occurs. I move that we also rescind the amendment agreed to last Friday and that the words:

not less than one year after the thirteenth day of June, one thousand nine hundred and twenty-three

be stricken out.

Mr. CHAPLIN: Please read the amendment.

Mr. RINFRET: It is the same amendment as we have made in the preceding clause.

Amendment agreed to.

Mr. RINFRET: Since the bill was in committee some interested parties have reported to me that we might possibly make a change at the thirty-first line. It says:

if a license in respect of said patent has previously been granted under section 40,

I may explain that the commissioner of patents does not grant the license; he simply orders the patentee to do so. The intention of the legislation would be carried out if we substitute for the word "granted" the word "ordered," because a case might arise where a patentee had been ordered to grant a license and had not done so. I believe that under the other sections of the act we could still proceed against him and revoke his patent. However, I think the clause will be much clearer if it is made to read:

if a license in respect of said patent has previously been ordered under section 40.

[Mr. Church.]

I would therefore move, Mr. Chairman, that in line 31 we strike out the word "granted" and insert the word "ordered."

Amendment agreed to.

Mr. CHAPLIN: Mr. Chairman, in the same section, a few lines below the place to which the minister has just referred, are the following words:

and unless the patentee proves that the patented article or process is manufactured or carried on to an adequate extent in Canada.

Will he kindly explain what "adequate extent" means?

Mr. RINFRET: A similar question was put to me the other day. It is within the discretion of the commissioner. If my hon. friend will revert to clause 1, subsection (c), he will see that the commissioner considers the petition, and has discretion to determine whether in his judgment the requirements of the public are adequately provided for and the article adequately manufactured. I may say to my hon. friend from South Wellington (Mr. Guthrie) that although we were very much pleased last week to do away with the split infinitive, the words "adequately manufactured" are used throughout the bill, and practically form a verb by themselves. It is immaterial either way.

Mr. CHAPLIN: Mr. Chairman, I expected some such answer from the minister. I believe the reason why Canadian patents are not as well taken care of as they ought to be is that there is too much power given to the commissioner of patents. You should have your law so framed that if a patent is void, it is void; and if it is not void, then the commissioner should have no discretion.

Mr. RINFRET: I welcome my hon. friend's opinion, which I prize very highly. There is no intention in this bill to alter the principle of our patent law. We are merely bringing our legislation into conformity with the decisions of The Hague conference in respect of such minor matters as I have indicated. I shall be only too pleased to consider my hon. friend's representations and if possible make a more extensive study of the whole patent law with a view to its general revision.

Mr. CHAPLIN: I did not catch the full purport of the amendment; perhaps the minister will read it again.

Mr. RINFRET: The amendment is very plain. It was provided in the amending act of 1923 that the disposition would obtain for one year, and when the revision was made this was carried into the revised statutes—

"not less than one year after the thirteenth day of June, one thousand nine hundred and twenty-three". This is now quite obsolete. I am sure my hon. friend will have no objection to the amendment in this respect, and the other amendment consists merely in the changing of a word. Subsection 2 empowers the commissioner to consider the application, "and if a license in respect of said patent has previously been granted under section 40", then certain action is taken. This is what I should call a clerical error, because we do not grant licenses under section 40; we order the license to be granted by the patentee. The only change, therefore, is from the word "granted" to the word "ordered".

Mr. CHURCH: It seems that parliament is being asked to hand over the administration of the act to a commissioner who may or may not grant licenses for political purposes. The word "granted" is changed to "ordered". Subsection 2 provides for the revocation of the patent unless it is shown to the satisfaction of the commissioner that the patented article or process "is manufactured or carried on within Canada to an adequate extent". Do these words imply that the applicant for a patent may be at liberty to bring in foreign labour, skilled or unskilled, in violation of our Alien Labour Act, as is actually done now? In the city I come from a number of men were brought in from the south to work in the nursery business, notwithstanding that similar labour could have been obtained in Canada. In my opinion this bill should take account of the provisions of the alien labour law in this respect. Will it not be possible for the holders of patents, under this provision, to bring in skilled and unskilled labour from the United States under the terms of paragraph (b) from which I have quoted?

Mr. RINFRET: My hon. friend has repeated the argument he advanced on the previous section and I thought he would take it that I had not changed my view of the matter. We have discussed this question before and it has been pointed out that the proposed legislation is intended to carry out the terms of a mutual agreement on the part of the nations that met at The Hague. It is a plausible argument that this parliament does not sit at The Hague but in Ottawa. That is perfectly true. But is it not desirable that we should take advantage of the protection which will be afforded us by the participating countries? Surely it is not a bad thing now and then to cultivate the international spirit in matters of this kind which link the nations together. Really, to be perfectly frank, I must say that my hon. friend's objection does not appeal to me.

Mr. BOYS: I do not quite appreciate the object in changing the word "granted" to the word "ordered". I can understand that the license might be ordered, but there comes a time when it is actually issued. Surely, therefore, the intention must be to make it applicable not only to licenses which have been ordered but to licenses which have been issued.

Mr. RINFRET: The commissioner orders the license to be granted but the license is granted by the patentee himself. Of course, under section 40, if he fails to issue the license within a certain time limit we may revoke the patent. We thought that the provision would be better worded in the manner now proposed. We order that the patent be granted; that is the only thing we do as a department. The commissioner orders the patentee to grant the license.

Mr. BOYS: Is not the license eventually issued by the department?

Mr. RINFRET: It is granted by the patentee himself.

Mr. BOYS: But take the document itself, the license: where does it come from?

Mr. RINFRET: It is registered in the department, but we have no way of compelling the patentee to grant the license. We may, however, revoke his patent. The proposed amendment aims simply at making the provision clearer and bringing it more into harmony with the previous section.

Mr. BOYS: I do not think the minister grasps my point. What I want to indicate is that there comes a time when the license is issued, and so far as I know it is issued by the department. I may be wrong in that regard; if so—if it is issued by the patentee —then I agree with the minister.

Mr. RINFRET: Under the copyright law, where application is made for a license the department grants it; under the patent law, on the other hand, the department issues the order and the patentee grants the license. If our instructions have not been followed and the license is not granted, then we may proceed under section 40.

Section as amended agreed to.

Bill reported, read the third time and passed.

TRADE MARK AND DESIGN ACT

The house resumed, from February 10, consideration in committee of Bill No. 8, to amend the Trade Mark and Design Act.—Mr. Rinfret—Mr. Johnston in the chair.

Mr. RINFRET: I move that we revert to section 6.

On section 6—Filing of application already filed in another country.

Mr. RINFRET: I have an amendment which will change the wording of this section. The leader of the opposition pointed out the other day that in the first two lines of that section the words "as enacted by section 3 of chapter 28 of the statutes of 1923," had become obsolete, and my purpose is to move that the section be amended by striking out those words. I also move that the figures 49 at the beginning of the new section be changed to 52. There is nothing material in the change except to do away with the line which figured in the old act, but which has no meaning now that we have a revised statute.

Section as amended agreed to.

Amendments concurred in.

Bill reported.

SAINT JOHN AND QUEBEC RAILWAY

The house resumed, from February 10, consideration in committee of Bill No. 9, to authorize an extension of time for the completion of the St. John and Quebec Railway between Centreville, in the county of Carleton, and Andover, in the county of Victoria, N.B.—Mr. Dunning—Mr. Johnston in the chair.

On section 1—extension of time.

Hon. CHARLES A. DUNNING (Minister of Railways and Canals): The other day, when this bill was before the committee, the leader of the opposition called my attention to a point in connection with it, and the bill was left in committee in order that I might have the opportunity to take the matter up again with the Department of Justice. I have done so, and the Department of Justice regards the amendment in its present form as quite sufficient for the purpose, and I am also advised that the Premier of New Brunswick, who is really the promoter of the line in question, is perfectly satisfied with it as it now appears, and he requests it in this form.

Mr. CHURCH: I have been a member of the railway committee for six years, and I have never known a bill asking for an extension of time which has not been referred to that committee. I do not see why any exception should be made even in this case of a government bill. We have a committee appointed by this house to deal with questions of charters and extensions of time and so on, and I am going to move that this bill be referred to the select standing committee on railways, canals and telegraph lines.

Mr. DUNNING: Probably my hon. friend was not present the other day when this matter was referred to the committee of the whole instead of the committee on railways, canals and telegraph lines, as is usually the case. The reason for dealing with it in this manner is that this is not an ordinary railway charter; the railway in question is owned by the government of the province of New Brunswick, and the extension is asked for by that government. It was therefore thought quite proper to deal with it in this way, as no private interests are involved in any sense and it is not necessary to call witnesses and go through the usual procedure. I should also say that this railway is in operation already, and this extension refers to a branch which is not yet constructed.

Mr. CHURCH: Technically the minister may be correct, and this may only be one exception, but at the same time I see no reason why the house should be asked to deal with railway bills in this way. The predecessor of the present minister had all the branch line bills, government and private, sent to the railway committee for consideration, and even the estimates of the Canadian National Railways are sent to a committee of this house to be dealt with. All the branch line bills were sent to the railway committee, and that is the only regular way in which bills of this kind should be considered under the rules of the house. Some of these companies are only paper companies; they get a charter and then ask for repeated extensions of time. We had two or three bills before the railway committee during the last two or three sessions requesting an extension of time, and hardly a dollar had been spent on any of them. I contend that this process violates the whole principle of the Railway Act. For these reasons I think the minister should agree to have this bill dealt with in the regular way.

Section agreed to.

Bill reported, read the third time and passed.

ROYAL MILITARY COLLEGE OF CANADA

The house resumed from February 10, consideration in committee of Bill No. 13, respecting the Royal Military College of Canada—Mr. Ralston.—Mr. Johnston in the chair.

Hon. J. L. RALSTON (Minister of National Defence): When the bill was last under consideration section 7 was allowed to stand, and also section 9. In reference to section 7 the committee will remember we were discussing the provisions for the admission of cadets to the college. As I pointed out, the provision which was retained in the old act was obsolete because of the fact that now there is no preliminary examination; the examinations are based on standards of educational qualifications in the different provinces, and it was unworkable to select candidates from the whole of the Dominion in order of merit. I have, however, considered the suggestions which were made at that time to incorporate as far as possible the principle of merit, and, as I indicated to the committee, whether it is incorporated in the act by regulation or practice, it is the only standard under which the act will be administered. I now suggest to the committee that the following words be inserted at the beginning of section 7:

The selection of cadets from each province shall be in order of merit, and

This I think will be found satisfactory. The reason the words "from each province" are inserted is because it is felt we cannot put together all the candidates from the Dominion and simply select them in order of merit. That would not be fair to the individual provinces and would not give them their quota.

Mr. CHURCH: I should like to see a change made in the law with respect to this splendid institution under which the period for obtaining a diploma would be changed from four to three years where it was for over thirty-five years until recently. A complaint I hear made in respect to the Royal Military College is in regard to matriculation or entrance. In every province there is a separate examination for matriculation, and I think that the change made in the system followed at Kingston has not been in the best interests of that institution. We should go back to the old system and let the college run its own entrance.

I should like to quote from a letter written to me at my request by Mr. Iva E. Martin, M.A., who was director of studies at the college for many years, and is now one of my constituents. Mr. Martin was one of the most brilliant students in mathematics who ever graduated from Toronto university, and was a most efficient and successful member of the staff of the Royal Military College for over thirty years. The minister should see to it that in the matter of literary requirements the college should go forward and not backward. Merit alone should be the test of entrance with one examination for all.

May I be permitted to read two or three paragraphs of the letter in question? Professor Martin has the confidence of all classes of graduates. He did more to make the college than anyone else. He says:

This proposed act will put into a practical form the authority necessary to continue the institution as it is now being conducted. The old act has been out of date for years. Regulations issued from time to time by the governor in council is the real basis of its operations and this act merely authorizes this constitution.

I would suggest that paragraph 2 (1) of the proposed act be made to read something as follows:

2. (1) There shall be an institution for the purpose of imparting a preliminary education in military subjects such as tactics, fortification, engineering, etc., and a general introduction to such scientific subjects as may be connected with, and necessary to, the technical education of a military officer in the performance of his duties in the military profession. Also for qualifying officers for command and for staff appointments.

Paragraph 5 indicates the "qualifications" of the commandant which are difficult of realization in the practice, and I think that he should be "assisted" by a director of studies who should be selected from the civil members of his staff.

Professor Martin is right in all he says. There should be a director of studies under the commandant with increased duties and powers. I hope the minister will see his way clear to provide improved buildings, equipment and grounds and a recreation hall for the Royal Military College so that it may not lag behind McGill, Queens and other universities and colleges, and grant better pay to the staff and give them quarters at less rates.

Mr. RYCKMAN: Before the amendment carries I should like to say that the clause appears to me to be very indefinite. No one can say how "order of merit" is to be determined. Merit in what? In athletics, in scholarships, in Sunday school work?

Mr. RALSTON: Merit in the subjects required for the examination.

Mr. RYCKMAN: The clause does not say so. I submit, Mr. Chairman, that this matter is left entirely at large without any definition, it may be purely guess work. Anyone can come later on and say merit is one thing,

and somebody else will say it is another thing, and the point will be decided according to the decision of the commandant or the minister.

Amendment agreed to.

Section as amended agreed to.

Mr. RALSTON: Regarding clause 9 the suggestion was made that the old act provided a limitation of the amount to be paid by each student. I have incorporated that in an amended section which I will read to the committee:

9. Every cadet shall be required to furnish himself with such books, apparatus and equipment as are not supplied by the college, and to pay a sum not exceeding the rate of $300 per annum and such allowances as are from time to time authorized by the governor in council to meet the ordinary expenses of living and the procuring of uniform.

Mr. EDWARDS (Frontenac): Do I understand that the student will have to pay for his tuition and board the amount of $300 per annum?

Mr. RALSTON: I have sent down for a statement as to just what it does include. I can only assure my hon. friend that this is exactly the provision that is in the old act. The cadet will not have to pay any more under this bill than under the old act. I gave the figures when we were considering this bill before, to the effect that they only paid $300 per year, except the first year when they paid $550, $250 being allowance for uniform.

Mr. EDWARDS (Frontenac): What I am going to say may not be very popular, but that will not be an unusual experience with me in this house. Needless to say I have a great admiration for the Royal Military College, for the work it is doing and for the reputation which its graduates have made throughout the world. I am not sure that we are on the right track in limiting the cost to what it has been in the past, namely, $300. The cost of obtaining a degree in arts, medicine or science in any of our Canadian universities is far below the cost of the education provided to a cadet of the Royal Military College. In so far as we limit the cost to the student, we increase the cost to the country, provided that we increase the accommodation at the college for a greater number of students. It may be advisable to keep the expenditure down to about where it is or where it has been; but if we are to do that and at the same time increase the accommodation so that more students can attend—and I think that should be done—it seems to me that it is about time and very proper that we should consider whether or not the cost borne by the students might not be increased to a certain degree. I am not going to suggest what that cost should be; but the very fact that that sum of $300 has obtained for so many years, notwithstanding what we all know to be the fact that the cost of education in all other institutions has enormously increased in comparison with what it was a number of years ago, suggests that the matter of what the students should pay, without too large a burden being placed upon them, is one which might very fairly be considered from the standpoint of fair play to all concerned.

The Royal Military College is regarded, and rightly so, as giving a very efficient and select education to carefully selected men from all parts of Canada. The cost to the student is very low as compared with that of other institutions such as universities. I should like to see the number of students increased. That, of course, would mean an increase in the cost to the country unless some appreciable increase in cost was placed upon the student himself. I may not be on a popular line in expressing the thought that the student should pay more money; but having regard to all the circumstances and changed conditions, I submit it is a matter which is worthy of our careful consideration.

Mr. RALSTON: There are perhaps many of us who on general principles would feel inclined to concur in what my hon. friend has said; but in amending this act I have felt that I do not want to introduce any new principle. The point is that the accommodation has not been increased, and when the accommodation is increased I quite agree with him that it may be well for whoever is considering the matter to consider an increase of charge to the student as well. I should like the committee to remember that these students are selected in a different way from students going to an ordinary educational institution. In every other institution the doors are wide open to students. Before a student obtains the privilege, for it is a privilege, of receiving this education in the Royal Military College, he must show a certain qualification, a certain aptness, a certain physical fitness, a certain mental alertness, and, in short, he must measure up to a certain standard. Therefore it is felt that it is perhaps not advisable at this stage, when I am merely suggesting more or less formal amendments to the act for the purpose of bringing it up to date, that we should consider increasing the cost to the student. When the

accommodation becomes more luxurious and extensive, there may be an opportunity for considering that matter.

Mr. EDWARDS (Frontenac): I quite appreciate the viewpoint of the minister and I am prepared to concur in it. Has he under his hand sufficient material to enable him to inform the committee what percentage of the graduates of the Royal Military College follow a military career after leaving the college?

Mr. RALSTON: I do not have that just under my hand. Speaking from memory I would think those who actually enter the permanent forces are less than five per cent, but I would also point out that in the late war ninety-nine per cent of the living students who were physically fit took their part and behaved themselves creditably as students of the Royal Military College should do.

Mr. CHURCH: Might I ask the minister if the supplies are going to be purchased under the federal patronage system? With the increased fees and the uniform and equipment required, the Royal Military College is now looked upon as a rich man's college. Nowadays out of sixteen collegiate institutes in the Toronto district the college does not get more than one or two students a year, while in other years it got quite a number. There is no other institution in Canada where there is more party patronage as regards not only the staff, civil and military, and the help, but the purchase of the equipment, repairs to buildings, new buildings and supplies. They even built a road through the constituency of the hon. member for Frontenac-Addington (Mr. Edwards) under the patronage system, and he can tell how at great expense a little bit of macadam and concrete road was built some of it without tender, which could have been put in by any city engineer for one-third of the cost. The whole tendency seems to turn this institution from what it was intended by its founders into a rich man's college. The course has been lengthened to four years; the fees have been increased as well as the equipment and supplies. The whole thing is just a patronage institution for the benefit of the Liberal party in the city of Kingston and in the county of Frontenac. All the supplies are being bought down there. If the department would buy the text books in the same way as the larger boards of education in Canada do, they would save this institution and the cadets from one-quarter to one-third of the present cost. I should like the minister to consider the policy of buying these books and supplying them to the students, charging so much for them and thus effecting an economy.

Mr. RALSTON: If my hon. friend knows of any instances in connection with which any improper expenditures have been made, I trust he will bring the matter to my attention when the estimates of the Royal Military College are before the house. As regards patronage I want to say to him that I know of no institution under any government department that is conducted as free from party patronage as this institution is, and while I happen to hold the position I do, that condition of things will remain, because I do not propose to have this institution made anything other than what it is, namely, a place where deserving young men, men who will become creditable Canadians will be able to obtain an education at a moderate cost and thus be fitted to take their part in their country's affairs.

Mr. EDWARDS (Frontenac): I hope the day is far distant when, as was suggested on a former occasion in this house, the present Postmaster-General (Mr. Veniot) might succeed the Minister of National Defence.

Section agreed to.

Bill reported, read the third time and passed.

DISPOSAL OF CANTEEN FUNDS

Hon. J. L. RALSTON (Minister of National Defence) moved that the house go into committee to consider the following proposed resolution:

That it is expedient to provide for the disposition and allotment of the canteen funds which were accumulated during the war by certain units of the Canadian expeditionary force in Canada, the Canadian Siberian forces and by the forces stationed at St. Lucia (British West Indies), resulting from the profits of canteens and other like institutions operated by the several units and formations, and for the administration of the same by the provincial board of trustees appointed under the Canteen Funds Act, chapter 34 of the statutes of 1925.

Motion agreed to, and the house went into committee, Mr. Johnston in the chair.

Mr. BENNETT: Perhaps the minister will make a statement.

Mr. RALSTON: There is deposited with the Receiver General of Canada the sum of about $124,000 which has been accumulated from the profits of canteens operated by units which have their local organizations in Canada, which did not themselves proceed overseas. These were units such as depot detachments, hospital units and things of that sort, and in

addition to that there were three units not so localized such as the Siberian expeditionary force, the St. Lucia forces, and the Y.M.C.A., all of which accumulated profits, and these had been paid to the receiver general.

Mr. GUTHRIE: About what do they amount to?

Mr. RALSTON: About $124,000.

Mr. GUTHRIE: That is what is left?

Mr. RALSTON: Yes. The way in which it is proposed to dispose of these funds—we are advised that it is necessary to enact legislation—is to divide it up into allotments according to provinces and hand the funds over to the canteen boards which were constituted under the act of 1925. The administration will naturally be somewhat different, and the proportions to the provinces will be somewhat different from the overseas canteen funds, but that is a matter which I think can be taken care of by the provincial boards when the moneys come to their hands. What we have done is this: we have taken the place of organization of a particular depot unit, and have allotted the funds, the profits of that unit, to the particular province where the organization took place. Generally speaking the enlistments were made from a province in which the unit was situated. In addition to that we have the Siberian forces, the St. Lucia forces, and the Y.M.C.A. force, and in this case the division proposed is according to the enlistments in each province. By a combination of the two a percentage has been made up which is given in the schedule to the bill based on this resolution, and it is proposed to hand the funds over in these proportions to the various provinces. I do not know whether the committee will be interested in having the percentages given or not. I will give the figures roughly, leaving out the second decimal. They are as follows:

	Per cent
Alberta	6.5
British Columbia	3.6
Manitoba	10.9
New Brunswick	5.5
Nova Scotia	4.4
Ontario	41.5
Prince Edward Island	.32
Quebec	23.5
Saskatchewan	3.1

Mr. ADSHEAD: Can the minister give it in dollars and cents?

Mr. RALSTON: I will give the principal in dollars and cents. The interest is lumped at the bottom. The figures are:

[Mr. Ralston.]

Ontario	$42,000
Quebec	23,900
Alberta	6,500
Saskatchewan	3,600
Manitoba	11,000
New Brunswick	5,500
Nova Scotia	4,500
Prince Edward Island	320
British Columbia	3,600

That comes to $101,000; then we have the interest in addition to that, $23,000, making $124,000 in all.

Mr. GUTHRIE: May I ask if this scheme which is now propounded has been approved by the Canadian Legion and the other soldier organizations?

Mr. RALSTON: I cannot say at the moment. The officers of my department were in consultation with some of these representatives, but I cannot answer offhand.

Mr. MANION: Are those funds being divided up on the same basis as the other funds of last year, and by the same organization? I think I understood the minister to say they were.

Mr. RALSTON: They are being divided by the same organization and on the same basis, except that my hon. friend must remember that those who were overseas would probably not expect to share in those funds, because those who originally enlisted in the depot units and went overseas are supposed to have gotten the benefits of the profits from the depot canteens when they sailed. Conducting officers were given a certain amount for comforts, which was supposed to represent in theory at least a fair proportion of the unexpended profits up to that time. So that those who will share in this fund will be largely those who have not gone overseas, and who have not derived any benefit from any other source.

Mr. MANION: I must confess that I have very little information on the matter, except what the minister has given me. When the bill comes before the house I presume we will be given an opportunity to obtain more information. I suppose the minister will have no objection to any reasonable modification, provided it is along the line of fair dealing with everybody. I am not proposing that there shall be any modification, but some information may come to us between now and the time when the bill comes before the house, and I presume the minister is not tying us to the details of the bill as presented.

Mr. RALSTON: No. I shall be glad to have any suggestions because we all recognize that we are to some extent dealing with

a fund which, in the strict legal interpretation at least, may belong to individuals, but which in a lump sum will permit something tangible being done with it. Therefore any helpful suggestions I shall be very glad to have.

Mr. ADSHEAD: Were not these funds accumulated from the money of men who were overseas?

Mr. RALSTON: These funds particularly were not, I think, accumulated from men who were overseas. As I tried to point out, those who went overseas, in theory at least, and, I think they will agree, generally in practice too, received the benefit of the profits of the depot canteens from which they made their purchases. Then those who were overseas began to get the benefit of canteen funds from overseas canteens, but those who remained in Canada still kept contributing to those depot canteen funds, and it is they and their dependants who, I think, would benefit largely by any disposition of these funds. The bill to follow this resolution does provide that any use of the provincial allotment for relief purposes should be limited to the class of case for which no relief is then available from governmental sources or from the allotment made under the Canteen Funds Act. In other words, it proposes to provide for the class of men who contributed most generally towards the funds still left.

Mr. CLARK: Mr. Chairman, I think the minister ought to be able to assure the committee generally that those men who did go overseas and did contribute to these funds actually received the proportion to which they were entitled. I have grave doubts that that is the fact. I do not think it was the custom to pay them the exact proportion of the funds to which they would have been entitled had a division been made at the time. True, they may have been given something from the funds when they went overseas, but I do not think it is generally accepted that they received the proportion to which they would have been actually entitled if the funds had been divided at the time. Therefore I do not think the men who went overseas should entirely be disentitled to something from these funds.

Mr. RALSTON: I endeavoured to make it clear to the committee that I thought in theory at least—that is the word I used—these men were supposed to have received the benefit of the funds that had accumulated; but there was no accounting, and there may have been more contributed than was paid out. We have to deal with the practical situation here and the question is whether it is worth while attempting to divide the small amount of money among all the men who contributed, or to confine it to those who were members of the depot units. As I said to my hon. friend from Fort William (Mr. Manion) a few moments ago, I shall be very glad to receive suggestions from the committee when the bill is under consideration. The principal thought in mind is not to dissipate the money so that it will not do any good.

Mr. CLARK: What information has the government secured from those directly interested in the funds? After all, their representations should have some bearing on the disposition of the money.

Mr. RALSTON: I cannot give my hon. friend an answer in regard to this particular resolution, I can only speak of the representations which were made to the commission which considered canteen funds generally two or three years ago. At that time it was represented that these funds should not be divided among individuals, but should be used for the relief and general benefit of those most in need. That is the principle which I think our ex-service men would like to see carried out, and it is the principle under which the provincial boards are administering the funds received from overseas canteens.

Mr. CLARK: Why were they not included at the time?

Mr. RALSTON: This particular fund was not the immediate subject of the investigation to which I refer, although that investigation had to do with similar funds accumulated overseas.

Mr. GEARY: Has the minister any information as to the amount received from each of the sources outlined, for instance, the Siberian forces, the forces stationed at St. Lucia, and so on?

Mr. RALSTON: I could give my hon. friend the proportions going to the different provinces from these funds. I do not seem to have under my hand the total received from the Siberian forces. For Ontario, for instance, the fund of $42,000 is made up of funds from about sixty different units. The only two amounts that I notice from the Siberian expeditionary forces in Ontario are $139 and $71. The 85th battery of the Siberian force contributed $652. I cannot give my hon. friend the total for the Siberian forces. It is simply a matter of arithmetic

to add together the various items relating to the Siberian expeditionary force under each provincial list.

Mr. GEARY: Those two items were probably moneys realized in Canada.

Resolution reported, read the second time and concurred in. Mr. Ralston thereupon moved for leave to introduce Bill No. 39 respecting the disposal of certain canteen funds.

Motion agreed to and bill read the first time.

ADMIRALTY ACT AMENDMENT

Hon. ERNEST LAPOINTE (Minister of Justice) moved:

That the order for the second reading of bill No. 30 to amend the Admiralty Act be discharged.

Motion agreed to.

SUPREME COURT ACT AMENDMENT

Hon. ERNEST LAPOINTE (Minister of Justice) moved the second reading of Bill No. 31 to amend the Supreme Court Act.

Mr. EDWARDS (Frontenac): What is the nature of this bill?

Mr. LAPOINTE: Perhaps my hon. friend will let the bill go into committee, when each section can be explained.

Motion agreed to, bill read the second time, and the house went into committee thereon, Mr. Johnston in the chair.

On section 1—Dates of sessions of supreme court changed.

Mr. LAPOINTE: Under the law as it stands the spring sittings of the court begin on the first Tuesday in May, but it is represented that it is more convenient for the court to have the sittings begin on the fourth Tuesday in April. The judges desire to work a little longer and I do not think there can be any objection to that.

Section agreed to.

On section 2—Notice of adjournment of court.

Mr. LAPOINTE: This is to amend the section which provides that the court may adjourn any session from time to time and meet again, at the time appointed, for the transaction of business. The subsection which it is proposed to repeal provides that notice of adjournment and the day fixed shall be given by the registrar in the Canada Gazette. It is stated that the provision is unnecessary and, as a matter of fact, has not been observed in practice. As a rule these adjournments are for very short intervals and sometimes it would be impossible to advertise them in the Canada Gazette unless an extra issue were published. The fact is that only the lawyers concerned in the case, the hearing of which is adjourned, are really interested and they know when the court will meet again. It is therefore considered unnecessary to have publication of notice in the Canada Gazette.

Section agreed to.

On section 3—Appeal to be on a stated case.

Mr. LAPOINTE: This amendment adds the following proviso:

Provided that the court may, in its discretion, on special grounds, and by special leave, receive further evidence upon any question of fact, such evidence to be taken in the manner authorized by this act, either by oral examination in court, by affidavit, or by deposition, as the court may direct.

As explained in the note on the opposite page, it has happened quite recently, in the case of Red Mountain Railway Company versus Blue, that the filing of plans before the court here could not be accomplished for the reason that the court had no authority to receive such new evidence, and when the case went to the Privy Council the filing of the plans was allowed. The new provision is intended to give the Supreme Court of Canada the same power which is exercised by the Privy Council and by the appeal court in England.

Mr. GUTHRIE: And Ontario.

Mr. LAPOINTE: And, my hon. friend adds, the appeal court of Ontario.

Section agreed to.

Bill reported, read the third time and passed.

PUBLIC PRINTING AND STATIONERY

AMENDMENT OF ACT RESPECTING ADVANCES TO THE KING'S PRINTER

Hon. FERNAND RINFRET (Secretary of State) moved the second reading of Bill No. 33, to amend the public printing and stationery act.

Motion agreed to, bill read the second time, and the house went into committee thereon, Mr. Johnston in the chair.

On section 1—How expenses shall be met.

Mr. BENNETT: I expressed the opinion the other day that this bill was an endeavour

to place a limitation on the working capital of the department in the sum of $700,000, but I pointed out that the last words of the measure were intended to place unlimited discretion in the power of the governor in council and for that reason were most objectionable. It will be observed that the working capital of the department may by this section be increased up to a sum not to exceed $700,000. If the bill stopped there it would be easily understood. But these words follow:

Or such sum as may hereafter be determined, from time to time, by the governor in council.

It is perfectly obvious that you cannot in one sentence place a limitation of the amount and then, in another sentence, use language that places no limitation on the sum that may be granted by the governor in council. Here we have a parliamentary restriction to $700,000 and at the same time a parliamentary grant to the governor in council of power to increase that sum to any extent in the world. That, I submit, should not be done and cannot possibly be in the mind of the minister. You cannot restrict with one hand and with the other confer unlimited power.

Mr. RINFRET: There is much force in my hon. friend's argument and I am quite willing to meet his views in that respect. The idea behind the legislation was to rectify a situation which has existed for some time. While the statute provided for an advance to the printing bureau of $200,000 at a time, it happened that the advances were liable to be protracted according to special circumstances. The object was to increase the limit to $700,000 and also to provide for a possible emergency, if that amount should prove insufficient, as for instance in the event of a long recess where no estimates were voted. I quite agree with my hon. friend that there is a contradiction in fixing a limitation and at the same time providing that there be none. I move, therefore, that the section as it stands be amended by striking out the words "or such sum as may hereafter be determined, from time to time, by the governor in council." I may add, however, that it is just possible that this will afford the minister occasion to come back in future sessions with similar bills.

Mr. BENNETT: The minister appreciated the point the other day and I assure him that I appreciate his position. But may I suggest to him, as being in charge of the Printing and Stationery department, that when he mentioned the other day the fact that he had inventories amounting to half a million dollars he might have reflected that it is sound business in these days to keep inventories as low as possible. I was amazed to find that his inventories totalled that sum, while he was asking for a working capital of $700,000. If he has read the book recently published by Mr. Ford he will see that when that gentleman was confronted with a difficult situation he saw the wisdom of reducing inventories. And with the paper business, of all businesses in the world, it is highly desirable to keep inventories as low as possible, or a loss will be suffered.

Mr. ADSHEAD: When this matter was before the committee previously I gathered that the printing department was self-sustaining, and that when they performed their work of publishing certain documents, say for the Department of the Interior, that work was charged to the Department of the Interior and the printing department got credit for it, and the same all along the line. Perhaps I should bring this up on the estimates, but at present I see no provision made in any of the departments for repaying the printing department for work done.

Mr. RINFRET: I think I can satisfy my hon. friend right away. This is only one clause in a somewhat extensive act, and if my hon. friend will refer to the whole act he will find that provision is made for everything he asks.

Mr. ADSHEAD: Then why the necessity of increasing the capital account if the work is credited to the printing department immediately it is completed?

Mr. RINFRET: That is to cover the interval between the time of the completion of the work and the time the work is paid for by the different departments.

Amendment agreed to.

Section as amended agreed to.

Bill reported, read the third time and passed.

SUPPLY

DEPARTMENT OF AGRICULTURE

The house in committee of supply, Mr. Johnston in the chair.

Agriculture—dairying, including grant of $5,000 to the National Dairy Council, $265,000.

Hon. W. R. MOTHERWELL (Minister of Agriculture): The committee will notice that there is not very much change in the size of this vote; the $14,000 increase is largely accounted for by salary increases which came into effect last year. There are three or four main items into which this sum is divided; part of it is taken up with research

work, part with the grading of butter throughout the country and a part is spent on educational work. I will give the details as soon as I get the figures, which will be here in a moment.

Mr. LUCAS: The minister mentioned the grading of butter. I would like to ask if there is now a standard system of grading butter in the Dominion?

Mr. MOTHERWELL: The grading is uniform now. The western provinces formerly did their own grading and we accepted their grades, but that was found to be not very satisfactory. They wanted to include more in their grading than was the case in the east, so an arrangement was made about a year ago whereby we would take over the grading for all the western provinces, and that is what was done.

Mr. LUCAS: Does that grading only apply to butter for export, or to butter for domestic use as well?

Mr. MOTHERWELL: It is only for export, although the same grades are used for domestic butter. For home consumption the grading is only voluntary, while for export it is compulsory. The export business, of course, has now come to be very small.

Mr. EDWARDS (Frontenac): As the minister very properly says, the exports of butter have come to be very small, and there are very good reasons why that condition has come about, some of which I desire to place before the minister for his most careful and prayerful consideration. For two or three moments I would like to refer to the effect of the foolish legislation put through in 1925 upon the dairying interests in Canada when this government entered into an agreement with Australia and New Zealand. That trade agreement came into force with regard to Australia on October 1, 1925, and was extended by order in council to New Zealand. At the time that agreement was made the rates of duty on butter under the tariff of 1907 were 4 cents general and intermediate, and 3 cents British preferential. Under the Paterson plan operating in Australia three cents a pound on every pound of butter manufactured in the commonwealth was put into a pool, and out of that pool six cents a pound was paid on each pound of butter exported. This, it is quite obvious, has given a very decided advantage to the producers of butter in Australia, apart altogether from the climatic advantages that they enjoy, over the producers of butter in Canada. New Zealand and Australian butter can be shipped from those countries to Vancouver for slightly less than 3 cents a pound; I think I am correct in that statement. Now let us see how that works out. Suppose every pound of butter shipped from Australia has cost the producer the extra 3 cents a pound that goes into the pool. Well, he receives a bonus of 6 cents, so that he has sufficient left over, after paying the 3 cents into the pool, to carry his butter to Vancouver without costing him a cent—at least he comes into competition with the producer in Vancouver under as little handicap as if Australia were only a short distance away. There is another advantage given to him. Australian and New Zealand butter arrive at Vancouver and can be shipped from there to Montreal for $2.30 per hundred pounds. Add to that a cent a pound for the duty now imposed and you get $3.30 per hundred pounds. But suppose the producer in British Columbia wants to send a carload of butter to Montreal. In that case the freight rate on his butter from Vancouver to Montreal will be $3.58½ per hundred pounds. In other words he is at a disadvantage, as compared with the Australian and New Zealand producer, of 28½ cents per hundred pounds in competing in the market in Montreal. New Zealand butter imported into Vancouver in November, December and January last was laid down there at 34 cents a pound all charges paid. That meant that butter produced in Saskatchewan and shipped from Regina or Saskatoon to Vancouver had to be sold in carload lots at 31½ cents, for the reason that it cost 2½ cents a pound to send that butter from the points named to Vancouver. The price therefore, as I say, was fixed by the importations in the province of Saskatchewan.

Another point to which I wish to draw attention is this: There is a spread between the winter and summer price of milk right here in Ontario and Quebec. In this city it amounts to 40 cents, and in Montreal to 90 cents per hundred pounds. In Montreal the summer price is, I think, $2 per hundred pounds, and the winter price $2.90. Surely it must be obvious to every person who notes that difference in the cost of producing milk in summer as compared with the cost of production in winter, how very unfair it is that the producers in Canada, with a climate such as we have, should be forced to compete with those who have no winter and enjoy summer weather the year round.

Let us see for a moment the effect of this on the western provinces. Take first the province of Saskatchewan. In 1900 that province produced only 339 pounds of butter. There was then no such thing as a dairy industry in Saskatchewan. In 1910 it produced 1,548,000

pounds; in 1925, 15,946,000 pounds; in 1926, 16,629,000 pounds. Well, you may say, notwithstanding the conclusion of the agreement with Australia in October, 1925, the production in Saskatchewan in 1926 was greater than in the previous year. That is very true, but the effect from the importations, which was bound to occur later, had not then been felt. In other words you would not expect every farmer in Saskatchewan to knock every one of his cows on the head immediately after the agreement came into effect, but as soon as the Saskatchewan producers began to feel the effect of this trade arrangement they began to go out of the dairy business. For instance, compare the production in Saskatchewan for the first ten months of 1926 of 15,730,000 pounds with the production in the same ten months of 1927 of 11,502,000 pounds, a reduction of over 4,000,000 pounds, or a decrease of 26.8 per cent. In the month of October, 1925 the production in Saskatchewan amounted to 1,302,432 pounds, whereas in the same month of 1927 it dropped to 633,062 pounds, a decrease of 48.6 per cent. At the present time Saskatchewan is making about 50,000 pounds of butter a week and consuming about 200,000 pounds in the same period. Why should not those extra 150,000 pounds be made by the farmers of Saskatchewan instead of buying it from the farmers of Australia and New Zealand? On undoubted information twenty butter factories which had been in operation in Saskatchewan for years went out of business in the month of November last year, and went out of business for good.

The same story is told with regard to the effect of this trade arrangement on the butter industry in Alberta. The decrease in production in each of the provinces of Saskatchewan and Alberta in 1927 over 1926 is estimated by those who are well qualified to make a computation as being between four and five million pounds. In the four western provinces they have been building up a magnificent dairy industry. In 1910 the production in those provinces was less than 7,000,000 pounds of butter. That production grew in 1920 to 28,000,000 pounds. In 1925 it reached a total of 1,000,000 pounds a week, or 52,000,000 pounds a year. In 1926 it reached a total of 55,000,000 a year, and we are informed by members of the National Dairy Council of Canada, who are well qualified to make an estimate in regard to this matter, that the production in those provinces for the year ending March 31st next will be over 10,000,000 less than it was in the preceding year.

I should like to represent the situation to the minister in another way. We have been saying a great deal about inducing people to come to this country to fill up our vacant lands and engage in farming. If you hope to succeed in inducing people to go on Canadian farms you must give them encouragement by holding out to them the prospect of profitable employment or reasonable profits. Take the average butter production of the average Canadian cow. I believe it is about 150 pounds a year, but we will put it at 200 pounds if you like. The production of some ten million pounds of butter which we import from New Zealand and Australia in one year would keep fifty thousand cows busy the year round in the Dominion of Canada. If you allow ten cows to a farm, that would establish or play a very important part in establishing a firm basis of mixed farming on some five thousand farms in this Dominion. What are we doing by this arrangement with Australia and New Zealand? By this foolish policy of the government we are establishing on a paying basis mixed farms, not in British Columbia, Saskatchewan, Alberta and other provinces, but in Australia and New Zealand. We are importing from Australia and New Zealand millions of pounds of butter which should and can be produced in this country, and we are exporting every year, to go into the pockets of the farmers of Australia and New Zealand, millions of dollars which should be in the pockets of our own farmers.

Our exports and imports are very suggestive. In 1925, for instance, we exported 24,500,000 pounds of butter and we imported 193,000 pounds, so that we had a surplus of exports of more than 24,000,000 pounds. Our product was going out to other countries of the world and their money coming into Canada to enrich our farmers. In the fiscal year 1926 our exports amounted to 23,303,900 pounds, and our imports to 7,029,000 pounds. In 1927 our exports dropped from 23,303,900 pounds to 9,878,400 pounds, and our imports amounted to 7,190,267 pounds.. For the year 1928 it looks very much as if we would have 10,000,000 pounds of imports in excess of our exports and, in fact, it looks as if our exports would be practically nothing at all. Therefore, as regards the dairy industry, after two and a half years' experience with this foolish trade arrangement with Australia and New Zealand, we have a net result of our exportable surplus of 24,000,000 pounds being wiped out entirely and being replaced with an importation of more than 10,000,000 pounds of butter.

May I point to another fact? The United States imposes a duty of twelve cents a pound

on Canadian buttter. Surely every hon. member representing a dairy constituency and looking for future markets, would like to see the United States reduce that tariff against our butter, but do you think there is any likelihood of the United States doing so, as long as Canada permits Australia and New Zealand to send millions of pounds of their butter into this country at a rate of duty of one cent a pound? Will the United States lower their tariff and thus make Canada a halfway house for huge importations of butter from New Zealand and Australia? I do not think so, because the United States have followed a policy of protecting their farmers by giving them an advantage in their home markets over outside competitors. That is the sensible and rational thing for us to do in this Dominion of Canada.

Another little point which is worth referring to in connection with this matter is this. We all know by the advertisements and posters which we see put up all over Canada that, in the harvest season in the west, men are invited to come from other parts of the country to assist the western farmers in taking off their harvest. One of the advantages in going into mixed farming would be to encourage the farmer in Manitoba, Saskatchewan or Alberta to hire at least one man by the year, to give one man employment the year round, to give him something to do in the winter time as well as in the summer. But under this arrangement with Australia and New Zealand, with the dairy industry going out of business, with farmers getting rid of their cows, they have nothing for a man to do in the winter time, the result being that hundreds of men, who were formerly employed in assisting farmers to take care of their stock during the winter, find themselves during the winter months out of employment. That is inevitable.

The Minister of Finance (Mr. Robb), in advocating this arrangement, advised us to sell our butter to the old country; he told us to ship our surplus butter, if we had any, to London, and to import butter from Australia and New Zealand. In the first place, if we ship our butter to the old country, it will cost us about five cents per pound to get it from the prairie provinces to England. In the second place, when we get it there we are forced to compete with all the other butter-producing countries of the world that have a surplus. In the third place, if we ship a pound of butter from, say Saskatoon or Regina to London, England, at a cost of five cents a pound, and bring a pound of butter from New Zealand or Australia to Saskatoon or Regina, that will cost another five cents per pound, so that by the plan advocated by the Minister of Finance there is a direct loss of ten cents per pound. That strikes me as foolish and illogical in the extreme.

I looked in the returns to see to what extent Australia and New Zealand were providing our farmers with a market and I found that in 1926 our exports of butter to Australia were nil and our exports to New Zealand amounted to ten dollars' worth. I imagine some people in New Zealand were wondering what sort of people we had in Canada who could make such a foolish bargain, and why it was we did not produce our own butter. Evidently they decided to order a pound or so of our butter, in order to find out what kind of butter we produced in Canada, and I am sure they found that butter made in any province in Canada was equal to the best made in any part of the world. We thus got ten dollars of their money. In 1926, we exported to the United States only 17,774 pounds of butter. Why? Because it costs twelve cents per pound to import butter into that country. That is a very good reason. The United States say to us in Canada: We have farmers here who can produce butter, and while it is true you make good butter in Canada, we do not want your butter. We do not intend to allow you to send your butter into this country to be consumed by our people. We intend to give our own farmers an opportunity of supplying our people with butter.

Mr. BROWN: Has the hon. member the figures in regard to the increase or otherwise in the export of milk or cream or cheese?

Mr. EDWARDS (Frontenac): I am dealing with butter.

Mr. BROWN: But it is very important to get them all together.

Mr. EDWARDS (Frontenac): I quite agree it is very important. These are the figures of our imports of butter from Australia and New Zealand in 1925 and 1926:

	Imports from Australia	Imports from New Zealand
1925.. ..	nil	162,848 pounds
1926.. ..	2,485,000 pounds	2,342,966 pounds

There is at the present time a demand in the United States, in New York state particularly, for milk and cream from the province of Ontario. I suppose my hon. friend is aware of the fact that in the state of New York—and I presume in other states across the line, but I know it is the case in the state of New York—they have been year after

year, putting into effect this tuberculin test with their cattle. They are determined to have all their cattle in that state accredited herds, with the result that they have wiped out thousands of cattle in the state of New York, and to a certain extent wiped out their local production, and that I submit furnishes a good reason why there is a demand in New York state to-day, not only for Ontario and Quebec milk and cream, but also for cattle and milch cows from these provinces. That accounts for it to a very large extent.

But I should like the minister, or some member on the other side of the house, particularly someone from Alberta or Saskatchewan, to give this committee some good, tangible and commonsense reason why we should put our dairymen in the western provinces in the position they are in. I have given some figures for the west, but the statement also applies to the east and affects the dairymen of Ontario, Quebec and the maritimes. It affects the price which the farmers of Ontario and Quebec get for their cheese. They are beginning to feel the effect of this Australian and New Zealand arrangement in the price of cheese. That was reflected in the prices paid last season for Ontario and Quebec cheese. It has a wide effect, but will some person tell me, will my hon. friend from Lisgar inform me, why we should allow New Zealand to send millions of pounds of butter into Canada at one cent a pound and Canada get absolutely nothing in return for that? In so far as the arrangement with Australia is concerned, it might be said that we offset what we lose in the dairying industry by the advantages, if there be any, to the pulp and paper manufacturers and to the automobile concerns. But you cannot say that in regard to New Zealand, and we are getting more butter from New Zealand than from Australia. Why then should this arrangement with Australia, which was bad enough in all reason, be extended, as it was, to New Zealand, giving them the advantage of our market and getting nothing whatever in return? Of course under the arrangement we have the privilege of paying more for raisins in Canada. That was intended for the special benefit of the people of Australia and was one of those things which was liberally coated with oil, in order that it could be more easily swallowed by hon. members from the west, and even the free traders from the west took that down without even making a face, swallowed it as nicely and easily as anything you could imagine. It is a fact that the farmers of Australia and New Zealand have a very decided advantage in the climate which they enjoy as compared with the climate of Canada. It is a fact that you can produce milk from which butter is made on grass cheaper than you can in winter time, when the stock has to be housed and supplied with expensive feed. What about those people in Australia and New Zealand whose cattle range out the year round? They have a decided advantage, and I should like hon. members in this house to consider this well. You may theorize as much as you like about what John Bright and Cobden and some of those fellows said many years ago. You may theorize as much as you like about free trade and protection, but I say that any government in this country should take into consideration the climatic conditions in Canada in arranging the tariff. The government is not fair to the farmers who have to spend thousands of dollars in putting up expensive barns and stables in which to house their stock, who have to spend thousands of dollars in cutting and storing feed for the stock in winter—stock which during the winter months are, as the farmers very often say, eating their heads off: that is to say they are not producing for him a profit. The farmer is waiting until the next summer to make a profit out of his cattle. Surely it is unfair, unreasonable and unjust in the extreme, to tell a farmer in Ontario or in Quebec or in the western provinces, or in any province, with climatic conditions such as we have in Canada, that he must compete on even terms with the farmers of Australia and New Zealand, who have a decided advantage over the farmers in this country in the matter of climate. This arrangement has been tried out for two and a half years; it has proved an absolute failure, and we have men from all over Canada, not one or two, but men representing all the dairy organizations in the Dominion, in every province, appealing to this government to put an end to this trade arrangement and give the farmers of Canada a fair deal in the matter of finding a market at home for the things that they produce.

Mr. ADSHEAD: I listened with interest to the hon. member for Frontenac. I expected the Minister of Agriculture would rise in his seat and offer some defence. I think I said last year, and I repeat it again this year, that you cannot run with the hare and hunt with the hounds. That is, if you believe in low tariff or even free trade, you cannot say "I want free trade in those things which I buy and protection in the things which I sell." This very proposition the hon. member for Frontenac has presented to-day was put up to me in my last election. The people of the

city of Calgary, when I spoke about free trade in butter and the question of the Australian treaty, told me I would not say the same thing in the rural district, where dairying was being carried on, as I did in the city. I wish to give the hon. member for Frontenac some figures in connection with this matter which I received a few days ago. I had twenty-eight cows myself when I was on a homestead in Alberta, and I told the farmers in the dairying district—and I could name the district—"If you cannot meet the competition of your fellow citizens in the British Empire 8,000 miles away, who have to ship their butter that distance, and send it over the equator, you had better learn to do it or go out of business." In the districts where I made that statement I got the largest vote. I said to them, "How can you, with consistency, ask for a protection on your butter and then send me down to parliament to plead for a reduction of the duty on agricultural implements? It cannot be done." I cannot sit still and say that I am going to support a tariff on butter and ask for a reduction of the duty on agricultural implements.

Mr. hon. friend quoted some figures for 1925. I was interested in this question of butter, and when I came here I wrote to the department and asked for facts as regards the imports and exports of butter for 1927. When I heard the hon. member for Frontenac dealing with the question of butter I ran upstairs and got a statement I received the other day which shows that in 1927 we exported butter to the amount of $3,351,581, and that we imported $2,500,000 worth, or nearly a million dollars' worth more butter was exported than imported by us. Those facts surely show that the Canadian butter trade is not suffering very much.

Mr. EDWARDS (Frontenac): What year was that?

Mr. ADSHEAD: The fiscal year ending December 31, 1927. My hon. friend took 1925. I presume that 1927 is much more satisfactory to our farmers and to the house at large. We imported two million dollars' worth of butter, and we exported nine million pounds, or over a million dollars' worth more than we imported. Why did we do it? Simply because our butter is good and commands better prices abroad than at home. Why should we put an import duty on butter? Why should we ask our fellow-citizens in the towns and cities to pay more for our butter than the price it commands in the open market? We produce our wheat and sell it in the open market against the competition of the world, and we also meet the open market for our butter.

Mr. EDWARDS (Frontenac): Does my hon. friend not think that when Canada had a surplus of from twenty to twenty-four million pounds of butter, that surplus was a sufficient guarantee to the Canadian people that they would not have to pay more than they should for Canadian butter at home?

Mr. ADSHEAD: It is a sufficient guarantee that if they could get more for it in the export market they would send it there. And that is what they did. I do not think, Mr. Chairman, that I need go any further into the matter. Our exports of butter show that even with the Australian treaty in effect Canadian butter is able to meet competition in the markets of the world, and asks for no quarter there. Therefore we do not propose to run with the hare and hunt with the hounds.

Item agreed to.

Cold storage warehouses, $30,000.

Mr. TOLMIE: Have there been any changes in the distribution of these branches since last year?

Mr. MOTHERWELL: No, this is to complete old contracts that were entered into prior to last year.

Mr. TOLMIE: Are any new ones anticipated for this year?

Mr. MOTHERWELL: Yes, we have just entered into a contract with a cold storage organization in New Westminster. If it makes sufficient progress we may require a further amount in the supplementary estimates to take care of it.

Mr. TOLMIE: That is to cover agricultural products and fish, or just fish alone?

Mr. MOTHERWELL: Everything that is perishable.

Item agreed to.

Fruit, including grant of $8,000 to the Canadian Horticultural Council, $290,000.

Mr. MOTHERWELL: The principal increase here, Mr. Chairman, is due to an extension of our grading system for export. It will be recalled that last session legislation was passed authorizing the department to introduce a system of compulsory inspection of apples and other fruit intended for export. This involves a considerable outlay. Five dollars is charged by the department for each car inspected, and this money goes back into the treasury.

Mr. TOLMIE: Does this new inspection give our fruit access to the Australian market?

Mr. MOTHERWELL: No, it would not affect that market.

Mr. TOLMIE: Do they accept our fruit there?

Mr. MOTHERWELL: There is some fruit going there, but it is not subject to inspection. The objection that our Australian friends have against our fruit is the possibility that fire blight may be brought into the country. We do not think the disease is transmissible through our fruit.

Mr. TOLMIE: Is that the only country which refuses Canadian fruit under those conditions?

Mr. MOTHERWELL: No, Japan is another. Some countries are more afraid of the transmission of fire blight than are others.

Mr. TOLMIE: When we were on a similar item about four years ago the minister was kind enough to promise to give me the reason for the spread between the prices paid to the growers of Delicious apples in the Okanagan valley, and the prices charged by the vendors in the city of Ottawa. They now sell first class Delicious apples at 2 for 15 cents, while the grower in the Okanagan valley, I understand, receives about $1.60 or $1.70 per box of about 140. The inquisitiveness that I had four years ago still persists, and if the hon. minister and his very able assistant can give that information to the people of Canada, I am sure it will interest both the consumer here and the grower in the Okanagan valley.

Mr. MOTHERWELL: I think the spread is due to high freight and express rates and the high cost of handling. It might have been attributable four years ago to the activities of the combine that was then in operation. This has since been dissolved, so after all perhaps the spread was not so much attributable to that cause as we thought at the time. I remember the interrogation of my hon. friend, but it was made so long ago that I forgot to anticipate it on this occasion. Possibly we can get the information.

Mr. TOLMIE: I did not expect the minister could give it to me offhand, but it would be most interesting to know how that spread occurs.

Mr. MOTHERWELL: Yes.

Mr. McGIBBON: Has the government or the minister's department in the past made any attempt to minimize this spread?

Mr. MOTHERWELL: The fruit branch thought they were working along proper lines when they assisted the commissioner to gather information in respect to the Nash combine. We worked on that for nearly two years. Anyhow the growers are always afraid of combines, whether they be wheat combines or tobacco combines or any other kind. We felt it was our duty to assist them in ferreting out the information in connection with this matter and we called the growers together in conference here about two and a half years ago to take counsel with one another. They came from the Atlantic and the Pacific and we paid their expenses, incurring a cost of some $1,600. We gave them an opportunity to organize their forces in the direction of a national campaign of salesmanship with a view to reducing the costs to which my hon. friend has referred. The main thing in selling satisfactorily is to have a product of good quality, and I will say this for British Columbia: that there are no other people in the Dominion I know of, so far as this or any other commodity is concerned, who have deliberately exceeded the standard required by law. The growers of British Columbia actually put up a pack a standard above that which the law demands and for that reason they can generally find their way into any market in the world.

Mr. McGIBBON: The minister has not answered my question.

Mr. MOTHERWELL: What does the hon. gentleman want?

Mr. McGIBBON: I have asked the question a good many times before, I have asked it again to-day, and I will continue to ask it. I want to know what the minister or his department has done in order to put into the pockets of the producers a larger share of the proceeds to which they are entitled considering the vast sum paid by the consumers.

Mr. MOTHERWELL: I understood the hon. gentleman to ask, first, what we had done to reduce the enormous spread, and I tried to answer that question. He also inquired as to what we had done to encourage a more acceptable system of marketing. My hon. friend has missed the point, because I dealt with shipping-point inspection especially in the case of exports. Through such inspection and the granting of the government certificate accompanying each consignment we have done something to help the industry, and the British Columbia and Ontario apple growers assure me that, having experienced the beneficial results of this

system, they would not now think of shipping their product without a certificate of quality.

Mr. McGIBBON: That is not the question.

Mr. MOTHERWELL: The hon. gentleman does not want to hear that. However, that is the way to bring about satisfactory results and I am anxious to impress it upon him. If there is anything else of a specific character which the hon. gentleman desires to know I shall be glad to answer him. I would ask, however, that he put specific questions and not generalities as to what we have done for this, that and the other. We have met the situation and improved the standing of British Columbia apples on the British market, and this result we have achieved by making grading compulsory for everyone. Ninety per cent of the growers grade their apples voluntarily in any case, and this legislation is to compel the other ten per cent, who have been spoiling the market, to follow suit. What further can I do for my hon. friend?

Mr. McGIBBON: The minister says that the government has enhanced the market value of the product, but the proceeds that go into the grower's pocket have not been increased. I want to know what his government can do or has done or contemplates doing in order that the producer may get that larger share to which he is entitled in view of the enormous cost to the consumer.

Mr. MOTHERWELL: All matters directly pertaining to production are usually conceded to fall within the scope of the provincial government. One cannot draw a very distinct line of demarcation between federal and provincial responsibility, but we have endeavoured to draw at least a rough line between the two, and all matters relating to improved production and reduced production costs are recognized to devolve upon the provincial government, while matters of grading and marketing as well as of standardization are regarded as coming under the jurisdiction of the federal government. Now I have already told my hon. friend what we have done in respect of the duties which I have classified as falling to us. We do not control freight rates. As I say, we have shipping-point inspection but we have nothing to do with freight rates, although we have made representations in this regard. Indeed, I made such representations when I was in the provincial government, but we have no particular record of any results achieved. The question has been raised on more than one occasion regarding express and freight rates on apples, but I cannot offhand indicate what has been the outcome of any representations that have been made in the matter. The rates are still very high, however.

Mr. McGIBBON: Probably I am stupid, but I want to get an answer to a definite question, and apparently I cannot convey my idea to the minister, or else he is stealthily evading the point. In the years he has been Minister of Agriculture, what has he done to find out, first, what the spread consists of and, secondly, whether that spread cannot be minimized so that the producer may receive more for his goods? Surely that is a simple question.

Mr. MOTHERWELL: Does my hon. friend suggest that we should start an investigation into the costs of handling at each end? Well, we did do that. The combine was charging a double commission, as my hon. friend will remember, and they were fined several hundred thousand dollars; double commissions were considered to be illegal. The courts confirmed that finding and this evil was removed. I think my hon. friend will admit that this is something.

Mr. McGIBBON: That is one achievement; what next?

Mr. MOTHERWELL: My hon. friend, I see, remembers that. Does he think we should go before the railway board and ask them to call a hearing? I repeat, we brought the fruit growers from various parts of Canada into conference, the department paying the cost, and they could have taken advantage of that trip to request a hearing before the railway commission if they wanted to make representations regarding freight or express rates. That is as far as we have gone.

Mr. EDWARDS (Frontenac): The minister has told us what great care is taken in British Columbia in the grading and packing of their apples, and he has said that due to the fact that they exceed the legal standard they have no difficulty in finding a market. That is very good. Now what I understand my hon. friend (Mr. McGibbon) to have in mind is this: We all know, and we can easily satisfy ourselves if we walk down the street, that we are paying a high price for apples in Ottawa, as indeed we pay for them anywhere else in Canada, in the east at any rate. We can also easily ascertain this to be the fact, that the producer of apples in British Columbia, for instance, notwithstanding all the care he takes in the selection, packing

and grading of his apples, does not get for his product anything like a remunerative price considering the great care and labour he expends, and the capital invested. Perhaps the minister has under his hand the figures in this regard and I should like him to disclose them so as to satisfy my curiosity. He might tell us the extent of the importations of similar fruit from across the line into British Columbia. I have been informed that growers in California and Washington and Oregon, finding a market at home for all their produce, are left with a surplus which they are obliged either to throw out into the back yard to rot, or else to ship into Canada, taking whatever they can get for it. That fruit is sent into the prairie provinces at prices far below its cost of production.

Mr. BANCROFT: Would that increase the spread?

Mr. EDWARDS (Frontenac): I am trying to find out if this has not something to do with the low price received by the British Columbia producer for his apples. The American producer says, "Here is a box of apples which cost me about $5 to produce; I might better sell it for $2 than throw it out in the back yard", and we allow him to ship it in Canada and take the market which should be kept for British Columbia apples. This cheap fruit is dumped into the prairie provinces, with the natural result that the British Columbia producer has to come down in his price. That is the point. I think the minister understands that, and perhaps he has the figures which would indicate to what extent the importation of apples from the United States into the western provinces has been carried on.

Mr. MOTHERWELL: The total importation?

Mr. EDWARDS (Frontenac): Yes, from the United States into the western provinces.

Mr. MOTHERWELL: I have not the total by provinces, but I have the total importation of apples into Canada for 1927, which amounted to 151,568 barrels. I also have a list of all the other fruits if my hon. friend cares to have it.

Mr. EDWARDS (Frontenac): Have there been any complaints from Canadian producers in regard to the dumping into Canada of apples or any other fruits at sacrifice prices?

Mr. MOTHERWELL: Only 525 barrels of apples came into Canada under the dumping clause, because as you know the invoice price has to be below the set price before the dumping clause is applied. That amounts to only 0.34 per cent of the total. The rest of the apples came in at a higher invoice price, consequently the dumping clause was not applied.

Mr. EDWARDS (Frontenac): Is that for last year?

Mr. MOTHERWELL: Yes.

Mr. McGIBBON: Did I understand the minister to say that over 150,000 barrels of apples were imported into the three western provinces?

Mr. MOTHERWELL: Into all Canada.

Mr. CAMPBELL: I should like to ask the minister whether the application of section 43 of the Customs Act to the importation of fruits into the western provinces from the United States would not make it impossible for low priced fruit to be dumped there from the United States?

Mr. MOTHERWELL: Section 43 was applied to 525 barrels of apples, which was only about one-third of one per cent of the total. These were low grade apples brought in at low prices, and consequently the dumping clause was applied. The remainder of the apples were of a superior quality and came in above the set price, and therefore the dumping clause was not applied to them.

Mr. CAMPBELL: I do not know to what extent fruit is being dumped into the prairie provinces from the United States, but I have never seen any of it at these low prices. In the particular district in which I reside the whole problem is to buy the fruit. We realize that our friends in British Columbia produce excellent fruit which we wish to purchase, fruit which we need and which we should have. We live in a cold country and are not able to grow this fruit ourselves, and in the winter time it makes an excellent food to balance up the heavier foods used on the farms. We need apples and other British Columbia fruits, and it seems to me that we have the very best market there for British Columbia fruit if we could afford to buy it. I do not maintain that our friends in British Columbia get too much for their products, because we know that is not the case. I know many men who have left their farms on the prairies to go into the fruit districts of British Columbia in an attempt to make a living growing fruit, and a great many of them have come back to the prairies after having lost money. Certainly there is not very much money in growing fruit in British Columbia, but I think the trouble lies more in faulty distribution than in the tariff or anything else. I can hardly ever buy a box of apples in my village for less than

$4, and certainly not for less than $3. The average farmer on the prairies should be able to put in from 20 to 40 boxes of apples every year for the use of his family, but not one farmer out of ten can afford to do it. I believe there is a great field for investigation there; perhaps this work could be done co-operatively. If fruit is dumped into the prairie provinces from the United States it certainly does not reach our part of the country. I do not believe the retailers make too much of a profit either, but the problem seems to be in distribution. The fruit is shipped in carload lots to the larger centres and shipped out again over long distances, sometimes as far as 300 miles or more, in less than carload lots, which means extra freight and express, all of which makes the price to the consumer almost prohibitive. I would suggest to our friends in British Columbia that they explore this field and see if it is not possible to develop some marketing system in the nature of our wheat pool, which would enable them to distribute these apples themselves to the smaller centres. They could ship the fruit in carloads, which would give us the benefit of the cheaper freight, and if that could be done and the fruit sold at a reasonable price there is hardly any limit to what we could consume on the prairies. I was going to say our fruit consumption could be doubled, but I can easily say that it could be increased five or ten times. We have the capacity for the consumption of that much more fruit, but the prices are so high that we are unable to buy the quantity we could use.

Mr. McGIBBON: I am glad to secure some information from a private member which I could not get from the government. The remarks of the hon. member (Mr. Campbell) at least have a ring of sincerity and common sense. This is one of the problems before Canada to-day, and I think the minister and his department should devote some attention to the question of distribution. If something could be done along this line he would be performing a service to the producer and the consumer which would be far greater than anything he has done in the past. I hope the minister will take into consideration the suggestions of the last speaker, and also see if he cannot give us a little more information with regard to that branch of the industry.

Mr. MOTHERWELL: If it will help my friend at all I will take a moment or two to recite some of the things we hope to do in the next twelve months. Last year, in reply to an inquiry by one of the hon. members for St. John as to what we contemplated doing in aid of cooperative marketing, I pointed out that I hoped not to have to organize any new branches of my department until I had better office accommodation for them, but that as soon as I secured that accommodation it was my hope to organize a cooperative marketing branch. My department was then scattered around in eighteen or twenty buildings throughout this city, and I did not want to increase that number to twenty-one. However, events have travelled pretty fast since then. There is, for example, the situation in Essex and Kent in regard to the cooperative marketing of tobacco. The efforts of the growers in that respect have met with only partial success. My deputy and myself went up to study the situation at Chatham, and later on at Windsor, and we made an announcement as to what would be done. We had not accommodation for our present staff, but the situation was growing so serious in Essex and Kent that we felt the time had come to establish a cooperative marketing branch and to take our chances of finding accommodation for it when it was established. The report to council asking for the necessary authority has been signed, and it will go to the treasury board in a day or two. There will be a staff of five.

That, probably, is the information my hon. friend desired. The branch is not yet in operation, and I do not know how long a period will elapse before it will be. We find that to get anything through the civil service commission it takes at least ninety days, so I give fair warning if any delay is experienced in the matter.

Mr. McGIBBON: This is truly a wonderful government. They have been in office since 1922, and in 1928 the Minister of Agriculture comes down solemnly and tells the house that the reason he has not done anything in this matter is because he has not got an office. I ask you, Mr. Chairman, was ever a more absurd excuse offered to an intelligent body of men? He has not got an office! After six or seven or eight years in that department that is the excuse offered by the minister for not having done anything for the people of this country.

Mr. MOTHERWELL: Oh, listen!

Mr. TOLMIE: I was going to ask the minister if he has distributed any information regarding the keeping of fruit. Of course it is well known you can keep fruit, notably apples, in certain temperatures, and they are kept that way by every large wholesaler; but when apples reach the small stores and the

consumer many bags are possibly spoiled by the exposure of the fruit to a fairly high temperature such as you would find in a kitchen. Then the apple becomes unattractive and people do not consume as many as they otherwise would. The idea has often suggested itself to me that if the government distributed a bulletin on how to keep fruit it would have a most beneficial result and no doubt bring about a larger consumption.

Yesterday we had a very interesting debate on research work. We are consuming in this country large quantities of the juices of citrus fruits for breakfast, and I was going to suggest to the minister that he might take up with the research council the question of finding out whether it is not possible to secure some very palatable substitute for these citrus fruits for breakfast, and by doing so increase the market for fruits produced in this country.

Mr. MOTHERWELL: We sent a number of packages of fruit, both last year and this year, to Great Britain. These were packed in different ways—some with two tiers, and some with one—just to find out how much the fruit was affected in transit by the depth of the package. We also had some experiments conducted in the last two or three years in regard to the breaking down of the Jonathan apple, and these have shown that a great deal of improvement could be obtained by harvesting at the right time. I think a great deal more can be done. Too great care cannot be exercised in handling not only apples but other commodities for export. The least thumb mark or the least roughness in handling will be shown immediately the commodity arrives on the other side of the water. I remember some of our people were visitng at Harrod's and they found in the case of some Canadian apples that although they had been handled with the greatest possible care thumb marks were visible on the skin. It is not possible, I repeat, to take too much care in order to ensure the arrival of fruit at its destination in good condition.

Mr. TOLMIE: In regard to the matter of keeping fruit I was very much impressed in London in 1921 when I was handed some apples that were over a year and a half old. They had just been taken out of storage where they had been kept at the right temperature. The apples were Ontario spies and they were in first class condition.

Mr. BANCROFT: I should like to ask if the vote of $8,000 to the Canadian Horticultural Council is to be continued. It has been passed for a number of years, and no one objects to voting this money when it is to be used for the advancement of horticulture. But when that vote, or any portion of it, is used in support of an appeal to the tariff board for higher protection on the fruit that the people of this country need to consume I think it is time to enter a protest. I certainly do protest against voting any money to the Canadian Horticultural Council, or any other organization, to enable them to appear before the tariff board and ask for a higher tariff.

Mr. MOTHERWELL: I presume they want to look after only what they conceive to be the interests of the fruit industry. On the other hand there is the Consumers' League, a very active body under the direction of a very prominent gentleman, looking after activities such as those of the horticultural council.

Mr. BANCROFT: But there is no vote for them.

Mr. MOTHERWELL: I think there are a few items with respect to them all right.

Mr. CAMPBELL: I should like to ask the minister in what way he finds his action in regard to any office he proposes to establish hampered by the civil service commission? I have heard the minister repeat so often in the house that he is hampered by the civil service commission that I should like to know in what particular way he does find his work hindered.

Mr. MOTHERWELL: I should have said the civil service commission under the limitations of the Civil Service Act. I have no complaint at all to make of delay due to the commission, but the procedure laid down is so tortuous that it takes ninety days on an average to get a matter through at all. I noticed in a speech delivered by a member of the previous administration in 1921 that exactly the same condition prevailed at that time. According to a return that was brought down the putting through of a certain matter took ninety days. This is due to no fault of the commission; they act as expeditiously as possible—but to the routine which has to be followed. The first thing we have to do is to establish the position; a position has to be created before you can appoint anyone to it. Then an elaborate description has to be given of the position. Then the matter has to go before the treasury board, who look it over carefully in order to be sure that I am not exceeding my powers. They have kept a very watchful eye on these matters for the last two or three years. There is a

lot of routine, and each party through whose hands the matter goes has to perform his duty and see that the necessary requirements are complied with. This all takes time. When I held office elsewhere the procedure was more simple and direct, and when a position was created it did not take nearly so long to fill it. If we required a man we went after him and got him. I have no authority of that nature in my present position. If immediate action is required the minister in charge must have power to act immediately; he cannot secure prompt action in the face of so much routine. The same thing is true with regard to research work. Australia can come to Canada and in broad daylight take away our best men. Why? Because their research workers are not under the civil service commission of that country. But on the other hand we cannot go to Australia and say to some of their men: "We want you," for the simple reason that we have no such authority.

Mr. CAMPBELL: All the minister has said will increase my respect and admiration for the civil service commission and convince me all the more that we really need to maintain such an institution in Canada. In spite of what the minister says, I find at every session of parliament some action is taken by this house to impair the usefulness and power of the civil service commission. In the estimates year after year appear votes providing for the appointment of certain officials not under the commission. There seems to be no difficulty whatever on the part of the government to get around the civil service commission when they want to do so, but the minister and one or two of his colleagues use every opportunity they can to throw some mud, not particularly at the personnel of the civil service commission, but at the principle on which the commission is based. In other words, they want the patronage system back. The minister told us about how nicely things were done where he came from, and I presume he refers to Saskatchewan. I can cite some instances about how nicely things are done there too. Let me give one.

Mr. MOTHERWELL: In the Department of Agriculture when I was in charge of it?

Mr. CAMPBELL: No. I think the minister administered his department excellently in Saskatchewan, and I will pay him the tribute, as I have done in my constituency, of saying that he is an excellent Minister of Agriculture. Without abusing the old proverb, "comparisons are odious," I think I can say

[Mr. Motherwell.]

that the minister understands his particular job just as well as any minister of the crown in this house. I do not think he is any particular sinner with respect to the patronage system. Some time ago I was unfortunate enough to become involved in a law suit in Saskatchewan.

The CHAIRMAN: I do not want to interrupt the hon. member, but I cannot see what that has to do with the item before the committee.

Mr. CAMPBELL: I will finish in a moment, but I think it is particularly relevant. The minister was permitted to express his opinion with regard to the patronage system, a system which is involved in every single vote in this house. I was going to say that in the particular case referred to I found that the provincial police of Saskatchewan were instrumental in working up a civil case against me.

The CHAIRMAN: The hon. gentleman is wholly out of order in this discussion.

Mr. CANTLEY: I have listened with a great deal of interest to the discussion which has gone on for the last hour or more. I sympathize to a large extent with the minister—

Mr. MOTHERWELL: Thank you.

At six o'clock the Speaker resumed the chair and the house took recess.

After Recess

The house resumed at eight o'clock.

ELECTRICITY AND FLUID EXPORTATION ACT AMENDMENT

Mr. H. A. STEWART (Leeds) moved the second reading of Bill No. 2, to regulate the exportation of electric power.

Mr. CAHILL: Explain.

Mr. STEWART (Leeds): I cannot add much to the information which was given to the house on the first reading. The object of the bill is to amend the Electricity and Fluid Exportation Act of 1907. By the provisions of that act the exportation of petroleum, natural gas, water and other fluids is regulated by order in council, and the effect of the bill now before the house is to change the provision with respect to the exportation of electric power so as to make it subject to act of parliament, and to leave the regulation of the export of petroleum, natural gas, water and fluids as it now stands.

When this legislation was introduced in 1907 the value of electric power was comparatively small as compared with its value at the present time. It is now one of our most valuable resources, and is practically inexhaustible, because as long as water flows over a waterfall we are able to develop electric power. It is constantly increasing in value, and we believe is approaching a huge development in Canada. Its value to Canada can scarcely be over-estimated, and I submit that in dealing with an asset so valuable we should have the sanction and approval of the House of Commons rather than have the matter dealt with by order in council. I feel, Mr. Speaker, that the exportation of electric power should, as far as possible, be prohibited; that electric power should be retained in Canada for the benefit of the Canadian people, because its value in developing our industry and our agriculture and in providing traffic for our railways can hardly be accurately estimated. This bill does not propose to go the length of prohibiting the export of power, but would make it subject to the regulation of parliament. As far as I have observed I think the press comment has been favourable, and the bill as introduced has the support of a very large body of public opinion in Canada. There are provisions in the bill which preserve the rights of the provinces, and the measure contains certain saving clauses with respect to existing liens.

The only objection I have heard urged against the bill in the house or elsewhere is that it does not provide for emergencies, or for the fact that in some cases it may be extremely advantageous that there should be an exchange of power from time to time as we have it at Niagara and perhaps elsewhere. That objection may be easily overcome by a proper amendment. In fact I have gone so far as to draft an amendment which I think would meet all the objections which have been offered. An order of the house has been made for the production of copies of all licenses and regulations, and when these documents are brought down we shall be able more intelligently to discuss the matter. I suggest that the bill might well be read a second time and sent to committee for approval and consideration and for such amendments as the circumstances seem to warrant.

Hon. CHARLES STEWART (Minister of the Interior): Mr. Speaker, the government is taking no exception to this bill. It does not make any drastic change, but I think the sponsor has in mind that in cases where new developments spring up, and there is a possibility of a certain portion of the power being exported, the company or individual promoting the measure shall come to parliament and obtain a private bill for that purpose. With that suggestion, the government has no quarrel; indeed I think I may say on behalf of the government that we will go even a step further. It is in our opinion desirable that the exportation of electricity be absolutely prohibited; it is too valuable an asset for us to permit it to leave our country. Although we may be at some disadvantage from a climatic point of view we have this very valuable asset which to some extent offsets that condition, and it is important that we should retain it within the boundaries of our own country. I suggest that this bill be referred to the committee on railways, canals and telegraph lines in order to give interested parties an opportunity to appear and voice any objections they may have to its provisions, and also to give my hon. friend an opportunity to make the necessary amendments which I think are required, particularly to clause 6. That clause reads as follows:

> Nothing herein contained shall be deemed to affect the rights of any province with respect to power or the rights of any person under any license issued before the first day of January, 1928.

I understand it is the intention of my hon. friend not to interfere with existing contracts, and that the issue of yearly license will continue. With that suggestion I think the bill might go to committee for consideration, and the government will be content.

Mr. H. B. ADSHEAD (East Calgary): I should like to get some further information on this question. My hon. friend has made a statement about not interfering with provincial rights. Last year we had a discussion in Alberta with regard to these power rights, and I understand the provinces of Ontario and Quebec claimed that they had full rights to the development of electrical energy in their respective provinces. It seems to me that if the provinces control the generation and distribution of electricity, this bill may be an interference with provincial rights. If we are to continue to put an embargo on the exportation of electric power, there is no reason why a similar embargo should not be imposed on the exportation of gas and other natural resources under provincial control. I think it should be made clear how far we are going to trespass on provincial rights.

Motion agreed to, bill read the second time and referred to the select standing committee on railways, canals and telegraph lines.

POST OFFICE ACT AMENDMENT

NEWSPAPER OWNERSHIP

Mr. T. L. CHURCH (Toronto Northwest) moved the second reading of Bill No. 22. to amend the Post Office Act.

He said: The object of this bill Mr. Speaker, is well known to the press of Canada, namely, to identify the ownership of newspapers. For many years past the newspapers of this country have been coming to parliament and securing privileges. Up to 1882 newspapers were carried free by the post office. This bill provides for what is already required by law in England, Australia and the United States, that is: A sworn statement of the names and addresses of editors, owners and principal stockholders of every newspaper, magazine, periodical or other publication, to be filed with the Postmaster General semi-annually. There is an exception in favour of religious, fraternal, temperance and scientific or other similar publications. Also, it shall not be necessary to include in such statement the names of small stockholders, that is, persons owning less than one per cent of the total amount of the stock, bonds, mortgages or other securities. If any such publication fails to comply with these provisions it shall be denied admission to the mails. Paid editorials and other reading matter for which money is paid shall be plainly marked "advertisement". Statements under the act are to be made in duplicate and delivered to the Postmaster General, who shall make regulations for the carrying out of the provisions of the act.

I introduce this legislation solely in the interests of the freedom of the press in a liberty-loving country. It is the law to-day, as I have said, in the old land, in Australia and in the United States. Unless a newspaper is registered in the names of the editor, the publisher and the largest stockholders it cannot get the advantage of the mails in the United States, and if it contains paid editorials they must be marked as advertisements.

It is interesting to recall, Mr. Speaker, that you were the pioneer in this field, because away back in 1919 you introduced a resolution for a purpose similar to that which I am now seeking to accomplish by this bill. It was then felt that such legislation was necessary, and parliament was prepared to enact it, but unfortunately at that time we had the so-called uplift form of government known as the Union government, which was very fond of making a political football of any economic question. The then president of the council, Mr. Rowell, raised the point that under section 92 of the British North America Act your proposal affected property and civil rights, and these being under provincial jurisdiction he asked that your motion might stand. His opinion prevailed.

I wrote the Postmaster General of the United States, and in his reply he refers to the fact that the legislation there is working satisfactorily and they could not very well get on without it.

The Hearst papers, some of which were prohibited during the war, are allowed circulation in Canada, but in the United States they are subject to regulations similar in scope to the provisions of this bill.

In Toronto we have the Mail and Empire newspaper. Until recently no one knew who owned it. That paper was the arch critic of the hydro-electric policy of the Whitney government; it ridiculed Sir Adam Beck, it ridiculed public ownership, and it ridiculed the Whitney government for introducing hydro-electric legislation, under which we have built up our provincially-owned hydro-electric system, a system that has conferred such boons on the farmers and working people of Ontario. The Mail and Empire was clearly wrong in its attitude to public ownership. As a matter of fact, the paper was owned in Montreal. Recently it was sold to a good man and a fair man—Mr. I. W. Killam of Montreal. We know he is a responsible man and a reliable one. He has turned the paper upside down; to-day it is better in every way as a newspaper and I venture to say he would not oppose this bill.

There have been considerable newspaper references to this bill. The various farmers' magazines have openly approved of the proposed legislation as being in the best interests of a free press and a free parliament. The Farmer's Advocate has written me in the following terms:

> The reading public are entitled to information regarding the ownership of the publications they read. There are to-day many cross currents in public opinion, and there are so many conflicting views expressed, that we are sure the publication of the information suggested in your bill would help to clarify the situation for the benefit of people who are guided by the printed page.

The St. Catharines Standard says:

> The information will be very interesting when it comes to the demand for power concessions and other rights, and might explain some flip-flops in the days immediately preceding an election.

The Globe, founded by George Brown, has urged such legislation for years, and in a recent editorial it says:

Parliament should earnestly support and pass the bill once more introduced by Mr. T. L. Church, requiring newspapers to give to the public information as to their ownership. It is a step which newspapers themselves should welcome in the interest of honest journalism.

Newspapers are a recognized force in the making of public opinion, which means a force in the government of the country. They present the news, but they also present opinions. Readers should know what interests and influences are at work in the forming of the opinions presented. There should be means of judging whether these opinions are based on informed zeal for public welfare or whether the newspaper uttering them is secretly promoting selfish purposes.

It should not be possible for two newspapers under the same ownership to promote contradictory policies without the public knowing the fact. By adopting the wise measure introduced by Mr. Church, the newspapers will be better served and public confidence will be increased.

The Port Hope Guide has this to say in support of the bill:

The public has a right to know from what source the fountain of public opinion, represented by the press, draws its inspiration. If from interests adverse to the welfare of the public, the fact should be known from the house-tops. This country cannot afford to have the press muzzled or controlled by corporations, parties or persons whose only object is to direct public opinion into lines that are calculated to advance private or corporate interests to the detriment of the general interests of Canadians.

No responsible publisher, or newspaper owner is ashamed or afraid to allow the whole world to know who's who, and would welcome such a law; it is only the publishing company whose personnel is represented by "straw men" and against such companies action cannot be taken owing to the fog surrounding them. It must not be lost sight of either that there are corporations even in Canada, which can and do afford not only newspapers but radio broadcasting to disseminate what they would have the public believe. Even the electorate might be influenced to vote for some fraudulent scheme and promote a wrong.

I may observe, Mr. Speaker, that you yourself supported a similar resolution in 1919. For your views on the subject I would refer the house to the debate as reported in Hansard. I want it understood that I am not for a moment attacking the press of this country; I do not believe that you could find anywhere a press to excel it. The contribution which the Canadian newspapers made to the community, the country, education, to social betterment, the satisfactory outcome of the war; what it did to promote the cause of the poor and needy and of charity and philanthropy and to further every worthy movement in behalf of the soldiers and of the nation at large, was invaluable. It was the press that helped very largely to restore Canada to her normal position. Nor can one say too much for the honour and integrity of the press of Canada. The tendency of our Canadian newspapers is decidedly forward, not backward, and notwitstanding the high cost of material and labour their prospects are bright. I have no doubt that the genius of our newspapers will help to make this country great industrially so that Canada will march triumphantly on from strength to strength. The genius of a free people will help and work for the good and success of the newspaper industry.

The object of this bill is to make the disclosure of newspaper ownership compulsory. There are four estates in the Dominion: the Governor General, the Senate, the House of Commons and the press. We know who the Governor General is, we know who the members of the Senate and the House of Commons are, and logically we ought to know the composition of the fourth estate, the press. There is no reason why the ownership of newspapers in this country should not be disclosed, when we bear in mind the fact that registration is compulsory in all cases of transfer of real and personal estate and, as well, in transactions in connection with chattel mortgages, bills of sale, wills, deeds, mortgages, notes, liens and so forth. The shareholders and directors of banks must also be disclosed, and those comprising bank mergers are not concealed. Why, therefore, should the ownership of a newspaper be concealed? A free press is as necessary to the welfare of the country as a free parliament. You, Mr. Speaker, are a literary man and a lawyer, and you presented the argument in this case a few years ago, in 1919, in such a manner as must have commended itself to all thinking people. Had your advice been followed in 1919 it would have been a good thing for this country and for the press and a free press and for the liberty of the press.

Is there any fair-minded man in this country who is opposed to this proposition if he has at heart the interests not only of the country but of the very press itself? Legislation similar to this has been found necessary and has proved beneficial in the United States and in England and Australia, and the same reasons that apply there are equally applicable in Canada. The object of the proposed amendment is to facilitate the enforcing of the regulations governing the use of the mails. In a return brought down by the minister it was shown that the country has been suffering a loss of eight millions a year in the payment of cash sub-

sidies to the newspapers in the way of rates granted on the carriage of newspapers through the mails less than the cost thereof to the post office; in other words an eight million dollar subsidy is given them.

Now the government occasionally spends considerable sums of money in advertising and I do not blame them for so doing. It is the duty of the government to keep the public informed on various questions affecting the interests of the people. All governments do this, and it is only natural for them to patronize the papers that support them. I am not complaining of this because I hope I am enough of a sport to realize that it is what others would do. The merchant on Sparks street also is obliged to advertise in the press and if he sells his stock or store must register the same. The merchant cannot sell his goods without registering, nor can the farmer dispose of his stock or crops or produce without complying with the same requirement of a bill of sale. I see no reason therefore why we should not expect the press to do the same and disclose their ownership.

Canada to-day is the happy hunting ground for American millionaires and promoters who are seizing our forests, our timber reserves, our mines, our pulp wood, our water powers, and in the process enlisting the aid of a section of the press. The future of new Ontario is endangered by a small section of the press which boosts the business interests of American millionaires, and we can very well understand why this legislation is being opposed by a few. It is a fact that many of the newspapers carry paid editorials whose sole object is to boost certain policies. The Toronto News, at one time under the direction of Sir John Willison, went so far as to describe Sir James Whitney and Sir Adam Beck and their hydro program as two amateur anarchists, and other newspapers have been known to oppose enterprises which have been undertaken for the good of the common people of the country. I know that a section of the press in the city I come from tried to foist an expenditure of $32,000,000 on the taxpayers in 1914, in connection with the sale of the Toronto Railway Company and Toronto Electric Light Company to the city. The arbitration gave them in 1922 $12,000,000 for the railway instead of $32,000,000, and that was twice as much as they should have got. The American interests in this country are by no means lax in asserting themselves, and they do not hesitate to engage the assistance of a section of the press.

The last time—1919—a resolution of this nature was proposed we had opposition from

[Mr. Church.]

the apostles of uplift, the Union government, especially that brand of uplift that finally landed the good old Conservative party in the cemetery. Legislation of the nature now proposed has been found to work admirably in the United States, and the same is true of England and France. It is a social necessity, it is an economic necessity, the object of which is to safeguard the interests of the country. I am sorry that neither the government nor some member of the Progressive party saw fit to introduce this bill, especially in view of the fact that the proposal has been openly espoused by agrarian newspapers in the western provinces as well as by many other leading journals in the prairies, of all shades of politics. I cannot understand why it should have been left to a member of the opposition to bring forward a measure of this kind.

One cannot help regretting the tendency of the press to-day to adopt the chain principle; we have chains of newspapers throughout the country. These chain newspapers have lost their individuality and their potency, and the local colouring and tireless aid which formerly they gave to the municipalities for good government and for legislation for the masses. I may say in this connection that I have a letter from the Postmaster General of the United States in which he says legislation of this kind is working out very satisfactorily in that country, and I believe there is no reason why it should not work here also. I believe this bill should go to the private bills committee, because it involves a very important public principle, and in that committee deputations could be heard dealing with all sides of the question. I have introduced three other bills similar to this, but they never proceeded beyond the first reading. In 1924 my bill came up for second reading, and, in the absence of the then Postmaster General, the Prime Minister asked that the bill stand, promising me another opportunity to proceed, which, however, was not made available. There has been no legislation in regard to this particular matter since 1882; I had the promise of the predecessor of the present Postmaster General that this bill would go to the private bills committee for consideration, and I believe that to be the proper course in this case.

Hon. P. J. VENIOT (Postmaster General): Mr. Speaker, I do not rise to oppose this bill; I rather welcome its introduction, setting forth, as it does, the policy of the Liberal party when they were in opposition in 1919, as declared in a resolution along very similar lines introduced by you, Mr. Speaker in that

year. I have one objection to make, however, and it is this: I believe we should place all newspapers in Canada on the same footing; there should be no exceptions. Subsection 1 of section 23a says:

Provided, that the provisions of this subsection shall not apply to religious, fraternal, temperance, and scientific or other similar publications.

I would suggest to the hon. member that he consider amending that section by leaving out that proviso and making it include newspapers and periodicals of all descriptions. If he would consider that before the bill comes up for discussion in committee of the whole house, I should be very pleased to help him put the bill through.

I do not think it necessary that this bill should go to a private committee; it can be dealt with very well by the committee of the whole house. I believe we are sufficiently aware of the importance of our newspapers in Canada, and I think we know enough of what is required along the lines set out in this bill to proceed with it here without losing time by submitting it to a committee.

Mr. CHURCH: I shall be very glad to accept the amendment, but I still think the bill should go to the committee on private bills.

Mr. M. N. CAMPBELL (Mackenzie): I wish to add just a word to what has been already said in support of this bill. I congratulate the hon. member for Toronto Northwest (Mr. Church) on the interest he has shown in bringing down a measure of this kind, and I heartily congratulate the Postmaster General (Mr. Veniot) on being at least one of the ministers ready to fulfil the promises made in the platform of 1919. This is something the organized farmers of western Canada have advocated for many years. Perhaps there is something rather remarkable in the fact that it should be introduced by one of the Toronto members, but I certainly approve of it and think the hon. member should be thanked for bringing down such a measure.

Motion agreed to, bill read the second time, and the house went into committee thereon, Mr. Johnston in the chair.

On section 1—sworn statement of names and addresses of editors, owners, stockholders, etc., to be made semi-annually.

Mr. VENIOT: Mr. Chairman, I suggested an amendment to this clause, and perhaps it might be in order for me to now move that all the words after the word "months" in the twenty-third line be struck out, down to and including the word "publications" in the twenty-sixth line.

Mr. MANION: The word "further" after the word "provided" in the same line would have to be struck out also to agree with that.

Sir GEORGE PERLEY: I have not given much study to this bill, but I suppose the minister wants to make it as workable as possible. It seems to me that when you publish the names of all persons having one per cent or over of the stocks, bonds or mortgages, you are going into rather unnecessary detail.

Mr. VENIOT: Where is that found?

Sir GEORGE PERLEY: Just after the words which have been struck out in line 28:

—less than one per centum of the total amount of stock, bonds, mortgages or other securities.

If the total was $1,000,000, one per cent would amount to $10,000, and just as in the case of ownership of $100,000 of bonds the name of the owner would have to be included. That seems to be unnecessary detail.

Mr. VENIOT: I am perfectly satisfied with the bill as it stands. It is up to the hon. gentleman (Mr. Church) to agree to any further change.

Section as amended agreed to.

Bill reported, read the third time and passed.

RAILWAY ACT AMENDMENT

SPECIAL RATES ON COAL

Mr. T. L. CHURCH (Toronto Northwest) moved the second reading of Bill No. 26, to amend the Railway Act.

Mr. LAPOINTE: Explain.

Mr. CHURCH: The object of this bill is a step forward for a national coal policy and to provide a remedy for the existing problem of supplying coal to the central and other portions of Canada, and render Canada independent of foreign supply.

The present coal situation is grave and demands an immediate solution and the adoption of a national fuel policy so that every pound of coal shall be mined and coked under the British flag.

The bill is an effort to establish a national policy for the carriage of Canadian coal and coke on the same basis as is provided by the special tariff on grain and flour. The govern-

ment by an order in council rescinded and then restored special rates on grain and flour. The coal question is a transportation question to the extent of 95 per cent. Canada owns the national railways and merchant marine, and has the facilities to solve the coal problem and put in force a national coal policy which would forever make the country independent of a foreign supply. Action is wanted. Coal is as much a necessity as flour and grain. Part of the Canadian grain going through American channels gets a special rate. There should be equality of treatment for carrying coal on the same basis as flour and grain. Canada has spent over two billions of dollars on the national railways, and surely it ought to be possible to reduce the rates for the carriage of coal by a few cents a ton in order to aid the miner in Alberta and the maritimes. The national railway either belongs to the people of Canada, or it belongs to Sir Henry Thornton. Should it be used to develop a sparsely populated vast dominion, or should it be run solely for profit to satisfy the ambition of its president? Is present profit its sole aim, or is to develop a vast dominion its sole object? Was this railway system taken over by the nation to help bring about economic annexation to the United States, or was the initial objective a means for the distribution of necessities and the transportation of its settlers in order to encourage an ever increasing and contented people? Can a country known to possess a real winter or fully one-half of every year expect to grow if the statement once was noised abroad that no reliable source of fuel was ensured for its settlers? If a country does not grow, will or can its revenue increase? Would not this bill bring in the near future great development of industry, some ten, some twenty and some a hundred fold?

The legislatures of Alberta and Ontario, and others as well, have lined up in favour of this legislation. There is only one proper course to follow and that is to grant reduced rates for the transportation of coal mined and coked in Canada and used for domestic purposes in Canada in order that the needs of the people may be met in a satisfactory and adequate manner. This particular legislation will cost the country little or nothing, and will confer a great benefit not only on the people of Alberta, and of other parts of the west, but also on the people of the maritime provinces and of central Canada. It is a step in the right direction.

The management of the national railways say they cannot carry coal from Alberta at less than $9 a ton. I would say to Sir Henry Thornton that Canada's national railway system must not be operated for the promotion of the United States coal barons alone but for the benefit of the people of Canada. Sir Henry Thornton receives his salary from the people of Canada. Does he consider their interest one iota or is he striving for his own vain glory? This question has been before the public for six or seven years now, and no progress has been made with it—a football has been made of it.

There is only one way of solving this question and that is along the lines of the Duncan report which is the principle of this bill. Ontario and Quebec are just as much entitled to relief in the coal situation as other portions of the country which receive bonuses and subsidies to solve their economic ills.

The province of Alberta is certainly entitled to a reduced rate for the carriage of coal as are the maritimes and on the same rate cut as grain and flour now receive. There should be equality of treatment in Canada. There should be an economic policy adopted in this country for the good of all the provinces. It should be a cooperation with a policy of "each for all and all for each." That is the just principle for all provinces in the confederation.

The proposed legislation may be looked upon as a small form of subsidy, but it will reap a vast harvest, not only for the national railways but for the people of western and central Canada and the east as well. If Sir Henry Thornton is working for the United States coal barons, and himself, he should either be paid solely by them or he should forfeit his present salary to his ambition for a surplus profit. Seemingly Sir Henry Thornton would prefer to fix the coal rate at $9 or $10 a ton and carry no Canadian coal at all, than to lower the charge a trifle and secure the cream of the business. In my opinion a case has been made out for placing coal on a parity with grain and flour in the matter of railway rates on a special tariff toll basis. If hon. members will read the evidence given before the railway commission they will realize that such is the fact and that coal should receive the same preferential rates. For the reasons I have given I move the second reading of the bill.

Hon. CHARLES A. DUNNING (Minister of Railways and Canals): Mr. Speaker, it is my duty to endeavour to inform the house as to what the effect would be upon the rates with which this bill seeks to deal. In the first place the present Crowsnest pass rates

on grain are applicable to the head of the lakes. As regards the movement of coal from the west to Toronto, the rate for grain per ton and the rate for coal per ton are now identical. The rate on grain from the west to Toronto is $12.70 per ton. From Drumheller, the mining centre to Toronto, the rate is the same. I presume however that my hon. friend who introduced the bill has in mind the application of the same mileage rates as now apply to grain as far as Fort William, to the remainder of the distance from Fort William to Toronto, although the language of the bill which he introduces leaves me somewhat in doubt as to whether that would be the result. Neveretheless I thought it desirable to have figures taken out which would illustrate the application of the mileage scale of the Crowsnest grain rates to Fort William, also to the remainder of the distance to Toronto on coal. The reason for making this analysis was to ascertain whether or not the adoption of such a principle would make it possible to move coal from Drumheller to Toronto and sell it there to the satisfaction of the people of that city and the people of Ontario generally.

If I remember correctly the representations which have been made by the coal operators of Alberta and by the government of that province, they do not believe that a rate of more than seven dollars per ton would enable the business to be done. All the argument is in the direction of a rate of seven dollars per ton or less in order to make practicable the movement of coal from Alberta to Toronto and southern Ontario generally. If we apply my hon. friend's measure in the manner I have just indicated, the Crowsnest mileage scale east of Fort William as well as west thereof, to coal, we would get a rate from Drumheller to Toronto of $8.44 per ton. That is what the railway commission would be ordered under this legislation to put into effect as a rate, and I submit for the consideration of my hon. friend and those who I know are interested in securing a solution to this question, that a rate of $8.44 is not in accordance with the claims which are made by the coal operators in Alberta and the consuming public in Ontario as to the reduction necessary in order to bring about effective relief.

Mr. HOCKEN: Is that all rail to Toronto?

Mr. DUNNING: Yes. The all-rail rates are the only rates affected by the bill. It might be claimed that a more advantageous comparison from the point of view of coal movement could be secured by including together the statutory rate on grain to Fort William and the rate fixed by the railway commission over the Transcontinental line to Quebec on grain and applying the mileage scale on grain east of Armstrong to the distance to Toronto. I have had those figures taken out too, and the result if that were applied—and I doubt very much if such an application would be covered by the terms of my hon. friend's bill—would be that the rate would still be $8.30 per ton. Therefore we see that by applying the lowest scale rate existent anywhere in Canada with reference to grain, we would still have a rate from the coal fields to the consumer in Ontario of $8.30 a ton. I think I cannot do better than leave to the house the question whether it is desirable to incorporate in the Railway Act a statutory rate which admittedly will not accomplish the objective which the promoter of the bill states that he has in view, because the rate which would be secured thereby is much higher than that stated by the coal operators and the government of Alberta and by the government and people of Ontario as being necessary in such a case. I would be quite prepared on behalf of the government to have the figures I have presented further examined by a committee of the house—and I am not now discussing, as I did the other day, the desirability of further extending the principle of statutory rates—but I think any examination would reveal the accuracy of what I have stated with respect to the application of the measure.

Perhaps it would be worth while to give some information regarding comparative rates from the maritime provinces region on coal with the Crowsnest rate now existing in the west on grain. I know there is a good deal of misunderstanding in some quarters in that connection. The rate on coal to Riviere du Loup, 718 miles, is $2.90 per ton. The grain rate under the Crowsnest pass schedule for the same distance in western Canada is $3.80 per ton.

Mr. BENNETT: Different classifications.

Mr. DUNNING: Of course coal and grain are different classifications, but the bill seeks to place them in the same classification. If my hon. friend's bill were to pass, I take it that the rate on coal from the maritime provinces to Riviere du Loop would be increased from $2.90 to $3.80 per ton, and would thus deprive the maritime provinces of the advantages which are theirs at present under the Maritime Freight Rates Act.

Mr. CANTLEY: Will the minister be good enough to give the point in the maritime provinces to which he is referring?

Mr. DUNNING: Sydney, Nova Scotia. That is the point taken as the point of shipment. I gave the mileage. If we take Quebec, an important market for coal from the maritime provinces, the present rate under the Maritime Freight Rates Act is $3.50 per ton. The rate for a similar distance, 818 miles, under the Crowsnest rate on grain is $4.00 per ton, or fifty cents per ton higher on grain than on coal moving from the maritimes into the central market. To Montreal, an important market—

Mr. SPEAKER: The hour for public bills and orders having expired, the house will now resolve itself into committee of supply.

SUPPLY

DEPARTMENT OF AGRICULTURE

The house in committee of supply, Mr. Johnston in the chair.

Agriculture—fruit, including grant of $8,000 to the Canadian Horticultural Council, $290,000.

Mr. STIRLING: Can the minister inform me whether any progress has been made as between the government of Canada and the government of Australia with regard to the entry of apples into Australia? The minister will remember that when the Premier of Australia was here last year he was approached in this regard. Again, as he passed through Vancouver he received deputations from the fruit growing interests in British Columbia, and he appeared to be very greatly interested in what that deputation placed before him. He was interested from the point of view of increasing the entry of Australian apples into Canada at times when the Canadian market was bare of apples; and just prior to the Minister of Justice starting for Australia he was supplied with data connected with the matter and asked to take the matter up in Australia. We have never heard whether what the minister was able to do in Australia resulted in any benefit, and we would like to know from the minister whether the situation has in any way improved.

Mr. MOTHERWELL: When Premier Bruce was in Canada I availed myself of the opportunity of having a very full discussion with him on this embargo which he placed against our apples because of fire blight. Our experts have always taken the view that fire blight was not transmissible by the fruit. The Australian government took the opposite ground—that there was a likelihood of its being transmissible—and they were inexorable on that point. After Premier Bruce left here, and about the time he would arrive home I wrote him very fully, so that he would have the letter on file, urging him as strongly as possible to reconsider the matter with a view to taking the embargo off. But the reply was the same—they could not see their way clear to do it. It is their privilege to impose embargoes if they see fit, and that is the way the matter stands.

Mr. CANTLEY: Before six o'clock the minister made some remark from which I gathered that he intended to do something in the way of establishing marketing conditions in the central part of Canada. May I ask him what are his intentions with regard to marketing, particularly in Nova Scotia? Last year that question was up before this house, and if I mistake not, the member for Hants-Kings (Mr. Ilsley), when we were discussing the question of the interchange of fruit between the east and the west, said that Nova Scotia fruit did not go to the west. Well, that is true, Mr. Chairman, and for a very good reason: the freight rates are entirely opposed to that movement. The Minister of Railways was in his seat a moment ago; I thought he was still there, but I see he is not. However, I may point out that from Onondaga valley to Halifax the freight rate is $1.64, whereas the rate on Nova Scotia fruit travelling westward into British Columbia is $2.65.

Mr. RALSTON: Per hundred pounds.

Mr. CANTLEY: It does not matter whether it is per 100 pounds or per barrel, it is a discrimination as against Nova Scotia fruit. I would ask the Minister of Agriculture to use his good offices with the Minister of Railways to rectify that matter, which is an injustice, as many of the other rates are, to the maritime provinces.

Mr. BROWN: It might be well to point out that the Crowsnest pass agreement originally made provision for the shipment of fresh fruits to the west, and if I remember rightly that agreement was very strenuously fought by a great many members in the maritime provinces.

Mr. MOTHERWELL: If not all of them.

Mr. CANTLEY: I am not interested in that, as I do not accept it as a quite correct statement.

Item agreed to.

Seed, feed and fertilizer control, including grants to seed fairs, etc., $375,000.

Mr. FANSHER (Last Mountain): Is the minister extending the operations of the seed control branch to western Canada?

Mr. MOTHERWELL: Perhaps I could answer that question better by pointing out that in all Canada there are six seed control zones, beginning at the western part of Canada. The first one is at Calgary, then Winnipeg, then Toronto, Quebec, Sackville, and there is a central zone in Ottawa. These are used primarily for the testing of seeds for purity from weed seeds and germination. There is a good deal of agitation in the west in regard to paying more attention to the cleaning and preparing of seed. The appliances there are so primitive that it costs so much that the average man cannot pay the cost of properly cleaned seeds. I have been in communication with the Minister of Agriculture of Alberta and the Minister of Agriculture of Saskatchewan in connection with doing co-operative work in connection with these facilities for seed cleaning purposes with the seed men. This vote covers seed, feed and fertilizer. I remember when we came down here the first year the hon. member for Lisgar brought to my attention the very urgent necessity of some amendment to the Feed Act, particularly with reference to bran and shorts. At that time a large percentage of the screenings was included in the bran and shorts. It helped out considerably from the weed standpoint, but not in the feeding properties. We had that act before us several times, and I think now everybody is satisfied with the Feed Control Act in that respect. The particular kind of fertilizers is not of very much interest to the western farmers. We have had experiments with the use of the fertilizers out there and it costs more to distribute it, even if it were laid down on the farm free, than it is worth. But down in eastern Canada where the early virginity is out of the land, the artificial fertilizer becomes an important matter indeed, particularly where you are constantly growing crops like potatoes and tobacco. It is a very vital matter to the farmers to get a good supply of the proper quality. It is just as important to them as any other subject is important to the western farmer—the grading of the grain, for instance.

These three acts, plus the Insecticides Act, which was passed last year, all come under the seed control administration. The Insecticides Act covers all poisons for economic purposes—fruit, vegetables or anything else. That is roughly what the seed control commissioner has to do.

Mr. FANSHER (Last Mountain): The point I wish to stress is with respect to the control of seed that is being used generally over the western provinces. We have made progress by the establishment of tuberculosis-free areas, pure-bred sire areas, and so on, and I think there is a great field of usefulness for seed control work in western Canada. We have a large number of varieties of grain sold in the same district, and when the crop is drawn to market we get mixed grades.

Mr. MOTHERWELL: My hon. friend is speaking of commercial seed. I suppose he saw the survey made by the Dominion Department of Agriculture with regard to the kind of seed used by many farmers. The seed was taken from the drills, and it was found that a large percentage was very low grade and dirty. It was appalling to find this class of seed being sold in what is possibly the premier grain-growing province of the Dominion. We found some of the weed inspectors were doing this, and they above all others should know better. It was not that way twenty years ago; then the utmost care was taken with the seed and it was treated with some form of insecticide. Unfortunately when there is a run of good crops there is a tendency, so far as the bulk is concerned, for the retailer to grow careless with regard to the quality of the seed, with the idea that anything will do.

Mr. BROWN: There is a matter which should be taken into consideration in connection with this vote, Mr. Chairman. I am sorry that the member for Neepawa (Mr. Milne) is not here, because he and his brother had an unfortunate experience that I think ought not to be repeated very often. The story told to me, if I remember aright, is that they bought some four or five hundred bushels of seed grain on sample from a seed merchant. When they got it home they found it was by no means equal to the sample. They complained, but their only satisfaction was to be told that they could draw the grain back to the railway station, about twelve miles away. To draw four or five hundred bushels of seed wheat such a distance at that time of the year was not a welcome experience. The situation must be met by a more rigid control over the men putting seed on the market to see that it is according to sample.

Mr. TOLMIE: I notice the minister has an increase of $39,000. How is it accounted for?

Mr. MOTHERWELL: As my hon. friend will notice, the activities under the department are extending all the time. It costs

something to take care of this insecticide act and also the new hay act. The flat increase that was given to practically all the civil service last year also represents a considerable addition to the vote. There are no particular new activities outside of those mentioned.

With regard to the complaint made by the hon. member for Lisgar (Mr. Brown), there is provision in the law for redress. I know it is pretty difficult to get complete redress when you are dosed up with a bunch of bad seed in seed time with no opportunity of getting better seed. That seed merchant should have been prosecuted for violation of the law, because every bit of seed grain is carefully examined by the seed inspector before it leaves the seed house. There must have been some dishonesty by somebody, otherwise such a consignment could never have got into the channels of trade. If anything like that occurs again we should like to be informed about it so we may take the matter up and get what redress is possible. Of course, I recognize that he who has been so victimized cannot get full redress.

Mr. BENNETT: Are the salaries of inspectors included in these items?

Mr. MOTHERWELL: Yes.

Mr. BENNETT: How many inspectors are there in the minister's department?

Mr. MOTHERWELL: In the whole department?

Mr. BENNETT: I was going to ask him for the number in the whole department before I find out how many there were on January 1, 1926, January 1, 1927 and January 1, 1928.

Mr. MOTHERWELL: That would be a nice thing to ask a return for.

Mr. BENNETT: No, it would be a nice thing to ask the minister for.

Mr. MOTHERWELL: The minister will be delighted to answer and justify it.

Mr. BENNETT: I am perfectly sure he will try to justify it.

Mr. MOTHERWELL: I might say that, outside of a comparatively small number of items, these sums are largely for inspectional purposes, and of necessity this inspection must be done through the medium of men and women inspectors. That is the character of the work.

[Mr. Motherwell.]

Mr. BENNETT: I want to know how many Liberals the minister employed last year.

Mr. MOTHERWELL: Liberals! We would have to get an X-ray to find any. I do not know how many—

Mr. McGIBBON: One hundred per cent?

Mr. MOTHERWELL: It is pretty hard to tell. Has my hon. friend any particular one in mind? If so I should like to put a tracer on him.

Mr. BENNETT: My information is that it requires now a tracer to trace them, there are so many, and that we have inspectors of inspectors.

Mr. MOTHERWELL: I invite now not only my hon. friend but any other hon. member to name one man engaged in this work over the requirements of the public service.

Mr. BENNETT: That is what we are trying to find out. Will the minister tell us under this item how many inspectors there are, and where the money goes to? That is the real business of the department.

Mr. MOTHERWELL: For the different divisions of this particular vote?

Mr. BENNETT: Just take this vote to start with.

Mr. MOTHERWELL: I confess I do not know.

Mr. BENNETT: That is what we are going to find out.

Mr. MOTHERWELL: My deputy has the information in different groups. In order to give the bulk number he will have to do some adding.

Mr. BENNETT: The minister can give them in detail from that book.

Mr. MOTHERWELL: Any particular province?

Mr. BENNETT: I should like to know how many there are altogether.

Mr. MOTHERWELL: That is some problem.

Mr. BENNETT: This country is greatly interested in it.

Mr. MOTHERWELL: Some of the names are pretty hard to get around.

Mr. BENNETT: I do not want the names of the inspectors, I want the list by provinces.

Mr. MOTHERWELL: The maritimes, five; Sackville is the centre.

Mr. BENNETT: For what purposes under this vote?

Mr. MOTHERWELL: Under seed, fertilizer, feed, insecticide and hay control acts there are five or six different subheads of which Commissioner Clark has control. Each year they are being added to.

Mr. BOYS: What are the salaries?

Mr. MOTHERWELL: The maximum is $2,200; the minimum, $1,400.

Mr. BOYS: Are they devoting themselves exclusively to this work?

Mr. MOTHERWELL: Yes, as far as I know; but they have more than one activity to engage in. These inspectors frequently cover the work involved in five acts. Under one act they will be engaged during a certain part of the year and under the other acts in other seasons. In this way they are able to administer four or five acts.

Mr. BOYS: Their whole service is given to the department?

Mr. MOTHERWELL: Yes. There are some inspectors who give only part time, three or four months, but that does not apply to those whom we are discussing. Some are engaged for six months.

Mr. BOYS: Where they get $2,000 or $2,100, do they give two, three or four months' service for this salary?

Mr. MOTHERWELL: The salary is for the year. At the present time we are in the midst of the seed business and the inspectors will be engaged in this work until the spring. Of course the staff is larger now than it will be immediately after the close of the season. When they get through with this work they will take up their duties under the fertilizer and insecticide acts.

Mr. BOYS: What portion of the year do these inspectors devote to their business?

Mr. MOTHERWELL: Their whole time is taken up.

Mr. BOYS: I understood that they were required to work only a portion of the year because their services were needed only during a certain season.

Mr. MOTHERWELL: The five acts are not administered at the same time by the same men. Take seed, for example: the work begins in the fall of the year, right after threshing, and becomes increasingly active. There are such things as seed germination and testing for variety and freedom from foul seeds, and these will engage the attention of the inspectors until seeding time in April, when the work reaches its peak. Immediately following seeding, the inspector turns his attention to the Fertilizer Act. Later on, even before the trees are in blossom, there is spraying to be done, and then the provisions of the insecticide act must be enforced. Later on, again, there is hay inspection. And so on. There is also the Feeding Stuffs Act to be administered, and that will cover the whole year inasmuch as its provisions are apt to be enforced at any time, food being a requisite to both man and beast at all times of the year.

Mr. BOYS: I thank the minister for his comprehensive explanation.

Mr. BENNETT: He might complete his statement by giving the number of inspectors in the provinces.

Mr. CHAPLIN: We have had Nova Scotia.

Mr. MOTHERWELL: In Quebec there are nine inspectors; in eastern Ontario three; in western Ontario seven; in Manitoba and Saskatchewan seven, and in Alberta and British Columbia six. They go to Calgary from these two provinces for inspectional work and seed testing, and I hope my hon. friend has taken advantage of a visit to that laboratory.

Mr. BENNETT: I have; it is well conducted, or used to be.

Mr. KENNEDY: Is there any standard that guarantees to the farmer, in case he is willing to pay for it, that there will be no noxious weeds in the seeds he buys? I have special reference to grasses and garden seeds.

Mr. MOTHERWELL: The Seed Control Act, an amendment to which may be submitted to the agriculture committee, covers that point. There is a standard in regard to both garden and vegetable seeds.

Mr. KENNEDY: Is there any standard that will guarantee to the farmer that there will be no noxious weeds in the seeds he purchases?

Mr. MOTHERWELL: Yes.

Mr. KENNEDY: What is it?

Mr. MOTHERWELL: I take it my hon. friend means, no noxious seeds as understood by the Seed Control Act. There is no such thing as a guarantee that there shall be absolutely no noxious seeds in any kind of seed. There is always bound to be a possible

slight percentage to the pound, but the act stipulates the extent of it. The act is lived up to rigidly. These are the grades: Registered, Extra No. 1, No. 1, No. 2 and No. 3. We have the maximum of primary noxious weed seeds per pound, and the various percentages are set out minutely. No. 1 registered is given as free from noxious weeds.

Mr. KENNEDY: That means that if the farmer buys No. 1 registered grass there will be no noxious weeds in it?

Mr. MOTHERWELL: My hon. friend knows that "noxious weed" is defined by the provincial Weed Control Act and there might be foreign seeds in the lot which would not be noxious. There is a list published giving the noxious weeds.

Mr. McMILLAN: Is that list available for distribution in pamphlet form?

Mr. MOTHERWELL: Yes.

Mr. KENNEDY: I want to make this point, that if there is not a standard—

Mr. MOTHERWELL: There is an absolutely definite standard.

Mr. KENNEDY: If there is not a perfect standard it is very important that the department make every possible effort to work one out. I know of nothing more discouraging to men trying to farm well and farm clean than to pay a big price for seed only to find that the seed contains some noxious weed. The inspector who comes around, who may be either a municipal or a provincial man, does not allow very much for the fact that those weeds have come in in spite of all the care the farmer has taken to avoid them. If we are going to have clean farms in Canada, or if we are going to keep those parts clean which are already in that condition, it is absolutely essential that some standard be set up either by the federal government alone or in co-operation with the provincial governments. A standard should be established so that any farmer may be sure that he is getting absolutely clean seed to start with if he pays the price, and from that he can develop seed for his whole farm. If under the act governing the sale of seed there is the possibility of a farmer being charged the highest price for the best standard, only to receive seed which is not absolutely clean, I fail to see how we can look forward to a time when agriculture in this country will be free from the blight of noxious weeds, because a few are enough to do the damage.

[Mr. Motherwell.]

Mr. MOTHERWELL: My experience with seed is that it does not matter how clean it is or how many certificates it has, the farmer is well advised to keep looking around his fields for some new weed to appear. As he goes for his Sunday stroll or for his evening walk, he should keep his eyes open because there is always the possibility of one stray seed being in a bag, and that is enough to do the trick. Here are some of the most noxious weeds which we are up against; bladder campion, dodder, field bindweed, Johnson grass, ox-eye daisy, perennial sow thistle, white cockle, wild mustard and wild oats. Some of the secondary noxious weeds, which are permissible to a certain degree where the others are absolutely prohibited, are ball mustard, blue weed, Canada thistle, chicory, couch grass, cow cockle, docks, false flax, hare's-ear mustard, night-flowering catchfly, purple cockle, ragweed common, ragweed great, ragweed perennial, ribgrass, Russian thistle, stickweed, stinkweed, tumbling mustard, wild carrot and wild radish. Those are the less objectionable weeds, and you will notice that a certain amount, depending upon the grade, is allowed in the sample. I think my hon. friend has farmed long enough, however, and has bought enough seed to know that you cannot be absolutely sure that there will not be one weed seed in a bag of seed which should not be there, but it is supervised and certified as far as it is humanly possible to do so. Human agencies always have their limitations, and that applies to this seed inspection as well.

Mr. CAMPBELL: I would like the minister to give us some information about the experimental work carried on in regard to vermilion wheat.

Mr. MOTHERWELL: Those experiments were conducted last year, and the results were so unsatisfactory that I do not believe the experiments have been continued. A certain amount of vermilion wheat did get into trade channels, however, and a very considerable acreage was sown before it was discovered to be such a poor baking wheat. This fall a new variety of wheat trickled down to Winnipeg and was observed by the inspection department there as something new and not very desirable. They sent a sample of the wheat and the flour to the Dominion cerealist and asked him to identify it, and it turned out to be vermilion wheat.

Mr. BANCROFT: Are the seed inspectors the men who look after the inspection of binder twine?

Mr. MOTHERWELL: Yes.

Mr. BANCROFT: Then at this juncture I should like to state to the minister how much I appreciate the fact that these inspectors have done very good work this summer in connection with the inspection of binder twine. Last year I had occasion to call attention to the fact that in some cases binder twine was being sold short in length and light in weight, and I am pleased to say that that has been very carefully looked after this summer. So far as I have been able to learn, no twine has been sold under the length allowed by law.

While I am on my feet I should like to remind the minister again that the personnel of the advisory seed board should be increased, and that there should be three farmer representatives from the three prairie provinces instead of one, as is the case at present. Now there is only one representative for Manitoba, Saskatchewan and Alberta, and he is appointed for one year only. The member this year is Mr. Mountain, of Solsgirth, Manitoba; next year there will be a gentleman from Saskatchewan; the year following someone from Alberta will be appointed, and the year after that it will come back to Manitoba. One member is not enough for those three provinces; pure seed grain is of too much importance for that. At the very least we need one farmer representative on that board from each of the three prairie provinces, and I also suggest to the minister that they be appointed for three years instead of one. In one year a man just gets nicely into the work when he has to quit, and a new man starts all over again.

Mr. MOTHERWELL: The remarks of my hon. friend are quite in order, but I might tell him that within the last ten days another farmer representative was appointed to that seed board. We find some difficulty in getting the proper relationship between the various members of the board as representing different phases of the seed trade. We have representatives on that board from the seed merchants, the seed growers and members of the seed branch of our own department as well. If you increase one you have to increase the other, and every one who has had anything to do with such a board knows that the larger it is the less satisfactory is the advice you receive. If you had a compact advisory board, however, you get much greater efficiency and good, sound advice. We have endeavoured to maintain that proper harmony and relationship between the different interests represented on that board by appointing one more farmer representative within the last ten days.

Mr. BANCROFT: One more from the prairie provinces?

Mr. MOTHERWELL: Yes, from Alberta, I believe. I have forgotten his name, but I believe he is a very good man.

Mr. ROWE: Could the minister tell us what proportion of this appropriation is used in the distribution of free seed throughout the Dominion?

Mr. MOTHERWELL: None. That is done usually through the Department of the Interior. Sometimes my department does a little, but there is practically none of that done now.

Mr. ROWE: Has the Department of Agriculture taken any action to encourage the use of fertilizer throughout the Dominion?

Mr. MOTHERWELL: We are always experimenting with it.

Mr. ROWE: Approximately what amount of this appropriation is used for this purpose?

Mr. MOTHERWELL: We are always conducting experiments in reclaiming soil. We have in eastern Canada a system of prizes, running up in the aggregate to two or three hundred dollars, to encourage the use of fertilizers by those who are not using them freely. My attention has been brought to such cases in the maritime provinces and Quebec, and I presume there are some in this province. We encourage the farmers to try the fertilizers. Some people have no faith in fertilizers, but if they will only try them once or twice they usually follow it up. I might draw the attention of my hon. friend to the fact that in addition to the ordinary sources of artificial fertilizer we have a synthetic fertilizer plant near Niagara Falls—my hon. friend possibly knows of it—where nitrates are extracted from the air through the medium of hydro power, which is becoming more and more popular. It has to be carried on with great care because of the possible injury to plant life unless applied to the soil two or three weeks before vegetation appears.

Mr. CHAPLIN: Is there any fertilizer from that plant used in Canada?

Mr. MOTHERWELL: Most of it goes to Buffalo because they are more familiar with the use of it there.

Mr. CHAPLIN: I understood the minister to say a minute ago that they were using that fertilizer in Canada.

Mr. MOTHERWELL: I did not say we were using it in Canada, I said it was made

in this country. Most of it is shipped to the United States, because they are more familiar there with the use of that particular kind of fertilizer.

Mr. CHAPLIN: All of it is used in the United States.

Mr. MOTHERWELL: I do not doubt that. I wanted to draw the attention of my hon. friend, without unnecessarily irritating him, to the fact that it was made in Canada.

Mr. ROWE: I should like to ask the minister if the department has not supplied fertilizer at cost, or given it away, in the poorer parts of the Dominion? Has that not been part of a policy adopted by the department? If so, how much was given away in 1926?

Mr. MOTHERWELL: Grants of certain quantities of fertilizer have been made to those who have been conducting certain experiments.

Mr. ROWE: How many carloads were given away by the department in 1926 and 1927?

Mr. MOTHERWELL: My deputy informs me that in the aggregate $2,000 worth was given last year in the form of prizes to those who would conduct certain experiments suitable to their particular localities and report to the department. There is still considerable objection on the part of certain farmers, to using artificial fertilizer, and this policy has the effect of familiarizing them with its use.

Mr. ROWE: The minister has not yet answered my question. I should like to know how much has been given to each province.

Mr. MOTHERWELL: My deputy informs me that he does not happen to have that information.

Mr. MILLAR: What penalty is applied in cases where binder twine offered for sale is not of the specified length per pound, and how many such cases were there in 1927?

Mr. MOTHERWELL: In nearly all these cases there is a penalty. I do not happen to remember how many cases there were.

Mr. BENNETT: The minister said the expenditure had been $375,000, and he gave the number of people that were employed as about forty. That certainly is not the number of employees that are doing inspecting work under this item. The number must be nearer one hundred than forty, when $375,000 were spent. I should like to get exact information as to the number of people employed.

[Mr. Motherwell.]

Mr. MOTHERWELL: Inspectors?

Mr. BENNETT: What I am trying to get at is how many people are involved in the expenditure under that vote.

Mr. MOTHERWELL: That is quite another question. My hon. friend is getting interested now in stenographers. I understood he was not.

Mr. BENNETT: That is all right. The minister is not going to get away with that cheap sort of talk.

Mr. MOTHERWELL: I made it quite plain.

Mr. BENNETT: As long as my hon. friend realizes his responsibility and acts accordingly he will be treated as he should be, but if for a moment he forgets it he will have reason to remember that we are here.

Mr. MOTHERWELL: Ah!

Mr. BENNETT: The minister may as well understand that now as at any other time. We asked him how many people were in receipt of pay under that vote. I asked for the number of inspectors and the numbers were given me—less than forty in all. Now there is a suspicion in this country that very large sums of money are being spent to provide employment for people who are not very useful in the public service. Here is an item of $375,000, a substantial sum of money, and that sum is being expended for the purpose named by the minister, namely the providing of inspectors and those associated with them in the public service. Now all I ask—and we have a right to know, whether they are ward heelers or not—is how many drew pay out of that $375,000.

Mr. MOTHERWELL: If my hon. friend will take the trouble to read Hansard tomorrow—I do not suppose he will have time, —he will find that he asked for inspectors.

Mr. BENNETT: I did, yes.

Mr. MOTHERWELL: Now he is enlarging the question.

Mr. BENNETT: Yes.

Mr. MOTHERWELL: Well then we will proceed to answer it. What is the kick about?

Mr. BENNETT: The kick is at the endeavour to make a joke of what was a legitimate question.

Mr. MOTHERWELL: If we did not make a joke now and again what would become of us?

Mr. BENNETT: I will admit that the hon. gentleman indulges in a joke a sufficient number of times, but there is no necessity of going further.

Mr. MOTHERWELL: My hon. friend has the privilege of changing his question. He has done so and it is my duty to answer it. That is where we stand now.

Mr. BENNETT: Very well.

Mr. MOTHERWELL: Then we will enumerate all the employees this time down to the janitors.

Mr. CHAPLIN: And the heelers.

Mr. MOTHERWELL: Do not let us forget that salaries do not cover the whole of this vote, but that it includes seed fair grants and many other things. While my deputy is counting these up I should like to appeal to the hon. member for Selkirk (Mr. Bancroft) if, from his experience in this inspectional work, we are not disposed to be undermanned rather than overmanned. As a matter of fact I have been conscious for some time since my hon. friend drew my attention to some shortcomings in the inspectional work in connection with binder twine, that we have not had sufficient staff to do the work as well as we would like to do it. I do not know whether the hon. member for Selkirk is present or not. That was the situation. What object have we in padding the list of employees? Until we find some specific case where the department is overstaffed, let me say with all respect that my invitation stands. I should like to be shown where they are and I shall be just as willing as any other hon. gentleman to get rid of them, but until you find them that cannot be done. This appropriation is not devoted entirely to salaries; it includes seed fairs throughout the Dominion. My deputy informs me that there are about ninety-two employees.

Mr. BOYS: Can the minister state how much is for fairs and how much for salaries?

Mr. MOTHERWELL: The total appropriation of $375,000 is distributed as follows:

General administration	$30,000
Seed production and markets	56,000
Administration of Inspection and Sale Act	4,000
Administration of Agricultural Pests Control Act	5,000
Administration of Seeds, Feeds and Fertilizers Act, By districts—	
Maritime provinces	28,000
Quebec	42,000
Eastern Ontario	24,000
Western Ontario	59,000
Manitoba and Saskatchewan	55,000
Alberta and British Columbia	49,000
Grant to Canadian Seed Growers' Associations	13,000
Purchase of seed stains	2,500

That is because in certain countries to which we export our seeds, the law requires that a certain percentage of the seed be stained so as to identify what country it comes from.

Fees for chemical analyses of feeding stuffs, etc., $7,500.

The increases asked for in this connection are to cover statutory salary increases, and to provide for the administration of the new Agricultural Pests Control Act, and the additional amount necessary for the payment of fees for the chemical analysis of samples of insecticides and fungicides. The item for seed production and markets $56,000, includes the seed fair item. That is given under certain regulations, the money being paid to the Department of Agriculture of the respective province and transmitted by them to the seed fair on condition that the province pays an equal amount to what we do for the seed fair. That practice has been in vogue for the last fifteen years.

Mr. TOLMIE: To whom is this amount paid for the analysis of feeds?

Mr. MOTHERWELL: We have not sufficient chemists of our own to do this work, without taking up too much of their time, and there is a certain number of what we call approved chemists who charge a given rate of fees. These samples are submitted to them and this item is to cover their fees.

Mr. TOLMIE: Are they located throughout the Dominion?

Mr. MOTHERWELL: Yes. Very much the same principle is involved in this as that with respect to approved veterinary surgeons.

Mr. BENNETT: And they are approved by a patronage committee?

Mr. MOTHERWELL: I should be glad if my hon. friend could find out some patronage, because I have been unable to find it.

Mr. BENNETT: I know the minister has been looking hard for it.

Mr. MOTHERWELL: I admit there is some left but it is not here. It is left in the most vicious form of patronage outside of the control and jurisdiction of this parliament. That is where it is and my hon. friend knows it. My hon. friend and I would probably be agreed on that. As regards the selection of these gentlemen I do not know one of them and I never saw them. The advisory board in each case recommends them and they are appointed by order in council. They are engaged then to charge not more than a certain fee. I do not know one of them in

all Canada and we are too busy to inquire into the political affiliations of the men who are doing work for us. Perhaps my hon. friend will not believe me, but such is the case.

Mr. BENNETT: If my hon. friend says so, I will believe it.

Mr. ROWE: The minister in answer to a question said that the Department of the Interior distributes seed grain throughout the Dominion. I fear this must be an error on the part of the minister. When did the Department of Agriculture transfer that responsibility to the Department of the Interior?

Mr. MOTHERWELL: Perhaps it has not come to my hon. friend's attention that, ever since homesteading began in the west, a certain quantity of seed grain has always been handled by the Interior department. This is now being done by the Department of Immigration since it has been separated, because homesteaders are under the care of the Department of Immigration until such time as they acquire their patent. For forty years or more homesteaders have been supplied in times of excessive drought with seed from the Department of the Interior, the same department from which they get their homesteads. In 1914 this was extended to other farmers than homesteaders.

Mr. ROWE: That is confusing. I cannot see where the distribution of seed grain for the development and encouragement of the growing of better grain by the farmers is connected with the Department of Immigration and Colonization or with the Department of the Interior. This should surely be an expenditure under the Department of Agriculture. This seed grain is distributed not only to those sections of the country which are still under colonization but throughout the whole Dominion. I merely asked the question as to the approximate amount of expenditure in this appropriation for the distribution of seed. This expense surely belongs to the Department of Agriculture.

Mr. MOTHERWELL: I think what my hon. friend has reference to is those small samples of five pounds that we gave at one time. This began to be badly abused. A large family would double up and put in a number of orders until they would get three or four bushels. Perhaps they would not do this in one family, but they would go around and send in names. Another objection is this: If a man sows just five pounds of seed, my hon. friend knows it is more difficult to look properly after a small plot sown with five pounds of seed than to look after five acres. The seed is put in a little corner by itself; it is exposed; it is not worth while going round with the binder, and it may be left a little too long. People do not like to thresh it in the threshing machine. This plan was found to be a nuisance and the results fell short of the idea of those who originated it. I do not condemn it, but it was played out and it was abandoned eight or nine years ago, long before I took office. Since then we have developed new varieties which are sold at a fixed price, the same price to all. Reward wheat is sold at three dollars a bushel at point of shipment.

Mr. ERNST: As regards these seed fairs, to what regulations must a fair conform, roughly, in order to qualify for the grant? What is the amount of the grant? How many such grants were paid to seed fairs in Nova Scotia last year?

Mr. MOTHERWELL: Conditions have changed since I was a provincial minister, but the practice used to be that there should be a certain amount of standing grain competition going with the seed in the bag. That has been abandoned. The seed and standing grain competitions have passed away. The only condition is that the provincial government contribute a corresponding amount, then they take the supervision of the fair. As to the number of fairs in Nova Scotia, my deputy tells me that he does not recall any. The provincial government recommends the fairs and draws the matter to the attention of the federal authorities. That is my understanding.

Mr. ERNST: Do I understand the grant is given only to seed fairs exhibiting these seeds, and that they would not be given to fairs exhibiting seed potatoes or other vegetables?

Mr. MOTHERWELL: Oh, yes, there is great latitude in the interpretation of the seed fairs.

Mr. ERNST: Suppose a fair exhibited seed potatoes, to what regulations would they have to conform in order to comply with the grant?

Mr. MOTHERWELL: All these terms are sometimes rather mystifying. For instance, seed fairs include potatoes, garden seeds, et cetera. I think my hon. friend has in mind the winter fair in the city of Amherst, which represents the three maritime provinces.

Mr. ERNST: No.

Mr. MOTHERWELL: Well, there is one there and there is a seed fair associated with

the winter fair. The winter fairs are not only live stock fairs, as they used to be ten or fifteen years ago, but they are branching out and becoming more and more seed fairs as well, and those grants are paid on the basis of what the exhibition association and the provincial government themselves put up.

Mr. ERNST: The minister knows that in most parts of Nova Scotia grain is comparatively unimportant as compared with some of the other commodities which are grown. I had in mind a number of agricultural exhibitions which are held throughout the province each autumn, in which seed of certain kinds is displayed. The seed of potatoes forms an exhibit in most of them, and other vegetables also, and I was wondering how those fairs could bring themselves within the provisions of the grant, so as to qualify for it.

Mr. MOTHERWELL: I understand that the seed fairs my hon. friend refers to are part of the small fairs. There is no grant in such cases. We try to confine our federal grant to fairs of a reasonable size. In the case of the summer fairs, we have our usual "A" and "B" fairs. These are classified according to the size, the prize list and the scope of their activities, whether they are provincial or interprovincial. The small fairs, such as are held in many provinces receive no grant at all. The provinces do not recommend them, and we are governed by what the provinces recommend.

Mr. ERNST: I have not got an answer to my question yet. I realize that the province has to recommend them, but I cannot quite understand the minister recommending the grant merely on the recommendation of the province. There must be some regulation with which it has to conform. The fairs to which I allude are of considerable size and importance, and I want to know how those fairs could qualify, if at all.

Mr. MOTHERWELL: The only way they could qualify would be by giving a sufficiently large prize list to attract a large number of exhibitors. A great deal is done on the recommendation of the provincial governments. There is a certain pliability and flexibility in the matter, but when the provincial government thinks it is of sufficient importance to warrant having a fair, we recognize it and O.K. it. I think that is the better way. We would require a larger staff if we were to undertake to exercise supervision and decide what fairs were eligible and what were not. In a great many of these cases we accept the recommendation of the provincial authorities.

Mr. ERNST: If the provincial government recommends a fair, does the minister make no inquiry?

Mr. MOTHERWELL: If it were outrageously out of the way, we might. The prize list is a pretty good indicator of the character and scope of the fair and of the interest that would be taken in it by the public.

Mr. ERNST: I am at last getting some approximation to an answer. I should like to draw attention to the matter of these exhibitions in the rural districts. The winter fair at Amherst is important to a large community, but the average farmer who might be interested does not get there, nor does he exhibit his goods. If the minister wanted to do a real service to the maritime provinces—which are entirely different from the west—he would give some encouragement in the way of a grant in order to foster the development of seed. I do not know what the regulations are. Apparently the minister looks at the prize list and arbitrarily decides whether or not the grant will be given, but if the regulations which he at present has improvised do not permit of the grant in such cases I wish he would improvise them further in order that a grant may be given.

Mr. MOTHERWELL: The hon. member wants the activity to be extended to a wider range.

Mr. ERNST: Yes, to do some practical good to the farmers of the maritime provinces.

Mr. MOTHERWELL: To be quite candid, we are carrying out more activities of a strictly provincial nature in the maritime provinces than in any other part of the country.

Mr. ERNST: That may be quite true, but encouragement is needed and I think the activities should be doubled.

Mr. MOTHERWELL: I will have a talk wth my hon. friend some day and see if I can meet him.

Mr. MILLAR: Is the minister now prepared to give me the information I asked for a moment ago in regard to the manufacture of binder twine not up to standard, and the number of cases in which fines were imposed?

Mr. MOTHERWELL: The maximum fine is fifty dollars, the minimum, ten dollars. A number of fines have been imposed, but we cannot recall how many. There was a tre-

mendous laxity in the quality and quantity of binder twine ten or fifteen years ago, but to-day there are very few of what one might call deliberate infractions of the law. Very often a word of caution is sufficient to prevent a second failure to comply with the statutory requirements.

Mr. MILLAR: Is there any confiscation of the binder twine?

Mr. MOTHERWELL: I do not know.

Mr. COOTE: Is any amount included in the vote for a grant to the Seed Growers' Association? If so, how much?

Mr. MOTHERWELL: Yes. We find the Seed Growers' Association, of which Major Strange and others are very active members, are doing such excellent work that this year we increased the grant two or three thousand dollars to encourage them in their work. The total grant is now thirteen thousand dollars. I think the money is well spent.

Mr. COOTE: Is there a weeds branch in the minister's department? If so, are their activities covered by this vote?

Mr. MOTHERWELL: No, that is a provincial matter. Nevertheless about once every ten years the seed branch get out an illustrated bulletin.

Mr. COOTE: I understood there was a seed and weed branch; probably I have been misinformed. In western Canada we have a serious problem confronting us with regard to noxious weeds growing on Dominion government land. At the United Farmers of Alberta convention about a year ago a resolution was passed requesting the government to make provision for the eradication of noxious weeds on Dominion government land. A copy of this resolution was sent to the minister, and I think his reply was to the effect that he would be glad if we could suggest to him any way of taking care of such noxious weeds. It seems to me rather peculiar that the government, while issuing so many bulletins instructing farmers how to eradicate noxious weeds, should be so lax in respect to its own property. In all seriousness I would suggest that the minister should spend a little money on devising ways and means of taking care of noxious weeds on Dominion government lands in western Canada. I have in mind one patch of sow thistle growing on the banks of the Old Man river in the town of Macleod, the property of the Dominion government. These weeds have been growing unchecked for several years, and the prevailing westerly winds carry the seed out toward the Lethbridge northern irrigation district, on which the province has guaranteed bonds to the extent of over five million dollars. The people in the district have a large enough problem on their hands to make a financial success of the venture without having to contend with perennial sow thistle from Dominion government land. One hon. member near me suggests that we might call it federal sow thistle. I think the minister will agree with me that it is probably one of the worst weeds we have to contend with. Certainly it is a shame that the Dominion government will not provide means to take care of these noxious weeds on their own land. We can deal with farmers in the district by plowing down their crop if they allow noxious weeds to grow unchecked, but we cannot apply this drastic treatment to the Dominion government. Undoubtedly the Dominion authorities might very well spend a little money to take care of their own noxious weeds before offering advice to farmers on the subject. We have absolutely no way of protecting ourselves against noxious weeds growing unchecked on Dominion government lands, and I do hope that the minister will take the necessary steps this session so that before next session this evil may be checked.

Mr. MOTHERWELL: I do not want to hide behind the Department of the Interior, but really my department has no public lands; these are under the control of the Department of the Interior, and that is where my hon. friend should apply. If there is any way of dealing with this matter through that department I shall be glad to help him. Take the bird sanctuary at Quill lake, which I understand has recently been let for pasturing. As everyone knows, it is swampy. I visited the place a year ago, and I found that sow thistle is getting a hold in the moist ground, in fact it flourishes under such conditions, and without employing an army of men to dig it out by hand I do not know how you can deal with it. There were crops growing on the surrounding land. The lake was swarming with duck, and all the stooks in the vicinity were half eaten up. If I remember rightly, I recommended to my colleague that something be done looking to the closing of that sanctuary. As I say, it has recently been let for pasturing purposes, but that will not solve the eradication of the sow thistle there. My hon. friend I understand is a practical farmer, so he knows that this weed has an under-

ground root stalk and just revels in moist land. What are you going to do about it? If my hon. friend will give me a recipe for the eradication of that sow thistle I will pass it on to my colleague.

Mr. COOTE: It seems from the minister's statement that I should be discussing this matter with the Minister of the Interior (Mr. Stewart), but I take it that the Minister of Agriculture is the agricultural adviser of his colleague.

Mr. MOTHERWELL: I am ready to sit at my hon. friend's feet and learn on that question.

Mr. COOTE: I am sure now that I have his sympathy, and that I shall have at least his moral support in endeavouring to get the Minister of the Interior to take care of this problem. The local provincial weed supervisor—I do not know whether that is his correct title—has made several examinations of the patch that I am speaking of, and from what he told me I think he is willing to undertake the necessary steps to eradicate the sow thistle. I think the work could be done under a thousand dollars, and it seems to me the Dominion government should be prepared to spend this sum to do away with the nuisance on their own land. I will take the opportunity of discussing the matter with the miinster in his office some day and I think possibly I may be able to suggest to him a way in which this difficulty can be overcome. I would ask his support for the proposal I make.

Mr. BANCROFT: Does my hon. friend suggest that the people in his constituency have discovered a means of eradicating sow thistle?

Mr. COOTE: One method recommended by the provincial department of agriculture was covering the patch of sow thistle with tar paper for a year or two. That would smother the weeds.

Mr. MOTHERWELL: We will do our best in the matter.

Mr. BENNETT: I should like the minister to direct his attention to the question which has been touched upon by my hon. friend (Mr. Coote). This parliament has jurisdiction over agriculture to a limited extent, and the provinces also exercise jurisdiction in this respect. The minister was at one time Minister of Agriculture in the province from which he comes and he now holds a similar portfolio in the federal government. Now my observation is this, that vast sums of money are voted here which would accomplish much greater results if their expenditure were more or less directed by the local authorities. In most matters centralization has failed, and any endeavour to standardize agriculture must necessarily fail in Canada as it has done elsewhere. My hon. friend from Macleod has discussed a matter to which I was going to refer. The Dominion government owns large areas of land in western Canada: it has Indian reserves, bird sanctuaries, forest reserves and other lands, some of which are occupied while others are vacant. Surely when the provincial authorities are endeavouring to deal with weeds and various other problems incident to agriculture, and are confronted with the difficulty of lands owned by the Dominion not being cared for, it is obvious that the entire effort is lost. The Quill lake reserve, to which the minister has referred, is a striking illustration of the point I desire to make. Of what value is it to spend federal money to bring about the results which the minister so earnestly desires if the provinces, in their efforts, find themselves absolutely unable to approach federally-owned lands, and if thistles and noxious weeds of various kinds flourish, with the result that the whole district is destroyed? Of what use is the expenditure of federal money when the federal government has not done its duty in relation to these lands? That is the position with respect to some Indian reserves in Alberta, and this is true also of other federally owned lands. I think the minister would be doing a great service to the country if, in his approach to the problems with which he has to cope, he regarded his duties as Minister of Agriculture as being of a national character, and correlated the efforts of his department with those of the departments of agriculture in the various provinces. The department of agriculture in Quebec, for example, has to deal with problems entirely different from those that face the department of agriculture in Alberta; and where you have federally owned lands in the western provinces in connection with which there are all the difficulties to which the minister has made reference, how can we hope to eradicate any pest from a district adjacent to such lands if the federal government does not devote its attention to the territory under its jurisdiction? That is a real, live problem. Farmers have spoken to me about it and I know that the provincial authorities have from time to time come right up against it. I myself have seen, travelling over the country in automobiles, and sometimes within the right of way of the railways, large areas of noxious weeds, seeds being disseminated over the surrounding soil; and the pest has persisted notwithstanding the best efforts of the provincial authorities, simply because the federal government has not

discharged its responsibility with respect to its own property or to those matters over which it exercises sole control.

I submit that the function of the federal department of agriculture is in a large sense national. It never was intended that the department should undertake detailed operations affecting agriculture in the provinces, and even though it makes grants in aid of work that may be done by the provinces, with assistance from the Dominion, the federal department should not engage in these small activities which I have mentioned, if they fail to look after their own property, with resultant injury to the work done by the provinces, especially in the west. I do not expect the minister to express an opinion at the moment, but I should like him to consider the problem that confronts the department of agriculture from the standpoint of a greater degree of decentralization, and an increased effort to discharge the broad national duties that rest upon the department in the matter of pure seed.

With regard to other matters to which the minister has alluded, it is perfectly clear that this department should exercise jurisdiction. But when it comes to the question of inspection and matters of a kindred nature, there is the danger that a situation may arise similar to that which was created with respect to eggs. The courts will declare that the legislation is invalid because it interferes with civil property rights within the jurisdiction of the provinces. My observation leads me to the conclusion that an effort is being made by the federal Department of Agriculture to pay too much attention to work that really constitutes an interference with the industry, at the expense of the local authorities who are more competent and are better able to deal with the situation. And this apart from the first point I made, namely, the failure of the federal government to discharge its duties with respect to federally owned property, with resultant danger, indeed injury, to adjoining lands, whether privately or publicly owned.

Mr. MOTHERWELL: I do not want my hon. friend's remarks to pass without consideration. I thank him for the suggestions he has offered. I would point out, however, that there are some things which cannot be helped. My hon. friend (Mr. Manion) is sitting opposite, and as a medical man he knows that so far no cure has been found for cancer. Are you going to reprove or to hold up to ridicule the whole medical fraternity because such a cure has not yet been discovered? If any farmer who is familiar with the sow thistle can suggest a recipe for eradicating it where it is found in low-lying soil, wet enough to encourage its growth and not dry enough to plough, then it seems to me his fortune is made. I do not mind admitting that I have no remedy to offer. Just as the medical man knows that there is no cure for cancer, so I do not pretend to be able to do the impossible.

Mr. BENNETT: I did not suggest that.

Mr. MOTHERWELL: There is no reason, however, why we should not persist in our efforts to find some means of eradicating the pest. The problem is a serious one which I have been studying ever since coming here, as indeed I did in Regina. The sow thistle develops in cultivated land more rapidly than elsewhere. The farmers, of course, like to pass the buck to the government, but this matter can be dealt with only by cooperation. The farmers will say, "What is the use of our cleaning up so long as the Dominion Government's lands are polluted?" And I presume the federal officials will take a similar attitude. Everyone knows that the pest exists and we can only be thankful that but seventy-five per cent of it is fertile.

With regard to the overlapping, that question came up at the interprovincial conference, and it must be admitted that there was a good deal of overlapping many years ago. The Hon. Mr. Hoadley brought that question up, and after it was discussed everyone agreed that very substantial progress was being made both by the federal government and by the provinces in cutting out the overlapping.

Mr. BENNETT: Perhaps the minister did not hear me; I was speaking with respect to federal property.

Mr. MOTHERWELL: There was another matter which I took no chance of forgetting; that is, interference with agriculture.

Mr. BENNETT: No, no.

Mr. MOTHERWELL: Yes, I remember that. My hon. friend said there was a great tendency on the part of the government to interfere with agriculture, and I think my hon. friend referred to the standardization of products both for export and for home consumption. Of course you have to interfere, but we never interfere until there is a reasonably strong sentiment in the community for the action we propose. Invariably we start with a voluntary system, as we did in the grading of cheese and butter, until about three-quarters of the people concerned are carrying it out. Then it is made compulsory, so there is no unnecessary interference. Ask any of the members from the maritime provinces if there is any unnecessary interfer-

ence now with their grading. We do not perform these services until we have a strong public sentiment behind us; there would be absolutely no use doing these things in any other way. If my hon. friend were as familiar with this work as he is with the practice of law he would realize that you cannot do this work without some interference any more than you can make omelettes without breaking eggs.

Mr. BENNETT: My hon. friend has misunderstood me. I was not talking about interference in that sense; I was talking about the federal power as distinguished from the provincial power, and I asked whether my hon. friend did not think the federal Department of Agriculture should at least see to it that federally owned lands observe the law with respect to noxious weeds, rather than have them as pest centres in communities which are otherwise free.

Mr. MOTHERWELL: I will take that up with the Minister of the Interior.

Mr. ROSS (Moose Jaw): You could spend the entire revenue of the Dominion of Canada trying to clear up the federal lands, and my hon. friend the leader of the opposition knows that. In western Canada years ago lands were opened up which never should have been touched, and now these have been abandoned. They are located all over the prairie provinces; they are covered with weeds, and you could not possibly clear them up. In the case mentioned by my hon. friend (Mr. Coote), probably that is a little plot of land owned by the government which could be easily cleaned up by the people of that town, but if you try to clear up every abandoned homestead and pre-emption in Manitoba, Saskatchewan and Alberta, together with the road allowances and all the lands belonging to the Dominion government, you could spend the whole revenue of this country in one year.

Mr. MOTHERWELL: And then not accomplish your purpose.

Mr. COOTE: As I said before, I did not want to delay this item, but I must reply very briefly to the remarks of the minister. In this particular case I have heard the weeds were started through the practice of some person or some firm in the town of Macleod of throwing on this vacant property straw which had come in a packing case. Sow thistle appeared where these people were in the habit of doing that, and it has spread from that Dominion-owned land to the district surrounding. I do not want to be misunderstood when I say this piece of property could be taken care of very easily; it is not very large and could be cleaned right up. It is larger than it was two years ago, of course, but even now it could be dug out by the roots, and in a few years the good done by removing that source of contagion would amount to thousands of dollars. The only two patches of sow thistle which amount to anything in my constituency, so far as I know, are on Dominion-owned lands; one is on an Indian reserve and the other on this property in the town of Macleod. The superintendent of Indian Affairs is doing his best to look after the sow thistle on the Indian reserve, and I thank him for it. I believe it is being dug out by the roots, and I think the same should be done in connection with this property in Macleod.

Mr. McLEAN (Melfort): I am inclined to think that this whole discussion is slightly out of order; sow thistle does not come under this item at all. It may be true, as the leader of the opposition has said, that a good deal of government land in covered with sow thistle and other weeds, but the Department of the Interior is ready at all times to cooperate with the local authorities in controlling these weeds. There are places where that is very difficult to do, but in regard to the land in Macleod I believe my hon. friend would find the Department of the Interior willing to turn over that land to the town for public use, and the town could clean it up. It is only reasonable that that should be done; the town was responsible for the pollution and they should clean it up. I believe that to be the practice of the department everywhere, and why it is being discussed under this item is more than I can imagine.

Item agreed to.

For experiments in dehydration of fruits and vegetables, $10,000.

Mr. BARBER: I should like to ask the minister for the total amount spent to date in carrying out these experiments, in what districts throughout Canada the experiments have been carried on, and the varieties of fruit dealt with.

Mr. MOTHERWELL: We have had three experimental dehydrating plants, one at the central farm at Ottawa, one at Grimsby and another at Penticton; we have had very good results, and a number of private commercial enterprises have sprung up. I believe some of these are located at Vernon and Kelowna, and are doing very well. We import enor-

mous quantities of dehydrated fruit, and we can very well supply a great deal of that quantity ourselves, but for some reason or other this has not been done, which is one reason why the department has spent a certain amount of money in developing these plants. We have a dehydrating committee in charge of this work, consisting of Mr. E. S. Archibald, B.A., Director of Experimental Farms, chairman; George E. McIntosh. Dominion Fruit Commissioner; F. T. Shutt, M.A., Dominion Chemist; W. T. Macoun, Dominion Horticulturist, and C. S. McGillivray, Chief Canning Inspector. A number of these gentlemen have been overseas attending a research conference, and Mr. Archibald has just returned from attending a dairy conference in the west. They have not had an opportunity, therefore, to lay out a program for this winter, and unless something more advantageous turns up we expect to go through with the same program. My friends from the maritime provinces will be interested to learn that a number of gentlemen came here from Berwick in Kings to see what could be done and if any assistance could be obtained in the establishment of a plant of this kind. Our vote was exhausted at the time, however, so we could not give them any money, but we put them in touch with a competent engineer and gave them all the information we had. Like many other enterprises they did not have sufficient funds, and their plant was not as successful as they would have liked, because they were unable to put in proper insulation, with the result that it did not do as well as they expected. We have it in mind to assist that plant and to help put it on its feet with this grant. The dehydration committee has a number of proposals before it. They did well down there but suffered from a lack of money. They did not have quite enough capital to operate the plant and we did not have any money at that time to assist them.

Mr. BARBER: What has been the amount expended in carrying out these experiments?

Mr. MOTHERWELL: Fruits that have been dehydrated are: apples, apricots, blackberries, blueberries, crabapples, cherries, raspberries, strawberries, gooseberries, loganberries, peaches, pears and plums; and vegetables. I think the process is going to be quite successful.

Mr. BARBER: The minister has not answered my question as to what amount has been expended in carrying out these experiments.

[Mr. Motherwell.]

Mr. MOTHERWELL: The house at first voted $15,000 and we have not exceeded the appropriation. This is the fourth year for the work, and the amount now asked for is $10,000. We have no idea, I think, of extending the system to the Okanagan valley. There are two very good plants in British Columbia, one at Vernon and the other at Kelowna, but I have not visited them since they were established. I should like to see a similar plant established in the Annapolis valley. They did start a commercial plant there but through lack of capital it is not as successful as it should have been, and I feel we might possibly help them out in the matter of a proper dehydrating equipment or something of the kind, so as to help them to get on their feet.

Mr. BARBER: In the Fraser valley we have looked for something in the line of experiments on the part of the department in the dehydration and crystallization of fruit. A large quantity of dehydrated and crytallized fruit is being imported into the country at the present time, whereas tons of fresh fruit are going to waste in the fruit districts of the Fraser valley. We believe that such fruits as loganberries, raspberries, strawberries, cherries and peaches could be handled if we had some process of dehydration or crystallization. The minister has referred to commercial plants that have failed. We have had commercial plants start in the district referred to and they have failed also. I understood that the object of this vote was to develop some process by which a dehydration industry could take care of the fruit and produce of our growers which otherwise would be wasted. To-day tons of fruit are being wasted which could be utilized if we had some process for the dehydration and crystallization of fruits.

Mr. MOTHERWELL: We shall be glad to look into the matter of crystallization. My hon. friend agrees that there is no further necessity to experiment in the matter of the dehydration of fruit on the Pacific. It is the crystallization that he is speaking of now, is it not?

Mr. BARBER: I do not think there have been any experiments in the dehydration of the small fruits.

Mr. MOTHERWELL: Oh, yes.

Mr. BARBER: Not in the lower Fraser district. I have been trying for two years to get some information from the department for people in that district and I have been unable to obtain it. All the information given

in the departmental report is that experiments in the dehydration of fruits and vegetables have been continued.

Mr. MOTHERWELL: The department recently got out a publication—I do not think my hon. friend's attention has been drawn to it—giving a summary of four years' work by the dehydration committee. The program for the coming year has not yet been outlined by the committee owing to some of them not having returned to Canada until quite recently.

Mr. ERNST: I should like to get some information from the minister. I do not speak disparagingly of the vote because I quite realize that some aid or encouragement is necessary to start this industry in order that it may be opened to the fruit growing districts of the province of Nova Scotia. He stated that some portion of the $10,000 in this vote is to go to a commercial enterprise in Berwick. Could the minister inform the house just what proportion of the $10,000 is to be granted to that enterprise, and will he disclose its name?

Mr. BENNETT: We have a right to know it.

Mr. ERNST: I think the information is due to the house. I ask only for the purpose of information.

Mr. MOTHERWELL: The representatives of the company came up to see us about two years ago.

Mr. ERNST: Which company?

Mr. MOTHERWELL: I have no recollection of the name of the company, I have never had an opportunity of discussing it with the hon. member for Hants-Kings (Mr. Ilsley). However, I do not recall the name of the company.

Mr. ERNST: It is not the Apple Crisp Company, is it?

Mr. MOTHERWELL: I do not know. I think it would take the whole of this vote for the improvement of plants already established once you began installing better equipment and providing cork insulation. Those improvements would soon eat up the $10,000.

Mr. ERNST: If some portion of this vote of $10,000 is to be used to assist private enterprise, no matter how laudable, I should like the minister to take the house into his confidence and inform us what enterprise it is.

Mr. BENNETT: We have a right to know.

Mr. MOTHERWELL: I do not care to act without the advice of the dehydration committee, the members of which have returned to Canada only recently. I would not care to give a straight pledge that the money would be invested there or somewhere else. If my hon. friend thinks he is not being given sufficient information we will strike the vote out.

Mr. ERNST: I am not asking that the vote be struck out; I merely want to get information before the vote passes. If the minister cannot supply the information I suggest that he let the item stand and perhaps he will be in a position to give it to us to-morrow.

Mr. MOTHERWELL: We have not the information my hon. friend would like to have, and that I would like to have. We have always been governed by the representations of the dehydrating committee, but my sympathies are in the direction of helping out the commercial plant that was started, but which, partly for want of capital, failed.

Mr. BENNETT: What plant is it?

Mr. ERNST: I only want to see that the money which is given for dehydration purposes in the maritime provinces is going to do some real good. I do not object to a vote for dehydration, but I should like to have an assurance that this money will be spent where it will do the most good. I want something done to benefit the industry.

Mr. MOTHERWELL: Perhaps it would have been better if I had not mentioned that institution when I did not know the name of it.

Mr. ERNST: The hon. member for Hants-Kings (Mr. Ilsley) is present. He can speak for his constituency.

Mr. McGIBBON: Is the minister asking parliament to vote money when he does not know what he is going to do with it?

Mr. MOTHERWELL: I think I have explained for at least the third time why I have not the information. The dehydration committee were not all in Ottawa until yesterday, and I should like to be advised by them because they have a knowledge of the work. If it is a technical violation of the rights of parliament not to have all this information, even for the reasons I have given, I shall be delighted, in order to bring myself in line with the rights of parliament, to move that this vote be struck out. Let it be remembered that I do this not in any spirit of petulance but because I recognize that the criticism is right. I think, however, the circumstances ought to be sufficiently

extenuating and the amount is so small that my hon. friend should not hang on to it in that way like a pup on a roof.

Mr. ERNST: While the minister's application may fit, it was because I have had some experience in connection with governmental expenditures in the maritime provinces that I drew the attention of the committee to this vote. I was only asking for information and I am surprised that the minister cannot furnish it.

Mr. MOTHERWELL: In view of the high regard in which I hold the maritime provinces I should not like to see the vote struck out, but I admit that the circumstances to which I have referred render it impossible for me to give the information asked for. The committee can take the item as it is or let it go out.

Mr. BENNETT: This parliament has not yet come to that.

Mr. ERNST: The item can stand and we can get the information later.

Mr. ILSLEY: The hon. member for Queens-Lunenburg (Mr. Ernst) has rather invited me to speak about this, and my statement will be very brief. I never knew, until I heard the minister so state, that any firm in Berwick, which is in my constituency, had applied for a grant, and I do not know now what firm it is.

Mr. MOTHERWELL: I do not know where it is except that it is in the Annapolis valley.

Mr. ILSLEY: I have not the slightest idea what company or firm has applied for this grant. If the hon. member for Queens-Lunenburg, who has had such an unfavourable experience in connection with governmental expenditures, is the least bit worried that the money is going in a wrong direction, he can rest assured that, so far as I know, it is not going to any friends of mine. I think it would be a shame to cut out this item. This experimental work should be assisted and extended, and if anything of this sort can be done in the Annapolis valley, it should certainly be done. I wanted to speak simply to obviate the impression that was left by the hon. member on the other side of the house that some unwise or unnecessary expenditure was contemplated in the Annapolis valley.

Mr. MANION: May I suggest to the minister that the suggestion of the hon. member behind me that the item should stand seems a reasonable one? Parliament is not going to prorogue to-morrow, and we have plenty of time.

[Mr. Motherwell.]

Mr. MOTHERWELL: All right, we will let it stand. The committee can see how amiable the minister is to-night.

Item stands.

Live stock, including grants to exhibitions feeder shows, etc., $1,480,000.

Mr. MOTHERWELL: I have been requested by an hon. member to let this item stand because he would like to get some information on it.

Item stands.

Progress reported.

PRIVATE BILLS

CHANGE OF ORDER OF REFERENCE FROM RAILWAY COMMITTEE TO MISCELLANEOUS PRIVATE BILLS COMMITTEE

Hon. R. B. BENNETT (Leader of the Opposition): Mr. Speaker, on Friday last three bills dealing with the incorporation of a memorial bridge company, a transit company, and a gorge bridge company, were before the house for second reading. They were being referred to the select standing committee on miscellaneous private bills when I directed attention to the fact that they dealt with railways and the construction of a bridge and should, therefore, be referred to the railway committee. I am now advised that such bills usually go in the first instance to the select standing committee on miscellaneous private bills and if it is thought desirable they may be sent afterwards to the railway committee. I therefore move:

That the order of the house of Friday, February 10, referring the following private bills to the select standing committee on railways, canals and telegraph lines, be discharged, and that the said bills be referred to the select standing committee on miscellaneous private bills, namely,—

Bill No. 14, to incorporate the Niagara Falls Memorial Bridge Company.

Bill No. 23, to incorporate St. Clair Transit Company.

Bill No. 25, to incorporate Niagara Gorge Bridge Company.

That puts the matter where it was originally. On Friday the Solicitor General, following my comment, mentioned that last year a similar bill had been referred to the committee on miscellaneous private bills.

Mr. CANNON: I mentioned it.

Motion agreed to.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.

Wednesday, February 15, 1928

The house met at three o'clock.

EARL OF OXFORD AND ASQUITH

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, a fortnight ago feeling reference was made in this house from all sides to the death of Field Marshal Earl Haig, the commander-in-chief of the British forces during the Great War. It is fitting in view of the announcement which has come to us from Great Britain to-day that we pause in the midst of our duties to pay a brief tribute to the name and memory of the one who was Prime Minister of Great Britain at the outbreak of war, and who held that high office during the first two years of the war.

I shall not attempt in any way to review the high attainments and great career of the late Lord Oxford and Asquith. They are present to the minds of all to-day, and will become increasingly appreciated as party controversy fades in the clearer light of the perspective of history.

Mr. J. A. Spender, in a recently published volume, The Public Life, significantly remarks that the great war is like a vast watershed which cuts across the territory surveyed when one seeks to speak of the men who were associated with the war; that so exceptional and stirring were the events of that time that it tends to make it difficult, if not impossible, to recall many of the incidents of careers that had been long and useful at a date anterior thereto. In this connection I would remind the house that the career of public service of the late Lord Oxford and Asquith extended over the greater part of half a century; that in that time he occupied the office of prime minister for eight years and eight months, a period of unbroken service in that position, longer than that of any prime minister of Great Britain; that his life was intimately associated with most of the important events which immediately preceded the war, and that his public service, from the beginning to the close of his career, was of an exceptionally high and useful character. Were testimony to the exceptional character of his public services required I would remind hon. members that when Mr. Asquith but a year or two ago was offered an earldom by His Majesty the King, it was upon the recommendation of the leader of the political party to which he had been traditionally opposed. There has been no more graceful incident in the many amenities of British public life.

As to Mr. Asquith's relation to the war, I should like to quote a paragraph from the book to which I have already referred. It serves to bring out a feature that all who are charged with the responsibilities of public life will keenly appreciate. Speaking of the men associated with the great war, Mr. Spender says it is impossible to consider them, and more particularly Asquith and one or two others whose names he mentions,

> —without feeling that they are in a certain sense marked off from their fellows. They had to make decisions which shook the world, which touched the very existence of their country, which brought death and desolation, salvation and victory, to their own fellow-countrymen, and to multitudes in other lands. They had to bear responsibilities beside which those that fell on their predecessors, however illustrious their names, seem like feathers in the scale.

There can be little doubt that this great responsibility, a responsibility greater than that which has fallen to the lot of almost any other individual had its effect upon the constitution, upon the powers of resistance of the great statesman who passed away this morning. Having this in our mind, as well as the service which he rendered not only to his own country, but to the British Empire as a whole, I feel it will be the wish of the members of this parliament to join with the members at Westminster in expressing our very great sympathy with the Countess of Oxford and the other members of the family, who have been so greatly bereaved, and also that it will be the desire of our country to be associated with the other dominions in their sympathy with Great Britain in the loss of one of the greatest of her statesmen whose passing creates a void not only in the public life of his native land, but also, I venture to say, in the public life of the world.

Hon. R. B. BENNETT (Leader of the Opposition): Mr. Speaker, it falls to the leader of this house, who is also the Prime Minister, to express on behalf of the Commons House of Parliament as well as on behalf of the Canadian people our sincere sympathy and regret at the passing of the Right Hon. Earl of Oxford and Asquith, familiary known as Mr. Asquith. On behalf of those who sit to your left, Sir, with whom I am associated, I desire to join in that expression of sympathy, and also to express the sense of loss that the empire has sustained by the death of so distinguished a statesman.

Mr. Asquith came into public life, in the language of Lord Granville, when speaking of the Earl of Beaconsfield:

> Without the aid of any of those adventitious circumstances that so often in England contribute to the advent of young men to the House of Commons and to the shaping of a political career.

He was indeed the architect of his own fortunes. Blessed with great natural abilities, he developed them by studiousness and keen application so that he became a student and ultimately a fellow of Baliol and a graduate of the ancient university of Oxford. He chose law as his profession, and very early in his career he manifested those great talents which gave him so quickly a commanding position at the bar. But public life soon claimed him, and while he was still in the early thirties he was elected to parliament for one of the Scottish constituencies, which he represented continuously for over thirty years. He was of such great talent that he early attracted the attention of Mr. Gladstone, and his was the voice which moved the vote of want of confidence which secured the defeat of the Conservative government then led by the Marquis of Salisbury. He succeeded to office, and as Home Secretary made for himself a very distinct mark in the political history of his day. Later he became Chancellor of the Exchequer, and from 1908 to 1916 he was Prime Minister of Great Britain.

With the outbreak of war, as my right hon. friend has said, he had to make decisions that were of the greatest consequence to the whole world. Calm and serene, undisturbed by the shock and the destruction of armies or the loss of ships, Mr. Asquith kept his steady course. Never were the great attributes of a Yorkshire Englishman more evident than in the course he then took, and if there is anything calculated to make a man proud to be born a Yorkshireman, it is the memory of the Asquith of that day.

It is not possible at this time to make any discriminating observations with respect to his standing as a statesman. There are varying opinions as to what his attitude in the years preceding 1914 should have been or might have been, but I recollect a great Scottish statesman once saying to me when I was in England that he believed Mr. Asquith had the greatest control of men of any statesman since the days of Pitt. It must be a matter of inspiration to the Prime Minister to realize that he, to some extent, has not been an unworthy disciple of Mr. Asquith, for with no majority as far as his own party was concerned, Mr. Asquith held office for many years as Prime Minister, with the aid of two conflicting groups in the House of Commons.

As to what his position may be in history with respect to the war it is not my purpose to speak. Already varying expressions of opinion have found their place in print. But this will be conceded by all men, that when that very difficult moment came in his life that he had to relinquish office to one who had served with him, he went out a loyal and devoted patriot and gave his great experience and wide knowledge to his country regardless of what his own position might be. In his life we have a fine example, then, of patriotic service to the empire at a moment when it was at the very crisis of its fate.

As to his subsequent career I do not think it is within my province to speak. He retired to the House of Lords, his party broken, and he found some happiness in writing his memoirs, and a greater happiness still perhaps in those excursions into literature which we realize so often characterized his life.

Mr. Asquith was first of all a great scholar. He was one of the foremost classical scholars of England, having been president of the Classical Association for years. It was one of the joys of his life to go to the old school at Winchester where he was welcomed to speak words in Latin and Greek. He was also a distinguished orator. His standing as a statesman I shall not discuss, but he did maintain the proud and noble traditions of parliament, and he did so in a manner worthy of the greatest statesmen of whom we have record. Moreover, he was an excellent jurist. We of the bar realize, indeed, how great a jurist he was. It was my privilege to appear before the Privy Council on the first and, I think, the only occasion on which he sat on the judicial committee, and although he was then past the age of seventy and had not practised law for a quarter of a century he showed an ability to catch the point at issue in the case which was the marvel and admiration of those present in the court.

The empire has indeed lost a renowned citizen—a citizen who was great in no ordinary sense of the word. He has passed from us full of honours as well as of years, and he has left behind him a priceless legacy. Differing with him, though we may, and with his opinions and his ideas of statecraft and of our common obligation to the union, the fact remains that his life will always be an inspiration to the younger men of the British Empire, and his utterances as recorded will be a fountain from which all may draw knowledge in the years to come. I do not think Lord Asquith was ever better than when, on an occasion such as this, he had to deplore the passing of a great colleague. Who can recall without emotion his noble tribute to Alfred Lyttleton? Who that speaks our tongue can but be thrilled at reading what he said concerning his great Prime Minister, Campbell-Bannerman? Who can study his

speeches in relation to the English Bible, or the words with which he greeted his old colleagues when he went down to receive a testimonial from the members of the bar, without revering the man? Who can read all these and not be moved? I should like to place on record words which I think Lord Asquith himself would possibly have used on such an occasion as this, words from the poet who was peculiarly beloved by him—Wordsworth:

Still glides the Stream, and shall for ever glide;
The Form remains, the Function never dies;
While we, the brave, the mighty, and the wise,
We, Men, who in our morn of youth defied
The elements, must vanish;be it so!
Enough, if something from our hands have power
To live, and act, and serve the future hour;
And if, as toward the silent tomb we go,
Through love, through hope, and faith's transcendent dower,
We feel that we are greater than we know.

Mr. ROBERT GARDINER (Acadia): I desire to join with the Prime Minister (Mr. Mackenzie King) and the leader of the opposition (Mr. Bennett), as well as with hon. members of the house generally, in paying tribute to the late Earl of Oxford and Asquith. The late earl, I believe, will be best remembered by the public as Herbert Henry Asquith. It is quite true he had a distinguished career at the bar, but it is not by reason of that fact that he will live in the minds and hearts of the citizens of this great commonwealth of nations. His memory will survive in the record he has left behind in his parliamentary career. It was in that field that he came before the public eye to the greatest extent and consequently we shall always look upon him as one of the greatest servants of the empire. As the leader of the opposition has properly observed, Lord Asquith occupied many high offices. But after all, Mr. Speaker, it is not the occupancy of a high position that is the determining factor in keeping green the memory of a distinguished statesman; it is what he accomplishes while he holds office. I am sure that the people of Great Britain, in common with those of other nations that go to constitute the British commonwealth, will remember the late earl more for his social legislation than probably for any other reason. It was he that broke the veto power of the House of Lords; it was he that introduced old age pensions into Great Britain; it was he that stood firmly behind every social measure that was calculated to ameliorate the conditions of the masses of Great Britain. I am satisfied that notwithstanding what he accomplished in the sphere of jurisprudence, however highly we may regard him as a jurist, in the minds and hearts of the people of the old country he will be remembered as one who devoted himself to the interests of the common people. I therefore take this opportunity, on behalf of the group whom I represent in this corner of the house, of joining with hon. gentlemen in expressing our sincere regrets to the bereaved wife and relatives of the late Earl of Oxford and Asquith.

PRIVATE BILLS

FIRST READINGS

Bill No. 40, to incorporate the British Empire Assurance Company.—Mr. Edwards (Ottawa).

Bill No. 41, respecting The Imperial Guarantee and Accident Insurance Company of Canada.—Mr. Edwards (Ottawa).

Bill No. 42, to incorporate The Port Huron and Sarnia Bridge Company.—Mr. Odette.

Bill No. 43, respecting the Bell Telephone Company of Canada.—Mr. Edwards (Ottawa).

PENSIONS AND SOLDIER PROBLEMS

SPECIAL COMMITTEE NAMED TO MAKE INQUIRY

Hon. J. H. KING (Kootenay, Minister of Soldiers' Civil Re-establishment) moved:

That all matters connected with pensions and returned soldiers' problems be referred to a special committee consisting of:

Messrs: Adshead, Arthurs, Black (Yukon), Clark, Fiset (Sir Eugene), Gershaw, Hepburn, Ilsley, McLean (Melfort), McGibbon, McPherson, MacLaren, Power, Ross (Kingston), Sanderson, Speakman, Thorson,

Motion agreed to.

SELECT STANDING COMMITTEES

Right Hon. W. L. MACKENZIE KING (Prime Minister): It usually happens that after the various committees have been struck there is a desire on the part of some members to have their names placed on committees other than those on which they originally appeared. There are, therefore, usually some substitutions and additions. I move, seconded by the Minister of Justice (Mr. Lapointe) that the changes now proposed be approved by the house:

That the name of Mr. Delisle be added to the select standing committee on marine and fisheries;

That the name of Mr. Jenkins be added to the select standing committee on industrial and international relations;

That the name of Mr. Lacombe be added to the select standing committee on official report of debates;

That the name of Mr. Bowman and also the name of Mr. Boucher be substituted for those

of Mr. Sanderson and Mr. Bouchard on the select standing committee on mines, forests and waters;

That the name of Mr. Sanderson be substituted for that of Mr. McMillan on the select standing committee on banking and commerce;

That the name of Mr. Vallance be substituted for that of Mr. McIntosh on the select standing committee on miscellaneous private bills;

That the name of Mr. Young (Weyburn) be substituted for that of Mr. Ross (Moose Jaw) on the select standing committee on official report of debates;

That the name of Mr. Ross (Moose Jaw) be substituted for that of Mr. Young (Weyburn) on the select standing committee on agriculture and colonization;

That the name of Mr. St. Père be substituted for that of Mr. Auger on the select standing committee on industrial and international relations;

That the name of Mr. Fansher (East Lambton), also the name of Mr. McIntosh, also the name of Mr. St. Père, also the name of Mr. Sanderson, and also the name of Mr. Young (Saskatoon) be substituted for those of Mr. Fansher (Last Mountain), Mr. Vallance, Mr. Morin (Bagot), Mr. MacLean (Prince) and Mr. Young on the select standing committee on railways, canals and telegraph lines.

