House of Commons Debates

OFFICIAL REPORT

Thursday, January 26, 1928

SECOND SESSION—SIXTEENTH PARLIAMENT—OPENING

The parliament which had been prorogued from time to time to the 26th day of January, 1928, met this day at Ottawa, for the despatch of business.

The house met at three o'clock, the Speaker in the chair.

Mr. SPEAKER read a communication from the Governor General's Secretary, announcing that His Excellency the Governor General would proceed to the Senate chamber at three p.m. on this day, for the purpose of formally opening the session of the Dominion parliament.

A message was delivered by Major A. R. Thompson, Gentleman Usher of the Black Rod, as follows:

Mr. Speaker, His Excellency the Governor General desires the immediate attendance of this honourable house in the chamber of the honourable the Senate.

Accordingly the house went up to the Senate chamber.

And the house being returned to the Commons chamber:

VACANCIES

Mr. SPEAKER: I have the honour to inform the house that during the recess I received communications from several members, notifying me that the following vacancies had occurred in the representation, viz.:

Of the Hon. James Kidd Flemming, member for the electoral district of Victoria-Carleton, by decease, and of George Spence, Esquire, member for the electoral district of Maple Creek, by resignation.

I accordingly issued my several warrants to the Chief Electoral Officer to make out new writs of election for the said electoral districts, respectively.

NEW MEMBERS

CERTIFICATES OF ELECTION

Mr. SPEAKER: I have the honour to inform the house that the Clerk of the house has received from the Chief Electoral Officer certificates of the election and return of the following members, viz.:

Of Albion Roudolph Foster, Esquire, for the electoral district of Victoria-Carleton.

Of George Spotton, Esquire, for the electoral district of North Huron.

Of William George Bock, Esquire, for the electoral district of Maple Creek.

INTRODUCTION

Albion Roudolph Foster, Esquire, member for the electoral district of Victoria-Carleton, introduced by Right Hon. W. L. Mackenzie King and Hon. P. J. Veniot.

George Spotton, Esquire, member for the electoral district of North Huron, introduced by Hon. R. B. Bennett and Hon. Hugh Guthrie.

William George Bock, Esquire, member for the electoral district of Maple Creek, introduced by Right Hon. W. L. Mackenzie King and Hon. W. R. Motherwell.

OATHS OF OFFICE

Right Hon. W. L. MACKENZIE KING (Prime Minister) moved for leave to introduce Bill No. 1, respecting the administration of oaths of office.

Motion agreed to and bill read the first time.

GOVERNOR GENERAL'S SPEECH

Mr. SPEAKER: I have the honour to inform the house that when the house did attend His Excellency the Governor General this day in the Senate chamber, His Excellency was pleased to make a speech to both houses of parliament. To prevent mistakes I have obtained a copy, which is as follows:

Honourable Members of the Senate:

Members of the House of Commons:

It affords me much pleasure to meet you at the commencement of another session of parliament and to be able to congratulate you upon the marked prosperity of the country. The volume of trade and of building construction, the growth in employment, the increased railway receipts, the expanding revenues, and business conditions generally, all bear testimony to a sound economic development which promises much in the way of substantial progress.

The celebrations of the sixtieth anniversary of confederation, held during the past summer, were of a memorable character. They evoked in all parts of the Dominion a spirit of national pride and patriotism. Related to the commemoration. and outstanding among the events of the year, was the visit of Their Highnesses the Prince of Wales and Prince George, and the Prime Minister of Great Britain. The welcome everywhere accorded the representatives of the Royal Family and the representative of the British parliament evidenced the strength of the ties which unite in a common allegiance the members of the British commonwealth of nations.

Striking recognition has been accorded Canada's position in the League of Nations through the selection of Canada by the assembly to a non-permanent seat on the council of the league.

As contemplated by the conclusions of the Imperial conference of 1926, provision was made on July 1 for direct communication between His Majesty's government in Canada and His Majesty's other governments of the British Empire. The further implementing of these conclusions which aim at more effective consultation through personal contact by the appointment to Canada of a representative of His Majesty's government in Great Britain is being discussed between the Secretary of State for Dominion Affairs in Great Britain, who is at present in Canada, and members of my government. By agreement between the governments of France and Canada and the governments of Japan and Canada it is proposed that each of these countries shall be represented in the other by a minister plenipotentiary.

Following the announcement made during the last session of parliament, a conference was convened at Ottawa in November between the Dominion government and the governments of the provinces of Canada. It is the opinion of my advisers that this conference proved of the utmost value in facilitating a full and free exchange of views between the participating governments on problems of mutual interest and concern. Your attention will be invited during the present session to some of the more important matters discussed at the conference.

As a result of the Dominion-Provincial conference, my advisers have decided, pending a complete revision of the financial arrangements as contemplated by the Duncan report, to recommend the continuance to the maritime provinces of the money grants made at the last session. In the light of the discussions at the conference, my ministers are continuing negotiations with the prairie provinces for the return of their natural resources and are giving consideration to the restoration to the province of British Columbia of the lands of the railway belt and the Peace River block. Consideration is also being given to the railway problems of the several provinces, as outlined at the conference.

The work of reconditioning that portion of the Hudson Bay railway previously constructed has been finished. After most careful examination and consideration, and upon the best advice obtainable, Churchill has been selected as the ocean terminus of the Bay route. A contract has been let for the grading and bridging of the railway extension to Churchill and preparations looking to the establishment of the necessary harbour works there are well advanced.

There has been a substantial increase in the number of British immigrants as well as in the number of immigrants of a suitable type from the continent of Europe. Steps have been taken towards closer co-operation with the provincial governments in land settlement, placement and supervisory work. Several provincial centres have already been established for the reception and distribution of British youths for agricultural work, and a constructive settlement scheme has been put into force for settlers of this class.

The opening of new territory by the construction of branch lines of railway is proceeding rapidly, and is providing wider opportunities for settlement.

Harbour commissions have been established at the ports of St. John and Halifax. This, it is expected, will facilitate and expand the movement of traffic through Atlantic seaports. The volume of trade at other Canadian ports during the past season has increased. In grain shipments, the port of Montreal attained a pre-eminent position among world ocean ports.

Much progress has been made in the development of aviation in the Dominion. An organization has been established for the administration of civil aviation, distinct from that of the air force. To assist in the development of transoceanic air routes, a site for an airship base has been purchased near Montreal. An airship mooring tower will be erected and a public air terminal for aeroplanes provided.

In the postal service the year has been marked by the inauguration of an air mail service between Rimouski and Montreal.

Satisfactory progress has been made in the organization of the Department of National Revenue. The final report of the Royal Commission on Customs and Excise will be presented immediately for your consideration, and legislation based upon the report will be introduced.

It is proposed to amalgamate the Departments of Health and Soldiers' Civil Re-establishment in a single department of National Health and Veterans' Welfare.

A proclamation has been issued bringing the revised statutes of Canada into force on the first day of February, and copies of the new revision will be available for the present session.

Among other important matters to which your attention will be invited will be measures providing for more favourable trade relations between Canada and certain foreign countries, and for substantial assistance to and improved facilities for industrial and scientific research.

Members of the House of Commons:

The public accounts for the last fiscal year and the estimates for the coming year will be submitted at an early date.

Honourable Members of the Senate:

Members of the House of Commons:

In again inviting your careful consideration of the important matters which will engage your attention, I pray that Divine Providence may guide and bless your deliberations.

Right Hon. W. L. MACKENZIE KING (Prime Minister) moved:

That the speech of His Excellency the Gorvernor General to both houses of parliament be taken into consideration on Friday next,

and that this order have precedence over all other business, except the introduction of bills, until disposed of.

Motion agreed to.

LEADER OF THE OPPOSITION

CONGRATULATIONS EXTENDED TO MR. BENNETT —TRIBUTE TO MR. GUTHRIE

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, with your permission, and the permission of the house, I should like to take an early opportunity to extend my congratulations to the hon. member for West Calgary upon his selection last October as leader of the Conservative party, and upon his assumption in the House of Commons to-day of the office of leader of His Majesty's loyal opposition. Hon. members on this side join very heartily with hon. gentlemen opposite in the welcome which has been extended to my hon. friend on his return to the House of Commons in his new capacity. May I also, as leader of one of the old political parties in Canada, extend to the Conservative party, its traditional opponent, our congratulations upon its choice of a new leader.

The position of leader of a political party, especially when that office is combined with the position of leader of the opposition in the House of Commons, is a very high and honourable position, implying as it does great confidence on the part of one's fellow men, large opportunities of public service, and the discharge of heavy responsibilities. Contrasted with the position of leader of the government, it differs in degree rather than in kind. The position of leader of the opposition requires on the part of the one who fills it a combination of qualities that in many respects is rare. It demands a wide knowledge of public affairs, the ability to criticize boldly and yet justly, and with discrimination, constructive suggestion, an intimate acquaintance with parliamentary procedure, and a disposition to co-operate in the conduct of public business. I am sure all hon. members will agree with me when I say that the hon. member for West Calgary, through his natural endowments, his exceptional training, his ripe scholarship, his high legal attainments, his comprehensive grasp of business affairs, and his wide political experience, possesses in a very marked degree the qualities necessary for the position which he now occupies. I wish to assure him that in the discharge of its duties—the importance and difficulties of which, I perhaps better than any other hon. member am able to appreciate and understand —he will, at all times, have my best wishes. It is too much to expect that my hon. friend and I will agree on all matters of policy—we shall certainly differ considerably in regard to many things—but I am quite sure, Mr. Speaker, we shall be in full accord in the desire to cooperate with Your Honour in upholding and preserving those ancient and honourable traditions of parliamentary usage which help so much to lend dignity and authority to the proceedings of parliament.

May I take advantage of the present occasion to speak of the service rendered this house during the last session by the hon. member for South Wellington (Mr. Guthrie). Speaking on behalf of the government, I wish to say that we all realized the difficult and trying position in which in many respects he was placed in undertaking for a single session the temporary leadership of his party. Nevertheless it will I think be conceded by all that his tact and courtesy, his judgment, and his wide experience in parliamentary practice were such as to cause his services to be of the utmost value in enabling the business of the house to be conducted expeditiously and with a due regard to all essentials; and were also of a character to merit for my hon. friend, the thanks of parliament, which, on its behalf, I should like now to extend to him.

Mr. ROBERT GARDINER (Acadia): Mr. Speaker, may I be permitted at this juncture to offer the hon. member for West Calgary (Mr. Bennett) our congratulations on his elevation to the position which he now occupies? We who come from Alberta are most appreciative of the fact that the Conservative party selected as its leader one of its members from our province. This will probably create a very strong sentiment between eastern and western Canada. It is quite true that we in the west have been to some extent suspicious of eastern Canada; but when a great party such as the Conservative party comes to the province of Alberta for the purpose of selecting its leader, we appreciate the sentiment implied by the choice.

I am sure the hon. member for West Calgary possesses the qualifications for the position. The group with which I am associated do not believe very much in political parties, but so long as the Canadian people desire to have political parties and an official opposition such as we have at the present time, there must be a leader and the Conservative party have made a splendid choice in selecting the hon. member for West Calgary. We are of opinion that cooperation in parliamentary work is just as essential to the welfare of the Canadian people as is

co-operation in other lines of endeavour. The sentiment so gracefully expressed by the Prime Minister in relation to the hon. gentleman and the great honour which has been conferred upon him will, I am sure, be shared by every hon. member of the house.

I was delighted to hear the Prime Minister make reference to the hon. member for South Wellington (Mr. Guthrie). While I have been a member of this House for only a few years, I noticed a great difference in the temper of the House last session primarily due to the very able leadership of the hon. member for South Wellington. It is not for me of course to advise the hon. member for West Calgary; but I would merely remind him of the splendid attitude which the temporary leader assumed last year and may we hope that he will follow in the footsteps of that hon. member. It will be an honour and glory to this country if the hon. member does so.

Hon. R. B. BENNETT (Leader of the Opposition): Mr. Speaker, I desire both on my own account and on behalf of those who are associated with me, who sit to your left, to express our very sincere thanks to the Prime Minister for the kindly words of congratulation that he has been pleased to utter with respect to my election, or possibly I should say selection as leader of the opposition and election as leader of the Conservative party. By my election to an office that has statutory recognition as part of the machinery of parliament and of government I recognize that I have assumed grave responsibilities and undertaken great duties. The very observations which the Prime Minister has addressed to the House but bring to my mind my own defects for the discharge of these duties. But I shall do my very best conscious that the spirit which actuated the right hon. gentleman in making the observations that he did is a spirit that I have found in every part of Canada since October last, a spirit of great kindness and consideration for a fellow citizen who, the people believe, has undertaken grave and serious responsibilities with a desire to be of some service to the country in which he lives.

I think I am right in saying that no man has been more kindly received by his political opponents and no man has received greater kindness from the press of this country than has the leader of the opposition since October last. That in itself indicates the fundamental kindness of human nature and the really serious desire there is on the part of the people to express their sympathetic consideration for those who undertake great public responsibilities.

I can only further say that under our system of government the duty of an opposition is a very important one. Fearless and courageous criticism must always be tempered with constructive suggestion and a desire that, whatever may happen, the opposition itself may serve some useful purpose in the direction of the affairs of the country and to that end I will devote my best energies. I am sure that represents the attitude of mind of all those who are associated with me in the discharge of public duties and obligations.

I should like again to thank the Prime Minister for his suggestion that we may be able to maintain the high traditions of parliament. Courtesy in debate, reverence and respect for constituted authority as represented by you, Sir, and regard for the rulings of the chair, conferences, mutual understandings, regard for the point of view of one another—all these things will tend to expedite the transaction of public business and are not inconsistent or incompatible with the maintenance of the high policies and, shall I say, the high policy of the great party which I have the honour to represent and the enunciation of them from the floor of this chamber. Keeping that in mind I shall endeavour to discharge the duties of the difficult task which I have undertaken with a desire to be of some service to Canada and to make it easier, I trust, to conduct public business than if we took a merely partisan view for the purpose of interposing objections and opposition for its own sake. That, Sir, we will not do. I can only make that promise to the house, to you, Sir, and to my hon. friends opposite. I trust the relations which have thus been so auspiciously opened between the government and His Majesty's loyal opposition may be long continued, and if the fortunes of war change the position of the parties I know the right hon. gentleman who now leads the government will approach the discharge of his duties in the future in the same high spirit which he displayed in 1919 when he found himself in the position which I now occupy.

Hon. HUGH GUTHRIE (South Wellington): Mr. Speaker, I regret that at the moment the Prime Minister rose I was occupying not my own seat but the seat of another member in this chamber. I am glad indeed that I was in the chamber at the time and I rise now merely to express to the Prime Minister my very sincere thanks for the kind and all too complimentary remarks he made in regard to my conduct during the past year.

when I occupied the position of temporary leader of His Majesty's loyal opposition.

I also appreciate very highly the kind words which fell from the lips of the hon. member (Mr. Gardiner) who leads the Progressive group in this chamber. I do not know that I can do more than thank my right hon. friend the Prime Minister, the leader of the Progressive group and those members of the House who have joined so heartily in the language of approval of the leader of the house.

SELECT STANDING COMMITTEES

Right Hon. W. L. MACKENZIE KING (Prime Minister) moved:

That a special committee be appointed to prepare and report with all convenient speed, lists of members to compose the select standing committees of this House under rule 10, said committee to be composed of Messieurs Casgrain, Forke, Hanson, King (Kootenay) and Stewart (Leeds).

Motion agreed to.

INTERNAL ECONOMY COMMISSION

Right Hon. W. L. MACKENZIE KING (Prime Minister) presented the following message from his Excellency the Governor General:

The Governor General transmits to the House of Commons a certified copy of an approved minute of council appointing the Honourable W. R. Motherwell, Minister of Agriculture, the Honourable J. H. King, Minister of Health and Soldiers' Civil Re-establishment, the Honourable J. C. Elliott, Minister of Public Works, and the Honourable Fernand Rinfret, Secretary of State, to act with the Speaker of the House of Commons, as commissioners for the purposes and under the provisions of the eleventh chapter of the revised statutes of Canada, 1906, intituled "An Act respecting the House of Commons."

DEPUTY SERGEANT-AT-ARMS

Mr. SPEAKER: I have the honour to inform the house that the Sergeant-at-Arms, with my approval, has appointed Edouard Taschereau, Esquire, to be his deputy during the present session of parliament.

ADJOURNMENT

DOMINION-PROVINCIAL CONFERENCE

Mr. MACKENZIE KING moved the adjournment of the house.

Mr. BENNETT: Before the question is put, Mr. Speaker, may I inquire from the right hon. the Prime Minister if the report of the Dominion-Interprovincial conference might be made available to us before Monday?

Mr. MACKENZIE KING: I do not know whether my hon. friend has learned of the understanding that was reached at the time the conference took place. The understanding with the provinces was that a record would not be kept of the proceedings. It was felt that there might be more in the way of frank discussion if the proceedings were not reported from day to day, and if members could feel free to express their views without everything that was said being taken down in a way that might tend to bind them literally to the point of view as expressed at the moment. There is, as a consequence, no report of the conference as such. For the purposes of the government, a record was kept of the meetings and of those who attended, but that report is not of a nature which I think would serve any useful purpose in parliament.

I should say to my hon. friend that the proceedings of the conference from day to day were given to the press in the form of statements which were prepared or authorized by representatives of both the federal and provincial governments. These statements I think hon. members have already seen.

Motion agreed to and the house adjourned at 4.20 p.m.

Friday, January 27, 1928

The house met at three o'clock.

CUSTOMS INQUIRY COMMISSION

Right Hon. W. L. MACKENZIE KING (Prime Minister): I beg to lay on the table of the house copy of the final report of the Royal Commission on Customs and Excise. I move, seconded by Mr. Dunning, that 1,200 copies in English and 400 copies in French of the said report, be printed forthwith and that standing order No. 64 be suspended in relation thereto.

Motion agreed to.

CANADIAN NATIONAL RAILWAYS

PACIFIC GREAT EASTERN RAILWAY

On the orders of the day:

Hon. S. F. TOLMIE (Victoria): Have negotiations taken place, or are negotiations now pending, for the acquisition of the Pacific Great Eastern railway by the government of Canada or by the Canadian National Railways?

Hon. CHARLES DUNNING (Minister of Railways): I think my hon. friend might give me notice of that question in order that I might give it some consideration before answering.

GOVERNOR GENERAL'S SPEECH

ADDRESS IN REPLY, MOVED BY MR. ILSLEY AND SECONDED BY MR. BEAUBIEN

The house proceeded to the consideration of the speech delivered by His Excellency the Governor General at the opening of the session.

Mr. J. L. ILSLEY (Hants-Kings) moved:

That an address be presented to His Excellency the Governor General, offering the humble thanks of this house to His Excellency for the gracious speech which he has been pleased to make to both houses of parliament.

He said: In rising to move the address I wish first of all, not only in deference to custom but in all sincerity, to express my gratitude to the Prime Minister (Mr. Mackenzie King) and his colleagues for the compliment which they have so very kindly paid my constituency in asking me to move the address in reply to the speech from the throne. I have the honour to represent the two counties of Hants and Kings in the province of Nova Scotia, counties which include within their borders the greater part of the orchards of the Annapolis valley, the fertile dyke lands of Cornwallis and Horton reclaimed by the Acadians from the sea nearly three centuries ago, and many spots which are sacred to lovers of history, including the town of Windsor, built at the meeting of the waters, and the beautiful land of Evangeline, with its haunting memories of the past.

My constituents are for the most part farmers, typical Nova Scotians, proud of their counties and of that province which was referred to by the writer of a recent book on the province of Nova Scotia as the "sea beaten, mistmantled, valley cloven, many watered, green garmented province of Canada which fronts the Atlantic and the rising sun."

One of my duties in moving this address is to express the gratification which we in the province of Nova Scotia, in common with those in other parts of Canada, feel at the rapid acceleration which has taken place in the material progress of Canada during the past year. Canada is prospering; we no longer talk of being on the eve of prosperity; we are enjoying prosperity. That prosperity has been briefly mentioned in the speech from the throne, and is more fully dealt with in the reports or addresses which have been presented by the presidents and general managers of the great Canadian banks to their shareholders during the last few weeks. These addresses tell the story of a greater progress than has ever before been experienced in the history of Canada, a greater prosperity than Canada has ever enjoyed.

The year 1927 saw the greatest building program since pre-war days, resulting in the erection of houses, factories and industrial and power plants in all parts of the Dominion. Last year also saw greater activity and interest in mining than at any previous time in the history of Canada. Immigration during the past year has greatly increased, particularly immigration of British settlers and those of the best European stocks, while on the contrary, emigration which has in past years presented a problem of importance has decreased. National taxation has been reduced from time to time during the past few years, but while that reduction has been effected the national debt has been very greatly and spectacularly reduced as well. During the past year there were substantial and in many cases unexpected increases in savings bank deposits, in the amount of money invested in life insurance, in trade with foreign countries, in the value of Canadian securities, in the earnings on Canadian industrial stocks, in the value of Canadian field crops, in car loadings and in the gross revenue of the Canadian National Railways. At the same time, unemployment was considerably lessened and the demand for labour has increased. Indeed, the condition of the country has been so satisfactory, from the standpoint of material progress and prosperity, that an hon. member of this house, an acknowledged authority, writing in the Montreal Gazette's Commercial and Financial Review for the year 1927, on January 7 of this year, had these striking words to say:

Canada has never before enjoyed a year of so general progress and prosperity as that of 1927. Production, distribution, manufacturing, transportation and foreign commerce exceeded all previous records, and while there was a slowing down here and there in the last quarter of the year, the relapse was slight and not such as to excite apprehension. Labour was fully employed at wages higher, relatively to the peak, than the cost of commodities, giving to artisans and mechanics a substantal surplus of earnings to be employed either in bank deposits, investments, or a higher standard of living.

This is very gratifying to all Canadians, and we consider it all the more remarkable when we recall that less than two and a half years ago a large part of the population of every province of Canada, from the Atlantic to the Pacific, was predicting financial ruin

and industrial disaster unless a radical change took place in the trade policies of Canada, a change which has not been made.

In discussing the question of Canada's prosperity, Mr. Speaker, there is one unfavourable feature which should be mentioned, and that is the fact that this prosperity has not been as evenly distributed as might have been the case, or as we would have liked to see it. I am not now referring particularly to the distribution as between classes in the community, although a good deal could be said as to that; I am referring to the territorial distribution of prosperity in which the people in the maritime provinces, unfortunately, have been slow to share. For that condition of affairs there are many causes, most of which are beyond the control of any government. I wish, however, to mention just one cause, which is not at all original since it has been mentioned in this house many times, but nevertheless a very real reason for the tardiness on the part of the maritime provinces to share in the prosperity of Canada. That cause is the lack of markets for agricultural products in that part of the Dominion.

It may be difficult for people who live in the central part of Canada, in close proximity to the great cities which furnish such an admirable market for their products, to understand the difficulties which confront the farmers of the maritime provinces. They are not near large cities and have to depend to a very large extent on foreign markets for their products. It is true that since the passage of legislation last session in connection with freight rates we have been able to ship our products a little further west, and in a few instances a good deal further west into our Canadian markets, but still we have to depend to a very large extent upon foreign markets.

I venture to say that in the western part of Nova Scotia, and in other parts of the maritime provinces similarly situated, one sentence in the speech from the throne will offer as much hope as anything else. The sentence to which I refer is:

> Among other important matters to which your attention will be invited will be measures providing for more favourable trade relations between Canada and certain foreign countries.

If I may be permitted to do so I would like to make a concrete suggestion to the government and in particular to the Minister of Finance with regard to the extension of foreign markets and the improvement of Canada's trade relations with foreign countries. I would say: Do not forget the agricultural producers of the maritime provinces, and in particular do not forget the apple growers of Nova Scotia, who are now shut out of the German market, which is an exceedingly valuable market, by prohibitive duties while apples grown by their American competitors are permitted entry under favoured nation treatment.

I would also remind you of the potato growers of the maritime provinces; within the last two months Cuba has placed an almost prohibitive tariff on Canadian potatoes, with disastrous results as far as the price is concerned, while as in the other instance American potatoes are admitted at lower rates. In other words, nothing would be more appreciated in the maritime provinces than trade treaties with Germany and Cuba which would remedy these evils. I know that in negotiating these trade treaties the country with which you are negotiating requires a quid pro quo, and other interests in the Dominion might be adversely affected, but I am pleading for the producers of agricultural products in the maritime provinces, and I feel that if my suggestions could be carried into effect the benefit which they would derive would be very great.

I would not like this house to infer that conditions in the maritime provinces are by any means hopeless; that is far from the case. In the province of Nova Scotia very great progress has been made in many directions during the past year. The production of coal has increased very materially, and the action of the Dominion government in appointing a royal commission to investigate conditions in the fishing industry and bring in recommendations for the improvement of conditions has been a great encouragement to the fishermen of the maritime provinces. In addition to that the production in many lines of agricultural endeavour has increased quite considerably. There is also a revival of interest in mining in Nova Scotia and the other maritime provinces as well, which in itself is very promising.

No reference to conditions in the maritime provinces would be complete without a word of appreciation for the loyal, honourable, and generous way in which the government of Canada has carried out and is carrying out the recommendations made by the Duncan commission. In November of last year we had a Dominion-provincial conference in this city, and that conference was of inestimable value in making clear the viewpoints of the various parts of Canada both to the Dominion government and to each other. In particular, perhaps as a result of that con-

ference, the Dominion government have determined to continue the increase in subsidies which they granted as a temporary measure in the year 1927. Thus we are encouraged to believe that this increase in subsidies to the maritime provinces will be a permanent feature of our fiscal system. This assistance is in accord with the recommendations of the Duncan commission, and is greatly appreciated in the maritime provinces.

Another recommendation of the Duncan commission has been put into effect: I refer to the legislation with respect to coking plants. Private companies are already beginning to take advantage in a small way of this legislation, which will have the effect of stabilizing and to some extent enlarging the market for Nova Scotia coal.

Another important fact is the appointment of a harbour commission for the city of St. John, which is already functioning energetically and successfully. Harbour commissioners have also been appointed for the city of Halifax, and it is hoped that this body will give some degree of direction and unity to the efforts of the people of that city to improve existing conditions. At the present time there are so many disputes and differences of opinion between persons occupying important positions in Halifax as to what should be done along certain lines—for example in the matter of encouraging the grain export trade—that we in other parts of Nova Scotia are inclined, perhaps, to have less respect than we otherwise should for the legitimate aspirations of the people of that great port.

The most important and far-reaching measure enacted last session as a result of the findings of the Duncan commission was, of course, that relating to maritime freight rates. This has been of very great benefit to shippers not only along the line of the Canadian National railways, but also along the line of the Canadian Pacific railway in the province of New Brunswick, and its subsidiary, the Dominion Atlantic railway, in the province of Nova Scotia. The Canadian National Railways have been very severely criticized recently by the Premier of New Brunswick in speeches which he made in the cities of Montreal and New York. In that regard I would say that there are many people in the maritime provinces who do not associate themselves with immoderate and hysterical denunciations of the Canadian National Railways. We in the maritime provinces feel that if we were to be judged by the speeches which have been made by the Premier of New Brunswick our legitimate requests would meet with scant recognition or notice. Moreover, we know, just as people in other parts of Canada know, that we owe a duty to the management of the national system. Our duty in the first place is to refrain from petulant abuse when we do not get everything we want. A further and a positive duty devolves upon us, and that is to lend our support in every way possible to the management of the national system in their efforts to make the system what it ought to be, namely, a self-sustaining asset of this dominion.

I have been discussing the relations of the maritime provinces to the rest of the Dominion at much greater length, perhaps, than I should. Now let me say just a few words regarding the relations of Canada to the empire. During the past year we celebrated the sixtieth anniversary of confederation. These celebrations have revealed Canada to the world as a nation—young, self-reliant, forward looking, and animated in all its parts by very genuine love of the British connection and of British institutions. This was shown by the warmth and spontaneity of our welcome to their Royal Highnesses the Prince of Wales and Prince George, and to the Right Hon. Stanley Baldwin, Prime Minister of Great Britain, who were the guests of Canada a few months ago. At the present time we have the pleasure of welcoming here the Right Hon. Mr. Amery, Secretary of State for Dominion Affairs in the British government, who is now in Canada after having visited the dominions of Australia and New Zealand. In a day or two we shall also have the great pleasure and honour of welcoming here Mr. Cosgrave, president of the Executive Council of the Irish Free State. His visit here, it seems to me, is very fitting when we recall the fact that the constitution of the Dominion of Canada was taken as the model of the constitution of the Irish Free State. These are significant and happy events, and they remind us of the great experiment in statecraft which was initiated at the Imperial conference of 1926, and the working out of which began last year. The achievements of the Imperial conference of 1926, and of those who attended that conference, constitute one of the greatest triumphs of the genius of the British peoples for statesmanship that has ever been witnessed. The world has never seen anything like the British commonwealth of nations. In Canada it is true we have had, for sixty years and longer, two nationalities, racially separate, dwelling together in peace and unity, but the experience of other parts of the British Empire has not been nearly as favourable. We are all familiar with the history, the sad history, of Ireland. We are also familiar with the history of South Africa, where during the last

two decades conflicts have occurred between those who believe in separation from the British Empire and those who uphold the British connection. These conflicts at times have waxed so fierce as almost to make it appear that there could be only one outcome, namely, secession from the British Empire. The fact that representatives from these troubled dominions of Ireland and South Africa could sit at the same table with representatives from the Dominion of Canada, from the more purely Anglo-Saxon commonwealth of Australia, from Newfoundland, from the dominion of New Zealand, and from the mother country, and work out a declaration of principles satisfactory not only to one or two but to all these dominions and to the mother country as well, after which the President of the Irish Free State could go back to Ireland and there fight successfully for the British connection and the Premier of South Africa could go back to his country and tell his people that henceforward there was no further need to consider the question of secession—this fact goes to show how great was the achievement of the Imperial conference of 1926, and demonstrates that what was accomplished there was wrought in the spirit of true and lofty statesmanship.

The intimation in the speech from the throne that in the near future the British government is likely to have a representative here, that Japan and France propose to have representatives at Ottawa as well as Canadian representatives at their capitals, and the fact that Canada has been accorded by the assembly of the League of Nations a non-permanent seat on the council of that body, are of importance as indicating the development of the ideas and ideals promoted by the Imperial conference of 1926.

Now let me say a word about one other event which took place last year and which is of importance not merely to one political party but to Canada as a whole. I refer to the first national convention of the Conservative party which was held in the city of Winnipeg in the month of October last, and which was one of the most important events in the history of this country. My own observation has led me to the conclusion that many delegates who went to that convention with somewhat narrow views on national matters returned to their homes with their minds broadened and enlightened. In the province of Nova Scotia we have too often seen exhibitions of the most extreme sectionalism. During the last few years this government has been not only criticized but denounced and condemned in that province for its tariff policy, which was alleged to be in the interest only of the farmers of the west; for its construction of the Hudson Bay railway, and for the lowering of the transportation rates on western wheat. For example, one candidate, now a member of this parliament, put into his manifesto, issued on the eve of the election of 1926, these words:

> Western freight rates were lowered, taxes so changed and altered as to fall less heavily on western farmers, and millions of your money promised for a useless railway to Hudson Bay. We in this eastern province were crying for bread; we not only received a stone, but we helped, and are helping, to pay the bills for those princely gifts to others.

Fortunately for the unity of Canada the Liberal-Conservative party, in national convention assembled at Winnipeg, assumed a new and entirely different position and attitude in respect to these matters. By their resolutions they sanctioned the principle that necessaries of life and implements of production should be lightly taxed by the customs tariff; that the construction of the Hudson Bay railway should go forward; that the existing freight rates on grain and grain products should be maintained as a maximum. This I cannot help thinking is an indication that even the opposition is coming around, getting into line, and that henceforward it will be more constructive, more truly national in its efforts and activities.

Mr. Speaker, my speech would be incomplete did I not, as I do very heartily, extend my congratulations and the congratulations of this side of the chamber to the newly selected leader of the opposition in this house. As we all know he is thoroughly imbued with the high traditions of British parliamentary life and is prepared to devote himself to the public service. In this we hope that his efforts may result in the building of a progressively greater Canada.

Consequently, Mr. Speaker, I have the honour to move that an address be forwarded to His Excellency the Governor General to thank him for the speech which he so graciously delivered to both houses of parliament.

Mr. ARTHUR L. BEAUBIEN (Provencher) (Translation): Mr. Speaker, ever since the setting up of confederation a custom based on the terms agreed upon in the great federal pact requires that the address in reply to the speech from the throne be moved and seconded in both the official languages of this country. Every government has desired to acknowledge thereby the equality of the

two great races whose toils have cleared the land, civilized and made a greater Canada. They wished to convey the idea that they especially expected from the virtues and eminent qualities of these two races, the peaceful and united effort which will give to our country the marvellous expansion that the future has in store for it, and which will make it—as already foretold—the country of the twentieth century. The government went further. To second the motion for an address in reply to the speech from the throne, they might have chosen among the brilliant array of representatives from the province of Quebec. They however wished to extend this honour to the only member belonging to the French language elected west of the great lakes. They certainly desired to emphasize the fact that the Canadian of French origin is placed on an equal footing in this country and that the sons of the pioneers are everywhere at home in this vast Dominion. By inviting the comments of a French Canadian from the west, the government wished to show their trust in the various French settlements of the prairie provinces and convey the hope that the citizens of the French language would lend, in the development of this vast region, their powerful and peaceful co-operation. It is not therefore solely on my behalf that I wish to thank the government and congratulate them on their broad mindedness, but it is also on behalf of the French Canadian people who are, through my humble person, the recipients of this honour and token of appreciation that I wish to extend to the right hon. Prime Minister and his hon. colleagues the feelings of a sincere and deep gratitude.

Before commenting upon the speech from the throne, allow me, Mr. Speaker, to express our joy in seeing you looking always young and in such good health. Time rolls on without ever leaving any trace upon your features and each session we see you return ever ready to give with an untiring zeal, to our country and its representatives, the benefit of your great parliamentary experience, of your deep knowledge of our customs, laws and of your science in other spheres, as well as of your sense of fairness, of your personal prestige, vigour and great activity. Together with your friends and admirers to your right, sir, let me express the wish that you may retain for a long time to come the high office that you so honourably fill. I even believe that I express also the secret wish of those to your left, sir, for although all the members of the loyal opposition may desire a change of government, I feel certain that there are many among them who would regret a change in the speakership of the house.

[Mr. Beaubien.]

Since last session, the features of the loyal opposition have somewhat altered. In a great national convention held in Winnipeg, the Conservative party chose as leader, the hon. representative of West Calgary (Mr. Bennett). There is no need for me to speak in praise of the new leader. He is esteemed by all, and I have no doubt that, under his able leadership, the members who support him will co-operate with him in order that the present government may wisely direct the affairs of the country. The hon. member for West Calgary stands out very prominently at the head of the opposition forces and, I trust that, together with all his friends to your right, sir, he may fill this post for a long time to come.

The speech from the throne contains no high sounding statement. In a moderate language it testifies to the prosperous conditions of the country and states the intention of the government to continue in the path of material progress by ensuring national unity. First recalling the great celebrations which commemorated the sixtieth anniversary of confederation, they remind us also of the harmony and union which presided over the celebration and draw our attention to the growing feeling of national pride and patriotism existing among all sections of our people. This love of country in no way weakens the ties which bind us to the other parts of the empire, as evidenced by the warmth of our people's welcome to the Prime Minister of Great Britain. The merry-making of our people have once more revealed our unshaken and loyal attachment to the royal family and British crown. The cheering which welcomed the visit of their Royal Highnesses, the Prince of Wales and Prince George have fully set forth this attachment.

Canada's status was clearly enunciated at the Imperial conference of 1926. The report of the conference regarding the autonomous units of the British Empire contains the following passage:

> They are autonomous communities within the British Empire, equal in status, in no way subordinate one to another in any aspect of their domestic or external affairs, though united by a common allegiance to the crown, and freely associated as members of the British commonwealth of nations.

This new status giving us fully the rank of a nation in the world was acknowledged in a striking manner when our country was elected to a non-permanent seat at the council of the League of Nations. Canada may well be elated over it, we have also cause to be proud in having as our representative, at the council of the league, a man whose emi-

nent qualifications have been acknowledged by the diplomats the world over, and whose sound counsels have been sought after and appreciated by the leaders of the great powers. Indeed, Canada may rightly glory in the service and work of the hon. Senator Dandurand. Canada may now have direct diplomatic intercourse with other nations, and no doubt the government will avail itself of such a right wherever we have important interests to safeguard. Already Great Britain, France, Japan and other nations desire, following in the footsteps of the United States, to establish a permanent diplomatic service with Canada. These relations will contribute to emphasize our full national expansion and thereby draw to our free and autonomous country new citizens who will be prepared to benefit by our immense wealth and enjoy our peaceful national life. They will also attract capital of which we are so much in need.

The conference of the provincial prime ministers has laid down a firm foundation for that prosperity and peace which the labours of our citizens and of a sound administration ensures to a country disposing of such large resources as Canada. After having, for the sake of justice, requested the continuation of the subsidies voted to the maritime provinces at the last session, the provincial prime ministers, with the greatest freedom and frankness, scrutinized all the interprovincial questions, and the government, inspired by deliberations where were naturally exposed the various viewpoints, acquaint us with the necessary legislation destined to ensure the general welfare of the country, nevertheless taking into account the needs and legitimate aspirations of each province.

The return to the prairie provinces of their natural resources will be acclaimed by the population of the west as an act of justice, which will give them a new scope towards progress. In certain parts of the country, the prairie provinces are too much looked upon as a plain where the citizens have no other resources than that of the fertility of the soil. Moreover, in their opinion this fertility is subjected to many conditions which make the returns more or less uncertain. This is an entirely erroneous opinion, and should they be given possession of their natural resources, these provinces will prove to the remainder of Canada that they possess wealth which, by a more direct administration, will be able to supply some industries and give remunerating work to thousands of people.

The hon. members for Saskatchewan and Alberta will no doubt address you on the natural resources of their provinces. I shall therefore confine my remarks to a few sources of wealth in Manitoba. There is no need to discuss the fertility of its soil, which never fails to reward those who cultivate it, or of its dairy industry, its remarkable progress in poultry and bee raising or of its live stock trade. Manitoba has become highly reputed in these various spheres of agricultural industries, and what I might say would add nothing to what you already know. However, I wish to especially mention its mines and mineral beds still unworked. Who has not heard of its prosperous gold mines to the east of lake Winnipeg and to the north of the Pas? Their output is always on the increase and will continue so with better communications. There exist in those two districts mineral resources of all kinds. In the first rank is copper of which we possess the largest beds in the whole world; there is also to be found silver, nickel, iron, lead, zinc in sufficient quantities to attract capital and give very profitable returns. The famous mineral belt known as the Flin-Flon will soon be worked, thanks to the generous and willing co-operation of our Minister of Railways who had no hesitation in meeting the wishes of the Hon. Mr. Bracken, prime minister of that province, and with whom he came to an understanding which ensures the building of a railway which will serve that whole mining district. By the way, allow me, sir, to express my esteem for the Prime Minister of Manitoba who so energetically devoted himself to ensure the development of this new region. Mr. Bracken is aware of the untouched wealth of that district which he represents in the legislature, and he has faith in the spirit of enterprise and honesty of capitalists which this wealth will not fail to attract. Allow me also to extend to the hon. and sympathetic Minister of Railways for the Dominion the deep gratitude of the people of Manitoba for the strong co-operation which he gave to our provincial government in their endeavours to develop our province.

This railway will also facilitate the establishment of fisheries in this region still untouched and will at the same time open up new fields to settlers. I may add that Manitoba's sub-soil moreover contains deposits of gypsum, marble and of the beautiful stone which one admires in the interior of this building.

Allow me, Mr. Speaker, to congratulate the government and once more our energetic Minister of Railways, for the activity displayed in the completion of the Hudson Bay railway. The ocean port of Churchill will soon become, we hope, a great centre of

exportation which will economize millions to the western farmers, because the freight rates will necessarily be in proportion to the shorter haul.

Among the questions which the speech from the throne mentions, there is one of the utmost importance to which I want to draw your attention. It is the question of immigration. The co-operation mentioned in the speech from the throne between the Dominion government and the provincial governments cannot but produce good results. The immigrant that we especially need is the one who can settle on the land. Too often, alas! the person who has indulged in the dream of becoming the owner of a large domain from which he will gather in the crops, is sadly deceived, not that the soil has ceased to be generous and fertile, but owing to the preconceived idea that one may become a farmer overnight and that it is but necessary to till the land to reap.

A mechanic cannot possibly become a good farmer in a day. Sometimes an immigrant is advised to go on the farm so as to acquire experience. It is a sound advice, but one must bear in mind that, as a rule, the farmer is not continuously in need of farm hands, it is then that the new arrival finds himself without work after having toiled very hard for some months only; he then takes the road which leads to the city whence he never returns. We may consider ourselves lucky if the large United States manufacturing centres do not entice him across the border. On other occasions, the immigrant who wants to become efficient on the land by hiring himself as a farm help, disagrees with his employer, and judging all other farmers by the latter who perhaps has wronged him, gives up all idea of farming. The combined action of the Dominion government and the provincial governments will, we hope, relieve the situation, and make of the immigrant to Canada, a contented settler. A settler who writes to his friends that he is satisfied with his lot, is the best colonization agent that we can wish for. It seems to me that our colonization agents have now an easy task: Canada is prosperous, great activity prevails in all spheres, the future is full of alluring promises.

On the whole, the speech from the throne leads us to believe that the government is going to pursue its progressive policy which it has inaugurated and that the Progressive members who have given it their sincere and loyal support will not have to withdraw their trust.

Mr. Speaker, I have the honour to second the motion.

[Mr. Beaubien.]

On motion of Mr. Bennett the debate was adjourned.

On motion of Mr. Mackenzie King the house adjourned at 4 p.m.

Monday, January 30, 1928

The house met at three o'clock.

REPORTS AND PAPERS

Report of joint board of engineers, St. Lawrence waterways project, dated November 16, 1926—Mr. Mackenzie King.

Report on the selection of a terminal port for the Hudson Bay railway, October, 1927. —Mr. Dunning.

ELECTRICITY AND FLUID EXPORTATION ACT AMENDMENT

Mr. H. A. STEWART (Leeds) moved for leave to introduce Bill No. 2, to regulate the exportation of electric power.

Hon. ERNEST LAPOINTE (Minister of Justice): Explain.

Mr. STEWART (Leeds): Mr. Speaker, the object of this bill is to amend the existing law having to do with the exportation of electric power from Canada. At present this is governed by the provisions of the Electricity and Fluid Exportation Act of 1907, and under that act the governor in council has authority to issue a license providing for the export of electric power from Canada. The effect of this bill is to provide that a license shall only issue by the authority of parliament, and on such terms as may be determined by parliament. The necessary amendments to the existing act are included in this bill, and there is an express provision that nothing contained in this bill shall be deemed in any way to affect the rights of the provinces in connection with electric power.

Motion agreed to and bill read the first time.

CIVIL SERVICE ACT AMENDMENT

RESTORATION OF EXCLUDED POSITIONS

Mr. E. J. GARLAND (Bow River) moved for leave to introduce Bill No. 3, respecting the civil service.

Right Hon. W. L. MACKENZIE KING (Prime Minister): Explain.

Mr. GARLAND (Bow River): This bill simply proposes to place under the operations of the Civil Service Act the employees of those departments of the government who have not been included up to the present.

Motion agreed to and bill read the first time.

CIVIL SERVICE COUNCILS

Mr. J. S. WOODSWORTH (Winnipeg North Centre) moved for leave to introduce Bill No. 4, to amend the Civil Service Act.

Hon. ERNEST LAPOINTE (Minister of Justice): Explain.

Mr. WOODSWORTH: Mr. Speaker, this bill was introduced last year. It provides for the setting up of machinery to permit of consultation between employees in the civil service and the officials of the government. It is designed to provide a means for the hearing of grievances and for promoting efficiency, and is in line with the expressed purpose of the Prime Minister, which he made clear some time ago when he said:

> I think that in the relations of the civil service and the government, a council on which there would be representatives of the civil service to speak directly to members of the government or to take up with heads of the departments matters of interest to all government departments, could be of the utmost service to all concerned.

Motion agreed to and bill read the first time.

CRIMINAL CODE AMENDMENT

Mr. J. S. WOODSWORTH (Winnipeg North Centre) moved for leave to introduce Bill No. 5, to amend the criminal code.

Right Hon. W. L. MACKENZIE KING (Prime Minister): Explain.

Mr. WOODSWORTH: Mr. Speaker, this bill is designed to repeal the clause of the criminal code dealing with blasphemous libel. This is an old piece of legislation, which is practically obsolete and which I believe has been used only once in the history of Canada.

Motion agreed to and bill read the first time.

GOVERNOR GENERAL'S SPEECH

ADDRESS IN REPLY

The house resumed from Friday, January 27, consideration of the motion of Mr. Ilsley for an address to His Excellency the Governor General in reply to his speech at the opening of the session.

Hon. R. B. BENNETT (Leader of the Opposition): Mr. Speaker, it is not difficult to conform to the old traditions of this and other parliaments in congratulating the hon. gentlemen who spoke so splendidly on Friday last. The speeches in which they moved the address in reply to the speech from the throne were noteworthy. My hon. friend from Hants-Kings (Mr. Ilsley) is a graduate of the school of law from which I also graduated, and I have the natural pride of a fellow alumnist in his splendid achievement in this chamber on Friday last. My hon. friend from Provencher (Mr. Beaubien), who was elected by acclamation, was thereby placed in the position of being a member of this assembly who, with his adaptability, would have found himself quite happy and with great serenity making the same speech on this side of the house had the fortunes of war permitted.

I regret very much that, although it may be difficult for the house to believe it, I was so overcome on Thursday last that I failed to thank my hon. friend from Acadia (Mr. Gardiner) for the very kind sentiments which he expressed to this house upon my election to the position I now hold. I desire now formally to thank him and those associated with him for the very kind sentiments to which he gave utterance and particularly for the expression of the hope that I might be able to discharge the duties of this difficult position in a manner satisfactory to the country at large.

It always seems that there is sadness mixed with joy in all assemblies of this character. The cables this morning conveyed to us the sad intelligence that the great commander in chief of the British forces during a long period of the war had passed to his reward. It is a matter of profound sadness to all of us; so great was Lord Haig, so great his achievements, so dogged his courage, his persistence and his effort, that the sorrow at his passing is very marked even in a country such as this. I am sure that wherever men are gathered together in this country which sent so many thousands to that great conflict, there will be a feeling of deep sympathy for his wife and family who survive him, together with a feeling of pride that the empire produced so great a soldier at such a time of stress.

But the speech with which His Majesty's representative has been pleased to meet this parliament is remarkable more for what it does not say than for what it does say. I fancy that there is some measure of satisfaction, perhaps, in the mind of the Prime Minister because he has concluded that if the country has prospered so well without his doing anything, it may be desirable to continue that inaction in the future as in the past. I fancy some such thought as that was in his mind, and in the mind of the Minister of Immigration (Mr. Forke), when the speech was being prepared. At any rate, the speech is sufficient for my purpose because it enables us to look at the affairs of this country from

three points of view; and no speech from the throne hereafter will be complete—in fact, that has been the case for many years past—unless it deals with Canada's affairs from three aspects, namely, the domestic point of view, the matter of our imperial relationships, and the international point of view. I shall venture therefore to direct attention to the speech with these three main divisions in view.

I do not think it necessary to refer to those portions of the speech that deal with the diamond jubilee and the celebrations incident thereto. My right hon. friend will find, as we all do, that it is a very excellent thing to bask in the reflected glory of the great; but at times it is necessary to walk out of the shadow.

Mr. LAPOINTE: Hear, hear.

Mr. BENNETT: I am glad the Minister of Justice approves of that remark, for presently I shall ask him to do the very thing he says he approves of.

If a review of the past brings us great joy, as it does, and satisfaction too, it also reminds us of the obligations of the present and the duties and responsibilities of the future. I am quite certain that my right hon. friend has on very many occasions during the year that is past and the celebrations in which we have been engaged tried to remember that he is Prime Minister of Canada and not the leader of a party; but I will confess that I found it a little difficult to follow his reasoning in associating himself with a statement as to our status—and I think the report in the newspaper must have been incorrect—in connection with the visit to Canada of Their Royal Highnesses the Prince of Wales and Prince George and the Prime Minister of Great Britain, Mr. Baldwin. If my memory serves me, the heir to the throne laid the foundations of the old buildings that stood on this site, and he found it not difficult to visit this country notwithstanding the then status of Canada. Furthermore, if my memory serves me, the Lord Chancellor of England, keeper of the great seal, who had never left England and is supposed to have the great seal in his custody at all times, visited Montreal. So that I cannot see very much connection between the visit of Their Royal Highnesses and the Prime Minister of England, and the constitutional position to which reference was made. My thought was that there must have been some mistake in the report of the speech of my right hon. friend rather than that he said what was attributed to him in that regard. For after all the visits to Canada of the heir to the throne and the Prime Minister of Great Britain had about as much to do with the constitutional status of this country, I suppose, as the appointment of a minister to Washington; I should think they had about the same relation one to the other.

Now, Mr. Speaker, having disposed of that matter, I observe that the speech from the throne refers to the fact that there is evidence that this country has been placed upon a sound economic basis; and to establish that fact reference is made to certain conditions that obtain with respect to increasing revenues, the growth of employment and building construction, railway receipts and business conditions generally. Well, all I can say with respect to that is that it is not probable that when the speech was written great attention was paid to the trade returns nor yet to the unemployment figures. The fact is that we sold less by fifty millions this year than we did last, and we bought from other countries eighty millions more than we did the year before—eighty millions, a great portion of which should have been made in Canada and employment given to Canadians who are now idle. I am sure the members of this house must have observed that the Premier of Manitoba has just sent a memorandum down to this government asking for assistance with respect to unemployment. If you will look at the young, vigorous men who are employed in shovelling snow in this city you will realize the lack of employment that prevails in Canada. The figures of employment are the figures that are given by employers in industry who send reports to the statistical department as to the number of people they employ. In the city of Calgary a much larger sum was expended last month in taking care of those who are unable to find employment than for some time previously. The same may be said with respect to other cities in this dominion. Therefore so far as the statistics of the department with respect to employment are concerned, they are merely a record of the number of men and women relatively employed in industries that make reports to Ottawa; the official figures do not deal with the number of unemployed men and women who are without occupation today because we are buying $80,000,000 more goods from other countries this year than we did last, goods that should have been made in Canadian factories.

Then with respect to the railway figures: I am sure the gentlemen responsible for that speech have not closely analyzed those figures, because if the condition that prevailed last year is to continue for another three years, the railways will have no net revenue at all. The truth is that the Canadian Pacific railway earned last year $3,76[illegible],000 more gross than

the year before, but the net receipts were $4,700,000 less than they were in 1926; and the Canadian National railway system, while increasing its gross revenues by $2,692,000, decreased its net revenue by five and a half million dollars. Now as its net revenues were only thirty millions it follows that if the revenue of the railway is decreased by five and a half millions every year it will only be five or six years before it has no revenue at all.

Then we come to the question of our trade. I will not on this occasion deal at length with this question, but I do desire to point out the real foundation upon which our present economic prosperity rests. The truth is that the population of this country has not increased during the last five years; I shall show presently that it has decreased. The truth is that a lesser number of people, inhabiting the same area, have been creating new wealth more rapidly than they did before. They have been utilizing the great resources of science and scientific investigation, improved machinery and equipment, and they have been increasing the natural wealth of this country at a very rapid rate indeed. Let us see what the figures indicate with respect to that. Last year two billion dollars of wealth were created by the Canadian people, and we sold to the people of the world 1,218 million dollars worth of goods. But what were the goods we sold? We sold $281,000,000 of wood and paper; we sold metals and minerals of all kinds worth $181,000,000, and we sold of grain and grain products $447,000,000 worth; making a total of $900,000,000 of products that we sold out of a total of $1,218,000,000, leaving only $318,000,000 to be otherwise accounted for. Now what did the production of wood, paper, metals and minerals, grain and grain products mean? It meant first a decline in the productivity of the soil that produced them. It meant the absolute exhaustion of mines and minerals that cannot be replaced, and it meant, with respect to wood and wood products, the depletion of resources which are utterly lost, at least for our life time, and which according to careful statisticians we shall be altogether unable to replace within a period of at least twenty years.

So that the sound financial basis upon which this country's prosperity now rests consists merely in this: we are selling our estate, which is being rapidly exhausted. That is all we are doing, and there can be no permanent prosperity in any nation whose present prosperity depends upon the sale of its fixed assets. If you sell lands, minerals, trees and the products of lands—if you sell these things—you will not produce any permanent prosperity. Our forests are being depleted, our wood products are being sold, products that will not be replaced in our lifetime. Mines, minerals and mineral products, and the products of the soil in the way of grain, are being sold to the extent of over $900,000,000 per annum out of a total of $1,200,000,000 odd, according to the figures for the past year.

There is another fact to be considered in seeking to find the causes that have led to this result. We have had in Canada during the last year a very bountiful harvest; indeed, Providence during the past three years has favoured our people with quite abundant harvests. I say therefore, that it is conclusively shown, that the result which I have just indicated has been brought about notwithstanding the fact that farmers and artisans engaged in production to-day are lesser in numbers than they were five years ago. So that the only inference is that there has been an increase in energy and hard work on the part of Canadians who have made possible this increase in the temporary prosperity upon which apparently we are relying.

Let us look at the facts. I find, in the census reports which were distributed a short time ago, that the population of Manitoba, in round numbers, was 610,000 in 1921 as compared with 639,000 in 1926, an increase of only 28,000 odd; in Alberta there has been an increase from 588,000 in 1921 to 607,000 in 1926, an increase of 19,000; while in Saskatchewan the population has risen from 757,000 in 1921 to only 821,000 in 1926, an increase of 63,000. These figures give the situation in regard to the population of the provinces mentioned. But what do we find when we look at the immigration returns? During that same period there were actually brought into the province of Manitoba, and distributed by the Department of Immigration and Colonization, 40,397 persons; in Saskatchewan, 58,487, and in Alberta 78,660. And if we take the natural increase on the basis of the provincial figures we find that we lost over 100,000 in these three provinces during the five years from 1916 to 1921.

As to the basis on which our prosperity is to be achieved, what are the facts? The facts I have given come from the statistical department, but it is not enough to rest the case there; let us see how many farms have been under cultivation. The number of farms occupied in Manitoba in 1921 was 53,252, and in 1926, 53,251. In Saskatchewan, in 1921, there were 119,451 farms under cultivation as

compared with 117,787 in 1926, and in Alberta, while there were 82,954 in 1921 the number in 1926 was 77,130. The total acreage under crops of all varieties has increased in these provinces, in Manitoba by something like 400,000 acres, and in the other provinces correspondingly. I need not go into details. The point I make is this: the considerable accretion of new wealth which we have had in the country has been attributable to the development of our natural resources and to the crops that have been reaped by our husbandmen, as well as to the minerals and metals taken out of the soil and to the forests that have been denuded of their trees. These are facts that cannot be controverted in the light of the returns made by the various departments affected. So that the courage, skill, enterprise and hard work of Canadians have made possible the various increases to which I have alluded as having occurred during the years that have passed. But concurrently there has been a steady diminution in the population that has effected these results, and to that I shall presently refer. So much for this phase of the subject.

Let me come now to another point mentioned in the speech from the throne—and perhaps it is well to mention it here, inasmuch as this is the most appropriate stage at which to discuss it: I have reference to the statement with regard to the Dominion-provincial conference. We are told that a great conference took place in this capital, as indeed there did, and that a large number of very important subjects were considered. May I venture to suggest to the first minister that it is highly desirable that this parliament should have laid before it a precis of what took place at that conference? I am not for a moment suggesting that the explanation given the other day is not wholly adequate from the standpoint of those who participated in the conference; naturally they would not desire to have their discussions made public. I can quite understand that; had I represented one of the provinces I should certainly have felt that way myself. But when we are asked, as we are, to deal with the matters discussed at the conference, it seems to me the proper course would have been to prepare a precis which might have been signed by the respective representatives from day to day or at the conclusion of the conference, in order that parliament might have something on which to proceed intelligently and which it could fully understand. Such a precis would enable us to understand what took place at the conference. I observe from the speech from the throne that certain measures will be introduced as a result of this conference. These are purely domestic matters, and I note that at an early day we may expect the introduction of these measures, and when they are before us we shall consider the problems involved. But what about the provinces? The province which is oldest, posibly, in point of settlement, and certainly the second largest, has already given its view of the matter. While we in this parliament have before us what this government has to say with respect to the conference, may I also direct attention to what the government of the province of Quebec had to say on the subject on January 10 last. The following words occur in the speech from the throne as delivered in the legislature of Quebec:

> An interprovincial conference was held in Ottawa in November last. All the provinces of the Dominion were represented there, and questions of the greatest importance were discussed. My ministers believe that Canadian unity and the future of Canada will be best assured by respecting provincial autonomy and by all remaining loyal to the British North America Act in spirit as well as in the letter. This declaration is the more timely in view of the celebration in 1927 of the sixtieth anniversary of the Canadian confederation. The progress hitherto achieved, marked by such splendid festivities, should move us to forestall any possible source of discord.

So that the conference was a possible source of discord—this conference about which we have been told so much. In the view of His Majesty's advisers of the province of Quebec it was not a conference making for Canadian unity but one, rather, which constituted a source of discord. I should like, and I am sure the country would be glad too, to hear the Prime Minister explain just how the conference may have been a possible source of discord, something that may possibly disturb Canadian unity, according to the view of the legislature of Quebec. I should think, in view of that statement in the speech from the throne presented to the legislature of that province, and, further, in view of the speech which we have heard in this parliament, that it is highly necessary—indeed, I consider it absolutely essential—that we should have before us some precis with respect to what took place at the conference in order that we may be able to reach our own conclusions in the matter.

I gather that my right hon. friend had something of this kind in mind when he made a speech in the great city of Quebec while attending a banquet given in honour of one of his colleagues. On that occasion he used, or is reported to have used, these words:

> Since the government of Canada is but the executive of parliament, announcement of what had been agreed upon would have to wait until parliament assembled.

That does not seem to be unfair, but unfortunately what is it that we are to depend on? Is it to be by word of mouth of ministers who are telling the story and who may not know what happened? Will it be by means of the speech from the throne, which deals only in vague and glittering generalities? Will it be by means of measures that appeal to the government but perhaps not to the several provinces? I think if it was important that at the imperial conference there should be kept a precis of what took place, far more important is it in the domestic issues of this country that we should have laid before us a complete precis of what took place, in order that we may be able to ascertain for ourselves just what are the respective views of the Dominion and of the provinces.

The next domestic matter to which I refer is one that was touched upon at that conference, and one with respect to which I desire to make but a few observations. We had last session presented to this parliament the so-called Duncan report—a Duncan report which the Prime Minister anticipated might possibly rank with the historic Durham report as one of the great documents affecting the life of Canada. That report was tabled. The leader of the government accepted it; the leader of His Majesty's opposition accepted it; the people of the maritime provinces accepted it and expected it to be entirely implemented, and I rejoice that provision has been made for continuing during the present year at least the subsidies that were provided for under that report by parliament last year. But there still remain many matters to be dealt with by this parliament before that report is implemented in its entirety, and I can only hope, indeed, I am quite confident, having regard to what was said by the Prime Minister last session, that every reasonable effort will be made by the government this session to see to it that there is no possible cause for complaint on the part of the provinces affected by reason of that report not being implemented in its entirety. I will not at the moment do more than leave it in just that position.

I next turn to another matter which was dealt with at that conference, and one which is I think as important a subject as has engaged the attention of this parliament in recent years. I refer to that paragraph in the speech from the throne which deals with the return to the province of Alberta of its natural resources. Let us for a moment consider the position of the government with respect to this matter. I should like this House to remember that this is not a new matter. The right hon. gentleman who leads this house has prepared seven speeches from the throne. He has prepared and placed in the hands of the representative of the sovereign seven documents dealing with national questions and problems—one in 1922, another in 1923, another in 1924, another in 1925, two in 1926, and the one that we are now considering. Let us for a moment see how on the threshold of his career as Prime Minister he dealt with the matter of the return to the provinces of their natural resources. Here are his words:

> The long standing question of granting the control of the natural resources of three western provinces to their respective provincial governments has engaged the attention of my ministers. Sympathizing with the desire of the authorities of these provinces, which have now advanced to maturity, to have the same control and management of their resources as is possessed by the older provinces, my government have made a proposal to the governments of the several provinces concerned, which it is hoped may lead to a satisfactory settlement of the question at an early date.

Those of us who have lived in western Canada since 1900 will recall the circumstances under which the provinces were induced to accept money instead of lands; will recall the election that was conducted in 1905 and the vigorous appeals that were made to the electorate of those provinces to accept money rather than resources. When I look at the Minister of the Interior (Mr. Stewart and recall the fervid eloquence with which the Liberal party told the electorate of the great benefits that would accrue to them if they accepted money instead of resources—well, it was a matter of consolation and joy to me to read in the speech from the throne that these people had now advanced to maturity, and that the government sympathized with them in their desire to control their natural resources.

The next year came. In 1923, 1924 and 1925, no reference was made to natural resources, but negotiations were taking place. But in 1926, at the end of the speech from the throne, occur these words:

> Your attention will be invited, among other measures, to a bill to provide for the transfer to the province of Alberta of its natural resources, and to a bill amending the Dominion Elections Act.

The agreement upon which that bill was based was signed on behalf of the government of Canada by the hon. Minister of Justice (Mr. Lapointe) and the hon. Minister of

the Interior (Mr. Stewart), and on behalf of the province of Alberta by the Premier of Alberta and the Minister of Railways of the province, Hon. Vernon W. Smith. There is a promise given by His Majesty's representative that a bill would be introduced to return its natural resources to the province of Alberta. Well, that has not yet been done. But I find that last year there was referred to the Supreme Court of Canada a question for determination and settlement, under an order in council which reads as follows:

> The committee of the Privy Council have had before them a report dated June 24th, 1926, stating that as the result of certain negotiations looking to the transfer to the province of Alberta of the public lands within that province, now vested in the crown and administered by the government of Canada for the purposes of Canada, an agreement was entered into on the 9th January, 1926, between the governments of the Dominion of Canada and of the province of Alberta, respectively, whereby it was agreed that certain provisions of the Alberta Act should be modified to the intent that all crown lands, mines, minerals and royalties within the province, and sums due or payable for such lands, mines, minerals or royalties should, from and after the coming into force of the said agreement, belong to the province, subject to any trusts existing in respect thereof and to the several other terms and conditions particularly set forth in said agreement. Subsequently, the two governments agreed upon certain additional provisions to be inserted in the said agreement relative to the transfer and administration of the School Lands fund and certain specified school lands, to parks and forest reserves affected by the agreement, and to the rights and properties of the Hudson's Bay Company. Notice was given by a resolution that a bill would be introduced into parliament, at its present session, to approve and give effect to the said agreement as so modified, but a question having been raised as to the constitutional validity of section 17 of the Alberta Act, relative to the subject of education and schools within the said province, it was decided not to proceed with the proposed legislation as drafted until this question of doubt could be authoritatively settled.

That matter was considered by the Supreme Court of Canada on the 7th of March and on the 20th of April, 1927, and on the last mentioned date a judgment was given unanimously deciding that the statute was constitutional and that the Alberta Act in every particular was within the legislative competence of the parliament of Canada. That was the unanimous judgment of the Supreme Court of Canada, given in answer to a reference made to it by the governor in council in which the specific question was asked, twenty-two years after the enactment of the legislation, as to whether or not it was within the constitutional competence of parliament to enact it. That question having been answered, as I have said, in the affirmative, one would naturally have expected that the lands, mines and minerals would be turned over to Alberta and the promise given immediately implemented. But what happened? One would have thought, especially in view of the discussions that took place in this house as to our equality of status with relation to other sections of the empire, that the judgment of the supreme court would have been at once accepted, and action taken by the government accordingly. But what was done? Instead of that proceeding being taken, an application was made by petition to the judicial committee of His Majesty's Privy Council in England for the purpose of hearing an appeal when there was nobody to appear in the case as respondent. I happened to be in London a few days after, and I saw the transcript of what took place. When Mr. Lafleur, representing the Minister of Justice of this Dominion, appeared for the purpose of presenting his petition—mark you, a petition to the Privy Council from a judgment of the Supreme Court of Canada, about which we hear so much, and to which I shall presently allude—when he presented his petition he was asked, who were the respondents? There were none. To whom did you give notice, he was asked? To nobody. And then he was told to hunt up a respondent somewhere in order that they could get on with the case; and so to-day, as far as I can find out, before the province of Alberta can get its resources the Minister of Justice must find a respondent to appear before the Privy Council.

But that did not end it. If it had ended there one might regard it as somewhat amusing. My friend the Minister of Justice will remember that last session, discussing the question of our constitutional status, he declared with great deliberation that it was the fixed aspiration of the French-Canadians to prevent appeals to the Privy Council. At page 1713 of Hansard the Minister of Justice, speaking of the Nadan case, said he thought it was well decided. He said further:

> So that that is not the feeling that animates me, but to alleviate the fears of my hon. friend with respect to Quebec I will tell him that the men in Quebec who represent really the aspirations of French-Canadians are applying to have the appeal to Privy Council done away with.

That is the same Minister of Justice who presents his solemn petition to His Majesty the King to permit him to take an undefended case to the Privy Council with a judgment in his favour.

I suggest that the government, without further delay, return to Alberta its natural resources. I raised no question in this House

—because I appreciated the difficulty of the situation—when the hon. Minister of Justice referred to the Supreme Court of Canada for its opinion the question I have just mentioned. That opinion having been unanimously given, I thought, and still think, that it was the bounden duty of this government without a moment's delay to give effect to the aspirations of the province of Alberta, with which province five years ago they had such sympathy. It is idle to disguise the fact that this long delay has created the most unfavourable opinion with respect to the whole situation, and nothing will remedy the matter more quickly and bring about that unity of thought and action so much desired in this country as to give effect to that opinion at once. But further; suppose the Minister of Justice had succeeded in getting to the Privy Council, what should we have had? Lord Chancellor Loreburn said that the answers given to such questions are not binding in litigation and have no greater value than the opinion of the law officers of the crown. We have the opinion of the law officers of the crown; we now have the opinion of the Supreme Court of Canada, which is no better, according to the Privy Council, than that of the law officers of the crown; then why should we delay? That is the question the people of the west are asking this house. It is a question which is highly relevant and should be answered without further delay.

With respect to this interprovincial conference I find that the railways were also discussed in this connection. Now, is parliament to be treated in this way? Is parliament not to be told what the discussions were? Are we to have no idea what they were until legislation is introduced by which we will have to pay $14,000,000 or $15,000,000 for railways in British Columbia? Is that the way the matter is to be treated? I recall how the Minister of Justice before 1921 used the strongest terms—terms I would not use now in my amiable frame of mind; terms so strong, so emphatic, so embittered that I should not think a peaceful man like the Minister of Justice could use them. We now find that these railway problems are being considered by the cabinet, but we are not told whether the Pacific Great Eastern is to be taken over, or what is to be done in regard to the Edmonton and Dunvegan railway. These matters are not discussed, and my hon. friend has stated that he had not time to discuss them, although he was present at the conference.

Then there is another matter that illustrates the attitude of the government towards parliament. Speaking of the Hudson Bay railway, we were told last year that an eminent engineer was to consider the tidal and estuarial conditions at the port, but no statement was made as to whether he thought Fort Churchill was a better port than Port Nelson or that without regard to parliament the change would be made. When the matter first came up for consideration in this house the government of the day was led by Mr. Borden, now Sir Robert Borden. On that occasion Mr. Graham made this statement in the house:

> I will admit this; that I think the necessity of the construction of a much longer line of railway to Churchill may have had considerable influence in the selection of Nelson. But just at the time the selection was under discussion, or practically had been made, the government changed, much to the detriment of the country, and my successor was neither satisfied with the contract nor with the port of Nelson; so he stopped the contract, and stated he would see whether there was anything wrong with it. Then he made a trip to Nelson himself, and came back enthusiastic about that being the proper port. I refer to the late Mr. Cochrane. I do not pretend to be practical myself, and I simply based my selection on the information given by the engineers at that time. This was confirmed by my successor in office, Mr. Cochrane, but, as I said before, it is possible the shorter mileage of railway construction might have had something to do with the selection of Nelson...

It is not a question of the respective merits of Port Nelson and Fort Churchill that I desire to draw attention to at this point, but rather the fact that in 1911, before the Laurier administration left office, Mr. Graham, as a result of perusal of the reports of his engineers, had fixed upon Nelson. That was sixteen years ago last fall, and now, on the sayso of one eminent gentleman, the terminus is changed to Churchill, several more miles of railway are to be constructed and $6,000,000 that have been spent are to be lost, or practically lost. But the most important part of it is this: that a minister of the crown announces that by radio, without reference either to council or parliament—

Mr. DUNNING: No.

Mr. BENNETT: Does the minister say he discussed it with his colleagues before he made the announcement? Is that the statement?

Mr. DUNNING: Yes.

Mr. BENNETT: My hon. friend announced it by radio, then, not on his own behalf alone but on behalf of himself and his colleagues, although his colleagues were at one place and

he at another; but in these days of rapid communication wonderful things can be accomplished. At any rate the communication having taken place and the announcement having been made, one would have thought that parliament might have been considered.

I read with some interest the debate which took place on this subject last year, and certainly you will not find within those pages, any indication that parliament left it to the Minister of Railways or the government to make an announcement of that character without at least bringing it to parliament. Although the statement was made, and the letter read as to what Mr. Palmer's instructions were, what he was to do, the fact is that most hon. members believed, as I did, that he was to make a report on the basis of which parliament could consider what action should be taken, rather than that it should be an executive act on the part of the government. However, the action has been taken, and the question whether it is well taken or otherwise will be determined not in our time but rather by posterity, and by that time I suppose neither the Minister of Railways nor any of us will be able to say how accurately Mr. Palmer guessed. But it is a singular comment on the institutions of the country that sixteen years after the selection has been made by two ministers, one a Liberal and the other a Conservative, one who visited the port and the other who did not, but relied upon the word of responsible engineers, their work should go for naught and all the moneys expended practically lost just because a tidal and estuarial engineer says he thinks the other port would be the better. I do think that that is not in consonance with sound economy and constitutional government as we have it in this country.

Again with respect to this Hudson Bay railway it is only fair to say that the very first speech I ever made in the old chamber was an appeal for the immediate construction of the railway, and I recall the circumstances under which the then minister went there for that purpose. There was a suggestion—and it is only right that I should say the Minister of Railways has intimated that the suggestion is rather the reporter's and not his—that political considerations governed with respect to the selection of the port. I refer to an interview in the Montreal Gazette. But my hon. friend has assured me that the inference drawn by the reporter there is only an inference.

Mr. DUNNING: The article says so.

Mr. BENNETT: I have it under my hand, and I do not think it says so.

[Mr. Bennett.]

Mr. DUNNING: I wish my hon. friend would read the article.

Mr. BENNETT: It is rather long.

Mr. DUNNING: Just the part relating to the inference.

Mr. BENNETT: If the page will go up to my room and bring me the newspaper I will satisfy my hon. friend.

Mr. DUNNING: If my hon. friend will permit me, the matter is of some importance because it relates to a very highly respected gentleman who is now dead.

Mr. BENNETT: That is just the reason I mentioned it.

Mr. DUNNING: And that is the reason I want the report correct.

Mr. BENNETT: I have it here:

The Minister of Railways had a brief chat with Premier King—

Mr. DUNNING: It is further on than that.

Mr. BENNETT: Yes, I have it here. My friend has looked it up since I spoke to him the other day.

Mr. DUNNING: Yes, that is right.

Mr. BENNETT (reading):

Mr. Dunning would not comment—

Mr. DUNNING: "Would not comment."

Mr. BENNETT (reading):

—on the costly blunder of the men responsible for the location of the terminus at Port Nelson,—

Mr. DUNNING: That is right.

Mr. BENNETT: There is only one inference. (Reading):

—where more than six million dollars has been expended since the inception of the Hudson Bay route. It is quite evident however that the decision to make Port Nelson the Hudson bay port was dictated by political rather than business motives.

That is the sentence, and it does not say that it is Mr. Dunning's or the reporter's.

Mr. DUNNING: Oh, no.

Mr. BENNETT: I go this far to say that when Sir Robert Borden saw that report he was so annoyed—I can go this far without violating any confidence—that he directed attention to the fact that during his official life he had never seen any minister whose regard for the public interest was so great as the late Frank Cochrane's, or one who was so willing to subordinate political considerations to the public weal. Because of that I

spoke privately to my friend about the article, and he told me that he had no intention to convey the implication that might be drawn from the document as it now reads.

Mr. DUNNING: Perhaps my hon. friend will permit me to say that I have on more than one occasion paid tribute to the absolute honesty of the late Mr. Cochrane's motives in connection with the whole of this matter.

Mr. BENNETT: Quite so.

Mr. DUNNING: To my mind no such inference can be drawn from this report as that now suggested, and I cannot be responsible for the reporter's words.

Mr BENNETT: Quite so. Not only that, but Mr. Graham himself said that it had been settled by his government before he left the administration.

With respect to this Hudson Bay railway project there has been a good deal of misunderstanding. The only difference that ever occurred between the two parties in this house, so far as I know, was whether or not we had the money immediately to proceed with its construction. I recall that in the first speech I made in the old chamber in moving the address in reply to the speech from the throne, I urged the immediate construction of the railway, pointing out that by 1914 it should be available as an outlet for the western crop.

Now, let us go a step further. I mention this because I observe that parliament is not being consulted in relation to this expenditure. Neither is parliament being consulted with respect to capital expenditure by the Canadian National Railways in the harbour of Halifax. Parliament has not given any authority for that expenditure. I would also point out that there are two sections in the Railway Act of which I think it might be well for the government to take cognizance. In section seven of chapter 171 of the new revised statutes it is provided that:

> The minister shall have the management, charge and direction of all government railways and canals, and of all works and property appertaining or incident to such railways and canals, also of the collection of tolls on the public canals and of matters incident thereto, and of the officers and persons employed in that service.

Chapter 172, dealing with our National Railways, contains this section:

> Whenever under the provisions of the Railway Act, or any other statute or law, the approval, sanction or confirmation by shareholders is required, such approval, sanction or confirmation may be given by the governor in council.

The speeches that were made in this house last session by the right hon. the Prime Minister and by the Minister of Railways and Canals, particularly that portion of the latter's speech in reply to the member for West York (Sir Henry Drayton), indicated that in their opinion those words should be construed to mean that no money should be expended without the antecedent sanction of parliament. I direct attention to these expenditures that are now being made and to the contracts that have been entered into involving large sums of money, all without the sanction of this parliament, because that which cannot be done directly cannot be done indirectly, as the courts have so often ruled—I direct attention to these matters in order that we may take such steps as may be thought desirable to settle the issue once for all, because if this house desires that expenditures may be made without the antecedent sanction of parliament, then let us say so; but do not let us place upon the statute books provisions with respect to capital expenditures on our national railways requiring the antecedent sanction of parliament and then go ahead in direct disregard of those provisions.

Now, sir, I pass rapidly to the next domestic matter that I think of great importance, and that is immigration. It is true that immigration is by all odds the most important question that can engage the attention of this house or of this parliament. I find that in every part of the Dominion there is a state of unrest in the public mind—suspicion with respect to the manner in which the department is being conducted, suspicion of its administrative power, belief that political considerations have influence in connection with getting permits for the admission of settlers. You will find these things in every newspaper you take up, in the dispatches from its correspondents and in the editorials, and they are discussed in synods and other church meetings. It is high time that something be done to put the power of parliament unitedly behind an effort to bring people over and settle them in this country. We cannot continue as we are and maintain our present position very long. It is essentially important that we should induce more settlers to come to this country. I have pointed out this before, and I repeat it now. I observe in the speech from the throne a statement with respect to settlement that I hardly think was made in the light of the figures, for I find that the record is as follows: In 1920 we brought from the British Isles 59,603 settlers, and from European countries 8,077. In 1926 the figures were 37,569 and 39,717 respectively. For the last

calendar year the figures are, from the British Isles 49,782, and from other European countries 73,182. How, then, my friend could write into the speech from the throne this statement with respect to immigration I find a little difficult to understand:

There has been a substantial increase in the number of British immigrants as well as the number of immigrants of a suitable type from the continent of Europe.

Well, the figures show that while immigration from the British Isles has increased, it has increased much more rapidly from continental countries; that while we had 37,000 odd from the British Isles in 1926 and 39,000 odd from other European countries, last year the figures were 49,000 odd from the British Isles and 73,000 from other European countries. I leave the question to be dealt with by the government.

But I want to go a step further with respect to this question, because the government has a history in this regard, and I think it time this country realized just what that history is. I have already said that this government has prepared seven speeches from the throne; let us see what they have said on the question of immigration, and ask the people of the country to judge on the most important question that can engage public attention at this time, what is being done and what has been done. We will look first at the speech from the throne in 1922, and see the statement with reference to this question of immigration. It is as follows:

The stream of immigration to the Dominion was much interrupted and restricted during the war. Now that the blessing of peace is with us, a renewal of efforts to bring in new settlers must be made. My government are fully alive to the importance of this question and will use every reasonable endeavour to attract to our country people of the most desirable class, with particular regard to settlement on our undeveloped lands.

That was in 1922. A further statement was made in 1923, to this effect:

The matter of securing an increasing flow of desirable settlers to develop the large areas still available for cultivation in Canada has had the serious consideration of my advisers. Additional and general publicity campaigns have been launched in Great Britain and the United States, and, as opportunity offers, will be extended to other lands from which a suitable class of settlers may be attracted. In other particulars, the activities of the Department of Immigration and Colonization are being expanded.

In 1924 nothing was said on this subject, but in 1925 we again have some semblance of activity:

To aid in an increase of production, through the development of our vast natural resources, every effort is being made to attract the right class of immigrants to Canada, and to secure their settlement in the undeveloped areas served by our great transportation systems. In due course steps will be taken to further colonization and settlement in other fertile regions such as those of the Peace River.

Then again in 1926 they had one more try out:

An agreement has been made between the government and the railroad companies providing a larger measure of co-peration in immigration activities in the British Isles and on the continent of Europe. An agreement entered into with the British government has already been instrumental in stimulating immigration from Great Britain.

While it is of importance to attract new settlers it is equally, if not more important, to assist those who are already established on the land by reducing the cost of agricultural production. To this end a measure will be introduced offering wide facilities for rural credits.

I have already read that part of the speech from the throne delivered in 1927 dealing with this question, and I gave the census figures for 1916 to 1921 and for 1921 to 1926; those figures have been placed on record, and they indicate that although we have sent a few settlers west, many of them have left the country; they entered at the front door and left by the back, and we have not even maintained our natural increase. Further than that, in no one year since 1921 have we brought into Canada half as many people as were brought here in 1913. Those are the facts and the figures.

Now, Sir, this question transcends party; it is larger than the lives of parties because it strikes at the very life of this Dominion. We must have settlers. We have in Canada facilities to take care of an additional population of from 15,000,000 to 17,000,000 people; we have 10,000,000 acres of untouched land within 20 miles of the railways; we have the Peace River area and other portions of the country which are lying idle while the government is expressing pious hopes as to what will happen. I say the time has come when action must be taken.

It cannot be done in any small way; it cannot be accomplished in any niggardly way, but it must be done in a large way. It involves the expenditures of vast sums of money and, more than that, it involves a large and comprehensive policy of settlement. I suggest to the Prime Minister that the committee on agriculture and colonization or a special committee of this House, one or the other—and I would prefer the latter—should meet to hear the evidence of the presidents of our great railways, of the minister, the deputy minister and the officials of the de-

partment and, further, that we should bring here the men charged with this work overseas. I am sure they would come, at their own expense if necessary, to give us the benefit of their experience in other lands. I say again that this committee and this house should hear the story in its entirety, in order that the people may have their unrest and their suspicion with respect to the conduct of this department removed. I think it highly important that this should be done, and I do ask my friend in all seriousness whether he does not think that either the standing committee on agriculture and colonization, or a special committee appointed by the house, should deal with this question.

Within the last three hours I had a cable from a friend of mine in London who is tremendously interested in this question, saying that the regulations now in existence are preventing people from coming to Canada. He said also that the new medical regulations were absurd, to give his exact words. I am not going to pass judgment upon them myself; I was very careful to tell the house that this was a cable from a friend vitally interested in these matters, not in any sense from a political point of view at all. Everywhere men and women are interested in this question; I recently had a letter from London giving me the very figures which I quoted with respect to British and continental immigration. I checked them up at the Bureau of Statistics and found them correct in every detail.

These are the conditions under which this department is being administered. It is a crying shame that this country is not getting additional settlers. We have here the greatest area of vacant land in the world, crying for settlers; we have productive lands and we offer great opportunities, and we must do something to deal with this problem.

There are two problems to be dealt with at the same time; one is to conserve the present population, a big problem in itself, and the other is to secure additional settlers. On the one hand we have to maintain the population we have, and on the other we must induce additional settlers to come here. These two problems are allied and connected; the one is the complement of the other, and unless the government takes such measures as will secure the safety and employment of those men who come to our country in the first instance, and thus conserve our present population, they certainly will not succeed in meeting the second problem, which is the movement of people to this country. We do not want to bring people here merely for the purpose of sending them on to other countries. That is not what we desire to do, and I do suggest in all good part to the right hon. Prime Minister, that some effort be made to deal with the matter along the lines I have mentioned. Then when intelligent men, seized with the whole circumstances and with a high sense of their responsibilities and obligations, make recommendations of a practical character, we may hope to have them carried out. I do know this, sir, that from time to time articles appear in the public press suggesting that we should deal with these matters entirely outside of government; that we should set up a great body which would deal with them as a commission. That does not appeal very strongly to a great many of the Canadian people, but the fact remains that the suggestion has been made from time to time, and it should be considered by the committee dealing with this matter. Other suggestions have also been made; I suppose most of the members of this house consider from time to time the reports coming from overseas with respect to migration and the vast sums of money which have been made available to prospective settlers. Large sums, relatively, have been allotted for the purpose of sending people to this country and to other parts of the British Empire; settlers are going to Australia and they are coming here, but the unfortunate fact is that the figures indicate that as far as we are concerned this has been almost a total failure, and I do think the time has come when some effort should be made in the way I have suggested.