Mr. BOYS: If the Prime Minister has no objection, I should be exceedingly glad if he would permit my name to be taken from the public accounts committee and placed on the committee on private bills. I have spoken to the hon. member for Peterborough (Mr. Peck), and he is agreeable to being placed on the public accounts committee in my stead.

Mr. MACKENZIE KING: Possibly it might be understood that the change will be made.

Mr. SPEAKER: The clerk will make the change.

Motion as amended agreed to.

BANK ACT AMENDMENT

MERGERS—PROPOSED APPROVAL OF PARLIAMENT

Mr. T. L. CHURCH (Toronto Northwest) moved for leave to introduce Bill No. 44, to amend the Bank Act.

Some hon. MEMBERS: Explain.

Mr. CHURCH: This bill is to restore the provision in the act that agreements for mergers of banks shall have the approval and sanction of parliament, instead of having the sanction merely of the governor general in council and the Minister of Finance.

Motion agreed to and bill read the first time.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

[Mr. Mackenzie King.]

HANSARD—TRANSLATION OF FRENCH SPEECHES

Mr. CAMPBELL:

1. What is the policy of Hansard with regard to the translation into English of speeches delivered in the House of Commons in the French language?

2. Is the English translation of all such speeches supposed to appear in the unrevised edition of Hansard?

Mr. MACKENZIE KING:

1. The policy of Hansard is in accordance with a resolution adopted by the House of Commons on March 9, 1921, to the following effect:—

This house is of the opinion that the speeches delivered in French should be immediately translated and published; that the government should at once instruct the translators and the king's printer to publish every Monday, during the session a special sheet of Hansard containing the translation into English of all the speeches which have been delivered in French the preceding week.

2. Yes; in a supplement to the issue of the Monday following the delivery of speeches in the French language.

BRITISH NORTH AMERICA ACT AND MARITIME SUBSIDIES

Mr. CAHAN:

In view of the terms of the address passed by the Senate and Commons of Canada, dated April 26, 1907, and of the British North America Act 1907 (7 Edward VII, c. 11), is it the intention of the government to procure an additional amendment to the British North America Act to authorize the payment to the provinces of the additional grants of subsidies made or to be made by the government of Canada in compliance in whole or in part with the recommendation of the Duncan report?

Mr. MACKENZIE KING: As announced in the speech from the throne, it has been decided, pending a complete revision of the financial arrangements as contemplated by the Duncan report, to recommend the continuance of the money grants made at the last session. For the present, these grants are temporary. If, as a result of a complete revision of the financial arrangements between the Dominion government and the provinces, the present or other grants should be made permanent, it is the intention of the government to procure an additional amendment to the British North America Act in conformity with the policy adopted in 1907.

CUSTOMS AND EXCISE REVENUE AT BERTHIER

Mr. GERVAIS:

What is the total amount collected by the Department of National Revenue at the customs and excise sub-port of Berthier for the year 1927; (a) on excise duties; (b) on customs duties?

Mr. EULER: Customs duties, $25,433.68; excise taxes, $544,815.92; excise duties, $537.34.

GRANDE PRAIRIE AND PEACE RIVER HOMESTEAD ENTRIES

Mr. KENNEDY:

What were the number of homestead entries in (a) Grande Prairie land district, (b) Peace river land district, in each of the years 1921, 1922, 1923, 1924, 1925, 1926 and 1927?

Mr. STEWART (Edmonton):

Fiscal year ending 31st March	Grande Prairie Land District	Peace River Land District
1921	548	671
1922	312	462
1923	172	286
1924	94	142
1925	92	137
1926	111	205
1927	193	251

GRAIN SHIPMENTS

Mr. COWAN:

1. What was the total number of bushels of grain handled through the port of Vancouver in each of the years 1926 and 1927?
2. What was the total number of bushels of grain shipped from Port Arthur and Fort William during each of the seasons of navigation 1926 and 1927?
3. What was the total amount of grain handled at Port Colborne during each of the seasons 1926 and 1927?
4. What was the total amount of grain shipped from the port of Montreal during each of the seasons 1926 and 1927?
5. Is there any record available of the amount of Canadian grain shipped via Erie canal from Buffalo to New York? If so, what amount was shipped in each of the seasons 1926 and 1927?
6. What amount of United States grain was handled through the port of Montreal during the seasons of 1926 and 1927?

Mr. MALCOLM:

1. Calendar year—
   1926: 52,494,615; 1927: 50,847,482.
2. Season of navigation—
   1926: 298,860,493; 1927: 284,172,722.
3. 1926: 93,762,003; 1927: 110,166,303.
4. 1926: 138,635,858; 1927: 197,522,230.
5. Not available.
6. 1926: 38,101,582 bushels; 1927: 96,239,783 bushels.

GRANTS TO EXPERIMENTAL FARMS

Mr. COWAN:

1. What support or aid, financial or otherwise, does the Department of Agriculture make to the experimental farm in the district of Thunder bay?
2. What was the amount of grant or aid, if any, in 1926 and in 1927?

Mr. MOTHERWELL:

1. There is no federal experimental farm in the district of Thunder Bay.
2. Nil.

NEW BRUNSWICK GEOLOGICAL SURVEY

Mr. MacLAREN:

1. Has a detailed geological survey of New Brunswick been made during the years 1926 and 1927?
2. If so, (a) to what extent has the survey extended; (b) what was the number of persons so engaged; (c) what time was devoted to such work?

Mr. STEWART (Edmonton):

1. The detailed geological survey of New Brunswick was continued during the seasons of 1926 and 1927.

2. (a) In 1926 geological survey of about 400 square miles east of St. John completed. Topographical survey of an area of 400 square miles (partly in Quebec) on the bay of Chaleur continued. Investigations made of various mineral occurences and peat bogs.

In 1927 a topographical survey of 400 square miles on bay of Chaleur completed. Hydrographic survey of Chamcook lake and vicinity completed. Systematic examination made of occurrences of manganese and various other mineral deposits examined.

(b) In 1926, eight; in 1927, twelve.

(c) In 1926, 455 days; in 1927, 896 days.

It should be understood that the detailed geological survey of New Brunswick will require many years for completion. It has been in progress for a good many years previous to 1926. Geological investigation is being preceded by a topographical survey and the results of topographical and geological work will take the form of a series of maps on a scale of 1 inch to 1 mile, each sheet representing an area 15 degrees of latitude by 30 degrees of longitude.

TRURO, N.S., POST OFFICE SITE

Mr. MacNUTT:

1. On what date was a lot in the town of Truro, Nova Scotia, purchased for a new post office site?
2. What price was paid for said lot?
3. To whom was said lot sold?
4. What proportion, if any, of original lot was sold for church building purposes?
5. Who was purchaser of remaining portion of lot?
6. What price was paid by each of the two buyers?

Mr. MACKENZIE KING (for the Minister of Public Works):

1. July 11, 1914.
2. $17,000.

3. Part of site (100 feet by 165 feet) to St. James presbyterian church for $3,300 and remainder of site (124 feet by 165 feet) to Geo L. Brenton for $4,500.

4, 5 and 6. Answered by No. 3.

QUESTIONS PASSED AS ORDERS FOR RETURNS

REVALUATION OF SOLDIER SETTLERS LAND

Mr. SPEAKMAN:

1. How many applications have been received during the past year for revaluation of lands held by soldier settlers under the provisions of the Soldier Settlement Land Act and its amendments: (a) total number; (b) by provinces?

2. How many cases, if any, have been the subject of appeal to the Exchequer Court of Canada: (a) total number; (b) by provinces?

3. How many cases have been finally adjusted: (a) total number; (b) by provinces?

4. What is the average percentage of reduction made in such cases: (a) total percentage; (b) by provinces?

NATIONAL RESEARCH COUNCIL

Mr. KENNEDY:

1. Who are the officers of the National Research Council of Canada?

2. What sums of money have been voted for this body in each year since its organization?

3. What questions or matters has the research council under investigation?

4. What reports are available as to its work?

UNOPPOSED MOTIONS FOR PAPERS

NATURAL RESOURCES—WESTERN PROVINCES

Mr. CHURCH:

For a copy of all correspondence, telegrams, orders in council, reports and all other documents exchanged between the government of Canada and the government of Alberta since the last session of parliament, relating to the natural resources question;

And also relating to the return of the natural resources of Saskatchewan, Manitoba, and British Columbia to those provinces by the Dominion.

GRAIN EXCHANGE BUILDING—FORT WILLIAM

Mr. COWAN:

For a copy of the lease existing between the government or any department thereof, and the Grain Exchange Company, Fort William, for the premises occupied in grain exchange building, Fort William. Also return showing a statement of the total cost to the department per annum for the use of the said premises.

KAMSACK, SASK. POSTMASTERSHIP

Mr. CAMPBELL:

For a copy of all correspondence, letters, and other documents in connection with the dismissal of Alex. Wilson from the position of postmaster at Kamsack, Saskatchewan, and also in connection with the appointment of his successor.

[Mr. Mackenzie King.]

PAYMENTS FOR LEGAL SERVICES

Mr. GARLAND (Bow River):

For a return showing the disposition of the $485,957.06 paid for legal services for the year 1926-27 according to Auditor General's report, giving the names of the lawyers or law firms and amount paid in each case.

DROBOT, SASK., POSTMASTERSHIP

Mr. CAMPBELL:

For a copy of all correspondence, letters, and other documents in connection with the dismissal of John Stinka from the position of postmaster at Drobot, Saskatchewan, and also all similar papers in connection with the appointment of his successor.

SHEHO, SASK., POSTMASTERSHIP

Mr. CAMPBELL:

For a copy of all correspondence, letters, and other documents in connection with the dismissal of C. J. Sorrell from the position of postmaster at Sheho; and also a copy of similar papers in connection with the appointment of his successor.

THE MEXICAN SITUATION

Mr. CHURCH:

For a copy of all correspondence, telegrams and orders in council between the government of Mexico or Mexican railways, and the government of Canada or the Canadian National Railways, asking for the loan of Sir Henry Thornton, president of the Canadian National Railways, to report on the railways situation in Mexico;

And also for all correspondence between the government of Canada and any person or persons objecting to the aforesaid and objecting to the utterances and letters of the Mexican consul at Toronto, L. Medina Barron, on the same subject.

Right Hon. W. L. MACKENZIE KING (Prime Minister): I should like to draw attention to one feature of this motion. It asks for two sets of correspondence, one relating to the visit of Sir Henry Thornton to Mexico, and the other to certain utterances by the Mexican consul in Toronto. The rules provide that papers should be called for on one subject at a time. If my hon. friend is agreeable to amend his resolution so as to leave out the second paragraph, then so far as the first paragraph is concerned, the government will have no objection to bringing down all the official correspondence relating to Sir Henry Thornton's visit to Mexico. Regarding the second part of his motion, I would like to say to my hon. friend and to the house that there is a considerable amount of correspondence which has come to the government from different persons throughout Canada, some of them objecting to the utterances of the Mexican consul referred to in

the resolution, others commending them. I do not think it would be in the public interest to bring down that correspondence. A great deal of it is very extreme in its phraseology. Some of it appears to have been written only for the purpose of provoking controversy. I fail to see wherein its production can do any possible good, and I do see wherein it might do a great deal of harm, not only within the confines of our Dominion, but in international relations as well. I hope sincerely that my hon. friend will be content to have the house receive the correspondence relating to the visit of Sir Henry Thornton to Mexico and drop the other part of the motion.

Mr. CHURCH: I have no objection if the Prime Minister wishes to have the first and second paragraphs divided. The first part of the question is a proper one. It is a publicly owned road and we should find out who are these people who are asking to have Sir Henry Thornton sent to Mexico without the authority of parliament, and should have full information as to the public policy involved. The second clause of the resolution speaks for itself. A private member on the government side gave notice of this matter and then dropped it. My motion raises a great public question of status and our relations with a friendly country—Mexico—and the rights and prerogatives of consuls within our borders—also an important international problem. I object to withdrawing this motion and will not do so. It is in order to ask the government for all these public papers. They are not private papers, but were received on a matter of government policy. If the Prime Minister wishes to do so, let him take the responsibility of voting my motion down.

Mr. MACKENZIE KING: If I may interject a word, Mr. Speaker, I should like to ask for your ruling as to the point I raised at the outset with respect to the motion.

Mr. SPEAKER: The motion, in my opinion, should be divided. The first paragraph should be the subject of one motion and the second paragraph the subject of another motion, because the one does not flow from the other. If the hon. gentleman chooses he may place another motion on the order paper dealing with the subject mentioned in the second paragraph.

Mr. MACKENZIE KING: If the proceeding would be regular, Mr. Speaker, I should have no objection to having the two questions put immediately if my hon. friend wishes, or rather let the first paragraph be carried now and divide the house if need be on the second.

Mr. SPEAKER: I think the hon. gentleman who moved this motion should be given the opportunity of converting the second paragraph into a motion which might appear on the order paper at a subsequent sitting of the house.

Mr. MACKENZIE KING: I would move an amendment that the second paragraph of the hon. member's motion be struck out, and that the motion as amended be adopted.

Mr. SPEAKER: Mr. Mackenzie King moves in amendment, seconded by Mr. Lapointe:

That the second paragraph of the motion be struck out.

Mr. CHURCH: I rise to a point of order. Both paragraphs conform strictly to the rules of the house. Canada wants some action taken on this particular question. The motion raises a great public principle. I object to the second part of this motion being ruled out. I think the motion is in order, and that it is not permissible to amend it in the way proposed.

Mr. SPEAKER: In my humble judgment any motion which is presented to the house can be amended. The question now is on the amendment.

Mr. BENNETT: It seems to me that before the question is put there should be a clear understanding as to what the issue is. The hon. member for Toronto Northwest moved a notice of motion, and the right hon. the Prime Minister raised a point of order. He said that he did not think that this was a proper motion and that the rules of the house require that a motion for papers should cover only one subject. Your Honour, in my opinion quite properly, ruled that the motion was a double motion, and therefore the only portion of it that was now being dealt with was the first portion. The other portion dealing with another matter should be placed on the order paper by the hon. member at a later date if he so desired. That is my understanding of the matter. Therefore there can be no amendment in any sense in view of the ruling of the Chair.

Mr. MACKENZIE KING: I am simply trying to facilitate my hon. friend's desire to get a part of this information. He can have it immediately if he is agreeable to having his motion amended, and that is all my amendment contemplates. The first part of his motion would be perfectly regular, and if the

hon. member wishes subsequently to introduce another motion covering the second portion of his resolution we will be prepared to consider that when the time comes.

Mr. EDWARDS (Frontenac): Mr. Speaker, if you accept an amendment from the Prime Minister to strike out the second part of this notice of motion I ask you how that particular matter can be reintroduced.

Mr. SPEAKER: My ruling, if so it can be called, was that the second part of the motion does not flow from the other part. The second part could be made the subject of a second motion to be placed on the order paper. That is the position I took. Now let me read to the house what Beauchesne says under standing order 47, paragraph 379:

A motion which contains two or more distinct propositions may be divided so that the sense of the house may be taken on each separately.

I think the house may accept the first paragraph of the motion, and that the hon. member should be given the opportunity of moving another resolution based on the second paragraph. Is it the pleasure of the house to adopt the motion as amended?

Some hon. MEMBERS: Carried.

Mr. CHURCH: Lost.

Mr. SPEAKER: The hon. member is given the opportunity of making the second paragraph of his resolution the subject of another motion. I declare the motion carried.

Mr. CHURCH: I will amend the second part accordingly for to-morrow.

Motion as amended agreed to.

GREAT LAKES SHIPPING

Mr. T. L. CHURCH:

For a copy of all correspondence, reports, orders in council and all other papers asking for the suspension of the coastal shipping laws on the great lakes.

2. For a return showing the list of bulk freighters on the great lakes, Canadian register by the shipping lists, and number of days during the navigation season out of commission of each ship because of lack of cargoes.

3. For a return of a copy of all papers, memoranda and correspondence from the Master and Mates Association, or from Captain William Stitt, their secretary, or from the National Association of Marine Engineers or other marine men, asking for a modern system of life saving stations, beacon lights, modern equipment, use of air craft, ice crushing tugs, and other aids to navigation on the great lakes to assist mariners.

Mr. ARTHURS: I would suggest that this resolution is rather complicated and that it involves various shipping matters, so that it is in character a good deal like the previous one.

Mr. SPEAKER: Is it the pleasure of the house to adopt the motion?

Hon. JAMES MALCOLM (Minister of Trade and Commerce): I would suggest that the information called for by the second part of the motion can only be obtained from shipowners or their officers. The government cannot furnish that information because it has no record of the subject.

Mr. CHURCH: I think it would be quite easy for the government, through their officials to get the information called for.

Motion agreed to.

LIGNITE AND BITUMINOUS COAL

UTILIZATION BY CONVERSION INTO CRUDE OIL AND OTHER COMMODITIES

The house resumed from Monday, February 13, consideration of the proposed motion of Mr. Kaiser:

That, in the opinion of this house, the government of the Dominion of Canada should immediately initiate such measures and take such other steps as may be necessary to bring about the utilization and transport of our vast deposits of lignite and bituminous coal, by their conversion into crude oil and other valuable commodities of every day life.

Mr. T. E. KAISER (Ontario): Mr. Speaker, when I was interrupted on Monday night by the application of the eleven o'clock rule, I was about to discuss the second part of my resolution as to what we might expect the government to do, and do immediately, in accordance with the resolution. I would suggest in the first place that the government obtain a few hundred copies of the original report as delivered by Frederick Bergius in Pittsburgh, in order that every member of the House of Commons and others who are interested in this subject might receive some basic information.

The second suggestion I have to offer is this, that the government should endeavour to arrange with the university of Birmingham, where there are two Professors, Professor Skinner and Professor Graham, who have the technique and the equipment, for carrying on investigational work and the analysis of coal such as I have suggested. These gentlemen have given reports in regard to hundreds of analyses of hundreds of varieties of coal for England and the British Empire and I have under my hand one report of their finding in regard to coal shale from Australia. They have found some coals that lend them-

selves very readily to this process; they have found other specimens which are not in that class. At the beginning of this undertaking it is necessary for us to know whether the coals we possess in the Dominion of Canada, both in Nova Scotia and Alberta, are of such a character as will lend themselves to the process under discussion. This can be discovered only by our having analyses made by men with the requisite equipment who will give us the results. I find that these university professors, in order to carry out this work, demand that a specimen of one hundred pounds each be sent to them. If we were to send them two or three hundred specimens of coal of one hundred pounds each, this would be inexpensive and we would be able to get a great deal of information. Along with that I would ask the government to have Doctor Tory select a few of the young men of our country, who have devoted a large portion of their lives to subjects of this kind, who would go to England and be paid for their time in order that they might equip themselves scientifically and technically for the solution of this and other problems which confront Canada.

The next thing that I would suggest is that we should endeavour, if possible, to get men like Shatwell, Graham, or Skinner in the old country who, in the summer, exchange lectures with professors in other universities, to come to the university of Saskatoon and there set up an equipment for the analysis of this coal so that they may give us the result of their findings in that way.

I should like to refer for a few moments to statements made by some of the great men of this country and of England in regard to what I have been discussing. In matters of this kind I am guided, as the house should be guided, only by the opinion of men who are in a position to give expert advice and whose statements may be relied upon. In the first place I would draw the attention of the house to a few words contained in the report of Professor Graham and Professor Skinner, who are at the head of the mining research laboratory of the university of Birmingham and who have analyzed hundreds of specimens of coal for the purpose of ascertaining what can be produced under the Bergius process. Their finding is this:

> With coals of the class referred to above, the process could possibly be worked at the present time with profit. The annual output of such coals is sufficient to supply the greater bulk of the present day fuel oil requirements of this country.

I would draw attention also to the finding of Mr. H. G. Shatwell who was sent by the British coal syndicate to the Bergius plants in Germany to investigate and to come back to the British government and the British syndicate with a report of what he had discovered. The details of the report are tremendous and I wish to draw the attention of the house to the conclusion of this scientific gentleman. He states:

> The system of hydrogenation proposed by Bergius, therefore, dispensing as it does with catalysts and employing reactants which in no sense of the word are pure and are not even chemical entities, opens up a new avenue both for scientific research and for commercial exploitations; and there is little question that its adoption on a large scale is only a matter of time.

Following that up let me give the house an opinion taken from the London Times of December, 1927, of Mr. Frank Hodges, who will tell us who he is. Mr. Hodges says:

> As a member of the national fuel and power committee I am able to review the whole range of research and achievement of both our engineers and our chemists. I can therefore say that steam-raising from pulverized coal has passed into conventional and profitable use. It will soon pass from use on land to use on the high seas.
>
> Next year we shall see commercial plants in operation in Britain which will make a frontal attack upon the system of imports of fuel in the form of oil from foreign countries whilst our own men suffer acute poverty and distress. We shall witness the production of oil from coal of such quality and constituents as to result in Diesel oil, lubricating oil, and fuel oil being made available from the much-despised "black diamond".

Such is the opinion of eminent scientists in England and abroad.

Let us come now a little closer home. We have in the employ of this government a gentleman whose views on questions such as this command the respect of the whole people of Canada; I refer to Dr. Adam Shortt. I assume that he at least knows what he is talking about, and in addressing a meeting in my city on the 5th of December last he said:

> The progress of science is as rapid as it is astonishing. In Germany particularly processes for extracting gasoline from lignite coal are making rapid strides. In the past 12 months they have manufactured 100,000 tons of gasoline by these new methods and are now equipped to extract 400,000 tons in the next 18 months. The price is being reduced and there is no predicting how far it is yet to the bottom.
>
> What does this mean but wonderful progress for the Canadian west? There are enormous quantities of lignite in Alberta. So far it cannot be transported economically because it deteriorates in quality after mining so that a binder has to be used.
>
> But if it can be turned to gasoline and its by-products used, the fuel problem of Canada will be solved.

I ask the people of Canada, if they feel that I am not as conversant with this subject as I should be, to pay attention at least to the statements of men of such high standing as I have quoted.

There is one other point. In the Bergius process it has been found that the great expense is in the production of hydrogen. After this question came up, a number of men in the city of Toronto undertook to see what could be done in that regard, and a gentleman by the name of Stewart announced that he had just completed a process by which the cost of producing hydrogen could be reduced by over fifty per cent, and the very next day Professor McLennan of Toronto university, a gentleman to whom we pay three or four thousand dollars a year, said that he had looked into this man's process and found that it was absolutely correct. Now if Canadian genius has been able to devise a process whereby the cost of producing hydrogen is reduced by over fifty per cent, what may not happen in the next few years in connection with the problem of untilizing in a practical manner our vast deposits of lignite and bituminous coal? I believe that the genius of this country is equal to that of any other country in the world. When I think of the wonderful advances that have been made in this country, of those vast prairies which at one time looked as dead to me as the lignite coals of Alberta, when I remember that it was the genius of Professor Saunders that evolved a new type of wheat, a discovery that laid the foundation of the great wealth of those prairie provinces to-day, I regret as a Canadian, as I did last summer when I went across Canada from the Atlantic to the Pacific and viewed many of the monuments to the soldiers and eminent men in the history of this Dominion, that right at the gateway to the prairies there is not erected a monument to the memory of Professor Saunders. I think it would be very fitting to commemorate his work in that way, to show to the world that there are victories of peace that are greater than the conquests of war. I believe that we are just awaiting such touches as have already come to us to make these lignites give up their secret, to the immense benefit of the people of Canada and the people of the whole world. We are simply the trustees for this tremendously valuable asset, and we shall be judged by future generations by the manner in which we discharge our trust. We should enlist the brains and energy and enterprize of the people of Canada to help solve such problems as these, and I believe that we are on the verge of a complete solution not only of this question but also of our fuel problem in central Canada.

[Mr. Kaiser.]

My time is about up. I propose to leave this matter absolutely in the hands of the government. I was glad to know that the Minister of the Interior (Mr. Stewart) on his trip to Europe last summer did make an investigation into this question, and I hope he will give the house the benefit of whatever he has learned in that regard. I did see one statement that he made at the time, and that was that the department of the government was equipped and ready to handle this question. It is not so equipped, Mr. Speaker, but it should be equipped, and should look into this problem in a sensible way. Let us investigate this question and make sure we are right before committing ourselves to a large investment, and then I believe that future generations will bless us for having given these great questions the study they deserve.

Mr. A. W. NEILL (Comox-Alberni): With as much as I could catch of what the hon. member for Ontario (Mr. Kaiser) said, I have no fault to find. As far as I could make out, his arguments were sound and reasonable. But that is far more than can be said for his resolution when you examine it. I would like to draw the attention of the government to what they are committing themselves if this resolution passes. Of course, if this resolution is only to be used as a basis for debate and is going to be withdrawn, no harm will be done; but this is what we are asked to commit ourselves to:

> The government of the Dominion of Canada should immediately initiate such measures and take such other steps as may be necessary—

That is wide:

> —to bring about the utilization and transport—

Another big order:

> —of our vast deposits of lignite and bituminous coal—

It is the following to which I wish particularly to draw attention:

> —by their conversion into crude oil and other valuable commodities of every-day life.

I am not chemist enough to know whether it is chemically possible to produce real crude oil out of coal. I do not think so. Undoubtedly you can produce some kind of oil, but under this resolution the government is to be compelled to produce crude oil by any means and at any cost. It is a well-known fact that you can obtain gold from salt water; but that it is not economically possible.

There are many other things, especially in the chemical world, that you can do, but which cannot be done on a commercial basis because the cost is too great. There is no doubt that some form of oil, and particularly gas, not gasoline, but commercial gas, can be obtained from coal. That is an admitted chemical fact to-day, but the question is, can what is asked here be done on a profitable basis, and should we commit the government to it regardless of the cost of transport or anything else? That seems to me an exceedingly big order indeed. It is the mandatory character of the resolution that I am afraid of.

Last summer there was a meeting in British Columbia of the institute of mining and metallurgical engineers of Canada. We had the advantage there of some very able addresses by the most capable men who had studied this subject. I was keenly interested in it because I had thought to find in that method of changing coal into gasoline or some further product the solution of our troubles arising from depleted markets for the product of our coal mines in British Columbia. But it was unanimously agreed by that body of capable technical men that at the present time it is economically impossible to apply the process in Canada. It has been done, I believe, with more or less commercial success in Germany. Possibly the coal there is of a character that is very easily and cheaply mined; possibly the supplies of natural crude oil are somewhat remote; possibly low labour costs may have something to do with it. But I am inclined to think the success achieved there is due principally to the fact that it is comparatively easy to have access to some large city where there is a market for the supply of gas, because it has not yet been found possible to make gasoline out of coal except at an enormous cost. Therefore you can imagine what an absurd solution of our coal troubles it is to tell us we should turn our coal into gas at enormous loss when in our remote part of the country there is no market for the product close at hand and only a very limited market at a distance. I believe that when the system of what is called low temperature-carbonization is perfected it may be possible to make gasoline out of coal, but to-day it cannot be done.

Now, the men who were at the meeting to which I have referred were not carried away by local conditions at all. They were looking into the matter from a strictly scientific and technical standpoint, and they advised those of us who were interested in the coal mines and their future to devote our energies to the production and use of pulverized coal. I have a resolution on the order paper, No. 18, under which I will deal with that aspect of the problem.

Those technical men also gave us this further advice. They suggested that neither provincially nor federally should we embark on any huge expenditures in scientific research along these lines only in the course perhaps of five or ten years to arrive at the same solution as that already reached in Europe. In other words, they were opposed to the idea of the astronomer, I think in Italy, who said that he was going to make fresh discoveries in astronomy, but he was not going to begin where the old scientists had left off, he was going to find out everything for himself; but after a lifetime devoted to astronomical research he died before discovering that the earth is round. The same principle should guide us here. Instead of going to enormous expenditure in this young country to build up information on the subject from the beginning, those technical men recommended that we should select half a dozen competent chemists, skilled men in their particular line, and send them abroad to acquire in the colleges and schools and the research institutes of Great Britain and the continent the very latest information along these lines, because scientific information generally is free to the world, and it could thus be obtained at very much less cost and in a much more practical and immediate form.

As I have said, I will deal with the matter of pulverized coal under my own resolution, but I should like again to point out that, while the principle of the resolution is right, if the government allows this motion to pass in its entirety it will be committing the country to a very serious expenditure along lines which I do not think desirable.

Mr. H. C. HOCKEN (Toronto West Centre): Mr. Speaker, it appears to me that the hon. member for Comox-Alberni (Mr. Neill) is somewhat hypercritical of this resolution. If I understand the purpose of it, it is to persuade the government to make a reasonable investigation to discover whether our great lignite deposits can be applied to commercial uses. My hon. friend analyzes the resolution and picks out some phrases from which he concludes that what is proposed is impossible, and he disposes of it with a sweep of the hand. I do not think that is a reasonable way of treating the resolution. It may be that we will not be able to get gas or anything else from these lignite deposits; but, Sir, I submit that if any other progressive nation, Germany, for example,

had similar deposits, it would not hesitate to spend what was necessary to discover whether they could be applied to commercial uses.

An hon. MEMBER: Germany is already doing it.

Mr. HOCKEN: Then that is an added reason why we should do it.

An hon. MEMBER: Quite right.

Mr. HOCKEN: I think the Minister of the Interior (Mr. Stewart) will not be deterred from giving this resolution his support by the summary manner in which the hon. member for Comox-Alberni would dispose of it. It seems to me that the member for Ontario (Mr. Kaiser) has introduced something that is well worthy the consideration of the government. This is one of our natural resources, just how valuable it is we do not know, but surely it is the part of wisdom for us to make inquiries and discover its value and how it can be developed.

I merely rose, Mr. Speaker, to express the hope that the Minister of the Interior will not be persuaded by my hon. friend from Comox-Alberni to deal with this resolution as he himself has dealt with it. This country has enormous resources, some of which we do not know very much about. I recall the time when the best geological experts said we would never find gold in northern Ontario, the rock strata not being of the right kind.

Sir GEORGE PERLEY: Or silver either.

Mr. HOCKEN: Still we have found some gold there. We do not know what we may get out of these lignite deposits until we investigate them and experiment under the best possible conditions.

Mr. NEILL: But the resolution says that we "must" do these things.

An hon. MEMBER: Modify it.

Mr. HOCKEN: I do not think the government would be well advised to spend the whole national revenue on the measures proposed by the mover of the resolution, but it should do what is necessary to discover how these lignite deposits can be developed in the best interests of the Dominion.

Mr. J. S. WOODSWORTH (Winnipeg North Centre): I rise, Mr. Speaker, to add a word in support of this resolution. It may be as the member for Comox-Alberni has suggested, better phrasing might have been chosen; but it would be comparatively easy to amend the resolution to read, that the government should investigate the feasibility of what is proposed.

Mr. NEILL: Hear, hear.

[Mr. Hocken.]

Mr. WOODSWORTH: If those words were inserted I think they would meet the objection of the hon. member. But altogether aside from the exact form of the resolution, it seems to me that the hon. member for Ontario has made out a very strong case indeed for a careful investigation by the government of the utilization of our lignite and bituminous coal by conversion into crude oil and other commodities. From what little reading I have done along this line I have come to the conclusion that there is a great deal in what the mover of the resolution has already said, and, I repeat, I think he has presented a very strong case.

I have often thought that instead of going so much into the question of railway rates in searching for a solution of our coal problem, we ought rather to look in the direction proposed by the hon. member. Aside from this particular question, I have been tremendously impressed by the emphasis that the hon. gentleman has placed upon the need of scientific investigation with regard to our natural resources and their development. I think that we should have the resolution framed in such a manner as to make it unanimously acceptable to the house.

Hon. CHARLES STEWART (Minister of the Interior): I need hardly assure the house that I am as much interested in the resolution submitted to-day as I was in that proposed by the hon. member for Bow River (Mr. Garland) with reference to scientific and industrial research. Indeed, they go pretty much hand in hand. I have, however, this additional interest in the present resolution, that it was my privilege this summer to make a special investigation of the very matter herein proposed. Part of my mission to the continent this year had a direct bearing on this subject, apart from a rather interesting week or two which I spent at Geneva listening to the deliberations of the delegates assembled in the Leauge of Nations. And in passing, Mr. Speaker, may I observe that the discussions there were exceedingly interesting and that I am confident, after that visit, that a great deal of good will result from the efforts of the league. However, I do not propose to say anything in that regard to-day. What I want particularly to discuss now is that aspect of my mission which was of greatest interest to me because of the enthusiasm it created, especially in view of the report referred to by the hon. member for Ontario (Mr. Kaiser)—the report of Dr. Bergius to the convention of scientific experts at Pittsburgh respecting the liquefaction of coal.

I will not go so far as my hon. friend from Winnipeg North Centre (Mr. Woodsworth) and suggest that we can immediately do something in this direction to obviate the necessity of moving our coal. We shall still be obliged to consider rates in order if possible to bring coal from the west and the east to central Canada. But I do affirm that there are unlimited possibilities in at least three or four of these experiments that are being carried on. I do not suggest for a moment that they have yet emerged from the experimental stage, notwithstanding the fact that in Germany they have spent a great deal of money. As my hon. friend has well said, Dr. Bergius has devoted over fifteen years of his life to experimentation in this important field with German coal and has attained a very appreciable degree of success. The experiment is being conducted on a large scale at Leuna, where there are special facilities for its completion on a commercial basis. Indeed, scientific research there has at its disposal every aid that is humanly possible. An almost innumerable variety of things are being manufactured from coal, and one is amazed at the output of that huge plant which, at the time of my visit, employed 25,000 workmen. Through the courtesy of Dr. Streseman, whom I met at Geneva, I think it may be said that we who went from Canada were the first representatives of any nation who were admitted to the interior of that plant and shown its operations in detail. We had, therefore, a splendid opportunity to note exactly what was being done, and one was struck with the immensity of the work carried on as well as with the vast extent of experimentation. If I remember correctly there are 1,200 chemists employed in that institution alone. Every department has at its command the services of an expert chemist in the particular line in which it is engaged. Perhaps it is not important, but the fact is interesting at any rate, that they collect all the precious gems that come from the coal. My hon. friend expressed the opinion that we had no idea of the possibilities in a matter of this kind, and I may tell him how astonished I was to discover that they were able to obtain gems for rings. I brought one home with me, recovered from the electrical ovens which were used in the operations elsewhere. The plant is peculiarly equipped for the production of oil. As my hon. friend knows, Germany requires at the present time something like 8,000,000 barrels of crude oil annually, and she is producing only 400,000.

Mr. McGIBBON: Tons.

Mr. STEWART (Edmonton): Barrels is the information I have. It will be seen from this statement what an enormous quantity of oil must be imported into Germany every year. There they have a market of which none of us were aware.

I shall be delighted to meet my hon. friend's request not only for the distribution to members of this house of copies of Dr. Bergius' paper, but also for its wide publicity in Canada. Further, I shall be only too glad to recommend to Dr. Tory the desirability of our students studying abroad; and if the national research council will not consider the question I shall introduce an estimate to provide the necessary funds for the purpose. I am anxious to widen in every way possible the knowledge we have of this subject, which is of great importance to the country. My hon. friend was telling me the other day that for ten or twelve years he had been advocating, in season and out of season, scientific research in this direction, and I can assure him that the matter is one that is dear to my own heart. I should like to see every avenue of scientific research explored. It is well, however, to bear in mind, as the leader of the opposition remarked the other day, the advisability of avoiding as far as possible any overlapping of efforts. In six or eight plants that we visited in Germany, not all of them engaged in liquefaction, some of them going in for low temperature carbonization, and in every one of ten or fifteen in Great Britain, I found samples of Alberta coal which had been submitted by various interested persons. I do not recall a single plant where experimental work was being done in which we did not find samples of our own coal either from that western province or from Nova Scotia. In the very plant which I have been discussing we found samples. I would not limit to 100 pounds the coal that we should submit for testing purposes; I am willing to send it in ton lots at the expense of the federal government to any plant which is prepared to test it, and I am sure that the result will be beneficial not only to those directly interested but to the country at large.

Mr. KAISER: I did not intend to suggest that we should send only 100 pounds. I was merely pointing out that the university to which I referred asked that each sample consist of 100 pounds.

Mr. STEWART (Edmonton): I understand that, but there need be no restrictions to the quantity that we send. The more we send the better it will be. While in Germany I

had the pleasure of visiting Dr. Fischer's laboratory at Mulheim, where in my opinion there are tremendous possibilities. His work, however, is still only in the experimental stage, but I believe that his process will be cheaper than that of Dr. Bergius. Whether it will obtain the same results I do not know. And by the way, may I say that I had the very great pleasure of an hour with Dr. Bergius in his own home, and was generally received in Germany with the utmost courtesy. Much of what I saw I could not of course thoroughly understand, but as I had Dr. Camsell with me he was able to furnish the details and to supplement such knowledge as I did have.

We were greatly interested in low temperature carbonization, in connection with which there are about eight or ten processes in Germany, all of which undoubtedly give promise of success. You will be told of course by the inventor that there is no doubt about the success of the invention. But when you come to examine them minutely you will realize that they are not yet past the experimental stage. I am somewhat chary in this respect, because hon. gentlemen will remember that when I came here there were investigations proceeding at Bienfait, Saskatchewan, which had not got past the experimental stage, and we wasted about a million dollars without getting very much result, and I should like to know now where the break takes place between what is experimental and what can be done in a commercial way. Precaution should be taken in all work, whatever its value may be.

Mr. McGIBBON: Surely the minister does not expect to get dollar for dollar value at the outset?

Mr. STEWART (Edmonton): No, but I think any scientific man will agree that while an experiment conducted on a small scale at first may be eminently successful, when it is tried in a commercial way many difficulties may be encountered. That is exactly what happened at Bienfait, and that is what I had in mind as a layman in looking at the various plants in operation in Germany. Some of them were still in progress. We know that carbonization can be carried on successfully under high temperature, and high temperature produces large quantities of gas and a low percentage of oil. What we want to do in Canada, so far as I understand the situation, is to discover a process that will produce a high grade fuel under low temperature and give off a small percentage of gas and a fairly large proportion of oil. That is what we keep constantly before us in looking over the various experimental plants. I formed this conclusion after some days of investigation of the process which has been so successful under high temperature. The still process of treating the coal apparently gave better results than where the coal was stirred up in the process, as it is in many stages of passing through the plant.

May I say that one cannot visit Germany without being struck with the prevailing efficiency, despatch, and neatness; the modern character of the buildings they have constructed in connection with their plants, and the sanitary conditions that obtain. Everything points to efficiency of the highest order. Indeed I sometimes wonder whether we could present a like picture if we were to take visitors through our coal mining districts in Canada. I rather think we have a great deal to learn in that respect. I know something of the conditions in the coal mining areas in my own province; I have seen something of them in other parts of Canada, and they are not localities to which we would like to take distinguished visitors or scientists who come here. I saw a model town, ideal sanitary conditions, and there was adequate provision for education, medical attention and everything necessary to convenience and efficiency. I was told that no ordinary workman received more than the equivalent of $50 a month in our currency, nevertheless a great deal of attention is paid to the social welfare of the workmen. One instance struck me rather forcibly. In these modern days in Canada, and indeed I am afraid in other parts of the world, there is a distinct tendency toward what we call apartment house dwellings, and usually the individual who has more than one or two children is not a very welcome tenant. To my amazement, at this huge plant no such distinction was made, the man who had the most children was given the most comfortable quarters. Not only that, but on the coming of every child the company presented the parents with a cradle and provided medical attention. I had my eyes opened, and I hope my experience will be a benefit in an administrative way. It did appear to me that mechanism was being brought to the highest state of efficiency, and perhaps they are going to mechanize the human family as well. In some respects things seemed to be carried beyond the bounds of reason, but I cannot help admiring the efficiency that was so evident everywhere.

We left Germany and proceeded to Great Britain. Through the courtesy of Dr. Lander of the British federal research station we visited many districts in England, chiefly look-

ing into the possibility of low temperature carbonization. I am not going to admit that our good cousins across the ocean are one bit behind the Germans in what they know about low temperature carbonization. They have about one hundred and fifty processes, and all have splendid possibilities of development. We were advised to visit certain centres, and we did so and examined them minutely. Not all the conditions would be applicable to Canada, and in order to be sure I am going to send one of our best men to visit these centres with a view to determining the possibilities of the adoption of their methods at some of the principal points in Canada.

So far as the Bergius process is concerned, I was able to see in the research station at London what I was unable altogether to comprehend at Leuna in Germany—a perfect experimental plant so set up that any layman can see the whole business without the least difficulty. As my hon. friend has said, the discovery of a cheaper hydrogen will go a long way toward cheapening that process, and I am very glad that one of our Canadians can claim to have the honour of making discoveries in that connection. May I say in passing that one is rather proud of the fact that working in many of the institutions you find bright young men, graduates of our universities. In the old land they are not missing anything in the way of the treatment of coal; and why? They have a pressing reason. One cannot live many weeks in London without realizing that something should be done in the matter of the treatment of coal. They have many of the same difficulties in connection with coal that we have. Every one of us will remember that ten or twelve years ago coal was used much more extensively than it is to-day on the Pacific coast, but that market is disappearing. Go to the Atlantic and you will find the ships plying there using oil. In this very city fuel oil has largely replaced coal; I venture to say that twenty per cent, or nearly that figure, of the domestic demands are being supplied to-day by fuel oil. In my own city of Edmonton where coal is mined, and where it formerly was used in our furnaces, nearly every individual is using natural gas from the field at Viking, eighty miles away. The coal market has been invaded from every quarter. The same problem prevails in Germany, in England, in every coal-producing country in the world. When cheap petroleum becomes a thing of the past then coal will come into its own again.

The most interesting experiment I saw had relation to low temperature carbonization. I do not know how it will work out, but at Birmingham a young student invented a process of coal treatment by high temperature steam. He tried it for a couple of years in an experimental way, and only last year was enabled to induce a hard headed Scotchman in Glasgow to put in a plant. When I was at Glasgow they were just putting fire under the furnaces to test it out. This may be one of the systems that will be very useful to the Canadian coal industry: it is free from all difficulty in the matter of gases.

Time will not permit of my giving a description of all that one could see on a trip of the kind, but I will make the prediction that within ten years there will be no raw fuel burned in Great Britain, it will all be treated. The ingredients of value will be extracted, and the residue will be a fuel that will be smokeless to a very great degree, thus obviating the difficulty they have to face from fogs in large centres like London.

My hon. friend spoke of the possibilities of burning pulverized fuel under pressure. I visited one of the admiralty stations in England and I was startled to find the great strides that had been made in connection with pulverized fuel. Vessels intended for service on the Pacific and north Atlantic were being equipped with powdered fuel apparatus, and it was estimated that the saving in power would be about thirty per cent over that of oil. Wherever you go, therefore, scientific men are using their best endeavours so to transform coal by treatment that it will be the cheapest and most efficient agent for the production of power. While Dr. Bergius has the distinguished honour of having gone a very long way as leader in the field of liquefaction, there are many who are following him very closely.

My trip to the continent was a real inspiration to me. I picked up some information that I think will be of very great value to me, and I trust to the people of Canada, in the matter of the treatment of our coals. May I say further that without overlapping, because I deem that to be an important thing, the work being performed in Germany or in England—which will be made accessible to us, because they have given us that promise—we should use every endeavour to educate our men so that we may utilize this great natural resource of ours to the fullest extent.

I have not said a word about transportation, because that is scarcely appropriate here. I do not think the wording of my hon. friend's resolution is important, or whether he presses it or not, but it is important that we should educate the public mind of Canada in secur-

ing the necessary moneys and discovering processes, if need be, that are not being pursued by the scientists of other countries; it is important that we should join our information to theirs and bring about as speedily as possible a realization of the great value that we have in this natural product of ours, namely coal.

Mr. DAVID SPENCE (Parkdale): This resolution, I think, should pass the house, at least in modified form, and I am satisfied that the Minister of the Interior will be willing to accept it. We all appreciate the splendid address given by the minister, and the illuminating information he has presented to us. He is to be commended for the trouble he took in gathering that information.

We are told that Canada is a land flowing with milk and honey, a land of wonderful natural resources. I think that if part of the money voted for research purposes were expended in connection with the development of those resources, it would be money well spent. The minister did not touch on the question of the long hauls and the freight rates in this country, but may I point out that as between coal from Alberta and coal from Pittsburgh or Virginia the haul in one case is 400 or 450 miles and in the other 2,000 miles. If coal can be reduced to a condensed form it can be much more easily and economically carried. There are thousands of people burning oil in the city of Toronto today. It is just as cheap as anthracite coal and causes no dirt in the handling. If we could strike a few big oil wells in this country, or get our coal converted into gas or oil, it would be a splendid thing for Canada.

Instead of the resolution being adopted in its present form I suggest that it be amended as follows:

> That in the opinion of this house the government of the Dominion of Canada should consider the initiation of such measures—

And so on. That will not commit the government to anything. I think the minister would be willing to accept the amendment.

Mr. STEWART (Edmonton): Quite right. I may say to my hon. friend that I did not see the necessity of discussing transportation in connection with this resolution, because it is being dealt with on another motion.

Mr. SPENCE: It is up to this country to develop its natural resources. We have them in abundance, and we should exploit them before strangers secure control of them.

Mr. THOMAS CANTLEY (Pictou): I have listened with very great interest, as I have no doubt we all have, to the discussion. There is no question whatever that the subject dealt with is an important one, but I doubt whether the problem is going to be worked out by any department of the government, bearing in mind that it has been the subject of investigation for more than a generation. In Scotland they have been extracting oil from shale for far more than that period of time. We have been doing that more or less in an experimental way over a period of ten years in New Brunswick and Nova Scotia, and I might tell the hon. member for Ontario (Mr. Kaiser) that if he goes down to Victoria street in Montreal, a few doors north of St. Catherine street, he will see a small unit there actually distilling oils from Nova Scotia shale and torbanite. That experimental plant has been working for a considerable time.

There are practical difficulties in connection with the process. I have listened with a great deal of interest to what has been said by the Minister of the Interior (Mr. Stewart). I am fairly well acquainted with what has been done in Germany and I have been at a good many of the points he has referred to as having visited. I have been associated with a company which for the past ten years has been experimenting with the torbanites and shales of Pictou county which are among the largest and richest deposits in Canada. What are the practical difficulties? One difficulty is to get a process which will be continuous, that is, which will distil the oil from the shale and take care automatically of the refuse. So far as I am aware no process has yet been perfected that will, as an economic unit, meet the conditions which must be met in order to make the process a commercial success.

Another difficulty is the value of the product obtained. While crude oil is selling as low as it is to-day in the southern states and other oil-producing countries on this continent and Europe, it is not possible in my judgment, to produce shale oil or oil from the destructive distillation of coal at a profit, or in other words, to make it a commercial success. Our shales and torbanites—and practically the same thing applies to coal—will give us forty gallons to, in some cases in the richer torbanites, even as much as one hundred gallons per ton. There is also the question how cheaply you can assemble the raw material and what you are going to obtain for the oil and other products.

Another difficulty is in connection with the disposal of gas. If you are going to treat the raw material, coal, close to the point where it is produced, say at the pit head

or on the surface, where there is open cut mining, you have no market for the gases which are produced in enormous quantities. If, on the other hand, you transport the raw material coal to large centres of population where you have a market for the gases, you have to add the cost of transportation. Anyone can readily understand that, with coal or torbanite or shale giving fifty gallons of oil per ton, with a cost even as low as two dollars per ton for your raw material, you have an oil cost of four cents a gallon apart altogether from any other cost incidental to its production. With oil selling at $1.50 a barrel on the Atlantic coast of this country, the proposition is not commercially possible. That is the whole story. Just so soon as the cost of crude reaches the figures of, say, five years ago, the whole question will be solved. In five or six different countries people have been working for a generation, and continue to work, on this matter and there is available an enormous mass of information in the accumulated results of experiments and in actual work.

The minister has referred to what has been done in Germany and he has also made a statement with which I am in hearty accord, namely, that our kinsmen in Great Britain are not one whit behind the Germans or any other people as regards practical knowledge of this important question. As a matter of fact the people of Scotland have been extracting oil from shale longer than any other people in the world; they have been doing it successfully for forty years or more, and they have practically exhausted all the shales that are within four or five hundred feet of the surface of the ground in Scotland. They are now treating in their distilling plants oil brought from Persia because their supply of shale has been exhausted. After distilling oils from the shale they treat them in various ways. They have practically ceased to distil oil from shale owing to the fact that their shales are exhausted, and they are now running their establishments as refineries for foreign oils.

Mr. McGIBBON: What would be the value of the gas produced from a ton of coal?

Mr. CANTLEY: I cannot give the exact value, but in every place it depends upon the rate of consumption or the available consumption. The minister made reference to pulverized coal. Pulverized coal has been used very successfully in quite a number of places. He also made reference to some steamers operating with such fuel. About four months ago the first steamer, so far as I am aware, fitted up to consume pulverized fuel, left the coast of America and crossed over to Great Britain. More than seven hundred engineers and other gentlemen interested in shipping visited that steamer while she was in Great Britain in order to look into that installation. On her return to this country many engineers in Canada and other parts of this continent visited her. She was the first steamer propelled entirely by pulverized fuel that ever crossed the Atlantic and returned. It is expected—and there are good grounds for the expectation—that as a result of the working out of the system in connection with that installation, that method of steamship propulsion will supersede oil as boiler fuel and may supersede the Diesel engine. That is, of course, another question, but in this country the use of pulverized coal is not a new matter. In Cape Breton there are boilers which have been heated with pulverized fuel for more than ten years. The Nova Scotia Steel Company in New Glasgow have furnaces that have been operated on pulverized coal for a matter of eight or ten or more years. There is a feeling in this country that we are behind many people in our application of new ideas. That is not true. There are many cases in which we are on a par with anybody else in the world and the Canadian people as a rule are as bright, capable and progressive as any people in any other country.

I have no doubt that this problem will be solved, but it is a commercial question. It all hinges on the price at which crude oil can be produced and sold by the great producing wells of this continent and elsewhere, and while oil remains at the low figure at which it stands to-day very little practical progress will be made in the distillation of oil from coal, whether it be by high-temperature distillation or low-temperature distillation. Just as soon as the price of oil gets up to say, four or five dollars per barrel at the seaboard you will see coal so treated, as has been suggested by the minister and by others this afternoon. As I said before, it is largely a question of transportation, and the relative cost of crude oil.

Mr. H. E. SPENCER (Battle River): I wish to congratulate the hon. member for Ontario (Mr. Kaiser) upon bringing this subject before the house and also to congratulate the hon. Minister of the Interior (Mr. Stewart) upon the work his department has done, as well as the very valuable work he has promised to-day, to carry out with the support of this house.

While in England a year ago I took the opportunity to gather such information as I could with regard to this process of extracting oil from coal. I visited a plant in

Yorkshire where I obtained a lot of information that apparently the hon. member for Comox-Alberni (Mr. Neill) has not been made aware of up to the present. In England they claim that Germany has nothing on them so far as the process of getting crude oil from coal is concerned, and so sure was the company whose plant I had the pleasure of visiting that they had got the secret of production on a commercial basis, that although the plant I went over was only a ten-ton per day plant, the firm were building several hundred ton per day plants in that country.

As is well known by members of this house, we are losing about eighty per cent of the value of our coal when we burn it in the ordinary grate. It is probable that it is of more importance to Great Britain than to us to get oil from coal, but considering that we have in this country about fourteen per cent of the coal supply of the world, and that parts of this country are badly in need of fuel of some sort, it is very important that Canada should give consideration to the process that these other people have discovered. The factory which I visited had treated no less than some two hundred different varieties of coal in their experiments, and they claimed that they were getting anywhere from twenty to fifty gallons of crude oil from each ton of coal treated, according to the variety. One very valuable thing about this process was that they were able to make use of the very small coal, the dust of the mine, which to-day is considered practically useless.

One of the criticisms that we made a year ago with regard to the proposed establishment of coking plants in this country was that it was difficult to find markets in this country for the huge amount of gas that is produced by such plants. If we can discover some better means of handling coal, as has been suggested by the mover of this resolution, we shall come nearer to using one hundred per cent of the coal in some other form than gas.

I again wish to express my appreciation of the work the department has done and of the work the minister has promised to do with the support of this house.

Hon. ERNEST LAPOINTE (Minister of Justice): I move, Mr. Speaker, that the resolution be amended to read as follows:

That, in the opinion of this house, the government of the Dominion of Canada should consider the advisability of taking steps to bring about the utilization of our deposits of lignite and bituminous coal, by conversion into crude oil and other valuable commodities.

[Mr. Spencer.]

I think that is the drafting which was agreed to by the mover.

Mr. SPEAKER: Does the hon. member accept the amendment?

Mr. KAISER: Yes.

Mr. SPENCE: Is that similar to the one I have?

Mr. SPEAKER: Yes.

Motion as amended agreed to.

GRADING OF WHEAT

PROPOSED REVISION OF STATUTORY DEFINITIONS OF GRADES

Mr. JOHN MILLAR (Qu'Appelle) moved:

That, in the opinion of this house the statutory definitions applying to all contract grades of wheat in the western inspection division, should be amended in such a manner as to provide for including protein as a factor.

He said: In proposing to the house, Mr. Speaker, the resolution that appears on the order paper in my name I wish to impress upon hon. members the fact that if this resolution be carried and put into effect, it would meet a very long-felt want. I cannot remember any time during the last twenty or twenty-five years in western Canada when there has not been an agitation more or less pronounced in favour of having our wheat graded according to its milling and baking value, rather than according to colour. True, during those years, having agitated so long without meeting with any results, the agitation sometimes has naturally not been heard of very much, but since placing this resolution on the order paper I have received a number of letters commending it. One man remarked to me when I was leaving home that if this resolution could be put through the house, it would be one of the finest things for western Canada that had been done for some time.

I might point out, Mr. Speaker, that this is a matter of very great importance since it affects the producers of four hundred million bushels of wheat. During the last twenty or twenty-five years we have had our wheat graded according to standards that have been inflexible, standing still, as it were. There have been slight changes, but they have been only very slight. At the same time, the chemical knowledge of wheat and flour has greatly advanced during past years. Chemists have been at work in this country, in the United States, Great Britain and elsewhere, and they have learned a great deal about the different elements of wheat. It is quite natural, therefore, that millers and bakers should have benefited by that knowledge and

have changed and improved their trade practices. So the time has arrived now when though wheat is sold in Canada and in England on grade, and in the United States on protein content, it is really selected by the representatives of the mills of Canada and Great Britain on that same basis of quality. The world over it does seem that millers are placing a great deal more importance and greater market value on protein content than on any other element in the wheat berry. In a moment I shall read some extracts from authorities which will bear out that statement.

Some people have asked me, after reading the resolution, what is its intent. Is it the purpose of the resolution again to subdivide our present grades of wheat and so multiply the number? That is not the purpose at all; the number of grades will not be increased. The purpose is simply to grade on a different basis. Instead of grading wheat on weight per bushel, variety, and colour—I stress colour—the proposition is that it should be graded as now except on the factor of colour. The proposition is that colour shall be very largely eliminated as it only affects the bran in many cases, and does not indicate the milling or baking value of the wheat. I would substitute for colour the factor of quantity of protein. The effect will be that a considerable quantity of grain would take a higher grade, especially in a year like the present, when during the threshing season or immediately after harvest there comes a spell of bad weather and considerable grain has been affected in the bran and has not then the red colour demanded by the Grain Act definition. Much of the slightly sprouted grain has been proved on analysis, as I shall show later, not to have been damaged in milling quality. It has been held in the United States that this discolouration is not damage. But this grain before it was discoloured was graded No. 1 northern; immediately after discolouration it was graded down to No. 3. If hon. members are inclined to think, "Oh, well, the farmers are always kicking, and this is just another form of it," I should like to ask them how they would be satisfied, after labouring for a year and harvesting their crop, to have their wheat given a classification by the inspection that lowers it in value from $100 to $400 per car, without just cause. There have been times during this winter when the spread was as high as 15 cents between two grades, and 25 cents between No. 1 and No. 3. Wheat such as I have described —millions of bushels, sometimes more than half the crop—is affected in this way. You can see the tremendous importance of this question to the farmers of western Canada, and naturally it causes a great deal of dissatisfaction.

Turning to the Grain Act definition on page 28, I read:

No. 1 Manitoba Northern wheat shall include all varieties of hard red spring wheat equal in value to marquis wheat;—

There we have some guarantee of quality, because any wheat that reaches the high standard of marquis is a good milling wheat. But let me point out that in the case of marquis or any other variety the variation in protein content of the wheat grown in different districts in western Canada is very great. You may find marquis wheat with only from eight to nine per cent of protein, and you may also find it with seventeen or eighteen per cent. I pass on:

—shall be well matured and well cleaned,—

Of course, that is no indication of strength.

—weighing not less than 60 pounds to the bushel—

Everyone familiar with wheat knows that that is not any indication of strength. The pounds per bushel is related to yield of the flour per bushel, that is all; it indicates nothing else.

—and practically free of damaged kernels and foreign grains;—

Now we come to the latter part of the definition:

—shall contain 60 per cent of hard red vitreous kernels.

That is the definition. Is there anything there to indicate strength in the wheat? Yes, there is. Hard red vitreous kernels are likely to be stronger than those that do not come under such a description. But if it is spring threshed wheat or has been subjected to rain and other conditions, it is not then a red wheat. Although the damage is only to the bran, the wheat cannot be described as red, and so it will not qualify to go into No. 1 northern grade.

A case was brought to my attention some time ago which will, I am sure, interest the house. It has to do with a sample of American wheat, but the illustration holds good. It graded No. 1 on the American side of the best variety they grow there. The grain was conditioned to prepare it for milling—not damaged, you may rest assured; not lowered in value, you may rest assured; it was improved and worth more to the milling firm. That grain was submitted to a gentleman who had been a deputy grain inspector in Winnipeg, and he graded it No. 3. Now, that is the condition under which we are marketing our grain at the present time. I do not think

you would find anyone conversant with our grading system prepared to bet that a No. 1 northern sample taken from the inspector's desk cannot be so discoloured in 24 hours that it will grade between No. 2 and No. 3. Yet it has not been damaged. Repeated tests have shown that such grain is as good as, and in some cases better than, grain not so discoloured, a fact that I will read extracts to prove in a few minutes. So at the present time we are grading on a basis that only approximately and in a general way picks out the wheats that are of nearly equal value and classifies it in a way that I contend is not fair.

In order further to persuade hon. members that our grading system is not fair, allow me to read some extracts from high authorities in Canada and the United States. Some may take the ground that illustrations drawn from the United States are valueless in Canada; that is not the case. The grain grown on the south side of the 49th parallel of latitude does not differ from that grown on the north side, the same tests holding good for gluten, for protein, for colour, and for what is termed damage. Consequently the experiences of the United States are of great value to Canada. True, when it comes to the stage where the amount of premium is fixed the conditions differ, but only in the degree of premium. The first quotation I will read is from bulletin No. 37, of the state testing mill, Minneapolis:

No. 1 northern spring wheat flour contained a slightly higher percentage of protein than flour milled from No. 1 dark northern spring wheat.

Let me explain that No. 1 dark northern spring is the fancy wheat of the United States, it is the very best; and yet their second grade proved in this case to be higher in protein.

This suggests the inadequacy of the present system of classifying spring wheats on the basis of their density or the relative proportion of vitreous kernels present. A determination of the percentage of crude protein in the wheat would probably afford a more satisfactory and accurate basis of classification into the several sub-classes of northern spring wheat.

Bulletin No. 18, issued by the Saskatchewan department of agriculture in 1904, sums up the result of their investigations in the following words:

Making due allowance for the fact that the flour from these wheats, Nos. 4 and 5, is somewhat dark, one cannot help reaching the conclusion that the market value is not in keeping with the intrinsic value of the wheats farmers have to sell.

The chairman of a protein committee in an American grain centre says:

The protein runs from 10 per cent to 15 per cent on the different samples, and in this

[Mr. Millar.]

market the colour or quality of the grain is no indication of the protein content.

That is what I have been trying to explain, that in many cases colour does not indicate protein content. Now I come to the evidence given by Dr. Birchard, dominion chemist at Winnipeg, before the grain inquiry commission. I have in my possession a letter from an American authority who quotes Dr. Birchard as a chemist of very high standing, and while I am not personally qualified to pass on that question myself, I have evidence that among chemists Dr. Birchard is eminent. Now Dr. Birchard says:

As regards spring-threshed wheat, which shows very similar baking characteristics as the sprouted wheat, my contention is that under the present system this wheat should be graded very much higher provided it has the required weight per bushel, and is free from any form of damage. It has been contended that spring-threshed wheat, and bleached wheat, which is another form of the same kind of wheat, is liable to be damaged by mould or otherwise.

In a note the following statement is added:

In this connection it should be noted that the United States Department of Agriculture, who have made very extensive investigations along this line, do not consider bleached wheat as damaged. In fact, they have dropped the word "bright" from their definition of the grades after standing three years. I am informed, however, that the definition as regards "brightness" was never actually enforced.

He continues:

I have examined a large number of samples of bleached and spring-threshed wheat, and in no case have I been able to detect any injury from this cause. We have made a very large number of tests on spring-threshed and bleached wheat, and in every case the baking quality is decidely improved. It is true that the weight per bushel is lower at times, and with it the yield of flour, so that in most cases it could not be granted higher than No. 2 northern. The real point I wish to make, however, is that spring-threshed and bleached wheat should not be degraded simply because it is bleached.

Another reason for the demand for high protein wheat is that it is necessary to maintain a uniformity in the protein content of the flour, by maintaining a reserve of high protein wheat at all times. So long, therefore, as this demand exists, something should be done so that a portion of the extra premium should be reflected back to the producer.

In Wheat Studies of the Food Research Institute, published by Stamford university, California, I find the following:

The lack of correspondence between grades and values, due largely to variations in protein content, is indicated by a day's quotations of cash sales of carload lots in leading cash markets such as Minneapolis or Kansas City. Thus on a recent date in Minneapolis, the median prices of No. 1, No. 2, and No. 3 dark northern spring (omitting smutty and mussy lots) were, respectively, $1.70½, $1.68½, and

$1.66\frac{3}{8}$; but the range of price in No. 1 was $1.64\frac{1}{2}$-$1.80\frac{1}{4}$, in No. 2, $1.62\frac{1}{2}$-$1.77\frac{3}{4}$, and in No. 3, $1.56\frac{3}{4}$-$1.77\frac{1}{2}$. In other words, the range of prices within each grade was four or five times as great as the difference between the median prices of No. 1 and No. 3; and the lowest tenth of cars graded No. 1 sold below the median price of No. 3.

"Median", I take it, is the medium or middle price. I may explain that, with one exception, grading in the United States is not done by the state; the grain is graded as it is with us, and after that the test is made by a commercial laboratory which charges a fee. The grain is then actually sold on the grade, plus the protein certificate. There they value the protein so highly that in the price cards issued from time to time by the milling firms a differential in price is made for every one-quarter of one per cent of protein. One-quarter of one per cent of protein will ordinarily net a premium of from one to two and one-half cents per bushel; that is to say, one per cent of protein will represent a premium of from four to ten cents per bushel.

A great deal will be said in this discussion about the quality as well as the quantity of protein, and I frankly admit that quality is of greater importance than quantity. But quality cannot be readily attained. It would be an ideal system that would readily indicate the actual strength or value of wheat, but we have not such a system. An authority, writing in "Milling", Liverpool, on February 20, 1926, says:

> Our American brethren, to use their own expression, "tell the world", and unfortunately as a result one is apt to think that they are the only people actively engaged in research and the trying out of new ideas and methods. Many mills to-day in these Isles are, however, supplementing their previous "rule of thumb" methods by utilizing the protein test. One big stumbling block to British millers appears to be the fact that they are still hoping for the perfect test which will wipe out all others and stand alone in its glory. I am afraid they are doomed to certain disappointment; the wheat berry is far too complicated for that. If, then, the protein test can be considered as a valuable supplementary test, it will be found of proved value, as all who use it regularly know. . . . But since there are, although many do not realize it, great variations in different wheats belonging to the same type, the test can be of great use in selecting the most profitable from a "gluten quantity" point of view.

We are told that our objective should be a milling and baking test, but I believe this to be at present impracticable, and to prove that I think I can do better than give my own opinion; I will read what an authority has to say on the point. I find in the printed proceedings of the Research Council of Canada the following:

> All endeavour so far has failed to disclose any method by which strength may be measured other than the baking test, but this method is unsatisfactory for many reasons. It is inexact, depends chiefly on the skill of the operator, is time-robbing, and when completed it is impossible to express the results numerically or in a way that would be universally understood. Also reliance can scarcely be placed on a single test, and often as many as three bakings must be made to make certain of the results.

That is to say, it is a characteristic of a great deal of western Canadian grain, as well as of some American grain, that it lacks in diastastic or yeast action. Our grain is noted for that. Baking alone would give very unsatisfactory results. Then again wheat that contains, as some reward wheat and some marquis wheat does, 17 or 18 per cent of protein, baked by itself would not give satisfactory results. It is not a satisfactory wheat. The gluten is too rigid. It is what the millers call gluten-bound. Someone may ask what is protein. I am not a chemist but I may give some explanation. Protein is a kind of food that belongs to the class containing nitrogen. That distinguishes it from the starch and other elements contained in the wheat. Although there are many proteins in wheat only two need be considered from the bread making standpoint; that is glutenin and gliadin. These two, when mixed with water in the flour, form a sticky dough, such as we have seen in mother's kitchen. If the protein in the wheat has been of good quality there will be an abundance of stickiness in the dough. If it is not of a good quality, it will "run." It will not hold fermentation, the fermentation period will not last long, and the size of the loaf will not be satisfactory. If the quantity and quality of gluten is sufficient, we will have, when baked, a large well-shaped, fine-texture loaf of bread, and there will be a goodly number of loaves to the barrel of flour, which is an important consideration from the standpoint of the baker. Reading again from the article from Milling, Liverpool, I would like to answer the objection that the quantity of protein is not of much value. This article says:

> In considering protein tests, the objection usually raised is that they are only a measure of quantity and not quality of gluten. But is it really requisite to know the quality of the gluten in the original unconditioned wheat? A superficial examination is sufficient to indicate if the wheat is diseased, frosted or shrivelled, and in these cases the protein test is not required. The quality of the gluten in unconditioned wheat is not of vital importance, since the business of conditioning is to improve and modify the gluten out of all recognition to its original state. How is the miller to

know that he is getting a sufficiency of crude gluten for him to treat? How is he to find out if the reputed high quality or high-priced wheats are really valuable to him, in that what he requires is a quantity of gluten, whose quality within fairly wide limits is matterless, as he will be able to alter and correct same by the experienced use of his conditioners? What is required, then, is some test that will accurately give him the percentage of gluten or protein in the wheat that he is able to obtain. Users of the protein test will agree that the test can be made to yield this desired information in a most reliable and accurate manner, as the question of the personal factor does not enter into the test as it does in such an operation as washing out glutens. Unfortunately the test can really only be carried out by a chemist with suitable apparatus and facilities; probably this is the reason the test is not so popular in this country as it is in America.

I have already touched on the fact that protein is not considered in our present inspection system. Because it is important to convince this house that there is a strong demand throughout the world, amongst the countries that are using our wheat, for protein, I will read further extracts:

The fact that the Minnesota people have the advantage of a large experimental flour mill capable of handling wheat in carload lots and of storing 2½ cars at a time, makes this work of special value. The mill in question is 32 ft. wide by 60 ft. long and 4 stories high with a full basement. The building and equipment, complete, cost about $80,000 but, by virtue of an arrangement whereby the state institutions purchase their flour from this mill, the annual cost of operating latter comes to only around $10,000.

Then I quote from the Northwestern Miller, Minneapolis, Minnesota, February 13, 1926, as follows:

Because Montana wheat is high in protein content, and therefore in demand by millers for combining with soft wheat to make a high quality flour, growers in this state have been agitating movements since last fall whereby a system of grading will be established by the Department of Agriculture with the protein content as a basis.

Then further on:

In the last few years, however, considerable advance has been made in the understanding of this factor. . . . Viscosity may now be used as a measure of gluten quality.

Viscosity is a test of the quality of gluten. That method is not in common use as yet. It is used to some extent in the states, and has been found quite accurate, but if it comes into common use it will overcome the objection we frequently hear that when you have the quantity gluten you have not all you need. What you want is the quality. Now this measures the stickiness of this sticky mass. Then I read from the Food Research Institute, Stamford university, California, February, 1926:

[Mr. Millar.]

Nevertheless, all things considered, the amount of gluten, that is, of protein, seems in the light of the present-day knowledge to be the nearest approach to an ideal index of baking strength available. The baker who depends upon it alone will now and then be deceived. If, however, he knows the variety and place of origin of the wheat from which the flour is milled, he will less often be misled.

Some may ask where will we find our market. That is an important question and must be answered satisfactorily if we are going to institute this method of handling wheat. If you go to Winnipeg or to any of the officers of the large milling concerns, they may be willing to show you their map and give you an idea of what they think of the high qualities of protein. They are not employing highly paid chemists to gather information as to whether or not there is starch in the wheat, but they have highly paid chemists at work in Winnipeg who do nothing else but select grades of strong wheat containing a high percentage of protein. They have their maps illustrating the different grades. I saw one as I was passing through Winnipeg on the trip down. In that case there were six different coloured pins on the map. A yellow pin indicated the shipping districts where the protein was the weakest. Then there was a green, a blue, a white and a red—six in all. At many shipping points there were four pins, indicating four different classes of protein from the same shipping point. Protein is produced in semi-arid or arid districts from certain varieties of wheat that are more likely to be high in protein content than others. Other factors have an influence, such as the amount of nitrogen in the soil, and whether or not there is a strong soil. Sometimes at the same shipping point you may find grain grown on sandy soil or in a district where there was excessive rain, and perhaps ten miles away there may be altogether different conditions; and you may get nine per cent protein from one car of wheat and fifteen per cent from another.

Now that the Canadian miller realizes the value of the protein content in wheat they are buying carloads of the right quality at very great expense. There is a market for our protein now, but they will not pay a premium for it until the free supply has disappeared. They are doing in Canada exactly what they did years ago in the United States. We are told that at a certain stage in their development some of the millers realized that protein was an important factor in the wheat, and they quietly picked up all the cars of high protein wheat they could obtain. Then the time arrived when a premium was offered, and some millers even

began to guarantee a certain percentage of gluten. All we are getting is the standard price and it is very far from the actual milling value of the wheat. Great Britain gets wheat from all over the world. She gets soft wheat from Argentina and from the United States, and a comparatively strong wheat from Australia. If Russia were shipping wheat England would get a strong wheat from there, but they can secure no large supply of strong wheat except from Canada. English millers want that wheat; they are picking it up to-day because of its strength. That term includes not only quality but quantity. There is considerable Canadian wheat milled in the United States with about 30 per cent of American soft wheat added. In this way while they pay a duty on the offal, they receive a 99 per cent drawback duty on the flour that is exported.

I am told that my time is up, and in resuming my seat I would express the hope that the hon. member who is speaking at six o'clock will not move the adjournment of the debate.

Mr. M. N. CAMPBELL (Mackenzie): May I first congratulate the hon. member for Qu'Appelle on his very able presentation of this all important matter, and for the careful and patient study he has given to the consideration of the question of the grading of grain according to its milling value.

This question, Sir, is something that has agitated the farmers of western Canada for very many years. As early as 1903, in response to demands from the agricultural population, the government of the Northwest Territories undertook to have an investigation into the question. In the early part of 1904, Professor Harcourt, chemist of the Ontario Agricultural college, was commissioned by the Agricultural department of the territories to undertake this investigation. Professor Harcourt secured samples of the various grades of wheat that could be obtained in western Canada at that time. These were done up in packages and shipped to the chief grain inspector at Winnipeg. The samples included wheat all the way from "No. 1 hard" to "feed." I will just read from a book called Deep Furrows some of the records connected with this investigation:

They were milled with exceptional care to prevent mixing of the various lots and the flours obtained were put through three different baking tests.

The conclusion reached was that there did not appear to be much difference in the value of the different grades of wheat. Even the "feed" sample proved by no means useless for bread-making purposes, either in yield or quality; the only thing that rendered it less available for bakers' use was its darker colour. All who saw the loaves were surprised at the quality of this bread.

These tests seemed to confirm the suspicion the farmers had always had, that the difference in the price between No. 1 hard and feed was entirely out of line with the actual intrinsic value of the wheat. For instance, reading again from the record:

From No. 1 hard the amount of flour was 70.8 per cent, as against 68 per cent from the No. 4 grade.

In 1903 there was a very severe frost on the prairies which seriously damaged the grain. There was also a great deal of wet weather that fall, consequently much of the grain was damp and tough. The government thought that perhaps it was not fair to take the 1903 grain as a test, so they did the same work again next year; and with respect to this I read again from the book already quoted from:

The second tests practicaly confirmed the work done the previous year. The milling, chemical and baking tests failed to show very wide differences in the composition and milling value of the grades submitted. The conclusion reached was that the difference in composition and milling value was nearly as great between samples of any one grade as between the various grades.

That is very important. Even the difference between certain classes of No. 1 wheat may be just as great as the difference in the milling qualities of No. 1 itself and the lowest grade of wheat.

In 1923 this government appointed a commission to inquire into the handling of our grain. Professor Rutherford, who was a member of that commission, was sent to Europe and he studied the situation over there. He visited the British Isles, where he spent a considerable time, and he also visited various points on the continent of Europe. Professor Rutherford's report is attached in the appendix to this commission's report which was presented to the house in 1925. He points out what we all know, namely, that our wheat may be subdivided into three main divisions. First, there is the hard red spring wheat which is grown in the prairie provinces and which, because of its high protein quality and quantity combined, is probably the very best wheat in the world for bread-making. In the second place, there is the durum wheat which is used largely in the manufacture of macaroni. Then there are the softer Ontario wheats, which are more suitable for biscuits, scones and various classes of pastry.

The old country millers, all of whom, I may say, employ chemists and who have, in conjunction with their mills, laboratories

for the testing of this grain, pointed out one very important matter to Professor Rutherford. They stated, first, that Canadian grain received direct from Vancouver is of a higher quality than grain of a similar grade carrying the same certificate received from Canadian Atlantic ports. Further, they pointed out that grain received from Canadian Atlantic ports is of a considerably higher quality than grain carrying similar grade certificates received from United States ports. It is quite obvious that the difference is due to the mixing. There is probably no mixing so far at Vancouver. We know that our grain in passing through the United States—although it is bonded and carries a Canadian grade certificate, which accompanies it to the old country—is being constantly mixed in transit through the United States and our grades are thus debased. Let me read from Professor Rutherford's report in which he points this out. He states:

> Manitoba one northern via Vancouver is worth a shilling a quarter over Atlantic, and Vancouver threes have been nearly as good as Atlantic twos, and fours as good as threes, or nearly so.

Then he goes on to quote the millers. He says:

> We set our prices according to what we expect to receive, based on past experiences.

Therefore we sell our grain in the old country on its milling value, because the millers base the price they will pay for a certain No. 1 or No. 2, as the case may be, on the experience they have had in the past with that particular grade. On page 185 of this report Professor Rutherford states:

> Among the millers interviewed in the old country on this question, the preponderance of opinion was to the effect that during the last ten or twelve years there has been a slight gradual lowering of the milling value of Canada's wheat.

That, I think, is something we should all take into consideration because it affects the sale of our wheat in competition with that of other countries. On page 186 he says:

> No doubt the mixing of grain, as it has been carried on in the past, has played a part in reducing the quality of grain through Atlantic ports.

Professor Rutherford also visited many of our Canadian mills, and on page 187 he says:

> From one of the large Canadian mills in western Canada, I obtained a report on the protein content of 114 cars of one northern wheat, ranging from 10.8 per cent to 16.5 per cent.

Any one can see what a difference there is in the intrinsic value of the wheat. Although it was all No. 1, yet it ranged in protein content from 10.8 per cent to 16.5 per cent.

[Mr. Campbell.]

I have under my hand a synopsis of the report of the United States Department of Agriculture for the past year. In dealing with this question Secretary Jardine says:

> Desirable milling wheat for domestic consumption gave returns to the grower at least fifteen cents a bushel above the value of export grades. At Kansas City premiums for choice hard red winter wheat ranged as high as thirty-five cents a bushel. A car of wheat marketed at Minneapolis showing 16 per cent protein commanded a premium of sixty-five cents a bushel.

That is sixty-five cents above the regular price for that particular grain and under our system that might have been lost entirely to the grower. A few years ago, in a district not very far from my home, a farmer sent two samples of No. 3 wheat grown on his own farm to Minneapolis to have them inspected and tested for their protein content. One of those was grown on summer fallow, the other on spring ploughing, and nothwithstanding the fact that under our system they graded the same No. 3 wheat, a miller in Minneapolis offered this man a premium of twenty-six cents a bushel for the wheat grown on summer fallow. Hon. members can understand what this actually means to our farmers.

A few years ago the hon. member for Qu'Appelle, some other hon. gentleman in this section of the house and myself called on the Minister of Trade and Commerce and suggested to him the establishment of a laboratory at Winnipeg to carry on this work. The minister agreed to that and Doctor Birchard, I think, has been placed on that particular work. But Doctor Birchard has been very much crippled in his work. I understand he has not sufficient staff; he has not the proper equipment to carry out this work, and I should like to impress upon the minister the necessity of his having sufficient staff with equipment to carry on the work of that laboratory so that any farmer who wishes to determine the protein content of his wheat can send a sample to Winnipeg and find out, before it leaves his farm, whether it is premium wheat or not. I quite realize the impossibility at the present time of devising any system whereby wheat at the local elevator can be tested for protein content. Mr. Robinson, of the Board of Grain Commissioners, speaking at the recent convention of the United Farmers of Alberta, is quoted in the Western Producer as making the following statement:

> There are now 573 recognized grades of wheat, and including the tough and damp, the total is in the neighbourhood of 1,700 grades.

One can therefore quite understand what we would have to face if we tried to create any more grades. At this time I am not altogether in favour of establishing a system by statute. I hardly think it is workable. In a sense I think to a large degree the farmers' grievances have been met by the formation of a wheat board, that is, the premium grain is all in the pool, and the premiums received are distributed amongst the farmers.

Mr. MILLAR: Is it not a fact that those who produce the fancy grades do not receive the fancy prices?

Mr. CAMPBELL: I was just going to point that out. At the present time, of course, the farmer who produces the premium grain does not get the fancy price, but it is a little better than it was before. It is distributed amongst them all. The grievances have not been fully met, but they have been met to a degree, and in so far as the pool distributes these tokens back to the farmer, by creating competition it does force the grain companies to do the same perhaps to a greater or less degree. But as I said before, it is impossible to devise any system for judging the milling value of grain at the local elevator. It can be done at Winnipeg, but I think the time is just a little too soon to create a statutory grade. I would like, however, to see this resolution go before the agriculture committee where representatives of the wheat pool, the grain companies, farmers' organizations, millers and all others interested can appear and present their views. There is a certain amount of research work being done at the present time, and I hope the minister will agree to sending this resolution to the committee on agriculture.

Mr. MILLAR: Would the hon. member please read the matter I refered to on page 159 of the royal grain inquiry commissioner's report?

Mr. CAMPBELL: Dr. Rutherford in his report says:

> I asked the standholder if he knew the statutory definition of Manitoba No. one northern. His answer was "No". He liked to trade on the Canadian certificate final. It gave them the least trouble. I asked him if it would be an advantage in selling Canadian wheat if he would guarantee the miller a grade with say 14 per cent protein. "It would", he agreed, "be of advantage to the miller to have such information and more, if possible".

Mr. SPEAKER: Does the hon. member wish to continue the debate?

Mr. CAMPBELL: Yes.

Mr. SPEAKER: Then the resolution will retain its precedence on the order paper.

BUSINESS OF THE HOUSE

THE BUDGET—PRIVATE MEMBERS' DAYS

Right Hon. W. L. MACKENZIE KING (Prime Minister): Before the house rises, with the permission of hon. members I should like to say a word in regard to to-morrow's business. It is understood that the budget will be brought down by the Minister of Finance (Mr. Robb) early in the afternoon. On Monday night, I think it was, the house agreed unanimously to this course being adopted, and the intention of the government was to ask the house to allow the debate on the budget to have precedence over all other business until disposed of. I have been informed by some hon. members that it would suit their convenience better if after the Minister of Finance delivers his budget presentation the debate on the budget were not to be proceeded with until Monday of next week. The government is anxious to meet the desires of hon. members in that regard, and I therefore wish to intimate at the moment that our intention after the budget has been presented is to return to the regular order of business on Thursdays.

I had undertaken on behalf of the government later on to give a day for private members' day if we exhausted Thursday in a discussion of the budget, but I now would like to modify the undertaking of the government in that particular so as to give on some subsequent day a period of time corresponding with whatever time is taken up by the Minister of Finance in presenting his budget. I think hon. members will see that that is fair.

Mr. CAHAN: The leader of the opposition before leaving the house told me that he wished to agree to the adjournment of the budget debate to-morrow afternoon until Monday, but he also hoped that the government would not depart from the suggestion it had made before, and that although part of to-morrow afternoon and to-morrow evening may be given to a discussion of private members' resolutions, the government would not depart from giving another day, as otherwise it would be holding private members down to practically four days during the whole session.

Mr. MACKENZIE KING: I think I may say that there will be every readiness to give some additional time to private members. We shall not exhaust private members' rights by taking next Monday to go on with the debate on the budget.

At six o'clock the house adjourned, without question being put, pursuant to standing order.

Thursday, February 16, 1928

The house met at three o'clock.

PENSIONS AND SOLDIER PROBLEMS

SPECIAL COMMITTEE TO INQUIRE INTO QUESTIONS CONCERNING RETURNED MEN AND DEPENDANTS

Right Hon. W. L. MACKENZIE KING (Prime Minister): A special committee was appointed yesterday to consider problems affecting returned soldiers. The number comprising the committee was fixed at seventeen. Apparently seventeen is an infraction of the rule, which would limit the number to fifteen. I move, therefore:

That the provision of standing order No. 65, under which no special committee may, without leave of the house, consist of more than fifteen members, be suspended in connection with the resolution passed by this house on February 15, appointing the special committee on pensions and returned soldiers' problems.

Motion agreed to.

CRIMINAL CODE AMENDMENT

Mr. E. R. E. CHEVRIER (Ottawa) moved for leave to introduce Bill No. 45, to amend the criminal code (greyhound races).

He said: The object of the bill is to amend the criminal code for the purpose of placing greyhound racing on the same basis as horse racing as now carried on in Canada.

Motion agreed to and bill read the first time.

QUESTIONS

(Questions answered orally are indicated by an asterisk).

BUTTER IMPORTATIONS

Mr. CAYLEY:

1. From what countries is butter being imported into Canada?
2. How many pounds were received from each country?
3. What was the increase of total imports of butter in 1927 over 1926?
4. What were Canadian and British prices of butter for 1927?
5. How many pounds of butter were exported out of Canada in 1925, 1926 and 1927, respectively?
6. Can butter be produced more cheaply in countries exporting butter to Canada than in Canada? If so, why?

Mr. RINFRET:

1, 2 and 3.

Quantity of Butter imported into Canada, by countries, years ended December 31, 1926 and 1927, with increase or decrease, 1927 compared with 1926.

Countries from which Imported	Years ended December 31 1926 Pounds	1927 Pounds	Increase + Decrease— 1927 compared with 1926 Pounds
United Kingdom	2,798,697	2,007,830	— 790,867
United States	99,127	104,236	+ 5,109
Argentina	62,720	.....	— 62,720
Australia	2,995,740	376,096	— 2,619,644
Barbados	8	.....	— 8
Bermuda	448	.....	— 448
Fiji	.....	4,760	+ 4,760
Italy	.....	9	+ 9
Newfoundland	110	410	+ 300
New Zealand	3,193,382	8,714,985	+ 5,521,603
Syria	1,650	490	— 1,160
Trinidad and Tobago	.....	3	+ 3
Total imports	9,151,882	11,208,819	+ 2,056,937

5. Exports of Butter from Canada

(Calendar Years, 1925, 1926 and 1927)

	1925 Pounds	1926 Pounds	1927 Pounds
Canadian Produce	26,646,535	9,814,000	2,696,000
Foreign Produce	840	800	2,100
Total Exports	26,647,375	9,814,800	2,698,100

6. In the case of New Zealand—probably yes. As to other countries—not in a position to express opinion.

Butter can probably be produced more cheaply in New Zealand than in Canada owing to the fact that lush pastures are available there for twelve months in the year, thus saving a great deal of work harvesting forage and quite possibly lowering production costs as compared with Canada.

COST OF CARRYING NEWSPAPERS

Mr. GEARY:

1. What was the cost of carrying newspapers by mail during each month from January 1, 1926, to date?

2. What was the revenue derived from the carrying by mail of newspapers during each month from January 1, 1926, to date?

3. On what date did the reduced rates authorized by parliament in 1927 come into effect?

Mr. VENIOT:

1. The cost of carrying newspapers is approximately $8,500,000 per annum.

2.	1926	1927
January	$127,644 27	$149,104 06
February	125,221 42	146,227 09
March	130,067 13	149,011 25
April	137,300 93	133,038 97
May	138,300 57	134,572 35
June	136,301 31	131,505 61
July	133,156 25	114,124 25
August	134,284 35	116,248 57
September	138,322 94	118,358 47
October	149,872 61	127,114 96

December	156,868 92	131,510 89

3. 16th April, 1927.

PRIVILEGE—MR. WOODSWORTH

On the orders of the day:

Mr. J. S. WOODSWORTH (Winnipeg North Centre): I desire to direct attention to an entirely misleading, I may say, false, statement, with reference to what I said the other day during the debate on national banking, which is contained in the Toronto Evening Telegram of February 14 in what purports to be an account of the proceedings of that date, despatched by the special staff correspondent. I find that under the guise of a report a vicious attack on myself. Under the special heading "Rebellion Suggested" I read:

> But his language grew stronger as he went along, and he pictured the whole of the national credit drifting into the hands of two or three men and then recorded his sad conviction that, "If anything would justify armed rebellion against the established condition of affairs, I think such conservation of the banking system is the one thing that would justify it."
>
> Strange, isn't it, how these peaceful little chaps—most of them pacifists—are always ready to talk red rebellion. Makes you wonder, if said rebellion ever did come, whether they'd fight or raise wheat to feed the fighters.

All that I said in this connection will be found recorded in Hansard at page 389.

Some hon. gentlemen may remember a rather remarkable statement made during the election of 1925 by Sir Clifford Sifton. He said:

> "We are rapidly approaching that condition in which two or at most three banks will be doing the whole of the business of the Dominion and you will have the spectacle of about three men sitting on the whole of the funds of the people of Canada deposited in the banks and deciding to whom they will loan these funds."

And again:

> "If anything would justify an armed rebellion against the established condition of affairs I

think such a consummation of our banking system is the one thing that would justify it."

An hon. Member: Sedition.

Mr. Woodsworth: Somebody suggests that this is sedition. Well, such an utterance might be seditious in the mouths of some of my comrades in the working class, but I suppose it is comparatively safe for Sir Clifford Sifton to make this statement.

I suggest that the members of this house ought in some way to be protected against misrepresentation of the proceedings of the house and of what is said by those who take part in them.

ROYAL ARCHITECTURAL INSTITUTE

On the orders of the day:

Hon. J. W. EDWARDS (Frontenac-Addington): May I call attention to an article appearing in the Ottawa Evening Journal of yesterday?

Some hon. MEMBERS: Oh, oh.

Mr. EDWARDS (Frontenac): I may say for the information of my hon. friends opposite that this is not a comic journal. The article in question refers to a very important convention which is to be held in this city to-morrow and the next day, namely, that of the Royal Architectural Institute of Canada, with representatives from coast to coast. I see in this article that the only person mentioned as representing the Department of Public Works is a gentleman holding a very minor position. This is an important convention and I should like to know from the Minister of Public Works (Mr. Elliott) whether his department will be represented by its chief architect or, if not by him, at least by some of its senior architects.

Hon. J. C. ELLIOTT (Minister of Public Works): The department will be properly represented.

Mr. MACKENZIE KING: I may add for the information of my hon. friend that the government as a whole has arranged to receive a deputation from this particular organization. They are to meet the government as a body.

SOLDIERS' CIVIL RE-ESTBLISHMENT

REPORT OF ROYAL COMMISSION

On the orders of the day:

Hon. R. J. MANION (Fort William): I desire to ask a question of the Minister of Soldiers' Civil Re-establishment (Mr. King, Kootenay). We have seen a good deal in the press within the last two months about the Hunter commission, which is considering questions relating to the Department of Soldiers' Civil Re-establishment. Would the minister kindly tell the house when the report of the Hunter commission and the evidence connected therewith will be tabled for the information of members?

Hon. J. H. KING (Minister of Soldiers' Civil Re-establishment): I will have the report tabled at the next sitting.

Mr. MANION: And the evidence also?

Mr. KING (Kootenay): If the evidence is required I will include it.

Mr. MANION: I should like to have the evidence also as many of us are interested in this question.

RESTIGOUCHE RIVER—SMELT SEASON

On the orders of the day:

Hon. G. B. JONES (Royal): Mr. Speaker, I tried to get in touch with the Minister of Marine and Fisheries (Mr. Cardin) before the house opened, but I could not locate him. I desire to bring to his notice that the fishery overseer on the Restigouche river in New Brunswick has notified the fishermen and the buyers that the smelt season will not be extended; whereas on the other side of the river in the province of Quebec, under exactly similar conditions, the season has been extended. I should like to know the reason for this discrimination.

Right Hon. W. L. MACKENZIE KING (Prime Minister): The Minister of Marine and Fisheries is not in his seat at the moment. I will bring the matter to his attention.

ACQUISITION OF ALASKA PANHANDLE

On the orders of the day:

Mr. W. G. McQUARRIE (New Westminster): Mr. Speaker, might I be permitted to ask the Prime Minister if he has received a request from the government of the province of British Columbia to negotiate with the United States for the acquisition by Canada of the panhandle of Alaska; and if so, will he consider the request?

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, I am not aware of such a request having been received. When received we will give it consideration.

On motion of Mr. Mackenzie King, the house proceeded to government orders.

THE BUDGET

ANNUAL FINANCIAL STATEMENT OF HON. J. A. ROBB, MINISTER OF FINANCE

Hon. J. A. ROBB (Minister of Finance): Mr. Speaker, by unanimous consent between

the leaders of the different parties, which we on this side appreciate very much, I move:

That Mr. Speaker do now leave the chair for the house to go into committee of ways and means.

Mr. Speaker, seldom have the annual statements from leaders of finance and industry throughout Canada so generally reflected such progress and prosperity as that of the year 1927; and the statement of the nation's business, which to-day I have the honour to present, will show conclusively that, notwithstanding our annual reductions in the rate of taxation, our revenues have been ample to meet fixed charges, take care of the ever increasing needs of a growing country, and provide also for a reduction of debt.

Public Accounts 1926-27

In the budget speech of February 17, 1927, it was estimated that the net debt would be reduced by some $31,366,000. The public accounts recently tabled show that the net debt was actually reduced by $41,896,729.33, or some $10,500,000 more than estimated. This was due to the practice which has always been followed when estimating revenues and expenditures.

That there should be no uncertainty as to the correctness of the public accounts of this Dominion, I recommended to the treasury board that an independent audit be made of the balance sheet of the public accounts as of March 31, 1924, 1925, 1926 and 1927. The well-known firm of chartered accountants, P. S. Ross & Sons, of Montreal, Toronto and Winnipeg, were engaged and instructed to make a complete audit of the departmental accounts in question, and on the fifth of December last their certificate which is printed on page xiv of the public accounts for the year 1926-27, was received. Their report confirms the accuracy of the public accounts as submitted to parliament and certified that the reduction in the net debt during the period in question was $105,942,498.65.

Fiscal Year 1927-28

Revenue

With the permission of the house may I place on Hansard a comparative summary setting out the actual revenues and expenditures by services for 1926-27 and the corresponding estimated revenues and expenditures for the present fiscal year.

Revenues and Expenditures

Revenues Ordinary Revenue	Actual 1926–27	Estimated 1927–28	Increase	Decrease
Taxation Revenue—				
Customs Import Duties	$141,968,678	$153,600,000	$11,631,322	$
Excise Duties	48,513,160	57,000,000	8,486,840	
War Tax Revenues—				
Excise Taxes (Sales, Stamps, etc.)	105,613,160	88,000,000	.....	17,613,160
Income Tax	47,386,309	55,300,000	7,913,691

Miscellaneous Non-Active Accounts	462,596	.....	.....	462,596
	$355,634,688	$364,665,000	$24,134,304	$15,103,992
			15,103,992	
			$ 9,030,312	
Surplus of Revenue over Expenditure	$ 44,817,792	$ 54,815,000		
Assets written off as Non-Active—				
Soldier Land Settlement Loans	2,921,063	14,000,000		
Seed Grain and Relief—Advances (Department of the Interior)	.....	2,000,000		
Net Decrease of Debt	$ 41,896,729	$ 38,815,000		

From this summary it will be seen that we estimate our ordinary revenues for the present fiscal year as $412,580,000, which, with special receipts of $6,900,000, (including $6,767,000 from reparation payments, of which $3,790,000 is in the nature of a delayed settlement) will give a total revenue for the year of about $419,480,000, an increase of $19,000,000 odd over the revenues for the year 1926-27.

We expect to receive from customs duties $153,600,000, an increase of $11,600,000 over the previous year; excise duties $57,000,000, an increase of $8,400,000; income tax $55,300,000, an increase of $7,900,000; interest on investments $10,190,000, an increase of $1,630,000; post office $31,000,000, an increase of $1,930,000; Dominion lands and certain other sources of revenue $8,530,000, an increase of $161,000.

The revenue services which will show decreases are,—excise taxes (sales, stamps, etc.) $88,000,000, a decrease of $17,600,000 under the previous year; delayed business profits tax $640,000, a decrease of $70,000; miscellaneous services $8,320,000, a decrease of $180,000.

Expenditures

The estimated expenditures for the year are: ordinary expenditures, $333,730,000;

capital expenditures, $21,405,000; special expenditures, $7,115,000, including $3,843,000 to the Canadian National and other railways on account of the Maritime Freight Rates Act of 1927. In addition there are loans in cash to the Canadian Government Merchant Marine of $1,000,000 and to the Quebec Harbour commission of $1,415,000. As these loans are carried in our accounts as non-active assets, the amounts are included as expenditures for the year. The total expenditures will therefore be $364,665,000, being an increase of $9,030,000 over expenditures for the previous year.

Mr. Speaker, with the consent of the house may I also place on Hansard:

First: Statement of our estimated ordinary revenues, by services, together with the percentage of such services to the total of the ordinary revenues as estimated.

Second: Statement of the estimated expenditures, by services, for the present fiscal year, showing the various amounts and their percentages to the total expenditures.

Estimated Ordinary Revenues
For the Fiscal Year, 1927-28

Special War Tax Revenue	Amount	Percentage of Total Revenue
Excise Taxes (Sales, Stamps, etc.)	$ 88,000,000	21.33
Income Tax	55,300,000	13.40

	$165,535,000	45.40
Total Estimated Expenditure on Government Services	$358,207,000	98.23
Other Expenditures		
Maritime Freight Rates Act—Estimated Amount required—		
Canadian National Railways	$ 3,395,000	.93
Other Railways	448,000	.12
Home Bank Depositors Relief Act	200,000	.06
Loans to Quebec Harbour Commission	1,415,000	.39
Loans to Canadian Government Merchant Marine	1,000,000	.27
Grand Total	$ 364,665,000	100

Surplus $54,815,000

In the statements just tabled it is estimated that ordinary revenue will amount to $412,580,000 which, together with special receipts of $6,900,000, gives a total estimated revenue of $419,480,000. After deducting from this the estimated total expenditures of $364,665,000 there will be a surplus of revenues over all expenditures of $54,815,000.

[Mr. Robb.]

Net Debt Reduced $38,815,000

After provision has been made to the extent of $16,000,000 for the writing down of certain soldier land settlement loans and other assets, the reduction in the net debt will be

$38,815,000. Thus, during the five-year period ending 31st March, 1928, after providing for writing down certain assets, we will have succeeded in reducing our net debt by $144,700,000.

Chapter 68 of the statutes of 1927 amended the Soldier Land Settlement Act of 1919, and provided for the revaluation of loans to settlers for the purchase of lands. The soldier settlement board advise the Department of Finance that the total amount likely to be written off through this revaluation will be about $8,000,000. We propose reducing our assets as shown in the public accounts at the close of the present year by this sum of $8,000,000. The soldier settlement board also advise that there will be a further loss on the re-sale of stock and equipment, as well as on farms which have reverted to the board. Certain of these farms have been resold, but some 3,000 properties remain to be disposed of. In the opinion of the board a loss will eventually be sustained in connection with the assets referred to of approximately $6,000,000 which sum the government proposes to write off as a non-active asset.

It has also been deemed advisable to reduce by some $2,000,000 active assets now carried as seed grain and relief advances, transferring this amount to non-active assets. These accounts have been running for many years and a certain number are now considered of doubtful value.

Outstanding Public Debt.

Representations have been made in this house and elsewhere that, through a sinking fund properly invested, provision should be made for retirement of our total debt within a limited number of years. I do not intend to go into the merits of this proposal beyond remarking that there are opinions both for and against the adoption of a fixed plan. In the final analysis it must be recognized that a net surplus of revenues over all expenditures is the only effectual sinking fund for debt retirement. In 1845 an eminent British economist, McCulloch, dealing with the question of sinking funds and taxation, declared:

> The greater productiveness of industry and the greater well-being of the community are the real sinking funds which a wise government should exert itself to build up and encourage.

In recent years we Canadians have succeeded in reducing annually both debt and taxation; each reduction of interest bearing debt has enabled us to reduce taxation further, and while welcoming any workable plan that will ensure the retirement of our national debt, I submit that until Canada is nearer the pre-war rate of taxation, annual reduction of taxes is as important as reduction of debt. Our policy is to reduce both.

Retirement of Maturing Loans

Mr. Speaker, total maturities for the current fiscal year, amounting to $100,505,650, were provided for as follows:—

On the 1st and 15th November, 1927, the 5½ per cent renewal loan of 1922 amounting to $29,068,400, and the 3-year 4 per cent notes amounting to $8,000,000 matured and were redeemed in cash.

On the 1st December, 1927, a portion of the 5½ per cent 1917 victory loan, tax-free, amounting to $63,437,250 matured. We were able to redeem $18,437,250 in cash. To meet the balance we issued 4 per cent 3-year treasury notes to the amount of $45,000,000 which we sold direct to the chartered banks of Canada at par. All of the chartered banks subscribed to this issue. The sale of these treasury notes marks the first financing since 1912 which the Dominion government has effected at a net cost as low as 4 per cent.

The saving in interest resulting from these transactions will be $3,607,000 annually. An additional advantage will accrue from a further reduction in the amount of outstanding tax-free bonds, as the December 1st maturity of $63,437,250 carried exemption from taxation.

Guaranteed Securities

Canadian National Railways

Financial requirements of the Canadian National Railways were met by an issue of $65,000,000 4½ per cent 30-year bonds dated July 1, 1927, guaranteed by the Dominion of Canada.

This issue was made to provide for the following authorized commitments of the railway company:

$20,000,000—for the refunding of a like amount of 4 per cent Dominion guaranteed 3-year notes which matured July 1st, 1927, as authorized by the Canadian National Refunding Act 1927 (chap. 27).

$15,000,000—for the funding of a temporary loan obtained by the company to finance capital expenditures and miscellaneous maturing obligations as provided for in the railway appropriations for the previous year, 1926-27. The vote for the year was $31,000,000; $10,000,000 was advanced by the government as reported in the budget speech of last year and $15,000,000 was borrowed temporarily as authorized by vote 372, Appropriation Act, 1926-27, which vote also authorized the issue and guarantee of securities to take up the temporary loan.

$16,600,000—to provide for expenditures authorized in the railway appropriation for 1927-28 for general additions and betterments and miscellaneous maturing obligations as provided for by vote 408, Appropriation Act, 1926-27—"Loans to Canadian National Railway Company."

$4,000,000—for capital expenditures in connection with the Toronto viaduct scheme as authorized by the legislation of 1924 and 1925.

$9,400,000—on account of construction of various branch lines as authorized by the special acts passed in 1924, 1925 and 1927.

Montreal Harbour Commissioners

During the year, the government guaranteed a demand obligation of the Montreal harbour commissioners for $4,000,000 in connection with the financing of the South Shore bridge, as authorized by Chap. 58 of the Statutes of 1924. This, together with a guarantee for a similar amount, previously given, brings the total of guaranteed obligations issued in connection with this project to $8,000,000.

Canadian National (West Indies) Steamships Ltd.

Parliament last year authorized the government to guarantee securities of the Canadian National (West Indies) Steamships Limited to provide for the construction of steamships for the West Indies service. A guarantee to the amount of $8,000,000 has been executed but actual borrowing will take place only to meet cash requirements as construction proceeds. The company has arranged for bank advances as collateral for which the guaranteed securities are to be pledged.

The international trade of Canada is well maintained. Our fiscal year does not end for some weeks but the records for the nine months ended December 31, indicate a substantial favourable balance. This is particularly note-worthy at a time when industrial expansion and undertakings of various natures create a demand for machinery, construction material and other necessary articles not procurable in Canada. Imports of necessary supplies of raw materials for further manufacture are also on a larger scale. As we look back to the years when railways were being extended across the Dominion and western Canada was being settled, it will be recalled that there were annual unfavourable balances of trade, the adverse balance in the calendar year 1913 being $222,000,000, one of the highest in our history.

The League of Nations in 1927 made an interesting comparison of the international trade of the world and for this purpose took the calendar years 1913 and 1926. It was found that in 1913 only three nations had favourable trade balances. In that year the United States had a favourable trade balance of $7.13 per capita, Argentine $6.78 per capita, and British India 60 cents per capita. Thirteen years later there were six countries with favourable balances of trade, and Canada, which in 1913 had an unfavourable balance of $29.61 per capita, in 1926 led the world with a favourable balance of $29.34 per head of population. The countries so listed are:

Country	Favourable Balance per Capita
Canada	$29 34
United States	3 22
Brazil	1 97
British India	1 01
South Africa	14
France	02

In the first nine months of the present fiscal year, viz., from April 1 to December 31, our total imports were $823,054,094; while the total exports amounted to $970,154,998, giving a favourable trade balance of $147,100,904. A comparative statement of our total trade for the same periods in the past two years follows:

	Imports April 1st to December 31st 1926	1927
Free	$277,186,180	$297,055,594
Dutiable	489,576,862	525,932,873
Electricity	66,508	65,627
Total	$766,829,550	$823,054,094
	Exports April 1st to December 31st 1926	**1927**
Domestic produce	$983,924,100	$950,103,367
Foreign	11,361,988	16,391,583
Electricity	3,452,786	3,660,048
Total	$998,738,874	$970,154,998

Both the decrease in exports, $28,000,000, and the increase in imports, $56,000,000, can be attributed principally to greater domestic demand under conditions of prosperity such as we have been enjoying. But it is also apparent that our ability to produce still exceeds our capacity to consume by a broad margin and that our exporters annually market over a billion dollars worth of goods in other lands.

Trade With Treaty Countries

Favoured nation treatment is of importance alike to basic producers and to manufacturers of finished products. Our prolonged winters tend to restrict employment in some industries while others have only a short marketing season in Canada. Consequently, to maintain a high state of efficiency, ex-

port markets are to many industries, as well as to basic producers, of almost primary importance. Canada now enjoys favourable trade relations with many foreign countries to whom we sold $157,000,000 of goods in the fiscal year 1927, purchasing in return $78,000,000.

Empire Trade

Our trade records show that in the fiscal year 1927 we sold to the empire goods to the value of $542,000,000 and purchased in return $214,000,000, collecting in duties from these imports $36,598,000. Sometimes comparisons are made to arrive at the average rates of duties assessed under various columns, so it may be pointed out in passing that nearly 35 per cent of the total duties collected on empire imports was paid on $25,711,000 of alcoholic beverages. If we except the United Kingdom from the calculations it will be noted that in the fiscal year 1927 Canada purchased from other British countries goods to the value of about $50,000,000. On these imports $4,267,000 were collected in customs, over 54 per cent of the total being paid as duties on sugar and spirits, thus showing in a broad way that the major portion of our imports from the British dominions and possessions consists of non-competitive and raw products. As practically all of our $94,000,000 of exports to those British dominions and possessions are fully manufactured, the value of working for closer trade relations within the empire is surely apparent.

Reductions in Taxes

Provision having been made for expected expenditures in the coming fiscal year and heed taken to maturing obligations, it is with pleasure and satisfaction that once again we are in a position to propose further reductions in taxation. As an added encouragement to business, as a measure of relief to taxpayers and to those provinces where local income taxes are levied, it is proposed that the Dominion shall continue gradually to lighten the load in the income tax field. Last year a reduction of ten per cent in all rates of the income tax was announced. To-day we are able to go a step further and to propose that the income tax payable by individuals be reduced an additional ten per cent. The list of exemptions is to be increased by allowing an exemption of $500 to those supporting dependents over twenty-one years of age who are incapable of self-support on account of mental or physical infirmity. In the case of corporations and joint stock companies, it is proposed that the tax be eight per cent net.

A general reduction of twenty-five per cent will be made in the sales tax.

The Customs Tariff

We come now to the customs tariff. The Advisory Board on Tariff and Taxation has concluded its hearings in respect of the textile group, excepting silk and artificial silk, and in the proposed revision there will be shown a general reduction in rates.

Cottons

Considering first the items comprising the cotton schedule, it is proposed that the maximum under the general tariff be reduced from 37½ per cent to 30 per cent with a single exception.

On a large range of household cottons, and also on cotton socks and stockings, cotton underwear and cotton clothing, the rates will be materially reduced.

Coupled with the general lowering of rates on the finished products is a lowering of rates on yarns and other materials used by the manufacturers for further processes. In the proposed changes the needs of the Canadian consumer and manufacturer have been carefully considered, while incidentally the scope of the British preference has been materially widened.

Woollens

In revising the woollen schedules two main considerations have been kept in mind, the vital necessity for warm clothing in a climate such as ours, and the position of the Canadian mills which weave woollen and worsted cloths. It is proposed to aid the Canadian weaving industry by granting free yarns for weaving purposes. The importations of woollen and worsted yarns are large, and the concession proposed should be of material assistance to the industry.

The drawback of duty on dry spun yarns will be abolished on October 1, 1928.

Material decreases in duty will be made in the preferential rate on woollen goods imported in the gray for dyeing and finishing in Canada.

There will be a reduction in the duty on all mitts and on all but the more expensive lines of woollen underwear, socks and stockings. A reduction is also proposed on certain woollen fabrics.

Linen, Flax and Jute Products

The classification of linens and of flax and jute products will be separated from that of cottons. The linen schedules now proposed will conform in structure to those relating to cottons and wollens.

In respect to the finer grades of linens, which are not produced in Canada, there will be reductions in the British preferential rates.

Silk and Artificial Silk

Practically no changes in rates are made in the silk or artificial silk items, as hearings on these groups have not been completed; but the wording of the schedules has been revised to conform to that of the cotton, woollen and linen schedules.

Textile Machinery

As a further assistance to the textile industry, the duty on machinery incidental to the working-up of fibrous materials will be adjusted. This machinery is now entered under items 467 and 468. The Department of National Revenue find difficulty in administering these items, as one overlaps the other. It is considered advisable to merge the two items into one. The new item may result in an increase in the duty on a small portion of the imports if such imports enter under the general tariff, but the reduction under the British preferential and the intermediate tariffs will more than offset that increase. On a small part of the machinery imported under the first item there will be no change, but on a large part of the importations a reduction is proposed from ten per cent to free under the British preferential tariff and from ten per cent to five per cent under the intermediate tariff.

Other Tariff Changes

The duty on machinery for mining and concentration of ores will be reduced. This reduction applies to locomotives for underground haulage in mining, to mine hoists of a class or kind not made in Canada, and to parts of certain mining machinery. It is proposed to make the duty on press blankets of a class or kind not made in Canada free under the British preferential tariff, five per cent under the intermediate tariff, and ten per cent under the general tariff. At present the imports of these blankets come in under the general tariff, the rates ranging from twenty to thirty-five per cent under different items.

It is proposed to reduce certain paper mill wrappings from fifteen to five per cent, British preferential tariff, and from twenty-five to ten per cent under the general tariff.

Flake calcium chloride, for road-treating purposes only, is placed on the free list.

It is proposed to make free under all tariffs non-alcoholic preparations or chemicals for disinfecting, dipping or spraying.

Crude petroleum, not in its natural state, imported for refining purposes, is made free under all tariffs until July 1, 1931.

The tariff rate on engines for fishing boats is now fifteen per cent under the general tariff. It is proposed that the parts therefor shall enter at the same rate. This is a reduction of twelve and a half per cent.

The present rates covering engines, and complete parts, for equipment of aircraft, are to be extended until July 1, 1930.

It is proposed to place on the free list under all tariffs nickel chromium, in bars or rods, of a class or kind not made in Canada, for use in the manufacture of electric resistance wire.

Drawbacks

Assistance is given the publishing industry by granting a drawback of 80 per cent on certain papers used in the production of magazines.

A drawback of 99 per cent is granted on bituminous coal used in melting or evaporating salt produced in Canada.

A drawback of 60 per cent is to be allowed on materials used in the manufacture of various tools when at least fifty per cent of the production cost has been incurred in Canada.

A drawback of 50 per cent is given on materials used in the manufacture of engines for the equipment of aircraft. After July 1, 1930, no drawback shall be paid unless at least 40 per cent of the cost of producing the finished engine has been incurred in Canada.

The Department of National Revenue has difficulty in administering the present tariff item 531 covering cloth for bookbinding. This item is repealed; a drawback of 99 per cent is granted instead. This will give the bookbinders practically the same concession.

The following statement classifies the proposed changes according to the industries affected:—

	Preferential Tariff		General Tariff	
	Old Rate	Proposed Rate	Old Rate	Proposed Rate
Mining Industry				
Xanthates and cresylic acid for concentrating ores and minerals	15 p.c.	Free	17½ p.c.	Free
Locomotives and motor cars for underground haulage	22½ p.c.	10 p.c.	35 p.c.	20 p.c.
Mining hoists of a class or kind not made in Canada	15 p.c.	10 p.c.	27½ p.c.	20 p.c.
Machinery for concentration of ores and minerals	15 p.c.	10 p.c.	27½ p.c.	20 p.c.
Printing and Publishing Industry				
Press blankets	22½ p.c.	Free	35 p.c.	10 p.c.
Drawback on paper used in the production of magazines	80 p.c.			
Fruit and Horticultural Industries				
Small onion plants for transplanting or propagation purposes	15 p.c.	Free	17½ p.c.	Free
Preparations or chemicals for disinfecting, dipping or spraying	10 p.c.	Free	20 p.c.	Free
Fishing				
Aluminium floats of a class or kind not made in Canada	15 p.c.	Free	25 p.c.	Free
Parts of engines for fishermen's boats	15 p.c.	10 p.c.	27½ p.c.	15 p.c.
Road-Making				
Flake calcium chloride for road-treating. Per 100 pounds	10 cents	Free	15 cents	Free
Aviation				
Engines and complete parts thereof for the equipment of aircraft—Present rates continued until July 1, 1930.				

A drawback of 50 p.c. will be allowed on materials used in the manufacture of aircraft engines. After July 1, 1930, no drawback will be paid unless at least 40 p.c. of the cost of production has been incurred in Canada.

Mechanics Tools

A drawback of 60 p.c. will be allowed on materials used in the manufacture of certain tools, when at least 50 p.c. of the cost of producing the finished article has been incurred in Canada.

Salt Industry

A drawback of 99 p.c. will be allowed on coal used in producing salt.

It is estimated that the reduction in taxation will be $19,000,000.

In order to foster empire trade there is a general tendency in the Dominions and the mother country to increase the percentage of cost of production requirements on goods receiving the benefit of the British preferential tariff. At present Canada requires 25 per cent to be empire labour and materials. It is proposed to double this percentage. There will be similar increases in the percentages required on goods entering under treaty rates and the intermediate tariff.

In summing up the statement presented to-day little need be said, because, sir, the figures, speaking for themselves, require no words to emphasize the sound position of the Dominion's balance sheet. A general tone of optimism exists throughout Canada. Nevertheless, may I be permitted a word of friendly caution as to the future.

To-day we are widening the inhabited frontiers, penetrating and developing our great northern domains. Federal and provincial governments, transportation companies, commercial corporations and individuals share in the work. It is a national undertaking of importance, for it not only develops Canada in a material way, but in addition, gives a better balance to our geographical groupings of population. Should we not profit by experiences of the past and keep this expansion within proper economic bounds, so that at no time will undue strain be placed either on the resources of the governments or of the investors.

In May, 1922, the first post-war budget presented by the government of the Right Hon. Mackenzie King was submitted to this house. Business was then passing through a period of depression, and a deficit of $81,000,000 was announced. With a view to balanc-

ing the budget, expenditures were reduced, taxation re-adjusted and measures of relief to basic industries enacted. Thus by policies beneficial to all parts of Canada, national development both in industry and population, has been encouraged. Canadians are returning home—

Some hon. MEMBERS: Oh, oh.

Mr. ROBB: Does anyone challenge my statement that Canadians are returning home?

An hon. MEMBER: Everybody.

Mr. ROBB: Canadians are returning home, desirable types of immigrants are attracted and Canada is once more building solidly for the future.

A spirit of hopefulness has been developed, and as we entered the present calendar year one could not help but note that leaders of industry and finance emphasized that the present prosperous conditions sprang from the solid growth and solvency of the basic industries of Canada.

With revenues now buoyant there is a tendency to have the Dominion embark on many new ventures, as well as a tendency towards indiscriminate private speculation. We should not, however, forget our national debt. Work and thrift are the only sure roads to success. The generation that spent the money should not shirk its responsibilities. Further taxation reductions will become possible as Canada progresses, but national progress is dependent on the wholesome goodwill we practise towards one another.

I beg to give notice that when the house resolves itself into committee, I shall move the following resolutions:

1. Resolved, That it is expedient to amend Schedule A to The Customs Tariff, being chapter forty-four of the Revised Statutes of Canada, 1927, by striking thereout tariff items 219a, 236, 267b, 277, 291, 438, 442, 453e, 462, 465, 467, 468, 494a, 520, 521, 522, 523, 524, 524a, 524b, 525, 526, 527, 528, 529, 530, 531, 532, 533, 533a, 533b, 534, 535, 536, 537, 538, 539, 540, 541, 542, 543, 543a, 544, 544a, 545, 546, 547, 548, 548a, 549, 550, 551, 552, 553, 553a, 554, 555, 556, 557, 558, 559, 560, 561, 562, 563, 564, 565, 566, 567, 568, 568a, 569, 570, 571, 572, 573, 573a, 574, 575, 575a, 575b, 576, 577, 578, 579, 580, 581, 581a 582, 583, 583a, 583aa, 583b, 583c, 583d, 590c, 610, 620, 621, 626, 627, 630, 631, 638, 638a, 639, 641, 643, 644, 645, 646, 681, 683, 721, 732, 734, 740, 750, 753, 764, 765, 772, the several enumerations of goods respectively, and the several rates of duties of customs, if any, set opposite each of said items, and by repealing Order in Council, P.C. 2158, dated the 9th day of November, 1927, designated as Item 790 of the Customs Tariff, and the following items, enumerations and rates of duty are inserted in Schedule A:—

Tariff Item	—	British Preferential Tariff	Intermediate Tariff	General Tariff
87b	Small onion plants grown from seeds and imported for bona fide transplanting or propagation purposes only	Free	Free	Free
192a	Pulp board in rolls not less than nine one-thousandths of an inch in thickness for use in wrapping rolls of paper	5 p.c.	7½ p.c.	10 p.c.
208d	Flake calcium chloride for road-treating purposes only	Free	Free	Free
208c	Xanthates, cresylic acid and compounds of cresylic acid, used in the process of concentrating ores, metals or minerals	Free	Free	Free
219a	Non-alcoholic preparations or chemicals for disinfecting, dipping or spraying, n.o.p.	Free	Free	Free
236	Surgical dressings, antiseptic or aseptic, including absorbent cotton, lint, lamb's wool, tow, jute, oakum, woven fabric of cotton weighing not more than seven and one-half pounds per one hundred square yards, whether imported singly or in combination one with another, but not stitched or otherwise manufactured; surgical trusses and suspensory bandages of all kinds; sanitary napkins, spinal braces and abdominal supports	12½ p.c	17½ p.c.	20 p.c.
267b	Crude petroleum not in its natural state ·725 specific gravity or heavier at 60 degrees temperature, when imported by oil refineries to be refined in their own factories	Free	Free	Free
	On and after the 1st July, 1931, per gallon	3/10 ct.	4/10 ct.	½ ct.
277	Palm and palm kernel oil, unbleached or bleached, not edible; shea butter	Free	Free	Free
356b	Nickel chromium, in bars or rods not more than three-fourths of an inch in diameter, containing more than sixty per cent nickel and more than			

Tariff Item	—	British Preferential Tariff	Intermediate Tariff	General Tariff
	ten per cent chromium, of a class or kind not manufactured in Canada, when imported by manufacturers of electric resistance wire and electric resistance strip or ribbon for use only in the manufacture of such articles in their own factories....	Free	Free	Free
438	Locomotives and motor cars for railways and tramways, and chassis, tops, wheels and bodies for same, n.o.p.....	22½ p.c.	30 p.c.	35 p.c.
438e	Locomotives and motor cars for railways and tramways, of a class or kind adapted for underground haulage for use only in mining operations.....	10 p.c.	15 p.c.	20 p.c.
442	Printing presses, lithographic presses, and type making accessories therefor, also machines specially designed for ruling, folding, binding, embossing, creasing or cutting paper or cardboard, sheet feeding machines, when for use exclusively by printers, bookbinders and by manufacturers of articles made from paper or cardboard—including parts thereof composed wholly or in part of iron, steel, brass or wood; machinery and complete parts thereof for printing by photographic methods on plates for use on lithographic and offset presses; stereotypers' and typecasters' blankets, and press blankets used in covering cylinders on rotary printing presses, of a class or kind not made in Canada.....	Free	5 p.c.	10 p.c.
453e	Engines and complete parts thereof to be used exclusively in the propulsion of boats bona fide owned by individual fishermen for their own use in the fisheries, under regulations prescribed by the Minister of National Revenue.....	10 p.c.	12½ p.c.	15 p.c.
453g	Machinery for the concentration of ores, metals or minerals, viz.:—flotation machines, pumps, vibrating and impact screens, jigs, magnetic separators and filters, when for use in the concentration or separation of ores, metals or minerals, and integral parts of all machinery mentioned in this item.....	10p.c.	15 p.c.	20 p.c.
453h	Mine hoists of a class or kind not made in Canada...	10 p.c.	15 p.c.	20 p.c.
462	Blowers of iron or steel of a class or kind not made in Canada, for use in the smelting of ores, or in reduction, separation or refining of metals, ores or minerals; rotary kilns, revolving roasters and furnaces of metal of a class or kind not made in Canada, designed for roasting ore, mineral, rock or clay; furnace slag trucks and slag pots of a class or kind not made in Canada, and integral parts of all machinery mentioned in this item.....	Free	Free	Free
465	The following articles and materials when imported by manufacturers of automatic gas buoys and automatic gas beacons, for use in the manufacture of such buoys and beacons for the Government of Canada, for marine signal purposes or for export, under regulations prescribed by the Minister, viz:—iron or steel tubes over sixteen inches in diameter; flanged and dished steel heads made from boiler plate, over five feet in diameter; hardened steel balls, not less than three inches in diameter; acetylene gas lanterns and parts thereof; and tobin bronze in bars or rods.....	Free	Free	Free
468	Machinery and apparatus, of a class or kind not made in Canada, and parts thereof, especially constructed for preparing, manufacturing, testing or finishing yarns, cordage and fabrics made from textile fibres, or for use in factory operations incidental thereto, imported for the exclusive use of manufacturers and scholastic or charitable institutions in such processes only.....	Free	5 p.c.	10 p.c.
494a	Cork slabs, boards, planks and tiles produced from cork waste or granulated or ground cork.....	15 p.c.	17½ p.c.	25 p.c.
520	Raw cotton and cotton linters not further manufactured than ginned; rags and waste wholly of cotton unfit for use without further manufacture, not to include used garments nor waste portions of unused fabrics.....	Free	Free	Free

Tariff Item	—	British Preferential Tariff	Intermediate Tariff	General Tariff
520a	Waste portions of unused fabrics or used garments, wholly of cotton, imported by manufacturers to be used exclusively for disintegrating, or for manufacture into wiping rags in their own factories....	Free	Free	Free
520b	Garnetted material wholly of cotton, obtained by disintegrating yarns or fabrics, prepared for use; cotton wiping rags and wiping waste; waste portions of unused fabrics and rags and waste wholly of cotton, sold by weight, not to include remnants nor mill ends, n.o.p.....	7½ p.c.	10 p.c.	12½ p.c.
520c	Linters of short fibres of cotton, bleached, when imported by manufacturers of paper to be used only in their own factories for the manufacture of blotting paper or other grade of paper.....	7½ p.c.	10 p.c.	12½ p.c.
521	Batts, batting and carded sliver wholly of cotton, not bleached, coloured nor impregnated; cotton fibres, bleached or coloured, n.o.p.....	5 p.c.	10 p.c.	12½ p.c.
521a	Batts, batting, sheet wadding and carded sliver wholly of cotton, n.o.p.....	7½ p.c.	15 p.c.	17½ p.c.
522	Rovings, yarns and warps wholly of cotton not exceeding number twenty, not more advanced than singles.....	10 p.c.	15 p.c.	20 p.c.
522a	Yarns and warps wholly of cotton exceeding number twenty, but not exceeding number forty, not more advanced than singles.....	12½ p.c.	15 p.c.	22½ p.c.
522b	Yarns and warps wholly of cotton exceeding number forty, not more advanced than singles.....	7½ p.c.	10 p.c.	15 p.c.
522c	Rovings, yarns and warps wholly of cotton, including threads, cords and twines generally used for sewing, stitching, packaging and other purposes, n.o.p.; cotton yarns not more advanced than singles, wholly or partially covered with metallic strip, generally known as tinsel thread.....	15 p.c.	22½ p.c.	25 p.c.
522d	Yarns and warps wholly of cotton, mercerised, number forty and finer, imported by manufacturers for use exclusively in their own factories....	Free	10 p.c.	15 p.c.
522e	Yarns wholly of cotton, exceeding number twenty, and not exceeding number forty, not more advanced than singles; cotton sewing thread yarn and crochet, knitting, darning and embroidery yarn, in hanks, composed of three strands or more, not bleached, coloured nor mercerised; imported by manufacturers who manufacture cotton sewing thread and crochet, knitting, darning and embroidery cottons only for use exclusively in their own factories in the manufacture of those materials.....	7½ p.c.	15 p.c.	20 p.c.
523	Woven fabrics wholly of cotton, not bleached, mercerised nor coloured, n.o.p.....	12½ p.c.	20 p.c.	22½ p.c.
523a	Woven fabrics wholly of cotton, bleached or mercerised, n.o.p.....	15 p.c.	22½ p.c.	25 p.c.
523b	Woven fabrics wholly of cotton, n.o.p.....	20 p.c.	25 p.c.	27½ p.c.

		cles on various subjects, current topics, political and other news or reviews, criticism or other informative matter, or fiction, being bound, wire stitched or otherwise fastened together.....	80 p.c.
1061	Woven fabric manufactured for covering the outside of books, of a class or kind not made in Canada.	When imported by bookbinders for use exclusively in binding books in their own factories.....	99 p.c.
1062	Materials, including all parts.....	When used in the manufacture of bit braces, marking gauges of metal or wood, levels of metal or wood, planes or hand tool scrapers of metal or wood, spoke shaves, try squares and bevels with metal or wood handles: Provided that no drawback shall be paid under this item unless at least fifty per cent of the cost of producing the finished article has been incurred in Canada; And provided further that no drawback under this item shall be payable more than once on any article.....	60 p.c.
1063	Materials, including all parts.....	When used in the manufacture of engines for use only in the equipment of aircraft: Provided that on and after July 1, 1930, no drawback shall be paid under this item unless at least forty per cent of the cost of producing the finished engine has been incurred in Canada.....	50 p.c.
1064	Seamless iron or steel tubing over four inches in diameter.....	When used in the transmission of natural gas under high pressure from the gas wells to point of distribution.....	50 p.c.
1065	Bituminous coal.....	When used in melting or evaporating salt produced in Canada: Provided that no drawback under this item shall be payable on coal used in producing salt or brine when such salt or brine is further manufactured than salt enumerated in tariff items 40, 41, 42, and 42a.....	99 p.c.

3. Resolved, That any enactment founded on the foregoing resolutions shall be deemed to have come into force on the seventeenth day of February, one thousand nine hundred and twenty-eight, and to have applied to all goods mentioned in the foregoing resolutions imported or taken out of warehouse for consumption on and after that date and to have applied to goods previously imported for which no entry for consumption was made before that day.

Resolved, That it is expedient to amend The Income War Tax Act, and to provide:

1. That the schedule of rates of Income Tax pertaining to individuals be reduced for the year 1927 and thereafter by twenty per centum.

2. That the Income Tax of companies for the year 1927 and thereafter be eight per centum.

3. That allowance for exhaustion of mining lands, oil and gas wells and timber limits be afforded to and apportioned between lessee and lessor.

4. That the income from the operation of ships owned or operated by a non-resident person or corporation be exempt from taxation, provided that the country of residence grants an equivalent exemption in favour of a person or corporation resident in Canada.

5. That $500.00 exemption be given persons supporting dependents twenty-one years of age and over, incapable of self-support on account of mental or physical infirmity.

6. That upon election by the trustee controlling a superannuation pension fund or plan to have the investment income exempt from taxation the contributions by employees shall not be exempt.

7. That provision be made for procuring information as to payments made from the source of payment.

Resolved, That it is expedient to introduce a measure to amend the Special War Revenue

Act, chapter 179 of the Revised Statutes of Canada, 1927, and to provide:

1. That section eighty of the said Act which imposes an excise tax on automobiles adaptable for passenger use be amended by adding thereto the following subsection:

"4. When goods of any class mentioned in schedule I are manufactured or produced in Canada and are for use by the manufacturer or producer thereof and not for sale, such goods shall, for the purposes of this part, be deemed to have been manufactured or produced in Canada and sold, and the sale shall be deemed to have taken place when the goods are used or appropriated for use. The Minister may determine the value of the said goods for the tax."

2. That the rate of consumption or sales tax be reduced to 3 per cent and that any enactment which may be founded on this resolution No. 2, shall be deemed to have come into force on the seventeenth day of February, 1928, and to have applied to goods imported or taken out of warehouse for consumption on or after that date and to have applied to goods previously imported for which no entry for consumption was made before that date.

Resolved, That it is expedient to introduce a measure to amend The Copper Bounties Act, 1923, and to provide that the payment of bounties at the rate of one-half of one cent per pound on copper bars or rods, as described in the said Act, be continued up to the thirtieth day of June, 1931.

1. Resolved, That it is expedient to amend schedule A to the Customs Tariff, being chapter forty-four of the Revised Statutes of Canada, 1927.

2. Resolved, That schedule B to The Customs Tariff, being chapter forty-four of the Revised Statutes of Canada, 1927, be amended.

3. Resolved, That any enactment founded on the foregoing resolutions shall be deemed to have come into force on the seventeenth day of February, 1928.

4. Resolved, That it is expedient to amend The Income War Tax Act.

5. Resolved, That it is expedient to introduce a measure to amend the Special War Revenue Act, chapter 179 of the Revised Statutes of Canada, 1927.

6. Resolved, That it is expedient to introduce a measure to amend The Copper Bounties Act, 1923.

On motion of Mr. Cahan the debate was adjourned.

On motion of Mr. Mackenzie King, the house proceeded to the consideration of public bills and orders.

GRADING OF WHEAT

PROPOSED REVISION OF STATUTORY DEFINITIONS OF GRADES

The house resumed from Wednesday, February 15, consideration of the motion of Mr. Millar:

That, in the opinion of this house the statutory definitions applying to all contract grades of wheat in the western inspection division, should be amended in such a manner as to provide for including protein as a factor.

[Mr. Robb.]

Mr. M. N. CAMPBELL (Mackenzie): When the house rose at six o'clock last night I was endeavouring to explain why, in my opinion, the resolution, in so far as creating a statutory grade for the protein contents of grain, is difficult of application. I realize that there are a great many difficulties in the way of putting this into effect at the present time, but I am very much in favour of further research work in connection with it. I suggested to the minister—and may I emphasize it again—the necessity for increasing the facilities at the bureau at Winnipeg and giving Dr. Birchard all the help that he requires to carry out this work. I believe if that bureau is properly equipped and manned it will be a great help to the farmers of the prairies. A farmer who considers that he has grain of a high protein content and high protein quality can send his sample to this bureau and receive a test, and find out just what its value is before he ships it from his farm. It seems to me that would simplify matters very considerably, and I would again request the minister to agree to have this resolution sent to the committee on agriculture and colonization. I believe that, if it is referred to that committee and those who are interested are given an opportunity to present their views, we will get some information that will put this house in a better position than at present to determine just in what way to proceed. If the grain dealers, representatives of the pool, the millers and the farmer's organizations can come and present their views, I believe that committee will be in a position to make some concrete and constructive proposals to this house as to how the matter should be further dealt with.

Mr. J. G. ROSS (Moose Jaw): Mr. Speaker, in speaking to this important resolution, I first of all wish to state that I do not at the present time think we should force the standard board or the board of grain commissioners to have protein taken into consideration without first having the question investigated by the advisory council for scientific and industrial research, and also the committee on agriculture and colonization of the House of Commons. We are in this position in this country in regard to our grain, that we have no scientific basis for grading our grain upon the milling value contained in our wheat. It is about the only commodity that we handle in large quantities whose value is not yet set on the proper basis of what is contained in the product. May I read a

definition of what I consider the proper grading system:

> Commercial standards of any commodity to be of the greatest value must be such as to classify the commodity according to its value for the industry for which it is most extensively used. The grades in these standards should be definite enough to ensure uniformity of application, simple enough to be practical of application where the commodity is first inspected and stringent enough to indicate real differences in value.

Wheat is used most extensively for milling into flour to be made into bread. Flour is used by different classes of consumers; first, by the domestic consumer or the housewife who makes her own bread in her own house, and second by the commercial consumer or baker. The housewife wants one class of flour and the baker wants another, and therefore the miller mills two kinds of flour for the two different consumers. The housewife requires a flour that will make a wholesome loaf of bread of good texture and colour. She does not want a flour that takes too much work or kneading. She does not care whether the flour will absorb a great deal of moisture or not, and is not greatly concerned whether she gets the last loaf of bread out of a bag or barrel of flour. On the other hand, the baker wants a loaf of good volume, fine texture, light and of good colour. It is very important to the baker that he gets the last loaf out of the bag or barrel, and it is very important to him that the flour shall absorb a large amount of water, because that water goes into the weight of the product that he sells, and water costs much less than flour. The miller knows these things and mills all kinds of flour. The most important point to the miller in milling flour is that he shall mill each and every bag and barrel, in each and every year, of the same standard of the brand that he sells. That is he must have his flour of the same strength in every year for the same brand. Otherwise, if the housewife or the baker used one grade or brand of flour this year and the same grade or brand next year but having a different strength, using the same ingredients, the result, while it might be quite successful in one case, might be a complete failure in the next. The most important point, therefore, is to see that the standard of flour is kept uniform at all times. This has a very definite bearing on the protein content and quality of protein in our wheat. The important factors to the miller are yield, baking strength, colour and moisture content of the grain. These are the things that the miller looks for. But our grain is not graded today on the basis of these factors in any respect. Under the present grading system the Grain Act provides, as the hon. member for Qu'Appelle (Mr. Millar) pointed out yesterday, that No. 1 Manitoba northern wheat shall include all varieties of hard, red spring wheat equal in value to marquis. But all of us who grow grain know that marquis itself is not of uniform value in different parts of the country, and there is nothing in the Grain Act which gives any guide as to how it may be determined whether any wheat is equal in value to marquis or not. The act provides further that the grain shall be well matured and well cleaned. It is also true, I think, that grain from one part of the country, although not fully matured, may be a better milling product than grain from another section which is fully matured. Again, it is provided that it shall not be less than sixty pounds to the bushel. This has to some extent a bearing on the yield of flour in the grain. It must also be practically free from damaged kernels; but the act does not say what is meant by "damaged." "Damaged" may mean anything, and there are under the Grain Act grains that are described as damaged but which, so far as their value for milling or for baking purposes is concerned, are not damaged to any degree whatever. On the contrary, indeed, their value is sometimes enhanced by such damage, so called. It must contain, too, 60 per cent of hard, red vitreous kernels. This is another standard that does not give you any real value to go by.

Can we in this country establish a system of grading scientifically based on the real milling and baking value of the grain? There is no doubt that with proper scientific research this can be done, and I believe it will be done some time in the future. We grade oil in this country, and its value is based on its specific gravity and on the amount of gasoline that can be got from that oil. We grade cream in this country, and the value of the cream is based upon the content of butter fat which it yields. We grade our ores from our mines, and the value is based upon the percentage of gold, silver, lead, copper, zinc or other precious metals that may be found to be contained per ton. There is, therefore, no reason in the world why wheat cannot be graded on its yield of flour to the hundred pounds, its protein content, the quality of the protein and the percentage of moisture in the wheat. These all have a direct bearing on the value of the wheat. We have been told by grain men that it cannot be done and is not done, but I maintain that it is being done to-day in all parts of the world by those who purchase our grain. There is not

a large milling concern in the Dominion of Canada which does not chemically test the grain which it buys, to find out whether that grain contains these values of which I speak. We are told by exporters that in Liverpool the price is not fixed upon this basis but upon the Canadian final certificate. I submit that when samples of grain from the first of the crop are sent to Liverpool a chemical analysis is made by the importers there and that the price is set for our wheat upon that analysis; it is fixed upon the chemical analysis of each grade and Canadian grain is bid for on what is disclosed by that test. In other words, we are selling grain from this country on one basis and it is being bought by the millers of the world on another basis. It has been frequently said throughout this country that it would be impractical to make a complete milling and baking test. Two reasons are given for this opinion: first, the cost of making the test, and, secondly, the time consumed in carrying it out. As regards the cost, I am not convinced that it would not be an economical proposition for the grower of grain to have a full milling and baking test taken of his grain. That milling and baking test would consist of these processes: milling, two hours; weighing and mixing ingredients of flour, five minutes; fermenting, two hours; proof, one hour; baking, half an hour; cooling, one hour; scoring and measuring the loaf, five minutes—a total of six hours and forty minutes. At first sight this seems to be a considerable time for making a test of grain, and it would be per sample. But this operation may be carried out under mass production methods, so that it does not mean each sample would have six hours and forty minutes devoted to it. The test can be made in large quantities; the miller can mill more than one sample at a time. Weighing and mixing can be done by machinery; fermenting and proof can be done in large quantities or with a large number of samples by one man; and baking can be done, as it is done commercially, by hundreds of loaves at a time in large ovens; while measuring and scoring is but a small item in the time consumed. This would have no tendency at all to hold up cars on the railways, for this reason, that under the present system of inspection samples are taken from the cars and the cars proceed to their destination. It may take six or seven hours to make the full baking and milling test, but during that time the car is en route to destination and the grade is wired there. So there is no delay to the railway. I am not advocating that this test is necessary, but I do advocate that it should be thoroughly looked into by the proper authorities to see whether or not it would be an economical proposition for our grain growers.

To my notion the only tests that are necessary to establish the milling and baking value of Canadian wheat are the moisture content test—this is being made to-day—the protein test and the viscosity test. The viscosity test gives you the quality of your protein, that is, it tells you what baking strength your flour has. The action of yeast in bread is to extend the loaf by the formation of carbonic acid gas. That extension can be definitely established by the viscosity test. In other words, you find out just how far the loaf will be extended by the action of the yeast, and how long it will hold there, so that you can determine whether it has been properly fermented. Now, this test is being made to-day not only in our laboratory at Winnipeg, but in every laboratory of the mills throughout Canada and the United States and a great many of the mills in Europe. The protein test takes only from forty-five minutes to an hour. The viscosity takes only about five minutes and can be made while the protein test is being conducted. The moisture test takes forty-five minutes, and can also be made at the same time that the protein test is under way with another part of the same grain.

Our Canadian grain is valuable for two reasons; first, for milling by itself into flour, and, secondly, for blending with other wheats throughout the world to bring their baking strength up to the proper standard. Therefore, Mr. Speaker, I submit that our grading system should be based upon the amount and quality of the protein in the grain as the first consideration, and on the amount of moisture as the second consideration. I recollect being questioned by an hon. member last session when there was some discussion as to the amount of moisture which should be allowed in our straight grades of grain. We allow 14.4 per cent moisture. That is, Canadian grain is bought in the markets of the world on that basis, and everybody understands that it is supposed to contain that percentage of moisture. But a great deal of Canadian grain coming from the farmer to the market does not contain 14.4 per cent moisture. If a man has 12 per cent moisture grain, and the market price is $1.50 per bushel, he is losing 2 per cent on his price, which in this case means 3 cents per bushel, because his grade does not come up to the standard percentage of 14.4. Lower moisture content should be set for our grain, and a man should be given credit

for the low content of moisture. And he should not suffer a reduction in price because his wheat contains 14.5 or 17 per cent moisture. Under our present grading system grain containing over 14.4 per cent is called tough, and immediately the grower of that grain is penalized to the extent of 8 or 10 cents a bushel; if it contains 17 per cent moisture he is penalized another 8 or 10 cents, and sometimes more. This should not be. The grower should be penalized only on the actual percentage of moisture in his grain, that is the shrinkage and the actual cost of drying that grain under proper conditions, for when tough or damp grain is so dried the milling value is not affected in any particular. As a matter of fact, a great many experiments have proved that damp or tough grain if dried under proper conditions is a better milling grain than the straight grade.

When the research council is investigating grain grading I think they should go further and inquire into the drying of our grain. I believe that to-day there is no grain dried in this country until the close of navigation. Nevertheless any grain with a moisture content in excess of 14.4 per cent has deducted from its price from 8 to 10 cents a bushel. This is altogether wrong. It is taken advantage of by our grain men who mix grain. For instance, a man has a 12 per cent moisture car coming to market, and he also buys a 16 per cent moisture car; then he mixes the two together and comes out with an average of 14 per cent, which is straight grade.

Mr. GARLAND (Bow River): Will my hon. friend permit a question?

Mr. ROSS (Moose Jaw): Certainly.

Mr. GARLAND (Bow River): I wonder if he can produce any substantiation of the statement that no grain is dried until after the close of navigation, for if so he will be performing a wonderful service to our country.

Mr. ROSS (Moose Jaw): I shall be only too glad to ask the Minister of Trade and Commerce (Mr. Malcolm) to make a return of the number of cars of grain actually dried. I think such a return will clear the matter up, because in talking to the elevator men I have been informed that up to the close of navigation there is no drying of grain, and that in a great many of the private terminal elevators the driers are practically never used, being put there simply as a bluff.

Now, in regard to moisture content in grain, it has been found by experiment that wheat which is slightly bleached is not damaged in any particular for milling into flour. Wheat that is heavily bleached is changed, but it is not damaged to anything like the extent that our grading system penalizes it to-day. For instance, there are times when the crop is of high quality as a whole, but there is some heavily bleached or sprouted wheat. At those times it has been the practice of the millers in this country, and also in the United States, to buy those heavily bleached and sprouted wheats at a premium in order to blend them with a high protein, high viscosity wheat so as to mill out a flour which will make a better baking flour, without using other commercial improvements. These wheats, under our present system, are placed in the No. 4 wheat for grade. That is they are put in with wheat containing a large percentage of green kernel or heavily frosted wheat, and heavily frosted wheat or wheat containing a large number of green kernels is a very poor milling wheat. This sprouted wheat which is a good milling wheat and the heavily bleached wheat should be kept separate altogether from the No. 4 so that it can be used for the purposes that I spoke of.

Let me say a word with regard to the buyers of our wheat in the world market. The miller of grain in Liverpool, or the European miller, is in this position in buying wheat: He has to mill to the same standard at all times, and must keep to that standard constantly, otherwise he will lose his customers. Therefore when the different wheats from different parts of the world start to come to Europe, he analyses those wheats and finds out how much wheat of different kinds he needs in order to mill to the standard he has maintained for years. In one year he will need a Canadian grain of high protein and high viscosity to a much greater extent than in another year. If the wheat of the world is low in protein and low in baking strength, that year he will need Canadian grain to a greater extent than another. He is willing to pay a premium for it, and would be only too willing to have our grain grade based upon the strength and the amount of protein that is in our wheat. The Canadian miller of grain is in a different position. He buys his grain in a country where we have ordinarily a large amount of high protein and high viscosity or high baking-strength wheat. Nevertheless this year the Canadian millers are buying thousands of cars of wheat, on the ordinary grade in the market, and in some cases are turning back into the trade as much as two-thirds of the cars that they have bought after

having tested them in their laboratories. The protein of the Canadian crop this year is a bit lower than usual. In other words the Canadian miller this year is picking from the run of our crop the high protein wheat, and is turning back the lower protein wheats into the export channel. Or to put it another way, the poorer part of the Canadian wheat crop is going to the world's markets to set the price for the whole wheat crop of Canada.

In the United States the miller is in a different position still. In that country the greater part of the crop is of soft wheat, low protein, low baking-strength wheat. He is in a restricted market, and he is much more ready to bid high prices for high protein than anyone else, because he has to get that high protein to blend with his soft wheats in order to bring up the baking strength of his flour. Therefore, the examples that have been given in this house regarding the prices that will be paid for protein in the United States do not hold good as to Canadian grain or grain going to the world's markets, because the demands in the world's markets are not as great as they are in the restricted markets in the United States, or do not exist to such a great extent. In the Canadian market there is a very limited demand for high protein because our average crop is high protein content. In some years there is a demand in Canada for low protein wheat or soft wheat, bleached or sprouted wheat, to blend with the high protein wheat.

Now in regard to mixing. Our present Grain Act allows the buyers of grain in this country to mix grades. If you buy No. 3 northern grain there is a wide spread in that grade. A good No. 3 is just too poor to be a No. 2; a poor No. 3 is just too good to be a No. 4; a good No. 4 wheat is just too poor to be a No. 3; and a poor No. 4 is just too good to be a No. 5. Now the buyer of grain in this country to-day can buy a good car of No. 3 northern and a good car of No. 4 wheat, can mix the two together, and come out under our grade system with two cars of No. 3 northern at an advance this year of 12 to 13 cents per bushel. As a matter of fact there have been cars of grain this year of No. 3 northern straight grade, and the specially good No. 5 wheat could have been mixed and graded to make a straight 3 northern. I do not say that without assurance for this reason: this very crop year I picked from cars that were going through a specially good sample of 5 wheat, and I took an average sample of No. 3 northern, and mixed the two together in the proportion of fifty-fifty. I put the result of that mixing in front of an inspector under the board of grain commissioners, paid by the Dominion government, and it was graded by him as No. 3 northern wheat. However, I was not satisfied with that. I took it to another inspector, and had him grade it, and he got the same result. There was a difference in that case of 26 cents per bushel on the one carload of grain. A grading system that will allow things of this kind most assuredly should be changed. Such a thing as that is entirely wrong, and the people of western Canada who are growing grain to-day are losing millions of dollars as a result of our grading system.

Mr. GARLAND (Bow River): The hon. gentleman is opposed to mixing?

Mr. ROSS (Moose Jaw): Absolutely.

Mr. GARLAND (Bow River): I wonder if the hon. gentleman would tell the house why a resolution with respect to mixing was withdrawn from the order paper by one of his colleagues.

Mr. ROSS (Moose Jaw): I am sure I cannot tell the hon. gentleman; I know nothing about it. I did not even know the resolution was withdrawn.

Now, Mr. Speaker, I would ask that this resolution be sent to the agriculture committee, or to the council on scientific research, to have these matters looked into and see if we cannot get in Canada a grain grading system scientifically based upon the milling and baking values in our grain. I would suggest that when that is done the matter should not be left wholly to university professors in different parts of the country, some of whom I believe are to constitute part of the membership of this board. I think the Department of Trade and Commerce should see that the proper amount of money, under the vote for research, is given to the laboratory at Winnipeg where they have been investigating matters and have advanced quite a distance in this work. I would also suggest to the Minister of Trade and Commerce that he call into conference with him the board of grain commissioners and tell them that we in this house are vitally interested in this being done and that they should facilitate in every way possible the elucidation of these matters. At the present time I do not wish to say much about the board of grain commissioners.

Mr. GARLAND (Bow River): Why not?

Mr. ROSS (Moose Jaw): I may do so at a future time, but I will say this, that I think they could be a little more sympathetic

to the producers of grain in this country than they have been in the past and not quite so sympathetic to the organized grain trade of western Canada. This is one of the most important resolutions before this house this year. If it is carried out, it means millions of dollars a year put back into the pockets of our people to buy Canadian goods, because to-day the producer of grain under the Canadian grading system is not getting a proper return for his grain.

Mr. F. W. GERSHAW (Medicine Hat): Mr. Speaker, the hon. member for Qu'Appelle (Mr. Millar), in bringing forward this resolution has done a very good service for the people of Canada. At the present time many people throughout the western part of this country are vitally interested in the grading of wheat. The selling of the wheat crop is often the one great venture of the year for the wheat farmer and during the present year there has been widespread dissatisfaction over the grades which are being given. It seems that the board of standards issues certain instructions each year, but often their instructions do not apply to all parts of the country. Their instructions may deal largely with rust conditions and things of that kind, and in certain parts of Canada the inspectors are given very little guidance and have only their own judgment to rely upon in grading the grain, a matter which is so vital to the producers. The present method, of course, is an arbitrary one, depending upon the individual judgment of the inspector, and many examples could be quoted where one inspector will assign a certain grade to a certain sample while another inspector will give the same sample an entirely different grade. Many things enter into their judgment in these cases, for instance, the colour of the grain, the number of unmatured kernels, the amount of starch in the sample and whether the grain has been slightly frosted or not.

In the wheat-growing provinces there are many varieties of grain. The older varieties are still used and still make up the standards, but many new varieties are being tried out by individual farmers. I realize that the department is doing a good deal to discourage farmers from planting these new varieties until they have been thoroughly tested out in the different experimental farms, but I know much grain does not comply with the older standards because these new varieties are being used. The chief inspector, I believe, says that there are about seventeen hundred different grades of grain at the present time. In a way we in Canada are in an especially good position as regards our grading system. I refer to the markets of Europe. While grain from the chief countries which compete with Canada is liable to be re-graded in Europe, European buyers will accept Canadian grades and this possibly would make it a little difficult to change our system of grading. Such countries as Australia, India and the Argentine are liable to have their grades changed or their grain re-graded in Europe, whereas Canadian grades are accepted.

As I have said, however, widespread dissatisfaction and a great deal of doubt exist in the minds of Canadian farmers as to whether they are really getting all they are entitled to get in selling their grain crop. Whether fairly or unfairly they often assume that they are not getting what is coming to them as producers of grain. For instance, when nearly all the grain of a district grades No. 4, they wonder whether all the flour produced from that grain will be No. 4 or not, and they also wonder if there is any way whereby buyers of grain could have their records checked up in order that it might be seen whether they sell the same quantity of, say grade No. 4, as they buy. If anyone doubts there is much dissatisfaction, he has only to consider what has been said by hon. members who have spoken on this subject, and if he does I am sure he will agree that an investigation is required into the present system of grading with the hope of finding some system that has more scientific accuracy in it.

The official standards for wheat do not at present contain any reference to protein content and they contain no element that constitutes a reliable indication of the protein content. We know that gluten, or the protein content, is the quality required chiefly by the bakers. We know that millers pay and are willing to pay a premium for high protein wheats, and we are not convinced that under present conditions this premium which they are willing to pay is fully reflected back to the wheat growers. This operates to the dissatisfaction of the producers of some of our choicest wheats. I refer to our dry land farmers. They are distant from milling centres and terminal markets and they are largely at the mercy of the people who buy their grain. Surely, if a premium is being paid at all, it should be fully reflected back to the primary producer of the grain who worked so hard to bring his crop to the market.

I wish to read just a short extract from the Wheat Studies of the food research institute of Stamford university. It discusses the various

grades of grain and the methods of judging that grain, and it says:

> Nevertheless, all things considered, the amount of gluten, that is, of protein, seems in the light of the present-day knowledge to be the nearest approach to an ideal index of baking strength available. The baker who depends upon it alone will now and then be deceived. If, however, he knows the variety and place of origin, of the wheat from which the flour is milled, he will less often be misled.

I contend, Mr. Speaker, that this is a subject which requires a good deal of investigation and very careful study. I am most firmly convinced, however, that the farmers of Canada are not satisfied with the present method of grading, and they hope that some better method may be worked out. The people in the United States are also alive to this condition, and the chairman of the United States board of review stated in conversation that:

> If Canada should establish protein as a grading factor, the United States would be forced to do the same. Pressure was being brought to bear all the time. The United States laboratories at Washington were working hard on this question at the present time. He believed the bakers were driving the mills to furnish high protein flour, and competition between the mills forced them to comply.

I believe that the wheat of Canada might have a better place on the markets of the world owing to its high protein content, and I think the farmers of Canada would be much happier if they did not have the impression that the present system was working unfairly to them.

Mr. G. G. COOTE (Macleod): Mr. Speaker, I think the hon. member for Qu'Appelle (Mr. Millar) is to be congratulated upon his persistence in keeping this subject before the House of Commons. It is a subject of great importance to the farmers of western Canada, and therefore of great importance to the country as a whole.

It is almost a waste of words to say that there is great dissatisfaction existing among the producers of grain in western Canada over our present grading system. Very much has been said in praise of our grading system, and possibly a good deal of it deservedly said. I think that a great deal of the dissatisfaction which undoubtedly exists has been caused by the lack of uniformity in our grading. It is very difficult under the present grading system as outlined in the Canada Grain Act to secure the uniformity which we ought to have. The chief inspector is reported to have made the statement when he was before a farmers' convention recently that grading was after all a matter of opinion. To producers the grading of their wheat is too important a matter to be done simply upon the opinion of the inspector.

I do not know enough about the subject to say whether we would improve conditions by basing our grading system on the protein content of the wheat. Two years ago I visited the Minneapolis sample market while on my way to Ottawa and spent two days there, and while I was on the trading floor of their sample market I saw a buyer for one of the mills offer a premium of twenty-eight cents a bushel for one car of wheat over what he would offer for another car, although both were graded the same, No. 1 dark northern spring. The broker who was selling these two cars of wheat had secured a protein test of each car. One car tested something over fifteen per cent protein, and the other about ten and one-half per cent protein, and the difference in the protein content of those two cars of wheat made a difference in value, in the judgment of this buyer, of twenty-eight cents a bushel. There was also one instance in that season where a premium of fifty-two cents was said to have been paid on the Minneapolis market for high protein wheat.

As the hon. member for Moose Jaw (Mr. Ross) said, it is generally believed that Canadian wheat is almost uniformly high in protein content, but we are probably assuming too much, with our present knowledge, if we assume that to be a fact. I personally would like to see this subject very carefully investigated. What I saw in Minneapolis convinced me that we should at least make a thorough study of this subject, and I would suggest that this resolution be sent to the agriculture committee for consideration. I know that there will be much opposition raised to the suggestion that we should change our present system and base the grading of wheat upon its protein content, but I would point out that the sections of the present Grain Act covering the grading definitions take into consideration the milling value of wheat, and the milling value is, I think, largely determined, especially in the case of our higher grades, by the protein content. I do not know whether it is a fact that the protein content is the determining factor only in our higher grades of wheat. I think that sometimes our low grade wheat although it might show a high protein content, is not of very high milling value because the quality of the protein has been injured by weather conditions, by frost, possibly, or some other condition.

I do not think I should discuss our present grading system at very great length upon this resolution. I think it is sufficient to say

that at least fifty per cent and possibly more, of our grain producers think that the system could be improved upon, and if that is a fact we do not need to discuss the present system at any length at this time. I think we have sufficient justification for asking that this resolution be sent to the agricultural committee for consideration, and possibly we may get a recommendation from that committee as to any change they deem desirable in the act, or whether they think the subject should be further considered by our research department.

Mr. CAYLEY: Is the protein test made use of anywhere in the world, and what is considered a high protein content?

Mr. COOTE: I do not know that protein is used as a basis for grading in any country in the world, but I think it is used as a basis for selling the great bulk of the wheat which is sold on the Minneapolis market, which is the biggest hard spring wheat market in the United States.

Mr. CAYLEY: Is the protein test made use of in buying?

Mr. COOTE: Yes, by the buyers. As the wheat arrives at Minneapolis, principally from Montana and North Dakota, it is graded in practically the same way as our own Canadian wheat, although we would consider their grades easier than ours. But after this wheat is graded it is nearly all sold on sample; at least, it is all offered for sale by brokers on the Minneapolis sample market. There is a large milling industry established in Minneapolis and a great deal of this wheat does not go any farther than that city, but is ground there. The buyers for the mills in Minneapolis do not buy much wheat without first securing a protein test. I think every mill there has its own laboratory in which it can make its own tests. In addition a commercial laboratory is located on the ground floor of the chamber of commerce, where the market is held. In this laboratory a sample of wheat may be tested in a very short time for a charge of, I think, fifty cents. I visited the laboratory and the proprietor told me they had tested that morning over 500 samples of wheat. The test is made in a very short time.

An hon. MEMBER: What is considered the average per cent of protein?

Mr. COOTE: I do not claim to have enough knowledge of the subject to answer that question positively, but we have in Canada a great deal of wheat which I think would test at least 15 per cent protein. I think the records show that in some of the laboratories many samples tested between 16 and 17 per cent, and maybe an odd one over that; but in my opinion, which I have arrived at as a result of conversation with grain men and millers, I believe anything in the neighbourhood of 13 or 14 per cent may be considered a high protein, and there is a great deal of wheat in the United States, and possibly some in western Canada, that will test less than 10 per cent. I believe the millers want a wheat for milling that will give a uniform baking value. To secure that they want a uniform protein content. I do not know exactly what that protein content has to be, but I know that if they buy a quantity of wheat with too low a protein content, they will offer a premium for a car with an exceptionally high protein test, to mix with it and that is what has caused a high premium to be paid on the market at Minneapolis for wheat with a high protein content. Whether that condition would obtain in Canada is hard to say, because many people here contend that so much of our wheat is of high protein content that there would not be sufficient demand to ensure the payment of very much premium for high protein wheat. However, I think we have evidence enough before us to warrant us in asking that this matter be referred for consideration to the committee on agriculture. They can, if they think necessary or advisable, call in the services of our chief chemist at Winnipeg, or the chemists who are making the experiments for the mills in Canada. I would suggest to the Minister of Trade and Commerce (Mr. Malcolm) that he would be very well advised to allow the resolution to be referred to the committee on agriculture.

Mr. THOMAS DONNELLY (Willow Bunch): Mr. Speaker, with the others who have spoken I wish to congratulate the hon. member for Qu'Appelle (Mr. Millar) on having brought this resolution to the attention of the house. I consider this an important resolution to any farmer in western Canada or to any man interested in farming, as it has to do with an honest endeavour on the part of the mover to secure for the farmer the right to demand and obtain the true value of his wheat. Now, we all concede that Canada is and will be for some time to come a distinctly agricultural country. The prosperity of the country depends upon agriculture. If the farmer is prosperous the whole country is prosperous and if western Canada has a good crop it stimulates trade throughout the whole Dominion, and that means a period of prosperity. Agriculture is and will be for many years the

basic industry of Canada. Any legislation therefore which enables the farmer to receive the true value of his product is good legislation and merits the support of the members of the house.

There are only two ways in which we can improve the conditions of the farmer and give him a greater net return for his product. One is by decreasing the cost of his production and the other is by increasing the price of wheat to the wheat grower. To increase the price to the wheat grower only two ways are open. One is to decrease the cost of the distribution of wheat. This problem has, to a great extent, been solved by the wheat pools in western Canada. It has been calculated that the wheat pools, by their work of distribution, have increased the price of wheat to the wheat grower by at least 25 cents a bushel, without in any way increasing the price of bread to the consumer. This has been brought about through the more efficient method of distribution, and we hope to see the wheat pools become still more efficient in the years to come. We can also increase the price to the wheat grower by inducing him to produce a better and higher grade of wheat. The wheat in western Canada is valued in the world's market chiefly on account of its hardness or the amount of protein which it contains.

Much work has been done in past years, and we hope to see much improvement in the years to come. This resolution asks that in fixing and applying standards of value account be taken of the basic property of wheat. That is the protein. Protein is that property of wheat which supplies viscosity to the dough: in other words, it is that property in the flour which, when made into dough and fermentation begins to take place, keeps and maintains each air particle separate and distinct from the other, as the dough will stretch and will not allow the air spaces to break into the other and so cause the dough to fall. Our system of grading has been in force for some years and is probably the best system in the world from a commercial standpoint. The system is convenient for commercial purposes and enables the wheat to be handled easily. It does not take into account the amount of protein contained in the wheat. In our grading system we only take into account the amount of moisture, the weight, the colour of the wheat, as well as the frost and so on, but we do not take into account the amount of protein. No account is taken whatever of the chief element for which the wheat is valued, and that is its protein. Our spring wheat grown in Canada is valued to-day throughout the world for its protein content, and yet in our grading system no account whatever is taken of this, and though our system of inspection of wheat is old and has not been changed for years, and though we have had a commission for many years past looking into the grading of wheat, we have had no report whatever on inspection or grading of wheat, and I may say to-day that this year, above all years, there has been more complaint concerning the grading of our wheat than ever before. I believe the time has come when this government should look into the whole system of the grading and inspection of wheat.

If there is one fault I have to find with the resolution, it is that it does not go far enough. We should ask for a complete investigation into the whole system of grading and inspection of our wheat as it exists to-day. At the present time we have wheat grown in some parts of western Canada containing as low as seven or eight per cent of protein. It may have a bright, large and starchy kernel, but is low in protein, and on the other hand we may have wheat containing as high as 16 or 17 per cent protein, clear in colour, but small kernels, and yet these two grades of wheat, one containing 8 per cent and the other 17 per cent, receive exactly the same price on the world's market. This probably affects my constituency more than any other part of western Canada. I have the honour to represent a constituency in which there is a new soil, practically all virgin, lying in an area that does not receive too much moisture but just sufficient to raise a good, hard, red spring wheat. Yet, although we grow a wheat with a high protein content, we receive no more for it than do those who grow a product of lesser protein content, probably only seven or eight per cent. We are glad to note that during the past year the Saskatchewan Co-operative Wheat Producers Limited have been investigating the whole matter of the grading and inspection of grain as it exists in Canada to-day, with a view to securing such information as will enable them to recommend a more equitable application of the grading system to the individual farmer. It is also gratifying to know that the Dominion government, through the board of grain commissioners, have had scientists at work in this connection for some time, and we trust that the result of their efforts will be the acquisition of information of a practical nature. We are convinced that better results would be achieved if the services of more scientists could be secured in this field.

I wish particularly to call the attention of the government to a portion of the report of the committee which was appointed by Saskatchewan Wheat Producers Limited, in which special reference is made to some of the faults which they discovered in the grading system. Let me quote one of their recommendations:

We next looked into the practice of grading as it is carried on at Winnipeg, checking the work of the samplers, deputy inspectors and chief inspector, and received much valuable information which has been submitted to you in detail. From Winnipeg we went to the head of the lakes and while there formed an opinion, which we still hold, that there is a difference between the standard grade at Winnipeg and at the lake head. There has been some fairly severe criticism with regard to this opinion being expressed by members of the board, but notwithstanding anything that has been said, we are still of this opinion and would recommend that the resolution which was unanimously agreed upon by the inter-provincial meeting held in Calgary in March last be again taken up with the dominion government at the next session of parliament, the resolution being as follows:

"That steps be taken to provide that, in accordance with the Canada Grain Act, terminal elevators, both public and private, shall be compelled to maintain outturn grades of the same standard as that in use at primary inspection points; and further, that if the Canada Grain Act as at present constituted does not provide for this, steps be taken to obtain an amendment thereto to bring it into effect."

In this the claim is made that we have two standards of grain, one for inspection at Winnipeg and the other for inspection at Fort William. The grain commissioners also, at the same time, fix a standard whereby grain is sold at Fort William or at the head of the lakes, and as you will see from this recommendation it is felt that the standard applicable to wheat as sold at Fort William is not as high as the standard by which the wheat is bought at Winnipeg. This militates against the farmer, to the benefit of the distributor or the grain dealer. They claim that there is one standard by which they buy and an inferior or lower standard by which they sell. To substantiate this argument or to prove that the wheat, when it is being sold or is leaving the country, is not of as high a grade as when it is bought, let me refer the house to some of the work that has been done along this line. Forty-seven samples of wheat of contract grades were taken from Buffalo. These were inspected by both the government inspector at Winnipeg and the inspector attached to the Saskatchewan Wheat Producers Limited. From four to six samples were sent at a time from Regina to the inspector at Winnipeg out of these forty-seven samples. Sixteen samples maintained their grade, and it was agreed by the inspector of the wheat producers as well as by the inspectors at Winnipeg that these were correct. Thirty-one were lowered by the government inspector, while twenty-one were lowered by the superintendent of the wheat producers. Every one of these samples had a small percentage of foreign grains such as barley, rye and so forth. Samples were also obtained from points on the Atlantic seaboard. From the public elevators at Baltimore, Philadelphia, Portland, Maine, New York and Montreal, samples of contract grades were taken and only one of these samples held the grade. That was sample No. 4 taken from the public elevator at Montreal. These samples were graded by Mr. Steele, of the Wheat Producers Limited, who was fully qualified to judge of the proper grade of wheat. Not satisfied with this, the Wheat Producers Limited had a number of samples, originally shipped across the Atlantic, brought back from England, and many of them I saw. There were from fifty to sixty of these samples. Invariably they were one grade lower, at least, than the contract grades at Winnipeg. The Wheat Producers Limited of Saskatchewan have had at least from forty to fifty samples of their shipments brought back from the old country. The general opinion seemed to be that our grades were more uniform, and if anything a little better than they were last year. Last year the old country millers complained bitterly about our No. 3 grade on account of its having dried wheat in it. This was almost a universal complaint, for it came not only from millers overseas but even from eastern Canadian millers. Nos. 1 and 2 grades were fairly uniform but they were just line grades; in other words, they were on the line between 1 and 2 or between 2 and 3, and invariably they were graded into the higher grade. This is some of the work that has been done and it shows that the grades that are shipped out of the country are lower than the grades received by the farmers at Winnipeg. This condition of affairs necessarily enables the private terminal elevators at the head of the lakes to indulge in the habit of mixing grain for export from Fort William and therefore lowering the standard of our wheat on the world's market.

Let me quote an example of mixing. I could cite many examples, but I will content myself with giving one to show the extent to which wheat is mixed at the head of the lakes, thereby reducing the standard. A fair example of the way wheat is mixed at Fort

William is given by the following shipment made on the steamship Royalton in November, 1926:

125,000 of Nos. 3.
65,963 of Nos. 3.
20,000 of Rejected 3.
1,200 of Tough 4.
6,720 of No. 5.
5,280 of Nos. 1 & 2 Kota.
8,580 of Moisture 3 & 4.
4,730 of Tough 3 Kota.
4,730 of Tough 3 Red Durham.
1,300 of Durham & Spring.
6,500 of Dried No. 1.

This mixture was shipped out and sold on the markets of the world as No. 3 wheat. This is one of the worst examples of mixing that we have had and a great profit is made by this process at Fort William; and while our pool elevators are returning to the farmer in a great measure much of the profits of mixing, by indulging in the mixing process themselves, it is felt that it is an evil practice and it would be far better if it could be done away with entirely.

For the past ten years our standards of wheat have been depreciating in the markets of the world through this process of mixing, and though we are endeavouring by every means to increase the standards of all other farm products, it is regrettable that our major farm product should be allowed to suffer in this way. We try to raise the standard of our butter, our cheese, our bacon, our fruit, in fact the standard of every farm product but our major farm product—wheat, which to-day is being depreciated in the markets of the world. In this connection I find in the Regina Leader of January 17, 1928, the following article:

Canada is losing her world markets through failure to maintain her products at high quality, Mrs. H. M. Aitkens of the institute branch, Ontario Department of Agriculture, declared to-day in addressing the Ottawa branch of the National Council of Women.

Discussing her impressions of Canada standing in the various countries of Europe which she recently visited, and in substantiation of her statement that Canadian produce was losing its former high ranking, Mrs. Aitkens said, "Canadian wheat is deteriorating; last year alone growers of the Dominion having lost $9,000,000."

This is a quotation from the report of the committee appointed by the board of directors of the Saskatchewan Co-operative Wheat Producers Limited.

In connection with this work we had found out from our general sales manager, Mr. D. L. Smith, and from the perusal of correspondence and cables received from the United Kingdom and continental Europe, that there was some dissatisfaction in connection with the standard of Canadian grain which was reaching those countries, a complaint being particularly strong in connection with our No. 3 Northern wheat. We also found a fairly general opinion expressed by terminal operators of long standing and by grain men generally that our grain standards were being gradually reduced, due partly to the many varieties of wheat that are being grown in the three provinces at this time, and due to the fact that most of the terminal elevators at the head of the lakes were being operated as private terminal elevators or mixing houses, and that very few of the terminal elevators were operating under a public terminal license, in fact only six of all the elevators in Fort William and Port Arthur at this time are operating as public terminal elevators.

The Department of Trade and Commerce should look carefully into this whole matter and endeavour by every means in its power to keep the standard of our wheat at the highest possible point in the markets of the world. It is felt that there is no necessity for two standards, one at Fort William, the other at Winnipeg. We believe that we should have only one inspection point for wheat, and that it should be at Winnipeg. I am speaking, of course, entirely of wheat shipped out through Winnipeg and Fort William. I submit that there should be no inspection point at all at Fort William, and that the wheat which the farmer has to sell should be inspected at Winnipeg, and that the wheat which is sold for export from all private elevators should also be inspected at Winnipeg, even if the mixing system is allowed to continue. A sample of the wheat that is being prepared for export should be taken out of the private elevators and sent back to Winnipeg, to be there inspected by the same inspectors that inspected the farmer's wheat. We do not believe that the graders at Fort William are crooked, we do not believe that they are not doing their work efficiently, yet there exists in the public mind a feeling that these men are not doing their work as it should be done, that there is too much room for graft. When we take into account the spread in wheat to-day between 2 and 3 northern has been on an average throughout the whole season at least 15 cents, and that boatloads are being shipped of two, three and four hundred thousand bushels, we find that a difference in those grades involves a loss running from $30,000 to $60,000. Now when it is borne in mind that the men who are doing this grading are only getting $2,500 to $3,000 a year—well, we cannot help but think the same sometimes as the man in the country, "human nature is human nature." In short, the chance for graft is too great. This chance should not be present. We think in fairness to the men themselves they should be relieved of all suspicion and the government should take every precaution to

this end. In order to relieve the men of all suspicion of questionable methods, either in grading or taking samples, I believe it would be wise if the samples were not only taken at Fort William when the boat is being loaded, but again at Buffalo or at any other point where the boat is unloaded, these samples to be sent back to Winnipeg to confirm the former grades.

Let me say in conclusion, Mr. Speaker, that I heartily support this resolution, but I think it should be enlarged so as to take in the whole question of grading and inspection of wheat, and that it should be referred to the agriculture committee, to thoroughly investigate and report thereon.

Mr. C. E. BOTHWELL (Swift Current): Mr. Speaker, I have listened to the discussion of this resolution with a great deal of interest. Every member from the prairie provinces must realize that the grading of wheat is a most important part of the great industry that is carried on in the west. Every year we hear complaints about the grading of wheat, and this past year has been no exception, in fact last fall I think there have been more complaints of wheat grading than ever before.

I am doubtful, though, if we are yet at the stage where we can accept this resolution. It reads:

> That in the opinion of this house the statutory definitions applying to all contract grades of wheat in the western inspection division should be amended in such a manner as to provide for including protein as a factor.

I take it this means that if the house passes the resolution, immediately the duties imposed upon the Board of Grain Commissioners, through instructions from the Department of Trade and Commerce, to prepare an amendment to the Grain Act, but from what I have heard in this debate I am very doubtful whether we are yet ready to accept such an amendment. Yesterday in introducing the resolution the hon. member for Qu'Appelle (Mr. Millar), at page 497 of Hansard, quoted the following paragraph from the proceedings of the Research Council of Canada:

> All endeavour so far has failed to disclose any method by which strength may be measured other than the baking test but this method is unsatisfactory for many reasons. It is inexact, depends chiefly on the skill of the operator, is time-robbing, and when completed it is impossible to express the results numerically or in a way that would be universally understood. Also reliance can scarcely be placed on a single test, and often as many as three bakings must be made to make certain of the results.

If that is a true statement of fact so far as the research council is concerned, surely we are not yet ready to amend the act and make provision for taking the protein content as a factor in the grading of wheat, with all that that implies. I do not know just what effect it might have on the wheat industry in western Canada. And I should like to know what effect it might have on the mills at or near the points of inspection. These mills often purchase the wheat immediately it comes into Winnipeg, and we do not know just how long that grain is going to be held up in order to have these tests made. We do not know further what effect it may have upon the railway traffic in connection with moving the tremendous crop of wheat that we have in the west each year.

For these reasons, and also the fact that apparently the investigators are not yet able to give a definite report as to how protein content can be accurately obtained, also that they are not yet able definitely to fix what percentage or quality of protein should be taken to determine the value of wheat—as shown by a clipping from the Southwestern Miller, which I should like to read—I do not think we are yet ready for the change suggested in this resolution. The article to which I refer is dated at Kansas City, July 21, and reads as follows:

> "The percentage and quality of protein is having more and more effect on the market price of wheat," says H. M. Bainer, director of the Southwestern Wheat Improvement Association. Continuing he says, "Millers and grain dealers are paying a good liberal premium for high protein wheat, especially when they know that the protein is of good quality. The wide margin in price often paid at the same market on the same day for different lots of wheat of the same grade is almost always due to the difference in protein.
>
> The country grain buyer cannot determine the protein content in wheat; the work is too intricate and special chemical equipment is necessary. The only way the wheat grower or grain buyer can determine the percentage of protein is by sending a small composite sample to the state grain laboratory or to a cereal chemist for analysis. Protein may run as low as 8 per cent and as high as 18 per cent, but 12 per cent is a good, high average."