The only other domestic matter on which I desire to speak is the customs report. In that respect I am only going to say this, that there could have been no more ample vindication of the expression of opinion by the hon. member for Vancouver Centre (Mr. Stevens). Nothing more clearly indicated the conditions under which the revenues of this country were being lost to the exchequer than that report, and nothing more amply indicated the wrongs which were being committed under political protection and under the protection of the law in various parts of Canada. I suppose my friend the Minister of Railways (Mr. Dunning) realizes what was said by counsel for the commission at Regina when dealing with the Bronfman cases; I suppose other gentlemen have realized what occurred with respect to prosecutions in the province of Quebec, and in all sincerity I say to my friend the Minister of National Revenue (Mr. Euler), that when this report is considered by this house, as it will be when the legislation which is to be introduced following that report, as promised in the speech

from the throne, is brought down, he will be expected to produce some better answer than the mere glorifications which have appeared in the newspapers as to the efficiency with which his department has been conducted.

This parliament has been flouted with respect to the customs enquiry. It solemnly passed a resolution in which it said that the judges should be appointed by the judges of the exchequer court, and they were so appointed in the first instance. When the change of administration took place an order in council was substituted for the voice of the judges of the exchequer court and a political tribunal—not using the words in that sense with respect to the judges—a political tribunal was set up and eminent counsel, a member of the Liberal party was appointed in connection with it. But information placed in their hands was not acted upon. I say now to the minister that the action of this parliament in demanding that prosecutions take place, naming the persons that should be prosecuted, naming the persons from whom money should be collected before the proper forum—and that forum did not mean a lawyer's office in Toronto but a court of law —was ignored. I say that when that action was taken and when those resolutions were arrived at they meant that this House of Commons demanded that action should be taken; and I say to the minister that when his legislation comes before this house—without taking up the time of parliament in going into the matter now—I hope that the names of these people will be given and some reasons offered parliament and the public why these prosecutions have not taken place. I say to my right hon. friend in all sincerity that he and not someone else has now the responsibility in this matter. I sympathized with my right hon. friend when he said to me in days gone by how difficult it was for the first minister to be able to know what goes on in every department of the public service. And that is the correct statement of the situation. However, I suggest to him that notwithstanding pressure of work he will find ample opportunity for satisfying his curiosity—shall I say?—if he will investigate the report that has been laid upon the table of this house.

There is only one thing more I desire to say with respect to the domestic situation, and that is in connection with research. I am wholly in accord with the suggestion made by the Minister of Trade and Commerce (Mr. Malcolm) that we should provide large sums of money for research. We have research with respect to animal husbandry, with respect to grain, with respect to field harvests, with respect to forests, with respect to fisheries. And here I observe that the government has appointed a fisheries commission to deal with certain matters in connection with the maritime provinces. I hope that the report of this commission will be laid upon the table before the house rises and at the earliest possible moment, because it is important that whatever is proposed in connection with fishery matters should be considered by parliament in the light of the evidence taken by that commission. But with respect to research, may I make this observation: Nothing is more fatal to research than duplication of effort and waste of public money; and no laboratory work is worthy of the name—the Prime Minister knows that so well—that is conducted under departmental supervision, as just a little branch of a department with a deputy minister at its head. That is so in connection with the Department of the Interior and of forestry research matters. But these things cannot be done in that way; it is a waste of public money. I have endeavoured to make some investigation into the matter. I have made some enquiries with respect to the work done, for instance—my right hon. friend is thoroughly familiar with it—by the Rockefeller institute and the Carnegie foundation; also work done by other foundations in Great Britain, and work being done in the universities. If we are going to have duplication of effort it will be money wasted without accomplishing any results at all. I want to say on behalf of the Conservative party, and every member of it, that we desire in every way in our power to make possible the development of research facilities in this country in order that young Canadian men and women may find employment; there is nothing comparable to it. I speak particularly of young women because some of the best work done in connection with the Department of Agriculture, as the minister himself will tell you, is done by young women who have adopted that particular field of activity.

There is one other important matter I will speak of, and that is with respect to the uniting of the Department of Health with the Department of Soldiers' Civil Re-establishment. Many of the men who have returned from the front are opposed to uniting their department with any other department; but it may be that there is such a close relation between their disabilities and the Department of Health that such a union can be satis-

factorily carried out. I reserve to myself the right to speak upon this subject when I have heard further details with respect to it.

I have been amazed that the speech from the throne contains no promise with respect to the matter of pension legislation. Last year when I introduced an amendment the Minister of Health (Mr. King, Kootenay) and the Minister of National Defence (Mr. Ralston) both rose in their places and promised that at the ensuing session legislation would be introduced dealing with the matter. It may well be that such legislation will be introduced, but it seems to me that if such is contemplated the speech from the throne would have been the most suitable place in which to have announced it. As I travel up and down the country I come into contact with increasing numbers of men who are unfit for work, men who are ill and broken in health. They have been given the same answer time after time, "This is a post-war disability", and they can get no consideration from the department at all. This seems remarkable to those who saw them leave for the front in the enjoyment of robust health. They have returned with broken down constitutions and they are told that their state of health is a post-war disability. Such treatment is calculated to make men not only indignant but resentful, and I should be most happy if some action is taken which will prevent any further delay in dealing with these cases.

I desire to make two or three observations with respect to another matter that was touched on in the speech from the throne. I find that there have been during the last few months since the house rose constant reiterations by the Prime Minister and the Minister of Justice on the question of the alleged equality of status of Canada with other parts of the empire. That has been mentioned times without number. It has been mentioned by visitors; it has been mentioned by the Prime Minister. Now it is as old as Aristotle that you must consider the government from three aspects: The executive, the legislative and the judicial. The judicial branch of Canada must always be responsible for the interpretation of the laws of the country. Upon that body must rest the proper construction of the meaning to be given to the legislative measures of parliament on the one hand and the acts of the executive on the other hand. So that in the ultimate analysis it is upon the judiciary we must rely for the interpretation of our constitution or of our enactments. I care not how pious your resolutions may be or by whom they may be passed; I care not how much the House of Commons may resolute; how much the Senate may resolute; how many resolutions the Imperial conference may pass, unless and until, as Dicey points out, the King with the consent and assistance of the Commons and Lords—in this case the Senate and the House of Commons—in parliament assembled enacts legislation, there is nothing of which a court can take notice. Resolutions are not taken notice of by courts of law; and in the interpretation of the constitution of this country recourse must be had to the decisions and to the constitution in order to determine what they mean. Now when we say we have equality of status we are saying something that is untrue. In fact my friend the Minister of Justice has so said in parliament as I shall presently read. So as long as the Colonial Laws Validity Act remains on the statute book of Great Britain we have no equality of status. We may as well face these things. Nothing could be worse for this country than to tell the young men of Canada that we have equality of status when we have not. It is nothing more than a specious deception, I care not by whom these words may be uttered, because in the end the judicial branch of government determines the meaning of legislation and executive acts, and no later than 1926 did the judicial body, sitting in London, determine that the Colonial Laws Validity Act still had power. In the Nadan case it was decided that because the parliament of Canada had passed a statute that was repugnant to the provisions of a British statute it had no force, no power, and was invalid. In the light of this, how can any man say that we enjoy equality of status? Neither I nor those members sitting on the left of the Speaker yield to any person in the desire to have Canadians stand on an equality with any other people within the British Empire. But there is one thing we will not do—and in this regard I shall in a moment quote the language of the Chief Justice of Canada: we will not become parties to any subterfuge or any use of language which leaves the impression that what we aspire to has in fact already transpired. We will make no such pretence. There can be no such thing as equality of status so long as that British statute remains in force. What said the Minister of Justice in discussing this question? He advanced the view that the only means by which we might attain the end to which we aspired was through the repeal of the Colonial Laws Validity Act. He said:

> I think that what must be done is to repeal the Colonial Laws Validity Act on which that Judgment—

That is, the judgment in the Nadan case.

> —was based.

Therefore until such time as the Colonial Laws Validity Act is repealed—and I have no doubt that members of this house would like to know precisely what that act provides—it follows that there can be no equality. It seems to me that nothing could be more fatal, nothing more injurious than to have the younger men of this country wake up some morning and find a decision of the Supreme Court of Canada to the effect that certain legislation passed by this parliament was invalid on the ground that it was repugnant to the provisions of a statute passed by the parliament at Westminster. Nowadays most Canadians are under the impression that such is not the state of affairs. My right hon. friend the Prime Minister has gone about the country and discussed the question in such a way as to convey the impression that equality of status is an accomplished fact. But what is the real state of the case? In the very report of the Imperial conference the statement is made that sub-committees have been set up for the purpose of determining what should be done in the matter. Under the circumstances, therefore, let us in all conscience tell the people of the country really the situation is this—that we desire equality of status and that proper measures should be taken to achieve it. But do not let us pretend that that which we are striving for has already been accomplished, that that has been done which in fact has not been done. Until such time as the British parliament at Westminster repeals that statute to which I have been referring our inferior position must continue.

I have here the provisions of the Colonial Laws Validity Act, which I have no doubt will be of interest to some of our friends, and I will take the trouble to quote from it.

Mr. LAPOINTE: Do I rightly infer from my hon. friend's remarks that he will join with me in asking to have the Colonial Laws Validity Act repealed?

Mr. BENNETT: My hon. friend, confronted with the difficulty of his own situation, seeks to escape by asking someone else a question. He will find that I am too old to be caught in that way. I resort to the language of Mr. Gladstone, "I will prescribe when I am called in." But I will tell my hon. friend what I am prepared to do: I will use every endeavour in my power, so long as I occupy this position, to see to it that this country shall maintain a status of partnership within the British Empire on an equality with other partners in the commonwealth.

An hon. MEMBER: That was a good question.

Mr. BENNETT: The question is good, but another question suggests itself: what has been done about it? Why assert that something has been done which as a matter of fact has not been done? Would a man in ordinary life say that that was an accomplished fact which obviously was not? Let me illustrate. Around a table sits a family group of six, the eldest fifty, the youngest twenty-two, and they all claim equality. Suddenly the old family solicitor interrupts: "There is a family agreement somewhere that provides that the eldest son shall have the power to veto if you do anything at variance with what he has done." They look up the family records and discover that such an agreement exists. Well, that is the Colonial Laws Validity Act, which in 1926 the Privy Council declared determined the Nadan case; and the language of that act is that any statute which is repugnant to it in terms shall be invalid to the extent of such repugnancy. Although Sir John Thompson forty years ago put on the statutes of Canada a provision denying the right of appeal to the Privy Council in criminal cases, in view of the fact that in 1833-44 it was provided that the poorest subject in the empire might claim the right to petition the Privy Council, that provision being inconsistent with the statute passed by the parliament of Canada, the Privy Council in 1926 concluded in the Nadan case that the law invoked was ultra vires. Here are the words of the Colonial Laws Validity Act:

> Any colonial law which is or shall be in any respect repugnant to the provisions of any act of parliament extending to the colony to which such law may relate, or repugnant to any order or regulation made under the authority of such act of parliament, or having in the colony the force and effect of such act, shall be read subject to such act, order, or regulation, and shall to the extent of such repugnancy, but not otherwise, be and remain absolutely void and inoperative.

A committee of experts created to determine what action should be taken concedes absolutely that there is no equality until such time as legislative measures are adopted in the circumstances, and here we are going about the country assuring the younger men that we have equality of status, when we know perfectly well that it is not so and cannot be so until such time as legislation is enacted by the parliament of Westminster as well as by the parliament of Canada. And in this regard may I point out that the gov-

ernment of the province of Quebec, on the tenth day of this month, placed on record its view with respect to amending the British North America Act.

I will not at present do more than discuss our international situation as dealt with by the speech from the throne. An international situation arises in Canada on the Atlantic, on the Pacific and on the three thousand miles of territory that lie between us and the United States, and further by reason of our membership in the League of Nations. We have recently achieved a non-permanent seat on the council of the league. That was foreseen when we joined the league. When we became a party to the agreement we knew that one day we should secure one of these non-permanent seats, and we now have it. But I do think, and I believe the people of this country are beginning to conclude, that there is too little knowledge on the part of parliament as to what transpires in the League of Nations affecting this country. A great commission was set up on imports and exports, an economic commission on which Canada was represented. Canada agreed to certain conclusions. How many members of this house know what they were, and how much has parliament done to deal with the matter? What I fear is that we shall be charged with bad faith in the years to come because we have become a party to these recommendations without knowing what they are. How many members of this house are familiar with these reports? How many know the implications of them in every sense? Senator Dandurand, speaking on September 15 before the assembly, pointed out that Canada was the only nation in the world that had reduced its tariff four times since the war, and he rather boasted about it. He said that this was anticipating the report of the economic commission created by the League of Nations. My hon. friends will find the subject discussed in the verbatim report of September 15. There are difficulties in connection with the protocol which was rejected, and Mr. Chamberlain made the statement that rather than sign that protocol he would leave because it would mean the disruption of the empire. Yet later on Mr. Ramsay MacDonald bases a speech on the vague and indefinite observations of Senator Dandurand as to the desirability of the protocol being signed. I am bound to say I do not think Mr. Ramsay MacDonald was justified in founding his observations on what Senator Dandurand did say, because he did not make at all clear that he favoured the protocol, as was suggested. I think that is clear from the whole substance of his speech. But we are dealing with international events in countries thousands of miles away, and we are appointing men on committees and commissions to deal with these matters, and what does parliament know about them? Senator Dandurand refers to a dispatch sent by this government to the League of Nations in 1925. I suggest to the Prime Minister that there should be laid on the table of this house every communication that takes place between Canada and the League of Nations, so that parliament and the people of this country will know what is going on, because I do not desire that this country should be charged with bad faith in the years to come because we have appointed men on committees and commissions dealing with these international matters, who have made no report to us and we have no knowledge of these matters except the printed word as circulated.

Then there comes our relations internationally by reason of the appointment of ministers to this country on the one hand, and by reason of the proposal to appoint ministers to France and Japan. May I point out that there seems to have been a very great misapprehension on the part of some persons with respect to the use of the word "ambassador" and "minister" in years past? The word "minister" is used as between Great Britain and Canada. We are told that we are going to have a minister in Great Britain, and Great Britain is going to have a minister in Canada. I took the trouble, thinking my memory might be at fault, to look up these matters. I had desired to speak on them last year, but I was prevented by illness from doing so. A leading authority on international law says:

> Diplomatic envoys accredited to a state differ in class. These classes did not exist in the early stages of international law. But during the sixteenth century a distinction between two classes of diplomatic envoys gradually arose, and at about the middle of the seventeenth century, after permanent legations had come into general vogue, two such classes became generally recognized—namely, extra-ordinary envoys, called ambassadors, and ordinary envoys, called residents; ambassadors being received with higher honours and taking precedence of the other envoys. Disputes arose frequently regarding precedence, and the states tried in vain to avoid them by introducing during the eighteenth century another class—namely, the so-called ministers plenipotentiary. At last the powers assembled at the Vienna congress came to the conclusion that the matter ought to be settled by an international understanding, and they agreed, therefore, on March 19, 1815, upon the establishment of three different classes—namely, first, ambassadors; second, ministers plenipotentiary and envoys extraordinary; third, charges d'affaires. And the five powers assembled at the congress of Aix-la-Chapelle in 1818 agreed upon a fourth class—namely, ministers resident,

to rank between ministers plenipotentiary and charges d'affaires. All the other states either expressly or tacitly accepted these arrangements, so that nowadays the four classes are an established order.

That is the position with respect to that. Let us go a step further and see who may be accredited, and under what conditions men may be accredited from one state to another. I find it put in this short sentence: First of all, there must be a state, and a state is defined internationally to consist first of all of a people. There must, secondly, be a country in which the people has settled down. There must, thirdly, be a government, and there must, fourthly and lastly, be a sovereign government:

Sovereignty is supreme authority, and authority which is independent of any other earthly authority. Sovereignty in the strict and narrowest sense of the term includes, therefore, independence all round, within and without the borders of the country.

That is the definition given by an accepted authority in international law. Let us proceed a step further, and here is where a great difficulty arises:

The appointment of an individual as diplomatic envoy is announced to the state to which he is accredited in certain official papers to be handed in by the envoy to the receiving state. Letter of credence is the designation of the document in which the head of the state accredits a permanent ambassador or minister to a foreign state.

Since when did Great Britain become a foreign state to Canada?

Mr. MACKENZIE KING: May I interrupt my hon. friend? I do not know whether his intention is to have it appear that someone on this side of the house has suggested sending a minister to Great Britain and receiving a minister from Great Britain in this country. If that is what he has in mind, may I tell him that he is entirely in the wrong? No one on this side of the house has suggested anything of the kind. I would like to add, for the benefit of my hon. friend, that I know a suggestion of that kind did come from some hon. gentlemen who are sitting beside him.

Mr. BENNETT: My right hon. friend always has greater information with respect to this side than I have. I can only say that if such a suggestion came from this side, I never heard of it. It may well be that someone has suggested that, but whether someone on this side has suggested it or not, I can only point out that it can possibly be that a minister from Canada cannot be accredited to Great Britain, or a minister from Great Britain accredited to Canada.

[Mr. Bennett.]

Mr. MACKENZIE KING: I entirely agree.

Mr. BENNETT: The Prime Minister may not have had that in mind, but certainly I can tell him that some of his followers had.

Mr. MACKENZIE KING: I do not think so.

Mr. BENNETT: I claim to know. My right hon. friend claims to know with respect to this side, and I do know with respect to his. There appeared an editorial in the Free Press of Winnipeg a few days ago dealing with the matter, and the editor of that paper asked, "Why be a stickler for names? It does not make any difference what you call them." That is the very point I desire to discuss.

What is international law? What is the law of nations? It is not something that you may set at naught by the use of terms that have no meaning. It is highly important that your terms be used in the sense which diplomatic usage and custom and established precedents have given to them down through the centuries, and when you use the word "minister" it means just what I have read to this house, and the same with the use of the word "ambassador". It is important that there should be no confusion in terms. These are words used in the intercourse between civilized states, and they are exactly defined by the authorities. Oppenheim, in his International Law, says:

Law of nations or international law is the name for the body of customary and conventional rules which are considered legally binding by civilized states in their intercourse with each other.

Bearing that in mind, I have no hesitation in saying that to set up an ambassador in the United States is not a difficult thing to understand. They realize our position within the British Empire, but when you are dealing with foreign nations, using the word in the larger sense, when you are dealing with people unaccustomed to our institutions, the implications are such as to leave a wrong impression on the public mind, and those implications involve responsibilities of a character which this country is not ready, in my judgment, to accept. You set up a ministry in Tokyo. The Japanese are highly specialized in international law, and they will read the word "state" as meaning just what I have said, and " minister" as meaning just what I have said. They will treat Canada in the sense I have indicated from the authorities, with all the implications relating to

property, protection, navy and army, and all these other matters that are involved. What are the implications with respect to setting up diplomatic relations in Tokyo? One can understand it in Paris, where they are familiar with our institutions, but when you are dealing with a far-off country, the situation is fraught with the greatest possible danger to this country. It is all nonsense to talk of the status of Canada being improved because you call somebody a minister. What this country wants in Japan and all other foreign countries are trade commissioners, under the Minister of Trade and Commerce, to carry forward Canada's trade. The Minister of Trade and Commerce (Mr. Malcolm) knows that trade commissioners are what are wanted, men who will carry forward Canada's trade, not our diplomatic skill and power, to the countries of the world. What this country desires to deal with are practical matters, not matters that carry with them the implications of international law to which I have referred, and these are serious matters that cannot be dismissed with a wave of the hand. They are matters that have caused wars in days gone by—the designation and description of a country's representative, the rights and powers and immunities they enjoy in foreign capitals, their right to speak with authority for the state they represent their right to command armed forces, whether naval or otherwise—all these questions are involved in these implications. I say that what this young country wants, with the Colonial Laws Validity Act still outstanding, is not ministers in foreign capitals dealing with diplomatic matters, but rather trade commissioners dealing with matters affecting the expansion of our trade and commerce; and when you appoint a diplomatic representative I say that the implications involved are most dangerous. They are fraught with the greatest possible danger to the body politic. It is easy to talk in terms of great boasting of the position of our country, but Canada's position in Japan will be no greater with an embassy or ministry or legation set up in Tokyo than if under the old flag you still carry on trade and commerce and look to the British navy for your protection.

I desire to make it perfectly clear that we on this side of the house are opposed to setting up these legations as long as our present status continues. We do not desire that the implications that are attached to our position shall be misunderstood in the world at large. It is going to bring about disaster, as certain as anything can be. About that there can be no doubt. One need not engage in prophesy; one need not be a prophet who reads the diplomatic history of Japan and the United States during the last twenty-five years, to understand what it means to start diplomatic relations in Tokyo. It is only necessary to know what has taken place to understand the situation. You, Mr. Speaker, represented this country in dealing with problems of immigration and if we set up an embassy or legation in Tokyo you can realize the position. We embark on these different problems with respect to immigration and other important problems, but it is idle boasting to talk about our position in a foreign country because some representative over there can wear gold lace and a uniform. That does not advance the interests of the country a single sou.

Mr. WOODSWORTH: Does the hon. gentleman not agree that some very far-reaching implications along the line he has been mentioning are involved in Canada's membership in the League of Nations?

Mr. BENNETT: The position with respect to Canada's status in the League of Nations was threshed out before we became a member of it, and therefore was understood by all who became subscribers to it. It was set out in the treaty and was not dependent upon customs and traditions which have come down to us. It is in the first part of the treaty of Versailles and there is definite provision with respect to what may happen and what shall happen. In the other case there are implications which may arise by the usages of international law.

There are other things for which the speech from the throne is remarkable. We were told that the position in regard to a fuel policy would be announced, and we were informed that a coal policy was in process of incubation, that the matter would be settled in a short time. But there is nothing in the speech in regard to money being spent at home rather than abroad; there is no explanation of the people leaving Alberta to seek work elsewhere, when thousands of them could be employed to dig the coal out of the western provinces. No policy is announced which will have the effect of keeping these people at home. It is not considered of importance.

Then there is nothing in the speech from the throne with respect to the St. Lawrence waterway. I have looked over the speeches from the throne for the last few years to find a reference to that subject. Hon. members

present this afternoon will probably recall the reference to it in 1924; I will read it so that there may be no misapprehension about it. In 1924 the Prime Minister placed before us, through the representative of the crown, the following:

A further interchange of correspondence has taken place between my government and the government of the United States with reference to the St. Lawrence waterway. In the opinion of my advisers, the importance of this question is such that further inquiry should be instituted before a final decision is reached upon the proposals which have been under consideration.

With respect to this the house was a unit. And now in 1928 we understand a report has been made; it was tabled this afternoon, but there is no indication in the speech as to what action is to be taken, although my right hon. friend is reported in the press as saying that this is the most important question that could engage the attention of the people of this country. Under these circumstances I suggest that this country had a right to expect that if the matter was to be dealt with it should be referred to in the speech from the throne, and if it was intended to give it further consideration it is just as well to say so in 1928 as it was in 1924.

The speech from the throne makes no reference at all to reduction of taxation or to economy. President Coolidge of the United States pointed out the other day that the time to practise economy was when the revenues are buoyant and when the country was enjoying a period of temporary prosperity. What are we doing with respect to the national debt? Are we endeavouring to deal with that in a comprehensive way, setting aside or earmarking any particular sums of money in that connection? We have not done so and are not doing so.

Further, while the speech from the throne contains no reference to reduction of taxation, I submit to you that the country expects, nay, almost demands, that there shall be a reduction of taxation at the present session. The people of this country are weary of the interminable difficulties in connection with the sales tax. I believe I voice the opinions of my hon. friends to my left when I ask that the sales tax be entirely abolished. When the sales tax is being used as a protective tariff I think you should call it by its proper names, and that you should use the proper instrument to protect the trade of the country, instead of the sales tax.

These are the only matters I desire to refer to at this time. In hurrying through my remarks, however, I passed over one matter which I desired to bring to the attention of the Minister of Justice. I refer to the following remarks of the Chief Justice of Canada in regard to the question of appeals to the Privy Council:

If our nationhood is to become a thing of substance and reality, either the appeal from our courts of last resort to an English tribunal must entirely disappear, or provision must be made for an adequate imperial court of appeal, as the ultimate appellate tribunal for all parts of the empire, whose decisions will be as binding in England and Scotland as in the dominions, including the latest welcome addition to their ranks, the Free State of Ireland.

And he prefaced his remarks by saying that:

While this subordination of our courts is maintained—while this badge of inferioty is attached to them—our vaunted Dominion status as a full partner in the empire seems but an idle boast—a sop thrown to our vanity.

These were the observations of the right hon. Chief Justice of Canada, given in a considered address from which I have just read.

Now, Sir, I have trespassed entirely too long upon the indulgence of this House, but the matters which are now about to engage our attention, whether from the standpoint of domestic policy, empire relations, or international affairs, are all of tremendous importance. They are not only important within themselves, but their implications are more important still. The matters that I do urge the government to take under its immediate consideration are matters affecting the settlement of this country, the reduction of our debt, the practice of economy, and the lessening of taxation. For this country, situated as it is with respect to the republic to the south, cannot maintain taxes higher than they are there and hope to attract settlers and retain them. This is one of the prices we pay for our geographical position. Therefore it is incumbent upon the government at the earliest possible moment not only to reduce taxation and remove from the statute books those taxes that are generally regarded as nuisance taxes when applied to the individual in the conduct of business, but also to see that our revenues are judiciously and economically expended for the purpose of providing for the public service and also of reducing our fixed charges by reducing our national debt as quickly as possible. Above all, the government should see that the supremacy of parliament is maintained. That is, the measures which are now being dealt with by the executive should not be so dealt with unless authority therefore has been obtained from parliament. As we all know, parliament came into being to protect the people of the country against encroachments of power on the part of the executive.

Whether that executive be king or cabinet matters not; if the rights that belong to parliament are not observed it will be found that the executive perishes.

Therefore we urge these matters on the government, and we who sit to the left of the Speaker promise to the full extent of our ability to help the government to carry them into effect. Our best efforts, our ability and our resources are at their disposal to secure that permanent settlement so desirable to the progress of this great Dominion.

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, I am pleased that my first words to the hon. gentleman (Mr. Bennett) upon the conclusion of his address can very sincerely be words of congratulation at the moderation of tone which has characterized it in comparison with addresses which we have been accustomed to hear in previous parliaments.

I am also pleased to be able to thank my hon. friend for the compliment which he has paid to those who have spoken on this side of the house in moving and seconding the address. Naturally we join very heartily with him in the praise which he has accorded the hon. member for Hants-Kings (Mr. Ilsley) on what was generally conceded to be a very excellent address. The hon. member has come into this house as one of the youngest of its members, he has been here but a short time, in fact this is his first parliament, and each time he has spoken he has given evidence of that high reputation which he had as a public speaker before he came into the House of Commons. His address reflects credit not only upon himself and his constituency, but equally upon this parliament.

May I say that I think the speech of the hon. member for Provencher (Mr. Beaubien) was in every particular equal to the speech delivered by the hon. member for Hants-Kings. It was delivered in French, and might have been delivered by him with equal facility in English. Had my hon. friend opposite read it carefully, he would in his references to it, have spoken differently. He said that the speech might well have been delivered by my hon. friend from Provencher had he been speaking on his side of the house.

Mr. BENNETT: My right hon. friend did not understand me correctly. I said: Had he been sitting on this side and had we been the government—he in the opposition.

Mr. MACKENZIE KING: All I have reference to is my hon. friend's remark that the speech might have been delivered from the other side of the house. If one reads the speech one sees that it is very loud in praise of the present administration and somewhat condemnatory of certain of the policies of my hon. friends opposite. In that regard I agree with him that the speech might well have been delivered on the other side with regard to the respective merits of the two political parties.

Now, Mr. Speaker, I shall endeavour to follow my hon. friend as far as I may be able in the order in which he has spoken on the various subjects under review. May I first of all join with him in expressing our sympathy, the sympathy of the Canadian people with Lady Haig in the great bereavement which she has sustained in the death of her illustrious husband. When I learned this morning that General Haig had passed away, I felt it would be the will and wish of parliament and the people of Canada that I should immediately cable, in their name, the deep regret which we all feel at the loss sustained by the British Empire and, indeed, the world by the death of this great and distinguished soldier.

My hon. friend touched very lightly upon the diamond jubilee of confederation. If I stop to refer to that subject as mentioned in the address it is not for the purpose of basking in reflected glory, as he has intimated might possibly be the motive, but rather to give credit where I feel credit is due for what I believe is generally conceded to have been one of the most memorable events in the history of our country. As hon. members will recall, at the last session of parliament a national committee was appointed, to which was entrusted preparations for a fitting celebration of the sixtieth anniversary of confederation. The Right Hon. George P. Graham was made chairman of that committee, and subsequently Mr. Cowan and Mr. Desy were appointed secretaries. I should like to take advantage of this the first opportunity in parliament publicly to thank these gentlemen for having given their time and efforts so unselfishly to the work of the committee, and I should like in the same connection to make special reference to the great service rendered our country by Hon. Thomas Ahearn, who had so much to do with the successful broadcasting to all parts of this Dominion from parliament hill of the proceedings on July 1.

I think, Mr. Speaker, we have all reason to feel a special pride in the degree to which all parts of this Dominion participated in the celebration of its sixtieth anniversary. The occasion evoked a national pride, a

sense of national unity to a degree that up to that time had never been expressed; and whatever makes for Canadian unity serves, I submit, in the highest way not only the interests of Canada, but the interests of the empire as a whole.

I am sorry that I did not understand the reference which my hon. friend made to some remarks of mine respecting His Royal Highness the Prince of Wales and the Prime Minister of Great Britain. I followed him, I think, in all other particulars, but I confess that even at this moment I cannot conceive precisely what their bearing was. At the time, I said that I thought it was a particularly fortunate and happy circumstance that whereas confederation had been brought into being by Canadian ministers visiting London and there co-operating with the British parliament and the sovereign of Great Britain in the enactment of the British North America Act, at the time we were celebrating the diamond jubilee of confederation we should have, not Canadian ministers visiting London, but the heir to the British throne and the Prime Minister of the British House of Commons visiting this Dominion to participate in the celebration of the sixtieth anniversary of that event. I think, Mr. Speaker, that that was a feature of the events of the year in which we all felt a great measure of pride. I would also say that my hon. friend might have fittingly made reference to other visits which have been made to our Dominion by distinguished statesmen of the British Empire in the recent past. Since the last Imperial conference we have had as guests of this country in addition to the Prime Minister of Great Britain, the Prime Minister of Australia and the Prime Minister of New Zealand, and I am proud to say that we have to-day in the capital of our country, as our guest, the President of the Executive Council of the Irish Free State, another of the sister dominions of the British Empire.

I would further say that I think my hon. friend might well have made reference, while dealing with the speech from the throne, to other features which have contributed largely to international good will during the course of the present year. I was happy to see that in reference to the legation which Canada has opened at Washington, my hon. friend has changed to a considerable degree the point of view to which he gave expression during the last session of parliament, and that in common with the citizens of Canada generally he has come to see that the opening of that legation has been a helpful factor in the economy of this nation, and helpful also in the larger affairs of the British Empire. I think the opening of legations at both Washington and Ottawa by the Canadian and United States governments respectively, is an event worthy of mention, and I feel that the experience we have already had of the services of these legations is sufficient to convince us that the step taken was a wise and eminently practical one, and will prove increasingly helpful as the years go by.

The visit of Their Excellencies to the United States was a feature of the year which I think was deserving of mention, if only to illustrate as it does the international good will to which that visit gave expression. I am happy to say that in the course of another week we in Canada will have the pleasure of receiving the Secretary of State of the United States, who intends to pay a visit to our Dominion at that time. The visit of His Royal Highness the Prince of Wales and the Prime Minister of England, in conjunction with Canadian ministers of the crown, to Buffalo, there to meet the Vice-President of the United States, the Secretary of State and other ministers of that government in the dedication of a bridge which commemorates more than a century of peace between our neighbours to the south and ourselves, was another event of which I think we on this continent have reason to be proud, and which may well be held up as an example to the world.

I should make mention at this moment, and I take this the first opportunity so to do publicly in parliament of the appreciation of parliament of the gift which was announced by His Royal Highness the Prince of Wales as coming from His Majesty the King in commemoration of the diamond jubilee of confederation. Honourable members know, this gift consists of oil portraits to be hung in these buildings of His Majesty and the Queen, as well as portraits of their late Majesties King Edward and Queen Alexandra. They are a possession which I am sure will always be greatly treasured in these houses of parliament.

I come now, Mr. Speaker, to consider some parts of the address of my hon. friend in which I feel he hardly did justice to the situation as it exists in Canada at present. As hon. members will have noticed, he made many references to the necessity for increased immigration. He said we were crying out for labour in this country and that we should do everything in our power to stimulate the supply.

Mr. BENNETT: I did not say we were clamouring for labour.

Mr. MACKENZIE KING: I am glad my hon. friend makes it clear that he did not say we were clamouring for labour, but he did say that we needed immigration very much; we are agreed on that. I would point out to my hon. friend that immigrants who come to this country and do not work are not the class of immigrants we want; we want people who will work. I was struck, as I am sure other hon. members must have been, by a curious kind of contradiction in the remarks of my hon. friend. He opened by stressing the unemployment which he said exists in this country, and returned to this subject when he came to the latter part of his address. He was seeking to belittle what was said in the speech from the throne with respect to the prosperity in Canada to-day when he spoke of unemployment; when that particular point had served his purpose, in order to criticize the government from an opposite point of view, he began to stress the necessity for increased immigration.

I may say to my hon. friend, so far as the policy of the government with respect to immigration and unemployment is concerned, that this country needs all the immigrants we can successfully assimilate and put into employment in Canada, but we do not intend to extend our immigration policy to a point where it will lead to large unemployment in any of the industrial centres of our Dominion. I think if my hon. friend is sincere in his desire to increase immigration, as I am sure he is, he will be better advised if he directs his attention more to laying stress on the prosperity of Canada and the publishing abroad of that fact than to making references in this house or elsewhere to unemployment in Canada at present. As a matter of fact we all know that for years past there has not been a time in Canada when there was less unemployment than exists at present. May I quote to my hon. friend the statement of a member of his own party, a prominent member, although not in this house? I refer to the Premier of the province of Ontario, and what he had to say to a delegation which waited on him only a few days ago. It was asking the Ontario government to help provide for some alleged unemployment in this province. What was the reply made by Hon. Mr. Ferguson? It will be found in the Toronto Globe of January 24. It seems that the delegation was from York township, members of the township council were evidently representing that there was some unemployment, and in reply to their request Premier Ferguson said:

> With the great activity in building and all kinds of construction work, I am at a loss to understand why there should be any serious unemployment. As a matter of fact, a general survey of the situation has led the government to believe that there is no real distress, and there is less ground for complaint than there has been for some years.

That is the view of the Ontario government after having made a survey of this province, and I would commend that view to my hon. friend as coming from a better source than the one from which he has derived his information.

What are the facts in regard to employment? Let me quote from the authentic records of the Bureau of Statistics as to actual employment. My hon. friend says these figures are gathered from firms which employ people; certainly they are. One would not go to a firm which did not employ anyone in order to get information as to employment, and I contend that the degree to which there is employment is better represented by statistics from employing firms than by any other possible source.

The Department of Trade and Commerce, in the statement issued on January 16 of the present year, reports the employment situation in Canada as follows:

> Employment as reported by employers throughout Canada was in greater volume in 1927 than in any other year since 1920, there being almost uninterrupted expansion on a large scale from early in January until the first of September. This upward movement carried the curve of employment to a level many points higher than in any of the last seven years and considerably higher than at the basic date in 1920, when the post-war boom was at its maximum. During these seven months of advancing employment, nearly 125,000 persons were added to the staffs of the reporting firms, a number which was practically the same as in 1926 and greater than in the same period of any other year of the record except 1922, when the opening up of industry following the depression of 1921 caused the employment of approximately the same number of extra employees.

If my hon. friend will consult other sources of accurate statistical information he will find that they all substantiate this position.

My hon. friend referred to the condition of trade, and indicated that in some particulars it was not just what he would like to see it. I think he will admit that the total volume of trade this year has been larger than that of any previous year. My hon. friend says that the imports are greater, but that the exports are somewhat less. That is quite true, but why are the imports greater? The imports are greater because—and if he looks at the figures I think he will find I am correct—we have been importing a large quantity of raw materials to be worked up in our

manufactures, that we have also been importing large quantities of equipment. These two items, the increase in raw materials and the increase in equipment, each of them representing expanding industry in Canada, are responsible for the imports being larger this year. In regard to exports my hon. friend will find that prices ruled considerably lower in some of the agricultural commodities, and for that reason, perhaps more than for any other, the total exports do not range as high in gross value as in previous years. Nevertheless the fact remains that the balance of trade in Canada was more favourable than was the case with respect to the balance of trade of any other country of any standing in the world. Our favourable balance of trade was $151,000,000 in 1927, the largest per capita favourable trade balance of any leading nation. I will not take time to quote the figures with respect to internal trade activities. Internal trade may be judged by the wholesale and retail figures of which I have a statement here, but to save time I shall pass them over. They disclose a great increase of business. I would, however, like to give to my hon. friend and to the house the record of the amounts of cheques charged in the clearing house centres of Canada. They are an index, and an important one, with respect to business transactions and to progress. These figures, secured from the Canadian Bankers' Association, show the bank debits in Canada to have been as follows:

1924	$27,157,000,000
1925	28,126,000,000
1926	30,358,000,000
1927	36,393,000,000

These figures disclose an increase of nearly 33 per cent between 1924 and 1927 in the volume of business transacted in Canada by means of cheques drawn upon our chartered banks.

My hon. friend spoke of the railway receipts and he was a little critical of the statement made in the speech from the throne that the gross receipts of the railways had increased. I do not think my hon. friend denied the truth of the statement but he drew attention to the fact that the net receipts had not been as considerable as in previous years. As a matter of fact, the gross receipts do show, exactly as the speech from the throne indicates, a very considerable increase. In the case of the Canadian Pacific Railway the total receipts for 1926 were $197,636,000, and the total for 1927 was $201,403,175. In the case of the Canadian National Railways, the total receipts for 1926 were $253,376,000, and for 1927 they amounted to $256,164,000, a considerable increase in the case of both companies. Why do the net receipts not show the same measure of increase? My hon. friend knows the explanation but he did not give it to the house. He knows that considerable increases were made in the wages paid to the employees of both railway systems, changes resulting in an increase of several million dollars. The fact that there was a later movement of some of the crops and a lowering of rates on the carriage of grain and other commodities also helps to account for the difference in net receipts. The fact that the reduction in the net receipts is so largely accounted for by the improvement in the position of that large body of the community represented by railway labour, is of itself a circumstance which speaks well for the increased prosperity in business of this country.

I might make further reference, as evidence of the prosperity in Canada, to building operations. The news manager of the MacLean Building Reports, in a statement published in the Commercial and Financial Review for the year 1927 by the Montreal Gazette, has the following in reference to building construction:

> Not since the boom days of 1912 has construction come within $100,000,000 of the record established in that year, until the past twelve months, when nearly $419,000,000 were spent or contracted for throughout Canada in this important industry. The fact of such a large sum, greater by 12.3 per cent than the record of 1926, was spent in the program for 1927 after five heavy building years speaks very favourably for the prospects for this year.

The official record of building permits issued in sixty-three cities shows a total value of building amounting to over $185,000,000 in 1927, as compared with $156,000,000 in 1926, an advance of over 18 per cent on what was itself a record year.

I submit, Mr. Speaker, that my hon. friend would help his immigration propaganda much more if he gave these figures to parliament and to the world instead of attempting to create the impression that the country is not as prosperous as everyone but himself is prepared to admit.

Now what is the position with regard to manufacturing in Canada? The manufacturing industries of the Dominion operated on a larger scale in 1927 than in any other recent year, as is shown by the monthly record of employment; 4,000 of the larger manufacturers report an employment of 477,000 persons, and the flood of manufacturing activity in 1927 is estimated as having been four per cent greater than in 1926.

I could quote figures to show how considerable also has been the increase in different branches of agriculture. I pause to make mention that Canada has come to be the leading exporter of wheat among the countries of the world. I could also point out that in mining we have made vast strides in production and in export. Coming to forestry may I say that in newsprint Canada is now the leading producer in the world. We have, in our production, passed in Canada beyond merely domestic and imperial records to world records.

In concluding this branch of my subject I should like to give my hon. friend, also for use in his immigration propaganda, the opinions of the leading bank managers in this country. I submit that he will be well advised to secure and broadcast statistics of this character if he wishes to bring into the Dominion a class of people who are ready and willing to work, and who will see before them in this country a land of great promise and of great opportunity.

The president of the Bank of Montreal, in his statement this year, declares:

Bank debits, bank clearings, bank deposits, car loadings, railway gross earnings, imports, note circulation, and lower mercantile mortality reveal that the tide of business has risen during the year. . . . I see no reason why an abatement of confidence in the continuance of these prosperous conditions need be apprehended.

Then the general manager of the Bank of Montreal states:

I have referred to the past year as the most expansive in the country's commercial history. That Canadians have experienced a greater degree of individual prosperity than ever before is, I think, undisputable.

The president of the Imperial Bank states:

Evidence of the general growth and prosperity of Canada may be observed on all sides.

The president of the Royal Bank of Canada:

Those who were most careful in their studies of world economic trends were forced to the conclusion that a return to world stability in commerce and finance would be accompanied by such a rising tide of demand for the products of Canada's fields, forests and mines as would assure a prolonged period of prosperity. The steady improvement in agriculture, mining, manufacture and internal and external trade which has characterized the years 1925, 1926 and 1927, has done much to vindicate the good judgment of this leadership.

The president of the Bank of Toronto:

The year just closed is notable for the sound progress made in nearly every branch of our economic life. . . So far as the future is concerned we have every reason to be confident. Our present prosperity is not superficial, but is well founded on natural resources, organization and efficiency.

And, finally, the general manager of the Bank of Commerce, at the annual meeting on January 10, 1928, makes this statement:

In conclusion: the general business situation is sound, the purchasing power of the people of Canada is greater than it has ever been before, and the development of the natural resources of the country proceeds apace. These conditions make for prosperity, and the general frame of mind of the public is genuinely optimistic. This creates an ideal atmosphere for future progress, and, if we will but give painstaking attention to our business and avoid excesses such as overtrading or speculation, we in Canada can face the future with confidence and certainly look forward to another year of progress and prosperity.

Mr. BENNETT: He does deal with immigration directly?

Mr. MACKENZIE KING: This is the way in which to deal with it. It is a much more effective way. I shall have a word to say on the subject of immigration later on. But let us see how we are viewed by observers outside. This house is familiar with the work of the Babson Statistical organization of Wellesley Hills, Mass. Mr. Creighton J. Hill, of that institution makes this statement:

Fundamental conditions in the Dominion indicate that general business in 1928 will exceed that of 1927, and while in the states the trend will be slightly downward, in Canada it is going to be upward. Canada is to-day in a position to maintain an independent prosperity through 1928.

May I conclude these references by quoting from an hon. gentleman who sits with my hon. friend on the other side of the house; I mean the distinguished member for Mount Royal (Mr. White). In his financial review of the year 1927, published in the Gazette that hon. gentleman has the following to say:

Canada has never before enjoyed a year of so general progress and prosperity as that of 1927. Production, distribution, manufacturing, transportation and foreign commerce exceeded all previous records.

I say, Mr. Speaker, and I say it with considerable pride, that there has never been an occasion when one standing in the position of leadership of a government was able to give to this parliament a record of greater progress or a message of higher hope, present and future, than I have been enabled to give to this house to-day.

My hon. friend said that we ought to promise something in the way of reduction of taxation; he suggested that we should show something in the way of diminution of the public debt. I wish to assure my hon. friend that is exactly what we have been doing, and when he becomes more familiar with the record of the government, as, with the passing

of time, I trust he will, I have no doubt he will be quite satisfied in his own mind on these points. Let me in this regard submit a few figures which I think will be of special interest to him. When we came into office we found that the government that had preceded us had been successful in one particular, namely, in adding to the public debt by leaps and bounds. There had been an increase of many millions in the public debt of the country, and as a matter of fact the situation was one of the gravest with which an administration could be confronted. The problem was not a simple one, how to reach the point where the budget of the country could again be balanced satisfactorily. What where the facts? In the fiscal year 1920-21 there had been an increase in the debt of $92,000,000. It will be remembered that this government took office in December 1921, so that practically all the figures of the fiscal year 1921-22 were attributable to the previous government's administration of affairs. Instead of the public debt decreasing, it was being added to progressively by colossal sums. True, there was in 1921-22 a little difference, accounted for possibly by the fact that the present administration had been in office three months of that particular year, but it was not such as to minimize the effect of the immensity of the figures. The public debt for the year 1921-22 was increased $81,000,000 such was the amount of difference between receipts and expenditure in that year. It is true that, in order to try ultimately to balance the budget, Mr. Fielding, who was then Minister of Finance, found it necessary slightly to increase taxation. Mr. Fielding took the position, which I think was a sound one, that this country could not go on running deeper and deeper into debt, and that if we were to reach the point where Canada should enter upon the road to prosperity and progress we must at least balance the budget, and, if at all possible, have surpluses instead of deficits in our yearly accounts. A slight increase in taxation was made at the time to help to meet the situation. The result was that the next year, although we were unable completely to avoid an increase in the public debt, the increase for the fiscal year 1922-23 was, not $81,000,000 as it was the year before, but $31,000,000. The year following that, after our policies had had an opportunity to get under way in the country and their effect had been tried, there was a complete reversal in the position of affairs, and from that time on we have heard no more of deficits, having had surpluses every year. In the fiscal year 1923-24 we had a surplus of $35,000,000; in 1924-25 a surplus of $345,000; in 1925-26, a surplus of $27,000,000, and in the fiscal year ended March 31, 1927, a surplus of $41,000,000. It is too early yet to say what the surplus will be in the present year, but it is not revealing any secret when one advises parliament that the figure will be quite large and that, again this year, we shall have a very considerable surplus as a result of our financing.

What in addition has taken place this year along the line which my hon. friend commends to us? He says that we should redeem outstanding obligations. In 1925-26, outstanding obligations of $20,000,000 were redeemed in cash, while in 1926-27 the redemption in cash was $43,000,000. In the present fiscal year there have been three maturities, one of $29,000,000, bearing interest at the rate of five and a half per cent, redeemed in cash on November 15; while four per cent treasury notes, amounting to $8,000,000, were redeemed in cash. On December 1, a maturity of $63,000,000 became payable. This was a five per cent loan, tax exempt, and $18,000,000 was paid off in cash, the balance being taken care of by borrowing from the banks treasury notes at the rate of four per cent. This was the lowest rate of interest that the government had secured in pre-war days. As a result of our financing in the present fiscal year, the annual interest saved alone will be $3,600,000.

Mr. BENNETT: Is my right hon. friend aware that the government guaranteed $65,000,000 for the Canadian National Railways, $20,000,000 for three years' notes maturing last year, and $15,000,000 bank loan, usually paid in cash, for which they issued securities, or taking these two, $35,000,000 in outstanding guarantees.

Mr. MACKENZIE KING: I will leave it to my hon. friend the Minister of Finance (Mr. Robb) to go into the details of the financing of the railways when we come to the budget, but I am giving to my hon. friend facts and figures which are incontrovertible with respect to maturities that have been redeemed and cashed during the past year.

Now while the government has been reducing the public debt, while it has been reducing outstanding securities as they have been maturing, while it has been refunding large sums of money with other securities bearing a lower rate of interest, it has at the same time been steadily reducing taxation. My hon. friend said he thought that we ought to reduce taxation. I want to tell him that that is exactly what we have been doing, and doing steadily for the last few years. The record of this

government in the matter of tax reduction is one of the most remarkable records that any administration has ever had to its credit. Let me just refresh the memory of hon. gentlemen with respect to what has taken place in that regard. The principal taxation reductions since 1923 have been as follows:

In 1923, reduction of sugar duties, $2,500,000. Changing the sales tax so that it shall apply as at the source. The first year this change showed a considerable reduction. Reductions under the British preferential tariff of 10 per cent where the goods are brought direct to the ports of Canada.

In 1924, reduction of sales tax from 6 per cent to 5 per cent and articles added to the exempted list. In the customs tariff the principal reductions were agricultural implements, saw-mill and logging machinery, coal-washing machinery, the estimated reduction of customs and sales tax revenue being $24,000,000.

In 1926 there was reduction of duties and excise tax on motor vehicles; sales tax reduction on canned fish from 5 per cent to 2½ per cent; reduction in postage; the receipt tax was abolished; reduction in income tax; the estimated total reduction in revenue being $25,000,000.

In 1927 there was further taxation reduction: ten per cent on all rates in the income tax; in the sales tax a general cut of 20 per cent; excise tax on matches cut 25 per cent; reduction of rates on cheques, bills of exchange, promissory notes and similar documents.

The total reduction in taxation amounted in that year to $27,000,000. So I say to my hon. friend that instead of telling us what we ought to be doing he should be thanking us for what we have been doing, and he should have not merely the hope but the expectation that we will continue in that way. It is not for me to say what the Minister of Finance will have to tell this House when he brings down his budget, but I for one shall be very much surprised if he does not show again this year, as in former years, a surplus, reduction of the public debt, and further tax reductions. I think, Mr. Speaker, I have perhaps dwelt at sufficient length upon the remarks of my hon. friend with respect to the position of the country at the present time, the government's action in the matter of economy, and its interest in the public welfare from the financial side.

I come now to the next subject on which he touched, the Dominion-provincial conference this year. May I say that when my hon. friend asked me on Thursday last for the report of the conference I mentioned to him that there was no official report for the reason that when the conference met it was agreed, not by one side, but by all present, that the conference would perhaps make better headway and that we would come nearer to an understanding of each other's difficulties if we did not attempt to have a record kept of the discussions, but gave to the public from day to day a precis which was carefully prepared by one who was present for the purpose of taking down the essential features of the discussion. That precis, before it was issued to the press, was submitted to representatives of the provincial governments and of the federal government. It was issued in fairly extensive form, and I may say to my hon. friend that comparing the official precis that was issued in connection with this conference with the records of previous conferences, it is much more complete than the record of any previous conference. Possibly it would be well if parliament were furnished with that precis in a form in which it could be made available to hon. members, and I am very pleased to say to my hon. friend, as he has drawn attention to the omission of an official record, that to-morrow I shall lay on the table of the house the official precis of the conference as given out from day to day, and that in a form which I believe will merit its publication by parliament.

Mr. BENNETT: Thank you so much.

Mr. MACKENZIE KING: That will give to members of the house an accurate statement of what took place from day to day in so far as it is desirable to have the proceedings of the conference made public.

Mr. BENNETT: That is all that is wanted.

Mr. MACKENZIE KING: May I say a word about the Dominion-provincial conference—because I think it was one of the most important events of the year—as to how the conference was called, its method of proceeding, and so far as time will permit me to touch upon it, what occurred in the course of the proceedings.

Hon. members will recall that at different times in this house it was suggested that certain matters should be taken up at a Dominion-provincial conference. With respect to some of the questions that were discussed the conference was called largely as a result of the express wish of this House of Commons. In order that the subjects taken up might be as inclusive as possible, some months before the conference was held a communication was sent to the premiers of the provinces asking them to enumerate any

subjects they would like to have brought up for consideration between the Dominion government and their provinces. When replies had been received from all the premiers these subjects were then classified and an agenda was carefully prepared which sought to so arrange matters as to make the discussion as logical and orderly as possible. The Dominion had certain questions which it desired to discuss with the provinces, as well as the questions which the provinces themselves submitted, but it was found that all the questions fell broadly into one of three classifications. They were questions either of a constitutional nature, or which had to do primarily with finance or they were of an economic and social character. The agenda as presented to the conference contained the different subjects for discussion under these three divisions. I might give hurriedly to the house the main topics that were discussed in this way. Under the head of constitutional questions, the following subjects were discussed:

1. Senate reform.

2. Procedure in amending the British North America Act.

3. Participation by provinces in international labour conferences.

4. Regulation of aircraft and flying operations.

5. Industrial Disputes Investigation Act.

6. Incorporation and operation of companies, including trust, loan and insurance companies.

7. Regulation of the sale of shares and securities of Dominion companies.

8. Representation of Nova Scotia in the House of Commons.

Under the heading of "Financial" the following subjects were discussed:

1. Federal subsidies, including recommendations of Duncan report thereon.

2. Other proposed federal aids:
(a) for highway construction.
(b) for technical education.
(c) for agricultural education.
(d) for unemployment relief.
(e) for steel industry.

3. Partition of federal lands.

4. The Canadian Farm Loan Act, 1927.

5. Taxation:
(a) Delimitation of fields of taxation.
(b) Taxation of the Canadian National Railways.
(c) Comparative taxation.
(d) Income tax. Method of collection.

6. Reduction of customs and excise duties.

7. Consideration of interests in which the Dominion and provincial governments exercise jurisdiction:—
(a) Agriculture;
(b) Policing;
(c) Health;
(d) Construction, maintenance and upkeep of railways.
(e) Developing markets for Canadian products.
(f) Establishment of national research laboratories and co-operation in research.

Social and Economic

1. Immigration. Federal and provincial co-ordination.

2. Fuel problems.

3. Old age pensions. Social insurance.

4. Water-power development.

5. Fisheries.

6. Child nutrition and transmission of infection.

My hon. friend asks how parliament is to know what was to be done with respect to these various subjects and what was the attitude taken by the conference upon them. My reply to him is this: that the various subjects were dealt with in different ways. It was possible to dispose of some of them on the spot. For example, among the subjects dealt with was the question of the regulation of air craft and flying operations. That question related to a possible conflict of jurisdiction as between the dominion and the provinces on the subject of aerial navigation. It was agreed that that question should be made a subject of reference to the supreme court, and the reference was agreed to by the Minister of Justice and has since been made.

Then there were other matters, such as the regulation of shares and securities of Dominion companies, which were referred to special committees of the conference, and the committees brought in recommendations suggesting legislation. That legislation was subsequently introduced into the House and dealt with. Other matters, such as constitutional questions, were discussed, largely with a view of obtaining an interchange of opinion on the part of the provinces of the Dominion, and consideration was promised by the federal government to the views expressed.

I shall not go through the agenda, but as parliament proceeds with its deliberations, with respect to every subject that is there mentioned it will be possible for the ministry, either in answer to a question that may be asked or by legislation to be brought down to

make clear to the house just what were the various matters dealt with and the attitude of the ministry upon them.

There is one subject which I think I had better touch upon immediately, as it is one which, though not dealt with at considerable length by my hon. friend opposite, was nevertheless the subject of consideration at the conference and has been the subject of considerable speculation by the press ever since, and that is the St. Lawrence waterway project. I wish to say, in regard to that, that my friend is right when he quotes me as saying that I believe there are few if any questions which have ever come before parliament more important and far-reaching in their many bearings than the question of the deepening of the St. Lawrence waterway. It has political, economical, national and international aspects, all of which are very far-reaching, and on behalf of the administration I wish to say we are fully seized of the magnitude of that question, and we do not propose to be precipitated in any way into a hasty discussion of its many features or except upon the maturest consideration into any diplomatic action with respect to them.

My hon. friend draws attention to the fact that there is no reference in the speech from the throne to this important subject. Here may I draw his attention to the circumstance: that this is an international question. If it has any significance at all, the significance in largest part lies in the international phase of it, and how that international phase is to be dealt with. My hon. friend is accustomed to big business and knows the care with which all large business transactions have to be surrounded, and I venture to say that the last thing he would do, and the last thing any business man would do, in connection with his own affairs, when he was considering a possible transaction with some other party, would be to disclose his hand any more than he was obliged to disclose it, until it came to a point where it was certain that negotiations would be successful. The government has given this great project the most careful and thoughtful consideration. First of all, there was a report of the International Joint Commission which was subsequently considered by a joint board of engineers; the members of this board differed among themselves thereby necessitating a reference back of certain of the matters which they had under consideration. In the United States an advisory committee to the administration was formed, to advise the government on the findings of the report which was presented to them; that advisory committee gave its advice, and some publicity was subsequently given to the advice given by that body. This government appointed an advisory committee. The advisory committee met as soon as was feasible after the report with its appendices of the joint engineers was presented, and as soon as they had sufficient time to study the subject. They spent some time in this city, considered different aspects of the problem, conferred with the administration, and gave us the benefit of their views and opinions. Among other subjects upon which they gave us advice was what in their opinion was the correct form of reply to be made to the United States government to a despatch which had been sent to us on that all-important question.

I want to draw the attention of parliament to one statement which is contained in the views of the advisory board as presented to the government. It is the statement which concludes the report with which they presented us. It reads:

> We would add the suggestion that in view of the delicacy of the international negotiations involved it would be inadvisable that our report be made public until such time as, in the discretion of the government, it might be published without prejudice to Canadian interests.

I wish the house to realise that that is the reason and the only reason why the government has not up to the present time made public the views of the advisory committee as presented to the government by that body. That body itself, recognising the many bearings from an international point of view of the advice which they have submitted, felt it would be inadvisable to have their report made public at the present time, and may I add in that connection that I hope hon. gentlemen and the public at large, and the press of the country in particular will not prejudice this all-important situation by attributing to the board of advisers expressions of view and opinion of which they can have no knowledge whatever. The report has not been made public, and so far as I have been able to see some of the alleged descriptions of what it contains are, to say the least, very wide of the mark. At the present time we are replying to the despatch which came to us from Washington asking for an expression of our views in regard to this great undertaking. We are giving to the United States government an expression of opinion, based upon the views of the advisory board, in order to ascertain their opinion upon those views. Until we have had an opportunity of learning from the administration at Washington how they regard certain considerations which we deem all-important

we will not be in a position to say whether or not negotiations are going to be possible for the construction of that great international waterway.

Mr. BENNETT: I should like to ask my right hon. friend whether or not the government is prepared to consider the legal implications as between the provinces and the Dominion before we proceed further, because the provinces assert certain rights, I understand. That is the question which I regard as the basis of international discussion.

Mr. MACKENZIE KING: I am glad to hear my hon. friend express himself as he does, because in that particular we are in entire accord with him. When the Dominion-provincial conference was held the premiers of Ontario and Quebec both intimated to the government that they thought there should be a reference to the courts of the question of jurisdiction with respect to the power developed as the result of the canalization of waters over which the Dominion government have control for the purposes of navigation. The Minister of Justice (Mr. Lapointe) promised consideration to that request, and as soon as possible after the conference concluded its proceedings the minister had prepared by the law officers of the crown a careful statement of the whole situation as far as it was possible for them to present it, and an order in council was passed on the 18th instant, whereby a reference of the whole question of jurisdiction has been made to the courts in accordance with what we understand are the wishes of the premiers of Ontario and Quebec.

Mr. BENNETT: That will be laid on the table, I presume?

Mr. MACKENZIE KING: At to-morrow's sitting I shall have pleasure in laying on the table of the house the reference which has been submitted to the courts.

On motion of Mr. Mackenzie King the debate was adjourned.

On motion of Mr. Mackenzie King the house adjourned at 6 p.m.

Tuesday, January 31, 1928

The house met at three o'clock.

CENTENARY OF HON. MR. DESSAULLES

Mr. SPEAKER: I have the honour to inform the house that I have received the following letter from the Speaker of the Senate:

Dear Mr. Speaker:

On Wednesday, 1st February, at 5.45 p.m., an address will be presented in the Senate chamber to the Hon. Senator Dessaulles in commemoration of his having attained the age of one hundred years.

May I, through you, extend to the members of the House of Commons an invitation to be present at this ceremony.

Believe me, dear Mr. Speaker,

Yours truly,

Hewitt Bostock,
Speaker of the Senate.

CONTROL OF WATER POWERS

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, I promised my hon. friend the leader of the opposition at the close of yesterday's sitting that I would table this afternoon a copy of the order in council passed on the 18th of January, in which the whole question of the division of legislative control over proprietary interests in water powers, as between the Dominion and provincial governments, has been referred to the supreme court for hearing and consideration. I now lay a copy of the order in council on the table.

DOMINION-PROVINCIAL CONFERENCE

Mr. MACKENZIE KING: I also mentioned to my hon. friend that I would table to-day the official précis of the Dominion-provincial conference. In tabling the document I would move, seconded by Mr. Lapointe:

That fifteen hundred copies in English and five hundred copies in French of the official précis of the Dominion-provincial conference held at Ottawa in November, 1927, be printed forthwith, and that standing order 64 be suspended in relation thereto.

Motion agreed to.

REPORT

Report of the Canadian delegates to the eighth assembly of the League of Nations, September 25, 1927.—Mr. Mackenzie King.

PUBLIC WORKS HEALTH ACT—PROPRIETARY AND PATENT MEDICINES ACT

Hon. J. H. KING (Kootenay, Minister of Health): I beg to advise the house that no regulations have been made under the Public Works Health Act since the last session of parliament; also that no regulations have been made under the Proprietary and Patent Medicines Act during the same period.

CANADIAN NATIONAL RAILWAYS

ROSEDALE-BULLPOUND BRANCH LINE

Hon. CHARLES A. DUNNING moved for leave to introduce Bill No. 6 to confirm

a certain agreement made between the Canadian Pacific Railway Company and the Canadian National Railways Company.

Some hon. MEMBERS: Explain.

Mr. DUNNING: This bill is for the purpose of confirming an agreement entered into between the Canadian Pacific Railway and the Canadian National Railways with respect to the construction of a branch line authorized by parliament some sessions ago, which authorization, I believe, was extended at the last session, from Rosedale to Bullpound, in the province of Alberta.

Motion agreed to and bill read the first time.

PATENT ACT AMENDMENT

Hon. FERNAND RINFRET (Secretary of State) moved for leave to introduce Bill No. 7, to amend the Patent Act.

He said: The purpose of this bill is to bring the Patent Act into conformity with the terms of the international conference for the protection of industrial property, as revised at the eighth conference of 1925. I may add that the changes are of a minor character. There is an amendment to section 40, concerning the granting of licenses for the use of an invention when the necessary and reasonable requirements have not been complied with, and this involves the addition of the following words:

Or that the patentee has failed adequately to manufacture the patented invention in Canada.

There is also a change made in section 49 which relates to any foreign ship or vessel entering the country temporarily. The words "air craft or land vehicle" are added to that clause.

Motion agreed to and bill read the first time.

TRADE MARK AND DESIGN ACT

Hon. FERNAND RINFRET (Secretary of State) moved for leave to introduce Bill No. 8, to amend the Trade Mark and Design Act.

Mr. GUTHRIE: Explain.

Mr. RINFRET: In like manner this bill is for the purpose of bringing the Trade Mark and Design Act into conformity with the decisions of the same meeting at the Hague in 1925. The changes are also of a minor character. There are added to section 11 of the act two new paragraphs giving reasons for which a minister may refuse to register a trade mark in certain cases.

After the expiration of the current term of a trade mark, namely, twenty-five years, this bill proposes to give an extra period of three months within which the owner of the trade mark may renew the application and similar provision is made with regard to rights in an industrial design. Special fees are provided in case of such renewal.

In the case of a trade mark which has been filed in another country and which it is desired to file in this country the period is extended from four months to six months. All these are in conformity with decisions reached at the Hague.

Motion agreed to and bill read the first time.

SAINT JOHN AND QUEBEC RAILWAY

Hon. CHARLES A. DUNNING (Minister of Railways and Canals) moved for leave to introduce Bill No. 9, to authorize an extension of time for the completion of the Saint John and Quebec Railway between Centreville and the county of Carleton, and Andover, in the county of Victoria, N.B.

Mr. GUTHRIE: Is this only an extension?

Mr. DUNNING: The Saint John and Quebec railway is owned by the province of New Brunswick and the provincial government has requested an extension of time in connection with the completion of the line. This bill is designed to grant such extension.

Motion agreed to and bill read the first time.

EXPERIMENTAL FARMS STATIONS ACT AMENDMENT

Hon. W. R. MOTHERWELL (Minister of Agriculture) moved for leave to introduce Bill No. 10, to amend the Experimental Farms Stations Act.

Mr. TOLMIE: Explain.

Mr. MOTHERWELL: When the original Experimental Farms Stations Act was passed some forty years ago, certain acreage limitations were imposed upon them, that is in regard to the Central Experimental Farm at Ottawa and the farms at Nappan, Indian Head, Brandon and Agassiz. The purpose of this bill is to remove the limitation from those five farms, thus putting them on a parity with the remaining eighteen which have no such limitation.

Motion agreed to and bill read the first time.

SEEDS ACT AMENDMENT

Hon. W. R. MOTHERWELL (Minister of Agriculture) moved for leave to introduce Bill No. 11, to amend the Seeds Act.

Mr. TOLMIE: Explain.

Mr. MOTHERWELL: This act has not been before the house for several years and this bill proposes a number of amendments, fifteen in all, with a view to brushing up the act to meet present day requirements.

Motion agreed to and bill read the first time.

DAIRY INDUSTRY ACT AMENDMENT

Hon. W. R. MOTHERWELL (Minister of Agriculture) moved for leave to introduce Bill No. 12, to amend the Dairy Industry Act.

Mr. TOLMIE: Explain.

Mr. MOTHERWELL: This bill provides for the reinforcing of butter and cheese boxes for export in order to avoid the many breakages that occur without this reinforcement

Motion agreed to and bill read the first time.

CUSTOMS INQUIRY COMMISSION

On the orders of the day:

Mr. D. M. KENNEDY (Peace River): Will the government lay on the table of the house the evidence which was taken by the Royal Commission on Customs and Excise and on which the report was based?

Right Hon. W. L. MACKENZIE KING (Prime Minister): I do not know whether my hon. friend desires to have the evidence placed upon the table in order to have it printed. It is a voluminous mass of material, but there is no objection to laying it on the table for the information of the house.

Mr. KENNEDY: All the evidence?

Mr. MACKENZIE KING: Yes.

HOME BANK DEPOSITORS

On the orders of the day:

Mr. PETER McGIBBON (Muskoka-Ontario): I would like to ask the Minister of Finance if it is the intention of the government to vote any further sums of money in aid of the Home Bank depositors in order to remove the unfairness that at present exists?

Hon. J. A. ROBB (Minister of Finance): I hope, as soon as the debate on the address in reply to the speech from the throne is concluded, to table the estimates for the ensuing year, and my hon. friend will have to judge for himself whether there is anything for them or not.

TARIFF ADVISORY BOARD—EVIDENCE

On the orders of the day:

Mr. H. B. ADSHEAD (East Calgary): I should like to ask the Minister of Finance, in view of the fact that he was not able last year to fulfil his promise to the members in connection with copies of evidence taken before the tariff advisory board, whether he will lay on the table, for examination only, copies of any evidence which may be required by members of this house.

Hon. J. A. ROBB (Minister of Finance): There is certain evidence in the department. If there is sufficient room in the chamber after the evidence of the customs inquiry has been tabled, I will consider whether we shall table this or not.

Mr. ADSHEAD: If any member desires to examine the evidence in connection with any one case, in view of the fact that the promise made last year in connection with furnishing such evidence was not fulfilled, will that evidence be placed on the table for the purpose of examination?

Mr. ROBB: That is a very reasonable request. I see no objection to it.

GOVERNOR GENERAL'S SPEECH

ADDRESS IN REPLY

The house resumed from Monday, January 30, consideration of the motion of Mr. Ilsley for an address to His Excellency the Governor General in reply to his speech at the opening of the session.

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, in addressing the house yesterday with respect to the speech from the throne, my hon. friend the leader of the opposition (Mr. Bennett) divided his remarks under three main heads. He referred first to matters of domestic concern, next, to those matters which have to do with imperial affairs, and finally to questions that have an international bearing. I was endeavouring to follow him in the order in which he had proceeded and had to a considerable extent concluded what I had to say with reference to the first division, which, by the way, constituted the longest portion of his utterances.

With respect to matters that are more or less of domestic concern, there were a few

points to which my hon. friend referred and to which I had not had time to reply when six o'clock came. As to these I shall endeavour in as few words as possible to give him the information which I think he wished to have, and also to address to him a question or two in reference to the significance of his own remarks.

My hon. friend mentioned that we on this side of the house had laid a good deal of stress on the importance of taking parliament as much as possible into our confidence, and wherever it could be so arranged, giving to parliament in the first instance information on matters of national concern, and certainly not making binding commitments without first obtaining the assent of this chamber and where advisable of parliament as a whole. I entirely agree with my hon. friend that such is the desirable course to pursue, and I assure him that such is the wish of the administration; and not only is it the wish, but it has been, and will continue to be, the practice, of the administration in so far as it can possibly be maintained. But I am sure my hon. friend will realize that during the parliamentary recess, when many months elapse between one session and another, situations will arise in which the government is certain to find it necessary to act immediately, and to come to parliament later on with a reasonable explanation of why the matter in question had not been held over for final decision until the members were assembled.

One of the matters to which my hon. friend referred was the announcement by the hon. Minister of Railways and Canals (Mr. Dunning) that it had been decided that Fort Churchill should be the ocean terminus of the Hudson Bay railway, and I think my hon. friend made the statement that the Minister of Railways and Canals had not only failed to take parliament into his confidence in making that announcement, but had failed even to take his own colleagues into his confidence. I should like to set my hon. friend's mind at rest at once in regard to the latter statement.

I recall the circumstances very well. Mr. Palmer was engaged first of all to make the study which he did with regard to the Hudson Bay because of his acknowledged reputation as an estuarial engineer of pre-eminence, of greater pre-eminence, I assume, than any other engineer engaged in like pursuits, and when he was retained it was assumed that the government was asking for his expert advice not for academic purposes, merely, but rather to be guided in its decision by the best advice that was obtainable. When Mr. Palmer made his investigation it was with a view to giving the government the benefit of his expert opinion, to enable it to decide in the interests of the country which was the most desirable port at which to have the ocean terminus of the Hudson Bay railway. While Mr. Palmer was making his investigation, the question naturally came up as to whether the announcement of the decision which would be made by him should be deferred until parliament assembled, or whether an immediate announcement should be made. The situation was canvassed to some extent between members of the government and the Minister of Railways and Canals before the minister went to the west with Mr. Palmer. It was felt that if Mr. Palmer was in a position to give his decision immediately, there was every reason why that opinion should be made known also to the country with as little delay as possible. Let me just ask my hon. friend what his criticism would have been if, having Mr. Palmer's opinion, we had withheld it. If, having had in our possession the opinion of an expert engineer who was to determine which was the better port, we had held back any announcement of his decision for several months, we would have been justly criticized on the ground that it was for reasons which affected the interests of friends of the government or something of the kind, and I think we would have been entitled to that criticism if we had taken that attitude. It was precisely because we wished to avoid any possible criticism, and also because we believed that in other respects it was in the national interest to give the country the information at the earliest opportunity, that it was decided before his report was made that the government should take prompt action with respect to announcing the decision of its expert.

May I add this? Far from failing to take his colleagues into his confidence in the matter, I recall very distinctly receiving from my colleague the Minister of Railways and Canals a telegram at the time the report had been finally made saying that the report was now in readiness and asking if I would ascertain from other members of the government their views in the matter, and give him the decision of council with respect to the publication of the report. That I did in a telegram that I sent to him, and on which he acted. But that was not until after council had been informed.

I think my hon. friend the leader of the opposition was unfair in another particular. He took a dispatch in the press which made certain adverse references to the circumstance that other developments had taken place over a

period of years which had now proved to be unwise, and he attributed what was in this newspaper comment to my hon. friend, though the article itself commences with the words, "Mr. Dunning refused to make any comment on the matter whatever." I submit that my hon. friend could not have read that article as carefully as he should have done, for if he did. I do not believe he would have made the particular comment upon the action of the minister which, possibly, in a little haste, he did. So much for the Hudson Bay terminus and the motives that actuated the government in reference thereto.

My hon. friend spoke next of the transfer of the natural resources to Alberta, and rather regretted that there had been a considerable delay in making the transfer. May I say to my hon. friend that I join with him in the regret that these resources have not been transferred more speedily, though may I hasten to add this statement, that having had the advantage which the members of the government had of meeting in conference last November the premiers of the different provinces and their colleagues and of considering with them the question of the transfer of the natural resources to the western provinces, I feel that it is possibly fortunate for the province of Alberta, as well as for the other western provinces, that a decision has been deferred until the present time, and that the necessary legislation has not been passed up to the present moment. Let me illustrate what I wish to convey.

One advantage of the conference was that premiers and ministers from the different provinces were in a position to give to the federal government an expression of opinion as to how in existing circumstances the action of the government would be viewed by their respective provinces—the action, for instance, of government with respect to subsidies to the maritime provinces under the Duncan report. We were pleased to find that without exception the premiers of the provinces of Quebec, Ontario, and of the western provinces, the premiers of all the provinces, were at one with the federal administration in having adopted the course which we did adopt in voting the grants which were made last session to the maritime provinces, and in saying that so far as their provinces were concerned they were only too happy that the maritimes should continue to be treated in like manner until at least the accounting which is asked for by the Duncan report had been completed. There was an evidence that the prairie provinces and British Columbia, as well as the central provinces, felt that in certain economic particulars the maritime provinces had been handicapped of recent years, and they were pleased that, as a factor contributing to the unity of our Dominion, the administration had taken the course it did in accordance with the recommendations of the Duncan report. Similarly in regard to the western provinces, we found, on the part of our friends from the maritimes, the premiers from Nova Scotia, New Brunswick and Prince Edward Island, and also on the part of the premiers of Quebec and Ontario, a distinct willingness to have the federal government, in the matter of dealing with the prairie provinces, take what may be described as a generous attitude in so far as that was consistent with financial considerations of which the federal government has to take account. They seemed to feel that the government might well consider what, in arranging for the transfer of their resources to the prairie provinces, has been one of the main difficulties up to the present time, namely, the advisability of continuing, along with the return of the lands, the subsidies which up to the present time, had been paid in lieu of the lands. The moment that attitude on the part of the other provinces became apparent to the administration, we found we were in a position to negotiate with the prairie provinces on a basis much more satisfactory than had existed before we had received that general expression of view on the part of the other provinces of Canada. After all, while these are federal matters, they do also affect all the provinces in the Dominion. As a consequence of the discussion which took place at the conference, the government has reopened the subject of negotiations with the Premier of Alberta in regard to the return of the natural resources to that province, and I am authorized by the Premier of Alberta to inform this house that so far as he is concerned, these negotiations are proceeding in a manner that is satisfactory to him at the present time. I hope that that assurance, which means that the matter is being satisfactorily dealt with as well, so far as the federal administration is concerned, will quiet any alarm or misgivings which hon. members opposite may have, concerning the progress of negotiations regarding the transfer of the natural resources to Alberta.

Then I come to British Columbia, and there again the expression of views of the other provinces was helpful to the administration. British Columbia made strong representations why some of the lands in the railway belt and the Peace River block should be returned to the province. I confess that the government had anticipated the wish of the British

Columbia government in that matter by having an inquiry made. The late John Oliver, as hon. members know, repeatedly brought to the attention of the federal government what he claimed were the legal rights of the province of British Columbia in that matter. In the spring of last year, if I recollect aright, the government appointed Mr. Justice Martin as a royal commissioner to investigate the question of the legal claims of British Columbia in respect of these lands. Mr. Justice Martin has submitted to the government an interim report, in which he states that, while he does not think there are legal claims, he is of the opinion that there are strong claims in natural justice—claims in equity, so to speak, on the part of that province for the return of these lands. Mr. Justice Martin's final report is not yet in the hands of the government, but as soon as it is received it will be laid on the table of the house and no doubt hon. members will be guided in the matter of subsequent legislation by the findings which the commissioner may make. So much for the question of the natural resources.

Mr. HEAPS: What will be the policy of the government in regard to the natural resources of Manitoba?

Mr. MACKENZIE KING: The same policy in the matter of natural resources covers all the provinces of the west. The federal government believes that the natural resources of the western provinces should be returned to them, but there are questions in relation to the transfer which require to be carefully considered. I should not like in any way to see created a situation which would be embarrassing to either the federal or provincial governments where our action is intended to be one which will have the effect of removing embarrassment, and therefore we may be proceeding with a little more caution than we would otherwise.

In regard to the Duncan report, I am glad to see that hon. gentlemen opposite so cordially accept it in its findings, and speak so highly of the service which has been rendered by the commissioners in the making of their report. Let me remind them—and I do it in case by any chance they should repeat a criticism of the administration in adopting a similar method at another time—that when the government decided to have the question of the maritime claims referred to a commission we were told by some hon. gentlemen opposite—indeed the line of criticism of the opposition and particularly of members of the opposition who came from the maritime provinces was—that this was no sort of way to deal with the question, and that it was only a means of evading the responsibility of the government in respect thereto. It has turned out to be the opposite. The government at the present time has implemented a very considerable part of the report and we intend to continue to carry out its recommendations.

On the subject of scientific research, I think my hon. friend is at one with the government in its desire to see in this country the work of industrial and scientific reseach furthered as largely as may be possible, and in a manner which will lead to co-operation between the federal and provincial governments. There again may I say that the Dominion-provincial conference was extremely helpful to the governments of the provinces as well as to the federal government. The subject was very fully discussed. The premiers of some of the provinces indicated the line on which they thought the provinces would be able most effectively to develop scientific research, and there was general agreement that, so far as the federal government was concerned, the establishment of laboratories here for the purpose of conducting certain lines of research would be the most important contribution which the Dominion could make. I will leave to my colleague, the Minister of Trade and Commerce to inform the house at a later stage just what the intentions of the government are in that particular.

My hon. friend has referred to the commission appointed to inquire into the fisheries of the maritime provinces in particular, and also of the province of Quebec, and has expressed the hope that its report will be tabled, so that hon. members may have it in the course of the present session. I will go one step further, and say that I hope that not only will the report be tabled, but that it may be tabled in time to permit this house, if thought desirable, to carry out in the form of legislation any of its recommendations, if legislation is called for.

Another matter to which my hon. friend referred was the announcement in the speech from the throne that the Department of Soldiers' Civil Re-establishment and the Department of Health would be amalgamated in a new department under the title of National Health and Soldiers Welfare.

The leader of the opposition expressed surprise that the speech from the throne did not contain any further mention of the promise made last session of a committee to inquire into the question of pensions. Well, may I tell my hon. friend that if we had attempted to put into the speech from the throne all

that we intended or promised to do it would have been a much longer document than it is, and he might perhaps have criticized us on that score. But I hope he will not think that anything which has been left out of the speech from the throne in the nature of a promise made in a previous session is being overlooked. The government intends at the very earliest date to ask the house to appoint a special committee to consider legislation which will be brought down by the Minister of Health and Soldiers' Civil Re-establishment (Mr. King) and to recommend what may be advisable by way of amendment to existing legislation. The hope of the administration is that the committee will go very fully into the whole question of pensions in its bearing on the well-being and welfare of returned men.

The remaining part of the address of my hon. friend in relation to the speech from the throne which concerned domestic affairs had to do with the question of trade. I confess that listening to him yesterday and also reading with considerable interest the addresses which he has made since he became leader of his party, I have yet to learn exactly what he has in his mind as to the policy he thinks should be adopted by the government with respect to trade matters. I hope during the course of the session he will enlighten us, and, if his party has a policy with respect to trade, that he will give us some opportunity first of all of knowing what it is and, if it differs from our own, of debating the merits of it. Up to the present time he has told us that what this country needs more than anything else is the development of its natural resources, the expansion of its commerce, and the development of trade within the empire. Well, all these are matters of common agreement. Of course we want to develop our natural resources, of course we want to trade with the different parts of the empire, and we want moreover to trade as widely as we can with all the countries of the world. If there is anything more than that in what my hon. friend has been telling the country is desirable in the way of policy, I hope he will enlighten us upon it.

I should like to ask him first of all, when he speaks of the development of our natural resources, whether in his experience of business affairs he has not found that capital is as necessary as labour in order to develop any branch of industry, particularly the great primary and manufacturing industries of the country. What the dominion needs at the present time is as much capital as possible brought in for the purpose of sound investment—not merely immigration for the purpose of supplying labour, but also the introduction of more capital. We want that capital from all quarters of the globe, and—may I say to my hon. friend?—the more we can get from the British Isles the happier we in this dominion will be. We cannot have too much British capital or British labour to develop our natural resources, so long as we are in a position properly to assimilate the population that comes to our shores; but simply to bring people into Canada without having the capital wherewith to put them to work in the development of our great primary industries is, I think, a questionable proceeding.

Mr. BENNETT: There are thirteen hundred and eighty-five million dollars of savings in this country not being used in industry or development. That is the answer.

Mr. MACKENZIE KING: Does my hon. friend wish us to infer that he does not want any more capital to come in?

Mr. BENNETT: No. People are fearful of using their capital. They are tying it up in the banks at three per cent instead of using it to develop industries.

Mr. MACKENZIE KING: I would say to my hon. friend that the large sums now in the banks is just another evidence of the great prosperity of this country. The more that is advertised to the world the more it will help to bring into this country the kind of settlers we want. I would ask my hon. friend, as the leader of the party opposite, if, when he speaks on a subsequent occasion, he will be a little more explicit as to just exactly what he wants to see done in the way of trade development, and how that wider development is to be brought about. He has spoken a great deal about trade within the empire. I should like to ask him this question—not to reply to it immediately, but I hope during the session: Does he want free trade within the British Empire? Does he want an increase in the British preference; and if so, on what particular commodities? Does he wish us to trade only within the British Empire, to build up a sort of exclusive economic unit within the British Empire; or is he prepared to have the producers and manufacturers of this country buy and sell in as wide markets as it is possible for them to find? Before my hon. friend pretends to the country that he has a policy on trade matters I think he ought

to make clear first of all in his own mind what that policy is, and then give to us the benefit of a clear expression of his views.

Speaking of trade within the empire, I have a few figures here that may help my hon. friend to reach a decision on this matter of benefit to his party and himself. Let us take the figures with respect to trade with the United Kingdom and other parts of the British Empire. What are they? In 1896 we imported from the United Kingdom commodities to the value of $33,000,000; in 1926 our imports amounted, not to $33,000,000, but to $163,000,000. From other parts of the British Empire we imported $2,000,000 in 1896; that had grown to $44,000,000 in 1926. In other words, our total import trade with the British Empire had grown from $35,000,000 in 1896 to $207,000,000 in 1926. Our exports to the United Kingdom in 1896 totalled $62,000,000; in 1926 that total had reached the large figure of $513,000,000. To other parts of the British Empire we exported in 1896 $4,000,000, and in 1926 $85,000,000. In other words, our total exports to the British Empire increased from $66,000,000 in 1896 to $598,000,000 in 1926.

While that is an enormous growth of trade within the British Empire and one of which we are all proud, may I draw my hon. friend's attention to this fact: that while in 1896 the empire took 60 per cent of our exports, in 1926 it took only 45 per cent, although there had been that great expansion from $66,000,000 to $598,000,000 in the total exports from this Dominion to the various parts of the empire. That, it seems to me, means that if this Dominion is to find markets for its produce and products, whether they be the raw materials that my hon. friend speaks of so much, or the goods that are manufactured from them, those markets must be found in all parts of the world. The United Kingdom or the British Empire as a whole cannot begin to take from us all the commodities we have to sell. Are we to wait until my hon. friend has brought about this economic union which he speaks of in a theoretical way in order that we may trade within the empire to the exclusion of other parts of the world?