I think it was the hon. member for South Oxford (Mr. Cayley) who inquired as to the protein content of our Canadian wheat. Taking the report of the Regina Leader last year as to the six more commonly tested wheats from the western station in the prairie provinces the results are as follows:

	Per cent
Reward	17.52
Kota	17.29
Ruby	16.99
Marquis	16.20
Garnet	15.89
Kitchener	14.54

Now, Mr. Speaker, having regard to the facts I have stated, that we are not yet able to put into operation any definite system of grading wheat according to protein content, but that protein content, as shown by these quotations, is a most important factor in the grading of wheat, I beg to move, seconded by Mr. Vallance, the following amendment to the resolution as it now stands:

That all the words after the word "that" in the resolution be struck out and the following words substituted:

Whereas the protein content is an important factor in the value of wheat,

Therefore be it resolved that in the opinion of this house the national council of industrial and scientific research, in conjunction with the board of grain commissioners, be asked to investigate and report on the feasibility of utilizing the protein content of wheat as a basic factor in the grading of that product.

And further be it resolved that this resolution be referred to the committee on agriculture and colonization for consideration and for such suggestions in connection with the grading and inspection of wheat as it deems advisable to pass on to the said national council and board of grain commissioners.

I move that for the reason that our own research council, as shown by a report made on January 11 of this year is not yet ready to make any definite recommendation. I quote in support of the amendment as I have worded it the following from the report of F. J. Birchard, chemist in charge:

Among the other problems now under investigation, or which it is proposed to study very shortly, the following might be mentioned.

The relation between the variety, weight per bushel, size of kernels and various other factors on the oil content of flax.

The effect of various percentages of different forms of damaged wheat on the milling and baking value of the flour produced therefrom.

The development, if possible, of a practical method for determining the quality of the gluten in wheat.

A study of the chemical composition, milling and baking characteristics of the different grades of wheat originating in different parts of western Canada.

Hon. W. R. MOTHERWELL (Minister of Agriculture): I desire to make just a few observations before the amendment is put. I feel that the thanks of the house are due to the hon. member for Qu'Appelle (Mr. Millar), and those associated with him, for the persistency with which they have kept this important question before the house and the country generally. For the last forty years, at least every time there has been an off-year in the matter of grades, there has been an agitation and a natural and proper demand for some betterment in the matter of our wheat grading system. The fact that not much improvement has been made is not an argument in favour of giving up the fight, but rather an argument in favour of pressing onward until that betterment has been obtained in every possible respect. The house will recall, at least those members who have had the opportunity of reading Dean Rutherford's account of his visit to the old country will do so, that when the dean visited the old land he could find no miller or importer who would venture the opinion that wheat could be successfully graded on a protein basis for export, because of the great difficulty of retaining the identity of the various wheats on that basis. I will not enter into a discussion of the matter, except to point out that we have a tremendous multiplicity of grades now, and anything that will tend to increase the present number, without bringing about a commensurate advantage, should be avoided. Take for instance No. 1 northern. It may be tough or damp; it may be rejected for smut, and I do not know what else. If we had to grade it on the basis of the protein content—whether it were 16 per cent, or 15 per cent, or 14 per cent, or some other percentage—that would multiply the number of grades very considerably. While that is the case, something I think can be done and the hon. member for Macleod (Mr. Coote) indicated it. The prices are governed, at least for the home market and in the United States, very substantially on the basis of protein. Where the millers are right on the ground and can see the sample they are buying on the sample market, and there is very little damage, if any at all, from frost, they can reasonably well buy on that basis. But on the other hand, where this low grade wheat is due to either frost or rust, grading on a basis of protein content might be quite misleading and might, as a matter of fact, have the very opposite effect to that which is contemplated. As I have already pointed out, the very lowest grade wheat, namely, No. 6, might run just as high in protein content as the highest grade, namely, No. 1. The protein content in the case of wheat will mean nothing unless the quality goes with it, and everybody knows the quality cannot go with a No. 6 northern wheat which has been put into that grade as a result of damage by frost; neither can it go with wheat affected by rust, because the yield will be so adversely affected. The whole question, therefore, is properly a matter for the committee on agriculture to consider, and it should also be the subject of research.

I hope the house will not draw any wrong inferences from the suggestion of the hon. member for Macleod (Mr. Coote) that there is a possible difference of twenty-eight cents

a bushel with regard to two samples of wheat because of the difference in the protein content. If the quality of the wheat were adversely affected in any of the ways in which Canadian wheat may suffer damage, a greater quantity of protein in content would have no appreciable effect in counteracting that damage; as a matter of fact the effect might be the opposite to what is contemplated. If we refer this matter to the committee on agriculture we shall have the decided advantage of being able to call in our experts, for instance, Doctor Shutt, Dominion chemist, who has done a great deal of experimenting in this respect, and Mr. Newman, Dominion cerealist. We could also call in Mr. Harcourt, of Guelph, who is in charge of one of the best milling and baking laboratories in Canada, if not in America, and we could find out from them first-hand just to what extent the protein content can be made use of without our being misled in the direction indicated by various speakers.

I should like to make a few observations with respect to the remarks made by the hon. member for Willow Bunch (Mr. Donnelly) on another matter which is correlated to this one, and that is with respect to the standards of our outgoing grain from the head of the lakes. The evidence he produces goes to show that a large number of samples of outgoing grain differed very materially from the samples where the standards were set at the time of purchase, namely, in Winnipeg. Without doubt that is a very important point, and I wish to draw the attention of the house to the fact that provision was made in the Turgeon report for correcting just that sort of thing, but at that time the committee on agriculture and the house were not prepared to move in the direction of the Turgeon report. I have no doubt whatever if the request were made by the growers through their pools that grain which is mixed at the public terminals at Fort William should be graded on the same basis as the grain at Winnipeg, there would be a disposition on the part of the agriculture committee of the day and this house to accept such a suggestion coming from such a source.

Some hon. members from the west who can recall the late eighties of last century know that mixing grew to such enormous proportions during the latter part of that decade that the grain trade itself came to parliament and asked to be saved from its own conduct. In the year 1900 the new Grain Act was introduced as a result of the agitation of that time and mixing was prohibited. About 1912 —and I need not go back to the reasons for this—mixing was resorted to again, and it has been going on and on, and being more generally practised, until we now have the complaints referred to by the hon. member for Willow Bunch. In my estimation we shall have history repeating itself. This evil will cure itself because those who are practising it and the farmers themselves will, in due course come to parliament and ask that this condition be remedied. I am very much in favour of the amendment and all the facilities of my department will be made use of for the purpose of having the parties to whom I have referred brought before the committee to give evidence.

Mr. JOHN VALLANCE (South Battleford): Mr. Speaker, I am rising to second this amendment because I believe the proper place to discuss this resolution and to do it justice is in the committee on agriculture. As has been pointed out by the Minister of Agriculture (Mr. Motherwell), there we can have the millers, growers and others who are interested come before that committee to give their views on this matter. Perhaps this resolution and the amendment are somewhat premature, because I think the whole proposition would benefit if discussion of the matter were deferred until the report of the research council is available. We would then be in a better position to discuss the matter intelligently.

It is quite apparent in this debate that every member from the western provinces has attempted in some way to expose the evils of the present grading system, but I do not think all the evils have been pointed out. The hon. member for Moose Jaw (Mr. Ross) pointed out one particular instance, namely, the moisture content of wheat. In a year such as the crop year 1927, where we had a large quantity of tough wheat, this was a very pressing question with the farmers of western Canada, and I had pointed out to me on more than one occasion that too much latitude seemed to be given within the grade, for instance, that wheat shall contain 14.4 per cent of moisture in order to get into dry wheat. It is common knowledge, at least to us western farmers, that the greater bulk of the wheat grown on the open prairies of Saskatchewan and Alberta contains as low as 11 per cent of moisture, and the farmer who is growing wheat with 11 per cent of moisture content feels that he is being somewhat penalized because he has to accept it as containing 14.4 per cent of moisture. Therefore, we are selling on the world market wheat of a grade that may contain 14.4 per cent of moisture although on many occasions we are growing wheat with a great deal less moisture content. As long as there is a latitude within

the grade, as is the case under the present grading system, we shall have to submit to two standards of grade. I believe, from my experience after growing wheat for twenty-two years on the western plains, that we, the farmers, sell our wheat at the maximum moisture content and that when it goes on to the world market it is sold at the maximum, thus giving the grain trade a great deal of latitude in the mixing. At the present time, particularly in Saskatchewan where the Co-operative Wheat Producers, Limited, control eighty per cent of the wheat, this mixing is not as great an evil to the farmer as it was prior to the establishment of the wheat pool, because we enjoy the same mixing privileges as do the other grain interests. If this whole question is referred to the agriculture committee, we shall be able to bring the very best brains before the committee and be able to deal with the question intelligently. Therefore it affords me very great pleasure to second the amendment.

Mr. E. J. YOUNG (Weyburn): I wish to rise in support of the amendment. I am of opinion that the proper thing to do in this regard is first to get the opinion of the national research institute, when that organization is set going, so that we can arrive at as definite a scientific opinion as is possible.

As I understand it, the aim of the resolution was to make the protein content if not the determining factor at least a greater factor than it is at present in determining the grade of wheat. I was much impressed by the remarks of the hon. member for Moose Jaw (Mr. Ross) when he pointed out that although protein is an important factor it is not always the only factor which the millers require in buying wheat. In the United States protein is very largely the determining factor for this reason: Minneapolis is a very large milling centre. It draws its wheat from a large area where the wheat is of low protein content. It is only on the northern borders of Montana and Dakota that wheat of high protein content is produced. Consequently the millers of Minneapolis, wishing to make a flour up to their standard grade, are looking for wheat of a high protein content to tone up the wheat which they get from other parts of the country that is of a lower protein content. Protein is therefore always at premium in the Minneapolis market. They have their grades over there just as we have here. You will find on the Montana side of the line that wheat of a certain grade, selling say for one dollar a bushel, will, if it contains a large percentage of protein, bring a premium of sometimes as high as twenty-eight cents a bushel. But that would not apply universally; it would not apply in this country. Our wheat is very largely of high protein content. Protein, then, not being so scarce in Canada as it is in the United States, would not necessarily command the same premium.

What is the practice at the present time in grading wheat in this country? We grade largely by the eye and by the scale. If the wheat weighs sixty pounds to the bushel and contains a certain percentage of hard, bright red, vitreous kernels, these can be inspected and judged by the eye, and that wheat is put into No. 1 grade. Much has been said of the dissatisfaction over the grading that has existed in the west during the past year. I have never seen so much dissatisfaction over our present grading system as I have this year, but is that dissatisfaction due to the presence or absence of protein? I do not think so. I think the trouble is this: The farmer looks at his sample and he sees that the great bulk of it is composed of hard, bright red, vitreous kernels, and he thinks that that surely will grade No. 1. He ships his car, and a sample is taken at Winnipeg. The inspector looking at that wheat is not looking for hard, bright red, vitreous kernels; he is looking for defective kernels, and if he finds a certain number of green, frozen or damaged kernels, he puts that wheat down a grade.

It seems to me that possibly the Grain Act might be improved in this way, without waiting for such a reference as this: The inspection department will not separate wheat from wheat. If you ship a carload of wheat which contains a certain percentage of wild oats, it might go through as No. 1, but if you ship another car of identically the same wheat, but containing, instead of wild oats, a certain percentage of small, green, shrunken kernels, that wheat will be degraded because they will not separate wheat from wheat. Now these damaged kernels could be taken out just as easily as the wild oats.

Mr. DUNNING: More easily.

Mr. YOUNG (Weyburn): Yes. It seems to me there is room for improvement there without having regard to protein content. I think that could be done quite easily. I believe that is the principal cause of the greater part of the dissatisfaction which exists in the country at the present time with regard to our grading system.

Mr. MILLAR: Reverting to what the hon. member said a moment ago, that the premium commanded in the United States could not be expected in Canada, would not the adoption of this system of grading wheat where protein is a factor broaden the field of com-

petition so as to include the American buyer, who is now importing a lot of our wheat for grinding with his own soft wheat both for export and for domestic purposes? Would it not also include the British buyer? Would it not broaden the field to include Canada, the United States and Great Britain, whereas now the field is confined to the Canadian miller?

Mr. YOUNG (Weyburn): No, I do not think so. I think that the American buyers coming over here looking for a particular quality of wheat would proceed in this way: They send their experts all over the country while the wheat is growing; they know before the harvest just where the kind of wheat they want can be got, and they instruct their buyers to get wheat from that particular district.

Mr. MILLAR: This would deprive them of that privilege. They would have to pay for it.

Mr. YOUNG (Weyburn): Perhaps so, but there is another way of getting around that difficulty. It seems to me that in determining our wheat grades the first man we should consult is the old country miller. He knows what he wants; he will be prepared to tell us exactly what he wants, and what he would be willing to pay for it. The producer of any other article, clothing, for instance, or anything else, first consults the market to ascertain its needs, and then he tries to produce the kind of article the market wants. Our principal market is in Great Britain, and having determined our grades in accordance with what they want, we should then see to it that they always get the minimum grade. Never give them any better than they pay for, nothing more than the law requires. They do not expect anything better.

Mr. MILLAR: Has not the British miller by his practice in selecting high protein wheat already let us know exactly the kind of wheat he wants? He wants it of high protein content.

Mr. YOUNG (Weyburn): No. I shall have to revert back to the remarks of the hon. member for Moose Jaw, who pointed out that generally speaking that is so, but at such times as the world's wheat crop is coming from several different countries and contains all qualities of wheat, the English miller requires less protein content than he does at other times; then it is not protein content that he is looking for. Let us arrange the grades to suit the English miller, and then let us see to it that he never gets anything better than he pays for. Let us see to it that the wheat going over to the old country is always at the bottom of the grade.

There is another question, and that is how to get for the farmer the true value of his wheat. To-day the farmers with No. 1 wheat, whether it be good No. 1 or a poor No. 1, get the same price, but there might be a difference of from five to ten cents in the milling value as between two cars of No. 1 wheat; and the same would apply to the other grades. The question is how to get to each individual farmer the true value of his carload. The remedy for that situation would be a sample market, with samples within the grade, if you will, where professional buyers representing the terminals in which this wheat would be mixed could attend, and where every carload would be tested. Let them give a bid on every car and say exactly what that car is worth in the light of what the market is demanding at the moment; then ship that wheat to the terminals and allow it to be mixed right down to the bottom of the grades. It seems to me that that is a solution of the problem that is about as rational as anything I know of. I heartily support the amendment.

At six o'clock the house took recess.

After Recess

The house resumed at eight o'clock.

Mr. J. L. BROWN (Lisgar): Mr. Speaker, my contribution to this debate will not detain the house very long. I rise as a Manitoba member to associate myself with hon. members from the other provinces who have emphasized the importance of the subject under discussion. I was not in entire accord with the resolution presented by the hon. member for Qu'Appelle (Mr. Millar), not because I had underestimated the importance of the question, but because I felt that at the present time our knowledge of the subject is not sufficient to warrant our taking immediate steps to apply the principle which the hon. member for Qu'Appelle emphasized. I discussed the question many times with my hon. friend and he knows my views in the matter. While the question is one of supreme importance, I have had very grave doubts in my mind as to whether it would be possible, under the conditions which prevail in our grain market—especially when we remember that the greater part of our wheat is for export—to apply those principles which are so successfully applied in the Minneapolis market.

It has been suggested that in this matter that we may have or will get help from expert chemists. I am not sure whether we need very much more from expert chemists than we have at the present time. Some of

us visited the central experimental farm two years ago and spent a very interesting time with Dr. Shutt and his helpers at that institution, and we found that while they had much to present that was very interesting from a scientific point of view, they were absolutely helpless in the matter of offering us any means by which we could apply their principles in the grain trade. However, if this subject is to be referred to a committee, as I believe it will, I am in entire accord with the amendment that has been moved. In the event of its reference to a committee, together with the related subject mentioned by the hon. member for Willow Bunch (Mr. Donnelly), it would seem to me unnecessary to go into any detailed discussion of the matter. I repeat that as a Manitoba member I desire to associate myself with those who have emphasized the importance of the subject. The farmers of Manitoba are at one with their brethern in the other prairie provinces in the endeavour to find a solution for some of the problems which have been troubling us for the last twenty-five years.

Mr. JOHN EVANS (Rosetown): Mr. Speaker, the question of grading wheat according to its protein content was of more importance years ago, and in common with the hon. member for Lisgar (Mr. Brown) I am of the opinion that it is not even practicable for the farmer of western Canada to market wheat under that method. Some years ago we urged the government to establish a sample market. They did not do so, for obvious reasons. A sample market is a necessity for the hard wheat farmer on the North American continent, if it were possible for the farmer to market all his wheat at home. I would say that we should by all means establish a sample market, so that the farmer would get the intrinsic value of his wheat; but having to export about nine-tenths of this great wheat crop of Canada the difficulty is for any foreign miller to get the wheat he has bought on sample to its destination where he would be able to take advantage of it, and the protein content he has bought, at his own mill. It has to pass through so many terminals and transfer between Fort William and the seaboard that the identity of any wheat bought on sample is bound to be submerged in the common whole. In the first place, it is sent forward to Fort William in such quantities that after it is graded according to its content of protein at Winnipeg, bills of lading are exchanged by all companies and it is unloaded at the terminal most convenient to be used at the time.

I believe that this principle of grading wheat is not as yet practicable. Besides, I think the need of the grower has been obviated somewhat by about 60 or 70 per cent of it now being marketed by himself through the pool method, and he is to-day getting nearer the value of his product than he ever did before. If it were profitable to transfer and to preserve the identity of the wheat between the grower and the ultimate miller, I would then be in favour of such a system; but at present I cannot see that it will help the grower very much. I am not against the resolution and shall be glad to have it discussed in committee, but at present I cannot see that it is at all practicable.

Amendment (Mr. Bothwell) agreed to.

Motion as amended agreed to.

DOMINION ELECTIONS ACT

VOTING BY CLERGYMEN, TEACHERS AND STUDENTS

Mr. L. P. BANCROFT (Selkirk) moved the second reading of Bill No. 32, to amend the Dominion Elections Act.

Mr. LAPOINTE: Explain.

Mr. BANCROFT: I explained the bill briefly on the first reading and I hardly think it necessary to discuss it at any great length now. I will ask the house to pass the second reading and allow the bill to go to the committee on privileges and elections for detailed consideration. The object is to obviate the disfranchisement of clergymen, school teachers and students when, in the pursuit of their various callings or studies, they find it necessary to change their place of residence from one constituency to another within the period during which, under the present law, such transfer of residence would disqualify them. This period covers about four months prior to the date of the election. Most of our federal elections are held in the fall of the year. Practically every federal election since 1896 has been held in the fall, and clergymen usually change their pastorates during the summer months, while school teachers take up new duties about the first of September and university students and those in business colleges about the first of October. Should any of these three classes change their place of residence at the beginning of their respective terms they are disfranchised under the present act if the election happens to take place in the fall. The act provides that

the voter shall reside in his present polling subdivision for a period of sixty days prior to the issue of the writ of election, and as the writs are usually issued about two months before the election it means that the voter must reside in his division for about four months preceding the election.

The question may be asked, why make an exception in favour of clergymen, school teachers and students? I would point out that under the act as it stands a similar exception is made in favour of railway employees, sailors and commercial travellers, in the interests of whom advance polls are provided.

I brought down this bill last year and it received its first reading but it could not be dealt with at that session. I would remind the house that before introducing the bill then I took the matter up with Colonel Biggar, then chief electoral officer, and discussed it fully with him, and he agreed that the amendment proposed should be carried into the act. As I say, objection might be raised to confining it to these three classes.

Mr. HEAPS: Why not include harvesters?

Mr. BANCROFT: I should like to see every harvester's franchise preserved to him and every Canadian citizen enabled to exercise his voting rights. But in framing the bill we confined it to those classes by whom the concession would be impossible of abuse.

Mr. HEAPS: Does the hon. member suggest that harvesters would abuse the privilege?

Mr. BANCROFT: I do not say that harvesters would abuse it, but I can conceive the possibility of a transfer of votes on the part of harvesters from one constituency to another, where you had a close seat in one place and a safe seat in the other. Some particular brand of harvesters might migrate from the safe seat to the close seat and cast their vote there.

Mr. KELLNER: Is that not possible with students?

Mr. BANCROFT: This is confined to students in the higher institutions of learning —universities and business colleges. All students entering these institutions are obliged to make application, wherein they must state their place of residence. The secretary, or whoever happens to have charge of such matters, the registrar of the institution, perhaps, knows pretty well the history of every student coming in. Moreover, the bill provides that the person making application to the registrar to have his or her name put on the voters' list shall satisfy that officer that he or she is qualified in every other respect, apart from the question of residence. The same thing applies to school teachers and clergymen. When people apply for positions as school teachers the secretary of the school district, to whom the applications are sent, learns their history to a certain extent. The secretary of every school district knows where a particular teacher comes from, how long he has been in his last place of residence, and gets sufficient information generally on which to enable the registrar to decide whether or not the applicant is qualified to vote. In the case of clergymen, I believe, every religious denomination has some board or other body that passes upon all transfers from one pastorate to another. In each of these three cases, therefore, the record can be checked up if necessary, and the onus is placed upon the applicant who, when he applies to the registrar to have his name included in the list, must furnish satisfactory proof that, apart from residence, he is qualified to vote. The provision in the act which this bill seeks to amend reads:

—has ordinarily resided in Canada for at least twelve months and in the electoral district wherein such person seeks to vote for at least two months immediately preceding the issue of the writ of election.

This bill will add to that subsection the following:

Provided, that clergymen or school teachers following their respective occupations or students attending a university or other institution of learning and following their studies, who have ordinarily resided in Canada for at least twelve months immediately preceding the issue of the writ of election, shall be permitted by the registrar to have their names placed on the voters' list if it be proven to the registrar's satisfaction that they will be residing, on the day the election is to take place, in the electoral district wherein they seek to vote, and the rules in schedule A and B of section thirty-two of the act shall apply to this proviso in so far as they are not inconsistent therewith.

As I said when introducing the bill, this amendment affects approximately 12,000 clergymen, 63,000 teachers and 75,000 students.

Mr. BENNETT: What warrant is there for making that statement?

Mr. BANCROFT: The Dominion Bureau of Statistics.

Mr. BENNETT: There are that many in Canada?

Mr. BANCROFT: Yes.

Mr. McGIBBON: But they do not change every year.

Mr. BANCROFT: It would be very hard to find out how many change every year, but it affects them all because they all change from time to time. I would ask the house to allow the bill to be read a second time and referred to the committee on privileges and elections.

Mr. A. A. HEAPS (North Winnipeg): Mr. Speaker, I am not a member of the committee on privileges and elections and consequently will not have an opportunity of taking part in the discussion of this bill should it be referred to the committee. There is no analogy between the advanced poll provided for by the Dominion Elections Act and the purpose of this bill. The advanced poll only gives to the individual voter an opportunity to vote in the riding where he or she is entitled to vote; but this bill proposes to give the right to three particular classes in the community to vote in a constituency other than that in which under the act they now would be entitled to exercise their franchise. If the hon. member wants to shorten the time of qualification for voting, he should have brought in a bill aptly worded, and made all classes equal in this respect; but this bill applies to three particular classes, students, clergymen and teachers, and puts them in a preferred category. There are other men and women who may find themselves in exactly the same difficulty at election time as the people in question, and why should they be deprived of the privilege to be granted by this amendment? Men engaged in railroad work and harvesters cannot vote at the advanced polls provided for under the act, although they have a right to the franchise. I am as anxious as the hon. member is to give every elector an opportunity to cast his vote at election time, but I am opposed to granting favours to a few and thus creating inequalities under our electoral law. The hon. member has given the number of students, clergymen and teachers who would be benefited by the passage of this bill, but although he gives those figures on the authority of the Bureau of Statistics, it does not follow that all those people are entitled to vote; a large percentage of the students, for instance, may be under the age of twenty-one, and others may not be Canadian citizens. I have no objection to this bill going to the committee on privileges and elections, but I do hope that that committee will thoroughly look into the inequalities to which I have drawn attention and put every section of the community on an equal basis.

Hon. ERNEST LAPOINTE (Minister of Justice): Mr. Speaker, as the mover of the bill says he agrees to its being referred to the committee on privileges and elections, I have no objection to the second reading.

Motion agreed to, bill read the second time and referred to the select standing committee on privileges and elections.

BANKRUPTCY ACT AMENDMENT

ATTENDANCE FOR EXAMINATION

Mr. J. C. BRADY (Skeena) moved the second reading of Bill No. 38, to amend the Bankruptcy Act.

He said: Mr. Speaker, under the Bankruptcy Act each province becomes a bankruptcy district, but the governor in council may divide such districts into two or more divisions and appoint an official receiver for each division. In the centre of British Columbia, an immense area through which are scattered many small towns and business centres, there are only two official receivers, one at Vernon and the other at Prince Rupert, and tremendous distances have to be travelled by the debtor in order to appear before the official receiver for examination. The purpose of the amendment is not to interfere with the basic principles of the act but simply one of procedure in examination of the debtor and to obviate the present necessity of the debtor being obliged to travel so far to the detriment of the creditors, because his travelling expenses naturally come out of the estate. This bill would make the Bankruptcy Act operative in those areas wherein to-day it is inoperative, due to the conditions that I have just referred to. In other words, it would enable creditors there to benefit by the act as they do in urban centres.

Let me give the house an illustration typical of the difficulties in securing a debtor's examination in those areas. A bankrupt who formerly carried on business near Prince George is now resident in Vancouver. From Vancouver to Prince George the distance by the Pacific Great Eastern railway is 480 miles, and via Prince Rupert by water and rail the distance is about 1,200 miles. Now, the debtor is obliged under severe penalties to travel to Vernon to appear for examination before the official receiver of the district

wherein he formerly resided. Later he must go to Prince George where the creditors' meeting would naturally take place. The purpose then of the amendment is not to interfere with the basic principles of the act but to render the act operative in those areas wherein to-day it is not possible for the creditors to benefit by it. I think, therefore, that anybody who has studied the bill and read the observations set forth therein will have no difficulty in seeing that it is of great importance that the creditors be enabled to get something at least out of the estate. In one particular instance where the act was taken advantage of the creditors were obliged to pay the debtor's expenses on two occasions and yet they received no benefit whatsoever out of the estate. The purpose, therefore, of the amendment is simply to render the act operative throughout the whole of Canada, and likewise to enable the creditor or the creditors to receive the benefits which it was intended by the act that they should receive.

Mr. C. H. CAHAN (St. Lawrence-St. George): Mr. Speaker, the hon. member for Skeena placed before me some time ago, simply as a friend, the difficulties of securing examinations in British Columbia and in some of the districts of the northwest. It has seemed impossible to bring debtors five hundred, six hundred, or a thousand miles, through rough country oftentimes for the purposes of examination. I think the gist of it is in section 1, subsection 1, the last sentence:

> The examination of the debtor shall be taken before a magistrate, justice, commissioner for taking affidavits, notary public or any qualified person authorized by the court to take evidence, at such place of business or residence, or as near thereto as possible.

It will be made under an order of the court anyway, and in my opinion it simply gives a judge having charge of bankruptcy proceedings authority to have an examination, as we say in the English law, de bene esse. I thought that under those circumstances it was a proper amendment for the consideration of the house, but it could be more particularly studied in committee if the Minister of Justice would consent that it go before the committee for study and consideration. It is simply a matter of procedure, not an amendment of substantive law.

Hon. ERNEST LAPOINTE (Minister of Justice): This bill having been printed only a couple of days I admit that I have not been able to give the matter the consideration it deserves. The Bankruptcy Act was put into our statutes after long consideration by committees of the house, and every section of it was carefully studied. I am rather reluctant, therefore, to change the act without giving the fullest consideration to the proposed change. However, I will say this to my hon. friend: I admit that the act as it is may in some special cases involve rather a hardship. Under section 128 of the act the debtor is required, within three days of the assignment, to present himself before the official receiver for examination, and that under penalty of imprisonment. I think the ordinary practice is to have this examination at the same time as the debtor presents his assignment to the official receiver. He has to travel some distance, a long distance in some cases, and at considerable expense. In some cases there are not many assets, and even if there are assets the debtor personally has no money. Even with a provision that he should be reimbursed out of the proceeds of the assets he could not go for the examination. On the other hand I am advised by the officers in charge of the administration of the law that they do not know of any case where a man has been imprisoned because he did not, owing to lack of funds, go for his examination. I may say to my hon. friend that those are obstacles, but they were purposely put into the act in 1923 because of the flood of assignments which occurred at that time, especially in rural districts. In my own province it was considered a plague, and those obstacles were placed in the way of these many assignments, which were regarded as a real danger.

Now the question is whether the time has come to remove the obstacles and in what way that shall be done. One method would be to appoint more official receivers. For instance in the province of Quebec there are at present thirteen official receivers and thirty judicial districts. If there were an official receiver in every district there would be thirty instead of thirteen. I am considering the advisability of authorizing the official receiver to appoint a deputy in some cases in other parts of the district. I may say to my hon. friend from Skeena (Mr. Brady) that as far as his province, and I think his district, is concerned, I have come to the conclusion that an official receiver should be appointed at Prince George. I think this would go a long way to remove the difficulties of which my hon. friend complains. The question of distributing the work between the judges of the high court and of county courts is also engaging the attention of the department. As to authorizing a notary public or minor magistrate to do the work which

is mentioned in the bill, I am not sure that it would be an improvement. However, we are at the present time considering changes to be made to improve the act.

I do not know whether it would be better to send this bill to the committee on banking and commerce—I suppose that committee would be the natural one—or, perhaps, allow it to stand. In the latter case my hon. friend might discuss the matter with me and the officers of my department and we might come to a conclusion that would satisfy him.

Mr. BRADY: That would be very satisfactory. While the minister was speaking I was thinking that the Yukon, for example, has no official receiver. There may be no bankruptcy cases up there; possibly they settle such cases in their own way. I have never heard of a Yukon bankrupt; apparently he is non-existent, but there are many cases to-day in British Columbia where the creditors do not utilize the Bankruptcy Act, or benefit by it, because of the great outlay involved.

Mr. LAPOINTE: Stand.

Hon. R. B. BENNETT (Leader of the Opposition): The motion for the second reading has been moved, and the Minister of Jupstice has expressed the opinion of the administration with respect to it. I hardly think the bill could be allowed to stand now; the debate would have to be adjourned. That I think would be the proper procedure. In view of what the minister has said as to the general condition of the law I am sure he will agree that the most we have done thus far this session has been to amend statutes that were consolidated during the last few years and which came into effect in revised form on the first day of this month. This particular statute was one of them. The subject matter here is worthy of the most careful attention on the part of the government, having regard to the size of the territory and the limited number of people in the area affected, and it perhaps would advance the public business if we just allowed this bill to go pro forma to the committee. Then if the minister concludes it will be desirable to adopt this amendment, we will get it off the order paper and advance it that far. Perhaps the minister might be willing to deal with it in that way.

Mr. LAPOINTE: I hope I shall be able to agree with all the proposals of my hon. friend as I am pleased to agree with this one.

Motion agreed to, bill read the second time and referred to the select standing committee on banking and commerce.

[Mr. Lapointe.]

UNOPPOSED MOTIONS FOR PAPERS

MALLORYTOWN POST OFFICE

Mr. STEWART (Leeds):

For a copy of all reports, petitions, correspondence, orders in council, recommendations, communications, memoranda, and other documents in any way relating to the change in the location of the post office at Mallorytown, in the county of Leeds, Ontario.

DALEM LAKE—BOULARDARIE POSTMASTERSHIP

Mr. JOHNSTONE:

For a copy of all correspondence, letters, and other documents in connection with the dismissal of Alex. McDonald, Dalem Lake, Boulardarie, Cape Breton, from the position of postmaster, and also all similar papers in connection with appointment of his successor.

WESTERN SHORE POST OFFICE

Mr. ERNST:

For a copy of all correspondence, telegrams, letters, and other documents in connection with the removal of the post office at Western Shore in the county of Lunenburg, in the province of Nova Scotia, from the residence of Mr. E. Holman to another part of the district.

CONQUERALL BANKS POSTMASTERSHIP

Mr. ERNST:

For a copy of all correspondence, telegrams, letters, and other documents in connection with the dismissal of Mrs. Albert Rafuse from the position of postmistress at Conquerall Banks, Lunenburg County, Nova Scotia, and in connection with the appointment of her successor.

MAHONE BAY—CHURCH LAKE MAIL ROUTE

Mr. ERNST:

For a copy of all correspondence, telegrams, letters, and other documents in connection with the proposed change of mail route between Mahone Bay and Church Lake, in the county of Lunenburg, Nova Scotia.

RELATIONS WITH SOVIET RUSSIA

Mr. HEAPS:

For a copy of all correspondence, telegrams, orders in council and other documents, pertaining to the breaking off of relations between Canada and Soviet Russia.

Mr. MACKENZIE KING: There is no objection to bringing down this return; but I should mention to my hon. friend that some despatches have passed between the British government and our government, and as is customary in relations between governments, I should wish to get the consent of the British government in regard to any communications that have come from or gone to that source before laying them on the table.

Motion agreed to.

CHICAGO DRAINAGE CANAL

MOTION FOR PRODUCTION OF REPORTS AND CORRESPONDENCE RESPECTING DIVERSION OF WATER

Mr. C. H. CAHAN (St. Lawrence-St. George) moved:

For a return showing: 1. The report of the three Canadian members of the international waterways commission, dated on or about April 25, 1906, recommending the negotiation of a treaty with the United States respecting the international waterways lying along the international boundary between the United States and Canada, and referring to the diversion of 10,000 cubit feet per second by way of the Chicago drainage canal to the Mississippi river.

2. The joint report of the international waterways commission to the governments of the United States and Canada, dated May 3, 1906, recommending, amongst other things, that a diversion for sanitary purposes not exceeding 10,000 cubic feet per second be authorized for the Chicago drainage canal.

3. A report, dated January 4, 1907, by the international waterways commission recommending that the government of the United States prohibit the diversion of more than 10,000 cubic feet per second for the Chicago drainage canal.

4. All reports, correspondence or documents in the possession or under the control of any department of the government of Canada, which would tend to substantiate or to qualify the statement made to the foreign relations committee of the United States Senate, when the waterways treaty of 1909 was under consideration, that the representatives of the government of Canada "consented to leave out of this treaty any reference to the drainage canal, and we are now taking 10,000 cubic feet per second for the drainage canal which really comes out of this lake system."

5. Copies of all correspondence, reports or documents relating to any protests made by or on behalf of the government of Canada against the diversion of waters from lake Michigan by the sanitary district of Chicago.

He said: The subject of the right of the Chicago sanitary district and of the state of Illinois to divert water at Chicago has been discussed in this house on a number of occasions, and the present Minister of the Interior (Mr. Stewart) made remarks in regard to the matter on March 26, 1924, again on June 3, 1924, and more recently in this house during the session of 1926. On January 25, 1926, the Minister of the Interior, in the course of a review of the whole matter, made to the house a formal statement in which he referred to a judgment of the Supreme Court of the United States dated January 5, 1925, restraining the Chicago sanitary district from withdrawing water from lake Michigan through the Chicago drainage canal in excess of the quantity then authorized by the United States Secretary for War. The Minister of the Interior then said:

This judgment—

Referring to the judgment of the United States federal court.

—recognized for the first time, that the diversion affects and was contrary to Canadian rights under the Boundary Waters treaty of 1909.

I examined that judgment at some length, but I was unable to find in the terms of the judgment any such recognition as suggested by the Minister of the Interior. In any case the injunction was obviated by the fact that the United States Secretary for War, on March 3, 1925, granted a further permit to the Chicago sanitary district to withdraw water up to the quantity then required. The Minister of the Interior on that occasion also referred to a bill then before the United States Senate which "provides for the construction of a nine-foot navigable channel in the Illinois and Mississippi rivers based on the diversion from lake Michigan through the sanitary district canal of an amount of water not to exceed 10,000 cubic feet per second." The minister continued:

The government is fully alive to the menace of the provisions of this bill to the navigation, power and other interests of the great lakes and St. Lawrence river, and is registering with the United States government a vigorous protest against its passage in so far as it contemplates the withdrawal of water from the great lakes.

It seems to me, Sir, most important in view of subsequent developments that these protests, such as they are, should be laid before the house so that the house may really understand the nature of the position taken by the government as represented by the minister.

On June 7, 1926, the United States Supreme Court referred three suits then pending in the federal courts—in which twelve states appeared as complainants against the state of Illinois and the Chicago sanitary district as defendants, all of which were consolidated and referred—to Charles Evans Hughes, as master, to take the evidence and to report thereon. The appointment of master in the federal courts of the United States, as it is in our own courts, is usually made of an appointee versed in the law, but of some impecunious lawyer who has not very much of a practice to occupy his attention. The appointment of a former secretary of state of the United States, a former governor of the state of New York, and an ex-judge of the supreme court of the United States, seems to suggest that the appointment of Mr. Hughes had political as well as judicial significance.

The prolonged inquiry before Mr. Hughes as special master, which continued from November 8, 1926, to June 23, 1927, was at length completed, and in November, or early in De-

cember last, Mr. Hughes filed his report, which seems to be of special interest to this country. In this report Mr. Hughes briefly finds:

That the congress of the United States has power to regulate the Chicago diversion and to determine whether and to what extent it should be permitted;

That congress has by various enactments conferred authority upon the United States Secretary of War to regulate such diversion;

That the permit of the Secretary of War under which such diversion is now being made is valid and effective according to its terms;

That there is, in law and in fact no unlawful or illegal diversion of waters at Chicago.

In other words, in popular newspaper parlance, there is no "Chicago steal" so far as the United States is concerned. This report is satisfactory to this country, I should think, at least in this respect, in that if it is confirmed, as seems likely, it affirms unconditionally that, so far as the United States is concerned, the congress of the United States has exclusive control over this diversion at Chicago. So that so far as Canadian interests are affected thereby, it would seem that the federal government of the United States must accept full responsibility.

Dealing with conclusions of fact, that report also affirms what has been the contention made in this house by members of the government, namely, that the effect of a diversion of 8,500 cubic feet per second has been to lower the mean levels of lakes Michigan and Huron six inches, the mean levels of lakes Ontario and Erie approximately five inches, the mean levels of the connecting rivers, bays and harbours, which have the same mean levels as the lakes I have mentioned, to the same extent respectively, and that each additional diversion of 1,500 cubic feet per second would lower the above levels by approximately one inch more; and finally there is the conclusion of fact from the evidence that if this diversion at Chicago were ended, assuming that other diversions remain the same, the mean levels of the lakes and rivers affected by the Chicago diversion would be raised in about five years in the case of lakes Michigan and Huron, and in about one year in the case of lakes Erie and Ontario, to the same levels as they previously were before they had been lowered respectively by the Chicago diversion.

So far the report was well within the bounds of the reference to Mr. Hughes, but in the evidence as submitted to him there were certain reports which had been made by the old international waterways commission in which the American members and the Canadian members of that commission had concurred, and which came under review by Mr. Hughes in making his report; and he perhaps goes beyond the scope of his reference, or, at least, the finding which he made in that respect is not binding upon Canada at all events. Mr. Hughes suggests that Canada has no valid ground of complaint under the waterways treaty of 1909, and that, in fact, Canada is now precluded by the conduct and consent of its representatives and by the terms of the waterways treaty of 1909 from making any effective protest against such diversion.

The evidence discloses the following significant facts:

For many years prior to 1909, the congress of the United States had under consideration the diversion of 10,000 cubic feet of water per second from lake Michigan into the Illinois river and thence to the Mississippi river for the purposes of the sanitary district of Chicago, and also to provide a connection between the navigation of the great lakes and the Mississippi river and its tributaries.

I shall not review at length in the short time at my diposal the various statutes passed by the congress of the United States under which these diversions were authorized.

Mr. STEWART (Edmonton): As to the amount of water—

Mr. CAHAN: I have all the permits here. Permits were granted at various times up to 8,500 cubic feet per second, in addition to about 1,400 or 1,500 cubic feet which had otherwise been diverted.

Mr. BENNETT: Not exceeding 10,000 cubic feet in all.

Mr. CAHAN: Yes. It is about 9,800 cubic feet in all.

Mr. STEWART (Edmonton): But my hon. friend is not arguing—

Mr. CAHAN: I am not arguing at all. I am simply making a statement with regard to a prima facie case.

Mr. STEWART (Edmonton): I just want to get it clear. Do I understand that my hon. friend says that the Hughes judgment suggested that 10,000 cubic feet was actually being diverted under the treaty of 1909?

Mr. CAHAN: I have not gone that far, and I am not suggesting it. I will tell you in a few moments what he does say. These early statutes to which Mr. Hughes refers in his report were passed by the congress of the United States, some ten years prior to the negotiation of the waterways treaty of 1909. On November 18, 1900, a board of engineers, appointed under the act of congress of March

3, 1899, referred to the drainage canal as of "sufficient depth and width for any possible requirements of navigation", and reported that "from the west end of this canal the waters of lake Michigan, in a steady flow amounting to from 5,000 to 10,000 cubic feet per second, are discharged into the bed of Des Plaines river and are carried thence down the Illinois river to the Mississippi".

Subsequently further permits were issued, and then we come to the appointment of the first international waterways commission. This commission was formed in pursuance of an act of congress of the United States, known as the River and Harbour Act, of June 13, 1902, and with the permission of the house I would like to place this one clause of that act on Hansard without reading it:

The president of the United States is hereby requested to invite the government of Great Britain to join in the formation of an international commission to be composed of three members from the United States and three who shall represent the interests of the Dominion of Canada whose duty it shall be to investigate and report upon the conditions and uses of the waters adjacent to the boundary lines between the United States and Canada including all of the waters of the lakes and rivers whose natural outlet is by the river St. Lawrence to the Atlantic ocean, also upon the maintenance and regulation of suitable levels and also upon the effect upon the shores of these waters and the structures thereon and upon the interests of navigation by reason of the diversion of these waters from or change in their natural flow and further to report upon the necessary measures to regulate such diversions and to make such recommendations for improvements and regulations as shall best subserve the interests of navigation in said waters.

It provided for a commission on which Canada should be represented by three Canadian members to be appointed by the government of Canada, the United States by three American members to be appointed by the government of the United States, who were to form an international commission. These six members were to represent the interests of their respective countries, and it was their duty to investigate and report upon the conditions and uses of the water adjacent to the boundary line between the United States and Canada, including all of the waters of the lakes and rivers whose natural outlet is by the river St. Lawrence into the Atlantic ocean; also upon the maintenance and regulations of suitable levels, and also upon the effect upon the shores of these waters and the structures thereon, and upon the interests of navigation, by reason of the diversion of these waters from or change in their natural flow, and so on. The Canadian government, of which Sir Wilfrid Laurier was then Prime Minister, accepted the invitation of the United States, and by order in council dated April 27, 1923, made provision for Canada making appointees to this commission for the purposes mentioned in the act; but it was not until January, 1905, that the three Canadian members were all actually appointed, and the order in council of the government of Canada, among other things, authorized them to inquire into the levels of lake Huron and lake Erie by the construction of the Chicago drainage canal.

The commission held its first meetings in Toronto on June 14 and 15, 1905. The United states Board of Engineers reported to congress on January 18, 1905, as follows:

The Chicago drainage canal was brought into use in January, 1900. It has not yet been completed to its full capacity as desired. When fully completed it will have a capacity of about 10,000 cubic feet per second flowing at a low velocity. As now constructed it has a depth of about 22 feet and a bottom width in different parts, 110 feet, 160 feet and 202 feet respectively. It constitutes a navigable channel, able to accommodate the largest vessels now navigating the great lakes. It extends from the Chicago river to Lockport, where it discharges into the Des Plaines river. . . In preparing its estimates the board—

That is the United States board—

—has assumed that the full discharge of 10,000 cubic feet per second contemplated in the plans of the sanitary district will eventually be permitted by the Secretary of War.

The effect of this diversion upon the level of the great lakes was even then clearly apparent. In the same report, the United States board of engineers says:

The effect upon the level of lake Michigan of withdrawing 10,000 cubic feet per second for an indefinite period has been the subject of elaborate investigation under the office of the lake survey at Detroit, and the conclusion reached is that the final effect will be to lower the level about six inches.

Which was as subsequently found in the evidence adduced before Mr. Hughes last year. That report was dated December 18, 1905, and on December 29, 1905, the Canadian section of this international waterways commission made its first report showing that a subcommittee of the commission personally visited the Chicago drainage canal and that the drainage canal was not then completed. Their report continues:

The canal is not yet completed. It was designed to take up eventually a volume of 10,000 cubic feet per second. This represents about five per cent of the flow over Niagara falls which is about 222,400 cubic feet per second. The Chicago drainage canal when completed will, according to a calculation furnished by an engineer of the Canadian section of the commission, lower the level of lake Huron by six inches and the level of lake Erie by four and a half inches. But the Chicago drainage canal

takes now less than half of the volume originally contemplated. The United States war department in its power of conserviency to protect the navigation in the Chicago river has, December 5, 1901, limited the volume of water which can be taken through it into the Chicago drainage canal, to 250,000 cubic feet per minute throughout the 24 hours of the day which is about 4,166 cubic feet per second. If the original plans of the Chicago drainage canal are carried out, and it seems likely that this will be done, it will eventually take out as above stated, 10,000 cubic feet per second.

Therefore the result of this diversion was well known at the time to the American members who made a separate report to their government and to the Canadian members who also made a separate report to their government, both concurring in the facts stated. Then on the 9th of March, 1906, the three representatives of the United States on the international waterways commission in a report to congress recommended legislation authorizing the diversion of 10,000 cubic feet per second through the Chicago drainage canal. Note the time! And on April 25, 1906, the following month, the three Canadian members of this commission recommended to the Canadian government that the proposed diversion at the Niagara river should be limited to 36,000 cubic feet per second on the Canadian side and to 18,000 cubic feet per second on the American side, exclusive of the amount required for domestic uses, saying that the apparent advantages to Canada were more than counterbalanced by the complete diversion of 10,000 cubic feet per second by way of the Chicago drainage canal to the Mississippi river, and urging that the diversion at Chicago should be limited to the quantity mentioned.

On April 25, 1906, the Canadian members of the international waterways commission also reported to the Canadian government, as follows:

At Chicago the Americans have built a drainage canal which, when in full operation, will use about 10,000 cubic feet of water per second. The quantity of water required for the purposes of a ship canal is comparatively small, but the character of this drainage canal at Chicago is such as to involve a continuous flow of water which will have the effect of lowering lake Michigan by over six inches and lake Erie by four and one-half inches.

Then they go on to say that this water by being diverted can be used to generate some 30,000 horsepower, and they say:

As the diversion from lake Michigan to the Mississippi river is of much more serious character than the temporary diversions from the Niagara river, it is felt that the amount of water to be taken on the American side of the Niagara river should be limited to 18,500 cubic feet per second.

[Mr. Cahan.]

They proceed:

It is exceedingly important, in the interests of navigation both to ourselves and to the people of the United States, that the diversion by way of the Chicago drainage canal should be limited.

Then they proceed—and I will not detain the house by quoting it all:

If our proposals are carried out the diversions will be about as follows:

Diversions on the American side

	Per second cubic feet
Niagara falls..	18,500
Chicago drainage canal.. ..	10,000
Total..	28,500

Diversions on the Canadian side

	Per second cubic feet
Niagara falls and on the Niagara peninsula..	36,000

The Canadian commissioners thereupon proceed to recommend that:

The diversion by the Chicago drainage canal should be limited to the use of not more than 10,000 cubic feet per second, and they also recommend that on the Canadian side at Niagara a diversion for power purposes should be authorized of 36,000 cubic second feet, and on the American side at Niagara only 18,500 cubic second feet.

And the Canadian commissioners add:

This would give an apparent advantage to Canadian interests, but as the diversion is not of serious injury to the falls and does not materially affect the interests of navigation it is more than counterbalanced by the complete diversion of 10,000 cubic feet by way of the Chicago drainage canal to the Mississippi river.

This report, which deals with the question of Canada's receiving compensation in respect of the 10,000 cubic feet per second proposed to be used in the diversion at Chicago, is signed by George C. Gibbons, chairman, Louis Coste and W. F. King, members, and Thomas Cote, secretary of the Canadian section. Then follows in the same year, indeed about eight days later, a joint report from the international waterways commission, including both the American and the Canadian members. That report, submitted to the respective governments, contains the following:

The commission, therefore, recommend that such diversions exclusive of water required for domestic purposes or the service of locks in navigation canals be limited on the Canadian side to 36,000 cubic feet per second and on the United States side to 18,500 cubic feet per second (and in addition thereto a diversion for sanitary purposes, not to exceed 10,000 cubic feet per second, be authorized for the Chicago drainage canal) and that a treaty or legislation be had limiting these diversions to the quantities mentioned. The effect of the diversion of water by the Chicago drainage canal

upon the general navigation interests of the great Lakes system will be considered in a separate report.

Then on January 4, 1907, the following year, the Canadian members of the international waterways commission reviewed and again reaffirmed their recommendations of April 25, 1906, and also reaffirmed the joint recommendation of the international waterways commission of May 3, 1906, that:

A diversion for sanitary purposes, not to exceed 10,000 cubic second feet, be authorized for the Chicago drainage canal.

That recommendation was signed by the Canadian members, Messrs. George C. Gibbons, chairman, and W. F. King and Louis Coste, members, and Thomas Cote, secretary. They closed their report as follows:

The position at Niagara falls has been dealt with having regard to the exceptional circumstances there existing and taking into consideration the large permanent diversion by way of the Chicago drainage canal.

On January 4, 1907, the joint commission also reported to their respective governments. I have not time now to review at length that most extraordinary report, but I merely quote from the summary contained in the report as jointly prepared:

The diversion of 10,000 cubic feet of water per second at Chicago will render practicable a waterway to the Mississippi river fourteen feet deep.

This joint report, in which the Canadian members concurred, after reviewing all the facts, formally recommends:

Careful consideration of all the circumstances leads us to the conclusion that the diversion of 10,000 cubic feet per second through the Chicago river will, with proper treatment of the sewage from areas now sparsely occupied, provide for all the population which will ever be tributary to that river, and that the amount named will therefore suffice for the sanitary purposes of the city for all time. Incidentally, it will provide for the largest navigable waterway from Lake Michigan to the Mississippi river which has been considered by congress.

I wish to put on Hansard their joint recommendation in the form in which it appears:

We therefore recommend that the government of the United States prohibit the diversion of more than 10,000 cubic feet per second for the Chicago drainage canal, all of which is respectfully submitted.

W. F. King, chairman, Canadian Section.
Geo. C. Gibbons, Louis Coste, members, Canadian Section.
O. H. Ernst, Brig.-General U.S. Army, retired. Chairman, American Section.
Geo. Clinton, E. E. Haskel, members, American Section.
Attest: W. Edward Wilson, Secretary, American Section.
Thos. Cote, Secretary, Canadian Section.

On March 9, 1908, the Canadian members of the international waterways commission, who were then George C. Gibbons, Louis Coste and William J. Stewart, made a supplementary report to the Canadian government reaffirming the recommendation of the joint commission of May 3, 1906, that:

A diversion for sanitary purposes, not to exceed 10,000 cubic feet per second, be authorized for the Chicago drainage canal.

Thereupon the government of Canada, with the full knowledge of the reports cited, began the negotiations with the government of the United States that resulted in the waterways treaty of 1909, which was signed at Washington on January 11, 1909 and subsequently confirmed by this parliament. That treaty was negotiated, as nearly as I can ascertain from a study of the record, by three members of the Canadian government, Hon. Mr. Pugsley, since deceased, Mr. afterwards Sir George Gibbons, also deceased, and the then Minister of Justice, who is now a member of the upper house, Sir Allen Aylesworth. When the matter of the ratification of this treaty came before the house, Mr. Aylesworth, as he was then, said on December 6, 1910:

I take, with each of my colleagues, the fullest responsibility for recommending the acceptance of the treaty which is under consideration.

I quote from page 908 of Hansard of 1910-11. Sir Wilfrid Laurier, then Prime Minister, said:

I may say it was only after careful and exhaustive consideration on my part that I agreed to accept the treaty as it has been written.

The Hon. Elihu Root, who was then Secretary of State for the United States, and who negotiated the treaty on behalf of that country, in submitting the draft treaty to the foreign relations committee of the United States Senate, said.

I have carefully guarded the terms of this treaty in order not to include lake Michigan and not to involve Senator Cullom's constituents in the drainage canal in this treaty in any way.

Of course, his statements are not binding on us. However, Mr. Root continued:

The great bulk of the water goes on the Canadian side and the waterways commission that was appointed some time ago to deal with the question of the lake levels reports, I think, that 36,000 feet can be taken out on the Canadian side and 18,500 feet on the American side, without injury to the falls. I thought it wise to follow the report of the commission and I put in 1,500 feet in addition to get round numbers.

Then he proceeds:

We are now taking 10,000 cubic feet a second out of lake Michigan at Chicago and I refused to permit them to say anything in the treaty

about it. The definition of boundary waters was carefully drawn in order to exclude lake Michigan. . . . In the third place—

Referring to the reasons for allowing the United States to divert only 20,000 cubic feet while Canada was allowed 36,000 cubic feet.

—they—

That is, the Canadians.

—they consented to leave out of this treaty any reference to the drainage canal and we are now taking 10,000 cubic feet per second for the drainage canal which really comes out of this lake system.

Mr. Hughes, quoting these words, finds that:

The statement of the Secretary of State (Elihu Root) before the foreign relations committee of the Senate, when this treaty was under consideration, shows that it was not intended to cover lake Michigan as a boundary water, or to affect the diversion through the drainage canal at Chicago.

Now, this treaty is still in full force and effect, but it may be rescinded on twelve months written notice by either party to the other. The treaty was negotiated, as stated in its preamble:

To prevent disputes regarding the use of boundary waters—

and to settle all questions which were then—

—pending between the United States and Canada involving the rights, obligations, or interests of either in relation to the other or to the inhabitants of the other along their common frontier.

Then I may go on and show that by the express terms of the treaty lake Michigan was excluded. The preliminary article of the treaty defines "boundary waters" as:

The waters from main shore to main shore of the lakes and rivers and connecting waterways or the portions thereof along which the international boundary between the United States and the Dominion of Canada passes.

Therefore by the express terms of the treaty lake Michigan, through which the boundary line does not pass, was excluded. I think that is common ground. But apparently to place beyond doubt the reservation of lake Michigan from the operation of the waterways treaty, it was inserted in the treaty that the term "boundary waters" shall not include:

Tributary waters which in their natural channels would flow into such lakes, rivers and waterways—

—as are included in the term boundary waters. Thus making it very clear that, although the waters of lake Michigan may be of the same level as lake Huron and may connect with and flow into lake Huron, lake Michigan is nevertheless not included in the term "boundary waters."

[Mr. Cahan.]

Then article 2 of the waterways treaty further expressly reserves to each of the parties:

The exclusive jurisdiction and control over the use and diversion, whether temporary or permanent, of all waters on its own side of the line, which in their natural channels would flow across the boundary or into boundary waters.

It is suggested that this reservation by the United States in respect of lake Michigan undoubtedly gives them under the treaty the right to control the use and diversion of the waters of lake Michigan. But article 2 of the treaty provides:

But is agreed that any interference with or diversion from their natural channel of such waters on either side of the boundary resulting in any injury on the other side of the boundary shall give rise to the same rights and entitle the injured parties to the same legal remedies as if such injury took place in the country where such diversion or interference occurs.

That is, if Canadians suffer by reason of a diversion of waters on the American side of the boundary they may go into American courts for redress and have exactly the same rights as Americans would have in their own courts; but the very fact that congress had authorized the diversion would preclude citizens of the United States from seeking redress in the courts of their own country, and Canadians seeking redress in those courts are placed on the same plane, and therefore would have no right of action.

But the representatives of the United States who negotiated this treaty went still further apparently so as to leave no room for doubt, for they inserted the following proviso to article 2:

But this provision—

As to the right to seek redress in the courts.

—shall not apply to cases already existing, or to cases expressly covered by special agreement between the parties hereto.

And it is suggested that the waterways treaty therefore expressly reserves cases of diversion of water then existing. Chicago was then diverting as an actual fact something like 5,000 cubic feet per second—they claim more, but at least 5,000. And the treaty also withdraws from the jurisdiction of the courts those cases which are covered by special agreement. I am not stating that it is incontrovertible, but prima facie the suggestion is that in so far as the 5,000 cubic feet per second diversion is concerned, it appears to have been guarded against in that clause which I have cited; and, in so far as the full 10,000 cubic feet per second diversion is concerned, it is also guarded against in the same clause of the treaty, if there was

an agreement between the United States and Canada to carry out the joint report of the international joint commission, which I have quoted, that Chicago should be authorized to divert 10,000 cubic second feet. But if these contentions of the United States are correct—and apparently there is a colour of right in them—then from the Canadian point of view there is no semblance of a "steal," nor so far as the federal government of the United States is concerned. Newspapers on each side of politics and members on both sides of this house have during the last five or six years frequently referred to the diversion at Chicago as an illegal act of the United States, or of the state government of Illinois, or of the Chicago sanitary district—reference is usually made to the illegal act of the United States authorities, and this diversion is frequently characterized as a "steal".

Now, if Canada acquiesced in the diversion of 10,000 cubic second feet at Chicago, if, knowing all the facts, Canada with open eyes received compensation therefor in the shape of this extra 16,000 cubic second feet for use at Niagara falls, there is strong ground for the conclusion that it has made an agreement with the United States with respect thereto. I say there is a prima facie case, but in view of the relations between this country and the United States and in view of the documents which I have cited, I think the time has come when the government should, through the Prime Minister or one of his ministers, thoroughly consider this matter and state to this house and to the whole country what is the position of Canada in respect thereof. Those public documents are now known in the United States; I have seen within the last two or three days a number of them republished in American papers. If we have acquiesced in this diversion, if we have accepted compensation therefor; the honour and good faith of this country is involved, and we cannot afford to repudiate the agreement made in our dealings with a great neighbour such as the United States. If, on the other hand, there are any grounds available in the diplomatic correspondence and in the reports of those who negotiated the treaty, for contending that we have not acquiesced as the American authorities believe we have, then it is due to parliament and the people of this country that the real facts should be disclosed. It is on that ground that I urge the supreme importance of having all available documents relating to the Chicago diversion presented to the house so that we may be able to form a clear and intelligent opinion with respect thereto.

Hon. CHARLES STEWART (Minister of the Interior): Mr. Speaker, I think the house is indebted to my hon. friend for his very clear and lucid speech in connection with the transactions that took place leading up to the treaty of 1909. I was not aware, however, that all of the documents in connection with the negotiations had not been brought down and placed in the custody of parliament. I wish to assure him here and now that any documents that have not been brought down will be, and that we shall cheerfully acquiesce in his request for production of all the documents contained in the order for return.

I am not going to attempt in a detailed way to make a presentation to the house or to review many of the statements made by my hon. friend, but I am going to take some exceptions to the conclusions he arrives at. Dealing with the negotiations prior to 1909, I think it is within the knowledge of everyone that those negotiations were carried on by the accredited representatives of the Canadian government and of the United States government, and it is quite probable and within the bounds of reason, I think, that those accredited representatives would from time to time make reports to their respective governments upon conditions as they found them. It is quite true that as far back as the early forties Chicago had begun diversions from lake Michigan, and naturally in these reports the Canadian commissioners assumed that lake Michigan was boundary water, as I think we may very well assume still. My contention, as one humble member of this house, has always been that if the outflow from lake Michigan is into the great lakes system then of necessity it must be part of the boundary waters. I think that contention—if I may say so without going into detail, and I do not propose to do so to-night—undoubtedly was in the minds of the Canadian members of the commission prior to 1909, and all the documents concerned are on file here as reports to the Canadian government. No one will seek to deny that. But may I say this, and I am in no way refuting the argument of my hon. friend: at the time the treaty of 1909 was inaugurated all this knowledge was before the negotiators, and the American negotiators refused to allow lake Michigan to be included in the boundary waters, and it is not so included in the treaty of 1909. Undoubtedly one of the reasons was the very considerable

diversion that was in effect at Chicago. My hon. friend has argued, and it has been argued specifically before, that the diversion authorized in 1909 was exactly 4,167 feet. My hon. friend may argue that compensation was given us at Niagara by the diversion for the Welland canal.

Mr. CAHAN: I am not arguing.

Mr. STEWART (Edmonton): My hon. friend presents that aspect of the case—may I put the matter in that way?—and infers that because the negotiations have taken place, because these reports and documents were in the hands of the government, we are in some sense committed to a diversion at Chicago of 10,000 cubic feet per second.

Mr. BENNETT: Are we not?

Mr. STEWART (Edmonton): If my hon. friend will allow me to conclude my argument I think I will show him that we are not committed to that extent. My hon. friends opposite will admit that reports of various kinds may be made in connection with any dispute, or for the purpose of settling the negotiations in connection with what may become a dispute. Well, the documents signed and sealed indicate in no uncertain terms what took place and what was in the minds of the negotiators at that time. I am not going to deny that perhaps the Canadian negotiators felt that to a certain extent the diversion at Chicago was not warranted; but I do say that it is not part of that treaty for the specific reason that lake Michigan was left out of the award altogether. It is not part of it, nor was the Chicago drainage, and no one will argue that we have any reference to 10,000 cubic feet in that treaty.

Mr. CAHAN: I thought so.

Mr. STEWART (Edmonton): I did not think from my hon. friend's argument that he did.

Mr. CAHAN: I find it possible to believe that the diversion, if it was agreed to between the parties up to that time, was practically confirmed by the treaty.

Mr. STEWART (Edmonton): I am arguing against the inference that because of the statements and reports made prior to the treaty the Canadian government in some way were committed to a diversion of 10,000 cubic feet. I say now, as I have said before, that 4,167 cubic feet was the diversion permitted by the Secretary of War. We are glad to know now that we have not to deal in this matter with the city of Chicago or with the state of Illinois, but with congress itself.

[Mr. C. A. Stewart.]

Mr. GEARY: Is it the contention of the minister that the diversion to the extent of 4,167 cubic feet was authorized by the treaty of 1909?

Mr. STEWART (Edmonton): I am not arguing that at all.

Mr. GEARY: I am just asking for the sake of clarity, that is all.

Mr. STEWART (Edmonton): If we are committed to anything—and we are not committed under the treaty to any diversion at Chicago, as I understand it—we are committed to an order signed by the Secretary of War for the diversion of 4,167 feet at Chicago. But I do not think we are committed to that, because it is not embodied in the treaty, or in any treaty with the Canadian government that I know of. Surely if it had been the clear intention of the Canadian government to agree to the diversion something would have been said about it in the treaty. My contention is that these reports were for the purpose of leading up to the negotiation of a treaty. As there is no reference to it in the treaty which was concluded between the government of the United States and the government of Canada, we are not committed to it except by inference. Governments cannot escape the responsibility of what is a matter of record, but I reiterate that inasmuch as the diversion is not part or parcel of that treaty—it is not mentioned in any treaty to my knowledge—then the government of Canada are not committed to it.

I do not know that there is very much more to say. So far as I am concerned—and I want to have this clear—I make this statement on my own responsibility. Of course I am not without the knowledge that I am speaking on behalf of the government, but I am speaking on my own responsibility in this connection. I am quite aware that the American government—perhaps I should not say the American government but those who represent the Chicago interests and are desirous of continuing this diversion—will continue to urge that Canada is committed by the reports of the men who acted in her behalf. I claim, however, that as these reports were not acted upon the government cannot be committed to them.

May I say further that I do not think it is the intention of congress to press for the diversion of 10,000 feet at Chicago? I will admit this, and admit it very frankly, having some knowledge of these negotiations, that we have done nothing further than protest against this continued diversion and the attempt to increase it, believing that the in-

terested states surrounding Illinois and the city of Chicago, some twelve or thirteen in number, who are fighting this diversion with the desire to have it reduced, are bringing far more pressure upon the American government in this respect than perhaps we would be able to do. We are interested in every hearing, we are interested in every protest. We have maintained steadily, ever since I have come to Ottawa and became a member of this government, that we are desirous that congress should see a great reduction in this diversion and that the difference of six inches in the levels of the international waters—particularly in the St. Lawrence river, which means so much to navigation—will be restored by the return of at least a very large proportion of the nine or ten thousand cubic feet per second that are now passing through the drainage canal at Chicago.

My hon. friend mentioned one other very important point, namely, that the treaty can be terminated in one year on notice. The treaty was not intended in any sense to be a continuous document, to be in force for all time; it was intended to meet the urgencies of the case at the time it was made.

Mr. CAHAN: Does the minister think the termination of the treaty would terminate those provisions of it which deal with the exclusion of lake Michigan?

Mr. STEWART (Edmonton): I am well aware that governments are in honour bound to keep their word and I would not seek for a single moment to evade responsibility in that particular. But my hon. friend knows full well that many questions which will arise in connection with the adjustment of the international waterways will perhaps present a way by which redress can be had for the diversion at Chicago. I agree with my hon. friend it is regrettable that our newspapers have to some extent misrepresented the situation. This does not tend to improve conditions for a settlement of difficult matters of this kind—and we have difficult matters to deal with in connection with our international waterways. It does not tend to improve the relationship between foreign countries and ourselves. But at the same time I do not think for a single moment that the people of Canada, through their government by any action on their part, are committed to the diversion of ten thousand cubic feet per second in Chicago. That is the position I take and that is all I have to say on the matter at this time.

Mr. G. R. GEARY (South Toronto): Mr. Speaker, I have listened with a great deal of interest to the presentations we have heard from both the hon. member for St. Lawrence-St. George (Mr. Cahan), who sits in front of me, and the Minister of the Interior (Mr. Stewart). I trust that what the minister has said is right. Nothing to me would appear to be more disastrous to the interests of Canada in the matter of navigation than that the government of the late Sir Wilfrid Laurier in 1909 should have in some way or another committed this Dominion to the loss consequent upon a diversion of ten thousand cubic second feet at Chicago. The Minister of the Interior has laid some stress upon the termination clause in the treaty, but at the moment I fail to see what satisfaction we can get from that. The whole quantity of water diverted at Niagara falls is in use in a very extensive way. It is devoted, I take it, largely to the purposes of the Hydro Electric Power Commission of Ontario and works are constructed there to such an extent and the use of water has become such a matter of common everyday life of the people of the province that it is impossible for us to contemplate any restoration of the 36,000 feet or the 18,000 feet over and above the 20,000 feet which were arranged to be given to United States interests. Moreover if we could and should terminate the treaty under the provisions, we are still, according to the statement of the Minister of the Interior, without any recourse as regards the diversion at Chicago, because, from the minister's statement, I take it he is of opinion that that diversion not having been mentioned in the treaty, it is of course not covered by the treaty. Surely then it would not be affected by the termination of a treaty which does not cover it.

I am very much interested, as all people have a right to be interested, in the attitude of the government with respect to these negotiations. They have dragged along for a long time. We have had ever present before us the danger of this diversion, and when the diversion is completed to the full 10,000 cubic feet per second shipping will be very seriously damaged. As a matter of fact it is very seriously damaged to-day and men engaged in the shipping business in the great lakes estimate the loss of revenue in lack of draught at many millions of dollars per annum. If we are to go through with the St. Lawrence waterway, extending a route in one way or another—and I do not want to discuss the method by which that may be done or what arrangements may be come to in regard to it—if we are to realize a dream that many of us have that some day there will be a through waterway from the outer St. Lawrence to the

great lakes, this question of the diversion at Chicago assumes a magnitude that we can hardly over-estimate. To my mind, it is almost the first step to be taken in regard to that through waterway. If we are to have the lake level restored and made permanent as far as we can, we can do so only by having this question of the diversion of water at Chicago settled.

I have yet to hear of any progress being made by the Dominion of Canada in that regard. So far as my recollection goes of the statements that have been made by the minister on behalf of the government, no one in this Dominion can be seized of the position that Canada is taking at present, how far she has gone and what are the prospects, whether by pressure, negotiation or otherwise, of this Dominion contributing to the shutting off of this diversion. True it is, that the lake cities, Cleveland, Detroit, Toledo, Milwaukee and other United States cities along the front, are as vitally interested in this as are we of the Dominion of Canada, and for the very same reasons, because the harbours, while they are not passing out of existence, are very seriously affected and the draught of lake vessels, as I intimated a little while ago, has suffered to such an extent that many millions of dollars in carriage are being lost annually.

Mr. STEWART (Edmonton): May I interject one thing that perhaps I should have said before? My hon. friend is speaking of no progress being made.

Mr. GEARY: I am.

Mr. STEWART (Edmonton): The recent order of the Secretary of War granting a diversion of 8,500 cubic feet provides that there shall be a reduction annually up to 1935 and that the diversion at that time shall not be more than 4,167 cubic feet. I should have mentioned that.

Mr. GEARY: That is conditional on the construction of certain disposal works by the sanitary district of Chicago. The diversion at Chicago may be restricted in 1934 to 7,500 cubic feet per second, but that is more than the Dominion of Canada and our friends on the opposite side of the great lakes can stand. The waterborne commerce of the country cannot stand a diversion to that extent. What I am urging upon the government is a more strenuous opposition, some results that can be laid before this house, something to prove to the people of Canada that the government is up and doing, is alive to the situation and is making some progress in its representations. We have had suggestions made that the government of Great Britain should be called upon to intervene in this matter, and that the government of the Dominion of Canada should make definite representation.

We have an embassy at Washington. It would be interesting to know how far that embassy has been entrusted with the work of negotiation, what it is doing, and whether or not the people of this country can hope with some certainty that this government will be so active in the opposition to this diversion as to ensure some success in that opposition. That I am, I say with all frankness, Mr. Speaker, unable to accept as proved for the moment. Last session and the session before we heard from the minister and from the other side of the house often enough that they were active in the matter, but what has been done, what result has been accomplished, and how far the Dominion of Canada has been able to assert its rights, I for one do not know, and I should be glad to know.

I trust that the prima facie case outlined so ably by the hon. member for St. Lawrence-St. George (Mr. Cahan) is merely a prima facie case, that there is no substance and real strength in it. I hope, and I believe he hopes and wishes just as much as I do, that the Minister of the Interior (Mr. Stewart) is right, but the fact remains that Mr. Hughes, the master, in his decision lately handed down, which I should say has a very good chance of being sustained by the supreme court of the United States when it comes before it, does set out—it may be obiter, it may be something with which the report had nothing to do—the facts that my hon. friend from St. Lawrence-St. George has set out, and evidently on behalf of the United States relies upon that position.

Perhaps it is true, I hope it is true, that the country has not been committed in any way by the reports made by our Canadian members of the international waterways commission. There has been no formal agreement so far as I know entered into between the two countries, but if my hon. friend the minister is forced to admit that the "cases now existing" refers to the diversion of 4,167 cubic feet then existing, it seems very difficult not to understand the remaining language of the clause as applying to a diversion to be extended in the future. The language is almost express, and I trust that the government will use every effort to sustain the position the minister has taken in urging that the government is not bound beyond the strict letter of that treaty, whatever it may be. I am sure he will do that.

Again I would say that if the government would convey to this house the assurance that it is using its best efforts and is getting some results in its protest against the diversion of water in Chicago, I am sure the country would be very much relieved. At present the matter is in great uncertainty, and the country is fearful of the outcome. There is no matter before the house at the present moment that is of more importance to this Dominion in practical affairs than this question of the depth of our great waterways in the great lakes and down the St. Lawrence river.

Hon. R. B. BENNETT (Leader of the Opposition): I think there are few questions of more practical importance that can engage the attention of this house than the subject matter of the motion which has been made by the hon. member for St. Lawrence-St. George (Mr. Cahan). It is quite clear that the American attitude towards this question, as expressed in their public journals during the last few weeks, is that by negotiations which took place between the representatives of the government of Canada and representatives of the United States, the Chicago sanitary canal commissioners acquired certain rights—to divert not exceeding 10,000 cubic second-feet of water from lake Michigan for sanitary purposes and power. That in itself is a proposition to which this country at the present moment is or is not bound. Whether we are bound or not depends largely upon the construction to be placed upon large numbers of documents and papers, including correspondence that has passed between the two governments, and reports that were made by certain Canadian commissioners in connection with these matters.

I find by looking at Hansard of 1909 that it is abundantly clear that the government of that day took the view that they were bound to negotiate a treaty with the United States almost in the terms in which the treaty was finally submitted for consideration. In column 867 of the Hansard of 1910, when the waterways treaty came up for consideration, the late Hon. William Pugsley, speaking for the government, discussed the proposition of international law upon which the United States government relied. He made it abundantly clear that while those propositions did not commend themselves to him as a lawyer, they were propositions which unfortunately he and others concluded they were bound to accept. I do submit that their acceptance of those propositions of international law, which are not usually accepted by nations as binding but represent a new doctrine set up by the United States; propositions which Mr. Borden, now Sir Robert Borden, then leading the opposition, opposed and stated he and those associated with him were not prepared to accept, but which Mr. Pugsley, Sir Allen Aylesworth and finally Sir Wilfrid Laurier himself after the discussion had taken place for some hours accepted; for Sir Wilfrid rose in his place and indicated, in effect, that because of our nearness to the United States and because of their general position of influence and power we were acceding to their views—the acceptance of these propositions, I say, has greatly embarrassed this country and is the source and foundation of our present troubles. I cannot think that in this day at least one would accept such propositions as easily as they were then accepted.

I refer hon. members of this house to the discussions that took place in 1909, because I take it there is not a member of this house that does not realize his great responsibility in connection with this matter. Any hon. member who will be good enough to read what I shall not trouble the house to-night to read, the long series of speeches that were made with respect to this matter, will have, I submit, a much clearer appreciation of the situation than he now has.

I have observed in some quarters a tendency to attach blame to the British government in connection with the negotiation of this treaty. The treaty itself, which is found in the statutes of 1911, pages 245 and onward, is signed by the late Lord Bryce as the plenipotentiary acting on behalf of his majesty, and by Mr. Root on behalf of the United States of America. When that treaty came before parliament for consideration, Mr. J. D. Reid, now Senator Reid, was very anxious to ascertain to what extent the Canadian government was acting in this matter. He asked the question as to who was responsible for the treaty, and at column 9183 of the Hansard of 1911 Mr. Pugsley answered in these words the question that was put to him:

> The interests of the Canadian government were looked after by Mr. Gibbons, the chairman of the international waterways commission, who was constantly in conference with the British ambassador, and who was assisted by Dr. King and Mr. Campbell, both of the Department of the Interior. On different occasions I went to Washington to render what assistance I could, and the Minister of Justice (Sir Allen Aylesworth) also went to render assistance at one stage in the negotiations.

Mr. Reid continues to put questions; at column 9184 he asks:

> Then the negotiation of this treaty was practically delegated to the Minister of Public

Works and the Minister of Justice on behalf of Canada, and they are responsible for the treaty being in its present shape.

To which Mr. Pugsley answers:

The whole government is responsible.

So it is abundantly clear that the responsibility for this treaty and for all that is involved with it rests upon the Liberal administration of that day. I do not say that in the sense of endeavouring to make party capital against the Liberal administration, but I do say that any effort that may be made to divert responsibility from that government to the British plenipotentiary who negotiated the treaty must fail in view of the statements made at that time to the House of Commons by Mr. Pugsley, the minister in charge, when he was submitting the treaty to the house for ratification.

Further, it will be found that in the waterways treaty itself there is a distinct reservation of the rights of the United States with respect to the waters in lake Michigan. That treaty dealt with international problems, with international waterways, with international boundaries, and there was a special reservation of the rights of the United States with respect to its own waters, on the one hand, and with respect to Canadian waters that were solely the property of Canada, on the other. The result is that lake Michigan, which is not a boundary water and not an international waterway, as is lake Superior, between the United States and Canada, was, as Mr. Root pointed out in the Senate, specifically reserved in terms from the operation of the treaty, and so it is that by our acceptance of the United States claim under this doctrine of international law, to which Sir Robert Borden objected and to which Sir Allen Aylesworth and Sir Wilfrid Laurier agreed—the claim that they have the sole right through their congress to license the use of the waters from lake Michigan, it not being an international waterway—by our government's acceptance of that doubtful and in my judgment erroneous proposition of international law this country now finds itself in the position in which it is, despite as I have said, the objections made by Sir Robert Borden, Mr. Magrath, Colonel Currie, then member for Simcoe, and others who had given much consideration to the matter. It is in my judgment therefore important that all these documents that touch on the matter, that will in any sense throw light in any way upon the questions involved as to the application of this new principle of international law set up by the United States with Mexico in the first instance, should be laid on the table. The attorney general of the United States set up certain principles of doubtful practice in regard to international law in a dispute with Mexico in respect of the Rio Grande river. The government of the United States endeavoured to assert the same principle against this country with respect to lake Michigan. When Sir Robert Borden protested, the final answer was that "with our rich and powerful neighbour we are practically bound to do as they suggest, and we recognize that they can formulate new principles of international law." Against that proposition in this day and age I protest.

I might refer to something in connection with our own Alaska boundary arbitration, which occurred in the life of the late President Roosevelt—and I say that the Canadian parliament should protest against the application of such a new principle of alleged international law. That is a question which I think this house should thoroughly consider before it permits itself to be further drawn into the acceptance of a principle, set up by one nation only as a sound principle of international law, that has not the support or acceptance of the nations of the world. When Sir Wilfrid Laurier was confronted with the American proposition he said that the United States have always treated us very fairly and decently, and while he might have quoted Vatell on the rights of nations in reference to this matter, he thought it better to deal with it in the manner I have indicated. I submit on these facts that every possible scrap of paper that can have any bearing upon this matter should be laid upon the table so that the House of Commons of Canada may be able to determine whether they are bound to accept a new doctrine of alleged international law, which through ignorance has been forced upon us. We should be in a position to determine whether this country is bound to accept the proposition that the congress of the United States can validly authorize a license to the Chicago sanitary commission to divert 10,000 cubic second-feet of water from lake Michigan regardless of the effect upon the user by Canadians of the international waters of lakes Superior, Ontario and Erie or of the St. Lawrence river.

I think the matter has now reached a point where our position is one of great difficulty. I learned last year that when these hearings were being held, when former Justice Hughes was receiving testimony with respect to the diversion of water by the sanitary district of Chicago and the protests of the states were being heard, a young lawyer was sent from Canada to Chicago to watch the proceedings on behalf of Canada. He went to the hear-

ing, sat there a while, went away, and came back in the afternoon. I submit that the government is not doing its fair duty to the people of Canada in dealing with the matter in this way. I say it in all seriousness, and if we on this side of the house can render any assistance in making the situation clearer and enable the government to uphold the position of our country with more strength than has been done, we shall be glad indeed to do so. I do not regard it as being other than a matter of first rate importance, from the standpoint of our rights, at least to have the level of lakes and rivers which are admittedly international protected from being lowered by the user of water by a country which contends that the whole of the water of lake Michigan belongs to it, that it has the right by authority of congress to divert as much water as it pleases from the lake regardless of the effect upon its neighbour. It is that doctrine that Sir Robert Borden assailed, and I submit it is unfortunately that doctrine that is recognized in the treaty that followed. That false doctrine was asserted in 1909, and finds expression in the treaty of 1911.

That is the position of the matter, and nothing can be said to change the essential facts. I cannot think the government will permit the present situation to be much longer continued.

Mr. STEWART (Edmonton): Is my hon. friend referring to the continuance from 1911?

Mr. BENNETT: Under article 2 and other articles of the treaty it may be fairly inferred that the United States will not permit the waters of lake Michigan to become the subject matter of a treaty, on the grounds that these waters are theirs and theirs only, and that they only have the right to deal with them. They contend that they can use the waters of lake Michigan as they please and that the question whether the waters of other lakes and rivers are thereby lowered is not a matter in which Canada has any concern. It may not, perhaps, be improper to recall the fact that these waterways agreements to which attention has been directed—I have reference to the treaty of 1909—were discussed in the house in that year. The treaty of 1909 you will find as I have said at page 245 and following pages of the statutes of 1911, and the heading reads as follows: "Treaty with the United States relating to boundary waters and questions arising along the boundary between Canada and the United States, signed at Washington, January 11, 1909." The treaty was not ratified in that year; for it will be recalled that when the treaty was in the Senate of the United States one of the senators had certain amendments made to the resolution of ratification, and it was not until 1911 that it was adopted by this parliament. It will be observed that the date on which the act of ratification was assented to is May 19, 1911—chapter 28. At that time certain other negotiations were pending of a trade character between the two countries. You will find in Hansard for that year the protests made by those who voiced opposition to the treaty. But the treaty was ratified by this parliament. We cannot blame England for the bargain that was made; Mr. Pugsley, speaking for the government, stated in parliament that the government of that day was responsible for the treaty, as I have already read to the house. Under those circumstances, facing these facts, I submit we should look at this matter as one in respect to which it might well be said that much water has flowed over the dam. The facts cannot be blinked or overlooked; and it is our duty, by the most careful examination of every scintilla of evidence—not next year or the year following, but now—to protect the rights of the people of this country in the waters of the lakes to which I have alluded in consequence of the diversion of water from lake Michigan.

Mr. STEWART (Edmonton): As a matter of record it would be interesting for the hon. member to tell us where he gets his inference that we are committed to the Chicago drainage scheme, inasmuch as lake Michigan was withdrawn altogether from the treaty of 1909.

Mr. BENNETT: So far as that is concerned, all I can say is to repeat that the United States authorities refused absolutely to bring lake Michigan into the treaty. They contended, by the application of this doctrine of doubtful international law to which I have alluded, that they and they alone had the right to license the diversion of water out of that national lake and that it was none of the business of the people of Canada what happened in consequence. The United States were looking after their affairs and we might look after ours, and in that view apparently we acquiesced. That, briefly, conveys an idea of the attitude they have taken, and if there is any evidence needed to support this statement as to their general view on such matter I would refer hon. gentlemen to the life of the late Theodore Roosevelt by Lord Charnwood, in his reference to the Alaska boundary question. It will be remembered that a commission of six considered the prob-

lem that developed in that connection, and it is interesting to read what Lord Charnwood says. At page 131 we read:

When the new commission was to meet, Roosevelt took a step characteristically drastic and characteristically gentle in manner, to make a miscarriage unlikely—or in other words to prevent any influence that might make the Lord Chief Justice vote wrong. Avoiding the offensiveness of any diplomatic representation, he wrote to a valued American friend of his own and of the British statesmen concerned, and asked to have his real determination made known to them in friendly conversation. It was, he said, only his "very earnest desire to get on well with England" which had made him consent to this second commission. If it failed, he should take measures which would make arbitration quite impossible, and use the troops (which in fact he had sent to Alaska to keep order) to "run the line as we desire it, without any further regard to the attitude of England and Canada. . . If," he said, "I paid regard to mere abstract right, that is the position that I ought to take anyhow; I have not taken it, because I wish to exhaust every effort to have the affair settled peacefully and with due regard to England's dignity." This step of his was of course not publicly known till long afterward.

Lord Charnwood expresses the opinion that President Roosevelt was justified in making his views known to the British foreign Secretary. English authorities declare that the Lord Chief Justice was not advised of the message. Be that as it may, we have here a doubtful doctrine of international law apparently assented to by the Canadian government of the day in 1911, for the very same reasons, I suppose, which Lord Charnwood discloses as having actuated Mr. Roosevelt. The time has come, surely, when we should stand by the principles of international law and insist upon their being observed between nations. We talk glibly about the peaceful relations that exist to-day, but the real situation is as has been fully disclosed to-night. And this is why the question is brought to the attention of the house at this time. We should no longer permit the matter to drag from day to day and, by acquiescence, have it inferred that we have agreed to the contention made by our powerful neighbour. Might and power are not to be the determining factors where our rights are at stake. No one nation, however rich and powerful it may be, has the right to take the attitude that international law consists in the extent to which it is able by force to carry its will into effect. I submit, therefore, that every scrap of evidence bearing on the matter should be laid upon the table at the earliest possible moment, in order that the house may consider the facts affecting the rights of Canadians who use these lakes, which rights have been impaired by the license granted by the United States Secretary of War, under authority of an act of congress. These rights I trust we have not lost, and for that reason the present motion should be adopted.

[Mr. Bennett.]

Right Hon. W. L. MACKENZIE KING (Prime Minister): To the purposes of the motion as set forth in its text, no exception whatever can be taken. I agree entirely with the mover of the resolution (Mr. Cahan), and as well with the leader of the opposition (Mr. Bennett), that it is wholly in the interests of parliament to have before it all the documents that have any bearing on the question of the diversion of water at Chicago, and the government will be only too ready to see that documents not already in the possession of the members of this house, if there be such, shall be laid on the table in accordance with the request made by this order. I am inclined to think that all the documents mentioned in the motion are already in the possession of such hon. members as are interested in the question. Indeed, they must be more or less of a public character or my hon. friend could not have made the references to them that he has done in his speech to-night. Let me say further that I am in entire accord with the leader of the opposition when he says, with his great skill, that, if there is a doubtful principle of international law being enunciated by the United States, strong exception should be taken to it by this parliament and by the people of Canada. On behalf of the government I desire to join with him in opposing any principle of international law which is not fully recognised in British practice and procedure.

Mr. BENNETT: International practice.

Mr. MACKENZIE KING: It does appear to me, listening to the discussion this evening, that hon. gentlemen opposite have had in mind some purpose other than that of merely procuring the documents requested in the motion with an object of strengthening the position of Canada in a matter of international negotiation. Perhaps I might present the matter in this wise: If there is a weak spot in Canada's contention—a weak spot arising out of negotiations that took place some twenty years ago—is this the time to expose that spot, seeing that we are now seeking to effect a satisfactory adjustment of the differences that call for settlement? If there is a weak spot in Canada's case with respect to the diversion of water at Chicago, is this the place to furnish arguments to those in the United States who are doing their utmost to defeat Canada's contention in this matter?

Mr. BENNETT: What I said was that in the United States press these arguments were set forth. In this building yesterday I saw a magazine, published by a gentleman named Bede, I think, which contained all the essential facts that have been advanced.

Mr. MACKENZIE KING: Yes, and in the press of the United States to-morrow all the arguments that are presented by hon. gentlemen here to-night will be cited against Canada as the opinion of the Conservative party in this country in a matter of serious international negotiations now pending. That is the objection I take to the present discussion. I do not take exception to the motion which my hon friend opposite has moved, but to the argument he has presented to the house and in which he has been supported by his hon. leader—an argument which, I am sure, everyone in the United States interested in maintaining the diversion at Chicago will be only too ready to quote sentence by sentence, paragraph by paragraph, to its conclusion.

There is one other remark on the part of my hon. friend to which I must take exception. The leader of the opposition alluded to a possible accusation of the British government touching the negotiations of 1909-11. I would ask my hon. friend this question: Has he heard anyone make a concrete or specific reference to any dereliction of duty on the part of British negotiators respecting the question of a diversion of water at Chicago? I have never heard any suggestion of that nature, at least from this side.

Mr. BENNETT: I did not say in this house. It has been freely alleged, however, that this is another of the British treaties in the category of the Alaskan award.

Mr. MACKENZIE KING: I do not agree with my hon. friend, and I doubt very much whether he can cite any reputable authority as the source of that allegation.

Mr. BENNETT: I have heard it frequently.

Mr MACKENZIE KING: I gathered from the remarks of my hon. friend that in his opinion, in reference to another matter of international negotiation, namely, the Alaskan award, which he has just mentioned, there was room for criticism of the management of that arbitration on the part at least of one who was acting at the instance of the British government.

Mr. BENNETT: That is denied.

Mr. MACKENZIE KING: But my hon. friend's remarks to-night and the quotations which he gave left ample room for an inference such as I am drawing at the moment as to what was in his mind at the time.

May I say, Mr. Speaker, with respect to the position of Canada in protesting and presenting argument against the diversion at Chicago, that the Canadian position has been strongly maintained by the present government ever since it came into office. It has been mentioned by other speakers to-night that for every interest affected on this side of the international boundary corresponding interests have been affected on the other side. My hon. friend from South Toronto (Mr. Geary) gave a list of great communities on the United States side that were adversely affected by the diversion of water at Chicago, and he made it apparent to the house that so far as influence and power go, if they are to be judged by the number of persons affected and the size of the communities, the communities in the United States adversely affected by the Chicago diversion are larger in number and probably have larger interests at stake than have the communities on this side. If that is the case, is it not clear to everyone that in relation to the United States government in the states bordering along the international waters the states and interests affected in the United States are themselves doing all that possibly can be done to see that their interests, which are similar to ours, are duly and fully protected. I ask the house, if a like situation presented itself in Canada, and the people of Ontario and Quebec were doing their utmost with the federal government here to maintain their position, would hon. members think the position of those two provinces would be materially improved if the United States forced its way into the situation, other than by supporting in the strongest possible degree what was being done by others similarly affected in this country?

Mr. CLARK: Is that the reason why this government has done nothing?

Mr. MACKENZIE KING: I would say to my hon. friend that comment of that character is not argument.

Mr. CLARK: I am asking the question.

Mr. MACKENZIE KING: It is not even a question. If my hon. friend had been asking a question I should have been pleased to answer it. It is comment of a character that has no application whatever, because earlier in the course—

Mr. CLARK: Has the Prime Minister any evidence to offer that anything has been done?

Mr. MACKENZIE KING: I said to my hon. friend—and he was looking at me when I made the remark—

Mr. CLARK: I heard it.

Mr. MACKENZIE KING: The fact that he heard it will convince him that his question is utterly futile, and nothing but an interruption.

Mr. CLARK: I did not wish to interrupt the Prime Minister. I think there is a doubt in the minds of the people of the country that the government has done anything, and I am asking if the Prime Minister has any evidence to offer us that anything has been done.

Mr. MACKENZIE KING: If I say to my hon. friend that the government has evidence, will he accept my word for it? I will ask him to answer that question. Now, I should like to tell him that the government has evidence, documentary evidence, which will be produced at the right time and in the right place. The government has not been negligent or indifferent or apathetic in this matter. We recognize that it is a great problem which affects the interests of Canada as a whole, and we have been watching closely and carefully the interests of the Dominion in our representations to the United States authorities.

There is nothing further, Mr. Speaker, that need be said at this moment. If the government declines to follow the example of hon. gentlemen opposite in trying to develop argument that cannot fail to serve the purpose of those by whom we are being opposed in delicate negotiations which are being carried on at the present moment, it is only because we feel that such a course is not only prejudicial but—may I add—in the existing circumstances unpatriotic.

Mr. C. H. CAHAN (St. Lawrence-St. George): Mr. Speaker, I ask the right to close the debate if no one else wishes to intervene.

Mr. SPEAKER: If any other hon. members wish to speak now is their opportunity.

Mr. CAHAN: I simply wish to suggest to the Prime Minister (Mr. Mackenzie King) that when he alleges indirect or wicked motives on the part of those on this side who have asked for these papers, his argument is entirely beside the mark. The main documents to which I made reference this evening are in evidence in the suit in Washington. The Prime Minister also says they are in the records of this government. I have found some of them here, and to that extent have verified the claim that authentic copies were produced in evidence in the United States. When an ex-Secretary of State and an ex-judge of the supreme court refers to these documents which I have quoted to-night, I say it is utterly useless for the Prime Minister or the government of this country to play the ostrich trick of burying their heads in the sand and accusing others who call them to wakefulness in the performance of their public duty of being unpatriotic. It is futile for the Prime Minister to suggest that we should not discuss a matter of great public interest such as this for fear that we would make known to the authorities of the United States documents which they have in hand, documents which are well known to their officials, and documents which they themselves, within the past few months, have put into evidence in one of the most important suits ever carried on in the United States. It is the patriotic duty not only of the members on this side of the house, but of the parliament of Canada to investigate and ascertain what grounds there are available to support our contention; and if our grounds are not valid and solid, if they are not tenable, for goodness sake let us cease bluffing with the United States, let us cease presenting to them childish arguments which they know to be futile and contrary to the evidence which they have in their own possession. Let us deal with the matter frankly. There is nothing unpatriotic on our part. I brought this matter up because the press of the city which I have the honour to represent has for a number of years referred to this Chicago diversion as a water "steal"; because every ship that comes into the harbour of Montreal loses from $1,000 to $5,000 per trip due to the lowering of the levels of the water in the harbour; because an engineer of the harbour commission of Montreal—which has always received the high approval of the Prime Minister and his colleagues—has alleged in a recent report that some $25,000,000 a year is lost to the commerce and shipping and trade of Montreal by reason of the lowering of the levels of the great lakes by the Chicago drainage canal. Therefore it is a matter of public interest that should be discussed, especially when we are to be asked during the present session to vote a million dollars to deepen the channel below Montreal—a channel the depth of which has been decreased by this diversion at Chicago of which we complain.

All I ask of the Prime Minister is that he shall credit us with having as patriotic motives as those which, I am sure, he has himself. If I have presented the case to-night with some

ardour, let me say that I was not presenting my own point of view, I was not attempting to make an argument for the United States, but I was attempting in fair, clear, impartial language to present to this house the case which the United States are making, and the case which so far is alleged to have been established in the proceedings which are now pending at Washington between twelve states as complainants against the Chicago sanitary district and the state of Illinois.

Motion (Mr. Cahan) agreed to.

UNEMPLOYMENT, SICKNESS AND INVALIDITY INSURANCE

Mr. A. A. HEAPS (North Winnipeg) moved:

That, in the opinion of this house, the committee on industrial and international relations be authorized to investigate and report on insurance against unemployment, sickness and invalidity.

He said: Mr. Speaker, last year I introduced a motion almost identical with the present resolution, and was extremely pleased with the very hearty support which it received from members in all parts of the house. However, on account of the fact that it was brought up on a Wednesday afternoon there was no opportunity of dividing the house, with the result that a determination of the question was postponed and I had to place the motion on the order paper once more this year.

This particular matter is not by any means new. It has been debated in this house on several occasions, and it has also been discussed by several of the provincial legislatures. In the platform of the Liberal party of 1919 one finds a reference to this very important question. I was also glad to note that in the platform of the Conservative convention at Winnipeg in October a reference, although indirect it is true, was made to legislation of this particular character. In view of these facts I do not see that there can be very much objection to referring this question to a committee for consideration and report. The grounds for such a reference are strengthened by the fact that not only have the members of this house discussed this question, but many of them have expressed their approval of the principle involved.

It may be argued that this matter is not entirely a federal one. I do not think there are many hon. members here who will claim that unemployment, and all the problems connected therewith, are matters of purely municipal or provincial concern. The unemployment question is a problem which affects the Dominion as a whole, and I believe it should be dealt with by the federal parliament. In 1919 this house appointed a royal commission to investigate the unemployment question. That commission reported favourably in regard to the questions of unemployment, health, sickness and invalidity insurance. In 1921, and also in several subsequent years—I am giving these facts in order to show to hon. members that the federal parliament in the past has assumed certain obligations and also a certain responsibility in regard to this question—the Dominion house gave relief to the provincial governments so as to alleviate the unemployment condition in several parts of the country. In 1924 the government of that day summoned a Dominion-wide conference in order to discuss the question of unemployment, thereby recognizing the fact that the problem was a Dominion one and not purely provincial or municipal in its character. I do not claim that we can cure unemployment under existing social conditions. I believe that unemployment is inherent in our modern system of capitalism, I do not believe we can get rid of it, but that does not mean that because unemployment is inherent in our economic structure we should not take steps to relieve unemployment and, as far as we can, alleviate the evils attendant upon it.

In looking into this question I find great difficulty in getting accurate information as to the exact amount of unemployment prevalent in this country. There is very little reliable data that is available to the people to show the exact extent to which unemployment exists. A commission appointed by the Ontario government conducted an investigation and reported as a result of that inquiry that unemployment in Ontario amounted to about 14 per cent, whilst an authority on economic problems at Toronto university expressed the opinion that unemployment approximated about 4½ per cent in the month of October when employment was supposed to be at the very highest. This demonstrates that unemployment is permanent in Canada, and I believe that parliament would be remiss in its duty if it did not take some action towards alleviating these conditions.

As to the causes of unemployment it has been said that certain parties in this house advocate a policy which will provide a solution for the problem. Certain hon. members to my left set up the claim that if we had greater protection there would be less unemployment. I do not take that view; I do not believe that protection in itself is a cure for unemployment. It may increase the volume of employment in a certain district, but that does

not mean to say that it would bring about a decrease in the volume of unemployment generally. It may mean that more men would be employed in connection with certain industries in certain particular localities, but the volume of unemployment would remain about the same.

In this connection may I be permitted to read a statement that was made in the other house by Senator Robertson, during a discussion which took place there on March 23, 1927. The hon. senator on the occasion referred to spoke as follows:

I was astonished the other day to find the real situation is, and I will quote just a paragraph. The manufacturing industries of Canada in 1924 employed 516,177 persons—only 974 more than were engaged in those industries in 1910. But the capital employed in 1924 was $3,380,000,000 compared with $1,247,000,000 in 1910. That is, the capital invested in manufacturing industries in Canada increased 183 per cent in that period of fourteen years, while the number of employees or man-power necessary to handle that greatly enhanced production and value, increased one-sixth of 1 per cent.

The working people of our country find themselves in this position, with the advance of science, the improvement of machinery, and the large mechanical production of the present day. So great every year is the rush and struggle and competition between the hundreds of thousands of workmen looking for employment, that the old man finds himself shoved aside, and when a man gets beyond fifty years of age in Canada, unless he has a trade or is skilled in some particular line, he finds it difficult to get a living.

There we have one statement from a senator who has made probably a little study of that particular problem. I want now to come down to figures which perhaps might help to give an illustration of existing conditions in industry, and why the unemployment problem is with us and likely to stay with us. In the year 1917—and I am going to ask permission to allow this record to go on Hansard, it is taken from the Canada Year Book—there were employed in industry 552,968 people. In 1924 we find the number of persons employed in industry was 432,273, or a reduction of approximately 120,000. In the same period the gross amount of wages paid was about the same in 1917 as 1924, showing that although the number of persons employed in industry was less in 1924—the latest year, by the way, in which figures are available—there is only a slight increase in wages to persons employed in industry. Taking wages in 1917 as 100, wages have risen to 111.4. The statement is as follows:

Average Yearly Earnings and Real Wages of Wage-earners in Manufacturing Industries, 1917–1924.

Years	Amount of wages paid	Average number wage earners	Average yearly earnings	Index numbers		
				Average yearly earnings	Retail prices	Real value of average yearly earnings
	$	No.	$			
1917	420,094,869	552,968	760	100·0	100·0	100·0
1918	480,949,599	547,599	878	115·5	113·7	101·6
1919	496,570,995	529,327	938	123·4	122·2	101·0
1920	583,853,225	526,571	1,109	145·9	142·8	102·2
1921	381,910,145	381,203	1,102	131·8	125·1	105·4
1922	374,212,141	398,390	939	123·6	115·7	106·8
1923	428,731,347	446,994	959	126·1	116·7	108·1
1924	420,269,406	432,273	972	127·9	114·7	111·4

I want to point out another very interesting and important factor which is bound to have some bearing upon this question. I am also going to ask permission to have this tabulation placed on Hansard, as it is so closely related to the one to which I have just referred. In 1917 the amount of manufacturing production was $2,873,000,000 and in 1924, $2,695,000,000. But if we are to take the value of the production in those periods we find that in one case, taking the production for 1917 as 100, the production had actually increased to 104.65. The tabulation is as follows:

Volume of manufacturing production 1917-1924

Years	Values		Prices		
	Gross value manufacturing production	Percentage relative to 1917	Index No. prices of manufactured commodities	Percentage relative to 1917	Index No. volume of manufacturing production
	$				
1917	2,873,268,183	100·00	175·5	100·00	100·00
1918	3,289,764,146	114·49	196·9	112·19	102·05
1919	3,290,500,585	114·52	204·4	116·46	98·33
1920	3,772,250,057	131·28	242·0	137·89	95·20
1921	2,576,037,029	89·65	180·0	102·56	87·41
1922	2,482,209,130	86·38	155·0	88·31	97·81
1923	2,781,165,514	96·79	159·1	90·65	106·77
1924	2,695,053,582	93·80	157·3	89·63	104·65

We also find, using another tabulation which I would ask permission to put on Hansard, that in 1917—

Mr. KAISER: Whose permission does the hon. member ask for putting these statements on Hansard?

Mr. HEAPS: The very same permission that other hon. members ask.

Mr. KAISER: I have been refused.

Mr. HEAPS: I am sorry the hon. member was so unfortunate.

Mr. KAISER: The excuse made was that this costs a good deal of money. If in these forty minute speeches we can ask permission to load up Hansard with statements, I should like to have known that before I made my speech.

Mr. MACKENZIE KING: My hon. friend is quite correct. Last year he endeavoured to load up Hansard with a lot of figures that he did not read to the house and we on the government side took strong exception to that procedure. If my hon. friend is endeavouring to put on Hansard something which is part of a speech which he ought to deliver, he should be prevented by the Speaker from so doing.

Mr. HEAPS: Do I understand that the Prime Minister wishes me to read these figures?

Mr. MACKENZIE KING: I think my hon. friend should do so.

Mr. HEAPS: I am quite prepared to read them, but I think conditions this year are so totally different from those of last year that objection ought not to be taken. Seeing that last year hon. members had unlimited time in which they could state their case to the house while this year they are restricted to forty minutes, I believe a little more latitude might be allowed in regard to figures.

Mr. MACKENZIE KING: I hope my hon. friend will not misunderstand my intention. I am endeavouring simply to uphold the rules of the house as laid down by itself.

Mr. HEAPS: I am just as anxious as the Prime Minister is to uphold the rules. I was not very anxious to proceed to-night, and I would not have discussed the matter, if I had received the assurance of the house that it would go to committee without discussion. Hon. members will understand it is very easy for other hon. members who are opposed to this resolution to speak until eleven o'clock and then the whole matter would lie over until next year.

Mr. MACKENZIE KING: As the rule now stands, this resolution becomes the first order the next time these motions are taken up.

Mr. HEAPS: Provided that I speak until eleven o'clock.

Mr. MACKENZIE KING: The hon. member can go on again to-morrow and complete his forty minutes.

Mr. HEAPS: I do not know whether I quite agree with the Prime Minister. I will read these figures now so as to comply with the request of the Prime Minister, and I presume, of course, that as no objection was taken to the other two tabulations which I submitted, they will go on Hansard. In this tabulation I am going to give just a few figures. Taking 1917 again as 100 and comparing it with 1924, efficiency in production has increased from 100 to 128. That is, while I have shown in the other tabulations that the amount of wages paid out of industry

to those engaged in industry was about stationary in the period from 1917 to 1924, efficiency in production has increased in the same period from 100 to 128. There has been that greatly increased efficiency without a corresponding increase in wages in that period. I am not going to read this table as I have other matters to deal with and I will not ask to put it on Hansard.

I wish now to make a few references to the question of unemployment and sickness insurance for the benefit of those members who may feel inclined to oppose the proposals. I know there are some hon. members who often refer to this question as the handing out of a dole to men and women who happen to be so unfortunate as to be out of work. If I know anything it is the fact that the average working man or working woman hates to accept something for nothing. They would much prefer to be able to safeguard themselves against the eventuality of unemployment or sickness. Consequently we find to-day in different parts of the world various schemes of insurance against these contingencies. Perhaps nothing creates greater uncertainty and worry to the workers of any country than the fact that they may any day be cut off from employment. The worry in regard to sickness also creates a feeling of uncertainty.

In 1911 Great Britain adopted a policy of unemployment insurance. At that time the number of people coming under the provisions of the act were rather limited; but as the years went on, and as the provisions of the act became more widely known, the numbers coming under the act became greater, and from a comparatively few in the first years of the operation of the act there are in Great Britain more than fifteen million inhabitants who at the present time come under various forms of state insurance. They have insurance against unemployment, sickness and invalidity, and there is also a contributory system of old age pensions. The contributory system applies only to persons between the ages of sixty-five and seventy. All persons over the age of seventy come under the scheme as it was prior to the latest act coming into operation. In order to give the house some idea of the magnitude of the scheme they have in Great Britain, I want to read one section of the Blanesburgh report dealing with the amount of money involved. It states that the total sum paid into the fund from the beginning of unemployment insurance in 1912 to the first of July, 1926, was £212,775,000. The amount paid by the national exchequer in this period was £70,454,000. For the year 1925-26 the exchequer contributed £13,002,000 and the employers and workers jointly contributed £33,867,000. This goes to show, Mr. Speaker, that there is nothing in the nature of a dole given to these people who are the recipients of unemployment relief in Great Britain. They are receiving payments on exactly the same basis as a person who insures his life, or insures his property against fire risks. The man who pays for fire insurance, if he is so unfortunate—sometimes fortunate—as to have a fire, when he receives his insurance he does not regard himself and is not looked upon as one who is receiving a dole. He has insured himself against that particular risk, and he feels entitled to the money he receives.

In Great Britain the worker and the employer make a joint contribution, and the state also makes a contribution to the fund. It is worked out on an actuarial basis. The state assists with the scheme for the simple reason that they believe that the state receives some equivalent benefit when the men and women who are out of work receive a certain weekly allowance, and also because the state, in addition to the employer and the employee, has also a certain degree of responsibility. Consequently I should like to see established in this country a system something along the lines of that established in Great Britain. However, I know that we are confronted here with a greater difficulty perhaps in regard to administration than they have in the old country, because there they have one central authority which can act for the whole country, whereas in this country we are blessed with nine states and a sort of a superstate represented by the federal government. I know that the provincial authorities are jealous of their particular spheres of legislation, and they may take some objection to the Dominion government assuming the whole cost. I cannot say as to that, but in my opinion, Mr. Speaker, a scheme of this character would perhaps require four parties to the agreement. In the first place I believe the federal authorities should assume a certain responsibility; the provincial governments should assume a certain share of responsibility; the men and the women employed in industry will have to assume a certain portion of the cost; and industry itself will also have to assume its share. I believe that among these four different bodies a scheme could and ought to be worked out that would give to the men and women who find themselves out of employment, or sick, or in some other way unable to work, something to tide them over that difficult period.

It might be argued, and I believe some hon. members will maintain, that with such a scheme in force there would be some who would prefer to remain out of work rather than seek employment, but I do not think that during the whole time the act has been in force in Great Britain there has been anything shown to substantiate such an impression. The commission that investigated this whole matter in 1926 made a very thorough investigation into several cases that had been submitted to them, and they found that these charges were almost entirely unfounded, and that taking it on the whole the act had worked fairly well, that it had been a good thing for the state, a good thing for the employer, and a good thing for the men and women who happened to find themselves out of work.

I notice, Mr. Speaker, that in the year 1919 the Dominion government were represented at the Washington conference which dealt with labour legislation, and that Canada became a signatory to that treaty. Not only that but at that conference at Washington, at which, as I say, Canada had a representative, there was passed a resolution dealing with this question, to which evidently the representative of this country agreed. This was the motion that was agreed to arising out of section 13 of the Treaty of Versailles:

> This joint conference recommends that each member of the international labour organization establish a system of unemployment insurance either through a government system or through a system of government subventions to associations whose rules provide for the payment of benefits to their unemployed members.

The Canadian government agreed to this very principle in 1919, and after agreeing to the principle I do not think I should be asking too much if I asked the government and the house to agree to the principle in 1928. But what I am asking at the moment is that this resolution be sent to the committee, where it may have a thorough investigation and where we may hear the evidence of men and women in this country who have given long and continuous study to this particular question. I hope that that committee will arrive at some conclusion whereby we may be able to establish in this country a scheme such as has been established in almost every other country in the world. It is quite true, Mr. Speaker, that the country to the south of us has not got very much in the way of unemployment insurance or sickness and invalidity insurance, but that is no reason why we should not have such legislation in this Dominion. We have heard some very uncomplimentary references here this evening to the methods adopted by our neighbours to the south. I am not going to make any uncomplimentary references to what they may do on the other side of the line. In the matter of legislation and in our method of dealing with the social problems of our people, I would far rather we looked to Great Britain for an example than to the United States, and I would far rather we followed the British precedent than any precedent that may be set up on the other side of the line.

Mr. SPEAKER: It being eleven o'clock—

Mr. HEAPS: Do I understand, Mr. Speaker—

Mr. SPEAKER: If the hon. gentleman has not finished, the resolution will retain its place on the order paper.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.

Friday, February 17, 1928

The house met at three o'clock.

REPORT OF COMMITTEE

Interim report of special committee on pensions and returned soldiers' problems.—Mr. Power.

CUSTOMS TARIFF SCHEDULE

On the orders of the day:

Mr. J. T. THORSON (Winnipeg South Centre): With reference to the schedule to the customs tariff, referred to by the Minister of Finance in his budget speech yesterday, and with a view to facilitating a study of the tariff changes which have been proposed, I desire to ask the Minister of Finance if he would be good enough to prepare and place on Hansard a comparative table showing the old rates and the proposed new rates where changes have been made.

Hon. J. A. ROBB (Minister of Finance): I may tell my hon. friend that the officers of the department are now preparing a complete statement such as he requests for the use of the minister in committee. I imagine it is almost complete now, and just as soon as it is finished I will be glad to lay it on the table in order that it may be inserted in Hansard.

DEPARTMENT OF THE INTERIOR

On the orders of the day:

Hon. R. B. BENNETT (Leader of the Opposition): I would like to ask the Minister of the Interior (Mr. Stewart) whether Mr.

Alexander Smith, K.C., has prepared a report upon the matters he was investigating in connection with the Department of the Interior, and if so, whether the report will be laid upon the table at an early date.

Hon. CHARLES STEWART (Minister of the Interior): My information is that the report is almost complete. I cannot say exactly when it will be finished, but as soon as it is ready I will lay it on the table.

CIVIL SERVICE COMMISSION

RECLASSIFICATION OF LETTER CARRIERS

On the orders of the day:

Mr. H. B. ADSHEAD (East Calgary): I would like to ask the Postmaster General if he has received from the Civil Service Commission any information with regard to the proposed reclassification of the letter carriers, and if so, if he will lay it on the table.

Hon. P. J. VENIOT (Postmaster General): That matter is now before the Civil Service Commission and is receiving their attention. There has been no reclassification made as yet.

RESTIGOUCHE RIVER—SMELT SEASON

On the orders of the day:

Hon. P. J. A. CARDIN (Minister of Marine and Fisheries): Yesterday in my absence from the house the hon. member for Royal (Mr. Jones) referred to the situation with regard to the smelt fishing season, particularly on the Restigouche river. I may tell my hon. friend that no extension of the smelt fishing season has been granted this year in Quebec or any other province. Of course the fisheries of the province of Quebec are administered by the provincial authorities, but the granting of an extension of any season is within the power of the federal government. We have not granted any such extension, and if any fishing is being carried on beyond the limits of the season it is being done illegally. At all events, we are making inquiries of the provincial government with regard to the real situation, and we will see if the officials are keeping on the job.

TRADE MARK AND DESIGN ACT

On the order:

Hon. FERNAND RINFRET (Secretary of State): Mr. Speaker, with the unanimous consent of the house I would move that Bill No. 8 to amend the Trade Mark and Design Act be referred back to the committee of the whole.

[Mr. Bennett.]

Motion agreed to and the house went into committee, Mr. Johnston in the chair.

On section 1—Minister may refuse to register trade mark in certain cases.

Mr. RINFRET: This section sets forth two additional reasons why the minister may refuse to register any trade mark or union label. The object, as I explained when the bill was before the committee previously, is to bring our act into line with the decisions made at The Hague conference, where it was decided that we should not grant trade marks which constituted a reproduction or imitation liable to create confusion with the trade mark of another unionist country. In subsection (f) the following words appear:

—with a trade mark known to be the mark of a national of another country —

It has been represented to me that it would be better to have that more clearly defined, and that we should adopt the exact wording of the decision arrived at at The Hague. I therefore move that the words "known to be" be struck out and that there be substituted therefore the words "which is considered by the competent authority to be well known in Canada as".

Mr. BENNETT: I am inclined to think that perhaps the sense of The Hague convention would be better met by specifying the competent authority in this country. The words "competent authority" were used at The Hague in order to meet the requirements of all nations, but as each nation has its competent authority designated by statute, might it not be better to express in our act the name of the competent authority, which in this case I believe is a judge of the exchequer court.

Mr. RINFRET: Our competent authority under that section would be the commissioner.

Mr. BENNETT: Yes, subject to appeal.

The CHAIRMAN: Shall the amendment carry?

Mr. BENNETT: If the minister will look at subsection (f) he will observe this wording:

If the trade mark constitutes a reproduction or imitation liable to create confusion with a trade mark known to be the mark of a national of another country which by treaty—

And so on. Now in article 6 of The Hague convention the words used are, "a trade mark considered by the competent authority of the country of registration to be well known" and so on. If we use the words suggested in the amendment I think it may be open to much confusion, and it might therefore be desirable to adopt the expression "known or

established to the satisfaction of the commissioner to be the mark of a national of another country" or something of that sort. I think if you leave the matter in the terms in which you now have it the law may become very much confused. Has the minister considered the question of designating a competent authority?

Mr. RINFRET: My object was to reproduce the exact wording of the article adopted at the convention. But there is a point in the argument made by my hon. friend, and perhaps we could meet the wishes of the interested parties and at the same time cover the point completely by adopting a somewhat different phraseology. Perhaps we might insert the words "which is considered by the commissioner to be well known in Canada as"—

Mr. BENNETT: I suggest that it might be well to designate the "competent authority" in the statute itself.

Mr. RINFRET: I move to insert the words:

"which is considered by the commissioner to be well known in Canada as"—

Mr. CHAPLIN: I should like to inquire from the minister whether, in the event of one of our own nationals applying for a trade mark, the commissioner must first of all search the records of other countries to see whether there is any interference with other trade marks.

Mr. RINFRET: Perhaps the chairman will read the proposed amendment again.

The CHAIRMAN: The amendment is to strike out the words "known to be" in the tenth line and insert the words "which is considered by the commissioner to be well known in Canada as."

Mr. BENNETT: I think that will meet the case.

Amendment agreed to.

Section as amended agreed to.

On section 4—Procedure as to cancellation.

Mr. RINFRET: I would ask the chairman kindly to refer now to section 4. We have the same situation there in the twenty-fifth line where provision is made for the institution of proceedings before the exchequer court. The section uses the expression "trade mark known to be the mark of a national of another country" and so on. I do not think the amendment should make reference to a "competent authority" at all, because the court becomes the sole judge. I wish to have the section perfectly clear, and at the same time to meet the desire of the hon. member for Lincoln (Mr. Chaplin) that the trade mark should be known in Canada. Therefore I will move that we strike out the words "known to be" and insert the words "well known in Canada as."

Amendment agreed to.

Section as amended agreed to.

Bill reported, read the third time and passed.

SUPPLY

DEPARTMENT OF AGRICULTURE

The house in committee of supply, Mr. Johnston in the chair.

Agriculture—for experiments in dehydration of fruits and vegetables, $10,000.

Hon. W. R. MOTHERWELL (Minister of Agriculture): When this estimate was before the committee a few days ago we were asked to let it stand. The committee will remember that I explained that the committee on dehydration had not been able to meet owing to the fact that three of its five members were absent from Canada. They convened only the day before yesterday. At that meeting they made a complete recommendation as to how this $10,000 could, in their estimation, be expended to the best advantage. Perhaps it would save time if I read their report:

Proposed Activities of Dehydration Committee 1928-1929

In the province of Nova Scotia, it is proposed at the experimental station, Kentville, there be installed a small dehydrator of cabinet type, to be used for research work in dehydration. Although this installation is for experimental purposes, yet it will have a capacity up to one and a half tons of apples per day, hence it is semi-commercial. Dehydration work with apples will be done this year, and a complete study of varieties commonly grown as to their suitability will be undertaken, and demonstration work with regard to the importance of grading of fruit previous to dehydration, and the grading of the dehydrated product. This plant will cost approximately $2,000 and the material and labour $3,000.

In the province of British Columbia the three-unit plant formerly operated at Penticton will be installed at the station at Summerland. This plant will be operated this year on apricots and prunes which will be available in the orchards in the Penticton and Summerland areas. The great importance of production of suitable varieties; the proper ripening of prunes preparatory to dehydration justifies the planting of a ten acre orchard at Summerland for further complete study and demonstration work as to profitable prune production for dehydration. The importance of apricot dehydration is illustrated by the fact that our importations into Canada are still great. Dehydration in Canada has not been started yet. The planting of young orchards is such that within five years there will be a large surplus of apricots not

required for the fresh fruit trade which of necessity will be dehydrated, thus replacing present importations.

In addition to the above, at Agassiz there will be conducted dehydration work in connection with loganberries. The cost of the work in British Columbia will be distributed about as follows:

Planting of demonstration prune and apricot orchards	$1,200
Dehydration operations in apricots and prunes	3,000
Dehydration operations in loganberries	800

We received information only yesterday from the government of British Columbia in reply to a communication of ours of about three weeks ago inquiring whether we could lease a five-acre plot of ground in the Oliver district for the purpose of planting this apricot orchard. The British Columbia government wired us that they would be pleased to lease us, at a nominal rental, five acres in that district for this purpose. The same kind of experimentation will be conducted at the Summerland experimental station with the idea of developing the best variety of fruit and ascertaining the stage of development at which it will dehydrate to the best advantage.

With regard to the situation in the maritime provinces, it will be recalled that in the absence of any such program as I have just outlined my sympathies were rather disposed to favour the improvement of the commercial plant in Annapolis valley. Neither Dr. Grisdale nor I was able to give on the last occasion the name of the owner of that plant; it turns out that the establishment belongs to the United Fruit Growers. Inasmuch as neither of us had ever dealt with that case we were not in a position to give the name from memory. We have also learned that these growers have recovered very largely from their early disappointment and their plant is now in fairly good shape. Nevertheless they have not yet got into their stride, and the same applies to two other plants in the Annapolis valley. Consequently we have decided to set up a $5,000 dehydrating plant at Kentville for the purpose of testing out and demonstrating the best varieties of fruit for dehydration.

There is a tendency to use any kind of fruit for dehydration; anything that is unsuitable for the fresh fruit trade, it is considered, is good enough for the dehydration plant. That is a fallacy; it will not work. It has been found many times that you cannot convert poor fresh fruit into a good dehydrated product. A reasonable standard of quality must be maintained in the raw fruit if the converted commodity is to be of good quality. Size, quality and many other factors in relation to dehydration will be investigated at the Kentville station along the same lines as have been pursued in the Kelowna valley during the past four years. I have a report, copies of which may be obtained on application, of the work that has been carried on during the four years that this vote has appeared in the estimates, the present being the fifth occasion on which the grant is being made. It might curtail the discussion somewhat if I read this report, which is quite interesting. Here are the conclusions:

The results of these investigations might be briefly summarized as follows:

(1) It is impossible for a dehydrator to make a good product from low-grade fresh fruit.

As will be noted from the passage I have quoted, it is essential that a reasonably good raw fruit be used if a good product is to be obtained.

(2) The hope for permanency and prosperity in the Canadian dried-fruit industry lies in creating a greater confidence therein by both the domestic and foreign trade, and by emphasizing high quality. This can be done perhaps more effectively through dehydraters than through the evaporators. A reduction in costs is equally important. The dehydrater, once established, can operate at a lower cost per ton of dried fruit than the evaporator.

The hon. member for Victoria (Mr. Tolmie) brought up this matter last year when he inquired as to the relative cost of dehydration and evaporation. The conclusion arrived at after four years of investigation is that the dehydrating plant once established can operate at a lower cost per ton than the evaporator, and, of course, the product is much more acceptable to the purchasing public.

3. The fruit-growers themselves must carefully consider the matter of their plantations in relationship to dehydration. It is impossible to expect a trade to be developed on an insecure supply of a large number of varieties. Hence, our fruit plantations must be somewhat remodelled with that end in view.

The trouble in the past has been that a good many people have looked upon dehydrated fruit as a by-product, something that has been made fairly presentable from a poor raw material. That idea is altogether erroneous. The conclusion in this regard is this:

(4) Dehydrated fruit must be considered a fruit product and not a mere by-product.

(5) It would be wise for those considering plantations for dehydration purposes to consider carefully the relationship between the dried-fruit industry and other phases of the fruit industry. Often the dehydration plant should

either be operated under the same company, or in close co-operation with the fresh-fruit warehouses, the canning plants, cider plants, cider and fruit-juice plants, jam, jelly, and marmalade plants.

That is obvious. The cost of administration would be reduced if all the operating units were centralized.

(6) There still remains considerable work to be done thoroughly to classify the suitability of uniformly good grades of the different varieties of our various fruits and vegetables.

The foregoing are the conclusions arrived at in this report covering the experimental work carried on over the last four years.

Mr. CHAPLIN: Why is it necessary to grow apricots in British Columbia when, as the minister says, in three or four years' time there will be far more apricots in the district than there will be a market for? Why do we need to grow more?

Mr. MOTHERWELL: Some varieties will dehydrate better than others and the department is leasing five acres from the provincial government, very much to their satisfaction, for the purpose of testing these varieties.

Mr. CHAPLIN: How long will it take to produce fruit if you plant to-day?

Mr. MOTHERWELL: The sooner you begin the sooner you get fruit.

Mr. CHAPLIN: That is self-evident, but it does not tell us how long it takes to produce apricots.

Mr. MOTHERWELL: Five or six years.

Mr. CHAPLIN: That is to say, it will be six years before you make the tests and you are putting in your dehydrating plant now?

Mr. MOTHERWELL: There were orchards planted immediately after the war and they are bearing now.

Mr. CHAPLIN: I know that.

Mr. MOTHERWELL: But they were planted indiscriminately as to quality and suitability for dehydration. They are bearing now and we shall be able to make tests with these while the other trees are growing. The result will be a continuous supply of new raw material for experimental purposes. If there were no trees bearing now the hon. gentleman's criticism would be warranted, but there is a substantial number of trees, although I am unable to say precisely how many thousands. It is a large soldier settlement where fruit-growing, particularly the producing of apricots, was undertaken after the war. The soldiers found the undertaking somewhat onerous and this is one way in which we can help them to improve the quality of their product and enable them to compete in any market.

Mr. CHAPLIN: The minister thinks I am criticising him. I was merely asking him for information, and he certainly has not given us a clear explanation of what he is doing. He says he is planting trees with the idea of finding out in the future which are the best varieties to grow. He also advises us that it will take six years to determine from the trees we are now planting what quality of fruit they will produce. He is putting in a dehydrating plant at once to test the kind of fruit which will be produced six years from now. That may not be what he said but it is the effect of his remarks. Can he not find out, by testing the fruit which is now being produced, what are the most suitable varieties? That is the common sense of the matter, and I know something about it because I come from a fruit district.

Mr. MOTHERWELL: We are not putting in a dehydrating plant at Oliver and I did not say that we were. We are transferring the plant that has been at Penticton.

Mr. CHAPLIN: Where are you putting it?

Mr. MOTHERWELL: We are transferring it to the experimental farm at Summerland about eight miles from Oliver. There is no dehydrating plant at Oliver, which is simply an experimental orchard. In the meantime there will be an abundance of apricots to experiment with.

Mr. MILLAR: Is this work carried on under the fruit branch or under some other department?

Mr. MOTHERWELL: The fruit commissioner is on the committee, also Professor Macoun, Mr. Archibald, the director of experimental farms, Mr. McGillivray, Mr. McIntosh and Dr. Shutt.

Mr. MILLAR: Is this connected with the health of animals branch?

Mr. MOTHERWELL: No, it comes under fruit.

Mr. TOLMIE: What variety of prune has the department found to be the most satisfactory for dehydration?

Mr. MOTHERWELL: We have not done much of that as yet. It is for that purpose that we are establishing the plant at Summerland. We have a new orchard of ten

acres where we shall experiment particularly with prunes. There are very few varieties of prunes that have been dehydrated, but an enormous quantity of prunes comes into Canada, and we might just as well produce that article ourselves. There is no doubt that they can be grown, but it has not yet been demonstrated which is the best variety or what is the proper stage of maturity for dehydration. That will be established at Summerland.

Mr. TOLMIE: We grow the Italian prune to perfection in many parts of British Columbia, and I was just wondering if that variety was satisfactory for dehydration purposes.

Mr. MOTHERWELL: I understand it is.

Mr. TOLMIE: What information has the minister with regard to the dehydration of the loganberry? That is a berry that is grown in great profusion. It is a fertile and a very profitable crop produced in many parts of British Columbia, particularly in the coast section and down on Vancouver island. We are already making most excellent wine from loganberries which after three or four years is equal in palatability, and also in pressure, to anything else. If we can find a new outlet for the loganberry, it will prove to be a very profitable crop for the growers in that section of the province.

Mr. MOTHERWELL: My hon. friend is quite right; it has become quite a crop. In the summary from which I have just quoted there is a short paragraph with regard to loganberries which says that in addition to the work at Agassiz there will be conducted dehydration work in connection with loganberries. Here is a paragraph with regard to loganberries in the report covering the last four years:

> Loganberries dehydrate into a delightful product. The colour, flavour and appearance are well preserved. When dehydrated they are almost as natural in appearance as the fresh fruit.

I might add that whereas the loss of weight in most evaporated fruits amounts to approximately twenty per cent, in the case of the loganberry moisture is absorbed in sufficient quantity to restore the fruit almost to its original weight as well as to its original quality.

Mr. STIRLING: I think the minister is to be congratulated in carrying on this work of dehydration of various fruits in the Okanagan valley. The experimental plant which has been in operation there for three years has arrived at some very valuable findings which have recently been published.

[Mr. Motherwell.]

With regard to one clause in that report it is particularly worth noting that as the grading of apples has got better and better, the quality of the cull apples left behind has also improved. Whilst dehydration is of very little use economically for the small under-sized crooked apples, the better the quality of the culls, the more culls there are in a hundred pounds which can lend themselves to dehydration. As a practical result of these experiments at Penticton, a small dehydration plant has successfully been started at Vernon on a commercial basis, and the minister has a sample of the dehydrated apples which they are putting on the market. To my mind the greatest future before these experiments lies in the dehydration of prunes, largely because Canada imports an enormous quantity of prunes every year. Throughout the Okanagan valley, and especially the southern part of it, prunes have been grown very successfully for the last twenty years. The Italian prune is the most popular variety, but it remains to be seen whether the Italian prune will prove as good for dehydration purposes as other varieties of prunes, and one of the values that I attach to this lease of land from the provincial government at Oliver is that there it will be demonstrated whether Italian prunes are the most likely to produce the maximum of results from dehydration. I do not know just where that five acres is situated, but I have no doubt that on it there will be growing already apricots, and very probably apples. Is not that so?

Mr. MOTHERWELL: Nothing as yet.

Mr. STIRLING: Undoubtedly apricots and apples, and I should imagine prunes, are being grown on the neighbouring land, and that will be an extremely good basis from which to start. I also agree with the moving of the dehydration plant from Penticton to the experimental farm at Summerland. That is a wise piece of business. It brings one more piece of work under the minister in that neighbourhood, directly under the eye and supervision of his representative at the farm. I think the fruit growing interests of British Columbia will be well served if the experiment is carried on along the lines the minister suggests.

Mr. ANDERSON (Halton): Has the minister considered the advisability of establishing a plant in the Niagara peninsula for the dehydration of fruit—apples and other products—or has such a plant been established there?

Mr. MOTHERWELL: Some years ago —before my time at least—dehydration was established at Grimsby right in the heart of the fruit country, but at that time they still held to the old idea that anything at all would do to dehydrate. The result was it was never satisfactory. They did not seem to take to the idea. It was a fresh fruit country, and although the establishment was a good one, and although an artificial ice production plant was constructed for the purpose of icing the cars, they never made use of it and are not using it now. They are using the ice plant to ice cars when required, and also to create a sheet of hockey ice in the adjoining rink.

Mr. ANDERSON (Halton): Is there a market for this particular product of dehydrated fruit?

Mr. MOTHERWELL: Yes, a very large market; but a great many people do not seem to differentiate between dehydrated and evaporated fruit. Some of the enthusiasts who first advocated dehydration left the impression that anything would do. Then when it was tried it did not produce a good product and did not take on the market. But they are getting over that idea now. There is a commercial plant at Kelowna, and another one at Vernon. I do not know whether the hon. member knows of any more or not. I think they are doing well. In the maritimes there are three plants which are doing fairly well, but not nearly as well as if they had an experimental plant in their midst, to give them the same advantage as the Kelowna plant got at Penticton, and that is the reason we are establishing one at Kentville.

Item agreed to.

Experimental farms, including necessary new buildings, $1,900,000.

Mr. GARDINER: Will the minister explain this item?

Mr. MOTHERWELL: As the committee is well aware, we have one central experimental farm and some twenty-two or twenty-three branch farms. I presume my hon. friend wants to know the amount for each branch farm, as well as the central experimental farm. The figures are as follows:

Central experimental farm	$500,000
New buildings	100,000
Special printing	65,000
New farms	145,000

That is the tobacco farm at L'Assomption.

	1928-29
Charlottetown	40,100
Summerside (Fox ranch)	14,840
Kentville	50,535
Nappan	44,755
Fredericton	48,280
Ste. Anne de la Pocatiere	46,625
Cap Rouge	50,000
St. Joachim, (horse farm)	13,675
Lennoxville	46,500
Farnham	22,500
La Ferme	35,000
Kapuskasing	45,759
Harrow	28,398
Morden	45,130
Brandon	46,662
Indian Head	47,935
Rosthern	34,600
Scott	36,225
Swift Current	35,880
Lethbridge	52,280
Lacombe	45,822
Invermere Windermere	36,500
Summerland	45,890
Agassiz	44,000
Sidney	24,695
Substations	26,805
General	3,200
	$1,022,591

I see that covers them all. I presume my hon. friend wants to know what this increase is to be used for. The house will recall that in addition to taking care of the general growth of this system it was hoped we would be able to make an extension last year or this year to some one or two of these farms. That is the one at Lethbridge, the central farm here. The equipment was getting inadequate to meet the situation. The other was the new tobacco farm at L'Assomption. We found the money grant was not sufficiently generous to take care of the central farm enlargement; so that it was spent on the Lethbridge farm and the new tobacco station at L'Assomption. This year we have been trying to arrange for an extension to the central farm. We have been negotiating for some time, but owing to the difference between the price asked by the owner of the property, and what we think we could afford to give, no transaction has as yet been consummated. There were three in prospect last year, and we have three in prospect this year. We will take up such one as the vote will permit our purchasing and we can make the best arrangements for. As the years pass by the valley of the Assiniboine is flooded with greater frequency than in the early days, with the result that a very large part of the Brandon experimental farm is inundated about every third year; that has occurred at least two or three times since I took charge of the department. Consequently we require an extension of that farm. A small extension at the Agassiz farm is also required. Which of

these three we will use the vote for I do not know at this stage. It will depend upon how good a bargain we can make and how much money we have at our disposal. We are in hopes of getting an extension of the central farm here. Our persistency in this direction has not resulted in very much progress so far, notwithstanding the urgency of the case.

Mr. BENNETT: Cannot you expropriate?

Mr. MOTHERWELL: It will be observed that part of this vote will cover the necessary buildings. In former years these had to appear in the Public Works estimates. It was thought to be more convenient to have this part of the expenditure included in our vote for administration purposes. Consequently $50,000 will be so expended, and will not appear, as formerly, in the public works vote. So the increase will be that much less than appears on the surface.

Mr. GARDINER: What is the necessity for the increase of the central experimental farm? Is it going to be made into a beauty spot, or is it to be used for experimental purposes?

Mr. MOTHERWELL: That question is very well put. It is already a beauty spot. I think great credit is due to the late Dr. Saunders for the way in which he laid out this farm forty years ago. At that time it was considered to be a good large farm, for it comprised about 460 acres. But to-day we are endeavouring to carry on our farming operations without sufficient land. Nearly every branch and provincial farm has been getting larger to meet the growing requirements of the country, but this farm has actually been growing smaller and smaller each decade so far as its utilization for practical purposes is concerned. The arboretum to the north of the Prescott highway takes up 62 acres; the shelter belt takes up 16 acres; the campus covers 13 acres; the orchard 40 acres; the experimental plots, the poultry runs and the paddocks and yards for the various branches of live stock take up a large acreage. The result is that for farming purposes the area is reduced to three fields of 40 acres each—120 acres. The campus of the Saskatoon university farm is twice as large as our campus. So cramped have we been for space that during the meeting of the world's poultry congress here last August we had to use our wits to conceal the lack of pasturage for our chickens. We did the best we could—we put some of our chickens on a piece of tillable land, and about 1,300 others we sent out to a private farm. The year before we put our chickens out on the rifle range, where we lost about a thousand dollars' worth due to the unsuitable nature of the ground. When an experimental farm in the very heart and nerve centre of the Dominion has not enough land to pasture its chickens, it seems to me we had better give up farming altogether or get additional acreage. But a far more serious question arises with respect to our young cattle. We send them out to the same rifle ranges, and I do not know what we should do but for the good nature of the hon. Minister of National Defence (Mr. Ralston), who lets us have the land at a nominal rental. Then we have 65 head of milch cows of various breeds to look after. We have no pasture for them. Last year we fenced off temporarily five or six acres of new meadow land that had been seeded down the year previous. In wet weather it does not take 65 cattle long to make such a small enclosure look more like a corral in the west than pastureland. In the summer time those cows are housed all through the day. At five o'clock in the evening we let them out to have their little frolic in this five-acre plot of nominal pasture, then at five o'clock in the morning they are brought in for their breakfast and kept in for another twelve hours. That practice has been going on for ten or fifteen years. Well now, it seems to me it is about time we provided a little real pastureland for those "critters." When Premier Bruce and Premier Coates were here last winter I was thankful it was that season of the year, because both of them are practical farmers. Premier Coates was more interested in live stock, and when I have a practical man like that to show around I have to keep dodging to prevent his getting to know too much about the weaknesses of our layout.

Mr. BLACK (Yukon): You can do it all right.

Mr. MOTHERWELL: That is not a joke, it is a fact. As I think everybody knows, the original owner of about 100 acres of the present central farm was the late J. R. Booth. He was an old resident and we all recognized the sentimental value he placed upon the Booth farm—he held it away up at $1,500 an acre. Of course he did not want to sell, and I could not blame him, for he was associated with the place for the best part of his life. Now, however, the present owners are prepared to talk business, although their price is still too high. I feel very strongly that we should not continue any longer with our present cramped quarters if we are to have a real central farm. It must be remem-

bered that this is the centre of our whole system of experimental farms. It is here that we develop new wheats. During the last few years we have, in a small way, grown the wheat under glass in the winter, and so reduced by half the time required to develop a new variety; but with only sufficient room to do it on a single plot instead of a triplicate plot system, and with very little glass for continuing this experimental work through the winter, it takes us a little better than double the usual time to develop a new wheat. It seems to me that since Canada is developing in this way, with at least half of the people engaged in agriculture, we can afford to have one farm here as the centre of the system, of a size commensurate with the importance and the innumerable requirements of agriculture.

Mr. MILLAR: Since one of these experimental farms is close to my own home, and since I am possibly responsible for a small part of the increase, perhaps it would not be amiss if I were to say something on this subject. Within recent years three important events have occurred in conncetion with that farm, the first being the magnificent donation of Mr. W. R. Patterson, which was mentioned in the house last year. Mr. Patterson owned 640 acres of land immediately north of the experimental farm, one of the finest farms in western Canada, with a fine spring, good buildings and the land in a good state of cultivation, and he has given this as an addition to the present farm. Nominally I suppose this farm is being held by the government at a small rental, but evenutally it is to become the absolute property of the Dominion of Canada.

The next event, and a rather happy one, was a hail storm. I had been trying for a year or more to persuade the Minister of Agriculture that a new greenhouse was required on that farm, since the one then existing was a small building erected in 1888, which had become a fine illustration of decay. The minister was visiting in the west, and while he was there I prayed for a hail storm, which eventually came and finished the greenhouse. I then telephoned the minister asking him to pay a visit to the farm, which he kindly consented to do, and I knew that would settle the matter. It did; the greenhouse is already built and is a credit to the farm.

The third matter which I desired to mention was in connection with the horse breeding business. For some years, under the able management of the superintendent, Mr. W. H. Gibson, they have been engaged in breeding Clydesdale horses, and have produced some of the best Clydesdales in Canada. Last fall a number of these horses were exhibited at Toronto, but for a reason easy to explain they did not succeed very well at that exhibition. The same horses were taken to Chicago, however, where they were awarded a number of the very best prizes in competition with the rest of the North American continent, and as I understand it, one of these horses was awarded the title of the best Clydesdale mare in North America. A Scotch judge, who was judging some of these horses at Toronto, said about one horse that he would like to take it back to Scotland with him. I think that shows that we have made great advances in Canada in this connection. Of course all the provinces do not specialize in the same breeds, but I fancy that within the next ten or fifteen years western Canada may become the source of supply of the very best Clydesdales, and we will find breeders coming to Canada from the United States and perhaps even from Scotland to buy their stock. Therefore I wish to commend the minister on the management of this farm at Indian Head.

Mr. MOTHERWELL: Before anyone else speaks I would like to refer for a moment to Mr. Patterson's donation of a whole section of land, fully equipped with the exception of machinery. I have known that farm ever since it was homesteaded, and it is a wonderful property. We had an experimental farm there consisting of 680 acres; Mr. Patterson knew the government required more land, and he contributed another 640 acres, feeling that his original homestead could not be put to a better use. He has been living there right beside the experimental farm for nearly forty years, and he appreciated the work done. We have to get up some speed or private interests will step in and do work which naturally falls to the lot of the government. It is no secret that when our research experts were taken from Winnipeg to Australia and to Toronto, the wheat pool offered to make up an addition to their salaries sufficient to keep them here. We should not have that condition; surely we should speed up, and not only extend our farms but also pay our men salaries sufficiently adequate so that they will not gravitate away to other countries when they receive better offers. I am sure that when the hon. member for Acadia (Mr. Gardiner) knows all the facts in connection with this farm, his judgment will tell him that we must either go forward or go back, and this is not the time to go back. The more the west grows the more tremendous are the problems to be solved in connection with cereal culture. This year our loss from rust

is estimated to be at least a hundred million dollars, and my opinion is that it will be a great deal more. In addition to that matter, our experimental farms are taking up the question of root rots and a number of other important things, so it will be seen that we will be doing a real work. Perhaps when the rust laboratory at the farm gets started we may have all this work under one administration, although I doubt if that can be done because you have to operate right in the rust field. That is where this work is being done, with headquarters in Ottawa to keep track of it all. We cannot carry on these operations in mid-air or under ground; they have to be done on the ground level and under natural conditions, or they are not of much value. We have a large herd of cattle representing the three main dairying breeds, and they do not see the light of day from five o'clock in the morning until about five o'clock in the afternoon. That is very unsanitary and an absolutely unnatural condition, and work of that kind must be carried on under conditions as close to normal as it is possible to make them.

Mr. GARLAND (Carleton): I do not know that I can quite agree with the idea of enlarging the farm. When the present location was decided on some forty years ago, the Conservative party was in power; they appointed a committee or commission from both sides of the house to look about and procure land for this experimental farm, and if I remember correctly Hon. Sydney Fisher represented the Liberal party. I was wondering if it would not be wise for the present government to adopt the same method of procedure. I believe there is land very close to the present Booth farm which could be bought for much less money, and it is very good land in a very good location. It might even be wise to take the adjoining properties; I believe there is one farm of 80 acres and another of 160 acres, making a total of 240 acres which could be secured in addition to the present land. If it is good business to enlarge the present farm at all I believe it is good business to get 240 acres more, and so have a farm which will do for the next twenty-five or perhaps fifty years. If that were done the farm would be bounded on all sides by main highways, which is a very desirable feature.

I would also like to bring up another point. The municipality in which this land is situated at present exempts the experimental farm from school rates and municipal taxes. There will now be 420 acres added to that exemption. The government have also exempted some 2,700 acres in this same township for the Connaught rifle range. To my mind that municipality should be helped by the government in some way, if not through the medium of municipal rates at least by means of school rates. The children of those who reside on the experimental farm get their tuition in the schools of the city, although the rural municipality has established a high school at enormous expense. Therefore these municipalities should be given compensation of some kind, bearing in mind the exemptions which diminish their revenue.

I agree with everything the minister has said with respect to the very cramped conditions on the farm. The way the live stock are housed and kept at the farm almost constitutes cruelty to animals. Nobody in the business would think for a moment of keeping live stock under the conditions in which they are kept at the farm. Brood mares are running loose along a little lane at night, and a watchmen is kept to see that no person runs a motor car down there and cause injury. There is no room whatever for poultry, sheep, cattle, or in fact any live stock at all. I commend the minister for his decision to enlarge the farm, but I do not quite agree with him in his expropriation proposals. I think he might have got the other 240 acres adjoining at a much lower price, and the price he would then pay would be more on a parity with prevailing land values. The price asked for the Booth farm, according to newspaper reports, is $600 an acre. That is too much to pay for merely farm land, but it is at the rate of $100 for a city lot. Land which is practically in the city, bought at this rate will be worth inside the next ten years, practically $1,000 a lot; you cannot at present get lots as close to the city as the lots in question are at such a price as that.

Mr. EVANS: What is the area of the proposed extension and what will it cost?

Mr. MOTHERWELL: The area is something like 320 or 321 acres. Whilst I am on my feet I should like to say something in reply to the hon. member for Carleton. It is quite evident that no question of politics is intruding itself in this matter because the owner of the farm which my hon. friend is recommending is a Liberal, or is supposed to be, whereas the owner of the land whose purchase I am considering is a Conservative. It must be admitted therefore that we are dealing with this matter purely on its merits, a very pleasant fact to record. I may say to my hon. friend that we have had offers of parcels of land at a rate very considerably cheaper than the price of the Booth farm, but anybody

who has had any experience in operating two farms divided by a highway knows the tremendous disadvantages encountered in trying to get from one to the other. If you are on the one farm the implements you desire are at the other, and when you are at the other you are bound to want implements which are at the first farm. It would be a continual inconvenience to have to cross the road. The land is good but not better land for experimental purposes; it is a very heavy good clay land. On the far side, what should be called the west side I suppose, there is a lot of rough land which is very broken up with rocks, and there are two intersecting roads. If we had taken the farm suggested there would have been two roads between the present experimental farm and the operations on the far part of the Caldwell farm.

Mr. GARLAND (Carleton): I did not suggest going past the suburban road.

Mr. MOTHERWELL: The property we have in mind is almost as natural a site as Fort Churchill is a natural terminal for the Hudson Bay railway. I do not know how you would improve it. However, I am not going to enter into any discussion, because we have not purchased the land yet. We are going to get land somewhere, and I am very glad to have my hon. friend's testimony as to the urgency of the case.

Mr. BRADY: I should like to ask the Minister of Agriculture three questions: first, what portion of the appropriation of $1,900,000 for experimental farms goes to British Columbia; secondly, what part of the total appropriation is to be applied to the erection of new buildings; thirdly, is it the intention of the government to extend the operation of experimental farms and give one to the great area of central British Columbia?

Mr. MOTHERWELL: While my deputy is looking up the desired information with regard to my hon. friend's first question I will answer his third. I was in hopes some years ago of being able to carry out the expectations of my predecessor in establishing a new experimental farm up in the Prince Rupert district between Fort George and Rupert, and made a trip through that country in order to judge of its character. It holds out many advantages from an agricultural standpoint, but I found that the district was so inadequately equipped for the purpose that I concluded it would be better to improve existing farms to a reasonable degree, than to establish new farms. There is a tremendous demand for the starting of new farms—I do not think there has been any less pressure in the case of this government as compared with preceding governments in that respect—but the most sensible proceeding would seem to be to complete the existing experimental farms and equip them properly. We have been starting a number of demonstration plots, and I think they have been doing pretty good work. Of course some people are very ambitious and would not for a moment look at little demonstration plots or small farms; they want big farms, equipped with buildings, and cattle, and other kinds of live stock. Personally I think we have as many farms as we can afford to administer until a larger appropriation is voted, and that in some of the provinces we could do with fewer farms at this stage. But they are in existence, and hon. gentlemen will remember the old saying: Once a capital always a capital; once a farm always a farm, because it is pretty hard to let it go. In some of the provinces where there are many farms, four or five, the provincial governments have started negotiations with the department here looking towards the taking over of some of these farms for provincial purposes. Whether anything will come of it I do not know, but I look favourably on the proposal where a province has four or five farms. These farms have done excellent pioneer work and some of the provinces are desirous of taking over farms here and there. I am not going to say what purposes they have in view, but I may observe that they have been looking into the work carried on at the Alberta farm and have been looking into the schools, having in mind perhaps the possibility of establishing some primary agricultural farms such as were set up in Alberta some years ago. If we can make a business arrangement with them we may relinquish some of the farms and then extend into frontier areas. I am not going to make any promise in that regard but I should like to see something done in that direction. In the meantime we are doing what we can to establish the work on a sound basis, equipping old farms where necessary. To get the most satisfactory results we should really, if I may use the term, jack up the vote half a million every year, because we have been going along very niggardly. I may say that we are not going to come out square this year. As every farmer knows, the last two years have been exceedingly expensive in agriculture; and as costs have increased in the case of the private

farmer, where the harvesting is done in bad weather, so have they increased to the government, with the result that we are running somewhat behind. The total for British Columbia is $200,000. There are the Sidney farm on the island, Agassiz on the mainland, and Summerland and Invermere, besides some substations in the north.

Mr. BRADY: I deeply appreciate the explanation which the minister has given, and I realize what expenditure is involved in developing agriculture throughout Canada. At the same time, I should be derelict in my duty if I did not oppose the views of the minister, knowing as I do the importance and the greatness of the lands which to-day are neglected in the matter of experimental work. I desire to give to the committee a clear view of a part of the country which to-day is practically in a pioneer state, wherein farmers alone, unaided, are building up an agricultural industry that has brought them into prominence even against the keenest competition of the most centralized and most highly developed parts of Canada. There are two points in relation to the district to which I refer which I wish to submit for the consideration of the minister. In the last year or so the farmers in the district in question, in competition with other parts of Canada, as well as of the United States, were able by their unaided efforts to secure first prize in Chicago for their timothy seed. Within recent days the president of the Alberta wheat pool examined at the elevator in Prince Rupert cars of wheat coming from the prairies and four cars that came from the Buckley valley, and he, unprejudiced, publicly made the assertion that the wheat that came from the Buckley district excelled that of best grade wheat that came from the prairies. I am giving you the words of Mr. Woods, the president of the Alberta wheat pool.

I wish to say a few words now to show that it is the duty of this government to enlarge the scope of the splendid work which the experimental farms are doing, and to urge that the particular district I am speaking for should have an experimental farm.

Briefly, the constituency of Skeena comprises four provincial electoral ridings, Atlin, Ominica, Skeena, Prince Rupert and part of Mackenzie county. In that constituency there are the famous valleys of the Kispiox, Nechako, Endako, Buckley, Skeena and the Naas, comprising a million acres of land that is most suitable for agriculture and dairying. But what do we find? We find that the climatic conditions that prevail in this great empire of national wealth are not known to Canada at all. It would be impossible for any Canadian who has not travelled the great west to realize the potentialities of wealth that lie within those borders. When you come to consider it, the splendid experimental farm at Agassiz fills only the needs of a small portion of British Columbia. Agassiz experimental farm is situated in the most southern part of British Columbia, within a few miles of Vancouver. It has done splendid work. Everyone knows of the wonderful development that has taken place there in the dairying industry and of the prizes obtained by the prize herds on this farm. In poultry, too, as well as dairying, it has done a splendid work in developing the southern part of British Columbia. But what about that great section of country to which I refer. We have there millions of acres of land suitable for agriculture, but progress has been retarded, and there has not been that development that has taken place in the most southerly part. The minister is aware of the reasons that we advanced on behalf of this section last year. We mentioned first of all the necessity, and showed the advantage an experimental farm would be to the established farmers as well as to new settlers. I should like to put some facts before the committee, Mr. Chairman, and if I am wrong I should like the minister to correct me. I shall be willing to accept his decision if he can deny the accuracy of my statements in this connection.

The constituency of Skeena, for which I am asking for an experimental farm, is ten times as large as the Free State of Ireland, whose president was in the precincts of this building a few days ago. We have almost the same climatic conditions in the constituency of Skeena as they have in the Free State of Ireland, but greater possibilities if we would only make use of them. In the first eleven months of the three years from 1925 to 1927 the butter exportations from the Irish Free State rose from £3,500,000 to £4,500,000, an increase of practically $5,000,000. Their imports of butter during the same period decreased from £867,000 to £333,000, a decrease of about $1,700,000.

I am not here to ask the government for something that is not of vital import to Canada. I realize what it would mean in expenditure, but I know that in what I say I am striking a responsive chord in the hearts of the people who want to build up in this country a great agricultural and dairying industry, the very foundation of Canada's success. The minister may not be able to establish a farm there now, but I ask him

and the government seriously to examine the needs of that country and to give to those people this opportunity to develop their great resources.

There is one other point that I think it is worth while for me to bring up. In western Canada there are thousands of young boys to-day who are not fitting in with the social fabric of our country. I think scholarships should be offered to boys selected from each agricultural community and an opportunity given to them to acquire a knowledge of agriculture and dairying. That is one thing in which we are behind. There are many boys to-day who would willingly take up this great work if they had the opportunity. Our schools are crammed full of great material that is going to waste, and I appeal once more to the government, and ask for the kind co-operation of the Minister of Agriculture, to do something in this direction for western Canada, which to-day is absolutely left to its own resources in agricultural development.

Mr. TOLMIE: With regard to these experimental farms and the proposed enlargement of the central experimental farm at Ottawa, I quite agree that there is a marked necessity for the addition of certain lands to the central experimental farm. As far as the purchase of the lands is concerned, the best lands should be procured for the least possible money, always seeing to it they are well fitted for the purpose of which they are required. It is a very difficult matter of course to set any actual value on farm lands that are used for experimental purposes, where a great deal of the work that is carried on in the different lines is done on plots of one-fortieth of an acre. But it is common knowledge that the discoveries on this single farm at Ottawa have already yielded a revenue to the agriculture of this country that has amply paid for every dollar that has been expended on experimental farms or will be expended in that direction for some years to come. If these experiments are to be of value to the average farmer they must be carried on under ordinary farming conditions, that is, with a sufficient area to supply pasturage and the other things that one usually finds in connection with an ordinary mixed farm in Canada. So I should say that the purchase of these lands is an absolute necessity. The people of Canada are to be congratulated upon possessing the most complete system of experimental farms to be found in any other country, without a single exception. Those farms have developed; they have done a great deal of very valuable work for this country, and properly conducted they have a great future. It would be a mistake, in my opinion, to cramp the central experimental farm at Ottawa, which is the one generally visited by agriculturists and others coming here from other parts of the world. Canada is too big a country to take any such narrow view of the situation.

Referring to what the hon. member for Skeena has said, I quite agree with his remarks in connection with the necessity for a farm in that huge inland empire known as central and northern British Columbia. British Columbia has an area larger than the three states to the south, an area greater than France and Italy and Switzerland combined; so you can readily see that with one or two experimental farms located in the southern part of the country, where the conditions are entirely different from those that prevail in the north, it is impossible to obtain the best results and to give information that will be of value to those who are living in the northern section. That northern country is a great lake area, with rich lands, lightly timbered, and with many lakes and rivers. It is an ideal dairy country, with such a rainfall that you can have a stand of grass all summer. During the past year British Columbia was one huge field of grass wherever grass could grow, from the forty-ninth parallel to the Alaska boundary. Hon. members may be surprised to know that in British Columbia we have no less than 160,000,000 acres of range land, of which 100,000,000 acres are timbered and 60,000,000 open. To show you how slowly we are progressing, in one single year it has been found necessary for us to import seventy-five per cent of the meat we buy in British Columbia, running into a matter of $5,750,000, as well as 24,000 head of cattle, 63,000 sheep—as many as we have in the province—5,000 calves, and 113,000 hogs. That is the amount we imported into a country which has rich agricultural possibilities but is still in an undeveloped state. We are using but six per cent of our range land, while the state of Washington to the south is using about 69.7 per cent. Washington is not only feeding herself but is exporting her surplus products to other countries, and that shows how necessary it is to encourage the settlement of those great areas. I do not know anything that would give more encouragement to those farmers than a recognition on the part of this government, by the establishment of a suitable farm in that particular section, of the agricultural possibilities of the part of the country to which I refer.

During the time I had the honour to be Minister of Agriculture we decided to have a farm located in that section, after we had made a very thorough examination, and received reports from the experts of the Department of Agriculture connected with the experimental farm system. They reported favourably, and we would have established a farm there had it not been for the action of the Liberal party in defeating us at the next election. However, we have strongly urged this on the present Minister of Agriculture, and I feel sure that he could not dispose to better advantage of any of that surplus which the Minister of Finance mentioned yesterday in his budget speech than by immediately taking up this matter and establishing an experimental farm in that section. During my time as minister we established an experimental farm at Swift Current. A good many of the people were opposed to it at the time, but I understand that it is now rendering very excellent service to the farmers in that particular area. The peculiar conditions existing there were a reason for the establishment of that farm, and the same is the case in northern British Columbia. None of the present experimental farms can do for the agriculture of that province what the establishment of a farm in that particular area itself would do. I urge again upon the minister in the strongest possible terms that if he cannot give attention to this matter this year he take advantage of the earliest opportunity to obtain further information, and then to expend the necessary money for this very laudable purpose.

Mr. SPEAKMAN: I have listened with sympathetic interest to the statement made by the hon. member for Skeena (Mr. Brady), I believe that the work done by the experimental farm has proved to be of so much value to the farming interests of this country that the minister should take under consideration as soon as possible the extension of that system to a part of the country which is so badly in need of it. I am driven to that conclusion by my personal knowledge of the good work that has been done by the district farms. While speaking of this matter may I refer to the statement of the minister a moment ago that we were familiar with the system and with the probable changes. I quite agree with him, but I say that it is not so much that the problems are becoming more difficult or less difficult of solution, but they are becoming different. The pioneer days in the old parts of the provinces immediately in the vicinity of the experimental farms have gone. With them the pioneers problems have gone, but we are confronted day by day with changed problems that require new methods; the discovery of those new methods with accuracy and knowledge requires further experimentation, and I believe that it will be many years, if ever, before the time comes when we can do without our experimental farms. We have stressed in this house, and stressed rightly, the value of scientific research as applied to industry. It is my impression, and I think it is an impression which is shared by all those who have any knowledge of the subject whatever, that there is no occupation which more definitely requires the application of scientific information, which more definitely calls for further scientific research than that very occupation of agriculture. Dealing as we do, as every farmer must do, with nature itself, facing the varying climatic and soil conditions, and working as it were in the very laboratory of nature itself, it seems to me that there should be brought to the assistance of that occupation all the knowledge which can be obtained on the subject. I am perhaps more intimately acquainted with the experimental farm at Lacombe. I no longer represent that particular district, but my interests are the same as they were previously. I have spoken on the subject before. May I say again that I would be very sorry at any time to see a diminution of the interest taken in this matter, and I would be glad at any time to welcome an increase in the attention paid to those farms. They have done excellent work, as far as I have seen in my experience, and I think the money spent on these farms has been well expended. It is not merely a matter of discovering new seed varieties, or discovering the best method of caring for stock. There is another aspect to which I have referred before, and to which I shall refer again, and that is the protective effect. I do not see the hon. member for Moose Jaw (Mr. Ross) in his place, but I know that he takes strong exception to the word "protection." But there is one form of protection with which I am in favour, and that is protection against the exploitation of the people of this country, and these farms are one of the best means of preventing the exploitation of farmers by unscrupulous men who at all times of the year come forward trying to sell some particular kind of seed which they say is of great value, which turns out to be of no value. The farmer is not in a position to experiment with these seeds. It would be ruinous for him to attempt to do so. His time is too precious. The work of the farms is experimental not commercial work,

and I disagree with those gentlemen who speak without knowledge, who say that the experimental farms should be self-supporting. That is not the purposes of these farms. The idea is that these farms should carry on experimental work, such as no individual farmer can do. In that way we would increase the productiveness of the farm and the profits to the farmer. I am a farmer myself, but I think we in this house all realize that any grant which will assist better production in any line of business and lower production costs, or which will increase or improve the value and variety of products and will improve the possibilities of selling any product in the country, will be money well spent.

Again I urge upon the minister that he give his full support to these farms; in fact I know he will, and this house is more and more realizing that point, and will not only grant, without undue criticism, but will welcome the appropriation of money for additional expenditures when it can be proved that the result will be beneficial, and that the money will be spent in the most economical and efficient manner.

I should like to refer to what was said by the hon. member for Skeena in connection with agricultural training for young men. I am very much in sympathy with that point of view, and I speak of it because of some experience I had or because of some observations I made of the work being done in the agricultural schools. That work is carried on to a limited degree, it is true, in Alberta, but I may suggest to the hon. member that it was carried on by the provincial government. They endeavoured to train young men and young women, to give them a more scientific knowledge of the greatest occupation in the world —and I believe it is the greatest—and to elevate that occupation in their minds, so that their mental concept of farming should not be that of a servile occupation but that they should be imbued with the idea that agriculture in its proper sense is one of the greatest and most useful occupations in the world.

Mr. KENNEDY: Last year when the minister's estimates were before the house he informed us that it was his intention to rent forty acre plots for demonstration purposes at Spirit River, Waterhole and McLennan in the Peace River country. Can the minister tell me what has been the result of that policy?

Mr. MOTHERWELL: My recollection of it is that we were unfortunate in that the gentleman who had charge of this work, Mr. Fixter, passed away, with the result that we have not been able to follow up the work as accurately as we would otherwise have done. We have a successor in mind, if we can land him. I do not know whether we can or not, but I think he will make a good man if we can obtain his services. When I had the privilege of visiting that country in 1925 I sized it up with the idea of establishing these demonstration plots, because they cost only four or five hundred dollars apiece, and they are in new districts. I do not know where we can spend money to better advantage. I do not want to hold out any temptations to new men to apply for this because of its being something of a government nature, but there is no place they can serve the country better than in that district. In reference to an experimental farm such as the hon. member for Skeena has been advocating, I think it will possibly come, but in the meantime we have a substation at Beaver Lodge; Mr. Albright is in charge and is doing very good work. It is a privately owned farm, and probably we are geting better value for the money expended than we would in any other way, but neverthless the system has disadvantages that I need not enter into. If our friends will get the idea of keeping me on the job long enough I may get out to those places, or if some of the older farms are taken over by the provinces we shall be able to go further afield. There is no doubt that the hon. members for Skeena (Mr. Brady) and Victoria (Mr. Tolmie) are right, that country requires a full-fledged farm; but I have to make my coat suit the cloth. Give me more cloth and I will try to meet all these demands, although personally I am not very much in favour of multiplying these farms in the older provinces. British Columbia now has as many full-fledged farms as any of the other provinces.

An hon. MEMBER: One.

Mr. MOTHERWELL: British Columbia has four; Saskatchewan also has four, and so has Quebec. Therefore if we gave British Columbia one more she would have more full-fledged farms than any other province. But that of itself does not nullify the need in the district of which my hon. friend spoke. As I said before, if I am responsible for this work sufficiently long I think I will get around there. There is no question that both there and in the Peace River we have very promising centres for the settlers that are pouring into this country. With regard to those three or four units, the late Mr. Fixter visited all the locations. Before he reached Spirit River he received through the mail protests against these little 40-acre plots. The

objectors did not think that the plots looked like farms at all; they wanted full-fledged experimental farms or nothing. We received no protests from Waterhole or McLennan Junction. As I said before, on account of Mr. Fixter dying last summer we were unable to follow up these activities. I should like to hear my hon. friend's opinion regarding the suitability of these three points.

Mr. KENNEDY: Mr. Chairman, if it was the intention of the department to go ahead this summer, I would not have any criticism of the location, but I do think Peace River deserves a full-sized experimental farm. The hon. member for Victoria, B.C., suggested that it would be a good thing to have an extension of the central experimental farm, and the minister said that he had had considerable difficulty to keep distinguished visitors from noticing the weaknesses of the present situation, due to the fact that the central farm has become too small. It may be very important for us to have a fine gateway to show distinguished visitors, and I am in favour of it; but it is just as important that we give full recognition to the people who are pioneering in northern British Columbia and Northern Alberta. I would prefer a full-sized experimental farm for the Peace River country, but if the minister says we cannot have that, why, we ought to proceed with this other plan in the meantime, without, however, losing sight of the full-sized farm. The work being done at Beaver Lodge is in my judgment very valuable and is appreciated in Peace River. I do not know of anything more valuable to the average farmer in that country than the results of the experimental work done by the superintendent of the station.

Mr. MOTHERWELL: In the event of our establishing a full-fledged farm in Peace River, would my hon. friend suggest that we keep the Beaver Lodge farm going too?

Mr. KENNEDY: It would depend on the location of the experimental farm. When the day comes to establish a full-fledged experimental farm, I hope the site will be selected on the basis of the suitability of the soil and the location to serve the whole country, and that no political considerations will be allowed to enter into the selection. If the site selected is near the present Beaver Lodge farm, then of course that farm can be dropped; if the site is at a distance, it will be necessary to consider whether the demonstration farm should be still carried on.

Mr. CARMICHAEL: Mr. Chairman, I should like to put in a word of appreciation for the good work that is being done by what might be termed these pioneer illustration stations. I do not know just how many are in operation, but I am very well acquainted with the excellent work that is being done by at least one of them located near my home town. It was established, I think, in 1923. We were very fortunate in getting an able man to take charge, a good practical farmer. For the amount of money expended, I would venture the opinion that the work done is much more beneficial to the farmers in the surrounding country than even that done by the central farm. The acreage is about 40 acres, and the rental $200 a year. Annually at this small station we have what is called a field day. Last fall I was fortunate enough to be able to attend. There were, I should judge, from 120 to 125 farmers present, some with their wives, to receive instruction and listen to the lectures given by two men sent out from the Swift Current central farm. It was a very interesting day. The farmer in charge of the station had plots of different kinds of clover, wheat, oats, corn, and such like, as well as some fallow ploughed land. One of the lecturers took the people from plot to plot and outlined what was being done. Following that a free lunch was served, and the people sat down beside the farmer's house and listened to some very instructive lectures. I think many of those assembled came from fifteen or twenty miles away to take advantage of that field day. It was the consensus of opinion that not only was that particular day very profitable to the farmers of the community, but the illustration station was of great value to them because they were able to call up the man in charge and get his advice as to different crop rotations. I was going to suggest that it might be profitable, and certainly not very expensive, to have more of these illustration stations in the pioneer districts. My own constituency is about eighty miles from north to south and approximately 150 miles from east to west, and in that area I believe there are only two or possibly three of these stations. When I was fifty miles away from my own town I found that inquiries were being made from the station there. I suggest to the minister the advisability of having more of these small stations established in good central localities, because one station should not serve a greater radius than possibly fifteen or twenty miles. In the pioneer districts of the western part of Canada I am sure it would greatly benefit the people if a good many more of these stations were

established, and it would not be very expensive to the department. I wonder if the minister could tell us just how many of these stations are in existence in Saskatchewan, and the amount of money expended on them.

Mr. MOTHERWELL: There are about twenty-five stations in Saskatchewan. There were three in my hon. friend's riding, but I am not sure whether or not the first one is still in existence; there is one down in that point of land near Empress, I believe. In the whole of Canada we have 169 of these stations, and the average cost is about $200, ranging from $10 to $500 or $600. There are two or three special stations, one of them in what we call the burned-out area south of Yellow Grass. We have a very difficult problem there; a lot of the soil has disappeared, either from the effects of fire or from wind; it has a remarkable faculty of being blown somewhere, but we do not know where it goes. In those areas we have special demonstrations which cost a little more, but the average is about $200. Then there are a number of small stations up towards Hudson bay, which are about half as large as this room, and their average cost is very low.

Mr. EDWARDS (Frontenac): How many of those stations are in Ontario?

Mr. MOTHERWELL: About twenty.

Mr. McQUARRIE: I would like to add a few words to the eloquent plea advanced by the hon. member for Skeena (Mr. Brady) for an experimental station in central British Columbia. That huge country is bound to develop but it requires some assistance, and it seems to me to be a good investment for the government to make plans immediately for the establishment of an experimental farm somewhere in that country. I come from southern British Columbia, and there is an experimental farm in the constituency adjoining mine, at Agassiz. I believe that farm has done a lot of good; it has been very well conducted and is a credit to the department in every way, but I have been wondering whether it would not be possible to do something more in that connection for the benefit of that particular part of the country where the conditions as the minister knows, are somewhat peculiar. Most of the land in the Fraser valley was heavily timbered; most of the timber has been removed, leaving a great many stumps which have been there for many years, and our people are faced with the problem of getting that land into a condition which will permit of cultivation. When the stumps are removed we will have land there which cannot be surpassed, as the minister is well aware; he visited that part of the country quite recently and is familiar with the conditions. We were not able to put on a hail storm for his benefit, as was done by the hon. member for Qu'Appelle (Mr. Millar), but I think we showed him everything there was to be seen, and he was very good in going round and visiting the small and large fairs which we have everywhere during the fall season. He saw what can be produced when the land is cultivated, and I think he saw some other things also.

Mr. MOTHERWELL: Not enough of them.

Mr. McQUARRIE: He saw some of the Liberal politicians and tried to instil a little courage into them, but as results have shown he did not succeed very well. However, we were glad to see him and we would like to have him come back any time.

I should like to know from the minister whether the program mapped out in regard to these experimental farms includes anything in the way of investigation or experimentation to find the best and most economical methods for clearing land such as we have in the Fraser valley, because that would be very valuable knowledge indeed. It is very hard for the farmers themselves to bear the expense of clearing lands unless some new method is devised for getting rid of these stumps. I suppose the minister has considered this subject, because the government attempted to place returned men on land which was covered with stumps, and in quite a number of cases these men found it impossible to succeed. I think they had the industry; they worked hard enough, but conditions were such that success was almost impossible. As the minister knows, under present methods it costs from $100 to $500 an acre to clear land, and it is a question whether the land when cleared is worth that high figure. If we can only devise some new method of getting rid of these ancient stumps there will be a great deal of land put under cultivation which is capable of producing fruits and vegetables as well as grains, and about everything else that is grown anywhere outside of the tropical regions. There is an immense area in the Fraser valley which should be made available for agricultural purposes. I think possibly I represent the finest agricultural district in the whole of British Columbia, and that means a

good deal. I am sure I am safe in saying that I represent more farmers than any other member from British Columbia, and I would impress upon the minister the necessity for making some intensive study of the best method of clearing up our lands.

Mr. MOTHERWELL: As my hon. friend has raised not a new question but one new this afternoon, I think I will be justified in making some comment in that connection. We have figures because we have cleared up some of these lands in British Columbia, for instance at Sidney, but I hesitate to give the information to my hon. friend because I am afraid it would not be very conducive to immigration; the clearing of the land would cost too much. The situation is just the same as it was with the farmers in Ontario a hundred years ago. If the people of that time had known how much it was going to cost in money and labour to clear the land they might have hesitated about tackling it. Nevertheless they did tackle it and once they got interested they forgot all about the cost. They had more in the way of strong arms and healthy bodies than they had cash in the bank, and they kept working away until they cleared the land. That is the only course to follow in the case of these British Columbia lands that I know of. If you want to charge up the cost of clearing that land you must bear these facts in mind: You have to blow the whole thing to pieces with dynamite, and then as a consequenc of turning the under soil over on to your top soil you have to use fertilizer—the whole cost is a serious deterrent to settlement. Of course in the case of a man who wants to go in and make a home for himself regardless of the cost it is a different matter; but if he sits down, as a man should do when he wishes to build a house, and considers the cost he will never start it. This statement, of course, is not very encouraging.

Mr. McQUARRIE: That hardly answers my question.

Mr. MOTHERWELL: I do not care to give the figures. It is very expensive if you charge up everything. But if you are really desirous of building a home, and you like the climate, and you clean up a little bit every year and have good health, you will get a good farm by the time you are ready to pass away.

Mr. McQUARRIE: Of course you will have a good farm, but the minister has not dealt with my question at all.

Mr. MOTHERWELL: Do you want me to give the exact figures?

[Mr. McQuarrie.]

Mr. McQUARRIE: I am not asking for figures. What I am asking is this: Is the department conducting any experiments as to the best and most economical method of clearing lands? The minister throws up his hands and says that the only way to clear lands is to get in and take out stumps—that is, follow the strong arm method; but sometimes it has been possible to use brains as well as strong arms. The question I am asking is: Has the minister access to brains, and is his department doing anything to investigate this particular matter?

Mr. MOTHERWELL: Not for publication purposes. We are not only investigating but we are doing the actual work and know the actual cost. There has been some experimental work done, but primarily for clearing the land in Agassiz. A large part of that land is mountainous, and of 1,300 acres possibly only about 300 acres are tillable. The rest is so mountainous we could not convert it into arable land. There is some work being done in the direction my hon. friend suggests but it does not require experimenting. I do not see any particular advantage in finding the cost. The proper method to follow in a case of that kind is to take the timber off the land and commercialize it to the best advantage, apply it to whatever purposes it is most suitable for, and then blow out the stumps with dynamite. By so doing, however, you create big holes so that you would think you were in some shell-scarred region in France or Flanders. It is very expensive land to clear, because it is so heavily timbered, and then one has to use fertilizers thereon in order to bring it into proper condition for production. We can give the desired information, but it would not be conducive to promoting the settlement of these timbered lands, which after all make expensive farm lands unless all the timber thereon can be used commercially.

Mr. GARLAND (Bow River): I do not think the Minister of Agriculture is treating the hon. member quite fairly in refusing to answer the question on the ground that it may not conduce to furthering the immigration plans of the government. No greater condemnation of immigration plans with respect to British Columbia has been made in this house than the one uttered by the minister when he intimates that not only would labour extending over years be involved in clearing out a farm, but that the man would probably be in his grave before he had succeeded in getting a farm. I do not see why the information cannot be given.

Mr. MOTHERWELL: I will give it to my hon. friend, but I do not think it will serve any good purpose. The land at Sidney is heavily timbered, and in some places the cost would be $500 an acre.

Mr. EDWARDS (Frontenac): I wish to ask the minister for some figures that may not be quite so horrifying. How much of this item is to be devoted to increasing the area of the experimental farm in this city? I believe that farm is entirely too small. It is carrying on work which, it must be admitted, is in the interest of all the other experimental farms in Canada.

Mr. MOTHERWELL: That is it.

Mr. EDWARDS (Frontenac): And the area is entirely too small, in my judgment.

Mr. MOTHERWELL: Hear, hear.