Mr. BENNETT: He did not say that.

Mr. MACKENZIE KING: I may be wrong in interpreting what my hon. friend has in mind, but I think the house will agree with me that he has been sailing pretty close to the idea of a sort of economic unit of trade within the British Empire.

Mr. BENNETT: But he did not say it.

Mr. MACKENZIE KING: I am glad to have got that much from my hon. friend, that he has never said that we are to seek to make an economic unit of the British Empire in the matter of trade. However, may I make our position clear: What we want first of all is trade, and we would prefer to have that trade in largest measure within the empire. Wherever, therefore, there is opportunity for trade we shall take advantage of it, first of all among ourselves at home and next, other things being equal, with other parts of the empire, in preference to trading beyond. But when we have gone as far as we can in developing trade among ourselves and within the empire, then, if it is to the economic interests of the citizens of the Dominion to find other markets, we shall endeavour as far as we can to obtain such markets, and the best markets possible, in all parts of the world.

Let me call my hon. friend's attention to what appeals to me as an important consideration in this matter. What do we mean by raw material? The grain that is grown in the field is raw material: it is raw material from which flour is subsequently manufactured. Are we to understand that Canada is not to export her wheat at all but only to manufacture it into flour, shipping out the finished product alone? Flour itself is in turn a raw material, used in the making of bread. Are we therefore to cease exporting our flour and to export only bread? And so we might pursue the query? Take newsprint, for example: newsprint comes from pulp and pulp, as my hon. friend knows, is a product of the trees of the forest. But newsprint is a raw material; it is used for a variety of purposes. It becomes therefore a question whether we shall stop exporting newsprint, if the argument that is advanced is to be regarded as sound. If that is to be the case, let me remind hon. members that we have reached in Canada to-day the point where we have not only the greatest record which this country has ever achieved in the export of wheat and newsprint, but that our record in respect of the export of these two commodities is also the greatest of any country in the world. It seems to me further, we should keep in mind, if we are to have a proper appreciation of matters of this sort, the significance of conservation—something which my hon. friend apparently disregards altogether. Because wheat is grown and exported one year it does not follow that the soil has been exhausted and is incapable of

repeating the same reproductive process year in and year out. If proper regard is had for the rotation of crops, and for other considerations of which agriculturists have a wide knowledge, there is no reason why the fecundity of nature should not continue from year to year with increasing advantage to the nation. Similarly with regard to our forests. My hon. friend in some of his utterances seems occasionally to be under the delusion that we are necessarily depleting the country of its forests when we export such large quantities of newsprint. There again he should consider the importance of conservation properly carried on as a means of restoring and renewing our forests. If my hon. friend will give due consideration to this aspect I am sure that many doubts he may have in the matter will be removed.

I pass now to the next subject which the hon. leader of the opposition touched upon, namely, immigration. Here again I find the same difficulty in appreciating what precisely he has in mind. If he will scan the remarks he made in the house yesterday, as reported, he will see that what he suggested was the introduction of some immense scheme in relation to immigration. Apparently he seemed to think that the country was dissatisfied with the restrictive measures at present in force and that what was most needed was some large policy that would involve a considerable expenditure. If that is what he contemplates, I wish he would tell us just what the scheme is. That is what we are entitled to know. What does he want to initiate? What does he want to do with the money which he wishes parliament to vote for immigration? Does he want it spent in bringing into the country people to work in the factories? If so, let him tell us. Does he want to bring in people indiscriminately, without any of the restrictions that exist at the present time? If that is what he has in mind, should he not so inform the House? But do not let him criticize the government's immigration policy simply on the score of its not being satisfactory because it is not large enough to satisfy some ambition which he himself has not seen fit to disclose to the country.

As to the government's immigration policy, let me say this—and if this is not going far enough I wish my hon. friend would suggest how much further we ought to go—our policy is to bring into the country just as many people, of proper physique and general qualifications, as the country is capable of assimilating with satisfaction to itself as well as to those who are brought in. We do not wish to bring into Canada races that are not assimilable. We do not wish to bring in peoples from countries that have populations which, as experience has shown, do not make good citizens or settlers in our dominion. On the other hand, wherever men and women of strong, healthy physique and of proper character can be found, the doors of the country are open to receive them, under such restrictions only as this parliament places, or authorizes the government to place, upon their entrance into Canada. Parliament in its wisdom has thought well to make a distinction between different classes coming into Canada. We have felt that as a British dominion we should welcome, in larger measure than from any other country, immigrants from the British Isles. It is the desire and the wish of the administration to encourage as largely as we can immigration from England, Ireland, Scotland and Wales. We want to build up this part of the British Empire with people of British stock. But if the British Isles are not prepared to send their people, if the people of the British Isles do not wish to emigrate to this country, despite the inducements we offer, then we feel called upon, in the endeavour to increase the population of this dominion by immigration, to introduce strange stocks from other countries as well. The policy, then, is to accept as the best stocks, next to the people of the British Isles, those who come from the northern races of Europe, not because we have any particular criticism to make of the individuals who come from the southern climes of Europe, but because experience has shown that the northern stocks are best adapted to this northern half of North America. The effort of the department is to encourage immigration of people from Norway, Sweden, Denmark and other northern countries, next after those of the British Isles.

There are certain parts of Europe from which it has been thought advisable not to seek to bring in immigrants to any large extent, and parliament has decided that they shall be permitted to come in only subject to special permission on the part of the minister or of the department. My hon. friend said yesterday, with respect to permits, that all sorts of rumours were afloat regarding the department. He intimated that there was suspicion and a feeling that people were being kept out who should be allowed to come in, and that there was need for investigation. I am very glad that he made reference to this matter, because I think that wherever there is suspicion abroad the sooner we know about it the better; the sooner the whole matter is investigated the better it will be for everyone concerned.

Let me say to the house that the officials of the department have an extremely difficult task to perform. In the matter of administration they are restricted by the obligations which parliament imposes upon them; and, on the other hand, they have to stand all the abuse that may be directed against them for not meeting the wishes of persons who, from one motive or another, hold a view different from that which parliament has decided should prevail. I remember being much impressed in this house on one occasion with a remark made by the Right Hon. Mr. Fielding, to the effect that not only every member of the government but, as well, every member of parliament owed a special duty to the civil service to uphold public servants who endeavoured to discharge their duties honourably and honestly. The government of the country is carried on by a large body of civil servants who act under instructions and in accordance with the policies laid down by parliament. They are not free agents; if they did as they pleased they would be violating the obligations of their positions. They are put in positions and are expected to administer the law in accordance with the provisions of the statute. The Deputy Minister of the Department of Immigration, Mr. Egan, has sought, I believe, to administer the affairs of his department honestly. He is fearless and courageous, and all that I have seen of him makes me believe that he is possessed of the qualities which it is desirable to have in officers of the public service. If Mr. Egan is restricting immigrants from coming into this country in consequence of any regulation, all I have to say is it is for parliament to decide whether that regulation should continue or not. So long as the regulation is there, and the officer seeks only to uphold the regulation, no member of parliament is entitled to criticize him adversely. If there is any criticism to be made let it be directed against the government that keeps the officer in his present position. Let me say to my hon. friend that the government will be only too happy to have all the affairs of the Department of Immigration discussed and investigated by a committee of this house during the present session. It is suggested that that committee should be the committee on agriculture and colonization. I think that possibly, in view of its membership, it is the best committee to investigate matters relating to the Department of Immigration. I know that the minister at the head of the department was quick to volunteer the statement that he would welcome the fullest investigation into the affairs of the department, by the members of the committee. That investigation can easily be arranged, and will be arranged during the course of the present session.

My hon. friend stated that there was suspicion as to the permits that were being issued, as to how they were being issued and the like. May I say that if it is found that permits are being issued in an illegal manner no time will be lost on the part of the administration in seeing that that procedure is brought to an end very summarily. I wish to say, because it is within my own certain knowledge, that members on both sides are coming to the Minister of Immigration from day to day and pleading for the right to have permits granted to certain people in their own constituencies. That is known to every hon. member, and I say that if hon. gentlemen do not wish the permit system to continue by all means let it be discontinued. But if the permit system is regarded by parliament as wise, I would urge hon. members to support the minister and the department in their efforts to carry out that system properly.

I am not so sure that the views expressed by my hon. friend in regard to the extent of immigration to Canada give a fair idea of what is being done. My hon. friend expressed the view that we were doing nothing at all, and that immigration was being brought almost to a standstill. The hon. gentleman knows better than that. Not only is that the case, but his own words disclose that he knows directly the opposite, because elsewhere in his address he said that there were not half of those that came in 1913. My hon. friend chose 1913 because it was the peak year, so to speak, of the immigration movement to Canada. Let me point out that 1913 was before the war. At that time Europe was in a state of panic, and many people were trying to get away from the continent as fast as they could. In 1913 transportation costs across the Atlantic were low. These were factors which contributed to a heavy immigration movement at that time. Moreover, for a number of years previous to 1913 there had been considerable immigration from Europe to Canada, and as every hon. member knows no immigration propaganda is as effective and as helpful as that which comes from immigrants who have come to this country and are living here happily and contented. They are glad then to induce their friends to come and settle in the new land where they themselves have encountered success. I need not point out the unfairness in making a comparison between 1913 and to-day. Take the population of Europe to-day. Why that continent has been largely depopulated of those progressive spirits who

are ready to move from one part of the world to another when opportunity offers. There is no country in Europe, and that is true particularly of the British Isles, which has not suffered a tremendous loss of manhood in consequence of the war. How then is it possible to get the same volume of immigration that took place in 1913 and preceding years. In 1913—I speak only from memory at the moment—my impression is that you could go from ports in the British Isles to Montreal for something like $25 or less. To-day the fare is $80 or more. That is a very different situation to-day when we want to get immigrants. Notwithstanding the handicap to which I have alluded the immigration to Canada for the first nine months of the last fiscal year amounted to 128,928 persons, an increase over the corresponding period of 1926 of 14,893, or 13 per cent. Of the total of 128,928 the immigration of British, United States, French, Belgian, Swiss, Scandinavian, Dutch or German origin amounted to 92,955. In the nine months under review—here I want to direct the attention of the house to a statement by my hon. friend that Canadians were leaving the west to go into the United States—33,722 Canadians returned to live in Canada from the United States where they had gone with the declared intention of residing there permanently.

Mr. McGIBBON: Is the Prime Minister aware that in the last five years more Canadians crossed to the United States than the number of immigrants who, from all sources, came to this country?

Mr. MACKENZIE KING: I am not, but I would say this to my hon. friend. I would rather in the interests of immigration give to the country the statement I have just made than the one he has made to the house.

Mr. LAPOINTE: "Whisper of death."

Mr. MACKENZIE KING: It is insinuated sometimes that the government is not doing as much as it should towards encouraging immigration from the British Isles as compared with Europe. What are the facts? I will ask hon. members to listen for a moment while I communicate the details of the relative expenditure on bringing immigrants to Canada from the British Isles as compared with bringing them from Europe, and ask if they think the insinuation or implication is correct that we are doing more for immigration from Europe than we are for immigration from the British Isles. The expenditures on the continent of Europe totalled $63,000 in 1925-26, and $57,000 in 1926-27. The per capita cost of continental immigrants was approximately $1.50 in 1926 and less than 80 cents in 1927. In the British Isles during 1925-26 we spent in advertising, literature, exhibitions and general office expenses, $427,000, and on passage assistance during the same period, $317,000, a total of $744,000, or an average of approximately $20 for every British immigrant secured. In 1926-27 the expenditure was $881,000, or an average of something over $17 per capita. For the continental immigrant there is no passage assistance; he pays a minimum ocean rate of $112.50 or stays at home. A Britisher who pays his own way pays a minimum ocean rate of $84.50, while if he belongs to the classes receiving assisted passages, his ocean passage costs him but two pounds and his children under seventeen years of age travel free.

That is the position as between the continent and Britain and I submit that those figures are unanswerable as to the effort on the part of the government to encourage migration from Great Britain. When my hon. friend speaks about other parts of the empire receiving British immigrants, what are the figures? In the calendar year 1927 Canada received 47,607, Australia 27,571 immigrants. During the same period there was a total of 60,967 passages assisted in England, of which Canada received 29,287, Australia 26,021, New Zealand 5,368 and South Africa 293. Therefore our proportion of immigrants from the British Isles who received assisted passages was the largest of any of the dominions. One would think, from much that one reads in the press, that Australia and other countries were getting away ahead of us in British immigrants. My hon. friend, I think, will discover when the committee on agriculture and colonization considers this question, that what is really at the back of all this criticism of the Department of Immigration is the fact that while this parliament is prepared to vote money to assist immigrants to come to Canada who will take up agriculture as an occupation or become domestic servants, parliament is not prepared to vote money for persons who will engage in other occupations and callings.

Those who are interested in bringing into this country people regardless of the occupation into which they will go are continually finding fault with the administration because our assisted passages are limited to those two classes and because equal amounts are not given to people who wish to enter Canada to engage in other occupations. I ask hon. gentlemen opposite who are members of the legal and medical professions how long they

would tolerate a contribution by the state to bring in by assisted passages lawyers and doctors in large numbers from the British Isles to Canada. The man who is a mechanic working at his trade, the skilled engineer, the miner, men in the building trades and the like feel in exactly the same way with respect to what they have devoted of their time and energy in acquiring skill in their particular trades.

Mr. CAHAN: In respect of those other than agriculturists who are coming in, is it not a fact that they are prevented from coming in from other countries than Great Britain unless they go into agriculture or become domestic servants?

Mr. MACKENZIE KING: I think my hon. friend is mistaken there in the broad inference that one would take from his remarks. May I put the matter in this way? As regards the British Isles anyone can come to this country who can qualify as being physically fit; there is no restriction of any kind. As regards Europe there is an occupational test; a man has to follow a particular occupation in order to be permitted to enter Canada as an immigrant. May I add this further? As regards the British Isles, if the immigrant belongs to the agriculturist class or is a domestic servant his or her passage is assisted, paid for the most part by the state. In connection with Britain there is further a contribution by this parliament which is joined in by the parliament of Great Britain towards the settlement of families from the British Isles in this country. That does not exist with respect to the continent.

There are some European countries from which certain classes, as I indicated a moment ago, can come only under special permission. But parliament has decided that, and the Department of Immigration is surely not to be blamed for carrying out regulations which parliament has made. If hon. gentlemen feel that we should not exclude any class from Europe, all they have to do is to amend the law to that effect. But I submit that they will not do so because what in the matter of immigrants is of greatest importance to this Dominion looking to the future is quality rather than quantity.

Mr. CAHAN: I am asking purely for information and not from any partisan motives. Is it possible under the regulations for a citizen of France, no matter how wealthy he may be, who is engaged in any occupation except that of agriculture or domestic service, to enter Canada at the present time for the purpose of settling?

Mr. FORKE: I might answer for the Prime Minister. As a matter of actual practice, immigrants from all countries of northern Europe are coming in under practically the same provisions as immigrants from Great Britain provided that they pass the health qualifications.

Mr. CAHAN: If they get special permits from the minister.

Mr. FORKE: No.

Mr. CAHAN: A relative of mine who happened to be a French citizen came into Canada to stay for six months, and although a person of wealth and distinction I was asked to give a bond for return.

Mr. FORKE: If the hon. member will give me the name of that person I will make inquiry and I will guarantee that the case is not exactly as he states.

Mr. CAHAN: My statement will stand.

Mr. FORKE: I will take the name.

Mr. KENNEDY: Does the Prime Minister not think the farmer has the same right to object to competition as the doctor or the lawyer?

Mr. MACKENZIE KING: I have no doubt he has the same right to object but he does not do so. The farmer is anxious to get as much as he can in the way of agricultural assistance and I think he takes a much broader view on these questions than some others.

Mr. BENNETT: May I direct my right hon. friend's attention to the fact that it is not the statute that prohibits but the regulations made by order in council under the statute and this parliament has not had an opportunity of dealing with the matter, but rather orders in council prepared by the government have been made to conform to particular cases that are desired to be met.

Mr. MACKENZIE KING: I am quite prepared to agree with my hon. friend that the statute gives the government authority to make regulations. Those regulations are laid on the table of the house; they are known to all hon. members. If those regulations are not satisfactory, let us have a debate on the matter and amend and change them. The point that I am making at the moment is that as long as those regulations exist it is unfair to officials of the department who are doing their utmost to serve their

country faithfully and well, to criticise them on the score that they are endeavouring to restrict and prevent people from coming into Canada. My hon. friend said that he had a telegram from some friend of his in Europe complaining about instructions with respect to medical examination.

Mr. BENNETT: From London.

Mr. MACKENZIE KING: That serves to illustrate just how far criticism may go in completely misrepresenting the intention and purpose of the administration in respect of some of the so-called regulations. For years the medical examination of immigrants to Canada took place on this side of the ocean. I think hon. members will all agree that we do not want in this country classes who are defective, delinquent and dependent, but that we want classes that will come up to a certain qualification. The examination took place at Grosse Ile, with what result? The result was that many of those who had left their homes in the old country were turned back when they reached the shores of Canada. What was the criticism made? The criticism was that the government by making its examinations on this side was deterring immigration; that every man who was sent back became a centre of discontent in the country to which he returned. It was urged that instead of having these examinations made at the time of landing and consequent painful returns of immigrants to the old country, the examination should be made in the old country itself. Then at great expense, because it is a great expense, the government appointed medical examiners in Europe and the British Isles, placing them not one in every village but at a considerable number of points. Now we are criticized because of alleged extravagance by the government in paying for these physicians on the other side, and then our hon. friend comes and tells us that we are criticized because we make the immigrants on the other side undergo this examination.

Mr. BENNETT: No; it is the character of the examination.

Mr. MACKENZIE KING: This also is a matter which I would wish this committee to discuss, and I think it will be shown that every one of the so-called restrictions has been made primarily if not entirely in the interests of the immigrant. As I say, I believe it will serve a useful purpose in every direction to have the entire question of immigration as thoroughly ventilated as possible.

With respect to the empire settlement scheme, and in particular to the possible criticism that we are not doing as much as we should, may I quote a paragraph from an interview given at Vancouver by the Secretary of State for Dominion Affairs, Mr. Amery, in regard to this government's part in cooperating with the British government in empire settlement? As every hon. member knows, no one has more at heart than Mr. Amery, the Secretary of State for the Dominions, the success of the empire settlement scheme. Here is what Mr. Amery said in one of his first interviews:

> I do not think there is any feeling in Great Britain that the Canadian government is not doing its part to stimulate immigration, and I do not think there has been any apathy on the part of the Canadian government in the old land in this respect. The fact is there have been economic factors at work which have retarded the flow of emigration to this country.

There is a statement which I hope hon. members will take as authoritative having regard to the source which I have mentioned.

I regret that I have found it necessary to dwell at such length on these matters of immediate domestic concern. I shall endeavour speedily to conclude by referring to the two other main subjects which my hon. friend brought up in his address. I refer to imperial and international questions.

First of all, may I allude to the remarks of my hon. friend on the alleged commitments of our country at the League of Nations. He said, if I followed him aright, that parliament ought to know a great deal more about what is going on at the League of Nations and what we are being committed to than it does; that there has been recently an economic commission on which Canada has been represented, and that the implications of its findings are matters of concern to all of us, and he said that these commissions should not exist without a fuller knowledge on the part of members of this house as to what they are doing. He also intimated, in particular, that there was an order in council or a despatch sent some time ago which set out the policy of the government in regard to arbitration; or rather, it was the other way round—that the policy of the government in regard to arbitration in international affairs was a matter on which he desired to have more concrete information, and which he thought—my hon. friend shakes his head. Did I not understand him aright?

Mr. BENNETT: I referred to the observations with respect to Senator Dandurand's speech, and I said that in my judgment that speech did not warrant the implications founded upon it. My right hon. friend will find what I said in Hansard.

Mr. MACKENZIE KING: Probably there is very little difference between my hon. friend and myself on this point. The government's policy with respect to arbitration was set out in a despatch tabled two years ago. What I wish to say with respect to the League of Nations and the part that this country is assuming in relation thereto is this: As hon. members of the house know, the reports of the representatives of this country at the League of Nations, the reports of delegates who have been appointed to the league, are tabled every session, and in addition to that, there is distributed to all members of parliament the proceedings of the League of Nations which contain, I understand, all that transpires there that is of moment. These documents give as complete information to members of the house as it is possible to get from any source.

In regard to the economic commission to which my hon. friend has just referred, may I say to him at once and to the house that that was not a commission on which ministers of the crown were represented. It committed the government or the country to nothing. It was a commission of experts on economic questions, meeting under the auspices of the League of Nations to discuss means of more effectively bringing about greater stability in economic matters throughout the world—a body of experts who met in Geneva and discussed these matters there, and prepared a report. That report will be presented to parliament. The report of our members on the economic commission will be presented to parliament, I hope, to-morrow. It would have been ready for presentation to-day, but it is being translated. I desired to present both the French and English copies at the same time.

I now come to that part of my hon. friend's address which touches upon the much discussed subject of status. May I say to the leader of the opposition at once that so far as we on this side of the house are concerned, our view in regard to Canada's position within the British Empire is none other than that which was laid down at the Imperial conference of 1926, in that part of the report of the conference which relates to the status of Great Britain and the dominions and which is set forth in black and white in the published proceedings of that body. May I say this further to him, that in that particular, namely, in our view as to Canada's position, we do not differ one whit from the view of the government of Great Britain, the government of New Zealand, the government of South Africa, the government of Newfoundland, and the government of the Irish Free State. All the governments of the self-governing dominions, and the government of the mother country have expressed their view as to the present constitutional position of the dominions and the mother country, and that position is the position which we at all events, as the Liberal party in this country and, in another capacity, as the government of this country, take with respect to Canada's status at the present time. May I read from the proceedings of the imperial conference the exact statement of Canada's position as we conceive it to be in relation to other parts of the British Empire? The report of the conference reads:

> There is, however, one most important element in it—the British Empire—which, from a strictly constitutional point of view, has now, as regards all vital matters, reached its full development—we refer to the group of self-governing communities composed of Great Britain and the dominions. Their position and mutual relation may be readily defined. They are autonomous communities within the British Empire, equal in status, in no way subordinate one to another in any aspect of their domestic or external affairs, though united by a common allegiance to the crown, and freely associated as members of the British commonwealth of nations.

That position has not only been emphasized, as my hon. friend has said, by my colleague the hon. Minister of Justice (Mr. Lapointe) and myself and other members of the government, but it has been stressed in this country by every visitor we have had in this Dominion in the past year who has had anything to do with the imperial conference. The Prime Minister of Australia, when he passed through Canada, said that this was the position so far as Australia was concerned in regard to its relations to the other parts of the empire.

Mr. BENNETT: Australia can amend its own constitution.

Mr. MACKENZIE KING: I am going to have a word with my hon. friend on that point in a moment. Then the Premier of New Zealand took the same position as respects both New Zealand and Canada. We have just had a visit from the President of the Executive Council of the Irish Free State, who has taken exactly the same position, and we have had within the last week a visit from the Secretary of State for Dominion Affairs who has repeated at different points in this country the same position. We had during the summer a visit from the Prime Minister of Great Britain, not to

mention His Royal Highness the Prince of Wales, each of whom took exactly the same position with regard to our status.

My hon. friend has just interjected that Australia has the power to amend its own constitution. What I wish he would tell the house is whether, if he is in any way dissatisfied with the present arrangement, he is prepared to join with us in having amended the present procedure in regard to the amending of our constitution.

Mr. BENNETT: The responsibility rests at the moment with my right hon. friend.

Mr. MACKENZIE KING: My hon. friend says that the responsibility rests with us at the moment. Under the circumstances, and since he hesitates to give expression to his own view, let me give to the House what I conceive to be the views and desires of my hon. friend with regard to the amending of our constitution. I think that possibly my hon. friend and those of us who sit on this side of the house are not very far apart on this matter. At all events we were not very far apart before he became the leader of his party, and I cannot believe he has changed since, although no doubt he has received warnings from those who sit about him as to how far he should go in these matters. I have in my hand a copy of a very admirable address which my hon. friend delivered before the board of trade of his native city, Calgary, on June 5, 1927, before he had become the leader of his party. May I just read to the house the account which appears in his own paper, the Albertan, of the address which he delivered there?

Mr. BENNETT: To those who live in Alberta that is a joke.

Mr. MACKENZIE KING: Then my hon. friend takes exception to the statement that the Albertan is his paper?

Mr. BENNETT: Rather.

Mr. MACKENZIE KING: But he will not take exception to the accuracy of the report?

Mr. BENNETT: I have not seen it.

Mr. MACKENZIE KING: Perhaps he will tell me if the report is incorrect. This report reads:

Mr. Bennett began by mentioning that Canada will probably advance as much both constitutionally and otherwise in the next ten or fifteen years as she did in the past fifty or sixty years. In 1865 Canada was a dependency of Great Britain and was treated as a colony by that country. The members of the British house in the debate on the British North America Act revealed themselves as devoid of vision as to what the confederation would mean. Since then the relations of Canada with foreign powers in respect to trade, the making of treaties and the like involved the assertion of nationhood.

These are good words.

Mr. BENNETT: Yes.

Mr. MACKENZIE KING: Then he continued:

But Canada cannot properly be called a nation to-day even though there have been great changes since confederation.

Mr. BENNETT: Hear, hear.

Mr. MACKENZIE KING: He continues:

Canadian laws are still subject to disallowance by Westminster theoretically, and there is on the statute books of Great Britain a law which says that in certain cases British law has precedence over Canadian law.

That was something along the line of what he said yesterday.

Mr. BENNETT: The reporters did not understand the legal side of it.

Mr. MACKENZIE KING: I read further:

In one matter there has been no progress. We are still without the power to amend our own constitution.

This is what my hon. friend said:

If Canada is to be a nation she must have this power.

Now does my hon. friend want Canada to be a nation? We should like to know whether my hon. friend wishes this country to be a nation or not.

Mr. BENNETT: I will answer it. Nationhood technically used in international law involves, as I said yesterday, complete independence. I am not prepared for the complete independence of Canada.

Mr. MACKENZIE KING: My hon. friend is putting his own construction on the word "nationhood." May I say to him that the reason that I welcome the equality of status as between the different dominions of the empire and Great Britain is that I believe it is the only basis on which the British Empire can continue and endure, and for that reason and not from any desire of independence in the sense to which my hon. friend refers, I am a strong supporter of the present position of the British Empire as laid down at the Imperial conference of 1926. The quotation continues:

If Canada is to be a nation she must have this power. In its ultimate analysis the constitution of Canada is a statute passed by Great Britain. The British parliament is supreme except in cases where it has delegated its power,

but there is no indication in the British North America Act that that power has been parted with. There are indications that the Canadian people are beginning to wish to have this power.

That is the end of the quotation. Then the report in the paper proceeds:

Mr. Bennett referred to the fact that other dominions have the power to change the constitution, namely, Australia, New Zealand, South Africa and the Irish Free State.

Then a quotation again:

It seems to me that young men must be prepared to calmly consider what machinery shall be set up by it to amend our own constitution.

Mr. LAPOINTE: These are fine words.

Mr. MACKENZIE KING: The quotation continues:

This to me is the biggest problem.

Mr. BENNETT: I agree I said that.

Mr. MACKENZIE KING: The report in the paper continues:

He referred to the report of the imperial conference and said that Canada has not equality of status within the so-called commonwealth of nations, and that to refer to Canada as a nation is a misnomer—

Mr. BENNETT: Exactly.

Mr. MACKENZIE KING: —

—while the present constitutional arrangements exist.

Mr. Bennett also referred to the selection of a Canadian flag which he said was another problem which would demand attention before many years and was wrapped up with the problem of obtaining the power to change our own constitution.

Mr. BENNETT: Hear, hear. So it is.

Mr. MACKENZIE KING: My hon. friend must leave the house to judge from this just what his real desire with respect to nationhood is.

Mr. BENNETT: I did suggest—and that is a very casual report in the newspaper—that it was highly desirable that the young men of this country should think in terms of the possible amendment of our constitution, and with respect to the flag—it was the time of the controversy in South Africa when the people were tied up with that problem—I said it was time the people of this country were thinking of it. I do not withdraw a single word of what I said.

Mr. MACKENZIE KING: Yesterday in the course of my hon. friend's remarks, he used the word "implication" and spoke of what was implied. It is desirable that the house should know just what his point of view is with respect to the position of Canada within the empire and what deduction is to be drawn from his own utterances in this regard.

I will not take up the time of the house by citing statements of other parties as to Canada's position, but I would like to put on record one statement made by Mr. Amery, Secretary of State for Dominion Affairs, who is here in our country, with respect to what, in his opinion, was laid down at the conference. Speaking as a British minister he said:

The conference had laid down in the first place the complete equality of British nations—that none was subordinated to another. "Canada is no more subordinate to Britain than Britain is to Canada" he declared. "That principle is laid down for the whole empire with absolute unanimity."

With that statement we on this side of the house are in entire accord and complete agreement.

Yesterday my hon. friend's remarks were directed in large part to the Colonial Laws Validity Act, and he argued that because there is on the statute books of Great Britain a law known as the Colonial Laws Validity Act, under which statutes repugnant to the laws of Great Britain when passed by this parliament become of no force and effect, we are not, shall I say, a nation—

Mr. BENNETT: Not of equal status.

Mr. MACKENZIE KING: Not of equal status with the mother country. May I say to my hon. friend that if he is speaking of purely legal technicalities—

Mr. BENNETT: Not technicalities—official interpretation.

Mr. MACKENZIE KING: Legal interpretation—then perhaps he can find some support for what he says, but may I remind him that every recognized authority on constitutional law and constitutional history has taken the view that the constitution is something larger and broader and higher and deeper than a mere matter of law. The constitution is not made of statutes alone, but of customs and practices and traditions, as he well knows, and of principles and practices which have been long in use, all of which played their part in determining the constitutional position and status of a country.

Mr. BENNETT: I desire to make myself perfectly clear to my right hon. friend. I say the customs and practices have nothing whatever to do with judicial interpretations. The courts take no notice of anything else but statutes, as appears in the Nadan case, and therefore in the Nadan case they interpreted the statutes—

Mr. MACKENZIE KING: I do not wish to go into the legal side of this matter with my hon. friend. I prefer to leave that to the legal members of the house. But I want to say that there would be some force in his contention if the factor to which he has drawn our attention had not been the very factor of which full notice had been taken and to which particular consideration had been given at the conference. What was the precise endeavour of the conference with regard to describing the status of the dominion? It was, first of all, to discover whether there was agreement between all parts of the British Empire as to the nature of the relations existing between the different self-governing parts to each other; and if so, what the basic principle of the relationship was. There was no difficulty in discovering that. It was agreed by all that it had been a matter of evolution. It was not some new thing of the moment, brought for the first time into being. It was the opinion of all that the point reached in the constitutional evolution of the dominions themselves and their relation to the governments of Great Britain and of one another was such that the only accurate description of the relationship existing between them was one of equality of status. Once that principle had been laid down, then the conference proceeded to see whether in any particular there was a survival of the old order which had passed away. It was recognized that there had been a change. I submit that the greatest of all the transformations that had taken place in respect to the British Empire had been the transformation from the conception of the empire as an imperial unit to be highly developed in the form of a federation to this acknowledged conception of the empire as a community of free nations, owing a common allegiance to the same crown, having similar constitutions, cooperating with one another in accordance with certain well understood principles, but in no state of subordination one to the other.

Having laid down the position, the conference had then, as I have said, to see whether there were survivals of the old order, whether there were anachronisms, whether there remained anomalies. As was to be expected, one, two, three or four anomalies presented themselves. One was the case my hon. friend has mentioned. If you have equality of status, if that is the position between the dominions and the mother country, how can you reconcile that equality of status with the power which the Colonial Laws Validity Act apparently gives to the imperial parliament?

That is what is troubling my hon. friend. It was noticed at once at the conference that that was an anomaly; at once it was stressed that the statute could not continue to be operative under the condition which has now come to be recognized, and immediately the conference undertook to provide ways and means of removing that anomaly. Instead of seeking to remove it instantly during the sessions of a conference which had been called only for a few weeks, and which was then nearing its close, recognizing that there were legal obligations and difficulties involved, it was decided that a committee of experts from different parts of the empire would meet with a view of considering how that particular anomaly might be removed before the time of or at a subsequent conference.

The whole position in that regard has been set out in the proceedings of the conference. Let me, in order to confirm what I have said, read from the text of the report of the conference. After setting forth the statement of equality of status in the terms in which I have read it, the report has the following:

> Equality of status, so far as Britain and the dominions are concerned, is thus the root principle governing our inter-imperial relations. But the principles of equality and similarity, appropriate to status, do not universally extend to function.

I do not need to continue on that part.

Mr. CAHAN: It is puzzling to me to know what "function" means.

Mr. MACKENZIE KING: My hon. friend and I will have to talk about that some evening. I think we can work it out together. Here is the point:

> Existing administrative, legislative, and judicial forms—

My hon. friend has referred to the judiciary; there is a reference to judicial forms.

> —are admittedly not wholly in accord with the position as described in section 2 of this report.

The conference recognized that there were some features not in accord with the principle.

> This is inevitable, since most of these forms date back to a time well antecedent to the present stage of constitutional development. Our first task then was to examine these forms with special reference to any cases where the want of adaptation of practice to principle caused, or might be thought to cause, inconvenience in the conduct of inter-imperial relations.

Going on from that stage in the procedure, under the head of Operation of Dominion Legislation, the report continues as follows:

Our attention was also called to various points in connection with the operation of dominion legislation which, it was suggested, required clarification.

And what was one of those points?

(d) The operation of legislation passed by the parliament at Westminster in relation to the dominions. In this connection special attention was called to such statutes as the Colonial Laws Validity Act.

The very point that my hon. friend has drawn our attention to. Now what does the report continue to say with regard to that?

We gave these matters the best consideration possible in the limited time at our disposal, but came to the conclusion that the issues involved were so complex that there would be grave danger in attempting any immediate pronouncement other than a statement of certain principles which, in our opinion, underlie the whole question of the operation of dominion legislation.

What is said further on this point?

Mr. CAHAN: Is not that an ideal to be attained rather than a realization at the present time?

Mr. MACKENZIE KING: My hon. friend is quite correct in saying, it is an ideal to be attained, and I hope he will join me in the endeavour to bring about its attainment.

Mr. CAHAN: There is no pretence of our having attained it.

Mr. MACKENZIE KING: There is no pretence; this statement sets the situation forth in black and white. This citation, I think, answers what my hon. friend says about "pretence". Referring to certain matters that may have to be considered in the interim the report says:

On this point we propose that it should be placed on record that apart from provisions embodied in constitutions or in specific statutes expressly providing for reservation, it is recognized that it is the right of the government of each dominion to advise the crown in all matters relating to its own affairs. Consequently, it would not be in accordance with constitutional practice for advice to be tendered to His Majesty by His Majesty's government in Great Britain on any matter pertaining to the affairs of a dominion against the views of the government of that dominion.

Now, Mr. Speaker, when the British government itself declares that with respect to any statute which affects this dominion it will not undertake to advise His Majesty, but will have His Majesty advised by the government of this dominion, whether it be with respect to the Colonial Laws Validity Act or any other statute, I submit that we need have no fear about the full establishment of the principle of equality of status as between governments. Then the report goes on to say that:

Steps should be taken by Great Britain and the dominions to set up a committee with terms of reference on the following lines:—

And one reference is:

(iii) The principles embodied in or underlying the Colonial Laws Validity Act, 1865, and the extent to which any provisions of that act ought to be repealed amended or modified in the light of the existing relations between the various members of the British Commonwealth of Nations as described in this report.

May I suggest to my hon. friend that perhaps he would be well advised to give to this particular question the same degree of thought that his predecessor in the high office which he now holds as leader of the Conservative party has given to it. I think he will find if he reads what Sir Robert Borden has written on the question of status that Sir Robert takes as to the evolution in the constitutional development of the Dominion very much the view which is now being expressed. May I cite one paragraph from Sir Robert's treatise on Canadian Constitutional Studies which relates to the question of Canadian status. Probably we will hear my hon. friend quoting it one day on a Conservative platform as a part of his policy:

As no formal attempt was made to define the constitutional relations between the British and Canadian governments, those relations were free to develop by the same slow and sure steps which had built up the system of government now obtaining in the United Kingdom. Unfettered by a written constitution in the ordinary acceptation of the term, that system has been moulded and is controlled by custom and convention to a remarkable extent. In the words of Lord Bryce, "the always changing constitution becomes interpenetrated by custom." Anson puts it in much the same way: "If in our constitution we find that law and custom diverge, we must note first what is the law, and then how it has been overgrown by custom."

"The conventions are superimposed upon the law, and modify political relations without in the least affecting legal ones." In an interesting contribution to the history and study of relations between the nations of the British commonwealth, Mr. H. Duncan Hall points out the vast scope of changes that may be effected through new conventions of the constitution.

Mr. BENNETT: Since then we have had the Nadan decision.

Mr. MACKENZIE KING: My hon. friend, with all his legal acumen, might well, instead of seeking to emphasize a small technical point upon which he dwells at such length, offer the house some advice as to how best, for the benefit of all concerned to remove this last anachronism, this trifling anomaly, this irritating remnant.

And now may I conclude by referring to the one other matter in the speech from the throne which my hon. friend discussed at some length,

namely, the decision on the part of the administration to have ministers plenipotentiary exchanged between France and Canada and between Japan and Canada. May I here preface what I have to say by reading the paragraph which appears in the speech from the throne. I would ask hon. members to follow the sequence of statements as they are there set forth. The paragraph in the speech from the throne reads:

As contemplated by the conclusions of the imperial conference of 1926, provision was made on July 1 for direct communication between His Majesty's government in Canada and His Majesty's other governments of the British Empire. The further implementing of these conclusions which aim at more effective consultation through personal contact by the appointment to Canada of a representative of His Majesty's government in Great Britain is being discussed between the Secretary of State for Dominion Affairs in Great Britain, who is at present in Canada, and members of my government. By agreement between the governments of France and Canada and the governments of Japan and Canada it is proposed that each of these countries shall be represented in the other by a minister plenipotentiary.

Let me now take the proceedings of the Imperial conference as they relate to the question of representation between Great Britain and Canada and indicate to the house what was there agreed upon among the representatives. At page 22 of the report, under the heading, System of Communication and Consultation, there appears the following:

Sessions of the imperial conference at which the Prime Ministers of Great Britain and of the dominions are all able to be present cannot, from the nature of things, take place very frequently. The system of communication and consultation between conferences becomes therefore of special importance. We reviewed the position now reached in this respect, with special reference to the desirability of arranging that closer personal touch should be established between Great Britain and the dominions, and the dominions inter se. Such contact alone can convey an impression of the atmosphere in which official correspondence is conducted. Development in this respect seems particularly necessary in relation to matters of major importance in foreign affairs, where expedition is often essential and urgent decision necessary. A special aspect of the question of consultation which we considered was that concerning the representation of Great Britain in the dominions. By reason of his constitutional position, as explained in section 4 (b) of this report, the Governor General is no longer the representative of His Majesty's government in Great Britain. There is no one therefore in the dominion capitals in a position to represent with authority the views of His Majesty's government in Great Britain.

That is all I need quote in the present connection. What I wish to direct the attention of the house to is this: The Imperial conference, composed of those members of the several governments within the empire who have to do for the most part with communications passing between different parts of the empire, were agreed that the time had come when there should be not only direct communication as between government and government but also greater opportunity provided by way of personal contact and personal consultation, as a supplement to the written words of a despatch exchanged between governments. Perhaps I might state it thus wise: As nations, in their relations one with another, have found it advisable as the years have passed, to develop a diplomatic service whereby communications may be exchanged not merely in the form of written despatches from one government to another but having the advantages of personal contacts as well, so within the British Empire, with the business of the empire growing as it is, and with the increasing need for cooperation, extending as it has extended since the war, a useful purpose will be served if, in addition to written despatches, there are resident in the various capitals within the empire personal representatives from other parts of the British commonwealth of nations. It was recognized that it was for each dominion and for the British government to decide individually how best it should be represented in the other self-governing communities. Canada has been represented in London for many years by a High Commissioner. The High Commissioner in London holds the highest position in the gift of this government in its diplomatic relations with the world outside Canada. As between the other governments of the British Empire and Canada on the one hand, and as between foreign countries and Canada on the other, there is of necessity a considerable difference in some particulars in the matter of representation. It seems to me that there must be drawn a distinct line between representation as between units within the empire and the representation of a dominion in foreign countries. I believe that so long as there is a British Empire the contacts within the empire will be to each dominion more important, more numerous, in every particular more essential, than will be the relation between that dominion and any foreign country; and for that reason I shall always feel that, so far as this country is concerned, the highest post in a representative capacity that may be given beyond the confines of Canada will be the post occupied by the official, whoever he may be, representing this Dominion in London. Whether he be called a High Commissioner, or by whatever other title he may be designated,

he should be regarded as the head of that representative service which has to deal with the affairs of Canada abroad.

I do not know where my hon. friend got the idea, but he spoke about the possibility of appointing a minister to London. I want to assure him that so far as we on this side of the house are concerned, so far as the government is concerned, we have never thought of anything of the kind.

Mr. BENNETT: That was the word used in many press articles.

Mr. MACKENZIE KING: I agree that the press may have used the word, and I think my hon. friend was right in directing attention to the fact that "minister" would not be an accurate designation of Canada's representative in London. It would not be accurate, first of all, for the reasons which my hon. friend gave; and moreover it would be certain to be confused with "minister of the crown". The last thing I should wish to see, carrying out the doctrines of responsible government, would be a minister of the crown from Canada residing in London and there without opportunities of consultation with his colleagues, committing the administration of this country to whatever he might wish to say or do. There is another factor of importance, and that is the difference which must always obtain within the empire in the relation of one who represents merely a government and not the crown and one who represents not merely the government of his country but also the sovereign or recognized head of the country from which he comes. May I make this a little clearer by way of illustration. Within the empire, the crown is represented in Great Britain by the King and in this Dominion by His Excellency the Governor General. The government of Great Britain, as distinct from the crown, has in Canada no representative at the present time. Such however is not the present position of the United States in Canada, which by its minister is represented both as respects the president and the government. Among other subjects discussed by Mr. Amery when passing through Ottawa was this very question of a representative to be appointed from Great Britain to this dominion. The Secretary of State for the Dominions made it clear that it was the intention of the British government to appoint a representative who would reside at Ottawa. What his designation will be, or who will be chosen, is a matter for the British government to decide. Mr. Amery naturally wished to have an opportunity of conferring with his colleagues in England before announcing any decision on either of these particulars, and he is returning with certain views after having carefully considered the situation during his visit to this country. Whoever is sent by Britain to represent the British government will receive a very cordial and warm welcome to this Dominion. I believe that the effect of personal representation of the British government at Ottawa will go very far to make closer and more effective the consultation which is so desirable if there is to be effective cooperation between the British government and our government; that it will make that consultation much more effective than it has been hitherto. Having said this, I now say to my hon. friend: If personal conference and contact is desirable as between governments of the British Empire, why is it not equally desirable with respect to the governments of the British Empire in their relations to the governments of other countries? The British government has thought it advisable to have a representative of His Majesty and His Majesty's government in all parts of the world. That has proven to be in the interests of Great Britain. Why should it be less in the interests of His Majesty's government in Canada to have its representatives in other parts of the world? True, there is no necessity for having a number of representatives; we must gauge the situation in each case as we feel the necessity of so doing.

I submit, however, that in Europe conditions have vastly changed from what they were when Canada was first given representation there. It was in 1888 that Sir John A. Macdonald appointed a high commissioner or commissioner general to Paris. For forty years Canada has been represented in Paris by a commissioner general. In the intervening period there have been cataclysmic changes. In the recent past no less than four empires have disappeared, no less than twelve or thirteen new republics have come into being. The whole complexion of the map of Europe has altered. A league of nations has come into existence. This Dominion of Canada is a nation in the League of Nations, as it is a nation in the community of British nations. Not only is Canada represented in the assembly of the League of Nations but it has a representative on the council of the league. I say therefore that conditions, so far as Europe is concerned, are entirely different from what they were at the time the commissioner general to Paris was appointed. I think it will be conceded by all who have been in Paris and have met Hon. Mr. Roy, the Commissioner General, that he has established there a position very different from the one which it was expected a commissioner general would hold, and that his position is

in reality much more nearly that of a minister. By that I mean, a minister has the right, as representing his government, of immediate approach to the ministers of the government to which he is accredited. He has the authority to speak in the name of his government. Mr. Roy has time and again been accorded that right as a matter of courtesy by the French government and by the British Ambassador in Paris. It has, however, been as a matter of courtesy that the right has been conceded. Now we have come to the time where we feel that if there is to be equality of status and co-operation between the different self-governing communities of the British Empire there should also be an increased measure of responsibility on the part of each with respect to its own affairs. We feel that Canada's interests, which have grown so largely in the course of the years, will be safeguarded more effectively, that the business interests of this country in relation to France and the government of Canada in her relations to the government of France will all be in a better position, if our representative in Paris is given a standing similar to that which a number of other countries, many of them much smaller than Canada, enjoy in France at the present time. and, I might add, the British government correspondingly relieved of a measure of embarrassment and expense. We have thought it advisable therefore to take this step.

Now I turn to the orient, and let me first point out the change which has taken place in the situation there. I believe it is true that our trade with the orient to-day is greater than was the trade of Canada with the United Kingdom at the time the government of Sir Wilfrid Laurier came into office. When that event took place Canada's trade with the United Kingdom stood at a certain figure. That figure is exceeded to-day, so I am informed, by the total trade of Canada with the orient. Now volume of trade is indicative of a variety of increasingly important interests, and while I think it is wholly desirable, as my hon. friend (Mr. Bennett) said, that we should have trade commissioners, and an increasing number, scattered in different parts of the world, no trade commissioner as such, it must be remembered, has any right to approach the ministers of the government of the country in which he holds office, nor does he speak with any authority on behalf of the government by whom he may be employed. He is not a representative of that government, he is the agent of a government department. I may say that our government has received from trade commissioners in different parts of the world repeated appeals that their status should be improved, that they should be given something of a diplomatic status; that Canada was suffering because they had not the status which would enable them on behalf of the dominion to have those relations with the governments of the countries in which they were stationed which they felt was desirable in the interest of Canada.

We have appointed one representative to the United States. We intend to appoint a minister to France, who will be the sole representative on the continent of Europe, and one to Tokyo who will be the sole representative on the continent of Asia. To appoint but one representative in Europe, one in Asia, in addition to one in America, each of whom will have the standing of ministers and be in a position to meet the diplomats and members of governments of other countries on an equal footing, is surely not in the present stage of our international relations proceeding with undue haste. And may I say to my hon. friend that the purpose we have in view in this matter is not at all that of emphasizing our status. That is not our view. We do not need to emphasize our status; our status is conceded and we are no longer worrying about it. But what we do maintain is this, that if there is to be equality of status there must be something also in the way of responsibility with respect to our own affairs, foreign as well as domestic, in whatever pertains to the relations between this dominion and other countries of the world. What we wish is to assume the responsibility which we as a nation, having to deal in increasing measure with foreign affairs, feel we should assume in the position to which Canada has attained at the present time. This I submit, is essential to effective cooperation with other parts of the empire.

May I say one further word in regard to our representation in the orient? Here I touch on a very large subject, and I hope the house will receive what I have to say as coming from a profound conviction of what I sincerely and deeply believe is of importance in the relations of this country with the orient. I was sorry to see at the party convention which my hon. friend attended that among other resolutions which were passed was a resolution declaring for oriental exclusion. I do not wish to question the motives of anyone in connection with the introduction or passing of that resolution. I believe one can read it, as an hon. member from my hon. friend's own party has done, as not really meaning what it appears to say.

May I make this perfectly clear, that as regards desiring a white Canada and a white British Columbia, as regards desiring to maintain the standards of our labour in British Columbia, I will yield place to no one in the belief that we must not permit competition of the oriental races with our own people in that province? I think the numbers that have come into this country from the orient are excessive already and there is abundant reason why every possible measure compatible with good relations and good will between the different nations of the world should be adopted in order that we may prevent what I believe would be a very serious consequence were, for example, labourers from the orient to be permitted to come to this country in any numbers. But what I do say is this, that in dealing with foreign countries, a country with a population as large as that of Canada, a country as important as this country is, cannot afford to fail to take cognizance of the susceptibilities of the nations with which they are doing business and with which they wish to deal not only this year but for years to come. Hon. members know very well that there is no term more offensive to the Japanese people than the word "exclusion". I feel that in this parliament on these matters of foreign affairs my hon. friend opposite and myself ought to be able to unite in taking a question of this kind completely out of the realm of party politics. Let us agree that we do not want oriental labour coming into this country in competition with our own. But let us realize this, that if we are going to remain, as I hope and pray we always shall remain, a part of the British Empire, we owe a certain obligation to be true not only to ourselves but to other parts of the British Empire in our relations with and attitude towards other countries of the world.

During the time I was privileged to be present at the meetings of the Imperial conference I learned a good deal about the difficulties which were confronting Great Britain in some of her foreign relations. Indeed, if not the main purpose of the conference, it always seemed to me to be the most important result of the conference that those who came from other parts of the empire were afforded an opportunity of coming to appreciate the magnitude of some of the problems with which Great Britain herself had to deal and the importance of certain considerations with respect thereto. I believe that within the last year or two there has been no problem which Britain has had to face that in the seriousness of its aspect has been comparable with that of the unrest which has developed in China, and which in the last session of this parliament led to discussions as to whether or not there was to be war in the orient and whether or not this country was to participate in it. Along with that unrest in China, stimulated as there is every reason to believe it has been from some other parts of the world, there has been great unrest in India. If to the unrest in India and the unrest in China you give the Japanese nation cause to feel indignation and resentment at the British Empire, I do not know what the consequences are going to be. I wish to say to my hon. friends opposite that when the government was face to face with the situation created by that resolution, and was forced to ask itself how, in the face of it, it was to deal with this oriental problem, then, and for the first time, we took the position that we could not stand for restriction of immigration by a policy of exclusion in those terms, but that we would do our utmost by diplomatic endeavour with a friendly nation to see that the numbers of Japanese coming into this country were reduced to the lowest possible point in a manner which at the same time would help to preserve the friendly relations between that country and ourselves and between that country and the British Empire.

Mr. BENNETT: Perhaps my right hon. friend will explain what he said a moment ago that there were too many of them now.

Mr. MACKENZIE KING: I meant exactly what I said. I would say so to-morrow in Japan. I think there are too many Japanese of the labouring classes in British Columbia at the present time. I have always made that clear. My hon. friend turned to the Speaker yesterday and complimented His Honour upon his visit to Japan and the result of his diplomatic mission some twenty years ago. Does my hon. friend think we would have succeeded even at that time in getting the reduced numbers we succeeded in getting if the whole matter had been left to despatches or to the roundabout process of dealing through the Foreign Office in Great Britain with the Foreign Office in Japan? It was because we were able to send from Canada one of our own citizens, one of our own ministers, and have him deal at first hand with the Japanese government that at that particular time we were able to make the arrangement we did. There was one remark which my hon. friend made yesterday that I did not like. I hope I was wrong in what I gathered as to the meaning of his reference to the diplomatic skill of this

country. I contend that the diplomatic skill of Canada with respect to Canadian affairs is of just as high an order as the diplomatic skill of Great Britain or that of any other part of the British Empire.

Mr. BENNETT: I made no reference to the diplomatic skill of Canada.

Mr. MACKENZIE KING: I am glad to hear my hon. friend say that.

Mr. BENNETT: Where a gentleman has been able to remain in power from 1921 to 1926, as my right hon. friend has, I have a high regard for his diplomatic skill.

Mr. MACKENZIE KING: I can tell my hon. friend he will come to have a still higher regard if he just continues where he is for another half a dozen years.

Mr. BENNETT: It will not be that long.

Mr. MACKENZIE KING: May I conclude, Mr. Speaker, by saying that it has been solely from a desire of meeting the responsibilities of Canada as one of the sister dominions of the British Empire, to play our part with respect to Canadian affairs as we believe we should play it in foreign relations as well as in domestic relations with a full consciousness of our responsibilities, that we have been led to take the step we have taken with regard to representation in Europe and in Asia and of which we hope this house will approve. In other words, our desire in these particulars as respects our country in its relation to other parts of the British Empire is expressed by the three words: equality, cooperation and responsibility. We believe in the equality of the British nations within the empire; we wish to co-operate in a friendly and helpful way with all parts of the empire, and we wish in cooperating to assume to the full the responsibilities which as a nation within the British Empire we believe are ours in imperial and international affairs.

Mr. ROBERT GARDINER (Acadia): Mr. Speaker, before addressing myself to some of the important problems with which we in Canada are confronted, I should like to be permitted to extend my congratulations to the hon. member for Hants-Kings (Mr. Ilsley) who moved the address in reply to the speech from the throne. I can assure him that I enjoyed his address very much and I hope he will be long with us in this house to give us the benefit of his opinions. I had also the pleasure this morning of reading the translation of the speech of the hon. member for Provencher (Mr. Beaubien) who seconded the address in reply to the speech from the throne. I enjoyed very much the reading of it, and I regret that I do not sufficiently understand the French language to have been able to follow him when he was speaking.

I wish also to thank the leader of the opposition (Mr. Bennett) for his kindly reference to me yesterday. I am quite sure it was a mistake on his part during the proceedings on Thursday in this house when he forgot to make the reference, which forgetfulness he deplored. I accept his explanation and I appreciate his reference.

It will not be possible for me, Mr. Speaker, in view of the fact that the forty minute rule is now in effect, to give to this house a detailed consideration of some of the more important questions with which I should like to deal, but so far as this group is concerned, no doubt different speakers will take up specific questions and give them a more detailed survey than it is possible for me to do in the time at my disposal this afternoon. I shall therefore lose no further time, and turn my attention to one or two of the more important matters.

The speech from the throne this year is not a document such as it was last year. It is not very specific. It is, in my judgment, merely a recital of circumstances or things which have already taken place. It gives to the House no intimation of the legislative program of the government for this session. In that respect the speech from the throne is very deficient. It is regrettable that the members of the house will have no intimation until such time as the actual legislation is brought down of what the legislative program which we shall have to consider later on will be. Comparing the speech from the throne this year with that of last year, a tremendous difference is to be noted. Last year the government did give the house a very good forecast of the legislation it intended to bring down, so that the members were apprised beforehand of what they might expect and were therefore in a position to study the different subjects that were coming up. But the speech this year is very deficient in that regard, and under no circumstances would we be justified in using extravagant language in praising it.

Since the house prorogued last year I have had the privilege of addressing many meetings of electors in my own constituency, and of telling those people that for once in the history of this country we had a government in power that carried out its promises at least on one occasion, and that was this government during the last session. We all remember the session

of 1926 when a certain program was before this house containing important pieces of legislation. For certain reasons which we all understand it was impossible to carry out that program at that time, but I had the pleasure of telling the people of my constituency that when the same government came into power again last year, they were in a position to carry out and did carry out their previous program, and we appreciate that very much indeed.

The speech from the throne states that we have evidences of great prosperity. It is quite true that we have exidences of greater prosperity than has prevailed for several years past. But is this prosperity general, or does it apply to certain sections of Canada and only to certain classes? I think we should find, if we were to review the situation very closely, that certain classes in Canada are probably fairly prosperous, but that on the other hand many other classes in Canada can by no stretch of the imagination be called prosperous. As a matter of fact if you go into our large cities to-day I think you will still find bread lines, notwithstanding all these evidences of prosperity that are spoken of, and because of that fact I feel that the speech from the throne is not as explicit in that respect as it should be. I think we all realize that certain sections of the country are not enjoying the same measure of prosperity as are other sections. There may be economic reasons why some sections of this country are not enjoying the same measure of prosperity as others are, but without going into those reasons there is no doubt at all that such sections do exist in Canada.

Dealing with the question of unemployment, which also is related to the question of prosperity, my hon. friend the leader of the opposition (Mr. Bennett) in his address to the house yesterday afternoon cited the fact that we had imported during the last fiscal year $80,000 000 more of goods than we did the previous year, and he attempted to show to the house that if we had not imported this extra volume of goods we would probably have had no unemployment problem in Canada. I think my hon. friend is sufficient of a business man and has had a wide enough experience to know that all business is an exchange of goods and services, whether it be between individuals or nations; consequently if Canada is to export her surplus products—and in some lines of production we have a surplus in great abundance —it is necessary for us also to import. In that connection I should like to point out that there is some information which is lacking at present and which would be of great value to the members of this house if it could be secured. We recognize, of course, that we are borrowing large sums of money from the different countries of the world for development purposes, railroad construction and the like, for loans for settlers and so forth, and that all our governments, federal, provincial and municipal, are borrowing large sums of money abroad. Now the only way in which we can pay back the principal and keep up the interest payments on these borrowings is by exporting our goods and selling them in the markets of the world. But we have no record at the present time of just what our annual obligations under this heading are, and I would suggest to the Minister of Finance (Mr. Robb) that for the better information of the house and of the country generally, steps should be taken to secure that information as rapidly as possible so that we may have an intelligent idea of what our real balance of trade is at the present time. We do not know whether or not the balance of trade which is indicated as being in our favour is a real balance of trade, because we may owe in principal and interest more than the balance that is indicated in our favour. Under these circumstances, therefore, we are discussing this very important question more or less in the dark—merely stabbing at it instead of dealing with it in the light of full knowledge. I would again urge the Minister of Finance to take steps to make this information available to the house.

A great deal has been said, not only in this house but throughout the country, as to the necessity for securing capital to develop our natural resources and to build up industry. I should like to place this viewpoint before the house for its consideration. First of all, let us determine what capital is. Money is not capital. Money in its proper form is merely a medium of exchange, a medium whereby services or goods of one class are exchanged for services or goods of another. Money, therefore, being a medium of exchange, is not and can never be capital in the proper sense of the word. Real capital consists of lands for building purposes, the buildings erected upon these lands for manufacturing or productive purposes, the machinery of production and the raw material necessary for the product. That is the real capital. Whenever any person advocates the importation of large amounts of capital he must at the same time advocate the importation of large volumes of goods. Capital does not come into this country in the form of money. It comes first of all by way of credits.

After the credits are distributed, as they are intended to be distributed, there must follow the importation of goods either from the country of the origin of this credit or from some other country; consequently when we ask for the importation of capital or the increase of capital from outside sources we are asking for the importation of goods, and those who are of a protective frame of mind naturally would object to that. The two terms are not synonymous, and they can never agree in any shape or form.

The situation appears to me to be this: We have in this country undoubtedly a surplus of labour at the present time. Probably that surplus is not so great to-day as it has been in years gone by, but nevertheless we have a surplus of labour. We have the raw material from the natural resources to which that labour can be applied, and in most cases we have the necessary machinery of production. I wish to ask this question in all sincerity of all members of the house; is there any reason why we Canadians cannot create our own capital in our own way to suit our own needs? I maintain that it is quite possible for us, if we so desire and if we organize properly, to produce our own capital without importing it, and without at the same time having to pay interest for the use of it. This is a matter of very great importance. It is a big question, I admit, but no effort, so far as I am aware, has been made along those lines for the creation of our own capital. I am not at all satisfied that it is a good policy for the Canadian people to advocate the importation of large volumes of capital which eventually will have to be repaid and at the same time pay dividends upon it. I believe that, in the interests of the people of Canada, the working classes and all classes, it is very essential that we create the most of our own capital, to be used for our own services, in order that we may create a larger measure of happiness amongst all classes of Canadian people.

I should like to refer for a few moments to the conditions in western Canada. It has been said that we in western Canada have harvested the second largest crop in the history of the three prairie provinces. While that is true so far as the number of bushels is concerned, on the other hand we regret to say that the quality of that crop this year is in many respects very low, and consequently the monetary return to the farmers of western Canada will not be as large as we had anticipated prior to the harvesting season.

Mr. DUNNING: It is only of value for export.

[Mr. Gardiner.]

Mr. GARDINER: That is quite true. Under those circumstances we do not expect to have the same measure of prosperity, measured by our purchasing power, as we had anticipated. We have had great losses from natural causes. During this year we have had more damage from hail in western Canada—at least in Saskatchewan and Alberta—than we have ever seen before. That has hit some sections and some farmers very hard, almost to the extent of putting them out of business. We also have had considerable damage from frost. That, of course, is a natural cause which you cannot overcome except by securing early ripening kinds of grain. Probably the greatest problem we have before us to-day is the question of rust. I want to pay a compliment to the Minister of Agriculture (Mr. Motherwell) for his desire and his effort to try to secure ways and means to combat this menace to our welfare in the west. I should like also to point out to the government in this regard that, so far as the investigation of this particular matter is concerned, we require the services of the best trained minds that we can secure. It is so important a question that we cannot afford to be penny-wise in regard to it, and it is necessary to pay higher salaries than we are paying to-day in order to obtain the services of the right class of men to assist us in this great problem. I would suggest to the government and to this house that it would be far better to pay those salaries in the hope of securing some remedy than that the western country should be subjected to the tremendous loss it now has to bear.

Mr. MOTHERWELL: Hear, hear.

Mr. GARDINER: This is also applicable to other research work. It has been stated on many occasions that we in Canada lose the services of many of our best scientists and research men because we cannot afford to pay salaries equal to those which are paid in the United States. If this country is to progress as it should progress—and research work is essential to that progress—I maintain that we cannot afford to allow another country to secure the services of these valuable men, irrespective of what the salaries may be. Consequently I hope the government will see to it that, wherever possible, if they can retain the services of these men, the salaries must not stand in the way.

I desire to come to the question of the interprovincial conference. I believe such conferences are very valuable. Probably we have too few of them. I believe that this

government, or whatever government may be in power, can secure through interprovincial conferences an idea as to the conditions in the various provinces which form the confederation. Therefore I suggest to the government that instead of having long intervals between these conferences they should hold them more frequently. By that means the government will always be apprised of important questions which affect the welfare and happiness of the various provinces.

At the last interprovincial conference apparently the only question that was really decided so far as we have any information at the present time was the continuation of the subsidy to the maritime provinces. Of course I am not taking the attitude that out of that interprovincial conference other questions of value may not be settled before the close of the session. But so far as the speech from the throne is concerned the question of the continuation of subsidies to the maritime provinces seems to be the only question that found a final settlement in that conference. I have no objection at all to the maritime provinces securing increased subsidies. I did not take any objection last year when the bill was before the house. The only question I asked the Prime Minister in that regard was whether this was to be an annual subsidy or was intended merely for one year. His reply to that question was, "For one year." Now we have the matter mentioned in the speech from the throne, and naturally the government will wish to carry out its promise in that regard. As I have stated before, I have no objection to this increase in subsidy, but I do object to some provinces being treated differently from others. If we can be assured by the government that the whole question of subsidies to the provinces is to receive sympathetic consideration, then I will withdraw any objection at the present time. But, remember, I object solely on the ground of the difference of treatment accorded the various provinces.

In my judgment increased subsidies to the provinces have become almost a necessity. Because of the demand for social services, resulting in social legislation, the provinces, financially, are unable to give those services unless they secure increased subsidies from the federal government. If we are to give the social services that are demanded, services that present day conditions warrant, then the whole question of subsidies to the various provinces must be considered from that standpoint, and I trust the government will give it sympathetic consideration.

This afternoon the Prime Minister made a statement which I was very glad to hear with regard to the return to the prairie provinces of their natural resources. I think those provinces had practically reached the conclusion that the question had become, and was likely to remain, a political football for all time, or until the natural resources were all dissipated. However, in view of the assurance which we have this afternoon received from the Prime Minister, I trust we can take a more hopeful view of the situation. I must confess, Mr. Speaker, that I had come to the conclusion that the time was ripe for the prairie provinces to stop all negotiations with the federal government looking to the return of their natural resources, and that the whole question should be referred to our courts and finally, if necessary, to the Privy Council, to determine whether this parliament ever had the right to withhold those resources. But having heard the Prime Minister's assurance this afternoon, I am going to wait and see in the hope that it will not be necessary for the provinces to take such action. I have given this matter some study during the last fifteen months, and in my judgment there is good ground to believe that the provinces would win an appeal to the Privy Council on such a reference. However, if the provinces can come to an amicable arrangement with the federal government I think it will be better for all concerned, and I hope that this important matter will be so settled.

This afternoon the Prime Minister also made reference to the claim of British Columbia to the return of certain lands within its borders. He stated that the law officers of the crown advised the government that British Columbia had no legal claim to these lands, but that for certain purposes it might be advisable to meet the wishes of the province. If it can be shown that it is a fair proposition I do not think that either myself or my colleagues would object to the transfer, but before the matter is finally decided we hope that we will get the requisite information to determine whether such a transfer is really necessary and justifiable. I trust, however, that this question is not going to become a political football in view of the possibility of a general election in British Columbia in the near future. Let the question be decided upon its merits, and if it can be shown that British Columbia is entitled to these lands, I do not think there would be very great objection to their transfer.

In the prairie provinces we are still confronted with railway problems. We appreciate the legislation that was passed by this house last session for branch line construction in connection with the Canadian National Railways. We appreciate also that the Canadian Pacific Railway is doing its duty to the best of its ability in providing branch lines. But there are still many districts unprovided with the necessary transportation, and until it is provided it will be impossible for them to produce to their utmost, and consequently Canada will suffer just to that extent. May we hope that another branch line program for the Canadian National Railway system will be in evidence this session, and that the Canadian Pacific Railway will also take similar action in regard to its system?

I now come to one of the important questions that has been discussed in this debate. I refer to the Hudson Bay railway. For years western Canada has felt that great injustice had been done to it because of the failure to complete this railway. Last year the Minister of Railways (Mr. Dunning) intimated to the house that before any further expenditures would be made on a terminus an independent investigator would be sent into the territory to determine whether Port Nelson was feasible or whether another port should be selected. I wish to thank the minister for his kindness in sending me a copy of Mr. Palmer's report, which I have perused with a good deal of interest. From the data furnished by Mr. Palmer it is evident to me that a great mistake was made when Port Nelson was selected as the terminus of the Hudson Bay railway. I also had the privilege of discussing this question with a friend of mine who was in that territory for three years with a survey party taking soundings at Fort Churchill and in the waters adjacent to Port Nelson. He informed me that in the judgment of those engaged in that survey Port Nelson was not a very good place to provide shipping facilities, and that in fact Churchill was superior in every way. I trust, however, that no mistake will be made in selecting Fort Churchill as the terminus. I do not know just to what extent the government has committed this house and the country to expenditures at that point. I can quite understand their desire to ensure the completion of this work at the earliest possible moment; on the other hand, I think the government in matters of this description should be very careful not to take into their own hands that power which in the final analysis is vested in the House of Commons.

[Mr. Gardiner.]

Mr. DUNNING: If my hon. friend will permit, is he suggesting that that was done in this matter?

Mr. GARDINER: I am referring now more particularly to expenditures. I said I did not know just exactly how far the government had gone. If no expenditures of any great importance have been made, then I think probably the attitude of the government is quite correct; but outside of the question of the terminus to be selected, if those expenditures have been sufficiently large, then probably there is some reason for complaint.

Mr. DUNNING: Authority was given by the house last year and that authority has not been exceeded. The amount granted was $5,130,000 and the discussion which took place in committee of supply is surely clear. Every member of the house knew what it was proposed to do. I am not now addressing myself so much to my hon. friend as to the leader of the opposition (Mr. Bennett), who suggested a moment ago that there was no authority.

Mr. GARDINER: I must remind my hon. friends that I am subject to a time limit.

Mr. DUNNING: I would request that the hon. gentleman be given consideration for this interruption.

Mr. GARDINER: I am glad to accept the minister's explanation, and in the light of the evidence produced by Mr. Palmer I can congratulate him on the action he has taken in the matter.

At six o'clock the house took recess.

After Recess

The house resumed at eight o'clock.

Mr. GARDINER: When the house rose at six o'clock I was about to deal with the question of immigration. I was very glad indeed to hear the statement of the Prime Minister this afternoon, to the effect that if the house deemed it desirable the whole question of immigration would be sent to one of the committees for investigation. I believe that would be the best way to deal with the situation, because we need to have an immigration policy suitable to the conditions which prevail to-day. We must remember that the conditions which obtained in 1900, and for some years thereafter, were altogether different from what they are to-day, and the new conditions demand the adoption of new immigration methods. From 1900 onward a large amount of railway construction was done in Canada,

and an extensive area of crown lands was available for settlement. Under those conditions it was possible to absorb large numbers of immigrants annually. But to-day there is not the same amount of railway construction, which provides employment for new settlers, nor have we the same extent of crown lands from which to make grants to new settlers. In my judgment a land settlement policy is essential. Not only do we need such a policy but we must take care that no greater number of immigrants are to be admitted to Canada than the country is in a position at the time to absorb. I appreciate very much the suggestion the Prime Minister made in this regard. At present there is a partial land settlement scheme in operation in conjunction with the imperial government, but I understand that this will take care of only some three thousand families, and I should not be at all surprised to hear that the specified number of families have already been settled under that policy. We must review the whole situation and see if it is not possible to adopt a more effective policy with respect to immigrants than the one which is now being followed. I have had several interviews with men who claim to be in touch with the situation, and I have been informed by these men that many immigrants are coming from Great Britain under the assisted passage scheme, but instead of going on the land they are crowding into the cities. It is an easy matter for them to do so at points contiguous to large centres of population. The result is that under that particular policy we are getting immigrants who come to Canada at the reduced rate and then go to swell the population of our cities, which is certainly not in the best interests of Canada. I approve very heartily of a strict medical examination of immigrants, but complaints have come from different sources as to the severity of this examination in Great Britain. I have also received complaints with respect to the medical examination on the continent, but it is claimed that the examination there is not so severe as it is in the old country. If so, British immigrants to Canada are in a measure discriminated against. I do not know whether or not the statement is correct.

Mr. KING (Kootenay): There have not been any examinations made on the continent as yet, and very few have been made in the old country up to the present.

Mr. GARDINER: I accept the explanation. I am merely bringing these matters to the attention of the government so that they may take cognizance of them.

I wish now to deal for a few moments, if I may, with the case of the returned soldiers, whose situation is becoming more pressing each day. I should like to see this matter also referred to a committee for investigation. There are many veterans who require a medical examination but have not the needed funds to pay for medical attention; they are unable to follow any employment and consequently are almost destitute. It may be quite true that the Minister of Health has not at present the power to take care of this particular class of men, but some remedial legislation is necessary in their interests and that legislation is long overdue. These men have served their country faithfully and their health is now impaired. Whether that condition is or is not due to war service, in my opinion, makes no difference. I believe it is the duty of the country to see that these men who have served Canada so faithfully should be given such medical care as it is within the province of this parliament to grant. I appeal strongly to the house on behalf of this particular class of men, because I know many of them are in poor health and have not the means to secure that medical care which they should receive.

My time has pretty well elapsed, consequently I shall not be able to deal with many other matters which I desire to discuss. For instance, there is the question of grants to highways. We had in this country a policy by which there was a grant of $20,000,000, I believe, to assist the provinces in building highways. I maintain that the federal government has a duty to perform in regard to interprovincial highways and I trust that before the session is over this matter of assistance to the provinces to build particularly interprovincial highways will be given serious consideration by the house.

Then there is the question of technical education. We had a grant from this parliament for the assistance of technical education in the provinces. Some of the provinces have built suitable institutions for the purpose, but when the grant is withdrawn or has expired they will not be in a position financially to carry on this good work. Technical education is very important to all classes in Canada in that it makes our workmen and our people generally more efficient in their life work.

There is also the important question of the rate for Alberta coal. I will not attempt to-night to go into that, because time forbids, but I trust some of our members from Alberta will have an opportunity of dealing very extensively with that particular matter.

As regards the question of the St. Lawrence development, we are partial to that develop-

ment, yet we believe that much more information should be secured before that work is proceeded with. We are sympathetic in regard to the matter and that is about as far as we can go at present.

I have not the time to deal with the question of the tariff advisory board and its reports, except to remind the Minister of Finance (Mr. Robb) that at all times members of this house should be in a position to secure reports of the evidence given before that board. If the question is one of funds, I trust that before parliament prorogues such funds will be made available.

I have not the time also to deal with the question of the redemption of the national debt and its being put on a sound financial basis. Up to the present we have merely taken the surpluses that accrue each year for the reduction of that debt, and in my judgment that is not good business procedure. Certain items should be included annually in the estimates until the national debt is much reduced.

I have just half a minute at my disposal and I am going to take it in order to enter a protest here. We have listened with a good deal of interest to the leader of the opposition (Mr. Bennett) and also the Prime Minister (Mr. Mackenzie King) in their addresses to this house. I was particularly interested in the Prime Minister's address this afternoon, more especially on constitutional questions. The Prime Minister spoke for something like three hours and twenty minutes, and while we all appreciate the value of his address, at the same time it seems somewhat incongruous in a democratic organization such as this. The last redistribution took place on a population basis; that is to say, each constituency had about the same number of inhabitants in it, the quota being something like 36,000 souls. That means that each member of this house is responsible for the representation of a similar number of electors, but under the rule of last session a discrimination has crept in. At that particular time I did not appreciate the importance of the change in the rule limiting most of the members of this house to forty minute speeches, but if this rule is continued, an undemocratic situation will be created, and at this time I merely appeal to the house to re-consider that rule.

Mr. J. S. WOODSWORTH (Winnipeg North Centre): Mr. Speaker, in most of what the last speaker (Mr. Gardiner) has said I heartily concur. To-night, however, I should like to emphasize particularly certain matters in which the Labour group whom I represent are interested. The speech from the throne as an indication of the government's program is distinctly disappointing; indeed it would almost seem as if the speech were becoming simply a convenient peg on which to hang a very elaborate ceremonial. I should like, however, to compliment the government on one or two matters which have been introduced, and I wish to refer first of all to the proposed appointment of a minister to Japan. It seems to me that action recognises not only the wider responsibilities which are facing us in Canada, but at the same time the importance of a situation which prevails on the Pacific coast. I refer also to the announcement that the government intend to give substantial assistance to industrial and scientific research. That it seems to me is a distinct step in advance.

The speech makes reference to the prosperity of the country. The hon. member for Hants-Kings (Mr. Ilsley), in his very graceful speech, admitted that the prosperity was not as evenly distributed as it might have been, and he went on to say that he referred particularly to the territorial distribution. I would agree with him with regard to that matter. Certainly the central provinces are enjoying a larger measure of prosperity than either the east or the west, but I wish to refer particularly to the distribution as between classes. According to the latest statistics which are available in the Canada Year Book of 1926, the capital invested in manufactures amounts to $3,538,813,460, the net value of the products to $1,256,643,901, and the wages to $420,269,496. The percentage of wages to the value added by the manufacture is 33.4 per cent. When the labourer receives only one-third of the added value which his labour produces, I do not much wonder that the other classes who receive the remaining two-thirds rejoice in the great prosperity. What does that one-third amount to in the case of the individual wage-earner? The average yearly wage is only $972, or roughly, $81 a month, or only $20 a week. I ask: How can a man live and maintain a decent standard of living on that amount, and how can the country generally be prosperous if the purchasing power of the mass of the workers is so low as that? I do not mean to say that this has anything to do with politics. It is ridiculous that either the leader of the government or the leader of the opposition should suggest that. This is but an indication of the great economic laws that are at work. Recently we have had from the census bureau of the United States Department of Commerce a report covering a survey which has been made of all the branches of manufacturing in the United

States. The report points out that industry is being centralized at an appalling pace; that the number of workers employed is decreasing, while the output and the manufacturers' profits are advancing with giant strides. Let me quote one brief paragraph from this report.

The outstanding features of the report were the increase in production, the decrease in employment of wage-earners and the increase in horse power.

If we want to know what low wages mean to the countryside I do not know that we can do very much better than take the statement that was made the other day by the member for Hull county in the provincial house at Quebec. He is reported to have said:

The labourers of Hull received only twenty-five cents an hour or $2.50 a day for a ten-hour day, and often lost working time during the year, and most of them had eight, ten or twelve children at home, and very often more. How could he keep them on $400 a year, which was all he had when he had paid his own board and contributed even lightly to the church and good works.

Yesterday when the Prime Minister was speaking about the growing employment in the country, he quoted the Premier of Ontario as refusing to acknowledge that there was unemployment in Ontario. May I say that in my judgment the Prime Minister was hardly fair because he has in his possession a letter recently received from Premier Bracken of my own province of Manitoba, in which that province points out the very serious state of unemployment, and asks the federal government to assist in giving relief. In a memorandum presented on December 14th by the committee on unemployment, of the provincial house of Manitoba, these statements are made:

In 1927, during the first seven days of December, 708 men registered for work at the employment office, as compared with 466 during the same period last year. There is also an increase in the number applying to the social welfare commission of Winnipeg for unemployment relief, the total number registered for relief to December 7, 1927, being 108 families as compared with less than half that number last year. Employment office officials estimate that there are 1,000 men available for immediate employment if work was available, and that this number is being added to daily through the fact that many men are coming to Winnipeg hoping to find employment in the Flin Flon development work.

Again:

The control of the immigration stream is in federal hands, and it would seem reasonable to demand that at least a share of the cost of relief made necessary by unemployment caused by immigration should be paid by the Dominion government.

We are told that there is a "substantial increase in the number of British immigrants." I should like to read quite a typical paragraph with regard to the British immigrant:

With neither employment nor money and only a few threadbare clothes to keep out the biting blasts and sub-zero temperatures, Stanley Hornsby, a young lad giving his address as "the old country", appeared in St. Boniface police court this morning charged with vagrancy, and pleaded with the magistrate to send him to jail.

That was on December 15th, the day after the provincial committee had reported on the question of unemployment, and it indicates how serious a matter unemployment is in the lives of our citizens.

On the other hand, the speech from the throne calls attention to the prosperity of certain classes. It mentions "increased railway receipts". In that connection I note that a few months ago there appeared the following item in our daily papers:

The directors of the Canadian Pacific Railway to-day decided to issue an offer to shareholders of record August 19th, on the basis of one share to eight of their respective holdings, $32,500,000 of ordinary capital stock at $150 per share.

And I read the following comment from one of our labour papers:

The only explanation which will fit all the facts is that the Canadian Pacific Railway increases its capitalization by one-eighth to enable themselves to divide up the accumulated surplus profits and to prevent the surplus profits "piling" up in future years as an accusation of extortion and an argument for reduced transportation rates—and in the meantime the Dominion railway commission putters with little details such as railway crossings.

Lest that should be thought to be merely an extreme statement by a radical labour paper, perhaps I might quote from a letter that I received from a very good Liberal friend of mine, a Winnipeg lawyer, with regard to this very practice. He says:

There should be no cutting of melons in public utility corporations, and every such utility should be compelled to sell new stock on the open market for the best price that it will bring and the financiers of the utility therefore receive the full benefit of a sale of new stock.

I wonder why the government cannot put on the statute books legislation which will carry out the idea behind that quotation.

The speech tells us that there is to be the establishment of "more favourable trade relations between Canada and certain foreign countries." I hope the government will take the very earliest opportunity of informing the house why it broke off relations with Russia. There are no charges of improper activities on the part of the Soviet representatives in Canada. In a statement to the press the

Prime Minister explicitly repudiated any such thing. Let me quote a comment from the Manchester Guardian on the action of the British government in severing relations with Russia:

> Can British trade benefit? Quite the contrary. Will Europe in general be the more tranquil for this widening of the chasm between Great Britain and Russia? Obviously not.

Again:

> It is questionable whether we or Russia suffered more from the wars of intervention after the armistice. If we are now to attempt in the economic field what we could not achieve by force of arms, the consequences are likely to be equally costly to ourselves, to Russia, and to the peace of Europe.

Why, I ask, should the Liberal government in Canada be tied to the apron strings of the Conservative party of Great Britain?

I see the Minister of Railways and Canals (Mr. Dunning) in his seat. I should like to offer him a suggestion with regard to the Hudson Bay railway and incidentally may I say that I think he is to be commended on his promptness in securing competent authority to make investigations with regard to the terminal of that railway. Amongst our most highly respected immigrants in western Canada are the Icelandic people, who came to this country over fifty years ago. Some of us perhaps fail to remember that their claim to be the real discoverers of America when Leif Ericson crossed the Atlantic is really fairly well substantiated. Two years from now the Icelandic people propose to celebrate the one-thousandth anniversary of parliamentary institutions along modern lines in Iceland. Large numbers of them are then returning to participate in those celebrations. I would like to suggest to the minister that, if for nothing more than a matter of publicity, he should offer to send a party of these people to Iceland on one of the merchant marine vessels via Fort Churchill. As they say in the press, that would certainly put Fort Churchill on the map.

We are informed that the government is "continuing negotiations with the prairie provinces for the return of their natural resources." I cannot say that that is exactly news. In fact, I am afraid if the negotiations go on for any great length of time longer there will be nothing left to return. Seriously, it seems to me that we are in danger of giving away our great natural resources of the north country, and I hope that at a convenient opportunity the government will tell the house just why it is that the Whitney syndicate is to be allowed to pay no royalties for a period of twenty years. I notice that the Canadian Mining Reporter, speaking with regard to this matter, publishes the following:

> The thing is wrong in principle. It is not because the Flin Flon deal is being made with foreign interests. It would stink just as badly if purely Canadian financial interests were being handed such a gift on a platter. What we object to is the giving away of our Canadian heritage by our government to anybody.

Here we really enter upon the wider question of the control of the natural resources. In that same northern district we have the White Mud falls. In my judgment the control of the powers of the White Mud falls is just about as important a question as that which was brought up last year in regard to the Georgian bay canal scheme. Why are these powers so recklessly alienated? I came across an article the other day in the Nation's Business for October, headed "Why our factories cross the border." The writer is Mr. Floyd S. Chambers, editor of the Financial Post, Toronto. He referred to the 1,400 American branch factories located in Canada and went on to speak of the United States having three billion one hundred thousand dollars invested in Canada, representing a mortgage of twelve per cent on the total national wealth of the country. If already twelve per cent of our national wealth is mortgaged to the United States, I submit it may not be so very long before we realize the evil consequences of the get-rich-quick policy that has characterized some of our business men of to-day.

At the last annual meeting of the Canadian Manufacturers' Association, Mr. Cyril T. Young, in an address on Canada's Resources, exhibited a large map of Canada decorated with the union jack. He exclaimed dramatically "Long may the union jack flutter and wave," and of course there was applause. That sounds well, but I would call attention to the very rapid acquisition of our resources by Americans. Pulpwood, mining, oil, water-powers are passing under foreign control. Some day, if the house will permit it, I should like to exhibit in this chamber a spot map on which the American controlled industries would be marked with the stars and stripes. If that were done in respect to all of the country there would hardly be room to place the union jack, much less a Canadian flag, if we had one. Do not let us deceive ourselves by saying that because we live north of the forty-ninth parallel we control things here. Economic control and economic considerations are more important than political control or geographical considerations. Last summer I spent a month in a mining town in the mountains. When I was having supper

one evening in a miner's house a whistle blew. I think it was three blasts that signalled across the valley, and the miner remarked: "That means no work to-morrow." He had no option. And who was it who told him he should not work to-morrow? The company, of course—an American company with the stock owned in Pennsylvania and the board of directors sitting in the city of Philadelphia. My hon. friends around about me from Alberta are very anxious that we should adopt a policy of buying and consuming Canadian coal.