Mr. EDWARDS (Frontenac): I do not know whether or not my information is correct, but I have been told that there is one block of land adjacent to the farm, of about 200 acres I think, which is being held at $600 per acre, and that the government is negotiating for the purchase of this particular block. I have also been informed that there is another farm, also close to the experimental farm, and of about the size and the same character of soil, which can be obtained for $200 an acre. I do not know whether or not these rumours are well founded, but I do think that the area of the farm here should be increased. Of course if the land can be obtained for $200 per acre it would be foolish to buy it for $600, even though some warm personal friend owned it. I have had the privilege of visiting pretty nearly all the experimental farms throughout the Dominion, and I believe they are doing a good work. I believe also that the work can be improved, and doubtless will be in years to come, as, under proper guidance, these farms make use of advanced scientific methods. Again let me remind hon. members of the house who advocate experimental farms or stations for their own particular district or province not to lose sight of the special scientific work, chemical and otherwise, which is being carried on here at Ottawa and under very cramped conditions.

Mr. MOTHERWELL: In reply to my hon. friend I may say that Mr. Booth is asking $600 an acre for 321 acres, which will amount roughly to $190,000, but I am disposed to think further in the matter before acting. Not but what the land is worth the amount asked, but in order to afford satisfaction to all parties, especially the taxpayers, I think the matter should be submitted to the exchequer court in order to get a valuation.

Mr. BENNETT: By expropriation?

Mr. MOTHERWELL: Yes. We have prices on three or four areas adjoining the Booth farm, submitted by the owners, and these will constitute, I presume, a basis for valuation if it is necessary to take the matter to the courts. We have tried to get a satisfactory adjustment with Mr. Booth, but before I should feel justified in paying $600 I think the fair thing to do would be to refer the question to the exchequer court.

Mr. EDWARDS (Frontenac): What about asking prices on the other farms?

Mr. MOTHERWELL: They run from $300 to $450.

Mr. EDWARDS (Frontenac): How do they compare as regards suitability?

Mr. MOTHERWELL: Some of them are excellent, but they do not begin to compare with the Booth farm for proximity, convenience and general suitability.

Mr. EDWARDS (Frontenac): You have some pretty good land in the experimental farm as it now stands. I do not know, but it seems to me that it might be worth considering whether in an experimental farm you should get the very best soil on the face of the earth or whether, on the contrary, it would not be advisable sometimes to carry on your experiments on average soil.

Mr. MOTHERWELL: That is what the Booth farm is.

Mr. EDWARDS (Frontenac): If the Booth farm is average then the others are under average.

Mr. MOTHERWELL: The Caldwell farm, between the two highways, is on the whole heavier and more productive land; it is above the average in the neighbouring country. The Booth farm is nearer the average of the adjacent lands which it would be intended to serve.

Mr. ADSHEAD: The minister remarked that a man going in for agriculture should not count the cost; he should just work away without giving any consideration to that question. The minister touches a very vital point when he makes this statement. If you look at the manufacturing industry you find that one of the first things they do is to count the cost. They take into consideration capital

expenditure and all expenses in connection with operation, and then they go to the utilities commission or some other commission and, getting their cost recognized at the figure they quote, they fix a profit of eight or ten per cent over and above that, and then a tariff on top of all that lest the industry fail. Now if a man is going into the business of agriculture why should not his calculations be made upon exactly the same basis? We have been talking about agricultural fairs. Perhaps I might mention that in the town of Olds, Alberta, in the constituency from which my hon. friend (Mr. Speakman) comes, they have induced a number of students to attend the agricultural college; and so keen is the interest which these young men are taking in their studies that it has been found necessary to increase the dormitory accommodation this year from one hundred to two hundred and fifty students. These young men are filled with delight at the prospect of taking up agriculture. They are taught everything that relates to the industry and are acquiring a love for the country. In my judgment there could be nothing more tragic than to have these prospective farmers, on leaving college with a roseate picture of farm life, disillusioned when they have to face the actual facts of farming as it is carried on in the country. The finer things in connection with farming have been expatiated upon to-day, but it would be a sad thing to see these young men, after taking up farms, drift away into the cities bankrupt because of their inability to meet expenses. The department should take these facts into account and have agriculture placed on the same basis as industry.

Miss MACPHAIL: It is all too true that practical farmers are contemptuous of scientific methods, but a great many farmers are coming to the conclusion that this is an unsound policy. It is not wise, and they are coming to realize the benefits of experiment and of the application of scientific principles to the carrying on of their business. But when the practical farmers of Ontario read that the department is contemplating paying $600 an acre for an extension to the experimental farm in Ottawa they will naturally want to know whether the department also contemplates an experiment to prove that anyone can make a living paying such prices for land. At once they will say that there is something wrong with the purchase: either the minister and his advisers do not know the value of land, or the man from whom they bought it is a tool of the government, or something else equally nasty. If experiments can be carried on in other parts of Canada as well as in Ottawa, surely it would be wiser to buy land which is not so close to the city; for $600 an acre is not the value of farm land. Such a purchase only lays scientific agricultural experiments open to the contempt of the practical farmer, and this is the feeling that generally prevails. As the hon. member (Mr. Adshead) says, boys who are attending agricultural schools are taught scientific methods, and they will have to apply those methods under practical conditions. The minister said something true when he suggested that there was no need to count the cost. The farmers have to work almost from the time they are born until they die, and if they are lucky they will be buried.

Mr. MOTHERWELL: I can assure my hon. friend that the owner of the Booth farm is not in league with the government.

Miss MACPHAIL: I did not say so; I said you might lay yourself open to the charge.

Mr. MOTHERWELL: That is one of the alternatives; either we do not know the price of land or we are in league with someone. I have had two or three conversations with this gentleman and I do not blame him for trying to get all he can out of the government. That is a common practice. On the other hand, it is my business to protect the treasury, and that is one reason why I say I should not be the one to determine the question on behalf of the government. The exchequer court is the proper authority. I do not want to go to my hon. friend's constituency afterwards and have it said that it was I who paid $600. The fair way to settle the matter is to let the exchequer court, with all the evidence before it in regard to the value of adjoining lands, adjudicate and decide the amount.

Mr. BENNETT: The responsibility for the selection of the site would be yours.

Mr. MOTHERWELL: As regards the comment I made respecting the cost of clearing land, I wonder how many gentlemen in this house who have cleaned heavy timber land would have jumped joyfully into the work if they had calmly contemplated the cost. I do not want to terrify anybody, and while I am aware of the biblical injunction to sit down and figure out the cost, I think that applies rather to building a house than to clearing land. I take off my hat to the old pioneer settlers of Canada, those of the maritime provinces and of Ontario, Quebec and British Columbia, who had to establish

farms in heavily wooded lands. I do not fancy that they sat down and calculated the cost, because they had no cash to start with. They built up their farms by their strong right arm, working hard from early morn till dewy eve.

Mr. BENNETT: They did not pay $600 an acre.

Mr. MOTHERWELL: Nor were there any high-powered tractors or donkey engines to take out the stumps in those days; they had to do it themselves. Many farms I know of were originally cleared by means of a two-year old steer at the short end of the yoke and a fourteen-year old boy at the other.

Mr. ADSHEAD: Would the minister like a boy of his to be at one end of the yoke?

Mr. MOTHERWELL: Yes, if necessary, and I should be proud to think that he was capable of it.

Some hon. MEMBERS: Oh, oh!

Mr. MOTHERWELL: There is no "oh, oh!" about it. What would they have done in the old days when they were on part ration from the British government and had to use every device they could think of in order to be self-sustaining? If one boy would not do I would put two on. I am talking about conditions one hundred years ago; I am not advocating this method to-day.

Mr. VALLANCE: The hon. member for East Calgary has asked a question about counting the cost. I would ask him, as a pioneer I understand in western Canada. just how many would have pioneered in that country if they had counted the cost. Those of us who pioneered did not count the cost in dollars and cents, and some of us are probably living to-day to see the harvest reaped from those early efforts of ours.

Now that this estimate is up I feel I should be remiss in my duty if I were not to mention that in my constituency we have an experimental farm. It was established some years ago. I was one of the early pioneers in that country, and I am sure that the assistance it has given to the farmers in that section of the country cannot be measured in dollars and cents. When the great western plains were opened, particularly that part known as the Tramping lake country, extending between the northern and southern Saskatchewan rivers, the territory was wholly new and we had to experiment. It has been repeatedly said during this discussion that the farmer cannot afford to experiment, but I must say that we were greatly pleased when the Scott experimental farm was established, demonstrating to us not only the kinds of grains we should grow, but also the varieties of fruits and trees that were best suited to that area. On the first of July, as is our custom, we had a field day at the Scott experimental farm, and I am not exaggerating when I say that there were seven thousand people gathered there. Almost any day in the summer, and particularly on Sundays, if you visit that farm you will find people there from as far south as Kindersley and Rosetown, as well as from a great distance to the west and north. I hope that this estimate will be approved by the committee.

I have a great deal of sympathy with the hon. member for Skeena because the country in which I pioneered twenty-two years ago was then in the same condition as the area for which he is pleading to-day. I think it behooves this or any other government in Canada to establish experimental farms or stations as circumstances warrant in any large section such as the Skeena country, and the government should be encouraged to do so.

Mr. TOLMIE: I have been very much interested in the recital of the early experiences of the Minister of Agriculture in Saskatchewan. With a two-year old steer at one end of the plough and the Minister of Agriculture at the other, I should have thought it would have been a very pertinent question to ask, which is the bull?

I have been rather impressed with what has been said concerning the central experimental farm and the purchase of high priced lands. In considering the situation we must be careful to remember that the overhead expense is on the central farm already, and if you buy land for one hundred or two hundred dollars an acre situated at some distance from headquarters, it is eventually going to cost you just as much as to buy land near the farm for five or six hundred dollars an acre, when you take into account new buildings and the great loss of time through running back and forth between the central farm and the new purchase.

Another point that I would stress is that an experimental farm can never be in the ordinary commercial sense a profitable farm. The profit from an experimental farm is lying in the files and records of experiments which have been completed by these farms, and in the information which has been printed and distributed for the use of farmers throughout the country. Everyone must realize that when you are farming on a plot of one-fortieth of an acre, with the large

amount of handwork and labour necessary under those conditions, you can never hope to make that farm a commercial success.

The statement has been made that the cost of clearing land in British Columbia would be $500 an acre if you wanted to establish an experimental farm there. I cannot allow that statement to go unchallenged. I pointed out a little earlier in the afternoon that British Columbia is an immense country, with varying conditions. In some places the timber is very heavy; in other places it would hardly be necessary to do any clearing at all. It is true there is not much land of the latter kind, but in the dry belt there are many areas that can be ploughed with comparatively little work, and that would be principally the removal of stone and brush. However, with regard to the big problems in connection with land clearing in British Columbia, we feel that one of the most important is that of making use of the waste material which remains on the ground after our high lead system of logging has removed the commercial timber from the land. That is a problem which I think the research council should investigate very carefully to see if we cannot get some revenue from the use of these waste products through the development of salable by-products of various kinds. Scientists have informed me that there are excellent chances for development along these lines. In clearing land in British Columbia in the ordinary farming sense—at all events if there is a Scotchman at the helm—the land first cleared is that which is most easily cleared. You get the slash off your land and sell the timber for what you can get; then after you have done the burning you at once seed the land down, and you find that grass easily takes hold with the little dressing of potash that there is in the ashes left on the surface. Then you graze it with sheep or goats, which will eat off the grass and the young willow sprouts so that the willows will not grow up again; and when the stumps begin to rot, you commence your land clearing as opportunity offers. You can begin to take your stumps out at the end of eighteen months or two years, using either powder or stumping machines, whichever is the cheaper. There is a great variety of land out there, and some of it will cost from forty to fifty dollars an acre to clear, under the conditions I have described.

Mr. MOTHERWELL: I am afraid that unless I make a further remark about pioneering a wrong impression may be left in the minds of those who are listening to this discussion or who read the report. In order to counteract the shock which the hon. member for Bow River got at the thought of human labour being used in the way I have described, and to satisfy the curiosity of the hon. member (Mr. Tolmie) as to who was the fourteen-year old boy, let me say that I was speaking of conditions in Ontario one hundred years ago, and I do not think you will figure that I was very much in evidence at that time. So far as counting the cost is concerned, whether it be in labour and privation either in the east or on the prairie, there is no one that I know of who has the real farming or home-building instinct who does not feel that all the labour and hardships were worth while once he experiences the joy of owning his own land and of having his own roof over his head.

Mr. McQUARRIE: May I suggest that though the minister may not be one hundred years old he may be one hundred years behind the times.

Mr. MOTHERWELL: That is the contribution of the hon. member for New Westminster.

Mr. MacLEAN (Prince): Apparently this is a field day for the farmers; and as we have heard from every other province in the Dominion I think I might say a word in regard to Prince Edward Island. I wish to speak in favour of these experimental plots. In my county I think we have three of them, and they have proved very successful and very beneficial. I wish to refer for a moment to the experimental farm or station in connection with the fox industry at Summerside. I think the minister has just said that that experimental station cost around $14,000 a year. To my mind there is no better expenditure of public money in the Dominion than that incurred in connection with that experimental station. Last year it was estimated that the silver fox trade from Prince Edward Island alone, including live foxes and furs, amounted to something over $3,000,000, and when you apply that to the whole Dominion you have some idea of what the silver fox business means to this country. It is regrettable that the people of Canada are not engaging in that industry to a greater extent than they are. The people of the European countries are going in for it very strongly. This year we had hundreds of buyers from European countries, especially from Norway, who bought large quantities of the best of our breeding stock and took them over to Europe. The experimental station at Summerside is doing excellent work. The breeders contributed a large number of the foxes to that station; the

government did not have to buy them, and the work is being carried on by Doctor Ennis Smith, formerly of Ottawa. The information published in the bulletin Doctor Smith is getting out will be of great benefit to breeders.

I wish to ask the minister a question in connection with the work at the central experimental farm in the matter of clover which will withstand the winter climate of eastern Canada. One of the greatest difficulties the farmers in Prince Edward Island meet is to get a clover which will carry through the winter and from which they can expect to get a second crop. At this farm in Ottawa a few years ago I was shown a plot which I was informed had been in clover for seven years, and it was still producing a splendid crop. I should like to know if any advances have been made in that direction and if the minister has any information which he can give us along that line. It is an important question to our people; if we can get a clover which will give us two or three crops it will be a great advantage and a great help to us. At present we sow clover seed very extensively; we get a crop one year, but in another year it is gone.

Item agreed to.

Health of animals—administration of the Animal Contagious Diseases Act and Meat and Canned Foods Act, and necessary buildings, $2,270,000.

An hon. MEMBER: Carried.

Mr. GARLAND (Bow River): Not by a jugful. I will ask the minister to allow this item to stand. There are some orders for returns to be brought down shortly which will give us information in this connection.

Item stands.

Entomology, $25,000.

Mr. MOTHERWELL: This is for the office at Ottawa.

Mr. ADSHEAD: How many experts are engaged by the Department of Agriculture, and are they from Alberta university, or where are they from?

Mr. MOTHERWELL: This vote is for the office at Ottawa. We should be willing to provide an escort and take anybody there.

Mr. ADSHEAD: I want to know how many experts are engaged.

Mr. MOTHERWELL: The head of the branch is Mr. Gibson, and the next in command is Doctor Swaine; I will give the names of the others later. The next vote deals with the entomologists employed in the branch. This vote is for supplies for the office, specimens of insects, and equipment to improve the sight. You will have to have very much improved eyesight to identify these small insects.

Mr. ADSHEAD: Are the men engaged there from Canadian universities?

Mr. MOTHERWELL: About twelve or thirteen.

Item agreed to.

Administration of Destructive Insect and Pest Act, and necessary buildings, $500,000.

Mr. TOLMIE: We have an increase here of $57,000. What is that for?

Mr. MOTHERWELL: Well, there is an increase in the work all along the line in the various laboratories and a very considerable increase is due to the flat rate increase to the staff of $120. That takes quite a bit of it. Then take the root rot question in the west, the new insect pests and new enemies all along the line, which increase the necessity of preparing to fight them.

Mr. TOLMIE: Does that necessitate the employment of some new men?

Mr. MOTHERWELL: It will necessitate engaging some new men.

Mr. TOLMIE: How many?

Mr. MOTHERWELL: We have just decided to establish a new staff, one man being already engaged, and we have already secured one of them at the university at Edmonton. The Hon. Mr. Hoadley of Alberta has drawn my attention to the fact—and I have been aware of it myself for about eight years—that one of the species of root rot is making considerable headway in northern Saskatchewan and Alberta. We have done a good good deal of work, but it is now developing into a very potent enemy. It lives in the soil and there is no way of killing it except by sterilizing the soil, which would be impossible without a laboratory equipment. That has been supplied by the Alberta university, and we are going to provide the men. We hope to carry out a working arrangement with Alberta similar to that which we entered into with the Manitoba government with respect to the rust laboratory in Winnipeg. We put up the building, and the provincial government supplied the land, power, heat and water.

Mr. MILLAR: What plants are attacked by the root rot?

Mr. MOTHERWELL: Cereals and a certain number of our native grasses. It is not known whether the disease was imported from

Europe or is to some extent indigenous to the prairies. I do not think it has been prevalent in the open prairie country. It was noticed first in northern Manitoba, and seems to have spread westward to the northern part of Saskatchewan and Alberta. It is not now so noticeable in northern Manitoba.

Mr. ADSHEAD: How many of the employees in these laboratories are graduates of Canadian universities?

Mr. MOTHERWELL: I understand that with the exception of one in the city of Ottawa they are all Canadians.

Mr. LUCAS: What progress is being made in the prevention of rust?

At six o'clock the Speaker resumed the chair and the house took recess.

After Recess

The house resumed at eight o'clock.

RAILWAY ACT AMENDMENT

SPECIAL RATES ON COAL

The house resumed from February 14, consideration of the motion of Mr. Church for the second reading of Bill No. 26, to amend the Railway Act.

Hon. CHARLES A. DUNNING (Minister of Railways and Canals): Mr. Speaker, I gave my undertaking to the hon. member moving the second reading of this bill that it would not be proceeded with in his absence. Now I understand that a motion of this kind cannot be allowed to stand. I made that agreement in ignorance of that rule, and I am sorry, but I hope the bill will not lose its place on the order paper. I think I had the floor when the house rose on the previous occasion, and in order to keep this item in its proper place I will move the adjournment of the debate.

Motion agreed to and debate adjourned.

MINISTERS OF THE CROWN

BILL TO OBVIATE NECESSITY OF RE-ELECTION UPON ACCEPTANCE OF OFFICE

Mr. P. F. CASGRAIN (for Mr. Jacobs) moved the second reading of Bill No. 28, to remove the necessity of the re-election of members of the House of Commons of Canada on acceptance of office.

[Mr. Motherwell.]

He said: In the absence of the hon. member who is sponsoring this bill I should like it understood that if the bill would have to be dropped on account of his absence I would rather have it proceeded with and sent to the committee on privileges and elections.

Mr. LAPOINTE: I do not oppose the second reading of the bill, on the understanding that it will go to the committee on privileges and elections.

Motion agreed to, bill read the second time and referred to the select standing committee on privileges and elections.

RAILWAY ACT AMENDMENT

RETURN TICKETS

Mr. P. F. CASGRAIN (for Mr. Jacobs) moved the second reading of Bill No. 29, to amend the Railway Act.

He said: In the absence of the hon. member I move that this bill be referred to the select standing committee on railways, canals and telegraph lines.

Mr. BENNETT: I would rather have it stand.

Mr. DUNNING: It is understood that the motion stands, and that the bill is not dropped from the order paper?

Mr. BENNETT: No, it stands.

Motion stands.

SUPPLY

DEPARTMENT OF PUBLIC WORKS

The house in committe of supply, Mr. Johnston in the chair.

Public Buildings—Nova Scotia—	
Halifax—immigration building—payment to department of Railways and Canals for accommodation.. ..	$25,000
Halifax—repairs to buildings and wharves at R.C.N. barracks and H.M.C. dockyard..	45,000
Halifax—Rockhead hospital—repairs and improvements..	5,700
North Sydney public building—addition..	7,500
Truro—tractor for postal purposes..	1,300
	$84,500

Mr. CANTLEY: I should like to call the attention of the minister to the fact that the first two items appearing in this vote are simply interdepartmental accounts, and the only amount which he proposes to expend for public buildings in the whole province of Nova Scotia is $7,500 to complete or make a small addition to a public building at North Sydney. Last year the sum total for new buildings in

that province was about $6,000. I submit that in view of the large votes for public buildings in other provinces, most of which I take it are fully justified, Nova Scotia is getting much less than justice.

Hon. J. C. ELLIOTT (Minister of Public Works): There is no information, I take it, that my hon. friend requires in regard to this vote. The amount is practically the same as last year—there is a light increase.

Mr. BENNETT: The hon. member says that the first two items in the vote are inter-departmental accounts. Is that so?

Mr. ELLIOTT: They are very largely departmental.

Mr. ERNST: I would remind the minister that I pointed out to him last year that in the estimates for 1926 there was a vote of $10,000 for a post office at Mahone Bay. That item was not included in the estimates for last year, and the minister gave me many ingenious and conflicting reasons why it was not included. I wonder if he could tell me why it has not been found necessary to revote that money this year.

Mr. ELLIOTT: I am afraid I cannot add anything to what I said to my genial friend last year. The condition of things is much the same as it was a year ago.

Mr. ERNST: Apparently it is going to stay that way.

Mr. ADSHEAD: Why is the tractor required for postal purposes at Truro not charged to the Post Office department?

Mr. ELLIOTT: That department makes the request to the Department of Public Works for a tractor to carry the mail back and forth, and we supply it.

Mr. ADSHEAD: Why should it not be charged to the Post Office department?

Mr. ELLIOTT: Apparently everybody comes to the Department of Public Works.

Mr. ERNST: I should like to ask the minister definitely if the administration has concluded that the expenditure at Mahone Bay will not be made. Has the administration definitely abandoned the idea of erecting a public building there?

Mr. ELLIOTT: Perhaps I should say to my hon. friend that Mahone Bay is in the same situation as a number of other places as to which similarly urgent requests have been made none of which are included in these estimates. By that statement I do not mean to say that these works are definitely abandoned. They will receive consideration just as soon as it is possible to get the money to carry out the work.

Mr. ERNST: Will the minister not tell me why that work is not necessary now if it was necessary in 1926? Business has expanded since then and the Minister of Finance has spoken about a handsome surplus this year. If in the state of public finances in 1926 the work in question was necessary, why is it not necessary this year?

Mr. ELLIOTT: Apparently there are more urgent needs now to provide for the increased business of the country than there were in 1926. That is the best explanation I can give my hon. friend. In the opinion of the departmental officials, from the reports we get other works are really more urgently required in order to facilitate the carrying on of the business of the country. I think that is all I can say.

Mr. QUINN: Is that a reasonable excuse to give the committee in face of the fact that there is an increase of $15,000 over the previous year for repairs to the royal Canadian naval barracks and wharves in the dockyard at Halifax, although we have no navy?

Mr. BENNETT: There is a principle involved in this matter. An appropriation was made in 1926 for a building at Mahone Bay. Obviously that money would not have been placed in the estimates had it not been required for the public service. I know that with respect to certain western appropriations the war necessitated their being withdrawn and dropped, and a change of government has prevented their ever finding a place in the appropriations since. But here you have a public building that in the opinion of the then government—and the same government is in office to-day—was a necessity. The item for that public building is now dropped, and I think this house has a right to know exactly why it is dropped. If it is for political reasons, say so and be done with it. If it was in order that when the election came on you might have all your votes for public buildings that year for the purpose of influencing public opinion, as has been done in the past, let it be admitted. Let there be frankness in this matter; let us know exactly why this appropriation has been dropped. I think it is not an unfair thing for the committee to know the reason.

Mr. ELLIOTT: I am perfectly willing to answer any question asked by my hon. friend, or by any other hon. member opposite. I would call my hon. friend's attention to this very vote, No. 123, and ask him to tell the committee whether he really thinks these particular estimates for Nova Scotia were prepared with a view to meeting political exigencies, when the fact is that there is in the estimates not a vote in favour of that province so far as any of the ridings represented by members on the government side are concerned. If he will look over the list I think he will come to the conclusion that anything but political expediency has actuated the preparation of the estimates. As regards Mahone Bay, I may observe that I have heard of the place before; I heard about it last year and I shall probably hear more about it again. I do not object to that; it is quite within the rights of my hon. friends to refer to it. But in the opinion of the department the needs of other places are more pressing at the present time than those at Mahone. I cannot add anything to this statement.

Mr. BENNETT: I direct the attention of the minister to the fact that the appropriation in question was apparently required in the public interests in 1926. A gentleman named Duff was defeated in that constituency in the election of that year, and he has stated that upon his having so requested the item was dropped from the estimates. That is the reason he gave last year for its having been abandoned. Now, is the public service of this country to be thus conducted? That is the question that this house has a right to have satisfactorily answered. Is the hon. gentleman who now represents Antigonish-Guysborough (Mr. Duff), and who stated in this house that he advised that the vote be withdrawn from the estimates, to determine whether the community affected shall or shall not be given a public building? The country has a right to know, and I submit that the minister should give the committee an explanation.

Mr. LAPOINTE: My hon. friend is making a slight mistake when he says that this vote was included in the estimates by the government now in office. He will remember that between the government of that day and the present administration there was another government which held office for three months.

Mr. BENNETT: But they brought in no estimates.

[Mr. Bennett.]

Mr. LAPOINTE: I would point out that the Minister of Public Works at that time was not the present minister, and the two might have had different ideas regarding the necessity for a public building there.

Mr. BENNETT: We are entitled to something better than that.

Mr. HOCKEN: According to the minister, it does not depend upon the change in ministers but upon the change of opinion on the part of departmental officials. What brought about that change?

Mr. McNUTT: Will the minister explain the item, "Truro—tractor for postal purposes, $1,300."?

Mr. ELLIOTT: This vote is to provide for the installation of a tractor at the railway station. The request comes from the deputy postmaster general, and the object is to facilitate the transportation of mails. It is the kind of tractor usually used for this purpose.

Mr. MacNUTT: I am glad to learn from the minister that the postal business of Truro is growing so rapidly as to necessitate the use of a tractor for the moving of mails. This brings up the question of the post office building at that point, which was erected some forty-four or forty-five years ago. At that time the population of the town was about three thousand; to-day it is approximately three times three thousand. Every effort has been made in recent years to provide a suitable building for the requirements of the people in Truro, and about 1912 or 1913 the department sent down an architect named Mr. Rankin to look over the situation. After several days spent there he worked out a plan which he presented to the government with an estimate of the cost of remodelling the building, but after considering the question the government decided that it would not pay to remodel it. It was felt that the cost would be too high and that even with the proposed remodelling the town would still have an old building. The building to-day is in very bad condition, and the cost being paid upon the repairs year after year would almost cover the interest charges on a new structure. I regret to tell the house that the site which was purchased for the new building in that town in 1914 for $17,000 had been sold at a loss to the country of nearly $10,000—$9,200 to be exact. As happened in other places during recent years there was a considerable decline in real estate values there, but nothing to warrant the lot being sold at such a loss. It seems to me that,

in view of the many promises which the town has received for the construction of a new post office building, it is not very creditable to the government that this ideal lot—in fact, the most suitable lot—should have been sold at such a loss. I regret exceedingly that there is no mention whatever in these estimates of any proposal for a new building in the town of Truro. The minister may depend upon it that the day is not very far distant when a new post office building will have to be erected there. I repeat, it is a disgrace that the country has lost almost $10,000 on the magnificent lot which was acquired for the promised building.

Mr. JOHNSTONE: Is the $7,500 for the North Sydney public building for additional work, or is it for repairs?

Mr. ELLIOTT: It is an addition.

Mr. GUTHRIE: Returning to Mahone Bay, I think a frank explanation should be given the committee; ministerial sidestepping of the question is not altogether the thing for us. The Minister of Public Works has the advantage now of having his deputy beside him. Will he tell us on whose advice the estimate of 1926 was prepared? What officer of the department recommended the construction of the building, and what officer of the department recommended the withdrawal of the item? It is within the recollection of a good many in this house that during last session the hon. member for Antigonish-Guysborough informed the committee that the vote had been struck out on his advice. And he happened to be the defeated candidate for the constituency of Queens-Lunenburg. Why was the building not necessary after his defeat if it was necessary before the election? That estimate was passed in the spring of 1926, when the government of the present Prime Minister (Mr. Mackenzie King) was in power. True, the personnel of the government has changed in the interval, but the government in power to-day is to all intents and purposes the same. If in the judgment of the government of that day it was necessary to construct the building in 1926, what has taken place in the interval to cause the government to change its view? And if it did change its view, as obviously it has done, on whose advice did it do so? The committee is entitled to know.

Mr. ELLIOTT: Of course there have been a great many changes since 1926. In regard to this item I should be very glad to obtain for my hon. friend any information which is in the departmental files. The information we have here relates only to the items that are in the estimates. My hon. friend will readily understand in view of the large number of post offices and harbours throughout the country that one cannot bear in mind all the things relating to these post offices and harbours that are not mentioned in the estimates. I remember the discussion last year. All I can say to my hon. friend is that the situation is no different now from what it was when this house last year decided that the reasons then given were perhaps the best that could be given as to why an item was not included at that time. I should think that the point of my hon. friend's suggestion—it is more than a suggestion; it is almost a statement—that this has been omitted for political reasons is completely answered when you see that there is no provision made in the estimates for any post offices in the province of Nova Scotia in any ridings represented by Liberals.

Mr. GUTHRIE: There were in 1926 prior to the election.

Mr. ELLIOTT: I was not in the department at that time.

Mr. HOCKEN: That does not answer the question at all. Why not ask the deputy?

Mr. ERNST: If the minister was at all familiar with the situation in Mahone Bay in 1926 he would have realized that a vote was included in the estimates that year because there was a pressing need in the community. The present building is entirely inadequate. It is small, cramped, in fact it is unsightly, and it is in one of the prettiest little country towns in Nova Scotia. The reasons which made this expenditure necessary in 1926 are even more cogent to-day. I should like to know from the minister if the statement made by the hon. member for Antigonish-Guysborough last year was correct, that he had that item withdrawn from the estimates. If he is unable to answer, I suggest that the items stand until he gets the information.

Mr. ELLIOTT: I do not think I had an interview with the hon. member for Antigonish-Guysborough while these estimates were being prepared.

Mr. ERNST: I was referring to last year's estimates.

Mr. ELLIOTT: That is a year further away, and perhaps my recollection does not serve me quite so well. What my hon. friend says about the building being worse now than it was two years ago does not apply only to the post office at Mahone Bay. The same

is true of a number of post offices from one end of this country to the other; it is true with regard to a number of post offices down in Nova Scotia, places at which post offices are not being provided for in these estimates.

Mr. ERNST: I think the minister should answer the question. I do not know whether he is in a position to contradict or affirm the statement made by the hon. member for Antigonish-Guysborough. I suggest that the item stand until some better explanation can be given.

Mr. ELLIOTT: May I call attention to the fact, Mr. Chairman, that we are not now voting on an item for Mahone Bay? That is not before the committee.

Mr. ERNST: We are voting on the estimates for public buildngs for the province of Nova Scotia, and I am suggesting that such an item should be there.

Mr. IRVINE: I personally would like very much to hear the minister answer that question. Of course I have often heard such charges as are being made here to-night, and have put them down as political talk, but I should like to know what are the facts in regard to this matter. Is it true what the hon. member says? I think the minister might well give an answer.

Mr. BENNETT: The minister has said that by looking at the estimates one would at once realize that political considerations did not influence the government in the preparation of the estimates for Nova Scotia. Knowing what we do with respect to certain public expenditures contemplated in Halifax, we have not the least doubt that the minister for that province is responsible for these estimates, and we do know that nothing is in the estimates at this time for Nova Scotia, but at the appropriate moment there may be sums available in order to secure the votes of the electorate of that province when election time comes round. There is no question about that at all. We have it in relation to what took place in Halifax not long since, and I say that it is high time that the provinces should not be deprived of their due portion of public moneys for public services required in order that those sums may be put in the estimates at the fitting moment for the purpose of influencing public opinion at the time of an election.

Mr. STEWART (Edmonton): Surely my hon. friend does not suggest, and surely no hon. member from Nova Scotia would entertain the belief, that any expenditures made by the government in the great port and city of Halifax would be made for political purposes? Surely not.

Mr. BENNETT: Surely not? I happen to know the hon. gentleman's history in that regard in his own province, and it is so nearly alike to what I suggested a moment ago that there is no doubt at all that at the appropriate time the discussion with respect to expenditures in Halifax, which are not these expenditures at all, will come before the house, and I say that the same directing mind that desired to prevent and that did prevent, expenditures there is responsible for there being no provision for public expenditure in Nova Scotia in the estimates at this time. I say it is not fitting that the province should thus be deprived of public moneys necessary for carrying on the public services.

Mr. DUNNING: There is an item occupying a full page of estimates for Nova Scotia.

Mr. BENNETT: That is under harbours and rivers; I am not discussing those particular expenditures. It is the "harbours and rivers" touch this year, you see; it may be dredging next. My hon. friend seems to understand the allusion. The point I desire to make is this: Having regard to what did transpire, and to this expenditure for harbours and rivers, about which there is a singular history in Nova Scotia—is the Minister of the Interior familiar with that history?

Mr. STEWART (Edmonton): I have voted a lot of estimates for Nova Scotia.

Mr. BENNETT: For harbours and rivers?

Mr. STEWART (Edmonton): Yes, and dry docks.

Mr. BENNETT: I think the item should stand because this is the only occasion upon which an opportunity will arise for the discussion of the question of public buildings in Nova Scotia. That question is limited to this one item, No. 123; that is all the public buildings there are for Nova Scotia. With respect to New Brunswick the policy seems to be very clear, that dredging, not being very spectacular, will be done this year, but when you come to Quebec and Ontario and the other provinces you will find quite a number of items for public buildings. For instance, I see an item of $15,000 to finish a public building at Wainwright. The Minister of the Interior might be able to explain that.

Mr. STEWART (Edmonton): I am quite ready.

Mr. BENNETT: Saskatchewan stands in much the same position. Certain buildings there have been started and have to be finished. It is the same with respect to Manitoba. In Quebec there are a considerable number, in Montreal alone quite a number of items, involving large sums of money. The minister realizes that that is so, but the item we are discussing is the only one with respect to public buildings in Nova Scotia, and I certainly desire to know what has been done by the province of Nova Scotia that it should be penalized because in the exercise of a sound discretion it did not see fit to yield to the views that were pressed upon it by the Minister of National Defence. Surely you cannot penalize a province for not taking bad advice, if the Minister of Justice suggests that that is what should be done. I say no; they should be rewarded.

Mr. LAPOINTE: I would not penalize them, I think they suffer enough by the representation they have.

Mr. BENNETT: It is a singular thing that that is exactly what the electors of Halifax thought when they rejected the Minister of National Defence. I do think the minister must be fair with this committee and tell us what were the guiding principles which led to Mahone Bay, with all its requirements, being denied the post office which the Prime Minister said the government accepted the responsibility for. The utterances of the hon. member, whose classic smile we are all delighted to see in this house, whether he is edifying us with an account of the wrongs of the auditor general or the advantages of doing dredging work at the proper season in Nova Scotia—these are a matter of profound indifference. But I do submit that the minister should give us some explanation.

Mr. DUFF: I am sure we are all pleased to see that the hon. member is taking an interest in an item of $10,000 which was dropped from the estimates last year in regard to public works in Nova Scotia. He seems to think there was some political influence brought to bear when this item was dropped. That is quite true, and perhaps if I give the house the reason why it was dropped the leader of the opposition will be satisfied. I might say that when I asked the previous Minister of Public Works to include in the estimates an amount for the building at Mahone Bay politics was furthest from my thoughts.

Some hon. MEMBERS: Carried.

Mr. DUFF: Hon. members are saying "carried" because they do not want to hear the explanation. But after I had worked two years with the Minister of Public Works to get the item in the estimates and the announcement was made to the world that such an amount had been provided for, the very gentlemen who said I was playing politics were the father and the brother of the hon. member for Queens-Lunenburg. Consequently when I found that politics were being played I advised the minister—I do not know whether or not he took my advice—to drop the item; because, Mr. Chairman, as I said a moment ago, I did not have politics in my mind when I asked for it. I did not want politics to interfere, and when my hon. friend said I was playing politics and the post office would never be built, I thought it my duty to tell the Minister of Public Works, the architect and everybody else that the building at the present time was not necessary.

Mr. HAY: It seems to me this would be an opportune time for us to take counsel together in regard to the expenditure of public money in Nova Scotia or in any other province where the amount is only $10,000 for a public building. I know nothing about the amount that was dropped from the estimates, but if only $10,000 is required, if that is all that locality needs, it would be well for us here and now to scrutinize all such amounts for public buildings in Canada. There is hardly any way of ascertaining what may have been in the mind of the hon. member or of the government, but we ought to recognize that the appropriating of public money for the purpose of getting votes is a delusion. My hon. friends across the way laugh, because they have been guilty, as perhaps another party may have been guilty, of voting public money for public buildings where their candidates were more often defeated than elected, and I think rightly so. Public money ought to be wisely voted and wisely expended. We all recognize that in our own municipalities we desire public money to be spent and large buildings erected, thus creating a vast liability upon the country and the government. We have throughout Ontario—and I assume it is true in other provinces—buildings going to decay, buildings which are of no commercial use, of no commercial value, which ought to be sold to insurance companies. If they cannot be sold to those companies then they should be sold by public tender and auction, in order to reduce the overhead as far as the government is concerned. We have an opportunity of recognizing, I think, that the expenditure of public money is a matter that should be judiciously and carefully scrutinized, and we should also recognize that the expenditure of public

money where it is not necessary is not a vote-getter, but rather recoils against the parties who do that for the purpose of electing a candidate or promoting their interests in an election. Before spending money we should look into it as a business proposition, and knowing what has happened in these small communities we ought to rise to the occasion and spend public money only where it is requisite and necessary.

Mr. CANTLEY: Will the minister tell me what is intended to be done in regard to the building at New Glasgow which I spoke to him about? Is it the intention of the government to provide in the supplementary estimates of this year for the necessary alterations to that building?

Mr. ELLIOTT: I recollect the New Glasgow matter on account of the interviews I had with my hon. friend in regard to it, but there is no decision to make public expenditures this year other than those we are asking for in the estimates that are now before the house. I know of no decision in regard to any buildings other than those asked for here.

Mr. CANTLEY: May I remind the hon. minister that I had what I consider to be a distinct undertaking on his part that he would this year, in the preparation of his estimates, include an amount for that building and recommend it to council? Am I not correct in that?

Mr. ELLIOTT: I would not like to say to my hon. friend or to anybody else that anybody has had anything amounting to a definite undertaking from me since I have been in charge of this department to provide any building at any place. I remember the interview I had with my hon. friend. I recall very well the strong plea put forward, but I have no recollection of making any definite promise to him or to anyone else that what he asked for would be done.

Mr. CANTLEY: I think I can refresh the minister's memory when I point out that in his office after we had discussed this matter he stated that he would make a memorandum in regard to it, so that he would have next year a clear understanding and recollection of what we had discussed and what we had arrived at. I think if he will look in his office he will find that memorandum, and the statement I have made will, I am sure, be borne out by that memorandum. I ask him again to include in the supplementary estimates this year an amount sufficient to carry out the suggested alteration in that building. He is thoroughly aware, and so is his deputy, of the necessities of the case. The matter has been presented to him not only by myself but also by the Liberal candidate in the county and others who are thoroughly aware of the situation. It is not fair to treat the people of New Glasgow as he has been treating them during the last two years, and I appeal to him to do justice. I recollect very distinctly the interviews we had.

Mr. ELLIOTT: Mr. Chairman, while I do not claim to remember all the details of the situation, I recall very distinctly the interviews to which my hon. friend refers. I would remind him that the representations made to me with respect to the condition of the building at New Glasgow are not by any means more urgent or—shall I say?—pathetic than those which have been made on behalf of at least fifty other places throughout the country. There is a strong demand for public buildings to provide for post offices, customs and other public services. My hon. friend must recollect that I do not get anything like the money for this department that I ask the treasury board and the Minister of Finance for, but I can assure him that I shall be very glad to look up the memorandum and reconsider the requirements of New Glasgow along with those of other towns when these matters are receiving attention.

Mr. CANTLEY: We discussed this case last session, and at that time I thought the minister had committed himself; I think so still. There is not very much use in telling the committee that other towns are asking for public buildings; I am not interested in them at all. The fact is, the situation in New Glasgow is intolerable. The minister knows it, his officials know it. Two different plans were made and submitted, and then revised plans were made. All the facts are thoroughly well known to the department and to the minister, and again I ask him to implement what I understood to be the definite promise given by him to me last session.

Mr. ELLIOTT: What my hon. friend regards as a promise, Mr. Chairman, shows how dangerous it would be for me now or at any other time to say positively that anything will be done to carry out his request. I do not think he will go so far as to say that I have definitely promised to look after his requirements in respect of New Glasgow. Nor do I think that any hon. members on either side of the house will say that in regard to any of the representations they have made to me—and they have been fairly importunate—I have ever given a definite assur-

ance in their favour until the votes asked for appeared in the estimates. As I have already said, I have to convince the treasury board and council of the necessity for these expenditures before they can be passed, and sometimes I have trouble even after getting my estimates beyond that stage.

Mr. ERNST: I was much surprised at the admission of the hon. member for Antigonish-Guysborough (Mr. Duff) that he had prevailed on the minister in a moment—shall I say?—of weakness to agree to the item of $10,000 for Mahone Bay being dropped. But I was all the more surprised at his explanation of its disappearance inasmuch as last session he gave the house a somewhat different explanation—that the people of Mahone Bay had asked that this money be not put in the estimates. I took the trouble to trace that statement to its source, and found that if the people of Mahone Bay had given any such instructions they were narrowed down to a very small circle. I think the present statement, if traced, would be found to be equally without foundation.

Mr. DUFF: Mr. Chairman, I rise to a point of order. I made a certain statement about two persons who deliberately said I was playing politics in regard to this item, and I submit the hon. member is absolutely out of order in questioning my statement.

Mr. ERNST: I am not questioning the veracity of the hon. member for Antigonish-Guysborough, I am questioning the sources of his information—something entirely different. In regard to statements made by other people, unfortunately I cannot trace them all down myself, although I have knowledge of some of those people; consequently I think that when those statements are investigated it will be found that the hon. member has been misinformed. In view of the statement now made by him, Mr. Chairman, I should like to ask the Minister of Public Works if he approves of his conduct of the business of this country being so influenced—that whether or not a community is to get a post office depends on the dictation of one man. That is the question at issue. Is one man, because he has been annoyed, to be allowed to convince the minister that such public expenditure is not necessary? That is exactly what the hon. gentleman says he has done. I think the minister owes the committee an explanation.

Mr. EDWARDS (Frontenac): Explanation!

Some hon. MEMBERS: Carried.

Mr. SMITH (Cumberland): Mr. Chairman, before this item passes—

Mr. EDWARDS (Frontenac): Let the minister answer.

Mr. LAPOINTE: He has nothing to answer.

Mr. HOCKEN: If he cannot answer, his predecessor can.

Some hon. MEMBERS: Carried.

Mr. HOCKEN: The item is not carried.

Mr. SMITH (Cumberland): Mr. Chairman, last year I brought to the attention of the minister, and the year before to the attention of his predecessor, the deplorable and inadequate condition of the postal service in the town of Oxford, Nova Scotia. The Department of Public Works is fully aware, as is also the department of the Postmaster General, of the conditions existing there. The post office in Oxford is conducted in a shack. A plan has been submitted to the department showing the inadequate accommodation. Not only so, but resolutions have been passed by the town council and petitions have been presented by the ratepayers and the board of trade praying that some remedy be applied, and suitable premises be acquired. It seems to me that the post office service in all parts of Canada should be maintained at a certain standard at least. The standard of the postal service in Oxford is a disgrace to the Dominion. I brought this to the attention of the minister last session, and it is my purpose to do so every session until this condition of things is remedied. I would ask the Minister of Public Works to reconsider the statement he made to-night and include in the supplementary estimates a vote to provide at least decent postal accommodation for Oxford. I might point out that Oxford is a very important postal centre, a great many rural routes radiating from it. The people served by the post office at this important centre are entitled to better conditions. The population of the town is approximately 1,500, and the annual revenue of the post office is upwards of $5,000. If I mistake not, two or three years ago the Post Office Department, through some of its officials, recommended that better accommodation be provided at this point.

Mr. ELLIOTT: I shall be very glad to go into the matter carefully, but it is quite impossible for me to say at the moment what may be the outcome. We will give the hon. member's request the very best consideration that we are capable of.

Sir EUGENE FISET: While the minister seems to be so lavish in dealing with Nova

Scotia, I should like to remind him that there is in my county a small town, St. Fabien, with a population of three thousand, which needs a post office very badly. I hope when he is considering the demands coming from hon. gentlemen opposite he will not forget the county of Rimouski.

The CHAIRMAN: I think I should point out to the committee that under standing order 58, subsection 2, the rule is laid down that speeches in committee of the whole must be strictly relevant to the item or clause under consideration. The discussion with regard to this post office at Mahone Bay might have been taken up more properly under vote 125, but certainly when we start to talk about public buildings in another province the discussion is altogether out of order.

Sir EUGENE FISET: I am only afraid, sir, that by the time all these other requests receive consideration there will be no money left.

Mr. CANTLEY: I am not finished with the New Glasgow post office yet. That building was constructed about fifty years ago, at a time when the population of the town and the immediately surrounding country which it serves was very much less than it is to-day. The situation there is very acute, as the minister knows.

Some hon. MEMBERS: Order.

Mr. CANTLEY: Who is talking about order now? Last year plans were submitted to the minister; later, after discussion with his staff, revised plans were prepared and submitted to him; we discussed the whole situation on several separate occasions, and in the end I received, from the minister, as I said before, what I considered to be a definite gentleman's agreement that he would put in the estimates for the present year, and submit to and support before the treasury board, an amount sufficient for this work. I would ask him now if he did so.

Mr. LAPOINTE: That is secret; he cannot say that.

Mr. POULIOT: Shall we be able to make certain observations with regard to public buildings when the Quebec vote is reached?

The CHAIRMAN: Certainly.

Mr. EDWARDS (Frontenac): Just on the point of order, Mr. Chairman; I have no wish to oppose the ruling, but I would like to get it quite clearly in my mind that under this heading of public buildings it is only permissible to discuss those buildings already in Nova Scotia, or those which should be there.

Some hon. MEMBERS: Oh, oh.

Mr. EDWARDS (Frontenac): I mean that literally. The discussion must not go beyond those buildings already there and other buildings which, in the opinion of members from that province, should be erected there. Is that right? A discussion of buildings in Ontario, for instance, would not be allowed at this time, in your judgment?

The CHAIRMAN: That is right.

Mr. MacDONALD (Cape Breton South): This discussion has been going on for some time, and without wanting to be unfair it does look as if Nova Scotia is being penalized. We have no vote at all for any public buildings in Nova Scotia while there are ten votes for Quebec immediately following, totalling over a million dollars. I would like to know why that condition has come about. Last year a delegation from my county came to Ottawa asking for the construction of a post office in the town of New Waterford. This is an incorporated town with a population of over 10,000 and the post office is in the back part of an old store. That delegation was composed of prominent Liberals from that county, and I refrained from accompanying them or from taking any part in the matter for fear the government might believe I was after some credit. I thought there would be a vote last year; I understood the delegation received assurances that something would be done for them, and I know they are looking for a vote this year. Surely such principles are not going to be tolerated, the government is not going to sit by quietly and allow such implications to be made, as we heard from the hon. member for Antigonish-Guysborough (Mr. Duff). However, that building was either needed in Mahone Bay or it was not needed. If it was not needed the amount should not have been placed in the estimates, but once there it should not have been removed to suit the political desires of my hon. friend from Antigonish-Guysborough, for whom I have the utmost respect.

I want to plead again with the Minister of Public Works, and to ask him if he will not consider the necessity of the town of New Waterford. I venture to say that of all the applications now before the government or to come before the government, none are

more deserving than that of the town of New Waterford. I submit the matter to the Minister of Public Works in the hope that he will consider it when making up the supplementary estimates.

Mr. ELLIOTT: I know something about the town referred to by my hon. friend, and the post office there is doing a good business; if I am correctly informed there is quite a mining business there. It is just like many other places; it would be much better if a new public building could be erected, but as I recollect from our reports I do not think the condition of the building can compare with that of some of the others which we have had to refuse. However, I shall be very glad to give the question consideration when the supplementary estimates are made up. By doing that I do not want to be understood as making a promise that this will appear in the supplementary estimates, because I am not going to do that with regard to any application.

Mr. DUFF: I am sorry my hon. friend thought it necessary to criticize any remarks I made, especially in view of the fact that I am very strongly in sympathy with the idea of a new post office building in New Waterford. Last year, when this delegation was here, although it was entirely outside any constituency in which I have any interest, either as the member or otherwise, I accompanied these gentlemen; I do not see why the hon. member did not come along, but I was good enough to take this delegation to see certain influential persons in Ottawa, and the least he might do is to give me credit without criticizing me. Again within the last month I had a very strong telegram from a prominent citizen of New Waterford asking me to get a vote put in the estimates for a new post office for that town, and again I approached influential members of parliament in regard to the matter, so I think the least my hon. friend might do is to thank me for my good intentions.

Mr. MacDONALD (Cape Breton South): Far be it from me to take away any credit at all from my hon. friend. I know exactly what he did last year and how enthusiastically he worked, and if I have any regret at all it is that the influence of the hon. gentleman in having items included in the estimates is not so great as it is in having them removed therefrom.

Mr. HEPBURN: I do not think it is fair to the minister to ask all these picayune questions and make these trifling interjections at this time. We all realize they are inspired more by politics than anything else. It is time we devoted our attention to business rather than to a controversy between two hon. members. It would seem from the arguments advanced here that when the hon. member for Antigonish-Guysborough (Mr. Duff) was getting a public building it was politics in the eyes of my hon. friend opposite, but if the hon. member for Queens-Lunenburg could get a public building it was good business. No one need be under the impression that only hon. members opposite have need of post offices. I think every member on this side has grievances in that regard which he could ventilate if he saw fit to do so. So much has been said about Mahone Bay that the time wasted and the expense incurred through that discussion would represent a sum more than sufficient to build the whole town.

Mr. ERNST: Very well, let us start.

Mr. HEPBURN: Let the minister go on with the public business, and if hon. members opposite have that interest in the public welfare which they claim to have they will show some desire to cooperate in the despatch of public business.

Mr. ERNST: I was not aware that any personal reflection had been cast by me upon the hon. member for Antigonish-Guysborough, although the hon. member who has just spoken suggested that there was. If there is any suggestion that I made any such reflection I deny it emphatically.

I want to ask the minister, in view of the explanation given by the hon. member (Mr. Duff)—I am doing it in all seriousness—for the dropping of this vote, if he will not give an assurance that this item will be placed in the supplementary estimates. I also think it is the duty of the minister to inform the committee as to whether the dictates of a member who may happen to be annoyed governs the policy of his department.

Mr. DUFF: I never get annoyed.

The CHAIRMAN: Shall the item carry?

Mr. ERNST: No, Mr. Chairman, I have asked the minister two questions and I want to get answers to them.

Mr. ILSLEY: I was astonished to find that any member of this house thought the minister ever gave an assurance in a matter of this kind. I have been as importunate in the matter of post offices as any hon. member. There are post offices needed urgently in three different towns in my constituency, and I have not been able to get any assurance that they will be provided. Lest the minister

may perhaps be impressed by requests from hon. gentlemen opposite I want to remind him, if there are to be any appropriations for post offices in the supplementary estimates, that I have three very urgent demands from my constituency.

Mr. LAPOINTE: Name.

Mr. HOCKEN: You will have another session.

Mr. EDWARDS (Frontenac): I think the hon. member for Lunenburg (Mr. Ernst) has put a question to the minister which affects every member of this house and every part of this Dominion. We have an hon. gentleman getting up in this house and declaring that at one time in his somewhat zig-zag political career he had importuned the government to build a post office in a certain place. Through the exigencies of politics he was obliged to run in another constituency. Whether that fact had anything to do with bringing about a change in his mind or in his attitude we, of course, can only conjecture.

Mr. DUFF: What do you think yourself?

Mr. EDWARDS (Frontenac): We have it from the hon. gentleman's own statement that at one time he thought a post office should have been built in this place, and he importuned the government along that line. Now he goes to the government and asks them not to build a post office where formerly he said it was needed. The hon. member for Lunenburg has put a proper question to the minister in asking whether or not he subscribes to that doctrine. The minister remains silent on the matter, and unless he answers the question I say that he is indicted as agreeing to that kind of policy and saying that he, in the expenditure of public money, is influenced by that spirit. It does not come well from the hon. member for Antigonish-Guysborough, it seems to me, to say that there is no politics in this sort of thing. There is politics in it. Politics of the most partisan character is spread all over it.

Mr. DUFF: Hear, hear.

Mr. EDWARDS (Frontenac): I say it is up to the minister to answer that question. It was a proper question, and it should be answered in the public interests.

Some hon. MEMBERS: Carried.

Mr. GUTHRIE: Oh no, it is not carried.

Mr. ELLIOTT: I want to answer the question of my hon. friend if no other member has any questions to put before I do so. My hon. friend who has just spoken has very properly urged the claims of a certain section of his riding to a public building, and I suppose there is no hon. gentleman here whose claims should be entitled to more consideration at my hands. He urged the matter sincerely upon my consideration, and I think he will agree with me that when I was not able to meet his views I was guided by official reports and the needs of various communities. That is what has actuated me in preparing these estimates. I do not want to cast any reflection on the criticisms which have been made, but those criticisms might have had some justification if either last year or this year any substantial number of post offices had been granted to constituencies represented by Liberals, Conservatives, Progressives or the members of any other political party. The grants for this purpose, since I have been in charge of the department, have been reduced to the barest minimum consistent with the necessities of public business. Now what we are considering is not a vote for Mahone Bay, or any other place in the riding represented by my genial friend; we are considering vote No. 123 involving an expenditure of $84,500, and the only objection that I have heard so far to that vote is that it is not large enough. There has not been one single objection against any item in that vote, and I do not consider the criticisms which have been made are well founded, in view of the fact that throughout the Dominion constituencies represented by both political parties have been treated in the matter of these grants in the same way.

Mr. GARDINER: We have heard a great deal about public buildings that are not included in the vote. I think perhaps it would be well for the committee to get down to business and discuss the items that are actually before us.

Mr. EDWARDS (Frontenac): I should like your ruling as to that, Mr. Chairman, because I should not like to be declared out of order. I submit that the only possible chance that a member has to point out where the need exists for a public building is under this particular heading. Surely it is not intended to hold members down merely to the items that are mentioned on this particular page of the estimates. For instance, when we come to Ontario I shall feel that I have the right to discuss under the general vote the matter relative to my constituency to which the minister has referred. I do not believe that the minister wishes to shut out discussion on the part of hon. members from Nova Scotia concerning any building which in their judg-

ment should be erected for the benefit of the province. They are entitled to discuss any public building that ought to be put up in Nova Scotia, whether it is included in the items or not. Otherwise we have to depend upon the judgment of cabinet ministers, and members of the house are precluded entirely from bringing up questions in which their constituencies are interested.

Mr. GUTHRIE: The question has not yet been answered; in fact, two or three questions have been asked the minister and so far he has failed to reply. It is idle for the minister to get up before an intelligent committee like this and discuss other post offices which may be in the estimates but which are not in this particular vote. This is a specific instance wherein a post office was recommended by the officers of the Public Works department. Can we have that report? What were the reasons given by the officers of the department when the building was originally authorized? I assume it was stated in that report that the building was urgently required. Who, then, was the officer that made the report? Has any officer of the department either withdrawn or overridden that report, or does the report still stand as indicating the view of the department, and is it among the files of the department? And why was the item withdrawn? If it was urgently needed in 1926 why is it not needed to-day? We were told yesterday that there is some $40,000,000 of a surplus in the treasury. Why not implement this promise made to the people of Mahone Bay prior to the election of 1926? Cannot the minister answer this question in a direct way instead of side-stepping, as he did five minutes ago when the question was put? Does he approve a procedure whereby a defeated candidate in a particular constituency can override the vote of the House of Commons and say, "Drop that item, I was beaten in that constituency"? If that is not playing politics in an important department of government, then I do not know what is. This committee demands some explanation of that procedure.

Mr. ELLIOTT: I thought my hon. friend was in the house when I made the explanation—

Mr. GUTHRIE: I have been here all evening.

Mr. ELLIOTT: —that so far as the decision was concerned as to what should be included in the estimates, I took the reports that were before me at the time the estimates were being prepared and arrived at the best conclusion I could. I have no recollection of my hon. friend having interviewed me; I know he did not interview me this year in connection with Mahone Bay or any other place.

Mr. DUFF: Nor last year either.

Mr. ELLIOTT: I do not recall his having interviewed me. My recollection is that for a considerable period of the session, while the estimates were under preparation he was not in the house. Naturally, my recollection of the matter is not as vivid as it was a year ago, but I know that for reasons that were considered sufficient then the vote was passed without an item for Mahone Bay. I want to assure my hon. friend (Mr. Guthrie) that there is no ground for his standing up and saying, upon an examination of these estimates, that they have been prepared with a view to meeting political emergencies.

Mr. GUTHRIE: I have said so.

Mr. ELLIOTT: Well, I say it is not so.

Mr. HOCKEN: We must all admire the ingenuity of the minister; he has been asked half a dozen times to answer a simple question and he has skated around it about as smoothly as anyone I have seen in the house. This, I submit, ought to be done: until the minister is able to answer the questions that have been put by the hon. member for Frontenac and the hon. member for South Wellington the item should stand.

Mr. LAPOINTE: What is the question?

Mr. HOCKEN: Upon what grounds was that post office recommended for Mahone Bay? We should have the report of the officials and then we should have an explanation as to why the item was withdrawn. That is what this side of the house is asking for, and that is what the minister will not give us. He has shown himself, I must admit, extremely clever in getting around the question, but I do not think we shall be satisfied until we have been given an explanation as to why this building was recommended, what was considered the necessity for it, why the item was withdrawn, and whether the minister gave his approval. Does the minister approve of the principle of a defeated candidate having an item removed from the estimates?

Mr. ROSS (Moose Jaw): The minister is being attacked as a very astute politician. May I point out that the hon. member for South Wellington stepped in at an opportune moment while the hon. member for Colchester (Mr. MacNutt) was discussing some property that had been bought at one time

by the department and had subsequently been sold at a very much lower figure—at a loss of $10,000, I think. If this item has to stand pending the obtaining of information for the committee, I should like to have the minister bring down information showing when this particular lot was bought, by whom, and from whom. The fact that such a lot as the one referred to in the locality mentioned by the hon. member for Colchester was bought at a sum representing $10,000 more than its present value is something that does not look very good, at least to me. The hon. gentleman says that the town has grown and its business is greater than it was before; but certain property purchased by the Conservative government is not worth nearly as much to-day as the money originally paid for it. I say, I want to find out whom the property was purchased from.

Mr. EDWARDS (Frontenac): The hon. member makes one statement which will apply generally to the whole Dominion. He says that in this particular case property purchased while the Conservative government was in power is not worth nearly so much to-day under a Liberal administration. I am not going to quarrel with the hon. gentleman on that point; probably he is right. The people of Canada, from the Atlantic to the Pacific, are realizing that property is not worth as much to-day under this government as it was some years ago.

Mr. ROSS (Moose Jaw): I say it is not worth what was paid for it.

Mr. EDWARDS (Frontenac): The hon. gentleman speaks of the opportuneness with which certain members get up on this side, but I notice that he did not give the Minister of Public Works a chance to rise and reply to the hon. member (Mr. Hocken). The hon. member for Moose Jaw put himself in the breach to protect the minister or to give him a little longer time to think the thing over. Well, I submit that in all conscience the minister has had sufficient time to think it over. He might avoid for the time being the tactics which he evidently learned from that venerable Liberal statesman, Oliver Mowat, who used always to say, whenever any embarrassing question was asked him, "I shall take it into my most serious consideration." That was as far as one could get with that statesman, and evidently the Minister of Public Works is adopting the same method of argument. Here we have a statement from the hon. member for Antigonish-Guysborough (Mr. Duff) that at one time he applied to the government for a post office in a constituency which he formerly represented, on the ground that such a building was very much needed. He used all his eloquence and exercised all his influence to have that building put up; it was sorely needed. That is fact number one. Fact number two: The people of that constituency got tired of him and refused to elect him again. Take along with that the next fact, which follows in chronological order. He comes to the government and says, "What I asked you before to do, I ask you now not to do. Do not give this constituency which refuses to express confidence in me the post office which they needed a year ago, and which they still need." I ask the minister again if he subscribes to that doctrine, if that was one of the things that influenced him and his department in refusing justice to this particular place. He has not seen fit to answer that question, and I repeat that until he does answer it he stands in the position of accepting that policy for his department and for the government, namely, that when a Liberal candidate happens to be defeated in a constituency he can come to the government and express his annoyance at the people who defeated him by influencing the government to withhold necessary and just grants to that particular constituency. That is the question, and I say that the minister ought to answer it, and tell us whether that was one of the representations he received that influenced him in cutting this item out of the estimates.

Mr. ELLIOTT: I do not want to be discourteous to my hon. friend in not answering his question, but I thought I had answered it already. He seems to be under the impression that at some time the estimates being prepared by me included an item for a post office at Mahone Bay, and upon that foundation he built up a splendid argument which made me think what an ornament the legal profession lost when the medical profession got my hon. friend. Might I just say in answer to him, and I think this will answer completely both his question and that of my hon. friend from Toronto, that they have both been going on an entirely wrong assumption, because never was there at any time an item for Mahone Bay in either the main or the supplementary estimates prepared by me. So I could never cut the item out. What may have taken place before, I am not in a position to say. I can only say that I certainly would not have cut out from the estimates for political purposes, an item that was already there. I do not think my hon. friend would charge me with that.

Mr. EDWARDS (Frontenac): I should like to return the compliment so graciously paid to me by the Minister of Public Works; I should be lacking in courtesy if I did not do so. He is a brilliant member of the bar, and for him to pay me the compliment of saying that the legal profession lost a bright and shining light when I joined the medical profession I take as a very great compliment indeed, coming from one who is so pre-eminent in the legal profession. It is because of my great and high regard for the hon. Minister of Public Works and for his integrity that I am endeavouring to get him to answer the question, so that he can protect himself against a wrong impression. I confess that I am still in doubt whether or not he or his department was influenced by the efforts of the hon. member for Antigonish-Guysborough, and I do not want to go out of this building to-night with any doubt in regard to that matter. I do not want to leave here with the impression that he was improperly influenced by the hon. member for Antigonish-Guysborough in not putting this item in the estimates. It does not matter at all whether the item was in the estimates before or since he became Minister of Public Works. The item was in the estimates of the Public Works department, and to that extent the government of the day had recognized the justice of the claims of Mahone Bay, no matter whether the present minister or his predecessor included that item. I am asking the minister if he has been influenced by the hon. member for Antigonish-Guysborough, who says that he influenced somebody.

Mr. DUFF: I did not say that I influenced somebody.

Mr. EDWARDS (Frontenac): My hon. friend from Antigonish-Guysborough has stated that he told them not to put this item in the estimates. Now whom did he tell? He did not tell me. He went to some member of the department and told them, and tried to influence them; and that he was able to influence them is evidenced by the fact that the item has been cut off the estimates, although Mahone Bay was a place that evidently the government had felt should have a post office. Because of my love for the Minister of Public Works, because of my high eseteem and very great regard for him, and because he is new to the job, I should like him to clear himself of any possible misunderstanding in this matter by getting up and telling the house at once that he was never influenced one particle by the representations made by the hon. member for Antigonish-Guysborough. Immediately he says that, he will rise in the estimation not only of every member on this side, but of every member on the other side as well.

Mr. HOCKEN: If I were of an irascible temperament I should have a right to feel peeved because, when the hon. Minister of Public Works was paying the hon. member for Frontenac the compliment of saying that he would have made a good lawyer, he left me out altogether. However, I am not of that temperament. I have not for one moment during this debate thought that the influence that was exerted was brought to bear on the present Minister of Public Works. But we have with us to-night his predecessor, and if influence was exerted it must have been upon him, if not upon the present minister. There must be something on the files of the department which will give some explanation of this whole transaction, and I suggest again, Mr. Chairman, that this item be allowed to stand until the minister has had the opportunity of examining his files and bringing down a reasonable explanation of all the circumstances.

Mr. LUCAS: The minister stated a while ago that he did not prepare the estimates last year which included a post office for Mahone Bay. I should like to ask him if he did not bring before the house last session, the supplementary estimates that were not passed the session before, and then ask this house to endorse them, which the house did. I think I am right in that.

Mr. KING (Kootenay): The other government did that.

Mr. LUCAS: Oh, no.

Mr. POULIOT: I remember that last year our friends opposite complained very much because an item of $12,000 was put in the estimates for a post office at Kensington, Prince Edward Island, and we spent a most interesting evening listening to our friends opposite opposing that item. This year, on the contrary, they do not ask us not to build a post office; they are asking us to build one at Mahone Bay. As we say in French, "autre temps, autres moeurs".

An hon. MEMBER: That is what Taschereau says.

Mr. SMITH (Stormont): We have been listening for several hours this evening to

hon. gentlemen opposite complaining because the government is not spending $10,000 to build a post office in a place with a population of six or seven hundred.

Mr. ERNST: Twice that.

Mr. SMITH (Stormont): Even so, I maintain that hon. members opposite should congratulate and not blame the Minister of Public Works for refusing to spend money on public buildings in a place of that kind.

Mr. EDWARDS (Frontenac): It is all right to spend half a million dollars at Washington.

Mr. SMITH (Stormont): Washington is going to spend half a million dollars in Ottawa. Is that wrong? I honestly think we should get on with the business of the country. People are anxious that we should not waste money by remaining here longer than necessary, talking about such ridiculous things as the building of a post office at Mahone Bay. We should proceed with the business and pass the vote.

Sir GEORGE PERLEY: What my hon. friend from Camrose said about the estimate is quite correct; these estimates were prepared in 1926 with the Mahone Bay item included. The estimates were partly passed in the session of 1926. After the election in the fall of that year, when the present government came back to power, my hon. friend became Minister of Public Works, and the remainder of the estimates of the previous session were brought into this house and passed right here, including the vote for a public building at Mahone Bay.

Mr. LAPOINTE: Without any discussion.

Sir GEORGE PERLEY: No discussion and no consideration. The present minister was the Minister of Public Works when these items were passed in this house. Now what happened? I had a good deal to do with administering the department during the short time the Meighen government was in power in 1926; and I would say to the hon. minister and to this committee that before the Mahone Bay item was put in the 1926 estimates there would be on the files of the department reports from officers of the department in Nova Scotia as to the necessity of the erection of this public building. Based on that report the then Minister of Public Works put the item in the estimates. The present minister had nothing to do with that, but he was minister when it was put through without discussion in the fall of 1926. Then what happened? When the items for the next year are being prepared the basis on which they are first made up is the previous estimates. The Mahone Bay item therefore must have been struck out of the 1927 estimates by somebody; the name would be there unless it had been struck out. There would be some report in the department before the minister would strike out the item, unless he did it entirely of his own volition without reference to the officials of the department. What the members on this side of the house have asked, and quite properly, is that the minister should provide the committee with a copy of the report from the engineer's department on which the item was put in in 1926, also a copy of the report of the officers of the department advising him that the item should be struck out in 1927. As I understand the methods of the department that is what happened. There must be a basis, a report or recommendation of some kind, on which the previous minister inserted the item, and there must be something on file in the department on which the present minister based his decision to strike it out in 1927. We ask that that be provided, and I do not think our request is at all unreasonable.

Mr. LAPOINTE: I have heard many theories presented to-night, and I am surprised at the theory suggested by my hon. friend just now. He says the estimates of the year must necessarily be based on the previous year's estimates.

Sir GEORGE PERLEY: Not necessarily, but usually.

Mr. LAPOINTE: I might remind my hon friend that when he was himself a minister of the crown he was not absolutely faithful in following that theory. He was a prominent member of the government which took office in 1911. I do not know if other members of parliament have had the same experience, but I was a member at the time. There were items in the estimates concerning my own constituency in the session of 1910-11, prior to the election. There was a dissolution of parliament on the reciprocity issue, as my hon. friend remembers.

Sir GEORGE PERLEY: Very well.

Mr. LAPOINTE: His leader took office. He was a member of the government, and by some mystery which my hon. friend might explain, these items disappeared. May I add that I did not whine? I took my medicine, and there were many on our side who did likewise for years. An hon. member on the other side made the comment that there are some items for public works in Quebec in these estimates. Maybe Quebec had been deprived

for so long—ten years—that there must be something now in order to repair the loss. But during the whole of the time we were sitting on the opposite side my friends and I took our medicine and did not whine, session after session. But let me say that the estimates are prepared as a new piece of legislation every year. My hon. friend says this item was in the estimates; why did it disappear? It disappeared because the government did not put it back in the estimates. It is asserted that my hon. friend the Minister of Public Works is responsible for the estimates. Well, the estimates go before the treasury board and council, and when they leave council they are far different from what they were when my hon. friend brought them in. Last year we had this same discussion and finally the Prime Minister said, in answer to a question which had been repeated as many times as the question has been repeated to-night, that the government was responsible; and the government does take the responsibility. There are questions of policy in that respect as in any other respect. When the estimates are discussed in council the general policy of spending public money for the building of new post offices is discussed. Why should we distribute public buildings in Nova Scotia because that province is represented by Conservative members in this house? I cannot see that. It seems to be offered as a reason for the government's erecting buildings there which are not given to the other provinces. I agree with the leader of the Progressive party when he says we are wasting the time of the house and the country in discussing Mahone Bay on an item of public works for Nova Scotia. I would ask my hon. friend to accept the very plain and satisfactory explanation which has been given by the Minister of Public Works.

Sir GEORGE PERLEY: Does the Minister of Justice think the item should have been dropped for the reasons given by the hon. member for Antigonish-Guysborough? We on this side do not claim that public buildings should be erected in Nova Scotia because they are represented by Conservative members; far from it. The minister simply ignores the point at issue. Is the Minister of Public Works or is the government ready to say that this item for Mahone Bay should have been dropped for the reasons given by the member for Antigonish-Guysborough?

Mr. LAPOINTE: It has been dropped for the reasons which have been given by the Minister of Public Works.

Sir GEORGE PERLEY: He did not give any reasons. If the Minister of Justice says—

Mr. LAPOINTE: He has given the reason, that it is the policy of the government not to build so many public buildings at the present time. We are economizing; we are decreasing the public debt; we are reducing taxation.

Mr. HOCKEN: I appreciate the attitude of my hon. friend from Stormont (Mr. Smith). It must surely appear to him to be a waste of time to continue this discussion, but I wish to direct his attention to the fact that the responsibility rests entirely upon the government. The government, through its ministers, has absolutely refused to answer reasonable questions.

An hon. MEMBER: No.

Mr. HOCKEN: Oh yes, I think so. A very serious principle is involved in the questions which we are putting to the Minister of Public Works and to which we are trying to get answers. Here is an appropriation put in at the desire of a man who was cultivating the constituency.

Mr. DUNNING: It was put in by the government.

Mr. HOCKEN: It was put in by the government at the request of a man who was cultivating the constituency. I think he admits that.

An hon. MEMBER: He says so.

Mr. DUFF: No, I denied it.

Mr. HOCKEN: I have a great admiration for the frankness of my hon. friend (Mr. Duff). Well, this item is put in because he wants to cultivate that constituency. Then an election is held, and the constituency rejects him; whereupon he comes along and says, "I will get even with you fellows," or something to that effect, and feeling that way he persuades one minister of public works, or another minister of public works, or some person in the department, to strike the item out. He says so himself; there is no doubt about that. Now, what we want is the information from the files of the department giving the reasons for putting that item in and for taking it out. If public business is to be conducted in the open and these appropriations are to be made upon their merits, this question must be answered. We are entitled to an answer, and certainly if there is any resourcefulness on this side of the house we will get the answer.

Mr. MacLEAN (Prince): In answer to my good friend from Toronto West Centre (Mr. Hocken), I may say that my understanding of the situation is this. Those votes were in the supplementary estimates. We had a vote for our province in the same estimates. Those estimates lapsed on March 31, and it was necessary to have the votes embodied in the main estimates for last year. My hon. friend will agree with me on that score.

Mr. HOCKEN: That does not get at the trouble.

Mr. MacLEAN (Prince): I had an estimate for my own county. It would have been dropped the same as the Mahone Bay estimate if I had not kept persistently after the department.

Some hon. MEMBERS: Oh, oh.

Mr. MacLEAN (Prince): Well, the point I want to make is this: The hon. member for Lunenburg (Mr. Ernst) failed in his duty —he admitted that last session on the floor of the house—in that he did not press for that vote to be included in the main estimates.

Mr. HOCKEN: No.

Mr. ERNST: The hon. member cannot find any statement of mine to that effect; the contrary is the case. I may say that I also have been persistent in my requests since the main estimates were submitted last session.

Mr. MacLEAN (Prince): This is not the only vote that was dropped from those supplementary estimates; there were hundreds of others, and they were not included in the main estimates. It is up to the member for the constituency to see that the votes he is interested in are so included. It is too late after the main estimates are brought down to complain that his votes are not in. The place to take that matter up is the department, and I think the minister has shown that the vote in question was not included in the main estimates last year along with a great number of others. I notice there was $20,000 voted for Prince Edward Island in 1927-28 which has not been used. We would like to have another post office down there, and I suggest to the minister that this money should be used for the purpose of the erection of a post office building in Alberton in my province.

Mr. LUCAS: I should like to ask my hon. friend (Mr. MacLean) what system he pursued in persuading the Minister of Public Works to look after his constituency; did he use blarney or the big stick? I happen to be one of those unfortunates who had a vote dropped in the supplementaries, and although I used my best endeavours—and I am Irish too—I was not able to persuade the minister to reinstate that vote in the main estimates last session. But, seriously, Mr. Chairman, I think we have a very important principle to decide. To my mind it is a disgrace to the public life of Canada that a body of men who pose as being capable of administering our national affairs should stoop to the small practice of cutting out a vote for a particular constituency because the electors of that constituency did not see fit to return a member in support of that government. Are we to understand that the people are to be bribed with their own money and that the public works they are granted depends on how they vote? The Minister of Justice gave what he described as a parallel case, but it was not. I take it, Mr. Chairman, that when those supplementary estimates were brought down in 1926 by the present Minister of Public Works, and he asked this house to endorse them, and they were endorsed, every one of them, those supplementaries should all have been placed in the main estimates for last year to be voted on by this house. It is a different question entirely where you are preparing new estimates.

Mr. LAPOINTE: The same procedure was followed in 1911 after the elections on the reciprocity issue; the first thing done was to vote the estimates of the previous session en bloc.

Mr. LUCAS: I presume that was a change of government.

Mr. LAPOINTE: That changes neither the theory nor the principle.

Mr. LUCAS: In this case the government came in and changed its own estimates. Anyhow, does the minister think that is right?

Mr. LAPOINTE: I think a government must assume responsibility for the estimates which are submitted to the house every session.

Mr. LUCAS: Those estimates had been submitted to, and endorsed by, the house.

Mr. ERNST: By the same minister.

Mr. LUCAS: By the same minister, and yet when the main estimates were brought down the same session certain of those supplementaries had been dropped. I think an explanation is due from the Minister of Public Works.

Mr. KING (Kootenay): The Minister of Public Works has, I think, met the situation fairly and reasonably. But I have some knowledge of the former estimate which is under dispute. We know that during the war years there was a cessation of public works, particularly the erection of post office buildings, throughout the Dominion. We came into power in 1921. We continued that policy, and in 1922, 1923 and 1924 I do not think we were able to prevail upon the treasury board to allow any appropriations in the estimates for the construction of public buildings, although the public service throughout the country demanded such accommodation. No one will deny that during that period the necessity for the construction of these buildings existed. In 1925 I did prevail upon the government to the extent of commencing a small program.

Some hon. MEMBERS: Oh, oh!

Mr. KING (Kootenay): Well, that is all right. A small program was undertaken after I had pointed out to the government that there had been no construction for ten years and that the needs of the country were so great that the government should begin the construction of some public buildings in a small way. As for the selection of the points where these public buildings should be constructed, as the minister in charge at the time I am prepared to take the responsibility. Surely, however, no hon. member will contend that the government, having accepted that policy on the advice of the minister of the day, having voted supply and then having been out of power for a few months and having been returned to office, had not the right to change its policy. The Minister of Public Works may have differed with me there, although I do not say he did; neither do I say that if I had continued in that department I should have been able to prevail upon the ministry to continue that program. I am of the opinion that the public service throughout Canada does require a large expenditure in order that there may be proper accommodation not only for the service but for the employees engaged in it. However, you cannot eat your cake and have it too, and yesterday the Minister of Finance (Mr. Robb) made statements in this house which I am sure were of great interest to the people of Canada. In fact I am inclined to believe that the judgment of the government was better than mine, and that for the time being the cessation of the construction of public buildings was a wise policy, a policy which has probably been one of the factors which made it possible for the government to relieve the burden of taxation and to reduce in some degree our enormous public debt.

With regard to what happened in connection with the re-voting of supply after the defeat of the King government in 1926, we know that the incoming government desired to pass these estimates en bloc, and endeavoured to do so. They were not allowed to do that, however, and they carried on during the interval by means of special warrants. When we returned to power it was understood, in order to clear up the financial situation, that it would be wise to vote the supply brought down in the winter of 1926 before the main estimates for last year were brought down. I do not believe it can be contended that the estimates of this year are to be the basis of the estimates for next year or the year after. Each year is treated by the government with regard to the condition existing at the time the estimates are under consideration, and any one who has served in the ministry knows that the instructions are given out some weeks before the preparation of the estimates is begun.

Sir GEORGE PERLEY: We do not object so much to the dropping of this item as to the reasons given by the hon. member (Mr. Duff) for its disappearance. In order to get on with the work, therefore, may I ask the minister if he will bring down copies of all the reports advising the construction of this building at Mahone Bay, and also copies of the files of record at the time the matter was dropped?

Mr. ELLIOTT: I shall be very glad to produce for the inspection of the committee any files we have with regard to this or any other public building either in or out of the estimates. But in addition to that I want to clear up what I feel to be a misapprehension entertained by the hon. member for Toronto West Centre (Mr. Hocken) and my hon. friend from Camrose (Mr. Lucas). The estimates to which they were referring were not, as you remember, the estimates that were presented last year; they were the supplementary estimates of the year before, and were presented either in the fall of 1926 or in the early part of the session of 1927. As I said before, no estimates prepared by myself contained the item with reference to Mahone Bay. Those estimates lapsed on March 31. They were not struck out; they went out of existence automatically on account of the ending of the fiscal year. This building at Mahone Bay, and the one to which my hon. friend from Camrose referred, were not reinserted for the reason that the government

considered that other expenditures were more necessary. I want to give my friend an answer which I hope he will consider straight and satisfactory. He asked me as to whether or not I was influenced by the suggestions made by the hon. member for Antigonish-Guysborough. I think he heard my hon. friend state that he had never spoken to me about it, and I have no recollection of his ever having done so. Therefore I am quite sure he is correct when he makes that statement, but at any rate I can say positively that I was not impressed by any such requests. They never came to me, so I could not have been impressed by them.

Mr. HOCKEN: May I ask the predecessor of my hon. friend whether the hon. member for Antigonish-Guysborough made representations to him to have that work stopped or struck out of the estimates?

Mr. KING (Kootenay): As Minister of Public Works I found that most of the members came to my office and made quite proper representations in connection with matters pertaining to their districts, and I imagine the hon. member referred to came to my office and made representations similar to those made by other hon. members on both sides of the house.

Mr. ERNST: The explanations which have been given make it more important that the item be allowed to stand until such time as the file is produced. The minister has stated that the hon. member for Antigonish-Guysborough did not speak to him in connection with this matter, while the hon. member for Antigonish-Guysborough positively states that he influenced the minister. That makes it all the more necessary to have the file produced in order to see what method was adopted by the hon. member for Antigonish-Guysborough, and I therefore suggest to the minister that this item be allowed to stand until the file is produced.

Mr. ELLIOTT: I have already stated to my hon. friend that I have no objection to producing the file, and I think my hon. friend should take my word for it. I say the file will be produced, and whatever correspondence took place will be laid on the table. On that undertaking I think my hon. friends might see their way clear to allow the item to pass.

Mr. CHAPLIN: A moment ago the minister said he would not produce the files of anything except the items in the present estimates.

Some hon. MEMBERS: No, no.

[Mr. Elliott.]

Mr. CHAPLIN: Do I understand the minister to say now that the file having to do with this particular matter will be produced?

Mr. ELLIOTT: Yes.

Mr. HOCKEN: Then I presume the minister will allow the item to stand.

Some hon. MEMBERS: Carried.

Mr. HOCKEN: Let the item stand. We may get information about it which will alter our view.

Mr. ELLIOTT: I call the hon. gentleman's attention to the fact that that file has no reference to, or no bearing upon, the items under discussion.

Mr. HOCKEN: But the items under discussion offer us the only opportunity we shall have of discussing the matter.

Some hon. MEMBERS: No, no.

Mr. HOCKEN: I think so. I submit that we ought to have the information we are asking for before this item is disposed of.

Sir GEORGE PERLEY: If the minister will provide the hon. member for Queens-Lunenburg with the files that refer to Mahone Bay, and allow him to discuss the matter on "harbours and rivers, Nova Scotia", if he chooses to do so, will that be satisfactory?

Mr. ELLIOTT: Quite satisfactory.

Sir GEORGE PERLEY: Then the minister will give us the assurance that the hon. member (Mr. Ernst) can discuss the Mahone Bay matter, when he has the papers, under the item: "harbours and rivers, Nova Scotia"?

Mr. ELLIOTT: Quite so.

Mr. LAPOINTE: Another night of it!

Mr. ERNST: I must confess that I am still not satisfied, because when the vote for harbours and rivers is up it may not be possible for me to be present. Therefore I will ask the minister to allow this item to stand until such time as the file is here.

Some hon. MEMBERS: No, no.

Mr. ERNST: I should hate to have to talk until 11 o'clock in order to explain my position. The Minister of Public Health (Mr. King) has advanced contentions which in reality are not arguments at all and have nothing to do with the question at issue. We now get back to the basic issue, which is that the hon. member for Antigonish-Guysborough has stated that he did certain things; he had a certain vote put in the estimates and afterwards had that vote taken out. He has stated

that two years in succession. Now what possible objection can there be to allowing the item to stand and then producing the file containing the papers referring to this matter, so that we can discuss it at a future date?

Mr. EDWARDS (Frontenac): I submit that this is a request which has frequently been made in this committee and agreed to. You do not make any progress by simply crowding an item through. I am sure I am right in stating that neither the minister nor any member of the government has the slightest intention of preventing further discussion of this matter, and where can the discussion more appropriately take place than under this item? Let the item stand, as has been done hundreds of times in my experience. Whenever there was a decided difference of opinion, or when members have asked that certain items should stand until further information is forthcoming, the request has been acceded to no matter what government was in power. Why should my hon. friend object to such a procedure? If the government has confidence in the honesty of these items it should be the first to meet that request and say "very well; let us get on with the business; we will take up something else, and when you have had an opportunity to look into this matter we will resume the discussion." My hon. friends are not losing any time by following this course, but they cannot crowd an item through in the face of general opposition.

Mr. DUNNING: "Crowd"?

Mr. EDWARDS (Frontenac): If the government persists in its course I cannot use any other word. Why not let this item stand and go ahead with other items?

Mr. STEWART (Edmonton): Is there any objection to the items in question? Has any information been asked for in regard to them?

Mr. EDWARDS (Frontenac): Yes.

Mr. STEWART (Edmonton): Not a bit.

Mr. EDWARDS (Frontenac): Excuse me, but I am afraid my hon. friend and I do not see this matter in exactly the same light. I endeavoured to put myself straight by asking the chairman a question some time ago. If I understood him correctly, and I think I did, he considered the discussion was perfectly proper. I understood the government also considered it proper. I understood it was permissible to discuss public buildings under this vote, even though certain public buildings may not be mentioned in it, and I think that is the proper course to pursue. We shall not be doing wrong if we follow the general principle that where there is a decided difference of opinion, and further information is asked for, we allow the item to stand, as has been done hundreds of times in this house.

Mr. LAPOINTE: I would agree with my hon. friend if the item in question was for Mahone Bay, but there is nothing concerning that place in this item. The items here relate to Halifax, North Sydney and Truro. Item 125 deals with Dominion public buildings generally. There is where the whole discussion should properly have taken place, as was stated by the chairman. Why not wait until that item is reached, if you deem it necessary to renew the discussion, and then you will have the file promised by the Minister of Public Works.

Mr. EDWARDS (Frontenac): I appreciate the point of the Minister of Justice, but under our constitutional system when a government comes to the house and asks for supply, it is the right of any member to bring any grievance to the notice of parliament, and to ask for redress before any money is voted. That is the democratic principle of our British institutions, and it is one which has always been recognized. I recognize my hon. friend's point that the discussion might be taken up under item 125, but I maintain nevertheless that the hon. member for Queens-Lunenburg has a right to make representations with respect to any grievance before supply is granted on any item.

Mr. STEWART (Edmonton): I would agree with the hon. member if any question were raised with respect to any item in this vote. But inasmuch as no question has been raised nor any information demanded regarding any items enumerated in the vote, it seems a strange thing for hon. gentlemen to ask that the whole vote should stand when they can discuss the matter later in the light of the information contained in the papers to be brought down. The request of my hon. friend does not exhibit any desire to expedite public business.

Mr. EDWARDS (Frontenac): May I ask my hon. friend one question: Does he not recognize the soundness of the principle that any member representing the people has a right to make representations with respect to a grievance and to have that grievance rectified by parliament, or by the government, before any supplies whatever are granted?

Mr. STEWART (Edmonton): That right is not being denied. The hon. gentleman is right when he says that items are allowed to stand with respect to which information is

desired. But no information is sought with respect to the vote under consideration, and a promise has been given to the hon. member for Queens-Lunenburg that as regards the item he has in mind the information will be brought down and he will be given an opportunity to discuss it. I fail to understand therefore why this particular item should stand.

Mr. ERNST: One word in reply to the Minister of the Interior. He seems to have overlooked the fact—possibly he was not here during the whole discussion—that there are two aspects to this question. There is the aspect of the vote for the post office at Mahone Bay which was dropped last year from the main estimates that were tabled. There is also the question of the principle as affecting the estimates under consideration and other estimates. Certain representations were made by the hon. member for Antigonish-Guysborough, representations as to the principle upon which votes got into the estimates and were taken out. Before any estimate passes the house it is really the privilege of the house to know whether or not that principle governs in the voting of public money. That is really the question at issue apart altogether from the question of Mahone Bay. And that is why I ask that the vote stand.

Mr. DUNNING: My hon. friend will admit that the principle can be discussed on any vote which comes before the house on any occasion. The right to discuss that principle is inalienable; any member can invoke it on any vote which comes up. There is therefore no reason why this particular vote should be held up, for it does not touch the principle just enunciated by my hon. friend any more than does any other vote. In view of the fact that the Minister of Public Works has promised to bring down the papers I submit that the item should be allowed to pass. The minister's word is good when he promises, although I admit he is the hardest man to get to make a promise. However, he has definitely promised to bring down the papers with respect to this matter, and so far as the general principle is concerned it can, I say, be discussed on any vote. It is not correct to say that any gentleman is being denied the right to air a grievance affecting a matter of principle. I urge my hon. friend, on the very ground he himself takes with regard to the principle at stake, to allow the item under discussion to pass on the understanding that he may discuss that principle later. He may discuss it not once but one hundred times if he wishes to do so; there can be no difficulty about that. Otherwise he must take the responsibility for merely obstructing until eleven o'clock, and that I do not think is desired. Surely this meets my hon. friend at all points. The hon member for Argenteuil (Sir George Perley), who is leading the opposition at the moment, suggested the course I am urging, and if we adopt it we can make some progress, at the same time giving the hon. member for Queens-Lunenburg every opportunity on another occasion to discuss both the principle and the specific matter relating to Mahone Bay.

[Mr. C. A. Stewart.]

Mr. ERNST: It is not my purpose to obstruct, and I appreciate the honeyed words of the Minister of Railways. But the assurance which he gives is somewhat broader than that suggested by the hon. member for Argenteuil and accepted by the Minister of Public Works. If the Minister of Public Works will assure me that on some other vote I may discuss not only the principle but the particular question with reference to the post office, I am content. I am not discussing the matter merely for the sake of obstruction.

Mr. ELLIOTT: My hon. friend said something about not being able to be here during the discussion of the vote for harbours and rivers. If he is not here when item 125 is discussed I will undertake to hold some other item to enable him to bring the matter up. He might let the item pass now.

Mr. ERNST: That is perfectly satisfactory.

Mr. CANTLEY: Any arrangement as to the Mahone Bay matter reached by or between the minister and any member on this side does not interest me in the slightest. My well-beloved and usually generous friend, the Minister of Justice (Mr. Lapointe), made some reference to the granting of post offices to constituencies represented by Conservatives. I am not asking for a post office and I have not done so. What I am asking for is to have repairs and alterations made to a building which is about fifty years old, the necessity for the repairs and alterations is admitted by the department, having been a matter of knowledge to them for several years. The request has been supported by the gentleman who opposed me in the county of Pictou, and correspondence from him is on file in the department in which he urges the importance of the work. I obtained from the minister last year what I consider a gentleman's agreement and I do not now propose to be put off without a definite assurance that something will be done in the matter within a reasonable time.

Mr. MacNUTT: I have deferred discussing the question I am now going to bring up until the matter of the Mahone Bay post office should have been settled or an answer given by the minister. Since we have failed to secure any satisfactory reply in that regard I wish now to refer to the item of $1,300 for the tractor for postal purposes at Truro. I shall ask the minister a question which I am sure it is within his power to answer. But before doing so I want to take up the reference which the hon. member for Moose Jaw (Mr. Ross) has made to my remarks concerning the purchase of a certain lot in Truro. In Hansard of February 15 the following questions and answers are given:

Truro Post Office Site

Mr. MacNutt:

1. On what date was a lot in the town of Truro, Nova Scotia, purchased for a new post office site?
2. What price was paid for said lot?
3. To whom was said lot sold?
4. What proportion, if any, of original lot was sold for church building purposes?
5. Who was purchaser of remaining portion of lot?
6. What price was paid by each of the two buyers?

Mr. Mackenzie King (for the Minister of Public Works):

1. July 11, 1914.
2. $17,000.
3. Part of site (100 feet by 165 feet) to St. James Presbyterian church for $3,300 and remainder of site (124 feet by 165 feet) to Geo. L. Brenton for $4,500.
4, 5 and 6. Answered by No .3.

Now the committee will see that a very valuable lot in Truro, for some reason or other, was sold at a loss to the country of almost $10,000.

Mr. DUNNING: Was it ever worth what was paid for it originally?

Mr. MacNUTT: At the time these lots were bought real estate values were higher than at present.

Mr. DUNNING: In 1914?

Mr. MacNUTT: In 1914. In that town prices were then high and this price was not considered exorbitant.

Mr. CASGRAIN: From whom was it bought originally?

Mr. MacNUTT: I did not ask that question, but I understand that it was bought from a widow. I know that in the town in which I live, Stewiacke, a lot was purchased for a post office from the widow of one of the strongest Liberals there.

Mr. DUNNING: Is that the same lot?

Mr. MacNUTT: No. In the town of Stewiacke to-day we are carrying on our post office business in a little ten-by-twelve office which is utterly unfit for the purpose. I hope the minister will not decide to dispose of that lot, which was bought in 1914, in the same way that the department did in the case of the lot in Truro. In view of the report from the architects of the department, to the effect that the building at Truro could not possibly be remodelled except at an enormous cost, almost equal to the amount that would furnish a new building, I should like to know from the minister upon whose recommendation the department has acted. The people of the town of Truro feel this very keenly. They feel that they have received a black eye by having this lot disposed of at the price which the department realized. I hope the minister has the information available so that he can give it to us to-night.

Mr. VENIOT: I should like to be allowed to say a word in regard to the Truro situation in reply to what the hon. member for Colchester (Mr. MacNutt) has just said. In December, 1926, at the request of the board of trade of the town of Truro, I visited that town. I arrived at nine o'clock in the morning, on my way from New Glasgow to Moncton, and met the members of the board of trade and some members of the city council. I went down with them, examined both properties thoroughly, and made a thorough examination of the present post office accommodation. At their suggestion, as Postmaster General, I recommended to the Department of Public Works that the lot purchased in 1914 between the two churches be disposed of because according to their opinion, in agreement with my own, there was sufficient real estate attached to the present building at Truro to add all the modern improvements necessary to give Truro all the postal and customs accommodation it would need for the next twenty years. I had the chairman, the secretary, and other members of the board of trade with me, and we fully discussed the matter. We returned to the station awaiting the train I was to take, and there it was decided that I should recommend to the Minister of Public Works the sale of the property that had been bought in 1914, and recommend also the necessary improvements to the present building along modern lines. The present building can be improved, and a modern up-to-date addition can be made to it on a property the rear of which is vacant to-day, sufficient to give the town of Truro all the postal and customs accommodation that it will need for the next

twenty years, without having to build a new building on a new site. More than that, the site of the present post office at Truro is the best available site in the whole town. It is more centrally located than the property that was purchased between the two churches at Truro, and I might add that there was a decided objection from the adherents of both churches that a public building should be put up in between the two churches. There is the history of my investigation as Postmaster General of the conditions at Truro, and it was upon my recommendation as Postmaster General that this property was disposed of. But before I took that action, I received the recommendation of the members of the board of trade at Truro, who met me at the station and visited both sites with me.

Mr. MacNUTT: I am very glad to have the minister acknowledge that he is responsible for the sale of the lot in the town of Truro. I am receiving letters frequently, and recently almost daily, asking me to have this matter brought up in the house, and these letters are not all from Conservatives either. I would like to know the gentlemen who accompanied the minister on that occasion.

Mr. VENIOT: The chairman of the board of trade was one, and the secretary of the board of trade was another.

Mr. MacNUTT: Evidently a change has come over the people since, from the information I am receiving. I am very glad, however, that the onus of the sale of this lot in the town of Truro is now placed upon the shoulders of the Postmaster General.

Mr. VENIOT: And upon the members of the board of trade of Truro. They recommended it.

Mr. MacNUTT: I will allow them to speak for themselves. I think I would take the opinion and the judgment of such men as the architect to whom I referred earlier in the evening, Mr. Rankin, who spent several days in that town making a report on the old post office, rather than the report of the Postmaster General, notwithstanding the high opinion I hold of his judgment. I think there is not a member of this house on either side who has ever made an attempt to remodel an old building, and this building is forty-four years old, who did not regret before he got through that he had ever started. The report I have referred to, which is on file in the Public Works department, shows that the cost of remodelling the old building to put it in the condition the public service requires would be almost equal to the cost of a new building, and even then you would still have an old building. I need not refer to the condition of the present building. The minister says that there is a lot of room in the rear. We know that there is room at the rear in nearly all our public buildings, but I say that the building will be entirely inadequate when it is completed and the cost will be so great that it would almost build a new one. I appeal to the Minister of Public Works, before attempting to spend a large amount of money on the Truro post office, to go very carefully and take the advice of his architects, who have already reported on it.

Mr. GARDINER: I would ask the minister to give some explanation of these different items.

Mr. ELLIOTT: Perhaps my hon. friend was not in earlier in the evening when I gave an explanation.

Mr. GARDINER: Yes, I was.

Mr. ELLIOTT: The first $25,000 is a payment to the Department of Railways and Canals for accommodation. It is really in the nature of a rental agreement. It is the amount that after considerable negotiation was arrived at as a fair price.

Mr. GARDINER: What accommodation was secured?

Mr. ELLIOTT: It is the immigration building. We were able to arrive at that arrangement with the Department of Railways and Canals. This is the amount we paid last year, and for some years past I think. The item of $45,000 is required for repairs to buildings and wharves at the Royal Canadian Naval barracks. These are rather extensive repairs. First, there are general repairs to wharves and cambers, $20,000; reconstruction of foundation of thirty-ton crane, and erection of crane, $15,000; repairs and construction of parade and recreation ground, $10,000, or a total of $45,000. The next item of $5,700 is required for repairs and improvements to Rockhead hospital. This has been requested by the Department of Health. The alterations asked for consist of installing door bells, electric fixtures, and other items, eighteen altogether. The next item is $7,500 for an addition to a public building in North Sydney. If my recollection serves me aright, that is for customs purposes. It is a one storey building at the rear of a public building, and it is necessitated very largely on account of the seizures of liquor. They already have so many seizures on hand that their accommodation is practically all taken up.

Mr. CHAPLIN: Is it not a fact that seized liquor is immediately destroyed?

Mr. VENIOT: No.

Mr. CHAPLIN: What is done with it?

Mr. VENIOT: It is kept for thirty days before it is destroyed.

An hon. MEMBER: It is consumed.

Mr. CHAPLIN: Who consumes it? According to the Postmaster General the building is needed to hold the liquor for thirty days so that it can be poured down the sewer.

Mr. VENIOT: I did not say it was poured down the sewer; I said it was destroyed.

Mr. CHAPLIN: Did the hon. member not say something about thirty days?

Mr. VENIOT: Yes.

Mr. CHAPLIN: According to this other minister the building is required to hold liquor for thirty days so that it can then be destroyed. If that is the only use for the building the government had better make a change in the law, save the $7,500 and destroy the liquor at once.

Mr. ELLIOTT: This addition was asked for by the Commissioner of Customs in a letter dated the 18th of November, as follows:

I have to request that a one-storey brick building 30 feet x 70 feet be erected at the rear of the North Sydney, N.S., public building in order to provide adequate facilities for the examination of importations and more especially for the safe custody of seized goods.

This accommodation is absolutely necessary, as North Sydney is the headquarters for our preventive service operations around Cape Breton island and it is impossible to obtain the required security in rented premises. Alcoholic liquors constitute the bulk of the seizures, and the goods have to be retained for long periods on account of actions pending in the courts.

Mr. CHAPLIN: Quite satisfactory.

Mr. ROSS (Kingston): As a matter of information regarding the naval barracks, did the minister state how many men are retained there on service or kept in the barracks?

Mr. ELLIOTT: The request made for this accommodation does not, I regret to say, state the number of men.

Mr. ROSS (Kingston): Is it used now as a barracks, or is it in preparation for a new navy?

Mr. RALSTON: This is an item which has been passed for a good many years. The amount is generally $30,000. Last year, however, there was no vote at all, and the additional $15,000 is on account of the repairs required.

Mr. ROSS (Kingston): I should like to know what corps is being held in those barracks.

Mr. RALSTON: I cannot tell the number of men,—probably about 200. The naval stations are situated at Halifax and Esquimalt.

Mr. KENNEDY: Is this $25,000 for the accommodation of immigrants? Can the minister tell me how many immigrants came into Halifax last year?

Mr. ELLIOTT: I am afraid my hon. friend will have to ask the Minister of Immigration that question. This is the amount of the rental for the immigration halls at that point. As I said before it has been paid for a number of years. Formerly there was an arrangement by which the departments divided the expense in a certain way, and it did not work out satisfactorily. After considerable negotiation an arrangement was made for a lump sum of $25,000 to be paid by the one department to the other.

Item agreed to.

Public buildings, New Brunswick—St. John quarantine station, Partridge Island—repairs and improvements, $13,600.

Mr. BELL (St. John-Albert): Will the minister give me some information as to the details of this vote?

Mr. ELLIOTT: This amount is required for general repairs and improvements to St. John quarantine station as requested by the Department of Public Health through the deputy minister in a communication dated December 2, 1927. The memorandum is as follows:

The proposed works consist of a large number of small miscellaneous items which are estimated to cost $13,520. They are as follows:

Alterations and repairs:

(1) Power House:

Cut out defective bricks in external walls and replace with new and coat walls externally with three coats minwax.

Construct one new store for bunkering coal, in location to be decided between Public Works department resident architect and medical superintendent.

Provide six ladders for fighting fire which may occur in the various buildings, (twenty feet to thirty feet long).

Cut opening between boiler room and main hall 2 ft x 3 ft for ventilating and heating purposes, provided with trims complete.

And other similar details which I shall be glad to read if my hon. friend desires them.

Mr. MacLAREN: May I ask the minister if there is any special condition about New Brunswick to account for the presence of only one item in the estimates for the province—$13,600 for the St. John quarantine station? There is no epidemic in the province so far as I know. Why therefore this special and sole attention to the quarantine station? It is

unfortunate if the quarantine station has the effect of keeping out of the province all votes for public buildings.

Mr. ELLIOTT: Do I understand my hon. friend to object to the vote?

Mr. MacLAREN: Yes, I am objecting to the smallness of the vote.

Mr. ELLIOTT: I can assure my hon. friend that the vote is adequate to make the required improvements in the economical manner in which we make them.

Mr. PRICE: Mr. Chairman, I have been very much amused by the defence offered by the government to-night of public expenditures, particularly those in the maritime provinces. Especially amusing was the explanation given by the Postmaster General (Mr. Veniot) of the extensions to be made at the Truro post office. It is becoming a habit with the government to fit up old buildings as best they can, jack them up, plaster and replaster them, leaving them in an unsanitary condition, in those constituencies where the Liberal candidate was not successful at the last election. In 1885 a post office was constructed in the city of Moncton when the population was about five thousand. That building has been condemned from time to time by the architect of the Public Works department, by the architect of the Post Office department and by every other official who has inspected it. Yet the gross postal receipts have increased from $65,000 to over $400,000 a year, with net receipts of over $300,000, standing I think about sixth in the whole Dominion in so far as revenue is concerned.

A few moments ago members of the government referred to orders in council, and the former Minister of Public Works (Mr. King) stated that having been out of power for something like two months, the items they had placed in the estimates had no effect whatever on their being returned to power again. That is a very weak argument, and I think no one realizes it better than the hon. gentleman himself. However, he put it over in very good shape.

The discussion on the Mahone Bay post office vote discloses the fact that a defeated and disappointed Liberal candidate was able to prevail on the minister to withdraw that vote for what was admittedly a public necessity. If that is what this government is ready to do on the recommendation of a discredited candidate, which means that they are prepared to accept the responsibility of withholding from the general public in any constituency a post office or any other necessary public building, then I say the time will come when the electorate will deal with that government.

[Mr. MacLaren.]

In the city of Moncton a private individual, a supporter of the present administration, purchased a property for something like $17,000. Four or five years ago, possibly six, but I think no more, the government, having been impressed with the necessity of building a post office in that city, selected the very property that this gentleman had purchased. An election was in sight, and I presume it was thought proper to pay a respectable price to the owner, and they handed him $49,000. This property they rented afterwards at $40 a month, and to-day it is occupied by an employee of the Canadian National Railways at a rental of no more than $49 per month, the government paying the taxes—a very fine income from an investment of nearly $50,000.

Now, from time to time the government has promised the people of Moncton a post office. As a matter of fact the present building is not sanitary, and it is so inadequate that the government has found it necessary to go to a middleman and get him to rent a place across the street and sublet it to the department. That is the condition of affairs there to-day—the government instead of renting the property from the owner is renting it from a middleman.

Mr. VENIOT: Not for the post office.

Mr. PRICE: That is the practice of this government. As I say, the people of Moncton require a new post office building. The old building has been repaired from time to time, and instead of putting up a new post office—which, as I have shown, is very badly needed to carry on properly the business of the department—the government are subjecting the postal employees to the inconvenience of looking after the public business in a building which has been condemned and which is inadequate and badly located.

Progress reported.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.

Monday, February 20, 1928

The house met at three o'clock.

PRIVATE BILLS

FIRST READINGS

Bill No. 46, respecting The Nipissing Central Railway Company.—Mr. Lang.

Bill No. 47, to incorporate Canadian American International Bridge Company.—Mr. Edwards (Ottawa).

Bill No. 48, respecting The Calgary and Fernie Railway Company.—Mr. Gershaw.

IMMIGRATION INQUIRY

REFERENCE TO SELECT STANDING COMMITTEE ON AGRICULTURE AND COLONIZATION

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, I move that the house proceed to government notices of motion, in order to take up the motion which stands in my name. It is the motion which refers matters pertaining to the Department of Immigration to the committee on agriculture and colonization. I have no doubt the house will wish to have the committee consider these matters while the debate on the budget is in progress.

Mr. SPEAKER: By unanimous consent Mr. Mackenzie King moves, seconded by Mr. Lapointe:

That the Immigration Act and regulations thereunder, including the work of the Department of Immigration and Colonization, be referred to the committee on agriculture and colonization for consideration and report.

Motion agreed to.

PENSIONS AND SOLDIER PROBLEMS

CONCURRENCE IN INTERIM REPORT OF SPECIAL COMMITTEE

Mr. C. G. POWER (South Quebec) moved:

That the interim report of the special committee on pensions and returned soldiers' problems, which was presented on the 17th of February, be concurred in.

Motion agreed to.

MARINE AND FISHERIES COMMITTEE

Mr. WILLIAM DUFF (Antigonish-Guysborough) moved:

That the annual report of the Minister of Marine and Fisheries for the fiscal year 1926-27, and the annual report of the fisheries branch of the Department of Marine and Fisheries for the fiscal year 1926-27 be referred to the select standing committee on marine and fisheries.

Mr. SPEAKER: This motion can only be made by leave of the house, seeing that no notice was given of it. Is it the pleasure of the house to adopt the motion?

Motion agreed to.

DEPARTMENT OF SOLDIERS' CIVIL RE-ESTABLISHMENT

REPORT OF ROYAL COMMISSION

Hon. J. H. KING (Minister of Soldiers' Civil Re-establishment): On behalf of the Secretary of State (Mr. Rinfret) I table the report of Commissioner Hunter and also the evidence taken before him.

Hon. R. J. MANION (Fort William): Will the minister also table the special audit of Gordon C. Scott, dealing with the same matter? I should like to have that report also.

Mr. KING (Kootenay): I shall be very glad to table that also.

QUESTIONS

(Questions answered orally are indicated by an asterisk).

PROPRIETARY ARTICLES TRADE ASSOCIATION

Mr. WOODSWORTH (Winnipeg North Centre):

What action has been taken or does the Government propose to take to protect the public against the operations of the Proprietary Articles Trade Association?

Mr. HEENAN: An investigation under the Combines Investigation Act was made into the operations of the Proprietary Articles Trade Association as an alleged combine of manufacturers and wholesale and retail druggists established to fix minimum resale prices on certain proprietary medicines and toilet articles. The commissioner, Mr. L. V. O'Connor, reported, on October 24, 1927, that the association was operating against the public interest. Immediately after the publication of this report the association withdrew its stop-list and ceased operations.

UNLOADING COAL AT HALIFAX

Mr. SMITH (Cumberland):

1. Is pier No. 9, in the city of Halifax, Nova Scotia, reserved for use of Canadian National Railways?
2. Was a large quantity of American coal unloaded at this pier during 1927?
3. If so, for whom was such coal unloaded?
4. By whom was such coal used?

Mr. DUNNING:

1. Not exclusively; portions being leased.
2. Not by or for the Canadian National Railways.
3. No information.
4. No information.

COLPTON MAIL CONTRACT

Mr. ERNST:

1. Was a new contract recently executed by the Post Office Department for the carriage of the mail from Colpton station to Colpton post office, Nova Scotia?
2. If so, who were the parties tendering, and what was the amount of the tender of each person?
3. Were any representations made to the department of the Postmaster General or any official thereof, respecting any of the parties tendering?
4. If so, by whom?

Mr. VENIOT:

1. Yes.

2. The amount involved being under $200 per annum, it was not necessary to invite tenders.

3 and 4. See answer to No. 2.

BARSS CORNER—NEW GERMANY MAIL CONTRACT

Mr. ERNST:

1. Was a new contract recently executed by the Post Office department for the carriage of the mail from Barss Corner to New Germany post office, Nova Scotia?

2. If so, who were the parties tendering, and what was the amount of the tender of each person?

3. Were any representations made to the department of the Postmaster General or any official thereof, respecting any of the parties tendering?

4. If so, by whom?

Mr. VENIOT:

1. Yes.

2. L. S. DeLong, Barss Corner, $779; Everett F. Langille, Barss Corner, $789.

3. Yes.

4. Government candidate for constituency.

PRICE OF FANCY DELICIOUS APPLES

Mr. STIRLING:

1. The producer in British Columbia receives $2.35 for a box of extra fancy Delicious apples containing about 140 apples, and out of that he pays the cost of their production.

The consumer is paying, on the average, 7½ cents apiece to-day in Ottawa, which is equivalent to $10.50.

2. What are the details of that spread?

Mr. MOTHERWELL:

1 and 2.

The following prices cover fancy Delicious apples, as prices for the extra fancy grade were not obtainable:

	Per box
Shipping point price, $2.35 to $2.60, mostly	$ 2 45
Freight to Ottawa	75
Heating charges	10
Brokerage	05
	$ 3 35
Wholesale price to retailer, $3.50 to $3.75, mostly	$ 3 75
Retail price to consumer, $4.25 to $4.50, mostly	4 50

When sold by the specimen the retail price is higher, ranging from 2 apples for 25 cents to 5 apples for 25 cents, according to size, average 4 for 25 cents.

[Mr. Ernst.]

DEPUTY MINISTER OF JUSTICE

Mr. ANDERSON (High Park):

1. What is the salary of the Deputy Minister of Justice?

2. Was not the salary of the Deputy Minister of Justice raised to $10,000 because the then deputy was able to and did personally attend and argue appeals before the Privy Council?

3. Does the present Deputy Minister of Justice personally attend and argue appeals before the Privy Council?

4. If not, why?

Mr. LAPOINTE:

1. $10,000.

2. No.

3. Since his appointment in 1924 it has not been found necessary to instruct him to attend personally before the Privy Council.

4. He has during that period been needed as deputy head of the department in Ottawa, where the work has been consistently increasing.

WELLAND CANAL

Mr. TELFORD:

1. On what date was the construction of the Welland canal commenced?

2. What amount has been spent on the construction of the Welland canal up to January 1, 1928?

3. What amount has been expended on the Welland canal in each year since the commencement of the work?

Mr. DUNNING:

1. During September, 1913.

2. $87,465,040.90.

3. Welland canal appropriations:

1905-06	$ 13,231 97
1906-07	10,825 27
1907-08	8,300 34
1908-09	19,993 37
1909-10	9,979 91
1910-11	21,229 35
1911-12	23,138 60
	$ 106,698 81

Welland ship canal appropriations:

1912-13	$ 112,890 92
1913-14	994,257 60
1914-15	4,074,200 69
1915-16	4,909,732 51
1916-17	3,513,769 82
1917-18	1,235,046 59
1918-19	1,823,875 96
1919-20	3,499,963 35
1920-21	5,070,297 57
1921-22	5,429,566 86
1922-23	6,404,157 18
1923-24	7,192,506 60
1924-25	10,097,045 62
1925-26	11,863,209 14
1926-27	13,988,961 74
April to December, 1927	11,362,635 52
	$ 91,678,816 48

Less: Plant sold and collected for during fiscal years 1921-22 to 1927-28, inclusive.. ..	4,213,775 58
Cost to December 31, 1927..	$ 87,465,040 90

Expenditures prior to 1913-14 were for surveys and investigations preliminary to commencement of construction work.

QUESTIONS PASSED AS ORDERS FOR RETURNS

EXPORTATIONS AND IMPORTATIONS OF BUTTER

Mr. GEARY:

What is the total amount of butter and the value thereof in each month from April 1, 1926, to January 31, 1928: (a) exported to Great Britain; (b) exported to other countries; (c) imported from Australia; (d) imported from New Zealand?

MAIL CARRIER ROUTES IN PICTOU COUNTY, N.S.

Mr. CANTLEY:

1. How many mail carrier routes are now maintained in the county of Pictou, Nova Scotia?
2. What points do these cover?
3. What is the mileage of each?
4. What is the remuneration paid for each route?
5. What is the name of the contractor?
6. When does the present contract cease in each case?
7. What is the average cost per mile for these routes where one horse conveyance is used?

DISMISSAL OF POSTMASTERS IN NEW BRUNSWICK

Mr. JONES:

1. How many postmasters in the province of New Brunswick have been dismissed since October 1, 1926?
2. What are their names, the names of the post offices, and the federal constituencies in which said post offices are located?
3. How many of said positions have been filled to date, and on whose recommendations were the appointments made?
4. In how many and in what cases were investigations held?

RAILWAY SECURITIES—DATES OF ISSUE

Mr. WHITE (London):

What are the dates of issue of the various securities listed in schedule V, page 15, of the Public Accounts of 1927?

UNOPPOSED MOTIONS FOR PAPERS

NOVA SCOTIA LEGAL FEES

Mr. ERNST:

For a return showing the names of all persons employed as counsel or solicitors in the province of Nova Scotia during the calendar year of 1927 by the Department of Justice in the prosecution of cases arising out of the Customs and Excise Acts, and of cases in the Exchequer court arising out of seizures made by officials of the customs and excise service, showing the respective amounts paid to each of such counsel and solicitors.

ALMVICK TOWNSHIP INDIAN AGENT

Mr. MAYBEE:

For a copy of all correspondence, letters, telegrams, and other documents in the possession of the government, relative to the dismissal of W. R. Coyle, from the position of Indian agent, on the Indian reserve in Almvick township, Northumberland county, Ontario; and also all similar papers in connection with the appointment of his successor.

RENATA POSTMASTERSHIP

Mr. ESLING:

For a copy of all correspondence, letters, and other documents in connection with the dismissal of Peter Friesen, from the position of postmaster at Renata, British Columbia, and similar papers in connection with the appointment of his successor.

CANADIAN NATIONAL RAILWAYS—STURGEON FALLS BRANCH LINE

Mr. LAPIERRE:

For a copy of all correspondence, letters, telegrams, petitions, and other documents in the custody of the government in connection with a demand for a branch railway from a point near Field on the Canadian National railway to Sturgeon Falls, Ontario.

MARITIME FISHERIES COMMISSION

Mr. FRASER:

For a return showing:—

1. The total cost of the royal commission investigating the fisheries of the maritime provinces, up to and including January 31, 1928.
2. The personnel engaged as members of such commission and as secretaries, stenographers, counsel, or in any other capacity.
3. The respective amounts paid or payable to each person engaged in any capacity with such commission up to and including January 31, 1928: (a) as fees, and (b) as expenses.

RELATIONS WITH SOVIET RUSSIA

Mr. SPENCER:

For a copy of all correspondence, telegrams, resolutions, orders in council, reports, or other documents in the custody of any department of the government of Canada, in any way relating to the breaking off of diplomatic relations with Russia during 1927.

Mr. MACKENZIE KING: In connection with this motion there is some correspondence with the British government on the matter, and before bringing down that part of the correspondence the government would wish to have the consent of the British government; otherwise the return will be brought down as it stands.

Mr. HEAPS: I think the Prime Minister made that statement to the house last Thursday. Has there been any reply yet from the British government?

Mr. MACKENZIE KING: Not yet.

SENATE REFORM

On the orders of the day:

Mr. J. S. WOODSWORTH (Winnipeg North Centre): Is it the intention of the government at this session of the house to take any action looking to the reform of the Senate? I have no reference whatever to the appointment of new Liberal senators.

Mr. SPEAKER: Notice should be given in the case of such an important question.

UNEMPLOYMENT RELIEF

On the orders of the day:

Mr. A. A. HEAPS (North Winnipeg): Has the Minister of Labour received from any provincial government or any municipality throughout the Dominion a request that the federal government give relief in regard to the unemployment situation?

Hon. PETER HEENAN (Minister of Labour): We have not had a request to contribute, but the Premier of Ontario and, I think, the Premier of Manitoba, inquired if we intended to carry on the old system of contributing one-third.

Mr. HEAPS: Will the minister be willing to table the communications he has had with those two governments?

Mr. HEENAN: I will table them tomorrow.

THE BUDGET

DEBATE ON ANNUAL FINANCIAL STATEMENT OF MINISTER OF FINANCE

The house resumed, from Thursday, February 16, consideration of the motion of Hon. J. A. Robb (Minister of Finance) that Mr. Speaker do now leave the chair for the house to go into committee of ways and means.

Mr. C. H. CAHAN (St. Lawrence-St. George): Mr. Speaker, when the leader of the opposition (Mr. Bennett) invited me to reply to the address on the budget of the Minister of Finance (Mr. Robb), I could not but accept the invitation as an expression of personal confidence and goodwill on his part; but the task of replying to that address and of setting forth as best I can the views and policy of the Conservative party in this house and in the country on the several matters enunciated by the Minister of Finance is, I find, a grave duty and responsibility and, therefore, I ask the indulgence of the house when I attempt to perform that duty.

The Prime Minister (Mr. Mackenzie King) in a recent debate endeavoured, as he frequently does, to distinguish between the expressions "equality of status" and "differences of functions." I presume he will not disagree with me in the suggestion that hon. members on this side of the house have an equality of status with members of the government and their supporters on the other side. The difference of function is one which, I think, he will also admit. We have had from the government from time to time the expression of their function in giving a very incomplete statement of the facts relating to the administration of the government and the financial and commercial conditions of the country. After the Minister of Finance has presented his budget, in which he confines himself to the truth but to a very incomplete statement of the truth, it is always necessary that members on this side should fulfil their onerous duty of placing the full facts before the country.

I notice that on the very evening on which the Minister of Finance made his budget speech, another gentleman, who is very prominent indeed, or who wishes to be so, in the public life of this country, made a speech in the city of Montreal in which he claimed for himself and one or two of his associates the full responsibility, and corresponding gratitude of the public, for all the advantageous results which the Minister of Finance had noted. I do not know and I cannot judge from personal knowledge of the capacity of Sir Henry Thornton as an administrator of the railways of this country, but apparently he thinks that the Prime Minister, the Finance minister and the Minister of Railways are mere lunary satellites who become known to the public only when they stand in the reflected light of his great sun or star. But in this house we must look to the ministers of the government, who have assumed the responsibility of the administration of public affairs in Canada for a statement and explanation of their conduct in the administration of their respective offices, and I think the government and parliament and the people of this country would be better satisfied if Sir Henry Thornton would not so often obtrude himself into matters of which he has only a partial knowledge and no experience whatever.

The Finance minister, in making his statement to the house, dealt with the net debt of the country, and, simply because Sir Henry Thornton has obtruded himself into this public discussion, I intend to reflect somewhat upon the part he plays in the administration and in respect of the net and gross liabilities of this country.

The net debt of Canada on March 31, 1927, was $2,347,834,370, showing on the face of the accounts a reduction of $41,896,729.33 in the net debt over that of the preceding year. And yet the national railway indebtedness, to the public only, increased in 1927 by $46,000,000.

The certificate of the firm of chartered accountants who have been employed for the first time by the finance minister to give a certificate as to the actual financial condition of the country, and who have audited the public accounts for the first time, contains the following:

We certify that the balance sheet has been compiled in a manner similar to the corresponding statements of previous years, and does not include in the net debt of the Dominion issues of the Canadian National Railway Company and companies included in its system, which carry the guarantee of the Dominion. The details of such guarantees are shown separately in the public accounts.

That I think is the first time that that specific statement has been placed in the return of the public accounts, and on that account it is interesting to note that the chartered accountants who have now for the first time audited the public accounts found it necessary in the fulfilment of their duty and responsibility to make that specific explanation.

The long term indebtedness of the Canadian National railways in respect of securities issued to and now held by the public amounted on December 31st last to $981,381,796 according to unrevised figures, but I assume they are approximately correct. A large portion of these securities are actually guaranteed as to principal and interest by the government; another portion are guaranteed as to interest only; but whether guaranteed or not, this government and the people of this country must accept full responsibility, morally and legally, for paying ultimately those liabilities; because, although they are kept in a separate account and are the liabilities of what I may term one branch of government, they are nevertheless the liabilities of the people of this country and ultimately must be paid by them. But the entire sum of $981,381,796, no part of which can ever be repudiated by this government, is not included to the extent of one dollar in the net debt of Canada as presented to parliament by the Finance minister in his budget speech.

The liability of the national railway system to the Dominion government for cash advances made out of the Dominion treasury on December 31, 1926—I have not the figures for December 31, 1927, but they will no doubt be given by the Minister of Railways—amounted to $507,848,511. It would be expedient, I think, on another occasion that the Minister of Railways should bring down his returns to this house so that they may be discussed in connection with the budget of the Finance minister with which they are intimately related. But let me remark that of this enormous sum of cash advances made by the government to the Canadian National railways not one dollar of interest has ever been paid. Only simple interest is computed thereon, and the simple interest up to December 31, 1927—I have not the exact returns before me—undoubtedly amounted approximately $226,500,000. In addition there is included, I may say by way of explanation, certain other amounts to which I have made no reference whatsoever. There is included in the long term indebtedness of the national railway, as shown by the balance sheet of the company, about $436,500,000, which represents approximately the amount expended by the Canadian government upon certain government railway lines, such as the Intercolonial, the Prince Edward Island railway, eastern branch lines, and the Transcontinental railway, which entered into the consolidation of the national railway system. That is another amount which is entirely excluded and which may properly be placed, as the Minister of Railways has contended once in my hearing in this house, in a different category from those cash advances to the amount of $507,848,500 which had been made by the Dominion government to the railway company itself up to December 31, 1926.

I may add that on December 31, 1927, the long term indebtedness of the Canadian National railways to the investing public was, as already stated, $981,381,796. The long term indebtedness to the Dominion government, subject to the explanation which I have made, was $1,225,046,995, including, as I say, the cash advances amounting to $436,500,000—and the total long term indebtedness amounted, on December 31, 1927, according to the unrevised report to which I have had access, to $2,236,428,791. I submit, Mr. Speaker, that those figures are sufficiently staggering to have received some comment and explanation from the minister who presides over the Department of Finance.

Now, the minister also laid claim to reductions in the net debt. He stated, according to the report tabled, that the net debt of Canada was actually reduced by $41,896,729, for the fiscal year 1926-27. That is true in the restricted sense that the accounts of the Department of Finance actually showed such

a reduction in the net debt. But there is this other department or branch of government, namely, the Canadian National railways, whose liabilities, as I have already said, and as I wish to emphasize, are not included in that statement of the Finance minister. When the Finance minister, therefore, reported a net reduction in the debt for the fiscal year ending March 31, 1927, if I remember, of $41,896,729, he failed to take into consideration the increases in the long term liabilities of that other branch of government to which I have called attention, which, during the calendar year ending December 31st last, increased its long term liabilities to the public—let me confine it to that, excluding its debt to the government for public advances—increased its long term public debt from $935,383,109 on December 31st, 1926, to $981,381,796, on December 31st last, an increase for the year of $45,998,697, approximately $46,000,000, in the net debt to the public on account of the railway alone, as compared with a decrease of $41,900,000 in the debt to the public of those other branches of government over which the Finance minister presides. When the minister made that statement of decrease in the public debt there was loud applause on the other side of the house. I fail to hear any applause from the other side now.

Some hon. MEMBERS: Hear, hear.

Mr. CAHAN: I am glad my friends from the west respond. They always treat me in the most chivalrous way possible. The Finance minister made a statement to the house and the country, and I repeat that it was far from being the whole truth.

Some hon. MEMBERS: Oh, oh.

Mr. CAHAN: Far from being the whole truth, and the statement which I am now making includes the truth in respect to the Railway department. The Finance Minister and some of his journalistic supporters throughout the country, when members on this side of the house, in attempting a solution of any public problem, present the whole truth, regard it as an unpatriotic action. I have only to say, with the best of goodwill to the Prime Minister and those who surround him, that I and other members on this side are not unwilling to enter into a comparison with him and his associates at any time and on any occasion with respect to the performance of our patriotic duty, and I may add that we on this side have as much disinterested loyalty to the best interests of this country as the Prime Minister or any other hon. member, even his most humble supporter or journalistic advocate.

[Mr. Cahan.]

The Prime Minister reported also a reduction in the net debt of Canada during the four years from March 31, 1923, if I have the figures correctly, to March 31, 1927, of $105,942,498.65—he was particular even to the sixty-five cents. That statement was also true in a restricted sense, but it was not the whole truth in respect of the reduction or increase of the liabilities of the government and of the people of this country. The fact is that the long term debt of the national railways to the public, excluding the original appropriations for the construction of the government lines, excluding the advances made in cash by the government to the national railway system, excluding the simple interest which has accrued on those cash advances—excluding all those things, the net debt of the national railways to the public alone, which amounted on December 31, 1923, to $823,099,056, was increased on December 31st, 1927, to $981,381,796, an increase of net indebtedness to the public in that time of $158,282,740, as compared with a decrease of $105,942,498 which the Finance minister showed in respect of the departments whose accounts he calculated in his return. If all the governmental accounts were kept as they should be, and the liabilities shown as they should be in the financial statement which the Minister of Finance annually submits to parliament, he would not have been able to announce a reduction in the debt in those five years of $105,942,498; he would have had to announce an increase in the net debt of the country during the same time of $52,340,000, on account of the increasing net liabilities of the government to the investing public during the four years mentioned.

Mr. BENNETT: By the people of Canada?

Mr. CAHAN: By the people of Canada, to the investing public alone.

On a proper basis of accounting the $65,000,000 of bonds which, as the Finance minister discloses, were issued by the Canadian National Railways as of July 1, 1927, guaranteed by the Government of Canada, would have appeared as a direct liability of the Government of Canada.

But these bonds do not, by the present system of accounting, appear as part of the consolidated debt, nor as a part of the net debt of Canada, although on January 1 last $60,272,764 of the proceeds of this loan had been expended—an amount which more than wipes out the Finance minister's estimate of $38,815,000 as the prospective reduction of the net debt during the year ending March 31, next.

The Finance minister continued:

It is with pleasure and satisfaction that once again we are in a position to propose further reductions in taxation.

He was not speaking of the rate of taxation. He was giving the impression—I think deliberately—to this parliament and to the people that there had been great reductions in the volume of taxation from year to year under the Liberal administration. He might have added, even in giving his own partial description of the facts for the sake of better clarity and greater verity, that the sales tax and income tax reductions—both reductions of special war taxes—were in fact reductions merely in increases of taxation which this government had previously imposed. They found the sales tax levied at the rate of 3 per cent; they increased it to 6 per cent. They then discovered that this rate was an intolerable burden on the country, increasing exorbitantly, as every per cent of it did, the cost of living. They first reduced it to 5 per cent, then to 4 per cent, and now they propose to reduce it to 3 per cent—just where they found it on attaining office. I think the opinion on both sides of the house is that when making their last reduction they should have announced the abolition of this tax, for thereby they would have done more than by any other single act of government to reduce the average cost of living in this country, which is so high in comparison with the cost of living in the same state of society across the border. They increased, two years ago, the income tax so as to impose double taxation on the incomes of all companies—once on the incomes as earned, and again upon the same incomes when distributed. Now, in a round about way—and apparently this government can never do anything frankly and directly—they propose to mitigate in some degree the burdens which they themselves had previously imposed, and which the people have found almost intolerable.

But apart from decreases in their own impositions of taxes, the volume of taxation has not been diminished since the Liberal party took office away back in 1921. In 1924 their excise taxes increased from $107,989,893 in 1923 to $123,668,847. In 1925, by reductions made of their own increase of taxation, the excise tax was reduced to $89,330,838—a decrease of $34,338,009 below 1924. Between 1924 and 1925 there was some reduction in the amount collected of other war taxes which were imposed by themselves. But, as I said before, except in these instances there has been no reduction in the volume of taxation annually collected. The total taxation collected rose from 409 millions in 1922 to 459 millions in 1923, to 479 millions in 1924. The total taxation then decreased by reason of the reduction in the taxes which they had previously imposed, and in 1925 the volume decreased to 395 millions. But the returns show that the amount of taxation increased next year to 443 millions, and again in 1927 to 471 millions. In the fiscal year 1927, which should have showed such enormous reductions in taxation according to the statement of the Minister of Finance, they obtained from taxation 61 millions of dollars more than in 1922, their first year of office.

I ask the indulgence of the house to place on Hansard a short statement, which may be examined by hon. gentlemen on both sides of the house, showing how these increases took place in the four years which I have briefly reviewed.

Mr. WOODSWORTH: Mr. Speaker, personally I do not object to tabular statements being placed on Hansard within reason, but I would urge that we have some sort of uniform action in this regard. It was only at the last session of the house—

Some hon. MEMBERS: Order.

Mr. WOODSWORTH: I think I am in order.

Mr. SPEAKER: Does the hon. gentleman rise to a point of order?

Mr. WOODSWORTH: Yes, your honour. On the point of order, I say I do not personally object to having certain tables placed on Hansard; I think it is a good thing; but I would remind the house that there ought to be uniform action in this regard. My colleague from North Winnipeg (Mr. Heaps) was stopped Thursday evening from placing such a table on Hansard. An hon. member objected, and the Prime Minister, supporting the objection, said he objected on behalf of the house to this practice. If objection is to be taken in the one case I think it should be taken in all.

Mr. SPEAKER: There is a rule of the house, and it is a custom also, that no document may be placed on Hansard without its being first read by the hon. member addressing the house. There is, however, a time-honoured exception in the case of the budget speech delivered by the Minister of Finance and the speech in reply by his chief critic. I think the house would be living up to its traditions by allowing the Minister of Finance and his chief critic to place certain statistics on Hansard. Otherwise it would have to be by unanimous consent.

Mr. MACKENZIE KING: Mr. Speaker, inasmuch as mention of myself has been made by the hon. member for Winnipeg North Centre (Mr. Woodsworth), I should like to say that he is quite right. I did take exception to his colleague putting on Hansard last Thursday a lot of material that he had in the form of a statistical table. At the time I think the hon. member mentioned that last session I had taken exception to an hon. gentleman opposite adopting the same course. In both cases I did so simply to uphold your honour in maintaining the rules of the house, and I still think that principle ought to be observed. Either we should alter the rule or have it observed. With respect to the time-honoured custom which you, Mr. Speaker, have mentioned, of giving to the critic immediately replying to the Minister of Finance a wider latitude than is granted to hon. members generally, I have no exception to take. Apart from that, I think it is the duty of every member to uphold the rules, and I believe we shall get further ahead if we make no exceptions.

Mr. WOODSWORTH: May I ask the Prime Minister whether he will have that rule observed—

Some hon. MEMBERS: Order.

Mr. SPEAKER: I would refer the house to Bourinot, page 365.

Mr. WOODSWORTH: I object to the statement being placed on Hansard.

Some hon. MEMBERS: Order.

Mr. CAHAN: The very simple statement which I am putting on Hansard gives the figures to which I have alluded and explains them, so that they may be open to further criticism if necessary. I should have no objection to reading them because, in this case fortunately, I am not limited to forty minutes. The statement is as follows:

Increase of Customs and Excise Duties
Increase of Taxation

1922—	
Customs duty	$121,487,393
Excise duty	36,909,899
Total	$158,397,292
1923—	
Customs duty	$133,803,370
Excise duty	36,259,654
Total	$170,063,024
1924—	
Customs duty	$135,122,344
Excise duty	38,616,038
Total	$173,738,342
1925—	
Customs duty	$120,222,453
Excise duty	39,005,343
Total	$159,227,796
1926—	
Customs duty	$143,933,110
Excise duty	43,370,231
Total	$187,303,341
1927—	
Customs duty	$158,966,367
Excise duty	49,139,913
Total	$208,106,280
1928 Estimates by minister—	
Customs duty	$153,600,000
Excise duty	57,000,000
Total	$210,600,000

Total Taxes Collected

1922—	
Customs and Excise	$158,397,292
Special War Taxes	251,386,774
Total	$409,784,066
1923—	
Customs and Excise	$170,063,024
Special War Taxes	289,624,767
Total	$459,687,791
1924—	
Customs and Excise	$173,738,342
Special War Taxes	305,705,108
Total	$479,443,450
1925—	
Customs and Excise	$159,227,796
Special War Taxes	236,494,996
Total	$395,722,792
1926—	
Customs and Excise	$187,303,341
Special War Taxes	256,524,653
Total	$443,827,994
1927—	
Customs and Excise	$208,106,280
Special War Taxes	262,890,761
Total	$470,997,041

Certain changes in the tariff and in the tariff policy of the country have been announced in this budget. Before proceeding to discuss these items, many of which are exceedingly difficult of discussion inasmuch as they call for a great deal of technical knowledge and skill, I wish to state what I believe to be the general tariff policy of the Conservative party in this house and in the country. We approve of tariff changes and generally of such tariff changes from time to time as the changing conditions of domestic industry and of foreign trade may require. In effecting such revision and the correlative readjustment of tariff rates we on this side

of the house stand by certain principles. These principles I intend to enumerate as best I can:

1. The stimulating and developing of our vast and varied natural resources.

2. The preservation and enlargement of the markets at home and abroad for Canadian farm products.

3. The establishment, extension and development of Canadian industries on stable and remunerative bases, so as to induce investments in Canada, of Canadian as well as foreign funds, and particularly so as to create and furnish such ever-extending and diversified employment to the Canadian people as will preclude any considerable emigration of Canadians to the United States of America for the purpose of seeking more remunerative employment in that country.

4. The stabilization in Canada of the costs of living and the costs of implements of production on such comparatively low bases as will enable our people, in producing and selling our surplus of national products abroad, to compete advantageously with the products of foreign countries in our common markets abroad.

5. The reduction of the customs tariff or the imposition of higher excise taxes, whenever and wherever necessary, to prevent the immoral use or abuse of the existing tariff, or any unfair advantage being taken of the tariff, as for example by those who would resort to profiteering by exacting unduly high prices for their products from domestic consumers, under the protecting elements of the existing tariff.

6. The adjustment from time to time of our preferential treatment of the products of the British countries comprised within the British commonwealth of nations, so as to modify preferences which are given at the expense of the Canadian farmer, dairyman or other industrial worker, and which tend to restrict domestic employment and decrease the general standards of living in this country; and

7. The promotion of the export and import trade of Canadian ports wherever possible.

This I understand to be a general statement, in my unexpressive language, of the tariff policy of the Conservative party in this house and in the country. We fully realize that in such a widely extended country as the Dominion of Canada the economic independence of any one section or of any one group or class is an unrealizable dream. We realize that each section and group are dependent upon each other section and group for the promotion of our common interests. We must stand or fall together in this country. No one section of Canada can suffer permanent injury without detriment to the whole body politic. In a word, we cannot conserve the economic interests of the whole country by promoting exclusively the interests of any one group or class. No one section of the country should be permitted to seek its sole aggrandizement at the expense of the whole body politic.

We recognize also that the monopoly of either trade or industry is often-times a source of economic evil, and, when such tendencies become manifest, they must, like every other public evil, be subjected to the control and restraint of this parliament. But we remember, and we affirm, that unfair and dishonest foreign competition is also prejudicial to the producers of this country, and measures for its due restraint are in like manner necessary and commendable. In every such case, however, such measures should be conceived and carried into effect for the general public interest of Canada, and not for the aggrandizement and profit of any particular group or class, no matter how closely associated they may be to the government of the country.

Experience has disclosed that each group or class or section of the country will tend to govern in its own interests when it has the opportunity and is irresponsible; but members of this parliament, on either side of the house, are, I suggest, representative of the whole Canadian nation, and as such they must exercise their authority without fear or favour in the interests of the Dominion as a whole.

The national policy as formulated by Conservative statesmen was designed, and admittedly designed, for the political unification and for the material and economic development of the whole country. Readjustments of the customs tariff for the encouragement of domestic industry were advocated only as one of the several elements of that policy. The national policy, in its broad outlines, contemplated the extension of the dominion from sea to sea; the opening up of the northern half of this continent to trade, traffic and transportation by railways and canals; the building of wharves and docks for the increase of commercial and shipping facilities; the intensive encouragement, on an extensive scale, of such primary industries as agriculture, forestry, mining and fishing; and, since men and women cannot live by bread alone, the national policy contemplated the establishment and extension in Canada of secondary

industries suitable to the existing conditions of this country, which will supply, so far as reasonably possible, the multifarious equipment, clothing, furniture, utensils and other things which satisfy the needs of our daily life. There are thousands of our own people who are not well adapted for the work of our primary industries of agriculture, mining, forestry and fisheries, and it is therefore necessary, if we would conserve the interests of the whole country, that we should establish from time to time those industries suitable to our necessities which will enable large classes of our people to obtain and retain employment in Canada, where they may contribute by their skill and labour to the economic welfare and advancement of our own country. The development of our primary industries being assured and safeguarded, the men who by their skill and labour in our domestic factories transform the raw materials of leather into boots and shoes, of coal and iron ore into iron and steel products, of wood pulp into paper, of wool into clothing and the like, are creating national wealth and promoting the general prosperity of the Canadian people. The secondary industries we maintain should be encouraged. But we must ever bear in mind that there can be nothing final in the political, industrial and commercial development of a widely extended country such as ours, which is only partly prospected, only partly explored, and its future progress and prosperity must depend upon our loyal, and sometimes our self-sacrificing, cooperation for the attainment of ends which we all have in common.

I obtained from the department of statistics a statement of the industrial production of Canada for the year 1926, and to save the time which would be consumed in reading it I ask leave now to have it inscribed upon Hansard.

Mr. WOODSWORTH: Mr. Speaker, I object.

Mr. CAHAN: The statement in question is as follows:

Industrial Production of Canada for Year 1926

Industry—	Gross	Net
Agriculture	$1,786,670,000 †	$1,340,000,000 †
Foresty	465,336,791 ‡	323,408,256 ‡
Fisheries	73,052,985	56,360,633
Trapping	14,290,861	14,290,861
Mining	279,674,780	240,437,123
Electric power	115,467,940	88,933,733
Total primary production	$2,734,493,357	$2,063,430,606
Construction	$ 431,917,233	$ 279,917,323
Custom and repairs *	105,908,000	67,687,400
Manufactures**	3,250,000,000 §	1,497,000,000 §
Total secondary production **	$3,787,825,233 §	$1,844,604,723 §
Grand total	$5,872,402,540 †	$3,582,309,593 †

* Statistics for custom and repair were not collected after 1922, and to effect comparability the totals for 1926 were estimated according to the percentage charge in the data for manufacturing.

** The item "manufactures" includes dairy factories, sawmills, fish canning and curing, shipbuilding and certain mineral industries, which are also included in other headings shown. This duplication amounting in 1926 to a gross of $649,916,050 and a net of $325,725,736, is eliminated from the grand total.

† Preliminary subject to revision.

‡ Partly estimated.

§ Estimated and subject to revision.

The net production of the industrial life of Canada, as estimated by the statistical branch of the Department of Trade and Commerce for the year 1926, eliminating all duplications, amounts to $3,582,309,593, of which we exported only $1,315,193,000 to foreign countries. Now those exports undoubtedly contained articles imported into this country which entered into the processes of manufacture here, and therefore when I am dealing with them I am giving the largest possible measure of advantage to exports. This clearly indicates the value of the domestic markets of this country which consumed over 63 per cent of the entire net production of Canada. Thirty-seven per cent, apparently, was sent abroad. In the United States, where industry is far more equally balanced, where there is a larger consumption in the country of primary products, where their exports of products—except in one or two instances such as cottons and tobacco—are largely manufactured goods which are constantly increasing, their foreign trade is only from about 12 to 13 per cent of their domestic trade; and I suggest that as our country becomes developed, as we cease to

send abroad our raw products to enter into the factories there and to give employment to the people across the border, we shall establish a better balanced trade, by developing our domestic consumption, which will necessarily restrict in some particulars the export trade of the country.

No one who closely investigates the items which compose Canada's imports from abroad can possibly doubt but that it is entirely feasible, under reasonable tariff conditions, to produce in this country, for domestic consumption, commodities of the value of several hundreds of millions of dollars, which we now import from foreign countries. We are now giving employment, under the system which we pursue, to tens of thousands of workers in foreign countries, instead of giving employment at fair wages to the people of Canada, who, in default of employment at home, are now migrating to seek employment across our southern border.

Agriculture in 1926, according to the statistics which I produce from the statistical branch, furnished throughout Canada about 37 per cent of the net production of all the industries of this country. In certain provinces agriculture largely predominates. I find that in Saskatchewan about 90 per cent of the net economic production was due to agriculture; that in Prince Edward Island the percentage was 84; in Alberta, 75; and in Manitoba, about 60. In each of the other provinces agriculture furnished less than one-half the net production. The three prairie provinces in which the production is so largely of grain, and Prince Edward Island where the production is also so largely agricultural, must, and we on this side of the house entirely agree, receive special consideration from this parliament, and that special consideration must result in this parliament conceding, from time to time, the special requirements which are necessary for the encouragement of that great industry. But while we must give every encouragement and assistance to the producers of the prairie provinces, we simply say that we must be careful not to discriminate against, and not to destroy, the industrial life of these eastern provinces upon which the welfare of so large a body of our population entirely depends.

The Minister of Finance suggested also that there had been a large increase in the trade of this country. I find that for the year ending March 31, 1927, there was an increase in imports, if you please, of $103,000,000, as compared with the previous year, 1926, and a decrease in exports of $61,100,000, a gross adverse alteration in our foreign trade of $164,100,000. Similar conditions have prevailed during the ten months ending January 1, 1928, as compared with the ten months ending January 1, 1927, resulting in an increase of imports for consumption of $57,000,000, and a decrease of exports of $35,350,000, another adverse alteration in our foreign trade of over $92,000,000 in ten months in the aggregate.

Another alarming feature, I suggest—and I stress it because I am going to refer to it in detail in dealing with the tariff schedule—is that this increase of over $160,000,000 in imports during twenty-two months is largely represented by manufactured products, which could be manufactured and produced in Canada, but which were almost wholly manufactured in the United States and then imported into Canada. The gross value of our imports of manufactured goods from the United States seems to be ever increasing, and of the proceeds of our exports of the products of the three prairie provinces to Great Britain we now use over $200,000,000 a year in cash to cover our adverse balance of trade with the United States. To cap the climax, I find that during the fiscal year 1927 we exported to the United States 1,608,657,174 kilowatt hours of electric energy to enable their factories employing American workmen, thousands and tens of thousands of them born in Canada, to produce for export to Canada manufactured goods which if produced in this country would have given employment to tens of thousands of our own residents.

In dealing with the new tariff schedule, allow me to direct attention to the real crux of many questions which arise in a consideration of the 159 tariff changes announced by the Minister of Finance. I suggest that the real question is not the rate of customs duty on imports, which enter into competition with the products of any Canadian factory. The Canadian factory pays customs duties on materials and component parts produced abroad, which are imported and enter, during the process of manufacture, into the Canadian factory's products. It is the net spread between the amount of customs duties which the Canadian factory pays on its imports of materials from abroad, and the amount of customs duties imposed upon its manufactured products, that enables the Canadian factory to survive in competition with the mass production or with the depreciated currencies and lower costs of labour of other countries, in which the cost of materials and wages have not risen as rapidly as their currencies have depreciated. It is this fact which guides the action of the Minister of Finance and enables him, on the one hand, to please his

western supporters by reducing the tariff rates on manufactured goods and, on the other hand, to appease the manufacturer by reducing the customs duties on the imported materials which are used in the manufacture of his completed product.

In the case of automobiles, for instance, the government at first reduced the net protection by lowering the tariff on the manufactured product, and they sought and received the acclaim of their western supporters. In the end they increased the net protection by reducing the tariff on materials and component parts imported, and also by reducing the sales tax previously imposed on the Canadian product, so as practically to maintain the same net protection and thus permit the Canadian industry to survive. I refer to that because I find the same tactics exemplified in the tariff schedules which have been submitted in the budget for the approval of parliament. But would not an intelligent public—because while you may deceive some of the people some of the time you cannot deceive all of the people all of the time—have more respect for the Minister of Finance and the government which he represents, if he did not resort to this sort of camouflage, but had the courage frankly to admit that by this indirect method he was endeavouring to please both wings of the divided party on which the maintenance of the government in power depends? In the end it is the producers of wool, hemp, iron and steel, and other primary Canadian products who suffer, and as a result of this and similar reductions of duties on raw materials, we find that Canadian growers of wool, dairy producers, and coal, iron and steel producers, are placed under serious disabilities, while their employees from year to year, as I will endeavour to show, are forced to emigrate and seek employment in the republic to the south.

Dealing with the new tariff, we frankly admit that, as trade and industrial conditions change, corresponding changes in the tariff are necessary in order to split up complicated schedules and to clarify existing schedules; but many of these new items, although intended for that purpose, seem to me to complicate matters still more thoroughly. I doubt if the Minister of Finance, in presenting his budget of tariff changes, took into his counsel the Minister of National Revenue (Mr. Euler) who has control of the department administering the customs, because I fancy that the experts of that department will for a long time find greater difficulty in ascertaining what some of the new schedules mean than they have ever had before in connection with any similar tariff items. It is difficult for one who is not an expert to determine the net result of some of the changes proposed. Owing to the variety of cotton products manufactured in Canadian factories I find that different factories are undoubtedly differently affected; but the new duties, as I will endeavour to demonstrate, will, I think, tend to turn over to United States factories a large share of the cotton business and particularly the coloured cotton business of Canada. Some Canadian mills may receive from some items of drawback or some items of customs duty a slight advantage as, for example, in the advance of duty on textiles of cotton mixed with rayon or on pure rayon textiles. Other mills, such as Wabasso, which confine themselves to particular branches of the trade, may reap some slight benefit from some of the changes made. Penmans will probably not be prejudicially affected so far as my vision goes, but I am not an expert. But the Minister of Finance, referring to these cotton schedules of the new tariff, said:

> Coupled with the general lowering of rates on the finished products is a lowering of rates on yarns and other materials used by manufacturers for further processes.

There we have the automobile trick all played over again, the second time in an attempt to appease the conflicting elements which I see on the opposite side of the house. This statement tends to create in the minds of one wing the impression that the customs duties have been lowered all along the line, and in the minds of the other that the net protection to the manufacturer has been maintained. But, continuing, the Minister of Finance said:

> In the proposed changes the needs of the Canadian consumer and manufacturer have been carefully considered, while incidentally the scope of the British preference has been materially widened.

Let me deal for a moment with the alleged widening of the scope of the British preference in respect of cotton fabrics. Four items of the new tariff, namely: 523, 523a, 523b and 523c cover all imports of cotton woven fabrics. Item 523a remains unchanged, evidently, as I think, and as I may suggest, for the purpose of quieting some friends of the administration who probably have special and irresistible claims. Consider first the British preference as shown in these four items. In item 523 the British preferential rate is 12½ per cent; no change. In item 523a the British preferential rate is 15 per cent; no change. In item 523b the old British preferential rate of 22½ per cent is reduced to 20 per cent—a reduction of 2½ per cent. In item 523c the old British preferential rate of 22½ per cent is reduced to 20 per cent—a reduction of 2½ per cent.

There is no change in the British preferential rates on two items; on the other two there is a reduction of 2½ per cent, from 22½ to 20 per cent. If this were all, there might be some substance in the claim of the Finance minister that he is enlarging the scope of the British preference. But the imports into Canada of British cottons are met in this market by a corresponding competition from the factories located to the south of the Canadian border. They, the Americans, are the chief competitors of the British manufacturers in our market. How are the American competitors treated in these cotton schedules? In item 523 the former general rate of 25 per cent against the American is reduced to 22½ per cent, while the British preferential rate is not reduced at all There is a difference of 2½ per cent in favour of the American manufacturer against the British. In item 523b the general rate against the American manufacturer is reduced from 32½ to 27½ per cent—a decrease of 5 per cent in favour of the American competitor. In item 523c the general rate against the American product is reduced from 32½ per cent to 30 per cent. There is another decrease of 2½ per cent in favour of the American manufacturer. I have prepared a short schedule containing only four tariff items showing the old and the new duties, which I will ask leave to place on Hansard:

	Preferential	Intermediate	General
Old item 521. Unbleached cotton.. ..	12½	22½	25
New item 523. Unbleached cotton.. ..	12½	20	22½
Reduction..	0	2½	2½
Old item 522. Bleached cotton..	15	22½	25
New item 523a. Bleached cotton.. ..	15	22½	25
Reduction..	0	0	0
Old item 523. Coloured cotton..	22½	30	32½
New item 523b. Coloured cotton.. ..	20	25	27½
Reduction..	2½	5	5
Old item 523. Coloured cotton.. .. .	22½	30	32½
New item 523c. Yarn dyed..	20	25	30
Reduction..	2½	5	2½

Average reduction in preferential 1¼ p.c.
Average reduction in intermediate 3⅛ p.c.
Average reduction in general 2½ p.c.

The result is that there is an average reduction in the preferential rate in favour of Great Britain of 1¼ per cent, and in the intermediate tariff of 3⅛ per cent. The Minister of Finance is giving foreign goods coming in under the intermediate tariff a better rate than they ever had before, while the general rate against the Americans is reduced by 2½ per cent. Between the British manufacturer and his American competitor in the Canadian market, the American manufacturer, I repeat, in respect of three of the four items, which cover the whole bulk of the imports of cotton fabrics into this country, is placed on a more advantageous basis by either five per cent or 2½ per cent in competition with the British manufacturer. If reducing the tariff in favour of the Americans more than you reduce it in favour of the British, and giving the American competitors a better opportunity of competing in the Canadian market, is enlarging the scope of the British preference, I do not understand the meaning of the English language. I do not make any reflection upon the Finance minister. He, as all hon. gentlemen know, is a genial gentleman who is esteemed on this side of the house as fully as he is on the other, but evidently his intellectual qualifications, like those of the Prime Minister, are somewhat limited in certain circumstances, and he apparently has been misled by some of his advisers into making the mistakes which he did make in the house in delivering his budget speech.

Now look at this situation. The imports of all classes of cotton fabrics from Great Britain were in 1921, 33,320,613 square yards, and in 1926, 35,161,338 square yards, or an increase in the imports of cotton fabrics from Great Britain in five years of nearly 2,000,000 yards. On the other hand, under the tariff as it then stood, the imports of all classes of cotton fabrics from the United States was in 1921, 36,648,986 yards, and in 1926, 30,616,-076 yards. Under the tariff as it stood until

last week, therefore, the American factories lost 6,000,000 yards of Canadian business. The Finance minister, whether he intends it or not, by reducing in greater proportion the general rate on American fabrics, is in fact restoring the American factories to their former position of pre-eminence in the Canadian market.

Mr. DUNNING: Does my hon. friend suggest that the American factories ever were pre-eminent, to use his own word, in the Canadian market?

Mr. CAHAN: My language will stand. Whatever I said I will stand by. Their position was certainly pre-eminent over the British position, and if the hon. gentleman can take any other meaning or implication from my remarks, he is welcome to do so.

Let us look at another characteristic of the new tariff. It is impossible in the time at my disposal to review, separately, all of the 159 items. They will be considered in committee—

Mr. DUNNING: You have all the time you want; you are not limited at all.

Mr. CAHAN: I am glad the minister welcomes discussion. I trust I am supplying him with a certain fund of information which will enable him to weigh well the merits of the tariff schedules produced by his colleague.

Item 569c covers the materials usually imported for use in the manufacture of hat bodies or shapes. All imports covered by this item were free under the old tariff, but the Finance minister was so obviously intent upon "widening the scope of the British preference," as he did in respect of cotton fabrics, that he has left these imports from Great Britain under item 569c free of all customs duty, and he has imposed a duty of 7½ per cent on imports from the United States. That differential rate against American products would assist probably in promoting British trade to the Finance minister's assumed taste.

Now let us look at the drawbacks payable on these same imports from the United States, as shown by item 1029. You will observe that imports from the United States of materials entering into the same articles, which are subject to the 7½ per cent rate, are also entitled to a drawback of 99 per cent when used by Canadian manufacturers "in the manufacture of such articles in their own factories." The Finance minister first gives the British producer a preferential rate of 7½ per cent, but in the result he fails to maintain for the British producer a preferential rate of 7½ per cent, but only one one-hundreth part of it—thus widening the scope of the British preference! There is an old saying I used to hear, that the Lord giveth and the Lord taketh away; blessed be the name of the Lord. The Finance minister gives a preference in one item of the tariff, and then takes away 99 per cent of it in another. Surely all parties interested should praise the name of the Finance minister for his benign extension of the scope of the British preference. On the other hand the American manufacturers, if they are somewhat dismayed by the reduction of 7½ per cent in favour of the Britisher, will thank the Lord that we have an amiable Finance minister in Canada, one who turning around takes 99 per cent of that reduction off in favour of the factories in the United States.

That is amusing, but there is a serious side to it all. Unhappily the predilections of the Minister of Finance in favour of the Britisher, which he never carries into effect, coupled with his predilections in favour of his American competitor, which he always carries into effect, preclude him from seriously understanding the needs of Canadian workmen and Canadian workwomen who have so far resisted the economic urge to leave their own country and take up permanent residence in the United States.

Let me refer to woollens. The Minister of Finance tells us that it is proposed to aid the Canadian weaving industry by granting free yarns for weaving purposes; that the importations of woollen and worsted yarns are large, and that the proposed change should be of material assistance to the industry. This time he evidently means the industry in Canada. The manufacturers of woollen cloth in Canada may well fear Greeks who, like the Finance minister, come bearing gifts. The woollen trade knows what the Minister of Finance evidently has never realized, that there is not now and there have not been any importations of woollen yarns into Canada for the manufacture of woollen cloth. The 55 woollen mills in Canada all spin their own yarns for the manufacture of their own woollen cloth; the mills manufacturing tweeds, overcoatings and so on in Canada are equipped with machinery to carry out all the processes of manufacture from the raw wool to the finished fabric; and the same thing applies to mills in England, France and Belgium as well as in every other part of the world where this industry exists. Under the former tariff the lowest rate on woollen yarns under the British preference was 12½ per cent. None were imported into

Canada, not because of the duty but because neither in England, nor in Belgium, nor in France, nor in any other country of the world, do manufacturers ever export woollen yarns for the manufacture of woollen cloths abroad. There is no source of supply even if it were desired to import these yarns into this country, and therefore the imports are negligible. These woollen yarns are now made free of duty. Perhaps the Minister of Finance has the hope that by putting them on the free list he may encourage the establishment in foreign countries of an entirely new industry, that of manufacturing woollen yarns for export to Canada to be used in making woollen cloths, although that trade has never existed up to the present time.

I am referring at the moment exclusively to woollen cloth mills in Canada, which weave their cloth from woollen yarns, which they spin with their own machinery after preparing their own raw material for the spinning. These mills, consequently, provide the maximum amount of labour in the community in which they are situated, and placing woollen yarns on the free list and taking away the duty of 12½ per cent formerly imposed under the preferential tariff will give no relief whatever to the woollen cloth mills of this country. The offer to those factories of free woollen yarns reminds me of a fable I once heard about a donkey which in company with a dog, had been locked in a stable full of hay. The donkey, having a generous instinct, offered the hay to the dog to appease its hunger, with the inevitable result that the dog starved. In order to resuscitate the woollen industry in Canada, which demands his earnest attention, the Minister of Finance has given them something which, under present conditions, is not of one iota of benefit to them.

But the minister makes another familiar gesture. He offers the owners and employees of these Canadian woollen cloth mills the privilege of importing their machinery free of duty, if you please. What value to them is duty free machinery when they now have more machinery idle than they have in operation? Last week the unfortunate owners and employees of these mills were waiting anxiously for the budget in the hope that it would bring down something to provide work for their idle machinery, and now they are told that they may import all the machinery they wish, duty free. I say to the Minister of Finance that what they need is not free machinery but rather a Canadian market, and orders in the Canadian market, which will employ a large proportion of this machinery which is now idle. The gesture of the minister is like leading a starving man to a table covered with fine dishes, glittering glass and polished cutlery, but containing not even a crust of food. There is not even a crust offered in this budget for the alleviation of the present depressing conditions in the woollen industry in Canada.

More woollen cloth is used in Canada than worsted cloth, and there is more woollen cloth made in Canada than worsted cloth. The same statement applies to importations; more woollen cloth is imported into Canada than worsted cloth. From the Bradford Chamber of Commerce Journal for January, 1928, I learn that the export of woollen cloth from Great Britain to Canada for the eleven months ending with November, 1927, amounted to 16,247,500 square yards, with an export value of £2,368,169. The exportation of worsted cloth was about half that figure, amounting to 8,379,200 square yards with an export value of £1,184,710. Look at the condition of the woollen mills in Canada. I have before me a report of their condition as of January of the present year. At that time in Canada there were twenty-one mills closed, having 327 looms idle; twenty-five mills were operating, having a total of 938 looms, 466 of which were operating, with 472 idle. There were nine other mills in Canada from which I have not been able to obtain reports, but, for the sake of comparison, I will assume that the 81 looms in these mills were all operating. That would show that in the 55 mills, which still exist in Canada, which have not been destroyed and wiped out, there are 1,346 looms, of which only 547 are operating, with 799 idle, and now they are to have the advantage of importing more machinery free.

Of the worsted cloth mills at present remaining in Canada only six are operating, with 474 looms. For each idle loom an average of three and one-half operators are put out of employment, in connection with the actual operation of the looms. Even if these woollen cloth mills could use imported woollen yarns, the only result would be that their spinners of yarn would be thrown out of employment and forced to go across the border to the United States. But let me tell the hon. gentleman for his information, that if the manufacturers of woollen cloths are to continue to fabricate woollen cloths of the quality and design which suits the Canadian market, then they must continue in their own factories all the processes and operations of fabricating woollen cloths direct from the wool. There is, as I said before, no world trade whatever in woollen yarns at the present time, and the

only effect of this change in the tariff schedule will be to induce foreigners to undertake the business of exporting woollen yarns.

Let me deal for a moment with the worsted cloth mills. There are, as I said, only six worsted cloth mills in Canada, operating 474 looms. The Minister of Finance may suggest that the woollen cloth mills which are idle—and which seem likely to remain idle under the present provisions of this amended tariff—might be turned into worsted cloth mills. I submit to him that the technique of making woollen cloths and worsted cloths is so different that it is impossible that the managers and employees of one should turn over and work the other. They are trained for the one, and they are not trained for the other; and he might as well suggest that I should give up my practice of the law and turn it over to my hon. friend the doctor who sits to my right (Mr. Manion), and that he should turn over his medical practice to me, and that we would be equally successful in our new positions, because we happen to be graduates of the same university.

Mr. DUNNING: It might be good for both your clients.

Mr CAHAN: That is quite impossible, and I venture to say that none of my clients is so stupid as even to suggest that.

Mr. MANION: And I might add, neither are mine.

Mr. CAHAN: Worsted yarns for making worsted cloths are, however, standardized the world over, and they can be bought to specifications by cable in England, France or Belgium. The old tariff imposed the low rate of duty of 12½ per cent under the British preferential schedule. These worsted yarns are now made free of duty. Personally I do not know the business sufficiently to predict what the result will be. I do know that one or two of these worsted weaving mills now existing in Canada do import largely of worsted yarns, but on the whole the quantities of worsted yarn now made in Canada by the Canadian mills are larger than the quantities imported. In other words, the worsted mills in Canada now make the bulk of their own yarns. If these worsted yarns are to be placed upon the free list instead of being encouraged by a 12½ per cent duty—which I do not think even my western friends would complain of—the result, so far as the spinning of yarn is concerned, will be to diminish their home production, with the result that Canadian workmen and work women must suffer lack of employment.

Now, one other phase, and I will not keep the house very much longer.

[Mr. Cahan.]

Some hon. MEMBERS: Go right along.

Mr. CAHAN: I refer to the steel and iron industry. On January 18 last the hon. Postmaster General (Mr. Veniot) representing the government of Canada, in discussing at St. John the Valley railroad and the bounty to the Sydney steel plant, said, as reported in the Telegraph-Journal:

> These two matters, however, were receiving the serious consideration of the government, and within a few weeks the policy would be divulged which, he thought, would make every maritimer feel proud.

Having been originally a maritime man myself, I looked through the tariff schedules with great anxiety to see how the steel industry was thereby being encouraged in Canada, and all I could find were the items allowing to the worsted mills and the woollen mills the importation of free machinery—which they did not need—and one or two removals of duty on locomotives and that sort of thing, all of which could very well I think, except for certain specified patterns or types, be manufactured in Canada. But I call the attention of the Minister of Finance to the present condition of the iron smelting and steel making trades in Canada. I find from a report made by Mr. F. W. Gray, which was published in Iron and Steel of Canada, January, 1928, this depressing condition of affairs:

The Dominion Iron and Steel Company, Sydney, Cape Breton, has six completed furnaces, at the end of October, 1927, it was operating only one.

Only one, I understand, has been put in operation since that time.

The Nova Scotia Steel and Coal Company's blast furnaces have been continually idle for the last five years.

Londonderry Iron and Mining Company, Londonderry, Nova Scotia, had one furnace which was idle and has since been abandoned.

Canada Iron Corporation Limited had two furnaces at Drummondville, Quebec, and one at Radnor Forges, Que., both idle and dismantled.

Standard Iron Company of Canada, Deseronto, Ont., has one furnace at Deseronto and another at Parry Sound. They have both been standing idle for years.

The Steel Company of Canada, Limited, Hamilton, Ont., has two large furnaces. One only is in partial operation.

Canadian Furnace Company, Limited, Port Colborne, Ont., has one furnace, which has been continuously idle since November, 1924.

Algoma Steel Company Limited, Sault Ste. Marie, Ont., has four furnaces, and only one was in operation in recent months.

The number of persons employed and the wages and salaries paid have been reduced between 1920 and 1926 in the following proportions:

	1920		1926	
	Persons employed	Wages and salaries paid	Persons employed	Wages and salaries paid
Blast furnaces and steel mills.. ..	13,874	$ 22,824,530	6,014	$ 8,934,536
Secondary plants..	101,887	135,860,417	75,400	125,229,867

The total of men employed has been reduced from 115,761 in 1920 to 81,414 in 1926. I might go into the whole question as elaborated in this report and show that in 1926 for producing a total value of $496,000,000 of completed iron and steel products, the output of this country, there was imported $255,000,000 worth of material which could have been produced at home, thus giving employment to our own workmen and our own country. Out of the entire manufacture, representing over $500,000,000, only $41,000,000 worth of primary products of Canadian origin was utilized. If the Minister of Finance will look into this record of idle blast furnaces, of unemployed men, of declining production of primary products within Canada, he will find sufficient to show that the earnest attention of this government should be given to the consideration of this vital industry of producing iron and steel, the prosecution and development of which is absolutely essential to the economic independence of this country. It is one of the most serious problems we have to face. We admit there are difficulties; but the government are there to consider serious difficulties and to suggest some improvement. And up to the present time they have absolutely failed. My own native province of Nova Scotia is more deeply involved in this regard than perhaps almost any other part of Canada, but I will not go into that question because there are others here—especially my colleague from Pictou (Mr. Cantley)—who are far more competent to deal with it. It was with a feeling of very considerable disappointment that the people throughout the country generally scanned the changes in the tariff made by the Minister of Finance, for they offer no relief whatever to this depressed and ever-vanishing industry.

The whole problem of immigration, to which this parliament is asked to-day to give special attention by sending a resolution on the question to the standing committee on agriculture and colonization,—I say, the solution of the whole problem of immigration into this country and of emigration from this country depends upon one thing and one thing only: It depends in the final analysis upon providing remunerative employment throughout the Dominion to our own people and, as well, upon giving equally remunerative employment to those people whom we seek to induce to come and settle here. This is the problem which, from year to year, confronts the hon. gentleman who sits in the office of Minister of Finance. But it is a problem to which he appears not to have given the slightest possible attention. He comes to this house year after year and tells us of the enormous development of our import trade, while year by year our own factories are idle, our own industries are diminishing and our Canadian workmen are being driven out of employment, and while, year by year, we are giving to American factories, which have the advantage of selling their manufactures in their larger market, the privilege of controlling the markets of Canada as well. If hon. gentlemen opposite intend to fulfil their whole duty and responsibility of promoting the advancement and progress of the country which Providence has committed to our charge, they cannot overlook, they must not overlook, the absolute necessity of providing more varied and more extended employment for our people. This is a matter that comes home to my heart because, while I sit in my office in Montreal, month after month I am besieged by young men from the technical colleges and the universities, young men who have served their time in our industrial concerns, who cry, "For goodness sake, Mr. Cahan, can you not find employment for us in this country—this country in which we were born and bred?" And what can I do? I have to tell them that I am utterly incapable of doing anything to help them under present conditions, with the result that they take the night trains for the United States and enter into industry there. I tell hon. gentlemen that in a country such as ours, with our large agricultural industry, which is growing from year to year, and with our industrial development, depressed though it is, there should not be one native-born Canadian who could not to-morrow or a week hence find profitable employment somewhere in this Dominion in some of our diversified industries. Until hon. gentlemen give to this problem the attention which it demands, and find a solution, we

shall never have the development of Canada placed on a permanent, stable basis. Until they solve this problem of unemployment we shall simply be raising families of sons and daughters and educating them here at our expense to qualify them to take up their vocations for life in the neighbouring republic.

Providence has committed to our charge and responsibility, temporarily under this government, one of the finest countries ever created, and we are making such a mess of the administration of it that we cannot retain our own people at home nor, without paying millions in bonuses, induce people even from the starved areas of Europe to come here and settle and make their permanent homes here. I therefore ask leave, Mr. Speaker, to move in amendment, seconded by the hon. the leader of the opposition (Mr. Bennett):

That all the words after the word "that" be struck out and the following substituted therefor:

This house regrets that the measures proposed by the government do not tend to provide increased employment in Canada, nor to induce the return of Canadians to their native land, nor to prevent the continued emigration of our people to the United States; and that they make no provisions for the preservation of our domestic markets for Canadian farm and dairy products, nor for the effective development of the natural resources of the country, nor for the abolition of the sales tax by the 1st of January 1928—

That is wrong; I should have read, "1929."

Mr. MACKENZIE KING: Perhaps I can help my hon. friend. I will give it to him; it is here in the evening paper of to-day.

An hon. MEMBER: He doesn't need help.

Mr. BENNETT: It is better than having the budget speech out before it is delivered.

Mr. ALFRED SPEAKMAN (Red Deer): Mr. Speaker, as, unlike the hon. member for St. Lawrence-St. George (Mr. Cahan), my time is limited to forty minutes, I shall not endeavour to emulate his exhaustive analysis of the budget proposals, nor is it my intention to comment in any way upon his address. With some of the remarks he has made in a most excellent address I am in entire accord. To some I might take exception. But I shall say nothing further than this: I listened with intense interest while the hon. member indicated and outlined the tariff policy of the Conservative party as laid down at the convention in Winnipeg last October. I think that it warrants the term which is used in that connection. For years we have listened to a plea for stability in tariff matters. Now "flexibility" has taken its place, and I gathered from the hon. gentleman's remarks, as I followed his interpretation of the policy, that it provided for these things: for the manufacturer it suggested "adequate protection" without using the words; to the farmer "low cost of production"; to labour "steady employment at remunerative wages"; and to the consumer in general "protection against exploitation and increase in the cost of living." I can only say, Mr. Speaker, that if any tariff policy could bring about all these beneficial results I think the country as a whole would welcome it, and would adopt it as a truly national policy. The thought was in my mind, as I listened to his speech, and as I remembered some statements made by the present Prime Minister in former days, that the Conservatives at the present time have apparently adopted in toto the fiscal policy of the premier at that time; and I can only hope that what is suggested in some parts of the present budget proposals is not true, and that the Liberal party have not adopted as their policy the former policy of the Conservatives.

Mr. Speaker, in endeavouring to consider for a few moments the budget proposals brought down by the Minister of Finance (Mr. Robb), my first words must be words of congratulation to the minister for the manner of its presentation. It was brief and concise, characterized by clarity of expression and by an absence of cumbrous or unnecessary verbiage. It was characterized also by a refreshing absence of overmuch political boasting. I may also congratulate him on one aspect at least of the budget itself. It illustrated the fact, which is well known to the people of Canada, that not only is the minister a capable business man—and as such respected throughout this Dominion—but that he is also a diplomat and a politician of a very high order. To my mind, Mr. Speaker, this budget represents a clever and not unsuccessful attempt to reconcile and express the varying and conflicting interests and opinions which go to form the present Liberal party. To the one wing we find is offered a reduced income tax; to our manufacturers a lowering of tariff on some of the raw materials which enter into the goods that they manufacture; to the other wing we find a reduction of the sales tax offered and, I am free to say, a rather vague and indefinite suggestion of a general revision of the tariff. I hold, Mr. Speaker, that it is a clever and not unsuccessful attempt to reconcile all the varying opinions upon which the minister must depend for support.

I wish to consider for a moment the preamble to the budget itself. That preamble includes two statements of some moment. The first is the following which I quote:

> Seldom have the annual statements from leaders of finance and industry throughout Canada so generally reflected such progress and prosperity as that of the year 1927.

Mr. Speaker, the claim that we in this country are enjoying increased prosperity has frequently been made by successive ministers of finance, and not infrequently with less reason for the statement than exists at the present time. I can well believe that from the point of view of those leaders of finance and industry referred to by the minister the assertion is in this case indisputable. Undoubtedly there is an increase in the volume of business being done within this country, increased dividends are in many instances being paid, and our banks, trust and insurance companies are becoming the depositories, and to some degree the beneficiaries, of an increasing volume of wealth. This question, however, is being asked by hundreds of thousands of men and women in Canada to-day: Why, in view of these visible manifestations of increased wealth it is so difficult, in many cases so impossible, for individuals to secure any share of that wealth for their own personal requirements. While business is increasing and wealth accumulating, tens of thousands of our workmen throughout this country are in receipt of a scale of wages far below the amount necessary to maintain a decent standard of living according to the computation of the Department of Labour. Thousands of our farmers are fighting to make ends meet, working under conditions and home surroundings which many of us here can not visualize, which none of us would tolerate, and content and satisfied if at the end of the year they have been able to hold their own. Moreover, hundreds of our small tradesmen and professional men throughout this country are struggling in that morass which has engulfed so many of their kind and forced them into bankruptcy. This question demands an answer. I cannot answer it, but I may suggest a line of inquiry which, if followed to the end by men more able than myself, might assist in the solution of this problem. The tendency of modern civilization is to concentrate our population in a few large centres, to centralize industrial production in large and larger units, and to concentrate the control of both industry and finance in the hands of a decreasing number of increasingly wealthy individuals and groups of individuals. In the limited time at my disposal I have not the opportunity to discuss whether this system is unavoidable or not, or whether it is good or bad. I will say this however: That through a multitude of channels is drawn to these centres a large part of the profits made in this country by the industry of men and women throughout the whole countryside. On the other hand the back channels through which these profits should again flow to irrigate the countryside, and freshen and brighten the lives of our people, seem to have been overlooked or are obstructed. Or to put the same thought into other words, centralization while it tends to efficiency in production, tends also to the most appalling inefficiency in distribution both of profits and of products. To solve this dual problem of distribution, possibly through cooperative effort, is a task towards which the best minds of the country both in the government and outside their ranks might well turn their serious and earnest attention.

Since I was a small boy I have worked on a farm or have been closely associated with men who have worked on and are working on farms, and I am inclined to believe that the same conditions which apply there apply largely to all classes of industries. We find men and women working day by day intelligently and industriously at hard manual labour; we find them very often working under admittedly unpleasant conditions, and we find them, in the case of the farmers at least, working for very long hours and yet apparently unable to provide for themselves and their families comfortable homes according to the modern standard of comfort, a decent comfortable standard of living and education, and some reserve in case of sickness or death. Why is that? It must be due to one of these two things. Is it because the workman as a whole, who is after all, in field and factory, in mine and forest, the great producer of our national wealth, receives an unfair remuneration for his work, or is it because he has to pay an unfair price for the things he has to purchase? One or other or both of these must be true, and due to my own circumstances during my life I have been face to face with that problem so that it has become a very real problem to me as it is to the people I represent. Again I would urge upon this house, regardless of any question of politics or parties, to concentrate on the problem of returning to the workingman of any sort, any class, whether manual or mental worker, a fair share of the wealth which he produces.

The next point in the preamble to which I should like to call attention is again an utterance of the minister. This is what he says:

> The statement of the nation's business will show conclusively that, notwithstanding our annual reductions in the rate of taxation, our revenues have been ample to meet fixed charges, take care of the ever increasing needs of a growing country, and provide also for a reduction of debt.

As regards the first part of that statement as to reductions in taxation I concur in the minister's statement, and I am afraid I cannot follow the reasoning of the hon. member for St. Lawrence-St. George (Mr. Cahan) and some of his colleagues. After all the true test as to the weight of taxation is not the aggregate amount but the percentage of income or business profits which is drawn into the channels of taxation, and while it is true that a greater aggregate and a greater per capita amount have been paid in taxes, still it is also true that reductions have been made and that the percentage of taxation on profits made—and by profits I mean all income secured in any way at all—is slightly lessened. Let me illustrate what I mean in this way. Assuming for a moment that the price of motor cars has been reduced—and I think that is a fair assumption at the present time—and assuming that, partly by reason of that reduction in price, so many more cars are sold that the aggregate amount and the per capita amount paid for cars within the country are greater than before, no one would argue from that situation that the actual cost of motor cars had not been reduced. That is an illustration of what I mean when I say that it is the percentage, the rate, and not the aggregate amount that should be taken ino consideration in discussing the subject of tax reduction.

But I cannot agree with the next statement of the minister as to the debt reduction, and I find myself drawn to the same logical conclusion as that expressed by the hon. member for St. Lawrence-St. George and on former occasions by others in this house. I have not the time to go into the back history of this country and I will not burden Hansard with any intricate computations. I will say simply this: We have in the same statement side by side the declaration of the minister that, after allowing for certain reduced assets, the net reduction of our national debt will amount to $38,815,000, while at the same time and during the same year $65,000,000 worth of Canadian National railway bonds were guaranteed by the government. A portion of that guarantee was simply a refunding matter.

[Mr. Speakman.]

An amount of some $20,000,000 indicates simply a change from a short-term, three-year guaranteed obligation to a long-term, thirty-year guaranteed obligation. It is simply a matter of bookkeeping and it neither adds to nor diminishes the total sum of our liabilities. The bulk, however, of the rest is a fresh liability on the part of the railways. I can conceive that if, as in the case of the Montreal harbour commission, for example, which had also guaranteed bonds to the extent of $8,000,000, the security within the company is ample to cover such bonds, the minister might say that it did not add to the liability of the country. But what are the facts in this case? It is generally believed and freely stated that the Canadian National Railways are at the present time over-capitalized. It is being suggested—and I concur in that suggestion—that the capital should be written down to a reasonable figure in order to allow them to have a fair showing in competition with other similar lines. If the railway is over-capitalized, this means that every available asset and every form of security it offers are mortgaged more than one hundred per cent. It means that there is no security in the railway itself for any additional loans or obligations, and we are in the position of a man who signs a note for another man who is mortgaged to the extent of every stick of furniture he owns, who has no assets of his own to meet that obligation. In that and in this case the guarantor becomes in fact the debtor. I shall leave that as my time is short and I simply wish to indicate my opinion and give some reasons for it.

I commend very heartily the minister's action in reducing the sales tax by 25 per cent. It is a tax which is cumbersome in operation and unfair in application. It pyramids as it reaches the consumer and becomes greater. It affects directly the standard and the cost of living and it hampers business in general. I think it was a proper move for the minister to reduce that tax at least to the extent he has done.

When I come, however, to the tariff proposals I am somewhat at a loss. I am without the intimate knowledge of certain lines of business that is possessed by the hon. member for St. Lawrence-St. George, and in the absence of comparative schedules, which the minister will table and which will be at our disposal at a later time, I am unable to arrive at any accurate or detailed knowledge as to what that revision actually means. The reclassification is carried on to such a degree; items are carried from one classification to

another, and no comparative schedules are given showing the actual reduction or increase made that it is impossible for me to form anything but a general estimate as to the line which has been followed in that tariff revision. One or two indications, however, are fairly distinct and clear. The first is that a large portion at least of this reduction does not tend and was not intended to give any relief to the consumers, but was intended, so far as it is effective—and I am not discussing the question of its being effective—to give manufacturers a little greater advantage by reducing some of the costs of the raw materials and the machinery which enter into the cost of the manufacture. With that I have no quarrel whatever. I am simply indicating what to my mind are the salient features of the budget. As to the general revision affecting consumers I shall say nothing; I am inclined to think the effect will be slight, but lacking accurate information I do not intend to give utterance to a premature opinion.

On one point, however, I am fairly clear, and that is the question of the British preference. The statement has been made that it has been amplified and enlarged. Again, I shall not follow the hon. member for St. Lawrence-St. George into his computations as to the exact meaning of the word. I wish to point out that accompanying the suggestion that the British preference is being amplified and enlarged comes the qualification that the percentage of the empire cost of production shall be increased from twenty-five to fifty per cent on all goods coming in under that preferential rate. Inevitably and obviously that provision will mean the effective curtailment of the quantity of goods coming in under that tariff. I am not saying that that is right or wrong; I am simply pointing out what would obviously be the effect. If you increase the percentage of empire cost of production from twenty-five to fifty per cent, you will inevitably curtail the quantity of goods coming in under that preferential tariff, and I cannot see how that can be called an amplifying or widening of the preferential idea.

There is another point in connection with the tariff to which I would like to refer, and that is in regard to the work of the advisory tariff board. Ever since my intelligence has led me to regard such a board as a fact-finding board, I have been in favour of it, but in view of the fact that the evidence brought before that board and the evidence elicited by it is not available to the members of this house, although it is available, I presume, to the government. I believe that the opinions of those who hold that that board is a smoke screen behind which the government can evade responsibility are at least partly justified. I took issue with that statement when it was first made because I conceived it to be a sound principle when we were dealing with the tariff that we should be in possession of all the information necessary to come to a conclusion, but if that information is to be only in the hands of the government and not in the possession of members of the house, then when the Minister of Finance says that the board has inquired into certain matters and certain findings have been made, I say that the government is to that extent shifting the responsibility from itself to the board, because it is not giving to the members of this house the opportunity to judge for themselves the value of the information brought forward. I urge upon the Minister of Finance that as soon as possible and at all events before another budget comes down an adequate appropriation be submitted to the house to provide for the perusal by members of parliament of the information brought before the tariff board to which they are entitled, and which they expected to receive when voting for its formation.

I come now, Mr. Speaker, to that part of the budget to which I take the greatest exception, and that is the reduction in the income tax, coupled with the statement by the minister that "it is proposed that the Dominion shall continue gradually to lighten the load in the income tax field". There is an inescapable inference to be drawn from that language and from the action of the government in bringing down this budget, and that is that the Finance minister and the government contemplate the gradual elimination of this form of taxation. I do not take issue with that on the ground imputed to myself and some of my colleagues by the daily press and by some hon. members to my right, that we object to any reduction in this form of taxation because we and the men and women we represent do not pay income tax, not having sufficient income to come within the scope of the act. It is possible, I believe in this house, and I claim that right for myself as I accord it to others, to discuss questions on their merits, without either imputing or receiving imputations that we are speaking from a selfish point of view. I do not impute to any gentleman here who votes for a reduction in the income tax the motive that he is voting for it because he has a large income and is therefore personally interested in a reduction, and I personally expect to have my own opinion respected in like manner. I am

opposed to this reduction on grounds that I shall give which appear to me to be sound as applied to the whole country.

First, I would say that this tax, with others, was instituted as a war tax to take care of the increased expenditure of this country consequent upon the war. Is that expenditure done away with now? Is that debt paid? Is the debt for which the income tax was instituted retired to such an extent that we are warranted in eliminating the tax?

Mr. GARLAND (Bow River): They have not scratched it yet.

Mr. SPEAKMAN: No. I have here a small estimate of what it costs. It is estimated that during the present fiscal year the interest on the debt attributable to the war, as segregated from all other debts, still amounts to $115,807,000. When you add to that the other annual expenses incident to the war, pensions, the expenditure in caring for our returned men and other expenditures due to the war, it amounts to an annual liability on the part of this country of $164,501,000, and I say that while that debt remains unpaid, so far as the finances of the country are concerned, the war is still with us, and so far as the finances of the country are concerned, I believe that it would be right and a sound policy to retain the tax which was instituted to take care of that debt.

But there is another reason. We have parts of this country crying for development, and we have men crying for assistance, and the answer to both has been that the state of the country's finances will not permit us to proceed with that development or afford that assistance. We have the great Peace River country—I speak of that because it is in the public mind just now—that great undeveloped area which, when properly developed, will bring huge returns to this country. The people in that area have been pleading for years for transportation facilities, for an open gateway to the sea, and the answer has always been that the road will be built in good time, but at present the finances of the country will not permit.

Again, we have throughout this country returned men, disabled to the extent of one hundred per cent, who cannot get pensions. Why? The finances of the country will not permit. Let us put ourselves in their shoes and ask ourselves what they will think when they see the income tax reduced—a tax which as at present applied imposes no hardship upon anybody, which does not affect in any way the standards of living because it does not apply below the point where the standard of living would be affected. When they see this money handed back to those able to afford to pay it, will they be inclined to accept the statement that the country cannot afford these other expenditures, this development and assistance that is being asked for? I think not.

There is another point. I will illustrate it by something I saw myself in my own district. On the 26th of July of last year, when the crops were looking splendid and the hearts of the farmers were rejoicing, a tremendous hail storm swept over the entire district, and thousands of acres were levelled to the ground. Not one bushel was left, not one blade of feed, not one dollar to repay the farmer for his year's labour. But these men, through indirect taxation, are out of their poverty forced to contribute their share to carrying on the affairs of this country. How will they look at this reduction in a tax that brings no hardship to anyone and is paid only by those whose income is high enough during the year to come under the tax.

I have another objection, Mr. Speaker, and from the point of view of the reputation of the Liberal party this is most serious. Year after year we have heard that the Liberal party is the party of low tariffs, and that one of their missions is to strike from the limbs of this nation the shackles of undue protection and so save us from commercial interests which might exploit us. It is of course obvious that the country requires a certain amount of revenue in order to carry on its affairs, and in my opinion it is impossible to curtail our present revenue. As the needs of this great country continually increase; as the need for development becomes greater and the requirements of certain classes of our returned men increase with old age and further disability, our total revenue must be greater rather than less. If you do away with direct taxation; if you eliminate the one alternative form of taxation, upon what will you depend for revenue? You must depend upon the tariff. If you eliminate the income tax and reduce the sales tax, you are driven more and more to this position from which you cannot escape, that to carry on the affairs of the country you must maintain a fairly substantial tariff or customs tax; there is no alterative. What then of the policies of the Liberal party? Are they prepared to accept that as the logical outcome of the attitude taken by the minister, by the government and by the party as a whole? Are they prepared to accept these consequences and to say to the country, "We have come to the conclusion

that our protestations in regard to the tariff were wrong; we no longer desire to reduce the tariff but we will even go so far as to put it out of our power to ever reduce it." That may appeal to some members in the house, but it certainly does not appeal to me and it certainly is not in accord with the proclaimed policy of the Liberal party. Yet that is the logical and inevitable result of this continual reduction and the eventual elimination of any alternative form of taxation.

I am not betraying any confidence now when I say that we have all gone to the minister and asked him for certain concessions or certain reductions in the tariff. Sometimes the minister has said, quite honestly, "The industry is in such a condition that to reduce the tariff would bring ruin to it." I respect that attitude, and so does everyone in this corner of the house, free traders though we all are on principle. We know that free trade would be better for our own particular class of people, but we are not asking for free trade altogether; we are asking for the greatest possible freedom of trade, compatible with the decent maintenance and development of industry throughout this country, and we ask for protection against exploitation rather than for the destruction of any industry. The answer to which I have referred is perfectly proper and logical, and we accept it as an honest answer. But there is another answer which we receive even more frequently, to this effect: "I would be very glad to do that, but the country has to have the money, and if this is done what are you going to offer as an alternative source of revenue? I offer this to the minister: Retain the income tax as it is. That is a suggestion which means that on his own computation about $5,000,000 or $6,000,000 yearly will be brought into the revenue of the country, which will make up for the loss occasioned by the concessions for which we have asked. So I take the minister at his word and offer him that suggestion when he asks what alternative revenue I can suggest to offset any lowering of the tariff.

Mr. Speaker, the forty minute rule, in my case, is a good one; I have said nearly all I wish to say except one last word. As I have indicated, unless and until the information brought out before the tariff board is placed at the disposal of every member of this house, I can only conclude that the minister is shirking the responsibility of making these decisions by appealing to that board; I can only come to that conclusion, until I have evidence to the contrary. I must decide that he is shirking the responsibility of putting into effect the platform of the Liberal party, and that he is shifting the burden of taxation from direct to indirect methods, and the weight of taxation from the shoulders of those who can best bear it to those who are least able to afford it. This calls to mind a statement which I heard, based on a few words spoken by the minister. In his address he urged upon us the necessity for work and thrift. Those are beautiful words, and I have heard this budget characterized as a work and thrift budget, but in view of the suggestion I have made some people in this country will characterize it not as a work and thrift budget, but as a shirk and shift budget.

Mr. A. A. HEAPS (North Winnipeg): Unfortunately I have not seen the Ottawa Journal this evening, and therefore I am not in a position to know exactly what is contained in the amendment proposed by the hon. member for St. Lawrence-St. George (Mr. Cahan). However, I suppose I shall have an opportunity to look over the amendment before eight o'clock and see how it appeals to hon. members in this corner of the house.

Mr. ROBB: If my hon. friend will allow me to say so, he is not in any worse position than the government.

Mr. HEAPS: I realize that, but we all know that it is nothing new for these things to appear in print before they are actually brought up in the house. I have been informed on reliable authority that speeches have appeared in the Montreal newspapers before they were actually delivered in the House of Commons here. However, in continuing this discussion I should like to say that I was very much interested in the opening remarks of the Minister of Finance (Mr. Robb) when introducing his budget. He said:

> Mr. Speaker, seldom have the annual statements from leaders of finance and industry throughout Canada so generally reflected such progress and prosperity as that of the year 1927.

I wonder why, in that statement, the minister left out any allusion to the farmers and the labourers of this country. Surely they should be in the minister's mind when framing a budget for the people of the Dominion of Canada; yet he referred only to the progress as reflected by the statements of the leaders of finance and industry. If I were a leader of finance or industry I know I should regard the budget as being very good, but not

being such a leader I cannot say that. I represent a working class constituency, where most of the men and women have to work for the money they get, and they cannot be classed in any way in that particular category referred to. Consequently I am compelled to view the budget as it affects the electors whom I represent, and I think that is the attitude which should be taken by every hon. member of this house in discussing this question. I presume that one of the reasons why the minister did not refer to anyone with the exception of leaders of industry and finance is because no one else has enjoyed prosperity.

Mr. GARLAND (Bow River): His conscience gagged at it.

Mr. HEAPS: I will not put it as baldly as that; I think there may be other reasons, because after the statements made in this house by the Minister of Immigration (Mr. Forke) and by others coming from farming communities, the minister might have known that he could not claim any prosperity among the farmers and workers of this country. Knowing that certain of the provincial governments had made requests for federal assistance to the unemployed, he must acknowledge that there is no prosperity among the workers here. From his opening statement I think it quite proper to infer that our farmers and workers were in no way prosperous during 1927. I admit there is a certain amount of prosperity in the country at the present time, but that prosperity is all at the top; it does not reflect itself at the bottom. What is prosperity? The fact that a bank manager, a railway president, or an industrialist, at an annual meeting, states that his particular institution has had a prosperous year is in my opinion no indication as to conditions throughout the country as a whole. I think prosperity reflects itself in the general condition of the masses, and when they are prosperous in Canada, then, and only then, can it be truly said that we are in a state of prosperity. At the present time there is not an hon. member, I do not care from what part of the country he comes, who can say that the masses of the people are experiencing prosperity; and so long as they are in a state bordering on poverty, only a few days removed from starvation, perhaps not even knowing where their next meal is coming from, I think it well that we should hear less talk of prosperity and should consider the actual conditions as we find them throughout the Dominion.

I want, now, Mr. Speaker, to deal for a few moments with another condition of affairs in which the minister took a certain amount of pride. He referred to our huge exports and their excess over imports. People are very easily deluded when figures of that nature are placed before them. I do not attach any great importance to such figures It is quite true that in the past few years we have been exporting far more than we have been importing. I think one of the reasons for this is that we have in the past imported so much capital that we are now repaying in goods some of our borrowings. I am using now the minister's own arguments in his budget speech. He claimed that in 1913 Canada had an adverse balance of trade of $29.61 per capita, and that in the same year India had a favourable trade balance. Now, because of that favourable trade balance does he mean to say that the people of India in 1913 were in a better condition than the people of this Dominion? That is the inference one must draw from the statement he placed on Hansard. Of course, it only goes to show the absurdity of trying to arrive at conclusions respecting the actual condition of a country by discussing the question of favourable or unfavourable trade balances. Invisible imports and exports have always to be taken into consideration, but the Minister of Finance omitted—conveniently or inconveniently—to mention this feature. In this house we have a number of farmer members, and I heard them applaud the statement that our exports were greater than our imports.

Mr. GARLAND (Bow River): You did not hear this corner applaud.

Mr. HEAPS: I apologize to my friends of the Alberta group. I am speaking of my friends opposite.

Mr. GARLAND (Bow River): The Liberal farmers.

Mr. HEAPS: Supposing a farmer has a couple of hundred head of cattle and sells 150: if he had been compelled by force of circumstances to get rid of his cattle would he be proud of the fact? I do not think any farmer would be pleased with a situation of that character. Having by necessity been compelled to dispose of the greater portion of his stock, probably at an inadequate price by reason of the forced sale, he would not at all feel happy. The parallel holds good nationally. We have in this country vast natural resources—natural resources which, I believe, ought to be the inheritance of our people. What have we done? We have bartered away many of those resources for a mere pittance. The result of that is shown

to-day in exports. In the past few years we have imported a vast amount of American capital; I do not know exactly how many hundreds of millions of dollars have been invested by American capitalists in the water powers and forest wealth of this country. As a result development is following along lines that obtain in the United States—we find "company" towns springing up. Recently, Mr. Speaker, I was at a meeting of the Montreal Trades and Labour Council, and I heard men state that when they had gone to these company towns in the neighbouring province, created by the importation of American capital, they were refused admittance. In other words, the Canadian people are denied the right to set foot on Canadian soil, controlled by American capital. What applies in some parts of Quebec also applies, as I know, in certain parts of Manitoba.

I wish also to deal with the implications that follow the importation of this capital from the United States. I am not one of those who look with kindly feelings towards American imperialism, especially as I see its workings and its implications in Mexico and Nicaragua. I have read statements of United States ministers, high up in the councils of their government, in which they claim that American capital wherever invested is entitled to the protection of the American government. That is a new international doctrine. The other night we listened to the hon. leader of the opposition (Mr. Bennett) discuss the diversion of water from lake Michigan by the Chicago drainage authorities, and in the course of his speech he quoted a statement by the late President Roosevelt in connection with the Alaska boundary. The very same problem is intensified to-day when we look at the amount of United States capital invested in foreign countries. You will generally find that those investments are followed later on by United States military occupation. I do not suggest for a moment that after the capitalists of the United States have secured financial and industrial control of a large part of the Dominion their government is going to do the same in this country as they have done in some of the South American republics, but the implications are there. Only in to-day's newspapers we read that some of the highest authorities in the United States claim the right for their government to intervene wherever American investments may be jeopardized. There is no telling when we may pass laws that may not be altogether to the liking of those to the south of us, and under such circumstances I can see us getting into a nasty squabble with the government at Washington. So long as we have American capital coming here I do not see how we can possibly avoid it. For my part, I would far sooner have waited a little longer, if possible, for the development of our natural resources than see the people of Canada become, in the language of the Bible, hewers of wood and drawers of water to American capitalists.

At six o'clock the house took recess.

After Recess

The house resumed at eight o'clock.

Mr. HEAPS: When the house rose at six o'clock I had just referred to the establishment by American capitalists of company towns in Canada. I do not mean it to be inferred from anything I have to say with respect to American capitalists that the Canadian capitalist is by any means a saint. However, the creation in this country of these company towns is something new, and something which I look upon with a great deal of disfavour. The men employed by these companies hardly dare call their souls their own. They are almost enslaved body and soul for a wage of from 35 to 45 cents per hour, and Canadians who attempt to enter these places are often prevented from doing so in spite of the fact that they are natives of this country.

The minister has reduced the income tax. By the reduction of that tax he is giving to these corporations an advantage which I do not think they are entitled to receive. It has been stated over the last week end, that the persons objecting to reduction of the income tax are those who do not pay that tax. I want to take issue with that statement. All taxation is paid out of production, and if there is no production there can be nothing to pay income tax with; and whilst it may be true that the farmer or the worker does not pay income tax directly, yet I claim that as they are the chief producers in the Dominion they thereby pay indirectly a large share of the income tax. I object to the reduction of the income tax because I believe it to be the fairest form of taxation. It is a tax that is based purely and simply upon ability to pay, and I do not think there is any fairer form of taxation than the taxation of those who have the ability to pay. The indirect taxation we have to-day places a heavy burden on the people of this country, and I would venture to assert that the farmer and

the worker pay heavier indirect taxes, in proportion to their income, than those who pay the income tax.

Now the Minister of Finance has been good enough to suggest in his speech, and I agree with the idea, that we ought not to shirk our responsibilities in regard to the national debt. He says that the people who created the debt ought not to shirk the payment of it, or words to that effect. I quite agree with that statement, but I maintain that the minister himself is shirking responsibility in reducing taxation and allowing the debt to remain at its present huge figure. He goes back to the year 1845, approximately eighty years ago, to try and find a precedent for the budget that he is bringing into this house in the year 1928. He quotes an economist who lived in that year in order to try and give the impression to this house and the country, that the budget he has brought in and the methods of financing he is adopting are the best that could be followed under modern circumstances. I entirely disagree with that premise. I believe myself that the minister ought to have a definite and fixed policy in regard to the payment of the national debt of Canada. There is no telling how long the national debt will remain the huge liability it is at present. He says we ought not to shirk our responsibility. Quite true, but how long did it take to create that debt? It was created in four years, and yet by the method of financing which is followed at present there is no way of telling whether the national debt will be paid in four years or in four hundred years. I believe that debt should be wiped out in as short a time as it took to create it. I have a suggestion to make to the minister and I hope he will give it due consideration. When I say "due consideration" I do not mean the kind of consideration which is frequently adopted by ministers when they throw suggestions into the waste paper basket.

Mr. DUNNING: We file them.

Mr. HEAPS: You file them? Well, you do a little bit better than throwing them into the waste paper basket. As a matter of fact you file them so securely that you never can get at them again.

I would deal with this question of the national debt from a little different angle, perhaps, than the one from which hitherto it has been viewed. I am going to suggest to the government that the question of inflation and deflation as between the years 1920 and 1926, should, in some way, form a basis from which to consider the whole question of the national debt. In the first place no effort has been made by this government to consider the problem of the national debt in relation to industry. In Great Britain a special commission was appointed in 1924 to consider this very important question, but in Canada we have allowed this matter to take care of itself by following purely haphazard methods; there has been no systematic or scientific effort on the part of the government to provide for the national debt of Canada. It is quite true that some reductions in our debt have been made during the past two or three years, yet these reductions cannot be regarded as the basis for a proper method of handling this problem. There is no such thing as a national sinking fund, and if lean years should come for the Dominion treasury it follows that no provision for reduction of the national debt could be made out of surplus revenue as is being done now. In 1920, and I am using that year because it was the peak year for commodity prices, our net debt was $2,248,868,624. At the end of the fiscal year, 1926, according to the Canada Year Book, our net debt was $2,389,731,099, showing an actual increase in the net debt for the year 1926 over the year 1920. It would not be fair to blame the government entirely for this condition. In 1920 there were shown assets of $792,660,963 which by 1926 had dwindled to $379,048,085, this dwindling of the national assets being to an extent due to the deflation which took place during that period. Whilst the government has very little to show because of this fact, the people of Canada have now to pay out of present production one hundred cents on the dollar which in 1920 was worth approximately 70 or 75 cents. The taxpayers of to-day and those of future generations are to be penalized in the first place for the inflation that took place in 1920 and in the second place for the deflation that took place in the period succeeding the inflation.

I want, however, to make this suggestion to the Minister of Finance. Most of the public debt of this Dominion was created during the period of inflated prices when the dollar was not worth what it is to-day. The following figures taken from the Canada Year Book will give the house some idea of the relative value of the dollar from 1900 to 1926. Taking the value of the dollar in 1913 as 100 we arrive at the following:

Year	Value of dollar
1920	186
1921	157
1922	152
1923	154
1924	151
1925	155
1926	153

If I had taken the figure for 1920 as it stood in the month of June or July, it would have shown a considerably higher level for that year and consequently the disparity would have been greater than is shown by the set of figures I have taken. In this table it will be noted that there is a difference of 33 points which means a decrease in the retail cost of commodities of approximately 18 per cent. It also means that the people who own the debt and control the money of the country are relatively so much better off to-day than they were in 1920. In other words, deflation which became effective in 1921 had the effect of adding more value to their holdings because the debt of this country was in no way affected by the deflation which then took place. The people who suffered mainly were the farmers, producers and working people. There is no need for me to mention the tremendous drop which took place in the price of farm commodities in those years. Hon. members of the farmers' group have referred to this matter on several occasions, but I would say that nothing would more forcibly show the feelings of the farmers of this country than the fact that in the election of 1920 they returned sixty-five members to this house. This no doubt was the result of the economic depression which hit the farmers so severely during that period. As regards the working people of this Dominion, in 1920 the number of wage earners was 526,571, and in 1921 this dropped to 381,-203.

These are some of the results of the policy of deflation as adopted by the financial interests of this country. Whilst it left the great mass of the people poorer, these interests became more wealthy. When hon. members discuss the question of people leaving Canada, these figures might give one reason why so many men and women were compelled to emigrate. It was not choice but necessity that drove them away, and if such was the case, it is obvious where part of the blame lies.

The question arises why present and future generations should be penalized for the monopoly of money and currency by those who control it. Why should the taxpayers of Canada be penalized for things for which they are not responsible? Why should the government not use the power vested in them and adopt some measure that will protect and give back to the taxpayer that which has been taken away from him by the hands of finance? My suggestion in this regard is that the amount of deflation as shown by statistics should also apply to the national debt. Why should the financiers of Canada and elsewhere benefit at the expense of the great masses of the Canadian people? If the national debt were deflated in the same ratio as other commodities—and it is obviously fair that this should be done—the corresponding decrease would mean that the net debt of 1920 of $2,248,868,624 should be reduced by 18 per cent, which would mean that the figure for 1926 would be $1,844,072,272, or a reduction of $404,796,352. This in turn ought to save an annual interest charge, based on a rate of five per cent, of $20,239,800.

To create this deflation in the national debt, I would suggest that Dominion currency equivalent to this amount should be issued over a period of three years and be used to retire bonded indebtedness. At the present time the Minister of Finance contemplates a loan of $500,000,000. How does the minister accomplish this? He issues securities which are regarded as gilt-edged, endorsed by the Dominion of Canada. These securities are easily negotiable and in many respects they have the same function as money, with this notable exception, that currency issued by the government bears no interest charges while bonds, of course, will. Naturally I would expect that bankers and other financiers would prefer to hold bonds which bear a good rate of interest to holding government currency which will not. It might be said that this suggestion would mean a policy of inflation. It would mean a policy of limited inflation of the currency of the country. What harm would it do? In place of creating any difficulty or doing harm, this limited increase in money issued by the Dominion government would be an advantage because in the first place it would mean a huge annual saving which, of itself, could finance the entire cost of the old age pension scheme for this Dominion. It would mean further that this extra money so created would have to find an outlet and this, in turn, would stimulate commercial activity. A policy of limited inflation must not be confused with the policy of inflation that was prevalent in European countries a few years ago. The amount of money and currency in circulation must always have a due regard to the productivity of the country, and I might also add to this, its potential productivity. Canada's industries have grown enormously since 1920, yet we find that the actual currency has decreased as shown in the following table:

Year	Currency
1920..	$296,353,737
1926..	231,603,330

Or a decrease of $64,750,407, and this in spite of the fact of the greatly increased

production that has taken place in Canada during this period. The amount of currency issued by the Dominion treasury is very small as compared with the total amount of money in circulation in this country. As an example of the relation of currency to the total amount of money in circulation, it might be interesting to note the actual amounts on deposit in the chartered banks of Canada in 1920 and 1925, the last year for which statistics are available:

Year	Deposits in chartered banks
1920..	$2,438,079,792
1925..	2,221,160,611

The total amount of currency for 1925 is equivalent to only ten per cent of the total bank deposits for the same period, and if the Dominion government added on to this currency an amount equivalent to the deflation between 1921 and the present year, it would naturally add a good deal to our currency, but even then it would be equivalent to only 26 per cent of the total deposits in our chartered banks.

Last year the hon. gentleman who now occupies the position of leader of the opposition (Mr. Bennett) made to the government a suggestion which they have filed away securely. It was that the government should conscript the surplus money owned by large financial institutions in this country and use it for the retirement of the national debt, paying four per cent for the use of same. I think that was a far more radical proposal than the one I am now suggesting. I had always thought, that, to the Conservative party, property was a sacred thing. At all events, I have not the least objection to the suggestion of the leader of the opposition, and I hope that he will repeat it during this debate. His proposal was regarded as a piece of statesmanship last year, coming from my hon. friend the leader of the opposition, but I suppose the same suggestion coming from this corner of the house would be regarded as bolshevism.

In the few minutes remaining to me, Mr. Speaker, I would like to say a word or two in reference to the closing remarks of the Minister of Finance. All through his budget address he had in mind the financier and the industrialist, and then practically in his last sentence he referred to the great masses of the people of this country, and his message to them was: Work and be thrifty, I think he had nothing else to offer them except that piece of advice. I am wondering who in this country does the work if it is not the workingman and the man on the farm. Where else does all this prosperity come from? And then when you remember that the average man employed in industry in this country earns approximately only twenty dollars a week, I would like the Minister of Finance to tell the workingman where he is going to commence being thrifty on that wage, and where he is going to end. I would suggest to the Minister of Finance, when he talks about thrift, that he should start right on the government benches and set an example of thrift there. I am going to make a suggestion with which I hope our Conservative friends will agree. I would suggest that the Minister of Finance start saving on the militia estimates. These estimates show an increased appropriation of several million dollars over last year, and most of that money I presume will go in lace and gold braid. If there is a wasteful expenditure in any part of the world, it is this expenditure on armaments. When we have a delegate at the League of Nations, and a branch of the League of Nations Society in this country, with representatives going around and preaching peace among the nations of the earth, I think the last thing in the world the government ought to do is to increase the estimates for military purposes. I think it would have come with good grace from the Finance minister, if he had the least desire to set an example in thrift, to throw out these millions of dollars of increased expenditure in the militia estimates for this year.

With regard to the amendment placed in your hands, Mr. Speaker earlier this evening, by the hon. member for St. Lawrence-St. George, the one thing that seems to remain in my memory more than any other part of his speech is his reference to the Canadian National Railways. He referred in no complimentary way to the president of the Canadian National Railways, because he did not like something Sir Henry Thornton had said. When the hon. member for St. Lawrence-St. George does not like something which Sir Henry Thornton said, I am inclined to think that Sir Henry Thornton must have said a very good thing, because otherwise we would not find objections coming from the hon. gentleman. I cannot see that the amendment is any better than the budget itself. I think the speech which the hon. member for St. Lawrence-St. George gave this afternoon was the finest possible commendation of the budget I could have, and when I see commendation of the budget coming from the Conservative side of the house I am bound to feel a little bit suspicious of the budget myself.

Mr. J. H. HARRIS (Toronto-Scarborough): Before offering any criticism of the remarks of the hon. member for North Winnipeg (Mr. Heaps), I wish to say a word or two with regard to the hon. member for Red Deer (Mr. Speakman). I am sure that I am only expressing what is in the minds and hearts of hon. members of all shades of political thought when I say that we are very glad to see him back in this House of Commons in apparent health and strength. Any hon. gentleman who had the privilege of visiting him in the Civic hospital, knowing how badly he was used up a year ago, having to lie on his back for several months, must rejoice at his splendid recovery.

But with regard to his remarks I must say to him in all kindness that I cannot altogether agree with him. I took the liberty of noting down a few of his thoughts. Among other things he said: Give the workingman the opportunity to participate in some of the wealth he creates. I would say in reply to that: Give the workingman the opportunity to earn a little bit of wealth in this country, so that he may be able to participate in some of the wealth the country is capable of producing.

I could not follow the reasoning of my hon. friend from Red Deer with regard to taxation. He, in turn, said that he could not follow our reasoning in that matter. He went on to say that there has been a reduction in taxation, but that anyone who reads the budget as presented by the Minister of Finance must realize that the volume of taxation has increased, and increased very materially.

I must admit I am in accord with the hon. member in his criticism of the presentation of the national debt by the Minister of Finance. I am also in accord with him in his criticism of the tariff advisory board, which he described as a smoke screen behind which the Minister of Finance can find shade, and hide in time of trouble. It is also very interesting to note that the hon. member for Red Deer is beginning to see the futility of the free trade arguments that he was wont to express in this house from 1922 up to 1926. To-day he says: I am not asking for free trade. I think he must have overheard some of the whisperings which went on at the convention held on the western prairies this winter, at which the dairymen there gathered denounced in no uncertain terms the Australian treaty and its results, especially the bringing into this country in ever increasing quantities of products which the dairymen of Canada are able to produce.

With regard to my hon. friend from North Winnipeg, that hon. gentleman rises in his place and says to the house and the country: I am not an industrialist, I am not a farmer, I am not a financier, and then in his next breath he tells us how to finance the affairs of this country. I was wondering what sort of man he was, and I was reminded of the story which Mr. Crerar once told the house. There was a boy, and his parents were in a quandary what to make of him; so they gave him a Bible, an apple and a half dollar, and left him in a room. They said, "Now, if he is reading the Good Book when we go back, we will know he will make a good preacher; if he is eating the apple, he will be a good farmer; and if he is playing with the half dollar, he will be a financier". After a while they went back to the room but to their amazement they found the boy sitting on the Bible with the half dollar in his pocket, eating the apple. Finally they decided that he would make a first-rate politician. The hon. member for North Winnipeg, as he told us himself, is no financier, he is not a farmer and he is not even a first-rate politician when he leaves himself open in the way he has done this evening. I shall not attempt to follow him in his arguments on finance because he admits he is no financier, although he undertakes to tell us how we should finance this country.

The hon. member for Red Deer in criticizing the statement of the Minister of Finance with regard to the national debt, made statements with which I am very largely in accord, and I wish to place on record some facts, and figures which I find in the Canada Year Book. They must be correct because this is a publication issued by the government. In 1921 the net debt of Canada was $2,340,878,-984, and in 1926 $2,389,731,099. Of course a lot of water has gone through the mill since 1926, but I would ask the minister to bear with me while I emphasize the way this government has done its financing. In addition to the direct liabilities of the government, there are certain indirect liabilities arising out of the guarantee of securities for railways. The outstanding guarantees as to principal and interest amount to $364,415,762 held by the public, and $58,157,951 held by the Minister of Finance, while the amount guaranteed as to interest is $216,207,142. I am not in accord with the method followed by the present government in determining the net debt of the country; I much prefer the way the former Minister of Finance, the Hon. Mr. Fielding, did it. He had an increase in the national debt to announce, and Mr. Fielding told us frankly that the increase was some $81,000,000. That was an honest, frank statement, and we found included in

that the deficit of the Canadian National Railways and the guarantees undertaken by this government. Anyone with common intelligence who finds it necessary to finance himself a little finds on going to the bank that while on the front of his statement he has to show his assets, before he endorses that same statement he must give on the back all the notes or other securities which he has endorsed. That, in my humble judgment, is the course that should be pursued by this government, and I ask the minister to be frank and sincere with the people of Canada, and in future bring down a statement which will show the net debt with everything we have endorsed and for which we are undoubtedly responsible. As it is with the individual so it should be with the government.

In each budget presented by the minister we are told that our importations and our exports are of such a nature that we have a fine balance of trade, even though we find the imports creeping up a little. In that case the minister takes refuge in informing us that this increase is due to an increase of raw materials coming into Canada. But I ask the members of the house to look at and analyze the schedules prepared by the Department of Trade and Commerce; if they do this they must come to the conclusion that the increase in importations is not due to an increase in raw material, but is rather due in large measure to an increase in manufactured goods. So I desire to place on Hansard the facts with regard to several articles, since I have not time to review the whole schedule. These references, however, will illustrate the whole question, and a review of the schedule will confirm what I have to say. Let us consider first the non-ferrous metals, such as copper, silver, lead, zinc, cobalt and so on, which are found in raw state in abundance in this country. Taking the year 1924 as a basis, we find that the increased importation of the manufactures of these materials amounted to 18.5 per cent in 1925, 28.4 in 1926 and 49.7 per cent in 1927. In that same period of four years, on the other side of the picture, see the exports of raw material of the same class extracted from the mines in Canada. Mr. Speaker, every time a train load of these raw materials goes to a foreign country to be manufactured you will find that from one to ten of the best workers of this country go also, to devote their energies to the manufacture of these goods and to produce the completed article, which will supply the home markets of the great industrial nation to our south, whose surplus will be returned to us and others in the form of fully manufactured goods. I say it is not fair to the artisans of our land and to our youth that this should be allowed to continue. It is not just; it is not right that those thousands graduating from our technical and commercial institutions should have to face these conditions and follow our raw material to a foreign land to find a vocation.

But we need not consider only the non-ferrous group of metals. We will go a step further, and review the situation as it applies to iron and its products. I see the minister is busily engaged in studying some other schedule, but I would question the candour of his statement that the increase in importations is largely due to greater importations of raw materials. That statement will not bear analysis. I would like to put this whole schedule on Hansard but I am afraid the rules will not permit me; I know the hon. member for Winnipeg North Centre (Mr. Woodsworth) will rise in his place and protest if I ask the house for permission, so I will just run through it hurriedly. First, I will give you some conception of the magnitude of the manufacture of iron and steel as shown in the four years from 1924 to 1927 inclusive:

Imports into Canada for Consumption

Nine months ending December

Iron and its Products

	1924	1925	1926	1927
Total imports	99,768,341	131,656,976	170,035,322	188,757,391
Raw iron	2,312,856	1,995,329	2,828,593	2,869,058
Per cent of total	2.32	1.51	1.66	1.52
Partially Manufactured Imports				
Pigs, blooms, etc	1,440,668	1,242,471	1,244,288	1,499,969
Scrap	402,010	391,670	676,419	984,248
Castings	2,531,701	3,761,854	3,357,837	3,072,946
Rolling mills products, pipes, etc	26,199,171	29,549,423	36,678,138	34,097,419
Tubes	1,869,435	2,587,761	2,940,492	2,825,945
Wires	1,916,143	2,012,223	2,351,865	2,525,567
Chains	476,863	472,589	701,505	616,960
Sub. total	34,835,991	40,018,091	47,950,544	45,623,054
Per cent of total	34.92	30.40	28.20	24.16

Manufactures of Iron Imported

	1924	1925	1926	1927
Sub. total..	62,619,494	89,643,556	119,256,185	140,265,279
Per cent of total..	62.76	68.09	70.14	74.32

Increase of Imports of Manufactures of Iron Compared to 1924.

	100.0%	143.1%	190.4%	224.0%

Importation of Non-ferrous Metal Manufactured

Total..	30,377,773	35,943,532	39,016,152	45,463,966
Per cent of total..	100.0%	118.3%	128.4%	149.7%

Importation of Glass and Glassware

Total..	5,099,246	5,593,858	6,811,224	
Per cent of total..	100.0%	109.7%	133.5%	

All these latter products, Mr. Speaker, as the hon. member for West Algoma (Mr. Simpson) has said, we are able to manufacture to-day in our own steel mills.

Our Liberal friends were wont to go around the country preaching low tariff, and yet we find that the government are taking more money in customs duties this year than last by some $11,600,000. Our friends from the prairie provinces and some others who talk free trade say: "Well, how can this be?" They need only study the policy of the government to see how this seeming paradox is brought about. It will be found that on almost each and every occasion when they lower the duty on some manufactured article, simultaneously they see to it that all the parts which enter into the manufacture of that article are made subject to a lower duty. With what result? That some of our manufactories throughout the towns and cities which in years gone by have filled in slack time by manufacturing parts for a large concern now find themselves unable to compete against the influx of these parts from the United States. More and more of these parts are coming in, and more and more of our artisans find themselves out of employment. Then of course their only recourse is to migrate to the United States to find a livelihood. That is the reason why the minister this year expects to extract $11,600,000 more under the customs tariff than last year.

It is very interesting to note that the minister backed up his statement with regard to the importation of raw materials by giving some concrete examples. He told us that in 1921 we imported seven thousand auto engines whereas in 1926 we imported fifty-nine thousand. Some of my hon. friends who are interested in labour and know what an advantage it is to keep our artisans in the Dominion will find it instructive to estimate the number of artisans that might have been employed in this fair land of ours manufacturing those engines. In like manner, Mr. Speaker, as an example of raw material, mark you, coming into this country, the minister told us last year that auto parts to the value of six million dollars odd had been imported in 1921, whereas these imports had increased to over twenty million dollars in 1926. Again, I call attention to the fact that he terms these parts "raw materials". How many of our artisans would have enjoyed the privilege of working in the machine shops and foundries of their native country manufacturing that extra fourteen million dollars' worth of so-called raw material? The Minister of Finance in his budget speech backed up that ridiculous and unsound statement, so far as the facts are concerned, by saying that we were importing more and more raw material to keep our factories busy! Last year he also drew attention to the fact that in 1921 we imported 7,784,980 pounds of raw wool, while in 1926 our importations had risen to 11,049,723 pounds. He took great pride in advising us that we had imported four million pounds more of raw wool in four short years. I see some of my farmer friends who perhaps know more about the sheep and wool industry than I do, but in all sincerity, Mr. Speaker, I ask since when have we convinced ourselves that we have not sufficient pasture land to produce from year to year millions and millions of sheep? Why is it that our sheep population dropped from 3,650,000 in 1921 to only a little over 2,500,000 this year? One reason is that we have imported four millions of pounds more of raw wool. The Minister of Justice seems to enjoy this, and even the Prime Minister, I notice, is very busy reading his paper. But what is he going to do with his own sheep? Not long ago I saw in the Star Weekly a picture of the Prime Minister tending his

sheep. I wonder if he is going to put the sheep industry entirely out of business, and then find himself without a vocation during his summer holidays tending his sheep. We have 898,000 acres of pasture land ready for sheep to graze on, and instead our sheep population has decreased by one million in five short years. It should have increased by that number; and instead of our importations of wool having increased by four million pounds—and the minister taking pride in the fact—those importations should have decreased, and the product of our farmers should be competing with that of the farmers of other lands.

In like manner the Minister of Finance last year took pride in the fact that our importations of raw hides had risen from 22,000,000 pounds in 1921 to 42,000,000 pounds in 1926, and last year the figure reached 49,680,200 pounds. The average weight of a steer's hide is 50 pounds, which means that we are importing the hides of one million cattle. Yet the minister takes pride in the fact that our farmers are having their home market curtailed to that extent. The farmers of this country need some protection against the inroads of these raw materials, and in my humble judgment it is not good business for the minister to take pride in these disquieting facts, for they spell national disaster.

Last year the minister also put on Hansard figures showing the importations of leather unmanufactured, showing importations to the value of three million dollars odd in 1921, rising to $3,909,000 in 1926, and according to the figures this year given me by the Bureau of Statistics there has been a steady increase for the past year giving a total of $4,124,793. I ask the Minister of Customs—he is not in his seat I regret to observe—since when has it been necessary for us to import these tremendous quantities of leather, since when have our tanneries been unable to supply us with the leather that we need to manufacture into various articles? He comes from the good town of Kitchener where several of our largest tanneries are located, and it would be interesting to have his views on this subject.

The amount of money received from the customs tariff by this government has been augmented by the application of the anti-dumping clause, and also by placing on the reduced duty list those various parts which enter into the manufacture of all kinds of machines. The net result is that our factories, which a few short years ago were factories in the true sense of the word are now largely becoming assembling plants and distributing warehouses.

[Mr. Harris.]

During the debate on the address, Mr. Speaker, I was interested to hear the Prime Minister enlarge on the great prosperity the country is enjoying due to the building boom in all the large centres of population. But if this boom is analyzed it will be found that of the eight hundred million dollars' worth of contracts he had in mind at least seven hundred million dollars' worth represented office buildings and hotels. What are these office buildings and hotels for; who are housed in them? They are chiefly for the accommodation of manufacturers' agents and others that come here to convince us that we should be buying their products instead of manufacturing our own. In addition to the office buildings the erection of new hotels is responsible to a large degree for this building boom. Why do we need new hotels? Simply to house the agents of foreign firms who come here to sell us the products of their factories. I see the Minister of Justice is enjoying this very much.

Mr. LAPOINTE: Extensively.

Mr. HARRIS: But let me tell him that our good friends in Quebec are not very anxious to see more foreigners coming here selling goods which their own factories could produce. Yet, Mr. Speaker, of the extra two hundred million dollars' imports last year a very considerable proportion represents manufactured goods, and eighty million dollars alone is the value of iron and iron products which we could ourselves produce. I am sorry the Minister of Finance has gone out. I should like to tell him that to my mind it is not a subject for congratulation on his part that our imports of supplies of raw materials for further manufacturing are on a larger scale than ever before, and, as I have pointed out, it does not really state the true facts of the case. The Minister of Immigration (Mr. Forke) is having troublous times these days. I say to him that if we provided work for the people of Canada this fact alone would be the greatest lodestone to draw more people to our shores than any other policy which could be enunciated by this or any other government.

It is interesting to note that we have it on record this year that an increased amount of British labour must go into goods which are to enjoy the preferential tariff. I want the house, I want the press, and I want the country to know that I stand four-square for the British preference, and therefore when I offer some criticism in this connection I do not wish to be misunderstood. You will find if you are importing goods from Great Britain under, say, a preferential tariff of 20 per cent as against 30 per cent general tariff, this happens. You send your cables to Rotterdam,

Hamburg, Antwerp, Lyons and London for quotations. From London you will probably be quoted, say, £40 per ton, whilst from the continent £35 per kilo ton, and similar quotations from Antwerp, Rotterdam and Lyons. But what really happens? The broker in London finds out what the market price is in England at which the English consumer can buy those goods, and what they cost on the continent. Then he goes out on the English market and buys sufficient to meet your order, adds on the difference between the preferential and the general duty, and sends a quotation just under the total cost from the continent, and then from the continent he will supply the English market. So that in the final analysis to a large extent we do not get the full benefit of the preferential tariff. And, further, if the broker is unscrupulous it may be that the goods he sends you had their point of origin on the continent. In this connection I was interested to run across an invoice the other day for a shipment of goods. Two hundred bags came in at 112 pounds to the bag; a second shipment came in a similar form; but the third shipment came in 110-pound bags. I just leave the Minister of Trade and Commerce to draw the inference why the 110-pound bags were used for the third shipment. In my opinion it was because that size bag represents 50 kilos, and consequently originated at a continental point.

Mr. MALCOLM: Will my hon. friend tell me whether the merchandise represented by the invoice is sold by the pound or by the bag?

Mr. HARRIS: It was sold by the pound.

Mr. MALCOLM: What difference does it make how much is in the bag?

Mr. HARRIS: The hon. gentleman has missed my point. Let me explain it again so that he may grasp it. We are not worrying about the two pounds we are losing on each bag. We are worrying about this fact; if this man was unscrupulous, he brought those goods from the continent to England and there transhipped them to us, and thus got the full benefit of the British preference.

Mr. MALCOLM: I cannot see my hon. friend's point. If the merchant is scrupulous enough to state distinctly how much is in each bag, I fail to see how he is deceiving.

Mr. HARRIS: It has nothing to do with the bag. The point is that the bag containing 50 kilos did not originate in England but at a continental point. Surely the minister knows that the English hundredweight is 112 pounds. I am sorry that in order to illustrate my point I have to tell the minister that the English hundredweight is 112 pounds and the continental hundredweight 110 lbs.

On the whole, Mr. Speaker, I think the country is rather disappointed in the speech from the throne, in that there is too much said of an international nature, and not enough of a domestic nature. I fear that the government is leading us too far afield in our international relations, for we are too small in population to be dabbling in such affairs. The cost will steadily increase, and we already have sufficient evidence of this fact. I do not think it is necessary for us to spend $225,000 this year in having diplomatic representatives in Tokyo, Paris and Washington. Instead of increasing our expenditure unnecessarily in this direction, in my judgment it would be much better to establish more trade commissioners throughout the world, as I have already tried to illustrate to the hon. Minister of Trade and Commerce. But apart from the mere expense, I say this dabbling in diplomatic services is fraught with great danger to this country. We have not the experience of a thousand years enjoyed by Great Britain. Much of her diplomtic skill to my mind is hereditary. Besides, Great Britain is backed by empire resources, she is backed by her navy; but we are backed by nothing on the sea. As long as we have the backing of the British navy, in my humble opiinon we shall enjoy another hundred years of peace. If we must spend this money, there are other and better ways of using it.

The time is too short for me to enumerate those channels of expenditure, but I am going to make one suggestion for the government to think over. This year I understand the government are going to bring down some legislation to give further effect to the Canada Highways Act. I hope that that legislation will be broad enough to embrace a fixed policy for the gradual elimination of level crossings on our highways. You are spending money under the Canadian Highways Act. See to it that it is spent in a way which will inure to the protection of the people by gradually eliminating level crossings. That is just one suggestion I have to offer in that connection.

Increased importation of goods of all kinds is bringing about a steady economic penetration of this country by the United States. The more our American friends penetrate this country and the more we buy of their materials the more and more dependent Canada will become upon the United States. I would prefer to see Canada more dependent on the British Empire than on the country to the

south of us. Every time you open up a new embassy or establish more direct diplomatic representation in other countries you weaken the bonds which unite us with the motherland.

I have only about three minutes more to speak, and I shall have to draw my remarks to a close. Let me say to our friends from the western provinces that Ontario has given you of her sons and daughters, everything you asked for in the way of statutory freight rates, and other concessions of all kinds. In like manner let me say to our friends from the maritime provinces that we want to grant you almost anything that you like to ask us for in order that we may hold confederation together. We are spending money on your behalf under the Maritime Freight Rates Act, and we want to give you everything we can within reason. We are with you in demanding the full implementation of the Duncan report.

To our friends from Quebec I would say that I do not know of any other land where you would enjoy the freedom and privileges which you enjoy in Canada. I know that to-day your hearts bleed for those of your fellow countrymen who find themselves in Massachusetts and in the New England states generally. I know you want them all back, and so I say to you one and all: See to it that you adopt in this country of ours a policy that will provide employment for the minds and hands of all classes of people not only that unity may prevail in Canada but that we shall attain to that position in the future which a kind providence has set apart for us. I have much pleasure in supporting the amendment moved by the hon. member for St. Lawrence-St. George.

Mr. E. A. LAPIERRE (Nipissing): Mr. Speaker, I am wondering what the people of Canada will be thinking to-morrow when they read the speeches of hon. gentlemen opposite which we have heard this afternoon. I was very much surprised to hear the remarks of the hon. gentleman who has just taken his seat (Mr. Harris) with respect to the city of Toronto from which he comes. If there is any city in Canada which has benefitted by the policy of the Liberal government during the last six years it is the city of Toronto.

Mr. HARRIS: I hope the hon. gentleman will be good enough to cite any statement I made with regard to the city of Toronto.

Mr. LAPIERRE: If I understood my hon. friend aright he stated that the hotels built in Toronto were erected for the accommodation of foreign business agents. I would tell my hon. friend those hotels were built to accommodate the tourists that are coming from all parts of the United States to see the prosperity which prevails in Canada. That same tourist movement has been very beneficial in the province of Quebec.

The time allotted to me this evening, Mr. Speaker, will not permit me to follow in detail the remarks of the last speaker, but in answer to him, I will quote one whose opinion should be acceptable to my hon. friend from Toronto-Scarborough. I have before me a copy of the supplement to the annual financial review of the Toronto Globe of January 3, in which appears a statement from Mr. A. E. Ames, well known to all the Toronto members, reading as follows:

> Retrospect of year 1927 shows large-scale progress throughout the Dominion.
>
> An inventory of prosperity surpasses in proportion to population any other nation's—Canada's funded debt lowered—More income tax reductions seen advisable—Canadians spent fifty million dollars for foreign securities, and bought half domestic bond issues—Canadians in mood for real adventure—"Steady does it".
>
> A cool retrospect of the year 1927 recognizes large-scale progress throughout the dominion. Perhaps the most notable features of the year in Canada have been the following, which are not intended to be listed in order of importance:
>
> Reduction of federal funded debt in the last nine months by, say $42,000,000;
>
> Increase in bank deposits of over $200,000,000;
>
> Abundant harvests;
>
> Notable development of hydro-electric power;
>
> Important increases in paper and pulp making capacity;
>
> Heavy increase in mining operation, construction and exploration;
>
> General business prosperity;
>
> A marked beginning of real estate activity, particularly in the larger cities.

That is the opinion of a gentleman in Toronto who is in a position fully to realize the great progress that Canada has made during the last six years. The Minister of Finance (Mr. Robb) is to be congratulated upon the budget which he has presented. Year by year we have seen the nation's prosperity increase until to-day we occupy, as a nation, one of the proudest positions in the world. That prosperity has not been confined to the cities but has been enjoyed by every class of our population. For the benefit of our western friends I should like to read an article from the same publication containing a statement by one who is known to them all. I refer to the Hon. T. A. Crerar, president of United Grain Growers:

> During the past five years the farmers of western Canada have produced and sold farm produce to the value of $2,000,000,000, taken at country points. Government statistics are not available with respect to all of this, but the government figures show the wheat crops alone in that time to have been worth almost $1,650,000,000 at country points, and to this is to be added the value of other crops, dairy products,

live stock, and other products sold. These figures take no account of the enormous business in handling and transporting this produce, which would amount to many millions more.

Now, Mr. Speaker, we have had the opinions of those who are close to us, but I value very much more opinions from an independent source, and I have here the financial and industrial page of the Literary Digest, from which the following is taken:

In international trade, we are reminded, Canada now ranks fifth among the commercial nations of the world. A writer in The World's Work tells us that Canada's per capita wealth is excelled only by the United States and Great Britain, "being $2,406, compared with their $2,918 and $2,459, respectively." Roger W. Babson, we read further in The World's Work, has recently estimated that Canada leads the world in the number of homes owned by her own people, namely, 70 per cent.

For one thing, "the 2,278 miles of railway in 1867 have now been expanded to 40,352, and no country in the world has as large a railway mileage per capita."

"To-day", continues Mr. Stevenson, "Canada leads the world as an exporter of wheat, newsprint, nickel and asbestos, and her command of raw materials and water-power resources, which can cheapen the costs of the manufacturing processes, insures her steady industrial expansion."

This should be sufficient to meet the arguments that have been put forward that Canada is not to-day a prosperous nation.

As my time is limited, I should like to refer now to another item of the budget which is much more interesting and which has not received during this debate the attention which it really deserves, having regard to its importance. During the discussions that have taken place this session reference has frequently been made to the visits to Canada last year of several distinguished personages, but there was one group which came to our country during 1927 whose visit had perhaps more to do with the future development of our mining resources than anything else that happened during that year. I have reference to the British Mining and Metallurgical Congress which met in Canada in 1927 and which was composed of some of the most eminent geologists, mineralogists and mining engineers in the British Empire. They were accompanied by a large number of distinguished men engaged in the same callings in different parts of the world. They were entertained and shown the wonderful mining resources which this Canada of our possesses.

I regret to say that the tremendous development of our mining resources is not receiving at the present moment the support and attention that it really deserves from the people of Canada. Our mining industry is one of the most hopeful features of our economic development. Canada possesses one of the most marvellous deposits of minerals in the known world, and more than ninety-five per cent of the mineral wealth produced in this country has been produced within the last twenty-five years. That wonderful precambrian shield, which has often been referred to in this house, is one of the largest exposures of mother earth's natural wealth; containing 260,000 square miles, encircling Hudson bay and practically blanketing the whole of North America, it has already become one the largest producers of minerals in the world. In order that we may fully realize just how much this means in the future development of Canada I wish to cite a few figures which will, I am, sure, demonstrate to the satisfaction of everybody that we are on the eve of one of the largest mineral developments the world has even known.

In 1927, the Dominion produced $243,000,000 worth of minerals, of which Ontario produced $90,000,000. In Ontario the mineral production is as follows:

Gold	$31,000,000
Nickel	14,374,000
Silver	5,760,000
Platinum	1,000,000

Our tremendous mineral development will be realized when we remember that twenty-five years ago we had but one mine in northern Ontario; that in the last twelve months that northern country produced more than $32,000,000 worth of gold alone; that we now have in northern Ontario the second largest mine in the world, a mine which since 1921 has produced $121,000,000 worth of gold and distributed more than $50,000,000 in dividends. This is just the commencement of a new era; already new mines are being discovered throughout that northern section.

Let me describe the situation which exists in my constituency. We have in the Sudbury district, within a radius of ten miles, three of the most startling discoveries in the mining world. We are now producing 95 per cent of the world's nickel, and within the last few years discoveries have been made which promise to be of even greater value to Canada than our wonderful nickel deposits. We have in the Frood mine one of the largest copper deposits on the American continent; it is now estimated that there is on this property an ore reserve of more than 100,000,000 pounds of high class copper. When we stop to consider that this copper was localized through diamond drilling at the bottom of a nickel mine, assuring profitable mining for many years to come at greater depths, and when we consider that in nickel alone the mines that are now being operated have a reserve of ore for the next fifty or sixty years, we are just commencing to realize the value of our mineral products. To us who have

waited all these years with faith in the future development of that mining country it was a source of the greatest satisfaction to hear those visitors from Europe express their astonishment that these tremendous mining deposits should have so long remained idle. They evinced the greatest interest in these wonderful deposits, and they were amazed at the variety of valuable minerals which are found within such a small area.

Another discovery which has been a revelation even to the oldest geologists and mining men in our section is that recently made in the centre of that great nickel deposit of one of the largest lead and zinc deposits on the American continent. This deposit means another producing mine in the centre of our nickel and copper country. The development work done prior to the present assures us of a continuous supply of high grade lead and zinc ore for the next fifty years. We are assured of an expenditure of at least fifty million dollars for equipment, machinery and construction within the next two or three years. I need only refer to what has happened in my own part of the country. Those who have followed mining development in this country within the last few years must have heard of the great developments that have taken place in northern Ontario. There again we have a very wide area which is rapidly coming to the front as one of the largest producing areas on this continent. There has also been made recently a very interesting discovery in Manitoba, and to my friends from the west I would say that the development in the northern section of that province would alone warrant the construction of two railroads to the Hudson bay. The amount of ore which has been exposed and is in reserve amounts to over four hundred million dollars. The ore blocked out or visible in the Flin Flon, the Sherritt-Gordon and the Mandy mine assures for Northern Manitoba a development equal to that which we have seen in northern Ontario. Those of us who can remember twenty-five years ago when that entire area in northern Ontario, then given over to the lumber industry but today dotted with thriving towns and large productive areas of agricultural land, can draw a mental picture of what is going to happen in northern Manitoba. Every operating mine means a new settlement, the opening up of new agricultural land. It means a market close at hand for the farmer's products; it means the employment of thousands and thousands of Canadians in an industry that pays ample salaries and is a source of great wealth to any nation. These are some of the possibilities of the near future. We can see within the next ten or fifteen years an expansion in this country such as has not been seen in any other civilized country in the world.

Besides the minerals which I have mentioned we have as well very large deposits of iron ore. This is a question that will soon demand the attention of the government. The iron deposits of the lake Superior district of Michigan are now within calculable distance of exhaustion, and it will take but a short time before the ore reserves of that part of the United States will not be available for the Canadian market. We have at the present time several iron deposits which have been successfully operated. We have large deposits of siderite, which can be beneficiated, by which I mean any treatment which will remove the impurities or the sulphur and prepare the iron ore for the furnace. Our resources of iron ore are almost inexhaustible and the small margin that now exists between the price of the high grade Michigan ore and the low grade siderite and hematite ores that we have in northern Ontario assures us that the time is rapidly coming when these ores will be treated in this country, and that we shall have here an iron ore industry. What that will mean for Canada, what it will mean to our transportation problem, and what it will mean to the future richness of the nation, can only be realized when we see what has taken place in the United States. Undoubtedly it will help us to solve our transportation problem. It will also help us to solve our unemployment problem, and it will add very largely to our national wealth. The development of these copper mines in northern Manitoba will mean a great deal to the industry all over Canada. For the treatment of these ores in Canada we require a very large amount of machinery and equipment. Most of that equipment at the present moment can be and is being manufactured in Canada; in fact, the activity which has been quite noticeable within the last few years in the mining equipment business and allied industries is due entirely to the mining development that has taken place.

We must bear in mind that the future of the mining industry depends very largely upon foreign capital. For years our mines remained undevolped for want of capital. I have heard some severe criticism and some doubts expressed as to the wisdom of attracting American capital to develop our Canadian mines. Mining differs in a great many ways from ordinary business. It is a business that is more or less speculative; it is a business of great hazards, and only those who are in

the business and have successfully developed mines are inclined to invest the immense amount of capital required to develop a mine. As I said a moment ago, the International Nickel Company in the installation of plant and equipment necessary to develop their new copper deposits will spend in the neighbourhood of fifteen to eighteen million dollars. There are very few corporations and very few individuals who are disposed to invest such a large amount of capital in an enterprise in connection with which they will have to wait possibly five or six years for any returns. That, Mr. Speaker, accounts in very large measure for the large amount of foreign capital which is coming into our mining areas. We would have welcomed a great deal more of English capital, but, unfortunately for us, the first English corporations which came to Canada and invested in our mines were unfortunate in their selections. They came into the mining area before the geology had been thoroughly explored, but to-day those areas are coming into their own. The holding in Canada of the 1927 convention of the mining congress has demonstrated to those learned men what great mineral deposits there are in this country.

The mining industry is one of those activities which unfortunately attracts but little attention. Though it is but rarely referred to in this house it is pregnant with wonderful possibilities for the future development of this country. It is predicted by those who are best in a position to know that within the next decade the products of our mines will be our largest source of wealth. We in the north have hope and faith in the future of this nation. We have seen the rapid transformation which has taken place in that part of Ontario, and we can see that with the continuous increase in the productivity of the west, with our industrial expansion due to the development of the natural resources and our increasing world trade, in the near future, Canada will be called upon to take her place among the leading industrial nations of the world.

Mr. C. H. DICKIE (Nanaimo): I am sure we all listened with great interest to the address of the hon. member for Nipissing (Mr. Lapierre). We were very glad to hear of the wonderful progress which has been made in the north country, and I am sure the indomitable people who first went in there deserve all the success which they will doubtless achieve. There is a wonderful mining country in northern Ontario; another is coming into being in Manitoba, and we have the mines of Quebec as well. Wherever the Laurentian shield extends minerals will be found, and wherever the precambrian rocks exist will be found gold. The geologists tell us that in two years Canada will outstrip the United States, and that in less than five years we will produce more gold than South Africa. That is a wonderful tribute to a wonderful country.

We also have great mines in British Columbia, among them the biggest copper mine and the biggest lead mine in the British Empire, and in British Columbia mining is also experiencing a revival. Canada has great forests, immense potential waterpowers and wonderful agricultural land, and the sad thing is that with all these possibilities we are drifting along, lagging behind with a population of only nine million people. There is something wrong with the directorate of this country or we would not have this state of affairs. Look at the situation with regard to our forests: each year wood, wood products and paper to the value of $240,000,000 go to the United States; we export to the markets of the world a great quantity of grain; we have these great mineral deposits. Why then, are we simply marking time while other nations outstrip us in the race for nationhood? I think we should devote a little more attention to economics and waste less time worrying about our status within the British Empire. We should make a sound economic study of this country, but I am afraid the present government is unfit for the task.

It was a pleasure to listen to the last speaker (Mr. Lapierre), but it was painful to listen to the budget speech this year. The minister fulfilled a very difficult task, but he presented a very serious aspect of affairs when we come to analyze it. Canada is not going ahead as she should. We say times are better here, and that everyone in Canada is prosperous. That may be so to a certain extent, but if you ask two or three thousand people in this beautiful little city whether they have experienced any prosperity, and ask the same question in Vancouver, Montreal or Toronto, I am quite sure they will all tell you the same thing. We cannot be a prosperous nation unless the rank and file are prosperous, and unless people are employed. Why are they not employed? Why are they going to the United States year by year, as has been the case ever since I can remember? Our manhood and womanhood are the only finished products the United States will accept from us, and they take our young men and women without question because we are known to be a resourceful, honest people. They would rather swell their population with Canadians than perhaps any other race on the face of the earth. I can remember that in the early days in California the best recommendation

any man could have was to be a Canadian, and almost the same situation exists there today. As I have said, we were known to be resourceful: we were accustomed to frugality and were not given to many of the habits which prevailed in that careless western country, so people wanted Canadians in their employ if they could possibly get them. At present in the cities of Seattle, Portland, San Francisco and Los Angeles, I venture to say one-half the bank employees are Canadian boys who have drifted down from Vancouver Island, and their fondest wish is that some day they may be able to return. Of course they cannot go down there under contract to work, but they write to a manager of a bank to ask if he requires any additional help. They will then receive a letter telling them to call in if they happen to be going past the bank, and when they do so almost invariably they secure employment at wages much better than those paid by Canadian banks.

We speak of an immigration policy; let us get right at the root of the matter and see on what we can found such a policy. There is only one sound principle, and that is to make this country a place where workingmen can exist and rear their families in comfort. Let us provide an outlet for our children, so that when they graduate from the universities and commercial schools they will be able to find employment and remain in the country they love so well. As it is now, what prospect is there for any of these men in the west, let us say? They are all raising families, only to see them depart for the United States as soon as they attain manhood and womanhood. That can be prevented by making this country just as good to live in as they find the United States. We still have plenty of raw material, although we are waging a relentless fight against our forests. The forests of the United States, together with a good many mines, have become nearly exhausted; as you all know, there is very little pulpwood left in the eastern United States. If we do not continue our foolish policy of sending them $15,000,000 worth of pulpwood every year, their paper mills will have to close down and they will probably come to Canada to carry on the manufacture of paper. I say we can make this country as attractive as the United States; it could be done if we had the proper directorate, but today, when we should be riding on the crest of the wave of prosperity, we find ourselves wondering whether times really are good in Canada.

What have we been doing; what has been our policy? After looking over the figures I wonder that we find ourselves as well off as we are. Let us consider the trade of Canada with the British Empire. In 1926 our exports to the United Kingdom amounted to about $459,000,000, while in 1927 they fell to $409,000,000, in round figures. That represented a loss of $50,000,000 in our exports in one year. In 1926 we imported from the United Kingdom goods to the value of $164,000,000, roughly, and in 1927 about $182,000,000, which meant that we imported $17,000,000 more in goods and exported $50,000,000 less. In 1926 our favourable balance of trade with the United Kingdom was about $299,000,000, while in 1927 that figure fell to about $217,000,000. That represented a loss in trade of $82,000,000, although of course we still have a very favourable trade balance with the United Kingdom. Bearing in mind that $217,000,000, let me give the figures with reference to our imports and exports. From the United States in 1926 we imported goods to the value of $668,000,000, and in 1927, $707,000,000. There we have an increase. In 1926, on the other hand, we exported $465,000,000 and in 1927, $474,000,000. That may not seem very bad on the face of it, but our unfavourable balance of trade in 1927, compared to 1926, shows a loss of trade of $39,000,000. We received $217,000,000 from the United Kingdom of a favourable balance in our trade, whereas we paid to the United States $232,000,000 more than we received from our friends in Great Britain. In other words, our balance from the United Kingdom is wiped out completely and we have to dig down into our pockets for sufficient money to offset the difference in respect of the United States.

Mr. ADSHEAD: How is that unfavourable trade balance paid?

Mr. DICKIE: In trade.

Mr. ADSHEAD: By further trade?

Mr. DICKIE: It is paid by trade to a great extent. But let me ask my hon. friend this question: Is it necessary in order to have trade relations with the United States that we should have an unfavourable balance of $232,000,000?

Mr. ADSHEAD: I was asking the hon. member how the difference in trade was made up and he said, by further trade.

Mr. DICKIE: Yes, but a trade that is unfavourable to Canada. Were it not for the products derived from our diminishing forests, forests that are being rapidly depleted, we should have an unfavourable balance of trade with the United States such as would alarm even my hon. friend from East Calgary (Mr. Adshead). I can understand a gentleman of my hon. friend's point of view wishing to buy

from the United States where he can buy on the cheapest terms; and that possibly is a good argument for a western man if he has no desire to do anything for Canada as a whole. But surely the people of this country, we in this House of Commons, should view the Dominion as an entity and be prepared to make some compromises for the common good. I believe we can make times good in Canada and build up manufactures in Ontario and Quebec, and also make Winnipeg and Calgary manufacturing cities. But in order to do this our people must cultivate the spirit of compromise. Is it not worth it to bring about a state of things which will make a home for our children when they have graduated from our schools, rather than have them drift away from us to enhance the prestige and enrich the coffers of the country to the south of us?

I have no fault to find with the policy of the United States; indeed, I only wish that we in Canada would copy it. I can well remember the time when the United States imported from England all the iron and steel it required. England had built up an admirable manufacturing industry in this line through the employment of the best scientists in the world. And she had coal and iron ore lying side by side, sufficient to supply the demands of all nations for iron and steel. At that time she supplied the needs of the United States in this direction. But what happened? Broadminded men in that country saw that too much money was leaving the United States, and they took this view: "We have the raw materials; let us build up an iron and steel industry in this country. Let us supply our own needs." But people with small minds who did not view things with a broad outlook said, "You will have to pay more for your iron and steel." Well, those of foresight in the United States admitted this, but they pointed out that they would be able to provide employment for a larger population. With this object in view the United States imposed an almost prohibitive duty on iron and steel, increasing it still higher until the duty constituted practically an embargo. And under that embargo was built up the great iron and steel industry of the United States, the barometer of trade in that country. Armies of men were employed in the iron and coal mines; cities sprang up; thousands of people came from other countries, and a vast population was accumulated. What argument was there against the means which they adopted to build up that industry, which could not have been created unless the people had been willing to pay more for their product for a time at least? When they had their industry in full working order then they were able to compete with the world in iron and steel. But it took them many years to accomplish this. Now, I have no doubt that we could do the same in Canada if we only tried. We need to use good judgment in considering the question, but I see no reason why my hon. friend from East Calgary, and for that matter any gentleman living say in the interior of Saskatchewan, should lose one dollar through the development of trade in this manner. I can conceive the possibility of a government with actuarial ability and broad common sense quite easily devising some scheme whereby if one part of the country suffered unduly by reason of something that made for the prosperity of the Dominion as a whole the discrimination might be offset in some compensatory way. I see no reason why this should not be done.

I know no argument that can be advanced against a larger population for Canada; certainly we must have a population. But as things are being carried on in Canada at the present time I dislike seeing any immigrant come to these shores. Let us get the country ready for immigrants; let us so arrange our economic affairs that if a man, for some reason or other, cannot take up farming he may go into some manufacturing centre and find work not only for himself but for his children as well. A policy of this sort requires sensible, careful handling, and above all we must look at things from a broad national standpoint. Let us take pride in this great country, about which we have heard from my hon. friend who preceded me. Let us see whether we cannot make this nation worth while. I have not the slightest doubt that with a sound economic policy we could bring millions of people here to augment our population, having them knocking at our doors for admission.

We are spending millions of dollars to induce immigrants to come into Canada while at the same time the Americans are spending vast sums to keep them away from their country. Canada for the last twenty-five or thirty years has been an immigration agent for the United States; I make that statement without the slightest fear of contradiction. The very best of our young men have been pouring across the border year after year, with the result that while the Americans are securing all the immigrants they can assimilate we are losing the cream of our population. So rapidly, indeed, is the population of the United States increasing that that country has found it necessary to enact a quota law to keep foreigners from its shores. Our Canadians, on the other hand, are admitted into the United States without let or hindrance. Why can we not take a leaf out of their book? Why can

we not adopt some sound, vigorous policy which will promote our own interest? We need not be bound by mere words; let us shun the term "protection" and "free trade" and simply get down to a common sense basis. Let us enact some common sense legislation which will foster various enterprises in this country. In may be perhaps that under some form of protection a manufacturer here or there may profit unduly. But we can take steps to remedy any evil that may arise in this direction. Nevertheless I am firmly of the belief that our manufacturers must be protected if we are to get anywhere; they must be enabled to make such profits as will render it possible for them to pay fair dividends, to lay by something against lean years, and to pay their employees as good wages as are paid in the United States, and even better.

Give our manufacturers Canada for a market and they can do this; and we can see to it that they do not profiteer to any unreasonable extent. As things are to-day, our industries are fighting against odds: the boot and shoe manufacturers and the textile people are struggling along, not knowing what they will do from day to day. The textile industry of Canada supplies just thirty per cent of the wants of our people, working only fifty-eight per cent of single shift time. And the same condition exists in other industries; the cloth industry is in serious straits to-day. It may be asked: What about the textile industry of the United States? It also is in bad shape; it is not making any profits. But the situation is entirely different in the United States. Over there they have ninety per cent of the home trade in addition to the trade they secure from Canada. The industry in the United States is over-machined; it has too much equipment. We in Canada on the other hand have an equipment which is sufficient to supply the needs of a far larger market than we enjoy at the present time; we could supply 75, 80 or 90 per cent of the people of Canada with cloth if only the conditions were favourable.

I might discuss other industries but I will not do so; the story is very largely the same in respect of them all. We must give our manufacturers a chance tc make good. Do not let us think that every manufacturer, because he makes a profit, is diabolical, as I have heard him characterized on the floor of this house. Our manufacturers must make money. There must be some goal for them to strive towards, otherwise they will not invest in industrial enterprises in Canada. With our wonderful water-powers, and with natural resources such as we have in this country, Canada should be highly prosperous. Let us see whether we cannot ride on that wave. I have every sympathy with the people both of the province of Quebec and of the prairies. Indeed, so far as the prairie provinces are concerned, all you have to do is to visit that country in the winter and you will realize the conditions that confront those people. Possibly they are not living the kind of life that makes for a broad point of view; conditions there may have a tendency toward narrowness of view.

Mr. McMILLAN: It is the opposite.

Mr. DICKIE: Nevertheless, they are conditions that make for honesty of purpose. I give the people of the west credit for that virtue.

In conclusion, may I ask that we forget everything but the important fact that we are all Canadians living in a great country which we can make still greater, a country of which we should all be proud? Let us not give up to politics that which was meant for mankind. And too many of us are inclined to do this. I mentioned the people of Quebec. Let me say, so far as they are concerned, that they are a fine industrial people who are willing to work, and it is unfortunate that for years and years their population should have been drifting across the line. As a good old priest remarked to me one day, "When our people go across the border away from mother church they lose the religion they learned at their mother's knee." Why should this be necessary? Quebec, with its wonderful resources, should be able to retain all its population and repatriate many of those who have left the Dominion to help to make the United States a great nation. Let us do something to remedy this condition of affairs.

Mr. G. L. DIONNE (Matane): This is practically the first time, Mr. Speaker, I have addressed the house, because I had not an opportunity to speak in the previous debate. However, I will now take occasion to make a few remarks on the motion before the house, and before discussing the subject matter of the present debate I wish to congratulate you, Mr. Speaker, on the manner in which you have presided over the deliberations of this chamber. I do not want to throw bouquets or burn too much incense, but I think I may safely say that your presence is an invaluable asset to the house.

I would also congratulate the Prime Minister (Mr. Mackenzie King) on the splendid document we have in the speech from the throne, now disposed of, while at the same time commending the mover and the seconder

of the address in reply thereto. Let me also compliment the leader of the opposition (Mr. Bennett) on his elevation to the position he now holds. It is a matter for gratification that the members on this side of the house show such good will and understanding in the support they give to the government, while I admire at the same time these qualities in hon. gentlemen opposite, who support their chief with equal loyalty. And while I am offering congratulations, I must not forget the ministers of the government, who have so wisely managed the affairs of the country.

As a member from Quebec, I rejoice in the elevation of Archbishop Rouleau to the office of cardinal, and as one interested in the diocese of Rimouski I take very great pleasure indeed in the appointment of Bishop-elect Courchesne.

Now, Mr. Speaker, I do not intend to review all that has been said since the beginning of the session; interesting though it would be, I have no inclination to travel all over the globe following all those who in their speeches have been making excursions into other countries. We have heard a good deal about emigration and immigration. As regards emigration, I have read that the Chinese at one time built very high and thick walls around their country and erected ponderous iron gates to keep the insiders in, but after a number of years they were obliged to remove the gates and very largely demolish the walls to let those insiders out. I presume it was getting too warm from overcrowding, and now the Chinese are scattered pretty nearly throughout the entire world. It is a very difficult matter, Mr. Speaker, to prevent emigration; indeed, it is almost an impossibility. But emigration can be to some extent moderated by means of laws not only enacted but strictly enforced.

As regards immigration, we have been acquiring considerable experience over the years, not without some success, and at a considerable expenditure. I am in favour of immigration, but I do not think that we should restrict it to people from the British Isles; we should get immigrants from France, Belgium and Sweden. When we are discussing the types best suited to this country, surely we must realize that the peasants from these three countries are well adapted indeed to conditions in Canada; they are farmers who have been brought up to an agricultural life and they would certainly do well here. What we need is, of course, an increase of population; our population instead of being nine or ten millions should be anywhere from seventy-five to a hundred millions. It is all very well to aim at an increase in population by means of immigration; but, Mr. Speaker, what is far more desirable is a natural increase. I would advocate the marriage of men between the ages of twenty and forty-five, and if we could raise families of five, ten and fifteen, yes, and even twenty children, our immigration problem would soon be solved. I would even encourage the marriage of the youngsters, those between eighteen and twenty. These youngsters marry, it is true, but unfortunately they ignore the responsibilities of the married state and have no children.

Coming now to the budget, I must congratulate the Minister of Finance (Mr. Robb) on the very able speech he delivered to the house. In view of what that speech discloses, there is not only hope of prosperity; we are actually in an era of prosperity. Agriculture is our main industry in Canada and we should encourage it by every means at our disposal. The farmers deserve every assistance we can give them. I have heard a good deal about the development of our natural resources, and much has been said in regard to mines, minerals and ores. This is all very well, but we must have the courage to develop those resources.

I have here a newspaper despatch quoting the comment of the *London Express* on the Robb budget:

> The Budget Makes One's Mouth Water
>
> London, 20 (S.P.A.). The newspaper "The Express" commenting on the Robb budget, says that it is one of those which makes one's mouth water. It is a further proof that Canada is one of the most enviable countries of the world, and that its prosperity, born from its natural resources, is permanent. After all, this is but a small issue if we are to compare it to the future possibilities which awaits it. Young men and girls should have no hesitation. The inheritance of the Empire and of good fortune await them on their arrival."
>
> The Sunday Observer remarks that Mr. Robb prepared his budget in view of rousing the envy of the finance ministers of Europe. "The tariff" it states, is of a nature to safeguard the interests of the country in a movement which is making great progress. The principle of British preference is always maintained and is established as solidly in Canada as it is in England. In a word the budget and the conclusions which they draw from it show up the opportunities of an energetic and coherent policy of immigration.

Now I return to the subject of immigration. There are some sons of Canada that have been in the United States for a number of years and they would be happy to return to this free country. By all means let us encourage the repatriation of Canadians now resident in that country. Some of them may not be able to come back, but others will be very glad to settle on farms in this Dominion. At the same time while it is a good thing to encourage immigration, it is far better to

keep in Canada those who are now here. Hon. gentlemen opposite have spoken of the exodus to the United States, and they say it should be checked. By all means let it be checked. I remember, however, the period from 1882 to 1896, although I was very young then, when the Conservatives were at the head of affairs in this country. There was quite an exodus to the United States at that time, and what did the government of that day do to check it? Absolutely nothing.

I am not going to enter, Mr. Speaker, upon the discussion of the complicated tariff items dealing with woollens, textiles, silks, worsteds and so on. The hon. member for St. Lawrence-St. George (Mr. Cahan) undertook that task this afternoon and got considerably twisted in his subject. I should not like to meet with the same experience.

Hon. gentlemen opposite talk about the national policy. Their policy used to be "Liberal-Conservative"; now they have dubbed it "national." It will only be necessary to add i-s-t for it to become "nationalist."

Some hon. members have spoken here about the banking system. The banking system in this country is all right enough; it works fairly well for those who can get money from a bank, but the farmer cannot get it. So far as he is concerned the system is no good. I will not speak about capital, because since 1925 I have been more used to paying interest than accumulating capital. I will not speak about capitalism because I know nothing about it. What I am familiar with is capitalized interest. Neither will I venture an opinion with respect to capitalists. I know some of them and they are very nice, decent "socialists."

Talking about repatriating Canadians from the United States, there is a nice opportunity for promoting this laudable movement. I refer to the building and operating of a railroad from Gaspe to a point in the Matepedia valley and then on to Edmundston. This line would run through a well timbered territory, through country rich in minerals. There are rivers and lakes in that district which would prove a paradise to the sportsmen. I do not hesitate to say that tourists would pour in by the thousands to that district if it were made accessible. Here is an opportunity to settle repatriated Canadians, along the route of this new railway. It would help in the opening up of new parishes, and would develop the natural resources of this part of Canada, to say nothing of yielding millions of feet of lumber and millions of cords of pulpwood. Taking all the prospects into consideration, this railway, if it were built, would in my opinion, be one of the most profitable in the whole country.

Something has been said about encouraging the raising of sheep. Now that sheepskins are entering into the manufacture of furs of all kinds, here is an additional incentive for the raising of sheep.

I should like to say a word or two to those who fear the occurrence of another war. There is a cloud in the sky, but it not a cloud which portends danger. It is a cloud full of good will and understanding, if I may use that expression, and it will burst in an expression of good will over the entire world. Let there be no fear of the coming of another war. If one should occur it will not be fought with deadly weapons but with pop-guns and pea-shooters.

I have already spoken of the natural resources which await development in my constituency. There are wharves also which need filling, and I hope the Minister of Public Works (Mr. Elliott) whose generosity is so well known, will make generous expenditures for this purpose, not only in my constituency but in other constituencies also. May I say in conclusion that I trust the government will not exercise the pruning knife too rigidly when it comes to making provision in the supplementary estimates for works of various kinds calculated to meet the necessities of the community and to promote in every way the development of the country. I hope to have other opportunities of explaining the needs of my constituency.

Mr. MANION: While it is a little earlier than usual to rise, there was an understanding between the whips that upon the conclusion of the speech of the hon. gentleman who has just resumed his seat, the debate should be adjourned. I therefore move the adjournment of the debate.

Motion agreed to and debate adjourned.

On motion of Mr. Mackenzie King the house adjourned at 10.10 p.m.

Tuesday, February 21, 1928

The house met at three o'clock.

REPORT OF COMMITTEE

First report of the select standing committee on miscellaneous private bills.—Mr. Parent.

REPORT PRESENTED

Report of Gordon W. Scott, Chartered Accountant of Montreal, on the activities and

"modus operandi" of the Department of Soldiers' Civil Re-establishment.—Hon. Mr. King.

CUSTOMS TARIFF SCHEDULE

Hon. J. A. ROBB (Minister of Finance): On Friday of last week the hon. member for Winnipeg South Centre (Mr. Thorson) asked for a comparative statement of the changes in the customs tariff as delivered in the budget. I am now tabling this, errors and omissions excepted. The officers of the department assure me that it is fairly complete, but as there are a number of reclassifications we may discover some errors as we proceed. I beg to move, seconded by Mr. Dunning:

That 1,500 copies in English and 500 copies in French of the comparative rates of customs duties enumerated in the lists now tabled be printed forthwith, and that standing order 64 be suspended in relation thereto.

Motion agreed to.

TARIFF ADVISORY BOARD

On the orders of the day:

Mr. H. B. ADSHEAD (East Calgary): I would like to ask the Minister of Finance if he will file a statement showing the applications that have been reported upon by the tariff advisory board?

Hon. J. A. ROBB (Minister of Finance): I think I can. I will look into it and give my hon. friend an answer to-morrow.

DEPARTMENT OF SOLDIERS' CIVIL RE-ESTABLISHMENT

REPORT OF ROYAL COMMISSION

On the orders of the day:

Mr. ROBERT GARDINER (Acadia): I would like to ask the Minister of Health whether it is the intention of the government to have the Hunter report printed and distributed to the members?

Hon. J. H. KING (Minister of Soldiers' Civil Re-establishment): I had not thought of doing that. The report was tabled yesterday and I see that it has been given a good deal of publicity in the press. If it were thought essential to publish it, I do not suppose there would be any objection, but I do not think it is necessary.

Hon. R. J. MANION (Fort William): I think it would be advisable if the minister would agree to printing the report, as it is not a very lengthy one. I am not speaking of the evidence; I am speaking merely of the report. The house would appreciate its being printed.

Mr. PARENT: I submit that this should be published in both languages.

Right Hon. W. L. MACKENZIE KING (Prime Minister): On behalf of the government I would say that a motion will be introduced to-morrow to have the report printed in both languages.

THE BUDGET

DEBATE ON ANNUAL FINANCIAL STATEMENT OF MINISTER OF FINANCE

The house resumed from Monday, February 20, consideration of the motion of Hon. J. A. Robb (Minister of Finance) that Mr. Speaker do now leave the chair for the house to go into committee of ways and means, and the proposed amendment thereto of Mr. Cahan.

Hon. R. J. MANION (Fort William): Mr. Speaker, in the forty minutes at my disposal I shall not attempt to deal at all exhaustively with the financial aspects of the budget. They were dealt with very ably yesterday by the hon. member for St. Lawrence-St. George (Mr. Cahan). He particularly pointed out the fallacy, stated now for two or three years by the Minister of Finance (Mr. Robb), in regard to the supposed cut in the debt of this country when, as a matter of fact, due to guarantees placed upon bonds for the national railways, bonds upon which the national railways are not paying interest, the debt is really being increased rather than decreased. When the railways reach the stage of paying interest on their bonds, then the Minister of Finance might be justified in taking the attitude that he does. I do not, however, wish to go further into that matter as the hon. member for St. Lawrence-St. George elaborated it very thoroughly yesterday, and I have other matters to deal with in regard to the faults and failings of this government which will take me my full forty minutes, and, if I were permitted, would take me three times as long.

The rest of the budget deals largely with matters such as the income tax, and income taxpayers will no doubt be somewhat pleased. As that affects only 200,000 or 225,000 people in this country, it does not affect 97 per cent of the people at all. The corporation tax is another of the same sort. If the reduction in the sales tax had been ample; if it had been along the lines proposed in our amendment, it might have made some difference in the cost of living; but as it is merely a reduction of the sales tax back to the point at which it stood when we went out of power, a reduction of only one per cent from the present rate, I fear that not very much of the reduction will be passed on to the consumers of this country, and, therefore, I am afraid that, as the tax stands to-day, the public generally will not benefit much.

While the tariff changes may seem minor when one looks at them first, already from reports coming in to members of this house who have in their constituencies mills which are affected by these tariff changes, it looks as if serious injury was once again going to be done by this government to the industrial life of this country. I have incidentally in my hand a report which I received a couple of days ago in the mail. This is the annual report of the Monarch Knitting Company, a company in which many years ago I happened to take a very small block of preferred stock. About the time when this government came into power—I do not say it was exactly at that time—this company stopped paying interest on the preferred stock, and I notice in their financial report this sentence which is worth reading:

> We are hopeful that an adjustment of duties at an early date will enable us to secure the portion of the business which we previously enjoyed, but which is now going to countries with a lower standard of wages and living conditions.

I fear the Monarch Knitting Company among others will not derive much benefit from the present budget. As time goes on, the government and the people of this country will find that the reductions in the present tariff, though minor in appearance, will do more injury to the industrial life of our country and drive still greater numbers of our people to the country to the south of us to earn their living which they are denied here at home.

Let me ask the Minister of Finance this: What is there in the whole budget for the ordinary man in the street? The budget is largely a review of conditions as seen through the somewhat prejudiced glasses of the Minister of Finance with the addition of the usual boasts by the minister and the government that such prosperity as the country is enjoying is the result of their good work in governing this country. As a matter of fact, they know as well as we know, and as the people of Canada know full well, that the real improvements, such as they are, that have taken place in conditions in our country have been due to the munificent gifts of nature, to our fertile soil, a salubrious climate, to deep and rich mineral deposits, to our teeming fisheries, and to the luxuriant growth of pulpwood and timber in our country—all nature's gifts merely awaiting the hand of man to turn them into wealth in this magnificently endowed country of ours. We have made this general statement from this side of the house many times, and it has been denied by members on the other side. I do not like to make a general statement without giving some proofs. I looked up the values of production of various kinds in this country since this government came into power, and I find that in 1922 the total production in all lines was $2,939,000,000. In 1926, the last year for which statistics are available in the statistical branch, the total production was $3,582,000,000, or an increased production of $643,000,000 net.

Mr. DUNNING: Hear, hear.

Mr. MANION: My hon. friend the Minister of Railways says, "hear, hear." I am very happy to agree with him that increased production has taken place, but of that increased production, $304,000,000, practically half of it, was in what are called the primary industries; that is, agriculture, mining, forestry, fisheries, trapping and electrical power, over which even my hon. friend the Minister of Railways will admit that no government has any particular control.

Mr. DUNNING: Oh!

Mr. MANION: The total primary production of this country in 1926 was over $2,000,000,000; that is the production over which the government has no control in these primary producing industries; in other words, it was the result of our natural resources in this country, plus the energy and ambition of our people, and had nothing whatever to do with this government or any other government. If we had been in power I would say exactly the same; and the balance of the riches that have been produced in this country is merely the consequence of those greater riches produced by the bounties of nature. Yet this government boasts continually that the improved prosperity—I do not like to use the term increased prosperity, because I fear from many evidences that that prosperity is largely superficial—the government boasts that the improved conditions are entirely due to their efforts. They seem to be so surprised that their foolish policies in so many directions have not entirely ruined the country that they have become more or less intoxicated and have formed themselves into a sort of mutual admiration society, and even the Minister of Finance, who is usually rather moderate in his remarks, has now joined that society and elaborated upon the good work of the government in combining with nature. Only the other evening the Minister of Railways was reminded of the bounties of Providence, and with a complacency that was almost unparalleled he agreed that Providence was combining with this government; he even went so far as almost to congratulate Providence on having this government's coopera-

tion. It reminded me a little of a rhyme I knew some twenty-five or thirty years ago that was made by an American admiral regarding the then kaiser. It was called "Me and Gott." The first verse ran:

> The kaiser of this fatherland
> And God on high all things command,
> We two, ach, don't you understand?
> Myself and God.

My hon. friend the Minister of Railways reminded me of that verse the other night, but I should like him to remember what happened the kaiser; it might be well to remember the lessons of history. I add that if there ever was a government which deserves so little of that self-laudation and self-satisfaction in which this government so easily and so often indulges, it is the present government. What has really happened is that a kindly Providence took pity on an afflicted land—afflicted with a government that lacks leadership, initiative, decision and imagination, a government which seems incapable of deciding for itself and must have everything decided for it by a commission of one kind or another. For example, we have had commissions in the last year or two on the claims of the maritimes, soldiers' civil re-establishment, immigration, the tariff, agriculture, and heaven only knows how many other subjects. I find myself wondering if this government ever has had the courage, decision, and imagination to decide anything without first being told what it should decide by some commission appointed by itself or by this house.

Let me in the few minutes at my disposal analyse very briefly a few of the delinquencies of this government. I will touch briefly on some of its errors of omission, though I could spend just as much time dealing with its errors of commission, but as I have not time to deal with both, I shall deal with the sins of omission of which it is guilty.

I shall not be so unfair as to say that this government in the seven years it has been in power has never done any good thing. I admit that probably it has at one time or another done something that has been useful to this country.

Some hon. MEMBERS: Hear, hear.

Mr. MANION: Each of the ministers is smiling and taking the credit to his own department. Even my friend the Minister of Finance is becoming afflicted with the habit.

Let me name, Mr. Speaker, a few of the important problems which this country has to face, and which it must solve if it is to become one of the great and progressive nations of the world. The first one I shall name is the immigration problem. Everybody who speaks before audiences in this country admits that immigration is one of the most important problems in our country. With our vast open spaces and our great opportunities Canada should be the mecca of all the desirable people in all the crowded portions of the earth, and yet the results which this government have achieved in the matter of immigration since it came into power are nil, or worse. Last year, according to the American figures, we lost to the United States over 84,000 Canadians, and that is in addition to those who crossed the line by underground routes and consequently did not get upon the American records. We received 159,000 immigrants, of whom 53,000 were from Great Britain—these figures are taken from the Immigration department itself —24,000 from the United States, and 82,000 from continental Europe. I became curious as to the 24,000 from the United States and asked authorities in the Immigration department to give me the figures as to their nationality, and I found that more than half of them were from continental Europe via the United States. So we have received in Canada, after losing 84,000 Canadians to the United States, 65,000 British people, and when I say British I am assuming all English-speaking immigrants to be British. We have received also 94,000 continental Europeans. I have nothing to say against them. I have a great many of them in my own part of the country and I like them very much, but they have to learn our traditions, our history, our customs and policies and everything else in this country, and it takes a long time to turn them into Canadians equal to the Canadians born in this country. That shows what a very slight gain we are making from the standpoint of immigration in this country. There is no sign of an immigration policy from the government or from the minister who holds the portfolio of immigration.

And has anybody in this house any hope of the Minister of Immigration (Mr. Forke) giving us any policy on immigration. I say this without any disrespect towards him, but the hon. gentleman finds it difficult enough to answer the most simple questions affecting his department. Of course, everyone knows that he was not taken into the government for his ideas, but for the votes he could bring to their support. There is no more hope of getting a real immigration policy from this government than there is of turning snowballs into grapefruit.

In the forty minutes at my disposal I can touch only very briefly on these questions. What is the attitude of the government in regard to the St. Lawrence waterway scheme? Nobody knows. Reports have been coming

in since 1922, but apparently they have been pigeonholed and forgotten. After all, the government is supposed to give some leadership to the country, they are supposed to tell the country to some extent what steps should be taken, whether right or wrong. But so far we have heard nothing from the government on what is one of the most important questions affecting the Dominion—important not only nationally, but important internationally, because it affects both Canada and the United States. Again I ask, what is the attitude of the government on this very important question? Have they any attitude in regard to it? Nobody knows.

Then what attitude is the government going to take in regard to the development of the hundreds of millions of tons of iron ore which we have scattered throughout this country from the Atlantic to the Pacific? A United States engineer has estimated that there are three thousand million tons of iron ore, of 35 per cent or better, located along the north shore of lake Superior. At the present rate of consumption in the United States we have enough ore to last a hundred and fifty years, and yet we are mining not one ton of it to-day. Although the government have been approached by the Ontario government and by the government of Quebec, offering to unite with the federal authorities in a scheme for the development of our iron ore deposits, no move is being made by this administration. The cost of sending a more or less useless ambassador to Japan would at least be sufficient to try out such a scheme. It would give a chance also to lessen to a certain extent the imports of two hundred million dollars' worth or more of iron and steel products from the United States.

Associated with this is the question of the deplorable conditions in the iron and steel industry of Nova Scotia. That industry today is being run at only 30 or 40 per cent of its capacity. But no move is being made by the government to develop a policy to help the iron and steel industry. And yet this industry is the basic industry of commercial progress of every industrial country in the world.

Next I come to the coal question. What has the government done to give us a national fuel policy? We have the second largest coal deposits of any country in the world, yet last year we imported sixty-two million dollars' worth of coal, largely from the United States. Our miners in Nova Scotia are idle, our miners in Alberta are idle, but they are not any more idle than this government so far as a national coal policy is concerned. The people of this country, Mr. Speaker, are ready to make every effort and some sacrifice to get this important problem solved. Surely the government should make some effort to bring about a solution.

And what are the government doing regarding the development of our natural resources within the Dominion?—not permitting them, as at present, to go across in the raw state to our neighbours, from whom we are graciously allowed to buy them back at a much enhanced value in the shape of finished products. In this as in everything else the government are doing everything to favour the foreigner, and as little as possible to favour Canadians, because so far as anyone can see not a move is being made by the government to solve this great national problem.

Then I ask, what is the government doing to open the thousands of closed plants from the Atlantic to the Pacific? I have in my riding a number of closed plants. I have brought their condition to the attention of the government, but without result. Yet the imposition of a duty of a fraction of a cent a pound would open at least one of those plants and give it the Canadian market. But not a move has been made by the government to reopen that plant or any of the other closed plants throughout the Dominion. This budget instead of opening some of these plants will either close down more or compel them to lower their production.

What is the government doing regarding the exodus of our people to the United States? Last year that exodus amounted to over eighty-four thousand people. True, that is not as many as went across in the previous years, simply because there are fewer to go. That is the main reason, and in addition we have to thank a bountiful Providence, which, plus the exodus of hundreds of thousands in other years, leaves fewer at home for the jobs which now remain. That is the way the government has cured the unemployment problem—by exporting our unemployed to the United States. The cure for this undesirable condition, Mr. Speaker, is to provide more work and wages so that our workingmen may remain in Canada. Let us do this instead of benefiting the foreigner by increasing our imports. It is only by a policy that will encourage the greater production of all kinds of commodities in this Dominion that we shall build up a broad national life, and so give our sons and our daughters the opportunity to remain in their native land instead of being forced to go to the United States, as they are at the present time, to get those opportunities which are denied them at home. Those boys and girls of ours desire to remain Canadians. They want to utilize their talents.

employ their energies, and fulfil their ambitions here, but the government are doing their best to force them across the line and so turn them into good citizens of the United States.

And what about Senate reform? Not a very important subject, I admit, although the Prime Minister at one time made it a prime subject, in fact his battle cry, when appealing to the electorate. What has happened to Senate reform since the people were hoodwinked by that battle cry of the Prime Minister? I am afraid that having served its purpose it has gone into the limbo of forgotten things.

The cost of living was another battle cry. I remember the eloquence of the Prime Minister, ten years ago, when he was leading the opposition. Backed by the Minister of Justice (Mr. Lapointe) he used to tear us to shreds and rip the silver off the clouds in their denunciation of what they termed our criminal folly in not cutting down the cost of living. They used to do that.

Mr. CHAPLIN: And Mr. Murdock.

Mr. MANION: Yes, but the people attended to him. They used to move an amendment each session condemning us for not cutting down the cost of living. I have looked up the cost of living for the past few years since my right hon. friend has been in office. This information I secured from the department of the Minister of Labour. It shows that in July 1922, a few months after this government came into office, the average cost of living for food, fuel, light, rent, etc., was $20 67. Last year in July it amounted to $21.10, five years after the government came into office, and in December, 1927, the cost of living had risen to $21.37. That is, in July, 1927, it had risen 43 cents, and in December, 1927, another 27 cents, or altogether 70 cents since our friends opposite took charge of the affairs of the country. I do not know how the Prime Minister and his supporters can answer the question, why they have not cut down the cost of living, for which they abused us so unmercifully when they were in opposition.

Then what about trade in general? The Minister of Finance has boasted of the increase in our trade, but for the last few years our imports have been increasing and our exports decreasing—the reverse of what all thinking people wish to see in this country. Our trade treaties have not helped us. Take the French treaty for example; under it France has benefited, not Canada.

Next I should like to know what the government have done for our workingmen during the seven years that they have been in power. Little, if anything, that I can think of. Of course, they will claim that they have given our working people old age pensions, but that scheme is only acceptable so far to one province, British Columbia.

Some hon. MEMBERS: No, no.

Mr. MANION: What other provinces have accepted the legislation?

Some hon. MEMBERS: Manitoba and Saskatchewan.

Mr. MANION: Do my hon. friends say that more than one province has accepted that legislation?

Some hon. MEMBERS: Sure they have.

Mr. MANION: Then the deputy minister of the Department of Labour is misinformed, because I made it my business within the last two days to put the question to him, and he told me that the only province that has as yet accepted the old age pensions legislation is British Columbia. I choose to accept his information as being correct.

Mr. YOUNG (Saskatoon): It is not finally accepted yet, but the necessary bill is now going through the Saskatchewan legislature.

Mr. MANION: In other words, hope springs eternal in the human breast, but hope deferred maketh the heart sad. I had disposed of old age pensions by stating the facts.

Some hon. MEMBERS: Oh, oh.

Mr. MANION: I do not know why my hon. friends laugh. The fact is that only one province so far has adopted the scheme.

Another claim by the government is that they have cut taxation for the benefit of the working people. What good will the cut in the sales tax do the working man? In all probability it will not be passed on to him. What good will a reduction in the income tax do him? Certainly no working man will benefit by the income tax cut for the simple reason that he does not pay income tax. Neither did the cut last year in the price of automobiles help him. Nor was the removal of the receipt tax last year—a tax which the government put on and then took off—of the slightest benefit to him. In short, the Canadian working man has less to give receipts for since this government came into power than ever before. I cannot find anything by which the government has benefited the working man. The real criterions of prosperity in this country are not the cost of automobiles, nor the height of the income tax, but the condition of the workingman's breakfast table

and his clothes line, and his opportunity to get employment when he needs it, instead of being obliged to seek his living in a foreign land. Indeed, the only kindness that I can find this government has shown the working men of this country so far is in giving to them permits to go over to the United States. A great deal of Christian forgiveness is all they owe it.

What is being done by the government for our returned soldiers? We hear more complaints than ever to-day about pensions, and yet the Pension department is being run at a higher cost. The Department of Soldiers' Civil Re-establishment is being abolished, largely, I have no doubt, on political grounds. But the strange thing is that the expenses of that department, added to those of the Department of Health with which it is now combined are higher by $35,000 this year than when the Department of Soldiers' Civil Re-establishment was functioning. For the year 1928-29 the total expenses of the two amount to $8,000,000 as compared with $7,965,000 the year before, or an increase of $35,000,000.

An hon. MEMBER: $35,000.

Mr. MANION: What did I say—millions? I do not want to make it worse than it is; it is bad enough.

Now, what has this government done for the miners, the farmers and the fishermen of this country? The miners of Nova Scotia are idle and the fishermen in many parts of the country are needy. Both for the miners who are out of work and those fishermen who are in straitened circumstances, I presume the reduction in the income tax will afford considerable relief. But, Mr. Speaker, for the farmers the government have done nothing; indeed, they have done less than nothing, for they have permitted tens of millions of pounds of butter to be imported to come into competition with and destroy the business of Canadian dairy farmers. Moreover, they have seen the American market practically wiped out; it has been gradually disappearing in the last few years so that to-day there is nothing to look for in that direction. I am not making statements which I cannot back up. In 1921 we exported of farm products to the United States—and I again quote the government's figures—$159,000,000 worth. If hon. gentlemen want confirmation of this statement I refer them to the report of the Department of Trade and Commerce. Compare that export figure of $159,000,000 in 1921 with our total exports of the same products to the United States in the same twelve months of 1927 of $64,000,000, and you have a reduction of nearly $100,000,000. This reduction in our exports of farm products to the United States within the last few years has been due, I admit, largely to the Fordney tariff—

Some hon. MEMBERS: Oh, oh.

Mr. MANION: Who says no?

An hon. MEMBER: It is evident.

Mr. MANION: So is everything else evident that is wrong with this government. But, Sir, what is the government doing to improve the market for the farmers? The United States government puts up a high wall to keep out our farm products, while this government sits idly by and allows this exclusion of our products from the American market to continue without taking steps to offset it. Why should the farmers of the west support this government under such circumstances? Indeed, for that matter, why should any farmer from any section of Canada support hon. gentlemen opposite? Why should not red-blooded Canadians show some spirit of retaliation in self defence against such action on the part of the United States? I do not ask this question with any feeling of bitterness, for I fully realize that the United States government is protecting the interests of its own people. But why do we not assert ourselves and meet them on their own ground with their own weapons, instead of demanding, as some hon. members apparently are doing, that we import still more from across the line than we have done in the past?

But the farmers are not the only class in the United States whom the American government protects. I have under my hand all the facts of a case which I will quote from briefly, as I am bound to do seeing that my time is going. Let me mention this case of a Canadian manufacturer of ladies' garments operating in the city of Toronto. In May, 1925, he happened to be in Detroit and seeing in the windows some clothing with which he thought he could compete he managed to secure an order for $192 worth of ladies' dresses for shipment to that city. He shipped them over a tariff of 50 per cent; that was the rate of duty and the dealer in Detroit who had given the order knew it. This dealer paid the 50 per cent on the goods but the customs officers refused to release them, and practically overnight the duty was increased to 90 per cent, with the result that the dealer was unable to take the shipment and make a profit on it. What was the outcome of this endeavour to export to the neighbouring country? The manufacturer in Toronto, known to many hon. members, had to take back the goods after having paid express and other charges. This incident is

illustrative of the treatment which the Americans mete out to the producers of Canada. The only thing to which they give free entry from Canada is the brain and brawn of our country; they will admit, free, the best of our young men and women—the greatest natural resource of any country. Yet our imports from the United States are on the increase.

What is the situation so far as the automobile industry is concerned? And this is another matter in respect of which the Minister of Finance (Mr. Robb) frequently tries to hoodwink the Canadian people. I have heard him say quite often that the automobile industry has not been impaired as a result of the reductions which have been made in the tariff. He has many times so stated. I notice he does not just now interject any denial, but he keeps on reiterating that the automobile industry has not been injured by tariff reductions. Well, I can only again quote the government against itself. I have here a document entitled Monthly Report on Automobile Statistics for Canada, published by the authority of the Minister of Trade and Commerce, and dated so recently as 1928. It therefore gives the facts for the year 1927. I will quote just a few sentences. First:

In review—

That is after a brief summary of the situation.

—a comparison of statistical data covering the Canadian automobile industry for 1927 with the figures for the corresponding period of a year ago shows the following features: (1) Production was lower by 13 per cent; (2) exports were lower by 23 per cent; (3) imports were higher by 28 per cent.

Has the automobile industry been adversely affected? The answer is obvious. Let me quote further:

During December, 1927, the production of automobiles in Canada amounted to 3,435 cars. This was the lowest output reported for any month during the past three years, being only slightly over one half the number of 6,617 cars made in the previous month and less than one half the number of 7,752 cars produced in December of a year ago.

I quote still further:

Imports of automobiles into Canada during 1927 totalled 36,630 cars, an increase of 28 per cent over the 28,535 cars imported last year which in turn was almost double the 14,632 cars brought into Canada during 1925 . . . Exports of automobiles from Canada during 1927 amounted to 57,793 cars, a decrease of 23 per cent from the 74,553 cars shipped to foreign countries in 1926.

I trust that with these facts from the Department of Trade and Commerce staring the Minister of Finance in the face he will not have the effrontery—because his oft repeated assertion that the industry has not been injured as a result of tariff reductions is utterly unwarranted—to declare in the future that the interference with the tariff is not injurious to the industry of the country. But other associated industries as well have been similarly injured. Free trade England protects the automobile industry to the extent of 33⅓ per cent under the Safeguarding of Industries Act, and this is one of the few industries in England which is prosperous today.

There are other changes in the budget which will tend to ruin our industrial life, further increase unemployment, and take away from us our best boys' and girls' opportunities to remain Canadians. Apart from the serious blow struck at our woollen mills, what about the sheep industry? Canada is admitted by agriculturists to possess a country ideally adapted to the raising of sheep, and yet whereas there are two and three-quarter million sheep in Canada, Great Britain, as large as a postage stamp in comparison, has twenty-two million, New Zealand, about the same size as the British Isles, twenty-seven millions—nine times as many as we have in Canada—and Australia ninety-seven million. Canada, with two and three-quarter million sheep, is having its woollen industry materially affected by changes in the budget so that the sheep industry, instead of being encouraged, is in jeopardy, with the government a blight upon it.

We talk about national unity to which we pay a good deal of lip loyalty. But if you go into Quebec—and I say this in no spirit of bitterness whatsoever—you will find that issues have been raised there in the last three elections to create prejudices and antagonisms enough to last the country for another generation.

What has the government done to economize? Look at the estimates. Whereas the year before last the total estimates amounted to $348,000,000, last year they were $366,000,000, or an increase of $18,000,000, while this year they are increased still further by $8,000,000, the main estimates being $374,000,000. And this without the supplementary estimates, which will probably amount to another $10,000,000 or $15,000,000. Every country in the world—England, France, the United States, Italy and Germany—is practising economy; Canada alone seems to care naught for the future, Canada alone seems to think that there is no bottom to her treasury. The government seems to think that there is no limit

to the resources of the treasury. It is true that money has been freer in this country, but the old adage is just as applicable to governments as it is to individuals. Governments as well as individuals should prepare for the proverbial rainy day. It is true that the revenues of this country have been higher, but while the Minister of Finance claims to have lowered taxation he has actually increased it though he has lowered the rates of taxation in some instances

I was rather amused the other day when the Minister of Finance pointed out that the government is collecting $12,000,000 more from customs than it did last year. At that statement his supporters applauded noisily, whereas they should have been hanging their heads in shame when they remembered that this increase in revenue was the result of the efforts of my hon. friend the member for Vancouver Centre (Mr. Stevens) who insisted upon an inquiry into the affairs of the Customs department, with the result that a commission of inquiry was appointed and certain findings arrived at and partially carried out.

It is no wonder that there have been many demands in the press asking for the inauguration of economy. It is indeed time that the people of this country paused and thought of the future, paused and prepared for that proverbial rainy day which I mentioned.

Mr. Speaker, my time is nearly up, but before I sit down I wish to relate a little historical incident. It took place away back about one hundred years ago and it applies in a sense to this government. There was a government formed in England which contained many unknown parliamentarians, if you will—I shall not say mediocrities because I do not wish to be disrespectful to my hon. friends—so many people who were unknown, that one day when the Duke of Wellington was being told by a friend of his in the House of Commons who the members of the new government were, the duke being somewhat deaf, did not recognize the names and he kept asking "Who? Who?" That government from that day became known as the "who, who government."

Mr. LAPOINTE: It was another "shadow" government.

Mr. DUNNING: What about the "shadow" government?

Mr. MANION: I presume the shadow government as my hon. friends term it had many faults. Apparently the people thought so, but the faults of the shadow government were nothing to the faults of this government. I was going to say—in view of the questions I asked as to what this government had done to solve the various problems of the country, and to which the only answer I got was the echo "what?" throughout the halls of parliament—this government might be called, not the "who who government," but the "what what government"—perhaps I should say the "whatnot government."

Now, I am certain that I shall be taxed with having made a "destructive" speech, but what is the use of delivering any other kind of a speech in this house? What is the use of delivering constructive speeches to this government when they either do not comprehend them or do not accept them at their proper value? My hon. friend the leader of the opposition last year advanced a constructive suggestion in regard to a method of conducting the finances of the country. Was any attention paid to it?

Mr. GARLAND (Bow River): What is the policy of the Conservative party now?

Mr. MANION: Ask my leader when he speaks later on in the debate. Last year I offered suggestions to this government in regard to the development of our iron ore resources. I was backed up by the hon. member for West Algoma (Mr. Simpson) and the hon. member for Port Arthur-Thunder Bay (Mr. Cowan), and various other hon. members in this house. But no attempt has been made to develop the hundreds of millions of tons of iron ore which extend throughout this country from the Atlantic to the Pacific. The hon. member for Toronto Northwest (Mr. Church) moved a resolution urging the adoption of a national fuel policy, but nothing has arisen therefrom. The hon. member for Victoria (Mr. Tolmie) delivered a constructive speech in favour of a more progressive immigration policy, because we are not getting many immigrants of the right class into this country, but it failed to provoke any response from the government. What is the use then of offering constructive suggestions to this government? The only alternative, Mr. Speaker, is to convince the people of the country that if this magnificent nation is to be developed, if it is to get into its proper stride in the direction of national prosperity it will have to elect a government with initiative, with imagination, and with real leadership, with a strong, virile Canadian policy which will be employed on behalf of our native sons and not on behalf of foreigners in whose favour this government, consciously or unconsciously, seems to be acting all the time. The thinking people of the country realize that whatever improved conditions prevail in Canada are due to a bountiful

harvest, to the digging of minerals from the earth and to the pulp, paper, lumber and fishing industries.

An hon. MEMBER: And Providence.

Mr. MANION: And Providence over whose policy this government has no control, because if it had any control it would probably ruin Providence as well as the country. Unless this government awakes from its complacent and self laudatory lethargy I venture the prophecy that at the next election the people will be so aroused and will bring about such an upheaval that a speech such as this will not be needed in Canada in many a moon.

Mr. H. E. LAVIGUEUR (Quebec-Montmorency): We have listened to a lot of criticism from hon. gentlemen opposite, particularly the hon. member for St. Lawrence-St. George (Mr. Cahan) and the hon. member for Fort William (Mr. Manion) based upon the supposed imperfections of the budget brought down on Thursday last by the Minister of Finance (Mr. Robb). But I should like to point out that in the press of Canada, both Liberal and Conservative, very high appreciation of the budget has been expressed, and the greatest eulogies have been bestowed upon the government because of the features which the budget contains. There was, at the close of the fiscal year, a surplus of $54,815,000, which, added to the four previous surpluses of this government, represents a total of $150,000,000. Consider the reduction in taxation of $19,000,000 which will be of the utmost advantage to the country in general. The hon. member for Fort William said a moment ago that this reduction in taxation will not benefit the common people, but will be of benefit only to trade and industry. Well, sir, this is the kind of policy we want, because if industry and trade are prosperous the country will be prosperous. The enormous debt of this country has been reduced by a large amount, so we are going in the right direction. I heard one of the fluent speakers opposite state a few days ago that we were taking advantage of the prosperity of our country. That may be so, but I contend that the prosperity of the country is due to our administration. Take as an example the province of Quebec, which has had a good administration under the Liberal regime for fifteen or twenty years; the prosperity which exists in that province under that administration is recognized all over the country. So it would seem to me, Mr. Speaker, that this is one of the best budgets presented in this house since confederation.

I do not wish to speak at great length on these questions, which will be debated by more able members, but will pass on to a matter to which I have directed the attention of the house during the last two or three years. I refer to the Civil Service Commission. I have stated already in this house that I am entirely against this commission; I fail to see the good of it. I am not in favour of patronage, but on the other hand I believe that members should be prepared to accept the responsibility for any recommendations they may make. The Civil Service Commission costs this country over $300,000 each year, and it has been admitted that they do not render the service which was intended. In many cases I think they have made great mistakes, and I think it would be really better if the patronage were handed over to those who are responsible to their electors. I do not see why the head of a department, who is experienced in his work and who knows the kind of employees he wants, should not be more competent to select such employees from the applicants for any position, with the ratification of the minister heading that department. When I nominate a lighthouse keeper or a postmaster in the county of Montmorency, I think I am in a better position to judge the merits of these men than the members of the Civil Service Commission who sit here in Ottawa and pass upon these applications. It is within my knowledge, Mr. Speaker, that in some of the examinations conducted by the Civil Service Commission candidates passing the examination have not received the appointment, while others who have tried no examinations at all have succeeded in securing appointments. I also know of the case of a man who presented himself for an examination; he had taken a classical course in a Quebec seminary, but another man who could hardly read or write his own name was given the preference by the Civil Service Commission. There are many cases where we see that the Civil Service Commission does not serve the object for which it was created, and a change should be made immediately. I have nothing to say about the commissioners themselves; I think they are perfectly honest and are doing their utmost to fulfil their duties, but there is certainly some defect in this commission and radical changes should be made.

I made this same appeal last year; I stated my case then, and I again appeal to the government and to this house. To-day I again ask the government and the House of Commons to study this question of the Civil Service

Commission and see if any alterations can be made that will improve the situation. I stated that I was not in favour of patronage, but on the other hand I think it belongs to the member who has the confidence of his people to assume, as he should assume, the responsibility of the nominations he has to make in his constituency. This is patronage that belongs to us; it is patronage that should be left to the members and to the minister. When a member recommends someone either to the deputy minister or to the minister, there is the safeguard that he is interested in making the best nomination possible, and as there are always many candidates for the position, the recommendation of the man who is best able to recommend a candidate should be accepted in all cases. As I say, during the last three years I have spoken three times against the Civil Service Commission, in which I have no faith, and unless something is done I will not let the question rest. I know that many other members, I do not care who they are, Liberals or Conservatives or Independents, have had cases similar to the ones that I have mentioned. As I have stated I hope that something will be done to improve the situation, and unless something is done I will come back again next session, if not before.

I wish to say a few words regarding the railway situation in Quebec city. For many years we have been promised improvements and we have asked the railway authorities to give attention to the question as it affects our city. The Canadian National Railways have not furnished us with the proper accommodation that we should have in Quebec city. We have been told on many occasions that the railway authorities were contemplating the construction of a new station in our city and we hope they will do something to improve the situation. We should receive a much better service and on many occasions the Quebec board of trade, the city council and the citizens in general have asked the railway authorities for better service, but we find that things do not move very rapidly. I regret the Minister of Railways and Canals (Mr. Dunning) is not in his seat at the present time as I should like to draw his attention to this situation; but we hope that Sir Henry Thornton, who has made such a great success of the administration of the national railways, will spare a little of his time to come down and study the situation in our city.

Since I have had the honour of being a member of this house—and this is my twelfth session—I have every year drawn the attention of the house to some of the needs of my district and more particularly of my constituency. This year I wish to mention the question of a bridge between the island of Orleans and Quebec city. This bridge was promised some years ago, namely, in 1911, by the hon. gentleman who preceded me in this constituency, the Hon. T. Chase Casgrain, who then promised the people of the island of Orleans that a bridge would be constructed from the island to Quebec city. There are on the island of Orleans six beautiful agricultural parishes which in the winter time, are without any communication. The people there are most deserving and I may say, en passant, that it is very seldom one meets on the island of Orleans a family of less than ten, twelve, fifteen or eighteen children. Those people are asking for better accommodation; they are asking the federal government to help the province of Quebec to construct this bridge. A couple of weeks ago a delegation of more than three hundred of those good people came to meet their member, the Hon. Mr. Taschereau, Premier of Quebec, whose colleague I have the great honour to be, and they asked him to come to their assistance by constructing a bridge from the island to Quebec city. Mr. Taschereau's answer was that he was quite willing to do his share provided the federal government also did its share. I know that our worthy ministers from the province of Quebec who are here are most sympathetic to this project. While I realize it is a difficult one and the federal government will not build bridges, yet the federal government has on occasion subscribed generously towards bridge construction. I would once more ask our ministers from the province of Quebec to try to induce their colleagues in the cabinet to take action to assure the construction of the bridge on the island of Orleans.

There is another question in connection with the island of Orleans which I wish to mention here again to-day. For a considerable time past I have been urging the department to take control of the telephone system on the island of Orleans. The telephone system at present is under the control of a private company, which is exploiting the people. The service is very unsatisfactory, and the people maintain that they are being overcharged. What we are asking is that the government take over and administer this telephone system for the benefit of the people on the island, so that they may receive the service to which they are entitled. I regret that the Minister of Public Works (Mr. Elliott) is not in his seat at the moment, but I hope he will take note of this demand, for it is a question that must be settled, and settled soon. I would add that I am not simply asking for a settlement of this tele-

phone question on the island of Orleans; I say to the government that we want this telephone line and we must have it.

I have another demand to make of the government. I was very much surprised and disappointed to see that the necessary amount for the construction of a post office at Beauportville had not been inserted in the estimates. I hope the government will reconsider this question and that the amount required for the erection of a public building, to be utilized as a post office, on the ground purchased by the government in 1913 will be provided in the supplementary estimates, and work be started on the building very shortly.

Before taking my seat I wish to say a word with reference to the resolution put forward by the hon. member for Bonaventure (Mr. Marcil). The hon. member has decided to withdraw his motion protesting against the language of the Mexican consul at Toronto, who has insulted, I may say, half of the people of this country, French-speaking as well as English-speaking—

Mr. SPEAKER: Order. I may say to the hon. member that what I suspect he is about to say is out of order for that question is not before the house. We are now discussing the budget, with which it has nothing to do.

Mr. LAVIGUEUR: I bow to your ruling, Mr. Speaker. I only wanted to say that I would have been quite willing to second the motion of the hon. member for Bonaventure.

The name of the Premier of the province of Quebec, Mr. Taschereau, has been mentioned in this house, but I noticed with pleasure that the hon. member for Charlevoix-Saguenay (Mr. Casgrain) has answered certain criticisms which were made by the hon. member for Temiscouata (Mr. Pouliot.)

Mr. POULIOT: Mr. Speaker, I rise to a point of order. My point of order is that the matters to which the hon. member is referring were discussed in the debate on the address, when my hon. friend from Quebec-Montmorency (Mr. Lavigueur) had every opportunity to reply to those statements. This is a different debate entirely, and I do not know what relation exists between the Hon. L. A. Taschereau, of Quebec, and the federal budget at Ottawa.

Mr. LAVIGUEUR: I was going on to say, Mr. Speaker, that the hon. member for Charlevoix-Saguenay had answered very properly the criticisms which were made by the hon. member for Temiscouata as to the help given to the Hon. Mr. Taschereau in the last election. I say that there is not a man—

Mr. POULIOT: I ask for your ruling, Mr. Speaker.

Mr. SPEAKER: No reference can be made to a debate which has taken place during the present session.

Mr. LAVIGUEUR: I am not referring to another debate, Mr. Speaker, but to the speech of the hon. member for Charlevoix-Saguenay.

Mr. SPEAKER: That was in another debate.

Mr. LAVIGUEUR: I want to say, Mr. Speaker, that the Liberal candidates in the last election were all returned by big majorities, and that was due to the good policies of the Liberal party. In the Liberal party we have a very able man, the Hon. Mr. Taschereau, who has been unsparing in time, energy and influence, which he has used to help the Liberal party. The Hon. Mr. Taschereau, with the cooperation of the Minister of Justice (Mr. Lapointe) in this house and others have made the Liberal party in the province of Quebec a great success. I say that the Hon. Mr. Taschereau is one of the most influential men in his province, and no matter what may be said against him, his influence has always counted enormously in the great victories of the Liberal party. It is not necessary for me to say more about the sympathetic help which has always been given to the Liberal party by the Hon. Mr. Taschereau, nor need I refer to the influence which he has exerted in our behalf. That influence is the result of the excellent administration that he has given to the province of Quebec since he succeeded Sir Lomer Gouin as premier.

Before taking my seat, Mr. Speaker, I have just one more word to say. I for one regret the insinuations made against the Hon. Mr. Taschereau by an hon. member in the course of a speech which he recently delivered in this house.

Mr. JEAN-FRANÇOIS POULIOT (Temiscouata): Mr. Speaker, it was not my intention to take part in this debate at the present moment, but through the courtesy of my hon. friend from Last Mountain (Mr. Fansher), who was to speak immediately after the hon. member for Quebec-Montmorency (Mr Lavigueur), I have been given this opportunity.

Last year the editorials in two of the most important Conservative papers published in the province of Quebec, the Montreal Star

and the Montreal Gazette, were not very favourable to this government, but since then there has been a great change in their attitude, and I think it is for the better. For example, since the budget was presented an editorial has appeared in the Montreal Gazette describing it as a bountiful budget. That was well-merited praise; but, better than that, it was true. I am very sorry that my hon. friend from St. Lawrence-St. George (Mr. Cahan) is not in the house at the moment, for I should like to have brought this change of attitude to his attention and to quote for his benefit what Queen Guinevere once said: They—of course I am referring to the Montreal Star and the Montreal Gazette—have been shamed into wisdom.

Yesterday I listened attentively to the speech of my hon. friend from St. Lawrence-St. George, and I noticed he made some rather remarkable statements about the capitalization of the Canadian National Railways. It seems to me that in drawing attention to the fact that the government has guaranteed the issue of Canadian National Railway bonds, he should not have lost sight of the further fact that the liability thus incurred is balanced by ample assets. I am not ready to accept everything that is done on behalf of the national railway system. I think it is a mistake, for example, to purchase new engines and leave the old rolling stock to rust in the engine graveyard. In my view the Canadian National railway management should repair the old engines, and thus give employment to our working people and at the same time effect economy of expenditure. But to return to the point raised by the hon. member for St. Lawrence-St. George. I would remind him that the government is not responsible for the bonds that it has guaranteed unless and until the revenues of the railway system are insufficient to meet the payments on those bonds. It is a very clear case, and I am sure every hon. member understands the position.

It should be remembered that the amalgamation of the various railways that we now know as the Canadian National Railways was brought about, not by a Liberal administration but by the Conservative or Union administration in 1919. Against the government of that day I have this very serious reproach: If at the time of the amalgamation the property was overvalued, it was the fault of those who prepared the legislation for submission to parliament and carried it through by the help of their supporters. I think the present management of the Canadian National Railways deserve credit for having been able to meet the interest charges on such a huge capital. But in this respect, although Sir Henry Thornton may be a very able man, I do not think the sole credit for this very fine achievement should be given to him; we should remember that the executive officers under him and the board of directors also contributed their share to the final result, and therefore deserve our thanks. Nor should we forget the Minister of Railways and Canals (Mr. Dunning), whose sound advice I have no doubt was very often of great use to the head of the railway system. Again, I say, if the Canadian National railway system is a liability to the country financially, the responsibility must be shouldered by the Conservative or Unionist administration of 1919, for the reasons that I have already set forth. I am glad to say that under the present administration the national railway system is in better shape than it ever was under the Conservative regime.

It is true that parliament has endorsed the liabilities of the Canadian National Railways, and as endorsers we are entitled to know everything about the business they carry on. If, as a representative of the people, I wish to get information from any Canadian National official on any question affecting the railways, I am entitled, I submit, to a decent and a true answer. I am in the same position as a man who endorses a note for another; he is entitled to a statement of that man's business. It is exactly the same with us, not as private individuals but as members of parliament and representatives of the Canadian people. When we go to Sir Henry Thornton or to any manager or superintendent of the Canadian National Railways, we have, I repeat, a right to expect a decent and a true answer. These people should not entertain the idea at any time that they are the kings and the rulers of the world. On many occasions I have remarked to the people in my constituency that I consider myself their servant. If, therefore, I am a servant of the people, the officials of the Canadian National Railways are servants to the servants of the people. This is my understanding of their relationship to the members of this house. Whatever may be the salary of any of these gentlemen—if his salary is higher than that of any other public servant it is because probably his responsibility is greater—an official of the Canadian National Railways must ever bear in mind that he is responsible to the representatives of the people and that it is due to them that he shall give correct information when it is asked for.

We have to consider several things in relation to the Canadian National Railways. We must consider, first, the passenger traffic, secondly, freight traffic, which is more remunerative, and thirdly, the officials and employees of the system, who are all servants of the public and who have their share of credit when the right side of the wheel turns up. In my constituency there are several hundred railway employees, as is well known to my hon. friend the Minister of Justice (Mr. Lapointe) who practised law for twenty years in my home town. And need I say, incidentally, that the minister was a most brilliant lawyer, whose memory is far from being forgotten. The young men begin to work as apprentices; they start out to learn certain trades as machinists, carmen, and so forth. They want to earn enough money in their lifetime to be able to bring up their children decently and to take care of themselves and their dependents in a suitable manner. This is a very natural and praiseworthy object, because every man who is a hard worker deserves credit, in whatever walk of life he may be. It is very sad sometimes, Mr. Speaker, to see men who are willing and able to work go to their shop in the morning and find that there is no longer anything for them to do. They are met with the abrupt intimation, "There is no more work for you; you are laid aside". Sometimes we see some of the old employees being superannuated, or being turned out when ill, and when they die, they are not replaced; too often no employment is given to those who are ready to take it. What is the explanation of this? The answer is that instead of repairing old cars and old engines which could be easily repaired, the authorities discard them; they consign them to the engine and car graveyard and buy new ones. Thus they add to the capital stock of the company while, for the sake of repairs, they allow the old engines and cars to be sold, very often for scrap iron. It seems to me that we should take every means possible to give employment to those people who are anxious to work, and this suggestion will, I hope, give some food for thought to every serious minded citizen of this country.

I can tell this house that quite often I write to the officials of the railways, not personally but as a representative of the people, and when I do so I receive an answer, polite enough, but very seldom affirmative. It is rather dilatory. I am told, "We will see about it; be sure, we will look into the matter. Don't be mistaken, we will look after your people". But in the meantime our people are out of work. I do not ask for any of my constituents that they be given salaries of one hundred thousand dollars a year; I plead for them only enough to live on. All I ask is that they be given work for which they will be reasonably compensated. Nor am I asking that new appointments be made at the present time; I simply request that every old employee be reinstated and be given the work which he formerly did. The railway should do this, not because I ask it, but because in my opinion it would benefit the country to have our rolling stock repaired at the proper time. This would result in a saving of money to the country and it would obviate the necessity for purchasing new engines and cars, which, needless to say, are very expensive. When I go to officials I find that they cannot give us what we ask for; sometimes, perhaps, we may ask too much. Suppose I go to Mr. Appleton or to any other manager and say, "Sir, we want information on three different points". Well, we receive a letter in reply—a letter which amounts to nothing at all. I do not think this is at all satisfactory or fair; I think I have a right to complain. I sit on the Liberal side of the house and I consider myself a good Liberal; but if I were on the opposite side I would complain just the same. I believe that when a member of this house goes to a Canadian National official for information he should be given it. There should be no secret about the business of the Canadian National Railways so far as members of parliament are concerned. Of course, if there is information of a confidential character which cannot be given officially, it might be given privately, and I am sure that members of parliament on either side of the house, if given information on the understanding that it was confidential, would respect that confidence. But, I repeat, members of parliament have a right to be informed of what is going on in connection with our railways. That information should not be refused us, and I defy anyone successfully to contend otherwise. To sum up, Mr. Speaker, I want first to get true and reliable information from any officer of the Canadian National Railways. Then I believe that while the administration at present is very satisfactory, there should be no shadow in the picture and they should do their best to give employment not only to imported gentlemen but also to common people who want to work and who are ready to earn their wages by their toil.

I would like to say just a word about the amendment introduced yesterday by my hon. friend from St. Lawrence-St. George (Mr.

Cahan). He complains that many Canadians are migrating to the United States instead of remaining in this country. One reason for that migration, especially in the province of Quebec, goes a good many years back; the division between forestry and agricultural lands was wrongly made. In some parishes the lands chosen for agriculture had very good soil, but in other parishes instead of setting apart forest reserves they opened the land for agriculture and the soil was hard to cultivate because there were too many stones in it. Succeeding generations have lived in these parishes and I admire those who to-day cultivate the land as their forefathers did; they deserve a great deal of credit for staying on the land. But all have not remained and the mistaken policy in regard to the selection of agricultural and forest land is one of the reasons why people have migrated to the United States. I cannot blame Mr. Taschereau for this wrong division because it took place sixty or seventy years ago, before Mr. Taschereau was born, but that division was wrong and sometimes these people have a very hard time of it on this poor land in some places.

I have very good news for the house, however. During the Conservative and Unionist regimes I passed through the constituency which I now represent and saw many houses with the windows boarded up. When I asked the reason, the usual answer was that the people had gone to Salem or New Bedford or somewhere else in the United States. Now, however, when we pass these houses we find them no longer closed; people are living in them, people who have come back from the United States to the old homesteads. I would like to tell you of one of the finest examples of family devotion it has ever been my pleasure to see. In my constituency there was an old gentleman, a farmer, who was not very rich; he had several sons to bring up and there was a heavy mortgage on his property. One day when he was quite discouraged his two oldest sons said to him, "Do not be discouraged, father; things are going well in the United States, so we will go there and earn money, and you will see what we do with the money." They went to the United States and worked in a cotton factory for two or three years, returning home with enough money to pay off the mortgage. Now their old father is not working any more; they are living with him and working the old homestead, on which there is no longer a heavy mortgage. This has happened in several cases to my knowledge, and I can give many names.

[Mr. Pouliot.]

Then there is another reason why people have gone to the United States. Their friends have come home from the other side, dressed in quite a flashy manner, and have called attention to their nice clothing. They say to those who have stayed home, "You work very hard; you have to get up early in the morning; you work all week and even on Sundays, but we have no such trouble in the United States. Our Sundays are free; we have nothing to do on Saturday afternoons and evenings; we can go to the moving pictures or to the theatres, and we have very pleasant times, which you do not have here." Sometimes these people become curious enough to go to the United States for this reason. Now, however, the news coming back from the United States is not so good; it is even very bad, and in the rural districts of Quebec the people know that the cotton factories where they used to work a few years ago are closed for a great part of the year, and the people who have gone to the United States to make a fortune in that high tariff country are very much disappointed. Sometimes they even have to send home for money with which to return, like the prodigal son. I do not say that everyone who has gone to the United States has returned like the prodigal son, but they regret their absence from this country as much as the prodigal son regretted his sins.

Sir, I enjoyed listening to the speech of my hon. friend from Quebec-Montmorency (Mr. Lavigueur); he is one of the older members of this house and he knows that everyone likes him. May I say that I absolutely share his views with regard to the Civil Service Commission. There are some dignified people connected with the Civil Service Commission, but I find it astonishing that there should be a whole battalion of people there who do nothing but nominate other people for positions. But when we ask, "Who made the nomination for this appointment?" we find that there is something of the Canadian National Railways in the answer, they are protected by the secrecy of office. I do not see any reason for applying this secrecy of office to questions asked by hon. members in that connection. I say we should come back to the old regime instituted by Sir Wilfrid Laurier, under which the Civil Service Commission was simply an examination body. I represent my constituency to the best of my ability; I can make mistakes, but when I make any recommendation to any minister or to the chief of a branch, I make it knowing my responsibility as a member, and make it to the best of my knowledge and ability. I would not

recommend any man of whom I would later be ashamed. As a member of this house it would not be to my interest to set aside public opinion in my constituency by recommending to a minister anyone who is not fit for a particular position. I believe, Mr. Speaker, that the spoils should go to the conquerors. When a party is elected to power I believe it should be able to appoint its own friends to office provided they are competent to fill such positions. In the same manner when the other party wins they should have the right to appoint friends of their own to any vacancy, and we should take our medicine. I have never asked any minister to dismiss any man simply because he had voted against me. I think every person should be free to exercise his franchise but when he works openly in the political field he should be relieved from duty in the public service, because he knows what he is doing and is well aware of what his fate will be if his friends are not elected. As to the Civil Service Commission I think it should be retained as an examining body. That is to say, every one who applies for a position in the government service should come up before that body for examination, and if found to be incompetent should not be appointed. I do not think the commission should remain as a nominating body.

I have just a word to say about the tariff on spirits and I will say it in "black and white." There has been no change in the tariff this year on spirits, but we do not know what may happen next year, and I take this opportunity of bringing certain facts to the attention of the cabinet. We have heard in Quebec very often from the lips of Mr. Taschereau that if liquor is dear in the province it is due to the action of the federal government in imposing a tax of $10 a gallon on spirits. I have not at hand at the moment the newspaper which would establish the correctness of the statement, but everyone in Quebec knows that the statement has been made several times by the premier of the province. I do not understand Mr. Taschereau for holding that view, and I certainly do not concur in it. This tax was imposed several years ago to meet the war time exigencies. Personally I think that liquor should be one of the first things to be taxed, and I think also that Mr. Taschereau who is so friendly with Mr. Ferguson—this is not an insinuation, it is a fact—should copy his example in some respects. If it be true that liquor is expensive because of a tax of $10 per gallon, why is it sold at a cheaper rate in the province of Ontario than in the province of Quebec? The province of Ontario pays the same duty of $10 per gallon and yet is able to sell its liquor more cheaply than Quebec. Let any hon. member compare the price lists of the two provinces and he will satisfy himself on that point.

Mr. LAVIGUEUR: Do you refer to quality or to price?

Mr. POULIOT: I refer to the different prices for the same quality and the same quantity of liquor. Take Two Dagger rum, for example, a twenty-six ounce bottle costs $3.75 in Quebec, whereas the same kind of bottle in Ottawa costs but $2.60, which is a saving of $1.15 to the people who purchase that kind of bottle in this city. Mr. Ferguson must have great skill as a manager to be able to sell spirits at a much cheaper rate than prevails in Quebec although he has to pay the same federal tax. The same difference is to be noted in the case of Baccardi rum, and various brands of Scotch. I do not recommend my hon. friends to buy liquor either in Hull or in Ottawa—I have no desire to make such a recommendation to anyone—but if they wish to establish the accuracy of what I say they are at liberty to procure price lists from both cities and make their own comparison. I am sorry the hon. member for Fort William (Mr. Manion) is not in his seat at present otherwise I would ask him to send a complimentary copy of the Ontario price list for liquors to Mr. Taschereau, and ask him to revise the prices in Quebec accordingly. That might prove to be the first step in the direction of providing cheaper liquor.

I have but a few minutes more to speak and I will take the opportunity of telling hon. members what I think about the question of spirits. In my opinion, it is very wise on the part of this government not to comply with the suggestion of the customs commission to reduce the tax on imported liquors. We have distillers in this country who manufacture liquors openly and in accordance with the law and those distillers should have the advantage over distillers living in other countries. The existing duty will give them some advantage and there is this further necessity: There should not be any reduction in the customs duty for a few years until we have effected a substantial reduction in the national debt. I think, however, that the Minister of Finance should reduce the excise tax somewhat next year. People would not drink any more if this were done, and if, as a result of the reduction in the excise duty, the Canadian distillers were to turn out a better and cheaper product, I believe that would be to the advantage of the community.

Before taking my seat Mr. Speaker, I wish to congratulate very sincerely the Minister of Finance on the wonderful budget he has presented this year. It cannot suit everyone completely, but it suits the great mass of the people and there is no one who has not received certain advantages from it. The income tax reduction is a great thing, not only for private individuals but for big companies. The present prosperity shows that the Liberal administration has been a good servant of the people and that this country has been blessed by having a good government. I hope that in the future we shall have other Robb budgets as good as this last one.

Mr. W. R. FANSHER (Last Mountain): Mr. Speaker, before making a few observations on the budget I wish to congratulate the Minister of Finance (Mr. Robb) on the clear and concise manner in which he addressed the house and also on having been able to bring down a budget with such a favourable balance as he reported. I should be remiss in my duty if I did not at this time also congratulate the Minister of National Revenue (Mr. Euler) because I think it was through his strenuous efforts that the surplus the Minister of Finance was able to report was made possible. Great credit is also due to the Minister of National Revenue for the able manner in which he has reorganized his department and brought it from what might be called the chaotic condition which existed when he was chosen for that position, to a department that is noted for its despatch and efficiency.

Returning to the speech delivered by the Minister of Finance I was struck very forcibly with the first sentence, which I will quote:

> Seldom have the annual statements from leaders of finance and industry throughout Canada so generally reflected such progress and prosperity as that of the year 1927.

I want for a moment or two to analyze this statement from my own point of view and from that of my province in western Canada. True it is that our financial institutions have reported in their annual statements almost unprecedented prosperity, and many corporations have reported similar prosperity. Coming as I do from the agricultural class, a class which has produced forty per cent, and sometimes more, of the wealth of this country, and coming from a constituency that has contributed a great deal towards the wealth so reported, I think I should give this matter more than a casual observation. No mention is made of the prosperity of the farmer or of the prosperity of labour, and without these two great classes we all know that the prosperity reported in the first sentence of the budget speech could not have been brought about.

I want for a moment or two to draw to the attention of this house a fact which, it seems to me, has had considerably more to do with that prosperity than any other single factor that can be mentioned. In the post-war depression, the deflation period as we sometimes call it, the farmers of western Canada were placed with their backs against the wall, and because of that situation they began to look around for ways and means by which they could better their condition. They evolved what is known as the wheat pool. I am not going to argue at length as to the merits or demerits of this particular institution, but I will give the house an idea of the amount it has been able to contribute. An accountant, who has been employed to look into the marketing of wheat and the effect that the pool principle has had in the last three years, has recently come out with the statement that it has increased the net price to the producer by at least 26½ cents a bushel. When you consider the millions of bushels of wheat that are produced in this country and multiply that by 26½ cents of an increased net profit to the producer, you can readily realize the amount of money that the primary producers have had available to stimulate the industrial life of Canada.

I want to take some exception to the fiscal policy as given expression to in the budget and a review of some of the conditions of agriculture in this country would, I think, be quite in order at this time. A very short time ago it was my privilege to drive through one hundred or one hundred and fifty miles of country in western Ontario that I had travelled over when I was a much younger man than I am to-day, and it pained me to see house after house with the boards up at the windows and the stock running in the fine orchards that had borne fruit in times gone by. I began to inquire why this land was not being cultivated. It was rich, very good farming land, in fact western Ontario is called the garden of Canada. The answer invariably was this: It does not pay us to buy machinery, to hire help and to cultivate this land, because the cost of production exceeds our net returns.

A similar condition has existed for some time in western Canada. The wheat pool has helped us materially in getting all the price that the consumer pays less the actual cost of handling, but this does not suffice to remunerate us for the cost of labour and the interest on capital, if we can call it such, used in the endeavours in which we are

engaged on the fair plains of western Canada. Our farms in the west could bear a very much improved condition. Only a small percentage of the homes have modern conveniences; and in passing I might state that this is one of the reasons why the young man leaves the farm, why the son does not wish to follow in his father's footsteps. When he goes to visit his city cousin the latter can put him in much more comfortable circumstances and much more commodious quarters than he could if the visit were returned, and he begins to wonder whether it is worth while to work and toil. The farmer of western Canada produces his crops under a great many disadvantages which are not known to the industrial life of this country. There is frost and hail and drought, and the last calamity that has come upon us is the rust, not to say anything of the weeds that have to be fought each year. When the western farmer is producing his crop under such conditions, I should think hon. members of this house would not ask him to bear a still greater load. The fiscal policy of this country, however, has placed upon agriculture a burden which it cannot possibly escape, and which is almost greater than the agriculturists can bear. In the depression of which I spoke a few moments ago many an agriculturist was crowded over the precipice, and has dropped into oblivion so far as his financial standing is concerned.

I want to speak for a few moments about the income tax. This tax was first brought down as a war measure, in the budget of a few years ago, and because the war debt that accumulated in the four years from 1914 to 1918 is still with us, because the overhead and carrying charges on that debt are so great, I think the income tax should have been maintained at its present level in order that we might meet and reduce as much as possible the carrying charges on that huge debt. There is nothing unjust about the income tax, because the exemptions that are now provided are quite sufficient to enable any man to maintain a standard of living for himself and his family far above that which the average farmer or the average labourer is able to maintain in this day. In fact most labourers and most farmers in this country would be proud to maintain the standard of living that the income tax exemptions permit of, and therefore I say that we should at least maintain this form of taxation in order to meet the carrying charges on our great war debt.

The farmers in this corner of the house have often been twitted by some hon. members, probably not with any particular intent, with not bearing their fair share of the income tax. I looked up the figures for 1927, and I find that the farmers and farmers' companies paid only $273,255, while the total income tax in that year brought in a revenue of $55,571,961. The difference is very noticeable; but in answer to some of the criticisms which have been made against the agrarian group, I would say, and I think that here I speak for all the farmers of Canada, that the farmers of this country would be more than delighted if they were in a position to pay all the income tax that is now collected. True, we produce an enormous amount of wealth, but because of the fiscal policy of this country we are unable to report an income on which we can be assessed. Therefore I say that the income tax should not have been reduced by ten per cent in this budget. The income tax is one of the last taxes that should have been reduced, at least until the war debt has been brought down to very much smaller proportions than at present.

The sales tax has sometimes been classed as a nuisance tax, but as it is now administered the sales tax is much more equitable than it was when foodstuffs and the necessities of life were taxed. The sales tax is now levied only upon luxuries, upon practically what are the non-essentials of life. I think, therefore, that we can well afford to have this tax continue for some considerable time, and I would suggest to the minister, if I may be permitted, that no further reductions be made in this tax for at least a few years to come.

The customs tariff, which has been a political football between parties in the last few years, is again brought to the fore by this budget. It has not been my privilege to go through all the schedules as presented by the Minister of Finance and compare them with the old schedules, therefore I cannot go into detail as much as I should wish. In discussing this question of duties with the proponents of high tariff I have been told that the tariff does not help the manufacturer; that the Canadian manufacturer, if he could get his raw material on the same basis as the United States manufacturer, could manufacture just as cheaply as does the American manufacturer. That I cannot gainsay; I have not the knowledge of that class of our industrial life in Canada to be in a position to dispute it. But this I do know, that it was my privilege some time since to go at length into this matter of production and distribution and to make a few observations

on the subject. I am going to give you an illustration, to be followed by concrete examples.

Not very long ago we had a very interesting discussion in this house on the Chicago drainage canal. We heard from the tariff supporters in this house how that diversion of water was demoralizing shipping, how it was causing the levels of the harbours in the great lakes and down the St. Lawrence as far as Montreal to drop, costing large sums on both sides of the border to those who were responsible for harbour maintenance. I think that is an excellent illustration of just how the customs tariff works as regards the agricultural industry in this country. It is not that the agriculturist does not put forth his best effort to produce. You find him out at four o'clock in the morning and putting in all his time as long as daylight lasts in an endeavour to produce as much as possible, so that he may be able to lay by something for a rainy day and his old age; but the customs tariff places on him such a burden and drains off such a large portion of his revenue that he is unable to create an industry in this country in connection with which he may receive a full return for his labour. In their applications before the tariff advisory board many of the manufacturers applied for an increase of duty on their manufactured product and a reduction of duty on their raw material. Well, it is not possible for the farmer in any way to increase his net return by protection of his products, for the simple reason that he is selling those products on the markets of the world, and he must sell at the prices there set. I repeat, there is no way possible for him to obtain any benefit by means of a customs tariff on what he produces. Therefore all we ask is an even deal and equity of treatment.

The following illustration will be helpful. Most of us know what a balky team is; one horse will pull, then the other will pull, but not pulling together, they will not lift the load. I think it is absolutely necessary for all classes to get together and discuss the tariff in a businesslike way in order to reach some equitable conclusion as to the best way in which these customs duties should be levied. For example, I use on my farm fifteen or eighteen articles of a certain kind, and probably I have to replace from four to six of those every year to maintain my full equipment. These articles are made in various sizes, and I pay from $2.85 to $3.15 for each article according to the size. During the last few years the price has mounted rapidly. One day I had the opportunity of getting in conversation with a manufacturer of this particular article and I asked him if he could tell me what it cost. He gave me the cost price in gross lots, and he also said it would cost about three cents each to deliver the article in carload lots to western Canada. Obviously the freight would not add very materially to the laid-down cost at my home town, provided that the avenues of trade were such as to permit its being laid down there at the least possible cost. I found that the article which I bought for $3.15 cost the manufacturer only $1.37 to make and place on the market. Now, I am inclined to agree with the contention that the manufacturer does not always get the benefit of tariff protection but somewhere in the transmission of this article from the factory to the consumer the price is very materially enhanced. Whoever is instrumental in doing this, whether it be the manufacturer, the middleman or the retailer, the effect is the same on the agriculturist. True, under the tariff this is permissible, and that is why we as an agrarian group representing the farmers in western Canada, and the farmers themselves through all their organizations, have expressed ourselves so strongly against the continuance of this evil.

Let me touch on something else that has happened in western Canada. Some of our implement manufacturers are exporting their product to the United States, and it has been rumoured in the west that Canadian-made implements are being sold cheaper across the line than in Canada. I hold in my hand some evidence, with a copy of an affidavit attached, respecting a particular class of implement called a drill. Most hon. members know that we have to use large drills in western Canada; six- and eight-horse machinery is our usual unit out there. This evidence shows that one of our farm group went over into Dakota to ascertain what these drills cost there. On a certain farm he found a drill marked in twenty odd places, "made in Hamilton," or "made in Canada." The box, the tongue, the frames, and many of the parts that went to make up this particular machine were so marked. The price to a Canadian farmer, had he bought his drill in Dakota and shipped it across the line, would have been $325; but buying the same type and make of drill from a dealer in any of our towns adjacent to the border the price to the Canadian consumer was $355. So the Canadian farmer could go across to a dealer in the United States, buy a Canadian-made drill there, bring it back to Canada, pay the duty, and save $30 on the transaction. Now, what

item of the tariff is being brought into play and is discriminating against the Canadian farmer? Is it what we know as 47a, or wherein is the tariff administered to permit such a condition of affairs? It is inconceivable that the factory in Canada could sell an article in the United States any cheaper than the price at which it could be sold to the farmer here. That is one of the evils that we are trying to overcome; that is part of the load that we are trying to get rid of.

Mr. YOUNG (Weyburn): Have you any idea how many drills of Canadian make were sent into the United States last year?

Mr. FANSHER (Last Mountain): That would be a very difficult question to answer. A person would have to communicate with the customs authorities in the United States or with the implement manufacturers in this country, and I do not think the latter would be willing to give the information.

Mr. YOUNG (Weyburn): I think twenty-six is the number.

Mr. FANSHER (Last Mountain): What is the point in saying that only twenty-six were sent into the United States last year?

Mr. YOUNG (Weyburn): That is the figure shown in the trade returns.

Mr. FANSHER (Last Mountain): I fail to see how that affects the argument in any way whatever. Here are the facts of the case, sworn to by responsible men. We are suffering to that extent, and whether it is by reason of the manipulation of the tariff, or the cost of transportation, or some other factor, whatever it may be, we know we are being discriminated against. I repeat, it is from that condition we wish to free ourselves.

I have in my hand a copy of the resolution which was moved by the Hon. George Langley at the Liberal convention held in this city in the autumn of 1919. Mr. Langley is known to most of us in this house, and if I were to give him an appropriate name I should call him "the grand old man from Saskatchewan". He spent a great part of his life in that province, trying to do all he could for the farmers of western Canada, and he has a great many achievements to his credit. Reading over his speech when he moved this resolution, I can imagaine with what gusto he entered into it; and the brogue, which we all so like to hear, no doubt attracted and captivated his audience. I think due credit is coming to him for the courage he displayed in putting forth and standing by the resolution which I am about to read, a resolution which I may say, by the way, was seconded by a gentleman from New Brunswick. I believe it was the same hon. gentleman who now occupies the position of Postmaster General (Mr. Veniot). I wonder whether that gentleman will recognize these words:

> That the best interests of Canada demand that substantial reductions of the burdens of customs taxation be made with a view to the accomplishing of two purposes of the highest importance. First, diminishing the high cost of living which presses so severely on the masses of the people, second, reducing the cost of the instruments of production in the industries based on the natural resources of the Dominion, the vigorous development of which is essential to the progress and prosperity of our country .
>
> That to these ends, wheat, wheat flour and all products of wheat; the principal articles of food; farm implements and machinery; farm tractors; mining, flour and sawmill machinery and repair parts thereof; roughly and partly dressed lumber; gasoline, illuminating, lubricating and fuel oils, nets, net twines and fishermen's equipments; cements and fertilizers, should be free from customs duties, as well as the raw material entering into the same.
>
> That a revision downward of the tariff should be made whereby substantial reductions should be effected in the duties on wearing apparel and footwear, and on other articles of general consumption other than luxuries as well as on the raw material entering into the manufacture of the same.
>
> That the British preference be increased to fifty per cent of the general tariff.
>
> And the Liberal party hereby pledges itself to implement by legislation the provisions of this resolution when returned to power.

I want to review the situation so that we may see where we are drifting. So far as I have been able to ascertain from the closest scrutiny of the budget, particularly as it affects the customs tariff, there is practically no reduction that will benefit the great mass of consumers and the producers of this country. The cost of living will not be materially reduced. In the election of 1926 western Canada responded amiably to the sentiment that was expressed by those who were propounding the Liberal platform, and in this response they showed to the people at large and to the Liberal party that they were once more going to take these gentlemen at their word. The result was that only one representative who might be called a high tariff advocate was returned from western Canada. We were told during the election of 1926 that if the Liberal party were returned to power the 1919 platform would be implemented. We were also given this assurance in the fall of 1921. The Progressives, or the agrarian group in western Canada and also in Ontario, stood for this platform on the plea which was made to the electors, especially the farmers. This group had suffered considerably at the election in

1925, and the agriculturists were interested in the platform I have quoted. Now we have had two sessions, two budgets have been brought down, and very little change has taken place.

I was very much interested in the question which the hon. member for Marquette (Mr. Glen) asked the Minister of Finance during the debate last year, and my confidence did not increase when the Minister of Railways (Mr. Dunning) gave the answer. I have been wondering what we are going to do. We have given an expression of opinion and we are doing what we can from this corner of the house to bring about or to make effective these promises which were given us. But I wonder what we shall have to take back with us when each of us from Saskatchewan returns as just one of the boys back home. What shall we tell them? What shall we have to carry home to them? Shall we be able to tell the people back home that there has been a reduction in the cost of the necessaries of life as well as of the implements of production? What will hon. gentlemen from Manitoba be able to tell their constituents when they return? Will they be able to say that they have assisted very materially in reducing the cost of living and lightening the burden which now bears both on labour and on the agricultural class? Hon. gentlemen from Manitoba are the doorkeepers, as it were, of western Canada. Are they going to assist us, or are they going to be instrumental in opening the doors to further burdens and to the laying of greater stress and strain on the agricultural industry? I hope not.

I recall an article I read not so long ago in regard to some of the discoveries which science is making. This article declares that a ship may be constructed and put out to sea without a single human being on board, being guided for miles by an electrical apparatus operated on the shore. As I thought of this article a few moments ago, it struck me very forcibly and I wondered what impediment was being placed in the way of the government to hinder them from implementing this promise. I wondered whether it was the dynamic, which we hear of so frequently, of St. James street, that was directing the ship of state and keeping it in its present course. I hope that in the near future this budget schedule will be clarified so that we may better understand it, and that after all it will show that there is to be some alleviation of the burdens of which I have been speaking. Otherwise, if there is going to be no relief in this direction, I am afraid that a few lines which I learned long years ago will be very apt. They will apply possibly to many of us from western Canada when we again appeal to our electors, and the last line of all will probably be the most applicable. In giving a description of the fall of the great nation of Greece, Byron said:

> The isles of Greece! the isles of Greece!
> Where burning Sappho loved and sung,
> Where grew the arts of war and peace,
> Where Delos rose, and Phoebus sprung!
> Eternal summer gilds them yet,
> But all, except their sun, is set.

Will that be applicable to those who are responsible for this most momentous resolution which I read, but who are afraid to implement that resolution in their legislative program? In closing I would appeal to the Minister of Finance to have that courage of which we heard in this house a few days ago. I sincerely hope that he will give us, in this schedule which has been placed on Hansard, encouragement to look forward to some alleviation of the great burden of which I have been speaking.

There is one other matter which I should like to bring to the attention of the house, and that is the point of view of at least some of us in western Canada, certainly of those whom I represent here. I think I could not better describe it than in the following words, which I took from page 25 of the 1925-26 Canadian Annual Review:

> The absorption of the Progressives by the Liberal party, whether in or out of office and under whatever guise effected, would postpone for a generation the attainment of necessary reforms, the re-shaping of national policies and the infusion into Canadian public life of that moral courage and idealism which slavish partisanship has well nigh destroyed.

I am asked whose words I am quoting. These are the words of the present Minister of Immigration (Mr. Forke).

Mr. DEPUTY SPEAKER: I am sorry, but I must tell my hon. friend that his time is up.

At six o'clock the house took recess.

After Recess

The house resumed at eight o'clock.

Mr. T. L. CHURCH (Toronto Northwest): Mr. Speaker, I do not want to show a lack of ordinary Christian charity towards the government who prepared this budget, but I fail to see in that budget any policy outlined

that will solve the economic ills which confront this country to-day. Whether it be the province of British Columbia, or the prairie provinces, or central Canada, or the maritime provinces, nothing is suggested for the alleviation of the economic troubles from which they are suffering, but there is a little tariff nibbling here and a little nibbling there, and over eleven pages of just such announcements, a heterogeneous mass of tariff items with many whereases and provisos, none of which will have any effect in relieving the country from its present economic ills.

The government proposes to do nothing to solve the problem of unemployment. Not one job by this tariff will they create for a Canadian boy in Canada. No policy is suggested which will have the effect of bringing back our young Canadians who have gone to the United States. Nothing is to be done to induce those Canadians to return to their homes from which they have been driven by the policy of the government, a policy which encourages some of our brightest minds to leave Canada and make their homes in the country to the south. There is not one word in the budget about the preservation of our domestic market, especially for those Canadians who are engaged in the great industries of farming and dairying, nor is there the least sign of any effort to conserve our natural resources and our raw materials.

The budget speech can be divided broadly into three classes: Part one deals with the financial affairs of the country in general. Part two deals with taxation, and with taxation as amended by the budget. Part three consists of eleven pages of tariff nibbling changes in which there is a heterogeneous mass of details, with a little lowering of duties here, and a little lowering of duties there. The object of a budget statement given annually should be to reveal exactly the housekeeping operations of the nation. We find from the budget that the revenue for the last fiscal year was $419,480,000, and there was paid out a total sum of $364,665,000. If this were the sole information to be imparted well and good, but a true budget should reveal the actual operations of the government and its outside commissions for the preceding twelve months, including all their outside obligations. What would you think of a company which presented a balance sheet only of the parent body, ignoring the operations of its subsidiaries although they belonged to the organization and were part and parcel of it? Yet this government ignores their outside obligations altogether. They figure out that they have a surplus or a balance on hand of $54,815,000. Well, if anyone can discover that surplus in the shape of cash in the treasury he will prove to be a greater discoverer than John or Sebastian Cabot, or any of the other early navigators. The budget consists of a partial statement only. The government have not struck a proper or complete balance at all; they have ignored some of the most important obligations of the country. They have ignored the millions of bonds of the Canadian National railways guaranteed by the state. They have written off $16,000,000 in connection with certain soldier settlement lands, which figures if they mean anything at all mean a deficit. They have ignored the $4,000,000 of guaranteed bonds of the Montreal harbour commisison, and the $8,000,000 guaranteed the government merchant marine in connection with the steamship lines to the West Indies.

I have in my hand pages 4 and 5 of the annual report of the Minister of Railways laid on the table at the opening of parliament, which shows that the item of interest due the government, accrued but unpaid, in connection with the Canadian National railways increased by $32,089,853 during the year, and now stands at $193,951,356. Appropriations account, which stood at $453,935,303 at December 31, 1925, now stands at $437,412,032. What would you think of the Ontario government if they prepared a budget statement leaving out all the debt of the hydro-electric commission whose expenditures reach a total investment of $250,000,000 on cheap light, power and transportation? Would you call that a real financial statement? I remember how George Washington Ross, one time premier of the province, went up and down Ontario boasting that he had a cash surplus of $8,000,000. One day at a meeting in Middlesex county I challenged the statement, and Mr. Ross said that if I would come up to the parliament buildings in Queen's park he would show me the surplus in gold and silver in the treasury vaults. I accepted the challenge and went up there. Premier Ross did not show me any surplus but he said "Never mind, Tom; take a cigar." That is the way in which he dealt with the surplus in the olden days. That was the kind of surplus they had at that time. If a proper accounting system were carried out in all the departments of government, and a real financial statement were presented, a huge debt would be revealed about which the country knows nothing at all at the present time. In connection with our railway operations vast sums in the form

of interest and fixed charges have been written off and are not included in the financial statement of the Minister of Finance.

As regards this magnificent budget, the like of which has never been seen before, the government are spending money in Canada like water. When Sir Wilfrid Laurier was Prime Minister in 1896 the then administration could get along with about $36,000,000. To-day this business-like economical government brings down a budget amounting to $364,000,000 a year. The Minister of Public Works (Mr. Elliott), who cannot find a snow shovel to clean away the snow in front of the parliament buildings, can find half a million dollars for a number of automobiles for the government. Any member of the cabinet who has not a large motor car bought within the past year is not fit to be called a minister. We hear talk about industrial and scientific research, but you cannot find a man with a snow shovel around the parliament buildings. I have never before seen such badly kept streets and sidewalks as there are in this city of Ottawa, the Washington of the north, in winter. It is time the government bought a few snow shovels instead of spending millions of dollars unnecessarily. The Minister of Public Works can get a nice vote for a post office town clock in the town of Glencoe so that he can tell the time on election day in West Middlesex; but when the question is one of cleaning away the snow in front of the parliament buildings it is impossible to get any snow shovels. We are not all hockey players and accustomed to using skates, and although there are some clean skaters on the government side, I would suggest an issue of skates to the members to use in getting to the buildings.

In this great city of Ottawa there is a wonderful give away commission called the Federal District Commission, headed by Hon. Thomas Ahearn, and according to the way they conduct their business they are spending money like water too—they have so much to give away to the Americans for nothing. The other day they proposed to give away eleven acres of land at Rockliffe for an American embassy although it is known that an embassy pays no taxes. They are taking a leaf out of the book of the government in the matter of spending money. The government pays no taxes in England on the magnificent edifice in London, Canada House, to house Mr. Larkin, who now has a new uniform, not a second or third-class uniform but a first-class uniform, if you please, because we are no longer a crown colony but a nation. The burden of that taxation has to go on the back of the British taxpayer who has his very bread and other necessaries of life taxed for a fleet to protect our shores while we refuse to pay our taxes in England. As I said, the Federal District Commission, headed by Hon. Thomas Ahearn, proposed the other day to give away eleven acres of land at Rockcliffe for an American embassy. Did anyone ever hear of the Right Hon. Uncle Sam giving away anything for nothing, or giving anything away down at Washington, for Mr. Massey's embassy, for which we had to pay half a million dollars and $120,000 for the maintenance of this magnificent minister in the city of Washington? I never heard of Mr. Ahearn giving away any of his own money in this way but he is ready, through the Federal District Commission, to give away this splendid public site for an American embassy. The government should have a house-cleaning in connection with the Federal District Commission if that is the way they conduct business. If that is the kind of commission it is, ready to give away public property in that way, the sooner the government gets rid of the Federal District Commission the better it will be for the so-called Washington of the north.

In regard to this budget, it seems to be a gamble between the spending branch and the revenue producing branch. The government have removed no taxes from the breakfast table of the workingman. The taxes of the workingman for the necessaries of life are to-day more than they ever were before. The revenues have been greatly increased; but the government still continue to pile on the taxes and nobody can find out exactly what the taxes are, because the revenues and the taxes are spirited away in these secret commissions to the extent of some fifteen or twenty spread over the country from Halifax to Vancouver, spending the public money like water—trustee boards and guarantee government boards not mentioned in the budget. Does the government think this money which is raised by taxing the working people of this country comes down like the dew from heaven so that they can spend money like water in the manner I have indicated?

Last session we had the promise of the government that a conference would be held with the provinces and that something would be done towards abolishing the duplicate system of income taxes. The conference was called. Did they do anything? Nothing but make a football out of the question. On the Pacific coast there is a triple-header income tax, namely: Dominion income tax, provincial income tax and municipal income tax. The proposed reduction of ten per cent will mean nothing to the workingman, but it will mean

a great deal to those whose wealth is in the millions. The list of income tax exemptions is to be increased by allowing an exemption of $500 to those supporting dependents over twenty-one years of age who are incapacitated. In this country there are many who are incapacitated because they have not a job, and on this account some 600,000 have had to go to the United States. Many of them are returned men who fought even unto death the battles of this country, and they are being incapacitated by this particular budget. Talk about the expulsion of the Acadians down by the sea! That was nothing to the expulsion of thousands of former residents of my city who have had to go out of the country to find a job.

This magnificent budget which we have before us to-night contains eleven or twelve pages of tariff changes, a nibbling here and a nibbling there. There is insecurity, uncertainty and instability of the tariff, and nobody knows what to expect next year. Wait until you see what this travelling minstrel show, known as the tariff advisory board, does next year. Their work last year has resulted in eleven or twelve pages of tariff changes. Wait till you see what takes place next year when they have a whole twelve months to go. Woe be it to the maritime provinces when they deal with some of their industries! Woe be it to the industries of the province of Quebec! I do not see my good young friend the hon. member for Temiscouata (Mr. Pouliot) in the house to-night. He always makes a good speech. The other day he made a great speech at the assizes over in Hull so that not only the jury but the judge on the bench shed buckets of tears. If the government had given him a chance on a proper budget subject he would have moved to tears the members on the government benches. When the working classes out of work ask the government of the day for some bread, they are given a stone in the shape of the tariff reductions which are before the house to-day. This budget will be small comfort to the working classes of this country because there is no reduction applicable to the breakfast table at all and the budget will create no new jobs. The necessities of life stand as they were, but the government could find reductions for some of their multi-millionaire friends in the mining industry like the Hollinger mine, and the newspaper industry by allowing press blankets to be brought in free of duty. These are two industries that are well able to pay taxes to help maintain the administration of this country, but they are the people whom the government single out and think of first, last and all the time. These multi-millionaires who can well afford to pay taxes are the ones who are given free trade in press blankets and mining concessions.

The main tariff changes in this magnificent budget with its twelve pages of schedules affect the cotton and woollen industry. I have no doubt that one reason for these twelve pages of tinkering is due to the fact that the government, in anticipation of a general election two or three years hence are making a nice little gesture to the gentlemen on our left in anticipation of a larger vote west of the great lakes.

The budget debate is a time for taking stock, and I wish to refer for two or three minutes to the auditor general's report in regard to the expenditures of this country, because we have an antiquated machinery of parliament. The machinery of parliament as regards control over expenditures differs little from what it was a hundred years ago. A civil war was fought in England in order that parliament might control taxation and expenditure. Taxation is still controlled, but democratic control of the national budget made up of the estimates of the different departments is to-day not in existence.

As regards financing, the present system is ridiculous. It is the very reverse of that adopted by municipalities. Each spending department draws up its estimates for the budget and possibly a spirited battle takes place between the departments and the treasury. There is a battle in the cabinet, and when the budget is approved by the treasury board and the cabinet it is presented to the house. The bureaucracy has increased in numbers and powers and the treasury board has never regained the control it surrendered during the late war. In 1896 the budget was $36,000,000 as compared with $364,000,000 in 1928. If a deadlock is reached over the estimates, they come before the cabinet composed of all the administrative chiefs and the scales are always weighed in the interests of the departments. Finally the budget is approved by the government as a whole and sent to the house, and it is all over as far as parliament is concerned. A few concessions here and there may be wrung from the Minister of Finance, but if he resists, the whole government will unite and stand behind him, because a defeat of the budget means that the government will resign.

Next come the estimates. In theory these have all to be approved by the House of Commons during the parliamentary session. Last year we had from fifteen to twenty

supply days. The minister chooses the estimates to be considered on these days, and some of the most important spending departments never have their estimates considered except for five minutes in the last rush at the close of the session. If a division is challenged, the government treats it as a vote of want of confidence; the whips are used to save the government, and the private members on the government side all line up with the government because if the item is defeated the government will resign. I say that it is a waste of time to consider the estimates under this antiquated system which is one hundred years old. There can be no detailed or useful examination of the estimates on the floor of the house. The estimates of a great many departments never come before parliament at all. The estimates of the Justice department, for instance, have never come before parliament since I have been a member, and the same with the Post Office department, Marine and Fisheries, Customs—and then in the dying hours of the session millions are passed without any discussion.

Our system is different from that of the municipalities under the Municipal Act. In Toronto, for instance, the heads of the departments prepare the estimates, the board of control go over them and strike the tax rate; the city council reviews each item, and there is thus some control by the legislative branch over the executive. Under our system in this house there is none. We have a committee of public accounts, it is true, and the auditor general, but the public accounts committee hardly ever meets, and the auditor general meets you sometimes and hands you a blue book. When the public accounts committee does meet, it is simply a case of holding a post mortem. The public accounts committee might be known as the morgue or coroner's committee. They hold a post morten examination, the subject being anywhere from two to ten years old and in the case of the national railways, from ten to fifteen years old. It is no wonder our taxation is high under the antiquated system we have here.

If parliament is ever to regain any of its old control, our whole financial system must be reorganized, and a new modernized system arranged. There is such a system in vogue in France and in the United States which we might well introduce here. They have estimates committees, of which members of parliament are members. There should be a committee for all the big spending departments in this government and for groups of the smaller spending departments, and the members of parliament who serve on such committees should be looked upon as non-partisan. If necessary they should sit in camera if business of a confidential nature is being disclosed. These committees should cross-examine the heads of departments, as the board of control in a large city does. There should be no voting along parliamentary lines, and the recommendations of the committee need not be looked upon as a reflection upon any particular department or upon the government. These committees would be a godsend for a great many hon. members because it would give them some work to do while they are waiting around in Ottawa for the taking of a vote upon some question or another in this chamber. It would also give them an added responsibility as members of parliament. I have no doubt that resistance would come from the great spending departments and from politicians to any such change, but it is the only way in which we shall ever get reduced expenditure, and the only way in which we can protect the interests of the great mass of the already over-burdened taxpayers.