Mr. GARLAND (Bow River): Hear, hear.

Mr. WOODSWORTH: And I say to my hon. friend from Bow River (Mr. Garland) who says "hear, hear," let us examine the matter closely. When I do so I find it impossible to get up any great enthusiasm over buying coal mined in Alberta if the dividends go into the pockets of the men who are controlling the mines in Pennsylvania.

Mr. BOURASSA: Hear, hear.

Mr. GARLAND (Bow River): Hear, hear.

Mr. WOODSWORTH: That is a matter that will have to be considered in the days to come. The leader of the opposition warns us against "selling our estate." I agree with him, but I would ask him, can we look to him to deliver us from the control of those big corporations so very largely American in character? I appreciate the sentiments uttered by the leader of the opposition at the Conservative convention and also at the opening of parliament. I give him credit for having resigned from his dictatorship—

Some hon. MEMBERS: Oh, oh.

Mr. WOODSWORTH: His directorship.

An hon. MEMBER: Leave it the other way.

Mr. WOODSWORTH: Little slips are sometimes not so serious after all. I recall that the leader of opposition has been a director of the Canadian General Electric Company, which is, I am told, controlled by the General Electric Company of the United States; of the Royal Bank of Canada; of the Metropolitan Life Insurance Company, an American concern; of the Canadian International Paper Company, which I am told is a subsidiary of the International Paper Company of the United States, and according to an American publication, The Trend of the Market, controls the newly formed Canadian Hydro-Electric Corporation. The leader of the opposition was also director of the Imperial Oil Company, closely allied to the Standard Oil Interests, and, of course, as we all know, for many years he was the legal adviser of the Canadian Pacific railway. I am very glad that he has resigned his directorates on these corporations, but since he is very fond of quoting scripture at times, I cannot but recall for his benefit one scriptural passage which runs:

> Can the Ethiopian change his skin or the leopard his spots?

I hesitate to complete the quotation, but it proceeds:

> Then may ye also do good, that are accustomed to do evil.

Before the election, I was interested in reading some of the guesses that were being made as to the Conservative leadership. In MacLean's Magazine, August 15th, there was an article headed, "Who's the Tory Moses?" The article says:

> Still it seems a pretty safe bet that Cahan will be proposed by powers which operate usually in St. James street, Montreal. A leader from Quebec must be suggested, if only to make impressive the apparent transfer of support to some other man.

Further on the article says:

> It is a fair guess that, whatever is behind Cahan will go to Bennett at the appropriate moment.

Mr. BENNETT: It did not happen that way.

Mr. WOODSWORTH: Since there has been so little legislation forecast in the speech I should like to suggest some measures that it seems to us ought to have been included. Perhaps the house hardly recognizes very clearly what are Canada's obligations under the labour section of the Peace treaty and the Washington conventions. I hold in my hand a very interesting memorandum issued by the Labour department showing the extent to which our obligations are met by existing legislation. This is rather a naive document. I should like to give a few illustrative extracts. Reference is made to the eight-hour day and forty-eight-hour week, with this comment:

> Legislative jurisdiction is primarily vested in the provinces.

And so with a number of other provisions. Reference is made to persons engaged in work for the Dominion government. Here we have Canada's own admitted responsibility. The memorandum merely says:

> The convention is partly met.

There is a clause with regard to mutual arrangements among members who have established systems of unemployment insurance. The memorandum says:

This has no application to Canada, as no system of insurance against unemployment has been established in this country.

A very easy way of getting out of it. Then there is a clause with regard to the prohibition of night work for women. This is delightful:

The provincial statutes vary in the length of the night period during which this class of employment is forbidden.

An hon. MEMBER: What class of unemployment is that?

Mr. WOODSWORTH: Night work for women. Again, reference is made to weekly rest in industrial undertakings. At last we have reached what is clearly federal jurisdiction. This is admitted, "as it involves jurisdiction relating to the criminal law." But what does the memorandum say?

It is met by the provisions of the Lord's Day Act.

Well, Mr. Speaker, in the language of the street, I would say, "it is to laugh"! Can we forget that there are large groups of labour in this country still working twelve hours a day and while there is a rest day once a fortnight it is earned by continuous work for twenty-four hours? Yet we are told that these clauses, part of a solemn treaty, are being met by the Lord's Day Act—yes, I was almost making another slip and saying, the Lord's Day Alliance Act.

Then there is a clause for the prohibition of the use of white lead in painting. This the memorandum says is:

Within provincial jurisdiction. . . no laws.

I would ask, why should not this come under the criminal code? If white lead poisoning is inimical to human welfare, even to human life, why should not its use in painting be made a crime in this country, as I understand it has been elsewhere? Again, there is a clause dealing with workmen's compensation and equality of treatment for national and foreign workers. Just listen to what the memorandum says in relation to this:

The practice varies in different provinces. . . in Ontario and Manitoba residents of countries which were enemies in the Great war are not entitled to compensation.

And this, notwithstanding the fact that we entered into the most solemn obligations with enemy countries.

Mr. GARLAND (Bow River): Who says all this? We missed the origin of this.

Mr. WOODSWORTH: I thought I made it clear that these clauses are included in the Peace treaty of Versailles, and that I am quoting from a memorandum issued by the Department of Labour of the federal government, showing how far we have legislation covering these points in the treaty.

There is provision in the Versailles treaty for compulsory sickness insurance. The memorandum of our Department of Labour says frankly:

There is no legislation on this subject in Canada.

In that connection may I say that my colleague from North Winnipeg (Mr. Heaps) is asking the house this session at least to go so far as to appoint a committee to consider this matter and see what can be done in the premises. As to unemployment insurance for seamen, the memorandum simply has to say:

No legislation.

Then, "prevention of unemployment in agriculture." Why, I would have thought this had something to do with the protection of harvesters. Is that the case? Not at all, for all the memorandum tells us on this head is that we have:

Provincial and private land settlement.

What a joke! Mr. Bryce M. Stewart in a recent book dealing with these Canadian labour laws and the treaty says:

In the matter of actual ratification Canada stands in the lower ranks despite her rating as one of the foremost agricultural and the sixth industrial country in the League of Nations. While certain provinces have recognized some of the conventions in legislation, and indeed have surpassed them in some instances, no single province has taken action on all the proposals, nor have all the provinces recognized any one.

Of course, division of powers between the Dominion and the provinces is pleaded as an excuse but, sir, let me give you a quotation which occurs in an entirely different connection. The Royal Securities Corporation condemns the inaction of the United States federal government with regard to the diversion of water at Chicago, which it characterizes as:

A flagrant violation of principles recognized by the law of nations and founded on abstract justice.

I would suggest that the following judgment pronounced on the United States with regard to water diversion applies with equal force to Canada in this matter of the ratification of the labour clauses of the treaty of Versailles:

The prolonged incapacity of the United States federal government to deal with this—

Water diversion.

—is a significant measure of its weakness and a warning to those who would rely upon its treaty undertakings if they happen to conflict with the interests of individual states.

Have we no sense of honour in Canada that we could enter into these most solemn obligations, which apparently there has been practically no effort made to have implemented?

Mr. BOURASSA: Will my hon. friend allow me? Does he take into account the declaration that was made by one of the signatories to the treaty, that one hour before they signed it they had never seen it?

Mr. GARLAND (Bow River): Would it have made any difference?

Mr. WOODSWORTH: I do not know whether it would have made any difference or not.

Mr. BOURASSA: Well, it might have as far as the moral engagement is concerned.

Mr. WOODSWORTH: I think the hon. member for Labelle will agree that we have certain responsibilities, and that if a nation undertakes to sign a treaty there is surely some obligation on its part to see that that treaty is lived up to.

Mr. GARLAND (Bow River): But is it not true that non-repudiation during the many years which have since elapsed would fully meet the question of the hon. member for Labelle?

Mr. WOODSWORTH: Possibly. I was very glad to see that the Conservative convention at Winnipeg pledged itself to carrying out the treaty. I cannot see where the difficulty lies. The Prime Minister has written a book on Industry and Humanity. He is in favour of carrying out these obligations, the Conservatives are in favour; then why cannot we have the treaty carried out in its entirety?

I should like to have had time to call attention to other classes of social legislation which are long overdue. For example, the Old Age Pensions Act which was passed in this house last session gave pensions to certain classes of people of seventy years and over. I would point out that the railway companies are dismissing men at the age of sixty-five. It seems to me that if men are being turned off at that age, provision ought to be made for taking care of them before they reach the age of seventy.

And may I point out that a resolution of this house was passed some years ago by which prisoners in our penitentiaries were to be paid for their work, and in the case of married men the money was to be turned over to their families. So far as I have been able to learn, the Department of Justice has not proceeded to act on that resolution; in fact we have the rather anomalous situation of the superintendent of penitentiaries begging that some action be taken along this line. He is reported:

> To keep men in enforced idleness is not only most inhuman, but in one institution in a foreign country where it has been tried over thirteen per cent of the unfortunate inmates were driven insane in one year.

In regard to the Dominion of Canada he says:

> Only one-tenth of the work possible to be done is being done. The government spends many thousands of dollars yearly for furniture, furnishing and equipment of various kinds, a portion of which could easily be made in the penitentiaries.

It does seem to me that when we have gone to the trouble for two years in succession of debating this question on the floor of the house, and have definitely passed a resolution, the matter ought not to be disregarded in this way.

Mr. BOURASSA: My hon. friend must remember that many of the labour organizations have unfortunately, for many years past, adopted resolutions petitioning the government against any sort of labour being carried on in penitentiaries. We have that situation to meet.

Mr. WOODSWORTH: Yes, but I would point out that the object has been merely to ensure that prison labour shall not come into competition with free labour. I may say that labour is quite content to have our prisoners do many types of work that could be done in prison, work which is needed in this country.

Now, Mr. Speaker, like other hon. members I have been keeping my eye on my watch and I see that the time allotted to me is nearly up. I should have liked to discuss the larger questions in which we are becoming more and more related to international affairs, but unfortunately I cannot do so in the time at my disposal. I content myself at this juncture with directing the attention of the house to a resolution which is being placed on the order paper by my colleague from East Calgary (Mr. Adshead), to the effect that:

> —the government of Canada should discuss with the government of Great Britain the desirability of Canada accepting article 36 of the statutes of the Permanent Court of International Justice providing for compulsory arbitration in international disputes.

With the feeling that is developing in some parts of the United States against Great Britain and the feeling which is developing in some parts of Great Britain against the United States—a feeling which is being voiced perhaps by rather irresponsible individuals, but which is nevertheless a reality that must

be reckoned with—I do not think that the present situation should be allowed to go unchecked. I fancy that some statement on the part of Canada looking to a better understanding in world affairs and a frank acceptance of the principle of arbitration would go a long way towards safeguarding the international situation.

Hon. HUGH GUTHRIE (South Wellington): I rise to make a few observations in what is a more or less formal debate in this house, particularly so when nothing in the nature of an amendment to the address has been moved. One has only to read the address which His Excellency the Governor General delivered to parliament to realize that it is more in the nature of political propaganda than of a serious parliamentary document. The theory of the speech from the throne is that His Excellency shall give to parliament the reason or reasons for its being convened, and it is quite proper in that speech to mention anything of national or international concern which has taken place since prorogation. I submit however that in the present instance the Prime Minister (Mr. Mackenzie King), who is himself responsible for every word which is in that speech, has gone beyond all reason in his attempt to pat himself and his government upon the back in almost every clause of that document. We on this side of the house have no objection to his proclaiming in proper terms the prosperity which the country undoubtedly enjoys at the present time. But the object of the Prime Minister in so doing is to claim credit for himself and his government, while we on this side of the house are inclined to give the credit for the present happy condition to the vigour, to the intelligence and to the adaptability of the people of Canada. Clause after clause of the speech from the throne is merely a chronicle of last year's events, something which the members of the house all know, something which does not need to be repeated and which is entirely out of place in a state document of this kind. I do not wonder that one of the leading newspapers of this city has seen fit to call attention editorially to this remarkable document.

Now there are one or two suggestions in the speech from the throne to the effect that we are to have some legislation. We are advised that two of the departments of the government are to be amalgamated. It is proper to place that in the speech; that is contemplated legislation. It is suggested that some measure will be introduced in regard to scientific research: that too is properly placed in the speech. And I believe that one other measure is contemplated in regard to new trade agreements. But the rest of the speech consists in an attempt to display before the country the activities or inactivities of the ministers who preside over the various departments of this government. It is solemnly stated in the speech from the throne that the government is considering the question of returning their natural resources to the three prairie provinces—something the government has been considering since 1922 or 1923. It is solemnly stated also that ministers are considering the question of returning railway belt lands to the province of British Columbia—something they have been considering for two or three years past. Who cares what amount of consideration they give these matters? What we ask for and what we expect is action in respect of them. There is no intimation of any action, and I suppose we may take it for granted that these ministers will simply continue their consideration of these important and pressing questions; and next year when this parliament is convened I for one should not be surprised if these matters were then still under consideration by the government.

However, we must take the program as it is. The debate on the address has wandered rather widely from the text of the address itself, and I intend only to dwell upon one or two matters which have been raised in the discussion. One of these matters, to my mind a most important matter, is the question of the Dominion finances. That question was raised purposely by my hon. friend the leader of the opposition (Mr. Bennett) with the object of drawing definitely to the attention of the government and of the Minister of Finance the absolute necessity of taking at once, at this session of the house, some definite action towards the retirement ultimately of the public debt of this country. This matter was raised in the house last session in a very able and well considered speech by my hon. friend from Toronto East Centre (Mr. Matthews). We raise it again now at the opening of the session and, in so far as an opposition is able to insist and demand, we propose to insist and we propose to demand that the government formulate some definite scheme whereby the debt of the Dominion of Canada may be retired within a reasonable number of years.

The Minister of Finance (Mr. Robb) has in his possession all necessary data in regard to that question. Financial authorities throughout Canada have discussed it, and have reported upon it. It is not a very

difficult matter to deal with, and if the Finance minister will display some courage in the matter he can evolve a scheme whereby the debt of Canada can be paid within forty or fifty years at most without causing any inconvenience or any disruption of a serious kind to the finances of Canada. The province of Ontario has adopted a scheme. Five or six years ago when the present government took office in that province it was confronted with a very serious financial situation. Something had to be done. Experts were called in. Proposals were made; a plan was evolved, and to-day we find that that government is annually setting apart a sufficient sum of money to retire the whole indebtedness of the province, I think within thirty years, and so far no inconvenience has been found in carrying out that scheme. I submit that a similar course should be adopted in this house. We draw the matter as forcibly as we can to the attention of the government, and so far as an opposition has any power to do so, we demand and we insist that some action be taken at the present session towards the retirement of the public debt.

One has only to examine the public accounts and financial statements made by the Prime Minister and from time to time by the Minister of Finance to conclude that the situation in regard to the debt of this country is not dealt with as satisfactorily as it should be. We hear statements from time to time on the platform and in this house that tremendous amounts have been paid off on this, that, or the other occasion. Newspapers give great prominence to statements of that kind, and we are all inclined to rejoice when we hear that the public debt has actually been reduced by large amounts. But when one sits down to examine the public accounts one is not as well satisfied with the results. Is it known in Canada that the actual funded debt of the country, the amount of money which we have to pay to creditors, for which we have given the bonds of this country signed, sealed and delivered by the Finance minister, is twenty odd millions higher to-day than it was when the King government took power? I make the statement from the Canada Gazette of December 31 last, and the statement is correct. The funded debt of Canada, for which creditors hold our bonds, was on the first day of this year $2,442,228,000, twenty-two millions more than it was when this government assumed office. The Prime Minister yesterday, in discussing the finances of Canada, announced amidst the applause of his supporters that in 1925-26 we had redeemed the bonds of Canada in cash to the extent of $20,000,000; in 1926-27, $43,000,000; in 1927-28, $29,000,000, $8,000,000 and $18,000,000, making a total retirement of $118,000,000 in the funded debt of the dominion, and at the same time on the 31st December last we find that we have twenty odd millions more funded debt than we had when this government came into power.

Now here is the situation: In 1921, when this government came into office, the system followed in the Finance department in respect to the national railways was that when we met with a loss we went to the treasury and paid it, and we charged it to the national debt. For the two years following the defeat of the Meighen government in 1921, Mr. Fielding, the then Finance minister, did precisely the same thing; when he had a railway payment to make and deficits to meet he went to the treasury, paid them in cash, and charged them to the debt of Canada. But when Mr. Fielding passed out and another gentleman became Finance minister a new scheme was evolved, and I do not say a bad scheme. It was decided that thereafter all outlays and deficits in respect to the national railways should be charged to the railways and not to the national debt of Canada, and instead of coming forward in 1923, 1924 and 1925 with deficits, as there had been in years previously, the government were able to come forward with surpluses, as the public accounts show, because they charged up railway defaults not to the national debt but to special railway account. How did they raise the money for the railroads, you ask? In former days it was raised on the bonds of Canada and charged to the debt of Canada. But under the new regime they raised railroad money on the bonds of the railway companies, and instead of signing the face of the bonds the Finance minister endorsed the back of them, guaranteed their payment, and allowed them to be charged against the Canadian National railways. That is the way he works out his annual surplus. What about the sixty-five millions of bonds that were issued by the railways last year and guaranteed by the Dominion of Canada, far more than they retired? In former times, and under Mr. Fielding's administration in the Finance department, those bonds would have been charged to the national debt, but under the new system of bookkeeping they are charged to the Canadian National railways. The country is the guarantor and the country will ultimately have to pay the bonds.

Now passing to another aspect of the matter. These claims of reduction in the national debt puzzle me. They always have puzzled me,

but I have been more puzzled in the last two years since I have studied the budget speeches of the present Minister of Finance. The trouble is that his budget speeches do not jibe with the public accounts. Which shall we accept? I am accepting to-night the public accounts of Canada, and I turn to the 31st of March, 1922—I am pretty generous; I am going back three months after this government came into power—the net public debt of Canada was $2,422,000,000. On the 31st of December last I find that according to the Canada Gazette the net debt of Canada amounted to $2,281,000,000, or an apparent reduction of $141,000,000 in five years. But that is not the whole story. That is not a correct statement. It may be correct on its face, but on examination it will not stand. In the first place, in 1922 we had an issue out of $241,000,000 of Dominion notes, which are the medium of exchange whereby trade in this country is carried on; they constitute debt so long as they are outstanding. On the 31st of December last Dominion notes outstanding stood at only $193,000,000; Dominion notes to the amount of $48,000,000 had been called in and destroyed. When they call them in I think the term they use is that they "cremate" them; they burn them and get rid of their debt in that way. There were $48,000,000 more of Dominion notes current in 1922, and that $48,000,000 should be taken off the debt reduction, leaving, as I understand the matter, the net reduction at $93,000,000 instead of $141,000,000, and that after nearly six years' operation by the government in power to-day, and the whole amount of $93,000,000 of reduction is due to the improvement in Canadian National Railways returns.

I must take issue with the Prime Minister on another point. In his speech of yesterday and to-day he made a bold claim in regard to the question of reduction of taxation. I cannot agree with him in the statements he has made, and I am trying to make my statement from the public accounts of Canada laid before parliament by this government. I state that the taxes collected from the Canadian people during the past five years are far greater than those collected during the previous five years by their predecessors. What counts in the matter of taxation? It is the burden upon the people; that is the only test. When I hear the Prime Minister, or the Minister of Finance as he certainly spoke in the campaign in North Huron, making claims that certain taxes have been reduced I must express my amazement. Why is this government not candid enough to say: The taxes we have taken off are the taxes we have put on? They maintain that they have taken off the stamp tax on cheques. That tax was only two cents a cheque when they took office and they promptly increased it to two dollars a cheque as a maximum. Last year they cut it down to two cents on cheques for over ten dollars. The increase was made by the present government, and tardily and after much persuasion from this side of the house they saw fit last session to take off the increase and put the tax where it was when they took power.

They made claim on the platform at Goderich that they had taken off the stamp tax on receipts. Who put it on? It should never have been put on in the first place. It was put on against the protest of those who sit in the opposition in this chamber. Last year, after much persuasion from the opposition, they reluctantly removed it and they claim that as an achievement.

Do hon. members recollect the statement made in this house yesterday by the Prime Minister in regard to the sales tax? Why, he said, they had reduced it twenty per cent. Twenty per cent sounds pretty well, but what are the facts? When the present government came into power there was a war measure sales tax in this country imposed to meet the awful expense of the war, a temporary measure. What did it amount to? It amounted to one and one-half per cent on the manufacturer, one and one-half per cent on the jobber, or three per cent all told. That was the tax when this government took power in 1921, but they were hardly in office before they started raising taxes. During the first session they raised the sales tax to five per cent instead of three per cent and the following session they raised it to six per cent. Then they found it was so high that it actually interfered with the trade and commerce of the country and they cut it down to five per cent. With a great sound of trumpets and much applause last session a reluctant minister of finance said: "I will take one per cent off," and one per cent off five per cent is the twenty per cent reduction to which the Prime Minister referred yesterday. The sales tax with this one per cent reduction now stands at four per cent, but when this government came into power the tax stood at three per cent; and yet they have the audacity in this house and on the platform to claim a reduction in taxation in connection with the sales tax. Why did they not take the advice of the opposition last year? We endeavoured to plead with them to remove this sales tax altogether, and to-day and during this session, if it is in the power of an opposition to insist or demand

we are going to insist and demand that the sales tax be removed altogether. We went so far last year as to divide the house on the question; we moved in the house that at least the sales tax be taken off wearing apparel and boots and shoes. Do you think, sir, the government would do that? No; every hon. member on the government side voted down that motion and every hon. member on the opposition side supported it. The sales tax stands at four per cent to-day—and what was the excuse of the Minister of Finance? "Oh," he said, "if you abolish it, it will practically ruin the retail merchants in this country."

Mr. ROBB: Hear, hear.

Mr. GUTHRIE: If the Minister of Finance had a little more courage on this and on other subjects it would be better for the Dominion of Canada and the trade of Canada. What my hon. friend lacks is courage. He is content to sit at his ease and allow the Department of Finance practically to run itself. A little courage is necessary in that important department, and if he will take the courageous course and in his budget will wipe out that iniquitous sales tax he will have not only the support of the members of this house but the approval of ninety per cent of the people of the Dominion of Canada.

Mr. ROBB: If I did that I would have to come back, or another government later would have to come back, and pay the automobile people as we paid them for remissions made by Sir Thomas White.

Mr. GUTHRIE: I am afraid my hon. friend sees lions in the path. Let him have courage and he can do this. What about the burden of taxation in this country? This claim of reduction of taxes is so absurd, so unfounded, that it must be exposed.

I take the taxes collected from the people of Canada for the last five years. I take the customs tariff tax. I know that it is not admitted on all hands that that is a tax, but for the purpose of my statement I am going to include that as one of the taxes.

Mr. ROBB: Does my hon. friend claim that it is a tax?

Mr. GUTHRIE: I did not express any opinion. I say I am including it in this calculation, and I am including also the sales tax, the stamp tax, the income tax, and all the other burdens which this government has imposed on the people of Canada. I take all those taxes imposed over a period of five years. I cannot bring my figures up to December 31st last; I have to take the return laid before the house on March 31st last, and what do I find? For the five years from 1922 up to the 31st of March, 1927, the average amount of taxation taken annually from the people by this government was $387,780,000. I take the five preceding years. I add together the same taxes, and I find that during that period the annual average amount of taxation collected was $348,500,000, or $39,280,000 less per annum than the average amount taken by the present government from the people of this country during the last five years.

Now how does that work out in the way of a burden upon the shoulders of the people of Canada? We can only take an estimate of the population, and the best one I can get is the one which was given to this house last session by the Minister of Trade and Commerce (Mr. Malcolm)—evidently a carefully worked out figure; he estimated our population on the first of March last to be 9,390,000. On the basis of that estimate I find that the burden of taxation under this government is $4.18 per capita, or for a family of five, $20.90, more than it was during the five years preceding the advent to power of the present government. In the face of those figures, which are taken from the blue books prepared by this government, is it fair for the government to claim that there has been reduction of taxation? I have given you the taxation which the average individual in this country pays; I have given you the taxation which the average family of five in this country pays; I have taken the government's own figures, and their own estimate of population——

Mr. ROBB: But my hon. friend has conveniently forgotten the debt which he himself ran up as a minister of the government from 1915 to 1921.

Mr. GUTHRIE: I discussed the debt question before I entered upon this phase. I realize that the debt in those years did increase, and increase enormously. I realize that the after-war debt was as serious almost as the debt which had to be piled on year by year during the war, and I am glad to say that during those war years and after the war we had an administration and a minister of finance who did not lack in courage.

I have given the house these figures taken from the government's own blue books. They can be checked up; if I am wrong I want to be put right, but I am satisfied that I am not wrong in the statement I have given. In the face of those figures, let me ask hon. members

opposite to be careful when they make platform statements about reductions of taxation by the present government. I think a little care should be exercised by my right hon. friend the Prime Minister and by the Minister of Finance when they discuss either in this house or on the public platforms the question of debt retirement, when we know full well from the public accounts that the actual bonded debt which we owe to creditors is greater to-day by $20,000,000 odd than it was when this government took office.

Let me advert to one other matter which has been discussed to-day, although it does not arise very directly out of the speech from the throne. It is a question which was the subject of a good deal of discussion in this country and in this house about a year ago arising out of the report of the Imperial conference of 1926. The discussion which has taken place in this chamber during the last day or two as to whether we had or did not have equality of status with the motherland and the other dominions recalls very vividly the debates which took place in this chamber last session. I do not know that the matter has been very much advanced in the interval. I am inclined to be well satisfied with the statement of the Prime Minister of Great Britain made in these buildings last August, when he stated in the presence of my right hon. friend the Prime Minister that so far as Canada was concerned, no limitation had been imposed upon the powers which she enjoyed, and nothing new had been added. That was a very satisfactory statement, as well as a very brief one, and carried out my own understanding of that document which we call the report of the Imperial conference of 1926. But the point which my hon. friend and leader sought to emphasize was merely this: The Prime Minister and his ministers are inclined at all times to state that that equality of status, to which I think we all look forward with a good deal of satisfaction, exists at the present time. As my hon. friend from St. Lawrence-St. George (Mr. Cahan) said to-day, that it is an ideal not yet attained; I believe that is a correct statement of the situation, and until a committee of experts shall report upon some method or plan whereby certain imperial acts may be either repealed or abrogated or otherwise rendered non-effective, equality of status cannot be attained. I am not dissatisfied with the present situation in any respect; I am perfectly satisfied with it, but in my own view there is another question, and a very important one, which can never be resolved in favour of equality of status. I doubt if actual equality as between the motherland and the dominions can ever be achieved. Where the force is, where the might is, where the power is, there is going to be the actual source, the real head of the state.

Mr. CAHAN: Would you call that "functioning"?

Mr. GUTHRIE: It may be a "function", as my hon. friend suggests. I had that thought in mind when my right hon. friend read that particular clause in the report to-day. The question in my mind is this: On that great question of war and peace can we ever have equality of status? Shall we ever be in a position by any act of ours to declare war or to make peace on our own account? Can we by any act of ours involve the motherland, the other dominions and the empire in a war? No, we cannot. Can the mother country? Certainly. A declaration of war by the motherland involves this and every other dominion instanter, and it may be entirely against our will and against our desire. We may desire to avoid it, to dissociate ourselves from it entirely. That will not help us. Our land will be liable to attack, our commerce liable to be seized or destroyed, and our citizens to be taken as prisoners of war without any act of ours. Under circumstances of that kind can you have actual equality? I do not know that anybody ever desired such a thing. I for one do not. I am absolutely satisfied with the position we have attained to-day, and I do not believe that in our generation, or in the generation to follow us, Canada can ever reach that plane of absolute equality, which is proclaimed in newspapers and political platforms, a position which we do not enjoy and which I do not believe we ever shall enjoy.

Mr. ADSHEAD: Does my hon. friend express the view that Canada will always be in such a position that we shall have no voice in regard to war?

Mr. GUTHRIE: I did not say that. I said our declaration would not be upon the same basis as the declaration by Great Britain.

Much has been said and suggested in regard to the right, which we do not now enjoy, of amending our own constitution. I confess that I have no very strong opinion upon that matter. I think it might be well if that power were given to this country. It is a

power or a privilege which is now enjoyed by practically all the other self-governing dominions. I do not mean that I would agree that the power to amend our constitution should be given to this parliament alone. I would not agree to that, but the power to amend our constitution should be given to this parliament and to the nine provincial legislatures. However, as the matter stands we suffer from no disadvantages in that respect. I am absolutely satisfied in my own mind, and my opinion has been confirmed by conversations with such men as Mr. Baldwin and others, that at any time when this parliament and the legislatures of the provinces can agree and ask for an amendment to our constitutional act, the British parliament will not hesitate to amend it. First we must agree on what we want, and the moment we do agree and properly present our request to the parliament of Great Britain, it will be granted; so that we suffer to-day from no disadvantage in that respect. Our difficulty is to agree among ourselves. We hope for much from the conference which was held between the Dominion government and the various provincial governments last autumn. We hope there may be some important results from that conference, but I am afraid that they merely agreed to disagree on the main questions which they were called upon to consider. Certainly, so far as I read the report, no agreement was reached upon the question of senate reform, and no agreement seems to have been reached in regard to the question of amendments to the constitution. I have no doubt that interchange of ideas among prominent men is always a matter of advantage, but I do not think that conference got much beyond an exchange of ideas. Nothing concrete seems to have resulted from it—nothing at all events of an important nature. But I maintain, and have always maintained, that we are suffering from no difficulty and no disadvantage whatever by reason of the fact that we have not in this country power to amend our own constitution. I think I would like to see Canada have the power through this parliament and the legislatures of the various provinces. Whether it would be an advantage or not I cannot say, but I believe it is accepted and constitutionally settled in Great Britain that whatever the parliament of Canada, with the consent of the legislatures of the Dominion, should ask in regard to our constitutional act would be engrafted upon the statute.

Mr. CAHAN: That is the principle that governs now.

Mr. GUTHRIE: That is the principle that governs now, and that is the principle that will always obtain. So that I do not feel very much concern myself about it, although the Minister of Justice (Mr. Lapointe) seems pretty strongly wedded to the idea that we should have the right to amend our own constitution. But I know at the same time that many of his compatriots in the province of Quebec, including the Premier of Quebec, take a directly opposite view to that of the Minister of Justice in that respect. They are quite content to abide by the British North America Act as it stands to-day, and that is my own view; I feel quite content to abide by it in the same way.

I do not desire to transgress the new rules, and therefore I resume my seat.

Mr. L. P. BANCROFT (Selkirk): In rising, Mr. Speaker, to take part in this debate, I desire first to congratulate my hon. friend from Hants-Kings (Mr. Ilsley), upon his very excellent speech in moving the address in reply to the speech from the throne. I was particularly interested in his speech, because he comes from my own native county of Hants in which I spent my earlier days, and I think I am voicing the opinion of all members of this house when I say that the people of Kings and Hants have every reason to be proud of their representative in this house.

There is one portion of the speech from the throne which is of particular interest to the people of western Canada, and that is the reference to the return of the natural resources. The statement made by the Prime Minister (Mr. Mackenzie King) this afternoon, in his very excellent address, that the government was prepared to return these natural resources to the prairie provinces and at the same time continue the subsidy at the present amount in lieu of lands which have been alienated, I think is most encouraging to say the least. The negotiations between the government and the province of Manitoba need not be very lengthy. Manitoba wants its resources and is prepared to take them over. If any difficulty arises in making the transfer—and I trust that no difficulty will arise—Manitoba is prepared to meet those difficulties by arbitration. Therefore, Mr. Speaker, with the government ready to return the resources to Manitoba and Manitoba ready and willing to receive them, the transfer should be made forthwith.

There is another paragraph in the speech from the throne in which I was particularly interested, and that is the paragraph concerning the Hudson Bay railway. It reads:

The work of reconditioning that portion of the Hudson Bay railway previously constructed has been finished. After a most careful examination and consideration, and upon the best advice obtainable, Churchill has been selected as the ocean terminus of the Bay route. A contract has been let for the grading and bridging of the railway extension to Churchill and preparations looking to the establishment of the necessary harbour works there are well advanced.

The manner in which the government has tackled the Hudson Bay railway question merits the approval of the people of western Canada. The Minister of Railways (Mr. Dunning) is to be congratulated on his courage in changing the terminus from Port Nelson to Fort Churchill before more money had been spent at the port. The change has met with very general approval from the people of western Canada.

In the course of the very fine speech which the hon. leader of the opposition (Mr. Bennett) made yesterday he stated, or I understood him to state, that the hon. Minister of Railways had changed the terminus from Nelson to Churchill without the authority of parliament. I have taken the trouble to look up the debate in this house last session when the estimate for $5,120,000 was passed for the work. The Minister of Railways had been addressing the house on the work under contemplation, and at page 2151 of Hansard of April 8, 1927 he is reported as follows:

> I only want to emphasize in conclusion that there will be no holdup in the work as a result of the investigation now proceeding, and it is hoped that before the end of this fiscal year we shall be able to make a substantial start on the assembling of materials and machinery necessary for work at the port.
>
> Mr. Guthrie: At what port, may I ask?
>
> Mr. Dunning: I have indicated, Mr. Chairman, that we expect to be guided by the investigation in that regard. We hope that it will be Nelson. It will be Nelson unless it is demonstrated to our satisfaction by the eminent engineer who is investigating it for us that Churchill can be more easily developed into a safer and better port, and that it will be economically advantageous to Canada to use that port instead of the other.
>
> Mr. McGibbon: When do you expect Mr. Palmer's report?
>
> Mr. Dunning: Not later than August.

I submit, Mr. Speaker, that when this house passed the vote after hearing the explanation of policy from the hon. Minister of Railways it gave him sanction to change the terminus if the report indicated that Churchill was the better point.

We used to hear a good deal in this house about Hudson strait. We were told that these straits were frozen up tight for ten months of the year. Investigation carried on by the Minister of Railways by means of daily aeroplane flights, according to press reports, have shown that the straits were open for navigation until December 1 this year. That in itself is something worth while finding out.

Mr. DUNNING: Last year.

Mr. BANCROFT: Yes, I mean 1927. The reference in the speech from the throne to the Hudson Bay railway must mean that the government intends to rush completion of the railway and terminus and that traffic will soon be moving over this route. The completion of the railway will not only bring the prairie provinces closer to Great Britain and the maritime provinces but will mark the beginning of development in northern Canada that should beneficially affect every portion of this Dominion.

I want, Mr. Speaker, to say a word about the fisheries of lake Winnipeg. The constituency of Selkirk which I have the honour to represent takes in all of lake Winnipeg. Lake Winnipeg is one of the great lakes of Canada. It is larger than lake Ontario and almost equal in area to lake Erie. It is 265 miles long north and south, and is connected with Winnipeg by the Red river. There is a large and ever-increasing traffic over this waterway from Winnipeg and Selkirk into the north country. The value of the fish marketed from this lake amounts to more than $1,000,000 each year. The most valuable varieties are whitefish and pickerel. There are no pickerel hatcheries in Manitoba, but I am informed that the government has decided to build a pickerel hatchery on lake Manitoba where pickerel constitutes the chief value of the catch. There were two whitefish hatcheries on lake Winnipeg until four years ago, when the hatchery at the mouth of the Dauphin river was burned. This has not been rebuilt, and the hatchery at Gull harbour is the only artificial means now being employed to prevent depletion of these valuable fisheries. When the Dauphin river hatchery was burned the boilers and pumps were salvaged, so the cost of constructing a new hatchery will not be great. I trust that next summer the government will build a whitefish hatchery at Dauphin river, Berens river or lake St. Martin. The Department of Fisheries knows the need of maintaining the stock of the valuable varieties, whitefish and pickerel.

There is a notice on the order paper standing in the name of the Minister of Agriculture (Mr. Motherwell) of a bill to be introduced by him to amend the Seeds Act. I should like to make a suggestion to the minister before the bill is brought down. At page 11 of the Seeds Act of 1923 there is a clause dealing with

the advisory board to be appointed under the act. This board was constituted as follows, but some changes have been made since:

Chairman: George H. Clark, seed commissioner, Ottawa, Canada. Seed growers, vegetable growers and farmer representatives—
J. C. Mitchell, Dahinda, Sask.
J. T. Mutrie, Vernon, B.C.
Dr. C. A. Zavitz, O.A.C., Guelph, Ont.
Walter J. Cook, Cataraqui, Ont.
Camille Legare, Côte des Neiges, Montreal, Que.
W. H. McGregor, Miscouche, P.E.I.
Canadian seed trade representatives—
Kirby White, D. M. Ferry & Co., Windsor, Ont.
Col. W. H. Bruce, John A. Bruce & Co., Hamilton, Ont.
E. F. Crossland, Steele Briggs Seed Co., Toronto, Ont.
Wm. Ewing, Wm. Ewing Co., Ltd., Montreal, Que.
A. E. McKenzie, A. E. McKenzie Co., Ltd., Brandon, Man.
Hector L. Déry, Montreal, Que.
Representative of the Agricultural Committee of the House of Commons—
W. F. Kay, M.P., Phillipsburg, Que.

Now, apart from the chairman, Mr. Clark, who can be depended upon to do his best for all parts of Canada, the provinces are represented on this board as follows: one from the maritimes, four from Quebec, five from Ontario, two from the three prairie provinces and one from British Columbia. Owing to the volume of seed used annually in the prairie provinces, and the value of pure seed in increasing production, and because of the great interest taken by prairie farmers in the production of pure seed and its sale along cooperative lines, I believe there should be a representative on this board from each of the prairie provinces. The enormous development of the production of cereals in western Canada justifies this demand. I would also suggest to the minister that appointments be made for three years instead of one as at present, because a man cannot give his best service to the board the first year of his appointment. I submit these proposals to the hon. Minister of Agriculture for his consideration.

There is another matter I want to speak to briefly, and that is the embargo on the export of pulpwood cut on crown lands. Pulpwood cut on patented lands can be sold wherever the owner can get the most for it; pulpwood cut on crown lands is prohibited from export. The embargo gives the Canadian mills a monopoly on the pulpwood cut on crown lands; the result is that we have two prices paid to the settlers for pulpwood in the northern part of my constituency. The prices for hand peeled pulpwood this winter at Arborg, Hodgson and Fisher Branch have been, from crown lands, $8.25 per cord, and from patented lands $11 per cord. Earlier in the winter I wrote the Minister of the Interior (Mr. Stewart), pointing out the unfair advantage which is being taken of the settlers because of this restriction and asking that the embargo be lifted for the year 1928. These settlers had their crops drowned out by the excessive rains of the spring and early summer of 1927 and are depending on the pulpwood for their winter's living and for seed and feed for next spring. The domestic price allows them very little for their labour after the deductions have been made; I refer here to deductions for stumpage, loading, profits and waste.

Two reasons are advanced against lifting the embargo; first, fear that our forests may be depleted by United States mills and, secondly, that our Canadian mills should be assisted in every way possible. I do not wish to be misunderstood in this matter. I want to see our forests conserved; I think that we should embark on a vigorous policy of conservation and reforestation. We should prevent ruthless cutting and should fight the fire menace and insect pests even more strenuously than we do now. But the embargo on the export of pulpwood from crown lands does not conserve our forests. The department has full control of the amount cut on the crown lands each year. Where settlers are depending on this for a living the tendency is to cut more cords when the price is low.

I should like to see all our pulpwood manufactured in Canada, but not at the expense of the settler. If Canadian mills need assistance to become established, surely some plan can be devised whereby all the people will bear the burden. These settlers are themselves establishing a very important industry; they are hewing farms out of the woods. In asking for the removal of this embargo they are asking for the right to sell their products in the best market, a right that is not denied the pulp and paper manufacturers and, in my opinion, should not be denied any Canadian citizen.

There is another matter to which I wish to refer for a moment and that is the sale of binder twine in Canada, which is regulated by the Inspection and Sale Act. I am going to suggest to the government that this act be amended so as to cut down the leeway allowed on the length of twine per pound from 5 per cent to 2½ per cent. The Inspection and Sale Act provides, in section 347, that:

Upon or attached to every ball of binder twine sold or offered for sale in Canada there

shall be a label with the name of the dealer and the number of feet of twine per pound in the ball marked or stamped thereon.

While binder twine is sold at different lengths per pound, I will confine my remarks to twine of 550 feet, that is, twine that measures 550 feet per pound. To each ball of this twine there is attached a label stating that the average length of twine contained in this ball is 550 feet to the pound. I turn however to the next page of the act, section 352, and I find this provision:

Provided that no deficiency in the number of feet of twine contained in any ball shall be deemed to be a contravention of this section unless the deficiency exceeds 5 per centum of the length indicated by the label.

This section allows the binder twine manufacturer a leeway of 5 per cent from the length stated on the tag. That is, a ball of twine that is labelled 550 feet to the pound may measure out only 522½ feet and still be legal. The farmer would be paying for 550 feet of twine and be receiving only 522½ feet, so that he would be 27½ feet short. In other words, his measurement would be 2,750 feet, or more than half a mile, short on 100 pounds of twine. It would be a very conservative estimate to say that the average farmer in the three prairie provinces buys at least 400 pounds of twine annually. Investigations that have been carried on by one branch of the organized farmers would lead one to think that some manufacturers are trying to make their twine 522½ feet per pound instead of 550 feet. The individual farmer cannot check the length of the twine he purchases and must depend upon the act and its enforcement for his protection in the matter of length. Proof that the manufacturers do not need the five per cent leeway is contained in their advertising matter. I have a farm journal which contains the advertisements of two Canadian binder twine manufacturers. One of these advertisements declares:

. This twine is guaranteed for length, strength and weight—the ball of standard manilla must contain at least 4,400 feet of twine.

That is to say, it must be 550 feet to the pound. That is guaranteed in the advertisement of this concern and it is proof that this particular firm does not take advantage of the five per cent leeway allowed by law. On another page in the same journal there appears the advertisement of another binder twine manufacturing concern to this effect:

It is longer—full length to the pound as guaranteed on the tag.

These being two of the large binder twine manufacturers in Canada, I submit that by their own admission they do not need this five per cent leeway. I would suggest to the government therefore that the Inspection and Sale Act be amended by reducing the leeway from 5 to 2½ per cent.

Before resuming my seat I want to say a word on the tariff. The work of the tariff board has reached a point where the government should be in possession of sufficient facts to warrant some reductions in the tariff. I have followed the work of the board as closely as possible without having the verbatim reports of the hearings, and I would suggest to the government that reductions might well be made on some lines of clothing and on kitchen utensils without seriously affecting the manufacturers. Tariff reductions along these lines would reduce the cost of living in every Canadian home.

Mr. T. E. SIMPSON (West Algoma): Mr. Speaker, it is not my intention to discuss the different items in the speech from the throne, for I consider that speech as more a recital of past events than a forecast of the legislation the government intend to introduce at the present session. In passing, however, I should like to refer to the prosperity which it is claimed Canada is enjoying at the present time, and to express my pleasure that that prosperity prevails to a greater extent than during the past few years. This I attribute mainly to the following five factors: the growth of the industry of agriculture, the increased production of forest products, the increase in our mineral production, the increase in the amount of capital that has recently been invested in the development of hydro-electric energy, and the increase in our tourist traffic.

I think everyone will admit that during the past four or five years the yield of agricultural products has been above the average, and the price that has been obtained, particularly for the wheat from western Canada, has been such as to add very materially to the wealth of this country.

As to the increase in our forest products, which in value are second only to those of agriculture, their value for 1927 is said to be no less than $475,000,000, of which approximately $283,000,000 were exported, chiefly to the United States—a material factor in maintaining the trade balance at as favourable a figure as it is. Looming large in connection with forest products is the pulp and paper industry, which is the most important manufacturing industry in Canada to-day, keeping in mind not only the value of the finished product but also the wage and salary distribution. The Prime Minister (Mr.

Mackenzie King) said in his speech to-day that Canada had risen to first place in the world in the manufacture of newsprint. That statement is absolutely true. Canada also occupies the proud position of exporting more newsprint than all the other nations of the world combined. In order to illustrate the growth of this industry let us compare the value of the product in 1913 with that of 1926. In the former year the total production of newsprint amounted to 350,000 short tons. In 1926 it had risen to 1,189,000 short tons, valued at $121,182,987, an increase in the newsprint production in that period of 438 per cent. The total production of pulp and paper for the fiscal year 1926 was $215,488,315.

Canada's rise to first place in the pulp and paper industry is due, in my opinion, to the wisdom and foresight of the provincial legislatures of Ontario and Quebec in placing an embargo on the export of pulpwood, notwithstanding what my hon. friend (Mr. Bancroft) has just said with respect to that action. I agree with my hon. friend, however, to this extent: I should like to see every stick of pulpwood that is cut manufactured in Canada, at least to the newsprint stage. If there is any discrimination against the actual settlers in Canada to-day surely some means can be devised whereby the settler shall be given a reasonable price for his wood, and yet maintain the manufacture in this country.

Mr. BANCROFT: That is all he is asking.

Mr. SIMPSON: Well, I think he should get it. When we consider the value of our forest products, the increased payroll which has come into existence as a result of the increase in the manufacture of those products during the last few years, and the increased capital which has been invested, not only in the enlargement of mills already in existence but in the erection of new mills, every one must admit that this development has played an important part in the prosperity that we are enjoying to-day. Then, as a result of the increase in the manufacture of newsprint, in the pulp and paper industry, and in mineral production, there has been a great demand for an increase in hydro-electric power, and as a result large sums of money have been expended in the development of hydro-electric energy. Let me give you a few figures to illustrate the growth of that development. The capital invested in hydro-electric development in 1910 was $121,000,000. To-day the capital invested is estimated at $900,000,000, an increase in seventeen years of over six hundred per cent. During the past three years over $180,000,000 of new capital have been invested in the development of hydro-electric energy in this country.

During the past few years we have benefited by another increasing source of revenue; I refer to the tourist trade. A few years ago this was not regarded seriously but last year, according to the figures compiled at Washington and by our own government, over $200,000,000 was spent in Canada by tourists from the United States, and when we consider the amount expended here by tourists from other countries we should probably be well within the mark in estimating that almost a quarter of a billion of dollars was spent by tourists in Canada last year—surely no small factor in promoting the prosperity which Canada is enjoying to-day.

Then we come to the mineral development. The production of our mines in the year 1927 is valued at $241,000,000, an increase of $155,000,000 in the past twenty years. Every one of the provinces with the exception of Prince Edward Island has contributed in some degree to this increase. Ontario, British Columbia, Alberta and Quebec, in the order named, have been the greatest contributors, and while the increase in recent years has been encouraging, I think when we look to the future, with the activity that we see on every hand with respect to mineral development to-day, none of us can form an estimate of the wealth that will be gained from the great pre-Cambrian shield in the years that are to come. When we realize that between fifty-five and sixty per cent of the total area of Canada is contained within the pre-Cambrian shield or mineralized belt, we may form some idea of what we may expect in the future from the mineral development of this country.

But I want to deal for a moment with the development in northern Ontario, not only because it has been the most active and important, but because I am a little more familiar with it. It is only about twenty years since the Ontario government constructed the Temiskaming and Northern Ontario railway north from North Bay and tapped the mining country at Cobalt. Since that time millions of dollars' worth of silver and other precious metals have been extracted from that section of the country. Several years later Porcupine was discovered and to-day they have a town with a population of between fifteen and twenty thousand, paved streets and several large gold manufacturing plants. From that camp alone more than $200,000,000 in gold has been produced. Before the war Kirkland lake was unknown. To-day there are several producing mines, some of them the richest in the world. In

the Sudbury area we find the Creighton and Frood nickel mines from which over $500,000,000 in wealth has been taken. It has been conservatively estimated that during the past twenty years there has been taken from northern Ontario more than $1,000,000,000 in wealth, of which approximately sixty per cent or $600,000,000 has been spent in wages, supplies and machinery, chiefly in other parts of Canada. Will anybody say that this has not been a strong contributing factor to such prosperity as we have in Canada to-day?

As I stated at the commencement of my address, these five means of production have been the principal factors in the prosperity which we enjoy to-day. Let me in all seriousness ask this question: What is the federal government doing to encourage development along any of these lines? Is it not a fact that our forest and mineral production have prospered because of the encouragement given to those particular industries by the provincial governments, and that with their development and prosperity the hydro-electric power development naturally followed?

But my chief reason for addressing the house at this time is to deal with another side of the picture, namely, the development of our iron ore and the iron and steel industry in this country. A few years ago the iron ore industry was quite an important one in Canada, when the Helen mine at Michipicoten in the district of Algoma was producing large quantities of high grade hematite ore, employing a large number of men, and providing considerable tonnage for our railways. But unfortunately the ore in that mine became exhausted and although considerable sums of private capital have since been expended in an endeavour to find new deposits of high grade ore, up to the present time the effort has been without success, and as a result not one ton of iron ore is mined in Canada to-day. The Ontario government a few years ago, realizing this, appointed a commission composed of mining men and engineers to make a study of the whole situation and report back to the government. This commission after an exhaustive study reported that large deposits of low grade iron ore running into hundreds of millions of tons had been located in northern Ontario but that none of this iron ore was fit for blast furnace use in its natural or raw state; that all of it required treatment for the purpose of removing some of the impurities and raising the iron content so as to make it merchantable or fit for furnaces. They found that the Algoma Steel Corporation had erected a plant at Magpie mine for the treatment of the ore and that it had been demonstrated that the ore could be successfully treated. But it was also demonstrated that the cost of treatment together with the cost of mining raised the price of that ore higher than the price of ore which could be imported from the Mesaba range in the United States and which was merchantable ore fit for blast furnace use in its natural or raw state. Consequently the company have had to abandon the plant and it has since been torn down and disposed of. The commission, no doubt realizing the great national importance of the development of this industry, recommended to the provincial government that some assistance should be given to enable this ore to be treated so that it could be used in our Canadian furnaces. They recommended that the provincial legislature should provide one-half of the assistance, which they suggested should be one cent per unit of iron content in the ore, and that the federal government should provide the other half. The legislature of the province of Ontario some two or three years ago made provision for the payment of their half of the bounty, and the matter now rests there awaiting action on the part of the federal government. My hon. friend from Fort William (Mr. Manion) and myself have endeavoured on various occasions to persuade the government to provide this assistance, but unfortunately up to the present time they have not seen their way clear to do so. I hope, however, that during the present session or in the very near future some provision will be made for taking care of this industry. I might add that there is no risk in connection with it because the ore has actually to be mined, it has to be treated and made fit for blast furnace use before they can claim any of the bounty; so the industry has actually got to function before it can receive any of this assistance.

I turn now to the iron and steel industry. Every one will admit, I think, that this great basic industry should be second only to agriculture in this country. It has been recognized as the very foundation of the industrial structure of every progressive and expanding nation in the world—an industry that has played such an important part in the industrial development of England, Germany, France and the United States. Now what is the position of that great basic industry in Canada to-day? I refer particularly to that part of the industry engaged in the primary manufacture of iron and steel, pig iron, steel ingots, billets, merchant mill products and rail mill products. That industry is certainly not in a very healthy or prosperous position. Indeed, for some years past it has had its back to the wall fighting for its very existence against the mass produc-

tion of the United States and the production of the mills of Europe, where the standard of living is very much lower than it is in Canada. When I tell you that the relative production of iron and steel in Canada as compared with the United States is only two per cent, you will be able to form some idea of what I mean by mass production.

The consumption of iron and steel in Canada is very diversified, and the demand in Canada for particular sections and particular sizes is small, necessitating frequent mill roll changes. The rolls have to be changed for each particular section and size that has to be rolled, and that naturally adds materially to the ton cost of finished product, placing Canada at a disadvantage as compared with the mass production of the United States or European countries, where they can go ahead and roll large quantities of each section or size without these mill roll changes. So you can readily see, Mr. Speaker, the disadvantage under which the mills of this country are working in that respect.

Moreover, the degree of protection that the iron and steel industry enjoys in Canada to-day has been materially reduced during recent years, because the duty is a specific duty, not an ad valorem duty. If it were an ad valorem duty it would be based on the value of the product, but it is a specific duty, so much per ton or so much per one hundred pounds of the finished product; and while the price of that product has materially increased during the last few years the duty remains the same; consequently the percentage of protection has been materially reduced.

Another factor that enters into the difficulties with which the steel industry is faced is the cost of transportation of the finished product from the mill to the consuming market, as compared with the cost from the mills in the United States or European countries. Let me give an illustration. Take Chatham, Ontario. The rate of freight on steel bars and structural sections from Buffalo is 26½ cents per one hundred pounds; the rate of freight on the same material from Sault Ste. Marie, is 41½ cents per one hundred pounds, or a difference in favour of Buffalo of 15 cents per one hundred pounds. The present tariff protection on structural steel sections weighing thirty-five pounds per yard and over is 15 cents per one hundred pounds, so you will see at once that the protection on this particular commodity is entirely wiped out by the increased transportation cost.

Take St. Catharines, Ontario—and may I say that St. Catharines is one of the principal pig iron consuming centres in the Dominion of Canada? The rate of freight on pig iron from Buffalo to St. Catharines is $2.30 per gross ton. The rate of freight on the same material from Sault Ste. Marie is $4.90 per gross ton, or a difference in favour of Buffalo of $2.60 per gross ton. The present tariff protection is $2.80 per gross ton, so you will see that in that case the protection is almost wiped out. I am not giving these figures with a view to asking the government to adjust the freight rates, because I am fully aware that that is the function of the railway commission. I am giving them for the purpose of trying to remove the misapprehension that exists in the minds of many people that the iron and steel industry in Canada to-day is enjoying a high degree of protection. I have mentioned a few, and only a few, of the difficulties under which the iron and steel industry is labouring, and as a result of which the importations of iron and steel have been increasing at an alarming rate.

Take, for instance, the figures under the main heading "Iron and Steel and Their Products" for the years 1925, 1926 and 1927 up to March 31. The importations were as follows:

1925..	$134,684,441
1926..	181,196,800
1927..	229,429,485

That shows an increase of almost $100,000,000 in the importations in this short period. I am informed that almost half of the iron and steel consumed in Canada is imported from foreign countries. What, then, should be done, Mr. Speaker, to put this great basic industry on a more permanent basis? I would say at once that a general revision of the tariff to meet more fairly the conditions that obtain to-day is long overdue. But, pending such a revision, I have a few concrete suggestions which I humbly submit to the government and which I hope will receive their favourable consideration. In the first place, I would suggest assistance to the development of the iron and ore industry to which I have already alluded. Second, I would suggest that a slight change be made in tariff item No. 1007 schedule B, which reads:

> Flat spring steel, steel billets and steel axle bars, when used in the manufacture of springs and axles for vehicles other than railway or tramway vehicles, 99 per cent drawback.

I think it is quite evident that when this section was drafted the automobile industry had not assumed the proportions in Canada

that it has to-day. A great deal of the steel that is imported under this item is used in the manufacture of automobiles, and I think the manufacturers of automobiles themselves will be the first to admit that in enjoying the reasonable degree of protection which they do on their finished product; this article, which is the finished product of another Canadian industry, should not be subject to the 99 per cent drawback. I would suggest that this item be changed to read:

Flat spring steel, steel billets, and steel axle bars, when used in the manufacture of springs and axles for vehicles other than railway, tramway or automobile vehicles; 99 per cent drawback.

I may say that steel such as that described in this item is manufactured in Canada to-day of a quality not surpassed by any manufactured in the United States or in any other country, and has been so manufactured for some time.

Then, thirdly, with respect to alloy steel; this is a comparatively new branch of the steel industry in Canada and there is no specific item in the tariff schedule covering this particular line of manufacture. I would suggest that an item to cover it be considered.

The fourth and final suggestion I would make is in connection with structural steel. There is a provision in the customs tariff to the effect that when structural steel is made in Canada in all sections weighing up to 120 pounds per yard the present duty applied to sections weighing less than 35 pounds per yard shall be applied to the larger sections. At the time this section was drafted practically none of the larger sections were made in Canada, and consequently had to be imported from foreign countries. Since then conditions have altered considerably. Canadian mills are now in a position to supply every need of the consumer in all the sections of steel angles and in beams up to six inches and channels up to seven inches. The Algoma Steel Corporation at Sault Ste. Marie has had the foundations laid for several years past for the erection of a mill to take care of the larger sections. For financial and other reasons they have not been able to complete that mill, but I am given to understand that they have informed the tariff commission and the government that if the clause of the tariff with respect to the larger sections of steel is made effective, they will immediately proceed to complete their mill at a capital expenditure of approximately $10,000,000, and will then be in a position to meet the Canadian demand for practically all the larger sections of steel. This is asking nothing more than what was contemplated when the section was drafted, and I think it is only what the industry is entitled to receive. If this were given effect to it would not interfere in any way with the steel imported by the manufacturer of agricultural implements or any of those items that are covered under specific regulations passed by the government in recent years. What would it mean to Canada if these suggestions were given effect to? It would mean giving a great basic industry a fighting chance for its existence. It would mean the manufacture in Canada of much of the steel now imported, thus providing employment for a very deserving and desirable class of citizens. It would help to improve our unfavourable trade balance with United States. During the year ended March 31, 1927, we imported in structural shapes alone about 150,000 tons, and if we cut that only in half by Canadian manufacture it would have a very material effect on the trade balance as between this country and the United States. I cannot speak with respect to the other steel companies in Canada, but so far as the Algoma Steel Corporation is concerned, I am informed that it would enable them to round out their present plant and increase their operation from the present standard of 40 per cent to about 80 per cent, thus giving more steady employment to the 2,500 men now on their payroll, who for a number of years have been given on an average only five month's employment in the year. It would enable them to employ from 800 to 1,000 more men, with an increase in the annual payroll of $2,000,000. Surely a new industry, or an extension to an existing industry if you wish to put it that way, willing to expend that amount of money and to increase their payroll to that extent in order to produce a product not now manufactured in Canada, a product which is being imported in such large quantities, should be worthy of the consideration of this government, I ask, Mr. Speaker, in all sincerity, that the suggestions, if I may term them such, that I have made to the government to-night receive their sympathetic support before the session is over, and that the Minister of Finance (Mr. Robb), particularly give them his most serious consideration before the budget is brought down, I think I can say without hesitation that anything they may do along that line will receive the hearty and unanimous support of the members on this side of the house.

[Mr. Simpson.]

On motion of Mr. Pouliot the debate was adjourned.

On motion of Mr. Stewart (Edmonton) the house adjourned at 10.40 p.m.

Wednesday, February 1, 1928

The house met at three o'clock.

REPORT

Report in French of the Canadian delegates to the eighth assembly of the League of Nations, September 25, 1927.—Mr. Mackenzie King.

ROYAL MILITARY COLLEGE OF CANADA

Hon. J. L. RALSTON (Minister of National Defence) moved for leave to introduce Bill No. 13, respecting the Royal Military College of Canada.

Mr. ROSS (Kingston): Explain.

Mr. RALSTON: The object of this bill is to bring the provisions of the act respecting the Royal Military College of Canada up to date and in line with the necessities regarding the appointment of the civilian staff in accordance with the provisions of the Civil Service Act, with respect to the qualifications required for students entering the college and also with regard to the financial provisions which for a long time have been out of line with requirements.

Motion agreed to and bill read the first time.

DEATH OF EARL HAIG

On the orders of the day:

Mr. T. L. CHURCH (Toronto Northwest): In view of the death of Earl Haig I would like to ask the government whether in his honour the flags on the House of Commons and on all other federal buildings in Canada will be half-masted and whether the house should not adjourn for one hour during the time of his funeral.

Right Hon. W. L. MACKENZIE KING (Prime Minister): Before answering my hon. friend's question I would like to have a word with His Honour, the Speaker.

CUSTOMS INQUIRY COMMISSION

On the orders of the day:

Mr. E. J. GARLAND (Bow River): I have in my hand a copy of the report of the Royal Commission on Customs and Excise. Is the government prepared to bring down and lay on the table of the house the ten interim reports which preceded this?

Right Hon. W. L. MACKENZIE KING (Prime Minister): The government has no objection to laying on the table the ten interim reports, beyond this that three of the reports contain references to firms against which it is recommended that prosecution should be commenced. What the result of those prosecutions will be it is difficult at this stage to state. It may be that these concerns will not suffer as a result of the charges brought against them, and the administration felt it was worth while considering whether or not in the interim publicity should be given to the names and to the references to them. What I would suggest is that seven of the reports which do not contain references of that kind might be tabled at once. As a matter of fact they are all bound in one volume and I was having them separated for that reason so that I could lay seven of them on the table at once and furnish my hon. friends, the leader of the opposition and the leader of the Progressive party, with the other three which they can distribute amongst the members. If it is thought well to lay them on the table and thereby make them accessible to the press, the government has no objection, but that has been the occasion of the hesitancy. I will see that the seven are placed on the table to-morrow and that the other three are given in the interim to the leaders of the respective parties.

Mr. GARLAND (Bow River): I do not wish to appear in any way too hard in this matter but I would like to ask the Prime Minister whether or not the prosecution is to take place in camera. If not, I see no reason for withholding the evidence contained in the three reports to which he has referred because the names of the firms concerned will be made public in any event.

FARMERS BANK

On the orders of the day:

Mr. R. K. ANDERSON (Halton): I would like to ask the Minister of Finance whether the Farmers Bank has been definitely wound up and a financial statement received from the liquidator.

Hon. J. A. ROBB (Minister of Finance): I will take a note of my hon. friend's question and give him a reply to-morrow. I shall have to consult the representative of the exchequer court who is handling the matter.

PEACE RIVER RAILWAY OUTLET

On the orders of the day:

Mr. D. M. KENNEDY (Peace River): I would like to ask the Minister of Railways

whether the survey of the passes between the Peace River country and the Pacific coast have been completed and a report made. If so, will the report be laid on the table of the house.

Hon. CHARLES A. DUNNING (Minister of Railways and Canals): The survey to which I referred last session has been made with respect to the Peace River pass. I have just received from Sir Henry Thornton a copy of the engineers' report and I shall be very glad to let my hon. friend see it. I do not see any reason why it should not be laid on the table of the house.

GOVERNOR GENERAL'S SPEECH

ADDRESS IN REPLY

The house resumed from Tuesday, January 31, consideration of the motion of Mr. Ilsley for an address to His Excellency the Governor General in reply to his speech at the opening of the session.

Mr. J. F. POULIOT (Temiscouata): Mr. Speaker, my first word will be an apology for speaking in a language which is not my own, but I will do so to the best of my knowledge and I hope every hon. member will catch every word of my speech. My second word is one of regret that in the high position which you occupy you do not take your share in the debates in this house and I think every member regrets not having the advantage at the present time of hearing your eloquent voice in this house.

May I point out a fact of importance that happened last year when the Holy Father called as a prince of the church His Eminence Cardinal Rouleau? The reason why I mention this fact at the beginning of my speech is because His Eminence, whose dignity and science have been admired throughout Canada, was born in my constituency. I boast at the same time that the Primate of the Roman Catholic church in Canada is a son of Temiscouata county, as is also, I am glad to say, the Minister of Justice (Mr. Lapointe). I am very proud of such electors although they have never voted for me.

I wish to congratulate my hon. friend the leader of the opposition (Mr. Bennett). Judging by his speeches since he has attained the leadership of his party, he is a great patriot, and as he is still a young man, I hope that he will continue to serve the country in that capacity and to the best of his ability in the years to come. During the course of this session I hope the house will have the advantage of being told by the leader of the opposition, when it is timely to ask the House of Commons at Westminster to repeal the Colonial Laws Validity Act, and also, as he says that his is a constructive policy, I hope that he will supply the house with a constructive program on immigration if the present arrangements are not to his taste.

I also take the liberty of congratulating from the bottom of my heart the mover of the address, the member for Hants-Kings (Mr. Ilsley). Though I did not have the advantage of hearing his speech, I read it carefully. I admire his eloquence, and I am very glad that his predecessor in this house has been so ably replaced. I mention his predecessor because everyone in this house knows that we were on speaking terms.

I also admired very much the beautiful language used by the hon. member for Provencher (Mr. Beaubien), in seconding the address, in French. I am not at all surprised that he had the honour of being elected by acclamation at the last election if he delivers to them speeches such as he delivered in this house the other day.

As to the hon. member for South Wellington (Mr. Guthrie), whose eloquence I admire very much although I do not always share his views, I consider him one of the ten best debaters in this house, and if we did not have the advantage of hearing his speeches answered we might believe everything that he said. I listened with deep interest to his address yesterday, when he attempted to show that the taxes now are higher than they were in the last years of the Conservative administration. That might be true; I am not discussing that, but the point I wish to bring out is that in the years previous to the Liberal administration coming into power the public debt grew very considerably, and instead of imposing taxes upon the people the Conservative government of that day used to borrow money to such a large extent that I think the Minister of Finance to-day should be warmly congratulated upon having reduced the debt. I have another request to make of my hon. friend the leader of the opposition in this connection, and that is that he would be kind enough during the budget debate to give us a constructive policy for reducing the public debt without imposing taxes.

I come now to a most important question mentioned in the speech from the throne, and that is the Dominion-provincial conference. I wish to tell the truth and nothing but the truth, but I shall be unable to tell the whole truth on account of the forty minute limitation on speeches. I shall not speak otherwise than as a member of the rank and file, as a back-bencher, and what I shall say will be

spoken entirely upon my own responsibility, but it will be in conformity with the opinions and sentiments of the people of Temiscouata county who sent me here as their representative in this house. I shall speak very calmly; I shall try to be as cool as ice, and my hon. friends will notice that every word I use will be uttered with the greatest sincerity.

I have been elected as a Liberal, as a supporter of the right hon. Prime Minister (Mr. Mackenzie King) and of his government. The Prime Minister is my leader, and I have to follow the advice of his ministers. I wish to be loyal to them, just as my hon. friends opposite wish to be loyal to their leader. The party system has existed for a long time in this country, and while perhaps it does not suit everyone, it is the system that appeals to most of us, and we have to follow party lines. I crave the indulgence of the house for the few remarks I am going to make.

First of all, may I say that the bonne entente is no longer young; she is now quite an old lady, having been born in 1867 when the parliament of Canada first met after confederation. Sometimes we do not share the opinions of hon. gentlemen opposite. It is our right just as it is theirs, to have their own opinions, but when we go out of this house the friendship that has always existed between us continues to exist, and during the few years that I have been in this house one of the things that I have admired very much is the good companionship that I have always found existing among members of different races, different creeds, and different political parties.

There are, Mr. Speaker, three forms of government in this country. I am looking at this question from a different angle than the leader of the opposition. There is, first, the municipal government, secondly, the provincial government, and thirdly, the federal government; and ever since I have taken an interest in public life I have never seen in any paper a report that a federal minister had ever criticized the acts of a provincial administration, whether Grit or Tory, whether Catholic or Protestant, whether English-speaking or French-speaking. It has never happened, to my knowledge that a federal minister, in his capacity as such, has ever criticized a provincial administration. I have never seen the leader of the federal opposition leaning on the shoulders of a provincial administration for support. I am sorry, Mr. Speaker, that I am compelled to say something of a similar character of the Premier of the province of Quebec. May I say, first, that I consider Mr. Taschereau is a good citizen and I am sure he acts in good faith, but he is not my leader. If he makes a statement I can tell him in very plain language that he is wrong; I can remain loyal to my own leader without sharing Mr. Taschereau's views and I can be loyal to my own leader when I express entirely different views from those of Mr. Taschereau. May I add that he is, in many respects, a good premier, and that he shares with the Minister of Roads, Hon. Mr. Perron, with his Minister of Mines, Mr. Perrault and with Mr. Nicol, his treasurer, a good part of the credit for the real prosperity of the province of Quebec.

As you are a scholar, Mr. Speaker, you will remember having read that before 400 B.C. Xerxes, king of Persia and Media, who abolished the kingdom of Babel and took away the statue of Bel, crossed the Hellespont. When the Newfoundland case was to be argued in England Mr. Taschereau crossed the Atlantic in the same glorious fashion. It is always a dangerous thing before a case is over to express an opinion.

The province of Quebec and the Dominion government lost the case before the Privy Council. I give credit to the people of the Department of the Attorney General at Quebec, as well to those of the Department of Justice at Ottawa, because they did their best in that case. No one is to blame. However, they did not succeed. The blame might be put on the lords of the Privy Council, but that cannot be done, because they are immune from the law. I wish to say a word in reference to the judgment in that case. Then Mr. Taschereau gave an interview to the papers. That interview he has never denied—but perhaps he will deny it to-morrow after reading the report of my speech—to the effect that if Canada and the province of Quebec lost Newfoundland and Labrador, it was because Mr. King, the Prime Minister, had too much to do with imperial questions, and that if he had done some lobbying, as the premier of Newfoundland had done, Labrador would have remained as a part of Canada. Well, Mr. Speaker, if Mr. Taschereau is right in saying that when a Prime Minister attended the Imperial conference he paid too much attention to imperial matters, one thing is sure, and that is that Mr. Taschereau did not study imperial questions at that time, and if he had known more about imperial questions the speech from the throne in the province of Quebec, which was read on the 10th January last, would not have contained this paragraph:

> My ministers believe that Canadian unity and the future of Canada will be best assured by respecting provincial autonomy and by remaining loyal to the British North America Act in the spirit as well as in the letter.

In reference to the Newfoundland case, Mr. Taschereau was wrong when he tried to evade responsibility by putting it on the premier's wide and strong shoulders. There was no responsibility at all, as I have previously said, but when I read part of the speech from the throne in the Quebec legislature, I heard some gentleman opposite who never did anything to support Mr. Taschereau in his elections say: "Hear, hear." My hon. friends opposite appear to be acquainted with Mr. Taschereau, and I will have a few words to say about that afterwards. What I want to say now is that equality of status between Canada and the mother country is like the equality of mind between Mr. Taschereau and my hon. friends opposite.

Just to please my hon. friends on the other side of the house, may I quote an extract from an interview given by Mr. Taschereau the day after the last general election, which has been published in Le Soleil, of Quebec on the 17th of May, 1927. It reads:

Nos amis du fédéral, ministres et députés, nous ont prêté leur concours avec un empressement et une générosité dont je tiens à les remercier vivement. La solidarité qui existe entre les libéraux d'Ottawa et les libéraux de Québec ne pouvait être mieux démontrée.

I will translate the statement as best I can. It read thus:

Our federal friends, ministers and members, have helped us with such earnestness and generosity that I wish to thank them warmly. The solidarity that exists between the Liberals of Ottawa and the Liberals of Quebec could not be better shown.

It means that when Mr. Taschereau called on us for support everyone of us answered, "Ready, aye, ready." And I tell you that when Mr. Ferguson calls on Mr. Taschereau, he answers, like a pupil, "Ready, aye ready."

Well, Mr. Speaker, there was a great change of attitude after the election. During the election Mr. Taschereau was saying, "My dear federal friends, pray come to my help against those Tories of the province of Quebec." After the election he was saying to the Tories, "Now I don't need my federal friends any more; come and I will kiss you on the cheek." And they seemed to like it.

Mr. EDWARDS (Frontenac): Does the hon. member get that idea from the attitude of the present government towards the Progressives?

Mr. POULIOT: The hon. member is a great humorist. I think, Mr. Speaker, that the word "solidarity" used by Mr. Taschereau in his message after the elections of the province of Quebec was wrong. There can be no solidarity between the federal and the provincial administrations because the spheres of action and the problems differ in the respective fields.

We were allies during the election, but afterwards let us see what happened. In municipal government there are pressing problems, as there are in provincial and federal government, but those problems are entirely different in each jurisdiction. Each body has its own way to travel, and what Mr. Taschereau did about imperial matters reminds me of a little story. One day while at college the teacher was giving a lecture in astronomy, in the course of which he explained an eclipse. Holding his watch in his hand he said, "This is the earth;" then he put his fountain pen in front of his watch and said, "This is the moon;" and, indicating himself, he added, "I am the sun." Immediately one of the pupils retorted, "You are a damn liar!" I apologize for the expression—

Mr. SPEAKER: I was about to draw the hon. member's attention to the fact that it is not strictly a parliamentary expression.

Mr. POULIOT: Yes sir, and I withdraw the expression. Perhaps Mr. Taschereau regards himself as the sun on imperial questions, but if so I cannot help but remember my old teacher. We cannot overlook the fact that as a nation we are growing up, and that our constitution must develop with our growth. But of course nothing will be done to change our constitution without the consent of all the provinces of Canada which were parties to the pact of confederation. Then what is the danger to provincial rights? I never heard in this house that the government had the least intention to override provincial rights in the settlement of the very difficult and important questions that arise from time to time in this Dominion.

I do not propose to discuss the imperial conference or imperial questions any further, but I would ask: Is Mr. Taschereau a specialist on imperial problems? Where did he study them? He has his own business to attend to. He has the Saguenay aluminum plant to think of and is so busy talking with American people about their settlement in Canada that he has very little spare time to study imperial questions. Those questions will be discussed in this house. But, Mr. Speaker, I do not see why the premier of Quebec should put in the speech from the throne delivered by the lieutenant governor of the province a paragraph that is a direct attack on the federal administration. Mr. Taschereau came to

Ottawa. I am told you were even gracious enough, sir, to lend him your apartments while he was here. He had ample space to work in—he had the library at his disposition. He could have talked with the members of the federal government about everything. Did he not do so? He has every right to his own opinions as a private citizen, but, sir, I submit that as Premier of the province of Quebec he has no right to speak against his friends who gave him such strong support during the election, when there is now no reason for him to fear anything. I respect Mr. Taschereau's views, he may think as he likes so far as I am concerned, but I contend that the paragraph to which I have referred does not express the real sentiments of the people of my province. We rely on the Prime Minister and the Minister of Justice (Mr. Lapointe) and their colleagues to express our views as a national entity.

Now, Mr. Speaker, I come to the St. Lawrence waterway. I believe it was the part of wisdom to submit the case to the Supreme Court of Canada, the legal advisers of the government of this country. At whose request was such step taken? I do not know whether it was at the instance of the federal or any provincial government, but, I repeat, it was a wise course to take, because when there is controversy on a point of law, the judicial part of our administrative system, to use the expression of the learned leader of the opposition (Mr. Bennett) must be consulted. There are three rights of ownership of rivers; private, provincial and federal. May I give a citation, Mr. Speaker, to show how private ownership of this kind has been treated by the provincial government of Quebec since Mr. Taschereau has been a minister of the Quebec government. I quote the first paragraph of article 2252 of the revised statutes of the province of Quebec, 1909. It reads:

> Sales and free grants of lands belonging to the crown are and have been since the first of June, 1884, subject to a reserve, for fishing purposes, of three chains in depth of the lands bordering on non-navigable rivers and lakes in the province.

A most important case, that of David McLaren and others against the attorney general of the province of Quebec, was taken to the Privy Council, who gave their judgment on June 28th, 1914. One of the considerants of that judgment reads:

> That the appellants were owners and proprietors of the bed of the Gatineau river and of the lands and water powers therein, opposite their property. (20 R. L. 248).

I quoted that judgment to my learned friend the leader of the opposition last year, and I would point out that in it it was held:

> That in such rivers the property of the riparian owner extends ad medium filum aquae. . . . to the middle line of the water.

This judgment had an important bearing on the legislation of Quebec. In the first place the civil code, which gives the rules governing property, was amended a few years afterwards, by 8 George V, chapter 72. That amendment was to the effect that the article did apply to all non-navigable and non-floatable rivers and streams and their banks bordering on lands alienated by the crown after February 19, 1890. But this is not the most interesting amendment; there is another one. I have read the law as it stood; I have quoted the article showing that there was a reserve, in the case of the crown, for fishing purposes. Now I will quote for the information of hon. members the amending statute, which will amaze them and from which they will see that, by a change in three words, a government can rob the people of their rights. This amendment reads:

> Article 2252 of the revised statutes, 1909, is amended:

It seems that this is just as easy as swallowing a spoonful of honey.

> (a) By replacing the words: "for fishing purposes", in the third line thereof, by the words "in full ownership by the Crown". (9 G. V, c. 31, s. 1).

And in this instance the crown was the provincial government of Quebec. Let me quote the law as it now is, from which you will see just what the difference is:

> Sales and free grants of land belonging to the crown are and have been since the first of June, 1884, subject to a reserve, in full ownership by the crown, of three chains in depth of the lands bordering on non-navigable rivers and lakes in the province. (R.S.Q. 1925, c. 83, s. 7).

This is my point. A case was submitted to the Privy Council with a view to securing an opinion on this provision, and when the judgment of the Privy Council was shown to be against the province of Quebec as an entity the law was amended with the result that the province, by changing three words in the statute, has acquired the full ownership of the interest of these riparian owners. As a responsible member of this house I make the statement that nothing of this nature has been done by this parliament, and the people have no reason to fear that parliament will take any such action. That is not our attitude and I am sure the federal government will never pass such a law. However, let me add this: If the federal government should introduce such a provision, loyal as I am to my leader and to the government as well, I should feel called upon, being also loyal to my electors, to vote against it.

Mr. SPEAKER: The hon. member's time has expired.

Mr. POULIOT: By leave of the house may I continue five minutes longer?

Some hon. MEMBERS: Yes.

Some hon. MEMBERS: No.

Mr. SPEAKER: I fear that if the house gave way in this instance it might lead to an abuse of the privilege.

Mr. PETER McGIBBON (Muskoka-Ontario): The government of the day has seen fit to call parliament together at this time, presumably for the despatch of business, and probably no more bloodless and pulseless speech from the throne has ever been presented to this house than the one now under consideration. I do not know that this is very much to be wondered at when we consider that this administration has never had sufficient courage to do, at the proper time, what should be done. For example, it is not surprising that no mention is made in the speech of the problem in relation to the great St. Lawrence waterway. I can imagine that when the contents of the speech were being discussed in the council chamber the shades of the Siftons, the Joneses and the Holts were hovering around like the ghost of Banquo before Macbeth. How could the government speak; how could they bring down a policy upon this great subject until the masters behind them had decided what they were going to do?

Yesterday, sir, the Prime Minister said to the leader of the opposition with great emphasis that we do not want people in this country until we have work for them to do. That is a very correct hypothesis, I agree, and I also agree that at present in Canada we have not the work for them to do. But I wondered, sir, if it ever occurred to this government and to the Prime Minister that it is the duty of a government so to shape their policies as to create work for the people? No greater crime can be laid to the door of any government than that which is laid at the door of the present government when we say they have not been able to create sufficient work to keep our own people in Canada. By way of explanation, the Prime Minister remarked that ocean fares had gone up, that conditions in Europe were different from those prevailing ten years ago, and that was the reason we were not getting immigrants. At the time I could not help but think of the people who wanted to migrate to the United States, and wonder if they were any different from the people we are trying to get. Is there any material difference between the fare from the old country to New York and from the old country to Canada? And yet, with a similar people, a similar climate and a similar country, we have been spending millions of dollars with no success in getting immigrants while the United States have been spending millions of dollars keeping immigrants out.

What is the reason? The reason can only lie in the incapacity of the men who sit on the treasury benches. No government ever had the opportunities to secure immigrants that this government have had. Coming into office shortly after the great war, when this country was advertised to the ends of the earth and the eyes of the whole world were upon our country with its vast stretches of land, its forests, pulpwood, mills and factories, still for five years this government have not been able to bring into Canada a number of immigrants to equal those Canadians who have left and gone to the United States. I drew the attention of the Prime Minister to that yesterday, and he said he would much prefer that his statement go out to the world instead of mine. Coming from the Prime Minister, of course, I do not doubt that, but I speak the facts. I say to him that there is not a man on this side of the chamber who would not be ashamed to sit in the chair of the Prime Minister to-day while more full-blooded, native-born Canadians are leaving Canada for the United States than we can replace with immigrants from all the countries in the world.

If there is any dispute as to that I have the figures here. In one hand I hold the report of the Minister of Immigration (Mr. Forke) and in the other the annual report of the commissioner general of immigration for the United States, and these show that for the last five years some 50,000 more Canadians moved across the line into the United States than this government have been able to bring to Canada from all over the world. I want you to remember this, sir; since 1924 none but native-born Canadians can go across the American line, and consequently the drain is much more serious. So I ask you, Mr. Speaker, and through you the government, how long this country can stand this drain with a population of only eight or nine million? How long can we afford to lose eighty, ninety or one hundred thousand people a year to the United States? Since this government came into power 720,000 Canadians have gone into the United States, registering and paying their head tax, and I think it a fair estimate to say that no more than three out of four of those going into the United States register, so I think it fair to

say that since the Liberal government came into power in 1922 a million Canadians have crossed the line and taken up residence in the United States. I say to the Minister of Immigration (Mr. Forke) that he is charged with one of the most important portfolios in this government, and I say to the Prime Minister that he and his government have been hopelessly inadequate in dealing with this question. I do hope, sir, that some good may come from the establishment of the commission which has been suggested by my leader.

That is the most important question in the country to-day, because involved with it is the question of our national debt and taxation. I was pleased to read in Hansard to-day the remarks of the hon. member for South Wellington (Mr. Guthrie), because he took up a subject with which I was going to deal to-day, but upon which I now find it unnecessary to speak. I refer to the matter of our national debt and the taxation in Canada. I think he proved conclusively that when you consider all our commitments the national debt has not been reduced since this government came into power. I have the figures showing the revenue for every year since this government came into power, and there has not been a single year in which this government have not taken more money out of the pockets of the people of Canada than did their predecessors in 1921 and 1922. Consequently I ask them, how can taxes be reduced when they have been obtaining through taxation more money year by year? If they wish an example, however, I would refer them to the system of debt reduction in force in the United States, as I have done in this house before; I would recommend to them the plan worked out by Mr. Mellon, Secretary of the Treasury in the United States, by means of which they have reduced their debt from over 26 billion dollars to $17,900,000,000 at present. Under this system of rigid economy, something which is foreign to this government, they have reduced the per capita taxation from $50 to $25.

Working under these new rules, Mr. Speaker, one is rather handicapped; you feel that if you digress too far you may get lost and be unable to return, so I will have to pass on. I would like to devote a moment or two particularly to the Minister of Finance (Mr. Robb) and the Minister of Trade and Commerce (Mr. Malcolm). Some time ago I noticed in the Financial Post a full page advertisement signed by the Minister of Trade and Commerce who, during the last twelve months, has been promoted to practically a publicity agent for the government, to boost their stock in a falling market. I find that this is the creed of the government, as laid down by the Minister of Trade and Commerce:

> It remains for our producers and manufacturers to learn more fully of the opportunities awaiting them abroad. To help in this direction, to assist producer and manufacturer, to teach our people "export trade consciousness"—

I want you to notice that, sir, because I am going to refer to it later.