I complain, Mr. Speaker, that Ontario and Quebec do not get sufficient recognition at Ottawa, although they contribute about eighty per cent of the cash taxes of Canada. The parliamentary system which destroyed the autocratic power of the monarchy and curbed the privileges of the second chamber has been a failure. To-day we have no government by the people, of the people, and for the people, and there cannot be any such thing so long as we retain a parliamentary system that is one hundred years old with little or no control over expenditure. That system has not justified its existence, because under it parliament does not exercise proper control over the government of the day, with the result that we have increased expenditures all along the line. We already have a special committee to consider the estimates of the Canadian National Railways, and instead of that committee holding five or six meetings, it should hold twenty or thirty. The same principle that we have adopted in connection with the railway estimates should be applied to the estimates of all the other departments, including the national railways, and then I venture to say we should get some relief.

With regard to the tariff changes, in my opinion this heterogeneous mass of changes proposed by the minister is going to do the industrial provinces untold harm. My friends, the Progressives, are protectionists so far as their own affairs in the prairie provinces are concerned; they are free traders only

when the industries of central Canada are affected. In my opinion a proper application of the doctrine of protection would solve all the economic ills that we have to-day. Protection is not a dead but a living thing. It will protect the manufacturer, the farmer, the artisan and the toiler; it will solve unemployment and make for a happy and prosperous and contented people. It would help the consumer as well, because no measure of protection should be adopted which ignores the consumer. I support protection as a principle, and not as a privilege to the few. Under a proper protective policy the automobile industry and some ten other native industries would become key industries in this country, employing tens of thousands of Canadians now exiled and driven to the United States.

The immigration question is wrapped up and correlated to the tariff. They are interwoven; one could not exist without the other. The first cornerstone of any immigration policy is to keep the population we already have at the present time, and the second is to adopt an all-Canadian all-British tariff, and encourage British immigration. Some of the manufacturers were the worst foes of a protective tariff in wanting all for themselves. Right Hon. Stanley Baldwin and Premier Bruce of Australia were reciprocal protectionists. In my opinion the tariff board is nothing but a travelling minstrel show. Nero never fiddled while Rome burned the way this government is fiddling with the main economic question in this country by appointing a tariff board to make a political football of our major economic question—the tariff. I say, with no disrespect for the members of the tariff board, because they are a good lot of men, that if they would only go into the theatrical business or into the movies they would make their fortunes. If they would blacken up their faces, they would make the greatest minstrel show that ever took the road.

The tariff, Mr. Speaker, will always be in politics, thank goodness for that, because dear knows where the working class would be if it were not for the tariff being in politics for keeps. The tariff board has cost this country over a hundred thousand dollars, and they have produced nothing but talk. It has been one of the most mischievous bodies in this country for breaking down our industrial existence. It is just digging up material for the free traders. The tariff board to-day, in my opinion, is composed of nothing but a lot of spade and shovel men who are digging up a lot of facts about free trade for the government to destroy protection and trying to foist free trade on the people. The farmers of this country do not believe in the policy of free trade, and yet the government are going to destroy every industry in Ontario and Quebec before they get through with this Yankee fad, the tariff board. There is not one word in the budget about the conservation of raw materials, the dumping of cheap, shoddy, European, German and American goods, neither is there one word about some form of social legislation or about sick and unemployment insurance for the masses of this country. This government have millions of dollars for the millionaire miner, for the millionaire manufacturer, for the millionaire newspaper publisher in the form of reduced taxation and tariff reductions, but they have not struck a cent off the taxes of the working classes or off the breakfast table of the masses.

The whole gesture in this budget speech is nothing but the first volume of reciprocity with the people of the United States. Canada does not want reciprocity if it could get it and could not get it if it wanted it. We want to be on friendly terms with our American cousins, but we should tell them at once, "If you want to do business with us you must do it on fair, just and equitable grounds, or not at all." Canada must stop buying 600 million dollars' worth of high class American goods—nearly all of which could be made in Canada—and paying for them in our raw materials which are fast vanishing. In my opinion what this country wants is a national policy and adequate safeguarding legislation in relation to: (a) its raw materials; (b) its coal and other fuels; (c) its water-powers; (d) patents and trade marks; (e) dumping of foreign goods; (f) scientific research; (g) export of hard wheat to the United States; (h) timber and minerals; and (i) domestic and empire marketing. This would conserve our resources, build up the country and protect it from unfair and unreasonable competition, preserve our own markets for our own products, and our own work for our own workmen, and so stop the exodus to the United States and solve unemployment. Such a national policy is both a social and an economic necessity; it is in the best interests and welfare of Canada and the conservation of our resources.

Away back in '49 Horace Greeley's advice to the young men of his country—and, remember, that was when they started protection in the United States—was: "Go west, young man." To-day this government with its free trade gesture is in effect telling our youth: "Go south, young man." And the

pity is that our young men are going south in thousands because of these tariff changes. The tariff changes, in my opinion, are anti-Canadian and of not the slightest help towards preferential trade or the safeguarding of our industrial growth. No effort is made to solve the problems of either domestic or empire marketing, or to take advantage of the great economic work done by the empire marketing board in the old country or legislation for the relief of our own dairying, fruit and agricultural industries. The budget contains no relief for unemployment. The tariff changes leave undone the things that ought to have been done and does those things that ought not to have been done. The place for this budget is the cupboard of old Mother Hubbard. There is no bone, let alone meat, in it. The unemployed cry for bread, and the government give them a stone. The modern old Mother Hubbard policy of the government has emptied the cupboard for the benefit of the Americans, so that our young men will be exiled and expelled from their own country—many of them returned men who fought even unto death for Canada. They are driven forth to search for work in a foreign land by the Honourable Billy Moore tariff board, and such a policy will make Canadians hewers of wood and drawers of water for the people of the United States.

There are jokers also in the budget. There must be some jokers in it of an economic free trade style if Mr. Moore has anything to do with it. The budget is simply a shell-out of our markets to our competitors. As an indication of this look at the reception Mr. Moore gave the fruit growers of British Columbia. He lectured them and told them to go away back home for presuming to come to Ottawa to ask for protection for the fruit industry. They had some little protection under the provincial government, but they could get no help from the tariff board. Mr. Moore might just as well have told them that his board existed to do spade and shovel work for lowering the duties on Canadian products and fruit to satisfy the Progressives, and to dig up ammunition for the rest of the free traders in this country. What is the result? Why, the farms and orchards of this country and the dairy industry are not what they used to be; these industries are withering.

The industries of this country are at the parting of the ways. Whither are we drifting in connection with a bona fide economic policy for this country—such a policy as was laid down in 1878? The tariff board and government are like a ship without a rudder, basking on the free trade shores. When they put out to sea they do not know where they are bound for or where this free trade policy is going to land them. No doubt the question of a national economic policy will be referred back to the committee of the first part, Billy Moore and his associates, while our returned men are, like the Acadians, driven into exile. The expulsion of the Acadians was nothing to the expulsion of 600,000 Canadians by this tariff policy.

May I say, Mr. Speaker, that in my view the economic problems of this country have been allowed to shift for themselves. The budget is not the only specimen of free trade that has come from this government. Hardly a week passes but some new free trade treaty is negotiated with some small foreign country on a preferred basis. To-day there is hardly a country in the world with whom we have not made a trade agreement involving the surrender of our markets. In fact the only two countries that I can call to mind with whom we have no trade treaties are Patagonia and Bogota. Let us have free trade and nothing but free trade, seems to be the policy of the government with all countries on the seven seas. Does the budget put money in the pockets of any Canadian working men? Not that I know of. I think there will be less work and less pay envelopes in the pockets of the working classes as a result of this budget. The tariff board is nothing but a travelling minstrel show and mock debating society. The government have fiddled with the question of this main national economic policy and done nothing. A burlesque consumers' league of one man, self-appointed, has acted as one of the chief performers in this burlesque. For the appointment of a tariff board to handle the economic affairs of this country is nothing short of a burlesque. With a little nibble here and another little nibble there at the tariff, does any business man know where he is going to wind up and who will be the next to be attacked?

This Liberal budget holds out no hope of expansion in Canadian industry. It is death to any such hope. The expansion of Canadian industry is sentenced to death and immediate execution in the terms of the budget, and is then let out on suspended sentence. Canadian industry is at the parting of the ways; it cannot expand under tariff uncertainties and the destructive actions of the tariff board. Under Mr. Moore and his associates they have all become professors in the great art of chiropody of the Cobdenist school; Canadian industry certainly will not expand under these conditions—in fact it is doubtful whether it will live. By the time they have got through with it, before the next

election there will be no industries left in Canada. And now we have the celebrated head of the Canadian National Railways Sir Henry Thornton, giving us a new gold cure for immigration; he wants to increase freight rates 10 to 20 millions for immigration—to a degree so prohibitive as to make it impossible for any industry to exist in Canada on the high freight rates. No labour would be engaged in industry here if his proposals were adopted and the plain English of it is Sir Henry talked rot and nonsense. The first essential to any successful immigration policy, Mr. Speaker, and the corner stone of it, is the providing of adequate jobs and employment for those who are here now and who come into the country. Immigration is necessarily wrapped up in the tariff policy of this country; the tariff and immigration are interwoven and correlated, because there can be no real success in any efforts to bring immigrants into the country unless we provide jobs for those who are already here and those to come. The tariff is the key to immigration within the empire. Let us give employment to the people who are now in Canada and stop the exodus to the United States through a proper all-Canadian tariff.

I have seen numerous advertisements in the newspapers of the old country inviting men from England and Wales to come out to Canada. One Canadian National advertisement in Wales declares, "Forty-five hundred men wanted in Canada." I have seen in the News of the World an advertisement signed by the Canadian National Railways offering inducements to these 4,500 people to leave home in order to take up work in Canada. Fares are guaranteed, and alluring prospects are held out. It seems to me that the railway and immigration agents in the old land should be restrained in their efforts to send people out to Canada under false pretences. I have here a whole list of advertisements published in the old country, in England and Wales, by immigration and railway agents, all to the same effect, and I trust that the committee on immigration and colonization will look into this matter and see to it that intending immigrants are not deceived in this way. So far as work goes, I do not think that unemployment was ever as bad as it is to-day. The Alien Labour act seems to have been suspended altogether, with the result that hundreds upon hundreds of people are coming in to oust native Canadians from their employment. As the session goes on I may have another opportunity to discuss some aspects of our economic problems; but before I close I am bound to say that so far as I can see the government has done absolutely nothing, in the budget it has brought down, to solve the many economic problems which now face us as a people from coast to coast.

Mr. W. K. BALDWIN (Stanstead): So far, the present session of parliament has resolved itself into what I think one may describe as a fellowship meeting. There has been no cross-firing such as would give one, if I may use the expression, pep and energy for assault. However, we have just had an onslaught from the popular member who has just taken his seat (Mr. Church), and who I must say has always shown himself, if a hard hitter, at least a fair and square one; he hits those on his own side of the house just as vigorously as he does those on this side. As regards his references to this antiquated government, I would ask him whether he believes in the Mussolini form of administration, or whether he thinks we should reconstitute our administrative machinery to run this country.

We have just had the fifth budget from the present Minister of Finance (Mr. Robb) and throughout the length and breadth of Canada the people are paying tribute to the hon. gentleman's outstanding ability and the success he has had in putting the finances of Canada on such a satisfactory basis. If we go back in our history a few years we shall see to what an extent the revenues of the country were squandered largely in the mismanagement of our railways. We all remember, I am sure, those dark days when there were whisperings of death, and these wailings have done more to drive people from Canada than anything else that has ever been done in this country.

It is with no little pleasure that I gathered from the speeches delivered throughout the country by the leader of the opposition (Mr. Bennett) before the meeting of parliament that this government, in its administration of the country's affairs, should in his view be allowed to operate without undue antagonism; and I believe that this principle has been well observed throughout the session. There has been no unnecessary finding of fault with the government. When a budget such as that now under consideration could be brought down within so short a time from the opening of parliament, it is not to be wondered at that there is peace and prosperity in the country and that business generally is stable.

The hon. member who preceded me spoke about the lavish expenditure of the country's money. There is absolutely no ground for such a statement; I know that the government is not spending money with too free a hand. If I want money for a

wharf or a post office or for the painting of a public building and I apply to the ministers they say, "We cannot raise the money. We must economize." We all believe in the Minister of Finance and we are confident that he will keep a firm grip on the purse strings. The extent to which he has reduced taxation in Canada and has been paying off the public debt is a matter for wonder and admiration. I regret, I am bound to say, that the Minister of National Defence (Mr. Ralston) has been allowed more money than I should like to see appropriated to his department, but we all know that the hon. gentleman is not a warrior at heart, and I have no doubt that the expenditures of his department will be directed more towards aviation than militarism.

We must be progressive in this country, which has amazing possibilities. Let us instil into the minds of our young people, our boys and girls, a proper appreciation of the greatness of this Dominion, and let us never forget that we are part and parcel of the British Empire, this wonderful commonwealth of nations embracing almost one quarter of the population of the earth and covering nearly a quarter of its surface. It seems to me that the Canadian people are losing their enthusiasm. It seems to me that patriotism and love of country, which should be drilled into our children, is being forgotten. However, let us remember that many of those who have gone to the United States would like to come back, if they only had the means with which to get back. Within the last few months I have had occasion to be in New York city several times, and I have seen hundreds of people who have gone from Canada to that city, many of them dejected and out of work, and the few who have made good admit that with the same hard work in Canada they would have done just as well. I want the people to remember that we must work and economize as we did during the war if we are to develop our great resources; let us work and strive and live frugally, and in that way we will more quickly bring about that development which we all desire. Let us live here as they did in the United States after the great civil war, when they were burdened with a huge debt. The officers went back to their homes in their faded blue uniforms, with no brass bands to greet them and no proclamations to receive them, but they went back to their affairs and started to work and economize, with the result that the United States has developed into one of the greatest and richest countries in the world. Within the last five years, through good administration, we have been paying off our national debt and reducing taxation, and if we continue in this way we shall get on solid footing in short order.

There are a few things in the budget with which I differ; I would have eliminated the sales tax. It is laborious work making out five copies of those papers, which must be done whether or not anything is sold. Then the customs officials throughout the country do a little more work and demand a little more salary, and I believe it takes hundreds of clerks to audit all the papers and work everything out, because if a mistake is made the papers will be returned to remind you that you owe a few cents more than you thought. In addition to this, there are many ways of evading that tax. We will say there are manufacturers in Montreal who make clothing; not those firms advertising themselves as wholesalers, who send out travellers and carry on a regular trade, but those other men who do a large volume of business in the aggregate, and who sell their goods more cheaply than the legitimate firms. If you buy goods from these men you pay cash and get delivery, but you cannot get an invoice, and in that way they evade the sales tax. There is another objection to the sales tax with which we who live near the border are well acquainted. If you build a house just across the line there is no sales tax to be paid, while if you build a house on our side of the line you must pay the sales tax. I would suggest that the stamp tax be increased in some way which would bring an amount equal to the sales tax revenue, and we would then be sure that every penny went into the treasury. There would also be much less trouble, because after buying stamps all that is necessary is to affix them.

This country has a wonderful future. The West Indies have always been dear to my heart. In this climate we have no tropical or semi-tropical products, and I have always believed that we should have political union with the West Indies, if that could be made agreeable to Great Britain and to those islands. How they would be represented in this country I do not know, but the idea is well worthy of consideration. Then we have Newfoundland just off our coast, a country with no great future if standing alone. Newfoundland should be brought into this Dominion, as was very nearly the case at one time, when for a paltry $8,000,000 the proposition was refused. That was a foolish move, because every dollar of that $8,000,000 would have been spent either in Newfoundland or in Canada, and would have done an immense amount of good. The size of the

United States has been almost doubled even within my memory by small wars and by diplomacy, together with the expenditure of a few dollars here and there, until now there is nothing left for Canada on this continent north of Mexico. We need the best efforts of the leading men in Canada, working together, to round out this great country.

Another thought which is worthy of consideration is a preferential tariff within the commonwealth of British nations, which would bring them altogether to supply the needs of each separate part. I do not know whether or not this could be worked out, but it is a wonderful theory. If one-quarter of the people in the world and one-quarter of the existing resources could be brought together under a preferential tariff I am sure the country to our south would be at a great disadvantage as compared with Canada. That is a thought which everyone should consider carefully. There is nothing more wonderful for a Canadian than to remember that he is a British subject, belonging to the British empire.

Another subject which I have mentioned in this house previously, but which I feel justified in bringing up again, is the Hudson Bay railway. I maintain that no part of this great country can prosper without that prosperity being reflected in every other part. I represent a great manufacturing community, but I do not care whether improvements be made in British Columbia, Saskatchewan, Alberta, Manitoba or the Yukon, I feel sure that the benefit will be felt all over Canada.

Then there is the question of the deepening of the St. Lawrence and the development of power. I am proud of the government because of the prudent and careful manner in which they have acted in this matter. The diversion of water by Chicago is something which I think should not continue. Can we afford to expend millions and millions of dollars to deepen our great waterways when the city of Chicago is diverting water not only for drainage purposes but to establish a new waterway to the south and to develop idle electric energy? We cannot possibly do it, and I am glad that the government are prudent and are pursuing a policy of watching and waiting.

As regards the export of power to the United States, we can never afford to allow that. It must be remembered that once contracts are entered into they cannot be very easily terminated. My advice is to develop our own water-powers for our own purposes, and not allow the exportation of Canadian power to build up towns and cities in the United States.

We are making progress in this country, but if there is any member of the government with whom I sympathize it is the Minister of Immigration and Colonization (Mr. Forke). He has a great problem before him, and we should give him our united support in trying to solve it. I would allow everybody who is law abiding and willing to work to come to this country. That may be a somewhat extreme statement to make, but I have seen immigration pouring into the United States through the city of New York, and other ports, when they were entering at the rate of a million a year. The sole belongings of some of those immigrants were contained in a little tin box and a handkerchief, but they were people of great energy and physical vigour. They have helped to develop the resources of the country to the south, they have aided in building highways even to the very mountain tops, they have assisted in reclaiming the desert and making it blossom like the rose, and they have played their part in recovering ocean lands along the Atlantic in the same way as they have done by the building of dykes in Holland. I am not afraid of labouring men. If we are to have only hand picked immigrants I cannot understand how we are to handle those waste lands which are awaiting development in various parts of this Dominion.

A railway to Hudson bay is now under construction, and I hope that railway will meet with all the success which its friends anticipate. I recall that last year, when the St. Lawrence was frozen over, Hudson straits were still open to navigation, showing that all that was said during the debate in this house last session was not so far-fetched after all. It was said that the straits are open for about nine months of the year. It may well be that when the railway is in operation and the transportation of grain under way the new route will warrant the optimism which its friends entertain in regard to it. The construction of the Hudson Bay railway will be an important factor in developing the natural resources of the country through which it passes. The great results at the Flin Flon mines is an illustration of what we may look for in connection with mining development in that part of the country. We cannot achieve development without the expenditure of money. Wherever there are resources to be developed we must be prepared to put our hands into our pockets. The Peace River district is a most wonderful country. It is almost an empire in itself, and when opened up will make a tremendous addition to Canada's wealth.

There is no occasion for being despondent. The future is bright with hope. Compared with the United States we are not so badly off. In the New England states there are thousands of people out of employment. In New York city people are working harder and longer hours than formerly, and there is a movement to reduce salaries. Banks are open at eight o'clock both morning and evening, and the employees have to work like trojans, while in this country we are living under much easier conditions. I would say, however, that too many of our young men are going to the cities and entering brokerage offices. In that connection I would state that just now a flood of circulars is going out from various brokers seeking to find out what worldly possessions you have. They want to ascertain whether you have any spare money. If you have they are prepared to advise you how to invest it. No doubt some of these people are honest enough, but others are seeking to get their hands into your pockets in order to relieve you of your money.

Personally I am a believer in hard work and frugal living. I rise at five thirty in the morning at home and work the whole day. When in New York recently I told them I felt as young as any other man in my community, or for that matter in the whole of Canada. Some of them believed it. Many people here look upon the United States as a land of promise, and believe that goods sell more cheaply there than in this country, but in the case of the chain stores, for instance, they do not sell goods over there any cheaper than similar goods are sold in Canada. The man who has saved money is in a happy position, and he will find it very convenient to be able to utilize the purchasing power of a little spare cash. But nobody will ever reach that stage who pays whatever anybody wants to charge him, and is always getting into debt. I wish every man and every woman in the country would at least avoid spending money until it is actually received, instead of paying what anybody likes to charge and getting into debt for thirty days, so that they remain poor and go about the country with a grouch. But it is the same throughout the world; there are some who know how to look after themselves and others who do not, no matter how much money they get.

I have mentioned Sir Henry Thornton as being the greatest railroad man in the world. He has demonstrated to the world that he has a wonderful grasp of the railway situation in Canada. I mention this because years ago, when there was another leader on the other side of the house, he went so far as to say that Sir Henry Thornton's salary and everything in connection with his administration was a farce, but my opinion is that great credit is due to Sir Henry Thornton for Canada being to-day where she is financially.

Mr. T. M. CAYLEY (South Oxford): Mr. Speaker, this is my first speech in this chamber, and after listening to hon. members who have been addressing the house this evening I could not help envying them their fluency and ease; I wish I possessed those desirable qualities in the same degree.

Canada welcomes another Robb budget. It again brings with it assurances of Canada's important place among the nations of the world and evidences of unsurpassed prosperity. Canada has never before enjoyed a year of such general progress and prosperity as that of 1927, and from the splendid reception the recent budget is receiving throughout this great Dominion it would appear that Canadians are quite content with the sound policies of the King government.

Gradually this government is undoing the lamentable tangles of debt and misadministration handed them when they took over their governmental duties in 1921. Steadily from year to year since that time they have succeeded in lessening the burden of the Canadian taxpayer and at the same time they have improved conditions for all concerned. Expenditures have been carefully administered so as to keep pace with the growing needs of this young Dominion. From March 31, 1924 to March 31, 1927, the public accounts submitted to parliament, and certified to, show a reduction in the net debt of $105,942,498, and for the fiscal year ended March 31, 1927, the reduction amounted to $41,800,000. The refinancing and reduction of the national debt in 1927 results in a saving in interest of $3,607,000 annually. The last Robb budget, according to press reports from day to day, shows that while there may be some minor points of difference, on the whole the people of Canada express themselves as satisfied with the wise administration of the government, and as confident in the Minister of Finance.

Are we prosperous? Canada, as I have already pointed out, has never enjoyed a year of such progress and prosperity as that of 1927. Production, distribution, manufacturing, transportation and foreign commerce exceeded all previous records. Labour was fully employed at wages higher relatively to the peak than the cost of commodities, this resulting in better living conditions, increased bank deposits, more life insurance written, a greater number of motor cars used, a wonder-

ful sale of radios and a general participation in the luxuries of life. Surely the records of our banking institutions and great transportation companies bear evidence of our decided growth and prosperity. The railways of Canada have never before moved a greater tonnage of merchandise than during the year just closed. While it is true that the net earnings of the railways have been decreased, this decrease was made for the purpost of stimulating business, increasing wages to employees and lessening freight rates. In this way the shipper, the workingman and the consumer were permitted to become greater participants in the prosperity of the great corporations. Surely a policy that takes into account the happiness of all is one that should meet with approval in every part of Canada.

Immigration has not been neglected as some would lead us to believe. The minister of that important department of the public service has shown his policy to be in conformity with the wish of all Canadians, namely, to fill our vacant spaces with those who are physically, morally and mentally acceptable and who are willing to adapt themselves to conditions in Canada, the great essentials being fitness and adaptability. With a country such as we have, leading the world in many respects, with its wonderful resources and mineral wealth not yet touched, with its almost unlimited water-powers, the immigration problem should solve itself if Canadians themselves expressed a greater faith in their own country and greater confidence in its future. If we felt less disposed to advertise our neighbouring republic and more inclined to boast of our own advantages, people would come readily to our shores, capital would pour in to develop our resources, and our 32,000,000 horse-power of electric energy would soon be harnessed. We must, of course, have plenty of immigrants of British origin, people of our own stock, people proud of British institutions and traditions, who believe that as members of the great commonwealth of nations we can work out our own destiny under the British flag and contribute to the peace of the world.

In the discussion on the problem of immigration the government's attention has been directed to the suggestion that some step should be taken to extend to people of our own Dominion who would gladly undertake farming work, as much assistance as is now being offered to outsiders. Thousands of our young people are forced out of rural life to seek employment in the urban centres of Canada, or even in the big cities of the United States, because of lack of sufficient means to meet the initial cost of starting farming operations. We are living under a new order of things, when more capital is required to commence farming than was needed fifty years ago. These are our own people, Canadians by birth, for the most part trained in the rudiments of farming and giving every promise of becoming successful citizens and of making valuable contributions to our Canadian citizenship and our national wealth.

Better care and attention should also be paid to the health and comfort of our citizens. We are annually losing too many children. The mortality rate of children under five years and of mothers is far too great. No doubt the government has considered this very serious drainage in our natural population, but we commend the matter again to his attention.

We also commend the government on the care shown in shaping its policies in such a way as not to injure any one section of the country at the expense of another. The people of South Oxford, whom I have the honour to represent, have always recognized the interdependence between the rural and the urban centres, and one element I am sure would not choose to reap any advantage at the expense or detriment of the other. We believe that the prosperity of each is wrapped up in the prosperity of the other. We are nevertheless of the opinion that greater consideration is due to rural Canada than is at present extended in comparison with the large amounts of public moneys that are annually expended in other directions. We believe that eight million dollars out of an expenditure creeping up towards four hundred million dollars is far too small an amount in view of the value of that great industry of agriculture. There should be no skimping in assisting the agricultural industries of Canada and in applying the forces of scientific research and technical training to that industry; and we are pleased to note that scientific research will this year receive greater consideration by way of an increased appropriation. Let it be urged upon the government that it renew its cooperation with the provinces in assisting technical education and in building up and maintaining national highways.

The jubilee year of 1927 was a testing time as to the unity and solidarity of Canadian sentiment. The test proved highly satisfactory, and showed the existence and possibilities of a national consciousness among our citizens no matter what their race or creed might be. The discords of former times have disappeared, intolerance has given

place to tolerance, and the faith and hope of the confederation fathers of 1867 has been fully realized.

Before concluding, Mr. Speaker, permit me to direct the attention of the government to a class of public servants who feel that they are not receiving compensation commensurate with the services they are rendering; I refer to the rural mail carriers, who in all kinds of weather and over all kinds of roads perform nearly every day of the year their onerous and important duties. In view of the importance of the service rendered by these employees to Canadians in rural districts, and to the outlay for equipment and maintenance in comparison with those in many other branches of the public service, we claim that they are not receiving just consideration.

To the people of Ontario the fuel problem is one of great concern. We are of the opinion that Canadian coal should be distributed to the people of Canada, and that we should eliminate our dependence upon a foreign country for this important commodity and promote the development of Canadian resources and national unity within our own borders.

As to the appointment of a Canadian plenipotentiary at Tokyo, I would say that it is high time that Canada was relieving the motherland of some of those international duties that she may well handle—questions that wholly concern Canada and the orient, and which can best be handled by one thoroughly familiar with Canadian affairs. We note with satisfaction the announcement that Washington is preparing quarters in Ottawa for her representative here, and that these quarters will be commodious and will in no way detract from the attractiveness of this beautiful city.

On motion of Mr. Sanderson the debate was adjourned.

On motion of Mr. Lapointe the house adjourned at 9.25 p.m.

Wednesday, February 22, 1928

The house met at three o'clock.

PRIVATE BILLS

FIRST READINGS

Bill No. 49, to incorporate the Canadian Credit Institute.—Mr. Thorson.

Bill No. 50, to incorporate The United Theological College, Montreal.—Mr. Cahan.

DEPARTMENT OF SOLDIERS' CIVIL RE-ESTABLISHMENT

REPORTS OF ROYAL COMMISSION AND ACCOUNTANT ORDERED TO BE PRINTED

Right Hon. W. L. MACKENZIE KING (Prime Minister): I beg to move:

That 1,000 copies in English and 400 copies in French of the report of the royal commission appointed to investigate charges of political partisanship in the service of the Department of Soldiers' Civil Re-establishment at Toronto, London and Ottawa be printed forthwith, and that standing order 64 be suspended in relation thereto.

Motion agreed to.

Right Hon. W. L. MACKENZIE KING (Prime Minister): I beg to move:

That 1,000 copies in English and 400 copies in French of the report of Gordon W. Scott, Esq., chartered accountant, of Montreal, on the activities and "modus operandi" of the Department of Soldiers' Civil Re-establishment be printed forthwith, and that standing order 64 be suspended in relation thereto.

Motion agreed to.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

PENSION DISBURSEMENTS

Mr. ALLAN:

1. What was the total amount paid for pensions in each of the years 1925, 1926, and 1927?
2. What was the cost of administration of the Pension department in each of the years 1925, 1926, and 1927?

Mr. KING (Kootenay):

1. Net disbursements on account of pensions—

	Fiscal year 1924-25	Fiscal Year 1925-26	Fiscal Year 1926-27
European War	$ 33,630,189 78	$ 35,822,629 11	$ 36,614,989 52
Northwest Rebellion	34,796 36	33,961 34	35,264 16
Fenian Raid	466 25	662 91	
Militia Long Service	695,249 27	697,215 79	743,626 44
Civil Flying	144 05	240 00	240 00
	$ 34,360,845 71	$ 36,554,709 15	$ 37,394,120 12

2. Cost of administration—

Total turnover of Department of S. C. R. and Pensions..	$ 53,713,273 34	$ 55,549,623 38	$ 49,235,358 88
Cost of administration including B.P.C. commissioners and Medical advisers.. ..	2,049,835 40	1,714,442 50	1,546,891 64
Percentage of administration..	3.816	3.086	3.142

The cost of administration includes cost of administering all activities of the department, as work of treatment and pensions, etc., is so inter-related that accurate determination of cost of administering pensions only cannot be made.

REPARATIONS COMMISSION REPORT

Mr. CLARK:

1. When will the investigation of the reparations commissioner be completed and final report made?
2. How many claims have been made?
3. How many claims have been fully investigated?
4. What amount was claimed by all claimants?
5. What amount is represented by claims not yet fully investigated?
6. What amount has the commissioner recommended should be paid in cases in which investigation is complete?
7. How many claims have been paid (a) in full, (b) partially?
8. How much has been paid under 7 (a), and 7 (b), respectively?
9. Has any provision been made for dependents of the civil population who lost their lives as a result of illegal warfare of the enemy?
10. What is nature of provision, if any, referred to in paragraph 9?
11. What amount has been collected by Canada for reparations?
12. What amount is payable to Canada for reparations and how is it payable?

Mr. RINFRET:

1. The investigation has been completed. The report of Commisisoner Friel has been made and is in the hands of the printer.
2. 1615.
3. 1613.
4. $56,039,893.42.
5. Approximately $50,000. (There are two claims, one for $50,000 and the other for an unstated amount.)
6. $4,246,868.76 plus 5 per cent interest on all awards, calculated to March 10, 1928, $2,042,520.59, making a total of $6,289,389.34.
7. Nothing whatever has been paid either in part or in full of any claim whatever.
8. Answered by 7.
9. In case of loss of life, claims were allowed only when on behalf of dependents, and the extent of the dependency was considered in making the awards.
10. Answered by 9.
11. $10,175,071.44.
12. Subject to certain priorities. Canada receives 4.35 per cent of the reparations receipts allotted to the British Empire and payments are made quarterly to Canada by the British treasury. The British Empire's allotment is 22 per cent of the whole. The amount payable depends upon the operation of the Dawes plan, under which the annuity is fixed at 1,750,000,000 gold marks for the year 1927-8 and 2,500,000,000 gold marks for 1928-9 and subsequently.

PROCEDURE

Mr. MANION:

1. When and how were reparation claimants first advised to submit their claims to the government?
2. Who was the first reparation commissioner, what was the date of his appointment and what was the scope of his duties?
3. Who was the second reparation commissioner, what was the date of his appointment and what was the scope of his duties?
4. Who was the third reparation commissioner, what was the date of his appointment and what was the scope of his duties?
5. What procedure was adopted to bring to the commissioner's attention the evidence in each case?
6. Did not the claimants appear personally before the commission and at their own expense try to substantiate their claims?
7. Were not a large number of claimants represented at their own expense by counsel?
8. What article of the treaty deals with reparation?
9. Have not Canadian claimants under other articles of the treaty of Versailles been already compensated?
10. If so, what were the total number of claims and the total amounts paid under and by virtue of such articles, and can any reason be given for such preferential treatment?
11. It is not a fact that the United States of America adopted corresponding provisions dealing with debts, property and reparations in the treaty of Berlin
12. Is it not a fact that American claims for (a) debts, (b) property sequestrated in Germany and (c) reparations are receiving equal consideration, and that no preference is being shown to any one class of claims?
13. Has not legislation been prepared to pay all such American claimants?
14. Have not some of the claimants in other allied countries already received compensation?
15. Has the reparation commissioner's report been printed?
16. When will it be brought before the house for consideration?
17. How much has Canada received to date on account of reparations?
18. Is not a large reparation payment from the British government expected soon and what will the amount be?

Mr. RINFRET:

1. By order in council, P.C. 2822, dated the 15th November, 1918, Thomas Mulvey, Under Secretary of State, was appointed an officer to take such steps as may be necessary to make a complete list of:

(a) Claims of persons residing or carrying on business in Canada who have been subjected to loss and pecuniary damage, arising from the destruction of life and property through the illegal warfare of the enemy, and

(b) Claims for damages to which persons residing or carrying on business in Canada have been subjected for breaches of contracts, which contracts were prevented from being carried out owing to the operation of the statutory list of persons in neutral countries with whom such contracts were declared illegal, and to examine and report upon all such claims as aforesaid.

A notice appeared in the Canada Gazette, dated 30th November, 1918, asking claimants to submit their claims.

2. The Hon. Sir John Douglas Hazen, K.C.M.G., was appointed on the 31st October, 1921, "to be a commissioner to conduct an enquiry under the provisions of part I of the Inquiries Act, Chapter 104 of the revised statutes of Canada, 1906, and to investigate the following claims:

(a) Claims of persons residing or carrying on business in Canada who have been subjected to loss and pecuniary damages arising through the destruction of life and property through the illegal warfare of the enemy, and

(b) Claims for damages to which persons residing or carrying on business in Canada have been subjected for breaches of contracts, which contracts were prevented from being carried out owing to the operation of the statutory list of persons in neutral countries with whom such contracts were declared illegal for the purpose of determining whether they are within the categories set forth in annex I of part VIII (reparation) section I of the treaty of Peace between the Allied and Associated Powers and Germany, signed at Versailles, June 28, 1919, and the fair amounts of such claims and to make such findings as may be of assistance to the government of Canada in determining which, if any, of such claims should be paid and the extent of payment thereof".

3. The Hon. William Pugsley, K.C., LL.D., was appointed on the 13th March, 1923. The duties are set out in the answer to question 2.

4. James Friel, K.C., was appointed on the 19th June, 1925. The duties are set out in the answer to question 2.

[Mr. Manion.]

5. All claimants were called upon to submit by declaration full particulars of their claims and to substantiate such by all documentary evidence in their possession. Subsequently the claimants were notified to appear before the commissioner at various centres nearest to their places of residence in order to give evidence before him upon oath, and to produce such witnesses that may be necessary to substantiate their claims.

6. Yes, but in some cases claimants submitted travelling expense claims, which were paid by the Department of the Secretary of State out of the appropriation for the adjustment of war claims.

7. Yes.

8. Articles 231 to 244, and the annexes thereto.

9. Yes.

10. 1,009 claims were filed of which 686 were paid amounting to $7,849,824.81. Special provisions were made in the treaty for the payment of claims under articles 296 and 297.

11. Yes.

12. Yes.

13. It is understood that a bill for this purpose is now under consideration by the Senate of the United States having been passed by the House of Representatives.

14. No information.

15. It is in the hands of the printer.

16. Under consideration.

17. $10,175,071.44.

18. Subject to certain priorities. Canada receives 4.35 per cent of the reparations receipts allotted to the British Empire and payments are made quarterly to Canada by the British treasury. The British Empire's allotment is 22 per cent of the whole. The amount payable depends upon the operation of the Dawes plan, under which the annuity is fixed at 1,750,000,000 gold marks for the year 1927-8 and 2,500,000,000 gold marks for 1928-9 and subsequently. The payments to which Canada was entitled for amounts paid for reparation prior to the Dawes plan have been received.

UNITED STATES BOATS ON GREAT LAKES

Mr. COWAN:

1. How many grain boats registered in United States were engaged in carrying grain on the great lakes during the seasons of 1926 and 1927?

2. By what authority were such boats allowed to engage in carrying grain?

3. What are the regulations under which boats of a foreign registry are allowed to engage in trade between Canadian ports?

Mr. RINFRET:

1. In so far as boats registered in the United States are concerned, which were engaged in

carrying grain between one Canadian port and another Canadian port on the great lakes —four United States vessels were used for winter storage in Canadian ports during the winter of 1926-27, and carried their cargoes to Canadian ports on the opening of navigation in 1927. As the winter of 1927-28 is not yet over, we can give no information in regard thereto.

2. By authority of order in council of November 5, 1926, P.C. 1721, and November 24, 1926, P.C. 1942.

3. Order in council P.C. 1721 dated 5th November, 1926, and order in council P.C. 2159 dated 9th November, 1927.

LIVERPOOL, N.S. PUBLIC BUILDING EMPLOYEES

Mr. ERNST:

1. Who were the applicants to the Post Office department or to the Civil Service Commission for the position of caretaker or janitor of the public building at Liverpool, Nova Scotia?
2. By what persons or organizations was each applicant recommended?
3. Which applicants were appointed or recommended by the Civil Service Commission?
4. Were any of the applicants recommended rejected by the Post Office department or any other department of the government?
5. Which appointment or recommendation was accepted?
6. Were any of the applicants returned soldiers and in receipt of pensions?
7. Were representations made by any person or persons against the appointment of any such applicant, and, if so, by whom?

Mr. RINFRET:

1. E. R. Corkum, Conquerall Banks, N.S.; H. J. Lake, Liverpool, N.S. C.M. Schupe, Liverpool, N.S.; G. W. Spurr, Liverpool, N.S.; D. F. Winters, Liverpool, N.S.; G. S. Winters, Liverpool, N.S.

Mr. E. R. Corkum was eliminated from the competition as he was not a resident of Liverpool, N.S.

2. H. J. Lake—no recommendations received; C. M. Schupe—J. J. Cameron, Esq., c/o Messrs. Hall & Cameron, Barristers, Solicitors, etc., Liverpool, N.S.; Robie Millard, Esq., c/o Millard Brothers, Liverpool, N.S.; His Worship, Mayor D. W. MacKay, Liverpool, N.S. G. W. Spurr—S. R. Forbes, Esq., c/o Madden's Pharmacy, Liverpool, N.S.; A. W. Hendry, Esq., General Shipping, Liverpool, N.S.; J. Ross Byrne, Esq., Barrister, Solicitor, Liverpool, N.S. D. F. Winters—no recommendations received. G. S. Winters—no recommendations received.

3. No appointment has yet been made.

4. Answered by No. 3.

5. Answered by No. 3.

6. Five of the applicants are returned soldiers; two are in receipt of pension.

7. No.

ST. LAWRENCE RIVER POWER COMPANY

Mr. MANION:

Has the Aluminum Company of America made application to the International Joint Commission to raise the temporary weir which they are maintaining at Massena, and to make such weir permanent?

Mr. MACKENZIE KING: The St. Lawrence River Power Company, of Massena, has made an application, addressed to the Secretary of State of the United States, for authorization to raise, from its present level at El. 200.0 to El. 206.0, sea level datum, the crest of its submerged weir in the south channel of the St. Lawrence river at the mouth of its power canal. The application was transmitted to the International Joint Commission, which has arranged to hold a hearing on the application on April 3.

RAILWAY MAIL CLERKS—CLASSIFICATION

Mr. EVANS:

1. What are the changes proposed regarding the grading or classification of railway mail clerks and their runs?
2. What will be the maximum salary?
3. What will be the minimum salary?

Mr. RINFRET:

1. The grading and classification of railway mail clerks and their runs is now under consideration, but no decision has been reached.

2 and 3. No information.

CHIEF ELECTORAL OFFICER

Mr. ANDERSON (Toronto-High Park):

1. When the chief electoral officer, Mr. O. M. Biggar, resigned last year, was the position given to the French-speaking assistant?
2. Has any English-speaking assistant been appointed to fill the vacancy?
3. Was the salary for such assistant voted in the estimates?
4. Does the government intend to appoint any English-speaking assistant?

Mr. MACKENZIE KING:

1. On April 14, 1927, a motion was unanimously passed by the house providing for the appointment as chief electoral officer of Mr. Jules Castonguay, at the time the assistant chief electoral officer; the position of chief electoral officer having been rendered vacant by the resignation of the former incumbent of that office.

2. The position of assistant chief electoral officer has not yet been filled.

3. Yes.

4. It is the intention of the government to fill the position in question.

LETTER CARRIERS SALARIES

Mr. ROBINSON:

Does the government intend to provide increases in the salaries of the letter carriers at the present session of parliament?

Mr. MACKENZIE KING: May I say just a word in regard to this particular question? It reads:

Does the government intend to provide increases in the salaries of the letter cariers at the present session of parliament?

There are several other questions on the order paper which ask as to the intention of the government in respect to particular measures. All of these questions could be answered to the effect that the matter is under consideration, or by words of like import, but hon. members will doubtless prefer to know the mind of the government as regards questions of the kind. In a word, it is that the government must be its own judge as to the time at which it will announce its intentions with respect to legislation, with respect to increases in salaries and the like. The questions for example with regard to the Post Office department might well be asked and answered in the consideration of the estimates of the Post Office department. Failing that the government's intention will be apparent when the supplementary estimates are brought down. The government will announce its intention in advance in regard to any matters in which such a course is deemed expedient. From the fact that the government's intention has not up to the present been announced it may be assumed that there are good and sufficient reasons why no announcement has been made.

Mr. SPEAKER: Dropped.

BOVINE TUBERCULOSIS—RESTRICTED AREAS

Mr. DUFF:

1. Is it the intention of the government to establish a bovine tuberculosis restricted area in the whole province of Nova Scotia?
2. What is the total number of signatures of cattle owners to petitions asking for establishment of such area received to date?
3. In pursuance of this policy, how many head of cattle have been subjected to the tuberculine test in Nova Scotia?
4. How many head of cattle have been slaughtered as a result of reaction to the test?
5. What is the number of cattle so slaughtered in each county in Nova Scotia?
6. What is the number of signatures received to petitions, as referred to, from each county in Nova Scotia?
7. What is the total cost to date of the establishment of restricted areas in Nova Scotia?
8. What is the total amount paid or due owners of cattle slaughtered in Nova Scotia under this policy?
9. What is the result of and report on the immunilogical preventive, curative and transmissibility work of the research councils and other bodies in reference to tuberculosis?
10. Is it the intention of the government to continue to aid such research work?
11. What was the amount expended during the last fiscal year upon such research work?

Mr. MACKENZIE KING: Here again the first part of the question asks as to the intention of the government in the matter of establishing a bovine tuberculosis restricted area in the province of Nova Scotia. That part of the question we would like to have dropped until the matter is under discussion on the estimates.

Mr. SPEAKER: All but the first part of the question stands.

CANADIAN NATIONAL RAILWAYS—BRANCH LINES PROGRAM

Mr. SPENCER:

Does the government intend to introduce a three-year branch railway program for the Canadian National Railways this session?

Mr. MACKENZIE KING: That is another question of the kind to which I have alluded. I would ask that this question be dropped, and the same with respect to the next question, standing in the name of the hon. member for St. John-Albert (Mr. MacLaren), with respect to the intention of the government as to a system of statistics of trade in the maritime provinces.

Mr. SPEAKER: Dropped.

QUESTIONS PASSED AS ORDERS FOR RETURNS

GOVERNMENT STEAMERS—COAL SUPPLIES

Mr. SMITH (Cumberland):

1. How much coal did the Lady Laurier, Arleaux and all other government steamers on the Atlantic coast government service use during 1927 and up to the present, in 1928?
2. What proportion was United States coal?
3. What proportion was Canadian coal?
4. What are the names of individual persons, or firms, supplying this coal?
5. What price was paid?
6. Was the coal supplied by tender, contract, or otherwise?
7. Where and when was the coal delivered?

IMPORTED MANUFACTURED PRODUCTS—FIXED VALUATION

Mr. FANSHER (East Lambton):

1. Under the authority given in the revised statutes of Canada, 1927, chapter 42, section 43, has a fixed value, for duty purposes, been placed on any manufactured products imported into Canada during 1927?
2. If so, what were the products and what was the fixed value in each case?

3. On what natural products imported into Canada during the year 1927 was a fixed value placed when calculating the duty thereupon?
4. What was the fixed value placed on each product?
5. For what period of time did each fixed value apply?

PREVENTIVE SERVICE—NOVA SCOTIA

Mr. MacNUTT:

1. How many preventive officers of all classes were engaged by the government or any department thereof in the province of Nova Scotia during 1927?
2. What are their respective names, addresses, and salaries?

THE MEXICAN SITUATION

Mr. T. L. CHURCH (Toronto Northwest) moved:

For a copy of all correspondence, telegrams, and all other communications between the government of Canada or any member thereof, or any other Canadian official, and any person or persons concerning the utterances and letters of the Mexican consul at Toronto, L. Medina Barron, arising out of the recent visit to Mexico of Sir Henry Thornton, president of the Canadian National Railways.

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, I should like to repeat what I said the other day when a similar motion was called, namely, that I do not think it is in the public interest that this correspondence should be brought down. May I say that the correspondence, in part, consists of resolutions from Orange lodges and, in part, of resolutions from Catholic organizations, practically all of which have already appeared in the press. So far as that part of the correspondence is concerned, it is already public. As to the remainder, much of it I regard as extreme in its phraseology and of a character calculated to provoke unnecessary controversy, and calculated to be very much misunderstood both in this country and abroad.

I have the correspondence here. I shall be very glad to have my hon. friend opposite, the leader of the opposition (Mr. Bennett) look it over, and if he wishes to have it tabled, well and good. I make the same suggestion with regard to the member for Acadia (Mr. Gardiner)—or for that matter any other member of the house. But I do not think so far as the general public and outside world are concerned that it is desirable that this correspondence should be made public, and I hope in view of what I have said that my hon. friend from Toronto Northwest (Mr. Church)—I shall be glad to let him see the correspondence—will see the wisdom of dropping the motion.

Hon. R. B. BENNETT (Leader of the Opposition): Mr. Speaker, this is a starred motion and not debatable.

Mr. SPEAKER: It is not debatable.

Mr. BENNETT: No. One of two things should now happen. The motion not being debatable, we are precluded from discussing it in any sense. The Prime Minister therefore should agree to it or ask that the hon. member for Toronto Northwest make it a motion for papers, so that it would be debatable. That is the obvious answer to the position now taken. Since no one may debate this motion, clearly the only way in which it could be debated would be on a motion for papers which is not a starred motion. On the other hand, if I might be permitted, Mr. Speaker, I would say that the observations made by the right hon. Prime Minister offering facilities to every member of the house to inspect the correspondence if he so desires, in my judgment more than amply meet the situation, and I trust my hon. friend from Toronto Northwest will adopt the suggestion.

Mr. CHURCH: Mr. Speaker, notwithstanding what has been said this afternoon, I submit that the rules of the house as laid down for parliamentary procedure require the production of these papers. I have now one motion—all I am allowed—on the order paper. No doubt the Prime Minister—

Mr. SPEAKER: Order. I have allowed observations to be made with a view to reaching a certain solution of this question, but the motion is not debatable. The hon. gentleman was asked if he would withdraw his motion. If he is not willing to do so, I have only one duty left—to put the motion to the house.

Mr. CHURCH: Mr. Speaker, I want to find out if this is a free parliament. I will not withdraw my motion. The other day when my motion was opposed by the government, as a matter of courtesy I agreed to amend the second part, and I submit that I am now within the rules of the house. But, Mr. Speaker, I bow to your ruling if you still declare that this motion is not debatable. Some have debated it already and some not.

Mr. SPEAKER: Under standing order 51 the motion is not debatable. As a matter of courtesy, and following the time-honoured practice of the house, I have allowed the two leaders to make certain observations across the table with a view to facilitating matters, but there can be no debate of the subject matter. Is the hon. gentleman willing to

withdraw the motion, or does he leave it on the order paper? I will put the question to the house.

Sir GEORGE PERLEY (Argenteuil): Mr. Speaker, may I call your attention to standing order 51 at page 135 of Beauchesne's Parliamentary Rules and Orders, second edition? The last sentence of this rule reads as follows:

All such notices—

That is, for the production of papers.

—when called shall be forthwith disposed of; but if on any such motion a debate be desired, it shall be transferred by the clerk to the order of notices of motions.

Hon. ERNEST LAPOINTE (Minister of Justice): I do not think that debate is desired. We want to proceed with the motion immediately.

Mr. BENNETT: The other man has his rights.

Mr. CHURCH: Mr. Speaker, I was asked by the leader of the opposition to withdraw my motion. I certainly will not withdraw my motion.

Mr. SPEAKER: Then I will put it to the house. Is it the pleasure of the house to adopt the motion?

Some hon. MEMBERS: No.

Mr. SPEAKER: Those in favour of the motion will please say, aye.

Mr. CHURCH: Aye.

Mr. SPEAKER: Those opposed:

Some hon. MEMBERS: No, no.

Mr. SPEAKER: Lost.

Motion negatived.

DEPARTMENT OF SOLDIERS' CIVIL RE-ESTABLISHMENT

TABLING OF EVIDENCE AND AFFIDAVITS

On the orders of the day:

Mr. E. J. GARLAND (Bow River): Mr. Speaker, I desire to ask the government a question arising out of the tabling of the Hunter report on Monday last. Was all the evidence presented at the Hunter inquiry tabled; if not, will it be tabled? Are all the affidavits that were taken before the inquiry tabled; if not, will they be tabled?

Hon. J. H. KING (Minister of Soldiers' Civil Re-establishment): I understand that all the evidence taken at the inquiry has been tabled, but I will ascertain if that is so. As to the affidavits that preceded the investigation, I do not think they have been tabled. If it is the desire of the house I will have them tabled.

THE BUDGET

DEBATE ON ANNUAL FINANCIAL STATEMENT OF MINISTER OF FINANCE

The house resumed from Tuesday, February 21, consideration of the motion of Hon. J. A. Robb (Minister of Finance), that Mr. Speaker do now leave the chair for the house to go into committee of ways and means, and the proposed amendment thereto of Mr. Cahan.

Mr. F. G. SANDERSON (South Perth): Mr. Speaker, within the limited time at my disposal I shall not be able to go minutely into the budget or the proposed tariff changes. However, limited as my time is, I should like to devote a moment or two to put myself on record—as a Liberal member from western Ontario, representing a constituency where we have a good deal of manufacturing, but which perhaps largely rural—and say that I endorse the budget. I will go further; I will take the opportunity of congratulating the Minister of Finance (Mr. Robb). Running true to form, he has brought down a budget that again we can safely call a people's budget—a budget for the masses of this Dominion.

Summarizing the budget briefly, Mr. Speaker, it can be divided roughly under three heads: Nineteen million dollars cut from taxes—

Mr. IRVINE: Which taxes?

Mr. SANDERSON: Will my hon. friend just let me continue? I have only forty minutes in which to present my views. He was not interrupted last night. I repeat, Mr. Speaker, for the benefit of my friend across the floor: $19,000,000 cut from taxes; $39,000,000 wiped off the debt; $55,000,000 gain to surplus. What better evidence of prosperity could the people of this country want than such a budget? I know that the reduction of taxes, and the wiping off of the debt to a substantial amount, and the surplus, are all due to the increase in our trade and commerce. But may I be permitted to say that perhaps there is another reason why it has been possible to bring down such a fine, healthy budget—the energetic work of the Minister of National Revenue (Mr. Euler) in his department. He, I think, is entitled to some credit for the surplus, as are also his staff and the commissioners as well as those under their direction; all of whom are administering their branches with efficiency for the benefit of the whole of Canada.

As regards the provisions of the tariff, I am in favour of the reduction of 10 per cent in the income tax following the reduction of 10 per cent last year, and I trust that next year or the year after, the Minister of Finance will see his way to wipe out the income tax entirely. I also agree with the further reduction of 25 per cent in the sales tax and I hope that next year the minister will be able to abolish this tax entirely.

Coming down to the proposed changes in the tariff, I have time to discuss only the textile industries, embracing cottons, woollens, linen and flax. The proposed reduction on cottons is from 37½ per cent to 30 per cent —not a very drastic change, but still a change and one which I think will be in the interests of all the people. All the people of this country to-day are using cotton in some form or other. The manufacture of cotton has advanced so rapidly in the last few years that there is hardly a garment of any description which does not contain some percentage of this fabric. In many cases, indeed, it has supplanted silk, wool and linen. It is therefore a household necessity and any reduction in the tariff on cotton will benefit the householder who has to buy cotton, if not daily, at any rate almost weekly. In this respect the proposed change will have some tendency to reduce the cost of living, to a certain extent at least.

Already the Conservative press of the country is beginning to repeat the old story of industry being injured, and we are being told that the cotton industry of Canada will be dealt such a blow that it will never recover. In refutation of this prediction I have only to point to the history of the automobile industry from 1926, and I believe that the reduction on the cotton tariff will be justified. I have no doubt that history will repeat itself; that what occurred in connection with the automobile industry will happen in this case, and that the cotton manufacturers will find that under the new arrangement their business will increase rather than diminish.

The Dominion Textile Company is the largest cotton manufacturing concern in Canada. I do not know whether it has a monopoly of the cotton business, but I should like to put on Hansard, for the information of the house, some facts from the last annual statement of the company as recorded in the Annual Financial Review, July, 1927. I cannot read the whole statement, which is rather lengthy; but for the moment I wish to quote comparative statements for the years ending March 31, 1924, 1925, 1926 and 1927, in relation to dividends and surplus. The Dominion Textile Company Limited, in 1924, paid dividends amounting to $1,035,842. They paid exactly the same amount in 1925, and in 1926 and 1927 they distributed an increased amount, $1,260,842. But while they were paying dividends they were building up their reserve, which has risen from $5,390,-003 in 1924 to $6,529,988 in 1927. In the light of these figures, Mr. Speaker, I contend that the proposed reduction in the tariff on cottons will not in any way materially affect the business of the Dominion Textile Company, Limited.

Now we come to the reduction on woollen goods. The hon. member for Fort William (Mr. Manion) yesterday afternoon took the house to some extent into his confidence. He told us that, unfortunately, as he put it, he happened to be a shareholder in the Monarch Knitting Company, Limited, and added that he was afraid the reduction on woollens proposed in this budget would operate adversely against the shareholders of that company. By a strange coincidence, Mr. Speaker, the Toronto Mail and Empire of February 16 last—that was last Thursday, the day the budget was brought down—on its financial page had the following to say about the Monarch Knitting Company, Limited, of which, as the hon. member for Fort William tells us, he is a shareholder.

Mr. MANION: A very small one.

Mr. SANDERSON: I am sorry, because it is good stock. This is what that journal says:

> Shareholders in the Monarch Knitting Company, Limited, have reason to be gratified over the progress that has been made since its organization. The company, in 1903, the first year of its operation, had net profits of $3,995.74—

Very small.

> —and these were increased to a peak of $386,686.99 in 1919. In the twenty-five years of the concern's existence the net profits have aggregated $2,826,185.12. Since the reincorporation of the company, when it was transferred from private ownership to a limited liability organization, there have been expended in improvements and extensions the sum of slightly over $1,000,000.

I do not think, therefore, that any shareholder of the Monarch Knitting Company, Limited, need have very much fear about his holdings. If I were inclined to offer any advice to my hon. friend from Fort William, I would say, hang on to the few shares you have.

Mr. MANION: I cannot do anything else because no one will buy them. The company is not paying dividends and has not done so for some years.

Mr. SANDERSON: If the hon. gentleman will possess his soul in patience I will tell him why they have not. I had the curiosity to look up, in the same Annual Financial Review, July 1927, the statement concerning the Monarch Knitting Company, Limited. I find in the Review their last financial statement, issued 1927. It is a very long statement and therefore I cannot read it all. However, I quote the following:

The Monarch Knitting Company Limited was incorporated by Ontario charter to take over the business of the company of the same name which commenced operations in the year 1903 and operated up to May 1, 1912.

The company's business consists of the manufacture of knitted goods; comprising sweater coats for men, women and children, and a complete line of fancy knitted goods such as sweater coats, skirts, toques, scarfs, hosiery, etc.

The factories owned by the company at Dunnville, St. Catharines and St. Thomas are modern in structure and equipment and excellently adapted for the business.

Then below that there is a footnote:

The Buffalo property and plant was finally disposed of, in 1925.

Reading the statement, you will find that nearly all the adversity which the Monarch Knitting Company, Limited, has suffered is to be attributed to the operation of its Buffalo plant in the state of New York. Nevertheless, the fact is that the rate of duty on woollen goods going into the United States runs from 40 per cent to 55 per cent, while the Monarch Knitting Company enjoyed a protection here of 37½ per cent. I would like to ask my hon. friend from Fort William if he purchased his shares knowing that the company had a plant in the city of Buffalo? Surely he would not put money into any concern operating in the United States.

Mr. MANION: In reply I might say that I do not pretend to be so loyal that I would object to making money in any country.

Mr. SANDERSON: I am glad to hear that, but this statement will show, Mr. Speaker, that the losses of the Monarch Knitting Company were made in the United States and not in the Dominion of Canada.

Mr. MANION: But what my hon. friend has said has not changed at all what I stated yesterday.

Mr. SANDERSON: Of course not; I might talk here until doomsday without changing the opinion of my hon. friend, knowing how biased he is.

Mr. MANION: You would not change the dividends either.

[Mr. Manion.]

Mr. SANDERSON: So much for the knitting industry. Now I just want to say a word or two about the linen industry. That is something of which I have perhaps a fairly accurate knowledge, because it is associated with the business in which I happen to be engaged, the growing and working up of flax for the spinner. The small change which has been made by increasing the preferential on fine linen will not affect the linen industry in the Dominion of Canada, nor will it affect the flax industry in Canada, for the reason that there is no fine linen made in this country or in the United States, with all the great progress they have made in manufacturing. I have not time to go into the reason for that in detail, any more than to say it is largely due to climatic conditions, which are most nearly perfect in Ireland where the finest linen is made. In the case of the textiles, cottons, woollens and linens, there is no harm done by the proposed changes in the tariff.

Mr. EDWARDS (Waterloo): What about the weaving industry?

Mr. SANDERSON: Is my hon. friend referring to linens, cottons or woollens?

Mr. EDWARDS (Waterloo): The weaving of woollen cloth.

Mr. SANDERSON: My hon. friend will have forty minutes in which to discuss the budget, and I would rather he did not take up my time just now.

Before I was interrupted, Mr. Speaker, I was closing my remarks with regard to the textiles, and now I want to go back to the speech of my good friend the hon. member for Fort William, because he is in a genial mood this afternoon. I always like to hear him speak; he has such a genial smile, but I have come to the conclusion that beneath that smile there is a stratum of political bitterness which he does not succeed in hiding. In the course of his speech yesterday he touched on the woeful condition of affairs in this country and made what might be considered during an election as a fairly good campaign speech, considering his side of the story. But I want to ask him and to ask this house if the speech delivered by the hon. member yesterday, decrying this country, repeating the old story of the boys and girls going to the United States and telling of the hundreds and hundreds of factories closed, is a good advertisement for the Dominion of Canada? It would be bad enough if it were true, but it is not; the statements are not correct.

Mr. MANION: Mr. Speaker—

Mr. SANDERSON: I object to these interruptions; I only have forty minutes.

Mr. MANION: I rise to a point of order. The hon. member has stated first that something I said is not true ,and secondly that I decried this country. I neither decried this country nor made any untrue statements. The hon. member may disapprove something I said, but no statements made by myself were untrue.

Mr. SPEAKER: I must ask the hon. gentleman to withdraw that statement. He is not permitted to say of another hon. member of this house that he made a false or untrue statement; that is not parliamentary language. This is an assembly of gentlemen, and it is not permissible to say that the statement of any other member is not true.

Mr. SANDERSON: As one of the younger parliamentarians, Mr. Speaker, I want to abide by the rules of the house, and if I have said anything contrary to those rules I willingly withdraw it. Nevertheless, Hansard will speak for itself with regard to the remarks of my hon. friend from Fort William. However, I have one or two further matters to take up with regard to the hon. member. He dwelt at length on the unemployment in this country, and stated that instead of decreasing it was increasing.

Mr. MANION: No; I said that our people were going to the United States.

Mr. SANDERSON: I am sorry I have not a copy of Hansard here in order to read the speech of the hon. member.

Mr. MANION: I wish you would.

Mr. SANDERSON: All this time is being taken out of my forty minutes, Mr. Speaker, so I would simply advise hon. members to read carefully the speech of the hon. member for Fort William and see just what he said, because he certainly referred to unemployment.

Mr. MANION: Hear, hear.

Mr. SANDERSON: Yes, indeed. Well, Mr. Speaker, I do not say this unkindly, but my hon. friend is pretty well employed; he is not only holding down one job but has two positions at fairly good salaries, if I am informed correctly. And then, not satisfied with being a member of the liquor control board of Ontario, which position he is filling very efficiently; not satisfied with being a member of this house, which position he is also filling efficiently, he attempted to get a third position in Winnipeg last October. Now, I ask him in all fairness whether, if he had been fortunate enough to secure what he went after in Winnipeg—and he made a fairly good run, among others—he would have attempted to hold all three of those positions, or whether he would have given some of them up?

Mr. MANION: Does my hon. friend wish an answer now?

Mr. SANDERSON: Yes, I will give my hon. friend a moment in which to answer.

Mr. MANION: Then I will tell my hon. friend that I would have decided what to do after I had obtained the leadership.

Mr. SANDERSON: But my hon. friend did not get the leadership.

Mr. MANION: I do not cross any bridges until I come to them.

Mr. SANDERSON: My hon. friend was like Barkis; he was apparently willing—we will just leave it at that. But my hon. friend had better not dwell too much on unemployment in Canada, I think. Two years ago in this house, speaking on the budget, he very frequently referred to Providence, and said Providence was taking care of this country in spite of the fact that we happened to have a Liberal government in power at Ottawa. I quite agree with him; Providence is over us all individually and collectively, political parties as well as everything else; but perhaps my hon. friend forgets that Providence has been guiding the affairs of this country since 1921 by permitting a Liberal government to remain in power.

An hon. MEMBER: It was the Progressives who did that.

Mr. SANDERSON: I did not catch the interjection. Speaking of Providence in connection with the hon. member for Fort William, I think he has a strain of religion in him, and I commend him for it. In his youth he must have thought of going into the ministry. In later years he has tried twice to get into the ministry; he succeeded on both occasions but did not stay there very long. I hope he will continue to place his faith in Providence, and remember that if a Liberal government happens to be in power at Ottawa it is because a kind Providence has placed them there.

My hon. friend referred to the Department of Soldiers' Civil Re-establishment, and again I hope that in what I am going to say I am not misquoting him; I will cheerfully withdraw any remarks which transgress the rules in any way. From my recollection of what he said yesterday the hon. member was criticizing the Department of Soldiers' Civil Re-establishment. He said that the expenses

in connection with the administration of that department were increasing, and that the increase had been some $35,000 last year over the year before.

Mr. MANION: I should like to correct my hon. friend; he is misquoting me again. I am sorry to take up the time of the house but I do it in good faith. If my hon. friend will permit me, what I said was that the two departments, the Department of Health and the Department of Soldiers' Civil Re-establishment, had this year $35,000 more estimates than the same two departments had last year. That is all I said.

Mr. SANDERSON: I understood my hon. friend to say that the $35,000 was charged against the Department of Soldiers' Civil Re-establishment.

Mr. MANION: No; my hon. friend read my speech too hurriedly.

Mr. SANDERSON: I was under the impression my hon. friend had made the statement. However, getting back to the Department of Soldiers' Civil Re-establishment, as a returned soldier I want to say that if there was inefficiency in the administration of the department, and it was necessary to increase the expenditure in the interest of efficiency, I am quite certain that my hon. friend, also a returned soldier, would not object to that increase, and that if it cost the country not $35,000 but a still greater amount, to give the returned soldiers a fair, square deal, I think my hon. friend will agree the expenditure should be made.

Mr. MANION: Hear, hear.

Mr. SANDERSON: Again, if I have misquoted or misrepresented the hon. member for Fort William in any way I am verry sorry. The hon. member for Fort William indulged in prophecy as to what was going to happen at the next general election. I think he is a false prophet. I have heard him prophesy before.

Mr. LAPOINTE: Hear, hear.

Mr. SANDERSON: I have heard him prophesy from the opposition benches, and I heard him prophesy from the government benches for a matter of a few hours. In both instances his prophecies were wrong so that I would not put too much dependence in any prophecy my hon. friend from Fort William may make concerning what will happen at the next general election. I am not going to indulge in prophecy further than to say it is a pretty safe bet that in all probability after the next election the Liberal party will come back here with a larger following than they have now. That is as far as I will go in the matter of prophecy.

The chief critic for the opposition, the hon. member for St. Lawrence-St. George (Mr. Cahan) whom I am sorry not to see in his seat at the present moment, made a speech here the other day that covered a very wide range. I do not know just why the leader of the opposition called on the hon. member for St. Lawrence-St. George to act in the capacity of chief financial critic. It is none of my business, and it does not concern me very much, but I thought that one reason, perhaps, was that he had an opportunity of exceeding the forty minute limit. At any rate the hon. member pursued a course in that speech which I do not think should go unchallenged in this house. He made what appeared to me to be an attack on the Canadian National Railways, and on Sir Henry Thornton, the general manager of the system. I do not hold any brief for Sir Henry Thornton; he is well able to take care of himself, but if there is one thing in Canada for which the people today should be grateful more than anything else it is the fact that Sir Henry Thornton and his able assistants have pulled the Canadian National railway out of the mire in which the Conservative party left it when they handed it over to the Liberal party.

My good friend the hon. member for Toronto Northwest (Mr. Church) made a speech here last night, and as far as I could follow him his chief grievance was against the tariff advisory board. I wish to say that in my humble opinion the tariff advisory board is functioning in a way which is for the benefit of the people of Canada. It is doing good, efficient and faithful work, which perhaps will have a tendency to take this vexed question of the tariff out of politics.

Mr. GARLAND (Bow River): Not if the government keeps on this way.

Mr. SANDERSON: I am glad that I am drawing fire this afternoon from all quarters of the house. The tariff advisory board is doing a work that will be of benefit to incoming governments whether they happen to be Liberal or Conservative. The hon. member for Toronto Northwest spoke of the tariff advisory board as "a travelling minstrel show." He repeated the statement two or three times. He not only repeated it in this house last night, but he repeats it occasionally in the city of Toronto. I do not think the advisory tariff board is a travelling minstrel show, but I do think

this: if the government in Ottawa wanted to go into the minstrel show business I could recommend them a man from Toronto Northwest who would perhaps fill the bill pretty well and he need not blacken his face either. I do not agree with my hon. friend the hon. member for Toronto Northwest when he calls the tariff advisory board a travelling minstrel show.

Now, Mr. Speaker, my time is almost up. I want to say in conclusion, getting back to the budget and to the financial condition of Canada, that under the wise and able leadership of the present Prime Minister (Mr. Mackenzie King) the Liberal party—whether they remain in power four years, or eight years, or twelve years—will leave a record behind them of efficient, honest and economical administration that will redound to the credit of this Dominion.

Mr. PETER McGIBBON (Muskoka-Ontario): Mr. Speaker, I really do not know what the hon. member for South Perth would have done if the hon. member for Fort William had not supplied him with material for his speech. While the hon. gentleman was speaking I could not help recalling a phrase uttered by a former finance minister of Canada in this house upon one occasion when a similar question was raised, when he said, "I have not found so great faith, no not in Israel." When the hon. member made the statement that the Conservative party left the national railways in a mess, he was speaking without a knowledge of the facts. If the hon. member will read the history of the railways of this country he will find that the great Liberal party were responsible for the mess in which the national railways found themselves. I ask him if he remembers when the Liberal party guaranteed the bonds of the old Canadian Northern from Fort William east and when they built the National Transcontinental costing this country some $160,000,000. Those two incidents alone were responsible for creating our railway problem and both of them were attributable to the Liberal party.

As I have only forty minutes at my disposal I cannot spend too much time upon the speakers who have preceded me. This is the first time in my life that I have seen a Minister of Finance, in presenting his budget, take for himself and his government credit for all the blessings of Almighty God and the products of the labours of man. As I listened to him delivering his budget speech on Thursday last, I could not help thinking of the words of Cassius: "Upon what meat doth this our Caesar feed that he is grown so great?" The picture that he painted is one that no other man in Canada can see to-day. I wondered at the time if he thought he was another John in the island of Patmos viewing a new heaven and a new earth, because the picture that he painted is not to be found in this country to-day. As he proceeded he took credit for his government for the bountiful crops which nature has provided and for the products of our mines and forests, and I wondered if he, like Joshua, could command the sun to stand still, the winds to blow and the rain to fall.

Then I thought of the great mass of the working people who have not a full dinner pail, of the farmers who have little left over after their year's work, of the march of that great army from Canada to the American republic, and I wondered what was the cause of those delusions and hallucinations in the minds of the government. With a courage worthy of a better cause and with a touch of the dramatic instinct in him the Minister of Finance rose in the house and challenged anyone to say that Canadians were not returning home. I wondered then as I wonder now whether any member of this government or any member of the Liberal party, who talks about Canadians returning home, had ever gone beneath the surface and studied the reasons why a few people are returning across the border from the United States. I would ask them to remember what the hon. member for Fort William (Mr. Manion) said yesterday, namely, that the great bulk of the people coming back are not Canadians at all. I would ask them to investigate that great organization created three years ago in the United States and called the border patrol, an organization that has headquarters in Seattle, Spokane, Grand Forks, Buffalo, Detroit and Montreal, and I would ask him to view the workings and study the returns of that organization. If he does so he will find out that that organization last year kicked back, so to speak, into Canada some nineteen thousand men. Those are the men that are returning to this country. Those are the immigrants that this government is taking credit for.

A few weeks ago I placed on Hansard figures showing that, since this government came into power, more native-born Canadians had gone to the United States republic than the number of immigrants we had received from all quarters of the world. That statement has never been and cannot be disputed. The matter is more serious when it is realized that since 1924 none but a native-born Canadian can migrate to the United States. I ask the Minister of Immigration (Mr. Forke), who to-day is occupying one of the most important

portfolios in this cabinet: How is he going to find work in this country for the British-born he is bringing in and to whom he is giving greater favours than Canadian-born citizens can secure? That is a question which he must answer. The Minister of Immigration is to-day sitting upon the government benches; he is drawing the salary and emoluments as a reward of his apostacy to the Progressive party. His policy and that of his party in the past has been one that has closed the factories of this country and to-day he finds that he is being crucified on a cross of his own construction. I ask him and I ask this house: How is he going to get work here for the people he is bringing in from Great Britain? He cannot, except to a limited extent, place them on the farms, and pursuing, as he is and as this government is, a policy of closing down our factories, I ask them where they are going to place these men. The Minister of Immigration can expect and deserve no consideration from us on this side of the house. The very policy that he and his party have advocated in this house, and that this government looks upon as its polar star of power, is the one which is making it difficult for people to get work in Canada to-day. I have however, many subjects to cover and I must not spend too much time on this.

I desire for a moment to speak about what this government has done for the labouring people of this country. Two years ago we saw them muddling up the automobile industry and as a result there are about five thousand fewer jobs in Canada to-day than there were. A few years ago they did the same thing with agricultural implements and to-day we are importing $30,000,000 worth of agricultural implements from the United States. They did the same thing with the steel industry and to-day there are thousands and tens of thousands fewer jobs down in the maritime provinces. But the government have not been content with their devastating influence in the past and they have once again put their knife into the great woollen industry, which should be one of our most flourishing industries. Coincidentally they have injured the farmer and the sheep growing industry. Why should there be only about 2,500,000 sheep in Canada while Australia, a similar country, has nearly 90,000,000? The reason is this, that ever since this government came into power they have been knifing and putting the stiletto into that industry as well as other industries in Ontario, always being careful to protect their friends in Quebec and, in this present budget, taking pains to protect some of their friends in Ontario. I ask why the Prime Minister, the Minister of Finance and the Minister of Justice should to-day pursue a different policy in connection with the woollen industry from the policy pursued in the regime of the late Sir Wilfrid Laurier. Those who know the history of this industry know that in 1900 Sir Wilfrid Laurier, through the British preference, reduced the protection from 33 per cent to 22 per cent. They know also the disastrous effect which that had on the woollen industry in this country, and in the following year the tariff was raised to 30 per cent, and that increase was supported by the present Prime Minister, the present Minister of Finance, and the present Minister of Justice. The tariff stood at that point all through the regime of Sir Wilfrid Laurier and up until 1922. When this government came into power, they reduced the rate to 27½ per cent. Not content with that, although it closed mills and looms by the hundred, in the year following this government took a further ten per cent off and reduced the tariff to 24.8 per cent. And now they come back and drive the stiletto into it again. They go at it in an underhand way, and possibly the woollen mills have given them some pretext for doing so because they have laid stress on the number of looms that are standing idle through the policy of this government. Now the looms, of course, have to do with the final product, and no doubt what is in the government's mind is that if they can start these looms they will be able to say that they have cured the ills of the woollen industry in this country. But, Mr. Speaker, I am told on good authority that every loom that starts up will give employment to only one girl, but behind that, it will put out of business some four or five who are doing the preparatory work. There we see again the baneful influence of this government, and how its policy is going to strangle the woollen industry and possibly drive more mills out of business. I ask you, Mr. Speaker, I ask any man of intelligence and common sense, why do we crucify our Canadian industries that are giving work to our own people? For the life of me I cannot understand it. I have studied the matter and I have studied the government, and the only conclusion I can come to is that it is done in order that this government may retain power. I say in all seriousness that the only hope for our people in this country is in one of two things—either that the American republic apply the quota system against Canada, or that this government be turned out of power.

I want to say just a word in reply to the Minister of Finance on the matter of taxa-

tion. In bringing down his budget he boasted, as usual, of the reduction that had been made in the national debt. His followers on the back benches have since been getting up and repeating in a parrot-like way just what the minister said, in spite of the fact that the departments of the government itself furnish figures which belie the minister's statement. I am not going to put them on Hansard, because they have already been put on a number of times. Suffice it to say that since this government came into power there is $62,000,000 more owed by the people of Canada. After I heard the minister boasting about the reduction in taxation that this government had made I took the trouble to figure it out and I found that when this government came into power we were paying $42 odd per head in taxation. In the few years this government has been in power that taxation has risen by over $4 per head; we are now paying over $46 per head. Compare that with what has been done in the American republic. After the war the American people found they had a national debt of $26,000,000,000, so they inaugurated a definite debt retirement scheme, and to-day their national debt is down to $16,975,000,000. They have reduced their taxation from $50 to $25 per head. Compare that with what Canada has done. President Coolidge in his address to congress a few weeks ago stated that his government had taken $212,000,000 of the burden of taxation off the people every year since 1925, and that is reflected in their present taxation. We look in vain in this country to see any reflection in our taxation of the economy of which this government boasts.

Looking a little further into the question of what this government has done for the workingman, I took the trouble to look up the income tax returns, and let me say to my friends of the Progressive group that only 1.02 of the people of this country are paying income tax to-day. I also figured out what the reductions that the Minister of Finance is proposing in the income tax schedules will amount to, and I find that people with an income of $100,000 will get a reduction of over $2,000 per year. Compare what this government is doing for the rich man with what it is doing for the farmers of this country. The man with an income of $100,000 gets a reduction of over $2,000 per year, while so far as the farmer is concerned, his protection is indirectly taken off the wool that he grows. The three per cent sales tax is retained on the shoes and clothes he and his family wear. The man with an income of $200,000 is given a reduction of $6,000 per annum, and the man with an income of $300,000 gets a reduction of $9,000. In contrast with that, this government takes out of the pockets of the farmer, through the operation of the Australian treaty, from twelve to fourteen cents on every pound of butter that he makes.

But there is worse than that. While the government makes this enormous reduction in the income tax for the rich man, it places a tax of forty per cent upon some articles of food that everybody in this country uses. I ask you, Mr. Speaker, is it any wonder we have bolshevists in this country when you have a government managing the people's affairs as this one is doing?

I want to pay a little attention now to another department of this government, to that still-born corpse that has been represented at the council table of this government for the last six or seven years; I refer to the Department of Health. With my good friend from Fort William I acted, so to speak, as the accoucheur at the birth of this institution. We spent days and nights trying to whip the thing into shape so that it might serve some useful purpose, and I remember coming out of the chamber one night after we had put up a strenuous argument for a department of scientific research, and having a cabinet minister say to me, "McGibbon, forget it; you will only be creating positions for friends of the government, which will be a great detriment to the country and to the party." I was young in parliament then, and considerable water has flowed under the bridge since. At that time I held cabinet ministers in a great deal of respect. I thought they were a kind of supermen, and that when they had spoken the judgment of the final court of appeal had been pronounced and there was nothing more to be said. But after ten years, after seeing how the mantle of power has made some little men great—I am not speaking in any personal sense, of course—after seeing how the livery of knighthood has turned men of mediocre standing into men of influence and power, I have changed my mind, and I bear witness in this house to-day to the fact that on that particular occasion the minister was right and I was wrong.

I have looked over the reports of the Department of Health for the last six or seven years, and the only thing I can say about them is that, in the words of the late member for Red Deer to me on one occasion, they are a catalogue. I cannot see one thing the department has ever done to justify its creation or its existence. I have a few things that I want to say to the minister, a few things that we have not been able to say about his de-

partment for a number of years, because generally the estimates have not been brought down until the dying hours of the session, when they have been slipped through with nobody present to scrutinize them. I hope there will be some way in which we can get at the department before the session comes to an end.

I know of no department of government that offers such great possibilities of service to this country as the Department of Health, if properly manned and properly organized. But it has been sterile, it has done nothing that will justify its existence or the expenditures voted on its account. I ask you, Sir, I ask the country, what has the department done to curb the tremendous illicit traffic in narcotics that is destroying tens of thousands of the best men and women of the Dominion. Why, Sir, the department has done nothing; it has been impotent. I hope the Minister of Health will bring down his estimates so that they may be scrutinized in the light of day,—

Mr. KING (Kootenay): I shall be glad to.

Mr. McGIBBON: —and thus let this house know something about him and his department. At the time of the organization of the department, Sir, we pressed for a department of scientific research, and it was promised to us. What has been done to redeem that promise? True, the Department of Health undertook a few routine duties, made a few good positions and increased the salaries, but as a scientific organization the body of men assigned to that work have done nothing; the organization has been futile, it has been dead. I should like to see somebody put some life into those dead bones and make the organization as useful to this country as undoubtedly it could be made.

Now, Mr. Speaker, there are a few things in that connection to which I want to refer. Particularly do I want to refer to one subject that has never been taken up in this house to my knowledge—the enormous economic loss to Canada through premature death and preventable illness and unemployment. I do not think the country has ever grasped the enormous economic loss that is suffered year by year, and to the Minister of Health I would point out this as one of the avenues where he can make himself and his department useful to the nation. I have some figures here. They are taken from a report by Professor Winslow and others of the university of Yale after investigations of conditions in the United States, but I have applied them to Canada in relation to our population. These figures disclose, as applied to this country, that 42 per cent of the deaths are of external origin, and consequently preventable. Cutting that in two and taking the figure of 20 per cent, and putting the value of life per year at $2,500, which is not excessive, we find that annually this country is losing from premature deaths no less than $47,000,000. Those premature deaths could be postponed—at least for a time. Then I come to decreased efficiency due to minor and major ailments. We find that advanced impairment of health affects from 10 to 24 per cent of our people, and minor impairment of health from 18 to 40 per cent. Taking 20 per cent as the average, estimating the working days in relation to our population at 3,510,000, and putting the average earning power at $750 per year, with 20 per cent inefficient to the extent of 25 per cent, we find that the loss to this country from that cause alone is another $63,000,000 odd. Then taking into consideration the loss of wages based on the same schedule, and again dividing the percentage by two, we find that 10,500,000 days are lost in this country every year. At three dollars a day, which is not an excessive estimate, this country loses annually in wages $31,500,000. If we add the cost of nursing, food, medicine and medical care, and so forth, we find that the Dominion is losing yearly through inefficiency, impairment of health and premature death nearly $250,000,000. I give those figures to the house and to the country. As I have said, they are not mine; they come from Yale university; but I have checked them up and applied them to Canada. I present them to the Minister of Health to show him where there is an avenue of usefulness and economic value to this country for him and his department. With a population of eight or nine millions we cannot afford to have a preventable economic loss every year of a quarter of a billion dollars. I would remind the house that I have figured out only the preventable part of this loss. This is the problem that I submit as worthy the attention of the Minister of Health and his department.

I see my time is about up, Mr. Speaker. I make one last appeal to this government. I make it on behalf of the sixty thousand soldiers who are dead in France; I make it on behalf of the forty-six thousand pensioners in this country; I make it on behalf of the mothers and fathers of Canada whose families have been broken up and their sons and daughters compelled to make a living in the United States. I say to the government, with all the vast natural resources of this country to be developed, bring down a policy to have this work done in Canada to keep our people at home. I say to the government, and particularly to the Minister of Immigration, that that is the biggest problem, that until the policy of the administration provides work to keep our people here, he can bring in

immigrants from the end of the earth, but in another ten years he will be no further ahead than he is to-day in regard to population. I make that appeal on behalf of the people of Canada. Let it not be said of the government as it was said of the Shulamite maiden. They made me keeper of my father's vineyard, but our own vineyard have we not kept.

Mr. B. W. FANSHER (East Lambton): Mr. Speaker, I feel that some words of commendation are due the hon. Minister of Finance (Mr. Robb), for the character of the budget that he has presented to the house. A statement that shows a balance on the right side, a surplus of receipts over expenditures, is always a pleasant one to hear. As the Minister of Finance announced, he is able this year to reduce the public debt some $38,000,000. But while a measure of credit is to be accorded the Minister of Finance, I think a word of congratulation is also due the Minister of National Revenue (Mr. Euler). It will be observed, from an examination of the finanical statement, that during the fiscal year ended March 31, 1926, the revenue was, in round numbers, $382,000,000, while in the year ended March 31, 1927 it was $400,000,000, roughly, an increase in revenue collections of some $18,000,000. As I say, words of commendation must be given to the efficient manner in which the Minister of National Revenue has administered his department. I must not stop there, however, in my commendation of those who have contributed to the satisfactory state of our revenues: I must congratulate the hon. member for Vancouver Centre (Mr. Stevens), who made it possible for the Customs department to be checked up and to be administered as it is at the present time. I believe this country owes a debt of gratitude, which it will never be able to pay, to that hon. gentleman.

As I said before, the increase in revenue is $18,000,000. The expenditures for the financial year ended March 31, 1926 were $335,000,000, and they were practically the same for the year ended March 31, 1927. That is an additional proof that whatever surplus is shown in the financial statement which is submitted to us is due to the increased collection in revenues, because the expenditures were practically the same in the two years.

While I am bound to compliment the Minister of Finance on his financial statement thus far, I am not in sympathy with him as regards the proportion in which the various taxes are levied. Prior to the war our revenue was derived practically from two sources, customs tariff and excise duties. During the war new taxes were levied; new forms and systems of taxation were inaugurated; the income tax was adopted as were also the sales tax and the stamp tax. This became necessary in order to meet the interest on borrowed money on war account and for the re-establishment of returned soldiers, as well as to provide funds for pensions. I have always been of the opinion—and I am not alone in this regard, because the statement has been made before in the house—that there should have been devised and presented to this house a system of war accounting, a statement showing the exact amount of revenues provided by war taxes. Alongside that, we should have a statement setting out precisely the extent of our war expenditures. Only in one year, I believe, did we have from the Minister of Finance a statement of that sort, and that was during the hectic session of 1926. And that statement reveals that in the year ended March 31, 1925, there was collected $147,000,000 on war account, while in the same year there was expended, also on war account, $167,000,000, leaving a deficit of some $20,000,000. For the succeeding years we have no account of the expenditures. We have had, however, an account in each succeeding budget of the amount of revenue provided by these war taxes, and I have tried to figure out as best I can what has been expended on war account. I find that in the year 1926 $157,000,000 was collected and $164,000,000 expended, leaving a deficit of $7,000,000; while in the year 1927 $156,000,000 was collected and $164,000,000 expended, or a deficit of $8,000,000. For the year 1928, as estimated in the budget, the revenues from war taxes will be $146,000,000, while the expenditure on war account will be $164,000,000, leaving again a deficit of $18,000,000. All told, in these four years, war taxes have failed, by the sum of $53,000,000, to provide enough money to pay expenditures on war account.

It is my firm conviction that war taxes should year by year provide for war expenditures and that the details should be set out in the financial statement. There are two reasons for this: this is a special account and should be treated separately; and, further, it is well for the country to realize as the years go by what war, so far as Canada is concerned, costs our taxpayers. Following this line of argument a step further, I wish to give to the house a statement showing the amount of debt reductions accomplished in the last five years. In the year 1924 the national debt was reduced $35,993,593.86; in 1925, $345,589.29; in 1926, $27,706,586; and in 1927, $41,896,729.33. So far as 1928 is concerned,

it is estimated that the debt will be reduced $38,815,000. So that the total in these five years will have amounted to $144,700,000. The point I wish to make is that during past years we have failed to provide enough money through war taxes to pay war expenditures; we have fallen short by about $53,000,000, and yet our debt is purely a war debt. In five years we have paid off about $144,700,000, but that has not been provided by war taxes. It has been provided by the older forms of taxation, the customs and excise taxes. I was sorry to hear the hon. member for South Perth (Mr. Sanderson) say that as far as he was concerned he was prepared to see the income tax gradually eliminated together with the sales tax. I hope those sentiments are not held by many hon. members opposite. If this were done we would be placed under the necessity of meeting our war debt from finances collected entirely from customs and excise taxes, and this is where I take exception to this budget. As I have already indicated, we have not raised enough money by war taxes to provide for war expenditures, yet year by year we are proceeding to reduce the income tax. You will note that in the budget speech of the Minister of Finance this year he says:

> —it is proposed that the Dominion shall continue gradually to lighten the load in the income tax field.

From that we cannot take any other meaning than that the government intends to proceed year by year to reduce the income tax, and I wish to say that I am unalterably opposed to such procedure.

When I first entered this house in 1921, I subscribed to certain principles known at that time as the Farmers' platform. Among other things that platform called for an immediate and substantial all round reduction in the customs tariff; a reduction in customs duty on goods imported from Great Britain to one-half the rates charged under the general tariff; for all foodstuffs, agricultural implements, farm and household machinery, vehicles, fertilizers, coal, lumber, cement, gasoline, illuminating fuel, and lubricating oils to be placed on the free list and for all raw materials and machinery used in their manufacture also to be placed on the free list; for an effort to be made to secure unrestricted reciprocal trade in natural products with the United States along the lines of the reciprocity agreement of 1911. I believe those principles are sound to-day, and I want to assure this house that I still adhere to them.

As many hon. members know, that platform was adopted in 1918; one year later a somewhat similar platform was adopted by the Liberal party in convention assembled in Ottawa. Perhaps there was a reason for that similarity at the time. I wish to read the part of that platform which deals with the tariff:

> That the best interests of Canada demand that substantial reductions of the burdens of customs taxation be made, with a view to the accomplishing of two purposes of the highest importance; first, diminishing the high cost of living which presses so severely on the masses of the people, second, reducing the cost of the instruments of production in the industries based on the natural resources of the Dominion, the vigorous development of which is essential to the progress and prosperity of our country.
>
> That to these ends, wheat, wheat flour, all products of wheat; the principal articles of food, farm implements, and machinery, farm tractors, mining, flour and saw-mill machinery and repair parts thereof, roughly and partly dressed lumber, gasoline, illuminating, lubricating and fuel oils, nets, net twines, fishermen's equipments, cements and fertilizers should be free from customs duties as well as the raw material entering into the same.
>
> That a revision downward of the tariff should be made whereby substantial reductions should be effected in the duties on wearing apparel and footwear, and on other articles of general consumption other than luxuries, as well as the raw material entering into the manufacture of the same.

And listen to this.

> That the British preference be increased to 50 per cent of the general tariff.

That is the Liberal platform as adopted in 1919.

An hon. MEMBER: Is that information to you?

Mr. FANSHER (East Lambton): I am sure the hon. member likes to hear that platform read and re-read. I believe in the tariff principles laid down in that platform; I could not believe in the former if I did not believe in the latter, but now I ask what progress has been made in implementing that platform since 1919? It is true that in some years small reductions have been made. I well remember the budget which was brought down in 1922; there were practically no reductions, and the Progressives on this side of the house voted against it. That year the majority in favour of the budget was sixteen. The next year the budget was again brought down with practically no tariff reductions; the Progressives again voted against it, and the majority of the government was only eight. The third year of that parliament the budget was brought down embodying substantial reductions on farm machinery and other lines and that budget received the support of the Progressives.

Mr. GARLAND (Bow River): Had the government a majority in the house that year?

Mr. FANSHER (East Lambton): They had an overwhelming majority; the Progressives supported the budget.

Mr. FORKE: Half of the Progressives voted against it.

Some hon. MEMBERS: No.

Mr. FANSHER (East Lambton): For the information of my hon. friend I will tell him that I voted for that budget, as he may possibly remember. The final budget of that parliament contained practically no tariff reductions. Then came the election, and the Liberal party did not have a clear majority in the house. What was the result? We had the most genuine reductions in the tariff that have ever been made in the history of this country. It seems to me that extraordinary conditions must prevail before we can get a tariff reduction in any substantial form. Of course in the election that followed, and in the campaign which preceded it, the budget played a large part.

Before I proceed further into that line of argument, I wish to take up just a few items that are enumerated in the Liberal platform. You will notice that it calls for a revision of the tariff downward in the matter of footwear. Cement and fertilizer are also enumerated in the list of articles to be free from customs duties. Fertilizer was the last one mentioned, and cement was the next one to it. As far as I am able to learn the last mentioned article in the list, fertilizer, is the only one which has been placed on the free list. Now I wish to suggest to the government and to the Liberal party that proceeding upwards from the bottom of this list they take the next article cement and place it on the free list on their next budget. I will give some arguments to show why I think that should be done, and I will place upon Hansard a few figures with respect to certain industries. I will take first the boot and shoe industry. This is one of the industries enjoying a high protective tariff, and we were promised in the Liberal platform that the customs duty should be reduced. Yet during all the intervening years since the Liberals were returned to power this particular tariff item has remained practically untouched. I applied to the Bureau of Statistics in Ottawa for a few figures showing the imports of boots and shoes, the duty collected thereon, and the value of the output manufactured in Canada, and I am going to give them to the house:

Boots and shoes other than rubber

Imports for the year ending March 31, 1927	$ 2,662,754 00
Amount of duty collected (less sales tax)	640,299 81
Percentage of duty	24.05
Manufactured in Canada in the year 1926	46,096,163 00
Exported	311,079 00
Balance for home consumption	45,785,084 00

It is obvious that when $100 worth of goods is imported the sum of $24.05 is collected in duty. Therefore every $100 worth of goods manufactured in Canada for home consumption means that an amount of $24.05 is provided in protection to that industry. We only have to base our calculations on the amount manufactured in Canada to find that there is a protection of $11,011,312.70 provided for the boot and shoe industry.

Mr. LAPOINTE: Is my hon. friend taking the British preferential rate or the general tariff?

Mr. FANSHER (East Lambton): I wish to inform the hon. Minister of Justice that I am not quoting the rates under either of these tariffs. I am taking the actual importations, and the duty collected thereon, and getting my percentage in that way.

Mr. LAPOINTE: But the rate is not 25 per cent under the British preference

Mr. FANSHER (East Lambton): What I am taking is the average percentage of duty. I will read the figures again for the benefit of the hon. minister. The amount of duty collected on all boots and shoes, whether they came in under the British preference or the general tariff, is $640,299.81. That amount is collected on imports to the value of $2,662,754. It is a simple matter of computation to get the percentage of 24.05.

Now we turn to rubber footwear and I have the following figures:

Imports for 1927	$ 116,264 00
Duty collected (less sales tax)	29,016 08
Percentage of duty	24.97
Manufactured in Canada	24,541,324 00
Exported	6,569,885 00
Consumption in Canada	17,971,439 00

By the same process of reasoning we find that when $100 worth of rubber footwear is imported $24.97 is collected in duty. So that in the case of every $100 worth of goods manufactured in Canada a protection of $24.97 was afforded and the total protection granted to that industry was $4,474,888.06. The other day the hon. Minister of Trade and Commerce (Mr. Malcolm), in the course of a speech, gave some statistics showing the importance of the rubber industry of this

country, and said that it held fourth place among our industries. In view of the figures that I have given I do not wonder at it.

In the case of the cement industry I wish to place on record the following figures:

Imports for year ended March 31, 1927.. .. ..$	77,886 00
Duty collected..	5,018 00
Percentage of duty..	16.20
Manufactured in Canada..	13,013,283 00
Exported..	358,231 00
Home consumption..	12,655,052 00

By the same process of reasoning protection in the sum of $2,050,118.42 was provided for the cement industry. For all three industries the total duty collected was $674,333.89, and for the same industries the total amount provided in the form of protection was $17,536,319.18, a ratio of 1 to 26. Which means that for every dollar that goes to the treasury $26 is provided for the manufacturers in question. Is it any wonder that we are opposed to this budget, to a reduction in the income tax, and to the maintenance of the customs tariff at the level where it has been for years past? It is my belief that facts such as I have cited here, viewed in relation to the advantage which accrues to the various industries, has a great deal to do with what is known as our emigration problem in this country. If our system of taaxtion were such as to give to the primary producer larger earnings than he now makes, he would not be so eager to seek other fields.

I have a few words to say upon the position of the government as regards this budget. During the campaign of 1926 an appeal was made to the public on the Robb budget which to my mind was really a Progressive budget, what the Progressive party had been advocating for years. The Conservative party on the other hand warned the country that if the Robb budget came into effect or if the King government was returned, this would mean the ruination of the country. Fair warning was given by the Conservative party. The Liberal party appealed as the low tariff party and they said: Why divide the low tariff element? They were returned to power and this is the second budget that has been brought down. After being pledged, in their platform and in the election, to a low tariff, they selected an advisory tariff board to assist them in better fulfilling their policy of low tariff. One budget has come down with no tariff reductions. A second budget is now down which is nothing more or less than a reclassification of the textile schedules, and which amounts to scarcely anything beyond a few classifications. The great majority of the benefits go to the large industries and the consumers get but little.

[Mr. B. W. Fansher.]

As I say, the government appealed to the country saying: Why divide the low tariff element? But in this budget they have simply tinkered up the old tariff wall, taking off a stone here and replacing it somewhere else, and taking one from there and putting it in the place of the one they took away. They have given the old tariff wall a coat of whitewash and they have still kept the old barbed wire entanglement known as the dumping clause on top of the tariff wall. I thought when I came to this house that the hon. member for Weyburn (Mr. Young), was intent, with the aid of the Consumers League, upon removing that barbed wire entanglement; but somehow or another somebody advised him that if he attempted it, he might get his hands torn and he has not as yet proceeded in that direction.

Mr. GARLAND (Bow River): They stole his wire nippers.

Mr. FANSHER (Lambton): He may be a little leery about putting his pliers into it. Why should the country not expect that in this second budget the Liberal party would come forward and fulfil its pledges? The country is looking for that and member after member from Ontario was returned on the strength of the Robb budget. The government were taken at their word and the country expects them to fulfil their pledge. It is because I believe in the principles enunciated in my party's platform and because I want to see them brought into effect that I speak as I do to-day. I desire to place myself unmistakably on record in this matter. I desire, therefore, to move as a sub-amendment, seconded by the hon. member for Rosetown (Mr. Evans):

That all the words after the word "regrets" in the amendment be struck out and the following substituted therefor:

"That the government proposes further reductions in the income tax, thus making a serious departure from the principle of direct taxation: that the proposed revision of the customs tariff is inadequate to bring effective relief to the consuming public; and that the sales tax on the necessaries of life has not been eliminated."

Mr. A. J. ANDERSON (Toronto-High Park): Mr. Speaker, in rising to address the house I wish to refer first to this sub-amendment. I do not agree with the mover and the seconder of it in regard to the first paragraph thereof and I will refer to it at greater length in the remarks that I have to make. The second paragraph states:

That the proposed revision of the customs tariff is inadequate to bring effective relief to the consuming public.

That is a debatable question and in the remarks that I have to make I shall probably

cover that matter. The last paragraph is practically the last clause of the amendment moved by the hon. member for St. Lawrence-St. George (Mr. Cahan).

A good deal has been said, not only by members of this house but by many people who are supporters of this government and by the press, regarding prosperity; and this was referred to also this afternoon by the hon. member for South Perth (Mr. Sanderson). Evidently the hon. member for South Perth felt the effect and influence of the arguments that were advanced yesterday by the hon. member for Fort William (Mr. Manion), as he spent the whole of his time in endeavouring to refute them, or, if he could, to ridicule that hon. member. That class of argument does not carry us anywhere. The hon. member did not attempt to answer, either in detail or in reality, the arguments set forth by the hon. member for Fort William.

The hon. member for South Perth referred to prosperity. I do not know exactly what conditions are in the constituency which he represents. It may be one of the constituencies in Ontario in which prosperity may be shown to exist to a considerable extent. The constituency which I represent, which is part of the city of Toronto, is largely industrial. As I said once before in this house, I think seventy per cent of our people, although they may not all be directly interested in industry, depend upon industry for their living. One can judge better as to whether there is real prosperity in this country by looking at the question from the immediate standpoint of the home. True it is that many of our citizens are enjoying a great deal of comfort and some of the benefits of the accumulated wealth of the country, but there are many who are not enjoying that measure of comfort which the wealth of our country should give to them. The Minister of Finance (Mr. Robb) referred in his budget address to the leaders of finance and industry and to the reports that they had made at various times during the year as being good evidence of the prosperity of the country. I do not know to whom he was actually referring when he spoke of leaders of finance and industry, but by leaders of finance I assume he meant the men in charge of our banks, trust companies, investment trusts, and probably insurance companies, because they have control of the greater part of our moneys that are on deposit with them as trustees for the people. Now, with all due respect to the bright statements that are sometimes made by these financial institutions in their annual reports, it is necessary I think for us to scan them with care.

In this country we have several banks all competing for business. These banks are doing business, it may be said, for the benefit of the public generally, but in reality they are doing business for their shareholders. The banks are privately owned; the shareholders own the bank, and the managers of these banks are anxious to make the best showing they possibly can. Competition is rife among the banks themselves, and they are always endeavouring to put forward the brightest statements they can. That is also true of our trust companies and our insurance companies. But when we come to look at what they are doing with the money that is entrusted to them in the form of deposits, what do we find that they are doing with a large part of it? When we begin to look at it from that standpoint, we notice that the stock exchanges of our country use a great deal of that money. The amount of money that is advanced by these various institutions to the stock brokers throughout the country, and the same is true of the United States, is something enormous; it represents a large proportion of the deposits that are entrusted to their care. Now if that money were used on the stock exchange for the buying of stocks, treasury stocks, the proceeds of which would go into the treasuries of these industrial companies, then I would say that that money was going in a direction in which it might help industry in this country and might help to make times better. If that money were invested in the bonds of these companies and were used for the extension of their business, I would also say that that would be for the benefit of industry, and probably of the country as well. But, Mr. Speaker, you know as well as I know, and every hon. member of this house knows, that the bulk of the money that is used on the stock exchanges of this country and of the United States is used in what are practically gambling operations. We may not call it gambling; we may say it is an investment, but whatever you call it the element of chance is there, and we find that our banks, our trust companies, our insurance companies and some of our investment trusts are using their moneys for this purpose. A striking instance of that came to my attention not long ago when one of our largest insurance companies in Canada published, and in rather a boastful way, the fact that it had bought a very large block of stock of another industrial concern in this country—International Nickel. The manager of that insurance company made the statement that they had bought that stock as a permanent investment. Now that stock

was not bought from the treasury of the International Nickel Company. Had it been bought from that source it would have gone into the industry and helped business generally. But no; it was bought on the stock exchange. It may be that it was all paid for in cash, but the money went not into the industry, but into the hands of other men who put it into their private purse or into their bank account, and it did not help the industry at all.

Now where does this insurance company hope to make profits if it is not that they are going to gamble or take a chance on that stock advancing in price on the market? That does not help the industry in this country. If we are to depend on the statement by that insurance company that everything is prosperous, you and I, Mr. Speaker, being probably insured in that company, have to conclude that the profits likely to come to its treasury are to depend upon chance; and that chance is not at all unreal. It may not be out of place for me to say that International Nickel was quoted on the stock exchanges of Montreal, Toronto and New York less than two weeks ago at 100, and to-day it is quoted at 80. Now that is a very great chance. I do not think that International Nickel is a concern that has any fear for the future. I believe it is good, but when we look at it we find that that stock is to-day paying two dollars per share of $25 par value, and yet it is selling on the stock exchange for from 80 to 100. At the price of 80 it pays only 2½ per cent, and it is clear that the insurance company is not looking at it from the standpoint of an investment paying them 2½ per cent; but they have bought that stock on the possibility that it will enhance in value and the profits go into the treasury of the company. If that is an evidence of prosperity—and the same thing applies to other companies as well—it is not a fair and just evidence of prosperity. These companies, as a matter of fact, very frequently refer to reports prepared by the government on public matters, so that the one refers to the other; they are working in a circle, but when we come to find out what is behind it all we have good reason for believing that the greatest care is not exercised in the reports which these institutions put out to the country.

Investment trusts have come into being in Canada during the last two years. They have been in the United States for a number of years. They buy stock of companies, the same as insurance companies are doing, until they gradually accumulate a large holding, and their profits are dependent solely upon the future advance of the market. Is it fair to say that the country is prosperous because these companies happen to make a profit on chance transactions of this kind? I say not. I think the information which is given to the country in general by the two great railroads of this country is probably a great deal better. The annual reports of the Canadian Pacific Railway Company and the Canadian National Railways both show decreased earnings and increased expenditures. These companies are working on the capital that is actually invested in them. True, the Canadian National Railways stock is not on the market, being held by the government; but the Canadian Pacific stock is on the market. The latter company pays a dividend of 10 per cent. Were it dependent upon freight and passenger earnings it might not be able to maintain that dividend, but by wise investments outside its regular railway business it has been able to do so, with the result that the stock to-day is quoted on the market at a high premium. But these railroads both say that the business of the past year is not as satisfactory as it might have been, and not in keeping with the development of the country.

I submit, Mr. Speaker, that the true prosperity of the Dominion can better be judged by the individual, by yourself in your constituency, by myself in my constituency, and similarly by other members of this house. In my opinion, wherever there is an element of unemployment not in keeping with the amount of wealth in our respective constituencies, then economically there is something wrong. The unemployment that is rampant throughout the urban portions of Canada, and also to a lesser extent in the rural districts, is the best evidence that prosperity does not exist to the degree that it should in view of the declarations that we have heard respecting the general prosperity of the country.

One is led to consider why our industrial development is not more active and prosperous. I do not suppose my friends to my left will agree with me, but I thought the other day we had from the hon. member for Red Deer (Mr. Speakman) something suggestive of a change of heart. He gave voice to a sentiment which, it seems to me, might form the basis of cooperation with the view of securing a better industrial development over the whole country. I refer to the statement that his party were not free traders, but were in favour—not necessarily because they like it, but because of existing conditions—of a tariff system, and that it was necessary and advisable that the various parties should get together on the question.

The government has always proclaimed itself a low tariff party. My hon. friends to my left have made it quite clear that they are free traders. The party to which I belong is wedded to a policy of protection. That does not necessarily mean protection to such a degree as to be harmful to our proper national development; it means protection which is constructive in its nature. In brief, it involves the development of all our resources from the raw product through the various stages up to the finished article that goes on the shelves of the retailer and thence into the hands of the consumer. The government by this budget and by its recent legislation is trying to show that it is a low tariff party. But unfortunately for that argument, the government is leaving the manufacturer in practically the same position as before. I do not object to this except as to the degree in which it interferes with the processes of manufacture in the earlier stages.

There can be no doubt that the low tariff legislation of last session injured the earlier stages of domestic manufacture, fabrication or conversion of our natural products, and this budget will be equally harmful in its effects. Let me cite the automobile industry as an example of what happened last year. A large number of the parts that enter into the construction of automobiles are manufactured outside of Canada, and under the budget of last session, they are being admitted free or at such low rates of duty as to interfere with the parts industry in Canada. True, it does help to some extent the secondary stage of manufacture in this country, but it has changed our automobile industry altogether, and to-day it has become to a great extent an assembling industry, with the result, as has been pointed out by other members, that a lesser number of Canadians are now being employed in our automobile industry. The importer of these automobile parts—the automobile manufacturer or assembler—probably is not losing. He handles as many automobiles, probably more than he did under the conditions that prevailed before the introduction of last year's budget; that is, he has become simply an assembler and a sales agent, and in that way he is making his profit. In fact many of the automobile industries are making big profits. But what about this industry in Canada? We are getting to be manufacturers of a partial product only, and if anything should happen in the future to interrupt the entry of those automobile parts, we would be in a very difficult position.

Now, this budget is proposing to do this year in regard to the woollen industry what the budget of last year did to the automobile industry. I can only refer to this in a general way. A part of the woollen product is admitted free in order to assist the secondary process of manufacture, that is, the weaving industry in this country. It is going to have the effect of reducing the number of our sheep, and it will reduce, if not obliterate, that portion of the industry which deals with the raw product up to the time it is fit to put into the loom for the purpose of weaving. And further, it will result in the scrapping of a large amount of machinery and a large number of plants in which has been invested a great deal of good Canadian capital. That, it seems to me, is a very unfair way to deal with the Canadian who is courageous enough to invest his money in a real home industry. Of course, what will happen is hard to predict. My own opinion is that the woollen industry will be affected in the same way as the automobile industry, that is, the secondary part of our woollen manufacturing will be dependent wholly upon the United States and other countries for the primary products. It will also result in eliminating to a great extent our sheep industry. In short, the whole woollen industry of the Dominion will be very materially injured.

Mr. FORKE: Sheep are the best thing going.

Mr. BENNETT: We have lost only about thirty per cent.

Mr. FORKE: We have received the best price for wools this year, and during the last five years.

Mr. McGIBBON: Not due to the government's policy.

Mr. ANDERSON (Toronto): I have before me some statements concerning the iron and steel industry and a reference to them will show, by analogy, how the woollen industry is likely to be affected in the future. As a result of a highly improper method of dealing with the iron and steel industry in Canada, we find this enterprise to-day in a most unsatisfactory condition. This matter was referred to by the hon. member for St. Lawrence-St. George (Mr. Cahan) and I will not go over the same ground. But supplementing what he said I may quote from a paper on Iron Smelting and Steel Making in Canada, by F. W. Gray, taken from the publication Iron and Steel of Canada of January, 1928. This writer points out the effect upon different sections of the iron and steel industry of allowing a certain percentage of the manufactures in iron and steel,

in their earlier stages, to come into this country either free or under a low tariff. In 1920 the number of persons employed in the blast furnaces and steel mills of Canada totalled 13,874, who were receiving wages and salaries aggregating $22,824,530. These blast furnaces and steel mills are the parts of the factories that handle iron and steel in their earlier stages of manufacture. In 1926 the number of persons employed had dropped to 6,014, while the total wages and salaries paid out amounted to only $8,934,536. It will be seen that the number of employees was reduced by half while the wages and salaries paid out were more than cut in two. This meant a direct loss to the labour element of the country, both as regards the number of workmen employed and in the matter of wages paid. The secondary plants do not show so disastrous an effect. In 1920 the number of persons employed in secondary plants was 101,887 and the salaries and wages paid them amounted to $135,860,417. In 1926 the number of employees in these plants had declined to 75,400 while the aggregate of wages and salaries paid was $125,229,867.

What has happened in connection with iron and steel will also take place in the woollen industry. We shall find that the primary plants will dwindle if indeed they are not eliminated altogether, while the secondary plants will be face to face with serious competition from outside; and the only way I can see in which we shall be able to stave off disaster is to provide a reasonable and fair protective tariff which will give the home manufacturer a chance to cope with foreign competition. Something might occur some day whereby we should not be able to get from outside those parts of iron and steel construction that enter into secondary manufacture, and the same prospect faces the woollen industry. Let me quote from Mr. Gray:

> It is also fairly well established that the importation of these raw or semi-finished materials has been aided by lowering or complete omission of import duties in the most important instances of usage; but it is not true, as has been stated, that this favouring of importations from outside—so far as the products of blast furnaces and rolling mills are concerned—is required because of the inability of Canadian plants to furnish them. The record of idle blast furnaces, of unemployed men, and of declining production of primary products within Canada is sufficient proof to the contrary.

So far as I can see, this is the condition to which the woollen industry and possibly cottons will be reduced. Mr. Gray says further:

> The point now reached, and the question that the secondary steel industries in Canada must answer from their own viewpoint of supply, is whether the primary plants are to be further pressed into decline and eventual extinction, or whether, for the protection of the secondary industries per se, the remnant of the native blast furnace industry shall be kept alive. It is possible, of course, that a steel industry of sorts—

And this will be said of the woollen industry also—"a woollen industry of sorts."

> —can be built up in Canada entirely on imported materials. But such an industry will not be a Canadian industry, and it will cease to exist the day that importations of the primary products from outside cease. It would be a reflection upon the intelligence of iron and steel men in Canada to attempt further to emphasize the elementary necessity of blast furnaces, and rolling mills connected therewith, to any civilized country that essays to possess an iron and steel industry, and that desires to have a national status above that of a helot nation, or to be more than an appanage and vassal of nations that have realized the importance of iron and steel, and in doing so have achieved an independence in industrial affairs that is actual and not merely an unreality.

That is the condition to which the woollen industry and others will be reduced under this new proposal.

Something has been said in the subamendment in regard to the reduction in the income tax. This is a matter in regard to which I wholly disagree with my friends to the left. The income tax is levied only upon a very small part of our population. I took the trouble to-day to inquire of the income tax office as to the number of persons in Canada who have paid income tax in the last year. We have a population of 9,300,000 and the number of persons who paid income tax was 116,029, while the corporations that contributed numbered 5,777. In other words, a total of 121,806 individuals and corporations paid income tax. Now, the reason the number of taxpayers in this class is so small is the fact that only this number of persons and corporations in Canada receive incomes that exceed the amount of exemption—$3,500 and upwards, or whatever the figure is. Those who receive an income may fairly be asked to pay a tax to the country, in view of the benefits they derive from the general industry. When I say that, without making it unnecessarily personal I may also say that I happen to be one of those who pay income tax, and I am quite prepared to continue paying it. But when we consider that the reduction of the income tax affects only 121,806 entities in this country, individuals and corporations, and that the other 9,000,000 people do not have to contribute in any way, you can imagine to what extent a reduction in the income tax will benefit the people of Canada.

For my part I think the government are simply making a gesture of a political nature. Some people have described it as a tricky affair, and have said that it is being done for the purposes of propaganda, in order to secure votes in the future. At all events it is not helping the people generally at all. If the government had gone the whole distance in regard to the sales tax I would have quite agreed with them, although I believe on the whole the sales tax has been very fair because it affects everyone according to the amount purchased. It has been a very annoying tax, however, almost as much so as the stamp tax, which has since disappeared. The sales tax should be wiped out altogether if the government really have any disposition to assist the consumer. We hear a great deal about the government trying to do that. They say, "We are trying to help the consumer; we are reducing taxes of every character with that end in view." The tariff board have been asked to do work in this connection, but we have no report of what has been accomplished by that board. We do know, however, that an individual has been appearing before that board calling himself counsel for the consumers of the country. I do not know by whom he is engaged; he may be doing the work voluntarily out of the kindness of his heart, although I doubt it. He claims to represent the consumers, and that includes every person in the country, because we are all consumers. If the government are particularly desirous of doing so much for the consumer, why do they not start right in and cut off the sales tax which is imposed against our own manufacturers, and thus bring home their good intentions to every individual in the country? The amendment moved by the hon. member for St. Lawrence-St. George (Mr. Cahan) asks that that tax be cancelled as of January 1, 1929. I believe the government might well agree to this, and if they did so they would be entitled to the credit of doing something for the whole of the people rather than helping only an infinitesimal number of them.

Referring back to the question of income tax, I find some interesting figures appearing in the Toronto Telegram of recent date. I do not refer to this paper very often, but immediately after the budget speech was delivered the Toronto Telegram published a compilation showing how the reduction in the income tax would affect the city of Toronto. And according to that statement I find that in the Toronto district there are about 25,000 individuals who pay income tax. That is interesting, as compared with the 116,000 who pay income tax throughout the whole Dominion; it would appear that Toronto is bearing its share of the burden. In addition to that, in that city there are about 2,000 corporations paying taxes. Sixty per cent of those who pay income tax in Toronto are in the class taxable on an income of $5,000 or under, and at the most their saving is only $3. Twenty per cent of the total includes those with incomes from $5,000 to $15,000, and the man with the latter income will save about $75. Ten per cent of that total represents incomes from $15,000 to $30,000, and at the latter figure the saving is about $350. Only ten per cent of this total have incomes in excess of $30,000. Then, at another place, it is shown that 30,000 people of those reporting have an income of less than $1,000; 5,500 people have incomes up to $2,000, and 2,500 people have incomes up to $3,000. That means that 38,000 people have incomes of $3,000 or less. The remainder of those reporting, numbering 5,570, have incomes ranging from $4,000 to $50,000. These figures are on the basis of the most recently available figures of the assessment department of the city of Toronto.

Mr. DEPUTY SPEAKER: I am sorry, but the hon. member's time has expired.

Mr. ANDERSON (Toronto): I regret that my time is up; I should have liked to make some remarks in regard to the public debt and the necessity of a sinking fund to meet it, but that is now impossible.

On motion of Mr. McMillan the debate was adjourned.

At six o'clock the house adjourned, without question put, pursuant to standing order.

Thursday, February 23, 1928

The house met at three o'clock.

REPORT OF COMMITTEE

First report of the select standing committee on agriculture and colonization.—Mr. Kay.

PRIVATE BILLS

FIRST READINGS

Bill No. 52, respecting the Canadian Pacific Railway Company.—Mr. Speakman.

Bill No. 53, respecting the Manitoba and North Western Railway Company of Canada. —Mr. McLean (Melfort).

TARIFF ADVISORY BOARD

Hon. J. A. ROBB (Minister of Finance): Mr. Speaker, I desire to lay on the table the statement asked for on Tuesday the 21st instant by the hon. member for East Calgary (Mr. Adshead).

PRIVILEGE—MR. CAHAN

Mr. C. H. CAHAN (St. Lawrence-St. George): Mr. Speaker, as a matter of privilege I wish to call attention to a statement which I made on the budget debate, and which has been the subject of some adverse criticism and also of some very gross misrepresentation. In opening that debate I spoke as follows:

I notice that on the very evening on which the Minister of Finance made his budget speech, another gentleman, who is very prominent indeed, or who wishes to be so, in the public life of this country, made a speech in the city of Montreal in which he claimed to himself and one or two of his associates the full responsibility, and corresponding gratitude of the public, for all the advantageous results which the Minister of Finance had noted. I do not know and I cannot judge from personal knowledge of the capacity of Sir Henry Thornton as an administrator of the railways of this country, but apparently he thinks that the Prime Minister, the Finance minister and the Minister of Railways are mere lunary satellites who become known to the public only when they stand in the reflected light of his great sun or star. But in this house we must look to the ministers of the government, who have assumed the responsibility of the administration of public affairs in Canada for a statement and explanation of their conduct in the administration of their respective offices, and I think the government and parliament and the people of this country would be better satisfied if Sir Henry Thornton would not so often obtrude himself into matters of which he has only a partial knowledge and no experience whatever.

Forty years ago I sat for some years as a member of the Press Gallery of this house, and therefore I appreciate the onerous duties and responsibilities of correspondents who sit in that gallery, upon whom the public rely for a fair statement of the proceedings of this house. So far as my experience goes, in the majority of cases, the fairness and accuracy with which these proceedings are reported does credit to the impartiality and competency of members of the press who sit in the gallery. But I find that the Ottawa correspondent of the London Advertiser, referring to the words which I have just quoted, sent the following report to his paper:

The outstanding feature of the speech delivered in the House of Commons this afternoon by C. H. Cahan, financial critic of the Conservative party, was a biting attack on the Canadian National Railways and Sir Henry Thornton, the president of the government-owned system.

[Mr. M. McLean.]

Some hon. MEMBERS: Hear, hear.

Mr. CAHAN: I remark this to the "hear, hears" of hon. gentlemen opposite, that there is not one statement in that entire speech which reflects discreditably upon either the national railways of Canada or upon the Minister of Railways (Mr. Dunning), who assumes the responsibility in this house for the administration thereof. Further, the correspondent of the London Advertiser proceeds:

Mr. Cahan was the official spokesman of the Conservative party, and presumably he uttered the opinions of the party as a whole when he attacked the national railways.

I think that is an unfair report of the proceedings of this house, and discreditable to the press representative who sent it to his paper, the London Advertiser. I notice also that the Ottawa Journal in dealing with these matters makes the suggestion to members on this side of the house that they should always keep quiet when they are likely to make statements which could possibly be misrepresented by the press correspondents of the house.

If that were carried out, Mr. Speaker, I am afraid the opposition would be entirely failing in the duties which it owes to parliament and to the public.

I would suggest to the right hon. the leader of the house (Mr. Mackenzie King), who in similar matters has had occasion to complain, that some measures should be taken to prevent utter misrepresentations of this character. It is well understood that the press correspondents are in the gallery only as a privilege which is due to the tolerance of this house, and unless we can have a fairer presentation of the proceedings to the public, it will be not only prejudicial to the house, as a house, but it will necessitate, I think, some measures being taken to prevent such misrepresentations being sent broadcast throughout the country.

PRIVILEGE—MR. FANSHER
EAST LAMBTON

Mr. B. W. FANSHER (East Lambton): Mr. Speaker, I rise to a question of privilege. Speaking yesterday in the budget debate I said, as reported at page 702 of Hansard:

The third year of that parliament the budget was brought down embodying substantial reductions on farm machinery and other lines, and that budget received the support of the Progressives.

That statement was challenged by the hon. Minister of Immigration (Mr. Forke), who said:

Half of the Progressives voted against it.

I have taken the trouble to look up the records of the house as recorded in Hansard, and I find that only one Progressive voted against that budget.

Mr. SPEAKER: Order. This is not a question of privilege.

SALE AND INSPECTION OF ROOT VEGETABLES

Hon. W. R. MOTHERWELL (Minister of Agriculture) moved for leave to introduce Bill No. 51, to regulate the sale and inspection of root vegetables.

He said: The purpose of the bill is to consolidate the root vegetables legislation of 1922 and such amendments thereto as may have been enacted since that date. No new principle is involved, the main departure being a provision for the establishment of an advisory board whose duty it will be to advise the minister of any new grades that may be required or of any modifications of old ones that may suggest themselves from time to time.

Motion agreed to and bill read the first time.

DIVORCE COURT FOR ONTARIO

Mr. A. N. SMITH (Stormont) moved for leave to introduce Bill No. 27, to provide in the province of Ontario for the dissolution and the annulment of marriage.

Mr. LAPOINTE: Explain.

Mr. SMITH (Stormont): The bill was introduced in the Senate and the object is to empower the Ontario courts to grant divorces in that province, instead of having such cases disposed of in the Senate as at present.

Motion agreed to and bill read the first time.

QUESTIONS

(Questions answered orally are indicated by an asterisk).

DOMINION GOVERNMENT NOTES

Mr. SPENCER:

1. What amount of Dominion government notes were in circulation on the 31st December, 1927?
2. In what denominations were these issued?
3. How many were issued of each denomination?
4. Do any Dominion notes other than $1 and $2 circulate among the general public?
5. If so, what denominations, and to what extent?
6. What use is made of those not in public circulation?

Mr. ROBB:

1. $220,808,365.20.
2. 25c, $1, $2, $4, $5, $50, $500, $1,000, $5,000, $50,000.
3.

Denomination	Number in Circulation
25c	5,487,852
$1	19,841,844
$2	7,092,420
$4	8,189
$5	49,961
$50	15
$500	3,377
$1,000	4,328
$5,000	1,572
$50,000	3,425

4. Yes.
5.

Denomination	Outstanding December 31, 1927
25c	$ 1,371,963
$4	32,759
$5	249,807
$50	650
$500	1,688,500
$1,000	4,092,000

6. For legal tender between banks.

OTTAWA POST OFFICE

Mr. SENN:

1. Were tenders called for the demolition and salvage of the buildings west of the post office in the city of Ottawa?
2. If so, how many tenders were received, from whom and what amount in each case?
3. If tenders were not called for, what amount was received for the salvage of the buildings?
4. Was the work of demolition done by days' work?
5. If so, under whose direction and what were the conditions of employment?

Mr. ELLIOTT:

1. Yes.
2. (a) Seven.

(b)

Betcherman Iron & Metal Co., Ottawa	$8,311
L. O. Genest and R. J. McKenzie, Ottawa	7,600
E. and M. Goldstick, Toronto	4,650
York Wrecking Company, Toronto	3,850
Sachs Brothers, Ottawa	2,100
The Eastern Wrecking & Construction Company, Toronto	2,000
Russell Wrecking Company, Hurdman's Bridge	1,000

3 to 5. Answered by No. 2.

DREDGES AND SNAGBOATS ON FRASER RIVER

Mr. McQUARRIE:

1. Are the men employed on the Dominion government dredges and snagboats operating on the Fraser river out of the port of New Westminster, British Columbia, required to work 52½ hours per week?

2. After having worked these 52½ hours are they not required from time to time to act as watchmen, and remain on the boat the whole of the Sunday?

3. After having worked this Sunday, are they allowed one day off as compensation therefor?

4. If they are not allowed one day off for having worked the seventh day, why have not the provisions of order in council, P.C. 1537, dated September 7, 1925, granting all civil servants one day off in seven been complied with?

5. Do the men receive overtime pay for this Sunday work?

6. Was not this matter brought to the attention of the Deputy Minister of Public Works on July 24, 1927?

7. Will the minister see that the above order in council is enforced as soon as possible?

Mr. ELLIOTT:

1. Yes, 9½ hours during first five working days, 5 hours on Saturday, with Saturday afternoon off.

2. Yes, usually three or four of crew remain on board.

3. Yes, when conditions permit.

4. Answered by No. 3.

5. No.

6. Yes.

7. In cooperation with representatives of those interested the department is endeavouring to reach a solution of the question.

THE BUDGET

DEBATE ON ANNUAL FINANCIAL STATEMENT OF MINISTER OF FINANCE

The house resumed from Wednesday, February 22, consideration of the motion of Hon. J. A. Robb (Minister of Finance) that Mr. Speaker do now leave the chair for the house to go into committee of ways and means, the proposed amendment thereto of Mr. Cahan and the amendment to the amendment of Mr. Fansher (East Lambton).

Mr. THOMAS McMILLAN (South Huron): Again we are assembled to discharge our duty as the servants of the Canadian people. Nature and a beneficent Providence have once more been exceedingly kind in their lavish bestowal of material gifts.

Some hon. MEMBERS: Louder.

Mr. SPEAKER: I must ask hon. members to refrain from conversation; I can hardly hear the speaker.

[Mr. Elliott.]

Mr. McMILLAN: The year of the diamond jubilee of this confederation will pass into history as one of the most favourable and prosperous in all our national life. As a consequence, the annual budget, as announced by the hon. Minister of Finance (Mr. Robb), in many respects displays a creditable financial record, with years of the most careful administration.

Why should his message not be optimistic? —with evidence of prosperity on every hand, with three successive good harvests behind us, with prices of cereals as well as live stock and live stock products at least fairly satisfactory, which has placed agriculture in such a situation as to be able at least to reflect good times upon almost every class and industry in the land, I might add, on almost all but its own.

This condition, together with a greater mineral production, a further increase of forestry products, more particularly the newsprint industry, has so strengthened our industrial and manufacturing life, that, no matter whether they depend on the farm, the forest or the mines for their raw material, they appear to be fully assured of a sufficiency thereof, and a satisfactory market for their product. With such conditions abounding, those engaged in almost every field of national endeavour, outside of the farm, seem more than ever convinced that Canada has now entered upon the most wonderful development in our history. That being so, is it not the first duty of the government to see to it that as far as humanly possible every phase of our national and productive life shall receive even-handed justice in their means and cost of production, thus enabling and compelling every line of effort to rely upon themselves and upon the ingenuity of their own resources, rather than upon government favours, for material success in their business. That cannot be done in a day or in a twelve-month. It takes time to effect a satisfactory readjustment.

With regard to the sub-amendment which has just been proposed, I must confess that since I have had the honour of a seat in this house I have been at a loss to conceive any good reason why my hon. friends should persist in segregating themselves in the south-east corner of the chamber. After listening to their latest declaration I am more than ever surprised at the unexplainable attitude which they assume. The sub-amendment shows clearly that the difference between them and us on this side is one merely of degree and not of principle, and I am sorry indeed to find that my good friend the hon.

member for East Lambton (Mr. Fansher) has placed himself in such a position. If my hon. friends would only drop local, sectional considerations—

Mr. GARLAND (Bow River): Do you call that local?

Mr. McMILLAN: —and view the situation from a national standpoint, there is not one syllable in the sub-amendment which should prevent them from standing with us and manifesting that broad-minded spirit of compromise which is so necessary to progress.

To the altogether admirable hon. member for Southeast Grey (Miss Macphail), allow me to say in this special year when she seems quite unable to make the necessary approaches to any one of the three bachelor leaders in this house, I extend an invitation to come across to us, and we will be pleased to show her the most desirable pathway that leads to the promised land.

Possibly before I get through I may give my hon. friends even stronger reasons for a difference with the government, but such a difference expressed by resolution would prove fatal to the national welfare. I would advise my hon. friends, and even plead with them, to realize that it is not what any great leader thinks ought to be done that it is always wise to attempt at the moment, but it is rather what step in advance can be taken and at the same time carrying your countrymen with you. That is the great secret of progress in a true democracy.

It is also gratifying to notice that the tariff advisory board is getting after its work in earnest. In many cases the facts elicited are indeed illuminating. They clearly reveal the information, well known to every student of tariff matters, that the present Canadian customs tariff is a structure whose revision in many particulars is long overdue. A number of applications have been received from those enjoying a protection of 30 per cent and over, who say they are selling their goods at the level of world market prices and taking no advantage of the tariff. If that is so, why the need of such protection? And yet the ghosts these men see are weird beyond belief. The manufacturers of enamelware, for instance, put in their story the fear of competition from Japan, and yet the total value of imports of enamelware from Japan in five years was only $214. In one of those years we actually imported six dollars' worth of enamelware from Japan. This constant fear of competition from countries of cheap labour is childish. No nation will ever become a great commercial nation without rich and varied mineral and other resources. Providence has blessed Canada with great natural wealth; we ought to become one of the greatest trading nations in the world, and the desire of the government and the people should be gradually to scale down all needless trade barriers and go forth to meet the open competition of the world. We watch our manufacturers as they push the sale of their products in the world's markets, and we are proud of them; we see them as they go out to conquer and, as they are conquering abroad. Why do they stand and shiver at the thought of meeting foreign competition at home? They are willing to fly their commercial flags in the markets of the world; why allow them to hang at half-mast in Canada? Why should our Canadian consumers be compelled to bear the additional burden? Why not get down gradually to a strictly revenue tariff?

From the cradle to the grave we have had preached to us, through the medium of this customs tariff, the gospel of our inferiority. Talk about an inferiority complex; the very thought of the thing is humiliating. It reminds me of the attitude of the British boot and shoe manufacturers about 1907 or 1908, when they appealed to the British government for protection against the American boot and shoe trade, saying there was such an inrush of American goods that they already had established American branch stores and were rapidly driving the British manufacturers of boots and shoes out of their own home market. Of course the British government gave to those people the only answer a British government could give, that it would never do to burden the whole British people to benefit a few boot and shoe makers. This compelled those manufacturers to turn their attention in another direction, so they renovated their dilapidated plants and brought them up to date. They also remodelled the styles of their footwear and brought them up to date, and what was the result? In less than three years they had driven almost every American boot and shoe out of the British market, and even the American branch shops were selling British made goods. Even before the war they began to successfully invade the Canadian and American markets with British made goods. Such would no doubt be the effect of a well-considered, substantial reduction of the Canadian customs tariff. It has been so in the past. It was eminently so in the case of the automobile tariff reduction, in the face of the great hue and cry which closed the Oshawa shops for the moment and sent a great deputation to Ottawa, many of whom got lost in Hull simply because they did not seem to know whether they were walking on terra firma or in the moon.

This customs tariff in its application has been in many ways a species of the most glaring economic injustice. Ever since my boyhood days it has hung like a millstone around the necks of a great majority of our people, and more particularly the agricultural and labouring classes. Surely it is a thousand times more important to the welfare of Canada that we should have a healthy and prosperous agriculture than that any other industry should be able through the medium of a high tariff to wring undue prices from the consuming public. More than that, we find many applications before the board even from manufacturers seeking a reduction of tariff on their raw material. They admit that tariffs add to their costs; scores of them have asked relief on their necessary requirements, and we can readily see that relief to manufacturers may also mean relief to consumers.

You may ask whether agriculture is not now prosperous. The answer is that agriculture is not as prosperous as it ought to be, nor as prosperous as it might easily be made. While some farmers do not make the effort which they might make, yet with the present economic handicaps and the clamour for an eight hour day, a half holiday in the middle of the week, and two or three weeks holidays in the middle of the summer which those in other lines of life are getting, no farmer can make a success on the farm, and those who are making it go are the ones who toil from sun to sun, and whose women's work is never done. The man and his good wife who pledge themselves to each other for life and decide to make their livelihood by dairying and allied lines are entitled to every just consideration by the government. I have sat in the homes of those who are recognized as our most successful farmers, and have discussed the situation with those high-minded wives and mothers, who with the keenest maternal feeling have recounted the experiences of their life's toil, saying that it seemed not so bad when they were young and strong but was now almost unbearable. They have repeatedly appealed to me to know if I really thought they should advise their sons and daughters to stick to the farm and repeat their own experiences in life. Yet, Sir, the lasting welfare of this country depends upon the principles that underlie agriculture. What do we see to-day? All over this country agriculture is losing the best and brainiest youths from our rural homes, and it is becoming impossible to replace them with suitable help. We talk about the problems of government. Sir, the greatest problem before this country to-day is the problem of keeping our own people on the farm, not of keeping them in Canada. We hear much from our friends opposite of the trek to the United States. Such remarks are very unpatriotic and largely beside the truth. The greatest trek in our history was between 1881 and 1891 when the national policy of protection was in the very height of its glory.

Mr. GARLAND (Bow River): It is pretty high still, is it not?

Mr. McMILLIAN: As I say, this is a problem which stares us in the face. No one seems to want to discuss it but the time has come when the people of this country, and more particularly their representatives in this house, ought to discuss this problem and find a remedy for it. This is a national situation. If we look upon ourselves merely as the creatures of a day, what difference does it need to make to us if conditions are never any better? It will only be a few years until we too are off the scene. If we are here for any good purpose we are here for the welfare of posterity, and we should endeavour to make the conditions under which they will live better than the conditions which we enjoy to-day.

Mr. GARLAND (Bow River): Your place is over here.

Mr. McMILLAN: You people should come to this side. Sitting where you are now you are only holding back the wheels of progress, whereas if you took your places here you would be able to help them on. As I say, this is a problem which is staring us in the face and we must grapple with it. The facts are that throughout this Dominion agriculture is losing the best and the brainiest young folks from our rural homes, and it cannot lose them and prosper. It is far from my view of life that every youth born on the farm should remain there. I have discussed this matter with scores of our brightest young men, and they tell me the only reason why they are directing their course elsewhere is because they cannot see a sufficient margin of profit easily obtained on the home farm. That has been the case for years. It was the case when a big deputation of farmers waited on the Laurier government in 1910, but it is greatly aggravated to-day. In looking over the proceedings of that deputation the other day I find I then made the following observation:

> The farmers are willing to meet any legitimate competition in the labour market of the country. He does not wish to underpay the workmen. His desire is to remunerate them well. But when he is compelled to face a statutory tariff provision which takes from him

annually a margin of millions, and those millions are employed in competing with him on his own home labour, he cannot stand an unjust competition such as that.

Those conditions are greatly intensified to-day. You may ask: Where are those millions of which you speak, obtained by our tariff beneficiaries with which they are able to compete for our agricultural labour? In a moment or two I will give you one concrete instance, but the reply broadly is that other lines of industry are able to obtain their necessary requirements either free or at the lowest possible rates of duty. Why should the agriculturists be deprived of the same privilege? Is the welfare of agriculture a matter of such secondary consideration in this country that it should be required to take a subordinate position?

Mr. GARLAND (Bow River): Why does not your party carry all that out?

Mr. McMILLAN: They are carrying it out—

Some hon. MEMBERS: Oh, oh.

Mr. McMILLAN: —and they have been doing so ever since they got into power. The only reason why the hon. member and his friends are sitting over there is because they are trying to find a place in the sun for themselves.

Some hon. MEMBERS: Oh, oh.

Mr. McMILLAN: And at every opportunity they try to hoodwink us if they can. The hon. member for Bow River tried to hoodwink me when he wanted the support of Ontario to the subsidizing of the railways in the matter of bringing coal from Alberta. When I did not yield to his request what did he do? He stood up in this house and complained that I should not be allowed to place figures on Hansard without reading them.

Some hon. MEMBERS: Oh, oh.

Mr. McMILLAN: Now, Sir, I say that agriculture is largely a domestic industry. But it is far more than that. It is the one great uncontaminated seed-bed of our population. In this respect there is no other situation in life to compare with it. Should that not count for something in the social welfare? As I say, farming is largely a domestic industry. Consider its requirements! Take agricultural implements, machinery, building materials, food, clothing and other household requirements. These comprise over 60 per cent of the needs of our agricultural life. Take the first of these—agricultural implements. They have not a high duty, only from 6 to 10 per cent. But I ask this question: Is it of more importance to the welfare of this country that the implement makers should be given a preference and allowed to make money and grow wealthy than that agriculture should so prosper that it would present a good living and comfortable homes to the millions for which it is looking? Sir, the question carries its own answer. We do not ask a preference, but if there is a preference going, agriculture should have that preference, and in no case should agriculture be discriminated against. Agriculture employs one-third of our gainfully employed population. Therefore it follows that a successful agriculture means a prosperous nation. Moreover, it is the first principle in this tariff that those manufactured goods which are exported to foreign countries are given a drawback equal to from 60 to 99 per cent of the duty on the raw material used. That provision gives to the residents of other countries our own goods cheaper than our own people can get them. Where is agriculture allowed any such equivalent? The agricultural industry is by far the greatest exporting agency we have got. Where is it allowed any drawback on its products exported? Absolutely none. The only way by which you can allow any such compensating advantage is to give to agriculture its necessary requirements free. And implements are only one of the hundred and one other things in the line of machinery which the farmer requires which all carry a tariff burden of from 20 to 35 per cent.

Turn to another line. Take paint. One would imagine the rate on paint would be low. Paint is a prime necessity in national economy. It is the rawest of raw materials. It enters or should enter into the construction of almost every building in the land. Yet the duty on white-lead ground in oil, which is the real basis of paints, is 37½ per cent among the highest of all ad valorem duties in the tariff schedule. One would think the manufacturers would stand hand in hand with the Consumers League in removing such anomalies. But they seem to fear the slightest touch upon that frail structure of protection.

Mr. GARDINER: What about the government?

Mr. McMILLAN: My hon. friend talks about the government. That talk is in line with their amendment. They want everything done to-day, and they will never get any further when they adopt that attitude.

Mr. GARLAND (Bow River): We want something done.

Mr. McMILLAN: It will be only a few years before my hon. friend will be no longer in the sun but will be in the shade. Let me say that protection as applied to trade and industry is a misnomer. Prevention is the proper term. Perhaps that is the reason why our hon. friends across the way dropped the word "protection" entirely at the Winnipeg convention, but every argument which is presented has that principle in ambush behind the shade.

Let us consider the cotton industry. That has already been placed before the house, but for the purpose of my argument I am going to place it again. The protection in Canada on manufactured cotton goods under the general tariff is not far from thirty per cent, and is sometimes more. Every time a Canadian workman buys a piece of cotton cloth in Canada he pays an exorbitant price as compared with the world price of those goods. Apparently, however, the cotton lords do not appear to think so. Their viewpoint was very clearly stated before the tariff board by that eminent Montreal lawyer, Mr. Aime Geoffrion, when he said in speaking of wages as a factor in the cost of production:

> As a matter of fact we deny the principle involved in the suggestion, if wages are to be considered, everything spent in Canada should be considered. In other words, all that is a factor. In deciding what should be the measure of protection, it can only be on the suggestion that there is money spent in Canada by which the consumer benefits. So, in that way, there is no distinction made between wages and salaries, purchases from local merchants, and any other expenditure in Canada.

In other words, the contention is that the people of Canada, the consumers, should provide the manufacturer of cotton goods with everything except his raw cotton. There is not other way we can do this than by paying an exorbitant price for our cotton goods. That is what we are doing now, and that we are doing it to the full limit of the tariff there is ample reason to believe. At the recent cotton hearing, the chairman pointed out that there was clear evidence that the manufacturers were in some cases taking full advantage of the tariff, and yet, according to their story, it is absolutely impossible for them to survive. Have they survived? Yes. Is the Canadian Cottons, Limited, doing well? This is their financial statement as summarized in the Financial Times:

> The balance sheet of Canadian Cottons, as of March 31, 1927, shows a surplus of $2,737,563 equivalent to over $100 a share on the 27,155 shares of common stock. In addition there is shown among their liabilities an item of $600,000 for special replacement reserve, despite a generous reserve for depreciation. If this sum was added to the surplus, the latter would be shown to be equal to $123 a share on the common stock.

Yet they would lead us to believe that they are going broke.

Let us consider the Dominion Textiles, Limited, the story of which company records some of the most remarkable adventures in Canadian financial and industrial history. The present owners paid $500,000 for stock with a par value of $5,000,000. Year after year they paid dividends on its par value. Then as the stock went up in price they gave to every holder of two shares the right to purchase an additional share at par when the stock was selling far above par. A year ago they split the stock in three; that is, every shareholder got three shares for one, and to-day that stock sells on the market for $130 a share. The company has a capitalized valuation of $29,000,000, and in all the years since it was formed only $3,000,000 has been paid for the stock. If we measure the profits paid to-day against the actual amount of cash paid by the original owners, we find the actual earnings of Dominion Textiles, Limited, to be in excess of 220 per cent. But that is not all. How fared this company in the hour of the nation's peril when it was expected that every citizen and more particularly every wealthy corporation should be doing everything possible to strengthen the allied cause? At page 362 of the evidence in the report of the special committee on the cost of living which sat in 1919, the then president admitted that the company earned a dividend of about 291 per cent. This is only one line of industry which has been considered and reported upon by the tariff advisory board, but the information is startling. Is it not time that a halt was being called on behalf of the consuming public of Canada to this kind of thing? In these lines of goods it would pay the Canadian consumer well to keep the extra margin which these cotton duties compel him to pay, with that margin pension every wage earner in those factories to the full extent of the wages they receive and let them go idle all the year, and they would still have a good surplus left.

In the case of agriculture employing one-third of our gainfully employed population, it follows that those engaged therein must bear a large part of that burden. Let us turn the tables for a moment or, as a schoolboy would say, "Turn about is fair play." Surely no one will contend that the cotton industry is of more importance than agriculture. How would it be if we now suggest paying the wage bill of those employed in agriculture, let alone an annual dividend of 291 per cent

of the cash price of the land? Would not that proposition, if carried into effect, "Make Farmer John a smile put on?" Why, the problem would be solved. You could not keep the people off the land.

I conclude by asking the same question which I put earlier in my remarks: Is it not a thousand times more important to the welfare of Canada that agriculture should be so prosperous that it would present a good living and comfortable homes to the millions for whom we are looking, than that any of these other industries should be able to grow wealthy at the expense of agriculture and the general consuming public? We have abundant economic proof that agriculture is not as prosperous as it ought to be? We are all agreed that at the moment we have, generally speaking, prosperous times in this country. Apart from the capital now in Canada seeking investment, foreign capital is rushing in by the hundreds and millions. Where is it being invested? We have just passed the new year, and we have noticed writers galore expatiating on the good times the country is enjoying and the fine opportunities for the investment of capital. Have you noticed anyone saying that capital, in large amounts is rushing in for profitable investment in our rich agricultural lands, the finest natural asset this country possesses. Yet that is where we all agree that more of our people ought to be and, moreover, if the people could see a sufficient margin easily obtainable, that is where they would be. You could not keep them off the farms; they would be falling over each other to get on the land.

If we are desirous of seeing more of our people on the land, why stand shivering on the brink of doing what ought to be done? The vital importance of successful agriculture is such that farming is far more than an industry. The significance of agriculture in the life of this nation is far deeper than this. Employing as it does about one-third of our gainfully employed population, it touches something really vital and fundamental in our national existence. It involves the continued national prosperity, the economic welfare, the racial character, and the social progress of the Canadian people. We must as a people determine, and it is the duty of this house as the servants of the people to determine, deliberately and wisely the role we wish to have agriculture play in our national economic life. Now is the time to decide. You cannot do this kind of thing during periods of dull times. You can do it only when times are prosperous and trade is buoyant. The golden opportunity has come, and it is the bounden duty of this government, now when it has begun the work, to take opportunity by the hand and go to it deliberately and wisely. If we wish to see agriculture thrive and prosper and present a good living and comfortable homes to the millions for whom we are looking, then free it from its present unjust economic restrictions. If this is not done, it may well be said that what is badly needed, not only throughout this country but in this house, is such a readjustment of national ideas as will place agriculture and its claims to the best intelligence and the highest skill of our people in the very forefront of national thought. When that reawakening is sufficiently emphatic—and God speed the day of such an awakening, that it may come ere the progeny of the noblest pioneers who ever settled any country have all deserted the farms—there will then be no more hastening away from the farm, but rather such a just conception of agriculture as our main resource and our most dignified and independent vocation as will attract to its just aim in the improvement of methods, the increase of yields, and in the clearing away of the unjust restrictions which lie across its path, the wisdom and the science and the willing hands of millions, who may then obtain a just remuneration for their labour, and at the same time hand on to posterity an unimpaired inheritance.

Mr. J. A. CLARK (Vancouver-Burrard): Mr. Speaker, though my remarks will be critical in their nature, I do not want it thought that I am not grateful to Providence for the bountiful crops which we have had during the past few years, nor that I am not extremely grateful for the influx of capital into this country as well as for the use of Canadian capital in developing our mines and our natural resources, nor that I am ungrateful also for the great energy displayed by our people in the development of those resources. I do not, however, admit that in the development of those resources this government has had any hand.

I cannot hope to analyze in detail the budget brought down by the Minister of Finance, but I must take note of a few of its salient features.

First of all, I would like to point to the method by which the Minister of Finance has arrived at his surplus. I see in the public accounts a certified statement by a firm of chartered accountants that the net debt of the Dominion does not include the issues of the Canadian National Railways guaranteed by this government. I find that those guaranteed issues have, since the present Minister of Finance took office, amounted to $200,000,000. True, $34,000,000 was in the nature of the

refunding of an indebtedness due by the Grand Trunk Pacific, which was not previously guaranteed by this country, and another $20,000,000 was for refunding of issues which were guaranteed; so that allowing $54,000,000 for refunding, there has been added to the indebtedness of this country by guarantees the sum of approximately $146,000,000.

Now the Minister of Finance over the same period claims a reduction in the net debt of the country of $105,000,000. Actually if those guarantees were added to the net debt of the country, as they should have been, we would find that there has been over the period during which the Minister of Finance has held office a deficit of some $45,000,000 to $50,000,000, which is not shown in the statement presented by the Minister of Finance this year or in any year since he took office.

I find also that since 1925 there appears to have been a reckless tendency on the part of this government to increase its expenditures. The public accounts disclose that for 1925 our total expenditures amounted to some $339,900,000. That sum increased in 1928, estimated, to $366,000,000, and taking the estimates for the current fiscal year, which are now before the house we find that that amount is still further increased to $373,796,000. If you allow $12,000,000 for supplementary estimates, a fair average, we find that the total expenditure for 1928-29 will be approximately $385,796,000—a total increase since 1925 in this country's expenditure of approximately $50,000,000. I do not think that members of this house can emphasize too strongly this fact, that there has been an increase of $50,000,000 in the country's expenditure in those four short years. And what have we to show for that increase?

I have heard it observed by speakers on the opposite side of the house that this is the people's budget. I suppose that we can assume that the farmers of this country form part of the people, yet what do we find in this budget that is of value to the farmers? I have read and reread this budget, and I have at last found that the Minister of Finance did not forget the farmers. I find an item which does relate to the farmers and which is supposed to benefit that great class, for whom the Minister of Finance must have very strong feelings because the item is the first one in the new schedules, reading:

> Small onion plants grown from seeds and imported for bona fide transplanting or propagation purposes.

These are put on the free list, and that is the one and only item in this budget which relates to the farmers of this country or is supposed to benefit them. The only conclusion to which I can come is that the Minister of Finance must be personally fond of onions, and I am wondering why he did not add pea soup.

I think we might also include among the people of this country the employed classes. I find that the family budget to-day is as high as it was five years ago; I am not so sure that it is not higher, but at any rate there has been no reduction in the cost of living since this government took office. But worse than that. In the manufacturing industries of this country there were in 1910, 515,203 employees in industrial establishments. Taking it by five year periods, I find that in 1915 there were 514,883 employees, and in 1920 that number had risen to 609,586. In case it may be thought that I am taking a peak year, I will give the figure for 1917, in which year there were 621,694 employees in the factories of this country. In 1924, the last year for which the figures are available, we find that in the industrial establishments of this country there were 508,503 employees, or some seven thousand less than in the year 1910. I ask the government, Does that indicate progress? There is this reduction despite the fact that we have in this country a new and great industry, the automobile industry, and its allied industries, such as the rubber industry and other new industries, which did not exist in 1910. Obviously, since this government took office it has destroyed many of our industries. The best evidence of that is to be seen in the empty factories throughout the country. But there are the figures. I asked the Bureau of Statistics for them, and I went back and had them rechecked to make sure that they were given on a comparative basis.

Furthermore, my friends on the left and the Minister of Finance also have emphasized another point—reduction in taxation, brought about by this so-called "people's budget". One of the big reductions we are told is in the income tax. I find that to-day the income tax affects only 116,000 of our people, or a little over one per cent of our total population, and they are the wealthy classes. Does that reduction in taxation indicate that this is a people's budget? Are the payers of income tax the common people that the Minister of Justice (Mr. Lapointe)—who, I presume, is now leading the government—was working to benefit when he assisted in bringing down these budget proposals? I see the Minister of Immigration (Mr. Forke)—not in his seat, but in the house; was he working for the common people when he put his imprimatur upon these budget proposals? How about the poor people who are affected by the sales

tax? True, the sales tax is reduced by one point, but it is still at the level at which the government found it when they took office. Our people are in the same position in relation to the sales tax as they were when the Liberal party took office, and it is high time that the sales tax was wiped out if the government desires to benefit the common people. The other great reduction in taxation that is claimed by our friends opposite has to do with the business profits tax. Two years ago this tax stood at 9 per cent; last year it was reduced to 8.1 per cent; to-day it is still further reduced to 8 per cent. Now, what does that mean? It means simply this. A business which made a profit of $10,000 last year paid a tax of $810; as a result of the budget proposals that business will get the advantage this year of the great reduction of $10—it will have to pay only $800 on its $10,000 profit.

One of the most noteworthy statements made by the Minister of Finance in his budget is this:

> The value of working for closer trade relations within the empire is surely apparent.

And he quotes these figures for the fiscal year 1927: our sales to the empire, $542,000,000; our purchases $214,000,000—a balance in our favour of $328,000,000. I agree with the Minister of Finance that it is worth while working for closer trade relations within the empire. But it would be amusing were it not tragic to analyze the way in which he has proceeded to work for these closer trade relations. During the time he has been in control of the Finance department he has made eight trade treaties, six with foreign countries. As a result of those eight trade treaties he reduced our favourable trade balance in the calendar year 1927 by $23,000,000 compared with the figures for the calendar year 1926. This seems to me like a hand-out to foreign countries, but that apparently is the policy of the minister and the policy of the government. It looks like a foreign improvement policy, rather than an attempt at working for closer and better trade relations within the empire.

Let us take these eight trade treaties and deal with them in order. Two of them are with British dominions, Australia and New Zealand. Let me take Australia first. In the calendar year 1927 our exports were $2,300,000 in round figures, less than in the previous calendar year; our imports were $1,200,000 more—or a decreased favourable trade balance of over three and a half million dollars. New Zealand: our exports for the calendar year 1927 were nearly $3,700,000 less than in 1926; our imports were $2,000,000 more—a decrease in our favourable trade balance of $5,700,000. Belgium: for the calendar year 1927 our exports decreased $3,400,000; our imports increased $1,200,000—a decrease in our favourable trade balance of $4,600,000. France: This is really the most illuminating of all, because if we go back to the time when the treaty came into force we shall find that we had a favourable trade balance of $7,000,000. For the calendar year 1927 we have a favourable trade balance changed into an unfavourable trade balance of seven and a half million dollars. In other words, in the calendar year 1927 we decreased our exports by $3,500,000; we increased our imports by $4,000,000—or an increased unfavourable trade balance of $7,500,000. British West Indies: The same story. The favourable trade balance for the calendar year 1926 of $715,000 is changed to an unfavourable trade balance of $1,500,000. Japan: We decreased our favourable balance by $8,668,000. With only two countries do we find that we have improved our trade—Italy and The Netherlands. With Italy we increased our favourable trade balance by $8,500,000. Let me point out to my friends to the left that that is represented mainly by the increase of $7,941,000 in our wheat exports for the calendar year 1927 as compared with 1926. That great increase was due to the failure of wheat shipments from Odessa. The same thing is true of The Netherlands. We increased our favourable trade balance by $660,000, but this is more than accounted for by the fact that we increased our wheat exports by $4,000,000, due again to the failure of wheat shipments from Odessa. The day is coming, I fear, when Russia will come back into the world's wheat markets. Only one thing is hindering the return of Russia into the wheat market of the world, and that is the lack of unity within that country, due to the fact that Russia is composed of more than two hundred races that cannot unite politically or economically. But should they ever be able to unite economically, think, Mr. Speaker, of the menace to this country in our foreign trade in wheat and other commodities.

But, sir, more serious than that, something which in my view transcends in importance every other problem that confronts Canada to-day, is the situation in regard to immigration. Here I challenge our Prime Minister (Mr. Mackenzie King) to point to any other five-year period in the history of the Dominion when the emigration of Canadians

to the United States or to any other country exceeded our immigration. Yet that is the situation in the period between the fiscal years March 31, 1922 and March 31, 1927. I have heard this sneered at by members on the other side, but according to the figures secured by myself from the Bureau of Statistics—

Mr. DUNNING: Of the United States?

Mr. CLARK: Yes; but does my hon. friend doubt the official figures compiled by the immigration department of the United States?

Mr. DUNNING: No, but I question your use of them.

Mr. CLARK: Do I infer that the Minister of Railways doubts that I am quoting them correctly?

Mr. DUNNING: No.

Mr. CLARK: Then the minister is indulging in empty talk. These figures show that 591,121 persons, including Newfoundlanders, entered the United States as immigrants in a given period. We can secure figures in regard to Newfoundlanders only for the last two years, but they would indicate that about 2,000 Newfoundlanders go to the United States per annum. Allowing, say, 7,000 for the previous three years—I am quite prepared to allow 10,000 Newfoundlanders, but let us say 7,000. We find that 11,257 fewer people came into the country than went out. I suppose the Minister of Railways will say, "But think of the returning Canadians!" I have heard the Prime Minister and every other minister on the other side say the same thing. But I took the precaution to get these figures from the Immigration department and I am not afraid to give them; I do not mind giving them. I would ask hon. gentlemen opposite, however, to recall that Canadians have been going to the United States since confederation, and while some of those may be among these returned Canadians they are not classed as immigrants. If they were once Canadians and they have come back they are not entered as immigrants, at least according to the information given me by the department. Last year, our Immigration department claims 42,078 came back from the United States. They are returning Canadians, and I fancy it would be very difficult to tell whether or not they are all Canadians who went to the United States as immigrants.

Now there was a time, only ten short years ago, when the blood of a Canadian was a matter of some consequence in this country. Canadians then took very much to heart, the tragic fate of our 60,000 dead who were laid to rest in the battlefields of France and Flanders, not to mention 50,000 permanently injured. It was freely predicted then that Canada could not stand the strain on her manhood but under this government, according to the official statistics of the United States, we have suffered nearly 800,000 casualties; and if the truth were known, including the underground route we have lost at least a million to the United States. And practically all these casualties sacrificed to the United States were native-born Canadians. But the greater tragedy is that they are in the United States competing with this country.

How are we replacing these Canadians? I further challenge our Prime Minister to point to any speech he has made in this house—and I have searched Hansard—or to any speech he has made in the country, or to any act on the part of this government, wherein this problem has been grappled with in a fair-minded, broad, constructive manner. All I can find in Hansard are empty statements that Canadians are returning, together with suggestions to the effect that members on this side of the house are unpatriotic in bringing the question to the attention of the country. Well, Mr. Speaker, if I am responsible for keeping one of these intending immigrants at home, I shall be content, providing I can influence the government to any extent in grappling with the question and endeavouring to keep our Canadians in this Dominion.

Let us see how this government has dealt with the question of replacing Canadians. I take the last fiscal year as an example; I presume that it must represent the policy of this government, though as a matter of fact no policy has been announced. However, I presume that these figures will indicate at least the desires of the government. The Minister of Railways laughs, as he usually does, but the fact is that last year was the one year since confederation when more foreigners entered this country than British and Americans combined. Is that something to laught at? Perhaps it is to the Minister of Railways, but to no other Canadian.

Mr. DUNNING: Mr. Speaker, I object to the remark; it is entirely uncalled for.

Mr. HANSON: It is not out of order.

Mr. DUNNING: Many dirty remarks can be made which are not out of order.

Mr. CLARK: If the Minister of Railways will contain himself and not smile at such tragic things confronting Canada these remarks will not be made.

Mr. DUNNING: I am not smiling at any tragedy but at my hon. friend. I am at liberty to smile at him.

Mr. CLARK: And I am at liberty to interpret my hon. friend's smile.

Mr. DUNNING: That is right.

Mr. CLARK: Now I will give a few of the figures. I find that of English people—I am not going to consider every race, but I take the English because there are more English than other British races—24,890 came into Canada. There were 15,222 of German origin, and of these 12,540 came from Germany and 2,682 from the United States. I find that there were 4,863 Jewish, 3,466 Italians, 4,941 Magyars, 6,700 Poles, 10,061 Ruthenians, and so forth. I will not go through the whole list. I want to say at once that I am not reflecting upon these people; they are in all probability the most admirable of their race that can be found. I repeat, I am not reflecting upon them. I suggest, however, that if you mix, as are mixed in Russia, all the races of the world, you cannot expect that unity which we all desire. It cannot be achieved under such conditions; it would take generations to assimilate these people into anything like a united whole. That is why I refer to this aspect of the question. And now let me give a list of others who entered the country last year. There were Albanians, Austrians, Bohemians, Bulgarians, Croations, Czechs, Dalmatians, Esthonians, Finnish, Greeks, Italians, Jews, Jugo-Slavs, Letts, Lithuanians, Magyars, Maltese, Mexicans, Moravians, Poles, Portuguese, Rumanians, Russians, Ruthenians, Serbs, Slovaks, Spaniards, Turks, Arabians, Armenians, Chinese, Japanese, Negroes, Persians, and Syrians.

Mr. FORKE: You have left out the Scandinavian races.

Mr. CLARK: I said I would not name them all.

Mr. FORKE: You left out the best ones.

Mr. CLARK: Perhaps I did; I am quite in agreement with the Minister of Immigration. There are no immigrants more admirable than the Scandinavians, with the exception of the British. I am not reflecting on any of these people; I am only pointing out the danger of bringing in too many of them when we have another country to which we can look.

I have heard it freely said that you cannot get the British immigrants here. Just let us see what the Australians have done; I will just give you the total number of British immigrants into Australia year by year.

1920	86,116
1921	76,674
1922	80,278
1923	80,926
1924	84,252
1925	82,662
1926	90,562

The figures for 1927 are not available, but at all events over 90 per cent of the total immigration into Australia has been British. I point to this as an answer to the statement which has been made that we cannot get British immigrants.

Mr. DUNNING: Did Australia have a greater British immigration than Canada during those years?

Mr. CLARK: Yes, much greater. Let me quote the figures for the same years, showing the immigration of British settlers into Canada:

1920	59,603
1921	74,262
1922	39,020
1923	34,508
1924	72,919
1925	53,178
1926	37,030
1927	49,784

Now, what is the irresistible conclusion to be drawn from these figures and from the exodus to the United States? There is only one conclusion, and that is the racial complexion of the Canadian people is changing, and changing at such an alarming rate that we cannot stand very many more years of it if we are to remain an Anglo-Saxon and French race. I wonder if this situation appeals to my hon. friends from Quebec; I do not think it does. I firmly believe that they appreciate the fact that the Anglo-Saxon has been the fairest, truest and most broad-minded friend the French have ever had, and I really believe in the heart of every French-Canadian is the desire that, apart from the French-Canadians themselves, the Anglo-Saxon shall be predominant. I do not think there are many in the province of Quebec, I doubt if there would be a handful, who would follow the hon. member for Labelle (Mr. Bourassa), who says that if we want to bring about secession in this country we should bring in the British as immigrants. No, Mr. Speaker, there are not many of that type, because it has been too lately proven on the battlefields of France that the British race is most versatile and adaptable and possesses the greatest power of endurance, much greater than that required by immigrants into this country. The British adapted themselves to circumstances previously unknown, and proved themselves to be the

best on earth. Let me recall the statement made by Marshal Foch, who said that it was the "hammer blows of the British army" which won the war, or words to that effect. They are the men, Mr. Speaker, who, it is sometimes suggested, are not fit to be immigrants to this country. No man can convince fair minded Canadians that the average Britisher is not loyal to the empire, that he does not understand the principles of British fair play or that he is not three generations ahead of every other available immigrant in suitability as a prospective citizen of this country.

In addition to that, Mr. Speaker, when the Britisher comes here he stays with us. I recall the figures placed on Hansard two or three years ago by the member for Victoria (Mr. Tolmie), which have never been controverted and as to which there has been no suggestion of inaccuracy. Those figures covered the period from 1900 to 1921, and of the various races entering this country we find that 77 per cent of the American born left while 23 per cent remained; 52 per cent of the foreigners left and 48 per cent remained, while only 36 per cent of the British left and 64 per cent remained. Surely these facts indicate the suitability of the British immigration and that we can and should attempt to secure them.

Now, Mr. Speaker, I appeal to this government to adopt the policy of the Australian government. I appeal to our Prime Minister to forget his constitutional theories, and with all the sincerity in my soul I ask him to go to the next Imperial conference determined to take a leading part, and to sit down with the representatives of the British government and ascertain whether there is not something that can be done to bring about a much greater British immigration to this Dominion, and to all the British dominions, for that matter. Furthermore, I appeal to him to promote those trade relations to which the Minister of Finance referred, by every means, to see if we cannot band together this British empire into an economic entity which will set an example to the world at large.

Mr. H. B. ADSHEAD (East Calgary): Mr. Speaker, I was very much interested in the statements made by the hon. member for East Lambton (Mr. Fansher) yesterday, more especially as he seemed to base most of his remarks on the Liberal platform of 1919. He stated that he stood by that platform, and as one of the Labour party who has perhaps been suspected of being somewhat more favourable to the Liberals than to the other party I felt that I was not quite so lonesome after the hon. gentleman laid the foundation for what he said on the Liberal platform of 1919. I am not ashamed to say that I do adhere to the Liberal policies. In fact my leader has on more than one occasion seen fit to introduce me to some of his friends in this peculiar phraseology of his: Allow me to introduce to you my Liberal-Labour friend, or what would be called in the old country a Lib-Lab. So that I propose to discuss this question this afternoon from a Liberal standpoint. I am not ashamed of Liberal policies, but I am ashamed of Liberal practices. During the years when I sat close to Doctor Clark, who was perhaps one of the ablest exponents of free trade and Liberalism that this country has ever seen, nothing was greater gall and wormwood to me, and to others in our district, than to have the hon. member for West Calgary (Mr. Bennett) come to our meetings and very truthfully tell us that for years and years the Liberal party had been urging the lowering of the tariff, but when they had the opportunity they only lowered it about one-tenth of one per cent on the whole. Last year I think I made the remark that in 1911 those who believed so strongly in protection had crucified Sir Wilfrid Laurier on the cross of protection. To-day it is obvious that another crucifixion is taking place which is even more important, and that is the crucifixion of Liberal principles.

A great deal was said in the budget speech about our expenditures, and there were many references to the annual financial statement in regard to our prosperity. I am very glad to be able to congratulate the Minister of Finance (Mr. Robb) upon his ability to meet those expenditures and still have a surplus. I am not going to attack the budget to-day along that particular line. I am critical not so much of the surplus on hand, but of the steps which are being taken to meet our obligations. That I think is the crux of the situation, and that is the point I intend to deal with in my address. There has been a great deal of attack upon the income tax. I have received protests against the income tax from the retailers' association, and others, and one of the salient arguments advanced was this: If the income tax were abolished we should be able to put more money into industry. That is quite true. If all taxes were abolished I am quite sure we should be able to put more money into industry. I should be very glad to see all my taxes abolished because I should be able to engage in business to a greater extent than I am able to at present. I do not, however, see that as any particular argument. We must get money

from somewhere to meet our obligations and the question is, where is that money to come from? It is upon the subject of this diminishing income tax, and the promise of still further reduction in that taxation, that I propose to make a few remarks, and I hope not to take forty minutes. Perhaps if we turn to what other countries are doing in this matter we may be able to form some idea as to where Canada stands. I hold here a statement made by an expert in financial affairs, to the following effect:

In England 45 per cent of the total revenue —an enormous sum—comes from inheritance and income taxes—including the super taxes. Sixty-four per cent of American tax revenues are from income tax—in Canada less than 14 per cent. The groans of those who bear this burden, much of it falling upon war profits, have melted the heart of the Minister of Finance. There is a 10 per cent reduction in income tax and, on balance, practically nothing in tariff reductions. There is also the definite warning that unless Liberalism asserts itself the income tax will disappear within a few years and wealth untaxed rule the roost. We have heard for a long period of time the contention that the tariff could not be lowered. We have been told that the necessities of the revenue prevented such action. We see now the hollowness of the argument. We have in the income tax a steady and unfailing source of revenue. Year after year it has been cut. In 1927 it brought to the government coffers over $48,000,000. It has proved itself in England and the United States the backbone of an efficient system of taxation. There is no justification for its reduction to-day. To reduce the income tax while the tariff remains as it is, is a budget decision which will meet with scant approval from forward looking people throughout Canada.

That is the opinion of an expert in taxation matters. However, I think we ought to go back to an earlier date than that of this statement. I took occasion the other day to read the addresses of those hon. gentlemen in the Liberal ranks who supported the income tax when it was inaugurated in 1917. I notice that Sir Wilfrid Laurier, the late Mr. Carvell, and Mr. A. K. Maclean, of Halifax, supported the proposal. I also note that you yourself, Mr. Speaker, made a very eloquent appeal in favour of the income tax on that memorable day, July 25, 1917. I propose to read to the house the opinions of Liberals upon the subject of income tax when that form of taxation was brought into force. On page 3767 of Hansard of 1917, I find the following remarks by Mr. Maclean:

One great value of this form of taxation will be that the taxpayer will take a greater interest in the expenditure of any money which he contributes directly to the public treasury. One of the evil effects of indirect taxation is that the taxpayer is apparently never fully seized of the fact that he is contributing anything in taxation to the public treasury. . . . It is in the interest of sound national finance that we should have in this country some form of income taxation, and I have no doubt that once we have embarked upon it, the judgment of the country will be that it should be continued for many years to come.

He went on and said that if the country feared that the income tax would impede immigration such a fear could be easily removed by lowering the rate of customs duty which was excessive. I maintain that that is exactly the position which we in this corner of the house take. That was the position of the old Liberal opposition, but it appears to me that the Liberals have forsaken that policy and are decreasing the income tax but not lowering the tariff. Then too, Mr. Carvell, at page 3770 of Hansard of the same year, said that the income tax had become an institution in Canada. He added:

I was glad the minister did not state he would abolish it at the close of the war. It will never be abolished, because the good sense of the people of Canada will see it is kept in effect for all time.

In spite of these declarations by Liberals we find the present Finance minister declaring in the budget speech that he is not only reducing the income tax 20 per cent but proposes to pursue a policy by which the income tax will be by degrees eliminated entirely. The hon. gentleman who now occupies the position of Speaker of this house supported the income tax in these words:

I warned my hon. friend a year and a half ago when he introduced his business profits tax that he would yet have to come to the income tax, which of all taxation measures is the most natural and fairest. According to the best authorities, such as Adam Smith and Thiers, the income tax is the least objectionable of all systems of taxation, because it makes no distinction as between the taxpayers.

Then further he says:

In spite of the hopes of my hon. friend, bright as he thinks they are, I really believe that the income tax has to-day entered into the politico-economic system of Canada, to stay there for many generations.

Those, Mr. Speaker, are the opinions, the policies, of those old-time Liberals, shall I say, who stuck to Liberal policies, Liberal principles and did not do as Goldsmith, I think, said:

Unskilful he to fawn, or seek for power,
By doctrines fashioned to the varying hour.

By those old Liberals, by those who stuck to Liberal principles and voted for them, the income tax was thought and said to be a sound economic Liberal principle, and it was expressly stated by them that reductions, if they

ever did take place, should take place not in the income tax but in the customs duties.

But I go still further. I notice that the Minister of Finance in addressing the interprovincial conference made some rather startling statements directly in connection with the question of the public debt and the income tax. On November 9, the Minister of Finance was discussing in the interprovincial conference the debt of Canada, and this is a precis of what he said:

> The minister took the conference into his confidence with respect to the war debt which to-day amounts to $1,694,621,687 with an annual cost of carrying including fixed charges of $162,799,000. The special taxes imposed for the purposes of carrying this burden failed to meet it by the sum of over $6,000,000. The minister stated that out of the total cost of administering Canada, its railways, its canals, subsidies, etc., paid out since confederation, 36 per cent represented the cost of Canada in the war.

He went on further:

> There had been nothing to do but to impose new taxes or to repudiate the debt.

Prior to the Minister of Finance suggesting or mentioning repudiation of debt at the interprovincial conference, the only mention I notice made of repudiation was in 1917. It must be borne in mind that the income tax was imposed for one purpose, namely, to pay the war debt, and it was to be left on until the war debt was paid. When the Minister of Finance states that he must seek for new taxes in order to meet those debts, I do not know wherein he is consistent when now he wants to abolish a tax which was inaugurated for the purpose of meeting the war debt. He goes on further and this statement of his is still more extraordinary:

> The minister stated that Canada was faced with the following maturities: 1928, $53,000,000; 1929, $60,000,000; 1930, $20,000,000; 1931, $77,000,000; and 1932, $73,000,000. He hoped that if revenues were maintained and the country continued to grow to materially reduce, if not retire all these obligations. The great difficulty came however in 1933 when the sum of $446,000,000 came due, and in 1934 when the sum of $535,000,000 came due. . . .
>
> Coming to the much disputed question of the income tax, Mr. Robb dealt with the contention that it was opposed to the spirit of the British North America Act because it was an invasion of the direct field of taxation.

But this is the point. In face of all the statements made by those worthies of old who inaugurated the income tax for the express purpose of meeting the war debt and of the Minister of Finance himself acknowledging that the obligations which matured increased year by year and that in 1933 and 1934 the obligations which matured were so great that he hardly knew how to meet them, except, as he stated, by imposing new taxes —in the face of all that, he deliberately, against the policy of the Liberal party, attempts not only to reduce the income tax by 20 per cent to-day but to continue reducing that very measure which was introduced into the house for the purpose of meeting war obligations.

How will these obligations be met if the income tax is wiped out by 1934? There is only one other way of meeting them and that is by means of customs duties, although the Liberal policy, as stated, proclaimed by the Liberal party, states that the income tax should be retained and that if any reductions are to take place they should take place not in the income tax but in the tariff. The minister made the further statement that we should not forget that in connection with the national debt the generation which spent the money should not shirk its responsibilities. In view of what I have stated; in view of what the policy of the Liberal party was when the income tax was inaugurated, and in view of the declarations of Liberal leaders that if there is any shirking of the payment of those obligations, I maintain the responsibility lies with those who have the most money with which to pay them, and that the burden should not be placed, as it is under the customs tariff, on the consumer who is the least able to bear it.

Having put forward that argument, I make the plea that the income tax should not be reduced and that, if there is a way out without endangering the government or lowering its dignity, the 10 per cent which has been taken off should in some way be restored. It was with a heavy heart I heard the Minister of Finance declare that he was going to reduce the income tax by another 10 per cent, and that further reductions were going to be made, especially when I knew that this was contrary to true Liberal principles and to the ideals of those people who inaugurated the tax and supported it for the express purpose of meeting war debts and obligations. If the income tax had not been touched, speaking for nobody but myself, I should have seen my way to support the budget; but I feel, with the giving up of the absolute principles of Liberalism, I cannot support the budget and I must support the subamendment of the hon. member for East Lambton (Mr. Fansher).

Perhaps the Minister of Finance will consider the suggestion that in the committee he might add that 10 per cent on again, even if he distributes it to the provinces. The provinces claimed in the interprovincial conference that the income tax, being direct taxation,

belongs to them. The British North America Act however states that the federal government has a perfect right to enter any field of taxation it may desire. I believe there is a way out and moreover I feel convinced, if we really knew just the hearts and minds of my hon. friends opposite, there is a good deal of misgiving among those who may support the budget, that Liberal principles are being sacrificed, and the reduction in the income tax is not at all to their liking. They are perhaps in the unfortunate position of having to vote for something they do not like rather than embarrass the government, or would they rather embarrass the government and stand by their principles? I should not like to see the government turned out. It is unfortunate that sometimes we have to choose between one of two things, between violating our conscience and embarrassing the government, and sometimes as the lesser of the two evils we violate our conscience. In view of the fact that a 10 per cent reduction took place in the income tax last year, against which we protested strongly and moved an amendment which should have served as a warning to the government that such a practice would not be countenanced again so far as we were concerned, and knowing as I do the hearts and minds of the people of my constituency, the people of the Labour party, if you will, and all who are true Liberals, and who have expressed their opposition to any further reduction in the income tax, I feel that I should not be doing my duty to my conscience and towards my constituents if I did not oppose as strongly as I can this reduction.