> —is the duty of this department of the government. The Department of Trade and Commerce has an active organization in the principal trading centres of the world. Working under the direction of the commercial intelligence branch at Ottawa, this organization has already enabled Canadian firms to obtain profitable and permanent markets in foreign lands. Canadian officials, strategically located, search out opportunities for the sales of Canadian products, and investigate all conditions under which these may be transported and offered for consumption. These official trade commissioners stand ready to assist the Canadian producer or manufacturer. Their whole effort, co-ordinated from Ottawa, is designed to create new markets for Canada, and help hold those we already have. Such a service is at the call of every Canadian who asks it.

That is a pretty fine creed for any government. After reading it I began to look over the record of this government to see how they have fulfilled the conditions laid down by themselves. I noticed, on getting the returns in regard to the different countries with which this government had entered into negotiations respecting commercial treaties, that in practically every country this government had fallen down in the very doctrine which I have just read to the house. For example, they made with Belgium a treaty which came into effect on the 22nd October, 1924. Prior to that treaty we were importing annually about $3,000,000 worth of goods. After it in 1927 we imported about $9,000,000 worth of goods. Prior to the treaty we were exporting about $12,000,000 worth of goods and in 1927 our exports had risen to $21,000,000. That is one of the most favourable examples.

We made a treaty with Czechoslovakia and our imports in 1926 amounted to $1,272,000 and in 1927, $1,726,000. But the fact is that our exports had not increased in any proportion to our imports.

We made with Finland a treaty which came into effect on August 1, 1925. Before the treaty came into effect we were importing about $15,000 worth of goods and in 1927 we imported about $82,000 worth. On the other hand our exports increased from $1,038,000 to $1,882,000.

We made with France a treaty which became effective on September 5, 1923. Prior to that our imports amounted to about $12,000,000 whereas in 1927 we imported $23,992,000 worth of goods. Prior to the treaty we were exporting annually about $14,000,000 worth of goods and last year our exports had increased to only $15,000,000. This export trade does not show an increase in line with the doctrine laid down by the present government. These are the important markets which they said it was their duty to get for the manufacturers of Canada.

We made with Italy a treaty that came into effect on January 8, 1924. In that year our imports amounted to about $1,800,000, whereas, in 1927 they amounted to $3,444,000. On the other hand our exports had increased in the same period only from $18,000,000 to $22,000,000. I might continue and read them all, but as my time is limited I am going to refer to only one more, and my reason for doing so is that it is one which affects the farmers more directly than the rest of the people of this country. I refer to the trade treaty with Australia. As nearly every hon. member knows, this treaty was negotiated in 1925 between the Minister of Finance (Mr. Robb) and the government of Australia, and by it radical reductions were made in the duties on certain articles, notably butter, coming into this country. In lieu we were supposed to get certain advantages on automobiles and automobile parts, pulp and paper, and some kinds of fish. What has been the result? Members on this side of the house denounced the treaty and said that it would be bad. Events have proved that our denunciations were not even half strong enough because the treaty has proved worse than we ever dreamed it would be. Let me give the house some figures with regard to our trade with Australia. The imports and exports are as follows:

Fiscal year ended March 31	Imports	Exports of Canadian produce
1924	$1,037,451	$19,923,997
1925	2,634,713	12,035,086
1926	3,042,054	15,411,746
1927	6,296,197	18,965,881

When you put side by side with that the importations of butter, which is the principal thing I want to speak about, you find that the importations of butter from Australia and New Zealand have risen year by year until this year they amount to more than ten million pounds and the price of butter in this country has dropped on an average, as estimated by wholesalers, from twelve to fourteen cents a pound. What did we receive in return for this? We were supposed to receive a benefit in the intermediate and general tariffs on automobiles and automobile parts, and we got it for a while. Then the government of Australia increased their general tariff and left the British preferential alone, so that to-day we have been legally robbed altogether of this market. Shortly after that this government by order in council made the terms of this treaty applicable to New Zealand as well. The Prime Minister, in discussing this treaty with the National Dairymen's Association, made a significant remark to which I want to refer. They met in Ottawa and after they had discussed it for a while and had pointed out to him how these vast importations of butter were ruining the dairy industry in this country, the Prime Minister made this significant statement:

We must think of empire trade.

The Prime Minister of Canada takes a market for ten million pounds of butter away from the farmers of Canada and gives it to the farmers of New Zealand and Australia, and especially New Zealand, for nothing. Is that a patriotic thing to do to the great dairy industry of Canada? There you have a market amounting to ten million pounds of butter given to the people of New Zealand and Australia and lost to the farmers of Canada.

But that is not the worst of the story. In order to encourage imperial trade with Australia they raised the duty on raisins from two-thirds of a cent to three cents a pound. This practically raised the wholesale price five cents and the retail price six cents. When I looked up the importations of raisins I found that out of 40,000,000 pounds imported into Canada, two per cent or about 800,000 pounds came from Australia. Consequently, the Prime Minister taxed the consumers of this country six cents a pound on 40,000,000 pounds of raisins, or about $2,400,000, in order to encourage an imperial trade which we did not get. This was a tax on the people of this country of about $2.50 per pound on raisins. imported from Australia. If you take the gross tax that was paid in this country and divide that into the importations from Australia you will see that it works out between $2 and $3 per pound. That is the price which this country is paying for one of the trade agreements made by this government. I hope before the session is over somebody in this house will have the courage to rise up and demand that this agreement be modified. We have lost the automobile business because Australia, legally and within its rights, boosted up the intermediate and general tariffs and there is nothing left for us but the paper industry and the fish industry, the exportations

of paper amounting to only $2,500,000. I wish that I had time to go more into details but, as I said before under these new regulations I have not the time.

Another matter to which I wish to refer is the question of the status of this country. Last year I did not say anything about it and I do not intend to say very much this year. But when I saw the Prime Minister (Mr. Mackenzie King), the Minister of Justice (Mr. Lapointe), and all the rest of the cabinet going about this country preaching this new charter of liberty which they had secured overseas, I thought it was time for someone to say something for the people who really won that charter, namely, the soldiers who fought in Flanders and France. Before anything more is said about this matter by the government, I would like the Prime Minister, the Minister of Justice or any other member of the cabinet or any hon. gentleman opposite to stand up in this house and tell me what this government ever did to advance our status. I have read all the reports of the different imperial conferences, and I think that every prime minister from confederation down has contributed something along that line—one of the principal contributors was Sir Robert Borden—but I have not been able to find a single thing that the King government ever contributed. Sir Wilfrid Laurier, after he became prime minister in 1896, went to the Imperial conference and demanded the repeal of the Belgian and German treaties, and he succeeded in getting them repealed. That did something to unfetter this country and give us more freedom, because the British preference was involved, and from that time on his voice was heard at every conference until in 1911 he succeeded in getting a little more detailed information than he had ever got before. Up until that time the prime minister of this country had been practically a spectator at the Imperial conferences. Let me read a sentence taken from Sir Robert Borden's Canadian Constitutional Studies:

> Although questions touching foreign relations had occasionally come under discussion at the conferences from 1887 to 1911, there is no reason to suppose that the Dominion representatives had been taken into the confidence of the British government with respect to general policy or commitments.

That is quite true; they never had been taken into the confidence of the British government. In 1911, Mr. Asquith, at the close of the Imperial conference that was held that year, said:

> Gentlemen, I again advert to a matter which has been referred to by Mr. Fisher and Sir Joseph Ward, that this is the first time—and this conference will be significant in memory in that respect—when, in Mr. Fisher's happy phrase, the representatives of the dominions have been admitted, as it were, into the interior, into the innermost parts of the imperial household; what in the old classical phrase were called the "arcana Imperii" have been laid bare to you without any kind of reservation or qualification.

That was the first time that the prime minister of this country was ever taken into the confidence of the British cabinet so far as imperial foreign relations were concerned.

A few years later Sir Robert Borden did what had never been done before. He attended the imperial cabinet meetings in 1915. We do not know what took place at those meetings because there is no record of them, but at any rate he was admitted into the cabinet councils at that time. Following that development along still further, in 1917 there were two cabinets in London—the British war cabinet and the imperial war cabinet. The imperial war cabinet included not only the Prime Minister of Great Britain and some of his colleagues, but the prime minister of every dominion, and these dominion and colonial representatives expressed the views of the people they represented. It was at one of these conferences that Sir Robert Borden succeeded in getting passed a resolution which I think is the basis of this greater charter of liberty which we are supposed to have got in recent years. In the records of the conference of 1917 you will find this resolution:

> The Imperial War Conference are of opinion that the readjustment of the constitutional relations of the component parts of the empire is too important and intricate a subject to be dealt with during the war, and that it should form the subject of a special imperial conference to be summoned as soon as possible after the cessation of hostilities. They deem it their duty, however, to place on record their view that any such readjustment, while thoroughly preserving all existing powers of self-government and complete control of domestic affairs, should be based on a full recognition of the Dominions as autonomous nations of an imperial commonwealth.

That resolution contains I think the phrase upon which this new charter of liberty was founded, and the foundation was laid by Sir Robert Borden in 1917. Further on in the minutes of that conference, you will find a resolution stating that there should be new means of communication between the United Kingdom and the dominions, and a resolution was brought in by Sir Joseph Ward stating that the Prime Minister of Canada had the right to communicate directly, if he wished to, with the Prime Minister of Great Britain.

Certain reservations were placed upon that for business reasons, because the Prime Minister did not want to be bothered with the details of trivial matters, and so it was left to the ministers to be the judge of what communications should go through that channel.

A little later on, the matter of Canada's representation at the peace conference came up. Sir Robert Borden on behalf of this country demanded that Canada should be represented there. You, Mr. Speaker, will remember that when parliament was sitting in the museum we were kept up all night one night in order to ratify the peace treaty before it was ratified by the parliament of Great Britain. It was desired that our ratification should precede imperial ratification, and we were kept up all night for that purpose. That I think was Sir Robert Borden's main reason for calling a special session of parliament, in order to vindicate the right of Canada to make her own treaties and to make clear that no treaty would be binding on this country until it was ratified by parliament. We did not get that without a struggle, nor did we get representation at the League of Nations without a struggle. Objections were made not only by Great Britain but by the United States, but we finally got representation on the league.

I want this government to tell me anything they have done to improve our status. Sir Robert Borden, as I have already pointed out, had that resolution passed at the Imperial conference in 1917, but what has this government ever done in that direction to justify them coming here and telling us they have brought home to Canada a new charter of liberty. I for one am glad that we have a fuller liberty in our domestic affairs. I do not think any of us would like to go back to the time when we sent over our first contingent, the Princess Pats and all that, and when the imperial authorities tried to requisition our ships during the war, but Sir Robert Borden and his government asserted our rights and I do not think any man can reflect on that time without feeling glad that we have greater liberty in our domestic affairs to-day. But I say that that greater measure of liberty came, not only to Canada but to the other dominions as well by reason of the fact that there were one million soldiers from the colonies on the battlefield; it was not through the influence of the King government. That is all down in the records for any man who wants to read it. I say to you, Mr. Speaker, that this government's patriotism must be pretty poor. They must feel their poverty, as far as the patriotic people of this country are concerned, when they come back here and try to take credit for something they have not done. I ask this country in all seriousness, why should this government rob the dead?

Mr. JOHN EVANS (Rosetown): Mr. Speaker, neither in the speech from the throne nor in the speech of the leader of the opposition was any new fiscal policy or forward outlook for Canada outlined. The government seemingly is very satisfied with things as they are as indicated in the first paragraph of the speech. But over against this is the dismal wail of the leader of the opposition regarding unemployment and the money which is leaving Canada to buy foreign goods. It is one of the economic fallacies often voiced in this house that to be prosperous we must not purchase goods or trade in foreign countries; but the class who put that forward are those who are the favoured ones in our tariff schedules. In answer to the leader of the opposition, I wish to tell him that we do not lessen employment by increasing imports. The increase of imports indicates always an increase of employment, because there must be increased exports to pay for increased imports. It does not lessen employment. But according to the view of the protectionist manufacturer and distributor, it is a detriment to import anything ready to use, because the idea back of protection is not prosperity for the country, but control of the earnings of the primary producers by a certain class in this country. The tariff system can never be a national benefit. It is only a benefit to a certain class and that class generally one of the smallest in any country. The tariff is always a class advantage and, as far as as that is true, it is the protected class only that benefits. The eighty million dollars worth of goods which we purchased abroad this year more than we purchased last year indicates two things; first a larger purchasing power on the part of the primary producer, and an indication that the earnings of the workers of the country are not completely under the control of the protected class.

Last year the government informed us that no changes were to be made in the tariff because the tariff advisory board were not ready to report, or had not dealt sufficiently with the applications placed before them. The income and excise taxes were cut, which benefited only the rich. We hope that this session will see a reduction in the tariff, and not a further cut in the income tax, and in support of our contention I was very glad to see that the Montreal chamber of commerce passed a resolution recommending the government at Ottawa to maintain an income

tax permanently, as a source of revenue, believing that it is economically sound, a just tax and the most economical to collect. I quote that in support of our contention which we have made for years under the organized farmers of the western provinces. This year the long overdue repeal of penalties on the working class is due. Last year's session of parliament was a rich man's feast. The farmer is penalized on the necessaries of life and his tools of production, and he has to sell his products in the open markets of the world, against all the cheap labour of the world, the cheap labour of Europe, Asia, Australasia and every country that exports. I do not think this truth can be too often reiterated in this house.

A good deal has lately been said about the Australian treaty as it affects the dairymen of Canada. Some protectionist journals of the east have been poking a little fun at the farmer in asking protection against butter, cheese and other agricultural products being imported from Australia. These journals, owned and controlled by protected manufacturers and distributors, for whose benefit the protective system of import penalties has been imposed on our primary industries, all wilfully ignore the facts of the case. Trade treaties are always part of the old game of class privilege, and a trade treaty never can be consummated without hurting some one class, to give another class an advantage. The Australian treaty is so pregnant with these features and abuses that it has, more than any other, served to bring these features before the people of the country. I would not mention the Australian treaty here were it not for the fact that some of our protectionist papers have, in their blind selfishness, played on the minds of their readers, to whom they are careful not to convey the real truth. As the mover of the address in reply to the speech from the throne said, "the country you are negotiating with always requires a quid pro quo", and in the Australian treaty we lowered the duty on butter from four cents to one cent per pound. That was to give the manufacturers of automobiles, paper, and certain other commodities a freer entry into the Australian market; indeed, some agricultural products were placed on the free list for this purpose. The four cents per pound of import penalty on butter never gave the Canadian farmer any advantage. Neither did it raise the price to the consumer. The price to the farmer on all dairy products was based on the export value, and the Canadian farmer never exceeded the export price. Four cents a pound was put on in the hope of furnishing an excuse for the Canadian manufacturer to exploit the dairyman on the price of the supplies that he was bound to purchase. The present duties on some of these supplies go as high as 35 per cent. Even the equipment most necessary to the dairy industry—churns for example—is very heavily taxed. When the four cents a pound could be of any use to the Canadian farmer to penalize the urban dweller for purchasing Australian butter the government promptly removed that duty. In my view this at once branded the administration as a capitalist government, favouring one class in particular and willing to sacrifice the whole dairy industry for the sake of the protected manufacturers. The government left the duty as high as 35 per cent on many of the supplies required by the dairyman.

Not only does this inequality and injustice exist, but the treaty itself facilitates the landing of agricultural products on our shores to compete with our own producers. So much is this the case that in the comparative short haul, say, from the prairies to Vancouver, our railways declare that they cannot meet the competition of ocean transportation all the way from Australia to Vancouver. So after tying up our farmers by trade restrictions for the benefit of our manufacturers, we see these protectionists in their selfishness gloating over the fact that they have got the dairymen squirming in agony under this injustice. Some years ago Goldwin Smith in his book, Canada and the Canadian Question, used these words:

> What corruption can be more pestilential or more dangerous to the commonwealth than the surrender of the commercial policy of the country to private interests in return for the support of their money in elections?

I cannot interpret the terms of the Australian treaty in any other light than that described by Goldwin Smith. He made his comment on the statement of Tilley who, speaking in the House of Commons in 1879, said:

> We have invited gentlemen from all parts of the Dominion to assist us in the readjustment of the tariff, because we did not feel that we were prepared without advice and assistance from men of experience to readjust and make a judicious tariff.

The provisions of the Australian treaty were never made by disinterested statesmen, but were dictated by men interested in paper, in automobiles and other commodities who desired priority in the Australian market. I think the words of Goldwin Smith are as true to-day as when he wrote them, and I cannot look on these features of our protective system in any other light than that they always involve a bargain.

. Now, let me discuss this treaty a little further just to show the callousness exhibited by those who negotiated it towards the workers in general of this country in regard more particularly to raisins and currants, which are very necessary articles of food. On those fruits to-day the duty is as high as 43.46 per cent. We import over forty million pounds of raisins and currants per year, yet they carry about the highest rate of duty of anything in the tariff schedules. But the strange thing about it is that our government, for the sake of a small class in the country, the manufacturers of certain articles getting an advantage in the Australian market, has laid the whole consuming public of Canada under tribute. Why? Will any protectionist say that it is benefitting the nation for its housekeepers to pay $143.46 for $100 worth of goods? It is the height of folly, whether committed by statesmen or lunatics, to increase the burden on our own people when negotiating a trade treaty.

Mr. GARLAND (Bow River): Would the hon. gentleman make clear the difference between them?

An hon. MEMBER: Order!

Mr. EVANS: The economic research department of the Canadian Council of Agriculture made an investigation respecting the effect of the increased duty on raisins at the port of entry, and they found that the increase of two and one-third cents totals to the consumer nearly five cents a pound. This agrees with the statement by Mr. Trent of the Bread and Cake Makers' Association. Now, forty million pounds at five cents a pound totals $2,000,000, or about $2.20 for every family in the Dominion. And all this to give an advantage to one class!

Having studied the tariff question for a long time, I am more convinced to-day than ever that all advantages given to any class of persons by this means always involve a bargain. Sir Wilfrid Laurier, whose name is still eulogized by many in this house, called the tariff system, "The mother of corruption." I think those words apply to-day as truly as when uttered by that great Liberal leader. I see no reason for the government any longer to put off dealing with the tariff. While I never could see much good in a tariff advisory board, I must confess that the present one has been instrumental in showing to the public the utter absurdity of maintaining a tariff at all on very many of our products, particularly on the necessaries of life and the implements of production. I predict that the new leader of the Conservative party (Mr. Bennett) will have a stupendous task to reconcile the arguments of the protectionists for a higher tariff with a consistent line of action for himself and his party. The hon. leader of the opposition is in favour of dealing with Britain in preference to any other country. I gather that from his Toronto speech last November. His words were:

> Has England helped the world? How can I help England? We can trade with England, and we should trade with her in preference to any other country.

In the brief presented to the tariff board by the cotton manufacturers there appears the following sentence:

> As between British and American imports into Canada to-day the Canadian cotton industry needs a higher protection from Great Britain on these fabrics on which manufacturing cost is relatively high than it does from the United States.

Not only would they abolish the preference given to Britain but they want to raise the tariff higher than it is against the United States. Not only are they not satisfied with a preference in favour of Great Britain but they want to have a duty against the motherland higher than the rate levied against the United States.

The one argument for protection has always been employment for the wage earners, but the tariff in many cases not only lowers the standard of living for the working man but actually fleeces the consumer in general so as materially to diminish the volume of labour and compel our workmen to seek employment in other countries. Whenever the consumer is charged an unduly high price for any article the purchasing power of the public is correspondingly lowered, and the labour market is always affected to that extent. No protectionist can get away from that fact. Let me give a concrete case to illustrate the point: We will take sugar with the duty as it stands to-day. I select this article as one concentrated on by the research department of the United Farmers of Saskatchewan. There is a duty on Cuban sugar entering Canada of $1.89 per hundredweight, and despite that heavy duty we find that the tendency is to some extent to keep down the price of the refined article in this country. We refined in Canada for domestic use in 1926, roughly, 800,000,000 pounds of sugar. Now the refiners, in the brief they submitted to the tariff board, showed that Canadian prices ranged from 55 to 65 cents per hundredweight above American prices. We should be quite safe in taking 60 cents as the mean. If we multiply that by our sugar consumption we have at least $4,500,000 as the sum we pay above American prices for the amount of

sugar we use. In the same year the total wages paid by all refiners of Canadian sugar amounted to $2,897,109. If we deduct one-eighth of that sum on account of the 100,000,000 pounds exported there is left $2,533,000 as wages paid in the refining of sugar consumed in Canada; and adding to wages the salaries paid the total is $3,460,000, or approximately $1,100,000 less than the extra cost to the people of Canada for the sugar they are using to-day. This is the result of the operation of our tariff. This was brought out before the tariff board, and surely a government which calls itself a Liberal and low tariff government, as declared by the Minister of Railways (Mr. Dunning) on the authority of the Minister of Finance (Mr. Robb) last year, and in accordance with the principles embodied in the platform of 1919, cannot allow an incident of this kind to exist any longer than it will take them to deal with it at this session of parliament. Just fancy. In this case we could pension off all the men engaged in the sugar refining industry in Canada and save $1,100,000 if we bought our supplies abroad. Surely the government cannot countenance such an incongruity as that which now exists in our trade policy.

Before I conclude I want to say a word regarding immigration. The leader of the opposition (Mr. Bennett) wants to have more people in the country, and from one end of the Dominion to the other, apparently, all urban interests are calling for a vigorous policy of immigration. Why? What is the purpose of this demand? Why the present craze for more people? In the cities of the west this winter many have sought shelter in the goals of the country in order to be fed and to be kept warm. The leader of the opposition himself stresses the fact of unemployment when he states that Manitoba to-day is seeking help from the Dominion government to feed its unemployed. He says:

> If you will look at the young, vigorous men who are employed in shovelling snow in this city—

That is, Ottawa.

> —you will realise the lack of employment that prevails in Canada.

I quote that from page 14 of Hansard. At page 21 the hon. member is reported as follows:

> It is high time that something be done to put the power of parliament unitedly behind an effort to bring people over and settle them in this country.

What does he mean?

Mr. COOTE: Maybe he is expecting more snow.

Mr. EVANS: He goes on:

> We cannot continue as we are and maintain our present position very long.

Putting the two statements together, what are we to make of them? What do they mean? And what does the same man mean by putting forward two such views? I am at a loss to understand it. This, however, is a sample of the illogical utterances on immigration which we are hearing throughout the country. Last summer—and in the summer employment is at its height—we had to go on our knees to Uncle Sam and beg him to allow 4,000 of our men to cross the border daily in order to get a day's wages on which to live. It seems to me it would have been better for our immigration department to send our immigration officers to Windsor and other border cities and, by offering the same inducements as we are holding out to foreigners, persuade many of these people who were going over into the United States to go on the land. Instead of that we had to appeal to Uncle Sam to permit our men to cross the line to obtain a day's wages. The United States agreed to certain conditions, that those who were Canadian-born might cross daily to work for their daily wage, but that this number must be deducted from the quota allotted by the United States to Great Britain this year. So those gentlemen who boast and have boasted of a monopoly of patriotism will accept this favour at the hands of Uncle Sam at the expense of Great Britain, knowing the terrible unemployment problem existing there to-day. Is it reasonable? It certainly is not.

The excuse given for immigration is land settlement, but those who are interested in immigration are those who like to see a hungry crowd around their factory doors every day. Those are the only people who are benefiting to-day by immigration, and I can see no other purpose in a vigorous policy of immigration than to lower the cost of labour and consequently lower the wages of the working men in our cities; I can come to no other conclusion. Those are the men advocating immigration; they are the ones who want raw material for their own factories brought in free, but the policy followed in land settlement is to penalize the primary producer in the prices of his tools and necessary supplies. If land settlement is the object, Mr. Speaker, I want to say that all we have to do is give the man on the land a square deal. If the policy followed in respect of urban industries were followed with regard to agriculture, all our waste places within reach of every railway would be occupied to-day. Then there would be no need of the

despairing cry of the leader of the opposition, as reported on page 22 of Hansard in these words:

> Now, sir, this question transcends party; it is larger than the lives of parties because it strikes at the very life of this Dominion. We must have settlers.

Another feature I would like to mention in connection with immigration is this: If we decide on a policy of immigration the government should engage in this work itself; it should not be given into the hands of railway companies or even religious bodies. It should not be dealt with by private concerns of any kind. If immigration is needed we should have a definite policy to follow, and the government should carry out that policy. In the return to an order of the house dated February 24, 1927, it was shown that 29 clergymen of the Roman Catholic church were in the employ of the government in immigration work. This has caused a great deal of ill-feeling and comment of a caustic nature throughout the country. There is no need for it, because this is work which should be done by the government. If immigration is needed at all it is a work which rightly belongs to the government. In the past we have seen private companies importing men for their own work; I mention the British Empire Steel Corporation as an example; they have done it more than once, to the detriment of the men themselves and to the embarrassment of this government. I believe our immigration policy to-day should be to let in those who wish to come, if they are from the nations of which we approve and if they are mentally and physically sound. We do not need to spend money by the millions of dollars on any immigration scheme.

These are some of the things which I wish to bring before the government before their policy is laid down in the estimates and the budget, and I hope that in the discussion of these questions it will be understood that I am not looking at these problems from a local standpoint but from the viewpoint of the welfare of the whole nation.

Mr. T. L. CHURCH (Toronto Northwest): Mr. Speaker, I very much regret that in the speech from the throne the country has very little with which to be either disappointed or satisfied, because the speech from the throne deals with nothing. It refers to nothing except evasions, postponements and references to this commission and to that court. One of the essentials of a speech from the throne is to give the representatives of the people in parliament an opportunity to lay before the house and the government some of the economic ills prevailing in the country from coast to coast, but in looking over this speech from the throne it will be seen that it deals very largely with platitudes; it contains an apology here and an excuse there, an evasion here and an "if" there; it does everything but make some adequate attempt to solve the many great economic problems from which the workers of this country are suffering to-day.

It says nothing at all about the three greatest problems confronting the British Empire at present; I refer to trade, defence and migration. It ignores the whole problem of marketing, both domestic and empire. We have been sending delegates to the old land constantly; almost every train and boat overseas takes a cargo of them, but they fail to do anything to solve imperial problems—or to give effect to the findings of the empire marketing board. It is no wonder that Australia and New Zealand are doing all the window dressing in the old land in relation to trade and migration, and they are to-day getting the cream of the emigrants.

The first corner stone in an immigration policy is to keep the people we already have here and to stop the exodus, but the speech from the throne ignores that entirely. The second essential is to provide work for Canadians at present in this country, but nothing is done to attain that end either. Parliament has been summoned here for the purpose of improving conditions, but the members might better have stayed home so far as the program presented by the government is concerned. In my opinion the government have shown themselves incapable of bringing forward any legislation which will help solve these problems and relieve conditions which exist all over the country. There is no relief for any of the provinces; there is no adequate protection for industry; there is no social legislation in the way of an adequate and up-to-date pension scheme or some system of unemployed insurance; there is no legislation to check the rush of our raw materials to the United States in the crude or semi-crude state, and there has been nothing done to prevent the dumping of cheap, shoddy European and American goods into the larger centres of population.

The results of all these difficulties are to be seen everywhere in closed factories and unemployment. We have no legislation presented which is designed to benefit the maritime provinces, the prairie provinces or those provinces at the extreme west; the speech from the throne deals with nothing and will amount to nothing so far as the good of the country is concerned. It simply shows that we have

a government to-day which is absolutely incapable of taking up these problems and offering any reasonable solution for them.

When all this tumult and shouting of the opening of parliament dies, what will the harvest be? What has parliament been called for? Is it called just to listen to the sounding of trumpets and the booming of guns while unemployment is rampant in the city from which I come? Notwithstanding what this government or the provincial government has said, the provincial government never at any time made a survey of the unemployment situation in the province or city which I have the honour to represent. The speech from the throne refers this problem to an endless conference so that it will go around in the same circle as we had a year ago in connection with the coal problem. To this conference or court or commission is referred the question of the resources of Alberta, another economic question, and the question of the St. Lawrence waterway. To another commission has been referred two or three other matters in the report.

The government state: We have nothing to do with unemployment; all that we have to do with unemployment is to launch a great basic industry in the city of Ottawa known as the ambassador cure for unemployment. We have gained a seat at Tokyo, Japan, and when the nominee goes over there, would that Canada had a Gilbert and Sullivan to set to song and verse the burlesque of the sending of that so-called ambassador to Tokyo, Japan, and other capitals. A government that has abandoned the Japanese alliance treaty for the protection of British interests in the Pacific, a government that has refused to give a dollar for the Singapore base, has the temerity now to come before parliament and continue a so-called ambassador cure for unemployment by sending an ambassador to Tokyo. Why not send ambassadors to Italy, China, Germany, Constantinople, Pekin all the capitals bordering on the seven seas?

This government have stated that they have nothing to do with unemployment; that under the British North America Act unemployment is for the provinces and municipalities. We say to the government that unemployment is a matter for the federal government under section 91 of the British North America Act. They are in charge of the tariff, the banking laws, the transportation laws, the immigration laws of the country and for the exodus of Canadians from Canada; and the blame for the present condition of unemployment rests on the federal government. Instead of the government dealing with this problem, they say nothing about it in the speech from the throne. They are not ready to go as far as they did years ago when they were prepared to pay one-third of the cost of unemployment relief, the provinces and municipalities to pay the rest of the cost. It is all very well for them to make a football out of it. The responsibility is with the Dominion government of the day to see that the people of Canada do not suffer, to see that some remedial legislation is introduced into the house. I regret to observe, however, that no such amendment for the benefit of the worker has been mentioned in the speech. Parliament has often legislated for the benefit of the trusts and combines, the bankers' association, the railways and others, but when it comes down to a question of doing something for the unemployed in the urban centres of population, the government is content with a policy of drift, and will do nothing to try to remove the burden from the working classes of this country. The first duty of a government is to look after the health and condition of its people.

Apparently all the government can do to relieve unemployment is to give a lot of politicians jobs as ambassadors in Berlin, in Pekin, in Constantinople and in all the other capitals of the countries washed by the seven seas.

A few favorite Canadians are to be appointed ambassadors at the public expense, while other Canadians have to go as ambassadors at their own expense to search in a foreign land for the jobs that they cannot find in their own country. Many of them returned men who fought for Canada in the great war, at the hazard of their lives.

The great industrial system of the United States was built up on the principle of protection and solved unemployment. In the days of Horace Greeley opportunities for employment in the United States were threatened by imports from Europe. To-day opportunities for employment in Canada are threatened by imports from the United States. The United States did not require the founders of American industry to go before a tariff commission to persuade the commissioners that the tariff should be so changed that their industries would be able to employ Americans in their own country instead of driving them to seek employment in foreign lands. Nero never fiddled while Rome burned the way this government is fiddling in appointing a tariff commission to solve the economic problems of this country. The tariff is not a party question, it is a

matter of economics that concerns our farmers and toilers in the various centres of population. But instead of announcing in the speech from the throne some measure of protection and safeguarding legislation that would solve our economic ills, nothing is being done by the government to relieve our unemployed who are asking for a job that they may get bread. Many industries are closed up altogether, others are working only 50 per cent, and even the great agricultural industry of the west is suffering.

Under the present government the question of unemployment has been made a political football between the federal government and the provinces. The Prime Minister referred to a statement made by Mr. Ferguson the other day in reply to York township's application for help re unemployment. I have been through Mount Dennis and Silverthorn and other places in West York, and there is much suffering and unemployment and returned men there are receiving $25 a week in some of the sweat shops for two weeks' work, and girls working for $8 for two weeks' work. The unemployment situation is so bad in the city of Toronto that they have had to open up the police stations at night in the centre of the city. Last night dozens of men were brought in and slept in the stations. Let me read one front page advertisement in the late editions of the evening papers of last Saturday:

> Major Ord, D.S.O, secretary of the poppy day fund reports a large number able-bodied, willing-to-work veterans with families without a job this winter. He is appealing especially just now for clothes for men, including socks, underclothing, boots, overcoats, trousers and coats. Kind people who have cast-off clothing to give should telephone Hill 2404 or 2290.

They had to pass the hat around on Armistice day; a tag day is necessary for the relief of unemployed soldiers who fought the battles of Canada in Flanders and France. It will not be necessary to have a tag day to raise $500,000 plus $140,000 to maintain Mr. Massey and his retinue at Washington and a minister at Tokyo or a tag day for the upkeep of Canada House and Mr. Larkin in London. It is a humiliating position for the people of this country to be in that we have to have a tag day and beg money for the men who fought the battles of this country in Flanders and France, and this is very largely due to the fact that the economic and soldier policy of Canada is all wrong and should be changed. Therefore I regret that in the speech from the throne the government has failed to bring down any measure of relief to prevent the dumping of foreign goods, to stop the exportation of raw material, to give an adequate tariff that will solve all the economic ills of every province in confederation and bring about a united and happy Canada, stopping the exodus of our people to the United States and reducing unemployment.

It is all very well for Mr. Ferguson to say that there has been no unemployment. He has been very happy in finding employment for a gentleman from New York, Mr. Grautstein, who has been presented with the title deeds to the Ottawa valley and the Gatineau, and he has extended rights and privileges to Mr. Backus, another American millionaire, in the northwest part of new Ontario. The Drury government gave Backus a principality of timber. Another government has come along and given him extended resources and water-power rights, so that while Sir Adam Beck has been dead for only a few years, his whole life work has been destroyed in the Gatineau contract and others. Certainly there is no unemployment for these American millionaires and others who cross over the border and find Canada a most happy hunting ground and seize the title deeds to the water powers and the mineral wealth of that great northwestern country. He who has the water power rights holds the key to the development of a district.

What was done at the provincial conference with regard to unemployment? Thousands of dollars of the taxpayers' money was spent to bring those people together, but nothing was done except to make a political football of the question, and nothing was done to take the responsibility for unemployment off the shoulders of the municipalities that are being taxed to death by both federal and provincial government. As Professor Fay, of the university of Toronto, said, the returns published by the Bureau of Statistics and the figures published by the Labour department are not reliable. I cannot get a reply from the present Minister of Labour (Mr. Heenan) to a petition sent to me by men from West York who complain of the non-enforcement of the Alien Labour Act in the bringing in of forty men from the southern states to work in the constituency of West York as nurserymen in the market gardens of that riding. I sent a petition to the minister; I have written him five or six times, but I cannot get a reply either from the deputy or the minister himself. The minister is a deep sea diver and no doubt he has taken the Alien Labour Act down with him to the bottom of the sea. When it comes down to doing something for the poor unemployed and the working class of this country, the government is content

to pursue a policy of drift and do nothing to remove the burdens of the working men. The first duty of a government is to consider the health, happiness and prosperity of all classes of its citizens, but apparently all that this government can do to relieve unemployment is to give a lot of politicians jobs as ambassadors abroad. A few favoured Canadians have been appointed ambassadors at public expense, while other Canadians to the number of six hundred thousand are sent across to the United States as ambassadors looking for a job in a foreign land. They are not treated as is His Excellency down in Washington, where everybody is going down to see him in his wonderful uniform and three-cornered hat, with his glittering sword. These other six hundred thousand Canadians are sent to a foreign land to look for a job which they cannot find here, and many of them fought even unto death for the liberties of this country, but they have been driven out of Canada by the economic policy of this government. When the working men of this country ask this government for bread, all they are offered is a stone by the platitudes and high-sounding and empty phrases in the speech from the throne. Many industries in my own city have been closed up altogether and others are working only fifty per cent of the time under the policy of this government. The policy of this government is a policy of enmity to the production of jobs for Canadians. That great industry that manufactures jobs and embassies for worn-out politicians will not make Canada a nation. The working out of that policy will make Canada a nation of ambassadors.

I want to say a word about the status of Canada. When Canada is in trouble or war threatens we always 'phone for the British fleet. When Canada was in trouble on the great lakes, our mariners had to sound their sirens morning, noon and night for American life-saving boats to come to their rescue.

I am a good Canadian nationalist because I am a true British imperialist. The sense of Canada's nationalism increases and multiplies through our love of British unity. The true Canadian nationalist will not want to see this country a dead beat on the taxpayers of the British Isles for the upkeep of battle cruisers and a navy to maintain the safety of Canadian shores and for the protection of Canada's commerce on the high seas. The true Canadian nationalist will not want to see Canada a nation only in the advertising pages of American journals. As a nation we are a pauper so far as the actual reality goes.

The three greatest problems of empire are trade, defence and migration, but there is not one word in the speech from the throne about empire trade, defence, immigration or the empire marketing board. The empire marketing board has found that only twenty-five per cent of the fruit used in the motherland was produced in the British Empire. The true Canadian nationalist does not want to see Canada a nation just on the advertising pages of American journals; he wants something in real life. Canada is a nation all right, yes, at five o'clock pink teas at Washington and ten o'clock dinners at Washington. Canada is a nation so far as that goes, a nation such as the Irish Free State or Patagonia or Bogota and every petty country on the earth—we are a nation in the same sense that they are. We have a contemptible little navy which hugs the shores, never leaves our coasts, and for the past year has been locked up in a garage at Halifax. That is the proper place, in my opinion, a most suitable place and lockup, for any change in the status of Canada. It takes more than embassies and Vincent Masseys and P. C. Larkins to make a nation; it takes more than pink teas and ten o'clock dinners at Washington to make Canada a nation. I remember reading in history that Henry VIII threatened the Lord Mayor and council of London that he would remove the seat of government from their city. The Lord Mayor fell on his knees and asked, "Will Your Majesty also remove the Thames?" An American politician to whom I listened, a Republican, boasted that his party had made the United States a nation. He boasted to such an extent that he almost gave credit to his party for the broad rivers and fertile fields of the American west. I may say that I do not know whether the American west owes its broad rivers and fertile fields to the party in power, but I do know that the United States owes its greatness to the broad rivers and fertile fields in the west. The people whom I have the honour to represent have no more pride in the nation-builders of their own party than I have in the nation builders of the party opposite. I have no use for the nation building that Sir Robert Borden, the Hon. Wesley Rowell, and the other oracles of Union government pretended to do at Versailles, dividing Britain's representation at Versailles and at Washington. I have no use for the nation wrecking separatism of Sir Robert Borden's proposal to establish a Canadian embassy at Washington. That embassy is not now and never will be anything in the nature of a centre of service for the good of Canada. The embassy at Washington is a sink hole, and the Canadian high commissioner's office at Lon-

don is not much better. These embassies, or sink holes, as I call them, will be duplicated all over the earth by this government. When the seed planted by Sir Robert Borden's and the Right Hon. Mr. Mackenzie King's separatist embassy at Washington has reached maturity, what, oh what, will the harvest be? The harvest will be reaped by the taxpayers of Canada. That harvest will not be in the form of crops that will give an increased profit to the farmers of this country or fill their barns, but it will be in the form of taxes that will empty their pockets. Canada will then be spending two or three million dollars per annum in interest and debt charges on embassy buildings and on the salaries and upkeep of useless Canadian ambassadors, and still more useless staffs of clerks. Canada must spend two or three million dollars per annum in order to prove that we are in an academic way a nation, a nation without a navy or an army.

Never in the entire history of Canada has she at any time been able to defend herself. We are a nation only in a mythical and academic sense. If this was a mock parliament, the speech from the throne would be fitting and all right. I remember the prime minister who leads this house help in preparing a speech from the throne for the university of Toronto students, in mock parliament assembled, and it contained far better ideas of essential measures for solving the economic problems of this country than does the present speech from the throne. A nation is not known by the number of ambassadors it keeps. Canada owes it to the god of nations that Canada became a nation the day a Canadian keel first parted the waters of our mighty rivers and great lakes. Canada is a nation unsurpassed in the present day and unapproached in history in the magnitude of its coastline and the might of its navigable waters. Canada has a coast line of nearly 2,000 miles from the gulf of St. Lawrence to the international boundary where lake Superior ceases to be British waters and becomes a coast water of the United States. I could not get much information from the wonderful labour and statistics bureau. The bureau tells us there is no unemployment, but they could not tell me how many sailors were on the great lakes or how many boats or equipment of any kind.

Canada has a lake marine of 300 vessels with a tonnage of one and a half million. Canada has 5,000 sailors and merchant seamen going down to the great lakes in ships and doing business in the great waters of an inland ocean. Canada has a government asleep at Ottawa that chatters about the new status of Canada. Canada is so much of a nation that Canada's national God-save-the-King government must be opening embassies wherever there is some political favourite to be placed in an easy job. Three years ago I raised the question of life saving on the great lakes; I pointed out that there were not life saving crews on those lakes and no craft or equipment. Hon. gentlemen will remember that cold December when many of our brave seamen perished in the great storm on the great lakes. Canada has a government which is asleep at Ottawa, but we find them sometimes chattering about the new status of Canada. Canada is so much of a nation that the separatist policies created by Sir Robert Borden and continued by the government headed by the right hon. member from Prince Albert will force the taxpayers of this country to pay not less than $3,000,000 per annum in the upkeep of embassies and the salaries of ambassadors and clerks of embassies. Canada is so little of a nation that there is not a decent life saving station on the coast line of Canada's lakes and rivers from Cornwall to beyond Fort William, except at Toronto where the splendid life saving station is maintained entirely by the patriotic taxpayers of my own city. The Canadians assembled in this House of Commons should blush to follow a government that calls itself a national government and leaves the many thousands of brave lake sailors, as fine a type of men as ever breathed a breath of life, deserted by their own country in their hour of need.

The grain growers of the west and the banks and industries and commerce of the east should be ashamed of this country's callous neglect of Canada's lake sailors. The mother country produced a great Liberal between 1870 and 1880, Samuel Plimsoll, M.P., who directed his efforts against what was known as coffin ships, and who forced legislation to provide for seaworthy ships and life saving aids and help to navigation. Plimsoll, a great Liberal, whose liberalism was of the true and genuine variety, unknown in this country except in the ranks of the hydro-Conservative party in Ontario, fought the hard battles of British sailors who were being sent to death in overloaded cotton ships. The Conservative government of Britain had promised legislation, and when it was proposed that parliament should take recess without bringing down the bill demanded by Samuel Plimsoll, Plimsoll stood up in the British House of Commons and told the ministers of His Majesty's government that they were a set of murderers. Mr. Plimsoll emphasized his sentiment with

oaths. There was a parliamentary scandal, but that great hearted and true Tory democrat and progressive conservative Benjamin Disraeli took the situation into his own hands and to-day the Plimsoll mark of seaworthiness is on the hull of every British ship. There is no Plimsoll in the House of Commons here, and perhaps there is no public opinion to enable a man to do Plimsoll's work if he tried. There is no leader among the hon. gentlemen opposite who has as much true and genuine liberalism in his whole body as Benjamin Disraeli had in his little finger. I hope the hon. member for Calgary (Mr. Bennett) will be spared to prove that here is at last a Disraeli in the camp of the Conservative party. We all honour our leader, with his colourful personality, his enthusiasm, and his warm human sympathy for the under-dog, and I predict for him a great victory in the country. You may have all the organizations and all the money you like, but if you have not public opinion with you all the organizations in the world will avail nothing in an election contest. All these hon. gentlemen opposite profess to have changed Canada's status. Canada is not a nation but a colony in the kingdom of mammon on the great lakes to-day as Canada was a colony in the kingdom of mammon on the great lakes in 1867.

The grain growers of the west whose crop is being conveyed by the sailors on the lakes care not a hoot what becomes of these great sailors. The signs of nationality are in the souls of these brave men, the great sailors of the great lakes who carry the grain crop. They go out in the winter storms so that the grain growers of the west may save a few cents a bushel on the price of their wheat, or that the banks and corporations of the west may increase their dividends—and what has been done for the sailors of the great lakes? Nothing. If their vessel runs on a rock in the darkness and storm of a December night, it can stay there until that ship of the Canadian nation, flying the national flag of Canada, is pulled off the rock by a steam tug operated by the American life saving service and coast guard.

I congratulate the flock of Liberals in this house. There is one solid block of Liberal members who ought to be proud to follow the belling of such a party, to support such leaders as hon. gentlemen opposite have shown themselves to be in their dealings with the great sailors of the great Canadian lakes. I refer to the hon. members for the maritime constituencies of East and West Lambton, North and South Huron, East Essex, North and South Bruce, North and South Grey and East Algoma. Here are ten constituencies in which the sailors of the great lakes have their homes. These constituencies have elected ten Liberal members. These ten members have supported a Liberal government. That government has made Canada a nation, they say—yea, a nation. Why, a crown colony—yes, the irresponsible ruler of a crown colony—would be ashamed to offer the brave merchant sailors of that crown colony the treatment that this government and the opposite party—and my own party for that matter; it was not very much better—has dealt out to the merchant sailors of the Canadian nation.

The politicians of the Liberal party have long put away Canada's status as a colony. They have loaded Canada's payroll with ambassadors. There is not a life saver on the payroll. Their Canadian embassies are to be on the stately avenues of all foreign capitals. There are no life saving stations on the shores of the great lakes. The Toronto Star, the Winnipeg Free Press, the John S. Ewart and, yes, the Hon. W. L. M. King type of Canadian nationalist believes that when Canada's safety is in peril of war the Canadian nation should ring up the British navy. These mythical nationalists, when Canada's freighters are in danger in peace, are content to have the captain of the doomed vessel whistle for help from a United States life saving crew.

The closing days and nights of navigation in the season of 1927 recorded a great story of unbroken fortitude and of unshaken endurance which proved that our countrymen, the sailors on the decks of those doomed vessels, were blood brothers of the soldiers who brought glory to Canada at St. Julien, the soldiers who could not be blown off the ground they gained at Passchendaele, who climbed the heights of Vimy Ridge, who gained the victory at Amiens and many another field of glory, men whose names will forever thrill every true Canadian. These sailors struggled or waited hour after hour; if help came to them it was help organized by the valiant hearts and strong bodies of their own country, or if help came it was help bought and paid for by the taxes of the people of the United States. That is Canadian nationality for you. The struggle was a story of glory for Canada's sailors. The struggle was a story of shame for Canada's politicians. The tragedies of the great lakes in the closing hours of navigation last season showed in its true colours the stuff that Canadian nationalism is made of. The Winnipeg Free Press, Toronto Star, John S. Ewart liberal variety of nationality is the nationality

that writes and talks and chatters at banquets and refuses to pay under the terms of that nationality.

Canada is a proud and haughty nation. It sends its merchant ships into the winter storms with nothing to do but whistle for a United States service tug when the ship is in danger and to fill the air with the distress signals of a siren with the hope that a United States life saving vessel will put to sea and save the lives of Canadian sailors. Canada, a nation, and in trouble, has a navy maintained at the expense of the old country taxpayer to guard the safety of Canada's shores in war.

I would like to see some immediate action taken as to prison reform, and a special committee should take it up. I find that sixty-four youths of sixteen years of age are in Canadian penal institutions. Are we yet living in a stone age? Canada needs a new broom and reform to restore these men in peace as the Red Cross saved a wastage of men in war. We are away behind the times, and a searching inquiry is long overdue. Grand juries should visit these institutions and make rigid, impartial investigations.

I am surprised, Mr. Speaker, that there is no mention in the speech from the throne of any additional legislation for the further relief of Home bank depositors, many of whom are to-day languishing in charitable institutions. In my opinion there should be no more mergers of our chartered banks without the consent of parliament. A large part of the stock of those banks is now held in the United States. The prices of our bank stocks have been going up steadily, and with so many United States stockholders it would be found impossible in the case of another bank failure to collect the double liability from these stockholders, for they have no property within the jurisdiction of the Canadian courts.

I am sorry to see that the Civil Service Act has been practically abolished. The Post Office Department to-day is run by patronage, even for special, temporary help at Christmas time. The same condition of affairs obtains in the Customs department. We would yet have the old order of affairs in this department and in the administration of the affairs of the Customs department to-day had it not been that the Conservative party, particularly through the instrumentality of the hon. member for Vancouver Centre (Mr. Stevens) forced a house cleaning? Why, the customs commission has spent half a million dollars on judges and lawyers' fees, but it has found out nothing that was not uncovered by the Customs committee of this house—except that the landing

men and other customs employees should be appointed, not by the Civil Service Commission but by the government of the day. Truly, it is a wonderful report on nothing not already known before they started.

But the Department of Soldiers' Civil Re-establishment is in a worse position still; there it is all patronage. If there is one department that should be free of politics it is the Department of Soldiers' Civil Re-establishment. But what has happened? The minister has shown his determination to put the Liberal party on the map and the returned soldier off the map. For instance part of the staff of the Christie street hospital have been fired. Why? Apparently simply because they were foolish enough to go to the front and fight for their country. As to the minister himself, he is simply an absentee landlord, and patronage runs the department.

Then I come to the Department of National Defence. The minister of this department is also actively engaged in putting the Liberal party on the map, and the returned men off the map. I suppose he intends to unlock the door of the garage at Halifax and let our navy run up and down the coast. But really I hope he will not send the boat out to sea, and certainly I should not like to see the minister himself venture aboard for I am afraid it is not a seaworthy craft. This navy is to be replaced by two destroyers which are to be built in England. I wonder he has not gone to a German or a United States shipyard, because the very pens and pencils used in this house, the keys of your office, your desk, your post office locker, are of foreign manufacture—made in the United States. Even the atlas which is sent out by the Immigration and Trade and Commerce departments is printed in the United States. And then the government talks about unemployment! But this proposal to secure two new destroyers from England is a contemptible payment for our maritime protection. I was very much amused at the activity of our first sea lord and admiral of the fleet during the recess. He has been going up and down the country and visiting various centres to help Liberalism, but his fleet has been lost or stolen or has strayed away. I should like to find out who is to be the admiral of the proposed new fleet. I would suggest the hon. member for Lunenburg (Mr. Duff). I think he would make a most excellent and popular admiral of the new fleet.

I have referred to the Minister of Soldiers Civil Re-establishment as an "absentee landlord". But he is not the only wanderer. We have seen the various members of the cabinet taking Cook's tours, some going to England,

others to the United States, and one to Australia. We used to have one or two Cook's tourists in our party, but they were not in it with hon. gentlemen opposite in their restless desire to sail the seven seas.

Now, Mr. Speaker, I think I have talked—and also thought—for nearly forty minutes. Not every member can think for that period of time. But I have only dealt with the fringe of my subject. I am not supposed to be the leader but I have said more than the Prime Minister uttered during the three and a half hours that he held the floor. Let me say that I can find no suggestion in the address and no promise of any plan for solving the economic ills which now confront the Dominion. The speech from the throne written by the right hon. gentleman who leads the government to-day might well have been delivered to a mock parliament at the university. I do not care to continue the debate, Mr. Speaker, because I understand we have a function to attend in the other chamber.

On motion of Mr. Garland (Bow River) the debate was adjourned.

On motion of Mr. Mackenzie King the house adjourned at 5.45 p.m.

Thursday, February 2, 1928

The house met at three o'clock.

PRIVATE BILLS

FIRST READINGS

Bill No. 14, to incorporate Niagara Falls Memorial Bridge Company.—Mr. Pettit.

Bill No. 15, respecting certain patent application of William H. Millspaugh.—Mr. Jacobs.

Bill No. 16, respecting certain patent applications owned by the British Steel Piling Company, Limited.—Mr. Jacobs.

Bill No. 17, respecting the Saint John River Storage Company.—Sir Eugene Fiset.

Bill No. 18, respecting a certain patent owned by Canadian Cinch Anchoring System, Limited.—Mr. Jacobs.

CUSTOMS INQUIRY COMMISSION

Right Hon. W. L. MACKENZIE KING (Prime Minister): For obvious reasons I have had placed on the table in advance the evidence taken before the Royal Commission on Customs and Excise. I hope the house will pardon me for not having attempted personally to table the volumes of evidence now tabled. I desire to lay on the table also the ten interim reports of the Royal Commission on Customs and Excise. With respect to the interim reports I move, seconded by the Minister of Justice (Mr. Lapointe), that twelve hundred copies in English and four hundred copies in French be printed forthwith and that standing order No. 64 be suspended in relation thereto.

Motion agreed to.

PUBLIC ACCOUNTS

Hon. J. A. ROBB (Minister of Finance): In tabling now a copy of the public accounts may I direct the attention of hon. members and of the press as well to page XIV. In order to secure an independent audit of the balance sheet the treasury board instructed Messrs. P. S. Ross & Sons, of Montreal, Toronto and Winnipeg, to perform the task and their certificate will be found on the page indicated.

NATURALIZATION ACT AMENDMENT

Hon. FERNAND RINFRET (Secretary of State) moved for leave to introduce Bill No. 19, to amend the Naturalization Act.

He said: This bill is the same as the one introduced last year proposing certain changes in the Naturalization Act in the way of simplifying the procedure whereby naturalization certificates may be obtained.

Motion agreed to and bill read the first time.

DEATH OF EARL HAIG

On the orders of the day:

Right Hon. W. L. MACKENZIE KING (Prime Minister): Yesterday the hon. member for Toronto Northwest (Mr. Church) asked whether it was the intention of the government to adjourn parliament during the funeral in the old country of the late Field Marshal Earl Haig. I am at present communicating to ascertain whether or not the British parliament would in such circumstances adjourn and if so we shall do likewise. If there would be no adjournment of the British parliament, there will be no adjournment here. Before the day is over I hope to be able to give a final word to members of the house. In the meantime, I might say that instructions have been given to have—at the time of the funeral in London— the flags flown at half mast on all public buildings in Canada as a token of national respect to the memory of the late Earl Haig.

FARMERS BANK LIQUIDATION

On the orders of the day:

Hon. J. A. ROBB (Minister of Finance): Yesterday, on the orders of the day the hon. member for Halton (Mr. Anderson) asked the following question:

I would like to ask the Minister of Finance whether the Farmers Bank has been definitely wound up and a financial statement received from the liquidator.

I promised to give the hon. member a reply to-day. This is the memorandum I have received from the department:

On December 20th, 1926, the liquidator G. T. Clarkson, received his discharge from the Supreme Court of Ontario, all assets of the Farmers Bank having been realized upon and accounted for.

Out of assets estimated in 1910 at $2,000,000 odd, the total amount collected by the liquidator was $1,372,829. This included $314,880 collected on account of double liability as against $584,500 capital subscribed.

After providing for note circulation 100 per cent and paying legal and liquidation costs, nothing was left for depositors, the total of whose claims was $1,134,036.

UNEMPLOYMENT IN NOVA SCOTIA COLLIERY DISTRICTS

On the orders of the day:

Mr. R. K. SMITH (Cumberland): I should like to draw the government's attention to the rather startling state of affairs in Nova Scotia in the matter of fuelling of Canadian government boats with American coal, as outlined in part by a telegram received by me this morning which reads as follows:

Halifax, N.S., February 2, 1928.

R. K. SMITH, M.P.,
Ottawa.

Unemployment in colliery districts. Glace Bay mines, only a few days' work each month. Startling fact that at present time in port of Halifax Canadian government boats being bunkered American coal. This has been going on since 1921. Within past forty-eight hours Lady Laurier and Arleux bunkered American fuel.

In view of the information contained in this telegram and considering the very serious unemployment situation among the miners in Nova Scotia, thousands being out of work and in destitute circumstances—

Mr. SPEAKER: I would ask the hon. gentleman not to argue the matter but simply to put a straight question.

Mr. SMITH (Cumberland): I would like to ask the government if they will take immediate steps to have this unpatriotic practice discontinued—

Mr. SPEAKER: Order.

[Mr. Mackenzie King.]

Mr. SMITH (Cumberland): —and also supply this house with an explanation as to why it has been countenanced.

Mr. SPEAKER: Notice should be given of such a question. No argument should be made on a question put on the orders of the day.

GOVERNOR GENERAL'S SPEECH

ADDRESS IN REPLY

The house resumed from Wednesday, February 1, consideration of the motion of Mr. Ilsley for an address to His Excellency the Governor General in reply to his speech at the opening of the session.

Mr. E. J. GARLAND (Bow River): Mr. Speaker, as I address myself to a brief discussion of the question introduced in this debate, one or two at least of which are not included in the speech from the throne, I feel at the outset that I should join with those who have preceded me in congratulating the hon. member who moved the address (Mr. Ilsley) and the hon. member who seconded it (Mr. Beaubien). I have no difficulty whatever in most sincerely doing so, as I rarely listened to so careful and eloquent a presentation of the motion as I did on that occasion. There is, however, a little curiosity raised in my mind. When I learned that the hon. member for Provencher (Mr. Beaubien) was to second the address, there immediately occurred to me a very fervid declaration of independence which I had heard from the leader of the Liberal Progressive party not so long ago in this house, and I naturally wondered if the independence had been sacrificed in order to permit the hon. member to second the address. Now I am not particularly critical of that at all, at the same time I think that an explanation might well be made, because if independence has not been sacrificed, then I submit that next year it would be quite in keeping that the hon. member for Comox-Alberni (Mr. Neill) should move the address and that the hon. member for Nelson (Mr. Bird) should second it. If on the other hand the independence has been sacrificed, then surely the house would be at least interested, if not excited, over the information. I might even picture a more extreme case than that. We might have, for example, the hon. member for Winnipeg North Centre (Mr. Woodsworth) moving the address, and the hon. member for Labelle (Mr. Bourassa) seconding it. I rather think, however, Mr. Speaker, that before either of these gentlemen would undertake that re-

sponsibility they would at least like to have something to say in the drafting of the address. I am not sure what part the Liberal Progressives did take in the drafting of the address; I hope very little, if any, because if they took any part in it, it does not do them much credit.

One point was raised by the mover of the address that I wish to refer to. He spoke in terms of adulation of prosperity—that was not unexpected. Any government, whether Conservative, Liberal or Farmer or anything else, at least allows it to be inferred that it is responsible for the prosperous condition, and those who toil for the country get very little share of the credit. In the course of his address he went on to speak of the amazing results achieved from the coking experiments of last year. I knew myself that no amazing results had been achieved, but after reading his remarks I desired to investigate the matter a little in case I had been mistaken, and I find that in the year that has passed since the coking legislation was enacted, only one contract, that with the Nova Scotia Power Company, has been entered into. Under the terms of the contract the total capital that will be invested in the plant is estimated at $160,000. The output naturally would be very, very low, and if the coal industry of Nova Scotia is going to depend upon such an extraordinary form of encouragement as that, with the result I have pictured, I am not surprised at the conditions which led to the question that has been asked by the hon. member for Cumberland (Mr. Smith). However, that is just in passing.

I regret, Mr. Speaker, that the speech made no reference to reductions in taxation. It is true, the Prime Minister at a later date remedied this neglect by intimating cautiously that he had no doubt the Minister of Finance would, at the proper time, on the budget, I presume, indicate to the house substantial reductions. I hope so. I congratulate the Prime Minister on being able to make the announcement. But let me utter a word of warning at this moment. My hon. friends to my right, following their convictions, urge that reductions be made on the sales and income tax. The reason is quite clear to everyone. The more reductions in the sales tax and the income tax, providing the necessity for revenue continues, the longer will be maintained the most objectionable of all forms of taxation, that of the customs tariff. I submit, therefore, if the Minister of Finance is going to be in the happy position of making any material reductions in taxation this year, that those who are associated with him, as well as those in this corner of the house, who have always cooperated with him on this particular point, certainly will join in expecting that the reductions will be in the right direction. We hope to see material moderation in the customs tax on many articles. Not a mere ticking of the cotton duty, nor a mere dallying with some other bit of duty here and there, but a fairly general reduction. I would not ask for a monstrous reduction all at once. I grant you it is not reasonable to throw in the face of the manufacturing class anything in the way of great embarrassment at one time; but there are many commodities to-day that are carrying an absolutely undue privilege at the expense of the common people. Now, all I ask is that in the reduction of taxation this year a large number of the more important commodities at least shall receive a measure of consideration from the administration in the reduction of indirect taxation.

So far as the appointment of ministers to Japan and France is concerned, I must most sincerely congratulate the government. I think both from the point of view of our national position and our international relations the step is one which can well be justified, particularly with respect to Japan. After all, Canada's future will to a large extent develop along the line of expansion in oriental trade and oriental activities. At the present time no continent is receiving greater attention from all the other continents of the world than the continent of Asia. I think it is high time that Canada, so close to that great continent, should have representatives there who will take care of Canadian interests and do all they can to develop the most favourable trade and pacific relations with oriental countries. However, in the Prime Minister's remarks in this connection he made, I think, a little slip, which I am sure at the moment was not intentional, but which unfortunately may to some extent result in criticism in the orient. As the Prime Minister himself no doubt is aware, oriental countries are particularly sensitive, especially in their dealings with occidental countries; and the Prime Minister intimated that the proposed ambassador to Japan would represent Canada's Asiatic interests—Asiatic interests. I understood the Prime Minister to say so.

Mr. MACKENZIE KING: I think my hon. friend will find that I did not use that expression. At least such was not the inference I wished to have drawn. What I was stressing to the house was that there would be

only one minister on the continent of Asia, one on the continent of Europe, and that I did not think in the matter of diplomatic appointments abroad that this was travelling at a very rapid pace. That is the point I was making. The proposed minister will be to Japan only.

Mr. GARLAND (Bow River): I understand that; but as the Prime Minister is aware Chinese sensibilities, as well as the sensibilities of other nations on that continent, are very easily offended, and it may be that they will resent the suggestion that the affairs of their country can be handled in any way, either in regard to diplomatic relations or otherwise, from Tokyo. I am glad the Prime Minister is in a position to persuade me that there was no such intention behind his statement.

With regard to the remarks of the leader of the opposition (Mr. Bennett), I regret that they were made. I regret it very sincerely because I am afraid that, again due to oriental sensibilities, even the nation of Japan may not now be willing to accept the kindly intentions of the Canadian government if it finds that His Majesty's loyal opposition in this house is opposed to the appointment at Tokyo. I rather think that the Japanese government will hesitate to accept the interchange of ministers as long as any large portion of this house is opposed to it. Let me say, then, Mr. Speaker, speaking, I trust, the view of some members around me if not all of them, that so far as we are concerned we heartily approve of this appointment and sincerely hope that the Japanese government will accept the offer in the spirit in which it is tendered.

Recently my attention was called to the organization in the city of Montreal of a council to study Pacific relations. I simply remark that as an indication that other portions of Canada, besides the government and besides the members of this house, realize the necessity for taking a deep and personal interest in what is going on in the oriental countries and in what is likely to go on.

The hon. member from Calgary, who discussed many things in his address—

Mr. ADSHEAD: West Calgary.

Mr. GARLAND (Bow River): I beg the pardon of the hon. member for East Calgary (Mr. Adshead). There is another illustration, Mr. Speaker, of the sensibilities of people, and one has to be very careful! The hon. member for West Calgary (Mr. Bennett) in his remarks referred with lamentation to the outflow of wheat, of mineral products, of pulp and pulpwood, and even of paper. He just bemoaned the fact that they were going out. He did not say anything about an embargo on their going out, he did not make the slightest suggestion on what should be done, and I presume his remedy would be to cap all the oil wells, stop all mining development, and prevent the farmers raising more wheat than could be consumed profitably at home. I am not at all sure that that is a fair conclusion to draw from his statement, but in the absence of a more reasonable explanation from him that conclusion is certainly inescapable.

An hon. MEMBER: He said they ought to be worked up in Canada.

Mr. GARLAND (Bow River): Yes. And I wonder how many children the hon. member who has interrupted me is prepared to provide to eat up the surplus? I wonder how many hon. gentlemen are willing to undertake the responsibility of consuming in Canada our mining products, and our paper production, or even to take care of a fraction of our pulpwood production. Why, the hon. gentleman himself is smiling at the suggestion because he realizes its absurdity.

Again the question of immigration came up. I wish to direct attention to just one little point in that connection, because no doubt ample opportunity will be provided later on fully to discuss this question before the parliamentary committee which we are told will probably be appointed. The one point I wish to discuss at the moment is medical examination of immigrants before they come to Canada. The leader of the opposition let the house understand that there was a good deal of criticism of this examination, and I am not sure whether he himself directly criticized it or not, but when I listened to him I took it that he was criticizing medical examination overseas. Now, Mr. Speaker, that was one of the many changes which our group here have advocated from the very outset. It is one of the changes which we feel to be absolutely essential to the proper treatment of these people whom we ask to come to our shores. I want to picture to you one or two incidents that have come to my personal attention. One is the case of a family encouraged to come to Canada by our immigration agents overseas. They sold out their little business over there, took passage on board ship to this land of hope, and when they arrived at the quarantine station they were informed that the youngest member would not be permitted to land because of a certain

physical disability. As a result that unfortunate family were compelled to deport themselves and face the heart-breaking task of reinstating themselves in a decent economic position in the old land—an almost hopeless task under the circumstances. I have another instance in passing. The husband preceded his wife to Canada and secured a farm in order to pave the way for his wife's arrival and have a house ready for her. When she came over subsequently she was not allowed to land because of physical disability, with the result that the poor fellow's effort and investment had to be abandoned. If medical examination had taken place on the other side these two horrible tragedies, typical of many others, would have been averted. I most heartily approve of the medical examination of immigrants overseas. I do not think anything should be done to limit that work. Indeed, it should even be extended, if you are going to continue an immigration policy.

Now, Mr. Speaker, it is not with any idea of self-adulation or of patting on the back the little group to which I belong that I remind the house of the progress of events during the last six or seven years. When we came down here we had in view what were regarded at the time as fairly radical reforms. During the interval we have steadily propagated our views and, I am glad to say, with more or less success. For example, we wanted a revaluation of soldier settlers' lands. We were, I grant you, not alone in that. Hon. members opposite and indeed hon. members in all corners of the house were at times more or less sympathetic and subsequently the legislation was secured.

The question of long term agricultural credits was one of great difficulty but last year even that was solved. The return of the Crowsnest rates on wheat and flour products was attained, but not on the west-bound commodities. I am rather sorry to say that this government disappointed us in respect to west-bound commodities under that agreement. We secured for the primary producers, with the cooperation of a few hon. members opposite, the restoration of the rates on grain and grain products. Now as to government inspection of Canadian banks hon. members of the Labour party were, I may say, just as active as we were in regard to that question, and as a result of constant agitation and the complete disaster in connection with the Home bank the government was finally induced to introduce government inspection of banks. As regards old age pensions my friends of the Labour party deserve the largest measure of credit but we have been glad to cooperate with them and to support them. I could continue citing many other social and economic measures of national importance that have been achieved, but it would take some time to do so. By the way, on the question of the tariff we have not, I regret to say, been so successful. We have, it is true, received a measure of reduction on agricultural implements, one of the commodities upon which we made a direct attack, and on automobiles, but outside of that nothing very much has been done with the tariff. As I said at the outset, however, we anticipate hopefully the introduction of this year's budget and we sincerely trust we shall be able to go back to the west and congratulate the Liberal party on its loyalty not only to the recommendations of the tariff board but to the principles and policies upon which the Liberal party pins its faith.

There is, however, one important question that has agitated this house during the seven years and that is the question of solving the fuel problem by the adoption and practical application of a national coal policy. No solution is yet in sight although we are closer to one this year than we have been in the last seven years. Before I go on with the details of the discussion on this particular point I would like, in passing, to remind the house that in the year 1926 alone Canada expended for foreign fuel and also for freight charges on that fuel to transport it to Canada about $114,000,000. I do not wish to be taken very seriously on that point because that total amount of course includes steam and bituminous coals for manufacturing purposes and we are interested at the moment in domestic coals. The central provinces in 1926 paid out for household coal and freight thereon no less than $52,000,000. If there is any reasonable economic means by which we can retain a share of that purchasing power within the Dominion there is no doubt such action will react to the advantage of consumers generally. I admit there is danger in the argument, but just in passing it makes a point upon which we might be justified in touching. In view of the fact that economists such as Professor Layton of England and others tell us that the average turnover in a year of money is from three to ten times, if you multiply $52,000,000 by three to ten times you have some conception of the vast purchasing power which is used not in Canada but elsewhere. True, I might just as readily argue that the material economic welfare of Canada was not affected by our allowing the purchase of that quantity of goods outside,

because in the very nature of trade exchanges we would probably receive an even break. That, however, is going into the realm of academic discussion and at the moment is a little aside from my purpose.

Canada as a whole possess about 14 per cent of the world supply of coal. Alberta, my province, alone possesses coal resources greater than all the known coal deposits in the rest of the British Empire. Surely that is a potential source of wealth worth developing and worth assisting with a view to its development. I give a good deal of credit to Sir Henry Thornton who has been sympathetic in the past to the possibility of developing this resource and I hope to secure his cooperation and assistance in the future. I give a good deal of credit to the provincial government of Alberta which since 1922 has spent large sums of money in carrying on an intensive and expensive publicity campaign. I give a good deal of credit to the province of Ontario, interested in the use of Alberta coal to the point of contributing something towards the development of public interest in the matter. To this government I am sorry that up to date I can give very little credit although I can give some. They did undertake to grant a certain sum of money for experimental shipments, but the energies of this administration have not been sympathetically directed, until at least recent months, towards the solution of this problem. We hope now that the matter has been boiled down to such a point that no longer can delays be tolerated.

In 1922 the first official movement of Alberta coal took place to the city of Ottawa. A good deal of satisfaction was expressed with it and public opinion began to be developed. In 1923 an experimental movement of 16,000 tons took place at $7 a ton. The first concrete proposal before parliament came in 1923 with a proposal for the appointment of a special committee to investigate the whole fuel problem of the central provinces with a view to finding a solution. The committee advocated a Canadian coal policy. They urged the introduction of publicity propaganda by the federal government and they recommended the actual branch of the department in which it should be carried on. That committee went further. In 1923 they recommended—and the house unanimously adopted its recommendation—that the government should undertake an independent examination into the cost of moving coal from eastern and western points to central Canada. Did the government take any steps in that direction? Not a step was taken, not a thing was done until 1926, when as the result of pressure from the Alberta government and other interested parties, an order in council was passed giving instructions to the board of railway commissioners to examine into the actual cost of moving coal, having consideration firstly to the cost entering into the movement of the coal itself, secondly the actual cost plus the care of general overhead that the coal should carry, and thirdly the cost plus overhead plus profit.

It is regrettable that these latter questions were included as a good deal of confusion has arisen since the report of the board was made public. I think it was about February 13, 1926, that the order in council was passed but the board did not sit on this matter until last June. For seven or eight days the board discussed the question with the experts of the railways and the technical experts of the two provinces with the result that they found, and reported in September last, that the out-of-pocket cost, according to the majority report of the commission, was $7.22 and that the out-of-pocket cost plus general overhead was $10.07. By the way, this latter figure is interesting in that Sir Henry Thornton has himself admitted that he can haul and is willing to haul coal at $9 a ton, but the Board of Railway Commissioners found that he could not haul it and pay general maintenance without receiving a rate of $10.07. Obviously somebody was wrong and I am prepared to accept Sir Henry Thornton's statement that he can haul coal at $9 a ton, pay the share of the overhead and make a substantial profit. Examining the report of the board one finds some strange matters. I hesitate to attack directly a tribunal of this character; I do not like doing it; but I am emboldened by the fact that last year, when this question was discussed, the hon. member for West Calgary (Mr. Bennett), now leader of the opposition, in no uncertain terms flayed the railway commission. At page 2325 of Hansard for last year Mr. Bennett is reported as saying:

> It is so seldom that I find myself in such complete accord with my distinguished friend that I should mark this occasion by saying that I believe the railway commission is rapidly losing the public confidence of this country.

That was a very frank statement from a gentleman in his former position, and a very alarming statement from a gentleman holding the position now occupied by that hon. gentleman. It is a statement with which I concur. A discussion took place at that time, which may now be interesting to hon. members of this house. The Minister of Railways, (Mr. Dunning), who perhaps was more directly affected than other ministers, took part in that

discussion, and may I remind the house that at that time we were requesting that the federal government bring in legislation enabling the government to establish, by order in council or by statute, the rate which the Board of Railway Commissioners should find as the cost rate, if that rate were one at which coal could move. The suggestion which I offered at that time was supported by the hon. member for West Calgary, by several members around me and by one or two others, but the Minister of Railways disagreed. He said:

> However, that may be, the intention of the government with regard to the matter is well set out in the order in council, and I can say to my hon. friend, and others who may be interested, that the moment we get this information from the Board of Railway Commissioners as a government we will move in one of two directions. First, we intend to find out immediately from the nature of the report received whether the railway commission would have authority to do anything to meet any of the recommendations made which might appear to have the effect desired.

Of course we were all perfectly aware even at the time the minister spoke that the Board of Railway Commissioners had no power and that this was just so much padding.

> That would be one course. The second course would be that I might undertake, as Minister of Railways, immediately to confer with the management of the Canadian National Railways, at all events, and probably with the Canadian Pacific Railway, who, I presume, would also be willing to confer on the matter, as to how far the railways would be prepared to go in advance of the meeting of parliament, having regard to the information made available to the government as a result of the inquiry by the Board of Railway Commissioners. That is as far as the government is prepared to go at the moment, all with the objective of bringing, if possible, some relief to the situation prior to the next meeting of parliament—

Well, Mr. Speaker, I have waited patiently ever since the report of the board was made public for the announcement by the Minister of Railways that this meeting had taken place, but I have seen no announcement of it.

Mr. DUNNING: It has taken place.

Mr. GARLAND (Bow River): I hope if it has the minister will tell us the result of that conference, because it will be intensely interesting. Last year he went on to say:

> But in so far as the government can move upon the basis of the information we expect to receive from the Board of Railway Commissioners, the government will move along lines designed to mitigate the situation and widen the market for Alberta coal.

That closing sentence fills me with hope. I am satisfied that we have now reached a stage of this problem so close to its solution that the ministry will this year find itself in a position to introduce a measure providing for the necessary alteration in existing conditions which will bring about the desired result.

What should that change be? First of all we have this $7.22 rate which the board found to be the actual out of pocket cost involved. I have heard men in the street discuss the matter, and they have said, "You cannot apply that rate because it would result in a loss to the railways." I say to you hon. gentlemen and to you, Mr. Speaker, that the $7.22 rate includes every possible charge that can be attributed to the movement of coal. So far does it go that it actually takes cognizance of the wear and tear to the steel rails as the result of the transportation of coal cars. It takes into consideration every other possible charge, switching, terminal charges, water, labour charges, everything which can possibly be attributed to coal, but of course it does not take into consideration the constant charges which would go on whether or not coal is moved.

Now, during the summer months I believe there are about 40,000 freight cars lying idle, according to the statement of the technical experts of the railways before the commission. All we ask is that some of these cars be put into operation for the transportation of coal, and we say further that not only will there be not a cent of loss to the railways as the result of the establishment of a fair rate for this movement, but that the railways will probably make a profit as the volume of business increases. The out of pocket cost is fixed at $7.22, which includes every charge which can possibly be made against this movement, but that rate was arrived at upon a wrong basis; the conclusion was reached incorrectly, and the whole thing was absolutely unfair to the coal movement. Why the Board of Railway Commissioners arrived at such a decision is beyond my understanding. I dislike to impute motives, and I am not going to do so now; I am not going to suggest that they were under the influence of the railways, but I am going to ask that the commission give some explanation now as to why they proceeded upon the basis they did take in finding that rate.

An estimate was made of the number of cars which would be used in the movement of coal; they were all considered going down loaded, and an estimate was made of the cost of moving the loaded train. Then the commission said, "You have to get these empty cars back again; how much will that cost?"

First of all they said, "Each of these cars is going to go back empty." That of course is perfectly absurd. The most ordinary individual on the street, with the most ordinary intelligence, will realize that if you are going to increase the volume of tonnage and the production in any particular industry, you are also going to increase the quantity of commodities consumed by that industry, and as most of these commodities come from the central or maritime provinces, you must naturally increase your tonnage going back. So if you used 10,000 cars to bring coal to this part of the country, it is absurd to argue that 10,000 cars would go back empty, yet that was the basis taken by the commission.

However, we will not quarrel with that; we will go to another point. How much will it cost to move these cars back? The commission said it would cost as much to move the empty car back as it cost to move the loaded car down. I appeal to the intelligence of this house to find any common sense in a statement of that kind. They said, "It costs so much to move a loaded train of coal to Ottawa, and it is going to cost just as much to move an empty train back." Of course, any ordinary individual knows that is absolutely absurd, but we will pass over that. We will give them all these things for good measure; these will represent a share of the profits to the railway companies in addition to the cost rate.

Mr. DUNNING: Will my hon. friend permit a question? Did the railway commission use the per ton mile basis in both cases?

Mr. GARLAND (Bow River): No, they used several bases; there was an A basis and a B basis; there was a C.N.R. basis and a C.P.R. basis. I have the whole thing under my hand, but it would take me forty hours instead of forty minutes to dispose of it. My time is limited, so I must get on to the more important points. The Minister of Railways may smile at this, but he will not smile at what I am about to say.

Mr. DUNNING: I was not smiling at my hon. friend.

Mr. GARLAND (Bow River): Perhaps my hon. friend was smiling at the forty minute limit. I am sure he is very glad that there is such a limit when discussions of this kind come up.

However, I want the house to consider one or two further points. In finding this cost rate, the Board of Railway Commissioners said that these cars would need repairs if they were put into that business. We agreed to that and asked how much the repairs would be. We ascertained that the average cost of repairing freight cars over the whole Canadian National Railways system was $121.90 per year, but the provincial experts representing Alberta and Ontario brought forth another basis upon which this cost had been worked out. They said that there must be a scientific basis and that they would accept the only basis of that kind in North America, the one accepted and used by the Interstate Commerce Commission of the United States. On that basis the provincial governments worked out a cost per car per annum of $209.52. That was a large increase over the average cost of $121.90 but what did our friends of the railway commission say? They wiped that aside; they refused to consider that scientific analysis and accepted the statement of the Canadian National Railways that it would cost over $424.85 per car per year. Eight and a half per cent of the total available cars would be used in the movement, but for eight and a half per cent of the cars to be asked to carry 24 per cent of the total car maintenance cost is utterly unfair. If that were reduced it would mean a difference of $1.30 a ton in the cost of the movement of coal. But that is not all. There is something else which needs to be demonstrated. I ask you, gentlemen, to take out your pencils and first of all deduct $1.30 from $7.22. The board also asserted that fifty-nine days would be consumed in the round trip for a train of coal going from Drumheller to Toronto. But the average for the round trip would be not more than thirty-two days; and the average speed of all trains on the Canadian National railway in the west is fifteen miles an hour. Another unfair feature was in regard to the car loading Now the average car loading—not the maximum or the minimum—of the whole Canadian National railway system amounts to 36 tons. That is the average load put in a freight car for the whole system, including package freight, furniture and everything else. For the Canadian Pacific railway the figure is 38 tons. But the Board of Railway Commissioners took 33.4 tons as the basis for the coal movement. Anyone can understand how unfair that is when they begin to analyze exactly what this means to the coal movement. The difference in cost between a 33.4 ton load and a 36 ton load is exactly 47 cents a ton. Deduct this 47 cents a ton, plus $1.30 from the $7.22, and you have a rate of $5.45. At that rate nobody questions

that Alberta coal can be brought down to Ontario to sell in competition with American anthracite.

Then we come to the next point. We are asked: Why fix the statutory rate of $6.50 a ton when it is said that $5.45 will carry the coal and cover every possible charge attributable to it? Well, this question came up before the Alberta coal operators. The analysis of the Board of Railway Commissioners came before them and having carefully considered it they said: There is no use our demanding that minimum cost rate of $5.45; it might not be fair. We are going to be as fair as we can. All we are asking for is that we shall get a rate at which our coal can be moved. We will not ask for $5.45, but we are willing that $1.05 should be added to that amount making the rate $6.50. In the interests of the largest coal deposits in the British Empire, in the interest of the development of one of the greatest resources in the Dominion, and the second greatest resource after agriculture in my province, I appeal, with some hope, to this government and to this house, that a bill will be introduced before the session closes, providing for a statutory rate on coal. It may be that they may not feel free to set a permanent statutory rate, but that they will be willing to test my proposals, and in the meantime will establish a temporary rate by statute for three years. If that is done I would urge the government to place independent accountants at work in order to ascertain whether the report of the Board of Railway Commissioners is accurate or not. The future of the Alberta coal industry, the future of one of the greatest resources of this country, is at stake. There is no use talking about your resources—no matter how eloquent your terms may be, or how violent your arm-waving may be—until you develop them. You have here a chance of developing one of Canada's greatest resources, and I offer the suggestion I have made to the government as a solution of the problem, which may be applied without further delay.

SIR GEORGE PERLEY (Argenteuil): Mr. Speaker, in the first place may I join with other hon. members in congratulating the mover and seconder of the address upon the very eloquent manner in which they expressed their views. I rise simply for the purpose of making a few observations in reference to one particular clause in the speech from the throne—I refer to the proposal of the government to send ministers to foreign states. To my mind this is a step in the wrong direction, and I regret to say that upon this matter I disagree with my hon. friend the member for Bow River (Mr. Garland) who preceded me. As a matter of fact, I am strongly opposed to this being done under present circumstances. I am not going to discuss the present constitutional position or development of the Dominion. This has already been done by my chief in a much better way than I could do it myself. It is sufficient for my purpose to remind the house that we have in Canada greatly progressed from the status of a crown colony, which we occupied years ago, to our present position. To-day we are, in fact if not in law, the master of our own destiny. In bringing this about all the prime ministers of the Dominion have given a helping hand, but none more than my former chief, Sir Robert Borden, during the war years and during the negotiations which resulted in the treaty of Peace.

To-day I make bold to lay before the house in a few plain words what I understand to be the position and feeling in Canada at this moment. On the one hand there has developed in this country a strong and robust Canadian spirit, and I believe it is increasing. I am glad that this is so, because it is certainly our duty to look after the interests of the country we love. This feeling is, I think, specially noticeable among the young men. They will not be content to have this country remain in any position of inferiority or subordination. They say, and quite properly, that every British subject, no matter in what part of the British dominions he may live, should have an equal voice and influence in all matters of common concern, and particularly in any issue as to peace or war. On the other hand there is in my opinion an overwhelming proportion of Canadians who favour the maintenance of British connection, and the working out of the destiny of this Dominion of ours in cooperation with Great Britain and our sister dominions. Now the question that I wish to ask is: How are we going to reconcile these two ideas and what plan can be worked out to accomplish that result? There are some people who say the thing is impossible, and certainly nothing of the kind has been accomplished in the world up till this time. As a matter of fact we are, I believe, in the midst of a great experiment or adventure in government. And we have half a dozen separate countries working out their own destiny, having full authority over their own affairs, who should work together in foreign matters. While I acknowledge the difficulties—we must all acknowledge them—still our race has had a genius for compromise

and for arranging questions of this sort. I believe this problem can be dealt with by the exercise of patience and goodwill on all sides; but in my opinion we have no hope of bringing this about unless we have a single foreign policy. Unless the various parts of the King's dominions speak with one voice and present a united front to the rest of the world how are we to get along? Can this end be attained if any considerable portion of the British commonwealth is going to send independent ministers to all foreign countries? In my own opinion it cannot. The other day my chief referred to the unfortunate implications which would be conveyed to foreign countries by Canada's appointing ministers to them, and I can see further complications which I need not at this time enlarge upon inasmuch as every member of the house may visualize them for himself.

Personally I never was in favour of the appointment of a minister to Washington, although there were many strong reasons for that departure which do not apply to other countries. The United States is our great and friendly neighbour and we have vast interests in common. In the case of France there are sentimental reasons why such an appointment might be considered, but as a matter of fact—at least this has been my experience—my friend Mr. Philippe Roy, Commissaire Generale in Paris, has been able to deal with all problems which have arisen between the governments of the two countries. I believe his work has been most satisfactory. But this proposal that we should appoint more ministers to foreign countries is to my mind a most dangerous precedent. Who can tell where it is going to end? In his speech the other day the Prime Minister (Mr. Mackenzie King) said that the government intended appointing a minister to France, who would be the sole representative of this country on the continent of Europe and one in Tokyo who would represent us on the continent of Asia. The hon. member for Bow River (Mr. Garland), in a few words, explained how this would create a misunderstanding, and I should be glad to have the matter explained by the Prime Minister. What other ministers are going to be appointed? By what authority did the government decide to appoint these two ministers and enter into an agreement before submitting the matter to parliament? I know there is general authority on the part of the government to perform executive functions, but the decision to make these appointments is something which will have far-reaching results. So far as I know there has never been any discussion in this house such as would indicate that Canada is prepared to send ministers to all the countries of the world, and I submit that this matter is too serious for the government to have settled it without having first brought it up in the house and having had it thoroughly discussed. It seems to me that the opinion of parliament and of the country should have been sought to ascertain whether it was the desire of the people to have the appointment of these ministers proceeded with.

Mr. MACKENZIE KING: May I point out to my hon. friend that the precise language in the speech from the throne is to the effect that we "propose" to send the representatives. Care was taken to indicate that parliament would in the first instance be called upon to consider the matter and to make the necessary appropriation, but before coming to parliament it was necessary to ascertain from Japan whether, in the event of the Canadian parliament agreeing to appoint a representative to Japan, that country would be agreeable to receiving him.

Sir GEORGE PERLEY: I can quite understand that the matter must be passed upon by parliament in some way or other, but an arrangement of this kind should be discussed by parliament before and not after it has been made. The exact words in the speech from the throne are these:

> By agreement between the governments of France and Canada and the governments of Japan and Canada, it is proposed—

Mr. MACKENZIE KING: It is proposed; that is all.

Mr. BENNETT: By agreement.

Sir GEORGE PERLEY: We do not know whether the agreement has been made, although I understand that it has.

Mr. MACKENZIE KING: Perhaps I may tell my hon. friend exactly what has taken place. Japan has intimated to Canada that she is agreeable to receiving a representative provided we send one, and we have stated that we are agreeable to receiving one from Japan if one is sent. But the Japanese government—and they have directed attention to this fact—have still to obtain the consent of their legislative body to sending a minister to Canada, just as we have intimated that on our part we shall have to get the consent of the Canadian parliament before any understanding can be implemented in the form of action.

Sir GEORGE PERLEY: My right hon. friend knows that this is a far-reaching question of policy, and therefore the government, in committing itself as it has done, is placing

the house in an extraordinary position. The agreement must be ratified by the house, because its rejection would amount to a vote of want of confidence. A policy of this moment ought to be decided by the house before such action is taken as in this instance. What is going to be the situation if we have ministers in all parts of the world? The government is confining itself now to these two proposals. But who knows what day they may decide to appoint ministers to other countries? And what will be the position in those foreign capitals if every section of the British Empire decides to send a representative there? Let us suppose we had six ministers from as many parts of the British Empire, all resident in Czechoslovakia; we can imagine the confusion that would be there. I ask you, Mr. Speaker, whether this plan is going to make for the whole-hearted cooperation of the British commonwealth such as we all want to promote? What excuse does the Prime Minister give for this action? At page 60 of Hansard I read:

> I believe it is true that our trade with the orient to-day is greater than was the trade of Canada with the United Kingdom at the time the government of Sir Wilfrid Laurier came into office. When that event took place Canada's trade with the United Kingdom stood at a certain figure. That figure is exceeded to-day, so I am informed, by the total trade of Canada with the orient.

I submit that the very reason given by the Prime Minister is an argument against his course. I wish to draw a sharp line between diplomacy and trade. In trade the various parts of the empire are rivals competing one with another, and it is our duty to see that our own people get the best chance possible for trade in every part of the world whether they compete against some other part of the King's dominions or against foreign countries. Let us have separate trade commissioners in the various countries as they may be required. That is one thing. But in diplomacy the King's dominions must be one and must speak as one people if we are to hold together. That is the problem which all the countries of the British commonwealth have before them at the present time. And you may ask, how are we going to accomplish this and still each part have a separate status? I appreciate the difficulty, but during the time I was in England I conceived the idea that it might be possible to have a foreign office representative of the whole British commonwealth. That is to say, it would be separated from the other departments of the British government, and would attend to the foreign policy on behalf of all parts of this empire. Now I do not see why a foreign office should not be administered by a committee, on which each of the dominions would have a representative, and with a British representative as chairman, under present conditions, so long as the mother country is more populous than we are—

Mr. ADSHEAD: Is the hon. gentleman aware that the British Prime Minister declared that the sharing of any such control was absolutely impossible?

Mr. BENNETT: He took it back two years later.

Sir GEORGE PERLEY: I understand that he has changed his mind since in that regard, and that happened some years ago. There is another prime minister now, and there have been several prime ministers since. As a matter of fact, my judgment is that so long as we find a way of holding together, the British government will be willing to listen most favourably to any suggestions put forward by the Dominion to that end. That is the way I found it when I was over there. I ask you, Mr. Speaker, whether this foreign office could not be administered by a committee, with a British representative as chairman. I ask you whether this service could not be recruited by men from all over the King's dominions. I ask you whether it could not be so arranged that a Canadian might be ambassador to France, for instance, or an Australian ambassador to the United States. In other words, these services should be recruited from all over the King's dominions. Some years ago Sir Robert Borden was offered the appointment as ambassador to the United States. I am sorry he found himself unable to accept the position, because I think it would have made a very good precedent. Some people say we cannot have an empire organization like such as I suggest that would be workable. There has been and is one empire organization that does work, the first one to function, and it works well. I admit it is in a different category, but when it was first started many people doubted whether it could be handled successfully and to the satisfaction of everyone. I refer to the Imperial War Graves Commission. I was at a meeting of the committee when it was first considered and when we got the royal charter. I was a member of the commission and took a great interest in it during all the time I was in London. Many people thought that Canada should look after the graves of her own men who died in the war. But the result has shown that joint action by the whole British commonwealth has produced the best results.

Everybody is satisfied with it and during the time I was in London and attended the meetings I felt that I was listened to and had as much to say about what was to be done as any other member of the commission. I say to the Prime Minister in all sincerity that I believe he is taking the wrong path, if he wishes to develop a plan of cooperation and partnership among the self-governing units of the British commonwealth. I admit that it would be difficult to work out a plan that you could feel would be satisfactory, but if my suggestion is not feasible then some other method should be found, so that we could all get together and speak with one voice to the whole world. I say again, in my opinion, that it is vital that we should do so, if the British commonwealth of nations is to continue to work together. As one of the half dozen oldest members in this house, I do not suppose I will live to see it myself, but in my mind's eye I can visualize an occasion arising when, under the present proposals of this government, the British ambassador and the Canadian minister in some foreign capital may be found urging different courses. How are we going to avoid that? We certainly do not wish anything of that kind to happen, and therefore, Mr. Speaker, I have taken this opportunity, in a few plain words, to try to put my views of this particular matter before the House of Commons, and I urge the Prime Minister to reconsider his decision.

Mr. J. A. GLEN (Marquette): Mr. Speaker, it is a pleasant relief to find, in the midst of controversial matters, a common ground of agreement. It relieves tension and imparts to a discussion a fellow feeling which makes us all akin. In the debate on the address from the throne, such a common ground occurs in the felicitations which have been offered to the proposer and seconder of the address by members on both sides of the house, and at the risk of saying something which may be considered stereotyped, I must take this occasion to express publicly what I have stated to them privately, that their speeches were models of brevity, conciseness and lucidity, delivered in a tone appropriate to a high occasion, flattering to themselves and honouring to their constituency. In connection with the remarks made by the hon. member for Bow River (Mr. Garland) regarding the seconder of the address, I would like to ease his mind with regard to that independence of which he speaks, and to say that the seconder of the address spoke without consultation with me as chairman or any other member of this group, and he did so on his own responsibility as a member of this house, accountable only to himself and his constituency.

The leader of the opposition (Mr. Bennett) remarked at the beginning of his address that the speech from the throne is "remarkable more for what it does not say than for what it does say". If I have any objection to offer it is in what it does not say, and later I shall deal with the omissions.

While the leader of the opposition has endeavoured to minimize the first paragraph of the address, which refers to the "marked prosperity of the country, the volume of trade and of building construction, the growth in employment, the increased railway receipts, the expanding revenues and business conditions generally all bearing testimony to a sound economic development which promises much in the way of substantial progress", yet by one of those "implications" which recurred so often in his speech, he does admit there is a present economic prosperity because, as he put it, "a lesser number of people inhabiting the same area have been creating new wealth more rapidly than they did before", and this wealth created by the depletion and sale of our natural resources. It is a gloomy picture he depicts. I trust he is not proposing to assume the devastating mantle of a Dean Inge. If his picture be true, then all the presidents of the banks to whose statements the Prime Minister referred must be wrong, absolutely and most negligently wrong. The president of the Canadian Pacific Railway must also be wrong in his statement published in several papers this year in which he says that:

> The general business of the country experienced a consistent and widely spread development based upon very general agricultural prosperity and industrial expansion.

The leader of the opposition well knows—he has probably helped to draft in past years the statements published by the bank of which he was a director—that no more carefully worded documents are published than are those of our banks at their annual meetings, based alike upon their country-wide knowledge and experience, and definitely proved by the financial reports of which they form the prologue. By reason of these authorities and in the light of the reply of the Prime Minister, I am going to assume in my argument that the paragraph I have quoted from the speech from the throne is correct and that the leader of the opposition, not for the first time, is wrong.

But the leader of the opposition has a remedy upon which he dwelt at length, and that is immigration. No one will deny we

need immigrants, no one will gainsay that in this Dominion we can offer to the proper kind of settler the opportunity of a fuller life than any other country in the world. That statement covers a large territory but I think any member of this house would have no difficulty in proving it. I would not wish, however, that any member would take the same illustration which the leader of the opposition gave and choose the year 1913 as a basis of comparison, for if we endeavoured to prove his contention, or rather his implication, that more settlers are necessary for permanent prosperity, the fact is that that year, 1913, in which he said "in no one year since 1921 have we brought into Canada half as many people as were brought here in 1924"—a year, by the way, in which the Conservative party was in power—was the year in which, despite that tremendous immigration, our total adverse trade balance was greater than in any year of our history. But yet I would not lightly dismiss his suggestion of a reference to a special committee, if for nothing else than to dispel suspicion, to correct abuses if any, and not least, to curtail or control the activities of self-appointed immigration agents, be they railway companies or individuals.

I feel that the problem lies not in immigration, but in assimilation. In the vast farming areas of the west we want new blood in our settlements who will take up land for their own use. We have not had much difficulty in obtaining labour, apart from spring and harvest, but of actual settler immigrants —I speak of my own constituency—we have had very few. I agree with the leader of the opposition that this question transcends party and I will welcome any method to attain what we all desire. I would, however, point out this fact, that Canada is big enough, broad enough and desirable enough to attract settlers; it should never be small enough to beg them.

In the limited time now allotted, Mr. Speaker,—with which let me say I have no complaint, although like others I may at times wish it longer—I do not intend to speak on any of the various questions specifically mentioned in the address. I propose to speak on matters not mentioned, but which in my judgment will have to be discussed during this session. On Tuesday night I listened with interest to the address of the hon. member for South Wellington (Mr. Guthrie), and there was one sentence which particularly struck me. He asked: "What counts in the matter of taxation?" He answered it thus: "It is the burden upon the people; that is the only test". I think that is the most important matter we have to discuss and decide at this session of parliament. I do not minimize or subordinate all the important subjects referred to in the address, but after all the well being, contentment and happiness of the people is the principal function of government, and for these reasons I was sorry to note that no reference was made in the speech from the throne giving promise of reduction of taxation. I was glad however, to hear the Prime Minister forecast reductions, and I hope they will be in the direction I propose to outline.

I would not wish to discuss this matter on any narrow basis. I have always realized and appreciated the fact that government of this broad and diverse Dominion must necessarily be based on compromise between conflicting interests; but having said that, let me also say that there are certain broad lines of general policy to which I, in common with almost all the members from the prairie provinces, am committed (1) by conviction and (2) as a representative. We must admit and record that nearly all the promises and pledges of the Liberal candidates in the 1926 election have been implemented by this government, for instance, the maintenance of the Crowsnest pass agreement—to which the Conservative party in convention assembled have given approval, although somewhat tardy; energetic and immediate steps towards the completion of the Hudson Bay railway—shall I say?—with the tacit approval of said convention; old age pensions; completion of the Customs probe; maintenance of the tariff reductions in the famous Robb budget, and others which I need not enumerate.

It is a matter of gratification to find that these reductions, which were so strenuously opposed by the manufacturers of automobiles—not forgetting His Majesty's loyal opposition, have resulted in no impairment of the production of cars by our manufacturers, but, on the contrary, have contributed to their progress. And when I listened to the hon. member for South Wellington, I was amazed to hear him accuse the Minister of Finance (Mr. Robb) of lack of courage. If anything was needed then, in view of the tremendous uproar made by these manufacturers, it was courage, and the Finance minister most certainly displayed it. When the same hon. member stated that the minister was "content to sit at his ease and allow the Department of Finance practically to run itself," surely he was in error. At

all events, his experience must be different from mine, for I came to the conclusion very early that the Finance department was the minister, and a stubborn, self-willed Scotchman at that, with all that that implies.

I am therefore in my concluding remarks, going to address myself to him particularly. In my judgment a good deal of the prosperity of this country to-day is attributable to the fact that in the post-war period the government of the day have not sought to embark upon quack revenue-producing experiments, but have stayed put behind a tariff which in comparison with that to the south must be described as moderate. When the attempt was made to stampede the country towards higher tariffs, it failed ignominiously and the consequences so freely predicted then have failed to materialize. On the contrary we have made material progress. The work, however, is not yet done. The Conservative party, if you except the Winnipeg platitudinous utterance, have not so far indicated their tariff policy. The leader of the opposition (Mr. Bennett) has not yet volunteered to the country and to the house where he and his party stand, if one might except only the one word "protection" which one may hear delicately uttered now and again by one or two irresponsible members. He speaks, it is true, of trade within the empire. With all deference I would suggest that such an idea is merely a pipe dream and is relieved from absurdity only by the eminence and the position of the speaker. There can be no two opinions on this matter, that the world is our market and will become increasingly so as the years go on.

If therefore, this prosperity can obtain with a moderate tariff, so-called, although in my view, most immoderate, I suggest to the Minister of Finance (Mr. Robb) that at no time in his political life has he had an opportunity as favourable as now of demonstrating the efficacy of a moderate tariff and of showing the fallacy of this fetish of protection. I am aware that he will not go so far as I would like, and on this point I would like to correct an impression which is disappearing in some quarters but which still has its devotees. We in the west have insisted in the past and will also in the nature of things insist in the future on a large measure of free trade; but nevertheless there is not one thinking man among us who does not recognize that these matters cannot be dealt with otherwise than by degrees. We know that industries must have time to accommodate themselves to changes, and we are ready to give the fullest and most ample consideration to all their claims. But having said that, we trust they will also recognize that we cannot and will not continue to suffer under vexatious and unnecessary tariffs which not only hinder the development of production, but seriously affect the standard of living. The hon. member for Hants-Kings (Mr. Ilsley) in his speech referred to the uneven distribution of the country's prosperity, and the hon. member for Winnipeg North Centre (Mr. Woodsworth), dealing with that, stated that when the labourer receives only one-third of the added value which his labour produced he did not wonder that the other classes who received the remaining two-thirds rejoiced in the prosperity. To this I will add that where it can be proved that industries are placing burdens on the taxpayers by taking advantage of tariffs, a summary remedy should be provided by parliament. I think that is good doctrine and it could be subscribed to even by the Conservative party.

If I had the time I would like to give a number of examples, but I am going to deal with only one or two. Some exception has been taken to the workings of the tariff board. In my judgment the tariff board are performing a function which no other body in the Dominion of Canada is able to perform. They are there as a fact-finding body, not as a recommending body, and on the question of tariffs what we certainly lack in this country is facts. It has happened that an application has been made before the tariff board by the Consumers' League for a reduction in the tariff on cottons. I have not had an oportunity of reading the evidence because it has been available to members of the house only within the last two days, but I have had an opportunity of reading the argument which was presented on behalf of the applicant for a reduction in the tariff and, so far as I could see, that argument was not contradicted nor controverted in the slightest degree. No exception was taken to it by any member of the board, and therefore I may assume that the facts which I now give and which were stated before that board are correct.

What was the application? It was an application for a reduction in the duty on cotton goods and it was stated then that under the general rate the average rate of duty on cotton goods was 30 per cent; that the average percentage which productive wages have to the volume of product was 20 per cent. The applicants were willing to give tariff protection under the general tariff equal, not to the difference in wages at home and abroad, but to their entire wages, exclusive of course of salaries. One would have

imagined when that offer was made, which in my judgment was a generous one, it would have been willingly accepted, but the answer was that the cotton industry claimed protection equal to the entire cost of everything they purchased in Canada as well. That is to say, if wages are 20 per cent and raw materials purchased in Canada amount to 30 per cent of the selling price of the goods, the tariff protection should be 50 per cent.

Figures were given showing that the Dominion Textiles had a total production in 1924 of $20,232,716, and its wage bill was $4,408,852, or 21.8 per cent, but this includes salaries as well as wages. If wages were taken alone the percentage would be less than 20 per cent.

The Wabasso Manufacturing Company, according to figures submitted by them covering a period of eleven years, manufacturing some of the finest qualities of cloth and yarn where the proportion of wages would be higher than in the coarser grades, had paid out in wages and salaries 23.7 per cent of the value of their products. During that time the average tariff under the general rate has been in excess of 30 per cent. The tariff rate is therefore 6.3 per cent higher than the total amount of wages paid by that corporation. It was contended that they could not compete with labour in the southern states. From their own figures it was shown that the average wages in the industry are as follows:

State or Province—	Per Annum
Massachusetts	$954
South Carolina	631
Quebec	592

That was from their own showing. The manufacturers contended that they were not getting their fair share of the market, but what are the facts? In 1914 the consumption of raw cotton in Canada was close to 80,000,000 pounds, while in 1927 it was 135,796,625. Does that show that they are not getting their share of the market?

Then let us consider the import of dutiable cotton goods. From 1914 until the present time the figures are:

1914	$26,210,000
1922	33,332,000
1923	37,222,000
1924	34,969,000
1925	31,812,000
1926	29,977,000
1927	28,096,000

You will understand, however, that during the years 1914 and 1927 there was a tremendous advance in prices. If instead of dollars we could give these figures in yards or pounds it would show an actual decrease in the volume of cotton goods imported during this period. So high is the duty in existence at present, in fact, that it acts in a large measure as an embargo and keeps goods out. This reduces the revenue and, in addition, allows Canadian manufacturers to charge prices much beyond the world level.

Canadian Cottons Limited submitted a statement in which they claimed that the cost of producing cotton goods in Canada was 35.07 per cent higher than in the southern states and 32.8 per cent higher than in Great Britain. Our average tariff on cotton goods at that time, under the general tariff which is the rate under which American goods enter, was 30 per cent, while British cotton goods enter at approximately 18 per cent. From these figures it will be seen that it would be absolutely impossible for Canadian Cottons Limited to survive if their contention was correct that they had to operate under a much heavier manufacturing cost than was the case elsewhere. What are the facts in regard to that company? In the Financial Times of last year we find the following:

> The balance sheet of Canadian Cottons as of March 31 last showed a surplus amounting to $2,737,563, equivalent to over $100 a share on the 27,155 shares of common stock. In addition there is shown among the liabilities an item of $600,000 for special replacement reserve, despite a generous reserve for depreciation. If this sum were included in surplus, the latter would be shown equal to $123 a share on common stock.

That seems a pretty good showing for a company labouring under such a heavy handicap.

Then we have the Dominion Textile Company, about which I am sure this house has heard before. This was a most remarkable financial adventure. The present owners paid $500,000 for stock with a par value of $5,000,000, and year after year they paid dividends on the par value. Then the stock went up in price and they gave to every holder of two shares the right to purchase an additional share at par, when the stock was selling far above par value. Then a year later they split it three ways, so that each shareholder received three shares for one, and to-day that stock is selling for $130 per share. This company has a capital valuation of over $29,000,000, but in all the years since it was formed only $3,000,000 has been paid for this stock. What made it worth $29,000,000? Surely there can only be one answer; the consumers in the Dominion of Canada paid the difference, and put in eight dollars for every dollar put in by the shareholders. If the profits were measured against the actual amount of cash paid in by the original owners, we find the actual earnings of the Dominion Textile Company to be in excess of 220 per

cent. As a further point, let us consider the evidence given by Mr. Daniels, general manager of this company, before the special committee on the cost of living, which will be found at page 362 of the proceedings of that committee. While under examination by Mr. Pringle he was asked the following question:

For 1918 you earned about 291 per cent?

To which he answered "Yes." Yet that company was before the tariff board in December last asking for an increase in the tariff.

My contention is that the consumers cannot afford to pay to an industry in Canada a bonus so far out of proportion to the services rendered to the community. We desire to be fair to an established industry and to encourage it by every legitimate means, but there must be a limit. Surely no offer could be more generous than to ask them to agree to a tariff under the general rate which would be high enough to cover wage costs. This would mean that the people would penalize themselves to that extent and without recompense or return they would pay the entire wage bill of the industry. It should be understood, of course, that this would apply only to the general rate and that the industry would have to be content to accept under the preferential tariff two-thirds of the general rate, and an intermediate tariff in proportion.

Here again I would emphasize my point of view. Such measures of tariff relief do not affect or minimize the basic principles underlying all tariffs, and it must not be understood that I accede to the need for tariffs. These sheltered industries must recognize that basic production in Canada should not be asked continuously to maintain them, and they must take the necessary steps for their own development and ability to stand alone. As I have said, we do not desire to be unfair or drastic. We wish them to recognize that the protection which they have enjoyed for so many years cannot be prolonged indefinitely. The point of view of the consumers who bear the burden and who pay the costs must be considered, and in all fairness the cotton industry cannot complain of being taken by surprise. This matter has been long before the house; Hon. T. A. Crerar, formerly member for the constituency which I now represent, so long ago as 1922 spoke of this matter in this very chamber, and pointed out the anomalies of the situation. These people knew then that these demands would be made, but nothing has been done. When an offer was made they refused it and continued to hide themselves behind this high tariff.

As I have already said, there are a number of applications now before the tariff board, the evidence in which has been completed, and I must say that the glaring inequalities are just as pronounced, although I cannot touch on them now because my time is getting short. The Minister of Finance has the records; he has the power and, I hope, the inclination to give relief to the consumer in these and in other ways, and I would ask him if the time is not long overdue when the people of Canada should participate in the dividends which have been earned by these companies. The consumers do not own the companies, but the consumers made them. These sheltered industries are built up from the pockets of the people, and they enjoy a shelter which they have abused. No one in the west or elsewhere objects to any individual or any company getting profits so long as they are obtained in open competition with the world. The great retail stores of the Dominion have built up their business not through protection but by efficiency and service. They do business and make money by legitimate business enterprise, and is it too much to ask the manufacturers to apply the same principles? If they do so, they will have the hearty and active support of the common people.

In conclusion, Mr. Speaker, I would urge the Minister of Finance to embody in his budget reductions along the lines I have indicated. We feel sure that no harm or injury would be inflicted on these industries, and the relief which it would give to the consuming public would be incalculable. It would be reflected in the greater purchasing power of the dollar and in increased amenities of life, and may I say, as a last word, that such a reduction would be in entire accord with the declaration made by the minister during the budget debate last session, when he said that this government "are recognized throughout Canada, and we are proud of it, as a low tariff party."

Mr. C. H. CAHAN (St. Lawrence-St. George): Mr. Speaker, I desire to occupy the time of the house for a few moments only to consider one aspect of the interesting speech of the Prime Minister (Mr. Mackenzie King) on the address. The subject to which he referred, inter-imperial relations, has been one of very great personal interest to me since the time of my boyhood. It has been an ideal of young Canadians growing old, ever since their days at the academy and the university, that we should one day attain equality of status with Great Britain

and with other parts of the British Empire, now known as the dominions. We have watched from year to year an improvement in that status, but we have not yet seen the accomplishment of the ideal which stirred so many of us thirty and forty years ago. That ideal has been in progress of attainment for eighty years in this country, but it was left, I think, to the Prime Minister erroneously to claim that he and his associates have at length accomplished it.

It is well that we should understand the present condition of affairs in order that, thinking clearly and foreseeing the future, we may prepare for the solution in a satisfactory manner of the great problems which still await us. It is not, as the Prime Minister suggested, a mere matter of legal technicalities, a mere matter of petty formalities, a mere matter of petty practices. It is not, as he said, a removing of trifling anomalies and irritating remnants; it is the solution of the problem of the basic conditions which must underlie the relation of Great Britain to her dominions and to all other parts of her empire, and the relationship of the dominions to Great Britain and to each other. There is not now, and there has not yet been attained, an equality of status between Great Britain and Canada, and certainly no equality of status between the imperial parliament and the parliament of Canada if you accept the word "status" in its ordinary meaning and purport. Those who were attempting by the adroit use of words, under the guidance of Lord Balfour, to lay down what they called general principles—but which they also qualified as a theory, a formula and a dogma in the very report cited by the Prime Minister—with respect to equality of status between Great Britain and her dominions, saw clearly that there were differences, and grave differences, which they sought to set aside under the term "differences of function." Now what are the differences of function as between the parliament of Great Britain and the parliament of Canada? They are very grave differences indeed involving, it seems to me, very serious differences in the status of these two countries. Canada may be a nation, as the Minister of Justice (Mr. Lapointe) sought to explain in the address which he made before Le Cercle Universitaire de Montreal, which has been widely circulated in pamphlet form. The minister in a very lengthy argument sought to prove that Canada is a nation. I agree, with the qualifications that he laid down, that Canada is a nation. He also sought to prove that Canada is a state. I admit, within the qualifications that he laid down, that Canada is a state. But the matter of importance, in considering the problem presented by the Prime Minister, is that Canada is not a sovereign state. The parliament of Canada is to-day subordinate to the parliament of Great Britain. The legislative jurisdiction of the supreme and dominant parliament of Great Britain is not restricted by any territorial limits. That jurisdiction extends to the uttermost part of the uttermost limit of a far-flung empire, with respect to which it legislates from time to time ,and its legislation must be construed and applied by the courts of every part of that empire. Great Britain's legislative jurisdiction applies to British shipping on the seven seas, to the sailors on British shipping at sea and in port, and it applies also to the property, to the lives, and to the interests of British subjects, citizens of Canada, citizens of Australia, or citizens of the crown colonies who are British subjects, wherever they may be in any part of the world.

The Canadian parliament has no such jurisdiction. It is, under present conditions, subordinated to imperial legislation which in terms applies to Canada. The Canadian parliament has jurisdiction limited to its own territory, and to a boundary of three miles at sea along its coasts; its jurisdiction does not extend beyond that. This parliament has no jurisdiction over Canadian citizens once they pass beyond the three-mile limit, or beyond the boundary line to the south. It can make no laws which affect them in their conduct when they are beyond the confines of this country. It has been laid down by the Privy Council that the parliament of Australia and its various states, that the parliament of Canada and its various provinces, have not the jurisdiction which appertains to Mexico or Patagonia, or any of the Central American states, or any other sovereign power from Liberia down to Monaco, that of bringing home and punishing there, under Australian or Canadian law, Australian or Canadian citizens who are guilty of crimes committed beyond the confines of their own state. If a Canadian citizen to-day commits a crime in Mexico and returns to this country it is the safest asylum he can find on the face of the globe, because this country cannot commit to prison and punish Canadian citizens for crimes committed by them abroad. This parliament cannot to-day provide legislative safeguards respecting the conduct of its own shipping and its own sailors, its own naval or

mercantile marine, while on the high seas. When we were sending our little Canadian navy to sea before the war I pointed out to the Prime Minister, of that day, Sir Wilfrid Laurier himself, that these naval ships belonging to Canada and carrying Canadian commanders and sailors might commit any crime they pleased upon the high seas and there was no Canadian law under which they could be punished; furthermore, that the parliament of Canada was incapable of passing a law to punish such crimes or misdemeanors committed upon the high seas. The result was that new amendments to the naval law were obtained—from the imperial parliament, if you please—whereby offenders of this character could be punished under admiralty law in the proper criminal courts. This extended jurisdiction of the parliament of Great Britain remains intact to-day. The Territorial Waters Jurisdiction Act of 1878, enacted by the parliament of Great Britain, also applies to Canadian citizens wherever they are found beyond the confines of Canada.

Moreover, there are grave restrictions to the legislative jurisdiction of Canada. The parliament of Canada cannot make a Canadian citizen a British subject throughout the British dominions. There are grave difficulties in connection with our legislation dealing with naturalization. The Canadian parliament to-day, except by separating itself politically and asserting its own sovereign independence, cannot of itself declare war, nor can it of itself make peace. When Great Britain is engaged in war it cannot declare its neutrality without at the same time severing its political connection with Great Britain and the other dominions beyond the seas. In respect of the carrying out of treaties, the Canadian parliament may make legislative provision for implementing treaties made on behalf of the empire, only so far as is necessary for the peace, order and good government of Canada. Again, the parliament of Great Britain has complete legislative jurisdiction over the succession to the throne: the parliament of Great Britain may to-day establish any form of government in Great Britain which it sees fit. Time and again there have been revolutions in Great Britain and different forms of government have been established. But the parliament of Canada must continue to be a Canadian parliament; it cannot of its own accord legislate its own extinction, nor can it of itself set up any other form of government than that which it has at the present time. The power of Canada to federate or to negotiate in any substantial degree with any of the other dominions is always subject to the powers conferred by the parliament of Great Britain.

As the leader of the opposition (Mr. Bennett) pointed out, and as the Prime Minister also contended, Canadian statutes are subject to be declared void for repugnancy, in so far as such repugnancy exists, under the terms of the Colonial Laws Validity Act. If I remember correctly, the Prime Minister inquired of the leader of the opposition whether he was in favour of the repeal of the Colonial Laws Validity Act. Now I ask the Prime Minister not to be sensitive to my personal references to himself, as he appeared to be at one time in the past, because I have a great respect for his office and position, and any personal references I make to him are certainly not with any intent to show disrespect. But the Prime Minister, it seems to me, judging from the discussions of 1926 and 1927, is intellectually utterly incapable of understanding the full implication of the Colonial Laws Validity Act. He fails entirely to distinguish between the repeal of the Colonial Laws Validity Act and the abolition of the supremacy of the imperial parliament itself. The repeal of the Colonial Laws Validity Act by the British parliament would leave applicable to this country a long list of imperial statutes which are still in force, and such repeal would in no sense prevent the imperial parliament from exercising in the future its proper, valid legislative jurisdiction to legislate anew in time of crisis for any part of the empire. The repeal of the Colonial Laws Validity Act would not abrogate in any sense, would not affect or limit in any sense, the legislative supremacy of the parliament of Great Britain. Many authorities have contended—it has been contended even in this country, it has been contended in Great Britain and in Australia—that the continuance of the Colonial Laws Validity Act is in itself a charter of rights for the dominions in so far as it implicitly prevents any acts, other than those made by direct reference applicable to the dominions, being enforced or enforceable in the dominions themselves.

There are therefore grave distinctions, in what the Prime Minister calls functions, between the widely extended functions of the imperial parliament, the widely extended functions of the British government, and those which are vested in the Canadian parliament and the Canadian government. It is significant that when you speak to any English statesman you discover the difference between the views which he holds privately and those which he expresses in public. I

have spoken privately to several Englishmen of high position in England, and those engaged in political life have usually one set of opinions which they express in public and another which they express in private discussion; and it would be difficult to find any Englishman in high position who believes for one moment that the mere agreement among the gentlemen who represented Great Britain and the dominions respectively at the imperial conference, upon certain thereotical principles which they there laid down, is binding in any sense upon the imperial parliament.

I know the Prime Minister cited, with a great deal of gusto, the remarks of Mr. Amery, but to my own mind, with all deference to the Prime Minister, that is a reflection of his sub-conscious sense of inferiority to British authority. I remember, Mr. Speaker, that when we had a grave constitutional crisis in this country, when he himself was the sole adviser of His Excellency the Governor General, he was so filled with that sense of servile submission to the overseas Dominion office that he himself advised the Governor General of Canada, in a domestic matter, to take his orders from the same Mr. Amery. I was more interested when he quoted a Canadian predecessor of his own, Sir Robert Borden, although I do not in all matters think that Sir Robert Borden may have, from time to time expressed the full extent of his own ambition with regard to securing equality of status between this country and Great Britain. In the very passage which the Prime Minister quoted from Sir Robert Borden there is an implication. He made a long statement with regard to the importance and effect of constitutional custom, precept and precedent as distinguished from legislative enactment. In quoting Sir Robert Borden he read:

> The conventions—

Those are the precepts to which the hon. member refers.

> The conventions are superimposed upon the law, and modify political relations without in the least affecting legal ones.

The Prime Minister, in his addresses to this house, and in his addresses throughout the country, which I always read with the utmost interest, because they are reported and sent broadcast throughout the country—I take occasion to smoke a cigar in my library and listen at the radio with gratification to his addresses—makes no distinction between the development of constitutional practice which lies outside the law and the development of the constitution which is provided and created by the statutory enactments of a competent legislature. There is a constitution of this empire. It is a broad constitution and it is found in a series of imperial enactments. It is found in the whole series of imperial treaties which are still in force. That constitution at present is regulated and controlled by those imperial enactments and by those imperial statutes, which form the basis of the legal constitution of the empire itself, and which cannot be abrogated, modified or restricted by any constitutional practice, and therefore it is to those measures that the Prime Minister and his advisers should direct their earnest attention.

At the meeting of the imperial conference resolutions were adopted which the imperial parliament have never approved or confirmed, and which by the way this parliament of Canada has never had the opportunity to approve or confirm; and no means have been formulated whereby the parliament of Great Britain to-day may effectively fetter its own future legislative action with regard to any part of the empire or with respect to any matter within its comprehensive legislative authority. The mere repeal of the Colonial Laws Validity Act would leave matters practically as they are. It was absurd to ask the leader of the opposition if he favours the repeal of the Colonial Laws Validity Act. I would favour it, yes, but undoubtedly what was in the mind of the leader of the opposition was that the repeal of the Colonial Laws Validity Act would not impair or fetter in the slightest degree the dominating supreme authority of the imperial parliament which passed it. I have a reference here to one of those distinguished writers on inter-imperial relations, Jebb, in which he presents a long argument to show that the Colonial Laws Validity Act is really a charter of liberty for the Dominion rather than a fetter, as it merely expresses in a reduced and modified form the restrictions upon the application of its own acts which the supreme parliament had thereby enacted. Its repeal and nothing else will leave the jurisdiction of the imperial parliament just as extended at it is to-day, without any restriction whatever upon the exercise of that legislative jurisdiction with regard to the dominions.

Now these are not mere trivialities. There are laws such as the Merchant Shipping Act, which controls our shipping in every part of the world. I refer to the Merchant Shipping Act, 1894, and more particularly to clauses 735 and 736, which are not consistent with either equality of status or equality of function; although perhaps the Prime Minister may think equality of status does not imply equality of function, and that so long as we

have something akin to equality of status the functions of the British parliament and government may remain as they are. There is also the Admiralty Act, under which the admiralty courts in Canada exercise the jurisdiction conferred by the Colonial Courts Admiralty Act of 1890. Our Canadian laws establish such courts, and their jurisdiction, procedure and practice are still subject to the approval and confirmation of Great Britain. I might go on, but I have not time, to consider a number of other acts, for instance, the Naturalization Act, the Copyright Act and other acts applying to this country. I could recite treaty after treaty which binds this country with respect to its treatment of the subjects of foreign states—but the Prime Minister says that these are mere trifling formalities.

Mr. BENNETT: Technicalities.

Mr. CAHAN: Technicalities. What I wish to urge upon the Prime Minister is this. If we are to attain equality of status, if we are to attain anything approaching equality of function, it is necessary that these imperial statutes should be wiped out.

But what is to take their place? The fault I find with him is that having satisfied the servile consciousness to which I alluded, a consciousness from which the inferiority complex has never been removed, he thinks it sufficient to leave to a body of experts in London to devise ways and means for solving these paramount problems in a way that may not at all be consistent with the views of this parliament or the views of the people of Canada. I have asked in a question before the house as to whether these expert committees which were proposed by the Imperial conference report have ever yet been constituted, as to who were appointed thereon, and as to whether any Canadians had been appointed, and I presume the Prime Minister will give me an answer when that order is reached in due time. But let the Prime Minister remember that every man in this country who is engaged in foreign commerce, every man in this country who is engaged in shipping, every man in this country who is engaged in large exports to the ends of the earth,—every one of these merchants and his legal advisers are wondering what is to take the place of the old imperial statutory constitution when that is wiped out. Take away the Admiralty Courts Act; what courts will be established in this country in the place of those constituted under that act? Take away the British Naturalization Act, and what is to be the status of the individual citizen who leaves Canada and goes to conduct his business in any part of the world? Is he still to be under the protection of the British flag, is he still to be under the protection of the British fleet and of the prestige of Great Britain; or is he to be a mere derelict abroad without citizenship in any country—because Canadian citizenship to-day, as Canadian citizenship, is not recognized outside of Canada?

But I suggest to the Prime Minister, with the most disinterested motive, with a desire as fervent as his own can be to see that the national life of Canada develops along the lines which it has been pursuing for the last eighty years, I suggest that he himself and his government shall in the meantime appoint, as I proposed a year or two ago, a committee of advisory experts in his own country; that he utilize Canadian intelligence and Canadian brains to devise ways and means whereby when he has shattered the old statutory constitution Canada may provide something enduring that will take its place and keep us in political association with the rest of the dominions of the British Empire. Let me refer to an address given by Lord Milner, then Secretary of State of Great Britain, on July 9, 1919, before our Prime Minister was elevated to his present office, and before he and his associate the Minister of Justice (Mr. Lapointe) were ever in the position to make and elucidate these great reforms in our status to which they lay claim at the present time. Dealing with the situation long before the meeting of the last Imperial conference, Lord Milner said:

> The only possibility of a continuance of the British Empire is on a basis of absolute, out and out equal partnership between the United Kingdom and the dominions. I say that without any kind of reservation whatsoever. It is easy to say that, but undoubtedly the working out of it in practice without bringing about a severance of relations between us and the dominions will be one of the most complicated tasks which statesmanship has ever had to face. I am not afraid of it, and yet I have to admit that the difficulties are such that our best efforts may end in failure. I hope not, but at any rate there is no other way out.

Those are the problems which the Prime Minister and his colleague the Minister of Justice and those associated with them are now, in the light of the resolutions of the last Imperial conference, called upon to solve for the nine million people who inhabit this country to-day and for the fifteen million who will inhabit it twenty or twenty-five years hence. In their hands rests the proper solution of these problems, or at least to direct the solution along the right lines, lines

which will assure the autonomy of this country, lines which will assure our hearty cooperation with the other dominions, our continued political association with them and with Great Britain herself.

There were some members of the Imperial conference who, fortunately, perceived the importance and the difficulty of these problems, because the Imperial conference report says that when the conference came face to face with these problems they found:

—that the issues involved were so complex that there would be grave danger in attempting any immediate pronouncement other than a statement of certain principles—

In other words, they stated what they called a theory, a formula, of equality of status which I as a Canadian, proud to be a Canadian, regard as an ideal to which we should constantly strive to attain—an ideal to which we have not yet attained, but an ideal the attainment of which will demand the advice of the best brains that the right hon. the Prime Minister may procure to be associated with him. I say that the time has come now—I said it a year ago—when he should not leave to mere pronouncements by Mr. Amery, when he should not leave to a body of experts in Great Britain, the solutions of these problems. He should have the advice of the best brains he can secure in this country as to the steps which are to be taken when what he terms the "vestiges of the past" are swept away, so as provide durable foundations which shall take the place of the imperial acts and of the imperial treaties, and take their place in such a way as to provide properly for our future political relations with Great Britain and with the other dominions beyond the seas. In attaining that ideal I do not lay the stress I laid forty or twenty or fifteen years ago upon equality of status. We have gone to the length in announcing our desire for equality of status. But let us at least also take into consideration some really constructive efforts to establish on new foundations the real principles and policy which should govern in our future relations with Great Britain and the other dominions beyond the seas.

One word more and I am done. There has been some talk as to whether we should have the power to amend our constitution. The question all depends upon who constitute the "we." The people of Canada, represented by their provincial legislatures and by their federal parliament, have the right to obtain any amendment to the constitution of Canada as expressed in the British North America Act which they may desire with any practical unanimity. It is all very well to say that it is a roundabout and clumsy way that we should first agree as they did in 1867 and then place that agreement before the imperial parliament for enactment; but that is only a matter of form in any event, and although we have had several amendments made to the British North America Act, in no case where we have presented an amendment which we desired to that act has that amendment been refused to this country. Therefore if we ask for amendments to the British North America Act which will provide for us any other way, through the Dominion parliament and provincial legislatures, of enacting statutory amendments to the British North America Act, let us at least first formulate some new entente, some new agreement, that will be binding and that may not be lightly modified, as the basis for the new statutory constitution which this country is to adopt. That problem I think will call for the consensus of the best minds that this country can produce. I see in it great difficulties. I believe I know this country fairly well, although perhaps during the last few years I have not travelled over it as much as I used to do. But we have in this country at present a great deal of agitation, of irritation, with regard to questions of race and religion, and I hesitate to put those questions again into the melting pot in Canada to-day until we have achieved a more united Canada, a more coherent and abiding sense of unity in this country, and therefore I think it is well in that respect to make haste slowly.

Mr. GEORGE W. McPHEE (Yorkton): Mr. Speaker, at the outset I wish to join with those who have preceded me in extending my congratulations to the mover and the seconder of the address on their splendid efforts on that occasion. The hon. member for Hants-Kings (Mr. Ilsley) acquitted himself in a manner highly creditable to himself and with honour to the counties and the province which he represents. The hon. member for Provencher (Mr. Beaubien), making an equally splendid address in his mother tongue, revealed the handicap those of us in this chamber labour under who speak only the one language. Representing as he does a constituency in western Canada, he has the gift of being equally at home in the English as well as the French language.

I also wish to join with those who have preceded me in extending my sincere congratulations to the hon. leader of the opposition (Mr. Bennett) on his election to the leader-

ship of the Conservative party. His years of experience in public life, his wide experience in business affairs, his high legal attainments which make him equally at home in the highest courts of our land as well as in the Privy Council, eminently fit him for the position to which he has been elected.

To the right hon. leader of the government (Mr. Mackenzie King), personally and on behalf of the people whom I have the honour to represent I wish to offer my sincere congratulations on the splendid presentation of the nation's affairs which he made in this house a day or two ago. Frankly, fearlessly and in a manner which, I am sure, will commend itself to all fair-minded people, he outlined to this house and to the Canadian people the progress of Canada under the present Liberal regime. Progress and prosperity, abounding revenues, surpluses of exports over imports, reduction of taxation, remind one of the great years of development in Canada from 1896 to 1911 under the leadership of our great leader the late Sir Wilfrid Laurier. In this connection I recall the words that Sir Wilfrid Laurier used in this house in 1895. After listening to the then Minister of Finance reading from a long list of statistics to prove that Canada was prosperous, Sir Wilfrid Laurier, then plain Mr. Wilfrid Laurier, said:

> When the party which I have the honour to lead comes into power in this country it will not be necessary for any man to read from statistics to prove that Canada is prosperous. I will simply ask every farmer and artisan and mechanic and business man in the country to put his hands in his pockets and there he will find the evidence of his prosperity.

So it is in Canada to-day. On all sides there is evidence of prosperity; on every hand there is a spirit of optimism and buoyancy among our people. The presentation made by the Prime Minister the other day of the nation's affairs stands out forcibly in contrast with the condition that obtained in Canada when he took over the reins of government. I will read from the last address delivered in this house as Minister of Finance by the hon. member for West York (Sir Henry Drayton), under the late Conservative government. Speaking in this house as reported in the fourth volume of Hansard of 1921 at page 3121, he used these words—and this must have been the position in Canada at that time so far as the minds of the members of the Conservative government were concerned because the then Minister of Finance was speaking on behalf of the government. He said:

> We in Canada have a great task before us. The world is sadly out of tune. May we help in restoring harmony? Trust and confidence are sadly lacking. Class interests are advanced with selfish insistence. Unemployment is with us. Faith in our fellowmen is weakened. Doubt of the future is often voiced.

Could any tale of desolation, gloom and dismay be better pictured than that, the benediction pronounced on Conservative governments in this country for some time by the then Minister of Finance? What consolation did he hold out? Let me read just a sentence more:

> The sun still shines—the rivers still sparkle—our lands are as great and fruitful as ever—our resources just as vast.

After giving the picture of desolation and gloom contained in his previous remarks the only consolation held out to the people of this country was that the sun still shone in the heavens and the rivers still sparkled on their way to the sea. Let me read just a line or two more from the same address, because it is necessary for a comparison which I wish to make later on. Speaking in the same connection the hon. member used these words:

> If Canada is to continue to buy as much as she now does from the United States, she ought to sell a great deal more in that market. It is undoubtedly to her immediate interest that she should do so. The position of our trade with the United States, unfavourable as it is, is likely however to be made still more unfavourable.

How much was there to that prophecy? Let me quote the figures. In that same year 1921, we imported from the United States goods to the value of $856,000,000, in round figures, while we exported to the United States goods to the value of $560,000,000, leaving a surplus of imports over exports of $296,000,000 In 1927, we imported from the United States goods to the value of $687,000,000 in round figures, and exported goods to the value of $479,000,000, leaving a surplus of imports over exports of $208,000,000. Instead of our trade becoming more unfavourable the present government reduced an unfavourable trade balance from $296,000,000 in 1921 to $208,000,000 in 1927.

Then I should like to give a few figures, which appear to me to be such that they should be placed on record, as showing the relative per capita wealth of Canada as compared with that of the United States. In 1922, the United States exported goods to the value of $3,771,156,489, and imported goods to the value of $2,608,079,008, leaving a surplus of exports over imports of $1,163,077,481. Dividing that by the population of the United States at that time gives us a per capita surplus of exports over imports for

1922, of ten cents. I am using the years 1922 and 1927 for the purpose of comparison because the present Liberal government has been in power for that length of time. In 1927 the United States exported goods to the value of $4,968,485,000, and imported goods to the value of $4,242,183,000, leaving a surplus of exports over imports of $726,305,000. If we divide that by the population of the United States we have a per capita surplus of exports over imports of only six cents. What are the figures with regard to Canada? In 1922, Canada exported goods to the value of $753,927,009, and imported goods to the value of $747,804,332, leaving a surplus of exports over imports of $6,113,677. Dividing that by the population of Canada in 1922, gives us the figure of 64 cents per head of population of exports over imports. Last year Canada exported goods to the value of $1,267,573,142 and imported goods to the value of $1,030,892,505, leaving a surplus of exports over imports of $236,680,637. If we divide that by the population of Canada we have a per capita surplus of exports over imports of $24.90.

Mr. BENNETT: Are those figures for the year ending March 31?

Mr. McPHEE: These are the last figures. In the last five years the per capita surplus of exports over imports in the United States has decreased from ten cents to six cents, while in Canada in the same length of time our per capita surplus of exports over imports has increased from 64 cents to $24.90, the greatest per capita surplus of exports over imports of any country in the world. It appears to me that these figures tell a story of prosperity which should be advertised to the whole world.

My hon. friend the leader of the opposition (Mr. Bennett) in endeavouring to show that Canada was not prosperous, referred particularly to the railway situation in this country, and at page 14 of Hansard he is reported as follows:

> Then with respect to the railway figures: I am sure the gentlemen responsible for that speech have not closely analyzed those figures, because if the condition that prevailed last year is to continue for another three years, the railways will have no net revenue at all. The truth is that the Canadian Pacific Railway earned last year $3,766,000 more gross than the year before, but their net receipts were $4,700,000 less than they were in 1926; and the Canadian National railway system, while increasing its gross revenues by $2,692,000, decreased its net revenue by five and a half million dollars. Now as its net revenues were only thirty millions it follows that if the revenue of the railway is decreased by five and a half millions every year it will only be five or six years before it has no revenue at all.

I think the best answer to my hon. friend is to place side by side with his remarks the statement of a gentleman with whom I am sure he will agree; I refer to Mr. Beatty, the president of the Canadian Pacific Railway Company. In an article published shortly after the beginning of the year, in which he reviewed the situation during the preceding twelve months, Mr. Beatty said:

> A review of the past twelve months shows that the general business of the country experienced a consistent and widely spread development, based upon very general agricultural prosperity and industrial expansion . . . That business conditions are such is highly satisfactory, but it is also well worth considering why net earnings of the railways show, as they do, a very serious decline. The reason, of course, is plain to see. While wages paid to railway operatives have been advanced during the year, there has been a serious reduction in freight rates on grain, with the result that increased traffic, resulting from better business, has failed to keep pace in revenue with advancing costs of operation. Furthermore, the bad weather conditions during the early months of the harvest delayed shipping, and earnings of the last quarter of the year were further adversely affected.

Mr. Speaker, the country is prosperous. On every side, as I have already said, there is a spirit of optimism. The beacon lights of prosperity are burning across this country from the Atlantic to the Pacific. In our own great western country, notwithstanding unfavourable weather conditions, a good crop has been harvested. Our people are rejoicing over railway construction and increased business generally. The Hudson Bay railway is now assured thanks to the present government and to our energetic Minister of Railways (Mr. Dunning). The mineral developments in that section of the country adjacent to the Hudson Bay railway fully justify the wisdom of this government in pushing the railway to completion. The Hudson Bay Mining and Smelting Company, owners of the Flin Flon mine, have contracted to build on the property during 1928-29 a 3,000-ton per day smelter at an estimated cost of $14,000,000. What is happening with reference to that mine will also happen in the case of other mines in the same territory.

Now, Mr. Speaker, it is just about time to rise for the recess and as I wish to go on to another subject I should like you to call it six o'clock.

At six o'clock the house took recess.

After Recess

The house resumed at eight o'clock.

Mr. McPHEE: Mr. Speaker, before recess I was discussing the financial and business conditions of the country, and now I bring my remarks to the section in the speech from the throne which refers to the celebration of the diamond jubilee. Here again great credit is due the Prime Minister (Mr. Mackenzie King) for the extensive plans which he made for that celebration, while credit must also be given to Right Hon. Senator Graham and his associates for the highly satisfactory way in which the celebration was carried out throughout the country. The degree in which the jubilee celebration caught the hearts of our people of all classes and creeds bears testimony to the wisdom of those who laid the foundations of confederation, and testimony as well to the fidelity of those who reared the superstructure on the broad lines of liberty, equality, fair play and justice to all.

I had the privilege of delivering several addresses in the course of the celebration, the largest gathering being in my own town, Yorkton, where there were seven thousand in attendance. Incidentally I may observe that in the way of local prosperity it is no longer a town, as yesterday it attained the status of a city. In another promising town, Theodore, I witnessed as intelligent and fine looking a collection of well taught school children as I have ever seen in any part of Canada. But the two celebrations to which I wish to refer for the purpose of the record were those that took place in localities where the settlers came from continental Europe. At a place called White Sand River Bridge, northeast of Theodore, where I attended a celebration, there were 367 children comprising six school districts, all dressed as patriotically as possible, and each one carrying a union jack. Each child in that gathering was the son or daughter of parents born in central Europe, and each of the five teachers who taught those children daily and who mobilized the gathering, while of Canadian birth, was the son of parents who came to this country from central Europe. These children sang "O Canada" and the national anthem with a spirit that would do justice to any gathering of school children in the Dominion. In another celebration at Rhein, Saskatchewan, where the people have come from Germany, I had the pleasure of addressing a gathering of 250 children. These also were well dressed in patriotic fashion and all carried union jacks. In massed choir they sang "O Canada," first in English, then in French and lastly in the mother tongue of their parents, German. In connection with another celebration later on in the same place I was privileged to attend the presentation of medals awarded by the Governor General for the best essays on confederation. These medals were given to those pupils in the school inspectorates who had written the best essays on Canada's development since confederation, and three divisions were made, the first division being grade 8, the second, grades 9 and 10, and the third grades 11 and 12. I was present when the school inspector pinned the medals on the boys who had won them. In the first division the medal was awarded, in this district, to Henry Graf, whose father came to this country from Germany. An independent judge, in giving his decision, said in reference to the prize essay: "It is carefully written and it has spirit and enthusiasm for Canada." The medal for the second division was won by Michael Ostopowich, whose parents came from central Europe. I put these facts on record because I notice that there is a tendency in certain parts of Canada to overlook the Canadianizing that is going on in our western country.

As I recall the incidents I have related, I think of the words of "The Canadian Immigrant" as applied to the parents of these children about whom I have been speaking:

> We have left the land we have loved so well,
> With tears dimmed our homeland fires;
> We have wandered far, we have wandered long
> To the land of our high desires.
>
> Not for ourselves do we seek the gold
> That lies in the prairie loam,
> But that those we beget may find and hold
> In Canada a home.

Again as I recall these incidents I am proud to belong to the great Liberal party that has done so much for these people because it was under the Liberal government of Sir Wilfrid Laurier and the administration of Sir Clifford Sifton as Minister of Immigration that the policy was inaugurated to bring these settlers to Canada.

Mr. Speaker, let us eliminate all religious and racial animosities in this country and let us bend our energies towards getting into Canada men and women physically and mentally sound and willing to work. If we do that we shall build up a country worthy of the traditions of our past. Let us take the people from England and Wales, with all their love of liberty and freedom. Let us take the people from Scotland and Ireland, with the Scottish

thrift and Irish merit. Let us take the people from France who, in the early days, were the voyageurs and pioneers of discovery and ministration to the North American continent. Let us take the people of the northern countries of Europe, who for centuries have battled with conditions similar to our own. Let us take the people of Germany, with all their knowledge of scientific research. Let us take the people of the other countries of central Europe with their love of pastoral and simple life. Let us take the Italian, with his tradition of sculpture and art, and let us build up in this God-given heritage of ours on the northern half of the North American continent a race combining all the best traditions of the races from which we sprung, establishing here what we hope to see above—a house of many mansions where there is room enough for all.

Mr. T. W. BIRD (Nelson): Mr. Speaker, one is at some disadvantage in following speeches so eloquent as the last two or three to which we have listened. I think you will agree with me that the forty-minute rule is having results that we did not expect. Quantity is giving place to quality.

At the beginning of my few remarks I wish to commend the government and the Minister of Railways (Mr. Dunning) for the energetic manner in which they have applied themselves to the construction of the Hudson Bay railway. That railway, as most of my hon. friends know, lies within my constituency. My constituents are in a position to appreciate or otherwise the efforts of the government in this direction, and I wish to say quite frankly that I have never yet heard one word of criticism of the policy of the government during the last two years. In regard to the change of ports, I am happy to be in a position to commend the government and Minister of Railways in that respect as well. The leader of the opposition (Mr. Bennett) joined hands with the Manitoba Free Press in expressing some doubt as to the wisdom of that change. It is a pity the leader of the opposition should agree with the Free Press only when the Free Press is wrong. We are very proud of the Manitoba Free Press in the west, but after all it is a human institution and occasionally it falls into error.

Mr. BENNETT: Purely inadvertent.

Mr. BIRD: The agreement of the hon. leader of opposition I assume, was equally inadvertent. I personally do not think it is necessary to go very far afield to find a motive for the change that was made. It is not necessary to impugn either the morals or the wisdom of the Minister of Railways, because fortunately there are reasons that are accessible to all who have studied the question which are amply sufficient to justify the change that has been made. The assumption seems to be that years ago there was a very thorough investigation, that a change had been made with insufficient regard to those early findings, and that the Minister of Railways has acted on the say-so of Mr. Palmer. In the first place, Mr. Speaker, I am not quite so sure that those early investigations were thorough-going in any sense of the word. It must be understood that up to 1909 there was never any question of Nelson being an alternate port to Churchill. From 1909 until 1912, when the final decision was made, I am not aware of any investigation being made that would qualify in any sense of the word as being a thorough investigation. It startles one to think that any government or governments should presume to decide an important matter upon such slender grounds. That initial investigation was far from being complete and thorough-going. Since 1912 much water has flowed beneath the bridge at Port Nelson. For four years the engineers of this government resided at Port Nelson and carried on the work of construction at that port. Those engineers naturally had an excellent opportunity of finding out all the possibilities at Port Nelson—four years of close investigation. From that time nothing that is new has been discovered concerning Port Nelson. All that there was to find out was ascertained at that time. So that it is very far-fetched indeed to say that Mr. Palmer gave a snap judgment, because Mr. Palmer had all the reports and all the results of that experience to judge by.

Therefore, Mr. Speaker, I am very much pleased at this point to be in hearty accord with the government and its policy. I think the action of the Minister of Railways is amply justified. The experience of our engineers at Nelson destroyed the old assumption that Nelson was an easy port to develop. The findings of Mr. Palmer at Fort Churchill, when he adopted the common sense procedure of sinking his drills at Churchill, destroyed the assumption that Churchill was a difficult and expensive port to develop. The old assumptions, which were entirely mythical, have been completely reversed, and it has been found that Churchill is the easy port to develop and Nelson the difficult.

Leaving that question aside, I should like to deal for a moment with our natural resources. I was glad to learn from the Prime Minister that at the Dominion-provincial conference there had developed a better feel-

ing of an inter-provincial character; an atmosphere was evidently generated there through which our sister provinces of the east were able to see this matter from our point of view. That is so much to the good. But I regret that the Prime Minister had not something more definite to say. As a member from Manitoba I want to tell this house that the return of our natural resources is the most vital question facing the province to-day, because in the last year or two some of the most valuable of those resources have been alienated from public ownership and handed over to private interests, and the process has been going on almost up to the present time. What is the situation? Here are we of Manitoba sitting helplessly by while our natural resources are being taken from us and given, in some cases, to alien ownership. At the convention of the United Farmers of Manitoba I was instrumental in getting an amendment moved to a resolution dealing with natural resources by which that convention was put on record as being in favour of the retention of our provincial water-powers—and very enthusiastically on record, because a short while before we of Manitoba had witnessed some of our most valuable natural resources alienated from our possession. I understand that the Dominion government has taken the position that the disposal of these resources is a matter for the discretion of the provincial government. After the carrying of that motion I was approached by a member of the legislature, a supporter of our provincial government, who repudiated the contention that the provincial government had any responsibility at all. He said: We are not responsible for this; the responsibility rests at Ottawa. We in Manitoba at this moment are in the position of having responsibility for our natural resources bandied backwards and forwards between Ottawa and Winnipeg, and it is an alarming situation.

Now, Mr. Speaker, I am one of those who does not subscribe altogether to the doctrine that it is to our national benefit to get rid of our natural resources as quickly as we can. Their exploitation at any price is not one of the things I entertain in my economic or political creed. The hon. member who preceded me (Mr. McPhee) in a very eloquent passage of his speech, which I admired, dealt with the celebration of our diamond jubilee. Well, if there was one blot upon the formal celebration it was the bragging we did in regard to the amount of natural wealth that we possess. I do not think it is dignified for a young nation to be too chesty and self-important because Providence, with no special regard to it in particular, placed those treasures where they are at the present time. I am anxious that our natural resources should be developed as speedily as possible, but I want to see them developed in harmony with a policy that will bring the greatest amount of good to the people at large. These streams of material blessings which we expect to flow from our copper mines, our gold mines and our forests will not of themselves, I suspect, begin to irrigate and bless the homes and the lives of the common people of Manitoba. This is the task of statesmanship, not to sit by and pay deference to the moneyed men of east or west or south or across the sea, and express a readiness to give these resources away, but rather to see that they are exploited in such a fashion that the people of the province, the pioneers who have borne the burden and the heat of the day, shall somehow get their share of that benefit.

With regard to our minerals in the north, I confess that they are of a peculiar nature. It does not seem to me there is very much hope that in the near future we shall be able to dig our copper or our gold in a way that will affect beneficially the ordinary farmer or labourer in any visible form whatsoever. Some people cling to the myth that somehow or other the speedy exploitation of our copper and our gold will bring indefinite blessings to the ordinary people. I do not believe it. I have never seen it happen. Unless there was some direct policy adopted by the powers that be, there could never be any hope that the exploitation of our resources by private capital would benefit the ordinary average citizen. Even on the basis of private ownership I think Manitoba has a right to dispose of her own precious metals. I do not think that the mining of these treasures can be economically developed by long-distance administration. So long as we are in a different position from Ontario or Quebec or British Columbia in this regard our mining development is going to suffer. I have no criticism at all of our Mines department. That department cannot do the impossible. It cannot administer the Manitoba mines as sympathetically and efficiently as, for instance, the provincial Department of Mines at Toronto can administer the mines of Ontario. Therefore it stands to reason that the early and efficient development of our copper and other mines in Manitoba demands that the government at Ottawa should at the earliest moment hand over these resources to the provincial authorities.

In our pulpwood we have a species of natural resource which presents its own prob-

lem in Manitoba. We have in it a very rich natural resource which exists contiguously to that class of farming land in Manitoba which has never been any too productive, farming land on which for a good many years men and women have lived and eked out a most precarious living. Our timber resources stretch, I was going to say, in a never-ending line diagonally across the province and are bordered by a class of farmer whose condition is no advertisement for Canada. This is an opportunity for statesmanship so to exploit our pulpwood as to work hand in hand with this struggling class of farmers who exist along the border line of the forests of Manitoba. I maintain that that is not being done; that our forests are being rifled and depleted according to no rule of any kind that I can see. The whole situation, so far as I know it, is one of utter confusion and it is certainly not playing into the hands of the man who has toiled on the little homestead all these years. We cannot too soon see to it that in some way or another these pulp resources are going to be of some benefit to that class of settler, not only for the present but for years to come.

In our water powers in Manitoba we have a great deal of pride. Manitoba is the third or fourth province in the dominion with respect to this form of natural wealth. It is a form of natural wealth which is inexhaustible, which requires no expenditure of our effort to renew it and which lends itself in a peculiar way for exploitation by the public and for the public. Inasmuch as it lends itself to the benefit of the people, just so much does it lend itself to the covetousness of the moneyed interests upon this continent. Within the last year we in Manitoba have seen our most valuable water power site alienated from public ownership. Last year in this chamber we men of the west stood up in what we thought to be a righteous cause. We thought we would stand between private interests and the consumer in Ontario, and when a raid was being made upon the water powers on the Ottawa river we came loyally to the assistance of the champions of the people. But within the short space of a year we have had the most valuable water power site in Manitoba given away without this parliament and without the people of Manitoba having had any say whatever in the matter. That kind of thing is a discredit to this parliament. This is a source of natural wealth which, by its very nature, lends itself to successful exploitation by the people themselves, a form of natural wealth which can easily be conveyed to every home in Manitoba so that it can make its tangible benefits felt in the way of dissipating the drudgery which overshadows the lives of our people in the west.

So much for our natural resources. I want to say a word about the tariff board. At the convention of farmers held at Portage la Prairie I said a few unpremeditated things about the tariff board and since that time I have been very severely expostulated with by a good many of my friends. I want to make it clear that I have no criticism to offer against the personnel of that board. They are all very clever and efficient men, and if they have an opportunity to put in a stroke for the consumer I am quite sure they will do it. But the reason I criticize the tariff board is precisely this, that I am jealous of any body, no matter by what name you call it, that steps in between government and the people whom the government governs. Jealousy is sometimes based upon very unsubstantial grounds, I know, but if I had the time I think I could quote concrete instances to bring to your mind the fact that all such bodies, no matter what they are, always lend themselves in the course of time to the creation of opportunities, far too numerous, of defeating the interests of the people in the interests of the few. That is my contention and I do not think it can be very well gainsaid. I do not care about the personnel; it may be the most trustworthy that you could find. I do not care what the regulations are by which it is governed; they may be the wisest you can conceive. I am thinking not of to-day, but of to-morrow, of the future. This intermediary body, call it a board or a commission, steps in between me as a citizen and my government, and I contend that it has no right to be there. I do not want it to influence either the government or myself. I do not want to be blinded and I do not want the government to blind itself.

This tariff board in my estimation acts like a breakwater against which the waves of public opinion break and shatter and disperse before they are allowed to reach the halcyon calm of the cabinet council. That is what I believe and no one has as yet shaken me in that belief. I know this and I do not think I am using satire when I say this; I do not intend to use satire. I think the government and its supporters, if they are honest, will recognize with me that the present government could not exist at all if it did not compromise on the tariff question. It is not a low tariff government or a high tariff government; it is a government which has perforce to compromise in order to exist, a government which within itself contains represenatives of both elements of public

opinion. I know that in order to have the necessary atmosphere of calm, the necessary stability to carry on, it is essential somehow to temper the shocks of public opinion on the one side and the other before they reach the precincts of the council. It is better to have the clash outside than to have it within. I do not criticize compromise; I have learned to think that perhaps it is necessary in this country; but I do not want to see the compromise settled down at a point where the people are going to continue to be penalized. If there is going to be compromise, if we are going to settle down to a state of balance, it must be much nearer to a point where the people get something like justice. We have this shock absorber erected between public opinion and a government whose very character renders it somewhat necessary. But I, as a man representing a farming community, cannot sit quiet and allow any body, no matter under what pretence it exists, to shield any government in any way whatsoever from the expression of public opinion that my people expect me to make.

They say the board is a fact finding body. The hon. member for Marquette (Mr. Glen) justified it on those grounds. I have as much reverence for facts as anyone; facts are serious things, and a fact scientifically established is a thing you cannot escape; when it is fixed it is always a step in progress. But are these so-called facts anything of that character? I do not believe they are. These facts are very imposing, of course, and I must say that they gave my hon. friend an opportunity to make a very excellent and telling speech indeed, but at the best they are statistical facts although some of them are very spectacular. I have listened to speeches of that kind for seven years, speeches just as effective, which arrayed facts just as well, but what does all this fact finding amount to? It amounts to nothing, and it cannot amount to anything. I do not know that a statistical fact, even when you have found it, does any more than simply give the professional juggler of facts just one more opportunity, and the consumers of Canada are not concerned with sleight-of-hand. They want action; they want results. There is only one fact with which they are concerned, and you do not need to go around by Robin Hood's horse stable to find that fact. The consumers of the country are only interested in the fact that the manufacturers of Canada have been riding on the back of the Canadian farmer for the last few generations, so why do you want to erect all this machinery in order to rub that in? What the Canadian farmer needs is not a tariff board at all; he needs to organize himself to come down here and make it impossible for governments to carry on until some redress is given him. The farmer has been fooled once, and he will be fooled again, by being side-tracked by such will-o'-the-wisps as these.

Now we are told that this is a fact finding body but not a fact interpreting body, that what this body produces is not interpreted facts but simply masses of evidence, and everyone knows that evidence does not constitute facts. We have listened to evidence given before committees of this house, and we know that evidence is not facts. On most occasions evidence is a hay stack of miscellaneous representations in which there is sometimes embedded an occasional jewel of fact, something such as my hon. friend resurrected to-day. These facts are often the kind which are intended to adorn an election speech and make it look like something, but the people of Canada do not want ornamentation any more; they want action. They want this government to move in the direction of lower tariffs, and to move at once. I might offer a constructive suggestion to the government, and it is not far-fetched because we have precedents for it; as I have said, this tariff question in Canada has reached a sort of impasse, in which we cannot expect any great leeway unless public opinion changes, and here we have a government sitting where it is because it is supported by low tariff votes. This government is in existence to-day because its majority is maintained by men pledged to low tariffs.

Miss MACPHAIL: And women also.

Mr. BIRD: I think it is the duty of the government to take the low tariff opinion of this house into consideration. I do not think low tariff men are unreasonable, with perhaps the exception of one or two whom I could name. We do not want to bring about the Kingdom of God over night, but we would like to see our tariff stabilized at a point lower than it is at present, which would be more consistent with justice to the producers and consumers of this country. There is no reason why a government supported in the way this government is supported and depending as it does on low tariff support, should not frankly state its case to the low tariff opinion of this house in order to secure in return an expression of public opinion as it exists in Canada to-day. Let the government find out what the low tariff opinion of this country means, what it demands, and what it is out for. I cannot see any other way in which the government can be carried

on honestly; I do not think this government can honestly exist a moment longer if some such arrangement is not made. This government cannot expect low tariff men to keep it in power unless some move is made to meet low tariff opinion, because the government is putting some of its own supporters into an impossible position, which will not be tolerated back home.

Now just a word or two in regard to immigration. I think we get into the habit of talking about immigration as we talk about natural resources, without regard to underlying facts. We say, "Let us fill up the country, make it populous and great". Most of us, when we catch ourselves by surprise, are megalomaniacs; we worship what is big, and we speak of things in quantitative terms. We do not stop to take heed of the human elements which exist all around us, and when we talk of immigration I am afraid we forget to consider the happiness and contentment of our Canadian homes. As we understand immigration in this country to-day, Mr. Speaker, it is competition; our immigration policy has been shaped not with the view of meeting the needs of the farmers but the needs of the urban centres. Our immigration policy professedly exists to flood our country with farmers, and no one can convince me that that is not bringing the farmer up against unfair competition. If you flood our western country with wheat producers, there is no power on earth which can prevent the price of wheat from falling. I know that from year to year the world demands increases, but it increases at an ascertainable rate, and our immigration policy should have some relation to that rate of increase; otherwise you are deliberately attacking the standard of living of our western farmers.

I would like to pin down, if I can, this immigration myth with respect to Manitoba, and I am sorry I have no figures for the provinces further west. Our Minister of Immigration (Mr. Forke) is from Manitoba. It is a matter of regret to me that the former leader of the Progressive party should be placed in such a position that his efforts, however excellent, are bound to be futile or to work injury on the people who placed him where he is. I find according to a government publication that for the year ending March 31, 1926, about 17,000 immigrants came to Manitoba. About 50 per cent of this number were agriculturists, or 8,913, to be exact; and of this number 70 per cent, or 6,239, were adult males, the real farmers. Thus we received in that year as many farmers as we could place on vacant lands which can possibly be farmed. According to another publication there are 5,135,634 acres of unused land in organized territory in Manitoba. About one-half or 54.26 per cent of this belongs to the public and may therefore be assumed to be practically worthless. You can take my word for it that it is worthless or it would not belong to the public at the present time. Of the other half, which we assume is worth something, only 9.57 per cent is good, 46.50 is medium, and the rest is worthless. This leaves 1,250,000 acres. This would make 7,800 farms, and in 1926 we had actually 6,239 farmers come to Manitoba. Can anybody tell me where they are going? They are not going on our farms; they cannot get on to them. They are drifting away to Winnipeg, and over the boundary at Emerson into the United States. Now figures of this kind let light into this furore of propaganda about increased immigration. The facts are that we do not need it as far as Manitoba is concerned. It is something else that we need: we want to make our Manitoba homes comfortable, contented and happy, and that is what they are not. I want to tell you—

Mr. SPEAKER: The hon. member's time has expired.

Mr. PIERRE F. CASGRAIN (Charlevoix-Saguenay, Translation): Mr. Speaker, as I had not the privilege of addressing this honourable house last year, might I be permitted to take up a few minutes in order to congratulate you on your being elected for the third time to the so exalted post of Speaker of this house. The whole province of Quebec prides itself and rejoices in seeing in the Speaker's chair of the House of Commons of Canada, one of its most distinguished sons. No doubt exists in my mind that sooner or later you will be called upon to fill higher posts, if not in the administration of this country, at least in other parts of the world.

Together with all the citizens and catholics of the province of Quebec as well as all the catholics in Canada, I rejoice in the elevation to the cardinalship of his Eminence Monseigneur Rouleau, archbishop of Quebec. I am glad to see that the new primate of the Catholic church in Canada, is a citizen of the province of Quebec. The custom has always been that the cardinal, in Canada, should be a bishop from the province of Quebec and moreover having his see in the city of Quebec.

May I also, Mr. Speaker, extend my most sincere congratulations to the mover and seconder of the address in reply to the

speech from the throne. They performed the task assigned to them with grace and dignity.

I am pleased to observe that the government has fulfilled a duty: they have acknowledged the rights of the French Canadian minority in Ontario, by calling to the upper house one of its distinguished citizens, in the person of the hon. Senator Lacasse, and I think that all the French Canadian people of the province of Quebec, as well as those of other parts of Canada, will give credit to the government of the Right Hon. Mackenzie King for such a fair and just act.

Recently Canada reached another pinnacle. Since it has joined the League of Nations, we have had the pleasure to see the hon. Senator Dandurand, a cabinet minister in the present administration, become president of the sixth meeting of the League of Nations. Moreover another very important post has been allotted to Canada: we now have the high honour of occupying a seat in the council of the League of Nations. No doubt if such a great honour has been bestowed upon Canada, it is naturally due to its importance, to the unique position it holds among the other nations of the world, but it is also due to the courtesy, dignity, experience and international relations of the hon. Senator Dandurand.

The speech from the throne mentions the appointment of ministers to Japan and France. No doubt that these two new appointments will be of a nature to reflect still more gloriously upon the Canadian nation, and further the progress of our country in the path it is now pursuing.

The speech from the throne also mentions the visit to this country of the Secretary of State for Dominion Affairs, the Right Hon. Mr. Amery. He is here, so it seems, to try and devise, together with Canada, the most efficient way of representing our country in England. He may be prompted by the best of interests, both as to his views and the way of proceeding in the matter, but at the same time we are informed that certain vessels of the admiralty are coming over to replace other vessels in Canada. These things, sir, may have their good side, but might I remind the government that in all these matters, one must act deliberately and wisely, and not take any decision which might lead us into very costly ventures, like what took place in the past. I might repeat here: Timeo Danaos et dona ferentes.

The speech from the throne, referring to immigration, says that the government will, by carrying out its policy, endeavour to attract here citizens capable of becoming good Canadians, who will help to develop the country and contribute to the Canadian nation's greatness. I would like to see such a selection, and I think that all those who come here from foreign countries can be assimilated, if we are careful as to where we locate them. As mentioned, the other day, by the right hon. Prime Minister, it is difficult to attract the best citizens of the countries of Europe. The best people of those old countries have emigrated to the United States or Canada. Allow me sir, to congratulate the government for having granted a subsidy of $150,000 to the province of Quebec, so as to help in the repatriation of the French Canadians who have emigrated to the United States. I think it is a sound measure and wise policy.

May I also draw the attention of the government to the fact that they should inaugurate a policy which would help the people of the province of Quebec and those of the eastern provinces wishing to settle in the western provinces, to reach that part of the country on better and easier terms than in the past. The people of the province of Quebec who, in certain cases find it impossible to remain any longer on our old lands would like to obtain the same privileges as foreigners enjoy. I trust that the government will give its full consideration to this question and grant to our people of Quebec and the old eastern provinces, the same advantages as those granted to the newcomers of European countries.

The Prime Minister, the other day, pointed out all and each of the most important activities of the administration. He gave the country a clear and precise statement of all that had been done during the good administration of his government. He clearly showed that the present government has been able to establish stability in the country, impart confidence among all classes of society, reduce duties and taxation and at the same time carry out the necessary work to help the progress of the various sections of the community.

The speech from the throne, Mr. Speaker, also refers to the construction of the Hudson Bay railway. I am not opposed to it. I also believe that the members of this house are neither opposed to it, at least those who sit to your right, Sir. Nevertheless, I think that while we are constructing this railway, the government should not forget the building of certain railways in the province of Quebec—or the improvement of certain lines —which have been needed for a number of

years and on account of which, part of the Gaspé peninsula—the counties of Gaspé and Bonaventure—is threatened with depopulation.

The government should find a solution to this problem of ours, as soon as possible, so as to keep among us the citizens of Quebec.

The speech from the throne contains an item about a new airplane service for the carrying of mail from Rimouski to Montreal. I congratulate the government on this matter. It is a new departure, and one must be up to date these days, we must not drag behind. There is but one thing that the speech from the throne has forgotten perhaps to mention, it is that I myself had the honour to obtain from the Postmaster General (Mr. Veniot) the establishment of a similar service to carry the mail by airplane from Murray Bay to the Seven Isles and the island of Anticosti. I therefore wish, on behalf of the whole population of the counties of Charlevoix and Saguenay which I represent, to thank the government and the Hon. Mr. Veniot for having solved this so urgent problem which affects all the people of that section of the country. This service is not perfect. I have already drawn the attention of the Postmaster General to this matter. He can rest assured that every day I shall give him no peace so long as the service is not improved in such a way as to provide for all the needs of these people.

I have asked the government—and I hope that the hon. Minister of Trade and Commerce (Mr. Malcolm) will comply with my request later—to grant a subsidy to private companies which are in a position to operate ice-breakers so as to maintain a regular service during the winter, along the north shore between Murray Bay and the island of Anticosti. I trust that this question as well as others will be settled to the satisfaction of the electors which I have the honour to represent.

The speech from the throne further mentions the interprovincial conference. Apparently, at this conference, many questions of interest to both the Dominion and interprovincial governments were discussed. Nothing but good can be the outcome of such conferences, and it would be desirable to hold them oftener. A matter of the utmost importance and to which I want to draw the attention of the government, is the improvement of certain highways in various parts of our province and in the counties which I have the honour to represent. As you are aware the question of highways is a provincial concern; quite so. Nevertheless there are certain far-off districts which are so sparingly populated, and territories so little organized that the provincial government is unable to provide for all the needs which crop up every day in the various parts of these new territories. I appeal to the government of this country to come to an understanding with the province of Quebec so as to solve the problem in such a way that the postal service, the travelling and trade facilities can be kept up in a satisfactory manner. No doubt that through the distinguished and worthy representatives who hold office in the Dominion administration, we shall obtain justice.

Mr. Speaker, last year the government enacted certain legislation; the Farm Loan and Old Age Pensions Acts. I congratulate them on that score and I trust that the government of Quebec will take advantage of the legislation which has been included in the Statutes of Canada so as to give the benefit of these two acts to its citizens.

Yesterday afternoon, I listened to the speech delivered by the member for Temiscouata (Mr. Pouliot). The hon. member was careful enough to state, at the outset of his remarks, that he was speaking solely on his own behalf. I thank him; otherwise, I think, he would have discovered that there were members to your right, sir, who do not share his views nor would they have stood by him. For my part, I repudiate all that was said on that occasion by the member for Temiscouata; I repudiate the insinuations levelled at the Prime Minister of the province of Quebec. The member for Temiscouata seems to take exception to a clause in the speech from the throne delivered at the opening of the legislature, in Quebec, on the 10th of January last, and which reads as follows:

> My ministers believe that Canadian unity and the future of Canada will be best assured by respecting provincial autonomy and by remaining loyal to the British North America Act in the spirit as well as in the letter.

This clause included in the speech from the throne and delivered at the opening of the Quebec legislature could well have been inserted in the speech from the throne delivered here, at Ottawa, on the occasion of the opening of parliament. Nobody more than the government of the province of Quebec wants the government at Ottawa to observe the federal pact. The Dominion as well as the provincial government wishes to uphold this pact; because without it we would not know where we were drifting nor how we could safeguard our rights, language, religion and freedom.

Exception is taken in certain quarters because on certain questions, the Premier of

Quebec, shares the same views as another prime minister, the Premier of Ontario. But, sir, can we prevent people sharing our views?

If the Premier of Quebec expresses an opinion and the premier of another province holds the same views, can we infer on that score that both walk hand in hand and are of the same party? I do not think so. Whenever the Quebec and Ontario Premiers met in conference I rather think that it was the Prime Minister of Quebec who led the way and that the former followed in his footsteps, it was not the Quebec Premier who followed. I, personally, know too well the Hon. Mr. Taschereau to think that he can be swayed by the views or bow to the opinion of another person; he is too sincere, upright and loyal, he holds too much to his opinions.

It seems to be rumoured in certain quarters that the Prime Minister of Quebec does not always agree with his friends in the Dominion government and the Liberal party at Ottawa. I shall ask my kind friends to recall where was the Premier of Quebec in those dark days of 1911, 1917, 1921, 1925 and 1926. He stood by the leader of the Liberal party carrying on the struggle by his side with all his energy in every riding of the province of Quebec; he stood beside my humble self, helping me to win the two united ridings of Charlevoix and Saguenay. If we answered: "Aye ready! when he asked us to help him in the provincial elections, he also, at the general elections of 1911, 1917, 1921, 1925 and 1926, answered back immediately: "Aye ready!" He was ready, he has always stood by us when we were in need of him. And if my memory fails me not, Mr. Meighen has often taken him to task for his campaign in 1925, and again he referred to this fact recently in Winnipeg. When partisans of the Liberal party, who had always been friendly to Sir Wilfrid Laurier, left him in the great crisis of 1917, the distinguished leader of the Liberal party in the province of Quebec remained faithful to him, and again, later on, he carried on the struggle side by side with Mr. King, Mr. Lapointe and all the other party leaders. I do not hesitate to state, knowing Mr. Taschereau as well as I do, that he is without gainsay one of the first citizens of this country. Among all the prime ministers of the provinces of Canada, none are greater. I am fortunate and honoured to include him among my friends, to follow his counsels and benefit through his experience. With the exception of the eminent men who are at the helm of our government to-day, and the distinguished ministers from Quebec, at Ottawa, no one has worked harder and more effectually than he for the success of the Liberal cause in the last Dominion elections, and a great part of the success obtained may be attributed to his good work and valuable co-operation.