I am sorry the Minister of Finance is not in his seat at the moment. The Minister of Railways was in the house a few minutes ago, but has gone out. I know that we back-benchers do not command very much attention, although we do get on Hansard. I am sorry the Minister of Finance is not here because I wish to refer to a statement that he made in Calgary last year. It was such an extraordinary statement that I took it up not only with my Labour friends but with my Liberal friends as well, and they were astonished because the minister's statement indicated to them, as it did to me, the attitude of the minister and his viewpoint on the income tax and incorporation tax. He made the statement that the reduction in the tax had saved to the corporations of this country $30,000,000, and went on to say that that $30,000,00 would no doubt gradually sift down right through to the man at the bottom. Unfortunately, that seems to be directly contrary both to Liberal principles and the actual facts of the case. Mr. Bryan in that excellent book of his, The Crown of Thorns and Cross of Gold, made the statement that there were two methods of distributing wealth: One was that it should gradually sift down from the top to the person below, and the other was that it should go from the producers upwards until it reached those at the very top. It is evident that the latter way was the one the Liberals had in mind, whether or not that is their idea now, that the primary producers should first receive their share of the wealth they produce. But now we have the Minister of Finance say that the reduction he had made in the tax had saved the corporations $30,000,000, which would no doubt sift down to the man below.

Dealing with the tariff for a few moments, I was very glad to hear the excellent speech this afternoon of my hon. friend from South Huron (Mr. McMillan). He asked us why we did not go and sit over on that side of the house. We might equally well ask him why he does not sit over here. It does not matter where we sit; it is the principle we are supporting that matters. I assure him that if the gentlemen on his side will make a serious attempt to persuade the government of the necessity of putting Liberal policies into practice, he will receive all the support that it is possible for this section of the house to give, but he will not receive that support if the government simply go on year after year professing what we have heard to-day and for the last thirty years: Oh, these things cannot be done in a day; they must be done gradually! I heard that story, Mr. Speaker, thirty years ago in the province of Alberta, and we are still hearing it to-day. I say that action is necessary, that mere playing with the thing is not going to satisfy the members either of the Liberal party or those who sit over here. When I look over at that side of the house I see Liberals, Liberal-Progressives, Progressives, and in this section of the house Progressive and Labour. Why Progressives over there? Why do they not do as the hon. member for South Huron suggested, join up with the Liberal party? It was just because of the facts I have cited that the Progressives ceded from the Liberals because they felt in their hearts that the Liberal party was not carrying out their policies, and they wanted to see those policies carried out and brought to maturity. That is the reason why my friends over there called themselves Progressives, and that is why they do go so far even as not to attend the Liberal caucus.

Mr. Ewart, a gentleman well known in the city of Ottawa, made a very pertinent statement about the tariff, pertinent because true. He said that the Conservatives swore by the tariff, but were afraid to raise it, and the Liberals swore at the tariff, but were afraid to reduce it. I think that is a very true statement when we remember how few reductions have been made in the tariff since 1896, and since this government came into power the reductions have been almost infinitesimal.

I have not been able to examine all the new tariff schedules, but I have the opinion of the adviser of the Consumers' League, and he does not seem to be very favourably disposed towards the present tariff proposals of the government. He says that the general opinion is that there is a revision downward, but that that is a matter which can only be determined by careful investigation. But this much is certain; there are changes upward, and there are changes downward. In some cases a higher rate of duty is charged on the higher priced product, the rate remaining unchanged on the medium priced article, and on the lower priced article the duty is lowered. The schedules in the intermediate tariff under which practically nothing enters the country are lowered materially, but the schedules under which importation takes place are only slightly reduced. This, Mr. Speaker, is not tariff adjustment; it is tariff legerdemain.

As regards the British preference, although you have increased the British preference by 50 per cent, you have stipulated that at least 50 per cent of the product must represent empire labour and material. The cotton manufacturers of my native city of Manchester import nearly 30 per cent of the cotton products from the United States. Nearly all their cotton is imported from the United States and is manufactured in Manchester and the neighbouring towns. But if this 50 per cent provision as to empire labour and material is to be applied, their product will not be able to come in under the British preference, and will have to come in under the general tariff and pay a duty of 30 per cent. That would wipe out the British preference so far as cotton is concerned, and simply give added protection to the cotton manufacturers of Canada.

We have been told that this country is very prosperous. I agree that we are more prosperous than we were, but there has never been a time in the history of Canada when somebody was not prosperous. In our darkest hour in 1918, the Dominion Textile Company, which will benefit under these cotton schedules, earned 291 per cent while our boys were dying in Flanders. They were prosperous. Sir Charles Ross was prosperous when afterwards, if I remember aright, he was voted two million dollars in lieu of the profits that he might have made. Surely he was prosperous. I say there never has been a time, however dark nationally, when somebody in this country was not prosperous. But the idea of prosperity is not that it should be allotted to three or four or even twenty; true prosperity prevails only when it is spread among all classes so that even in the humblest shack of a settler in the far-away constituency of my friend from Peace River (Mr. Kennedy) its influence may be felt. And that, Mr. Speaker, is our idea of prosperity.

I do hope the government will see the folly of still reducing the income tax. I do hope they will realize that it is contrary—if I may recapitulate—to the declared principles of those great Liberal worthies whom hon. gentlemen opposite hold up as models of statesmanship—the late Sir Wilfrid Laurier, Mr. A. K. Maclean, the late Mr. Frank Carvell, and even Your Honour before you were called to the chair. All these influential leaders of the great Liberal party advocated the imposition of the income tax as a means to pay off the war debt. And yet the government have abandoned those principles and reduced the income tax. What evil influence persuaded the Minister of Finance to take this course I know not, but I sincerely hope that some means will be found by which Liberal consciences, Liberal-Progressive consciences and our own may be satisfied, so that we can support the budget; in other words, I do hope that the government will maintain the income tax without change and thus put into practice Liberal policies and honour Liberal principles.

Mr. H. A. STEWART (Leeds): Mr. Speaker, the member for East Calgary (Mr. Adshead), who has just taken his seat, will, I am sure, excuse me if in my limited time I do not attempt to answer in detail the propositions which he has outlined in his interesting speech. But he asked one question which must have occurred to many other hon. members and to the people generally, and perhaps after he has been in this house longer he will become accustomed to the repudiations of policy, the violations of pledges and the inconsistencies he has pointed out in the record of the government. These departures from the often declared principles of the Liberal party can be explained only on the assumption that the conflicting views held by the members of the cabinet and by their supporters in this house cancelled one another, with the result that we do not get

vigorous action on any line of policy; we do not get fulfilment of any of the pledges that have been given by the government in the past.

Now, Mr. Speaker, the budget is, of course, a review of the financial affairs of the Dominion for the past year. We take revenue and expenditure, assets and liabilities, and we analyze as far as we can the situation from that standpoint. In surveying our assets we must not overlook one of outstanding importance, our Canadian National railways, an organization that is extending its usefulness, improving its services and very materially bettering its financial condition as the years go by. That is a situation which must afford great satisfaction to the house and to the country at large. If we endeavour to analyze the causes of these results, I think we may fairly divide them in the proportion of about fifty-fifty between the able management that that organization has had under Sir Henry Thornton, and the loyal support and cooperation which he has secured from the large army of employees of that vast system. These two influences have resulted in increasing the revenue, decreasing the operating expenses, and leaving a very substantial surplus—a surplus that is continually growing larger and larger.

Some criticism has been directed against the Minister of Finance (Mr. Robb) for the way in which he has dealt with the financial obligations of the Canadian National Railways, or perhaps, more properly, I should say the financial obligations of Canada in relation to the Canadian National Railways; because, after all, Mr. Speaker, we own this great railway system, and its debts in the last analysis are therefore the debts of Canada. The member for St. Lawrence-St. George (Mr. Cahan) pointed out that if we took into consideration the financial obligations of the Canadian National Railways we would find that not only had we not decreased our national debt in the last few years, but that on the contrary it had been increased. In this connection it may be interesting to refer to the budget debate in the session of 1923, when the Right Hon. Mr. Fielding was finance minister. He had to deal with the indebtedness of the Canadian National Railways, and in Hansard for that year we find that in the course of his budget speech he said in relation to the Canadian National Railways:

> We turn now to the year 1922-23, which closed not many days ago. We have not the complete accounts before us, but there is sufficient information to enable us practically to announce the result. Ordinary revenue amounted to $393,619,000. These are estimates, as the figures are not absolutely final. Ordinary expenditure amounted to about $331,780,000. As between those two items, there was then a surplus of $61,839,000. Capital expenditure, however, represents $14,500,000; adjustment of war claims, $6,700,000; cost of loan flotations, $3,050,000; these representing in all $24,250,000. There was thus a surplus over ordinary, capital and special expenditures, of $37,589,000. But again the railways have to be taken into account. We had to advance during that year $92,190,000 for railways, and $6,060,720 for the Canadian Government Merchant Marine, making in all for that charge, $98,250,720. This, of course, takes up all the surplus I have mentioned and leaves a large balance on the other side of the account. If we take everything into consideration for the year, the net result was that we added to the public debt in the year just closed $49,293,086. The receipt of something over $8,000,000 from the British government on exchange account helped us to keep down what otherwise would have been a larger addition to the public debt.
>
> The addition of nearly $50,000,000 to our public debt in the past year is not a situation that should cause very much satisfaction in any quarter.

That was the way Mr. Fielding reviewed the situation. In the following year we find the present Minister of Finance (Mr. Robb) adopting an altogether different course. I quote from Hansard:

> Turning now to the public debt. On March 31, 1923, our net public debt stood at $2,453,776,868.74. Our estimated ordinary revenue for the year just closed is $396,000,000. Our estimated ordinary expenditures of $328,250,000, and capital expenditures $12,170,000; special expenditures $8,390,000; railway loans $23,781,664; Canadian government merchant marine loans $1,500,000, and loans to Quebec Harbour Commission, which are treated as a non-active asset, $500,000, together with an amount of $621,987 carried on the books of the department for Victoria Shipowners, Limited, which it is proposed to treat as a non-active asset in the place of an active asset as heretofore, make the total charges $375,213,651. Our surplus of ordinary revenue over these expenditures will therefore be $20,786,349 to be applied towards the reduction of the national debt as it stood on March 31, 1923. To this must be added $1,317,000, being the amount of sundry outstanding indebtedness cancelled during the past year, and a further amount of $8,305,760.37 received in settlement of an adjustment of acknowledged book debts between the imperial and the dominion governments. These two amounts, totalling $9,622,760.37, together with the $20,786,349 surplus of revenue over total expenditures, reduce our net public debt as of March 31, 1923, by the amount of $30,409,109.37.

These figures show that with a revenue of $393,000,000 odd, and taking into consideration the situation of the Canadian National Railways, the Right Hon. Mr. Fielding found that the debt of Canada was increased by $50,000,000, while his successor, the present Minister of Finance, with a revenue of $396,000,000, almost the same, finds that our pub-

lic debt is reduced by about $30,000,000. It is perfectly clear that these two gentlemen have adopted different methods of procedure in dealing with the revenues of Canada and the expenditures and obligations of the Canadian National Railways. The explanation is found in the fact that in the year 1923 an amendment to the Canadian National Railways Act was passed, permitting the government to guarantee securities issued on behalf of the system; and since that legislation was enacted the government have adopted the principle of guaranteeing the obligations of the national railways and then forgetting all about it when coming to deal with the liabilities of Canada at the end of the year. The Canadian National Railways sign on the face of the bond, the Minister of Finance signs on the back of the bond, and then, like our old friend Micawber, the government says, "Thank the Lord, that debt is paid." The indictment of the hon. member for St. Lawrence-St. George in respect of this feature of our financial situation stands unanswered.

We hear a good deal about the prosperity of Canada, and in support of the contention that we are really prosperous we are supplied with the statements of bank managers and of financial organizations. These statements are all very well in a way, but I have no doubt they are as optimistic as the circumstances will permit; they have the perfectly proper and legitimate purpose of stimulating and encouraging business. I think, however, it is well that the house should note one sentence in the speech of the mover (Mr. Ilsley) of the address in reply to the speech from the throne—a very able speech. He says:

> In discussing the question of Canada's prosperity, Mr. Speaker, there is one unfavourable feature which should be mentioned, and that is the fact that this prosperity has not been as evenly distributed as might have been the case, or as we would have liked to see it. I am not now referring particularly to the distribution as between classes in the community, although a good deal could be said as to that; I am referring to the territorial distribution of prosperity in which the people in the maritime provinces, unfortunately, have been slow to share.

Apparently, therefore, this prosperity, according to one of the supporters of the government, is not as general as we could hope it to be. We all rejoice in the prosperity of Canada; we are not going to disparage or minimize it. It is inevitable that, as we advance from our war difficulties, from the difficulties of deflation, our condition will improve. We have had good harvests and good prices. But, I submit, no gentleman in this house has in any direct or tangible way connected the prosperity of Canada with the policies of this government, and it is impossible to do so. The prosperity is positive, and it would be much greater if in this country of vast natural resources we had a government with the courage to evolve and put into force some policy that would conserve and develop these resources for the benefit of the Canadian people. After all, no country of the size of Canada, possessing the vast resources which we have, can be truly said to be prosperous when fifty or sixty thousand of its best people have annually to leave that country to seek their home in a foreign land.

We are of course reminded of the tax reductions, and the outstanding feature in the reduction of the sales tax is the fact that it is taken off little by little. The result is that the consumer does not profit by these trifling reductions. If the sales tax were removed at once and made effective within a few months, and there were no loss to the merchants, then there would be an immediate and practical benefit to the consumers of Canada. It must be recalled, of course, that the sales tax, if the reduction now proposed goes into effect, will then be only where it was when this government came into power in 1921. The stamp taxes, which have disappeared, were also put on to a large extent by this government, and we have the spectacle of an administration boasting of reducing taxes which it has itself imposed on the country. I contend, Mr. Speaker, that so long as any government takes from practically the same number of people an amount of taxes increasing year by year we cannot truthfully say there is any real reduction in taxation. In looking up the reports I find that in the fiscal year 1926 the revenue from taxation amounted to $327,575,000, in round figures. In 1927 the revenue from taxation amounted to about $346,650,000, while in 1928 it is estimated that the revenue from taxation will be about $357,000,000. The house will note an increase in the total revenue from taxation during these years, and when this amount is being taken from practically the same population there can be no real decrease in taxation. That contention is as hollow as a drum which may be gilded and beaten in order to provide music to which the supporters of the government may march. It may be sufficient for that purpose, but after all it does not provide very pleasant music for the people of Canada.

We have in this budget a revision of some items to a certain extent. I do not propose to go into those in detail, but after all it

is really interesting to review the record of this government in connection with the tariff, because it illustrates in a most striking manner that inconsistency to which the last speaker referred. I sat in the gallery of this house before 1921 and heard the present Prime Minister vigorously demand a general downward revision of the tariff all along the line, and I am sure he went through the country giving that as the policy of the Liberal party. The first budget presented after he came into power was in 1922, and if one only had time it would be interesting to read Hansard and quote some of the statements made in connection with that budget. It is true that there were some revisions, but it was a disappointment to those who expected the promise of the Prime Minister to be fulfilled. His supporters were pacified to a certain extent, however, by the hope that it was only a beginning, and that it was a step in the right direction. Then we had the budget of 1923, in which the then Minister of Finance said we must have tariff stability; that the business interests of Canmust not be disturbed from time to time by these reductions; that the tariff after all was a moderately low tariff, and that if business were to prosper there must be stability of tariff. There were no tariff reductions that year. In 1924 we find another step taken in the direction of reduction, and in 1925 we find the excuse advanced that the tariff board was appointed and therefore the government must wait for the decisions of that board. In 1926, on the eve of an election, we had some reductions in tariff without waiting for the decisions of the tariff board, because it was thought that these reductions would be helpful. In 1927 the government apparently took another backward step; there were no changes in the tariff. In 1928 we have some changes, the effect of which I am not prepared to state because I have not been able to analyze them sufficiently in detail.

There is one reduction in this tariff, Mr. Speaker, to which I wish to refer, however, and to which I most emphatically object. I refer to the reduction in the tariff on dairy products coming into this country, particularly the products of Australia and New Zealand which enter our market to compete with the product of our dairy farms. According to the Dairy News, a letter issued from the Department of Agriculture under date of February, 1928, we find that in the year 1927 there came into this country 11,208,819 pounds of butter, while in 1926 we imported 9,151,882 pounds. This is against a tariff wall of only one cent per pound, and of course there has been a storm of protest from the dairying interests of this country. I have moved for a return showing these protests, and when they come down I am sure they will be very interesting indeed. These protests come from all parts of Canada, and before this debate is over I should like to hear from the Minister of Agriculture (Mr. Motherwell) how he justifies a reduction which is working such injury to the interests that it is his duty to protect and care for.

In connection with the tariff one is interested in the pronouncements of the present Minister of National Revenue (Mr. Euler) before he assumed that office. We find that in the year 1924, speaking on the address, he said:

> I do not know what there is to be gained at the present moment by the making of slight tariff changes. A policy of nibbling has never appealed to me.

He goes on to state that he approves of stability in the tariff, and continues:

> Let me say to possible critics of my attitude on the tariff when considered in conjunction with the tariff platform of 1919. I did not support that platform; I never endorsed it and I have on two occasions repudiated it in this house. I do so again now.

Then he announces his intention of voting against the budget. I suggest that if he is to be consistent he will vote against this budget on the same ground. This is a nibble at the tariff, and a big nibble to the prejudice of the dairying interests of this country. I should like to hear from the Minister of National Revenue as well, before the debate is finished.

We have heard a great deal, Mr. Speaker, about wider markets. If we look at the trade returns of this country, as published by the Department of National Revenue, we find that our imports in 1927 were greater than in 1926. In 1926 our total imports amounted to $2,256,028,869, while in 1927 their value was $2,298,465,647, and when we look at our exports we find that in 1926 they amounted to $1,328,700,137, while in the year 1927 they were valued at $1,267,573,142. There are, of course, two markets for the Canadian people—the foreign market and the home market. Those who have dealt with the treaties that have been adopted by this government have proved conclusively that we are not gaining very much in the foreign market, while the figures I have quoted establish beyond all doubt that we are narrowing and contracting the home market, which after all is the most reliable and the best. In foreign markets we have to meet the competition of the world. Changing policies and changing

conditions make this market erratic and unreliable. In no instance are the conditions satisfactory.

With regard to immigration, the volume of disinterested and intelligent criticism that has grown up in this country must convince us and the people at large that our policy in this respect is very largely a failure. We are spending many millions to bring people to this country, and we are losing from sixty to seventy thousand of our population annually to the United States. Some say they are coming back. Yes, Mr. Speaker, they come home for Christmas and they go back for the new year. After making every allowance, the figure that I have mentioned is a fair representation of our total annual loss. We are opening the front door to those coming from other countries, and we are leaving the side door open for the escape of our own people, the best asset we have, in the numbers that I have mentioned to the adjoining country. The situation demands heroic treatment. Some solution must be found. In view of our peculiar conditions we may be driven to adopt export duties, embargos, bounties, and wherever necessary higher import duties, in order that we may conserve and develop our natural resources as far as possible in Canada and for the benefit of our own people.

There is one subject of absorbing interest, Mr. Speaker, with which I should like to deal if time permitted, and which I must discuss very briefly. That is the St. Lawrence development. No mention of it has been made in the speech from the throne, but it is of absorbing interest because of its extent and its direct relation to the prosperity of the country. We have had boards, we have had joint boards, we have had advisory committees and reports galore, but no action has been taken. Let me say that although vitally interested in this project I do not urge any hasty or ill considered action, but I am anxious that Canadian interests shall be fully protected. The development will involve a considerable period of time, and we may well be excused for urging that there should be no delay. The matter has been referred to the courts. If I have any criticism to offer in this connection it is that the reference seems rather involved, and when the proceedings are finished I am afraid it will be necessary for the conflicting interests to arrive at some agreement before anything can be done. If this work is undertaken and carried to a conclusion let me urge that it be done as soon as possible and the whole of it developed concurrently; not without completing one section in one province to the detriment of another section in another province. When the project is carried out it will bring traffic to our railways, it will attract thousands of people to our country, it will give an impetus to agriculture, and it will make of the valley of the St. Lawrence the most extensive and intensive industrial area in the world; and while, as I have said, we do not urge haste we suggest that action should be taken at the earliest possible moment. Let me point out that when this development comes to the international section the opportunity may be afforded to correct the errors which appear to have been made in connection with the Chicago drainage matter. We trust the scheme will be carried out as far as possible in Canadian territory and by Canada; we are not in favour of joint development except where absolutely necessary.

Now, Mr. Speaker, I must conclude. There is an amendment before the house which reads:

> This house regrets that the measures proposed by the government do not tend to provide increased employment in Canada, nor to induce the return of Canadians to their native land, nor to prevent the continued emigration of our people to the United States; and that they make no provisions for the preservation of our domestic markets for Canadian farm and dairy products, nor for the effective development of the natural resources of the country, nor for the abolition of the sales tax by the 1st of January, 1929.

I propose to vote against this budget and for this amendment, and I wish to consolidate my reasons for so doing. I have tried to show that on a proper consideration of all our obligations we have an increasing and not a decreasing debt. If all the obligations we have are taken into account we will find that in the last four or five years our debt has been increased by $40,000,000 instead of decreased as contended by the Finance minister. I have shown that during these few years we have been taking each year an increasing amount in taxation from the Canadian people, and my argument is that instead of there being a decrease in taxation there is an increase. I have shown by the figures from the Department of National Revenue that our export trade is decreasing, and that we are increasing the importation into this country of goods which should be made at home. I have shown that the home market, which is the most desirable and the best market for the Canadian people, is being invaded. Furthermore, instead of our markets abroad being widened, they are being contracted, and at the same time the home market is being opened to competitors who are coming in and taking possession of it to the detriment of our own people. The

figures that the government have produced show conclusively that we are losing population at the rate of sixty or seventy thousand a year. The government, I think, is gambling to a large extent with Canada's prosperity, and is neglecting to lay down any permanent policy which is calculated to lead to improvement. It is following a policy of nibbling at the tariff which is distressing to industry and to agriculture, and is gradually undermining the foundations upon which our material prosperity rests. For these reasons I shall vote for the amendment and against this budget.

At six o'clock the house took recess.

After Recess

The house resumed at eight o'clock.

Mr. A. M. EDWARDS (South Waterloo): Mr. Speaker, in rising to offer my contribution to the debate on the budget I fully realize that the ground has been pretty well covered by hon. members who have preceded me, but the viewpoints as expressed by hon. gentlemen are of course widely divergent in character, this, I presume, being caused by the varied interests that exist throughout this great country. Those who come from the prairie provinces naturally have the viewpoint of that section; those from the provinces down by the sea have their problems, namely, those of the steel and iron industry, the coal industry and other industries indigenous to that part of Canada, while we in the central provinces have problems dealing more particularly with industrial and agricultural matters.

Before proceeding further I should like to take advantage of this my first opportunity to compliment the Minister of National Revenue (Mr. Euler) upon his elevation to that high office. We in the county of Waterloo—and I have the honour jointly to represent the good county of Waterloo with the Minister of National Revenue—are very proud of the honour that has come to him, and we in the southern portion of the county desire to congratulate him and to wish him every success. I feel sure that he will fill the position with great credit to himself and also to the state. He is an able native son of our county. With the influence which I presume he has with this government it seems to me that he might have been a little more successful in protecting some of the industries which are established in the southern part of the county and which have been very badly hit by this budget. I refer more particularly to the textile industries, those of woven cloths and worsteds. This question however I will take up at greater length later on.

With the reduction in the sales tax, as shown in this budget, I am in hearty accord As this tax is a burden upon the masses of the people, upon all consumers rich and poor alike, I hope the Minister of Finance (Mr. Robb) will take it into his serious consideration and endeavour to wipe out the sales tax by the end of the current year.

Much has been said about our national debt. To the best of my knowledge and ability to calculate the amount of this debt, we are $20,000,000 worse off to-day than we were when this government took office. Possibly I should not say worse off, because we have not yet been given an account of the tangible assets of the Canadian National Railways for which I presume the money was granted. There are, however, different viewpoints on the subject, but it seems to me a matter of book-keeping whether or not the loans made to the Canadian National railways should be included in the national debt of this country. They are obligations on the country just as much as any other obligation and they should be so recorded.

In the constituency of South Waterloo which I have the honour to represent in this house we have the happy combination of a splendid agricultural section and a well organized and highly industrialized district with a varied line of manufactured products, including the iron and steel industry in its many different lines, furniture factories and their subsidiaries, large shoe factories, textile factories, including woollen and worsted cloth mills, knitted goods, silk yarn, and silk cloth manufactures. It will be readily seen that any variation in tariff schedules is more or less reflected in conditions in this constituency. We have employed in South Waterloo in the textile factories upwards of 3,500 hands. This is the number of the actual workers in this industry exclusive of their dependants, and therefore hon. members will realize that anything that injures this industry is of very serious moment to our part of the country.

With reference to the so-called review made of the textile industry by the tariff advisory board I wish to make a few remarks. All branches of this important industry placed their positions in facts and figures before this board and all that was expected was a square deal with reference to tariff adjustment based upon the facts and figures presented. If this course had been followed and the Minister of Finance had been guided by this in the formulation of his budget, no debate on the woollen goods industry would

have been required at this time. All that is asked by the textile trade or any other industry I know of is to be placed in a position where they can compete on even terms with outside competitors. They are not asking favours; they are not asking any special considerations; they are not asking any high tariff adjustments. What they are asking is that the workers in this country be privileged to compete with workers in outside countries on even terms and nothing more. When we have regard to living conditions brought about in certain other countries by low wages; when we consider such safeguards as the eight-hour day in many lines; the minimum wage law; the Workmen's Compensation Act; safety devices of various kinds which are designed for the protection of the workmen and which are compulsory, humane and necessary; child labour laws; the Old Age Pension law—which I hope will soon be enacted in Ontario—when we consider all these safeguards with which industry is surrounded in this country, it will, I am sure, be readily seen that some protection must be given to Canadian industry to enable it to meet conditions imposed, so that it will not be forced to face unrestricted competition from England, France, Belgium or elsewhere, where like conditions do not obtain.

Let me take the weekly wages of textile workers in Canada as averaged from figures supplied by Canadian mills and compare them by hours of labour and sex of worker with those of workers in the mills of Yorkshire, England. The figures are as follows:

	Yorkshire	Canada
Binders	$ 5 92	$13 to $15
Twisters	6 34	13 to 15
Spinners	5 77	13 to 15
Reelers	6 52	17 to 20
Doffers	5 22	13 to 15
Overlookers	17 03	35 to 60
Warehousemen	12 06	18 to 20
Blenders, carbonizers and labourers	12 06	18 to 20
Male help in greyrooms, stockroom, packing department	12 30	19 to 22
Firemen	13 89	30

These figures were gathered at the end of 1924 and the comparison is made with wages in Canada in 1924. It is only fair to state that since that time wages in Canada have been reduced by ten per cent. These figures are not guess work; they were obtained by me from the books of the mills. I quote from the budget speech, as follows:

> It is proposed to aid the Canadian weaving industry by granting free yarns for weaving purposes.

That particular branch of the industry that is engaged in the weaving of woollen cloths and worsteds is the one to which I wish to draw the attention of hon. members, in order to show how it will be affected by this budget.

Previous to this budget, knitted yarn coming into this country, what is called forties and finer, used in the weaving of woollen and worsted cloths paid a duty of 12½ per cent. Under the new tariff schedule these yarns come in free, and I wish to show how that change is going to affect the industry in South Waterloo. In the first place there is, I understand, only one mill in Canada making cloth that does not spin its own yarn. This one mill, situated in Toronto, will be in the position of being able to purchase its yarn from England at a low price. But what of the other mills? I am thinking now more particularly of two of the larger mills in my constituency, one located in the town of Hespeler and the other in the town of Preston; and these are typical examples showing how this particular industry will be affected not only in the constituency of South Waterloo but elsewhere in Canada. One of these mills employs between 1,000 and 1,100 hands, and the other is actually employing at the present time 228 hands. Both these mills begin with the raw product—the wool—and work it through the different processes up to the finished cloth. I would like hon. members to observe how this help is divided between male and female. In the case of the mill employing the 228 people there are 68 men employed in carding, spinning and preparatory operations, and 22 women; in the warping, weaving and finishing departments, there are 35 men, and 103 women. These figures cover the actual workers in these departments at the present time and do not include workers classed as "overhead"; in other words, the wool is taken in at one end of the mill, and it is washed and combed and carded and spun into yarn. In that process a lot of men helpers are required, but after it passes that stage the material goes into the loom and is woven into cloth, and these looms are largely tended by female workers, so that anything you do that injures the original part of this business, the converting of the raw wool into the yarn, affects the heads of families more than would a change that was applicable to the later processes.

The amount paid for carding, spinning and preparatory operations, including overhead, is 40½ per cent of the total wages paid. I would like hon. members to take note of that fact, that when these new schedules come into operation, out of every $100 that these mills are to-day paying in wages approximately $60 will be paid in the mills, and $40 will be sent

to other lands. That gives you some idea of the injury that will be done to this business.

The value of the machinery and housing for this particular mill of 228 people which I have mentioned, if it is to be scrapped, will be between $400,000 and $500,000.

I now come to the larger mill employing between 1,000 and 1,100 hands, and in this connection I propose to read a letter I received from the general manager of this company. I had written and asked him to let me know just how his mill would be affected. Let me say first that this mill is located in a town of 3,500 people, and when a mill employing between 1,000 and 1,1000 hands in a municipality of that size is injured you can see how seriously it is going to affect that community.

This is the reply I received from the general manager of this mill:

We have been going over our records here very carefully, and last year (1927) exactly one-third of our spinning department was employed in making yarns for weaving purposes, and as nearly as we can estimate it not 5 per cent of this plant is likely to be operated for weaving yarns under the new regulations of free yarns for weaving purposes allowed into Canada from Great Britain, and there is positively no prospect of employing this part of our plant on other kinds of yarn, for the reason that there are other spinning plants in Canada who will be cut out of a certain amount of their yarn business by the new regulation and they will be forced to go after the knitting yarn business to a greater extent than before in order to keep operating, and we cannot hope to get knitting yarn business to take up the slack in our weaving yarn department. It is not only our plant in Hespeler that we are concerned about, but also our spinning mill in Orillia.

We are not denying that the weaving trade in Canada may possibly get some advantage by the change in the tariff on weaving yarns from 12½ per cent to the free list, but the advantage will be entirely at the expense of the spinning industry and those employed in the preparation of the wool through all the processes up to spinning, including sorters, scouring hands, card room hands, gill minders, combers, drawing room employees, spinners and twisters, and not only the above but labour employed in the dyeing department will also be affected because of the fact that much of the yarn required in weaving is in mixture effects, greys and coloured twists, etc., and the stock for these will have to be dyed in England before the material is manufactured or spun, so that the people employed in the dyeing in Canada will be hard hit also. We are going to be in the position of having all of these departments working at a discount, or in other words only partially employed, increasing the overhead charges in every one of these departments on the material which we will be able to continue to make. And as I explained to you when we were talking over the situation, the difference in wages which will be paid in our mills in the production of our cloth by manufacturing from imported yarns instead of manufacturing the raw wool through all the processes into finished cloth will be in the proportion of 59 to 100; that is, where we would be paying $100 to our employees for manufacturing the goods from raw wool Canadian labour under the new arrangement will receive only $59, and the rest of the labour involved will be paid for in England.

If this is a good stroke of business for Canada, we confess we are quiet incompetent to see it.

What we asked of the tariff board was a reasonable increase in the duty against finished cloth to enable us to carry on all the operations in Canada and employ people in this country. What we are getting from them apparently is nothing of the kind, but is a cutting away of the foundations of the Canadian weaving business and placing a large percentage of our operations on a free trade basis, the principle of which, if correct in connection with the spinning trade, should be equally correct in connection with the weaving trade.

The sacrificing of the spinning branch of the cloth trade in Canada we consider is utterly unwarranted from any practical standpoint, and particularly from the standpoint of the position which the country would find itself in in case of another war such as we have passed through, or which would cut off from Canada a supply of weaving yarns for any extended period of time. A strike in England in the spinning trade would be equally effective in closing up our weaving industry in Canada when our own spinning is in the discard, as it undoubtedly will be as a result of this type of tariff policy.

While we have stated that one-third of our plant is affected, the reason that the entire plant is not affected in the same way is that we are manufacturers of knitted goods as well as woven goods, and a mill which is exclusively in the weaving trade would be affected to at least 50 per cent of its equipment while we are affected to the extent of only about 33⅓ per cent.

I might explain that there is no change in the tariff on spun yarn that goes in to the ordinary textiles, such as knitted goods, and that has reference to coarser than 40's.

The two mills which I have taken are fair illustrations of this type of mill, namely, those that make cloth throughout Canada. It will therefore be seen what a serious matter it will be if these mills have to go out of the spinning of yarn for cloth. It will be noted that the larger percentage of men workers is in the departments that are affected by the budget, that is, the carding and spinning departments, the operations from there on being mostly done by female workers, as the figures show. We are therefore taking the work from the heads of families—a most serious condition indeed. Let us suppose, for instance, that finding themselves unable to spin yarn profitably for the weaving trade, these mills turn to the spinning of yarn for the knit goods trade. The ultimate will be a large surplus of machinery to take care of existing consumption, and we have the ridiculous clause in the proposed tariff

schedule allowing us to bring in textile machinery free of duty. Who under heaven wants textile machinery when there will be thousands of machines in this country lying idle?

Now let me deal with dry spun yarns to show how inconsistent this tariff schedule really is. This type of yarn has been imported on a duty basis, subject to a drawback when converted into stockinette hosiery, and so forth. This drawback has been cancelled, to become effective in October next. In other words, dry spinning plants from October on will have the benefit of a duty of ten per cent where previously those yarns came in free on the drawback plan. This policy is directly opposite to that pursued allowing yarns into Canada free of weaving. There are but two plants in Canada making this yarn, one in Hamilton, and the other in Toronto. The government apparently is desirous of building up a dry-spun yarn business for two manufacturers, but is not in favour of the same policy for yarn spinners using their own production for weaving.

With regard to cotton yarns, fine cotton yarns 40's count and finer—made by only one mill in Canada, that is at Three Rivers—are now subject to duty, whereas up till now they have been free. This also is directly opposite to the action applied to yarns entering Canada for the weaving trade.

I have endeavoured, Mr. Speaker, to place before the house as best I can the effect which the proposed changes in the tariff will have upon the woven goods branch of the textile industry of Canada. Let us now see how far-reaching the results will be by consulting the Preliminary Report on the Woollen Textile Industry in Canada, as issued by the Department of Trade and Commerce. Referring only to woollen cloth mills, there are fifty-seven mills in Canada making woollen cloth and, with one exception, all spinning their own yarn. These mills are situated: In Nova Scotia, 3; in New Brunswick, 2; in Quebec, 10; in Ontario, 42. The amount of capital invested in the manufacture of woollen cloth alone is $21,342,909, with 4,026 employees. These figures do not by any means indicate the amount invested or the number of people employed in all the textile factories—that is, the figures I have given the house are only for the woven trade. For the textile factories engaged on knitted goods, and so on, the figures are: Capital invested, $42,215,208; employees, 11,017. The value of the products produced, by provinces, was as follows in 1925:

Canada total..	$15,499,326
Ontario..	12,982,583
Quebec..	2,058,704
Nova Scotia and New Brunswick	458,039

The cost of the raw material entering into these finished goods was $9,415,211, and the value added by the process of manufacture was $6,084,115. Surely this is an industry that should merit careful consideration by those who have to do with the tariff.

I wish now to refer to one other branch of the textile trade, namely, that in connection with the manufacture of tapes, woven labels, and so on. These woven labels with the firm's name are attached to articles of clothing, and so forth. In the city of Galt there is an industry manufacturing this line of goods, established fourteen years ago. Under the existing tariff it has gradually expanded and worked up a fair business, and to-day it is employing seventy hands. It has not yet paid a dividend, profits being used for necessary expansion, the management realizing that in order to make money on a small business of this type it is necessary to put it on a first-class production basis, and in order to do this they have purchased additional equipment from time to time until now they are in a good position to carry on. When I tell the house that last year they made a little over nine thousand dollars profit it will be seen that they are not exploiting their tariff protection. Under the new schedule not only is the duty lowered on the finished product, but a duty is actually added to the raw material, which is cotton yarn. So you see they get it going and coming. On the basis of the 1927 business the increase in the cost of yarn to this institution will amount to $2,943, and the loss on sales through their being compelled to reduce prices to meet British and foreign goods will be $6,440—or a total loss, presuming business to be the same this year as in 1927, of $9,383. This will more than wipe out the entire profits of that institution for last year. If the proposed changes come into force this firm will have to discontinue business in the manufacture of tapes, causing a great financial loss and throwing many employees out of work.

To show who benefits by this cut in the tariff on tape, there is a small concern in the town of St. Mary's in the constituency of my hon. friend from South Perth (Mr. Sanderson), who spoke yesterday and was quite critical in his treatment of the speech made by the hon. member for Fort William (Mr. Manion). The concern to which I refer is a branch of an American mill. Their raw material is tape. Under the provisions of the tariff before this proposed change, they had to pay a slight duty on tape, which is their raw material. They put fasteners on the tapes and with a very slight operation they become their finished product, covered

by patents. Now, under this arrangement they are able to bring their tapes in direct from the parent mill across the line. I ask hon. gentlemen opposite if this is the way to foster Canadian industry? Is this the way to take care of our working people?

To give the house some idea of how this budget is considered by the executives of these concerns, let me quote, from the Guelph Mercury of February 18, 1928, certain interviews given to that paper by the heads of several large concerns:

The spinning business of this city has been badly hurt by the Robb budget, according to Mr. Harry Quarmby, president and general manager of the Guelph Carpet Mills and the Guelph Worsted Spinning Mill.

"We have an expensive spinning plant here, with the latest equipment for the spinning of yarns, and all this could be scrapped and the hundreds of people turned out of employment because of the admission into Canada of yarn at the reduced rate provided for in the budget.

"It would seem that the government of Canada is more interested in keeping the wheels of industry in England turning than in Canada, so far as the yarn spinning industry is concerned, but that is of no benefit to Canadian work people.

"The new rates will mean that the orders now on hand for weaving yarn may be cancelled and no more orders received. What that means can be easily imagined by the citizens of this city and by the two hundred employees of the spinning department. The government of Canada has shown absolutely no sympathy for this business.

"Labor in England is poorly paid in comparison with that of like occupations in Canada. The result of this is that yarn can be spun in England, shipped to Canada and laid down in Guelph cheaper than it can be spun here. That requires no wizard to understand the logical result of the government's policy. It means ruin to the spinning industry. I cannot condemn the budget sufficiently so far as the Guelph yarn spinning business is concerned, and what applies to Guelph applies to all the yarn spinning plants in Canada," said Mr. Quarmby.

Hespeler Plant Will Feel It.

Mr. D. N. Panabaker, director of the Forbes Mill at Hespeler, called on by The Mercury, states that there are three hundred people employed in the yarn departments of the big mill.

"The budget is a very serious thing for Hespeler. Just what plan of action will be decided upon cannot be said at the moment. It will make a difference in the cost of cloth, but it is destructive to the spinning end of the big textile industries.

"There are no compensation clauses in the budget," said Mr. Panabaker. In England, according to a report published in February, the wages of spinners while 160 per cent higher than before the war, are still less than 60 per cent of the wages paid to the spinners and carders in Hespeler, and there is no possibility of competing with that handicap.

"Our plants are fully equipped with expensive machinery, and while the new budget permits machinery to come into Canada free, it is of no benefit to us, because already equipped. The tariff advisory board is fully acquainted with the position of the spinning industry, but is powerless to make any redress. Hespeler will be hard hit, but we cannot tell yet just what procedure is to be followed," said Mr. Panabaker.

General Conditions.

Textile trades are badly worried because of the changes made in tariff. There has been a reclassification under cottons, woollens, silk, linen and hemp. There has been a reduction from 37½ per cent to 30 per cent on some cotton duties, but on cotton yarn of 40 counts or finer, there has been imposed a duty under the general tariff where formerly it was free. The general effect of the cotton revision will be to increase the cost of cotton yarns to Ontario manufacturers.

Woollen Mills in Bad Way.

David C. Dick, president of the Canadian Woollen Manufacturers' Association, expressed regret that there was nothing in the latest Robb budget which would seem to be likely to help the old-fashioned woollen mills of Ontario. He said these were in bad shape.

Mr. Dick said that free machinery from England would not help these mills very much, and as for free yarn, he did not believe that, from the very nature of their business, the old-fashioned woollen mills could buy yarn. Mr. Dick doubted very much whether the weaving mills would benefit one half of one per cent under the Robb proposals.

So far as the old-fashioned small mills, scattered all over the Dominion, where they weave woollen cloth, there are at the present time 20 of them, with 350 looms closed down, in the other 34 mills, with 1,015 looms, over half of the looms are standing idle. In Ontario the situation is extremely bad.

Means Unemployment.

Every weaver of worsted cloths in Canada, with one exception, has its own spinning plant to produce the yarns. If they take advantage of the free yarns, then, according to one of the best authorities in the business, it will mean the scrapping of hundreds of thousands of dollars' worth of machinery, and the throwing out of work of hundreds of employees.

The Robb budget will adversely affect the spinning plants of Canada, which produce worsted yarns to the extent of $500,000, in the opinion of one closely in touch with the situation.

Good-Bye To Lamb Chops.

Another result of the Robb Budget, according to one who has studied the matter, will be that the sheep industry will suffer tremendously.

"If free yarns are admitted, then the Ontario farmer will not find any market for his wool," said this authority. "It will mean that the farmer will not be able to afford to raise sheep. The result will be that you won't be able to buy a Canadian lamb chop on the market. The people of Canada will have to content themselves with eating frozen chops and Australian rabbits."

There are several others but I will not quote further; what I have read will give the house an idea as to just how these proposed changes in the tariff will affect these industries. In the large mill at Hespeler, which I know quite well, I saw huge bins of wool, one filled

with an Australian product, another with New Zealand wool, and a third with Canadian. Not being sufficiently familiar with the business, I was anxious to know the proportion of Canadian wool that entered into their product, and how far the proposed tariff would affect the raising of sheep in this country. Accordingly I wrote to the general manager of the concern and to-day I have his wire in reply:

> From careful investigation I can assure you that many carloads of Canadian wool have been consumed annually in cloth mills in your constituency. The effect of budget proposals will positively divert this wool from consumption in Canada. Industrial workers overseas and wool from foreign countries will undoubtedly be employed to the detriment of Canadian workers and displacing Canadian raw wool.

This will indicate what is likely to happen to the sheep trade in this country if the proposed policy is persisted in.

My time has about expired, but I hope I have placed fairly before the house the case of the spinning business, especially in relation to woollen and worsted cloth. I sincerely trust that the Minister of Finance will reconsider his decision to inflict upon this industry, involving hundreds of employees engaged in this class of work, a hardship such as I have pointed out. Not only is this continual tinkering with the tariff affecting the woollen and worsted cloth industry of Canada; it is actually frightening capital away from the country, because investors do not know which branch of industry will be attacked next. The result is that we have unstable and unsettled conditions all round. I must conclude now, and in doing so I wish to thank the members of the house for the courteous hearing they have given me.

Mr. JOHN EVANS (Rosetown): We had a promise from the government last year that when the tariff advisory board got under way the tariff would be revised, though cautiously, in a downward direction, so as to lower the cost of living. If the changes outlined in the budget now before us represent the work of the board, then I think the people throughout the country will be asking just what the board is doing . In my opinion the reconstruction of the tariff as outlined in the budget is not at all in accordance with the findings of the tariff advisory board. The country expected, as it had a right to expect, that now, ten years after the close of the war, which upset economic conditions for a period, something would be done to enable us to return to normal so far as the cost of living is concerned.

The hon. member for East Lambton (Mr. Fansher) in his speech yesterday discussed the way in which the Liberal party, the free trade party, has dealt with this great question, and I propose to adduce some facts to show why that party is pursuing its present course. Raw material under the budget is for the most part free again, but the consumer will have to pay a heavy penalty if he imports anything in the nature of a finished article. In some cases, I find, the intermediate and general tariffs are lowered, but the British preference remains as formerly. I find that item 537b, linen thread, is reduced, when imported from Great Britain, only 2 per cent. This is of value only to the importer; the consumer will reap no benefit. In items 569 a, b, c and d, which cover material for hats, the British preference remains the same but this material coming from other countries is taken off the free list and placed under a duty of 5 per cent and 7½ per cent under the general and intermediate tariffs respectively. The duty on the finished article in this case remains the same, at the prohibitive rates of 22½ per cent, 27½ per cent and 30 per cent. On inquiry I find that 90 per cent of this hat material comes from countries other than Great Britain, so the enmity to the British preference did not need to be emphasized here. It is evident also that those using this material are seemingly rather lacking in influence. It will be seen when we come to consider this budget item by item that in the importation of many articles in which the British manufacturer specializes the preferences hitherto enjoyed will not from now on apply, certain conditions making it impossible. This will have the effect of shutting out to some extent the British market for the agricultural products of the farmers of Canada.

Again, under item 267b I find a most amazing thing, the full import of which is not readily discerned. As far as I can see, the government has given notice to all small oil refining companies, and to those contemplating entering the business, to get out and stay out. In this connection I cannot help but think of the language used by Sir Richard Cartwright at the famous Liberal convention held in this city in 1893, when he said:

> It must be obvious to everyone who will give the slightest attentive consideration to the working of the protective system in this country or elsewhere, that the moment you introduce that system you make legal provision for corruption on a most extensive scale.

I wonder what he would have said of these manipulations in favour of the Imperial Oil Company, let us say, or some of the other large concerns. However, it certainly presages more expensive gasoline for the general public.

Taking it altogether, this budget is a rich man's feast. The money cost to the public through trade penalties has not been at all lessened, and the moral hazard has not been abated in any way. The income tax has been again lowered, but for the man who has no taxable income the burden has been increased, so far as I can find out. The parliament of Canada is the highest court in the land, the place from which one would suppose justice would emanate for all alike, but the present government, after having taken every possible means to inform themselves on the evil system of trade penalties, now come forth with a budget in defiance of that knowledge. This has given a direct challenge to the primary producers and workers of this nation; it has challenged the farmers to organize for political action, and it is even an invitation to the workers to strike for justice.

I have in my hand a pamphlet which has been presented to the government setting forth the demand of the farmers for free tools and implements, but the entire matter has been simply ignored. The farmers are the men who bear most of the burdens of this kind of state felony, but I am glad that there is at least one class remaining who have no desire to live on the sweated labour of any other class in Canada. The farmers of Saskatchewan have also asked for a freer method of distribution by the abolition of arbitrary valuations for customs purposes, which were designed to protect the large dealers, importers and jobbers against cooperative companies.

I saw a resolution which was placed on the order paper by the hon. member for Weyburn (Mr. Young), but since it has already been passed over twice it seems that he is not going to proceed with it, and the reason is obvious. Through party managers and manipulating politicians the government have become linked up with every concern in this Dominion with which they could make a bargain. That may be a rather harsh expression, but that is the way I look at it. Party funds have been subscribed by bootleggers, rum runners, distillers and others who want to defy the laws of this nation and of the United States. In this way these people purchase the legislation they desire, in order to evade the laws of this country. I make this statement on the authority of the report of the commission which has been lately printed, and if anyone wants a specific case he can turn to page 110 and read for himself. Again, the farming class of Canada has been farmed by the capitalistic class of this Dominion for the last forty years, and all governments of Canada for the last forty years, irrespective of party, have done the same thing. In this respect the present budget is no different from the budgets which have been presented in former years, but it does stamp this government as being composed of men who are willing to continue the sweated labour on the farms of Canada of our women and children, to say nothing of our men, to swell the profits of those who, through their henchmen in this house, proclaim their indolence, incompetency and callous indifference to the adverse economic conditions of all those other classes of the people who are practically reduced to the standard of slavery to satisfy their greed. The cotton manufacturers, the steel manufacturers and others come before the tariff board pleading for greater facilities with which to rob the public.

Here is one statement I do not like to make, but the Liberal and Conservative parties in this house to-day hold their offices as members of parliament and cabinet ministers by selling their power and influence. The report of the parliamentary committee appointed in 1926 to inquire into the customs irregularities, reveals the most astounding facts and it is for every patriot and honest man to take these facts into consideration here and now. The Western Producer, a Saskatchewan paper which was started some years ago to reflect the Progressive and economic thought of this Dominion, in its leading editorial of January 20, 1927, has this to say:

> The Western Producer demands to know what individuals in the Canadian House of Commons owe their responsible office to money secretly contributed to a fund mysteriously spent.

At the sitting of the committee referred to, on June 11, 1926, after insistent questioning by the member for Peace River (Mr. Kennedy), it came out that $274,000 had been subscribed to party funds and divided between both parties. In a clipping I have here from the Grain Growers Guide, the editor, who I think is very well known from one end of the Dominion to the other, has this to say:

> The cases in question, where the evidence is indisputable, show contributions of approximately half a million of dollars from two concerns. It may be reasonably assumed that the campaign fund managers were equally busy taking contributions from all the other liquor interests, and that they must have gathered in at least $2,000,000.

Two millions of dollars! I ask, sir, what hope is there for Canada under these conditions? This money was to purchase the legislation desired. I say that this budget of to-day is a product of purchased power and influence. I wish to remind hon. members of a fact well within the memory of every

man in this house, that not so long ago Sir Robert Borden read two men out of his party because of some irregularities in the sale of horses. The sale of the rights of men and women throughout Canada to-day goes merrily on, and not one in either of those two parties raises a voice on their behalf. Horse flesh, when considered from the political standpoint, is seemingly much more valuable than the lives of men and women.

An hon. MEMBER: Hear, hear.

Mr. EVANS: I hear the voice of the Minister of Immigration and Colonization (Mr. Forke).

Mr. FORKE: I was just wondering what the hon. member was trying to get at.

Mr. EVANS: To me it is not a laughing matter.

Mr. FORKE: No.

Mr. EVANS: I ask to-night whose hands are clean?

Mr. FORKE: Whose hands are filthy?

Mr. EVANS: Who is not a party to this iniquitous system? I say it is time that hon. members declared themselves on this subject. This money has been divided between both parties. Whom do they represent in this house to-night? What have the heads of both parties to say to this, and will they take the means that Sir Robert Borden once took to purge their parties of these methods? It hurts me to make this statement, and it hurts worse from the fact that certain hon. members opposite have allied themselves with those who tolerate this system and benefit by it, members who once sat with us in this corner of the house.

I have another clipping in my hand from the Montreal Witness, that old journal which has for eighty years worked for righteousness in this country. In it there is given a list of firms which have evaded the payment of income tax to the extent of many millions of dollars; they were not even asked to make an income tax return. One of my neighbours when I lived on the farm, a poor devil who never had an income, who never had anything to pay income tax on, was sentenced to jail for thirty days at Prince Albert because he refused to make a return. He had to get somebody to do it for him, he did not even understand the English language. Yet the firms in question have not even been asked to make a return. Is this the Canadian parliament?

From the Saskatoon Daily Star, under date of June 14, 1927, I read the following:

It is estimated that as a result of the customs inquiry and the auditor's disclosures, three hundred millions will come into the treasury.

The farmers in this house have been accused of evading the payment of income tax. They never had any income to pay taxes on. In this budget the class which reduces the agriculturists of the Dominion to a state of dependence through budgets such as this is the one which is again relieved by law of the payment of a large portion of that tax, and the government is dependent on the tariff for revenue—a method which places at least $2 in the pockets of the protected manufacturer for every one that goes into the Dominion treasury. I need not go any further for authority on that point than to the Right Hon. W. S. Fielding, who was Minister of Finance in this government until a few years ago. Let me read his words:

> It can be established positively, I believe, that if you take into account simply the difference between the duties that were paid during the period of the Liberal administration and the duties that would have been paid had the Conservative tariff remained in force, the money that went directly into the pockets of the Canadian people on that account alone was from $85,000,000 to $100,000,000. But it must be remembered—and economists, I think, will agree—that the saving you make in a case like that is not to be measured only by the amount that you did not pay into the customs; you have to take into account also the check that was put upon the rise of prices at home, and that for every dollar saved to the people in that direct way probably two dollars were saved in the difference between the prices prevailing and those which would otherwise have been charged by the home manufacturer.

Mr. GARDINER: What was the date of that utterance?

Mr. EVANS: May 10, 1921. Now the duties paid in 1921 amounted to 179½ millions. Twice that amount is over $359,000,000, and this is the amount that Mr. Fielding says the manufacturers added to the price to the Canadian consumer in disposing of goods sold in that year. The previous speaker, the hon. member for South Waterloo (Mr. Edwards), wants the whole of the difference between wages paid in Britain or other European countries and wages paid in Canada to be made up by the tariff. I ask: By what rule or reason can we shoulder the burden on to any other industry in this Dominion? The farmers, as I have already said, are the ones that carry the greatest part of this load. They sell their produce in the markets of the world, competing with Russia, China, India, Argentina, Australia, and in some of those countries they do not pay over one-sixth of the amount of wages which the Canadian farmer has to

pay on his farm to get his wheat harvested. By what rule or reason can the hon. member shoulder that on to the agricultural class of this Dominion? Let me ask: By what rule or reason did the government decide to put a heavier burden this year on the agricultural class that is still labouring to make ends meet and failing as the days go by?

The Minister of Finance says: "Work and thrive." Our people are working on the farms of Canada to-day double the hours that are worked in the civil service and four hours longer than are worked by those in the cities who have the eight-hour day. Our women are on their feet at five o'clock in the morning and if they get their work done by nine o'clock at night they feel lucky. I ask again, and perhaps the Minister of Finance will answer me when he speaks: By what rule or reason does he maintain this trade penalty on the commodities which the farmer has to purchase? I find from this pamphlet presented to him and his colleagues this year that there is a duty on some of our articles amounting to 35 per cent. Is this reasonable? Show me that the agricultural class is to-day so prosperous that it can bear the burden of all other industries. I challenge any member of the government side to-day to do that, and if I have time before I sit down I want to labour that point a little further.

A good deal has been made by the government this year regarding the reduction in the national debt. Debt is a relative matter and it must always be considered in relation to assets. The newspapers even have taken the matter up and much has been made of the fact that we have been able to meet maturing loans from current revenue. There are two ways of looking at this question. The minister gave us the impression, and the country has received it, that as a nation we are further away from a state of insolvency than we were last year. Is this so? I am more concerned to-day about our assets than our liabilities, and for this reason. In 1926 we sold 97,000 fewer finished cattle in the markets of Canada than we did in 1925, and in 1927 we marketed 21,282 fewer cattle than we did in 1926. But there is still another feature regarding agriculture that is worse even than the loss on finished cattle. In 1926 the farmers marketed 27,000 more calves than they did in 1925, and in 1927 they marketed 24,915 more than in 1926. Add to this the fact that matured cattle during this last year averaged twenty-five pounds each less in weight than the year before. The tremendous increase in the number of calves being marketed indicates that it will now be five or six years before the live stock industry regains its former status. Taken altogether, the diminishing live stock industry is a situation that should cause alarm to all who care for the development of this country, and not only its economic seriousness but its moral standard as well by the concentration of our workers in the centres of industry or the cities. The figures which I have given for 1927 in regard to the live stock industry I lately secured from the deputy minister of the department, Doctor Grisdale.

Between the years 1921 and 1926, two census years in Saskatchewan, despite all our immigration and despite the natural increase, we find that we had 2,000 fewer farmers in 1926 than in 1921 in that new province where the development in agriculture is chiefly taking place.

Mr. BOURASSA: Does the hon. member mean 2,000 fewer farm holders or 2,000 less population?

Mr. EVANS: Two thousand fewer farm holders. This fact regarding the number of farmers in Saskatchewan diminishing during that period by nearly 2,000 is surely conclusive evidence of the result of the traffic of the politicians in the lives of the workers. Our industrial lords and politicians may point to the building of great cities and their growth, but the foundations of cities lies in a contented, prosperous and virile population on the land. Destroy that foundation and the superstructure will tumble down on your own heads. Evil in every form by its very nature is its own avenger. The fact is that the government of Canada is had in tow by business interests, and this condition is of such long standing that even business is a secondary consideration to-day in the amassing of wealth.

The hon. member for Fort William (Mr. Manion) asks what this government has done for the mine owner, the manufacturer, and others, mentioning every activity in the Dominion—all going to show that business ability and courage are not the essentials in business to-day. The one essential, according to the hon. member for Fort William and some of his colleagues, is a successful linking up with the politician. Why?

The hon. member for Fort William also asks, what has the government done for the wage earner? Why does this government let our men go to the United States to seek work, he asks? The workingman has always been the concern of the patriotic protectionist, if you will let him tell the tale. Years ago I thought it was a patriotic thing to purchase my farm equipment from the factories

of Canada. I have during my thirty-seven years of farming purchased three Chatham fanning mills. I had always thought that these fanning mills were made in Chatham, Ontario; but only lately I found out that the Chatham fanning mill is as often made in the United States or anywhere it can be made the cheapest. One of my friends who can vouch for this fact only lately came across from Windsor with four drayloads of Chatham fanning mills smuggled into Canada.

Mr. BANCROFT: Was he a friend of yours?

Mr. EVANS: I would ask, where is the concern for the workingman under conditions of that kind? How do they get those things into Canada duty free? Oh, he spoke to the man in charge who said: These articles are unfinished. But I want to tell this house that all that was unfinished was that the screens were not punched. The Chatham fanning mills are made in the city of Detroit, and I hope hon. gentlemen will get that right. These mills have always been protected by a high duty, for the sake of the workingman, I presume, but they can be smuggled into Canada under the pretence of their being unfinished articles.

The farmer was also a concern of the hon. member for Fort William, but I hope that our agriculturist population will never lose its self-respect to the extent of joining in the plea for political pilfer such as we hear in this house from members who declare their own inability to make their living.

Partyism—let me say a word regarding partyism. Party politics as it is carried on in this country is destructive to every good quality which we as a people should develop. The idea of the politician is to keep in power, but that politics should be dependent on business and business on politics to the extent it is, is evidence of a depravity that should at once be checked. The evil of this party system is seen only in its entirety when the government of a province is of the same political stripe as the one occupying the seats of power at Ottawa, and because of this—I wish the Minister of Justice (Mr. Lapointe) were in his seat—the people of Saskatchewan last year were humiliated and their sense of justice and freedom was ravished by the fact that the provincial police were used as stool pigeons to secure evidence to convict because a federal politician was concerned, an honest man who was not guilty.

Some hon. MEMBERS: Explain.

[Mr. Evans.]

Mr. EVANS: Proof of that can be had at any time.

Some hon. MEMBERS: Give it now.

Mr. EVANS: I see the Solicitor General (Mr. Cannon) in his seat and I wish other ministers were here because I want this to sink in. These are some of the facts which this nation at this time should take into consideration, when the righeous sense of the patriotic people of Saskatchewan, their sense of liberty and justice has been ravished in this way. It was a case where even the officers of the law were debased, and justice became mired in party politics. I am speaking of what I know. This state of affairs has been developed because of the introduction into our public life of a system of class privilege. So much for that.

Another question that is occupying the attention of the people of to-day as never before is immigration. There came to hand this morning the Montreal Star, and I was glad to get it for certain reasons. The Star of Montreal, that great Conservative paper—

Some hon. MEMBERS: Oh!

Mr. EVANS: The Star wants more population, but it has at last acknowledged the fact in this article on its front page—and it is valuable on that account—that the farmer has all the burdens he can stand now, and that no more can be placed on his shoulders. While this editorial outlines a scheme of development which is, I think, just as impossible of success as the present system of protection, it is very gratifying indeed to see that such a paper at last recognizes the rights of the farmer.

Mr. FINLAY MacDONALD (Cape Breton South): Mr. Speaker, I regret that the acoustic properties of this chamber were not good enough to enable me to hear everything that the last speaker (Mr. Evans) said, but I did hear enough to startle me, and I am sure that the members of the government could not have been listening or they would have risen in their wrath at some of the charges which the hon. member for Rosetown (Mr. Evans) was making against them.

Mr. ROBB: May I say that I listened carefully to the hon. member for Rosetown, and his charges were not directed against anyone in particular. It was just an insinuation that every member of this house was implicated except himself.

Mr. MacDONALD (Cape Breton): All I have to say about this question of party funds is this: I am willing to join with the hon.

member for Rosetown in asking for a full investigation, because if there has been anything like that done, somebody on our side has been holding out. Many of us did not get our share, and I have no doubt that we had to contribute quite as liberally to our election expenses as did the hon. member for Rosetown.

Having listened to the last two speakers, I rather sympathize with the Minister of Finance. They attacked him from entirely different angles, but I do not think he should have very much trouble in deciding which of the two criticisms is deserving of consideration. The hon. member for South Waterloo (Mr. Edwards) presented facts and figures as to the exact effect that the proposed modifications in the tariff are going to have on the textile industry in his riding. As to the hon. member for Rosetown, his remarks were of a general character, and showed that he is too blameless and pure and high-principled to be able to contribute anything of practical value to an economic discussion of this kind. I think we all agree with many of the principles that he enunciates, but I am afraid that in this practical age the hon. member will find himself like a solitary sparrow on a housetop or a lonely pelican in the wilderness.

Now, sir, coming from the constituency in which is situated the great steel industry of eastern Canada, I have to express my regret that the budget holds out no hope for that industry. Two years ago the Duncan report made certain recommendations with regard to it. One year ago the Prime Minister (Mr. Mackenzie King) gave a message of hope to the people of the maritime provinces when he stated that the government intended to implement fully those recommendations. Two years ago the industry submitted its case to the tariff board, asking for more protection, but so far as I am aware nothing has yet been heard from the board. One year ago the Prime Minister gave as a reason for not taking immediate action to implement the Duncan report with respect to the steel industry that the British Empire Steel Corporation was in litigation, and he stated that nothing would be done until matters had been straightened out. Now the litigation has been settled, everything has been straightened out, and all we want at this time is some indication on the part of the government, some gesture of their intention to give assistance to that industry; but none is forthcoming. We had reason to hope, and did hope up to the very time the budget was brought down, that some assistance would be given to the steel industry of Nova Scotia.

I have no desire to embarrass the hon. Postmaster General (Mr. Veniot). In a speech delivered at St. John a short time before Christmas he intimated that when the budget was brought down, or at some very near time in the future, the two major recommendations of the Duncan report, one with regard to the Valley railway and the other with regard to the steel industry, would receive attention, and the news in relation to these matters would be such as to make every maritimer glad. Well, the speech was delivered at a convivial assembly by a minister speaking to his constituents; he would naturally have a strong desire to give them a word of hope and encouragement, and it was to be expected that he would speak in that vein; but I for one refuse to believe that his statement was entirely unwarranted. I believe that at the time the government did intend to do something for our steel industry. What has happened in the meantime to cause them to change their minds? Has anything happened, or are they going to postpone action for another year in order to be able to make political capital out of any concession then granted to the industry?

I am not going to take up any time discussing the question of debt and taxation, for it has already been fairly well threshed out, and I think it is pretty well understood by the people of Canada. I do not understand the great jubilation with which the government's announcement of a surplus is greeted. Unless the government can prove that they themselves have done something to earn that surplus by some legislative or administrative action, I do not see any occasion for such jubilation. At the time of confederation the province of Nova Scotia handed over all her revenues to the Dominion. To-day we are having a hard struggle down there to make both ends meet. In other words, the provincial authorities are finding it very difficult to raise sufficient money to carry on the government of the province. Contrast that lack of revenue with the federal surpluses running from forty million dollars to seventy million dollars. It seems to me that the lesson to be drawn from this disparity between the financial condition of Nova Scotia and that of the Dominion is that the time has now arrived for a considered adjustment of the financial arrangement between the provincial and the federal authorities. The federal government has from time to time invaded the field of provincial taxation, crippling the various provincial administrations, and to-day most of the provinces are experiencing considerable difficulty in meet-

ing their budget requirements. Even in the small matter of the fines that come in from prosecutions under the customs and excise act, although the provincial government furnishes all the officers and provides gaol accommodation when the prisoners are convicted, the fines go into the federal exchequer. The provincial government has to bear all the expenses. I think in fairness this government should refund to the province and to the various municipalities all the fines that have been collected from prosecutions under the act.

There is another matter closely associated with this question of the relation between the municipalities and the provincial governments on the one hand and the federal government on the other. The country store is passing away; the small storekeepers in the various towns and rural districts are going out of business. These people are being gradually driven out by the mail order houses. In my home city of Sydney I have seen a large room in the post office filled with mail bags crammed with catalogues from mail order houses. The people from the various rural districts send their money to these houses and get goods in return. This practice may possibly be defended on the ground that the goods are cheaper. Very well. But I ask in all seriousness why this government should use the post office department to facilitate the carrying on of this business without making some recompense to the municipality that is being hurt. The local storekeeper has to pay a certain amount of taxation for the upkeep of the town; the mail order house pays nothing. I submit that the time has come when these mail order houses should be made to pay a share of the taxation in the municipalities that are being affected, so that the local storekeeper may be given a chance for his life.

This forty minute rule, Mr. Speaker, is pretty much the same as a three months' note which a man has to meet: the time goes very rapidly. I have not an opportunity to develop any one of the questions which I should like to discuss, but I must hurry on now to the subject which is of supreme importance to me, namely, our fuel supply. We are all agreed in this country as to the great necessity of establishing some fuel policy—a national fuel policy if you will. We all admit that it is highly desirable that we should make this country independent in this respect. We have in Canada an ample supply of coal; at both ends of the country there are large coal deposits. But we are sending out of Canada over $100,000,000 a year for the purchase of coal which could be supplied from our own deposits if only we were able to make them available. Of course, our difficulty lies right there. These coal deposits are to be found on either side of the country while the great consuming portion of the population is situated about midway. It seems a somewhat sad commentary on our boasted civilization that under such circumstances the miners of Canada should be in dire distress and that public subscriptions should have to be called for in order to feed and clothe them during the winter. This is going on from year to year and nothing practical appears to be suggested. Surely something can be done and ought to be done to meet the situation. Our problem in the province of Nova Scotia is winter unemployment. During the summer months we are able to ship our coal to the St. Lawrence market, but for four months in the winter our mines are practically idle and our miners out of employment. Some sort of cure has been offered by means of the banking of coal in winter. This in my opinion is a very poor substitute, because after all the banking of coal in winter simply takes that amount of the market away in the summer time. There should be some more satisfactory way of solving this problem of winter unemployment.

During the past three years we have had a number of investigations into the coal question and various suggestions have been offered. The witnesses who have appeared before the committees all express a desire for a national fuel policy, but no one will tell us what that policy should be. I do not intend to propose what I believe to be a national fuel policy, but I do wish to submit to this government some constructive suggestions which I trust will have some effect in alleviating the circumstances of winter unemployment in Nova Scotia. Let me state the problem simply to the house. It costs us $3.80 a ton for coal at the pit mouth and another $3.80 to land it in Montreal; that is $7.60. American coal can be laid down there $2 cheaper than this figure. How shall we meet the competition? I confess that when I came to this parliament two or three years ago I had the idea that the whole question could very easily be solved; all that was necessary was a high tariff against coal coming in from the American mines in such large quantities. I have learned since that the tariff is only one factor in a very complex problem, and that if we are to cope with the question of unemployment in Nova Scotia there are three or four factors that have to be considered and three or four parties to the problem who will have to make sacrifices.

We have to meet American coal in the St. Lawrence valley, and to do so we must either cut our costs somewhat, or raise American costs to some extent, or do a little of both. I want to submit the suggestion to the government that it is possible to attain this end by a little sacrifice on the part of everyone. The operator must make some sacrifice and produce his coal at a rate lower than $3.80; the traffic man must make a sacrifice and transport his coal from Sydney to Montreal at a rate lower than $3.80, and the local government must make some sacrifice by refunding a portion, if not all, of the tax on the coal mined during the four winter months, because this is the particular time to which I am referring.

How are we going to do that? The idea is suggested by this famous Duncan report. Before the Duncan commission was appointed the maritime provinces were more or less in the doldrums; they were discouraged and rather hopeless; men were leaving and the industries were failing. The Duncan commission held sittings and brought in certain recommendations which, although they have not all been carried out, were still very hopeful, and the statement of the Prime Minister that it was the intention of his government to implement those recommendations had a wonderful effect throughout the maritime provinces. Now, the idea is this: Can we not have a commission similar to the Duncan commission to deal with this problem of winter unemployment in Nova Scotia? Let me make this suggestion to the government: Appoint a commission of five men, one representing the companies, one representing the traffic department of the great railway, one representing the industry, one leading business man and last but not least a representative of the miners of Nova Scotia, and let me say that the miners will send to that conference a man with an intelligence equal to that of any other man there present, and probably with a greater knowledge of the actual condition of affairs. There is no need to take any evidence; the evidence is all here and the facts are all in the possession of the Department of Mines. I am sorry the Prime Minister (Mr. Mackenzie King) is not here to-night, or I would try to secure from him an assurance of his willingness to consider the idea. Possibly the Minister of Finance (Mr. Robb) may give me his assurance. I venture to think that if such a conference as this is held a solution will be found, and a recommendation from that commission will be of sufficient weight, backed up by public sentiment, to effect a remedy for this great unemployment. This is not a cure-all; I am not offering this as a fuel policy but rather as a pure experiment to deal with this question in a practical way. Up to the present no person on either side of the house and no witness whom I have heard or of whom I have read has ventured to make any practical suggestion which would offer a solution of this difficulty.

This is an important and vital question to the maritime provinces. Every year we have a recurrence of these same distressing conditions; every year our miners and their wives and children are in dire distress and have to be helped with food, clothing and the other necessities of life. Surely the time has come in the history of this country when there is sufficient intelligence and patriotism on the part of the general public to make some sacrifice, not only to alleviate the sufferings of these men but that out of it may possibly grow something which will furnish a permanent solution of this very difficult problem.

Mr. A. E. BOURGEOIS (Kent, N.B.): Mr. Speaker, it is with a feeling of hesitancy that I rise on this occasion, because I readily understand that it is the duty of a member attempting to address this house for the first time to move cautiously; for there is always that danger of wandering too far afield and of having to be reminded to tread the straight and narrow path. For that reason, Sir, I will be brief in my remarks.

It is my first duty on the occasion of this, my first address in this house, to extend to you, Sir, my congratulations on your unanimous selection for the third time to the exalted position of Speaker of this house. This is unquestionable and conclusive proof of your nation wide known impartiality and of your unfailing courtesy and distinctive personality. Although most of the people of our province, so far as I am aware, have never had the honour of your personal acquaintance, I can assure you that your distinguished career in the service of our country is a household topic in the province of New Brunswick, and particularly in the constituency which I have the honour to represent. May I also say that we admire the province of Quebec for the number of talented and distinguished statesmen it has contributed to the public service of Canada.

It is also my desire to congratulate the leader of the opposition (Mr. Bennett) on his elevation to the position he now occupies at the head of the great Conservative party. I am particularly pleased at this because of the

fact that he comes from the province of New Brunswick and was born in the county of Albert, which is adjacent to my own county. I am confident that in time, if it is his ultimate destiny to become Prime Minister of this great Dominion, he will uphold the best traditions of our New Brunswick statesmen who have sat in the councils of the nation, and will bring to that exalted position those high ideals of the true Canadian statesman which he possesses in full measure.

It is also my pleasure to congratulate the mover (Mr. Ilsley) and the seconder (Mr. Beaubien) of the address in reply to the speech from the throne for the very masterly manner in which they performed their part. I can assure them that they have won not only the admiration of their constituents but also the respect of this house and of the entire country.

Unquestionably the outstanding event of every session of parliament is the presentation of the budget by the Minister of Finance. Although I was not a member of this house until 1926, nevertheless I have followed the trend of events very closely, and I am sure that the great majority of the hon. members of this house will agree with me when I say that at every successive budget presentation the people of Canada as well as the unbiased press of our country have been loud in their praise of the administration of the public affairs of Canada by the present government and the Minister of Finance (Mr. Robb) whose reputation as an honest, sound and economic administrator of the finances of Canada ranks high in the minds of the people. I believe that our expectations of sound economic progress throughout Canada have been again demonstrated by the minister in his presentation of the budget this year.

It is not my purpose, Mr. Speaker, to review what has taken place in Canada since the 14th of September, 1926, for many of the speakers on this side of the house dealt very ably with the conditions at that time when the speech from the throne was discussed. But, Sir, I must say that on that date the electorate of Canada responded nobly to the appeal to elect a stable government, a government with a truly national policy and one only for every section of Canada. Embodied in that policy are the three essentials of a moderate tariff policy, a policy of adequate protection for the manufacturers of Canada, and one of wider markets for every section and class of industry throughout our country. Do we need, Sir, any greater proof of the wisdom of this policy than the changed conditions brought about since 1921? Year after year we are witnessing a gradual reduction of our national debt. Year after year we are also witnessing a large favourable trade balance, and we are pleased to note this year an excess of exports over imports amounting to the large sum of $147,100,904, due, Mr. Speaker, not only to the wise policy of the government, but also to the indefatigable energies and cooperation of the agricultural and industrial population in every province of Canada. But special mention should be made of the agricultural population of the western provinces in contributing in such a large measure towards this favourable trade balance, and I desire to say, Sir, that the pioneers and their families who went west from the provinces of Ontario and Quebec and from the provinces down by the sea, and the folks who emigrated from the British Isles and other lands to western Canada, deserve the greatest commendation for their courage and perseverance in carving out of the Northwest territories the beautiful provinces of Manitoba, Saskatchewan and Alberta. They have accomplished the great achievement of making of western Canada the greatest wheat producing country in the world, and have thereby also contributed to a great extent to the success of the two great railway systems of Canada.

But one must not forget that Ontario, the banner province of Canada, has been a great factor in increasing our favourable trade balance, due to the highly industrialized conditions in that province and its intensive agricultural production. Another contributing factor has been the province of Quebec with its immense resources of forest wealth of wood pulp products and its sane economic hydro development policy, which have had the effect of attracting an enormous amount of foreign capital to that province.

It is true, Mr. Speaker, that in New Brunswick our progress has not been as marked along agricultural and industrial lines as that of the central and western provinces. That is due to some extent to our geographical situation and to our remoteness from the markets of the central provinces; also to the almost prohibitive tariff which prevents us from placing our surplus agricultural products in the markets of the United States, particularly potatoes, of which we have a large surplus every year and on which there is a duty of 50 cents per 100 pounds. Not only does that tariff adversely affect our agricultural population, but it also prejudicially affects our fishing industry to the extent of two cents per pound on mackerel, two cents on halibut and one cent on cod. It is therefore of the utmost importance to the maritime provinces that the government should undertake negotiations at

the earliest opportunity whereby our products of the soil, the forest and the sea may be admitted to the United States market under most favourable conditions.

But Sir, notwithstanding the disadvantages in that direction a spirit of optimism prevails throughout the province of New Brunswick, and a feeling of the greatest confidence in the future. This spirit has been stimulated by the fostering influence of the government in the opening of wider markets and by the negotiations of the British West Indies treaty; and with the prospects of a greater expansion of trade with the Central and South American republics the agricultural population are bending their energies to a more intensive agricultural production. As a proof of that assertion I may say that the estimated value of our field crop production in 1927 was $23,596,000. Of potatoes alone we had under cultivation 46,998 acres yielding to the farmers of New Brunswick at a conservative estimate a return of $5,423,000. Not only are they directing their energies towards a greater agricultural production but they are also paying attention to the dairy industry. In 1925 our dairy production amounted to $7,663,174. In 1926 it amounted to $8,046,743, a production which is still insufficient to meet the requirements of the home consumption of the province, particularly in butter. If the same increase is kept up from year to year we shall very soon, I hope, have a surplus. Until then the agriculturists of New Brunswick will have no cause to complain of the effects of the Australian treaty in so far as its results upon the butter market are concerned.

Coming to the fishing industry of the province of New Brunswisk, I must say that it is of the greatest importance to a large population located in the area extending from Campbellton on the Baie des Chaleurs to Cape Tormentine on the southernmost extremity of New Brunswick on Northumberland strait, an industry from which the fishermen benefited to the extent of $2,375,000 in 1926, and $2,520,722 in 1927. May I point out that the county of Kent occupies a very prominent position in that regard, particularly in the catch of lobsters and oysters. Within my constituency we have two lobster fishing seasons, one applicable to the district extending from Point Sapin on the north to Chockfish on the south, which opens on April 26th and closes on June 26th, and the other applicable to the district from Chockfish to River Philip in the county of Cumberland, Nova Scotia, opening on August 15th and closing on October 15th. Between the two last mentioned points there is unquestionably great dissatisfaction among the fishermen due to the lateness of the opening date. I would point out to hon. members that owing to the prevailing high winds and frequent and sometimes very violent and disastrous storms, the fishermen are unable to overhaul their lobster traps, and as a consequence can avail themselves of but three weeks out of a period of two months. The result has been that a great many have abandoned their occupation. I therefore hope that the royal fisheries commission in their investigations will have found conditions such as to justify the recommendation that the lobster season instead of beginning on August 15th and ending on October 15th, begin the first of August and end the 30th September. I would further particularly recommend that in order that our fishermen may be protected in their at all times hazardous and dangerous occupation in the open seas of Northumberland strait, where frequent storms arise which are sometimes very disastrous to life and property, more protection be afforded along our coast. In this connection, I would point out to the Minister of Public Works (Mr. Elliott) that in the county of Kent breakwaters are absolutely essential at St. Louis, Maillet's gully and Caissie cape for the protection of our fishermen along that part of the coast.

As regards the Duncan report, we are particularly grateful to the government for implementing the recommendations contained therein, especially the twenty per cent reduction in freight rates, a reduction which is and will be of incalculable benefit to the agricultural, commercial and industrial life of the maritime provinces. In regard to the recommendation with respect to railway matters in Kent, I hope the government will at an early day so adjust matters as to relieve the unsatisfactory conditions which have existed in the northern part for many years.

Another recommendation of the Duncan report, which is implemented and for which the fishing population are very grateful, is the appointment of the royal fisheries commission to inquire into fishing conditions in the maritime provinces. Its report when submitted will, I hope, tend in a large measure towards remedying the grievances of the fishermen and also towards a greater development of that very important industry in the maritime provinces.

In conclusion, it is my pleasure to say that we have in New Brunswick a strong and virile population characteristic of the two great English and French-speaking races, living in the most perfect harmony and

mutual good fellowship, and conscious of their duty to assist in making Canada a happy, prosperous and united country.

On motion of Mr. Arthurs the debate was adjourned.

On motion of Mr. Robb the house adjourned at 10.05 p.m.

Friday, February 24, 1928

The house met at three o'clock.

SELECT STANDING COMMITTEES

Hon. ERNEST LAPOINTE (Minister of Justice): On behalf of the Prime Minister (Mr. Mackenzie King), I beg to move, seconded by the Minister of Finance (Mr. Robb):

That the names of Messieurs Duff, Sinclair (Queens), Jacobs, Descoteaux and Glen be substituted for those of Messieurs Bourgeois, Boivin, Delisle, Fafard and Steedsman on the select standing committee on agriculture and colonization.

That the name of Mr. Lacroix be substituted for that of Mr. Kay on the select standing committee on railways, canals and telegraph lines.

That the name of Mr. MacLaren be substituted for that of Mr. Price on the select standing committee on marine and fisheries; and

That the name of Mr. Price be substituted for that of Mr. MacLaren on the select standing committee on printing.

Motion agreed to.

PRIVILEGE—MR. BIRD

On the orders of the day:

Mr. T. W. BIRD (Nelson): I rise to a question of privilege. I wish to quote from an article which appears in The Evening Guide, a newspaper published at Port Hope, Ontario, and I trust the house will restrain its sense of humour until I have concluded the quotation. The article in question, which appears in the issue of this newspaper of Monday, February 13, in commenting upon the bill which was introduced in the house a few days ago by the hon. member for Winnipeg North Centre (Mr. Woodsworth), for the purpose of amending the criminal code in respect of blasphemy, makes this statement:

The personality of those who supported the bill is worth a passing notice. It was introduced by Mr. Woodsworth and supported by Mr. Bird.

That is misstatement No. 1.

Remarkable to relate both these members of the house are ex-clergymen.

Misstatement No. 2: I am no more an ex-clergyman than the leader of the opposition (Mr. Bennett) is an ex-lawyer.

[Mr. Bourgeois.]

The former was a teacher or professor in the Winnipeg Methodist Theological College a few years ago.

This, I understand, is false: misstatement No. 3.

The latter was a prominent preacher of the gospel in one of the western provinces.

That is a slight exaggeration.

The question might very well be left just here, without note or comment.

But apparently the writer cannot withstand the temptation to slander, so he proceeds:

All that might be said of this extraordinary exhibition will readily occur to every right-thinking person. One cannot but hope that in the inner consciousness of each of these gentlemen some ray of light may pierce through the outward darkness that enshrouds what was once their better selves. Milton depicts Lucifer's fall as immeasurably tragic, because he had held an honoured place with the most high. One wonders at the strange perversion of an erstwhile religious mind contemplating the advisability of removing all restrictions to the flood-gates of heart-breaking, vile, shocking and contemptuous blasphemy, under the childish plea that liberty of speech is being fettered. It is a sad commentary, however, that the withdrawal of clergymen from their calling and their entry into public life in this country, has been disappointing and in many cases truly tragic. In no single case has any one of these clergymen been anything but a disappointment. Not a few but have gone wrong morally.

So much for this paper. I turn now to The Port Hope Daily Times of February 17. This newspaper prints the following:

The Rev. Mr. Woodsworth and the Rev. T. A. Bird of Nelson—

Not ex-clergymen this time.

—want to strike out the section of the criminal code under which Sterry was convicted, so that in future particularly red orators would be free to blaspheme at will. The language used by Sterry in the paper he published was of a most revolting character and made cold shivers creep up the spines of even those who cannot be termed religious, and one of the ministerial members of the house is so much enamoured of it that he attempted to read it to the house. Hon. Mr. Bennett, however, objected to the pages of Hansard being thus polluted and Rev. Mr. Bird took a second thought and desisted.

I will overlook the comparison between the religious zeal of the leader of the opposition and that of myself; it is very much to my disadvantage. However, I want to say that in regard to the first—

Mr. POWER: I rise to a point of order. We have on two or three occasions in the past listened to personal explanations from members of this house, to corrections of misstatements, or to commentaries on statements or articles which have appeared in the press. Possibly we were right in treating these as matters of privilege, but I respectfully submit that we should not regard as a

question of privilege the reading, with comments upon them, of lengthy newspaper articles.

Mr. SPEAKER: Bourinot is very clear on this subject. He says:

When a member conceives himself to have been misunderstood in some material part of his speech he is invariably allowed, through the indulgence of the house, to explain with respect to the part so misunderstood.

He concludes the paragraph by urging that such explanations be brief.

Mr. BIRD: It seems to me, Mr. Speaker, a much more serious matter for a member of this house to have his standing before the public, especially in relation to his religious convictions, scurrilously slandered in the manner adopted by these newspapers. Surely I can claim the protection of the house from that kind of thing. These articles attempt to brand me in the eyes of my fellow-religionists as being unworthy of the name I profess and of the profession I have followed for a good many years. I desire to call the attention of the house to what I actually said on the occasion in question. When this matter was before the house I was careful to make my point of view clear. I had not intended to speak to the bill at all; I knew nothing about it. But when my hon. friend from South Toronto (Mr. Geary), perhaps unintentionally, cast an imputation upon my hon. friend from Winnipeg North Centre, I rose and at once explained why I took part in the discussion. I said:

Now, I take part in this discussion in order to protect my friend from Winnipeg North Centre (Mr. Woodsworth) from what I consider to be the unjust objection of my friend from South Toronto (Mr. Geary).

Mr. POWER: Mr. Speaker, I again rise to a point of order. This is nothing more or less than an attempt to justify the participation of the hon. member in some debate, and I suggest that if his words on that occasion were not considered by the house to be sufficient justification for his stand, the matter should be allowed to drop.

Mr. SPEAKER: I have already said that these explanations must be brief, but at the same time in justice to the hon. member I must remind the house that Bourinot says that in all cases of personal grievance the house will frequently cast aside rigid adherence to established usage in order to permit a full explanation to be made. I think the comments made by the hon. member justify him in explaining his attitude to the house, but I again call upon him to be as brief as possible, because time is precious.

Mr. BIRD: I am just following the example set as recently as yesterday by a much more experienced parliamentarian than myself. On that occasion the hon. member's opinions were under attack, while in this case my character is being assailed. Any hon. member can read my few remarks through and see at once that I have been grossly slandered and misrepresented. It is my view of religion that when a friend of mine seems to be suffering under an unjust imputation, I should immediately come to his aid, and I would also say as the hon. member for St. Lawrence-St. George (Mr. Cahan) said yesterday, that there should be some protection for hon. members of this house against attacks of this kind. If there is one kind of blasphemy worse than another it is not the blasphemy of the soap box atheist who shouts on the street corner, but rather the blasphemy of the man who poses as a champion of religion, and while in that pose makes an uncalled-for attack upon the character of another man.

Mr. HOCKEN: Perhaps these editors wrote inadvertently.

PRIVILEGE—MR. ADSHEAD

On the orders of the day:

Mr. H. B. ADSHEAD (East Calgary): Mr. Speaker, I also rise to a question of privilege, but it is quite different from that raised by my hon. friend from Nelson (Mr. Bird). In addressing myself to the house yesterday I made the statement that the Minister of Finance (Mr. Robb) had addressed a meeting in Calgary, during the course of which he stated that $30,000,000 had been saved to corporations by his tax reductions, and that that saving was passed on the men below. The Minister of Railways and the Minister of Finance were both present at that meeting, and they have drawn my attention to the fact that I entirely misunderstood the remarks of the minister. It was quite unintentional, and I assure hon. members of the house that I had no desire to misquote my hon. friend. Therefore, accepting their statements as I do, I withdraw that portion of my address which relates to that particular statement made by the Minister of Finance.

PRIVILEGE—MR. GARLAND (BOW RIVER)

On the orders of the day:

Mr. E. J. GARLAND (Bow River): Mr. Speaker, I rise to a question of privilege. Yesterday the hon. member for South Huron (Mr. McMillan) is reported at page 715 of Hansard to have said:

The hon. member for Bow River tried to hoodwink me when he wanted the support of Ontario to the subsidizing of the railways in the matter of bringing coal from Alberta.

I am quite sure the hon. member did not intend to misrepresent me, so I simply state to the house that I have privately and publicly expressed my disapproval of any subsidy for the movement of coal from my province to any other place, and through the mouth of its Premier the province of Alberta has done likewise. The operators of that province also, at a recent meeting, unanimously passed a resolution asking that the transportation be carried out without subsidy.

TARIFF ADVISORY BOARD

STENOGRAPHIC REPORTS OF EVIDENCE

On the orders of the day:

Hon. R. B. BENNETT (Leader of the Opposition): Yesterday the Minister of Finance laid on the table sessional paper 132, in which the following words appear:

As stenographic reports of the public hearings are now taken, copies of the stenographers' notes have been filed with the Minister of Finance. These cover all hearings during the year 1927. The chairman has also filed with the minister his general report on the activities and proceedings of the board since he was appointed to office.

This has reference to the proceedings before the tariff advisory board, and I would ask the minister whether he would lay on the table for the use of the members of the house the stenographic reports of the public hearings before the board during the year 1927, together with the report of the activities and proceedings of the board as prepared and filed by the chairman.

Hon. J. A. ROBB (Minister of Finance): I shall be glad to table any information I have received from the board in that regard.

IMMIGRATION ESTIMATES

On the orders of the day:

Hon. R. B. BENNETT (Leader of the Opposition): I would like to draw the attention of the Minister of Immigration and Colonization (Mr. Forke) to his estimates on page 22 of the estimates as laid on the table of the house, and to ask him whether he will prepare and have printed and circulated for the use of the members of this house the details of votes 55 to 60 in those estimates, that we may intelligently and, we hope, usefully criticize his estimates. In part H of the Auditor General's report there is a statement in detail of the expenditure under the vote of last year, and it is quite clear that unless some further detail is given no useful criticism can be made of the current estimates. We would therefore like the minister to prepare and circulate the details of these votes, having regard to the terms of part H of the Auditor General's report, which indicate the actual expenditures of last year. I believe the right hon. Prime Minister will quite agree that in these circumstances we may be able to act as a committee on the estimates, and may be able to offer some useful advice with respect to expenditures in ports such as St. John and Halifax and other places, but as the vote now stands, composed of only five items, it will be quite impossible to make that useful criticism which is so essential in order that this vote may be understood by the house and by the country. If the minister could prepare this detailed statement and have it printed and circulated before these items are considered it will be greatly appreciated.

Hon. ROBERT FORKE (Minister of Immigration and Colonization): I will be only too happy to agree with the suggestion of my hon. friend, just as far as it is practicable.

Mr. BENNETT: That is all that is intended.

REPORT OF FISHERIES COMMISSION

On the orders of the day:

Mr. W. G. ERNST (Queens-Lunenburg): I desire to ask the Minister of Marine and Fisheries if he is able to give the house any further information as to when the report of the royal commission investigating the fisheries of the maritime provinces will be tabled in the house.

Hon. P. J. A. CARDIN (Minister of Marine and Fisheries): I regret that I am not in a position at present to fix any date for the presentation of that report. My present information is that the commissioners are losing no time in preparing it, and I will inquire about the date of its completion and inform my hon. friend not later than Monday or Tuesday.

THE BUDGET

DEBATE ON ANNUAL FINANCIAL STATEMENT OF MINISTER OF FINANCE

The house resumed from Thursday, February 23, consideration of the motion of Hon. J. A. Robb (Minister of Finance) that Mr. Speaker do now leave the chair for the house to go into committee of ways and means, the proposed amendment thereto of Mr. Cahan and the amendment to the amendment of Mr. Fansher (East Lambton).

Mr. JAMES ARTHURS (Parry Sound): Mr. Speaker, there are two outstanding questions which are engaging the attention of the thinking citizens of Canada at the present time. One is how to continue what pros-

perity we already have in Canada and how to increase it, and the second is how to increase our population in order that among other things we may lighten the burden of taxation throughout this Dominion. We on this side of the house rejoice that there has been a certain amount of increased prosperity in Canada. With our vast country, our great natural resources and our industrious people this was inevitable, but I want to point out that this increase in prosperity is due to no action on the part of the present government and, as a matter of fact, has come to Canada in spite of the acts of this government. I also point out that there is nothing in the present budget calculated to induce greater prosperity in Canada at the present time. The chief causes of the increased prosperity can be summed up under four heads: In the first place we have had three years of bountiful crops, thanks to Providence, and those crops have been sold by the farmers at prices much greater than existed in pre-war days. In the industry of animal husbandry a similar increase has also occurred, and good prices have been obtained. Consequently the farmers of Canada to-day, no matter in what province they may reside, are in a better position, relatively speaking, than they have been for some time.

The second great industry in Canada which has been prosperous is the mining industry. Here again we find the federal government is exercising no control or very little. The mining industry in Ontario, the province from which I come, is going ahead by leaps and bounds, largely on account of the measures taken by the provincial government. That government sent its Minister of Mines over to the old country on a very successful visit to interest British capital in the mines of the province. The mines of Quebec, I believe, are in a similar condition; and in almost every province of Canada the mining industry is increasing with the result that towns are springing up everywhere, and other industries are developing in connection therewith. The same thing may be said of the pulp industry, which is one of our largest industries. This is almost entirely under the control of the provincial government and is not subject to the whim or the control of the present government at Ottawa.

We have a fourth industry to which I should like to call attention for a few minutes, one that is gaining in importance every day in Canada—I refer to the tourist traffic. During the last few years it has grown at a wonderful rate, until it is estimated that last year the money left by tourists in this Dominion represented a total of upwards of $200,000,000. The traffic has been largely brought about by the construction of good roads in the various provinces. The movement for good roads originated, really, through a grant from the federal Conservative government for improved highways, and the movement for good roads has grown throughout the Dominion to such an extent that almost every Canadian province is spending a large part of its revenue in connection with improved road systems. The result is that the tourist business in increasing every year and will continue to increase, notwithstanding the fact that nothing at all is being done by this government to advertise Canada in that way. A few years ago, I believe, some advertisements were sent out by the Immigration department but these have been discontinued largely so far as I know.

Mr. STEWART (Edmonton): I am afraid my hon. friend has not been reading the press.

Mr. ARTHURS: There are a few pages of advertising published here and there, but very few.

Mr. FORKE: A lot of money has been spent on advertising.

Mr. ARTHURS: I have no desire to preach blue ruin or anything of that nature, but I should like to point out that a good deal of the prosperity which has been advertised so freely by hon. gentlemen opposite is nonexistent. We have reports showing that our banks are prosperous, and we believe it to be the case, but what consolation is that to the man who is out of a job, the man who has lost his occupation in some factory in this country? The immense amount of life insurance in force has also been cited. May I point out to the house and to the country that the great part of this life insurance is in the nature of investments by wealthy men, men who are anxious to avoid paying income tax and to provide that when they die their estates shall not be subject to taxation either.

The point that we are interested in mostly is this: Are conditions better in the country and in our small towns since the advent of this government, or are they worse? There can be no question but that in almost every town in this country the conditions are worse than they were four or five years ago. Our young men are leaving for the United States, hundreds have already gone, and no matter what the government may say these men are remaining in the country to the south, they are not returning. I think the member for Vancouver-Burrard (Mr. Clark) gave the house some figures on this subject from an American report yesterday. I should like to

quote some further figures in order to show the extent of this movement of Canadians to the United States. During the six years, from 1922 to 1927, 645,212 Canadians left Canada for the United States. They paid their head tax and went there with the intention of becoming permanent residents of that country. During the same years the proportion of Canadians going to the United States has vastly increased. For instance, in 1921, the proportion of Canadians to the total number of immigrants entering United States was 9 per cent; in 1922 it was 15.01 per cent; in 1923, 22.04 per cent; in 1924, 28.04 per cent; in 1925, 34.9 per cent; in 1926, 30.07 per cent; and in 1927, 25.03 per cent. In other words, during the last five years practically one-third of all the emigrants to the United States were from Canada and were Canadians, because these figures do not apply to other than native born Canadians. I would also point out that in the fiscal year, 1926-27, of the total increase in the population of the United States 88,023 were Canadians. That is to say we permitted 88,000 more Canadians to go to the United States than returned from that country to Canada. The claim is made that Canadians are returning from the United States. I should like to point out that according to the United States report of naturalized citizens leaving that country for Canada, 721 are given as Canadians; these in addition to 10,374 Americans. This shows conclusively that the exodus of Canadians to the United States is not at an end, and that we are losing vast numbers of our population to that country. In 1881 our population numbered 4,324,810. Since that time the volume of immigration to this country has amounted to 5,436,663, which should give us a population of 9,761,473. In addition to that we should have had a natural increase in population, estimated by the best judges to be upwards of 100,000 per annum. If we had retained this annual natural increase, amounting approximately to 4,000,000 souls, we should have a population to-day of 13,761,473. But such is not the case and it is apparent that we have lost by some means or other a population of upwards of 4½ millions.

As a matter of fact it is well known that our present immigration system is an absolute farce. We are supposed to hand-pick immigrants, and in many cases they do not stay in Canada but leave after a very short time. If we were to contrast our present system with that of the past we would certainly find it would be better to go back to the old system of allowing everybody to come in. For years we had a large immigration and a vast majority of the men coming in made good. We do not need to go outside of our ranks in the House of Commons to-day to see the result of the immigration policy of the past. We have in this house at the present time thirty-one members who were immigrants to Canada; in other words, twelve and one-half per cent of the total number of members in this house were born outside of this Dominion. These men made good and, as a matter of fact, many of them boast that they came to Canada without any advantage either monetary or otherwise, but under the present system they would probably not have been allowed in at all. I wish to point out also that these men were not all farmers. As regards nationality there were nine English, twelve Scotch, four Irish and six from the United States, and of the whole thirty-one members only ten were farmers. Yet these men have made good in this country and in the majority of cases we are pleased and proud to have them here.

I do not know whether the government purposes taking up the views of all their associations, but I find in yesterday's Ottawa Citizen a resolution passed by the Liberal association of a city close to this, advocating among other things that we have no more immigration in the meantime because we have some men out of work, and in the second place that, if we do have any immigration, it should be confined to farmers only, and if they leave their farms inside of ten years they ought to be arrested and deported. I do not know whether the minister is taking up that resolution or not, but I would recommend it to his consideration as being about as good as some that he has at the present time.

One of the principal problems we have now undoubtedly arises from the fact that we have a large debt owing to the war and we must increase our population in order to make this debt less burdensome upon the individual. This government, during the period it has been in power, has done absolutely nothing to remedy this condition. We lack the greatest of all remedies, namely, sufficient protection for our factories, our farmers and our labourers so that they can supply the home market. I know that many, especially our western members, speak very lightly of the home market and claim that, as they have to sell in the world market, they should also be able to buy there. But this does not apply at this time to the majority of our farmers, who know the value of the home market, and I would point out to my friends from the west, those who are engaged largely in wheat growing, that the

day is inevitably coming when the Russian republic will again enter the field as a producing nation. With her two hundred million people, with some of the finest land that, to use a common saying, lies out of doors, these people will come into direct competition with the farmers of Canada and the United States. In addition, other countries are liable to be developed along the same line, and the day will come, I believe very soon, when the importance of the home market will be felt even by those who are grain growers solely, as it has been felt by others. The hon. member for Comox-Alberni (Mr. Neill) last year made a speech, part of which was probably the greatest protection speech I have ever heard, wherein he pointed out that little towns were springing up in British Columbia and that the farmers in their vicinity found a market there for everything they could grow. The same principle should apply throughout Canada; we should develop our little industries, develop our towns and, if possible, have all our manufacturing for Canadians done in Canada.

Sometimes in this house too much weight is given to the farmer side of this question, and our friends are liable to overstep the mark even as regards their facts and figures. For instance, last year, a certain member belonging to the group to my immediate left, was speaking of Canada's exports and imports and he made this remark.

Mr. SPENCER: What is the name of the hon. member?

Mr. ARTHURS: The then hon. member for Maple Creek. He made the remark:

> We have one billion and a half dollars coming into Canada as a whole from all agricultural products.

Mr. GARLAND (Bow River): He is not an hon. gentleman to the immediate left of my hon. friend. He was over there.

Mr. ARTHURS: Well, he moved. I withdraw the implication. If we look up the statistics of this government we find that the hon. gentleman was mistaken to the extent of about 100 per cent. Our exports of farm produce are undoubtedly large and they should be larger; we should give our farmers every encouragement to produce and to export; but at the same time the exports are not proportionately as large as the hon. member endeavoured to make out. The total exports for last year of farm produce of all classifications amounted to $702,000,000, and these were classified in various ways. I would like to call the attention of the house to some of these articles classified as farm produce because they are most interesting. For instance, blueberries, groceries of all kinds, ale, gin, whiskey and other potable spirits, are all included under the head of farm products in a government return.

Mr. CHAPLIN: All the fish products of Canada will also be found there.

Mr. ARTHURS: Under farm products are included cigars, cigarettes, plug and twist tobacco, all other tobacco, pine tar and pitch, turpentine, linen and jute manufactured, and oilcloths. The amounts are large. For instance, our exports of whiskey and various other potable spirits amounted last year to about $28,000,000, and these are all included in farm products. Under the head of animal products we find harness leather, sole leather, upper leather, all other leather, glue stock, tankage, belting of leather, moccasins and Indian slippers, boots and shoes of leather, gloves and mitts of leather, harness and saddlery, and so on. If we turn over the page we find farm products including wool carpets, wool fabrics, wool underwear, wool clothing, woollens and glycerin. Incidentally, probably the export of farm products is one of the most prosperous businesses the government have, and if they did not export whiskey, they could not claim a surplus perhaps even according to their own book-keeping.

We on this side of the house, Mr. Speaker, have no objection at all to doing those things that are necessary to make any part of Canada prosperous. I do not think there was a dissenting voice on this side to any of those measures which were found necessary to build up our maritime provinces and to give them the rights to which they are entitled. We have for years in the central portion of Canada, in the provinces of Ontario and Quebec, been paying the bulk of the profits, if any, of our Canadian National Railways. Our friends in the west have been enjoying, and we granted it to them quite willingly, the benefit of much lower rates than obtain in Ontario and Quebec. We are glad to do these things, but in return we feel that we should receive some consideration for those factories which have been established in Canada for many years. Go where you will in the province of Ontario or elsewhere, where years ago there were small knitting factories, woollen factories and various other small factories, to-day we find that they have been put out of business largely perhaps on account of neglect by the government, and sometimes through adverse legislation. There is not a civilized country in the world at the present time that is a free trade country. In Great Britain the duties have been raised

from time to time until to-day that country is a more strongly protected country in many lines than is Canada. Great Britain has a flexible scheme for the protection of its industries, under legislation that is known as The Safeguarding of Industries Act, under which the control of the customs is placed in the hands of the British Board of Trade, with power at any time to increase or decrease a duty when they feel that there is unfair competition because of lower wages in competing countries, a different standard of living, or from any other cause. They have power, for instance, to decide:

> Whether foreign goods of the class or description to which the application relates are being imported into and retained for consumption in the United Kingdom in abnormal quantities.
>
> Whether the foreign goods so imported are being sold or offered for sale in the United Kingdom at prices which are below the prices at which similar goods can be profitably manufactured or produced in the United Kingdom.

Another clause reads that competition is not to be deemed unfair unless it arises, amongst other things, from:

> Inferior conditions of employment of labour, whether as respects remuneration or hours of employment, or otherwise, obtaining amongst the persons employed in the production of the imported goods in question as compared with those obtaining amongst persons employed in the production of similar goods in the United Kingdom.

It goes on to outline the whole procedure by which duties in Great Britain may be increased or changed without the consent of parliament at all, and as I said, the duties are being raised until some of their industries are better protected than ours. In the United States the same thing obtains. I think it was the hon. member for Fort William (Mr. Manion) who the other day gave a case where goods had been purchased by an American importer from Canada, and before the goods reached his warehouse the duty had been about doubled. I know of my own personal knowledge a case in my home town where a manufacturer has been selling goods to the United States, and after a contract has been made the duty has been increased to such an extent that it amounted in one case to over one hundred and fifty per cent. In self-defence, Mr. Speaker, I think we should do something to protect our workingmen, and for the benefit of the country generally.

Some splendid speeches have been made during this present session regarding the condition of the iron and steel industry in Canada. We have in Canada billions of tons of iron ore, and it is a burning disgrace that we have to acknowledge that during the last three or four years we have not produced a single ton in this country. The government of the province of Ontario a year or so ago offered to give a certain bounty for the production of Ontario iron, and I believe the Prime Minister of the province of Quebec made a similar offer, providing this government would come into the scheme and pay a fair proportion of the bounty. Nothing has been done in that direction. Yet we find that this government is able to spend, or is pledged to spend $2,000,000 to convert a couple of small blocks in this city into a park. I want to tell this house that if this $2,000,000 were spent in bounties or otherwise to help develop the iron industry in Canada, it would give employment to thousands of our unemployed Canadians and immigrants.

In conclusion, Mr. Speaker, I want to ask a few questions.

Will this budget help to make Canada prosperous?

Will it help the farmers or the workingmen?

Will it keep our boys in Canada?

Will it cause the wheels to turn in the factories that are now idle?

Mr. ROBB: None idle now.

Mr. ARTHURS: I am afraid the Minister of Finance is not a great traveller. This budget will increase industry in a slight degree, but it will be industry in another country; it will not increase industry in Canada, and the increase in industry in those other countries will be at the expense of Canadians and drive more of them out of this country to find work elsewhere.

What we need is a policy that will utilize the raw materials we have in this country. We should manufacture them into the finished product in this Dominion so far as possible, instead of sending those raw products to another country and buying them back in their finished state at an exorbitant price. In other words, Mr. Speaker, what we need to-day is a real policy of Canada for the Canadians, and not for anybody else.

Mr. W. A. HALL (South Bruce): Mr. Speaker, at the outset, I wish to congratulate the Minister of Finance (Mr. Robb) on the sound condition of the finances of this country as shown by the budget, as well as upon his courage and good sense in taking advantage of the circumstances that made this condition possible, notwithstanding the fact that the hon. member for South Wellington (Mr. Guthrie) accused him of lacking courage. The same hon. member accused him of deceiving the country by his method of dealing with the amounts guaranteed by the govern-

ment to the Canadian National Railways, which makes it appear that the debt of the country has been reduced when it has actually been increased by over twenty million dollars. He further said that all finance ministers prior to the present minister had added these guaranteed amounts to the national debt, instead of charging them to the particular railway company. But the Ontario government, he said, had five or six years ago evolved a plan to pay off the provincial debt in about thirty years, and so far had found no inconvenience in carrying it out.

Now, Mr. Speaker, I may say that none of these statements is in accordance with the facts. What are the facts? First, I need only say that this house as well as the country knows that the Minister of Finance not only has courage, but he also possesses honesty and modesty in a marked degree, characteristics possessed by few so-called politicians. His financial statement disproves the second accusation as to the increase of the national debt. If the hon. member for South Wellington will look up the records he will find that the $124,000,000 guaranteed by the Laurier government from 1896 to 1911 was not charged to the national debt; he will also find that the $170,000,000 guaranteed by the governments between 1911 and 1921 similarly was not added to the public debt. As to the Ontario government's scheme for retiring the provincial debt, the hon. member is wrong in saying that it was evolved five or six years ago. The Ferguson government was not then in power. He is also in error in stating that the scheme is to extend over thirty years; forty years is the term. As to his statement that the Ferguson government have found no difficulty in putting the scheme into practice, I may tell him and this house that the provincial treasurer has had to acknowledge a deficit every year since Premier Ferguson assumed office. The first year it was fifteen million dollars, the second year eight million dollars, and the third year five million dollars. This year for the first time the provincial treasurer finds himself able to balance his budget and announce a surplus, due principally to the profits from the government liquor stores. Presumably from now on the debt retirement scheme will be put in operation.

Turning to the budget, Mr. Speaker, this presents reductions and increases—reductions in taxation and the national debt; increase in trade and revenue, with a substantial surplus. The Minister of Finance is able to announce reductions in direct taxation as well as in indirect taxation, the sales tax, income tax and corporation tax being reduced. The reductions in indirect taxation, that is the customs tariff, are largely in the duties on textiles—cottons, woollens and linens. As these belong to the necessaries of life, the reduced tariff will lower the cost of living, and thus lessen the burdens of the working classes. The national debt has been reduced by $41,896,729, leaving it at the net figure of $2,306,000,000. During the five years the Liberal party has been in power the national debt has been reduced to the extent of $144,700,000.

The trade of Canada has been increasing by leaps and bounds. Canada ranks second among the exporting countries of the world, and fourth among the world traders. Our total trade, both exports and imports, for the nine months ending December 31 last, amounted to $1,793,209,092, leaving a favourable balance of trade of $147,100,904, as compared with an unfavourable balance of trade of $29,000,000 during the last year of the Meighen administration. But the most unfavourable balance of trade in the history of Canada was $222,000,000, or $29.61 per capita, in 1913 under Tory rule and a protective tariff which did not protect; while in 1926 Canada had a favourable balance of trade of $29.34 per capita under Liberal rule with a tariff for revenue only. During the year there has been a large increase in the revenue and a corresponding increase in the surplus. The revenue exceeded the expenditure by $54,815,000. After deducting the non-active assets, there is still left a net surplus of $41,896,729 which was applied to reduce the national debt.

According to the press of both political parties, Mr. Speaker, the fifth Robb budget is being well received by the major portion of the people. But it must be confessed that this budget, in relation to the customs tariff, is not comprehensive and far-reaching enough to satisfy a minority of the agricultural class of this country. They must remember, however, that this is the beginning of reductions, not the end; among the first, not the last. Reductions shall continue until the primary or basic manufacturing industries are free to compete with the world, having no tax, no tariff, or no protection. In bygone days agriculturists were looked upon as inferior to other classes. They were dominated by other interests because they knew not their needs, they knew not their strength, and they were not organized. To-day all that is changed. Agriculture is conceded by almost everyone to be the basis of Canadian prosperity. The agriculturists have organized. They have expressed their needs in clear-cut terms. They have made their demands with no uncertain sound. They are cooperating in buying as well as in selling, thinking that cooperation

is the keynote of agricultural prosperity, as it was thought to be in Denmark, whose people now boast that they enjoy a fair share in the distribution of wealth and prosperity of that country. But, Sir, I say that unless agriculture can be put on a paying basis the rural population cannot be satisfied, happy and contented.

Let me mention some of the reasons why agriculture does not pay:

1. Lack of science in tilling the soil, and in breeding, feeding and caring for live stock. Education along these lines is fast becoming more general.

2. Lack of discretion, or, shall I say, lack of sense, in decrying or condemning—or damning—their own occupation by branding it as drudgery or slavery, and by everlasting complaints. Doubtless this has driven, and is still driving, the young people from the farms to the urban centres more than any other cause—the net result being the concentration of industry and population in these centres at the expense of the rural districts.

3. Lack of labour. This is a natural consequence of the preceding cause.

4. Lack of working capital. This may be the natural outcome of preceding causes.

5. Lack of credit. This comes from a lack of capital. This has been partially overcome by the rural credit bill of last session.

6. Lack of business methods in doing business. Doubtless many farmers are like medical doctors who think that they are too busy to attend to business properly outside of their daily routine of work.

7. Lack of moderately-priced implements or manufactured articles. This arises from taaxtion, which I shall refer to later.

8. Lack of cheap transportation and distribution of products. This is partially overcome by cooperation.

9. Being reckless and profligate in buying luxuries. This is the last but not the least, cause for farming not paying. Luxuries may be coveted and may be desirable, but they reduce the profits of the farmer enormously.

As agriculture is the recognized source of greatest wealth, we have to depend chiefly upon it to meet our national liabilities, assisted by the products of forest, mines and fisheries. These are the main sources of real wealth we have to rely upon to restore our country to a healthy and sound financial condition. Of these, agriculture is the greatest; it produces annually more than the other three combined. The Financial Post gives the production of agriculture for the year 1927 as $1,660,387,100 and the production of the other three as $811,446,000, or less than half that of agriculture. Hence the important part the farmer plays in the economic welfare of the country. From his soil is furnished the food which is the foundation of labour for all classes. Without him the other classes could not exist. As consequently the prosperity of all classes depends upon the prosperity of the farmer, we should, as far as possible, remove every obstacle in his way so as to enable him to secure for himself a fair share of material wealth and happiness. I need not say that the chief obstacle which prevents the farmer from making a fair profit from his investment is the high cost of living, and this is due to the customs tariff, principally on the necessaries of life and on the implements of production.

But it will be asked, what about the manufacturer? He says he must have protection or must close his factory and so throw a lot of men out of their jobs; if this should happen just imagine the multitudes of unemployed! Well, recall the story of the closing of General Motors at Oshawa two years ago when the duty was lowered on automobiles and their accessories. We all know what the result was. Others say that the country must have revenue to meet its liabilities and pay off its immense debt. Let us apply this to the farmer. If you tax his implements of production—his binder, mower, horse-rake, plough, harrow, threshing machine, wagon and so forth, you take away from him the money that he has earned by the toil of his hands and the sweat of his brow and transfer it to the bank account of the manufacturer who has already millions which have been taken from his fellow farmers by means of the tariff. Thus you see that this money does not go into the revenue of the country and so does not contribute one penny towards meeting the liabilities and debt of the country. Manifestly this answers the Tory cry for revenue raised in this way.

The farmers of this country have always been anxious for reciprocity with the United States in natural products since the termination of the first reciprocity treaty in 1866, as they have a large export surplus of agricultural products and so must find a market for them. Take wheat for instance: only about one-sixth of the production is required for home consumption, notwithstanding the assertion of the Right Hon. Arthur Meighen during the election campaign of 1925. He went all over Canada telling the people that $500 was lost to the home market in respect of farm products for each person that crossed the border. That being the case, 9½ millions of people would consume 9½ millions times $500 or 4¾ billions of dollars of farm products each year. But Canada produced less than

1¾ billions of dollars of farm products last year; therefore, we must import over twice as much as we produce to feed our population—some exaggeration! But the truth is that we need only a small fraction of many of our farm products for home consumption.

This led the Laurier government in 1911 to make a reciprocity pact with the United States which would have been an immense benefit to the farmers of Canada. If the then government had put it into effect so as to show the benefit of it, instead of taking a referendum of the people, it would have meant millions of dollars each year to the farmers; and in the end it would have been a great boom to the manufacturer, as every additional dollar got by the farmer from the Americans meant an additional dollar of purchasing power from the business concerns of the Dominion. However, the government said that the people should be consulted. What happened? The manufacturers, organized to defeat the reciprocity agreement. It is said that they, with the rest of the Tory party, raised an immense campaign fund. It is said this was the only time in history that there was any money left after a political campaign in Canada, although it is said large sums were paid to the press, vast sums paid the constituencies, and every means used to create a public opinion hostile to that policy. However, all this would have been of no avail, but for a so-called political strategist, said to be Hon. Bob Rogers, who coined the slogan, "No truck or trade with the Yankees." This, coupled with the waving of the old flag, defeated reciprocity and won the election for the Tories, to the everlasting disgrace of the Canadian people.

In passing, I may say that the manufacturers although not injured by this pact but rather helped, were desirous of perpetuating the system of protection so that the money, equivalent to the duty, would continue to flow into their bank accounts as automatically as the rivers flow into the ocean. Since then, seventeen years have passed, and Canada has not been able to secure reciprocity in natural products with the United States, although the Borden government, shortly after it took office, sent a delegation to Washington to try to revive the reciprocity agreement in whole or in part. But they failed in their mission as the Americans could not trust them. This pact they had strenuously opposed a few months before. Their opposition was to win the election, and not for the good of the country.

Mr. BENNETT: The hon. member is incorrect. The Borden government sent no delegation to Washington to revive any reciprocity treaty.

Mr. HALL: That is what the leader of the opposition says, but I say differently.

Mr. BENNETT: I simply want to call the hon. member's attention to the fact that the statement is incorrect.

Mr. HALL: You have had your say. This is one more example of the inconsistency and insincerity of the Tory party. Before passing to another division of my speech, I may say that the Conservative party were anxious to have reciprocal trade relations in the natural products with the United States up to the election campaign of 1911. Indeed, Sir John A. Macdonald made several attempts to gain access to the American market for our natural products, but failed. It may have been that the Americans mistrusted the Canadians just as some of the hon. members opposite mistrust the Americans now.

Associated with agriculture, Mr. Speaker, is the question of the tariff, the question of transportation, and the question of our trade relations with other countries. It has been asserted that the question of the tariff is dividing Canada and would divide the Liberal party. It certainly divides the Canadian people into two classes, namely, high and low tariff people, or protective and revenue producing tariff people. The first class is represented by the Tory party and the second class by the Liberals and the Progressives. This is a very general statement. Let us particularize. The interests of the farmer and the interests of the manufacturer are said to be a great point of contention. Let us see how this works out. Canada does not figure largely as a manufacturing country; it is certainly not one of the great manufacturing countries of the world. Why is it not? Do Canadians lack ability in management, in intelligence, in application, in thrift and in industry? Certainly not. Is it not a fact that Canada produces, per capita, the greatest export surplus of food stuffs, which is the very foundation of labour, of any country in the world? Is it not a fact that Canada has an abundance of raw material from the farm, the forest, and the mines? Is it not a fact that Canada has the most magnificent water powers in the world, the ultimate hydro development from which is calculated to be forty million horse power? Is it not a fact that the centres of our population are situated in close proximity to the ocean traffic which carries their products to all parts of the world? Is it not a fact that Canada has transportation facilities, by land and by water, excelled by few countries in the world? Is it not a fact that Canada has a good labour market? Is it not a fact that Canada

has excellent banking facilities, affording adequate capital to manufacturers? To summarize it all, Canada possesses the six essentials for manufacturing, namely, an abundance of food stuffs, of raw material, of cheap power, of cheap transportation facilities, of good labour well located, and of available capital.

Then why is Canada not a great manufacturing country? Our people leave our own country and go across the line; the Canadian artizan and the Canadian manager are in demand in every country of the world. Then why is it that in his own country he cannot compete with the world? Who amongst us will confess that Canadians are inferior to other nationalities? Did not the Canadian soldiers in the late Great war prove themselves inferior to none, equal to any and superior to many? If all these things are so why cannot we compete with the world in our basic manufacturing industries as we compete with the world in our agricultural industry? There must be something wrong.

For the last half century the manufacturers in Canada have worshipped the fetish of protection; they have manufactured for the tariff and not for the consumers of the world. This idea of protection for the manufacturers in Canada has been carried to such an extent by the Conservative government and indeed by all governments that it has defeated itself, but the original idea of protection as conceived by Sir John A. Macdonald the father of protection in Canada, was protection only for the infant industries, not to be continued to those attaining the status of adults. In many cases this is a commendable policy, quite different from the Tory policy of to-day.

In spite of Canada possessing everything required to place her in the front rank of manufacturing nations, the principle of protection keeps her in the rear, which is the reason for the present government to make a gradual downward reduction of the tariff all along the line, as well as to facilitate transportation and to continue the further extension of our trade relations with other countries, especially with the other dominions within the empire. These things would establish industry on a sound basis and would enable the manufacturers of Canada to compete not only in a market of nine and a half million people within our own borders, but in the great markets of the world as well, thus adding real wealth to our country by greatly increasing the volume of international trade, which is the true barometer of the wealth and prosperity of a nation. This is our purpose in pleading for a low tariff; not because we have any hostility to any industry in Canada but because it has been proven that the principle of protection is restrictive and destructive, and must be changed if Canada is to achieve any great pre-eminence in her manufacturing industries. Thus we see that the interests of the farmer are in common with the interests of the manufacturer; a separation of interests affects both adversely. If a low tariff is best for the farmer surely the same tariff is best for the manufacturer, because the prosperity of the manufacturer depends almost entirely upon the prosperity of the farmer. A bountiful harvest with good prices means busy factories and great prosperity.

For a few moments let us look at the condition of our farmers. Many of them are far removed from the ocean ports, living and carrying on their work in the interior of the continent. Yet they must meet the competition of the world with their products. The railway freights are against them also, but they have accommodated themselves to these conditions and are able to carry on. They have no protection, and what is more they want none. The Tory party promised them protection; what would it be worth to them, since they now produce a large export surplus of farm products? Indeed, of what value is a protective tariff to manufacturing industries based on the natural resources of this country, when they now manufacture an immense surplus over home consumption? It is of no benefit. I submit, Mr. Speaker, that if the agriculturist can thrive and prosper without protection under such adverse conditions the manufacturer should be able to do likewise under a low tariff with the favourable conditions mentioned a few moments ago. Doubtless the basic manufacturers in Canada possess sufficient industry, energy, intelligence and ability for good management to put their industries on an export basis instead of a protective basis. The reduction in the customs tariff on automobiles in 1926 by the present government is a striking example of the truth of this proposition. Why would this not apply to other industries? It certainly would. The only thing needed is for this government to lower, adjust, equalize and stabilize the tariff on many of the manufactured articles instead of only a few, and in that way convince the people of this country that a low tariff is a sound and sane policy. In all these cases, the consumers share in the benefits with the manufacturers, just as they did in the case of the automobiles.

After this is done and the manufacturers have learned their lesson, they will no longer

call their employees together to tell them that they will have to close their factory doors on account of the lowering of the duty on similar manufactured products, while on the other hand the employees will no longer harass the manufacturer for higher wages since the cost of every article they require will be lowered. In other words the cost of living, and I presume the cost of dying, will be much less. As a result of all this there will follow a period of prosperity, contentment and happiness unsurpassed by any like period in the history of our country, as well as a complete and satisfactory solution of both our emigration and immigration problems. Doubtless this period will be known in our history as the second golden era of progress and prosperity since confederation, like unto that other golden era of the Laurier regime from 1896 to 1911.

Hon. E. B. RYCKMAN (East Toronto): Mr. Speaker, I am afraid I can hardly agree with the hon. member for South Bruce (Mr. Hall) who has just spoken, when he says that the protective tariff is restrictive and destructive and must be destroyed. If I had a mind that wanted to think that way I would not allow it to do so, because the entire commercial world thinks otherwise. I am sorry I cannot add any words of praise or commendation of the budget. I take what benefits the budget gives me, and it does give benefits; the cuts in sales tax, corporation tax and income tax all help me. They are gifts, and when a man is hungry he is anxious for any food, but I would take them all and cast them aside if the Minister of Finance had shown that courage which has been mentioned in the house this afternoon, and given this country the government it needs and the fiscal policy it requires.

I object to the budget because I do not think it is frank; I believe it to be misleading. I think it can be shown that the people of Canada are expected to take from this budget a view which the facts do not warrant. I hope I may not repeat too much of what has already been said, but there are certain matters to which I must refer. My chief complaint against the budget is that it starts to tell us there is a reduction in debt when there is no real reduction at all. It declares such a reduction when there is no real reduction in debt, that there is a surplus when there is no real intrinsic surplus as the minister has attempted to show. Further, the minister in his speech referred to the certificate given by the accountants. No one knows better than the minister how such certificates run. The formula is well understood. I pick up the budget speech and I read the statement of the Minister of Finance at page 505 of Hansard, to the following effect:

> That there should be no uncertainty as to the correctness of the public accounts of this Dominion, I recommended to the treasury board that an independent audit be made of the balance sheet of the public accounts as of March 31, 1924, 1925, 1926 and 1927. The well known firm of chartered accountants, P. S. Ross & Sons, of Montreal, Toronto and Winnipeg, were engaged and instructed to make a complete audit of the departmental accounts in question, and on the fifth of December last their certificate which is printed on page XIV of the public accounts for the year 1926-27 was received. Their report confirms the accuracy of the public accounts as submitted to parliament, and certified that the reduction in the net debt during the period in question was $105,942,498.65.

The Finance minister expected, and still expects, that the people of Canada who have seen this budget speech—and all Canada has seen it—will take this statement and understand that the certificate that has been given was given in the usual course, according to the usual formula, and specified the correctness of the accounts. That is not true. The certificate is what? It is dated December 5, 1927, is addressed to the Minister of Finance and says:

> By authority of the treasury board, given 28th June, 1927, we have examined the balance sheets of the Dominion of Canada for the fiscal years ended 31st March, 1924, 1925, 1926 and 1927.

Then do they give a straight certificate? No. What they desire to say, and what subsequently they give a form of certification to, is this:

> We certify that the published balance sheets examined by us have been compiled in a manner similar to the corresponding statements of previous years, and do not include in the net debt of the Dominion, issues of the Canadian National Railway Company and the companies included in its system, which carry the guarantee of the Dominion. The details of such guarantees have been shown separately each year in the public accounts.

They expressly exclude from the net debt of the Dominion all moneys that have been paid in connection with the Canadian National Railways for which the country is liable.

Mr. ROBB: Since my hon. friend has read part he might as well read the whole certificate.

Mr. RYCKMAN: There is no object to be gained by taking up time in reading it.

Mr. ROBB: Ah!

Mr. RYCKMAN: It seems to me that is rather cheap. They do certify afterwards in effect—I am not going to take up time by

reading the whole of it—reductions in the net debt with the exceptions which they have specified.

Mr. ROBB: Will my hon. friend permit me? He wants to be fair.

Mr. RYCKMAN: Certainly.

Mr. ROBB: The auditors certify surpluses for each year. More than that these gentlemen—who are the auditors for the province of Nova Scotia, the province of New Brunswick, the Royal Bank of Canada, and the Sun Life Assurance Company of Canada—tell me that our books are kept in exactly the same form as the books of the provinces including the province of Ontario. The last named province owns a railway system and a hydro-electric system and has the same form of book-keeping as the federal authorities.

Mr. RYCKMAN: That, certainly, has nothing to do with the actual debt of this country, and which it and no one else will be called upon to pay.

Mr. ROBB: The province of Ontario is following the same system of book-keeping.

Mr. RYCKMAN: The system in force here is the system that wrecked the Home Bank; it was just the same system of financing exactly. We found the general manager of the Home Bank doing what? Keeping two sets of accounts, not taking into account his liabilities, but taking all the assets that he could find, and then, with the liabilities not all accounted for, claiming that the bank was solvent. He even fooled the Minister of Finance because the bank was not shown up when it should have been. I say, Mr. Speaker, that in principle and in dealing there is no distinction between the handling of the Home Bank affairs by Mason and the handling of these accounts by the Finance minister if he claims there has been a net reduction in the national debt of Canada of $105,000,000. Why even the Minister of Finance was not astute enough to put his two inconsistent positions far enough apart in his budget speech. Take what we find at page 508 of Hansard:

Surplus, $54,815,000.

Then at page 509:

Guaranteed Securities
Canadian National Railways

Financial requirements of the Canadian National Railways were met by an issue of $65,000,000 4½ per cent 30-year bonds, dated July 1, 1927, guaranteed by the Dominion of Canada.

This is a little more than $10,000,000 larger than the alleged surplus. What was this sum of $65,000,000 for? For refunding and paying $20,000,000 that the Canadian National Railways could not pay. The next item is $15,000,000 for the funding of a temporary loan for which the Canadian National were liable and could not pay. Then there is $16,600,000 to provide for expenditures authorized in the railway appropriation for 1927-28 for general additions and betterments and miscellaneous maturing obligations as provided for by vote 408, Appropriation Act, 1926-27—"Loans to Canadian National Railway Company." This is again a sum which the Canadian National Railways could not pay, and so on. Therefore we see that more than this alleged surplus is used on the very next page of his speech as it appears in Hansard. Everyone knows that if you guarantee a primary debtor who is no good, who, you know, is no good, who can never pay, and who, you know, can never be expected to pay, you have to pay the debt yourself. That is the situation of this country and that situation should be frankly laid before the people. It is wholly idle and misleading and it should be condemned when one sets up that, during the period named by the Minister of Finance, we had a net reduction of the sum alleged.

In that clause of the certificate of P. S. Ross & Sons you can insert the words "Home Bank" instead of "Dominion", and you will find a certificate which will absolutely justify everything that that Home Bank did. Why, that certificate just points to a sinkhole in which you could deposit every bad debt in a financial institution. Instead of the certificate reading: We have examined the accounts and we certify that they exhibit a true and correct view of the country's affairs, it states: Here is a sinkhole, let rubbish of all kinds be deposited here, and you can do this under the certificate of the accountants. It occurs to me to ask: Was there any correspondence with the accountants about the certificate and its form? Was this second paragraph of the certificate discussed by them with the Minister of Finance? Did the Minister of Finance take this qualifying clause, which really destroys the effect of the certificate, and accept the certificate as satisfactory to the government and the people of Canada?

Mr. ROBB: Does my hon. friend desire an immediate answer?

Mr. RYCKMAN: Yes, otherwise I would not have asked the question.

Mr. ROBB: The question is very fair. The firm of P. S. Ross & Sons are too well known and of too high a type to be influenced by any person in giving their certificate.

There was no correspondence; there was no consultation as to the form of the certificate, and the government selected the firm of P. S. Ross & Sons to make this audit, because the government desired an audit that, by our opponents at least, would be regarded as satisfactory, because it is well known that the firm of P. S. Ross & Sons are amongst the most outstanding supporters of the Conservative party in Canada. One of them was a candidate for the Conservative party.

Mr. RYCKMAN: It is a very fine firm of accountants. Please do not misunderstand me. I am not complaining; I am saying that, as accountants understanding their duty, they could not certify to what they were asked or expected to certify without these qualifications and they insisted upon putting them in.

Mr. ROBB: Will my hon. friend allow me to clear that up a little further? The firm of P. S. Ross & Sons was selected to make this investigation after I had read a speech delivered by the hon. gentleman who at that time was leading the Conservative party, challenging the budget and the balance. I thought it was fair not only to the government but to all the people of Canada that we should have a true statement of the affairs of this country. I therefore cut out the report of that speech and sent it to the gentleman who did the auditing, stating: I want you to find out if that statement is correct or not. That is the answer from the books.

Mr. MOTHERWELL: An auditor from the dead would not please my hon. friends.

Mr. RYCKMAN: I am afraid the Minister of Agriculture will be examining corpses before long. I am not objecting in any respect to the certificate or its form, because I realize that the auditors could do nothing else; but I am saying that the form of it, which is in accordance with the facts, should not have been satisfactory to the Minister of Finance; that it is not satisfactory to the people of Canada, and that the minister cannot honestly state that there is a net reduction in debt of the amount specified of $105,000,000, because there is not.

The Minister of Finance in his budget also seemed to me to essay a political flight, but it was promptly met when he was carried to ground. There is no question—and no one regrets it more than I do—that there have been losses in our population and those losses have been chiefly to the United States. Everyone knows that is a subject that rankles in the hearts and minds of Canadians. We would like to cure or to palliate the situation, and the Minister of Finance in his political budget endeavoured to create the impression that Canadians were returning from the United States. He was immediately challenged for doing so. The Minister of Finance knows that, during the period with which his budget dealt, many more Canadians had gone to the United States than had returned from there. The figures have been given in this house and it is plain that the tide of immigration is not set our way. It is unfair to represent to the people of this country in an important speech such as the budget of the Minister of Finance that there is a turn in the tide; that the numbers are now favourable to us, who want to see them in our country, and that there is not an exodus to the United States but an exodus from the United States to Canada. That is not the fact and the people of the country must know it.

The Minister of Finance also allied himself with the prosperity of Canada. I do not object to that very much. He was not responsible for it, it is true, as has been stated this afternoon. Very cogently and carefully the hon. member for Parry Sound (Mr. Arthurs) this afternoon gave the causes of prosperity in this country. Everyone admits, as leaders of finance and industry have said, that there is prosperity. It is like a cross-section of a fruit loaf; there are many currants in it, but there are also spaces in which the Minister of Finance, if he is hunting for currants, can never find them. What is the situation? There never was more money in the savings banks than there is at this moment, the amount being, I believe, something like $1,500,000,000. Bank deposits and bank debits, of course, are large and perhaps larger than ever before. The Minister of Finance says: "There is money to spend" and in his own budget he says it is being spent in the United States. There is money to spend and it is being spent in the United States. Is there money for speculation? Yes plenty of it driven, I believe, into speculation in some measure at least by the financial policy of this country. We find now that even the little children prattle the jargon of the stock exchange. Women are interested; young boys are interested; defalcations are taking place in order that men and women may speculate on the stock exchange but there is nothing—and I challenge the minister—for new industries. There may be something for the pulp and paper business, but there is nothing for new business or industry in Canada. It will be found that some of those who are engaged in business are consolidating; that they are putting

their affairs into shape and taking advantage of this money that is available at present for anyone who can set up a case that will entitle him to receive it. But for those starting out to manufacture some of our raw material or to conduct an industrial business which would be a credit to this country and to the men engaged in it there is no money available because men are unwilling to go into business on account of the financial policy which has been put into force by the present administration. Manufacturing is at a standstill in this country. Manufacturers are courageous; they are a benefit to the country there is no doubt about that even our farmer friends will admit it, but there is no man and no body of men who are willing, unless under some extraordinary special circumstances, to engage in industry in this country because they do not know when the attack will come from the government. At one time it was the agricultural implement industry. Then the government made it up to those engaged in that business. On that we cannot take time to dwell. The automobile business was treated in the same way, but always there was a preference to those who are engaged in it. We know how the shuffle took place. We know how the Minister of Finance said, and he will pardon me for recalling this, that he was going to stand by his guns, that there was going to be no change; but there was a change. That business is suffering even with the consideration the Minister of Finance gave to it. And now it is the woollen industry. I am acquainted pretty well, as I have no doubt the Minister of Finance is, with the personnel engaged in the woollen industry in this country, and I know of no finer body of men anywhere, no men who love their country and want to carry on business in it and enjoy all that Canada affords more than they do. They have been struck by this tariff.

We had the speech from the throne. There was not much in it. I think members on the opposite side of the house will agree with that; if they do not, I think an inquest should be held because actually there was nothing in it. In this budget there is nothing that this country can take as a real benefit exclusive of the cuts in taxation, and I would be very glad to roll up and stow away all those cuts if the Minister of Finance would do what is manifestly the obvious thing to do, namely, cut the sales tax. When he came into office he found the garden sown with these tares. There was a sales tax which was put on in war time, and which has been a handicap to business. The large majority of people do not know how that tax cuts into them; I do not believe the members of this house do. I am not arrogating to myself any special knowledge, but I have had occasion to consider this particular matter of the sales tax and I say to you, Mr. Speaker, and through you to the people of Canada, that there has been nothing that has cut so hard into the workingman, into the consumer, as the sales tax, multiplied as it is, in some cases, several times, and lifted from the pockets of the consumer without his knowledge. The only knowledge he has of it is that the money is gone and that it should be in his pocket. The Minister of Finance knows that this is true, and in this budget he has put the sales tax back to where it was when his party came into power. I ask him now—I do not wish to appear over-earnest, and frankly I am not trying to play politics—I ask the Minister of Finance to strike that sales tax off the books altogether. I believe the country can afford it. As the minister says, the revenues are buoyant, and if he will wipe away that tax altogether in the interest of business, the rebound in business that will follow will mean greater revenue, more prosperity, and a better feeling throughout the country. It would in all respects be to the benefit of the country as a whole.

I heard the Minister of Justice (Mr. Lapointe) say something yesterday about the shadow government. I was but a short time connected with it, but sufficiently long to know that I for one walked into the shadow of a department that was a great spend-thrift department. Mr. Speaker, I dislike to use the word economy; I do not know that I should be called upon to preach it. The abuse and the misuse of the word is something that troubles me, but I submit that there is nothing like economy practised in the government of this country. What is economy? It is the spending of money wisely, and the refusal to spend it foolishly. I want to give two instances where the government could practise economy, and I speak of one of them because of my connection with the city of Toronto. I have been told that this government was losing thousands of dollars a day in Toronto just by reason of the port of Toronto being so glutted that goods could not be examined and duties paid and the work carried on properly. I knew that the government offices were housed in buildings for which the government is paying large sums in rent. I asked for some particulars, and I found that everything was in readiness to build a customs house in Toronto, but it had not been done; why, I will leave to your imagination. But it is as plain as the nose on your face that the government would

be money in pocket if it only provided reasonable accommodation for carrying on its own business in the port of Toronto. Shortly before the house prorogued last year I asked the Prime Minister if he had read the testimony of the Liberal officer, and he is a good one, who has charge of the customs house in Toronto, and who had said that if he were called upon to carry out the regulations which the government itself imposed, the port of Toronto would close in two weeks. The Prime Minister did not know anything about it. A commission has sat. I have not read their report, but from what they have said apparently this country is not going to lose any more money because it has not a proper place of business in the city of Toronto, and it will collect the revenues and the benefit will be felt all over the country. That is one thing that has not been done. I am not going to suggest the reason why, but it has not been done.

There is another matter. I dislike to touch upon it, but I feel that I have a duty to discharge and I propose to do it. There is a restaurant attached to the House of Commons. I am a member of the House of Commons. I receive an indemnity and perquisites, and one of my privileges is going to that restaurant. That restaurant loses $30,000 a year. There are 245 members of the House of Commons, and if you take in the senators, that would bring it to 300, not more. That means that in order to carry on that restaurant we, the members of this house, are taking, and, in some cases, literally having forced down our throats, an expenditure which averages $100 per member. The matter came up. I had never discussed it with anyone. I do not believe I had mentioned restaurant, but someone, I think as a joke, put me on that committee, although I had never heard of any question that related in any way to the restaurant. But I learned that the restaurant was losing $30,000 a year. I think that is something which should be corrected. If that amount can be saved, the members of this house should insist upon it. "Well," I said, "let us get someone, the Canadian National Railways or the Canadian Pacific Railway, to take the restaurant over for the session at actual cost plus ten thousand dollars and let us cut this loss by at least twenty thousand dollars, for either company should be glad to earn ten thousand dollars for the privilege of conducting the restaurant." That is a pretty good return, for it is actually money in hand. But there is a gentleman connected with the restaurant, and I was told that he had to be cared for. I have not a word to say against him. My attitude was: Take care of him, let him be satisfied, but let us cut down this loss. This man, we were told, is very useful in looking after private luncheons and dinners for members—and there seems to be difficulty in adopting my suggestion. But, Mr. Speaker, the people are not content to pay on an average every session about $100 for the food of each hon. member. I do not want the Minister of Finance to think I am trying to make a mountain out of a molehill, but this recurring loss is on my conscience, and I tell him that we have no right to continue losing thirty thousand dollars in the restaurant department. If we cannot carry on the restaurant successfully and make it pay for itself, then let us do without it. I could mention other savings that might be effected, and I will do so when the opportunity presents itself. While on this, let me say that I really have to laugh when I contemplate myself attempting to play this role to-day, but I must discharge what to me is a duty that I owe to the country.

In his budget speech the Minister of Finance quoted the captains of industry and the heads of financial houses in their references to the prosperous condition of Canada. What they have said is quite true. But the minister knows that in the reports to which he drew our attention there are also references to the lack of a proper immigration policy and the deplorable exodus of our people to the United States. Does he remember what was said at the annual meeting of the Bank of Montreal and of the Bank of Toronto with regard to this exodus? What was then said is absolutely true, and the Minister of Finance, as one of the most important members of the government, should make it his special business to solve this problem. The problem has not been met by any suggestion that has yet been made. If a question is put on the order paper asking the intention of the government in regard to some particular matter it is frowned upon; but I warn the government that the people will insist on their providing at this session some solution, the best that they can think of, for the immigration question. I must criticize the Prime Minister, and I am sorry that he is not in his seat. He says, in effect, that it does not do to speak of these things. I am just as anxious for the advancement of this country as any member in this house, I am just as loyal, but I am not prepared to see one other man, whether a mechanic or an unskilled labourer, enter the Dominion unless he can be directed to a job. Is that a rash statement? Let me tell you what I find in Toronto. On the way to my office in the morning I pass an employ-

ment agency. Through the windows I see inside a milling crowd, seeking to find out if since last night any fresh jobs have been listed. Outside there is another crowd waiting to get in. My office is opposite the offices of a newspaper published about eleven o'clock in the morning, and I am told that it contains more want ads than any other newspaper in Canada. Outside those offices every day you will see hundreds of men waiting for the latest issue, which they grab from the newsboys and eagerly scan in search of a job. When you enter your office you find men waiting there anxious for a job. Their only anxiety is to work; they do not want charity. Some of them are men who have fought for their country. When you are daily confronted with this regrettable state of affairs, what are you to do? Are you to tell them: This is a fine country to bring more people to. The condition I have described probably does not obtain in the country, but any hon. member from Toronto will tell you that this is the state of affairs there.

An hon. MEMBER: Hear, hear.

Mr. RYCKMAN: I do not know what hon. members from Montreal find in their city. Undoubtedly in our urban centres there is a demand that this problem shall be settled. I have in my hand what the hon. member for Parry Sound (Mr. Arthurs) referred to in the issue of the Ottawa Citizen of yesterday, headed, "Hull Liberals give immigration views." I may tell the Minister of Finance that before I join the Liberal party I am going to associate myself with the Hull Liberals to find out if it is a party that I should like to belong to. Those men in Hull say that proper consideration is not being given to the question of immigration, and they go so far as to declare that unless you can put an immigrant on the farm they do not want him. I have no grudge against the farmers. Certainly they should not be asked to provide jobs for immigrants when it is against their interest to do so. But if newcomers can be taken on the farm I am in favour of it. That phase of the question will have to be discussed by the committee on agriculture and colonization which is to investigate the Immigration department.

But, Mr. Speaker, we do insist upon having this problem handled promptly and in a business like way. I regret that the present Minister of Immigration (Mr. Forke) was given the portfolio. I think he would have been better satisfied with some other department. I am not cavilling about the reason why he was taken into the cabinet; it makes no difference; he is rightfully there, and if his leader wants him he should be there. But let us handle this most important part of our national affairs reasonably and quickly as business men would do, and see if something cannot be done to arrive at a satisfactory solution. In conclusion, I want to say this—

Mr. SPEAKER: Order. The hon. member's time is up.

Mr. J. S. WOODSWORTH (Winnipeg North Centre): Mr. Speaker, the amendment before the house expresses regret that the budget provides no measures to increase employment, to induce Canadians to return, to prevent the continued emigration from Canada, and no provisions to stimulate the domestic market or to develop our natural resources. Now, I submit it is not at all clear that the Conservative policy would accomplish these ends.

An hon. MEMBER: Give them a trial.

Mr. WOODSWORTH: It is suggested, Give them a trial. Well, all these evils complained of have, I think, come about during the period when we have had a protective tariff. We have had that to a greater or lesser extent for very many years now, and these things have been happening under it, so it must be conceded that we have already given that policy a trial.

The last speaker, the hon. member for East Toronto (Mr. Ryckman) said, if I caught him aright, that the business world was against free trade. I would suggest to him that the whole business world is not resident in Toronto or in the province of Ontario. It is only a short time since some strong resolutions were passed by the league of nations and by the international chamber of commerce, and we had also a very important document from some of the leading bankers and other financial men in Europe and America, all deploring the extent to which tariff restrictions had been set up, and urging that we could have peace in the world only as these restrictions were broken down. In view of such statements it is absurd for the hon. gentleman to suggest that the whole business world is against free trade.

I have a great deal more sympathy with that portion of the amendment which calls for the reduction of the sales tax, but we in this corner should like to distinguish between the sales tax on luxuries and the sales tax on the necessaries of life. Until the income tax is much higher than it is at present, we should be inclined to retain the sales tax on luxuries. The amendment to the amendment some of us will feel obliged to support. It calls for a reduction in the sales tax on

the necessaries of life. It urges that adequate relief has not been given in the proposed tariff changes and regrets a departure from the principle of direct taxation which is evident in the lowering of the income tax.

I desire to repeat the statement made in this house yesterday by my colleague from East Calgary (Mr. Adshead). In England 45 per cent of the total revenue—an enormous sum—comes from inheritance and income taxes —including super taxes. And I might say that as there are other sources of revenue, the proportion of the revenue which is raised through this form of taxation is considerably higher than that. In the United States 64 per cent of the revenues are derived from the income tax, while in Canada less than 14 per cent comes from this source. I do not think this statement can be too strongly emphasized.

Mr. GEARY: Is any part of the income tax to which my hon. friend is referring levied by the state? Is he giving state plus federal taxes?

Mr. WOODSWORTH: I am referring to federal income tax.

Mr. GEARY: In the United States the 64 per cent is entirely federal. Are you sure?

Mr. WOODSWORTH: No; I am afraid I cannot be positive on that point. My memorandum does not show that.

It is stated by some that at the Dominion-provincial conference the provinces claimed that they should have the field of income taxation to themselves. I would point out that the income tax is not in operation in all the provinces of Canada at the present time. I would also suggest that there should be no duplication in the collection of the tax and it would be a comparatively easy matter for the government here to turn over a certain percentage to the provinces. I strongly urge however, that we do not surrender the underlying principle which, as has been observed again and again, is a sound principle and which was adopted to meet an extraordinary demand—the discharge, namely, of the debts incurred by the country through the war. So long as these debts remain unpaid this tax ought to be kept in operation.

It has been further pointed out that since there is a corporation tax the income tax means double taxation. In answer to that I would remind the house that the small man is taxed over and over again. Excise, sales and stamp taxes amount to 21.33 per cent; customs import duties, 37.23 per cent; excise duties 13.82 per cent, or a total of 72.38 per cent of the total revenue; or a still higher percentage of the revenue raised by taxation, as this latter amounts to only 86.55 of the revenue. That means that the man who has children must pay taxes on a great many of the necessaries of life; if he has two children he pays probably twice over, and his taxation is correspondingly heavier all along the line in proportion to the size of his family. In other words, we have here not merely double but multiple taxation, and that upon the men least able to bear it.

I ask what is the purpose of all these heavy taxes? How do we spend our revenues? That is a rather interesting question. According to the minister's own statement, no less an amount than 45.11 per cent is devoted to expenditures attributable to the great war; and for national defence we have another 4.37, while for the mounted police, closely allied to the military, the expenditure is .65. There you have over 50 per cent devoted either to making provision for war or to the payment of the debt incurred by the last war. Careful calculations would seem to show that if you add to this the additional expense of collecting the larger revenues involved and also the additional cost of the flotation of loans, you find that somewhere around two-thirds of the entire revenue of the country goes to expenditures directly or indirectly connected with the war. This is an enormous portion of the revenues of the country to be paid out in this direction.

Now I turn to what I may perhaps term social expenditures. I find that health amounts to .21 per cent; scientific institutions—and I am very glad that it is proposed to devote a little more to this field in the future—.28 per cent; labour .38 per cent; and, last year to the Home bank depositors' relief, .06 per cent. Adding these together you have only .93 per cent. So that if we gave as much again this year to the Home bank depositors we should still have only one per cent of our revenues expended on this whole range of social activities. These contrasts are well worth public notice.

It has been said that the tariff board is more or less a smoke screen for the government. I can hardly believe this, because, so far as I have been able to study the tariff, it would seem that the information submitted to the tariff board has been very largely disregarded. None of us of course, are in a position to say what the tariff board recommended, if they made any recommendations; but certainly the facts that came before the board do not seem to have received great consideration in the changes now proposed. The other day I sat down for several hours trying to wade through these tariff schedules.

I found three classes, with all kinds of limitations and exceptions. Heinz's 57 varieties are not in it with these tariff schedules. There has been a reclassification; the old classes have been split and doubled up and rearranged until now we have a regular Chinese puzzle. I am glad that just to-day we have had placed in our hands some tables of comparative rates which may help us a little in coming to some conclusion with regard to this budget. In passing, I would suggest that the enforcement of these very highly technical classifications will require a small army of technical experts. As I read these tariff schedules I find them full of jokers, although this is not altogether new; there are grades specified, certain qualities, special makes, dates of applications and drawbacks. I admit that there are some concessions in the interests of the consumers at large, but on the other hand I note that decreases are often offset by increases. In some instances there are decreases on articles of minor importance; for example, I notice that braided candle wick now comes in free, while on the other hand there are large concessions to the electrical interests. I suppose that since we no longer live in the age of candles we can afford to be generous with those who still use them, but when it comes to modern systems of lighting and electrical appliances, that is another matter. Further, there are decreases where there is practically no importation; there are decreases in manufacturers' supplies, perhaps especially as these relate to mining and refining. I was rather interested to note that press blankets are now on the free list; I suppose that helps out the newspaper syndicates, but I cannot see why press blankets should be free while horse blankets are not free. I notice that the rate on wrapping for paper has been reduced, but I do not see why this should not be manufactured in Canada by the paper makers themselves. In some instances there are discriminations against the small manufacturers. In my own city of Winnipeg we have some cap and hat manufacturers; I do not know just how this is going to affect them, but it would seem to me that they will be hard hit.

As far as I can judge, without being an expert in the matter, there seems to be no rhyme or reason to the construction of this tariff. There are special concessions in evidence on every page. I am reminded of a time when I was a child, when my mother's mending basket was upset; in it were spools of thread, balls of yarn, tape, and a great variety of other articles. Some little kittens began to play with the contents of that basket, and perhaps you can imagine the mess there was left when they finishel, and the snarls and tangles which resulted from their fun. This tariff is very similar; there have been all sorts of pulls by various people who have had a hand in it, but I really do not know who will untangle the tariff; I hardly think parliament is likely to do it.

Mr. NEILL: Who are the kittens?

Mr. WOODSWORTH: I do not like to accuse the Minister of Finance (Mr. Robb) of being kittenish in his actions, but he has had a part in it, and I fancy a great many people who frequent his office have had an even greater part. In view of this very difficult question, I am inclined to take my opinion from those closer in touch with the situation, so I go to the Montreal Gazette, which says:

> The Minister of Finance maintains his reputation as a safe and sound administrator.

I presume there are good grounds for saying that. Further, the Gazette editorial states:

> With regard to the revision of the textile group, it is largely departmental, and further, the general effect of this will be, it is thought, favourable to the industry whose case for relief was fully made out two years ago.

According to the Gazette apparently the industry is to profit and is to obtain relief, instead of that relief being given to the general public. Then I turn to another financial paper, the Financial Post, which has the following to say:

> The tariff changes announced in the budget are more important as a low tariff gesture than for the effect they will have on business.

I would commend that statement to some of the hon. gentlemen directly opposite. In this connection I was reminded of an article which I read a few months ago in the April number of the Atlantic Monthly, called "The Money Power in Politics" and written by Mr. William B. Munro. Mr. Munro is a firm believer in the money power, and hence his admissions are rather interesting. He speaks of Mr. Elihu Root's phrase, "our invisible government" and says that:

> All governments, wheresoever they operate, are subject to the pressure of invisible influences. This pressure is unrelenting; it comes from many quarters; it is exerted upon voters, legislatures, executives, and courts alike; and its sources are often so well concealed as to be unrecognizable even by those against whom it is directed."

Again he says:

> The motive power in law making is supplied from somewhere outside the legislative halls.

And again:

> These interest groups, as we call them, work for the most part within the ranks of the

party organization. Indeed, the chief function of the party organization is to furnish a cover or screen for the political activities of groups which desire to keep their true objectives invisible.

He is in favour of such outside influence being exerted; he thinks the money power is beneficial on the whole; some of us can hardly agree with him.

The minister makes a great deal of what he calls our "favourable" trade balance. I would suggest that he is still harbouring the antiquated economic theory of the mercantilists, that the excess of exports over imports is an indication of prosperity. His theory forces him to put Canada in 1913 in the same class with the Argentine and British India. He seems to have some misgivings, however, for he says:

> Both the decrease in exports, $28,000,000 and the increase in imports, $56,000,000, can be attributed principally to greater domestic demand under conditions of prosperity such as we have been enjoying.

If this argument is true I submit that if we had still greater prosperity presumably the exports would decrease and the imports increase still further, but with absolute disregard for logic the minister proceeds:

> But it is also apparent that our ability to produce still exceeds our capacity to consume by a broad margin, and that our exporters annually market over a billion dollars worth of goods in other lands.

Just look at this question of the trade balance for a moment in a perfectly practical way. When does a farmer send off his farm more goods than he receives payment for? Surely he does that only either when he is making a loan or when he is paying a loan; those could be the only reasons for his continuing to ship goods out without having goods shipped in. Where is the "favourable" trade balance in such a case? I should like to quote an authority for this position. I tried to refresh my memory with regard to economics, and consulted The Principles of Economics by Seligman, one of the acknowledged authorities. He says:

> The so-called favourable balance of trade is for several reasons a delusion. It is difficult to state with accuracy the exact relation between exports and imports.

And he goes on in detail to explain the reason, concluding:

> The statistics themselves are therefore of dubious value. Even if the balance could be accurately ascertained, however, it would not tell us anything of importance. Some prosperous countries, like England, Germany and France, habitually import far more than they export; some poor countries like Peru, Siam and San Domingo, habitually export more than they import.

He might have added Canada. Further on he explains the situation.

> An excess of imports may represent the incurring of liabilities to other countries which must be met hereafter, or it may, on the contrary, represent a liquidation of past or present indebtedness by other countries. In the same way an excess of exports may mean that one country is making others its debtors. Or, on the contrary, it may be a measure of the amount of tribute which that country is paying to others for past or present favours in the shape of capital invested or services rendered. In itself the so-called balance of trade is irrelevant.

It seems to me that years and years after treatises of this kind have been written, a hundred years after these old theories have been exploded, we might hope that at least the minister would not come from year to year and try to fool the public by talking of the "favourable" trade balance.

In view of what Seligman has said I should like to examine some of the possible explanations with regard to this excess of our exports over imports. In an article in MacLean's Magazine of August 15, 1927, Mr. W. A. Irwin calls attention to the fact that our total wealth is estimated at $22,000,000,000. He gives our debts up to date—federal, railway, provincial and municipal—as $5,700,000,000, and he says that means that one-quarter of our national wealth is mortgaged. I may say that almost 30 per cent of these mortgages are held outside of Canada, so there is not much wonder that we have to ship out the interest on these mortgages. In addition to the public mortgages we have a very large number of foreign investments in this country, and in this connection I would call attention to some very interesting studies recenty made by Kenneth W. Taylor, and published in the Financial Post. With regard to the ownership of Canadian securities, Mr. Taylor gives the following figures:

Ownership of Canadian Securities 1927

	Grand Total	Canada	Total Foreign	United Kingdom	United States	Other Countries
Total (excluding land and mortgages)	$15,793,000,000	$10,885,000,000	$4,908,000,000	$1,927,000,000	$2,798,000,000	$183,000,000
Per cent	100.0	68.9	31.1	12.2	17.7	1.2

With regard to the outside capital invested in Canada Mr. Taylor says:

Of new issues of Canadian bonds and preference stocks, approximately $290,000,000 were sold in the United States, and $13,000,000 in the United Kingdom. About one-third of this amount was for refunding purposes, so that the new money from these new issues of securities would be about $190,000,000 from the United States and $12,000,000 from the United Kingdom. About one-half of these new issues were for power or pulp and paper developments.

I think perhaps this accounts for the fact that our imports were large in recent years. We are importing what is necessary to develop our paper and pulp resources. Mr. Taylor gives the following preliminary estimate of the total outside capital in Canada as of January 1, 1928:

United Kingdom.. ..	$2,110,000,000
United States..	3,031,000,000
Other countries.. .. .	236,000,000

He says:

The interest and dividend payments on this outside capital invested in Canada have been estimated at $254,000,000 during 1926, divided as follows: United Kingdom, $105,000,000; United States, $137,000,000; other countries, $12,000,000.

This huge volume of interest has to be paid some way. We pay it in the only way in which interest is paid to-day, that is in goods. I submit that this is the reason for the so-called "favourable" trade balance. And may I add in that connection that these men who are enjoying these very large returns from Canadian investments pay no income tax whatever to Canada, since they are resident in the United States.

I should like to give one other set of figures as presented by Mr. Taylor. These figures appeared in the Financial Post of February 3, 1928. They have reference to Canadian investments abroad; for there is the other side of the question which I do not want to forget. He gives the following preliminary estimate of Canadian investments abroad as of January 1, 1928:

Total..	$1,362,400,000
In United Kingdom ..	118,000,000
In United States.. ..	722,200,000
In other countries.. ..	522,200,000

And adds:

Interest and dividend receipts on Canadian investments abroad have been estimated at $63,000,000 for 1926, divided as follows: From United Kingdom, $6,000,000; from United States, $34,000,000; and from other countries, $23,000,000.

May I point out that if I were a protectionist I would suggest: Why not develop our Canadian natural resources by keeping our capital at home? I would suggest: Why not a super tax on this capital which is invested abroad? I think I should be quite consistent in urging that we develop our natural resources in Canada where more capital is necessary. If our financiers think they can make greater returns by investing in Mexico, or in South America, or in Cuba, I suppose that is their business; but if we really are in earnest about developing our own natural resources why cannot we take some means of keeping Canadian money at home?

The Minister of Finance states that work and thrift are the only sure roads to success. I suggest that this is one of those very dangerous half-truths that are frequently put upon an innocent public. Let me ask, will work and thrift bring financial success to an individual to-day other than to a very limited degree? How have our Canadian fortunes been made? If you go into any of our cities you will find many men have made their fortunes through land speculation, and many of the wealthiest people have made money by gambling on the grain or stock exchanges. You will find that a still larger number have managed to lay the foundations of their fortunes by securing special concessions and privileges. That has been true all through the history of Canada from the lavish grants of lands in the early days—yes, I might go even further back to the grants of special privileges to the Hudson's Bay company by the imperial parliament. Then we come right down to our railway charters, bank charters and all the rest of it. We have to consider in this connection all the devious methods of high finance, watered stock and things of that sort. I came across a statement somewhere which I think is rather too cynical but which might be taken as suggesting a portion of the truth. It was alleged that to financial success nowadays men can climb only by crooked stairs. Certainly when the minister enunciates as a great truth that, for the individual, work and thrift are the only sure methods of success, he is not at all in accordance with the facts of the case as we see them round about us.

Will work and thrift bring general prosperity? I do not believe that this either is clear under existing circumstances. Already we have so-called "over production;" that is, more goods are being produced than can be bought back with the resources at the disposal of the consumers. Indeed, many economists of high standing have suggested that one trouble with the world to-day is that there has been in one sense too much thrift; that on account of the unequal division of wealth the people who so very largely control the processes of manufacture, distribution and exchange, are able to retain in

their own hands a great part of what is produced; that not being able themselves to consume this large quantity, they are forced to put it back, or as the phrase is, to plough it back, into the business. The result is that they develop still greater plant equipment which, in turn, produces an increasing volume of goods, and to-day we are suffering from over development of plant equipment, of facilities for producing. On the other hand we have not adequate buying power on the part of the masses of the people. If any hon. member is interested in following up that line of argument, I would suggest that he could not do better than read some of the recent treatments of the subject by J. A. Hobson, the distinguished English economist, whose thesis is that an undue proportion of savings is being put into fixed capital. I would suggest that this budget is rather accentuating that very tendency because we are placing the burden upon the poor man. We are making it harder for him to expend money on consumable commodities, and on the other hand we are releasing large sums of money that must of necessity find investment in various fields of enterprise.

The true fiscal policy would be, it seems to me, to place the burdens where they can best be borne, so far as possible to release the income of the smaller men so that they may be able to buy back what they have produced, and instead of forever talking about the development of foreign markets, to lay a great deal more stress on the development of our home markets. That is what we need to-day. I know some of my Conservative friends are very apt to use that phrase: "The development of the home markets." They are thinking of the development of home markets for agricultural produce. I would suggest that we need more home markets for all manufactured goods as well, and if we had a greater purchasing power that could be accomplished.

I am afraid that some of us cannot consistently vote for the budget as it stands. We see in it, as has been stated in the sub-amendment, a departure from the principle of the income tax. That to me is very important. I should like to see the income tax greatly increased. I should like to see the higher incomes still more heavily taxed. It may be said by some that we advocate this arrangement simply to benefit ourselves. Frankly we do, but we claim that in reality we represent and are endeavouring to speak for the large part of the population of Canada. Only a very small number of people pay income tax, yet their great wealth makes it possible for them to pay much more than they are paying at the present time.

I would urge upon the Minister of Finance, in view of the large measure of unemployment which exists among a great section of the people to-day, and in view of the unsatisfactory conditions which are found among many people who are engaged in the ordinary business activities, that he might very well try an experiment along another line from that which has been followed in this country for the past fifty years, and that he should arrange his budget in the interest not of the big industries, which may be quite sincere in identifying their interests with those of the public, but rather in the interest of the great mass of the people who, although they may not be able to understand the intricacies of the tariff schedules, are nevertheless the best judges as to where their own interests really lie.

At six o'clock the house took recess.

After Recess

The house resumed at eight o'clock.

Mr. A. L. BEAUBIEN (Provencher): Mr. Speaker, in rising to make a few observations on the motion of the hon. Minister of Finance (Mr. Robb) and the amendments thereto, I intend to follow my usual practice and be brief. At the outset I desire to thank hon. members for their kind expressions on my behalf in the course of the debate on the address. The hon. leader of the opposition (Mr. Bennett) in his speech on the address said that my speech as seconder could have been equally well pronounced from his side of the house.

Mr. BENNETT: I am sorry, Mr. Speaker, but that is not quite correct. I said that the hon. gentleman would be equally at home on either side in making a speech in moving the address.

Mr. BEAUBIEN: I have his remarks here, Mr. Speaker, but I am not allowed to quote from a previous debate. I have only this to say to the hon. leader of the opposition. It is very seldom that I offer advice to any of the leaders, but I will take the liberty at this time of saying that had he had a greater knowledge of the French language or awaited the translation of my speech, I do not think that remark would have been made.

Another hon. gentleman seemed to be rather peeved at my being chosen as the seconder of the address, and that was the hon. member for Bow River (Mr. Garland). He was concerned at my seconding the address in reply to the speech from the throne without having had anything to do with the preparation of that speech. I have no apologies to offer to anybody. The hon. member for Bow River

has to my knowledge voted on many occasions for speeches from the throne with the preparation of which he has had nothing at all to do, and I again take this opportunity of thanking the Prime Minister and his colleagues for the honour which they did to my constituents in choosing me to second the address.

We have heard some very good speeches during this debate, Mr. Speaker, and we have also heard some blue ruin speeches. I have heard those blue ruin speeches for the last four or five years in this house, and I have come to the conclusion that if the exodus from this country is as serious as our friends on the opposite side claim, it is caused by these blue ruin speeches, and I am almost convinced that these gentlemen are immigration agents for the United States.

It is not my intention to go into financial questions, the reduction of the national debt, public accounts, or the accounts of the Canadian National Railways. There are men better qualified than I am to do that. I will say, however, that I believe the Canadian National railway accounts should be kept entirely separate from the Canadian government accounts.

Mr. CAMPBELL: Do you suggest handing it over to a company?

Mr. BEAUBIEN: No, I say that the accounts should be kept entirely separate from the country's accounts.

Mr. CAMPBELL: Is not that the case now?

Mr. BEAUBIEN: If our friends want to mix the debt of the Canadian National Railways with the debt of the country, we are always going to be confused. I have only forty minutes, Mr. Speaker, and I have never taken up that much time in the house. I think the hon. gentleman had better reserve his remarks for his own forty minutes and allow me to proceed; otherwise I may need the full time at my disposal.

The tariff resolutions which the Minister of Finance has presented to the house are confusing. I do not believe that all the lawyers in Philadelphia could understand them, and I am not going to discuss them because they are too confusing. I would point out, however, that there seems to be a joker in the proposals submitted by the Minister of Finance, and that joker is in the changing of the numbers of the schedules. Let me cite just one example in order to make my point clear. Item 526 of the present schedule provides:

White and cream coloured lace and embroideries, of cotton or linen: British preferential tariff, 12½ per cent; intermediate tariff, 17½ per cent; general tariff, 20 per cent.

Then Item 575 reads:

Embroideries, n.o.p.; lace, n.o.p.; braids, n.o.p.: British preferential tariff, 25 per cent; intermediate tariff, 32½ per cent; general tariff, 35 per cent.

In the new schedules which the minister has brought down that is changed to item No. 545, and in changing the item they have inserted the words "for use exclusively in the manufacture of," and therefore these articles which I have mentioned instead of carrying a rate of 12½, 17 and 20 per cent, which is the rate shown in the new schedule, will carry a rate of 25, 32½ and 35 per cent. I know the minister has no intention of doing that, but some of the officials of his department, I am sure, have made a mistake. I feel certain from the declarations the minister has made on previous occasions that he will see when we are in committee that the necessary change is made so that the people who are buying these articles not only for manufacturing purposes but for general purposes will get the benefit of the reduction proposed in the new schedules. I just wanted to make that point clear.

The Minister of Finance is also providing that in order to get the benefit of the British preference fifty per cent of the goods must be empire-made instead of twenty-five per cent as formerly. My information is that the cotton manufacturers of Great Britain import a great deal of their raw product from the United States, and I do not think the British manufacturer will be able to get any benefit of the British preference in our market if this increase is left in the schedules.

The reduction in the income tax, I am frank to say, does not please me. Our taxation should be as direct as it is possible to have it. I believe that every man who is able to pay income tax should pay it. He owes it to his country, he owes it to the masses of our people. I have paid income tax, a very small amount it is true, but I have gladly paid it. I would not have any objection if the exemptions were raised a little higher. In short, impose the income tax in such a way that no man will suffer by its operation. That is my idea of the income tax. But why give the man with an unlimited income the benefit of a reduction in income tax when he really is not entitled to it? Many people in this country made fortunes during the war by preaching a spurious patriotism to enrich themselves. Now, why should not those people pay a tax on their incomes? There is no reason in the world why we should not tax them in

order to lighten the burdens on our returned men, many of whom are crippled and incapable of earning their living.

Now, Mr. Speaker, there have been presented to the house the motion of the hon. Minister of Finance (Mr. Robb), the amendment of my hon. friend from St. Lawrence-St. George (Mr. Cahan), and the subamendment of my hon. friend from East Lambton (Mr. Fansher). What are we to do? Well, I will tell you what I am going to do, and I will give my reasons. It is easy to move amendments. It is the safest thing in the world to rock the boat when you are standing on land and in no danger of drowning. My hon. friend from St. Lawrence-St. George knows very well that nobody in the southeast corner and nobody on this side of the house can vote for his amendment. So his party is safe. Then there is my friend from East Lambton and all his associates in the opposite corner, for all of whom I have a great deal of affection, especially for the lady member.

Some hon. MEMBERS: Oh, oh.

Mr. BEAUBIEN: I mean that, Mr. Speaker. Now, they know the Conservatives cannot support the subamendment, and they know we will not vote for it. Well, they are rocking the boat while standing on dry land —the safest thing in the world to do. But we will suppose that the amendment from the official opposition carries. What happens? This government is defeated. Then who comes into power? Our friends opposite, now the official opposition. Would we have a ten per cent reduction of the income tax? No, Mr. Speaker; unless I am very badly mistaken the income tax would be wiped out immediately. Would we have small reductions in the tariff? No, Mr. Speaker, there would be increases, or else their speeches that I have listened to during the last five or six years do not amount to anything. Now suppose the subamendment of my hon. friend from East Lambton carries, what happens? Would the U.F.A. group take office, with my friend from Acadia (Mr. Gardiner) as Prime Minister? I have the greatest regard for him, but would he be able to form a cabinet?

Miss MACPHAIL: There would be enough of them to form a cabinet.

Mr. BEAUBIEN: They have no chance of coming into power. The only thing they can do is help put the Conservative party in the saddle, and I know they do not desire to do that.

Mr. McGIBBON: Which side would you be on then?

Mr. BEAUBIEN: Would the U.F.O. group take office? I should like to see the lady member become prime minister. But how would she be able to form a cabinet, whom could she choose besides the hon. member for East Lambton?

Mr. GARLAND (Bow River): May I submit to the hon. gentleman that if the hon. member for Southeast Grey became prime minister a large number of members would flock to her party rapidly.

Mr. BEAUBIEN: They would all like to be bachelors. I have proven that it is impossible for the U.F.A. group to form a government, and I have also proven that it is equally impossible for the U.F.O. group. What other group can we look to to form a government? We have the Progressives from Saskatchewan, four in number, led by my hon. friend from Rosetown (Mr. Evans). By the tone of his speech last night he seems to be at loggerheads with the world. Now, would he undertake to form a government? If he would be prime minister—well, to be prime minister a man has to do a lot of smiling. I am afraid my hon. friend would either have to change the tone of his speeches or adopt my mentality—I can smile almost any time. But I have not yet exhausted the possibilities. We have another group in that corner of the house—the hon. member for Nelson (Mr. Bird). I have the greatest regard for him. But he is alone, we cannot very well expect him to attempt cabinet making. Our last recourse is the labour group of three members, and for them I have a very high regard. How could they govern the country? There is only one ultimate result in voting for the amendment or the subamendment if either carries—the return to power of our Conservative friends. I am certain that nobody on this side of the house desires to see them on the treasury benches, nor do my hon. friends in the southeast corner desire it, and far less do the Canadian people.

As I said before, Mr. Speaker, the budget does not satisfy all my ideals or provide all that I think the country requires. I am frank about it.

Mr. GARLAND (Bow River): Not frank enough.

Mr. BEAUBIEN: But I would rather have a slice of bread than no bread at all.

Mr. GARLAND (Bow River): There is not even a slice.

Miss MACPHAIL: It is not bread this time, but a stone.

Mr. BEAUBIEN: I know the hon. Minister of Finance is a very kind-hearted gentleman, and I am sure that when we are in committee of the whole he will see his way clear to deal with the little difficulties in the wording of the proposed tariff changes to which I have drawn attention.

Now, Mr. Speaker, any remarks I make are always brief and to the point. I intend to vote against the amendment of my hon. friend from St. Lawrence-St. George; I intend to vote against the subamendment of my hon. friend from East Lambton; I intend to vote for honest and practical legislation—for the budget.

Mr. L. W. JOHNSTONE (Cape Breton North-Victoria): Mr. Speaker, I wish to confirm what the previous speakers from this side of the house have declared, namely, that the budget is a great disappointment to the country generally and in particular to the maritime provinces, in that it contains nothing that can be of any comfort to our people, especially to the working classes and the unemployed. It has always seemed to me, Mr. Speaker, that the people of Canada have always watched with eager interest the annual report of the Finance minister, commonly known as the budget. In this report many looked eagerly for some statement upon which maybe their whole existence depended; they hoped for something in its terms by which their livelihood would be regulated. And surely, Mr. Speaker, one would naturally expect to find in it something concerning our great basic industries; for although each county and province would look for something touching its own local affairs, the great basic industries of the country affect Canada as a whole.

Take for instance the iron, steel and coal industries of Canada. Everyone is more or less interested in them, and yet not one word of them is mentioned in the budget, notwithstanding the declaration of a member of the government during the past year that the Duncan report would be fully implemented.

In the maritimes we have been very hard hit, as we fully expected some protection to our coal and steel industries. During the past few years public relief has been necessary to our miners in Cape Breton. That should not be; yet the government members cry out, "Prosperity; prosperity in our country; our country is growing." Canada cannot be prosperous, this country cannot be built up if we close our industries and factories and import the manufactured articles; and so long as we have the amount of steel and coal imported into Canada, that is now coming in, our manufacturers and collieries must suffer.

[Miss Macphail.]

We in the maritimes were last session very hopeful when the Duncan report was laid on the table, and we felt sure that it would be carried out, especially when a minister of the government publicly announced in the city of St. John that the Duncan report would be fully implemented. And now when the great steel and coal industry of Cape Breton has been placed under a new head, one who seems to be willing to do all in his power to help the situation, surely the government will cooperate to get the miners of Cape Breton work during the winter. As my colleague, the hon. member for South Cape Breton (Mr. MacDonald), said last night, the solution of the question is difficult; but certainly he offered a very good suggestion to the government, and I only trust that the government will act upon the idea. The situation is serious enough, at any rate, for a trial. I do not think the government realizes the conditions that exist in Cape Breton. We can take one instance. My home town, and the surrounding district of Sydney Mines, has a population of about seven thousand people. There are three coal mines in the vicinity—one splendidly equipped mine ahs been closed for over three years; we have six churches and large school houses, with a large attendance of children. The same conditions exist on the southern side of the harbour; large population, many children, good schools, and churches; heavy taxes, accumulated bad debts, and no winter work. We have lost many by exodus; they had to leave for the purpose of getting a livelihood elsewhere. Over four thousand passports to the United States were issued during the year. Can a country be prosperous, Mr. Speaker, or can a country grow and be built up when our people are leaving in hundreds; when industries and factories of all kinds are closed and we are importing coal from foreign countries? We are exporting the greatest asset that Canada ever possessed, that is, our young men and maidens, educated at the expense of the Canadian ratepayers, and we are losing them, they are giving their brains and muscle to other lands.