Mr. Speaker, knowing the ins and outs of both the Dominion and provincial administrations, I have no fear in stating that—and I think that all those who sit to your right, sir, will agree with me—for ever so long, the most cordial intercourse has existed between the provincial and the Dominion governments. Mr. Taschereau is the worthy successor of the most eminent prime ministers of the province of Quebec, of Sir Lomer Gouin the Hon. Mr. Parent and the Hon. Mr. Marchand, who reflected such great honour upon the Liberal party and who also have shown that the Liberal party alone in Quebec as well as in Ottawa, was able to solve the financial problems both of Quebec and Canada. Some members may think otherwise—the hon. member for Temiscouata (Mr. Pouliot), perhaps— nevertheless I think that no one will hand down to posterity a more worthy name than that of the Hon. Mr. Taschereau.

What impresses us most in the speech from the throne, are the great results achieved by the present administration; peace, union and harmony exist since we have such a government.

We have a Liberal government, both in Quebec and Ottawa, and business is flourishing; I trust that, together with all my Liberal friends, both provincial and federal, we shall have for a long time to come Mr. Taschereau at the helm of the Quebec government, and the Right Hon. Mackenzie King in charge of affairs at Ottawa. These two governments will ensure the union, peace and harmony existing to-day, and I feel certain that Canada will continue to move forward in the path of progress, and that Quebec will enjoy an era of prosperity unparalleled by any government of that province.

Mr. H. B. ADSHEAD (East Calgary): I have been very much interested in the discussion that has taken place on the speech from the throne and I must compliment my hon. friend from Hants-Kings (Mr. Ilsley) on the admirable presentation he made of his case in moving the address in reply. It seems that one of the functions of the bi-party system is that, whenever a member on the right of the speaker rises, he shall tell us all the good things there are in the speech from the throne, leaving aside all reference to anything else, while those to the left of Mr. Speaker seem to have the faculty, as the

hon. member for Muskoka-Ontario (Mr. McGibbon) demonstrated the other night, of pointing out nothing but the evil. In my view our endeavour should be to give expression to criticism, not vindictively but in a friendly spirit, pointing out wherein there are errors, while at the same time giving credit where credit is due.

The hon. member for Hants-Kings made the statement the other day that there was great prosperity in the country and that the chief point at issue was the question of distribution. He left us just there, making no attempt to show how the present method of distribution should be remedied. As I see it, that is the whole question. The machines of Canada can produce more than the Canadian people can consume, although under present conditions they are not able to buy all the products they require for their own necessities. The farming communities are confronted with this very problem. Consider the various processes through which the farmer's product passes, to each of which a profit is attached. The farmer takes his wheat to the elevator and there is a fixed charge there; the elevator stores it and there again there is a fixed charge; the railway company transports it and there is another fixed charge. And each one of these charges is based on a calculation which yields profits to those who handle the commodity. Not so with him. My hon. friend from West Calgary (Mr. Bennett) some years ago was engaged on behalf of a gas company to make a plea, which he did eloquently before the utilities commission, in relation to the price of gas for that company. He based his argument upon fixed charges, depreciation and also a fair profit, and in view of the argument the utilities commission decided to have the price of gas fixed on the strength of these conditions. At that time the price of oats was twenty-five cents a bushel. I took home wth me the argument of my hon. friend from West Calgary and, calculating in accordance with the method which he had used in behalf of the gas company, I found that the price of oats should not be less than sixty cents a bushel. But in our agricultural communities it does not matter whether the grade of wheat is No. 1 or No. 2 or No. 4: the cost of handling the commodity is based on a system of profits and the farmer has to take just what is left. That is one of the reasons for the misdistribution of our so-called prosperity. Whenever there is a large crop the country at large prospers while the original producer does not get a fair share of what is left.

I come now to the Imperial conference, and in this regard I was interested in the argument of the hon. member for Argenteuil (Sir George Perley). I gathered from the hon. gentleman this afternoon that in his opinion a sort of imperial parliament should meet in London, the president of that parliament or committee to be the Prime Minister of Great Britain, with the representatives of the colonies sitting around, the assembly to solve foreign problems, questions of peace and war, and problems of foreign diplomacy. That very sane idea was put forward at the Imperial conference of 1911, when Sir Joseph Ward of New Zealand made such a proposal. Mr. Asquith, then Prime Minister of Great Britain, rose at once and observed that in matters of foreign policy and of peace and war the responsibility could never be shared. He held it was utterly opposed to the principle of responsible government and that the foreign policy of Great Britain must always be decided in Downing street, who were entirely answerable to the British people. These policies, the conduct of these affairs, he intimated, could never be the subject of shared responsibility. I have never seen any retraction of that statement. I know that Mr. Lloyd George confirmed the idea, and I know that in practice it is still carried out. When the treaty of Lausanne was being negotiated we were not consulted, but were simply asked to sign on the dotted line after it had been negotiated. When the treaty of Locarno was negotiated we were not asked if we had anything to say about the matter, but after it was all completed we were asked to sign on the dotted line. Last year I asked the Minister of Justice (Mr. Lapointe), whether Canada had been consulted in regard to sending warships to China. He said not a word. So that we are at war, whether we will it or no, when Great Britain is at war, but have nothing to say about the matter except that we are at war, as the hon. ex-leader of the Conservative party (Mr. Guthrie) said. The hon. member for St. Lawrence-St. George (Mr. Cahan) says he does not like Canada to suffer from any inferiority complex, and he stated that the Prime Minister was suffering from an inferiority complex. He wanted matters to be settled by Canadians and did not want Canadian destinies to be settled in London. If that is so, then much more should we have something to say about questions of life and death and peace and war, especially when 60,000 of our Canadian boys lie in Flanders fields. The proposition that we should not have anything to say in re-

gard to peace and war is one which no self-respecting Canadian can accept, and if the wedge is driven in, if the old country authorities are determined that we shall not have anything to say in this matter, it is they and not we who are driving the wedge between the motherland and the Dominion.

I was very thankful last year that the Prime Minister intervened at the last moment and granted us the last post fund under which Canada would not be so humiliated that we would have to go out in the streets and beg in order to provide funds enough to bury the indigent returned soldier. I thank the Prime Minister very much for dealing with that matter and granting our request. However, there is one little matter that remains to be dealt with yet. They sent the auditors to the various Canadian legions; I know they sent them to Calgary. They audited the accounts and said they were all right, took them back to Ottawa and we received word that they were confirmed. I should like to draw the attention of the government to the fact that they have failed as yet to send a cheque. It may be said it is only a little matter, but in my opinion it is rather important. I should appreciate it very much, and I know that the Canadian legion would appreciate it, if the government would fulfil that promise and send a cheque to the various Canadian legions to pay the bills they have incurred for the burial of returned soldiers.

Last year the question of aviation occupied considerable time in this house. A promise was then made that civil aviation would be made entirely separate from military aviation. Some members to my right seemed to think that as the air force had done good work in the war, and so they did—they should necessarily continue in the force as regards civil aviation. I am glad that the government promised that civil aviation should be entirely separate from the Royal Air Force. There is, however, a feeling among the returned soldiers that the promise is not being carried out. It is true I received a letter from the Minister of Militia and Defence (Mr. Ralston) intimating that as far as the private pilots were concerned they need not even be British subjects, that they might receive their certificates and be in no way obliged to be on the military reserve. Captain McColl, Canadian ace, who figured largely in the war, called me up and showed me his commercial certificate; and I may say that the returned soldiers who are engaged in aviation at the present time are very anxious that a complete separation of the civil from the military force should take place. On Captain McColl's certificate as a commercial pilot there is the statement that he is automatically on the Royal Air Force. I have a letter from the deputy minister stating that while that is in the regulation, it is a dead letter; it has not been carried out and probably will not be But in order to satisfy fully the returned soldiers I feel it is the duty of the government to say so; they should inform these men that they are not in any way connected with the military force. The government will be well advised to take into consideration the suggestion of putting the civil aviation on a footing entirely separate from the national defence; it should be under either railways and canals or marine and fisheries.

I come now to the question of the returned soldiers. I may say, Mr. Speaker, that for various reasons I have a warm spot in my heart for returned soldiers. I may be wrong in my estimate, but I am certain of this: that there is a feeling among the returned soldiers, and there is a feeling in the Canadian legions at Calgary and Ottawa, that the returned men, when making application for re-examination, or making appeals, do not meet with a sympathetic attitude on the part of those who are examining them. I am not positive that that is the case, but I know that the Canadian legions and many of the returned soldiers with whom I have conversed feel that way. Whether it is so or not I think the department and the hon. Minister of Health, (Mr. King, Kootenay) should give instructions that the medical men who examine our returned soldiers should at least be sympathetic and treat them as if they were equals, not as if the examiners were captains and the applicants privates in the department.

I cited last year for the benefit of the minister the case of a man who upon enlistment stated frankly—it was on his sheet—that he suffered from incipient Bright's disease, but he added: "I do not want to be a slacker; I am here if you like to take me as I am." We took him. I say "we" because I was responsible along with other citizens of Canada. When he came back from the trenches his disease was aggravated—I mentioned that to my hon. friend the minister in the house last year. He applied for a pension. They brought down his files, told him it was a pre-war disability, and nothing was done about it. That case was fought from May, 1918, until 1927; for nine years it was considered, which shows how tardy and how unsympathetic, in some cases at any rate, the treatment of returned soldiers has been. And what is the result? Here is the result. I got word

from the Canadian office, from the official adviser of the soldiers, who wrote me as follows:

> No doubt you will remember this case. The man was suffering from Bright's disease and was refused treatment or pension on the grounds that it was not aggravated on service. The man went to England and I was finally able to get the department to grant him pay and allowance. He received £50 this year.

After nine years' struggle they granted him pay and allowance; but when the postman took the letter down the street and knocked at the door the poor fellow lay in his coffin. I could quote one or two other cases of that nature. I say there is either too much red tape or too much delay in these matters, and I submit, sir, that men who offered their lives for us on the fields of Flanders should receive far different consideration at our hands.

Now I come to immigration. Last session I had occasion to put some questions to the Minister of Immigration (Mr. Forke) and he answered me along these lines: I can assure my hon. friend that there will be no flooding of labour in the towns and cities; all men who come here are going to farms either as farm help or as purchasers, and in six weeks from now there will be no unemployment, every man will be absorbed. I went home believing that, but as soon as I landed off the train in Calgary I saw three or four hundred Czechoslovakians walking the streets in search of jobs. They were willing to take anything they could get at from 25 to 30 cents an hour, to the detriment of Canadian workingmen. I wired to the Immigration department. We had been informed that an officer of the department, known as the superintendent of colonization, was supposed to look after immigrants on their arrival. I asked what his duties were. I was told he had to see that immigrants went to the places where they were supposed to go. But there was no superintendent of colonization accompanying these Czechoslovakians. They were brought in by the Canadian Pacific railway and landed at Calgary and other centres, where they were taking jobs at very low wages from Canadian workingmen anxious to secure work. Then I telegraphed the Prime Minister, and I wish to give him credit for his prompt attention, for he at once ordered an investigation. The investigator corroborated my statements in every respect. As soon as the investigator submitted his report the Minister of the Interior (Mr. Stewart)—he was the Acting Minister of Immigration while the minister of the department was away in England with Mr. Egan looking for more immigrants—I am informed cancelled the agreements with the railway companies, and thus put a stop to further immigration of this kind. I wish to give him and the Prime Minister every credit for their prompt action, but the point I want to bring out is this: We must have what I would term responsible immigration; and, further, the words of a minister given across the floor of the house that there is going to be no flooding of labour in our cities must be lived up to fully, to the very letter.

I think it was last session that I asked the Minister of Immigration: Do you consult at all with the provinces regarding their requirements for immigrants? And his reply was: Well, not exactly. I hope that the recent Dominion-provincial conference has changed that state of affairs. I think Mr. Brownlee's proposition is sound and would relieve the federal department entirely of responsibility if immigrants were brought in in excess of our requirements. He proposes: That it should be ascertained that immigrants coming in to buy farms have the necessary capital; that there should be a standard for the selection of immigrants; that in this selection the capacity of each province to absorb immigrants should be considered, and that the provincial authorities should advise the federal Department of Immigration in regard to their requirements. I think if the federal authorities would consult each provincial premier as to the class of men the province wanted, how many it wanted and when, the responsibility would be assumed by the provincial authorities, and the Department of Immigration would not be placed in the very unenviable position in which it found itself for a month or two last year. As I said before, I am very happy to give credit to the Prime Minister and the Acting Minister of Immigration for relieving the situation at that time as quickly as they could. At the last convention of the Alberta Federation of Labour it was stated that a large number of those Czechoslovakian immigrants were mechanics and knew nothing at all about farming, and that a number of them had secured work in the coal mines at Edmonton, thus depriving Canadians of work which they are rightfully entitled to. Before I came away the city of Calgary had incurred an expenditure of some five or six hundred dollars in looking after Czecho-Slovakians and Ukrainians who were sick and penniless and homeless in the city. I

wrote to the Department of Immigration here asking if they would foot the bill, but they said there was no appropriation for the purpose. So the city of Calgary will have to pay for looking after people whom they had no voice in bringing to this country.

I entirely agree that the contented farmer is the best advertisement for immigration that Canada can have. If you had farmers on the land who were prosperous and contented you could not keep immigrants out unless you put up a quota bar. To spend money and bring out men to settle on the land when those who are already here can barely make a living, is only going to increase the number of the discontented. We must make conditions on the land prosperous before we invite more settlers. I should like to see more immigrants from the British Isles, but as England is a highly industrialized country, and those in the rural centres do not seem very ready to leave the land, it follows that those who come here from the industrial centres are not exactly fitted to take up agriculture. A year ago a number of them came here from the mining districts, but they were entirely unsuited to our conditions, and for this reason some of them had to be deported.

As has been stated in this house before, what we require in immigration is quality rather than quantity. I happened to meet Dr. Miller recently, at one time professor in the school of technology at Calgary. He went over to the United States and after three or four years returned to Calgary. He said, "Well, I have been three years in the United States, and they have almost made a pretty good Yankee of me." I replied, "That is too bad, Doctor. But will you tell me what are the qualifications to make a good Yankee that are not necessary to make a good Canadian?" In other words, the character of a man rather than his nationality is what counts. We have heard a good deal about foreign immigrants. I was present at a Canadian club meeting when a proposal was made to organize a Canadian club among the Ukrainians. A very laudable object, I suppose, but I think we are wrong if we suppose that because a man happens to have been born in another country and speaks another tongue he does not appreciate and value Canadian institutions when he becomes a Canadian citizen. I hope none of us are labouring under such a great mistake, for the majority of our immigrants become good Canadians. I have in mind a gentleman from Winnipeg whose father and mother, Icelanders, could not speak a word of English, yet he, their descendant, is a graduate of Manitoba University, a Rhodes scholar, a member of this house, and a credit to Canada. I think my Canadian friends who were organizing the Canadian club were very much astonished when I told them of this fact. It is a very good thing to organize a Canadian club among the Ukrainians, but to assume an attitude of "I am holier than thou" or "I am better than thou" is rather beside the mark. I told them that in our house sitting quite near me was a gentleman, the hon. member for Vegreville (Mr. Luchkovich), whose parents could not speak a word of English, who himself is a Ukrainian, who graduated with honours at Manitoba Law School and who is to-day a member of the House of Commons of Canada. Surely these things ought to show us that it is not necessarily nationality that tells as much as it is the character of the man whom we bring to this country. I was glad to hear the hon. member for Yorkton (Mr. McPhee) speak of the assimilation of different nationalities. I am strongly in favour of a mixture of those nationalities which, for certain physiological reasons, are capable of assimilating. I think Ruskin says something like this:

> Every nation has within itself some peculiar characteristic which it alone has and which it alone can make as a contribution to building up civilization and each one of those characteristics should not be curbed but should be developed in order that in the building up of this human temple of civilization each one might produce its peculiar characteristics and give its contribution to the civilization of the day in which it lives.

I fear sometimes that when we meet with these people whom we call foreigners there is an attempt to submerge them, to tell them they must adopt our Canadian ideals. I value Canadian ideals; I value the Magna Charta; I value the struggle for liberty; but I am sure my friends in Switzerland value William Tell just as much as I value corresponding heroes in Canadian history. When I went to the Ukrainian temple and saw the pictures on the wall I asked who they were, probably thinking they were some terrible bolshevists or communists. They pointed with pride to men who had struggled for liberty just as our nation had struggled for liberty. I did not attempt to disparage them. In valuing those ideals we must remember it is the ideal that counts, not so much the symbol that stands for it. That is my idea of the question of immigration and assimilation. After all, what is it that makes the British nation strong? Were they all Anglo-Saxons to whom that strength is attributable? Not at all. It was the intermingling of those nations from

northern Europe, Angles, Saxons, Normans, Jutes and Danes, that made the British a strong nation, and those countries which isolate themselves and keep themselves from everybody else are the ones that begin to decay.

I come now to the question of trade and commerce. I was very much interested in reading the account of what the hon. member for West Calgary (Mr. Bennett) said in Vancouver. He is reported as having uttered these words:

> We must decide within the next few years if we are to combine with other parts of the empire or combine with economic interests elsewhere. It is economic union within the British Empire or with our cousins to the south.

I notice that he has advanced a stage in our relationship with the people to the south. They used to be "our neighbours" to the south; now they are "our cousins". He may get a closer relationship by and by. What I think my hon. friend ought to do is to state explicitly what he means by an economic union. If he means by an economic union, free trade within the empire, I will hold up both hands for it. I do not know whether he means that we are going to be forced into free trade with the United States or not. I do not know that I would hold up both hands for that at the present time, but I would hold up both hands for a reduction in the tariff between this and other countries. But if by economic union within the empire he means freer trade and lower duties, he will have to settle with the manufacturers' association, because if there is anything that the manufacturers' association have fought before the tariff advisory board on occasions when I have heard them, it is the British preference. If we want economic union within the empire we must maintain the British preference to a greater strength than it is at the present time.

As regards the question of trade and commerce, I should like to know why we severed relations with Russia and why we destroyed trade which existed with Russia. I have never had an answer to that question. If the Russian people in Ottawa or in Canada generally have violated any confidence given to Canadians, if they have done wrong in Canada, I am quite willing to support the idea that for that reason we should sever diplomatic relations with those people. But if we severed relations with Russia simply because Mr. Baldwin did it or, as the hon. member for Labelle (Mr. Bourassa) said last year, if we simply put up our umbrella because it is raining in London, then I say, as the hon. member for St. Lawrence-St. George (Mr. Cahan) said this afternoon, that we are certainly exhibiting an inferiority complex. He was extremely desirous that Canada should settle Canadian affairs upon a purely Canadian basis or because purely Canadian interests were involved.

The hon. member for Nelson (Mr. Bird) rather objected to the tariff advisory board. As both sides of the house agreed that the tariff advisory board was a very necessary institution in order, as they said, to take the tariff out of politics, I do not know what else we can do than seek to protect the ultimate consumers by presenting their case properly before that board. I am rather proud to say that I gave my little mite in order to keep Mr. Deachman at the tariff advisory board as representing the consumers of this country. I am not at all ashamed of that fact. The hon. member for Marquette (Mr. Glen) this afternoon brought out the fact that some of these people, made, during the year 1918, according to their own evidence, 291 per cent on the actual capital invested. The house will remember that the year 1918 was the time of greatest stress that Canada or Great Britain or the allies knew in fighting the Germans. That was the darkest year of the war. Extra duties were imposed upon cotton in order to raise revenue for war purposes, and at that particular time when we were in the greatest stress, when your boys and my boys were over yonder fighting for liberty, these gentlemen sitting in a directors' office in Montreal declared a profit of 291 per cent on the actual capital invested. It is no wonder that one gentleman who appeared before the cost of living committee said: "We are not running this business for the glory of God but for the profits of the shareholders".

I may say in passing that I attended a banquet to the tenth battalion. Although I suppose I would be called a pacifist, I was proud to attend that banquet and to address the returned men. Sir Archibald Macdonell was there and confirmed my statement. When I spoke to those boys I made bold to make this statement, and I make it now: If Canada is dragged into another war it will be against my strong personal opposition, and not simply because Mr. Baldwin or Mr. MacDonald says so. If that should occur, then so far as I am concerned we will strive for one thing more; no one in Canada will be allowed to stay at home and make huge profits while our boys are fighting in the trenches. We will all go to war, lawyers, doctors, and everyone else; we will all get $1.10 a day; no one will make these extor-

tionate profits, and no one will get the richer the longer the war lasts. When I mentioned that fact at the banquet of the tenth battalion I was surprised at its reception. I said it rather hesitatingly, but every man jumped to his feet and cheered, and even Brigadier-General Macdonell said: "Put it there, old man; I agree with you". I believe every returned soldier is against another war, but if it should come I know every man of them will insist on this condition and I will take the same stand.

I have one more word to say and then I am through. Last year the Minister of Finance (Mr. Robb) told us that no reductions were to be made in the tariff because no reports had been received from the tariff advisory board except on a few minor articles such as epsom salts and so on, and he did not think it right or worth while to bring down any reductions in the tariff. I accepted that explanation at that time and voted for the budget precisely for that reason. Now the government can have no excuses of that sort; the tariff advisory board has made fact finding reports in more cases than one. I see my friend the Minister of Railways (Mr. Dunning) is not here. I am sorry, because when he was in Calgary he said that we in this corner attempted to foist our ideas upon the government and tried to bludgeon them. I do not want to use the bludgeon, but because I want to be true to my promises and true to the principles I enunciated in my nomination and my election. I said then that I was for low tariff and that I would support a low tariff; I must take a definite stand. I told the government last year that they could not run with the hare and hunt with the hounds. One of the members in that corner said last year that he believed in a high tariff, and I was very much astonished to hear that from the Liberal side. I wonder what Doctor Clark or Sir Wilfrid Laurier or Sir Richard Cartwright would have thought of that? If you believe in a high tariff, go to the side of the house where you belong, where there are other men who believe in it and where they advocate high protection. One vote either way does not mean very much, but I want to say that you must bring forth fruits meet for repentance. You now have reports from the tariff advisory board, and something concrete must be brought down; something must be put in the budget to show that you meant what you said and that what was given given last year as a reason was not a mere excuse. Some reduction in the duties on the necessities of life must be made in the budget which is to come. If that is done according to your promise and according to the statements which you made last year, I shall be content to support your budget. But if there is nothing done by way of reducing the tariff; if there is nothing there to show that you have acted in good faith and in conformity with the facts found by the tariff advisory board, I am afraid I shall not be able to support your budget.

Mr. Speaker, I have finished my few remarks. I hope it will not be considered that I have been using the bludgeon, because in my criticisms I have not said anything in a vindictive way, and I hope my remarks will be taken in the spirit in which they are made.

Mr. JAMES STEEDSMAN (Souris): Mr. Speaker, in rising to take part in this debate I do so while suffering from a physical disability with which I have been slightly troubled of late, and I may find it necessary to curtail my remarks. I shall confine myself, therefore, to one or two subjects in which I am vitally interested.

Much has been said during this debate with regard to the wonderful prosperity in Canada at present, and something has also been said as to the part played in that prosperity by the production last year of the second largest crop of wheat in our history. I believe this to be true, Mr. Speaker, but I should like to point out also that the farmers of Canada are not sharing in that prosperity in the proportion to which they are entitled. This, of course, is due to many reasons, one of the most important being the poor quality of the grain this year. As the hon. member who has just taken his seat mentioned, no matter what the quality of the grain might be the handling charges remain the same; consequently the returns to the farmer this year are much less. In my opinion the main reason for this condition is the ravages of rust; this is true of the whole province of Manitoba, at any rate, and perhaps a large part of Saskatchewan as well. It is a condition which is not confined to wheat alone; the oat crop over the area which I have mentioned was almost a complete failure last year, and that adds greatly to the difficulty of the farmer.

Just at this point I would like to give the government credit for the fact that they have established in Winnipeg a well-equipped and well-staffed laboratory for the purpose of studying and combating this rust menace. We have been alarmed, however, at statements, or rather rumors, issuing from an unknown source, to the effect that we are likely

to lose the services of some of the most expert members of that staff because their salaries are not sufficiently large to induce them to stay. It would appear to me, Mr. Speaker, that a country holding the proud position of the greatest exporter of milling wheat in the world—for that is the position now held by Canada—can surely afford to engage and retain the services of the very best experts to be found anywhere in the world to combat this menace. I have stated that the farmers are not reaping a sufficient reward for their labour, and I believe that if they are to continue in the production of such crops as have recently been harvested it is necessary they should be relieved from some of the burdens at least under which they are suffering at the present time.

It has been suggested during this debate that this session we may expect reductions in taxation. What form these reductions will take we have not been told, but I should like to point out that one of the greatest burdens from which the agriculturists of Canada are suffering is the protective duties. There was a discussion the other day as to whether or not the tariff is a tax. To my mind that is neither here nor there; if it is not a tax it is certainly a burden on the producers of this country. I do not wish at this time to discuss the tariff at length, but I must say that the agriculturists of Canada, particularly those in the west, are looking for reductions in the tariff on many of the articles that enter into the cost of living and the cost of production. And are they not justified in entertaining those expectations? My hon. friend the member for Marquette (Mr. Glen) pointed out this afternoon that last year the Finance minister made the boast that this government are a low tariff government and are proud of it. If that be so the people are justified in expecting reductions in the tariff this year.

Now I wish to discuss another point. A situation has arisen in my constituency which is perhaps common to other constituencies located, as it is, along the border line of the United States in the prairie country. Many of the residents of these constituencies immediately along the boundary line have had, for one reason or another, which is their own affair, occasion to cross over into the adjoining state of Dakota. In order to do so they secured a permit from the customs officials, and trouble has arisen because they have returned to their own homes, oftentimes late at night, instead of driving a further distance of twenty or twenty-five miles, as the case might be, in order to report to the officers and return their permits. That has resulted in heavy penalties and fines being inflicted upon men who were absolutely innocent of any desire to break the law, and a number of such cases have been brought to my attention. I want it clearly understood that I am not seeking to defend smugglers or those engaged in smuggling. I am speaking to-night in the interest of innocent, honourable, law-abiding citizens who live on the Canadian side of the border. In the report of the royal commission on customs and excise various statements are made with which I agree. Among other things it is asserted that the customs offices in the west are not all located at the most advantageous points from a strategical point of view, particularly in the province from which I come. The ports of entry are confined to the railway lines, which in many cases are a long way from the border, and this involves, of course, much extra travelling back and forth for the people who live between the custom houses and the border. Now I am quite sure that the minister (Mr. Euler) in framing the regulations responsible for these penalties, had no desire that innocent people should suffer from them, and right here I want to do him the credit of saying that in every case in which I have appealed to him on behalf of innocent sufferers in my constituency he has shown great consideration and sympathy and has done his best to afford relief. But would it not be better in the interests of all concerned if such occurrences could be avoided? I think it is possible to prevent them from happening to a large extent.

Among other things the royal commission has suggested cutting out a number of the ports of entry, on the ground that there are too many of them in existence. That may be true; as to that I will not venture an opinion. I am convinced, however, that many of them are not located where they can best serve the objects for which they were called into existence. As I have already said, they are established along the railway lines, while the traffic between the two countries in the particular locality to which I have reference is almost entirely by automobiles on the highway. In the constituency which I have the honour to represent, two provincial highways lead directly to the boundary line of the state of North Dakota, linking up there with highways on the other side and thus making it possible for international traffic to pass back and forth. I submit that is where the ports of entry should be located. Should the government see fit to consider this suggestion and put it into effect it will not only relieve

the situation of which I have complained, but it will be of immense advantage to the travelling public who pass backward and forward at the points in question, and will also provide a more efficient check on smuggling. It will make the smuggler's way harder and render it easier to check him up and so stop this nefarious practice. The minister is not here tonight but I trust he will heed the suggestion I have made, because I am convinced that it would be of advantage, and I know positively that it would relieve the situation in regard to which I have had so many complaints from people living immediately along the boundary line.

Mr. F. W. GERSHAW (Medicine Hat): I wish first of all to congratulate the mover and seconder of the address, who performed their task in an eloquent manner. It is no easy matter to begin a debate of this nature and they set a very high standard. As a member from Alberta I also wish to congratulate the leader of the opposition (Mr. Bennett) on the high position which he now holds. The people of Alberta have a special pride in his success. When he returned from the Winnipeg convention the people in the different organizations in his home city of Calgary gave him a welcome extending almost over a week. He was enthusiastically received in the capital city of Edmonton; in fact political and sectional differences were set aside and he was warmly applauded and honoured throughout the province.

The debate so far has been of a high order and free from unpleasant personal references. Many problems of national and international character have been discussed, and I hope to speak of some things of a more purely local nature. The leader of the opposition has presented the immigration problem as an issue. His words as reported at page 22 of Hansard, in reference to the getting in of new settlers read:

> It cannot be done in any small way; it cannot be accomplished in any niggardly way, but is must be done in a large way. It involves the expenditures of vast sums of money and, more than that, it involves a large and comphensive policy of settlement.

Later on he pointed out that the province of Alberta had increased in population from 1921 to 1926 to the extent of about 19,000; that is to say, it had increased from 588,000 to 607,000, or about three per cent. Who will say that we could properly assimilate a very much larger increase? At any rate, if that does seem small, I hardly think that the Liberal government here or the Progressive government in Edmonton should be blamed, because I believe the causes are more economic than political. Let us see what some other agricultural districts have done during that same time. A census of some of the leading agricultural states in the American union shows an even smaller percentage of increase during the years from 1910 to 1920. Here are the actual figures: Kansas, an increase of five per cent in ten years; Iowa, five per cent; Kentucky, five per cent; Missouri, three per cent; North Dakota, ten per cent, and South Dakota, eight per cent. This is for a ten year period, and bear in mind that it covers the years from 1910 to 1920, during a considerable portion of which the war was in progress and prices were high, so that the drift was towards the farms. I cannot obtain the figures for the corresponding period from 1921 to 1926, but I think we may safely say that the rate of increase was not very much greater, because those were the years when there was a collapse in prices after the brief post-war boom; and they were the years of hard times in the farming districts both in the United States and in Canada.

As an illustration of the way in which prices have fallen, let us note that in February, 1920, the price of No. 1 Northern wheat was $2.15 whereas in 1921 it was $1.85; in 1922, $1.29, and in 1924, 99 cents. In other words, during that period the price of wheat had been more than cut in two. The price of coarse grains also followed the price of wheat. Now, the people had contracted certain obligations during these periods of high prices. Some men went on the land with the idea of producing food for the people of the world during the period of national crisis. When prices moved down these farmers found that they had to produce twice as much farm produce as they did before if they were to meet their obligations. Under such circumstances they were unable to carry on and many of them had to move out. Every one who has followed the trend of things in this country knows this to be true. Parliament itself officially recognized this state of affairs, for during the last session there was a revaluation of soldier lands. What was this but a recognition of the very fact which I have been stating?

Besides soldiers other settlers took up land during these times of peak prices and as their obligations were not reduced they encountered great difficulty in paying their way. During the past few years things have been a little better. The price of farm produce has increased, the prices of the things the farmers have to buy, machinery and Ford cars, have been reduced, and the price of

wheat has again advanced. But although there has been some measure of prosperity it is not as great as has been advertised. A good crop seemed to be almost within grasp of the people of southern Alberta but owing to unfavourable weather conditions only about fifty per cent of it could be threshed. Many people were unable to meet their obligations in respect of such relief as they had obtained during the long series of dry years and in respect also of commitments in connection with pre-emptions and interest on pre-emptions. If the people of the east knew how difficult it was for the people on the farms in the west to pay back the money advanced to them for fodder and relief they would agree with us that these old claims should be cancelled, as should be also the interest on pre-emptions. The people of Canada as well as this government owe much to the men and women who now find themselves unable, through no fault of their own, to meet these obligations.

This year there has been widespread dissatisfaction over the grading of grain. The present arbitrary system depends to a great extent upon the judgment of the inspector; consequently it lacks scientific accuracy. There is on the order paper a resolution regarding this subject and I assume that it will be fully debated later, but the producers would be glad if the Minister of Trade and Commerce (Mr. Malcolm) would start an investigation with a view to working out some more satisfactory system of grading if this is at all possible.

Now, what policies should be adopted to modify or improve these conditions? I do not believe that bringing in a large number of immigrants at the present time would solve the problem unless living conditions are made happier for the people who are already here.

The cost of transportation must be as low as possible, and surely the Crowsnest pass agreement must be retained.

I do not think higher protection would help.

Let me quote from Senator Robinson, of Kansas, as reported in the Congressional Record, page 1554, with reference to conditions in the United States. The following are the figures of the failures:

	State banks	National banks
1918..	20	...
1919..	50	4
1920..	119	10
1921..	204	47
1922..	277	55
1923..	578	77
1924..	613	121
1925..	361	103
1926..	722	...

The total liability was $165,000,000 in 1925. He says that the bureau of labour reports that employment is twenty per cent less than it was in 1920, and that there is a decrease of one-seventh in the payroll from 1920 to 1927. The index figure of employment in manufacture in 1920 was 118.8, and in 1926 it was 92.4. So we see that even in a country with a more highly protective tariff the condition has not been altogether good, and surely the condition would not be so good if the protection were increased in Canada, which is largely a producing country. We have a population of nine and a half millions and produce enough wheat to feed sixty millions. Many thousand cattle have been shipped to the United States this year in spite of the Fordney-McCumber tariff. I should say above all things that what we need as a primary requisite is a reduction in cost of living, and the one best means by which that can be secured is reduction of the tariff.

I recall with some interest the work of the tariff board. There have been a great many applications for tariff reductions. Many of the manufacturers have applied for tariff reductions because they are anxious to get their raw material at the lowest possible rate. Then there are a great many household articles of every day use on which reductions should be made. The average rate of duty upon enamel-ware and aluminum-ware is higher than upon silks and velvets, higher than upon jewellery, higher than upon fancy furs. The cotton schedule needs lowering in the worst possible way. It is so high now that it is stifling imports. Actual imports of cotton goods, measured in yards, on a per capita basis, are probably not more than one-half what they were in 1914. We cannot say that this is due to a change in the habits of dress of the people. There is a larger per unit consumption of cotton goods now than ever before. Merchants are appealing to the Minister of Finance to drop the sales tax. Millionaires are asking him to reduce the income tax, although few others favour its reduction. Revenues must be found, and I take the liberty of making this suggestion: a reduction in the rate of duty upon many items would be a considerable help in increasing the revenue. The rate is now so high that it constitutes an embargo upon imports, thus raising prices without making any material contribution to the revenue, with the result that the producers of this country are compelled to pay high prices and at the same time make contributions in other ways to the revenues, which under more reasonable conditions would come from customs taxes.

Raising tariff rates very frequently lowers actual revenue; reducing rates is apt to increase them.

In the milder climate of Alberta there are great numbers of horses, unused, running wild both winter and summer over the prairies. Since the war there has been little or no market for these horses, but the Department of Agriculture succeeded in selling about 3,000 of them to the Russian government during this year. The price is low, but otherwise no market could be found for the light horses. The horse owners appreciate the efforts of the Dominion and provincial departments of Agriculture and hope that these trade relations may be continued, as many more horses are available and every possible market for them should be developed.

Another problem much discussed in Alberta, and which means a great deal to returned men and others, is the getting of coal from the mines of that province to the markets of central Canada. This is such an important matter that boards of trade all over the country have passed many resolutions urging that something be done, and the government will make no mistake in taking the considered opinion and decisions of the men who make up these boards.

One other matter to which I wish to direct the attention of the government, and in which the west is tremendously interested, is that of branch line construction. There are many districts in western Canada in which rapid development is impossible because of the lack of railway facilities. In the constituency of Medicine Hat there are two branch lines required. One of them has been promised; very definite promises were made in regard to it several years ago. Many farmers have moved in and waited and waited, but as the line has not been completed they have had to move out. I realize the view held by some people in the east in regard to these matters. I have only this to say: in the older sections, where railway development has taken place, the resultant progress has certainly justified the act. I plead for generosity in the attitude of the house on this question. The history of Canada reveals a long record of struggle and doubt in regard to the wisdom of certain policies of railway construction. Sometimes we acted in haste; beyond question there were times when we built ahead of actual necessity, but taking into consideration the size of the country and the problems we had to face, we may pass lightly in judgment upon mistakes of the past. Railway building is not finished in Canada; it cannot be. If we are to make progress we must have a greater mileage than we have at present, and if good judgment is exercised the construction of these branch lines will mean not greater burdens but the actual lifting of burdens now borne.

[Mr. Gershaw.]

On motion of Mr. Smith (Cumberland) the debate was adjourned.

PARLIAMENTARY LIBRARY, PRINTING AND RESTAURANT

Mr. SPEAKER: I have the honour to inform the house that a message has been received from the Senate informing this house:

That the honourable the Speaker, the honourable Messieurs Green, Hardy, Ross (Middleton), Sharpe, Taylor and Watson, have been appointed a committee to assist the honourable the Speaker in the direction of the restaurant of parliament, so far as the interests of the Senate are concerned, and to act on behalf of the Senate as members of a joint committee of both houses on the said restaurant.

Also,—A message informing this house that the honourable the Speaker, the honourable Messieurs Aylesworth, Sir Allen, Beaubien, Chapais, Gillis, Gordon, Griesbach, Hardy, Hatfield, Laird, Lewis, McDougald, McLennan, Poirier, Taylor, Turriff and Webster (Brockville), have been appointed a committee to assist the honourable the Speaker in the direction of the library of parliament, so far as the interests of the Senate are concerned, and to act on behalf of the Senate as members of a joint committee of both houses on the said library.

And also,—A message informing this house that the honourable Messieurs Aylesworth, Sir Allen, Buchanan, Chapais, Donnelly, Farrell, Green, Hatfield, Legris, Lewis, McDonald, McLean, McLennan, Murphy, Pope, Raymond, Robertson, Sharpe, Taylor, Todd, White (Inkerman) and White (Pembroke), have been appointed a committee to superintend the printing of the Senate during the present session, and to act on behalf of the Senate as members of a joint committee of both houses on the subject of the printing of parliament.

ADJOURNMENT

DEATH OF EARL HAIG

Hon. ERNEST LAPOINTE (Minister of Justice) moved the adjournment of the house.

He said: The Prime Minister wishes me to say that he has been advised that the funeral services of Earl Haig in London tomorrow will be held in the morning, so that it will take place many hours before this house meets; also that a memorial service will be held throughout Canada on Sunday, February 12th, by the Canadian legion, and in Ottawa there will be a service in Keith's theatre at three o'clock in the afternoon of that day, to which hon. members are invited.

Motion agreed to and the house adjourned at 10.30 p.m.

Friday, February 3, 1928

The house met at three o'clock.

CIVIL SERVICE ACT AMENDMENT

On the order:

First reading of bill to amend the Civil Service Act (Director of Public Service)—Mr. Campbell.

Mr. SPEAKER: This bill provides for the appointment of a director of civil service whose duty it shall be to co-ordinate the staffs of the various departments.

As such an appointment would involve an expenditure of money, the bill must receive the recommendation of the crown before it can be entertained by the house. Section 54 of the British North America Act provides that it shall not be lawful for the house to adopt any bill for the appropriation of any part of the public revenue to any purpose that has not first been recommended by message of the Governor General and our standing order No. 60 states that all motions made for charges upon the people must be first referred to the committee of the whole before any resolution of the house do pass thereupon.

It seems therefore that the bill cannot be introduced by a private member. I know that I allowed it last session when the hon. member gave very little explanation on introducing it, but I should certainly have ruled it out of order had it come up for second reading. I therefore rule that the present motion is out of order.

BRITISH COLUMBIA LANDS

On the orders of the day:

Mr. S. F. TOLMIE (Victoria, B.C.): I desire to ask the government if the report from Commissioner Martin with regard to the return of British Columbia lands has been received and when we may expect to have it laid on the table?

Right Hon. W. L. MACKENZIE KING (Prime Minister): The final report has not been received. An interim report has been received, and I think I might undertake to have it laid on the table on Monday.

UNEMPLOYMENT IN NOVA SCOTIA COLLIERY DISTRICTS

On the orders of the day:

Hon. P. J. A. CARDIN (Minister of Marine and Fisheries): Yesterday my hon. friend from Cumberland (Mr. Smith) made reference to certain reports in regard to the use of American coal for bunkering purposes on Canadian vessels. I caused inquiry to be made, but I have not yet the full details in regard to the matter. As soon as I get the details I shall communicate with my hon. friend in regard to it. In the meantime, I want it to be understood that it is the stated policy of the Canadian government to use Canadian coal on all our boats and I am very much surprised to hear that certain reports have been made along the line mentioned by the hon. member. The stated policy of the government is to use Canadian coal and I shall see that that policy is put into practice. If an exception has been made, I shall see that the matter is corrected and that our policy, which is very well known, will be continued.

FARMERS BANK LIQUIDATION

On the orders of the day:

Mr. R. K. ANDERSON (Halton): I should like to ask the Minister of Finance (Mr. Robb) if I may have a copy of the final statement of the liquidator of the Farmers Bank showing the receipts and disbursements.

Mr. ROBB: At the moment I can see no objection to it. I shall inquire at the department and communicate with my hon. friend on Monday.

GOVERNOR GENERAL'S SPEECH

ADDRESS IN REPLY

The house resumed from Thursday, February 2, consideration of the motion of Mr. Ilsley for an address to His Excellency the Governor General in reply to his speech at the opening of the session.

Mr. R. K. SMITH (Cumberland): Mr. Speaker, I regret that, due to a railway tie-up on account of storms on the Canadian National railway between Montreal and Nova Scotia, I was not able to be present at the opening or to hear the mover and seconder of the address, I had occasion to read their speeches in Hansard and I think, with those who have preceded me in this debate, I can very sincerely tender my congratulations to those hon. gentlemen. Perhaps, I can go a step further with respect to the mover of the address, and say that the government of this country is to be congratulated upon paying a tribute to the province of Nova Scotia by selecting the mover of the address from that little province by the sea. I am sure the province will appreciate the honour and will also acknowledge that the mover of the address worthily upheld the capabilities of those coming from there.

I do not know, Mr. Speaker, that I need pay attention in any specific way to the speech from the throne. It has been referred to by all those who have spoken as being of an empty character. I think it might be said that it was a skilfully prepared document, closely and scrupulously evading anything of importance to the Dominion of Canada, and it probably will go down in history as a state document which would take first prize in respect of what it does not contain rather than for what it does contain.

I should like to make reference to the fact that the national fuel and steel question was omitted from the speech from the throne. The hon. member from Bow River (Mr. Garland) referred to this fact in his address yesterday, and made it clear that this matter has been long delayed by the parliament of this country. Definite action is an urgent necessity and the question should be taken into earnest consideration without further delay. I was pleased, Mr. Speaker, to hear the statement in the house to-day from the hon. Minister of Marine and Fisheries (Mr. Cardin) with respect to information received by me that Canadian government boats were being fueled with American coal at the port of Halifax. Yesterday afternoon I attempted to ask the question in the house and Your Honour ruled it out of order for what was probably a very good reason. The telegram I read to the house yesterday was followed by another telegram received by me last evening, and I am going to crave the indulgence of the house to read this second telegram now. The statement of the Minister of Marine and Fisheries is very refreshing to us and I am sure will be appreciated by all those who live in Nova Scotia. The last telegram I received reads as follows:

> Suggest you raise in house question of authenticity of following statement which appears in Evening Mail Thursday February second:
> "Unemployment conditions are serious in sections of the mining centres of Cape Breton; Workmen are idle, women and children are in want of food and clothing. The situation is due to the fact that there are not sufficient coal sales during the winter months to keep the Nova Scotia mines operating at full time. In the meantime on the Halifax waterfront to-day two Canadian government ships the Arleux and the Lady Laurier are having their bunkers filled with United States coal—coal mined by United States workmen and brought to the capital city of one of the greatest coal mining provinces in the world. Was there ever a greater outrage, was there ever a greater sham than the slogan of the politicians, 'Canada for Canadians'"?

If that report is true, Mr. Speaker—and I have no reason to doubt it—it seems to me that, as stated in the telegram, the slogan, "Canada for Canadians," is certainly a sham

of the worst character. The coal districts in Nova Scotia are in a very bad condition at the present time as far as employment is concerned. In the isle of Cape Breton, which is part of the province, thousands of workmen are idle and their families are in destitute circumstances, due to the fact that the operators cannot find a ready market for their coal at this season of the year. And yet boats owned and operated by the government of this country are being fueled with American coal at the port of Halifax! It seems to me that immediate steps should be taken not only to ascertain whether this is being done, but, if such is the fact, to have the practice cease without any delay, because as long as it is allowed to continue—and I understand that it has been going on since 1921—you will lose entirely the respect of the people of Nova Scotia. And let it be remembered that one-fifth of the population of that province is directly dependent upon the coal and steel industry. Therefore any action that tends to prevent employment being secured by the miners of Nova Scotia is deeply resented by all.

Now, with respect to the coal industry in Nova Scotia, let me remind the House that this is not a new question. In 1924 a delegation came to Ottawa headed by the then premier of the province, the Hon. Mr. Armstrong. That delegation presented their views and their claims to the government of the day and in no uncertain terms stated that unless some immediate steps were taken to remedy the then deplorable situation in the coal fields of the province calamitous results would follow. After that, Mr. Speaker, came the recommendation in an addendum to the report submitted to the provincial government by Sir Andrew Rae Duncan—not the Dominion Duncan report, but the provincial. In that addendum Mr. Cronyn, one of the commissioners, recommended to the government of Canada that this industry be placed on some sort of stable basis, insisting that it needed more tariff protection in order to compete with imported coal. I should like to say, sir, that this recommendation was not taken seriously by the government.

Then came the famous Duncan report that was submitted to this parliament last session. In that report by implication, if not expressly, we were told that the tariff on coal was not sufficient. Those are not the exact words; the language used was something like this—that the question of the tariff on coal should receive the immediate attention of the tariff advisory board, and they recommended that it be placed before that board without

delay. Well, the subject could not logically be placed before the tariff board for any reduction in duty; the duty is far too low now; it could only be placed before the tariff board for a substantial increase in duty. So I say the question of the coal industry, so far as the east is concerned, has been completely neglected by this government, and no effort has been made to see that it takes its proper place as one of the greatest basic industries of the Dominion.

It is not difficult to discover what the policies of the different parties in the Dominion are with respect to the coal industry. I have before me the remarks of the Liberal candidate who was contesting the county of Cumberland in 1921. Addressing a meeting at Amherst on October 5, in the presence of the Prime Minister, who was then the leader of the opposition, the Liberal candidate said:

> Free trade is not the policy of the Liberal party. If it were I would oppose it because I believe it would bring disaster to our industries and remove from the farmers the home market which is practically the only market they have left. Free trade may be all right from the wealthy grain growers of the west whose wheat goes to the foreign markets and who do not have to worry about selling their produce at home, but it would mean paralysis in the maritime provinces. Also, I am a firm believer in the establishment of a national coal policy for Canada—no country, especially a country with cold winters, which depends on a foreign nation for its fuel, can claim to be independent of that nation.

Then he announced his policy:

> Every pound of coal purchased by the government should be mined by Canadian miners and transported over government railways to the points of consumption. Coal required by other consumers in Canada should be carried at cost.

This is reported in the Halifax Chronicle of October 6, 1921. As I have said, on the platform at the time was the present Prime Minister of this Dominion. Therefore, I take it, Mr. Speaker, that so far as the coal industry of Nova Scotia is concerned that was the Liberal policy in 1921.

Mr. LAPOINTE: It did not have much success.

Mr. SMITH (Cumberland): Not very much.

Mr. BENNETT: Opportunism never did succeed.

Mr. SMITH (Cumberland): Now, Mr Speaker, if that was the policy of the Liberal party in 1921, certainly no effort has been made on their part to carry it into effect. Such a policy is certainly needed. Unless something is done, as Mr. Cronyn has pointed out, we can only expect a calamitous situation in the coal fields of Nova Scotia. The royalties on coal are one of the principal sources of revenue for the province, and consequently when the coal industry is stagnant the provincial revenues are correspondingly depleted. If the coal industry is in a flourishing condition it benefits generally the whole province; but I am sorry to say that the industry is not flourishing to-day, but the reverse of that.

What we need, Mr. Speaker, is a national fuel and steel policy, and I believe that the following measures would help to bring this policy about. In the first place, coking plants should be established. Some attention was given to this last session, and I believe something is being done along these lines at the present time.

Mr. HANSON: What about the use of Canadian coal?

Mr. SMITH (Cumberland): I was told quite recently that a plant is being established in the city of Montreal which is to use four hundred tons of coal a day in the manufacture of coke, but that the coal is to be American coal. I am not sure whether that is correct.

Mr. HANSON: Correct.

Mr. SMITH (Cumberland): Then it is a crying shame that that sort of thing should be allowed to go on. Yesterday the hon. member for Bow River (Mr. Garland) drew attention to the value of the coal fields in the province of Alberta, and stated that those deposits were greater than all the coal deposits in the other parts of the British Empire. It is inconceivable that in a country like Canada, striving to get on its feet economically, and claiming by some to have reached the status of a nation, American coal should be allowed to come in at the expense of our own coal miners and coal operators and to the great disadvantage of certain parts of the Dominion. Has it ever occurred to hon. members that an emergency might arise in this country whereby we might be shut off from securing coal in the United States or other parts of the world? The United States is the country from which we secure most of our imported bituminous coal, and a crisis might arise at any time whereby our supply from that market would be entirely shut off, and we would be thrown back upon our own resources, and possibly not be able to cope with the demands that would be made upon our own supplies. It seems to me that we must look at this situation from the viewpoint of national development,

from the viewpoint of saving and safeguarding those industries which are of such great benefit to this country, and unless we do inaugurate and put into force a policy of that character, it seems to me that we shall never truly be able to say that we have reached a state of nationhood.

I was going on to mention the different factors that occurred to me as necessary in the building up of a national steel and fuel policy: First, the establishment of coking plants; second, a subvention granting assistance in the carrying of coal west of Montreal; third, real tariff consideration against importations of coke, anthracite screenings and bituminous coal; fourth, more favourable transportation rates; and fifth, the abolition of the customs drawback on foreign coals used in coking.

It seems to me, Mr. Speaker, that if these methods were inaugurated, we would make an effective start at all events at putting Canada on the basis of securing a national fuel policy which I believe would work out in the end to the advantage of every section of the country, because if we doubled the output of coal in the Dominion, doubled the output of the coal fields of Alberta and Nova Scotia, we must naturally expect that there would be a reduction in the price to the consumer; that is the natural consequence that we must expect to follow, that with the output doubled, there would be a corresponding decrease in price to the consumer.

I come now to the question of subsidies, as outlined in the Duncan report submitted to this house last year. I am not so sure but that not only the government of this country, but parliament also, missed not only the spirit of the Duncan report but the phraseology as well with respect to provincial subsidies. I would like to read a short paragraph from the Duncan report in this connection. The report says, on page 19:

> We do not feel, however, that it would be right or wise that the maritime provinces, in their present state of grave necessity, with deficits accumulating against them in their ordinary revenue and expenditure, should be left in suspense until a reassessment is made by the Dominion government, and accordingly we recommend that immediate interim lump-sum increases should be made in the payments to the three maritime provinces as follows:—

The report then goes on to enumerate the payments—$875,000 to Nova Scotia, and so on. I would call the attention of the house to the words used by Sir Andrew Rae Duncan in this report. He says, "immediate interim lump-sum increase." The report was filed with the government of the day on September 23, 1926, and the first instalment of the subsidies was paid in July, 1927. At that time only one-half of the $875,000 was sent to the province of Nova Scotia. The balance was held by the Dominion treasury until late in November, until, as a matter of fact, after the Dominion-provincial conference held in Ottawa last fall, at which, representatives of our province brought the question up and forced the hands of the Minister of Finance to send along the balance of the subsidy, which should have been sent to us in July. Not only that, but even then the sum of $133,000 was held back from the final payment owing to a disputed claim between the province and the federal government in connection with the sending of the militia to the island of Cape Breton. That sum of $133,000 was deducted from the subsidy. The province of Nova Scotia disputes this claim. It is out of all proportion to the services rendered, and I claim that the federal government had no right and no authority whatsoever for withholding this amount from the subsidy that was sent to Nova Scotia. It is quite true that under the Militia Act there are certain regulations whereby under certain conditions a charge may be made, but the province of Nova Scotia was contesting this claim; it is still in dispute, but notwithstanding that, the federal government held back this $133,000. That to me, Mr. Speaker, bears the earmarks of rather sharp business practice, and I do not know that we should sit idly by and let that sort of thing continue without making a protest, and we do protest against it.

Mr. CAMPBELL: Did the province of Nova Scotia or the provincial government request the federal government to send troops on that occasion?

Mr. SMITH (Cumberland): The attorney general of the province of Nova Scotia did, I understand, ask that troops be sent down there, but as I understand it, under the Militia Act, which governs this matter, before any responsibility can rest on the province, action must be taken by order in council, and no order in council was passed by the government of Nova Scotia asking that these troops be sent there. I do not think that the government of the day in dealing with the provinces in financial matters should deal with them in a strict and rigid manner. I do not say that the government should spend money recklessly, but I think it should spend it generously so far as the provinces are concerned.

Away back in 1867, under the confederation pact, we lost a good many of our elastic sources of revenue. They were handed over to the

Dominion parliament, and we were granted a small subsidy in order to enable us to cope with certain matters of local concern. For instance, we had to look after the public health of the province, education, and highways. Turn your mind back to 1867 and you will realize that no person at that time could possibly conceive that public health service would have developed as it has done and would require the expenditure that it calls for to-day. At that time public health was not a very serious question. Science had not developed to the stage that it has reached to-day, and it was impossible to forsee the large amounts of money that it would be necessary to expend on public health. The same applies to education. With regard to our highways, no person ever dreamt at that time that highways would have to be kept up in the state in which they are maintained to-day. That was before the day of the automobile, and people were not thinking then of keeping up the highways in an efficient state for automobiles and tourist traffic. But these burdens were saddled upon the different provinces, and we were expected to shoulder them and make headway on the small subsidies that were granted at that time, although they have been increased, it is true, from time to time. Under the Duncan report we should have received the increased subsidy dating from September 23, 1926.

Back in 1867 we were partners in the purchase of lands in the western portion of the Dominion, and we gave those lands away freely and gladly to make up the other provinces of the Dominion, in order that the prairie provinces might be carved out; and it is a good thing that we did, because the west has helped to make this country great. But, Mr. Speaker, we expect something in return. The Prime Minister said the other day that the suggestion had been made—I do not know whether it was at the Dominion-provincial conference or not—that the western provinces should not only receive back their natural resources, but that the subsidies should be continued to them as well. I am in full accord with that suggestion. If we are going to maintain any standard of civilization in this country consistent with modern day requirements and our advancement, in so far as I personally am concerned, I thoroughly approve of the provinces getting the subsidies as well as their natural resources. I think this question has reached the point where this government should deal generously with all the provinces of this Dominion. As I have already said, this government has the elastic sources of revenue which we have not, and it is very difficult for the governments of the eastern provinces to make ends meet. I call attention also, Mr. Speaker, to the fact that in the Duncan report it is pointed out very clearly that there is no extravagance so far as the administration of the provincial governments is concerned; no one can point to any reckless expenditure made by any of the governments. The commission states that the local governments of the east, and I am sure this applies to all other provinces, are carrying on their administrations as economically as possible.

Now I come to another matter and that is the representation from Nova Scotia in this House of Commons. We claim, and I think quite properly, that we have been overlooked to the extent of one member of this house; in other words, we have fourteen members from Nova Scotia and we claim that there should be fifteen members representing that province. I do not think I can do better in this connection than to read the statement which was presented to the Duncan commission, which makes the matter very clear. I might remind the house also that this matter was brought to the attention of parliament last session by the senior member for Halifax (Mr. Black), but so far as I know no action whatever has been taken by this government. If you will bear with me for a moment I will read the few paragraphs in the brief of the Nova Scotia government presented to the Duncan commission dealing with this matter:

> The population of Nova Scotia increased from 1911 to 1921 by 31,499. Quebec's population increased at a relatively larger rate, so that the unit of representation after the 1921 census became 36,283. Nova Scotia's representation in the House of Commons was therefore reduced from 16 to 14. The population contained 33,965 more than was necessary to give fourteen representatives, but because we had fallen 2,318 below the fractional part, not exceeding one-half of the whole number required to entitle the province to a member, our population to that extent was disregarded, and we suffered the loss of one member. Nova Scotia could not retain its members, as Ontario did, under subsection 4 of section 51 of the British North America Act, whereby no reduction can be made unless the proportion which the population of the province bears to the total population of the Dominion be diminished by one-twentieth part or upwards.
>
> It may be difficult to overcome an effect such as this, but it is a fact that there are 33,965 persons in Nova Scotia unrepresented in the House of Commons, while there are in Canada, outside of the maritime provinces, ninety-six electoral districts returning members with less than that population within their bounds. The membership for Nova Scotia cannot be reduced below ten, the number of our senators. But if by the increase of population in Quebec our representation were lowered to this minimum, it would mean a

total reduction since Confederation of nine. This is a condition which is being rapidly approached.

Had the unit of representation, instead of being 36,283, been 36,125, a difference of 158, Nova Scotia would have saved another representative, and instead of having fourteen members in the House of Commons would have had fifteen; that is, if the population of Quebec had been less by 10,287 persons the unit would have been so reduced. By the British North America Act, section 51, subsection 2—

"There shall be assigned to each of the other provinces such a number of members as will bear the same proportion to the number of its population (ascertained at such census) as the number of sixty-five bears to the number of the population of Quebec (so ascertained)."

Quebec is defined by this act, section 6, as follows:

"The part of the province of Canada (as it exists at the passing of this act) which formerly constituted respectively the provinces of Upper Canada and Lower Canada, shall be deemed to be severed, and shall form two separate provinces. The parts which formerly constituted the province of Upper Canada shall constitute the province of Ontario; and the part which formerly constituted the province of Lower Canada shall constitute the province of Quebec."

That is, the population to be taken is the population of the territory known as Quebec at the passing of the British North America Act. But the population of Quebec which has been taken as the basis for the unit of representation since 1900 is the population of that province as originally constituted, plus the population of the extensions made by chapter 3 of the acts of 1898. It is now possible from information at hand to ascertain just what population was counted in these added territories, for they contain all of Abitibi, the district of Labrador, and what is known as part of East Maine, all that territory north of the height of land, part of it being traversed by the National Transcontinental railway. In extending the boundaries further in 1912 the territory then given to Quebec was excluded in considering the population for forming the unit of representation, but the population added by the act of 1898 is included.

A statement from the Dominion Statistician shows that there were 13,644 people in this area. These should not have been counted in determining the unit of representation. Excluding them, the unit becomes not 36,283 as used, but 36,073. This figure divided into the population of Nova Scotia 1921 gives 14 and a fractional part, exceeding one-half of the whole united number by 778 and entitling this province to another federal member. The representation in the House of Commons from Nova Scotia, as fixed by the Redistribution Act, 1924 (14-15 Geo. V. C. 63), should therefore have been fifteen members. The province was under-represented in the last parliament by one member and will be in the next unless immediate steps are taken to correct this error.

I think that explains the matter fully. We understood that the province of Quebec, as originally defined under the British North America Act, was to be the unit acted upon.

[Mr. R. K. Smith.]

Instead of that, however, in the last redistribution other portions were taken in, other sections were added and the population counted, which changed the unit and thereby deprived us of one additional member. We feel that we are entitled to this and we believe that the government of the day should take the matter under immediate consideration and see that we get justice in this respect. This question has been to the fore for some little time but nothing has been done, and I sincerely urge the government that no further delay be countenanced in this regard but that immediate steps be taken to redress this wrong.

For a moment or two I would like to speak with respect to the steel industry, which at one time in this Dominion employed 20,000 men. It is true that this was in an abnormal period, during the war, but under normal conditions this industry employed about 14,000 men. In Canada to-day only about one-half that number, or about 7,000 men, are engaged in this work while steel products are pouring into Canada from foreign countries and putting our own workmen out of employment, causing many of our factories to stand idle and bringing depression generally to industries which once thrived and helped to build up communities and the nation. It does seem to me, Mr. Speaker, that the government should take seriously under consideration the question of the revision of the tariff with respect to steel in order to provide this industry with sufficient protection to enable it to exist and carry on. It seems to me that it is not only a crying shame but a disgrace to allow an industry which has been built up in a country entirely adapted to it, to fall into decay as has been the case with the steel industry in the last few years. I would urge the government, therefore, that when the budget is brought down this year some attention be given to this very important question.

Then I have just a word to say with respect to the fisheries in my province. There has been a commission investigating that industry and endeavouring to find some means by which it may be placed upon a more secure foundation than has been the case for the past few years. The report of this commission should be tabled with the least possible delay, and immediate action on the report should be taken as soon as that is done.

During the past few months there have been some rather conflicting statements made with respect to the implementing of the Duncan report. I am not making any statement in this connection in any carping manner, or with the intention of criticizing or

embarrassing the government in the least. I think I am expressing the minds of the people in Nova Scotia when I say that we are very thankful indeed for what the government has done in connection with the Duncan report, but we do claim that they have not nearly implemented that report in full, and that some statements made by a minister of the crown with respect to the implementing of this report are somewhat removed from the actual facts. I refer to statements made by the hon. the Postmaster General (Mr. Veniot) at different places in the maritime provinces to the effect that practically all the recommendations and suggestions contained in the Duncan report have been carried out. Now, Mr. Speaker, we of the maritime provinces contend that this is not an accurate statement of the facts as they exist. As a matter of fact a great many far-reaching and important recommendations and suggestions in the Duncan report, have not been carried out. We were quite willing last session—those of us who sit on this side of the house—to give the government ample time to formulate their policy and to carry out in their entirety all the recommendations contained in that report. But the progress made, I must say, has been slow. People in the maritime provinces are waiting, but the conditions down there are such that they are not going to wait for an indefinite period in order to have these recommendations fully implemented. I was rather astounded to read the statements made by the Postmaster General speaking at two different points—at Amherst and at St. John—with respect to what the government had done towards implementing the Duncan report. I think, Mr. Speaker, that the whole of the recommendations in that report should be implemented without any further loss of time. I am sure that we on this side have endeavoured to help the government in respect to whatever legislation was proposed in that report. We still maintain that attitude and we hope to do everything in our power to assist the government in seeing that these recommendations are carried out in their entirety. But may I point out that delays are dangerous, that great hardships are being worked on account of these recommendations remaining unfulfilled. I hope and trust therefore, that the government will take immediate steps to see that these recommendations are carried out in their entirety.

I did intend to go into some further matters, but I see that my time has elapsed. In closing I want to thank the members of the house very heartily for according me such close attention during my remarks.

Mr. J. T. THORSON (Winnipeg South Centre): Mr. Speaker, in this parliament it is singularly appropriate that the address in reply to the speech from the throne should be moved in both French and English, in order that we may constantly keep in mind the equality of the two languages in this country. I sincerely hope that the tradition in this respect which has grown up since confederation will not be departed from in the years to come.

May I at the outset follow the example of those who have preceded me in this debate and express my admiration for the brilliant address delivered by the hon. member for Hants-Kings (Mr. Ilsley), and at the same time tender my sincere congratulations to the hon. member for Provencher (Mr. Beaubien) for the able manner in which he seconded the motion.

May I also add my congratulations to those that have already been tendered to the hon leader of the opposition (Mr. Bennett) on the great honour which was accorded to him by his party. I am sure that we all join in the wish that the great talents of which he is possessed may be devoted to the cause of national unity and prosperity. If it should ever be his responsibility to lead the government of Canada may he bring to the discharge of that responsibility the lofty sentiments of service to which he gave expression at Winnipeg upon the occasion of his selection as leader of the Conservative party.

I do not intend to deal at any great length with that portion of the speech from the throne which deals with the prosperity with which this country is undoubtedly blessed at the present time, nor to attempt an analysis of its causes, except to say that in large measure it is due to the bountiful harvests that we have enjoyed during the past three years, and to remind this house that agriculture is still the chief industry of Canada and as such continues to deserve our first consideration.

I do, however, wish to say a few words with regard to the great mining activities that are taking place in the province of Manitoba. I will not repeat what the hon. member for Provencher said with regard to the richness of the resources that have already been discovered. A new era is commencing in northern and eastern Manitoba, and I venture to prophesy that the history of northern Ontario in mineral development will be repeated in northern and eastern Manitoba. In order to promote and regulate that development we in Manitoba must look to the Dominion of Canada, for we do not as yet have control over our natural resources. May I here ex-

press the hope that the question of returning to the western provinces their natural resources may be settled in the very near future. We have already, and very recently, had an excellent example of cooperation in the manner in which the federal and provincial governments worked together in order to make possible the development of the Flin-Flon mine, and I sincerely hope that that cooperation may continue in the future.

Two suggestions have been made with a view to promoting and regulating mining development in Manitoba. The first of these suggestions is, that the present system of taxing the gross output of a mine should give way to a system of taxing the profits of the mine, particularly in the early stages of mining operations. This system is in force both in Ontario and in Quebec. It is a system to which the investing public is accustomed, and provided the necessary safeguards are set up for the protection of the interests of the public, it is urged that a similar system of taxation be adopted for Manitoba.

The second suggestion that is made has to do with the registration of documents affecting mining claims. Under the law and regulations at present in force, title to mining claims in the province of Manitoba is by way of lease from the Dominion of Canada. This has been the system in force since 1914, when the previous system of granting freehold title under a patent from the crown was discontinued. Under the present system provision is made for the registration of an assignment of any right or interest acquired under the provisions of the Dominion Lands Act, provided that such assignment is unconditional and its execution is satisfactorily proved. No provision, however, is made for the registration, after the issue of a lease from the Dominion, of any other document affecting mining claims. There is no provision, for example, for the registration of that very common form of agreement known as an option agreement. It is urged, and I think rightly, that this is unfair both to the prospector and to those who have the capital for mining development. It makes it very difficult for the prospector who has staked a claim, in respect of which he has received a lease from the Dominion, to interest capital in the development of that claim, for persons are naturally unwilling to buy a claim outright, without first investigating its possibilities, and they do not desire to spend large sums of money in investigation on the strength of an option agreement when that option agreement may be defeated by the registration of an assignment of the lease from the prospector to someone else. Under the present system the door is open both to fraud and mistake. The person who is investing capital in mining development is entitled to certainty of title when he decides, if he should so decide, to exercise the option which he has taken. It is therefore suggested that provision should be made for the registration of all documents affecting mining claims either by way of amending section 86 of the Dominion Lands Act or by appropriate regulations. These two suggestions which I make have the strong support of the mining bureau of the Winnipeg Board of Trade, the Manitoba branch of the Canadian Institute of Mining and Metallurgy, and the Manitoba Chamber of Mines. Furthermore, the Manitoba government is in hearty agreement with the spirit of these suggestions. I therefore urge that they receive the serious consideration of this government for action during the present session, so that we may be prepared for the great mining activity that will undoubtedly take place immediately in Manitoba.

A moment ago I made the statement that agriculture was the chief industry of this country and as such continued to deserve our first consideration. May I add my voice to that of those who desire to see that industry promoted? The very small margin of profit which the farmers of this country make in the circumstances under which they operate at present, can be increased only by lowering the cost of production, the cost of living and the rates for carrying their produce to the markets of the world. May I express the hope that the burden of taxation, both direct and indirect, especially the latter, which now weighs so heavily upon the people and particularly upon the farmers of this country, will be substantially reduced during the present session?

Western Canada watched with a great deal of interest and with considerable alarm the investigations made by Mr. Palmer into the question of the Hudson Bay ports. It was feared by many that this investigation was merely the forerunner of delay. That alarm was dissipated by the action of the government in definitely selecting Fort Churchill as the terminal of the Hudson Bay railway. The Minister of Railways and Canals (Mr. Dunning) deserves and has received the thanks of western Canada for the courageous and expeditious manner in which he dealt with this all-important question. We are looking forward to the day when Manitoba will have a maritime port and western Canada a new outlet to the sea.

Western Canada is always vitally concerned with questions of transportation and will note with considerable interest the section of the speech from the throne which promises consideration to the various railway problems of the provinces of Canada. May I urge that consideration be given in this connection to additional representation of western Canada on the Board of Railway Commissioners?

May I also, as one of the representatives of the city of Winnipeg and the province of Manitoba, bring to the attention of the government the advisability of extending the railway facilities that already exist in that portion of Manitoba which lies east of lake Winnipeg, with a view to linking up those facilities eventually with the Hudson Bay railway? The extension of such facilities will aid greatly in the development of the rich mining areas of eastern Manitoba, it will afford access to the timber resources of that portion of the province; it will make the tremendous power possibilities of the Nelson river more readily available for industrial development, and it will provide a much shorter and cheaper route to the Hudson bay terminal for Winnipeg and all the southern portion of Manitoba. In addition I am confident that such a route will attract a large volume of traffic from the states immediately to the south of Manitoba. Such extension would be of inestimable benefit to the city of Winnipeg and to the area which it would serve, and an additional guarantee of the ultimate success of the Hudson Bay railway would be provided. I therefore urge that the government give serious consideration to this suggestion.

Before I proceed to a discussion of international affairs and the question of national status, I wish to refer for a moment to one other matter of domestic concern which has to do not with matters of material prosperity, but with the health and welfare of our returned soldiers and their dependents. I am sure that the returned soldiers of this country will welcome the statement of the Prime Minister that a parliamentary committee will be appointed during this session to consider the difficult question of pensions. I am equally sure that all shades of political opinion in this house will unite in the desire to see that the pledges which Canada gave to her overseas men will be implemented in every particular, so that they and their dependents may feel that full justice has been done to them in so far as it lies within the power of this house to do.

Much has been said, Mr. Speaker, during the course of this debate about the status of Canada. I do not intend to deal with that question at any great length, for I expressed myself fully on it last session, and I have seen no reason to change the opinion which I then held. The imperial conference of 1926 was a great achievement of British statesmanship. It did not, I admit, change the legal status of Canada. It did not confer upon Canada any legal rights which Canada did not till that time possess. But it paved the way for a change in that legal status. It paved the way for conferring upon Canada the additional rights that she does not now possess, and it brought into the clear light of day, for all the world to see, a new attitude of inter-imperial relations between the various members that make up the family of British nations. That new attitude has been clearly shown, by the British statesmen, and by the statesmen of the self-governing dominions who have been our distinguished guests during the past year. Some of them, may have been unwilling converts to the new conception, but may I express a tribute to British statesmen in general when I say that British statesmen possess a special aptitude for recognizing facts as they exist, and when they see the light they are not obsessed with the shadows. I quite agree with the hon. leader of the opposition that we do not as yet possess absolute equality of status.

Mr. BENNETT: That is what I said .

Mr. THORSON: I quite agree with the hon. member for St. Lawrence-St. George (Mr. Cahan), that we do not as yet possess absolute equality of status. That hon. member in the course of a very forceful and able address. stressed the difficulties that must be solved before equality of status is achieved. I regret that he should have thought it necessary to lower the tone of what was otherwise an excellent address by the petulant remarks which he made with regard to the Prime Minister. Every lawyer who has given thought to the subject realizes clearly that so long as our parliament is inferior and subordinate to the parliament of Great Britain, so long as we do not possess the right to pass legislation having an extra territorial effect, so long as we cannot validly prohibit appeals to the Privy Council, if we should so desire, so long as we cannot amend our constitution without the intervention of the parliament of Great Britain, we do not possess equality of status with Great Britain.

Mr. BENNETT: Hear, hear; I say so.

Mr. THORSON: It is well to keep these facts in mind so that we may not lose sight of the objective. It is well to appreciate

that the problems in the way are difficult of solution, but surely we in Canada do not intend to leave our problems unsolved simply because they are difficult of solution. I must confess a feeling of some disappointment at the attitude of the hon. leader of the opposition on this question. When he was asked by the Minister of Justice whether he would cooperate in asking to have the Colonial Laws Validity Act repealed, he replied, among other things, that he was too old to be caught in that way, as though he were seeking to avoid some trap that was being set for him. I had hoped that he would take a bolder stand.

Mr. GARLAND (Bow River): Hear, hear.

Mr. THORSON: And indicate clearly what he and his party were prepared to do toward the solution of this great problem. I still have hopes that he will take such a course when the weight of his new responsibility presses less heavily upon his shoulders.

Mr. MANION: He will, right after the next election.

Mr. THORSON: If he will follow the example of the premiers who have had the honour to lead the government of this country, then I have no doubt, that in this respect the growth of Canada will continue as it has done in the past. The difficulties are there, Mr. Speaker. We realize these difficulties. The Imperial conference itself realized them very completely. It recommended that a special committee be set up for the purpose of solving these problems and solving them in the light of the declaration of equality that came from the conference. I sincerely trust that steps will be taken in the very near future by the necessary parties to implement the recommendations made by that conference; so that we may have conferred upon us the autonomy that we do not now possess, and so that we may have conferred upon us the rights which I referred to a moment ago which are not yet ours.

Mr. GARLAND (Bow River): Have those committees to which my hon. friend refers ever held a sitting, and has the government of Canada taken any steps to see that the imperial government appoints those committees and that they commence their work?

Mr. THORSON: I am unable to answer the questions asked by the hon. member for Bow River. I am urging that the necessary parties take the necessary steps at as early a date as possible, in order that the problems which are referred to may be properly considered. I am anxious that progress be made towards the realization of the ideal of equality that was visualized at the conference. We on this side of the house are proud of the attitude taken by our leaders on the question of national status, for it is an attitude that is truly consistent with the best British traditions of political evolution, and any other attitude would be unworthy of the example of self-development which Great Britain herself has set for us. In my humble opinion the realization of this great ideal—and I am quite willing to agree that it is an ideal and glad that the hon. member for St. Lawrence-St. George so regards it—is inevitable and is essential to the maintenance of the close relationship which holds the British nations of the world together.

In the larger field of international relations Canada continues to make progress, both in matters of trade and in the promotion of goodwill and mutual understanding with the nations of the world with whom she is associated. The Canadian minister at Washington has upheld the name of Canada with credit to himself and distinction to his country. We are now to have ministers to France and Japan. If we can be as successful in these appointments as we have been at Washington—and I see no reason why we should not be—great advantages will accrue to the Dominion.

It is hardly necessary in this country to mention the desirability of maintaining the most friendly relations with France. That is accepted as a matter of course. It is hardly less desirable that we should maintain and promote friendly relations with Japan. Our relationship with that country is twofold—domestic and international. May I direct the attention of this house to the figures indicating the amount of our trade with Japan and China. Our total trade with these two countries has grown from $10,951,591 in 1917 to $59,679,059 in 1927—an increase of almost 600 per cent in ten years. In 1927 our imports from these two countries amounted to $16,211,972, and our exports to them to $43,467,087. During the year ending March 31, 1927, our trade with Japan alone amounted to $41,117,413, which included imports from Japan amounting to $11,170,380, and exports to Japan amounting to $29,947,033. During that year Canada traded with 112 countries. Let me point out, Mr. Speaker, that Japan was our fourth best customer.

Those who have given any thought to the growth of population must be struck with the fact that the population of the world doubled itself during the last century. If this great rate of increase continues in the future, as many students of the question be-

lieve it will, there is an alarming prospect before the world, for food production has barely kept pace with the increase of population. I disagree very strongly with the suggestions that have been made in the course of this debate that we in Canada should curtail agricultural production. In view of the rapid increase in the population of the world, I venture to express the opinion that in the future the commanding positions in the world will be occupied by those countries which have the power and the space to produce large quantities of food wherewith to feed their own people and the people of other countries. No country in the world is feeling the problem of increasing population more acutely than Japan. No country in the world has a greater opportunity than Canada of producing food on a large scale. Are we, Mr. Speaker, to confine ourselves to the home markets in view of such a situation? I can see visions of an enormous trade in foodstuffs between Canada and Japan. The great Peace river country lies open, awaiting development that hungry Japan may be fed. Open up that great tract of land, provide for it an outlet to the Pacific coast, so that we may realize and fully develop the great opportunities of trade between Canada and the orient.

Our minister to Japan will have other duties to discharge than the mere promotion of trade interests, for we are a Pacific nation and interested in the problems of the Pacific. I cannot usefully add anything to the eloquent plea which the Prime Minister made for the promotion of peace and goodwill amongst the nations bordering on the Pacific. That objective alone, without any considerations of trade, is worth attaining.

The government is to be congratulated upon the manner in which it is facing Canada's international obligations. Canada has definitely ventured upon the wider arena of international politics. She is of the world and cannot remain outside it. Canada's election to a seat on the council of the League of Nations brings home to us more vividly than ever before a realization of the great responsibilities and the great obligations she undertook when she became a member of the league. Her representatives on the council will play their part in deciding the policies and exercising the executive functions of the league. As members of the council they represent not only Canada, not only the British nations of the world, but the total membership of the league, all the nations of the world that belong to it. There are duties and obligations owing to the world at large through that membership on the council. Canada has great responsibilities and great obligations to discharge, but she is in a very fortunate position to discharge them. Freed as she is from the necessity of building a great navy, freed as she is from the necessity of maintaining a great standing army by the fortunate geographical position in which she finds herself, which renders her comparatively free from attack, she has a great opportunity for promoting peace and goodwill and acting as an interpreter not only between the two greatest English-speaking nations of the world, but between the two great continents of Europe and Asia. Who, Mr. Speaker, could not be proud of citizenship in a country so blessed by Providence in opportunities for promoting the welfare of mankind?

Mr. J. C. BRADY (Skeena): The speech from the throne by His Excellency the Governor General at the opening of the session outlined certain legislation which the government proposes to ask parliament to adopt during the present session. I wish briefly to mention one of two matters, Mr. Speaker, that seem to me to be of outstanding importance, and then come to certain phases of the situation in Canada to-day which are calling for redress and advanced legislation.

First of all, I notice that the government proposes to send ministers plenipotentiary to France and Japan. That proposal has already been discussed from both sides of the house, and I believe the feeling throughout Canada is that in taking such a step we are advancing into dangerous ground, and we should be very careful because of the consequences that may ensue if this policy is carried out to its logical conclusion.

The government also intends to take steps this session to return to Alberta its natural resources, and to British Columbia the lands of the railway belt and the Peace river block.

The two pieces of legislation I have mentioned, which the government intends enacting this session, are but the corollary to implementing the Duncan report. Both have been advocated for many years, and not merely on this side of the house. They were advocated as far back as 1901 by Premier Dunsmuir of British Columbia, later by Premier McBride, and during the last session of parliament by the hon. member for Victoria (Mr. Tolmie). I trust that as a result of this legislation which is forecast in the speech from the throne there will be considerable development in both these provinces, a development which has been considerably retarded in the past.

The speech from the throne has been praised to a very considerable extent, and so far as any legislation that will be of benefit to the people of Canada is concerned, that praise is not confined to the members on the government side of the house. The members on this side of the house likewise accord praise to the government for any legislation that will be productive of good for the people of Canada. The government has been repeatedly congratulated upon its splendid record, and that brings me, Mr. Speaker, to the very question that confronts the people of Canada to-day. It is the most vital question that we can discuss in this assembly. What the people of this country are demanding to-day is, which of the great political parties is presenting the facts as they exist at this present stage of our development. I notice that there has been a disposition on the part of many government supporters to argue during this debate from the particuluar to the general, to try to take a universal application from some few isolated facts. I do not for one moment deny, Mr. Speaker, that prosperity is moving over the face of Canada. We see evidence of that on all sides, and indeed it would be a strange thing after the way Canada has been blessed by abundant crops, blessed in the courage and strength and virility of her people, if there were not at this period, sixty years after confederation, at least some evidences that we were prosperous. The Prime Minister said that we should not say anything in this house which would indicate to the outside world that things are not like a garden of Eden in Canada, or words to that effect. Sir, this government had its very origin in democratic party government, and the opposition has a bounden duty to perform. Its duty is to give honest criticism, and I shall not be prevented from doing so by the mild rebuke which was given to some members of the opposition by the Prime Minister.

We all rejoice to know that Canada is entering upon an era of prosperity, but so far as I can judge, this government has not been giving to the people of Canada that legislation and that help which a young country such as this, with its great wealth, is entitled to receive especially at this important stage in its history. Is it not true, Mr. Speaker, that much of the work of this parliament last session was turned over to all kinds of commissions? We had the Duncan report from a commission that was appointed to inquire into the grievances of the maritime provinces. That commission was appointed to try and find means of alleviating the conditions that prevailed in the maritime provinces. We also had a commission appointed to investigate the administration of the Customs department. For what purpose? —in order that we might prevent the flow of goods entering from foreign countries without paying customs and excise duties. We now have a commission investigating the fisheries. For what purpose?—in order that we may try to save the greatest industry possessed by Canada, because credible testimony causes us to fear it is in danger of being wiped out. I say that no government in a great country like this should have to spend its time, its capabilities and the money which is supposed to go into the coffers of the treasury, for the development of the country in investigations and commissions such as these.

The opening of parliament is a period of stock taking, or is considered such by the people of Canada. They want to know the stage of progress reached and the hope for future expansion. Since 1867 the questions of greatest interest to the people of Canada have been those belonging to the sphere of commerce, industrial and agricultural development and the development of our railways and our ports. These are the main things in the estimation of the people of Canada. We have passed through that eventful stage of experimentation in legislation; those experiments have now become firmly embodied in the laws of our country, and the hour has come when the statesmen who control the destinies of our Dominion should solve these problems which will fit in with the growing needs of this great nation.

We have heard a great deal about immigration, but I say that in spite of what we have heard in this house, that we are making progress, no man dares deny that the greatest tragedy which could occur within any nation in the world is taking place every hour and every minute in Canada. We are losing the cream of our intellect; the youth of both sexes are leaving us, as regularly as the waters pass over the face of the earth, and they are leaving us not to return. I ask you, sir, how this government is attempting to solve that vital problem, upon which the future greatness of this country depends. There has not been one month since last May that I have not written out letters of recommendation for young Canadians passing into the United States. Is it right that to-day we should talk about plenipotentiaries, to foreign states when the very life blood

of our nation is ebbing away hourly and the government has not the ability or the machinery with which to check it?

Let me present to the house a few facts. I cannot draw a great dramatic picture, but by a simple comparison the smallest child may understand the situation. British Columbia is a country larger than Italy, Germany and France combined and to-day it has a population of about 560,000 people. New Zealand, a little country of 102,000 square miles, has a white population of 1,500,000 people and still, sir, the history of British Columbia antedates the political history of New Zealand. Let me show it in another way. The constituency of Skeena, which I represent, has a larger area than New Zealand. It is even larger than Great Britain and Ireland and yet to-day, with its fertile valleys, its millions of acres of land, its rivers, its seas, its mighty natural wealth of forest and mine, there are only 40,000 people to be found therein. Is there something wrong, or is it possible that I stand here this afternoon telling this house things are not existent? That is what is wrong with Canada. We are losing our own sons and daughters and bringing in immigrants from other countries. The object, of course, is to make them colonists, and finally citizens, but we are not even doing that.