Canadians paid about $10,000,000 more last year for United States coal than they paid for Canadian coal. United States capital derived more profit from selling coal in Canada last year than Canadian capital derived from the year's operations. More men were employed in the United States to mine coal for sale in Canada than Canadian mines could find work for. More money went into circulation in the United States last year for payments on coal than went into circulation in Canada. In view of these facts, one thing

is certain: that the budget has done nothing to remedy the situation of the unemployed by creating new industries. Rather the reverse; they are closing up the present ones and any business that they may have is stagnant. They cannot therefore expect our people who have left to return to their native land, when no inducements are offered.

I fail to notice in the budget anything relating to our fisheries. I do not suppose the report of the fisheries commission has yet been brought down, but I cannot help feeling that the fishing industry, like many others, has been sadly neglected. I do not wish to say much on the question until the report is given to the house, but I would ask the Minister of Public Works (Mr. Elliott), with whom I have had considerable correspondence, to place in the supplementary estimates such a sum as would be of substantial benefit to the fishermen of Victoria county. A part of my constituency devoted to fishing is so situated geographically that the small harbours and inlets are very much exposed to the storms of the Atlantic, and therefore no breakwaters or wharves can be built. The fishermen cannot compete with the larger fishing fleets of Gloucester and other places because they cannot use boats larger than can be hauled up on the shore. The ex-Minister of Public Works, as an experiment, installed an engine by means of which the boats could be hauled up on a skidway or hoist. This worked very well and I firmly believe that had that gentleman continued as minister of the department he would have installed more such engines. The experiment proved quite successful. When the present Minister of Public Works considers the situation carefully I believe that his generosity, so highly spoken of a few nights ago by an hon. member, will show itself in this instance. I do not know of a more deserving case. Imagine twenty fishermen or so coming into harbour on an evening in the fall, in October or November, a gale of wind blowing. The poor men, tired out from the long day's work, are compelled to go out to their waists in the icy water to drag the fish-laden boats up on the shore. If you ever watched this work being carried on you would say that these men were certainly entitled to some assistance from the government. For two years I have been trying to interest the government in the matter, because the cost would only be about $500 for an engine and skidway, and the fishermen would operate the engine themselves. Now that the Minister of Finance shows a surplus why should not the people of Canada share in it? I am not opposed to the spending of money to beautify Ottawa and make it the Washington of Canada; I do not object to spending half a million dollars for our embassy in Washington while the representative of the wealthiest country in the world has been contentedly living in a rented house in Ottawa, but I do say that while these large and extravagant expenditures are being made by the government on these and other works, the poorer places throughout the country should participate.

There is not a member of this house who has not somewhere in his constituency a small town with no proper post office or other public building. I am reminded of one instance of a beautiful little town along the north shore where the post office was maintained by an old gentleman in his kitchen, for which he received a rental of $1.50 a month. A few years ago this became a distributing office, and the old gentleman had to enlarge his kitchen by building a shed, because a good deal of mail began to come in. Through me he applied to the government to have his rent increased to $2 per month, which was the rent then paid by the customs, but I was told by the Postmaster General that this could not possibly be done, that the laws governing the matter were very strict and could not be altered. I am sure we can all recall similar instances, Mr. Speaker, and I think the government is deficient in its duty to the people of this country in not spending more money in our rural districts. When the people of the maritimes learn of these great expenditures for which they have been taxed they will certainly feel that, according to the estimates for the maritimes this year, they have been discriminated against.

A larger reduction in the income tax would have met with greater favour throughout the country, and I believe the abolition of the sales tax is very necessary. It is the only tax which strikes the working man in what he buys both in the way of clothing and food; in everything he gets from the smallest store in the country it affects him personally, and the abolition of this tax would meet with very strong favour. I will certainly vote for the amendment.

Mr. MICHAEL LUCHKOVICH (Vegreville): Mr. Speaker, I rise to speak neither in praise of the budget nor yet in absolute condemnation of it. I appreciate the difficulties of the Minister of Finance (Mr. Robb) and I know it is no easy task to budget the accounts of this great country of ours in such a manner as to satisfy and conciliate not only this house but also the conglomerate elements in his own party.

I believe it is a rule in this house to use as much courtesy as possible when commenting on the speeches of other hon. members delivered here. It has been very noticeable however, at least to myself, that whilst the custom of congratulating and complimenting other members on their excellent addresses has been adhered to in the opening of one's speech, it soon becomes apparent that these chivalrous remarks must soon give way to criticism, at first mild but progressively hostile and vituperative. Honeyed words rapidly turn to the bitterest vitriol; sweet-scented bouquets become the hardest of bricks.

It is not my intention to hurl any boquet-wrapped bricks at the Minister of Finance; suffice it to say that the budget of 1928 is a marvellous piece of manipulation, considering the circumstances under which he had to work and the diverse elements with which he had to deal. There are many people in Canada who think that the success of any government is contingent upon compromise; that no government can successfully deal with or satisfy the electors unless by compromise. Their philosophy of politics is summed up in one phrase: No government can function successfully without compromise; its very stability depends upon it. In view of past events it would seem that this philosophy was sound so far as the government were concerned. At any rate they all seem thoroughly imbued with this doctrine, as is proven not only by the budget but by certain things that have been said and things which have taken place in this house in the past few years.

It is now a matter of history that this corner of the house once boasted of a fairly large group. What has become of that group of yesterday? Ask compromise. Where are those ten Progressives who used to glare so defiantly from this corner at those who sat on the government side of the house? They were led astray by the siren voice of compromise. What force is it that can transform the free and militant eagle into the gentle and cooing dove of peace? It has been the magic wand of compromise wielded by the Prime Minister of Canada (Mr. Mackenzie King) who is possessed not only of an intellect of a very high order, but a genius for compromise unrivalled by any member in this house. Consequent upon this understanding there has been an agreement reached whereby it is recognized that the country has demanded a stable government and the group are anxious to comply with that demand; that the policies upon which Progressives and Liberals were elected are based upon commons principles; that the Progressives shall give united support to the government upon those principles, and that the Progressive group shall retain its identity as hitherto. I agree that this is a masterpiece of compromise and admit that it is very cleverly stated, but whether or not the Progressive group is capable of retaining its identity, they have an opportunity even while sitting on that side of the house to act as guardian angels over the Liberal party, to stop them from committing the unpardonable sin of breaking pre-election promises and keep them in the straight and narrow path indicated by the low tariff reform pledges which have put them in the high position they now occupy in the country. I am sure that any reasonable person when offered strawberries and cream will refuse to accept apple sauce instead; if promised the substance we should not grasp at the shadow. I should like to believe that the members who left our group have acted and will act in all sincerity, for I should not like to hear it whispered in application to them, when the roll is called out west: "Oh compromise, what indiscretions have been committed in thy name!" I hope that the Liberal-Progressives are still the evangelists of low tariff. I sincerely urge them to practice what they preach, and if they feel it incumbent upon themselves, in view of their non-activity in the matter, to offer up a prayer, I wish they would include in it a solicitation to their colleagues for a more consistent attitude towards the tariff policy on which they were elected.

When I say this I am reminded of a band of evangelists who were holding a revival some time ago, in order to make a sinful world see the error of its ways and repent. At the conclusion of one of the meetings it was suggested by one of the brethren that some hats should be passed around among the hard boiled sinners in order to take up a collection. This was done, but when the hats came back they were found to be full of old nails, buttons and pins, but not one red cent. Thereupon one of the brethren remarked "Let us now thank God." "For what?" inquired another. "Let us thank God that we have got our hats back," was the reply. Now before our Progressive friends over there pass their hats to their so-called Liberal friends by conviction let their high priest, the hon. member for Lisgar (Mr. Brown) give them first a sermon, taking as his text: Come unto me all ye that are heavy laden and seeketh relief, and I shall give you the protection of my low tariff. Let him then without any further admonition go boldly to the Minister of Finance, hat in hand, with one eagle eye on the minister and the other equally concentrated on the hat, and see to it that the hon. minister puts in that hat not the old nails of futile promise and

adroit circumvention, but the new and shining pennies of a promise fulfilled, of an agreement unbroken, of a tariff policy unsullied, yea, even by a certain element on that side of the house. The member for Lisgar is a man of strong and commanding presence who looks like a likely person to scare the Minister of Finance into relinquishing a vise-like hold on the nickels that are entrusted to his care.

It has often been said that the Progressive movement is an anomaly in Canadian politics; that if they do occupy a place it is only as a sort of left wing to the Liberal party. This view is based on the supposition that both these groups are advocates of the low tariff; the only difference between the two being that while the one group is a little impatient in its attempt to reach that goal, the other believes that we should—

—move forward cautiously with the aid of knowledge of the facts secured by the tariff advisory board toward the goal of making our tariff structure bear as lightly as possible on producer, industry, and the people generally, having always in view the greatest prosperity of all legitimate industries of Canada. The tariff must be made to serve the best interests of the Canadian people as a whole. It must be adjusted from time to time to meet the needs, not of one class or group of industries alone, whichever one that might be, but of our whole economic structure.

Now, what I admire in any person and no less in a government, is courage—the courage of one's convictions. The Finance minister of Canada in concluding the budget speech of last year said:

We are recognized throughout Canada, and we are proud of it, as the low tariff party.

There is an old saying that caution is the better part of valour. If that is true, then I say that the present Liberal government is the most courageous government that Canada ever had. It is cautious to a fault. And why are they so cautious? They are cautious because they believe that is the only alternative. They are cautious because they do not wish to lose their parliamentary quota from Ontario; they are cautious because they do not wish to antagonize protectionist Quebec. I do not believe that hon. members will gainsay me when I emphasize the protectionist temper of our Quebec members. Who but our member from Quebec-Montmorency (Mr. Lavigueur) had this to say in his speech on the budget last year? I quote from his address on that occasion:

I consider it an honour to follow the hon. member for Southeast Grey (Miss Macphail) the only lady member in the House of Commons, although I do not share her views generally and particularly as far as the tariff is concerned. She has told us she is absolutely in favour of a low tariff. Let me assure her that neither the province from which I come, nor I myself, can sympathize with her in that regard. We are in favour of protection for industry. We do not believe in a low tariff. I am glad to have an opportunity to-night to state my views on the tariff question. I am pleased to see that the budget contains no items of reduction.

I have spoken of courage. I believe I must take those remarks back after reading the above quotation. The member for Quebec-Montmorency is very brave in bearding the lion in his own den; but at the same time he is throwing caution to the winds.

No, we are not Liberals. We are a separate entity called the United Farmers' Association. We believe in low tariff, and it is our duty to jack up the Liberal party every once in a while and remind them constantly of their duties in that regard. Like Atlas, we have been holding the world on our shoulders for ages—a thankless task of which there should be some recognition. Now, it has been our fate that we have to sit on this side of the house with hon. members who uphold the doctrine of protection. Owing to the fact that we often sit, talk, and smoke together in the lobbies we have come to love each other almost to the point of brotherly affection. I also wonder whether it has not been by the same token that the Liberals and the Progressives kiss each other's cheeks on that side of the house. Notwithstanding our congeniality in some matters I am sorry however that in matters of policy over here we must disagree. I hope that our differences in this world will be reconciled when we pass off to a better world.

High protection is not the doctrine of the United Farmers' Association. We do not think it is a good thing for a dominion such as ours with its preponderating agricultural industry and among whose constituent provinces there are such wide and glaring differences of interest in this matter. It appears to me that at best protection is an expedient to which the Tories would like to resort to safeguard our industries against foreigners who might unfairly injure them; at worst it is a form of domestic robbery which is very obnoxious when it goes so far as to rob the state to enrich the individual; it is based on a bad principle when importation is forbidden in order to prevent reasonable competition; and finally it is only justifiable when the taxes which it imposes are made available for the needs of the national treasury.

I think we on this side of the house would be very illogical if we did not support a low tariff doctrine. Indeed we must either hang together on that tenet, or hang separately when we get back home.

An hon. MEMBER: Hear, hear. You struck it that time all right.

Mr. LUCHKOVICH: I wonder whether it was the member for Provencher who made that observation?

Miss MACPHAIL: No, it was the Minister of Immigration and Colonization.

Mr. LUCHKOVICH: There are many people to-day who think that Canada should be divided politically into two parts, western and eastern Canada. I am not an advocate of a suicidal policy of that sort. I think that all we need is one government in Ottawa. I have one suggestion, however, that may be interesting if not practical. If we are to have a low tariff versus a high tariff form of government, let us first weed out all the protectionists on the Liberal side and send them over here, and all the low tariff men in the Tory ranks and send them over there. In a word, let us unite all the low tariff men in this house, and whether we be in a majority or in a minority let us then proceed honestly to do the work for which our electors sent us here.

And what of the changes in the budget? After the budget is brought down it is quite usual to hear in the lobbies and elsewhere many preliminary skirmishes as to its merits or demerits. Naturally I was interested in getting the opinion of others. One man in answer to my query had this to say about the budget: "Is there one tariff change in the Robb budget that means a job capable of employing a Canadian boy in Canada or bringing an exiled Canadian back from the United States?" "And what about the income tax?" was my further query. "A very considerable number of Canada's former income tax payers," he said, "are now in the United States working for their living. Had the policy been adhered to of protecting our home markets in the interests of both agricultural and manufacturing producers, Canada would probably have had a million more people than she has to-day and her wealth production would have been enormously increased. United States is the most highly protected country in the world. Why should we not protect Canada also? Why, if I had my business down there I would be able to make three times as much as I make here." Of course I realize that distant pastures always look green and I am not prepared to argue this matter. I have pondered his words, however, and I am still wondering whether his case is not analogous to that of the Irishman who thought if he could take the lakes of Killarney with him to purgatory he would be able to sell them down there at a shilling a drop.

An hon. MEMBER: What about the Jew?

Mr. LUCHKOVICH: The Jew? Well, I do not think he believes in purgatory.

I have heard it stated many times in this house and I have heard it stated during this budget debate that the government has been responsible for the exodus of many young Canadian men and women into the United States. I have no reason for agreeing with the government, but on this occasion I would venture to state that the government is not wholly to blame for this wholesale emigration. I believe there are certain subtle and insidious influences entering into this matter which are beyond the control of any government. Some one in this house has said that Canada is a geographical absurdity. Perhaps this is one of the reasons; but there are other reasons which are not of a rational but rather of a mystical nature.

Last spring it chanced that I paid a visit to a doctor friend of mine in Detroit. I admit that I was deeply impressed when, on getting off the train at Windsor, I beheld the countless numbers of tall skyscrapers skirting the Detroit river on the American side and looming up into the skies in majestic grandeur. The sight seemed all the more striking when one compared the luxuriously constructed American side with that of the city of Windsor. I have often wondered ever since how that grand sight has affected the countless young men and women who have had the fortune or perhaps the misfortune of viewing it as I viewed it. I am not a student of psychology, but the place once seen must have stirred up a conflict of emotions in their young breasts. Many of them, doubtless, would feel that they could do better over on the American side; and this feeling is naturally augmented by the fact that many of their friends have done well in the states. If a poor young Canadian girl, unknown and unheralded, leaves Toronto and makes a name for herself as the greatest living American actress, is it not reasonable to assume that others would like to emulate her success? I refer to Mary Pickford. If it is possible for a poor young Toronto boy practically to traverse the continent down to Los Angeles and win a $25,000 prize, does it not follow that other boys would like to do the same?

The United States is a very populous and rich country, older by many years than Canada. There is no doubt that wonderful progress has been made in the last decade, but just the same I for one prefer to live in Can-

ada. I prefer the quiet dignity of Canada to the loud egoism of the States; I prefer the stern but fairer administration of justice in our law courts; and finally I prefer the splendid morale of my people to the looser living of the folks across the line. Once I stepped into a law court in the United States and I was quite surprised to find two lawyers sitting on chairs in the law court and smoking cigars. They had their hats on and they were vying with each other as to which one of them could emit saliva into cuspidors about twenty-five feet away from them. I am sure nothing of that sort happens in Canadian courts. We have in this country decorum, dignity and many other things which the people of the United States do not possess.

You tell me that the youth of our land has gone to the States. Well I believe that the process will be reversed just as soon as we begin to forge ahead a little more. I do not, however believe in colossal strides in progress. That is what is wrong with the United States; they are going ahead too fast, with disastrous effects upon the chastity and morale of her people. It is better for Canada to forge ahead slowly but surely and to keep her traditions of dignity, courage, chastity and thrift intact, than to go ahead by leaps and bounds but at the same time destroy all we should hold dear as life itself. I am an optimist. Our boys and girls will come back and so will Canada, not because, but in spite of, the Robb budget.

And what is that budget we hear so much about nowadays? From a Liberal viewpoint, summed up briefly it means a lowering of the cost of living to the people, while at the same time giving every reasonable protection to industry and every possible encouragement to the promotion of trade within the empire. They call it a "work and thrift" budget. But is it a "work and thrift" budget? Let us see. The government each year has been spending more than the preceding year. Its surplus is, therefore, not the product of economy. Now the Minister of Finance has declared that the government's policy is to work both ways—to reduce debt and to reduce taxation. These may be admirable objectives, but I feel sure he would be able to do each of these things more acceptably to the Canadian people if he would produce surpluses by economy as well as by budgeting for a large revenue. I believe the minister will admit that 1927 was a comparatively good year, so that when a government budgets for nearly $55,000,000 more than it spends and taxes the people enough to secure the budgeted income, it is not difficult in a period of expansion to produce a surplus.

I realize that when I speak of economy the Minister of Finance may say: "All right, then, we shall withdraw our assistance for good roads and technical education and also increase the freight rates and use the extra income of the railways to promote immigration." This, I contend, would be false economy; and I understand he favours the withdrawals in all cases. I would like to point out, however, that the dominion treasury was enriched by about two and one-half million dollars last year from the liquor business in the province of Alberta alone; but that the amount for roads and technical education paid out to Alberta by the Minister of Finance was very small in comparison. Practically all the provinces are now engaged in the liquor trade. When one considers the fact that the government receives more from this trade than do the provinces themselves, the talk of economizing by withdrawing the grants for highways and technical education is extremely unreasonable.

I understand that Sir Henry Thornton, whether on the initiative of the government or not I do not know, has a proposal to increase freight rates and to apply the extra income derived therefrom to promote immigration. This would be discrimination, and I see no reason why the shippers of this country should carry our immigration burden. Immigration is a general policy and should therefore be a general charge upon the whole community. If the minister wishes to economize he can do so by a weeding out process in the departments, by amalgamation of branches that could be practically run under one head. Tax reductions were made last year at a sacrifice of $27,000,000 in revenue; this year the reduction amounts to $19,000,000, so that $46,000,000 might easily have been added to the curtailment of our huge war debt which, strange to say, hovers every year in the neigbourhood of about $2,600,000,000.

A payment of about $1,000,000,000 falls due in 1933. It bears interest at 5½ per cent. The minister of Finance proposes to take advantage of the favourable condition of the money markets and retire this debt with money borrowed at 4 per cent. I think this is good business and I have no quarrel with the minister on that score. It is good economy.

In so far as the sales tax is a heavy burden on the consumer, I approve of its reduction on the necessaries of life.

And now I come to that "most unkindest cut of all"—the income tax. During the course of the budget debate last year I remember some one on this side of the house remarking that the farmer is opposed to a reduction in the income tax because he does not have to pay any income tax at all; that he desired the repeal of the sales tax law because he could not evade the sales tax.

The truth of the matter is that there are very few farmers whose incomes for taxation purposes reach beyond the exemptions set by law, and even if they had such incomes they would prefer to pay income tax to paying either tariff taxes or sales tax. It is the belief of all farmers' organizations that reduction of taxation, as it becomes possible, should take place by reducing and removing those protective duties on imports which increase the cost of living and production in preference to a reduction of other indirect taxes, such as the sales tax, and that the income tax should be maintained at substantially the scale then in force. Farmers want the retention of the income tax, not on the basis of any class interest but on the definite principle of equity in taxation and the desirability of taxation being direct rather than indirect. They do not ask the repeal of the sales tax, as an indirect tax, until after the existing duties on imports have been removed, since they regard the sales tax as somewhat less injurious than the tariff.

The income tax in 1926 produced $55,571,961.57, and after the 10 per cent reduction the Finance minister estimated that the income tax would, in 1927 produce $47,900,000, a loss of over $8,000,000 from this source. Of course, the government has been bombarded by all the large income tax payers, who naturally want relief. The argument that the income tax reduces funds available for investment in industry has been worked overtime. Of course it is quite true. But all taxes have the same effect. When the farmer pays his various taxes, visible and invisible, he has just that much less money to invest in the development of his own industry. But it must be remembered that the income tax is the only federal tax which compels people to contribute to the cost of running the country in proportion to their ability to pay. We do not believe that the income tax, even before this last reduction, bore unduly or unfairly upon any one. It should not be forgotten also that just as the income tax is reduced so will the proportion of indirect taxation increase, and a heavier load will be placed upon those least able to carry it.

Last year's budget has been described as a rich man's budget. In view of the further cut in the income tax I know of no better name for this year's budget than to call it the richer man's; for where the man who is capable of paying last year paid 10 per cent less, his income tax this year virtually becomes 20 per cent less. At this rate it will soon be eliminated, and this means that the great majority of Canadian people will hereafter pay taxes to the federal authorities only upon consumption in the form of tariff duties, which go to the treasury when paid upon imported goods, or to the manufacturers, who, under shelter of the tariff, can charge higher prices for competing articles of domestic production.

Why should we in Canada be so anxious to reduce the income tax when countries like England and the United States still retain it? Why should the Minister of Finance lend a willing ear to these who are best able to pay, many of them still enjoying the fruits of war profits, and then thrust the burden upon the backs of the common people? In the United States 64 per cent of their taxes come from the income tax, in Canada less than 14 per cent. Last year the income tax brought $48,000,000 to our treasury. Why should the government wish to reduce it? Not on the ground of equity, for it is the most equitable of taxes; not on the ground of visibility, for it is the most visible of taxes; not on the ground of certainty or convenience, for it is the easiest tax in the world to collect. There is absolutely no justification in the world for reducing the income tax in view of the paltry reductions made in the tariff. In view, therefore, of the staggering figures of our huge war debt, and in view of the almost negligible reduction in the tariff, I see absolutely no justification for the minister lowering the income tax.

The average man at home looks upon the member at Ottawa as a person who is supposed to "bring home the bacon". In the old parties it means getting as much patronage for your supporters as you possibly can; and in this respect I look upon the Postmaster General (Mr. Veniot), as the grand daddy of them all; in a word it means "to the victor belongs the spoils".

The phrase about "bringing home the bacon" was coined by the old negro mother of Joe Gans, the prize fighter. On the eve of one of his greatest battles she said: "Joe, I expect you to get into that ring and win; your old mammy will be praying for you, so don't forget to bring home the bacon". Thus when I speak of "bringing home the bacon" I mean bringing home victory for those who sent us here. What we want is a square deal for the farmer, nothing more and nothing less; but how can we do it when the Minister of Finance continues to sizzle our bacon to a frizzle? The farmer wishes to get the same equal treatment for his industry that the manufacturer is getting for his. I should like to dissipate the view held on this side of the house that we in this corner are a band of outlaws come out from the wild and woolly

west to burn up their factories and carry off their wealth. We are just as law-abiding as they are, and we are just as serious in putting our industry on as sound a business basis as we already realize they have done with theirs. All we ask is an equalization of opportunity; in other words, we want equal rights for all and special privileges for none.

What I would like hon. members to know, who think that the farmer has no grievance, is that there is too great a discrepancy between the prices the Canadian farmer receives and the prices he has to pay for what he buys. Nobody will kick about 75 cents a bushel wheat if shoes are down to $2. We realize that laws will not do everything for us—and I am sure this year's budget will not —so we are beginning to do things for ourselves. We have learned how, by cooperation and education, to avoid exploitation by middlemen. We are striving to put our farming on a business basis and we hope to see the time when we can make business-like decisions on our own initiative.

I repeat, therefore, that all the Canadian farmer asks is the same right which other Canadian industries now enjoy, through their superior organization, to name a price in the first instance, and to acquire an organization which will secure to him the same power to maintain that price. This we are striving to do, mostly through personal initiative, and partly through legislation; and this is my idea of the noblest way of "bringing home the bacon".

I should now like to deal with the question of immigration, especially in the light of what has been said during this budget debate. No one seems to oppose immigrants coming into this country, but they do question the method or manner in which they are brought here. I for one, deep down in my heart feel that we need more people here, and I am courageous enough to say that I do not oppose immigration. This country is big enough and good enough to contain three times its present population. There is one thing certain about the position of a member of parliament, and that is that he never lacks for material of all shades of opinion. Thousands of pounds of mail in the shape of letters, pamphlets, magazines, books and newspapers reach the members during the session for their information or misinformation. Yesterday I received a copy of the Montreal Star containing an article marked with a blue pencil, on the failure of our immigration policy. The whole argument is so much in line with what our Conservative friends have to say on this subject that I am intrigued into quoting a part of it:

> It is an extravagant and cruel folly to entice people to come to this country and to leave them stranded here without means of earning their livelihood.

I am in complete accord with that part, but it goes on to say that only through a protective tariff policy can we get immigration. With that I am not in accord. Some one has said that our immigration policy is very analogous to the famous old rhyme:

> "Will you walk into my parlour,"
> Said the spider to the fly,
> "It's the prettiest little parlour
> That ever you did spy."
> But if the fly was wise
> He never would go in;
> He would know very well
> There was nothing there for him.

I know a case where some false representation has had beneficial results in the end, but this is an exception to the rule, and in any case it could never work out in the same way to-day. I know a district in Alberta where a settler who came here thirty years ago felt quite lonely because he was there all alone. He wanted more of his own villagers to settle there with him so he wrote back home saying that Canada was a most luxuriant country where everything from hay to coconuts, peaches and bananas grew in the greatest abundance. It was not long after that letter was received away back home in the old country that that whole village became depopulated, for they all sold out and came to Alberta. Of course at first they were all sorely peeved, but being a very hardy race they soon adapted themselves to conditions here, and to-day they are among Alberta's best settlers. I have said that this is an exceptional case and should not be followed as a general rule by the immigration authorities.

I object again to the commercialization of immigration, which enriches a few individuals at the expense of the country. Immigration should be controlled by the Dominion and not delegated to private individuals or associations. The Dominion should select the immigrant and when he gets here should see that he is properly placed.

I do not believe in paternalism or a spoon-fed immigration. I know from experience with immigrants in the past that those immigrants who had the least means and help were the ones to make the best success; while those who came here in comparative luxury are now virtually begging off their more prosperous neighbours. I say emphatically that paternalism is a vicious animal which will finally turn upon and bite its master. This is no country for mollycoddles; what we want is the hardy red-booded pioneering type that

scorns being fed with a silver spoon, but will roll up his sleeves and tackle without a murmur any obstacle that may confront him.

And how best can we bring them over here? To my mind the best and safest method is to allow families already settled here to bring their relatives to this country, provided they are fit and of the proper type. This will ensure to the country that someone at least will be responsible for them when they get here, and that they will not become a charge upon the country. Of course other supplementary methods could be suggested, but my time is short. And from where shall we bring those immigrants? From any country under God's sun that has the proper, adaptable type for a country like Canada; meaning, of course, a type of the white race that would be amenable to our ideas and democratic form of government. I object strenuously to the suggestion that the central European does not make a good citizen. A good citizen is a man who behaves himself, pays his taxes, does the right thing by himself and his neighbour, and, last but not least, is a sticker. The Germans and Scandinavians make wonderful settlers, but so do the Ukrainians. In a few years they have acquired the language of this country, and an understanding of our institutions as good as the best of them. I think that the member for Saskatoon (Mr. Young) will agree with me that in the institute in his constituency there are about 120 of the finest Canadians of Ukrainian extraction one would ever meet. I repeat that measured by every possible standard the Ukrainian becomes as good a Canadian as any of them. I have said that he is a sticker, and I mean it; for what avails it to a country, if a native born would rather flaunt his patriotism by waving a flag and rocking the boat than putting his hands to the oar. I have seen many of our native born run up a debt and then leave their farms because they would not live within their means. True patriotism, I insist again, also includes persistence and frugality even under trying circumstances.

I know it is hard to be patriotic under trying circumstances, but no man is a true patriot unless he has character; and character after all can only be moulded by a persistent battle with those circumstances. The man who comes out of such an elemental conflict successfully is a man of strong character. It is probably this that the Irish politician had in mind when he said: "Oh, never mind the foreigner, he is all right. In a few years he'll be out of the skinned class into the skinners and he'll then be as patriotic as any of us." If we wish to make the foreigner patriotic we must meet him half way and give him a

[Mr. Luchkovich.]

fair chance in the world. If we wish him to share our responsibilities we must stop discriminating against him; we must stop making him the goat of all our social unrest. Let us remember that it was a central European who risked his life in the Hollinger mine to save native Canadians from death. Surely this example alone should prove that he is actuated by the same high motives as our native born. So why should we not help him instead of hindering him from becoming a genuine Canadian citizen?

Mr. DEPUTY SPEAKER: Order.

Mr. A. E. MacLEAN (Prince): Mr. Speaker I am sure that we were all greatly pleased a few days ago when the Minister of Finance (Mr. Robb) brought down the budget. Believing as we do on this side of the house in the principles enunciated in the budget I think we may at least commend him to a certain degree. There can be no doubt that if circumstances had compelled him to announce a deficit and an increase of taxation he would have been the most unhappy and the most unpopular man in this house. But we are all pleased that the business ability which he has so conspicuously displayed in his private affairs he has brought to bear in handling the financial affairs of the Dominion, with the result that from year to year he has been able to show a steady improvement in the finances of the country. When he presented the budget he said he was pleased to be able to announce a reduction both in the national debt and in taxation; and I think this will constitute another Robb budget slogan for the coming year.

Some of our friends opposite have told us in the course of this debate that the tariff reductions proposed by the Minister of Finance will force into exile more and more of our native born Canadians. But this dismal prediction is not confirmed by the very favourable comments that have appeared in the English press. For instance the London Express says:

> The Canadian budget is of a kind to make an Englishmen's mouth water. It is one more proof that Canada to-day is perhaps the most enviable country in the world. It is being borne along on a tide of natural and, therefore, enduring prosperity. Ater all, it is only a meagre reward compared with the certainties of the future. Young men and women of character and pluck should not hesitate. The heritage of empire and chance of fortune are there to seize.

I think that is very good immigration literature and very encouraging proof that the budget is well received in Great Britain. The Sunday Observer remarks:

The Hon. James Robb introduced the budget to make European finance ministers envious. The new tariff is framed to safeguard the interests of home products in a growing market. The principle of British preference is carefully maintained, and is now as established a feature of Dominion finance as it is of our own. As a whole, the budget and facts lying behind it supply conclusive arguments for an energetic and coherent immigration policy.

I do not think we could wish for very much better immigration literature than that. Among the good things contained in the budget is an item of sixteen million dollars to take care of the revaluation of returned soldiers' land. I do not think there is a better item to be found there. Then $1,477,000 is provided for pensions to our returned men. That is another item that I think everyone throughout the country will approve, and I do not see how any hon. member can vote against it. That, in addition to the thirty-eight million dollars already paid in pensions to our returned men is something that Canada may well be proud of. This year the additional amount provided for our returned soldiers in the budget totals $17,500,000.

There is no doubt, Mr. Speaker, that we who support a lower tariff would like to have seen further tariff reductions. I do not know how some of my friends from the maritimes view the situation, but I feel very strongly that the tariff is one of the greatest hindrances to us down there. We have only to look back a few years and examine the figures showing the decline of population in the maritime provinces to see what great difficulties they have had to overcome. Taking the percentage of natural increase, we find that from 1901 to 1921 the figures were as folows: Saskatchewan, 729; Alberta, 725; British Columbia, 192; Manitoba, 139; Quebec, 42; Ontario, 34; New Brunswick, 17; Nova Scotia, 31. Thus of all the provinces in Canada in which there was an increase Nova Scotia shows the lowest, while Prince Edward Island had a decrease in population of over 14 per cent. It is only natural for us to inquire into the reason for this, and for an explanation we need but go back a few years and look at some of the figures which have been given indicating the decline in population in the maritime provinces, and especially in the province of Nova Scotia. What do these figures reveal? According to the census for the ten year period 1817-27 there was an increase in Nova Scotia of 61,000; in the next decade, 78,000; then, in the successive decades respectively, 72,000, 34,000, 56,000 and 52,000. We come to the period, then, within which the national policy was introduced. When this last census was taken the national policy had not been introduced; it was put into effect in 1878. In that period we find that the population of Nova Scotia had declined, so that the increase, instead of being 52,000, was only 9,000. I do not see how our friends opposite can rebut a statement as conclusive as this. In the next ten year period the increase stood at the same figure, 9,000. So that the fact is quite significant that, with the introduction of the national policy and the change in the conditions of trade in the maritime provinces resulting therefrom, our population suffered to so considerable an extent that, in place of an natural increase of 52,000 in a period of ten years it had fallen to 9,000, while in Prince Edward Island the increase had been entirely wiped out and there was a decrease of 14 per cent, shortly following this period. I do not think that any argument can be advanced in support of a protective policy so far as the maritime provinces are concerned.

Now I come to the amendment which was moved the other day by my hon. friend from St. Lawrence-St. George (Mr. Cahan). The amendment begins with the declaration that this house "regrets", and one infers from a reading of it that there are many things which are to be regretted. It seems to me that the greatest regret of all, from the standpoint of hon. gentlemen opposite, is that they are not on this side of the house in charge of the administration of public affairs. The old policy which our friends have preached to the country year after year, election after election is dressed up in somewhat new clothes, but it is the same old doctrine. I do not deny that it is ingeniously worded this time, no doubt with the idea of avoiding the use of the term "high protection"; the amendment evidently seeks to convey an impression that this is not its real object. It seems that the term "high protection" is being abandoned by our friends opposite, so that to-day they mention it only with bated breath or in a whisper. However, it is stated in the amendment that the measure which hon. gentlemen opposite propose will tend to keep at home those Canadians who are now in the country and induce those Canadians who are in the United States to return. There is no doubt at all as to what our friends really have in mind; they believe that higher protection will bring about this wonderful result. All we need do is to introduce again this brick for brick policy, about which we have heard so much in the last few years, and everything will be perfectly satisfactory again. That is what our friends would have us believe. But what is the meaning of the amendment, translated into plain English? It is simply this: This house regrets that the government has not brought in a measure of

higher protection for all our industries, making the tariff so high as to induce Canadians in the United States to return and Canadians who are now in the Dominion to remain here. That is what it means. The inference is also to be drawn from the amendment that, in the opinion of hon. gentlemen opposite, high protection will build up the home market for our products. It is the same old story; protection will do it all. I do not think my hon. friend from St. Lawrence-St. George could have been altogether sincere in advancing this policy. I find that in his own remarks, as reported at page 623 of Hansard, he admits that the policy is not satisfactory for the whole of Canada. He states there that if the policy were introduced it would be necessary to do something for the maritime provinces and for the prairies as well. In other words, they would bonus these provinces in some way to offset the injury which they would suffer from protection. I do not think a policy of that description can be very well advocated as one that could be applicable to the whole Dominion.

I have observed in the Montreal Star a suggestion rather similar to the above and which one of our western friends referred to a few moments ago. The Star offers a new policy, and I do not know whether it is altogether in conformity with the proposal put forward by the hon. member for St. Lawrence-St. George. In the first place, it is proposed to apply the system of protection in full measure to secure a home market for our producers. Now, I am willing to give the Star credit for an earnest desire to do the best it can in the interests of this Dominion. Those who direct its affairs have done a great deal to give to this country what is perhaps the greatest newspaper we have, and I am inclined to think that their interest in Canada is sufficiently strong to actuate them in what they consider to be the wisest course. But we must look into their policy critically to see how it will operate. They say we should have protection so as to shut out foreign goods and keep our market for the home producer. But if you keep out all foreign goods you immediately increase prices to the consumer. This is clearly the case, because if protection is not intended to increase prices why is it demanded? In other words, the manufacturer here would have the market now if he could produce cheaply enough to hold it. Prices to the consumer must therefore be increased correspondingly with every increase in protection. That is fact No. 1, and I think the house will agree with me that the consumer gets the worst of the bargain.

[Mr. A. E. MacLean.]

The next suggestion is to bonus the manufacturer on his exports to enable him to undersell trade rivals in foreign countries. Here again the consumer in Canada gets the worst of the bargain. Let us take an industry in Ontario. The province of Prince Edward Island has to contribute its share to pay the bonus to the Ontario firm, but it gets nothing in return. As a matter of fact, the consumers in Prince Edward Island, under such an arrangement, are taxed twice on the same article; they pay the increased price for the article in the home market on account of the added protection, and they also contribute to the bonus for the exporter. In this way the farmer of Prince Edward Island is taxed twice over. I do not think that such a policy would be for a moment acceptable to the whole Dominion. But what about the farmer? He has to go out and sell his produce in competition with the world, with no guarantee of any fixed price, notwithstanding the fact, as I have pointed out, that he would have to contribute in two ways, under such a policy as is here proposed, to the support of the manufacturer, who has a safe margin of profit, without any risks in connection with the disposal of his goods. It seems to me that when the Star looks into the suggestion somewhat more closely it will realize how unworkable it is. A rigid system of inspection is also urged whereby prices shall not be increased. To my mind this is also impossible. The manufacturer has to sell at cost, plus a small profit. It would be impossible to enforce such a system inasmuch as one manufacturer can produce at a much cheaper rate than another. The result is that the consumer would soon find himself paying the full added tariff together with a nice margin of profit to the manufacturer. So I do not think it would be possible to put that policy into operation, notwithstanding the good intentions which no doubt influenced the Star in that connection.

There is another strange thing about the speech of the hon. member for St. Lawrence-St. George. Presumably he laid down the policy of the Conservative party, and among the principles he enumerated was the following:

> The stabilization in Canada of the costs of living and the costs of implements of production on such comparatively low bases as will enable our people, in producing and selling our surplus of national products abroad, to compete advantageously with the products of foreign countries in our common markets abroad.

I do not know whether or not that is the policy advocated by the Star, but our friends opposite have been condemning the Liberal party for years, and they said our policy of

lowering the cost of implements of production was driving our people from Canada, forcing them to compete with the cheaper markets of the world and giving them less than an equal chance with other countries. This government have been taken to task at different times by hon. gentlemen opposite for this very thing. Now our friends are going to do two things at once; they are going to put the cost of living and the cost of production on such a low basis that our people will be able to compete with foreign countries in the markets of the world, and they are going to do it by increasing the tariff. That is the peculiar part of this argument, although the hon. member does not specifically say so. I cannot see how our friends opposite can be consistent in advocating a policy of that kind; to my mind that is ridiculous. How can you cheapen the cost of the implements of production by increasing the tariff? I do not think this policy will prove very acceptable to the Canadian people. Do they propose to bring our people to serfdom by compelling them to work longer hours for less pay, in order to produce cheap manufactured articles to sell in competition with the world? If we fully consider this article in the Star we can only come to the conclusion that if an industry requires a bonus in order that it may be kept going, it is up to the province, the municipality or the city in which that industry is located to look after it, if it is going to be a benefit to that particular community. I do not think the rest of Canada should be asked to pay a bonus to an industry in the city of Toronto, or some other city, to the detriment to the rest of the Dominion. If it is so advantageous to these communities to retain these industries, those communities should bonus the industries locally; the whole country should not be asked to do so.

Referring for a moment to the tariff board, which has been discussed quite often, I have advocated from time to time the widening of the scope of this board. I do not know the views of the government on this question, but I think the efficiency of that board could be greatly increased by widening their scope in order that they might confer with other tariff boards. In the United States they have a tariff commission which is a fact finding body acting in an advisory capacity, very similar to our own board, and if these two bodies could confer together there might be a good many items on which a reasonable adjustment could be made.

The question of potatoes in the province of Prince Edward Island has often been mentioned in this house. We are in that business on a very large scale at present, and are forced to ship these potatoes into the United States against a tariff of 50 cents per hundred pounds. We are growing certified seed potatoes there, which the farmers in the southern states need; it is to the benefit of the farmers and consumers to get those potatoes as cheaply as possible. I have had a good deal of correspondence with the United States tariff commission on this question, and I was surprised at the attention they gave the matter simply through my personal request. They went into it very thoroughly, and the question of whether or not seed potatoes could be identified as against table stock came up. Finally I received a communication from them stating that the explanation I had offered had been carefully considered, and they were of the opinion that if the state of Maine did not object too much there was a possibility that some satisfactory solution of the question might be found. I assured them that seed potatoes were certified with a government tag, and could be identified as such; therefore there was no possibility of these potatoes coming into competition with the table stock. I believe that the government would do well to widen the scope of the tariff board and let them interview other tariff boards in connection with matters of this kind.

There are always matters of local interest which we wish to talk over, and matters of this kind have been referred to by other speakers in this debate. Just in passing I would like to compliment the government, and more particularly the Minister of Public Works (Mr. Elliott), on the splendid facilities which have been given us for the handling of our crops—through the erection of suitable cold storage or semi-frostproof warehouses at Summerside, Charlottetown and Georgetown. These warehouses have been a great benefit to our people and have been used very extensively during the past year. As time goes on our people will see more clearly the benefits which they are receiving from these improved facilities.

That brings to mind another matter, and I would like to refer briefly to the request which has been put forward for a second car ferry. This is now being considered by the management of the Canadian National Railways. We sincerely hope that the time is not far distant when another efficient and suitable boat will be put on that route to take care of the increased traffic. The one boat on the route at present is taken off for perhaps six weeks in the spring season for repairs, and that is the very time of the year that it is most needed, with people coming to the island as tourists and others returning from trips abroad. The Scotia, which takes the place

of the ferry during those weeks, offers very poor passenger service, and I sincerely trust that this important matter will not be overlooked. Prince Edward Island is only a small province, but it is one of the provinces of this Dominion; the other provinces have their interprovincial bridges and other means of transportation, so why not give little Prince Edward Island the same amount of consideration? We are only asking for a fair deal, to be treated as a province of this Dominion should be treated and given the transportation facilities now enjoyed by the other provinces.

There is another question which has been discussed at various times and which is supported by all shades of political opinion in Prince Edward Island, that is, the need for more branch lines to extend the present railway system in that provinces. This is very important, and the matter has been brought to the attention of the government by myself and the other members from that province. We sincerely hope that it will be taken into favourable consideration by the railway management. Perhaps it is difficult to grant all the things we ask, but Prince Edward Island is purely an agricultural province; unless our people have adequate shipping facilities near at hand to take care of their products it is impossible for them to carry on, and we ask that these matters be given very favourable consideration.

The question of the fisheries of the maritimes is before a royal commission, and we entertain the hope that some assistance will be given towards removing some of the difficulties which our fishermen have to contend with. One recommendation I wish to make now is that some small boat harbours be constructed along exposed coasts, which would be a great benefit to our people. I do not know any class who endure the same hardships as the fishermen on the exposed coasts of the maritime provinces, and if a vote should be brought before this house with a view of alleviating their condition I hope that members from other parts of the Dominion will not look upon it as something which is being handed out in a political way to ridings in the maritime provinces. I wish to protest emphatically against such an idea as that, and to say that there is not a small boat harbour, wharf or breakwater on the coast of the maritimes which does not benefit the fishermen and the shipping public. Greater facilities are needed, and I hope that the requests we have made to the department in this connection will be considered this year.

There are a few suggestions I should like to make having as their object the improvement of the fisheries situation. They may be summarized as follows:

[Mr. A. E. MacLean.]

(1) Some assistance to develop a better system of preparing our fish for market so that a uniform and absolutely reliable brand or pack may be put on the market.

(2) That assistance be given to the fishermen by way of cold storage facilities and swift transportation to enable them to place their fish on the market in the best possible form.

(3) That a system of inspection be instituted in order that the pack may carry the inspector's guarantee as to quality.

(4) That the superior qualities of the lobster over the Japanese crab or the American crayfish be advertised to the world by the Department of Fisheries.

I may say that other varieties of fish are encroaching upon the market for lobsters, which used to be a wonderful industry in the maritimes. I think it is only necessary to demonstrate the superiority of the lobster over fish sought to be introduced as substitutes to convince everyone that the lobster should receive its rightful place in the markets of the world.

(5) That special attention be given to the restoration of the oyster areas in the maritimes, especially the habitat of the famous Malpeque oyster.

For the past few years we have been asking the Department of Fisheries to do something towards the restoration of these former wonderful areas. I brought the matter up in this house a few years ago, and I had the support at that time of the hon. member for West York (Sir Henry Drayton) who is not with us this session. That hon. gentleman stated that in his opinion there was not a more important question before the house that session than the restoration of these oyster areas, and if it was at all possible the effort should be made to restore them to their old time condition. I believe that if a proper expert were put in charge of this work, those wonderful Malpeque oysters which were formerly the envy of the world could be brought back to a proper state of productivity. There is no doubt that if this were done hundreds of thousands of dollars would accrue to the fishermen of our province.

(6) That the present season now in effect in the maritimes for lobster fishing be retained, with a possible change of opening dates and boundaries to suit conditions.

(7) That every day's lobster pack be labelled with a government label and that there be a tag on the case, giving the name of the packer and the date on which the product was packed, so that no fish can be sold without this government guarantee.

These are a few recommendations which I am sure would help the fishermen, and I trust

that the Minister of Marine and Fisheries (Mr. Cardin) will not overlook them when the report of the royal commission is being considered, along with any changes which the department itself may feel impelled to introduce.

One question which has been greatly discussed by the members from the maritime provinces is the implementing of the Duncan commission report. To my mind the government has made an honest effort to implement that report; some of its phases have been splendidly taken care of, while others remain to be further considered. With respect to the question of a twenty per cent reduction in the freight rates, I notice there is an item in the estimates amounting to $3,395,000 to give effect to it. This is a very large item, and I was unable to ascertain just what proportion of that sum would go to each of the maritimes. The management of the national railways was not able to give me any detailed information on the matter, but it is quite certain that a very large share will go to the province of Prince Edward Island. I looked into the freight rate matter before leaving for Ottawa and I find that on a carload of potatoes shipped from the western part of the province there is a reduction of about $12 a car. In the case of shipments to the St. John or Halifax market there is a reduction of some $15 a car, and so on according to the mileage involved. I think these reductions will not only benefit the shippers of freight from Prince Edward Island, but that it will represent a large item on the freight coming in. Therefore these reductions, which have come about as a result of the Duncan commission's report, will be of great benefit to the people in the maritimes and will save hundreds of thousands of dollars to the people of Prince Edward Island.

With respect to the tariff, hon. gentlemen opposite have complained that the Liberal party this year have taken more in customs duties than they had done themselves in former years. Personally I feel that I could not have a better story with which to go to the people of my county. We have always advocated a tariff for revenue, otherwise a low tariff, and it works out apparently just as we have always claimed it would do. The lower your tariff the larger revenue you get, and the people of the country are given a chance to import commodities which they desire at reasonable prices, while at the same time a substantial contribution is made to the revenues of the country. Hon. gentlemen opposite, therefore, need not try to alarm the country, especially the maritimes, by making this complaint with respect to customs duties, because our people want the tariff reduced to a point where they can import what they need at a reasonable rate, while at the same time the revenue gains to no inconsiderable extent. A high tariff will defeat this object.

The question of an increase in the subsidies to the maritimes is one of outstanding importance. The people of the maritime provinces hope that these subsidies, especially the subsidy to Prince Edward Island, will be still further augmented. I do not know what the Minister of Finance will say to the suggestion but I hope that he will give it his favourable consideration. There are many reasons why the subsidies should be increased, and those reasons have been stated here from time to time. The Duncan commission went very thoroughly into the matter, and their opinion was that sufficient account was not taken of the abrogation of the reciprocity with the United States. This regrettable event left the maritimes without a market and it took them a great many years to find a new market. I have pointed out on a previous occasion that when that agreement was abrogated, and the national policy was brought into effect, in one decade the population of Nova Scotia dropped from $52,000 to 9,000 souls. There must have been some reason for that, and the reason is that the national policy did not suit the conditions in that part of Canada. Prior to confederation the customs and excise duties went to the provinces as their chief source of revenue. At confederation these were turned over to the Dominion government. These revenues have gone on increasing and the Dominion is getting the benefit therefrom while the subsidies to the maritimes have not increased in the same proportion. That is a very strong reason in favour of an increase. In order to supplement the case I may state that in 1868 for every dollar paid out to the provinces in subsidies the federal government only received $4 in the form of revenue. To-day for every dollar paid out for the same purpose the federal government receive $12 in the shape of revenue or three times as much as they derived in 1868. On that score alone we have a strong claim for a larger subsidy. Sir Andrew Rae Duncan referred to the purchasing power of the dollar, and said that even if the arrangement with the maritime provinces may have been satisfactory for the carrying on of the governments there in 1907 the drop in the purchasing power of the dollar would call for revision at the present time.

The question of the public lands should also be borne in mind. The proprietors in

Prince Edward Island received grants of land from the British crown, but three-fifths of these lands were bought out by the tenants and local government prior to confederation. A sum not exceeding $800,000 was set apart under the terms of confederation for the purchase of these lands and $45,000 was to be paid annually by the Dominion. The commission reports that nearly this whole amount and the $45,000 annually, has been lost to the province, so that it has received no benefit from the arrangement.

The same can be said about the railway claim. Something like $4,700,000 was placed to our credit on entering confederation and the cost of the railway, which was built at that time in Prince Edward Island at a cost of $3,000,000, was charged up and deducted from the federal allowance on which we expected to receive interest from confederation on, the result being that we have lost the interest on that $3,000,000 ever since. The question has been brought up of the return of the railway lands in British Columbia to that province. We do not object to the return of those lands; but we say that if those lands are returned to British Columbia, it would be just as equitable to return that sum of $3,000,000 to the credit of Prince Edward Island, and to have the province receive the interest on that money from year to year.

There are many other claims that could be advanced but time will not permit me to take them up at the present time. No doubt those matters were fully dealt with by the Premier of Prince Edward Island at the interprovincial conference; but there is just one question to which I wish to refer, and that is the return of the natural resources to Alberta. We find that those natural resources are at the present time worth to that province more than $2,000,000. We admit that according to the statement that has been produced it costs about $2,000,000 to administer those resources. We also find that those resources in the last five years have increased in value by more than $1,000,000. The surface of the natural resources of Alberta has hardly been scratched, and as time goes on those resources will become more valuable as their development progresses. We trust that when the question of an adjustment of the subsidies to the different provinces is being dealt with, those matters which I have brought to the attention of the house will be given due consideration.

Hon. JOHN A. MACDONALD (Kings): Mr. Speaker, as this is but the second time I have attempted to make a speech in this house, I am rather afraid I have so much to say that I shall not have an opportunity of saying it within the forty minutes at my disposal.

I should like to devote a moment or two to the remarks of the hon. member for Prince (Mr. MacLean) who has just taken his seat. If a tariff is a hindrance to an increase in population, why has the hon. member so consistently supported a government which maintains a tariff? Further, in regard to his statements as to population increase and decrease in Prince Edward Island, he was very far at sea in stating that the decrease in population in that province commenced immediately after the national policy was adopted. That is not so. In the census of 1891 the population of Prince Edward Island reached its highest peak, and that was thirteen years after the national policy was adopted. Consequently his argument that the adoption of a protective tariff started a decrease in the population of Prince Edward Island was not correct. As a matter of fact the first decrease in the population of that province commenced in 1901, five years after the Laurier government took office, and the decrease, as shown by every census since that time, has continued steadily. So that his argument in that respect does not appear to have much weight.

As regards his argument that a tariff increases prices, I wonder how he reconciles that statement with the fact, examples of which we see every day, that the United States, the most highly protected country in the world, has on most of its products the lowest prices to be obtained anywhere, prices so low that they can ship their manufactured products into Canada in very large quantities and pay a tariff on them on the way in. As regards his argument in connection with bounties, I do not think he can claim that paying bounties to industry is any part of the Conservative policy.

In regard to seed potatoes and his correspondence with the tariff commission of the United States, he will find, as every other country finds and has always found, that the United States is not going to open its doors to competition with its own people. The United States takes care of its people, manufacturers, farmers and every other industry or person, and I think the hon. member for Prince will find that out before he finishes his correspondence with the tariff commission of the United States.

The hon. member for Provencher (Mr. Beaubien) spoke about the arguments from this side of the house being more or less arguments in favour of immigration for the

United States. That, of course, is simply an echo of the present Prime Minister (Mr. Mackenzie King), because his policy appears to be to hide the truth rather than to speak it, as though we could hide any fact from the world at large. I am not concerned with his attempt to justify his political career; but when he states that he would like to see the national railways run separately from the government, why does he not insist that the government should cease to guarantee the bonds of the national railways and thus have it really and truly separate?

The larger aspects of the budget have been fully discussed by many speakers and I rather feel like confining myself to its bearing locally in the maritime provinces, and particularly Prince Edward Island. We must, however, remember that a country like Canada, with its large expanse of territory, with its many diverse elements, must necessarily receive great consideration from many different standpoints, and the government must always be prepared to recognize and to adapt its policy to suit changing conditions. To-day we have large manufacturing industries in the central parts of Canada. Ten, fifteen or twenty years from now many similar industries may be established in western Canada, and when that day comes probably our western friends will have a somewhat different view of the policy of protection. To my mind we must always adopt a policy which will work the least possible hardship to any section and at the same time conserve the industries of the country. Without such a policy we cannot hope to be generally successful, and even if we have to make compromises here and there, we must accept those as being inevitable in Canada. I do not envy the job of the Minister of Finance (Mr. Robb) in endeavouring to reconcile all the different elements; but I do object to the financial conclusions at which he arrives, and it would be more to his credit if he made a really fair statement of our financial affairs and included all the liabilities. I do not intend to discuss the question of the national railway liabilities because it has been set forth so fully and so often already that it is not necessary for me to do so.

When we come to the taxation proposals, we find that after all very little relief has been given except to those with large incomes, and even there the relief is not very much. The reduction of one per cent in the sales tax will not mean much for the average man or woman or for the average farmer in our province. It will mean five or six cents on a pair of boots, twenty or thirty cents on a suit of clothes, and similar small reductions of that nature. That is all the benefit that Prince Edward Island will receive from these reductions in taxation. The Minister of Finance has always used reduction of taxation as a battle cry, as a means to furthering the political fortunes of his party. He advertised a twenty per cent reduction last year; he is advertsing a twenty-five per cent reduction this year. It is only one per cent in each case, and next year he will take another one per cent off, I presume, and advertise a thirty-three and one-third per cent reduction, take another one per cent off the following year and advertise a fifty per cent reduction, until finally when election time comes round he will be able to announce a reduction of one hundred per cent. In all the five years during which he is reducing the sales tax he will have reduced it by two hundred and twenty-eight per cent, and after he has reduced it two hundred and twenty-eight per cent in the five years it will be abolished. The forty-five per cent reduction he has made already has only brought the sales tax back to the point where it was when the present government took office. There is no doubt whatever in my mind that if reasonable economy in the administration of the finances of this country had been practised in the past two or three years the sales tax could have been fully abolished and we would not miss it in the revenues of this country. Sufficient economy could very well be practised to maintain the standing of our finances, to provide surpluses and to make a reduction of debt possible, even if the sales tax were abolished.

One of the questions to which the budget always refers is that of markets. If we are not able to adopt a policy that will build up the home market then we shall fail. There is not and never was a market that will be equal to the home market. That applies to every country. The home market is always there; you have it through good times and bad times, and regardless of world conditions. I am in favour of foreign markets so far as we can reach them, and let us go after them to the fullest possible extent, but in the foreign market you are always up against world competition, and years will come when that world competition will practically put you out of business in that market. But if you take care of the home market you have a stable outlet for your products from year to year, regardless of world conditions.

I was rather surprised at the statement of the hon. member for Queens (Mr. Sinclair) in

connection with the Australian trade treaty when, speaking a few days ago in this house, he said:

As an agriculturist in direct touch with this work of finding markets for our dairy products, I am in a position to state that the main result of the importations of Australian butter has simply been to put the speculator in Canadian dairy products out of business rather than to injure the farmer. To-day we have a ready market all the year round in Great Britain for our dairy products.

I wonder if he really gave serious consideration to that statement before he made it. He argues that the only thing to do with our butter is to export it to Great Britain. Now any person with a knowledge of the facts knows that in Canada our season of large and less expensive production is about six or seven months of the year, and during the remainder of the year, for five or six months, production is very much curtailed and the cost of production very much increased. What happens to-day under the Australian treaty is that we have to send our butter to Great Britain in the summer time, when prices are low. It is no using holding it until the winter season when it might command a better price because at that season the cheap butter of Australia and New Zealand, produced under summer conditions, is coming into this country, and we have no market for our butter in Canada. When it is remembered that the home market in Canada will take care of almost our whole butter production if we shut out importations, the fallacy of the argument of the hon. member for Queens will at once be seen.

But the Australian treaty goes further in its effects. It practically prevents winter dairying. Due to the high cost of production in winter, it is not profitable to the farmer because again the cheap butter of Australia and New Zealand, produced under summer conditions, is coming in and undersells our butter. There is no way of meeting this situation fairly to the farmer except by imposing a duty that will protect him, and he should be protected just as much as the manufacturer. Protection would put him on a fair basis. In this connection I should like to quote a statement made by one of the officers of the federal Department of Agriculture in Charlottetown a short time ago in which he distinctly disagrees with the statement of the hon. member for Queens. In a public statement issued at Charlottetown he says:

At the present time, our markets have received quite a setback, owing to so much New Zealand butter being dumped into Canada. Up to November 1st, 100,000 boxes of New Zealand butter was exported to Canada, and one boat in November delivered 34,000 boxes in Halifax.

New Zealand and Australia are producing under summer conditions, and are bonused to the extent of six cents a pound. So you see why we cannot compete with that trade, and make a profit with our type of cow.

That statement was issued by an officer of the Department of Agriculture, and I venture to say that the Minister of Agriculture (Mr. Motherwell) agrees with him, although he does not appear to be making any effort to meet that situation.

Mr. SINCLAIR (Queens): Does the hon. member agree with the statement made in this house a few nights ago by the ex-Minister of Agriculture, the hon. member for Victoria (Mr. Tolmie), when he admitted that the Australian treaty did not decrease the price of butter to our dairymen?

Mr. MACDONALD (Kings): I am quoting the statement of an officer of the federal Department of Agriculture. I am not discussing any statements made elsewhere. I did not hear the statement to which the hon. member refers.

Mr. BENNETT: Neither did I.

Mr. MACDONALD (Kings): Further in connection with this matter, I have here the history of a carload of choice No. 1 pasteurized creamery butter shipped from Prince Edward Island in the summer of 1926 and sold in London. On account of its choice quality it brought a higher price than the regular quotations there—one shilling and six pence above the current English quotation. Yet while it brought a fancy price, the net result to the shippers from Prince Edward Island was 28¾ cents a pound, while practically the lowest price, the less than average price, quoted in Prince Edward Island for butter during that season was 32 cents a pound. That will show the disadvantage of being obliged to ship our butter to the British market during the summer time. If it could be held over for later consumption in Canada you would get the benefit of the higher price.

The hon. member for Queens also dealt with the question of implementing the Duncan report. He made remarks in that connection with which I cannot agree, and which I cannot let pass unchallenged. As the hon. member knows, I am not criticizing him personally; I am criticizing his statement. He stated:

I think it is fair to say that on the whole the government have gone as far as it is possible for them to go in implementing the recommendations of the Duncan commission.

Now, Mr. Speaker, that is an attempt to bolster up the case of the government with an

argument that cannot succeed. He referred particularly to the improved facilities offered by the Prince Edward Island Railway and the ferry service. I do not wish to criticize the government unreservedly in this connection, for I appreciate what has been done and, as the hon. member for Prince (Mr. MacLean) said this evening, some of the recommendations that have been carried out have been a great benefit to us. But even in discussing the question of subsidies, we find that although the recommendation of the commission was in the hands of the government in September 1926, no subsidy was paid until late in 1927, and then only for the half year. The government should at least have paid a full year's subsidy. As I say, we do not wish to condemn the government unreservedly, but we cannot give them our full approval and accept what they have so far given us as completely implementing the Duncan report.

In connection with transportation the Duncan report has this to say:

> The railway administration admitted that there was substantial foundation for much of the complaint we heard in Prince Edward Island with regard to the railway service there. It appears that in view of the character of the roadbed and the succession of heavy curves and heavy grades the difficulties which railway operations incur, and the inconvenience which the public suffers, cannot be quickly and substantially lessened without a measure of capital expenditure.

What has happened in relation to that recommendation? Absolutely nothing, Mr. Speaker. It is in exactly the same position to-day as it was two years ago when the report was made. To give the house some idea of the handicaps that we have had to overcome, I may say that only last November and December on the section of the road from Georgetown to Mount Stewart we were limited to ninety thousand pounds on any carload of freight. That was not too bad while we were using box cars, but the moment frosty weather set in and we were obliged to use refrigerator cars of sixty thousand pounds tare, it meant that we could load only thirty thousand pounds, or ten thousand pounds under the minimum capacity. But to make matters worse, we were charged freight on the forty thousand pounds minimum loading. Now does the hon. member declare in view of such a condition that that recommendation of the Duncan report has been implemented in full? I submit, Sir, that his statement can not be justified. That is only one sample of the handicaps that result from the failure of the government to fully carry out the recommendations of the Duncan commission. Next let me take the case of the Murray Harbour railway, a stretch of narrow gauge line running partly through the hon. member's county and partly through mine. Nearly two years after the Duncan report no effort has been made to convert that railway to standard gauge.

Then take the car ferry service. The Duncan report recommends that:

> The railway administration should be asked to make a survey of what is required in this connection, and that the department should make capital provision for the improvements to be undertaken within the shortest possible time.

Two sets of estimates have been placed before this house since the Duncan report was in the hands of the government, but no provision has been made to take care of that work, which, it will be noted, was recommended "to be undertaken within the shortest possible time." The member for Prince sincerely hopes that something may be done in regard to it in the near future. But I think he and the hon. member for Queens should do a little more than "sincerely hope", because early action in regard to these matters is of great importance to Prince Edward Island as a whole.

Mr. SINCLAIR (Queens): Is not my hon. friend aware that the survey to which he refers was made during the past season?

Mr. MACDONALD (Kings): You can go on making surveys indefinitely for years to come. No survey was required in this case; the whole condition was well known to the railway authorities and the government.

Mr. SINCLAIR (Queens): What is the recommendation in the report?

Mr. MACDONALD (Kings): That is the recommendation:

> Altogether the ferry boat service is unsatisfactory. The railway administration admitted that there was need for supplemental provision being made in the form either of a second ferry boat or a special freight boat. We recommend that the matter be gone into from the point of view of placing at the disposal of the island such satisfactory means of communication as will ensure as regular and complete a service as can reasonably be made. We further recommend that, so far as the ferry boat service is concerned, it should not be run as part of the railway operations, but should be run by the railway administration under separate account for the department. We feel that, by reason of its association with railway accounts, this service does not get the attention it should receive.

Now, has that been done? Would a survey be required to change the accounting system of the car ferry? I ask that question of the hon. gentleman. Has anything been done to meet the demands of the province for a second car ferry, which is very much needed? It is

needed from the standpoint of traffic at the present time. I was not able to get the figures for the past year but I can give the house the figures for 1925 and 1926 of the total number of outward and inward cars:

	Outward	Inward	Total
1926..	12,972	13,001	25,973
1925..	9,960	9,671	19,631

It will be observed that the increase in 1926 amounted to 6,342 cars. Everyone who knows anything about the conditions there is aware that the ferry boat was operated to its maximum capacity in the fall of 1926. Taking last year, we know that the number of cars moved was considerably larger than for the preceding year. So that the necessity really exists for a better service, and yet nothing whatever has been done. In the summer season the ferry service is taxed to its utmost. Of course the boat must be put in dry dock every year. On these occasions the old boat from Hawkesbury is taken over, but it is entirely inadequate for the service. The element of danger is always present, and an accident to the ferry would isolate the island completely and might have very serious consequences. This is a matter of much more importance than when we had a steamboat service to the mainland twenty years ago, because then the people provided in the fall for their winter requirements and laid in enough supplies to carry them through the long period of disconnected traffic. We are not doing that to-day, for we are depending on the car ferry, and consequently we would be in a very serious condition indeed if an accident happened and the service were interrputed in the winter time. The hon. member for Prince has been asking for branch line railways in the province, but I say, let us first finish the lines which were started twenty or thirty years ago; let us change from narrow to standard gauge before talking about branch lines.

With regard to operating accounts, it should be remembered that this is an interprovincial matter and that the accounts for the car ferry should not be charged to the operating service of the Prince Edward Island section. It is not fair, and in regard to this matter the government has a precedent established a good many years ago. The terms of the union provided that we should have a continuous, efficient steam connection. Is a service which was good enough even fifteen years ago efficient to-day? Under the changed conditions it is not, because traffic has increased to such an extent that additions are necessary all the time. I need hardly refer to the fact that for forty-five years, as regards connection by transportation between Prince Edward Island and the mainland, the bond of Canada remained broken and disregarded until the Borden government provided the present facilities which became operative about ten years ago or so. This broken bond of Canada was largely the cause of our loss of population. But it was not only population that we lost; we lost whatever industries we had, and we lost revenue also to a large extent. In fact, our losses are well nigh incalculable.

Now, it is incumbent upon the government to maintain not only the present system established by the Borden government several years ago but to maintain it in such a manner that it will adequately handle the traffic offering. Failure to do this will constitute a failure to keep the bond of this Dominion with the little province of Prince Edward Island. It must not be forgotten that as a province we have rights and a status which the government should recognize and respect. I was going to say a moment ago that a precedent was established for changing the accounting system here, when the cable service between Prince Edward Island and the mainland was taken over by the government and operated, the entire cost charged to the government, and no delay being necessitated in connection with the telegraph service with the mainland. This placed us on an equal footing, as respects telegraph communication, with Pictou or Cumberland county or any other point on the mainland. The government should seriously consider carrying out that recommendation and placing the accounts in connection with the car ferry in the railway department instead of under the Canadian National Railways. As suggested in the Duncan report, Prince Edward Island would probably obtain greater consideration and a better operation on the part of the Canadian National Railways if this were done. If the straits were a mile, three-quarters of a mile or half a mile wide instead of eight or nine miles, the Dominion would have built a bridge and there would be no heavy charge for maintenance.

Another matter which I brought up last year when the estimates were being considered is the establishment of an air service at the capes, so that when the boat is tied up passengers and mails at least may be carried across without being subjected to delays of hours or even days, as is sometimes the case to-day.

Mr. VENIOT: You have that now.

Mr. MACDONALD (Kings): From Moncton to Charlottetown once a week, on Saturday evenings. But we want to get across oftener than that.

Mr. VENIOT: The object is to have the mails carried over on Saturday so that the people may not have to wait until Tuesday before having them distributed.

Mr. MACDONALD (Kings): I understand that, and it is a move in the right direction.

Mr. VENIOT: Why not give credit for it?

Mr. MACDONALD (Kings): I am willing to give the Postmaster General all the credit he cares to take for it, but I am advocating something better. The present arrangement is not sufficiently satisfactory. I want to see established an air service at the capes which will be always ready to transport mails and passengers when the ferry is tied up.

Mr. VENIOT: Mails and passengers?

Mr. MACDONALD (Kings): Mails and passengers, yes. It would be a comparatively cheap service; it is only a few miles.

Mr. ROBB: Free passes.

Mr. MACDONALD (Kings): No, we do not want free passes; what we want is service. The Minister of Finance may smile as much as he likes, but this is a serious matter with us.

Mr. VENIOT: You are getting a service now which is not costing anyone a cent. It is perfectly free, paid for by the government.

Mr. MACDONALD (Kings): Who else would pay for it?

Mr. VENIOT: The persons who receive the mails by this means should pay extra. It is done everywhere else, but we do not get a cent from the people of Prince Edward Island.

Mr. BENNETT: It is only a substitute mail.

Mr. VENIOT: It is a service Charlottetown asked for.

Mr. MACDONALD (Kings): We know very little about it because as a matter of fact it started only last week.

Mr. VENIOT: That is right. They asked for it last week and they received it within forty-eight hours of the request.

Mr. MACDONALD (Kings): I hope the Postmaster General will be as prompt in giving the full service we now ask for.

Mr. VENIOT: If the requirements demand it you will get it.

Mr. MACDONALD (Kings): I wish now to refer to the question of the subsidies paid in connection with the steamboat service between the mainland and the province. For steamboat communication between Charlottetown and Pictou $35,000 is paid. I have no objection to this, but there is another service for which a subsidy had been voted for upwards of forty years and which was dropped last year for the first time. This is an important service, much more needed than that between Charlottetown and Pictou, and yet not a dollar is being voted for it. It is highly important for this reason, that there are a number of places such as Murray Harbour, Lower Montague, Newport and several other points which are a long distance from any railway, some of them fifteen and sixteen miles away. Heretofore there has always been a service connecting these points with the mainland, but the vote was dropped a year ago. Yet last year $10,000 was added to the Charlottetown service which, I say, is not nearly so important. I plead with the government to re-establish the communication between the eastern part of the province and the mainland and to grant a small subsidy for it.

I wish now to discuss for a moment or two the West Indies trade agreement. I had intended reading an article from the Maritime Merchant, a non-political trade journal published in Halifax. The article is devoted to a consideration of this question, but in view of the fact that my time is about up I will not read it. A large amount of money will be expended under this arrangement for which those who have some knowledge of business conditions do not feel that we are likely to get any adequate return. Not only that; we shall probably suffer in the maritime provinces by reason of Cuba's attitude towards Canada in this matter. There will be a considerable expenditure on steamers to carry on the service, and yet the only place in the West Indies where we might secure trade, that is, Cuba, will be closed to us for the reason that under the trade agreement the steamers are not allowed to call at Havana or any other port in that island. We have a very large trade with Cuba, which takes about 3,000,000 bushels of potatoes a year from New Brunswick and Prince Edward Island, and we should like to retain that trade. There is a difficulty, however; we cannot directly say that it is on account of the trade agreement with the British West Indies, but the inference is that that has something to do with the fact that Cuba has put a very heavy duty on our potatoes. It is supposed that this was done in retaliation for the preference granted the British West Indies on sugar. Last year the duty was advanced from 65

cents per hundred kilos to $2 per hundred kilos, or almost a cent a pound, which is a very heavy duty indeed.

Just in passing I should like to refer to some newspaper reports which appeared last year, and which so far as I can judge are nothing but propaganda in favour of this government. These newspaper reports, which were sent out by the Associated Press, stated that the government had taken action and had succeeded in getting some reduction of this duty against our potatoes. Such a thing never happened; I do not know whether or not any action was taken, but certainly no results were obtained; the rate remains at $2 per hundred kilos. We are suffering severely on that account, because this offers an encouragement to the Cubans to grow their own potatoes. Instead of planting small quantities last fall they planted very large quantities and spread the planting season from the middle of October until well on in December. The result is that they will have their own potatoes all through February and March, with a later crop in April, which will shut out our potatoes. The ostensible reason for increasing this duty is of course the protection of their own farmers. That is a very laudable object, but it is generally conceded by those who know something of conditions down there that the duty was at least partly inspired as a means of retaliation against Canada for the preference given the British West Indies on sugar.

On motion of Mr. Matthews the debate was adjourned.

On motion of Mr. Robb the house adjourned at 10.35 p.m.

Monday, February 27, 1928

The house met at three o'clock.

PENSIONS AND SOLDIER PROBLEMS

CONCURRENCE IN SECOND REPORT OF SPECIAL COMMITTEE

On motion of Mr. C. G. Power (Quebec South) the second report of the special committee on pensions and returned soldiers' problems was concurred in.

TARIFF ADVISORY BOARD

STENOGRAPHIC REPORTS OF EVIDENCE

Hon. J. A. ROBB (Minister of Finance): On Friday last the leader of the opposition (Mr. Bennett) asked that the stenographic reports of the public hearings before the tariff advisory board during the year 1927 be laid on the table, together with the general report of the chairman of that board. The various stenographic reports as received from the board are now tabled, save the report on cottons which was tabled on Monday, February 13, at the request of the hon. member for East Calgary (Mr. Adshead).

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

REVELSTOKE—GOLDEN ROAD SURVEY

Mr. ESLING:

1. Did the federal government or any department thereof, enter into any agreement with the government of British Columbia, during the year 1927, for the survey of the road between Revelstoke and Golden in British Columbia?
2. If not, has an agreement for such a survey in the present year been arranged for?

Mr. STEWART (Edmonton): The subject is under discussion.

ABBOTSFORD, B.C. LIQUOR SEIZURE

Mr. BARBER:

1. Was a seizure made at Abbotsford, British Columbia, on November 24, 1927, of a freight car supposed to contain liquor?
2. If so, by whom?
3. To whom was it billed, and where?
4. Who was the shipper?
5. What did the car contain?
6. What quantity of liquor, if any, was found in said car?
7. If the car contained liquor, what was its final disposition?
8. Was the liquor sold, and, if so, what amount was realized?
9. What amount was due the seizing officer or officers?
10. What amount, if any, has been paid the seizing officer or officers?
11. Have customs officers at border power to seize cars containing liquor billed as another commodity, without export papers, and consigned to the United States?
12. Has inspector at Vancouver advised customs officers to keep hands off such shipments?

Mr. EULER:

1. Liquor contents seized but not the car.
2. S. J. Bates, senior customs excise examiner and G. E. Leary, customs excise examiner.
3. Shipment billed as shingles consigned to Samuel Cabot, Inc., Fort Wayne, Ind.
4. Export shipping bills not on file. No information.
5. Liquor and shingles.
6. 360 cases containing 693 proof gallons whiskey.
7. Liquor has been forfeited to the crown but not yet disposed of.
8. Answered by 7.
9. Cannot be determined until liquor disposed of.
10. Nil.
11. Yes.
12. No.

CANADIAN NATIONAL RAILWAYS—ROUNDHOUSES

Mr. WOODSWORTH:

1. What is the number of stalls, their length, and the approximate value of the roundhouse of the Canadian National Railways at the Neebing terminal, Fort William, and at Sioux Lookout, Ontario?
2. What was the cost of these structures?
3. Does this value include the heating boilers used in connection with the plant?

Mr. DUNNING:

1. 24 stalls—22 are 99 feet 9 inches long, and two are 129 feet 3 inches long, costing $181,956.61.

2. Roundhouse, $181,956.61; Machine shop, $23,278.41 (94 feet 9 inches by 51 feet); Boiler room, $38,126.42 (60 feet by 39 feet, 7 inches), including equipment.

3. Yes; boiler room and machine shop adjoin engine house.

CUSTOMS DRAWBACKS

Mr. SMOKE:

1. In the budget statement made by the Minister of Finance does he include, as customs duty, the amounts paid for drawbacks?
2. What sums were paid for customs drawbacks in (a) the fiscal year ending 31st March, 1927; (b) from the 1st April, 1927, to the 31st January, 1928?

Mr. ROBB:

1. No; the figure mentioned represented the estimated net receipts from customs duties for the year.

2. (a) $14,639,450.94; (b) $10,536,155.39.

MR. A. GEMMELL

Mr. WILSON (Wentworth):

1. Is Mr. A. Gemmell, of North Battleford, Saskatchewan, employed by the Department of Agriculture?
2. If so, what position does he hold?
3. What salary is attached to the position?
4. Was the appointment made by patronage, or by the Civil Service Commission?

Mr. MOTHERWELL:

1. No.

2 and 3. Answered by No. 1.

4. Mr. A. Gemmell was appointed by the Civil Service Commission to a temporary position as egg inspector at North Battleford, with effect from April 18, 1927, and continued in employment till January 23, 1928, when his services terminated.

CAP-ST-IGNACE POSTMASTER

Mr. CAHAN:

1. Who is the postmaster at Cap-St-Ignace, county of Montmagny, Quebec?
2. When was he appointed and on whose recommendation?
3. Did any returned soldier apply for the position?
4. And if so, why did he not receive the appointment?

Mr. VENIOT:

1. Joseph Mathieu, O.A.S.

2. 15th August, 1927—by Civil Service Commission.

3. Yes.

4. Present postmaster is a returned soldier.

DISMISSAL OF POSTMASTERS

Mr. BRADY:

1. How many postmasters were dismissed throughout Canada from October 1, 1926, to February 1, 1928?
2. During above period, how many of those postmasters were dismissed in British Columbia, Alberta, Saskatchewan, Manitoba, Ontario, Quebec, Nova Scotia, New Brunswick, and Prince Edward Island?

Mr. VENIOT:

1. 421.

2. British Columbia	7
Alberta	9
Saskatchewan	34
Manitoba	11
Ontario	32
Quebec	122
Nova Scotia	106
New Brunswick	99
Prince Edward Island	1
	421

METALLURGIC PRODUCTION IN CANADA

Mr. PREVOST:

What was the metallurgic production in Canada, in 1921 and 1927, respectively?

Mr. MALCOLM:

Metallic mineral output of Canada: 1921, $49,343,232; 1927 (estimated), $112,238,100.

MR. VALERE LABONTÉ

Mr. CAHAN:

1. Was Valere Labonté, of St. Joseph de la Beauce, Quebec, formerly employed as a preventive officer of the customs branch of the Department of National Revenue?
2. When and on what grounds was he dismissed from his employment?
3. Were three separate criminal informations laid against said Labonté before Arthur Godbout, a magistrate of the District of Beauce, Quebec, by Pamphile A. Martineau, an investigating officer of the said department, or of the government, in November last?
4. Were the said three criminal charges ever prosecuted by the government?
5. Were the said criminal charges withdrawn by the government ?
6. If the government either refrained from prosecuting or withdrew said charges, what were the grounds of the government's action in so doing?

Mr. EULER:

1. Yes.

2. Dismissed October 9th, 1927, for irregularities in connection with his expense accounts.

3. Four separate charges were sworn before the district magistrate.

4. No.

5. No.

6. Prosecution held in abeyance pending securing of further information. In two cases statements upon which charges were based were withdrawn by the complainants

Mr. GOTT:

1. Who is the excise officer at St. Joseph, Beauce?

2. On whose recommendation was he appointed?

3. Who was his predecessor?

4. Was he dismissed?

5. If so for what reason and on whose recommendation?

Mr. EULER:

1. J. Edward LeMay.

2. On the recommendation of F. W. Cowan, chief, preventive service.

3. Mr. Valere Labonté.

4. Yes.

5. For irregularities in connection with his expense accounts.

SLAUGHTER OF CATTLE

Mr. GARLAND (Bow River):

1. How many head of cattle have been slaughtered under the restricted area plan in each of the provinces of Canada?

2. What is the total area now free from tuberculosis in each province as a result of the operation of plan?

3. What was total amount of money paid to owners of slaughtered cattle in each province?

Mr. MOTHERWELL:

1. As recorded to February 1, 1928:

	Number of cattle
Prince Edward Island	582
Nova Scotia	806
New Brunswick	20
Quebec	8,570
Ontario	540
Manitoba	1,680
Saskatchewan	203
Alberta	Nil
British Columbia	5,069

2. No area has had tuberculosis absolutely eradicated. The following figures show the percentage of animals reacting to the initial test in each area and to the last annual test, where an annual test has been made.

Area Number One, Manitoba:

Thirty townships in the rural municipalities of Dufferin, Rolland, Thompson and Gray. 1,080 square miles.

Initial test, February 1st, 1923, percentage reactors, 5.7; last annual test, November 1st, 1926, percentage reactors, .4.

Area Number Two, Quebec:

Counties of Beauharnois, Chateauguay and Huntingdon, 773 square miles.

Initial test, October 23, 1924, percentage reactors, 7.9.

Last annual test, October 1, 1926, percentage reactors, .8.

Area Number Two "A", Quebec:

Counties of Vercheres, Chambly, Laprairie, Napierville, St. John and part of Richelieu.

Initial test, April 28, 1927, percentage reactors, 5.9.

Area Number Three, Prince Edward Island:

The entire province, 2,184 square miles.

Initial test, August 13, 1925, percentage reactors, .59.

Area Number Four, British Columbia:

5,600 square miles in the Fraser river valley.

Initial test, February 23, 1926, percentage reactors, 7.9.

Last annual test, March 1, 1927, percentage reactors, 1.1.

Area Number Five, Saskatchewan:

The rural municipalities of Longlaketon, McKillop, Millington, Last Mountain Valley, Mount Hope and Wreford in the Last Mountain district. 1,782 square miles.

Initial test, June 15, 1926, percentage reactors, .8.

Area Number Six, New Brunswick:

The parishes of Manners, Sutton and Flume Ridge in Charlotte county.

Initial test, March 10, 1927, percentage reactors, .76.

Area Number Seven, Ontario:

The county of Prince Edward and that part of Murray township in the county of Northumberland, which lies south of the Murray canal and adjacent to the county of Prince Edward.

Initial test, May 12, 1927, percentage reactors, 2.1.

Area Number Eight, Nova Scotia:

The counties of Antigonish, Colcester, Cumberland, Guysboro, Pictou and Yarmouth.

Initial test, September 8, 1927, percentage reactors (as at February 1, 1928), 1.68.

3. As recorded to February 1, 1928.

	Compensation paid
Prince Edward Island	$ 14,955 92
Nova Scotia	26,016 20
New Brunswick	513 33
Quebec	284,146 05
Ontario	19,990 73
Manitoba	55,667 80
Saskatchewan	5,826 60
Alberta	nil
British Columbia	180,703 16

COPPER AND HEMP BOUNTIES

Mr. WHITE (Mount Royal):

1. When were bounties first provided for on the production of copper bars and hemp twine in Canada?

2. Where are the factories located for the production of these commodities and what was the amount paid in bounties on such production in 1925, 1926 and 1927?

Mr. MALCOLM:

1. The bounty on the production of copper bars dates from May 12, 1923. The bounty on hemp twine dates from January 1, 1926.

2. Bounty on copper bars or rods—Consolidated Mining & Smelting Co., Trail, B.C.: Paid, 1925-26, $14,822.67; 1926-27, $164,242.30; 1927-28 to February 4, $73,604.92.

Bounty on hemp—Doon Twines Ltd., Kitchener, Ont.: 1927-28 to February 1, $285.72; Consumers Cordage Co., Ltd., 283 St. Patrick street, Montreal: 1927-28 to February 1, $74.18; Manitoba Cordage Co., Ltd., Portage La Prairie, Man.: 1927-28 to February 20, $1,025.92.

TRADE OF MARITIME PROVINCES

Mr. MacLAREN:

Has the government available such a system of statistics as will show a comprehensive measurement of the trade of the maritime provinces with other provinces and with foreign markets?

Mr. MALCOLM: No.

FRUITS AND VEGETABLES

Mr. FRASER:

1. What quantity and value of beans were imported into Canada in the fiscal years ending March 31, 1926 and 1927?

2. From what countries were these beans imported and what quantities from each?

3. What rate of duty was imposed on these importations, and, if various rates, specify each?

4. What is the rate of duty on fresh fruits and vegetables imported into this country: (a) from the United States; and (b) from other countries?

Mr. EULER:

1 and 2.

Statement of Imports by Countries of Beans: N.O.P.: Entered for Consumption in Canada During the Fiscal Years ended March 31, 1926 and 1927

Country	Fiscal year 1926 Bush.	Fiscal year 1926 Value	Fiscal year 1927 Bush.	Fiscal year 1927 Value
Great Britain	11,633	$ 38,330	47,863	$ 87,395
Hong Kong	5,272	11,980	4,474	8,459
Newfoundland	11	62	—	—
Austria	980	1,638	1,335	2,035
Belgium	49,357	93,741	287,020	516,341
Chile	1,705	8,169	815	3,987
China	124	293	460	919
France	1,064	2,179	29,934	55,709
Madagascar	201	1,114	—	—
Germany	550	1,500	7,359	12,309
Hungary	2,956	5,181	38,254	58,665

Japan	52,747	106,254	94,126	147,311
Netherlands	2	10	651	1,873
Roumania	600	1,140	12,594	23,256
Syria	—	—	22	279
United States	16,746	83,954	60,719	190,906
Totals	146,405	$362,064	595,924	$1,126,976

3.

Rates of Duty Imposed on Importations of Beans: N.O.P.: From Countries Specified

Country	Cents per bushel	Cents per bushel	Cents per bushel
Great Britain	15	22½	25
Hong Kong	—	—	25
Newfoundland	—	—	25
Austria	—	—	25
Belgium	—	22½	25
Chile	—	—	25
China	—	—	25
France	—	22½	25
Madagascar	—	22½	25
Germany	—	—	25
Hungary	—	—	25
Italy	—	22½	25
Japan	—	22½	25
Netherlands	—	22½	25
Roumania	—	—	25
Syria	—	—	25
United States	—	—	25

4. The general tariff rates apply to importations from the United States.

The British preferential tariff rates apply to importations from Great Britain and other preferential tariff countries, when imported in accordance with the British preferential tariff regulations.

The intermediate tariff rates apply to importations from France and other favoured nation countries, when imported in accordance with the French treaty regulations.

Fresh fruits and vegetables are rated under the tariff items below:

		British preferential tariff	Intermediate tariff	General tariff
83	Potatoes, n.o.p., and potatoes dried, desiccated or otherwise prepared, n.o.p.	Free	Free	Free
83a	Potatoes when imported from a country which imposes a customs duty on potatoes grown in Canada, per one hundred pounds	20 cents	35 cents	35 cents
85	Tomatoes, fresh	20 p.c.	27½ p.c.	30 p.c.
87	Vegetables, n.o.p.	15 p.c.	27½ p.c.	30 p.c.
87a	Onions in their natural state	Free	30 p.c.	30 p.c.
90	Fruits, viz.:—plantains, pineapples, pomegranates, guavas, mangoes, wild blueberries, wild strawberries and wild raspberries	Free	Free	Free
90a	Wild edible berries, n.o.p.	Free	Free	Free
90b	Bananas	Free	Free	Free
92	Apples, per barrel	60 cents	90 cents	90 cents
95	Blackberries, gooseberries, raspberries, strawberries, cherries and currants, n.o.p.; the weight of the packages to be included in the weight for duty, per pound	1½ cents	1¾ cents	2 cents
96	Cranberries, and fruits, n.o.p.	17½ p.c.	22½ p.c.	25 p.c.
97	Pears, quinces, apricots and nectarines, n.o.p., per one hundred pounds	35 cents	45 cents	50 cents
97a	Plums, per bushel	20 cents	20 cents	30 cents
98	Melons, each	2 cents	2½ cents	3 cents
100	Grapes, per pound	1½ cents	1¾ cents	2 cents
101	Oranges and lemons	Free	Free	Free
101a	Shaddocks or grapefruit, n.o.p., per one hundred pounds	50 cents	$1.00	$1.00
101aa	Shaddocks or grapefruit, when imported from the place of growth, by ship, direct to a Canadian port, per one hundred pounds	Free	50 cents	$1.00
101b	Limes	Free	15 p.c.	15 p.c.
102	Peaches, n.o.p., by weight of the package to be included in the weight for duty, per one hundred pounds	67 cents	90 cents	$1.00

LAFLECHE, SASK., POSTMASTER

Mr. ERNST:

1. Who is postmaster at Laflêche, Saskatchewan?
2. When was he appointed?
3. Whom did he succeed?
4. Was his predecessor dismissed, and if so, why, and on whose recommendation?

[Mr. Euler.]

Mr. VENIOT:

1. Edmond Hector Bilodeau.
2. Temporarily appointed May 5th, 1927. Permanently appointed February 20th, 1928.
3. John C. McAdam.
4. Yes—for political partisanship—on recommendation of member for constituency.

ANYOX-ALICE ARM MAIL CONTRACT

Mr. BRADY:

1. Who holds the mail contract between Anyox, Alice Arm, and way points?
2. When does the contract expire?
3. What is the frequency of service?
4. What amount, annually, does mail contractor receive for his service?
5. Is the department aware that the mail service between points mentioned above has been discontinued since February 1, 1928?
6. If so, was this service discontinued with the knowledge and consent of the department?
7. What is the reason for the suspension?
8. When will this mail service be re-established?

Mr. VENIOT:

1. H. F. Kergin and H. R. Fowler.
2. Temporary arrangement.
3. Three trips per week.
4. $1,200.

5, 6, 7, and 8. Contractors' boat laid up for repairs 1st February. However, prompt action was taken to authorize a temporary weekly service at $25 per trip, the most reasonable offer obtainable and information on file shows that the temporary service commenced on the 9th February. The regular service will be re-established upon completion of repairs to the contractors' boat. It is reported it will take from six to eight weeks to complete these repairs.

SAWYERVILLE, QUE., POSTMASTER

Mr. HANSON:

1. Who is the postmaster at Sawyerville, Quebec?
2. When was he appointed and on whose recommendation?
3. Prior to his appointment who was postmaster at Sawyerville?
4. Was he dismissed?
5. If so, why, and on whose recommendation?

Mr. VENIOT:

1. John Smith Gilman.
2. December 20th, 1927, by the Civil Service Commission.
3. W. E. Marshall.
4. Yes.
5. By Postmaster General in interests of public service.

QUESTIONS PASSED AS ORDERS FOR RETURNS

HUDSON BAY EXPEDITIONS—PURCHASE OF SUPPLIES

Mr. QUINN:

1. Who was the federal government purchasing agent in Halifax during the year 1927?
2. Did said purchasing agent purchase supplies for the Hudson bay and Hudson straits expedition of that year?
3. What quantities of American anthracite and bituminous coal were purchased for these expeditions, from whom and at what price?
4. What quantity of potatoes was purchased for these expeditions, for what departments, what was the price paid, what quantity was American potatoes, and what quantity was Canadian potatoes?

MAIL CARRIER ROUTES, NOVA SCOTIA

Mr. SMITH (Cumberland):

1. How many mail carrier routes are now maintained in the county of Cumberland, Nova Scotia?
2. What points do these cover?
3. What is the mileage of each?
4. What is the remuneration paid for each route?
5. What is the name of the contractor?
6. When does the present contract cease in each case?
7. What is the average cost per mile for these routes where one-horse conveyance is used?

UNOPPOSED MOTIONS FOR PAPERS

CHIEF CUSTOMS PREVENTIVE OFFICER, ALBERTA

Mr. GARLAND (Bow River):

For a copy of all correspondence, telegrams, and all other communications between the government, any department of the government, or any minister or official of the government, and any other persons, respecting the appointment of Sergeant Forbes, of Calgary, Alberta, to the position of chief customs preventive officer for Alberta.

AUSTRALIAN TRADE TREATY

Mr. PRESTON (for Mr. Stewart, Leeds):

For a copy of all letters, telegrams, resolutions, petitions or other communications, between individuals, associations, companies, or organizations, and any department of the government of Canada, relating to the alleged injurious effects of the operation of the Australian trade treaty upon the interests of agriculture or dairying in Canada.

JOLIETTE POSTMASTER

Mr. McQUARRIE (for Mr. Cahan):

For a copy of all documents and correspondence on file in the Post Office department concerning the appointment of a postmaster at Joliette, Quebec, including any and all complaints received by said department against the present acting postmaster.

ST. PAUL DU BUTON POSTMASTER

Mr. McQUARRIE (for Mr. Cahan):

For a copy of all documents, including the correspondence on file 117 the Post Office department, relating to or concerning the appointment of a postmaster at St. Paul du Buton, county of Montmagny, Quebec.

CAP ST. IGNACE POSTMASTER

Mr. McQUARRIE (for Mr. Cahan):

For a copy of all documents, including the correspondence on file in the Post Office department, relating to or concerning the appointment of a postmaster at Cap St. Ignace, county of Montmagny, Quebec.

UNEMPLOYMENT INSURANCE FUND

Mr. BRADY:

For a copy of all correspondence, telegrams or any other communications between the government and the Prince Rupert trades and labour council or any other trades and labour councils in Canada, regarding the creation of a state unemployment insurance fund.

CAMP HILL HOSPITAL, HALIFAX

Mr. QUINN:

For a copy of all letters, telegrams, memoranda, contracts, and all other documents which have been prepared or which have passed between various ministers, and between departmental officers, and between these and all firms, or corporations, and any person or persons, in reference to the purchase of fuel by the Department of Soldiers' Civil Re-establishment for use in Camp Hill Hospital, Halifax, Nova Scotia, for the winter season of 1927-1928.

TARIFF ADVISORY BOARD

PRINTING OF EVIDENCE

On the orders of the day:

Mr. J. L. BROWN (Lisgar): Might I ask if it is the intention of the government to have the verbatim reports of the evidence taken before the tariff advisory board printed for the use of members of this house?

Hon. J. A. ROBB (Minister of Finance): The reports are now tabled and they are the property of the House of Commons. There is no money voted in the department to pay for the printing.

MONEY POINT, N.S., LIGHTHOUSE

On the orders of the day:

Mr. L. W. JOHNSTONE (Cape Breton North-Victoria): I wish to ask the Minister of Public Works (Mr. Elliott) if it is the intention of the government to discontinue telephone communication between the lighthouse and fog alarm at Money Point, and Bay St. Lawrence? I have received a communication to-day informing me that the line is now out of repair and that it is not intended to establish communication again, and this is a very serious condition of affairs. Money Point lighthouse is the most northeasterly point of Nova Scotia, and the only means of communication at present is through a farm house four and a half miles away.

Hon. J. C. ELLIOTT (Minister of Public Works): I do not recollect having received any information in this regard within the last two or three days, but I shall be very glad to inquire into the matter and will endeavour to give my hon. friend an answer within a day or so.

[Mr. McQuarrie.]

REPRESENTATION OF NOVA SCOTIA

On the orders of the day:

Mr. ROBERT K. SMITH (Cumberland): I wish to ask the Prime Minister what steps, if any, have been taken to give the province of Nova Scotia its full representation in the House of Commons as provided for under the terms of the British North America Act and which, according to the population of Quebec, excluding Abitibi, at the last Dominion census, entitles us to fifteen members while we are allotted only fourteen members under the last Redistribution Act?

Right Hon. W. L. MACKENZIE KING (Prime Minister): If my hon. friend will place the question on the order paper he will receive an answer in due course.

INQUIRIES FOR RETURNS

On the orders of the day:

Mr. M. N. CAMPBELL (Mackenzie): I would ask the Postmaster General when I may expect to receive the papers asked for by orders passed by this house on February 13th and February 15th?

Hon. P. J. VENIOT (Postmaster General): Almost the entire staff of the department are working on the returns that were asked for, and just as soon as they are ready they will be brought down.

THE BUDGET

DEBATE ON ANNUAL FINANCIAL STATEMENT OF MINISTER OF FINANCE

The house resumed, from Friday, February 24, consideration of the motion of Hon. J. A. Robb (Minister of Finance) that Mr. Speaker do now leave the chair for the house to go into committee of ways and means, the proposed amendment thereto of Mr. Cahan and the amendment to the amendment of Mr. Fansher (East Lambton).

Mr. R. C. MATTHEWS (Toronto East Centre): Mr. Speaker, in the short time at my disposal I propose to make a few comments on some aspects of the budget as I see it. Other hon. gentlemen much more competent than I have discussed the general financial position, the tariff adjustments, and other matters contained in the budget, with their effect on industry and the general prosperity of the country. I shall confine myself to two subjects. I propose to make a few comments first on the retirement of the public debt, and to follow that with observations a little more in detail on the question of the income tax and its administration in Canada.

The question of the retirement or the elimination of the public debt must inevitably receive attention in this debate. It was brought to the attention of the Minister of Finance (Mr. Robb) in the last session of the house. That was done in the hope that the minister would make a careful examination of suggested plans, not only of sinking fund methods, but of refunding also, and would bring down proposals looking to the future that this house might accept. Since that time, since the adjournment last spring, one of the most important operations on record of refinancing has been accomplished. Those who followed the stupendous refunding of United States liberty loan bonds, representing $3,100,000,000, 4¼ per cent seconds, and $2,160,000,000, 4¼ per cent thirds, into lower interest bearing securities, must have felt that the minister would have been inspired by the success of this financing to bring forward something definite, or at least an outline of what might be expected, or what could be done in the field of Canadian finance. But with that lack of initiative so noticeable in this government, nothing of the kind was proposed. I want to be fair to the minister and so will tell the house what he has not divulged —that so far as a refunding operation of any great magnitude was concerned, it was really not possible, for the reason that Canadian loans of victory bonds and other issues are non-callable. It was the callable feature of the second liberty loan that made possible Mr. Mellon's vast refinancing, which operation saves his government $21,000,000 per annum. But notwithstanding this disability with respect to a large operation corresponding in some degree to the American venture, there was plenty of scope for the government to use acumen and foresight, just as much as in the case of private companies that in many instances have revamped their financial structure, or have made plans for new financing. All of these are made with debt retirement features, mostly by sinking fund, covering periods of from fifteen to thirty years. A longer period probably would be advisable in government finance, if the interest rate were low, as it is at present. The callable feature should not be overlooked. I observe, however, that in the meantime the minister has sold $65,000,000 4½ per cent non-callable bonds without sinking fund provisions. These are Canadian National thirty year bonds unconditionally guaranteed both as to principal and interest by the Dominion of Canada.

In support of this methodless method, the minister harks back to a sentence written by an economist, McCulloch, in 1845—eighty-three years ago—twenty-two years before confederation when income tax in Great Britain was seven pence on the pound, instead of listening to the voices that are speaking in 1928 of achieved and possible financing following the accumulation of debts after the Great War. McCulloch advanced the idea that:

> Greater productiveness of industry and the greater well being of the community are the real sinking funds which a wise government should exert to build up and encourage.

This is a pleasing generality, but it will scarcely stand beside the masterpieces of actual financial operation. Great Britain did not heed McCulloch when she funded her debt of $4,600,000,000 in the United States and arranged for orderly payments. She has since paid $95,000,000 of principal and $615,405,000 of interest, making total payments of $710,405,000. If the Chancellor of the Exchequer had accepted McCulloch's sentimental and indefinite financial ideas Great Britain would not have had the credit and the standing she has in the world to-day. Mr. Coolidge does not go back eighty-three years, but he points with pride to the fact that in the years since 1921 when the debt of the United States towered $26,500,000,000 there has been an orderly reduction until $8,500,000,000 or 30 per cent of the total has been removed. Permit me to quote from his message to congress transmitting the budget for the year ending June 30, 1929, with reference to current debt reduction from taxation. Speaking of reduction of taxation the president makes this significant remark:

> Since 1920 there have been three reductions in taxes for the purpose of relieving the people of some of their war burdens. The act of November, 1921, lightened the tax load by a reduction of $663,000,000. The act of 1924 afforded additional relief of $519,000,000. The act of 1926 made a further reduction of $422,000,000. Taking these all together our tax demands have been lessened by $1,604,000,000. This in itself illustrates the value of orderly procedure. The people are permanently richer because of the diminished demands made by the federal government. And hand in hand with these material curtailments of the amounts taken from the people the public debt has been reduced. From a peak of more than twenty-six and a half billion dollars the debt has been reduced, on June 30, 1927, by $8,084,794,716. This lowering of the debt means an annual saving in interest of approximately $320,000,000. While this tangible and extraordinary saving emphasized the importance of debt reduction as a preliminary to ultimate adequate tax reduction, we have at this time for consideration the question of further relief to those who pay federal taxes.

From this it will be seen that since 1921 the United States national debt has been reduced by more than $8,000,000,000 or about thirty per cent, while the Canadian debt has been reduced something like five or six per

cent. The president and others who have commented on this financing of the United States government attribute its success to orderly reduction. How different is this from the haphazard methods employed by the government of Canada!

In regard to the debt reduction in the United States, I wish to refer to the address delivered by Ogden L. Mills before the Bankers' Forum of the American Institute of Banking, in New York on December 19, 1927. Mr. Mills, after setting out in detail the refunding operations, to which I have already briefly referred, uses these words:

> This cannot be done in a haphazard way, but calls for foresight, planning and the setting up of a schedule of maturity dates which will make available maturities to which the sinking fund appropriations and foreign repayments may be applied.

I commend consideration of these words to the Minister of Finance because they may be helpful to him in any refunding he may undertake, and in arranging maturity dates for future financing. I bring this matter again to the attention of the government because of its great financial importance, and because I believe that foresight and planning will materially assist in the ultimate retirement of the whole of our Canadian funded obligations. Again I point out and recommend to the minister that these matters should be considered in a businesslike way and treated in accordance with the most effective plan that the best business minds can devise. That is all I wish to say on the subject of debt retirement.

I shall now undertake to say a few words on the question of the income tax and I shall emphasize the improvement made in England in tax collection methods as a result of constant and persistent efforts covering more than a century. I shall point out that lower rates of income tax do not necessarily lower the revenue and I shall quote United States and Canadian experience in that connection. Last year, in speaking in this house, I made certain comments on the Income War Tax Act of 1917. This year that act is still under discussion as it probably will be as long as it remains on the statute books. So far as I have been able to discover in listening to speeches made by hon. members, there appears at the present time to be little disposition to ask for the repeal of the legislation instituting this tax; but like all other tax enactments, it is subject, and very properly so, to close scrutiny and inquiry as to desirability, practicability and incidence.

Before 1914 there was very little intensive study in this country of tax systems, and particularly of direct taxation. Revenues were not large; the burden of taxation was not heavy, and if taxation was not imposed on sound principles or with due regard to equity, no great injury was done. All this has been changed. Indifference has given place to great concern. Tax bills are scrutinized, and there is uppermost in the minds of many taxpayers the question: Are our revenue laws based on sound theory, and are they made in the light of the most recent experience? No system of taxation is perfect, and I think it is a fact that there is no approach to perfection in the Income War Tax Act. We on this side have not asked for its abolition, but we submit that its application should be fair, effectual and equitable.

At what level will an income tax produce the most money? If that field of inquiry is opened and explored, the results will be surprising, and after minute examination of the experience of other countries and even our own, we are led to the conclusion that it cannot be answered unless all those who should legitimately contribute are required to do so. But without enforcement the rates do not accurately determine the revenue to be derived at any given level. In Canada we have not yet reached the stage of income tax development where we receive the best returns. The method of levying and the method of collecting could both be very much improved. In spite of the efforts that have been made to bring about good results, the act as administered has brought about a lopsided collection of revenue. The government has approached this question as though it were easy of solution, but it is not.

What has been the experience of Great Britain? They have laboured with the problem of evasion for a hundred and five years. The first income tax act was enacted in 1798, with an exemption up to £60; in 1799, the rate was graduated on incomes from £60 to £200. Above £200 the rate was ten per cent. The basis of the existing income tax law was enacted in 1803. In that year the rate was made five per cent, and it produced substantially the same revenue as when the rate was ten per cent. This corresponds to recent experience in other countries. In 1806 important amendments were passed to prevent evading. From 1816 to 1842 there was no income tax in Great Britain. In the latter year Sir Robert Peel introduced an act based on the 1803 act, including the amendments to prevent evasion. Since 1842 the tax has continued. The rate in that year was sevenpence on the pound and in 1874 it dropped to twopence on the pound. In 1856 and 1861 select committees of the house were appointed to consider:

The present mode of assessing and collecting the income and property tax, and whether any other mode of collecting the same, so as to render the tax more equitable, can be adopted.

In 1904 a committee was appointed and charged with several duties, the first of which was "the prevention of fraud and evasion," and frequently in this century the prevention of evasion has been considered by select committees, and in 1919 by a royal commission on the income tax.

These references are sufficient to show that throughout the period income tax has been collected in Great Britain, one of the greatest concerns of parliament has been to undertake that evasion shall cease. An inherent regard for justice and fair play impels the British government to see to it that all those liable to tax under the various schedules used in that country shall be obliged to pay. In Britain an income tax devoid of equity and justice to taxpayers would be intolerable. They do not leave it to chance. Collection is made at the source. A recent writer says:

The salvation of the British income tax is its intelligent and efficient administration.

And again:

It makes the collection of income tax a practical certainty. . . . It prevents fraud, evasion and carelessness. . . . It makes honesty the best policy. The tax is collected at the time the income is received by the person who bears the tax. There is no possibility that the recipient may spend it and then later be unable to pay his tax.

The British system is not perfect; it has glaring disadvantages, but it does get the money that under the law the state is entitled to collect. In Canada, evasion is commonly practised, and to secure a specified sum, say fifty or sixty millions, the total rates of taxation on personal incomes are needlessly high. Our system, as it is presently administered, encourages deception and fraud. Evasion is easy to all who desire to take advantage of it except the salaried classes, and shareholders, and investors in registered securities. The provinces of Canada found that the enactment of prohibitory legislation did not necessarily have the effect of bringing about prohibition.

The point I am trying to make, Mr. Speaker, is that throughout the one hundred and five years that Great Britain has had the income tax, there has been a constant and persistent effort to stop evasion as well as an unfair levying of the tax. Where this is not done the tax is unfairly burdensome on those who pay it. Canada has had the income tax ten years. We have not begun, or are only beginning, to consider methods leading to proper application. The income tax has been paid by those whose income has been easily ascertainable, plus taxable persons who have been honest and conscientious enough to put in a complete return.

The American system, known as reporting, is partially adopted here. But Canadian reporting is confined mostly to the man on salary, the shareholder, who is the victim of double taxation, and in general to persons of fixed income. As for the rest, evasion is easy, and in my opinion, much too general.

May I be permitted to support my contentions by brief references? I am referring to personal—not business—income tax. In the year ended March 31st, 1926-27, the total amount of personal income tax collected was $18,409,234. This total includes over a million dollars from personal and family corporations.

It seems to me futile, Mr. Speaker, to argue that any one class of citizens cannot pay income tax. The statute respecting personal incomes does not primarily deal with classes or avocations; it deals with individuals. No one is required by law to pay unless he is assessable under the act. What we should demand, however, is that returns from all persons should be filed, and the proper authorities will then determine whether an assessment is to be made, or not. Canada should receive the revenue it is entitled to collect from those whose incomes are taxable, whether the assessed be a professional man, a manufacturer, an employee, an agrarian, or any one else liable to assessment.

Out of a population of nine million people, only 116,029 individuals paid income taxes in 1927. Of this number 109,008 persons paid a tax of $4,270,407.92, and 7,021 persons, with incomes of $10,000 or more, paid $14,138,826.46. That is to say, 0.08 of one per cent of our population paid 76.80 per cent of our total individual income tax, and 1.24 per cent of our population paid 23.2 per cent of the total individual income tax. That is, the total individual income tax of Canada was paid by 1.32 per cent of our population. The remaining 98.68 per cent of Canada's population paid no income tax whatever.

Now, Mr. Speaker, who in this parliament, or in this country, believes that only 116,029 persons in this broad Dominion come within the provisions of the Income War Tax Act? Nobody. I should like the Minister of National Revenue (Mr. Euler) at a future date to tell the house how many persons filed income tax returns last year. Every person from whom a return has been demanded and who has not filed one has violated the act, and is liable to a penalty.

The secretary of the treasury of the United States in his annual report on the state of the

finances for the fiscal year ended June 30, 1927, refers to the income tax as a class tax. His exact words are:

> Analyses of the returns made under the 1924 and 1926 acts indicate that the income tax has become a class rather than a national tax.

If these remarks apply to the United States, they apply much more to Canada. If the secretary's conclusions that the income tax in the United States is a class, rather than a national, tax is correct—and the figures certainly support his view—the same with more force can be applied to the Canadian income tax.

We have come to this position that the income tax must be levied fairly and completely on those entitled to pay. I am sure that the love of fair play and justice is as inherent in the Canadian as in the British people when the facts are known and understood. Parliament would not allow an act like the Canadian Income War Tax Act to live in Britain, unless the enforcement was impartial and complete.

In respect of the reduction of income taxation much could be said. There seems to be a disposition on the part of some hon. gentlemen to hold that the higher the tax rate, the more money will be collected. Does that necessarily follow?

An inquiry into the effect of reduction in Canada and the United States can lead to no other conclusion than that a moderate tax will be more remunerative to the Department of National Revenue than the retention of rates that are excessively high.

The Canadian rates are greatly in excess of the American. For example, the following table shows the income tax payable by a married man with no dependents in Canada, as compared with one similarly placed in the United States, and assuming that income to the extent of $5,000 in the United States is earned income:

Income	Canada	U.S.
$5,000 00	$32 00	$16 88
6,000 00	56 00	28 13
7,000 00	88 00	39 38
8,000 00	128 00	56 25
10,000 00	232 00	101 25
15,000 00	632 00	311 25
20,000 00	1,232 00	618 75
50,000 00	6,688 00	4,878 75
100,000 00	19,048 00	15,858 75
500,000 00	162,848 00	116,058 75

The Revenue Act of 1926 in the United States reduced the normal tax 2 per cent rate to 1½ per cent; 4 per cent to 3 per cent; 6 per cent to 5 per cent. Surtaxes were cut from a maximum of 40 per cent to a maximum of 20 per cent. The report of the secretary of the treasury in 1927 states:

[Mr. Matthews.]

> It was very naturally anticipated that these changes would result in a considerable loss of revenue. As a matter of fact, however, the individual returns for the year 1925 showed a larger tax than for 1924.

The conclusion of the treasury department, after the most searching investigation and analysis, and reporting its judgment in respect of the incidence of income taxation covering a period of years, is given in these words in the 1927 report:

> The treasury department has always contended that in the long run the taxation of income at moderate rates would be more productive than at very high rates. The soundness of this contention appears to have been amply borne out by the tax returns under the law of 1926, for both calendar years 1925 and 1926.

But we do not need to go afield to find conclusive proof that a moderate tax will produce more income than excessive rates. Last year collections under income tax in Canada amounted to $47,000,000 odd. A ten per cent reduction was applied in 1927. Immediately there were strong contentions in parliament that the income tax must not be reduced. These arguments, or rather statements, were advanced without a true knowledge of the situation, and regardless of any endeavour to find the level at which the income tax would produce the most revenue. If the 10 per cent reduction of 1927 had had the effect of taking 10 per cent off the returns, we would have this year only about $43,000,000 instead of $47,000,000. But actually, the National Revenue Review announces in February collections of $54,500,000, and at the same rate the revenue for the fiscal year ending March 31st, 1928, will be in excess of $55,000,000, an increase of $8,000,000 at a reduced tax rate. Similarly, in my opinion, the 10 per cent reduction for this year will not diminish the amount collected. What this country needs is to collect the tax. And I charge, without fear of contradiction, that the government has merely played with this tax; and that the application of it has been so grossly unfair that it has led to its greatest abuses.

Consider, for example—and it is only one example—the case of bearer bonds. It is reported to me that about $4,000,000,000 of taxable Canadian government, provincial, municipal, school and industrial bonds are in existence, and are mostly held in Canada. I am credibly informed that comparatively little of this vast sum of four billions is reported to the revenue officials as being in the hands of taxpayers. Yet we know the bonds are outstanding and are largely in the hands of Canadian investors.

They prove the futility of the Income War Tax Act as an effective measure, unless the solution of its complete administration is found. It has taken vigilant care for 105 years of actual experience in Great Britain to arrive at an approximately complete enforcement. This country does not lend itself as easily to enforcement; we are still in the initial stage of development, still seeking outside capital and immigration. High rates of direct taxation are not conducive to settlement or investment, and the income tax cannot succeed unless the country is prosperous, I cannot but think that the financiers in the republic to the south have taken steps in the paths of wisdom and foresight, and Canada would do well at least to consider carefully their example. Income tax rates higher than theirs, cannot but have an effect on this country, and an approximation to the rates they are paying in income taxes would probably assist in further settlement and enterprise here.

I have endeavoured to place the problem before the house in a manner that will induce examination and consideration of a war measure that is on the statute books, but is fraught with many difficulties and perplexities in actual operation. This, together with other problems, will require the best intelligence in the department charged with its enactment, and the support of citizens everywhere if its operation is to be attended by success.

Mr. C. R. McINTOSH (North Battleford): Mr. Speaker, we have listened this afternoon to the hon. member for Toronto East Centre (Mr. Matthews) deal with the national debt and the income tax. I think we have had two plans placed before the house for paying off the national debt, one the fixed sinking fund plan presented last session by the present leader of the opposition, the hon. member for West Calgary (Mr. Bennett), and again put forward for our consideration by the hon. gentleman who has just taken his seat and the other the surplus plan of the Minister of Finance. The redemption of our national debt has such a direct bearing on the development of the Dominion that it seems to me every member of this house should give it his very earnest attention.

Now, Sir, plans for the redemption of national debts have been proposed; the question is not new and undoubtedly if we can evolve a practical policy for retiring our national debt within a certain fixed period, it should be adopted. But unfortunately for the hon. member who presented that idea to the house, his party is not in power; it does not command a majority in this chamber and, until it does, the proposal he submits may not be given as fair a trial as in his estimation it should receive. However, as to paying off the national debt, the Minister of Finance (Mr. Robb), in introducing his budget this year, dealt with that very question of a fixed plan, that is, the method of paying off thirty, forty, fifty or a hundred millions a year and so gradually reducing the debt. In discussing the question the Minister of Finance plainly showed that a better policy, and one which is followed by the present administration, is to make every effort possible to improve industry and promote community welfare in every part of Canada. If the welfare of every community in the country is furthered, from east to west and from north to south, and if industrial productivity is accelerated in the Dominion as it should be from year to year by means of wise policies properly carried out, then there is no question about it that by means of the surplus plan we shall be able to reduce the national debt considerably from year to year and thus remove this dead weight which is pressing upon the people of Canada. This is the policy which has been adopted by the Liberals, the party in power.

But there is another method of reducing the national debt, and I believe it ought to be submitted to the serious consideration of the people. There is a good deal of merit in it, and inasmuch as it is a practice which is followed in Great Britain it is one that we might very well adopt here; at least, we should not frown upon it. The hon. member for Toronto East Centre in his speech this afternoon did not touch upon it, and I propose to bring the matter to the attention of the house and advocate the principle as strongly as I can. I refer to anonymous gifts. We find that in Great Britain the men who have millions, those who are enjoying wealth beyond compare realizing the difficulties confronting the nation, with its huge burden of national debt, are coming forward voluntarily and contributing considerable sums to the national exchequer towards the debt. Donations up to the present time total some ten million pounds, the last gift to the Chancellor of the Exchequer being £500,000. This latest contribution, added to what had been given before, brings the total of free gifts to the nation up to £11,000,000. This is an enormous sum, and I believe that half a million pounds put out at compound interest would, over a period of a hundred years, amount to sixty millions.

Now we have many millionaires in Canada; there are in this country many men who became wealthy during the war, men who profited by the conflict in which sixty

thousand sons of Canada died. Why should these men, who profited by the war to the extent of millions of dollars, not come forward even at this late date and say to the parliament of Canada, to the government, to the Minister of Finance, "We will do our best to assist in reducing the national debt; we will give you a part of our millions which we will ask you to put out at compound interest as is done in Great Britain"? Why should not our millionaires follow the example of the rich men in Great Britain and come to the assistance of the nation in this way? If they made such gifts, in fifty years the national debt of Canada would be very materially reduced.

Mr. HEAPS: But suppose they will not come forward, what then?

Mr. McINTOSH: In that case I say, cultivate them in such a way that they will want to contribute.

Miss MACPHAIL: I gave the country six thousand dollars; would the hon. gentleman do the same?

Mr. McINTOSH: Did I understand the hon. member to say that she gave six thousand dollars towards the national debt?

Miss MACPHAIL: Call it anything you like.

Mr. McINTOSH: If the hon. member did that she deserves every commendation. That is along the line of my argument and now that a start has been made in the House of Commons I believe the time is ripe for other member millionaires to follow suit. Those who feel strongly inclined to follow the example of the hon. member should come forward and give a lead to those outside the house.

Mr. HANSON: She has no family to keep.

Mr. McINTOSH: That is an individual question. I am discussing the national debt, something much broader. Now so far as paying off the national debt is concerned, I think it might be well to consider for a moment or two the records of the two parties in this respect. Let us go back to the time of confederation and see what the Liberal and the Conservative parties have done respectively in the way of reducing the debt of this Dominion. Before the war our national debt was heavy enough; since the war it is considerably larger. In 1871 our Conservative friends paid off about $500,000; in 1882, $1,734,000; in 1912, a little over $100,000; in 1913, $25,000,000. This represents a total of $27,000,000 approximately, over a period of thirty-four years, or an average of $82,000 a year. That is not a wonderful record; it would take a long time to pay off the national debt at the rate of $82,000 a year. It is clear, then, that the Conservative party has never made any serious effort to cope with the great problem of our national debt and has done comparatively little towards its reduction. What about the record of the Liberal party in this respect?

Some hon. MEMBERS: Oh, oh.

Mr. McINTOSH: I am sure hon. gentlemen will be pleased to hear the record of their opponents, because there is nothing in life, especially in public life, like political chivalry. In 1900 the Liberal party paid off over $700,000; in 1903, $10,000,000; in 1904, $739,000; in 1907 over $3,000,000; in 1924, $35,000,000; in 1925, $345,000; in 1926, $27,000,000; and in 1927, $41,000,000. In other words, the Liberal party in 27 years has paid off a total of $159,000,000, or an average of $448,350 per annum—practically half a million a year. This is a record of which the Liberal party ought to be proud; and when a Conservative member brings up in this house the question of the national debt I am pleased to stand up and show what the party in power has done in squarely meeting the situation and making a real effort year by year to wipe off the debt and reduce taxation in order that the Canadian people may have a chance to develop more fully.

The budget, as every one knows, is the annual statement presented to parliament by the Minister of Finance for the approval of this house, and in the budget we receive a statement of the estimated revenue and expenditure for the coming year, as well as the financial policy and proposals of the party in power for the ensuing year. In this respect the budget now under consideration is a very favourable reflection of the system in force in this country. It is direct and effective and possesses a continuity linking it up with those budgets preceding it. It is direct because it gives us a picture of the finances of Canada; it is effective because from it we get a clear-cut conception of business conditions from coast to coast, and in the preparation and presentation of this budget the hon. Minister of Finance has done a piece of work which will bring credit to himself and to this country.

When we were considering the speech from the throne there was no amendment brought in, but to this budget an amendment and a sub-amendment have been proposed. I would like to say that as far as the speech from the throne is concerned I am glad to note that nationally and internationally we are making

progress. Canada has won a non-permanent seat on the council of the League of Nations; we are making every effort to increase our trade with other parts of the motherland as well as the other countries of the world, and during the past year we celebrated the sixtieth anniversary of our confederation. I believe it very important to have mentioned that point in the speech from the throne, because I think we should know more about our background of history and the material developments of the past, in order to be more fully alive to our duties in the years to come.

The speech from the throne emphasized the fact that we are making progress by land, by sea and by air. On land we are branching out and colonizing new areas; we are building a new railway in the north which will give our trade a new outlet through Hudson bay. Work has already begun on the construction of a new ocean port at Fort Churchill on this great inland sea. We are also taking to the air, making every effort to assist in the development and advancement of aviation. So all in all, Mr. Speaker, while the speech from the throne did not mark the beginning or the end of things, yet the message contained therein is one of congratulation to the government and commendation for legislation already brought down or to be put into effect.

The budget seeks to tell us just what we are doing as a party for the country in a financial way. We have an estimated surplus this year of about $54,000,000; we expect to be able to pay off this fiscal year $38,000,000 of our national debt, and in addition to that we have lowered taxation by about $19,000,000. Our taxation reductions in 1926 amounted to $25,000,000; in 1927 they amounted to $27,000,000 and in 1928 the figure is $19,000,000. On the other hand, before the Liberals came into power in 1921 the national debt increased greatly. The Conservatives in 1920-21, their last year in power, had a deficit of $92,000,000, but we have balanced the budget, and to-day we have progressed so well that we can announce to parliament a large reduction in the national debt and an estimated surplus which will prove to the world that as a people we are advancing and mastering our difficulties, both financial and commercial.

Then we come to the principle of the British preference, and in the budget this year we do not depart from that principle, which was laid down by the Liberal party in 1897 after 18 years of Conservative rule. In 1897 the principle of the British preference was introduced; it has been gradually amplified, and the Liberal party are still adhering to it. The Conservatives talked about preferences within the empire for years, but until the Liberals were returned to power no move was made to bring them into being, so it is important to know the history of the British preference in connection with the development of this Dominion. In 1868 the imports into Canada from the United Kingdom amounted to about $37,000,000; in 1897 that figure had dwindled down to only $29,000,000, and if that had gone on the trade between Canada and the United Kingdom would have almost ceased. But notice the change. The Liberal government introduced the principle of the British preference and in 1911, fifteen years later, the imports from the United Kingdom amounted to about $110,000,000. In 1919, while the Conservatives were in power, they again dropped to about $73,000,000; in 1926 they went up to about $163,000,000, while to-day they have gone up to $214,000,000, or practically triple the figure in 1919. But when we buy from a country we expect that country to buy from us, because there are two sides to every trade transaction. If we did not trade with the outside world, the outside world would not trade with us, and consequently our world trade would gradually go down as was the case in 1896, when the wheels of industry stopped and commercial development was almost at an end. At that time Canada lacked perspective and vision, and if ever a country needed political direction we needed it then. When the Liberals came into power, however, a change took place, and I have already shown what that change meant with respect to imports from the motherland.

Now let us consider the exports, which in 1868 were practically nothing. In 1897, when the British preference was introduced, they amounted to $77,000,000. In 1911, fifteen years afterwards, they had about doubled and stood at $136,000,000. That is loyalty of a practical nature. That is what counts in the consolidation or the building up of the empire. It is not a case of indulging in idle dreams, or of flag waving; it is getting down to actual business and doing something which will not only build up the empire but will unite this country more closely in a commercial sense with the old country and the rest of the dominions. As I say, the total in 1911 was $136,000,000. In 1922, when the Liberal government again came into power, the total was $300,000,000. In 1926 the total had grown to $500,000,000, while to-day it has reached approximately $542,000,000.

Then what about the total trade of the United Kingdom with this Dominion? In 1897 the total was only $105,000,000. It is no

wonder the government of the day felt inclined to do something if Canada was to prosper and the empire was to move forward as a unit. In the course of a few years, as a result of the efforts made by the Liberal government, the total trade had doubled. In 1897 it was around $105,000,000 and by 1911 it had reached $246,000,000. In 1926 it had gone up to the $600,000,000 mark, and in 1927 to a total of $756,000,000.

With reference to the articles placed on the free list and the cuts made in the tariff I have not the time to-day to deal with these matters as fully as I should like. However, we have had a cut in the sales tax. The Liberal party, as might be expected, has the interests of the people at heart. A number of articles have been exempted and a number, including boots and shoes, have had this tax cut to 50 per cent of the general tax, or 1½ per cent maximum. It is true that tax was originally 3 per cent. It is true that this government raised it to 6 per cent, and afterwards reduced the amount successively to 5 per cent, to 4 per cent, and to 3 per cent. The only reason why the sales tax was increased in the first place was that we had a debt to pay. And when it was increased, pyramiding the tax was effectively stopped. Not only had that debt to be paid but it was necessary to balance the budget, and so the sales tax had to be raised at the source. To-day, after having balanced the budget, after having developed a large empire trade and a large export trade, after Canada has been placed on her feet commercially and is making such tremendous progress, the sales tax has been reduced from 4 per cent to 3 per cent. I believe the policy of the government is to cut down that sales tax still further and gradually to eliminate it in the course of the next two or three years.

There are a number of members in this house who think that the income tax ought to be adhered to, and that if we can raise forty-seven or fifty millions of dollars a year from this source we ought to continue to do so. I am inclined to support that point of view but there is this fact to be borne in mind: We want to know exactly in what direction we are heading and we must adopt a policy of some sort. If that policy is not satisfactory to all it cannot be helped. We must go forward, we must drive ahead, we have got to take our stand. We must tell the people clearly and definitely just what we propose to do. Although the government is not telling us what its definite policy is on the income tax, I take it for granted that a 20 per cent reduction having been made in income tax, its desire is to continue lowering the income tax so as to make it possible for the provinces gradually to adopt direct taxation. Some people argue that the more the income tax is reduced the more likely we are to have indirect taxation through the medium of the tariff. I believe there is something in that argument. Nevertheless the government has communicated its policy to the house and to the country, and it is for hon. members to declare where they stand in the matter of reduction of taxation.

Mr. McGIBBON: Is the hon. member speaking for the government when he says the tendency of the government is to do away with income tax and leave that field of direct taxation to the provinces?

Mr. McINTOSH: I thought I had made it perfectly clear that I was not necessarily speaking for the government but merely expressing my own views.

Now I should like to deal for a few minutes with the question of immigration. I was talking with one of our members on this question and he said "Do not discuss that, it is too dangerous." I have no hesitation in discussing it. I never saw anything yet that I was afraid to discuss, either in this house or out of it, when the matter was one which concerned the people of Canada and the development of a truer Canadian spirit. There is no doubt but that the immigration question is a very important one. It is a very big problem and has been with us ever since confederation. So important is the immigration question that the government has announced its intention to have the whole subject investigated by a committee. That is the right course to pursue. In my opinion we need immigration in Canada, we need millions more people. We have vacant lands to be settled, and primary industries that must be manned in order to develop the country. I believe that for immigrants we should have the best class of people, not only in Great Britain, not only in Norway and Sweden, but in other countries of northern and western Europe. First of all our object should be to bring in Britishers. We should get the very best people we can from Scotland, from Wales, from England and from Ireland. Then, we could bring immigrants from northern and western Europe. But any immigration policy adopted should receive the united support of all parties in the house. Then we might reasonably expect to attract hundreds of thousands of people to our shores as we did not so many years ago.

We often hear people speak about the "foreigners" of western Canada. I am not using that name in any disparaging sense and

I believe that instead of using that name, we ought to use the words new Canadians or "newcomers." I believe there is attached to the name "foreigner" a stigma that ought to bar it from the language of Canada as a nation, or of any political party in this country. When the great Civil war was being waged in the United States from 1861 to 1865 and when we had people largely of British stock fighting for the right of dealing in slavery, for the right of man to hold property in man, what about the men who came from other lands to the shores of the United States? Those whose descendants are termed foreigners to-day and who had come to the republic to make their living on the soil, to find there homes and a new opportunity for service, were not found fighting in the armies of the south. They were found fighting in the armies of the north, and if it had not been for the aid that those men from the outside gave to Lincoln and the ideals for which he stood; if it had not been for the support they gave to the fight against slavery, that cause might have been lost. So to-day as regards these newcomers, men and women, who come to our shores from other lands, if we know how to receive them, how to weave them into our national life and how to use them in building up Canada the splendid qualities and attributes they possess, because it must be remembered they come from the great nations of the world, we shall feel that in the years to come they will be an important factor in politically consolidating this Dominion, in developing its resources, and in linking us up even more closely with the empire.

In 1921 the population of Saskatchewan amounted to 755,000, of whom 114,000 came from countries outside of the British Empire. Out of those 114,000, 80,000 were naturalized and mostly all could speak the English language. They were among our most reputable citizens and they were taking their part nobly in building up our municipal institutions, our provincial life and our national ideals. In my riding of North Battleford we have people from Germany, England, Ireland, Scotland; we have people from Poland and Russia; we have Ukrainians and Ruthenians; we have men and women from Hungary, Holland, Belgium, United States, from the uttermost parts of the earth, and many men and women who have made a pronounced success on the land will be found amongst those who have come from other lands, who have taken up land that was rough, hard to cultivate, and who still remain on the land. These people have made a huge success in developing those areas of the west, and so to-day I think, as a member of this house, I owe it to them, after the way in which they have been slandered and held up to ridicule, to tell Canada through this house that Saskatchewan feels proud of those who came to that province from other lands; that they have done a great work; that we thoroughly trust them to work out higher ideals in our municipal government, in building up our schools, in consolidating the different elements of the province, and in making Saskatchewan play the part it ought to play in the development of this Dominion.

Only a few years ago an investigation covering the years from 1915 to 1924 was made into the question of the effect upon the national character of the presence in Canada of people of outside extraction, and it was found that, in regard to this element of our population there is no danger of losing our ideals or of the British race becoming submerged. That sort of talk is all nonsense. The truth was brought out that serious crime had increased in Quebec and Ontario by one per cent, while in Alberta it had decreased forty per cent, in Saskatchewan twenty per cent and in Manitoba fifteen per cent or a decrease directly proportionate to the relative percentage of non-British people resident in those western provinces. That is a pronouncement that should be placed before the country. We have men going about berating these people and saying that they are responsible for this and that; but when we study the facts and make a scientific investigation of the racial problem in Canada, we can only conclude that these people have done a wonderful work; that we should thoroughly trust them, and that if we trust them still more they are going to fill, as our people of British stock have filled, and as we want all our people to fill, more and more the important positions in Canadian public life.

In conclusion, following out those remarks on immigration, I should like to give to the house a few considerations that ought to concern us as Canadians: first, the adoption of the selective principle to a greater degree than heretofore, thus securing the best racial strains to be found in the world for nation-building in Canada; second, concentration on British and French stock wherever possible. The British and French stock, the major races, have by union, largely made the Canada we have to-day. I believe if we link up the French with their fire and courage, with the respect they have for their native land, the admiration they possess for our literature and art, as well as their adaptability, with the British who have a genius in colonization, who have a courage to face all difficulties, and who are always found standing for ideals

of justice and progress, the future development of Canada will be absolutely safe. At the present time the French and the British combined comprise more than eighty per cent of our population and yet, because we are trying to bring the remaining fifteen or twenty per cent of our population from abroad, we hear people saying that there is a danger of British ideals and Canadian ideals being destroyed and the British people being wiped off the face of the Dominion. That argument does not in the least appeal to me.

Mr. M. N. CAMPBELL (Mackenzie): Mr. Speaker, I regret that I cannot congratulate the last speaker, the hon. member for North Battleford (Mr. McIntosh), on the suggestion that he has given the house for the reduction of the national debt. His suggestion, as I understand it, is that wealthy persons in Canada should be asked to come forward voluntarily and from patriotic and altruistic motives pour their shekels into the national hat. This comes rather peculiarly from the supporter of a government that has just announced a substantial reduction in the income tax and that proposes eventually to eliminate it entirely. For the year ending 31st March, 1928, the Minister of Finance (Mr. Robb) estimates that income tax collections will amount to $55,300,000. I find from the Canada Year Book that in the year 1926, 1,233 people, that is, those with incomes of $20,000 per year and upwards, paid 92 per cent of the total income tax, and it is for these needy people that the Finance minister proposes, as he stated in his budget address, to continue "gradually to lighten the load in the income tax field." Shifting the burden from this infinitesimal proportion of the population would not be so bad did it not necessarily involve placing the burden on the shoulders of the great mass of the population. The minister, of course, intimates that this proposal is in the interests of those provinces that now have income tax systems of their own. I should like to examine that proposal for a moment.

I think the assertion will not be challenged that the great majority of these large incomes are found in the central provinces, in Ontario and Quebec; but, Sir, I think it will not be denied that these incomes are earned from all over Canada. They are the large salaries drawn from transportation companies, financial companies of various kinds, insurance companies, companies doing business and earning profits in the maritime provinces, in the prairie provinces, and in British Columbia, as well as in the provinces of Ontario and Quebec. The maritime provinces today in spite of some relief they have secured, are still labouring under a sense of injustice. The prairie provinces are suffering a similar injustice—in fact their position is very much worse because they have been refused the return of their natural resources; that is a standing grievance in the prairie provinces. Now if you leave this income tax field entirely to the central provinces, a source of taxation which I believe should accrue to the whole people of Canada—if you centralize it again in the central provinces you will simply intensify and increase that dissatisfaction, and I say that a procedure of that kind may be fraught with serious consequences.

Those of us in this section of the house who object to the reduction in the income tax are frequently met with jibes and reminded that the farmers whom we principally represent pay very little income tax. It is unfortunately true that very few of those engaged in the agricultural industry owing to the small returns they receive from their work are liable under the income tax law. But it is absurd to suggest that farmers and working people do not contribute materially to the federal taxes. According to the minister's budget speech estimate, the revenue from taxation for the year ending March 31, 1928 will be $357,000,000, of which $298,600,000 will be collected through the customs department in import duties, excise and sales taxes. Now every farmer and every workingman who purchases a pair of boots or a pair of overalls or a calico dress contributes in some form or other to the federal taxes. In the United Kingdom forty-five per cent of the total revenue is derived from income and inheritance taxes. The United States receives sixty-four per cent of its total revenue from income tax while Canada receives less than fourteen per cent from this source and, the minister, whose heart aches for these needy rich, proposes now to eliminate even this fourteen per cent. And still we are calling upon the people of the United Kingdom and of the United States to come to this country as immigrants to assist us with their brain and their brawn in the development of the natural resources of this country and in building up here a great Dominion. I would suggest that the immigration literature which we distribute among these people should include these figures I have quoted, and that the people should be told frankly that they are invited to come here and share a larger proportion of the burden of taxation than their class is obliged to bear in the countries from which they come.

I submit in any case, when the minister had decided to reduce the income tax, that it

would have been very much fairer had he raised the exemption rather than reduced the total amount to be paid. Under the present system a person having a taxable income of $4,000 will receive a rebate of $2 under the reductions that go into effect this year, but a man having a taxable income of $25,000 will receive under this reduction a rebate of $253.

The Financial Post, a paper that might be assumed to represent and speak for those who have large incomes has this to say in an editorial in its issue of February 10 last:

> The campaign for the abolition of the income tax may do more harm than good. This campaign is being chiefly pushed by an organization styling itself the Retail Trade Bureau of Canada, a dissentient offshoot from the larger Retail Merchants' Association of Canada. The bureau has won a good deal of publicity for itself by conducting this campaign with considerable vigour and persistency. It has won over a number of influential people and, of course, has the hearty encouragement of every one who believes that a nation can be run without taxes.
>
> The income tax became part of our tax system during the war, and is to that extent a war measure. Some day when Canada has practically recovered from the financial after-effects of the war it may be possible to drop the income tax entirely. But although the war is over, we are still paying for it directly in annual payments of $125,000,000 a year for interest on war debt and for pensions and indirectly in other governmental expenditures.

Then I turn to the Financial Times, another paper representing the same viewpoint, a paper that might reasonably be expected to applaud the announcement of the minister that he proposed to wipe out this tax. The Financial Times takes a very strong stand against that proposal. It says that this tax is wholly suitable to Canada because it is capable of being graduated in accordance with the tax-paying power of the payer, and then it goes on in a lengthy article to attack very strongly the policy of the minister in leaving this field to the provinces.

The present Minister of Immigration, the hon. member for Brandon (Mr. Forke), speaking in the city of Winnipeg on September 17, 1925, had the following to say, according to the Manitoba Free Press:

> The retention of the income tax without reduction, until the proposed fiscal reforms have been established and the revenue requirements have been reduced to the lowest figure possible, is imperative.

Again, I find a despatch in the Regina Leader from Fenton, Manitoba, dated October 2, 1925, which says:

> Mr. Robb, the Minister of Finance, has announced that if the government is returned, he will reduce the income tax. "I am not in favour of it," said Robert Forke, Progressive leader here Thursday night. "It is the simplest tax and is paid by those who can afford it. It is much fairer than a customs tax."

I wonder if the minister's voice was heard in loud and angry protest in the cabinet council when these proposals were being considered. It would be rather interesting to know, because I have so much respect for the minister that I can hardly think he has allowed his viewpoint to become changed by —shall I say?—the sweets of office. I hate to think that he has changed his opinion. I would rather think that he protested, and protested vigorously, to his colleagues against this reduction.

But I have someone else to quote, someone who had very much more influence within the cabinet than the Minister of Immigration, and that is the Prime Minister himself. Speaking at Yorkton, Saskatchewan, on November 8, 1920, he is quoted as saying:

> There is no doubt where the Liberal party stands on the tariff.

I quite agree with that statement; there is no doubt about it to-day. But let me quote the Prime Minister further:

> Taxes have to be raised, but it is not necessary to do it all by direct taxation. I would tax incomes, business profits and luxuries.

Then listen to this gem:

> All could be raised in that way.

Here you have the Prime Minister, the leader of the government, when he was appealing to the people of western Canada for support, assuring them that if he got into power he would tax incomes, business profits and luxuries, and that all the revenue could be raised in that way. But when we come to examine the figures we find that this government is collecting a very much smaller proportion of its revenue from the income tax than the late Conservative government did. I will quote a few figures to prove my statement. I am taking the year 1921-22 as the last year of the Conservative administration, for although the Liberal party were in power during the last half of that fiscal year, yet the taxation policy was that set by the Conservative budget. The tax collections for that year were as follows:

Income tax and business profits tax	$101,500,000
Excise and sales tax	110,411,000
Customs duties	105,500,000
Total	$317,411,000

The important thing to remember is that in that year only 33 per cent of the total revenue from taxation was collected through

the customs tariff. Then we come to the year 1927-28. This is the minister's estimate:

Income tax and business profits tax	$ 55,940,000
Excise and sales tax, under the war tax legislation	88,000,000
Ordinary excise	57,000,000
Miscellaneous taxes	2,500,000
Customs duties	153,600,000

Those items represent a total of approximately $357,000,000. We have heard a good deal about reduction of taxation. The Minister of Finance himself made a great ado about it in his budget speech, and the hon. member for North Battleford, who preceded me, boasted of the achievements of his party in that regard. Yet, Sir, we find that this year the government expects to collect $40,000,000 more by taxation than did the late Conservative administration in the last year it was in power. But more important still is the fact that while in the year 1921-22 only 33 per cent of the total revenue from taxation was collected through the customs tariff, this year it will be 43 per cent. In 1921-22, 32 per cent of the total taxes were derived from income tax and business profits tax, and only 33 per cent from the customs tariff; whereas this year, 1927-28, only 14 per cent of our total revenue from taxation will be derived from income tax and business profits tax, as against 43 per cent from the customs tariff. Of course, under the policy laid down by the Minister of Finance this difference will increase year by year.

Next, Mr. Speaker, I come to the question of tariff reductions. The more I examine the budget the more I realize that the tariff is not reduced at all; it is actually raised. Of course, I am speaking from the standpoint of the consumer. I appreciate the fact that considerable reductions have been made on machinery and raw material used by the manufacturers, and in fact the great bulk of the reductions are really in their interest. I am not complaining of that; on the contrary I am delighted, because I am interested in seeing them just as prosperous as other classes of the community; but speaking from the standpoint of the consumer I must confess that I am unable to discover these reductions. The Minister of Finance in his speech states that he proposes to do something to foster interimperial trade. Well, Sir, I submit that the policy which he has laid down is directly designed to impede that trade. The changes with respect to the British preference will have the effect of raising the protection to the Canadian manufacturer, preventing the importation of goods under the British preference, and of course ultimately raising the cost to the consumer. The minister states:

At present Canada requires 25 per cent to be empire labour and materials. It is proposed to double this percentage.

Now, Sir, let us analyze the effect of this on the cotton industry, for instance. Of course, I appreciate the fact that where practically nothing enters under the intermediate tariff there are substantial reductions. As the hon. member for Winnipeg North Centre (Mr. Woodsworth) pointed out, there is a reduction of the duty on candle wick. Had that reduction been made fifty years ago it might have been of some relief to the consumer. But let me proceed to discuss the effect of the budget on the cotton industry. Ninety per cent of the short staple cotton used in British mills is purchased outside the empire, 30 per cent of the total American exports of cotton going to the United Kingdom. Not more than 15 to 20 per cent of the cost of the finished product of the British cotton mills is labour. Of course other materials enter into the finished goods besides cotton, and Great Britain has to import some of those materials. So it will be seen how difficult, how impossible in fact, it is for the British cotton manufacturers to secure the advantages of the British preference. In any case, may I point this out, when cotton prices are high on the market, the relative value of the cotton in the finished product will be increased; and the minister, in effect, says to the Canadian consumer: When cotton prices are high I propose to increase the duty on cotton manufactured goods, and when cotton prices are low there is a possible chance of these goods coming in under the British preference. In ten years the average value of the raw cotton used in British mills was 46 per cent of the finished value of the goods. In one year it was about 58 per cent. It is quite obvious, then, that under this new proposal the advantage of the British preference will largely be lost to the British cotton manufacturers.

Now, Sir, the Minister of Finance and his colleagues have made a great ado about the tariff board. Last year the excuse was made that tariff reductions were withheld until reports were received from the board. I have come to the conclusion that the tariff board is simply a shock absorber for the government—something to put the blame on, something to pass the buck to. That is about all it amounts to, because I find that this change in the British preference never went before the tariff board at all. Some of these interests apparently were allowed to come in by the back door, as the hon. member for Winnipeg North Centre suggested the other day; but when a delegation representing the United

Farmers of Saskatchewan came down here and laid their claims before this parliament, they were told that the proper place for them to go to was the tariff board, and no relief was given them. In a recent issue of the Financial Times it is stated:

Some relief has been given the Canadian linen industry under the new Robb budget.

I presume this refers to section 532 of the present tariff. It covers cotton yarns, No. 40 and finer, which I believe are largely used in the manufacture of linen. These were all free under the old tariff, but under 522b and 522d of the amended tariff they will be dutiable to the extent of from 7½ to 15 per cent. I understand that none of these yarns are imported; that the Canadian mills spin all their own yarns. So this just means an increase in the duty, and as the Financial Times assumes, "some relief has been given the Canadian linen industry."

From the minister's budget speech I take it that in 1927 we exported to the United Kingdom goods to the value of $448,000,000, and bought in return only $164,000,000, leaving a balance in our favour of approximately $300,000,000. As Great Britain, Mr. Speaker, provides almost the only market for our grain and for many other farm products as well as some manufactured commodities, I submit that the principle laid down in this budget may have disastrous consequences for us, because there is nothing to prevent Great Britain buying her grain and many of these other products from other exporting countries that are prepared to buy dollar for dollar from her. Whatever tariff we may impose against the United States, I submit that it is a most serious thing, at this time when the balance of trade is in our favour, to place any impediment against British exports to Canada.

Enough has been said about the Liberal platform of 1919, and I do not propose to quote from that historic document. But it is my complaint that hon. gentlemen opposite from Saskatchewan and Manitoba, and the government as a whole, secured the support which they received in the prairie provinces, particularly in Manitoba and Saskatchewan, by appealing to the people on this very platform of 1919 which they now ignore, by telling the electors that if they would only send men who would attend the Liberal caucus and sit in council with the Liberals the western point of view, as the Prime Minister said, would prevail. A stirring appeal was made to the electors in those provinces to abandon their Progressive ogranizations and to line up with the Liberals in order, as they declared, to get the low tariff forces together. That was the common slogan in the election. I wonder what it means to those gentlemen to-day. This appeal had its effect in securing the return of the block of Liberal members whom we find in the house to-day from the province of Saskatchewan, and as well in the absorption, in whole or in part, of the Manitoba Progressives, who also sit opposite. The whole argument, from the Prime Minister down, both in Manitoba and in Saskatchewan, was that if the electors would only send supporters to attend the Liberal caucus, men who would sit in council with the Liberals and take their share of responsibility, they would secure the fulfilment of the promises made in the platform of 1919.

Some hon. MEMBERS: Hear, hear.

Mr. CAMPBELL: Hon. gentlemen opposite are more optimistic about the future than I am; I am glad that at least they can indulge in some applause to keep their spirits up. I wonder what the hon. member for Battleford really thinks; it would be interesting to know what is really in his mind. And what does the hon. member for Weyburn (Mr. Young) think?

Mr. VALLANCE: Which Battleford is the hon. member referring to—North or South Battleford?

Mr. CAMPBELL: I am referring to the member for South Battleford; not the member for North Battleford.

Mr. VALLANCE: There are two Battlefords.

Mr. CAMPBELL: The Prime Minister, at Yorkton, on November 8, 1920, said:

All agricultural implements should be placed absolutely on the free list.

I wonder what was his real view when he uttered those words.

Mr. McLEAN (Melfort): Will the hon. member tell us what he is quoting from?

Mr. CAMPBELL: From a good Liberal paper which consistently supports this government to-day—the Yorkton Enterprise.

Mr. McLEAN (Melfort): It was a good Tory paper in 1920.

Mr. CAMPBELL: It is a good Liberal paper to-day. When the United Farmers of Saskatchewan, through a delegation here, asked this government to implement these very promises, their request was studiously and coldly ignored. A despatch in the Leader, Moose Jaw, September 30, 1925, refers to a meeting attended by the Prime Minister and some other gentlemen in that town. I quote:

The Premier also made a plea for the merging of the forces of the low tariff in the west to fight the common enemy of high protection led by Right Hon. Arthur Meighen.

On the same platform the present member for Moose Jaw (Mr. Ross) said:

The Conservative party says, "We will tax you more by our tariff proposals." Proudly the high protection flag is being flown by Mr. Meighen and his party. "We will tax you more," they say, "so that the rich men of the east may have better limousines and more sumptuous living."

On the same platform the then Premier of Saskatchewan the present Minister of Railways (Mr. Dunning), made this statement:

"No one will question one fundamental in so far as the tariff is concerned", said Mr. Dunning, "and of all the individual taxes which our people bear, this one of the tariff is the highest and one which brings no advantage to the people of the province."

Yet, only a short time earlier, the same hon. gentleman speaking in Ontario, made haste to reassure the people that he was not a free trader. At Pembroke, Ontario, on August 10, 1925, of the same year, he said:

I have been described as a free trader. I am not a free trader.

At the same meeting at Moose Jaw the Prime Minister, at the time he was making his appeal to the Progressives to drop their own candidates and organization and merge with the Liberals in order to defeat the common enemy, uttered these words:

The east asks your representatives to join with them. We ask you to send to our councils men who will work with us in shaping our policies,—

I wonder to what extent hon. gentlemen opposite from Manitoba and Saskatchewan joined with the government in shaping this budget. They are a sadder and a wiser lot to-day, but I am not blaming them; most of them were quite honest. They thought they could revolutionize this party when they came down here in a little bloc, but to-day they must admit it is beyond hope. But let me conclude the quotation:

—because we want the western point of view to prevail with regard to all the questions that apply to our Dominion.

Now I say, in view of all these promises, in view of the appeal that was made to the people of Manitoba and Saskatchewan, this government holds office to-day by fraud and deception.

Mr. BELL (Hamilton): And always has.

Some hon. MEMBERS: Order.

Mr. CAMPBELL: I have here some figures taken from Trade of Canada—

[Mr. Campbell.]

Mr. CASGRAIN: I understood the hon. gentleman to say that the government conducting the affairs of this country holds office by fraud and deceit. This language is not parliamentary and should be withdrawn.

Mr. CAMPBELL: I hope I shall be given extra time for these interruptions.

Mr. SPEAKER: I hope the hon. member will withdraw the expression; it is not parliamentary.

Mr. ROBB: May I say on behalf of the government that nothing which the hon. gentleman can say will hurt them.

Mr. CAMPBELL: In deference to your ruling, Mr. Speaker, I withdraw the expression.

Mr. CASGRAIN: I ask that the hon. member withdraw it.

Mr. CAMPBELL: I have withdrawn the remark, but that does not alter the facts.

Some hon. MEMBERS: Order.

Mr. CASGRAIN: The hon. gentleman has not withdrawn it.

Mr. SPEAKER: The withdrawal must be absolute.

Mr. CAMPBELL: I have withdrawn the statement, but I cannot change the figures. Now I wish to quote figures taken from the Trade of Canada—

Mr. CASGRAIN: I understood it to be your ruling, Mr. Speaker, that the words should be wholly withdrawn.

Mr. SPEAKER: The hon. member withdrew the statement but he added a qualifying remark which I must ask him to retract.

Mr. CAMPBELL: I do not think there is any mistake about the remark having been withdrawn, Mr. Speaker; I withdraw it. Now, there are certain figures which I wish to quote up to the year ending March 31, 1926. I am taking the last five years of the Conservative administration and comparing it with the first five years of the present government's administration. For the five years from 1917 to 1921 inclusive the average rate of duty on dutiable imports was 21.9, while for the five years from 1922 to 1926 inclusive, under this administration, the average rate of duty collected on dutiable imports was 24.06, or a difference under the late Conservative administration of 2.16 lower. We hear a great deal about the high tariff and the low tariff parties in this country, and for some time after coming to this house I wondered which of the two old parties was the high and which was

the low tariff party. To-day I no longer wonder; I am quite convinced from these figures that as between the two old parties the low tariff party sits to our right while the high tariff party occupies the benches opposite, including in their ranks the hon. members from Saskatchewan and Manitoba.

In his zeal and in his enthusiasm to represent the people who elected him, the hon. member for Weyburn (Mr. Young) placed a resolution on the order paper at the beginning of this session asking that section 43 of the Customs Act be eliminated. That resolution was called twice, but the hon. member failed to respond. I am not blaming him particularly; when he filed that resolution I believe he did so honestly, and with the firm conviction that he was representing the viewpoint of the people who sent him here and in order to carry out his pre-election promises. But I wonder what happened after he reached Ottawa? It would be interesting to know what happened in those Liberal councils to which the Prime Minister asked us to send representatives.

Then again, we have the hon. member for Willow Bunch (Mr. Donnelly). In his zeal to represent the people who sent him here he brought down a resolution asking that mixing at the terminal elevators be eliminated in connection with grades 1, 2 and 3 of wheat. I know that is a burning question in his constituency, but the hon. member was a little more frank than my friend from Weyburn. He did not wait for the Speaker to call the resolution; he withdrew it from the order paper, and I wonder just what happened in the party councils to bring about this result.

Mr. DONNELLY: Would my hon. friend like to know? I was advised by the Saskatchewan pool not to proceed.

Mr. CAMPBELL: That is no answer at all. If my hon. friend's constituents wanted that action taken he should have had the house divide on the question. The hon. member for Brandon, the present Minister of Immigration, speaking in Winnipeg on September 17, 1925, is reported by the Manitoba Free Press to have said:

> The absorption of the Progressives by the Liberal party, whether in or out of office and under whatever guise effected, would postpone for a generation the attainment of necessary reforms.

I am not going to criticize the minister, because I believe he said that from the depths of his heart; I believe that was his honest conviction, and if he would admit it I think it is still his firm opinion. However, we have all seen what has happened; a part of our representation from Saskatchewan and Manitoba has been absorbed, and you see the effect in this budget. When appealing to the Progressives to give up their organization and join with the Liberals, the Prime Minister is quoted as saying at Moose Jaw, during the campaign of 1925, the following:

> Mr. Crerar and Mr. Hoey did not present themselves in this election. Mr. Forke is like the ordinary Scotchman; he is going to hang on to anything he has until the end.

I am sorry the Prime Minister was not such a good prophet as the Minister of Immigration, because the minister did not hang on very long.

I listened with interest and attention to the speech of the hon. member for Provencher (Mr. Beaubien) a few evenings ago. We miss his smiling face, his ready wit and genial companionship on this side of the house. For a long time I looked forward to the day when he, like the prodigal son, would return to us, but his speech indicated that there is no hope of that now. He at least is one of those who have been absorbed, and for whom there is no hope. The hon. member objected to the reduction in the income tax, and I think he pleaded with the minister not to increase the duty on lace, or something like that. Knowing what a ladies' man the hon. member is I can understand his concern, but he wound up by saying that he was going to vote with the government anyway. In effect and in substance he said to the government, "I do not like your budget, but I am going to vote for it anyway." What is the effect of that? I say my hon. friends from Manitoba must bear the full responsibility for the fact that such a budget is now before the house.

Let us go back over our history from 1922. The first really good budget, from our standpoint was in 1924, and that was due to the fact that the government lost some by-elections and were in a weakened position. At that time the pressure from this corner of the house forced them to live up to their own policy and carry out, in a measure at least, their own pledges. Then almost the same thing happened in 1926, and here is the irony of the situation; on the strength of those two budgets this government is in power to-day. As a matter of fact we saved the government in spite of itself; and I wonder who is going to save the government the next time? I understand and appreciate the difficulties which my hon. friends from Manitoba have had to face, but I put it up to them squarely where their duty lies to-day. Should they not take an independent position and stand over here, serving notice on the government that unless

they carry out their own policy and fulfil their own pledges they will not be entitled to support? Had that been done, what would have been the result? We never should have had a budget such as this: so my hon. friends must bear the full responsibility for the nature of this present budget.

Mr. W. G. ERNST (Queens-Lunenburg): Mr. Speaker, I listened to the first part of the speech of the hon. member for Mackenzie (Mr. Campbell) with some approval, but when he reached the latter part of his remarks I knew he was voicing the extreme views of the west. It will be my purpose, Sir, to voice not the extreme views of the east but the views of the extreme east, and to discuss them not in an abstract manner in relation to the tariff in general, but in so far as budget changes affect the industries and the natural resources of that portion of Canada from whence I come.

Mr. CAMPBELL: I might say that I was voicing the views expressed by the government in the west.

Mr. ERNST: Then the government expressed an extreme view in the west.

It seems to me that the internal management of the country and the internal functions of a government in relation to the country to-day divide themselves largely into three groups. First of course there is the maintenance of law and order; then comes the conduct of the various departments of government and the collection of revenue, and lastly what you might class under the general heading of conducting the government for the benefit of the people, particularly bearing in mind under that heading the development of trade and our natural resources. In a country such as Canada, a young country blessed abundantly by nature, it would appear that this latter in itself is a gigantic task, and one of the most formidable which would be undertaken by any government. It is idle for the Minister of Finance to come before parliament and boast that this is a year of prosperity, seeking to prove it by quoting trade figures for this year in comparison with the figures for 1920 or any other year; many factors affect trade conditions, which in turn affect our revenue. Providence is one factor; world economic conditions are another, and lastly and possibly the least important of all, we have the policies of the government. Before these figures assume any particular importance it behooves the Minister of Finance or anyone talking glibly about the prosperity which this government has achieved for the country to show just how the government brought about the prosperity referred to. What particular items in its policy does it indicate as working for the general prosperity of Canada during the past seven years? Look the policy over item by item; consider the tariff changes. In so far as the whole tariff schedule is concerned the changes are trifling and insignificant. Surely it cannot be said that this government, by its tariff changes has so lowered the cost of living or the cost to the primary producer that it has increased the prosperity of the country. Take the trifling changes in the rate of taxation. Can anyone point to an instance where those changes have enabled one individual to stay in this country or one industry to remain in operation? Consider the immigration policy. Surely the government does not point to that as one of the factors contributing to the prosperity of this country, because looking at it for the last seven years we find that it has been the most ghastly failure in the history of that department. While we are bringing settlers in by the thousands, our own people in greater numbers are leaving the country. Then to what policy of the government shall be ascribed this prosperity? Is it because of economy? Surely not, because each year we find our expenditures increasing. What is left? To what features of its policy do hon. gentlemen opposite point in order to prove that the prosperity is the work of this government?

There is a better test, a really accurate way of measuring these things, and it is this: Are we developing the natural resources of this country to the maximum compatible with world economic conditions and with the preservation of these resources over a period of years? Are we developing in Canada a prosperity which will prevail in each of the provinces and will be effective from coast to coast? That is the true test to be applied in determining whether or not Canada is prosperous, and any government which cannot answer that question in the affirmative must be regarded as derelict in its duty to the people.

Much has been said during the last year about national prosperity and about national unity. We have witnessed also a great deal of pageantry. Pageantry is all very well, and I for one do not deplore it, but it seems to me that the only sure foundation for national unity in this country is to have such policies for the development of the resources of each province as will make the people of that province prosperous and contented and imbue them with an abiding faith in the destinies of Canada. Unless we make the people of each province prosperous and contented they

will not have that faith in the future of the country which they should have and they will not have a true belief in national unity. It is from this aspect that I want to consider the budget in relation to the industries of the province of Nova Scotia.

I am going to ask hon. gentlemen opposite if they can see in this budget, in so far as the primary and secondary industries of the province of Nova Scotia are concerned, anything calculated to develop those industries one little bit? I will consider the industries one by one. I will point out the tariff proposals, and then see what the effect will be, if any. There is a lowering of the sales tax to the extent of 1 per cent. I believe it is the view of the people of Nova Scotia as it is the view of the western members—I am sure it is the feeling of my own people—that the sales tax ought to have been abolished entirely because it weighs on everybody, high and low, rich and poor, whereas the income tax affects the wealthy alone.

What is there in this budget to help the coal and the steel industry in the province of Nova Scotia? The Postmaster General (Mr. Veniot), when he spoke at St. John some months ago, said that what the government was going to do for the steel and coal industries would make the people of Nova Scotia proud. What has the government done? What is the government going to do? We have in our province practically an unlimited supply of coal. We have in the adjacent Dominion of Newfoundland iron ore which can be brought to us in but a short journey over the water. We have all the potentialities of a great industry except the market. We need a national fuel policy, and we need protection for our steel industry. I wonder what there is in this budget which is going to help that industry to get on its feet again after its long struggle? If the Postmaster General can take any pride in this budget in that respect he must take pride in something in which he is usually wanting and that is silence.

Let us take our diversified manufacturing industries. We have a number of small manufacturing industries scattered over the entire province. What is there in this budget, or in the tariff schedule filed by the Minister of Finance, which is calculated to help even one of them? Take for example the woollen industry. In this budget the schedules with regard to it are rearranged. The woollen industry was dealt a severe blow when the British preference was introduced, a blow from which it has not recovered to-day. The only effect of the present budget is to threaten the spinning end of the woollen industry with extinction, and to leave the weaving end exactly where it was before the budget was introduced. With all due deference to the British preference I submit that what we need in this country is a policy of Canada for the Canadians. Let us place Canada first. Let us develop our own country for our own people and then, and only then, if we can do so compatibly with the interests of our own people, let us grant concessions to the mother country and to the other dominions. But always let us first consider our own people, let us develop Canadian industries in the interest of Canadians.

I pass on to the agricultural industry. The agricultural industry in eastern Canada differs largely from that in other parts of the Dominion to this extent: We have small farms devoted to mixed farming and which, excepting perhaps in the case of the apple industry, look largely to the home market for the sale of their products. Is there anything in this budget calculated to develop that home market, calculated to increase the growth of the urban centres where we market our products, or calculated to make new centres spring up where none exist to-day? Take the effect of the Australian treaty. The Minister of Finance (Mr. Robb) and the Minister of National Defence (Mr. Ralston) must be aware that the farmers of Nova Scotia are protesting against the effect of that treaty and against the importation of Australian and New Zealand butter to compete with their own product. Is there anything in this budget calculated to remedy that injustice, or to increase the market for our dairy farmers so that they may sell what they produce at a profit?

Take the pulpwood industry as to which we are differently situated from other provinces of Canada. Ours is a small province almost entirely girt by the sea, and our forests are easily accessible from the ocean. With what result? We have witnessed the spectacle of thousands of cords of our pulpwood going to the United States in 4-feet lengths there to be manufactured into pulp and paper. Last year 170,000 cords were exported from the province of Nova Scotia. From the constituency which I represent 40,000 cords went out on the Lahave river in 4-feet lengths. In three years more that river will be denuded of its forests and nothing will be left except the water with which to turn the wheels of an industry that can nevermore arise. You may say that is a matter of provincial concern. It is not a matter of provincial concern because the lands from which this wood is exported are largely owned by private investors, by private capital, and the pro-

vincial government is practically powerless to stop exportation. It is a matter for this government to take up and it will have to deal with it quickly if our forests are to be saved for posterity.

I pass on to the fishing industry. What is there is in this budget likely to be of any great assistance or benefit to the fishermen of the province of Nova Scotia? I realize, Sir, that a royal commission was appointed to investigate the fisheries of that province. May I remind the house and hon. gentlemen opposite why that commission was appointed? It was appointed because open discontent was manifested and open hardship had occurred in the eastern part of Nova Scotia, in the town of Canso, in the constituency of the hon. member for Antigonish-Guysborough (Mr. Duff). So acute was the situation that this government deemed it advisable to appoint a commission without the authorization of parliament for expenditure involved. I agree that the need was urgent, but political expediency dictated the sittings which that commission was to hold. It held sittings not only in practically every fishing village and hamlet of importance in the province of Nova Scotia, but also in New Brunswick and extended into Quebec, which was not originally contemplated. The reports of the government's own officials, including Mr. Ward Fisher, superintendent of the eastern division, for several years had drawn its attention to the conditions which existed, but it was not until open discontent was displayed and actual hardship was experienced that the royal commission was appointed. Be that as it may, the fishermen of Nova Scotia knew the need to be urgent, and action by the government was expected early this session. What has happened? As the result of the itinerary being mapped out by politicians and not by the commission itself the report is only now in course of preparation. It may be received in time for consideration by parliament during the present session. As to that I do not know, but I do know this: Had that report been available, and had the commissioners given full effect to the evidence submitted to them there would have been some proposals before parliament worthy of the consideration of the Finance minister and calling for notice in the budget. As a result of the delay which has occurred the proposals of the commission, whatever they may be, will have to wait at least one year more for fulfilment. As to the fishing industry I am reminded to some extent of the words of the Postmaster General, who I regret is not in his seat, when he spoke in this house on the 8th of February. He sought to leave with the house and the country the impression that Conservatives from the maritime provinces were disgruntled and had no real grievance, and he allied himself with the Minister of Finance and the Prime Minister who talked glibly of prosperity in this country. I wish he would come down with me to the shores of Nova Scotia and see conditions as they there exist. We have there a great fishing industry with resources practically inexhaustible and we have a people who are adapted to that industry; yet I can take him to villages where the average earnings last year per man were less than $200, and those men are heads of families. Those are not isolated villages. I can take him to whole stretches of the coast line where the average earnings per man were less than $300 per annum, I can point out to him reports of this government that since 1914 ten thousand men have been lost to this industry. I can show him whole villages where house after house has the windows boarded up and the occupants have gone to the United States, to Gloucester and Boston. Yet the hon. member, along with other members of the government, talks glibly of prosperity. For one thing I thank God, and that is that I cannot talk glibly of prosperity while my people are enduring hardships. The industry is one which is crying for bread, one which requires governmental direction and policy, if any industry ever did so.

Mr. HANSON: The government gave them a royal commission.

Mr. ERNST: That is not an end; it is only a means to an end. What has the industry got in this budget? Let us examine the proposals one by one. Of the items which are reclassified in the schedule filed by the Minister of Finance, there are six which directly affect the fishing industry. The first item is oakum, which enters into the caulking of boats and of ships. This was duty free before and it is free now. The second item is sails for boats and vessels and the duty on those is absolutely unchanged. The third item is sail twine and in this there is a reclassification. The duty under the British preference is lowered by some five per cent, and the duty under the general tariff is raised by some five per cent. The fourth item is oil clothing, in which I believe there is a general reduction of five per cent under the British preference and the intermediate tariff. A peculiar feature about that is that the larger portion of the oilclothing used by fishermen in Nova Scotia at least, is manufactured in that province, and if there is any cut in price, it will affect an industry which that province is struggling to maintain. The fifth item is aluminum

floats. I will confess that when I read that the duty on aluminum floats was to be removed, I thought, as the cut was substantial, the fishermen were going to derive a real benefit. I had spent most of my life along the shore and I had never seen an aluminum float, but I thought someone else might have and so I sent a telegram to the president of the fishermen's association at Canso in the county of Guysborough, Nova Scotia. That gentleman has spent his life on the sea; he has fished both in this country and out of Gloucester, and this is the telegram which I received from him:

Aluminum floats not used in this part of the province. Never heard tell of them, never saw them.

Possibly the government is in advance of the times and is endeavouring to introduce them, but it will certainly be a change if it is.

The last item under the tariff affecting fishermen relates to gasoline engines and engine parts for fishing boats. The reduction is five per cent under the British preference, twelve and one-half per cent under the intermediate tariff and twelve and one-half per cent under the general tariff. That again looked like a substantial reduction, but I draw the attention of the house to the fact that the reduction is not on engines but only on the complete parts of engines. Engines were formerly admitted at the same rate at which these parts are now being classified, so that the net result is that this change can benefit only those who have engines made outside of this country and who require complete parts for them. It is a matter of ordinary deduction that if this is going to be of any great benefit to the industry, there must be a substantial number of these engines. I took the trouble to look into the figures and I found that there are in Nova Scotia about 6,200 gasoline engines in use in fishing boats. I found further, upon investigation from a reliable authority, that less than fifteen per cent of those engines had been manufactured outside of Canada. Therefore any benefit that would accrue would be to less than nine hundred people who own the nine hundred engines constituting less than fifteen per cent. I was amazed to find that practically all those nine hundred engines had been manufactured by a United States company which has ceased to do business in that particular type of engine, and carrying my investigations one step further I found that gasoline engines manufactured in Nova Scotia sell to-day for less than those manufactured in the United States. That is another of the benefits handed to the fishermen of the maritime provinces.

Mr. RALSTON: Has the hon. gentleman not had strong representations from the fishermen of Nova Scotia asking that engine parts be put in the same category as engines with regard to duty?

Mr. ERNST: I was an attendant upon the royal commission for probably three-quarters of their sittings in Nova Scotia. The other quarter I was not present. As I recollect, only one individual, Mr. Daniel Fleet at Louisburg, asked for any reduction. Others may have done so, but I have no knowledge of them. I am not complaining about the reduction; what I am pointing out is that to an industry which is crying out for bread, this government is giving nothing but a stone. This industry requires assistance and this is only a gesture, a mere nothing. The fishing industry in Nova Scotia is in a difficult state. In a year of reclassification it was looking to the Minister of Finance to make some changes in the tariff, and one of the changes for which it was looking was a reclassification of the tariff item relating to the present duty on fish. There is to-day a duty of one-half cent per pound on fish imported into this country, or on fish landed, other than those caught by fishermen in Canadian fishing vessels. To put this in another way, the man who fishes in Canadian fishing vessels lands his fish in this country duty free; all others are expected to pay a duty of one-half cent per pound. The fleet in Nova Scotia consists of eleven trawlers manned by about 250 men and of about 15,000 odd fishermen who fish by hook and line. Of the eleven trawlers, five are or purport to be owned in Nova Scotia and six are owned outside of this country. Those six trawlers may not always be the same six because they come and go. They return to the country whence they came and others come here, but not one trawler coming from outside of this country has ever paid a fraction of a cent of duty on any fish landed by her in Nova Scotia. I was amazed to find this out, and when I wrote to the department asking why such was the case, I was informed that these fish were being landed duty free because the Department of Justice had given a ruling that a ship coming from abroad and chartered to a Canadian company was a Canadian fishing vessel. I know that in its application this is applied largely to trawlers coming from Great Britain and flying the British flag, but I should like to point out to hon. members that the provision in the customs tariff is that only fishermen who fish in Canadian fishing vessels can land their fish in Canada duty free. In other words, the word "Canadian" has a distinctive meaning; it means Canadian and nothing else;

it does not mean British. To carry it to its logical conclusion, let us say that a Norwegian fishing boat comes over here and is chartered to a fishing firm in this country. Under the ruling of the Department of Justice she would be equally entitled to land her fish duty free. Now how can she be a Canadian fishing vessel when under the Merchant Shipping Act and in accordance with international law she is still a Norwegian boat? But even assuming that the Justice department were right when they ruled her to be a Canadian fishing boat, there is another consideration.

The officials of the Department of Marine and Fisheries know, or they ought to have known, that those boats are not chartered at all. What is done is this, that the corporation —there were three, and two have latterly been concerned in the province of Nova Scotia— does not enter into a charter in the ordinary sense of the word, but it enters into an agreement to purchase the fish which that trawler may land at a certain pre-determined price. For instance, during the month of October they may agree to pay two cents a pound for the fish landed at a certain port. The trawler goes where she will, she comes and goes as she will, she is complete mistress of her own destiny, except that she knows when she lands her fish she is going to get a certain price for them. So there is no charter in the sense in which the word charter is understood legally. There is subterfuge and evasion. All the fish landed by these trawlers should have been subject to duty. They have been taking bread out of the mouths of Nova Scotia fishermen for years to the knowledge—at all events the department ought to have had that knowledge—of the Department of Marine and Fisheries and the Department of Customs.

Mr. STEWART (Edmonton): Are these chartered Canadian companies in Nova Scotia, that is, the companies that purchase the fish?

Mr. ERNST: I believe that two hold Nova Scotia charters, and as to the third, I do not know whether it has a Dominion or a Nova Scotia charter. But I do know this, that in their relationship with these trawlers there is no charter party in the sense in which a charter is understood. Those trawlers are controlled entirely by the foreign agent who resides in Nova Scotia and pays the men. They have no connection with the company whatsoever. Sometimes it is true the English company, or the company which sends the trawler to this country, sets up a man of straw, a Canadian, to whom they charter the vessel, and the Canadian then enters into an agreement with the fish company, but that is all done for the purpose of evasion of the Customs Act, and amounts in substance to defrauding the people of Nova Scotia, particularly the fishermen, of the living which is coming to them. These six trawlers catch the equivalent of what roughly twenty-five hundred fishermen would do, so practically twenty-five hundred fishermen have been deprived of their living year in and year out through the illegal action of these trawlers which have been landing their fish duty free.

I wish to say to the Minister of Finance that the first thing which the fishermen of the province of Nova Scotia are interested in is this: They are interested in having that abuse righted. This was a year of tariff reclassification, and they may very properly have expected the Minister of Finance in his broad reclassification to include this item 9 under the customs tariff, so as to compel these trawlers which come here for a season and then go to pay the duty which they ought to pay when they land their fish in Nova Scotia.

Mr. RALSTON: Do I understand my hon. friend suggests there are some companies which have merely a nominal charter or an arrangement which is not a charter? Will he kindly give the names of those companies?

Mr. ERNST: I shall not divulge the names of those companies on the floor, but I will say to the hon. member that if he will look up the evidence of Mr. Wilson given at the hearing of the fisheries commission held in Halifax he will find there evidence which will substantiate everything I am saying:

Mr. RALSTON: That is S. Y. Wilson?

Mr. ERNST: Yes; the hon. gentleman knows to whom I refer. I say further to the Minister of Finance that there will be disappointment over the whole coast line of Nova Scotia that the government apparently has not had the courage to grapple with this problem. The inference will be drawn, rightly or wrongly, that it has not had the courage because the officials of these companies support this government. That may be a wrong inference; I hope it is, but I do hope for the sake of the fishermen of Nova Scotia that some redress will be given during the present session.

I fear that it is going to be too late to have an adequate discussion of the report of the fisheries commission when it is tabled, but I do urge upon the government that immediate action is necessary. We are going to lose large numbers of our men to the United States during the coming summer unless something is done. Something must be done,