The forty minute limit confines one to a few salient points, but I would like to emphasize one point particularly to the government. That point is, that the great need of western Canada has not been touched upon and has not been voiced as it should have been in the speech from the throne. We should have our transportation facilities increased, both by land and water; we should have federal aid for our highways, which are the very veins of traffic development. I think, sir, that we are paying too much attention to externals and not enough to internals. It is within Canada that the future success of any government must lie; it is there, sir, that we must concentrate our efforts. We must step down and come among our people and examine their wants and their needs, and then the solution will be obtainable. I appeal to this government to accept what I know to be true, that the brightest gem which could be placed in the crown of any government is waiting, once the great Peace river country west of the Rockies is opened up, and British Columbia receives more equitable treatment and a fairer share of the revenues which she has given in the past and will continue to give in the future to this Dominion of Canada.

Mr. J. L. BROWN (Lisgar): Mr. Speaker, I am afraid that I shall not be able to rise to the heights of oratory reached in the speech that we have just listened to. Indeed I feel that it is an injustice, perhaps, both to myself and to the house, that I should be asked at this time to step into another member's place and speak with somewhat inadequate preparation. With the other hon. members, who have preceded me I would heartily join in congratulations to the young member from Hants-Kings (Mr. Ilsley) who moved this address.

A great deal has been said with reference to the speech from the throne, as to what it does and what it does not contain. I think, perhaps, if we examine the speech from the throne and compare it with others over a period of years, it will be found very similar to some that have gone before. Some speeches from the throne have gone very fully into the program that the government had in view. Others have given very meagre intimation of what was intended in the way of legislation; and I was not at all surprised when I read the speech that it should be subjected to that old, standard criticism, that has been levelled so often against speeches from the throne—I am not making it myself—that it is more remarkable for what it does not contain than for what it does. That is not a new thought in this parliament by any means. However, the speech seems to be considered a convenient peg on which hon. members may hang speeches touching any matter that they have in mind.

A good deal has been said about the prosperity of Canada at the present time. I know it is a very difficult matter to get an adequate or a proper gauge of what constitutes prosperity. I recognize that it is quite possible that in matters of high finance, in big business, things may seem to be prosperous, and yet in other walks of life many of our fellow citizens may be suffering hardship and distress. But judged by the ordinary gauges that are used to measure prosperity, judged by the gauge I imagine the hon. leader of the opposition has been accustomed to use himself in times past, Canada should be considered to be in a fairly prosperous condition. I have here a little pamphlet that came into my hands last night—I am only sorry that I have not had time to read it in more detail—issued by the Canadian Pacific Railway Company on agricultural and industrial progress in Canada. Evidently the Canadian Pacific Railway Company has no doubt as to the prosperity of Canada judging by this pamphlet. It empha-

sizes the fact that bond sales during the year have been gratifyingly large, and in a large measure are being purchased by Canadian citizens, and so on all through the pamphlet. It points out the great increase that has taken place in the establishment of industries and in the products of those industries. I might call attention to one of these, one that we have had to deal with in the past and that may be brought to our notice again. I do so because I believe application has been made to the tariff advisory board to consider the question of a duty on binder twine. Now this pamphlet deals with the cordage, rope and twine industry, and it points out that during the year the number of plants engaged in the manufacture has increased from nine to eleven, and that the gross value of the products has increased from $8,000,000 odd to $10,000,000 odd. But the last paragraph in this particular section deals with the question of binder twine, and in view of the application which has been made for the imposition of a duty on that article I think it is well worth hearing these figures. So I will read the paragraph:

> The binder twine situation in Canada in the first six months of the present fiscal year is very interesting. Imports into Canada in the period dropped from 280,895 hundredweight, worth $4,049,686, to 194,283 hundredweight, worth $2,290,110, the decrease being due to lower purchases from the United States, while those from the United Kingdom and the Netherlands increased. At the same time exports rose from 59,280 hundredweight worth $742,735 to 140,299 hundredweight, worth $1,571,234. While there was a decline in exports to Argentina of from 16,602 hundredweight, worth $215,225, to 7,500 hundredweight, worth $82,500, shipments to the United States increased from 25,450 hundredweight, worth $334,123, to 66,860 hundredweight, worth $794,022, and to Russia from 1,060 hundredweight, worth $11,872, to 30,872 hundredweight, worth $340,359.

So that while these binder twine industries are asking for protection for their products, these figures issued by the Canadian Pacific Railway Company make it abundantly clear that they are perfectly well able to compete with other manufacturers, both in the United States and in Europe, in their own territory. Let us hope, therefore, that we will not hear very much about any proposition to put a duty on binder twine.

There has been some difficulty on my part in trying to reconcile the position taken by the leader of the opposition in the first part of his speech with another taken in the latter part of that speech. In the first part of his speech he referred to the fact that we were exporting very largely of our raw products

of the farm, the forest and the mines. I would not have been very much surprised at that had he not included paper in the list. In the early days of the parliament that was elected in 1921 we were, for two or three sessions, met by the demand that there should be an export duty upon pulpwood, or in some cases an embargo, and the reason given was that we should seek to turn more of that raw product into newsprint. It was urged on the other hand, and I think as events have shown properly so, that there was a gradual, normal increase in the manufacture of pulpwood into newsprint without the imposition of either an embargo or an export duty. That is abundantly confirmed now in this pamphlet. Figures were submitted last session by the pulpwood association, that is an association consisting of the small owners of pulpwood land, to show that a proportionate increase was indeed taking place, and that is abundantly proven according to the statements in this pamphlet. It points out that in 1927 the output of Canada was substantially over the 2,000,000 ton mark, and that increases the Dominion's lead over the United States to more than 500,000 tons as compared with less than 200,000 tons in 1926. Let me read another paragraph:

> Similarly the export of pulp and paper products from Canada in the twelve months increased in value by over $3,000,000. This increase is attributable entirely to exports of paper, these growing by almost $10,000,000 in value, while the value of exports of pulp decreased substantially.

Therefore if we had taken the advice of hon. gentlemen, most of them situated in that corner of the house, to put an export duty on pulpwood or an embargo as was advocated in some cases, we would have been taking a step that was not necssary to accomplish the purpose which they had in view and that would probably have wrought injury to other interests that would have been affected.

We can take it as absolutely certain that for many years to come our chief exports are going to be just the products of the farm, the forests and the mines. The question of the conservation of our timber resources is an important one; it is one that should be faced by the government as a question by itself, and every possible proper means should be taken of conserving these resources. But when the hon. member came to the latter part of his speech, I found it a little difficult to reconcile the position he took then with his first position, because he advocated a very large policy of immigration; that large sums of money should be set aside to promote immigration to bring people in to develop our natural re-

sources. If we are going to bring in a large volume of immigrants, we may take it for granted that the great majority of those people will be employed in developing our mines, forests and fields, and for a long time to come these products will constitute the great bulk of our exports.

I was interested when the hon. member for South Wellington (Mr. Guthrie) spoke of the burdens that were being levied by this government upon the people. Again he overlooked the fact, to which I took occasion to call attention last year, that there was a tendency to confuse the rate of taxation with the volume of taxation. Perhaps in some few details it may be pointed out that the burden on the people has been increased. That is certainly true with regard to the duty on raisins, as affected by the Australian treaty. Without going into the merits of the sales tax I will admit that in that connection there may be some slight increase; but let us remember that so long as we impose indirect taxation, so long as we impose taxation upon trade, it is impossible for this or any other government to say what the volume of taxation will be. All that the government can do is to fix the rate of taxation, and if trade is prosperous naturally the volume of taxation will increase, so that those across the way or others may argue that the burdens upon the people are correspondingly increased. I took occasion last year to place on Hansard certain figures that I had gathered in regard to the automobile industry. I have not those under my hand at the moment, but they showed conclusively that the reduction of the duty on automobiles had led to a great increase in the revenue that the country derived from automobiles. Indeed, the argument that we always placed before tariff commissions when we met, was that it was possible to reduce duties and yet increase the revenue. Even the hon. member for South Wellington at one time in his political career would have used the same argument.

Mr. BENNETT: But the sales tax and the excise tax were left on automobiles.

Mr. BROWN: I am referring simply to the customs duty on automobiles.

Mr. BENNETT: But the burden of taxation with respect to automobiles is higher.

Mr. BROWN: It was not increased.

Mr. BENNETT: Of course it was. One was taken off and the other put on.

Mr. BROWN: No. The hon. member for South Wellington made a remark which struck me very forcibly at the time he made it. He said: "What we need is a minister of finance with courage." I began to think over the matter and the various demands that were being made upon the Minister of Finance just to see what kind of a minister of finance we really needed. I came to the conclusion that it was not so much a minister of finance with courage that we needed as a minister of finance who was a magician who could show us how we were going to reduce taxation and pay the public debt, how we were going to reduce taxation and increase our expenditures, how we were going to have our cake and eat it. I felt that we needed a minister of finance who could demonstrate that it was possible for two straight lines to enclose a space and who could disprove Euclid's axiom that "things which are equal to the same thing are equal to one another." In view of the fact that we are called upon to make very large expenditures—and when the estimates are brought down we will find that hon. members from all over Canada are asking for them, and there is room for increased expenditures—I can well imagine that the Minister of Finance will have a job on his hands to reconcile the two ideas.

But if we have not a minister of finance with courage, we have a Minister of Railways and Canals (Mr. Dunning) who at least has exhibited courage in his mode of dealing with the Hudson Bay railway. I think I ought to give him credit in any event for that. The easiest path for him to have taken would have been the path of least resistance, namely, to have gone forward with the development of the port of Nelson. In doing so he might have fallen back upon the reports of engineers who had previously given decisions in regard to the matter. But instead of that he took what at one time was an unpopular stand in this house. It was unpopular, I know, when the Minister of Agriculture (Mr. Motherwell) took the stand that Churchill should be considered. Personally I must confess that at that time I took the stand myself that, unless very good cause could be shown for a change, having begun the development of the port of Nelson we should continue to develop that port.

Mr. BENNETT: We spent six million dollars.

Mr. BROWN: But in reading the reports that have come from Mr. Palmer I am satisfied that the correct decision has been reached. It seems, though, that we were formerly misled as regards the character of the Churchill harbour. I know I had always been given to understand that Churchill harbour had a rock bottom; that it would be impossible to

make a harbour there without a tremendous amount of work. The reports indicate that instead of the harbour at Churchill having a rock bottom it has a bottom that can be very readily dredged to make a harbour sufficiently commodious for the purpose in view. There was a disposition to establish comparisons between the engineers who years ago decided on Port Nelson and Mr. Palmer who has given his decision in favour of Fort Churchill. All I can say is that we have some little light thrown upon the engineers who chose Port Nelson when we remember that they sent up there a sand sucker dredge that never found any sand to suck. The nature of the bottom to the harbour would not permit of its being sucked.

I do not intend at this time to deal at any length with the tariff. Our position with regard to that matter has already been emphasized on both sides of the house, but I wish to point out one or two things with regard to the customs regulations of the day. I would like to endorse what the hon. member for Souris (Mr. Steedsman) said last night. The customs regulations are in some cases most annoying. I think hon. members and ministers do not always get the point of view of those who have to abide by those regulations. They should remember that over one thousand miles of the Canadian boundary lies between the great lakes and the Rocky mountains. It should be made as easy as possible for people living on both sides of the boundary line to obey the law. Customs laws are not very popular at any time. We all know that, but we should make them as easy of observance as possible. That is not the case at the present time. Indeed, a great hardship is imposed upon many innocent people who have to pass backward and forward across that line. I notice that in the report of the Customs commission there is a recommendation that the number of ports of entry be decreased. Before that is done, I would ask that the Minister of National Revenue give very careful consideration to the matter. I had hoped before speaking on this matter to have had the whole situation more completely in my mind as regards the number of ports of entry than I have at present, but I know that along my own line of railway within the province of Manitoba, which runs at distances varying from ten to twenty miles from the boundary, practically right through the southern part of the province, a certain number of customs houses and ports of entry are located. There are one or two others. I can conceive it quite possible to reduce the number situated along that line of railway without entailing any hardship upon any person. So far as the customs report deals with the merchandise brought in through those ports, I will take no exception to the recommendations, but if the number of ports of entry is reduced, account should be taken of the fact that it is not merely the merchandise that actually comes in that has to be taken care of, but also the prevention of smuggling from the south, and further that reasonable facilities must be afforded those who want to pass backward and forward. If the minister carries out the recommendation without taking these considerations into account, he will make a mistake. I had occasion last fall to visit a point along the international boundary. I was asked to go down and see the condition of things that prevailed there, and I found that it was a matter of great hardship to the people who wanted to pass backward and forward to observe the regulations that were imposed as regards getting permits for crossing the lines and then the return of the permit. The character of the country there was such that men could not reach the nearest office without making long detours, and it puts honest law-abiding men in the position that they can only obey the law at very great hardship and cost to themselves. Before the report of the Customs commission is put into effect as regards reducing the number of points of entry, I hope this phase of the situation will be given consideration by the minister. The argument is frequently advanced in regard to the liquor trade, that bootlegging is increased because of the rigors of the law. Indeed, in the customs report, it is said that there would be less inducement to break the law if the excise duties were not so high. I am not going to discuss that argument in the meantime, but if it is true in regard to that matter, it certainly ought to be true in regard to the question to which I am referring; so that innocent people who want to cross backwards and forwards should have no more hardships than necessary placed in their way. We are aware that state roads are being constructed in the United States to meet the highways in Manitoba, to permit intercourse between the two peoples, and then we enact these very drastic regulations, to prevent the people making use of these facilities.

I shall not deal further with that just now but I wish to bring the matter strongly to the notice of the Minister of National Revenue (Mr. Euler).

I heartily endorse what has been said with regard to the necessity for the establishment of better facilities for promoting research.

Research is of importance to the farming industry because of the prevalence of and the destruction caused by rust. Indeed, unless some remedy is found for the rust that is now afflicting our crops there is great danger that Canada may lose the pre-eminent position it now occupies in the export of high class milling wheat, and no amount of money that can be spent will be too great if a solution of that problem can be found. If in attempting a solution of the problem we find it necessary to pay higher salaries to the technical men in question, pay them we must, and if in order to pay them we must to some degree upset the Civil Service Act, then upset it must be.

Mr. MOTHERWELL: Hear, hear.

Mr. BROWN: Because we cannot afford to lose the best trained men of Canada when they are needed to investigate these problems.

Mr. ECCLES J. GOTT (South Essex): Mr. Speaker, I should like to occupy the time of the House for a few moments to discuss the situation as it exists in western Ontario among the tobacco growers, which is most appalling. Before so doing I desire to join with other members of the house in offering my congratulations to the mover (Mr. Ilsley) and seconder (Mr. Beaubien) of the address, as I also desire to bespeak appreciation of the tobacco growers of western Ontario, particularly the riding which I have the honour to represent.

I desire to thank the Minister of Agriculture (Mr. Motherwell), his deputy, Dr. Grisdale, the Minister of Agriculture for Ontario, Hon. John S. Martin, and his deputy, Mr. Roadhouse, for the personal attention they have paid to the tobacco growing industry of western Ontario. I desire to read an article appearing in the Tobacco Growers Guide, taken from the Farmers Advocate, which says:

The whole tobacco growing industry in Ontario is deep in the quagmire. The reasons given for this unhappy state of affairs are many and conflicting. Some blame the quality of the crop; others blame the tobacco companies. In spite of the British preference and the alleged demand in the United Kingdom, our tobacco is not moving and morale amongst the growers is at low ebb. When a situation such as this arises there are usually many reasons; and the only way to let in the light and clear the matter is for the growers themselves to be masters of the situation, know all the facts and through their own duly elected officers keep themselves informed as to requirements, values and movement of crop. So long as the growers know only the producing end of the business, and many of them knowing that poorly, there will be disappointments and failure. The only solution of the problem is a real business-like co-operative marketing company, owned and controlled by the growers themselves. Such a company could advise its members regarding acreage; through instructors it could assist growers in producing a quality product, and then it could explain to its members what the market situation really was. So far as Ontario is concerned the growers themselves would be masters of the situation and would not be working constantly in the dark as they seem to be at present.

Now, Mr. Speaker, in the constituency which I have the honour to represent we produce approximately forty per cent of the entire crop of tobacco raised in the Dominion. During the last few months I took occasion by calling private meetings to ascertain if we could not uncover the discrepancies and discriminations that seemed to exist against the tobacco growers. I held sixteen private meetings before calling a general meeting, which was attended by seven hundred tobacco growers in the town of Leamington. These meetings were the prelude to a meeting that was attended by the hon. Minister of Agriculture (Mr. Motherwell) and his deputy minister. Aside from the private meetings that I called, other meetings were being held in the county, and at one the following resolution was passed:

Whereas the farmers of Essex county have been induced by various ways and means to tremendously increase their acreage of tobacco and their capital investment to take care of the same during the past season;

And whereas these farmers are now finding that their marketing facilities, conditions and quoted prices are irregular and discouraging for the future.

The directors of the Essex County Farm Bureau request that you bring these conditions to the attention of your Department of Agriculture so that if possible we ascertain the reasons for these irregularities, with the end in view of having a more satisfactory solution found for this acute problem.

This was carried unanimously. In addition to those meetings there was a meeting of the tobacco growers of the township of Pelee island in the constituency of South Essex, and the following resolution was passed:

That this meeting, representing the tobacco growers of Pelee island, views with much concern the state of the industry, both as regards price paid by the buyers and the difficulties experienced in disposing of the crop to the best advantage.

We feel that the advantage of the British preference has not benefited the growers in any sense, but that the money has gone into the hands of the buyer, thereby depriving the grower of the benefit for which the preference was intended.

It is becoming obvious that the present state of affairs cannot go on, for the simple reason

that the grower is never sure of being able to dispose of his crop. Tobacco farming is not the easiest task in the world, and the grower wants to feel a little more confident concerning the disposal of his crop.

Having before us the wonderful advantage the wheat pool has given the farmer in the west, this meeting is of the opinion that a pool, of a similar nature would be advantageous to the tobacco grower, and wishes to place on record its willingness to support any move made in this direction.

These are only samples, Mr. Speaker, of the resolutions that have been passed at meetings held in the riding which I have the honour to represent. Now, we have what is known as a British preference on tobacco. That preference was established by the British government in 1916 to induce the growing of better grades of tobacco in the British colonies for consumption in the British market. This preference was first given in 1916, taken away in 1921, and re-established in 1925. It gives the growers of colonial tobacco a preference of 49 cents a pound in the British market. But, sir, we have come to the conclusion that to-day the tobacco growers of western Ontario are not enjoying the preference that was given them with the sole intention of their not only increasing their acreage but improving the grade of their tobacco. Just to show that our tobacco is winning favour in the British market I desire to quote the following figures of increasing exports:

	Pounds
1920	70,000
1926 (approximately)	6,000,000
1927	5,577,981

The figures for 1927 are for the ten months to the end of October. Our exportation to Great Britain represents less than four per cent of the consumption of the British tobacco market. Now let me give the house the British imports of tobacco from the United States during 1926:

	Pounds
Flue cured	125,964,372
Barley	305,942
Dark fired Kentucky	15,733,539
Dark Virginia	3,626,160
Green river	3,638,170
Cigar leaf	30,380

During 1926 Canada imported from the United States 13,517,316 pounds of flue cured tobacco. We imported only 141,656 pounds of cigar leaf and 282,123 pounds of dark fired Kentucky. Last year we consumed in our domestic market approximately 40,000,000 pounds of tobacco. We exported to Great Britain 6,000,000 pounds of flue cured and we imported from the United States 13,517,316 pounds.

[Mr. Gott.]

Now, Mr. Speaker, the duty on tobacco going into the United States is much higher than our duty on their tobacco entering Canada. The United States duty on Canadian unstemmed tobacco runs from 45 cents to $1.85 a pound and on stemmed from 50 cents to $2.50 a pound. The Canadian duty on American tobacco is only 40 cents a pound straight, and importers have the privilege of leaving it in bond for two years. They are also allowed a rebate of the duty paid in respect to raw leaf manufactured for export. I should just like to address the Minister of Agriculture for a moment, if he will give me his attention. I think it would be wise to discontinue the rebate which is allowed to our tobacco manufacturers on imported raw leaf when manufactured for export. I desire further to say to the minister that as tobacco-growing has become the most important industry among the farmers of western Ontario, no rebate should be allowed, and the duty should be collected when the tobacco enters the country. I should also like to say to the hon. Minister of Finance (Mr. Robb) that if we had a higher tariff on flue cured tobacco coming from the United States part of the problem now confronting our farmers in the tobacco-growing sections of western Ontario would be solved.

May I direct the attention of the Minister of Agriculture and the Minister of Finance to the three principal factors that enter into the solution of our tobacco problem? First, a more extensive cooperative marketing system; second, a reduction of the excise tax on cigars and cigarettes; third, a higher duty on flue cured and other tobaccos entering Canada from foreign countries. I think that the farmers are doing their very best to solve their present difficulties, and in view of that fact I am going to ask the government to increase the duty on flue cured tobacco coming from the United States, not up to $1 or $1.50 a pound, but to 65 cents a pound. I think that will help to solve the problem. The Minister of Agriculture knows that it is a very serious problem. We have 5,000,000 pounds of the 1927 crop still unsold, in a non-competitive market, where there is no person bidding on the crop, and I think the house will agree with me that that is a very precarious condition for the tobacco growers of western Ontario to be in. The farmers are doing their part, and I ask the government to join with them and do its part. It is a very easy thing to increase the duty to the point where it should be.

We imported 13,500,000 pounds of tobacco last year from the United States, and we ex-

ported to Great Britain only 6,000,000 pounds. To show you that our tobacco is winning favour year by year in the British market, I desire to give the exports from Canada for the last six years:

Year	Pounds exported
1921-1922	340,487
1922-1923	892,482
1923-1924	1,164,061
1924-1925	2,219,109
1925-1926	2,722,897
1926-1927	6,308,093

This is evidence, Mr. Speaker, that our tobacco is growing in favor year by year in the British market. The British market took last year altogether 197,509,815 pounds of tobacco for consumption in the British market, and for the first ten months of 1927 they imported 158,693,166 pounds, so if we can produce a good quality tobacco in Canada we can sell to the British market all the tobacco we can produce in this country. Just think of it, Mr. Speaker, only four per cent of the total imports of the British market are supplied by Canada, and yet the preference was given to colonial tobacco growers in order that they might raise the quality and type of their tobaccos in the British colonies, so that Britain could purchase its tobacco requirements from them instead of purchasing each and every year 150,000,000 pounds of tobacco from the United States.

The entire tobacco crop in Canada in 1925 was approximately 30,000,000 pounds. Ontario produced approximately 26,000,000 pounds, of which Essex county produced 13,674,900 pounds. So that the riding I have the honour to represent produced approximately 13,000,000 pounds, or considerably more than half the tobacco grown in Canada in 1925. In 1926 the price of flue cured tobacco ranged from 32 to 60 cents a pound. In 1927 much of the flue cured tobacco that we produced in the county is still unsold, and there is no competition. The highest price paid in 1927 was 44 cents per pound.

During my investigation into conditions in the tobacco industry I was amazed to ascertain the profits of the Imperial Tobacco Company, and when I quote the enormous profits that are being made by this company, I want it understood that I am not taking issue with any director or any member of that firm. So far as I know, each and every person connected with the Imperial Tobacco Company is a gentleman; I hope so, at least, and every person who buys for them is, I believe, a gentleman of high standing. I am quoting these figures only to show the enormous profits that are made by the manufacturers as compared with those who grow the tobacco, those who do the real hard work and suffer the hardships. I wish to show that the profits of those who do the real hard work are not all commensurate with the profits made by the tobacco manufacturers. I would ask the Minister of Agriculture to grasp the significance of the following figures. In 1926 the net profits of the Imperial Tobacco Company were $3,672,850. For the fiscal year ending September 30, 1927 the total net profits were $4,371,613. I trust that the Minister of Finance will note the figures I am giving. For the two years 1926 and 1927 the total net profits of the Imperial Tobacco Company were $8,044,463.

Mr. ROBB: Is that after paying dividends?

Mr. GOTT: Those are the net profits.

Mr. ROBB: After paying dividends.

Mr. GOTT: The net profits, I presume, would include dividends. Those are their net profits anyway. Now during the year 1927 it is claimed that the Imperial Tobacco Company handled less than 10,000,000 pounds of tobacco. If that is the case, they made no less than 43.71 cents per pound on every single pound of tobacco they manufactured. These are figures that have been cited not only at private but at public meetings. They are figures that have never been disputed, and I have every reason to believe that they are correct. The Imperial Tobacco Company or officials thereof also make enormous profits through the sale of fertilizer to the farmer; they get the farmer both coming and going. They sell the fertilizer at high prices to the farmer, and the farmer has to take any price they offer for his tobacco. It puts the farmer in a very disadvantageous position. He has to pay the highest price for the things he wants to buy, and when he goes to sell his products he has to take any price they offer. That of course applies not only to tobacco but to all the products the farmer raises in the Dominion. He pays the highest price for the goods he buys, and generally sells his products for the lowest price, due to the fact that he buys in a protected market and sells in a non-protected market.

I have before me reference No. 69B, which was an application made to the tariff board. I have not very great confidence in the tariff board, but I should like to read this application which was made to them, signed by Andrew Wilson & Company, Limited, General Cigar Co. Limited, L. O. Grothe, Limited, H. Simon & Sons, Limited, John McNee, Sons, William Ward & Sons, Limited, McLeod Nolan & Company, The Tuckett Tobacco Co. Limited. The reference reads as follows:

In making representation on behalf of the cigar manufacturing industry of Canada for relief from present taxation burdens, we would point briefly to the appalling decline in the past decade and a half. Further, we would again voice our contention that the increased duties imposed since 1913 were in the nature of war time levies and as such should now be removed.

The reduction in the number of cigar factories in Canada during the past ten years has been 60 per cent. Employment has been seriously curtailed; capital has been penalized and government revenue has suffered.

In order to restore the industry to anything like its former basis, material reduction in prices to the consumer must be made. Such a reduction is only possible through reduction of the levies which have been imposed on the cigar trade through taxation since 1914.

I heard two or three words of the speech of the hon. member who preceded me, and one word which struck me forcibly was the word "bootlegger." I want to say to the Minister of Finance that there is more bootlegging in the Dominion of Canada in the cigarette business to-day than in any other branch of commerce, and I will point out how easy it is to smuggle and sell American made cigarettes in Canadian stores. There are thousands of cartons of cigarettes coming into Canada on which no duty is paid. Across from Windsor there is a store at the foot of Woodward avenue in Detroit which caters to Canadian business. Men go in there and they are not content to bring a package of cigarettes across but bring two cartons on their hip, and if they are coming in cars they bring many more cartons of cigarettes with them. Some of the stores in Essex county import cigarettes and pay duty on them, but these are only sold when some officer of the law pays them a visit or when suspicious people are in the store. For the rest of the time they are selling cigarettes imported from the United States on which no duty is paid at all.

Cigarettes in Canada to-day are twice as expensive as in the United States, due to the excise tax. This brief also points out that the production of cigars in Canada has dropped from 294,772,935 in 1913, when the 28 cent and 42 cent leaf duty was effective with a flat excise of $2 per thousand, to 174,154,652 in the fiscal year ending March 31, 1927. I say to the Minister of Finance now that this reduction in excise which I propose will be an inducement to Canadian manufacturers of tobacco to place on the market a cigarette which will appeal to the consuming public, and it will stop the smuggling of cigarettes to a very large extent. The excise tax on cigars and tobacco to-day is too high, and constitutes an extreme penalty on the consuming public, the manufacturer and the grower.

Now, Mr. Speaker, I desire to place on record the imports of unmanufactured tobacco into the United Kingdom for each of the calendar years from 1922 to 1926 and for ten months of 1927, as well as the imports of unmanufactured tobacco into the United Kingdom for the fiscal years 1920 to 1924, which includes the importations from British Colonies as well as other countries. I also wish to place on record, with your permission, the exportation of unmanufactured tobacco from Canada by fiscal years for the years 1921 to 1927 inclusive. It shows that we have gradually increased our exports to certain countries, while in other cases our exports have fallen off. For instance, in 1924-25 we exported to Germany 794,815 pounds, while the following year we exported only 711 pounds, and for the year 1926-27 we exported 1,952 pounds. With your consent, Mr. Speaker, I will place these figures on record.

IMPORTS OF UNMANUFACTURED TOBACCO INTO UNITED KINGDOM

I desire for a moment, Mr. Speaker, to refer to the early vegetables which we produce in Essex county. I have the honour to represent the most southerly section of Canada, which I believe produces the finest crops of early vegetables in Canada. During the debate on the budget last year the hon. member for Weyburn (Mr. Young) made certain remarks in connection with the dumping clause to which I will refer. I am sorry the hon. member is not in his seat, but I will read what he is reported to have said, which will be found at page 541 of Hansard for last year:

> They told me that dumping was going on. I undertook to find out whether it was going on or not and to find out what evidence there was that it was being practised. I went to the Minister of Customs and asked him. He reminded me that the Liberal party was not in power at the time and that the Conservatives were responsible. He referred me to his private secretary. I went to the private secretary and he referred me to the deputy minister. I went to the deputy minister and he referred me to somebody else. I went to that somebody else, and he referred me to still another. I think I went to every man in the customs building, except perhaps the policeman and the janitor, and I put the same questions to everyone. "What evidence had you that dumping was being practised last July when you imposed the dumping duty?" They all made the same answer: "Plenty of evidence", ...

The hon. member for Weyburn used a good deal of space and a large number of words in explaining to the house that he was unable to find any evidence of the dumping of early vegetables into Canada during the year 1926. On July 1, 1926, I received the following telegram:

> We respectfully wish to draw your attention to the fact growers here have been seriously handicapped by heavy importations of southern cucumbers and tomatoes which have severely hurt marketing of our hot house crops in this district. We are now about to begin heavy shipments of field crops such as cabbage and tomatoes and if above unfair competition continues serious losses will be sustained by our growers. We would ask you to use every influence to remedy these conditions.

This telegram was despatched from Leamington and was signed by the Seacliffe Growers. That telegram was passed on to the Minister of Agriculture, who wrote me saying he had referred the question to the Minister of Finance, who in turn referred it to the tariff board, a body which I claim is inactive and never had many signs of life. On July 2, I received another telegram signed by the Seacliffe Growers, as follows:

> Cabbage crop nearly unsalable. Prices offered would not net growers one cent pound. Tomatoes in much same position. All owing to import of American stuff which is being dumped in this country at prices that take such low duty that there is no protection to our growers. Cannot something be done to enforce anti-dumping act? This situation has already entailed serious loss to producers in this country.

The following figures, I think, will explain the state of affairs directly responsible for that telegram. During the week from June 24 to July 1 inclusive there were imported into Canada 128 carloads of tomatoes which arrived at their ports of entry practically free of duty, or at such a low rate that it meant no protection to our growers. The following are the figures:

	Carloads
Montreal	79
Toronto	35
Winnipeg	8
Ottawa	6

During the seven consecutive weeks from May 12 to June 30 of the same year, 1,911 carloads of early vegetables were imported,

which threatened destruction to this industry in Essex county. Here are the figures:

Week ending	Carloads
May 19	205
May 26	230
June 2	365
June 9	220
June 16	260
June 23	217
June 30	414

I say to the hon. member for Weyburn that these conclusive figures should be definite proof that dumping did exist when order in council No. 1088 was passed. When I returned to Essex county, from which the complaints had emanated, and visited the farms and fields, after ascertaining beyond question of doubt that the importations from the United States were causing serious injury to our farmers I forwarded the following telegram to the Hon. H. H. Stevens, who was at the time Acting Minister of Agriculture:

Vegetable growers of South Essex have drawn my attention forcibly to glutted conditions of their markets making it impossible to dispose of their produce with the result that crops are being left in the field. Government reports issued by the Fruit branch, Department of Agriculture, show hundreds of carloads of competitive vegetables imported weekly—see telegraphic report number 14 showing 414 cars imported into eleven Canadian centres during the short period of one week. American reports show such crops in the United States being shipped at prices that do not pay cost of transportation to markets, far less cost of production, with result that ad valorem duty imposed by our government and based on invoice price at point of production means absolutely no protection against heavy importations. These deplorable conditions existing now with reference to hothouse tomatoes, cabbage, and beans will continue with reference to main crops of field tomatoes and potatoes which are now ready to be harvested, unless some immediate action is taken now by our department. On my return to Essex county I made a personal canvass of the district and find conditions exactly as represented in this wire.

ECCLES J. GOTT.

In response to my appeal Hon. Mr. Stevens caused the immediate passing of the order in council known as No. 1088, to which the hon. member for Weyburn (Mr. Young) takes serious objection. That order in council was dated July 13, 1926 and under it the Acting Minister of Customs and Excise valued certain fruit and vegetable products when imported from the United States, as follows, per pound net:

	Cents
Tomatoes	5
Cucumbers	3
Cabbage	1¼
Celery	2
Onions	1¼
Potatoes	2
Asparagus	10
Carrots	1½
Beets	2
Lettuce	3
Spinach	3
Cauliflower	2½
Peaches	4
Raspberries	17

It was declared:

These values shall be held to be the fair market value thereof for purposes of application of ad valorem rates of duty and special duty.

I would ask the hon. member for Weyburn if he does not consider these prices represent a fair market value. My hon. friend made a reference to section 47a of the Customs Act. The growers in the county which I represent appreciate very much the fact that there is such a clause in the Customs Act under which fair market values may be placed on importations from the United States during periods of dumping. I think my hon. friend will agree with me that it was in the best interests of the farmers that the action referred to should have been taken. It certainly was in the best interests of the farmers that I have the honour to represent. The very moment that order in council went into effect the huge importations of cheap American products ceased, and the Canadian growers delivered to the towns in Essex county fresh vegetables each day. They sold direct to the consumers at a satisfactory price and the latter paid less for what they bought than they otherwise would have paid.

I observe that my time has expired, but in closing I want to make a reference to the unfavourable trade balance of the Dominion, which declined by something over $114,000,000 in the twelve months ended September 30th last. During that period we exported to Great Britain $435,350,400 worth of products, and we imported from that country $227,000,000 worth of produce, giving a favourable balance in the case of trade with the mother country of $208,000,000. On the other hand we exported to the United States $477,154,614 worth of goods and imported from that country goods to the amount of $707,654,535, leaving an adverse trade balance with the United States of $230,499,921. Thus our trade with Great Britain resulted in a favourable trade balance of $208,000,000, whereas our trade with the United States occasioned us an unfavourable balance of $230,499,921, leaving us with a total adverse trade balance for the year of 22 million dollars.

At six o'clock the house took recess.

After Recess

The house resumed at eight o'clock.

Mr. W. G. BOCK (Maple Creek): Mr. Speaker, I should like to ask the indulgence of hon. members for any imperfections they may observe in my attempt to present a few remarks in connection with the speech from the throne. Being a plain western farmer with no claims to oratorical ability and with but a very scant knowledge of parliamentary procedure, I trust their criticisms with regard to any observations I may make will be tempered with kindness, in return for which I shall endeavour to be as brief as possible.

In the first place I should like to congratulate the hon. member for Hants-Kings (Mr. Ilsley) who made so splendid an address on Friday last, and also to make mention of the very able manner in which the hon. member for Provencher (Mr. Beaubien) acquitted himself. I hope at some future time I may be able to present my remarks with the same assurance and ease of manner which my hon. friends displayed on that occasion. I also wish to congratulate the leader of the opposition (Mr. Bennett) on his having been elected to that high position, and, like many other Liberals present no doubt, I hope that he may long continue to hold that position.

I have been so much impressed by the grandeur and the splendour of these historic halls that I fear I may not be able to do justice this evening to my constituents, conscious that I am surrounded by brilliant statesmen and gifted orators. I can only comfort myself by remembering that, unschooled and inexperienced in parliamentary lore, nevertheless, as I wish to assure hon. members, I am sincere in my desire to be of service to my constituents and to Canada as a whole.

Miss MACPHAIL: I would not take the splendour too seriously. The hon. member is of more account anyhow.

Mr. BOCK: I thank my hon. friend. On an occasion of this kind I could scarcely forbear to refer briefly to the celebration of the diamond jubilee of confederation, and I think the national committee deserve our congratulations on the very successful manner in which that vast program was carried out. I am sure this celebration served to create a deep interest in Canadian history and tradition, because no one could have participated in that celebration without acquiring a more comprehensive knowledge of Canadian history. The various departments of government, both federal and provincial, reviewed the progress of our country since confederation in their many publications and supplied a mass of information on our political and economic development. In addition to this the newspapers, private institutions, and many individuals, contributed a large amount of valuable information touching on various phases of our Canadian life.

I am convinced that the influence of the celebration on the children of Canada must have been remarkably strong. From coast to coast our young people were busily engaged in essay-writing competitions and oratorical contests on Canadian subjects, which must have revived and deepened their interest in the study of Canadian history. The hon. member for Yorkton (Mr. McPhee) referred very appropriately last night to that particular part of the celebration when he commented on the way in which our foreign-born young people had participated in it. When we reflect that it is on the rising generation that the future of our country depends, the keen interest displayed by young Canadians was gratifying. The very atmosphere seemed to be filled with harmony and unity, and with a consciousness of the fact that the entire nation was listening to the grand carillon pealing forth our national anthems. The inspiring words spoken by our foremost Canadians seemed to find echoes in the hearts of us all. All question of partisanship, all distinctions of class, race or creed, were pushed far into the background where we hope they may remain forever. I am glad that at this session of parliament, following as it does the great jubilee of confederation, there appears to be even in this chamber an exemplification of that harmony and unity so strikingly in evidence last July, because sometimes on reading Hansard in the past I have been inclined to think that at times there was scarcely sufficient harmony to go round.

In the year just past we have had some very distinguished visitors in the person of His Royal Highness the Prince of Wales, his royal brother Prince George, and Mr. Baldwin, Prime Minister of Great Britain. While we as Canadians are always glad to welcome a representative of His Majesty to our shores, we always feel particularly glad to welcome His Royal Highness the Prince of Wales, as wherever he goes he carries a message of goodwill, and through his kindly and cheerful personality he has done much, I am sure, to strengthen the bonds of sympathy and common interest which unite the various units of the British Empire. The visit of Mr. Baldwin might be considered a reminder of the importance of our jubilee of confedera-

tion. I understand in visiting us last summer he established a precedent, as prior to that time no British premier had ever visited one of the dominions during his term of office. It is also interesting to recall that Mr. Baldwin was born in 1867, the year of confederation, and the fact that he celebrated his sixtieth birthday on Canadian soil was rather a pleasant coincident.

I should like to place on record a few remarks with regard to the Hudson Bay railway. In this regard I think the Minister of Railways and Canals (Mr. Dunning) is to be congratulated on the very prompt manner in which he acted in making his decision in favour of Fort Churchill as the terminus of that railroad. He did not hesitate nor allow the grass to grow under his feet after he received the preliminary report of Mr. Palmer, and though his prompt action in this matter was criticized to some extent by the leader of the opposition (Mr. Bennett), yet we all are aware that had he deferred action in order to await the approval of parliament on a matter of this importance, he would have subjected himself to the criticism of every energetic citizen of Canada, including probably the leader of the opposition himself.

I believe it is customary for a new member to refer to some of the outstanding features of his constituency, and in this connection also I shall endeavour to be very brief. The constituency of Maple Creek is situated in the extreme southwest corner of the province of Saskatchewan. It is an entirely agricultural area adapted to ranching and wheat raising. The western half of the constituency lies within the area known as the Chinook belt, which is not always blessed with the average or ordinary amount of rainfall, and which is subject in the growing periods to those hot winds that sometimes sweep in from the southwest and destroy the crops in a very short time. Many of the farmers in that area are in a rather unfortunate position. A considerable number of the original settlers have left and have located in other parts of the province where the rainfall is more plentiful. Many of those remaining will never be able to pay up the amount still owing on their pre-emption. It has been thought by some that if they were given an opportunity to file on a second homestead—the abandoned lands in that area being made available for this purpose, with the indebtedness cancelled —it might assist them materially to carry on. The hon. member for Medicine Hat (Mr. Gershaw) last night touched on this phase of the situation, as his constituency adjoins mine and many of the conditions there are much the same as those in Maple Creek. I have been informed that some relief may be anticipated, an act respecting debts due to the crown having been passed at the last session. This would mean that each case would have to be adjusted on its merits, I understand, as a blanket policy would involve difficulty in establishing boundary lines; that is, if a certain area were segregated it would apply to all located in that area. The settlers in this area are a very good class of people and are deserving of some consideration in this regard.

You, Mr. Speaker, have no doubt heard of the bountiful crops with which the west was favoured last year. We had an unusually late spring, and with the almost continuous rainfall seeding was not completed until about June 1, and in some cases later. We had an abundance of moisture, and the prospect looked very bright. Then a series of disastrous hailstorms swept over the country and wiped out thousands of acres of splendid crops. This was followed by frost and then by rust, and when the crops were harvested continual rainy weather delayed threshing operations. To aggravate matters, winter set in on November 6, much earlier than usual, and I would judge that in the western half of my constituency at least 45 or 50 per cent of the crop is still unthreshed, having been snowed under. A large percentage of the grain that had been threshed was of low grade owing to frost and rust damage, and the wet weather prevailing at that time caused most of it to grade tough or damp. So when we read in the papers about the glowing conditions in the west, we regret that those conditions do not obtain everywhere.

In this connection I would point out that I believe conditions would have been much worse had it not been for the operation of the wheat pool, for I am sure we are all agreed that through our system of distribution by means of centralized marketing we have been able to secure a much better return for our product than we could have done otherwise. I think the splendid success of the wheat pool in western Canada to-day constitutes a demonstration of the benefits of economic distribution, for while it raised the price of wheat to the producer—it has been said by reliable authorities in the neighborhood of 25 cents a bushel—it did not increase the price of bread to the consumer. Possibly some of our hon. friends who are seeking an upward revision of the tariff might be able to reduce their cost of distribution in somewhat the same manner.

I have noticed in the press recently that some of the experts engaged in rust research work in connection with the Department of Agriculture might be obliged to discontinue it owing to the remuneration not being sufficient. I think, Mr. Speaker, that if this branch of the department has any hope of solving so serious a problem as that of stem rust, we should see to it that sufficient funds are provided to enable the department to carry on in this very important research work.

I could not very well refer to the constituency of Maple Creek without making some mention of my hon. predecessor, Mr. George Spence, who was our representative in this house in the last two sessions of parliament. As an untiring worker in the interests of his constituents he had no peer. He devoted a great deal of his time to the promotion of railway branch lines. Indeed, most of his electors were very reluctant to dispense with his services as their federal representative. His work in relation to the establishment of the consumers' league is, I am sure, well known to us all. I might mention incidentally that the winning of elections was one of Mr. Spence's favourite pastimes. I believe in the past two years he has contested and won four elections. This is a record which, I think, will stand for some time to come. To follow in the footsteps of so energetic a man as George Spence—he is now Minister of Railways and Highways in the province of Saskatchewan—is going to be no easy task for me if I make any attempt to maintain the fast pace which he set.

In conclusion, Mr. Speaker, possibly I should thank the hon. leader of the opposition for the fact that the Maple Creek seat was not contested in the recent by-election, and I can afford to do so. But I am inclined to think that my acclamation was not due so much to any generosity on the part of the hon. leader of the opposition, or to any great personal merit of my own, but that it was rather a reflection of the confidence of the people of my constituency in the present Liberal administration.

Mr. H. J. BARBER (Fraser Valley): Mr. Speaker, at the outset of my remarks I wish to congratulate the last speaker (Mr. Bock) on his maiden speech. I am sure that the oldest member is still able to look back to that outstanding event in his parliamentary career with a certain feeling of satisfaction. But although I am a young member I must confess that I do not recall my own maiden effort with unmixed pleasure; in fact I have not yet altogether recovered from the ordeal.

[Mr. Bock.]

The speech from the throne has been criticized for what it contains and for what it does not contain. Many able addresses have been delivered from both sides of the house, in the course of which the ground has been very fully covered, and if it were not that during the debate the Prime Minister (Mr. Mackenzie King) brought to our attention a matter which is very vital to the province of British Columbia, I would hesitate to take part in the debate at this time. I may say that the oriental question has never been a political issue in our province. We have, irrespective of party, been working shoulder to shoulder in that great fight for a white British Columbia. For the last thirty years we have appealed to this parliament and to the people of eastern Ontario to join with us in checking what we have termed the oriental menace. We have been rewarded by the fact that some years ago we were successful in securing the exclusion of Chinese immigrants. Since that legislation went into force not one Chinese immigrant has stepped on our shores. Now comes the question of the Jap, and I can assure hon. members, irrespective of party, that the people of the province of British Columbia were delighted to know that one of the old parties in Canada in convention this year, with representatives from all parts of this Dominion, recognized our claim for the general application of something in the way of effective exclusion of orientals. The Prime Minister in his address last Tuesday expressed regret at the action of this convention. He said:

> I was sorry to see at the party convention which my hon friend attended that among other resolutions which were passed was a resolution declaring for oriental exclusion.

I think, Mr. Speaker, that this house will agree with me that there was nothing wrong with that resolution. It is short and I am going to read it to you. It is as follows:

> Therefore resolved, that Canada adopt an aggressive system of immigration based upon the selective principle and with that end in view efforts be directed to:
>
> (1) Repatriation of Canadians.
>
> (2) Securing a larger percentage of British settlers.
>
> (3) Taking full advantage of the assistance tendered by the British government to promote empire settlement.
>
> (4) Making arrangements between the two governments to ensure proper training of the youth of the British isles as agriculturalists to better qualify them as Canadian settlers.
>
> (5) That in the selection and settlement of immigrants a sane classification and distribution should be made taking into consideration the immigrants' previous occupation and adaptability and that in such distribution the needs of all provinces should be given fullest consideration.

(6) That in selecting new immigrants, relatives of present citizens of Canada should receive favourable consideration.

(7) That special concessions be granted to Canadians to enable them to settle our vacant lands.

(8) .Oriental exclusion.

That resolution is in the best interests of Canada. I am not going to deal with it generally, but I will take up section 8, and I think it is fair that we should read along with this section the preamble:

Therefore resolved, that Canada adopt an aggressive system of immigration based upon the selective principle and with that end in view efforts be directed to oriental exclusion.

This is what we have been working for in British Columbia for a number of years in regard to Japanese immigration. We have asked that some action be taken that would eventually lead up to the exclusion of Japanese immigrants. About twenty years ago we entered into an agreement with Japan which was ratified by the two governments. It is known as a gentleman's agreement. The terms have not been made public, but it is understood it was to limit the immigration of Japanese immigrants to this country. In 1922 during a debate in this house I understand that a full day was set aside to consider the oriental problem. During that debate it was pointed out by some members from British Columbia that this agreement was ineffective and a demand was made for its abrogation. The government at that time agreed to accept an amended resolution reading as follows:

The government should take immediate action with a view to securing the effective restriction of future immigration of this type.

The words "effective restriction" were preferred by the government to the word "exclusion," and they assured us that that would very shortly lead up to what we desired, namely, exclusion. What has been done to give effective restriction to Japanese immigration? The gentleman's agreement is still in force. Has Japanese immigration decreased since the year 1922? Let us look at the reports in the Department of Immigration and Colonization. Those reports show that the number of Japanese who entered this country were as follows in the years given:

1923	369
1924	448
1925	501
1926	421
1927	475

These Japanese entered as immigrants and became residents of this country. The serious part of this influx during those years is that so many women have been permitted to enter. Of the 1,397 Japanese who entered Canada during the last three years, 724 were women and 250 children under 18 years of age. It is construed that because nothing was said in the agreement about Japanese women there was no bar to their entry, or in the words of a Japanese, it is a gentleman's agreement and does not apply to ladies. They say there is a woman for every Japanese man who wants one, and as a result the Japanese are breeding themselves into possession of a good share of the business of British Columbia.

The following details of the oriental occupation of British Columbia were assembled through official inquiries made by the bureau of provincial information, giving the situation accurately to the beginning of 1927:

(1) At the beginning of 1927 the oriental population of the province was at least 46,500, or 1 in 12 persons. (Taking the adult males only into consideration, there is one Asiatic male for every five men in British Columbia. —T.M.).

(2) The Japanese birth-rate was 40 per 1,000, as compared with a general birth-rate (except native Indians) of 18 per 1,000.

(3) The increase in the Japanese population through excess of births over deaths was greater, by more than two to one, than the immigration of people of that race.

(4) Arrivals of Japanese women have greatly outnumbered arrivals of men for several years; two women coming in for every man.

(5) Of oriental arrivals in Canada in the past 20 years, British Columbia got 80 per cent of the Chinese, over 98 per cent of the Japanese, and nearly 99 per cent of the Hindus.

(6) Orientals owned land and improved property in British Columbia to an aggregate value of $10,491,250, and lease property valued at $1,099,500.

(7) Over 11,300 orientals were employed in the industries of the province.

(8) In three years preceding 1927 the number of Japanese children in the public schools had increased by 74 per cent, while white children had increased by only 6 per cent.

(9) With development of production under glass, the oriental was more and more increasing his hold; in 1923 he had constituted 9 per cent of the growers with 28 per cent of glass area; in 1925, 13 per cent of the growers with 37 per cent of the glass area.

(10) The handling of produce and garden truck by pedlars or hucksters was almost entirely in the hands of Chinese, and the same applied to the sale of vegetables in stores, to the extent of 91 per cent in the city of Vancouver.

Speaking of Vancouver, I have a statement here from the city hall records, as of October 31, 1927, showing that the number of trade licenses issued to Chinese in that year was 756, and the number issued to Japanese 1,060.

The Prime Minister and others have laid great stress on the question of trade, and have pointed to the growth of the Pacific ports. All I have to say in that regard is that other countries have adopted exclusion measures, and it has not interfered with their trade with the countries affected. South Africa, New Zealand and Australia, sister dominions in this great empire, all have oriental exclusion laws, but still they trade with Japan and China. The United States has passed a Japanese exclusion law, and yet their trade with Japan increased enormously last year.

Another stumbling block appears to be Great Britain and her foreign relations. So far as British Columbia is concerned, I do not think anyone will doubt the loyalty of that province to the British crown, and we would not like to see anything take place that would disturb the friendly relations between Great Britain and Japan. We claim that it is not necessary to disturb these relations, and that such a thing would not happen. It has not happened with the other British dominions. As I said before, South Africa, New Zealand and Australia all have exclusion laws. Asiatics are not permitted to enter these countries as immigrants or to become citizens. Australia to-day boasts of being a white man's country. At the same time the people of Canada must realize that under the present arrangement there has grown up a great domestic and economic problem in this country. I would point out to the Prime Minister that we do not insist upon the word "exclusion", which he claims is so objectionable to Japan, being incorporated in the legislation. He may adopt the Natal act or any other act that he sees fit so long as it will give the result we desire, and that is the exclusion of Japanese as immigrants to this country. I feel that there should be no objection on the part of Japan if it was pointed out to them that some legislation of that kind was necessary, that it was impossible to assimilate their race with ours, that such an attempt would be fraught with great danger, and that it was in the best interests of both nations that immigration should cease. In other words, we must be able to say to them, without offence, that the time has come for effective exclusion of that class of people from our shores as residents.

Mr. J. A. BRADETTE (North Timiskaming): Mr. Speaker, I think it is in order for me in rising to speak on the motion for an address in reply to the speech from the throne to congratulate the mover (Mr. Ilsley) and the seconder (Mr. Beaubien) of the address. It has been a great privilege for me in this my second session to study the members of this house, and I just wish to say that the hon. member for Hants-Kings (Mr. Ilsley) certainly lived up to expectations. That part of the country has produced eminent orators and statesmen, and he is a true Liberal of that great school. I also wish to extend my congratulations to the seconder of the address. His was a splendid speech. I have had the pleasure of reading it all the way through, and the hon. member did credit not only to his constituency but also to the great race that he has the honour to represent in this house.

I also want to congratulate the leader of the opposition (Mr. Bennett) and the Prime Minister of Canada (Mr. Mackenzie King). I know that my humble congratulations will not go very far, especially after the wonderful reception their addresses have received in the press throughout the whole of Canada. They have certainly lived up to the high expectations that were held of both of them, and they thoroughly deserve all the congratulations that have been showered on them from both sides.

I had the good fortune to-day to read some comments in Saturday Night on the speech from the throne, and I gathered from that reading that there was considerable information to be gathered and a lot of work to be done this session.

I wish to make just a brief allusion to the celebration of the diamond jubilee of confederation. It has been a wonderful thing to unite all the different groups living in Canada from the Atlantic to the Pacific. It has been a wonderful thing for the whole nation. Some splendid addresses were made, and we had distinguished visitors from Great Britain whose visits were appreciated by every section of this country. Several suggestions have been made as to the best way of commemorating this great national event. One came from the maritime provinces that we should construct a confederation highway. That would be something tangible to show to future generations that we really wanted to unite the whole of Canada and maintain the spirit of confederation. It would be a highly desirable thing to construct a highway from the Atlantic to the Pacific, binding together every section of this great country of ours.

I want to say just a word in regard to the St. Lawrence waterway. I believe that the government has taken the only practical stand under the present circumstances in giving this question, which is not only a national but an international question, very thorough study. While I am in full sympathy

with the needs and requirements of these two provinces, we have in Ontario, within our own borders, a wonderful waterway which eventually must be developed; I refer to the Georgian bay canal. It is really a national waterway within our own borders. As I said when I spoke in this house last year, the problems of southern Ontario are also the problems of northern Ontario, and vice versa, and I think in this discussion we should consider first of all the national waterway we have within our own borders.

Now I would like to say a word or two about immigration. I have heard hon. members opposite say that during the last ten years the population of Canada has not been increased. I am glad to say, as a representative of one of the most prosperous ridings in the whole of Canada, that the population in my riding and in northern Ontario generally has increased at least 300 per cent in the last ten years. If you look at the statistics you will find that in 1916 we had a population of only 30,000 people, while to-day we have over 100,000, and I believe the same principles should apply to the western provinces. We need immigration, but as the government has well said through the Prime Minister, we want to be in a position to assimilate the people we bring in. Let us not go too fast in these matters; let us try first of all to give them work.

I was greatly surprised two or three weeks ago to read in a newspaper the fact that a young British immigrant brought before a justice of the peace said he was surprised to find that there were six months of winter in Canada. We must tell the truth to the immigrants who leave their own shores and come to Canada. It has been my good fortune to speak to many British immigrants and they were absolutely unprepared for the winter conditions in this country. While we all know we have a beautiful winter I think everyone naturally prefers the summer, and we should see that the people we bring out are fully acquainted with these facts. Perhaps it would not make so much difference to those coming from the Scandinavian countries, where conditions are somewhat similar to ours, but I must say that some of the British people are being brought here under false representations. As you know, most of our immigrants arrive in the spring or early summer, and are greatly surprised at our winter climate. When the first snow comes they expect it to go away shortly as it does in England, but when they find it remaining for six months they are disillusioned and disappointed,: and this is one of the great reasons why so many immigrants leave Canada. We should tell them the truth before they come here. I do not say that we are handicapped by our climate, but of course it creates certain seasonal conditions. As we all know, the primary industry of Canada is farming, and the farmers do not employ as much help in the winter as they do during the summer months. That condition applies until the end of March or the first of April. For these reasons I repeat that it is not fair either to Canada or to the immigrants themselves to bring them out here under any misapprehension. We must tell them of the exact conditions which prevail here, and if they want to come over under those conditions, as I believe they will, I am sure they will make better Canadians.

There is another class of immigrants to whom I would like to refer. I speak now of those who come to Canada with the sole intention of sending out as much money as they possibly can. You would be surprised, if it were possible to get these statistics from the Post Office department, to learn the amount of money which is being sent from Canada back to Europe. Every dollar earned in Canada by this type of immigrant is a dead loss, because it is all sent out of the country. We should see that we get the class of immigrant who really intends to live here all the time.

Let me go a step further. I do not believe we shall need so many immigrants, and I am sure we will not lose our population to such a great extent, if the government will do something to see that young Canadians are offered some inducement to go on the farms and stay there. As you know, the bright lights of the cities, with their theatres, dance halls and so on, are wonderfully attractive even to the urban population, so it is no wonder that the young people are attracted from the country. If it were possible for the government to induce those young men and women to remain on the farms it would be a very splendid thing. Just in this connection I might mention something to which I have given a good deal of thought. In northern Ontario we have at least 20,000,000 acres of the best land in Canada to-day, and I believe it to be a fact that there are millions of acres of vacant lands in the western provinces as well. It should be easy, therefore, to retain our young manhood which we are now losing to the bigger towns and cities of this country and eventually to the larger centres of population to our south. Most of these young people would make good farmers and good citizens, but what are the actual conditions?

Within the last four weeks I was in the city of Toronto, and on my way to the theatre I was stopped at different times by five able bodied young men asking for a quarter with which to get a meal. It seems to me that if the federal and provincial governments could do something to settle these young Canadians on the land it would be the best possible way to provide employment. If we could induce a young man to take a farm in northern Ontario, perhaps the government might promise to give him twenty-five dollars for every acre of land that he clears, for a yearly maximum of 20 acres of land for every acre he cleared to a total value of $1,500, and some arrangement might be made whereby, if that young man remained on the farm for ten years, the money would be refunded to him and he would have his land free. If something of that sort could be worked out it would help a great deal in keeping our people here.

We were told this afternoon that we are importing a large percentage of our vegetables and fruits, and surely it is no wonder, because I believe our cities are over-populated. I was in Montreal some time ago and was told by some people there that if they lost their positions around the beginning of December they would be unable to get other work until spring. In northern Ontario, however, we have seasonable employment. When the farmers are through with their work in the summer they can work for the big companies in the woods or in the mines, and in that way find employment twelve months of the year. Again I say I believe the government are following a wise policy in trying first to assimilate the immigrants we have already brought in, and in not bringing more people here by the thousands without finding employment for them for the whole year.

Then I would like to say a word in connection with the reduction of the national debt. I am absolutely in favour of certain measures by which we may expect to reduce our debt slowly and surely, but I believe the time has arrived when this government should spend money on public buildings all over Canada. We know that in the past the governments have been following a very wise policy in only spending what was absolutely necessary, but I believe we should now begin to spend money in this way where it is needed.

An hon. MEMBER: Hear, hear.

Mr. BRADETTE: I can tell my hon. friend opposite, to ease his mind, that I do not want to make a run on the treasury myself. I am thinking at the moment of the city of Toronto, where they need a big customs house. I think that is something they should get, and I have no doubt they will get it in time. There are of course a good many other localities besides Toronto and Montreal in which public money should be spent, because I know in certain sections of the country they are very badly in need of post offices and other public buildings. I do not suggest that this money should be spent on public buildings alone, however, and I will give you an instance of another way in which some of this money could be profitably spent. In the town of Kapuskasing, within the limits of my own constituency, we have the best experimental farm in the whole of Canada, but within the last year I have had several reports from the settlers of that district to the effect that some of the horses belonging to that experimental farm were being hired out in order to make both ends meet. There is a case in which I believe some money could be spent to great advantage, because it is not fair for the settlers of that district to have to compete with government agencies in that way. I have suggested to the Minister of Agriculture (Mr. Motherwell) that sufficient money be given that experimental farm to permit them to meet their own expenses, and relieve the settlers in that neighbourhood from this unfair competition.

We cannot always go by what we see in the newspapers; sometimes they contain the whole truth and nothing but the truth, but at other times they contain very queer things, and I would not like it to be understood that I am suggesting a run on the treasury. I do not intend to make any such raid unless conditions absolutely warrant it, but in this case I believe we could spend at least $10,000 more with very good results.

One of the other things with which I would like to deal while I am on my feet is the very momentous question of the taxation of railway properties. People in the town of Cochrane, and when I say that I include the whole district of northern Quebec and northern Ontario practically from Quebec city to the Manitoba border, have been agitating for the last ten years at least that the property of the Canadian National Railways, or at all events a section of the old National Transcontinental line, should be taxed. We had several promises made by different ministers of federal governments of both parties, but with no result, and I am putting this before the house not in any political sense but because I believe it to be a national matter. In order that this cause might be furthered, before the house opened I gave notice of the following motion:

Taxation of Canadian National Railway property, on that portion of the railway system primarily known as the National Transcontinental, and extending from Quebec city to Winnipeg, for municipal and school purposes, in all localities, along these sections of the railway municipally organized—

Whereas, government ownership of the Canadian National railway system has created a burdensome situation in a number of municipalities through having a large portion of otherwise assessable property placed on the exempt list; and

Whereas, in many cases the loss of municipal taxes from such exempt property is out of proportion and creates a very serious loss of revenue absolutely needed for the proper administration of municipal affairs; and

Whereas, the prerogative of the crown, of having crown property exempt from taxation, was established prior to the crown ever expecting to or undertaking to take up competitive business in full competition with private corporations which are subject to municipal taxation; and

Whereas, it would appear that justice and equity would preclude the crown from taking advantage over private corporations in the discharge of corporate business; and

Whereas, the National Transcontineutal was built by the Dominion government for the Grand Trunk Pacific railway on the understanding that it would be handed over to this latter railway on completion and under a lease, as an integral part of the Grand Trunk Pacific system; and

Whereas, the principle of taxation of railway property on the Canadian National railway has been maintained and in some cases established, in most sections of the present corporation, namely; over the portions of the system originally called the Grand Trunk railway, the Grand Trunk Pacific, the Canadian Northern and the Intercolonial;

Therefore be it resolved: That this house urges the waiving of the prerogative of the crown of exempting any such railway property from municipal and school taxation, on that section of the Canadian National railway system originally known as the National Transcontinental railway, from Quebec city to Winnipeg, for all organized municipalities along that part of the Canadian National railway system, which is occupied and used solely for the administration and maintenance of that portion of the aforesaid railway system.

A few days afterwards I received the following letter from the Clerk of the House of Commons:

January 19th, 1928.

Dear Mr. BRADETTE,

The notice of motion which you sent in for the order paper does not seem to be in order, as resolutions to increase a charge upon the people must be introduced by the government with the recommendation of the Governor General.

You are asking by this motion that the house urge the waiving of the prerogative of the crown of exempting the Canadian National Railways from the municipal taxation in a certain part of the country. If you secure an affirmative vote, the government will be bound to renounce these taxes. In other words you are asking for a decision of the house on a charge upon the people without following the ordinary practice. I took the matter up with Mr. Speaker this morning and he entirely agrees with me. I regret therefore my inability to give notice of this motion when the session opens.

As I said before, this is a very important matter for northern Ontario. I have no quarrel whatever with public ownership. I am well aware of the fact that public ownership is doing wonderful work in the province of Ontario; it has certainly accomplished striking results from an industrial and commercial point of view in the southern portion of the province. I doubt, however, if we should have the prosperity we enjoy to-day in northern Ontario if we had had to depend upon that policy. To private ownership and the investment of private capital we owe much of the development in the northern parts of the province. In presenting the case as I do for the town of Cochrane I am speaking for the whole of northern Ontario and northern Quebec. In that sparsely populated northern country the municipalities need all the taxation they can get, and the amount involved here will run to from $75,000 to $100,000 a year.

I am going to read a memorial which was drawn up by the town of Cochrane, discussing the merits of the case. Other municipalities have concurred in this representation, and although it is somewhat lengthy I deem it better to place it before the house so that all hon. members may be apprised of the fact. The communication in question reads as follows:

The municipal council of the town of Cochrane, in conjunction with other municipal bodies in northern Ontario and northern Quebec, has the honour to place before the honourable the Minister of Railways and Canals, the great injustice suffered by the towns and villages in these localities through the differentiation in respect to taxation for municipal purposes of the Canadian National railways, and to respectfully submit the following facts in connextion therewith:—

(1) The National Transcontinental line was built by the Dominion government for the Grand Trunk Pacific Railway on the understanding that it would be handed over to this latter railway on completion and under a lease, as an integral part of the Grand Trunk Pacific system.

(2) The National Transcontinental line, to all intent and purpose, was completed at the close of the year of 1913 but the failure of the Grand Trunk Pacific Railway to fulfil their undertaking left the National Transcontinental line at the mercy of an indifferent operation of portions of the road, by contractors, thereby greatly retarding the development around here, until in July 1915 it was consolidated with the Intercolonial railway into the Canadian Government railways and has been in operation ever since.

(3) A large section of the National Transcontinental line has been built through virgin lands

of northern Ontario and northern Quebec and must be considered, in every sense of the word, purely a colonization road and the townsites along this section have been laid out on picked out level stretches of either muskeg or swampy bush land which required an enormous amount of groundwork in the clearing, in order to permit even the most rudimentary town planning.

(4) The building of this colonization portion of the National Transcontinental line can therefore in no way be considered a boon to the towns along its right of way as all these towns had to come subsequent to the building of the railway and they have since done their full share in the colonization and development of the territory within their sphere of influence, in even a larger proportion than the railway itself has done for northern Ontario and northern Quebec.

(5) The demand for educational and sanitary measures alone, in the building up of the towns to the present time, has been out of all proportion to the ability of ratepayers of these towns, to meet, since the largest property holders, the railways, are exempt from municipal taxation.

(6) Conditions as they exist to-day in Cochrane are to be found in a more or less like measure along the entire colonization section of the National Transcontinental line between La Tuque, Quebec, and the Manitoba boundary.

(7) In addition, the town of Cochrane, in common with other towns and villages along the National Transcontinental line in northern Ontario and northern Quebec, has suffered repeated devastation and the town of Cochrane especially, suffered on two occasions almost complete destruction by fire which struck the town from surrounding bush lands and for which no blame can be attached for lack of prevention.

(8) Again, owing to the inability of collecting adequate taxes, by reason of exemption of railway property, the town of Cochrane suffered severely through the scourge of epidemics, brought about through lack of funds to complete necessary sanitary improvements, with the consequence that the ratepayers have been greatly impoverished besides causing intense suffering through loss by death of a large number of citizens.

(9) In the year 1919 the town of Cochrane petitioned the Dominion government and parliament for relief through permitting assessment of railway property within the municipality and a promise was made that pending legislation of the session of 1919 would make special intervention by the government unnecessary, as through the creation of the Canadian National Railway Company, this company would be given a lease of the Canadian Government railways and would take the status of any ordinary corporation.

(10) Statements made in the House of Commons at that time by the leader of the government, as appearing in Hansard of that session, clearly indicate the intention of the government to fulfil promises made to the town of Cochrane, but there is nothing in the final bill enacting the Canadian National Railways Company to supplement such statements.

(11) The colonization section of the National Transcontinental line is the only railway built in Canada through virgin lands in the last forty years which has never assisted in the building and subsequent progress and development of towns and villages along its course, by assuming their just share of taxes to such municipalities, and yet the proper operation of a railway, and the subsequent success from such, preconceives that towns be built and conveniences be furnished to further the welfare and provide suitable living conditions for the employees of such railway.

(12) There is no place in Canada which presents a more incongruous situation than that which exists in northern Ontario and northern Quebec with respect to exemption of railway property from municipal taxation and no comparison can be made with other sections of the Canadian Government railways where the advent of the railways came subsequent to the existence of towns and villages, thereby benefitting such towns and villages in a large measure. Any assistance, therefore, which may be granted to the town of Cochrane and other municipalities along the colonization section of the National Transcontinental line, can in no way be considered a precedent, to be followed in respect to other places.

At a meeting of representatives of municipal bodies from along the colonization section of the National Transcontinental line between La Tuque and the Manitoba boundary, at which delegates were present from Cochrane, Sioux Lookout, Redditt, Kapuskasing, Hunta and Moonbeam in Ontario and Privat in Quebec, the following representation was fully concurred in.

Therefore, having in mind the unwillingness of the Dominion government to open up the general question of taxation of Canadian government railway property, the undersigned municipal corporations urgently request the honourable, the Minister of Railways and Canals to favourably consider the justice of making an annual compassionate grant, in lieu of taxes, to the municipal bodies affected and to have the necessary appropriation for the current year included in the supplementary estimates to come before the House of Commons during the present session, on the basis of the average annual loss of taxes had the railway property been subject to taxation.

The loss from taxation suffered by the town of Cochrane, based on a property assessment of the National Transcontinental line within the municipality, as appearing on the Cochrane assessment roll, of approximately $300,000 since 1915, when the line became operative, would at an average tax rate of 40 mills represent a sum of $12,000 annually, or for the whole period until the end of the year 1923 a total of $108,000.

The loss from taxation suffered by the town of Sioux Lookout, based on a property assessment of the National Transcontinental line within the municipality, as appearing on the Sioux Lookout assessment roll, of approximately $448,900 since 1915, would at an average tax rate of 40 mills represent a sum of $17,950 annually or for the whole period until the end of 1923 of the year 1923 a total of $161,550.

The loss from taxation suffered by the town of Kapuskasing, based on an assessment of $20,000 since 1921, the inception of the town, would at an average tax rate of 42 mills amount to $840 annually or a total since 1921 of $2,520.

The loss from taxation suffered by the public school section No. 2, Clute and Calder, at

Hunta, based on an assessment of $3,000 would at an average rate of 22 mills amount to $66 annually or a total since 1921 of $198.

All of which is most respectfully submitted.

We sent several delegates to interview the government of the day, and although we were all given a warm welcome and a sympathetic reception, no headway was made in the direction of the desired legislation. I have here several letters that I have received either from members of the government or from one or other of the two political parties dealing with this matter.

Here is a letter signed by Senator G. D. Robertson, and written under date of February 14, 1923:

Dear Sir:

This will acknowledge receipt of your letter of the 8th inst. together with printed circular enclosed referring to the desirability of the Canadian National Railways being assessed for municipal and school purposes.

At Cochrane and other points along the Transcontinental where the railway property represents a large portion of the improved property in the municipality, I readily appreciate the propriety of the railway bearing some of the cost of municipal taxation, especially for schools, as most of the children attending such schools are children of employees of the railway company and such employees ought not to be taxed for school purposes more heavily than are similar employees in other municipalities where the proportion of taxation is more widely distributed. This question was discussed some two years ago by the late government, being brought to its attention by the undersigned after my return from Winnipeg in August 1920 via the Transcontinental railway, when this question was brought to my attention, but it was not deemed advisable to take action at that time, or until the whole of the government-owned lines were merged into one system. Now that this is being done and the Grand Trunk and Canadian Northern portions of the Canadian National system do pay taxes, there would seem to be no good reason why some reasonable rate of taxation should not also be imposed upon the portions of the national system formerly known as the Canadian Government Railways.

I shall be glad to lend such aid as I may be able to bring some relief to your municipality, and others similarly situated, but feel that the movement should be initiated in the House of Commons, as the jurisdiction of the Senate, of which I am a member, respecting the introduction of money bills might be questioned.

This is a letter dated February 23, 1923, from Mr. William Irvine, M.P.:

I have received your communication, also resolution passed by the municipality of Cochrane, regarding the taxation of Canadian railway property within the boundaries of your municipality. I certainly am in favour of the taxation which you demand, and if the matter is brought before parliament, it will certainly receive my support.

I have on file at least a hundred letters from ministers, premiers of the day and members of parliament, and although many of these letters were absolutely non-committal, some of them were sympathetic. From these letters I gathered the impression that this matter was going to be brought before the house. I had the good fortune on one occasion of listening to the late Hon. Frank Cochrane, then representing a portion of the riding which I have the honour to represent to-day. He was at that time Minister of Railways and, speaking at Cochrane, my home town, he said that government railway property should be taxable; that it was an injustice, especially in connection with that section of the Transcontinental, that it should not be taxed. Do hon. members realize that to-day, as has been stated in those petitions, the Canadian National railway system is actually paying taxes on most sections of the road, and that in 1925, if I am correct, special grants were given to the provinces of New Brunswick and Nova Scotia, to the amount of $230,000 a year, as compassionate grants in lieu of taxes? As I said at the outset, we do not want straight taxation, but I believe we are entitled to a compassionate grant.

In the same year, 1925, an amount of $75,000 was offered to the province of Ontario, but for some reason, unknown to us and known only to Premier Ferguson, that offer was turned down. As I said at the beginning I believe the taxation on the whole system from Cochrane to Winnipeg will amount to $100,000, and I do not see why the Premier of Ontario refused that grant, which was and still is absolutely necessary. If the government is willing and ready to-day to extend that grant, it should be distributed through the provincial government or the railway municipal board to the municipalities. I remember on one occasion when a delegation was waiting upon the Hon. Mr. Ferguson, asking him for taxation on the Temiskaming and Northern Ontario railway, which is a provincially owned railway, the answer he gave us was in this sense: The moment we receive taxation from the Canadian National, the Temiskaming and Northern Ontario and the provincial government will do their share. In my home town the total assessment of those railways is at least a million dollars, so that if we were to receive a compassionate grant it should amount to at least $10,000 a year. I know the Canadian Pacific has a special department, with officials visiting all sections on which they are paying taxes. As hon. members are aware they are paying taxes on practically their whole

system, but we would be satisfied with a compassionate grant instead of a straight assessment. Perhaps many people are not aware of certain facts. This is a clipping from the Northland Post, a Northern Ontario newspaper:

An enquiry from Ottawa regarding the conditions of British government property in London brings the information that the Imperial government pays practically on government property in London the local tax rates. The thing is done in the frequent British way of meeting a troublesome situation by doing what ought to be done, but specifying that no legal obligation is admitted. The Imperial government declines to acknowledge any liability for taxes but appoints an officer to report what is fair. The officer reports that it would be fair for the government to pay a certin amount to the local authorities —and it turns out that this certan amount is equal to what would be the taxes if the property were taxed.

As I say, we would be quite satisfied in Northern Ontario to receive such a grant. We do not want a straight assessment. Perhaps in the discussion some legal point might be brought up which it would be hard for us to overcome. After approaching the Canadian National Railways on many occasions we wrote a letter to their attorney and this is the reply, dated May 14, 1923:

I have your letter of the 9th inst. You ask whether the act incorporating the Canadian National Railway Company gives the directors wide powers in respect of taxation. In reply I beg to advise that it does not. The only powers that are given to us in respect of the Canadian Government Railways, under the entrusting order in council, are to manage and operate the property, that is, we practically have the powers of a general manager. Now the exemption from taxation relating to crown property held by his majesty in the right of the Dominion is found, as you know, in the British North America Act. As general manager we have no authority to disregard the terms of the British North America Act. It would be just as reasonable, or even more reasonable, to expect the Postmaster General to pay taxes on post office property and to waive the crown right for exemption as it would be for us to attempt to do so in respect of crown railway property in the town of Cochrane.

It seems to me that the only remedy can be by act of parliament, or by some act of the Dominion government directing us, notwithstanding the exemption, to pay taxes. This direction could not be limited to the town of Cochrane, it would have to extend equally to every municipality through which the government railways run, or wherever they own property, and the question therefore is a very large one. Furthermore, if the crown in respect of railway properties pays taxes, the same condition, though with less force, could be made by any other municipality where Dominion property is situated, in respect of post offices, military property, canal property, immigration property, and all other property held on behalf of the crown. You cannot, it seems to me, admit liability in one case and deny it in another. You would have to treat all municipalities fairly and on an equal basis.

It can readily be admitted that the town of Cochrane is situated disadvantageously in respect of its taxable area, since a great deal of property is held for railway purposes either by Dominion railways or provincial railways. Both are equally exempt under the same act. On the other hand, it must be admitted that the town owes its very existence to the two railways in question.

If the matter came before our directors I would be obliged to advise them, from a legal point of view, that they had no power in themselves to waive the exemption provided by the British North America Act, as the question is purely one for the Dominion and provincial governments to consider and to remedy as they see fit. The only feasible remedy that I can see would be by a special appropriation made by parliament to the town in lieu of taxes, but whether the government or parliament would be content to recommend or pass such an appropriation is very questionable, in view of the discrimination they would thereby be making in favour of your municipality as against all others.

Those are some of the objections against such taxation. On one occasion I met Mr. Ruel personally and he made the same argument, that the British North America Act should be amended so that the government railways could pay taxes. Everyone is aware, without being a legal light, that when the British North America Act was drafted in 1867 there was no thought that the government would go into the railway business; that railways would be under public ownership. It was well known that the Canadian Pacific was under construction and no one dreamed that the government of the day or any future government would go into the railway busniess. But I believe in view of the manner in which the Canadian National Railways are being administered the system if not legally, at least is morally bound to pay taxes.

At the time of the amalgamation of the railway systems now forming the Canadian National Railways the Right Hon. Arthur Meighen, during the discussion in committee of the bill to effect the amalgamation, said, as reported in Hansard at page 1697:

It makes the new corporation liable at law and vests in the new corporation the rights at law of a corporation rather than putting it in the position of the crown. . . It can act as a corporation not subject to the restrictions or to the enjoyment of the privileges of the crown.

And again at page 1698 we find him saying:

Upon amalgamation the company will own the direct physical assets.

Further at page 1703 we find him proceeding:

Does not this bill mean that we are attempting to set up a system of corporate management divorced from direct government interference or control of this great railway system—corporate as distinguished from departmental management? . . . It seems to me to be a very real company. We want to make it a real company, but it will be a very unreal company if one-half is to be departmental and the other half corporate. I do think that while it is true that this is in reality a government enterprise, it is equally true that we are trying to operate it as a business concern under corporate management.

To live up to the spirit of these words, as the system to-day is being administered absolutely independent of the government—for I believe every member on both sides of the house will recognize that politics do not enter into the management—the whole system should be liable to taxation.

At page 1699 of Hansard I find the following pertinent statements of Sir Thomas White, at the time Minister of Finance and acting leader of the house:

This railway company of which the government is the virtual proprietor, notwithstanding the corporate form in which its assets are held, is not a department of the government in the same sense that the Railway or Customs or Inland Revenue is a department of the government.

That is a complete answer to the letter of Mr. Ruel, the counsel of the system regarding the ownership of the Canadian National Railways. Sir Thomas continued:

As I pointed out last evening when I spoke upon this matter, there are two ways in which the Dominion government could administer this great railway system which has now come into our hands and such other systems as may be acquired in the future. One way would be to attempt to administer them as the Intercolonial railway was administered, by the Railway department of the government, which, as the committee knows, is under the direct control of the Minister of Railways. The other way, both for practicability of administration and for divesting the government as far as possible of control in order that no question of political patronage may enter, is to administer them through the medium of a joint stock company or companies. Take the situation as it exists to-day. The various departments of the government, including the Railway department in respect of the Canadian Government Railway, make their estimates, and all expenditures are audited by the Auditor General, as my hon. friend has indicated. But in connection with the Canadian Northern Railway Company, whose stock is held by the government—just as the stock of this company which we are now creating will be held for the government—the administration being under a corporation is carried out as corporations carry out their enterprises. The corporation, as such, receives all revenue, and all expenditures are made under the authority of the board of directors.

It will be seen that it was said by the government of the day that the Canadian National railway system was going to be run as a private corporation absolutely independent of the government. From that a layman would gather that the corporation would be liable to taxation just like any other private corporation. Another thing: to-day the Canadian National railway system is paying taxation to the tune of millions of dollars. Apparently what is meat in one case is fish in another, and northern Ontario seems to be out of luck because of the fact that at the time of the construction of the National Transcontinental line the Grand Trunk Pacific did not want to undertake work of construction from Quebec to Winnipeg and through some unforeseen development the line was not taken over by that company. But I see no reason why we should be penalized on that account. It is absolutely unfair, and, I repeat, that morally, if not legally, the section of the population affected should be given compensation by way of taxation.

In the course of the evidence given by Mr. A. J. Mitchell, vice-president in charge of finance of the Canadian National Railways, when he appeared before the parliamentary committee on national railways and shipping, he stated that municipal and provincial taxes and taxes on lands in 1920 on the national lines amounted to $1,371,853.41. But northern Ontario did not get a cent of that money, other sections of the country benefited, and even the provinces of Alberta and Saskatchewan, although they may not be getting direct taxation, are taxing the revenue of the system. Here is another typical case which I quote:

A report from Toronto states that the Canadian National Railways lost the appeal in the divisional court respecting the business assessment on the Toronto suburban ticket office, executive offices and express sheds. The court of revision held that the assessments were not validly made. Judge Denton restored the assessment, and the Ontario Railway and Municipal Board affirmed his order. Now the appellate court sustains the board's ruling.

My time is almost up, Mr. Speaker, I have made this appeal as strongly as I know how, but I fear through lack of experience I have not made it nearly as convincing as I should like it to be.

Mr. DEPUTY SPEAKER: Order. The hon. gentleman is exceeding his time.

On motion of Mr. Sanderson the debate was adjourned.

On motion of Mr. Mackenzie King the house adjourned at 9.20 p.m.

Monday, February 6, 1928

The house met at three o'clock.

BRITISH COLUMBIA LANDS

INTERIM REPORT TABLED

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, I beg to lay on the table a copy of the interim report of Mr. Justice Martin, appointed a commissioner to receive and inquire into the arguments of the government of the province of British Columbia in support of its claim for reconveyance to the province by the government of Canada of the land conveyed by the province to the Dominion following paragraph 2 of the terms of union.

DEPARTMENT OF NATIONAL REVENUE

CUSTOMS INQUIRY COMMISSION

Right Hon. W. L. MACKENZIE KING (Prime Minister): I also beg to lay on the table, Mr. Speaker, a copy of the minutes of the conference at Washington between the customs commission and officers of the United States government on August 29 and 30, 1927. It is part of the proceedings of the Royal Commission on Customs and Excise.

PEACE RIVER—SETTLERS' RAILWAY RATES

On the orders of the day:

Mr. J. A. CLARK (Vancouver-Burrard): Mr. Speaker, I should like to draw the attention of the government to the contents of a letter I have just received from the citizens of Vancouver:

Dear Sir,—

We are desirous of going into the Peace River district in the early spring and find upon making enquiries that there is no settlers' rate from here, but at Blaine an American citizen can secure a settlers' rate. There is no reduction on settlers' effects from here but there is from the American side.

We understand the Canadian government will bring a European in here for about $15, and to go from here costs us each $45 via C.N.R.

I know of at least one dozen good fellows who would go out there and would make good but all feel the big drawback it is to be a Canadian. The European and American has us backed off our own map.

Mr. SPEAKER: Order. For the information of the hon. member and others who put questions on the orders of the day, I would remind them that it is against the rules of the house to read letters or telegrams. Questions may be based on information so received, but no such communications must be read.

[Mr. Bradette.]

Mr. CLARK: Your Honour, I will put it this way, that I have received a communication from British Columbia which indicates that the foreigner may and does receive special rates over our railways to our vacant lands, that the foreigner is given special consideration in settling our lands as against Canadians. I do not think I could put it in better language than it is put in this letter.

Mr. SPEAKER: Order. The hon. member is too well aware of the rules of the house for me to remind him that he must plainly put his question. This is not the time for argument.

Mr. CLARK: Mr. Speaker, I must base my question upon facts, and the facts are fully stated in the letter. May I put my question in the form in which I have received it: Let us know what our Canadian government has to say about this condition, what they are prepared to do for our own Canadians?

Mr. MACKENZIE KING: I would suggest, Mr. Speaker, that the question of my hon. friend stand on the order paper for answer.

SEVEN SISTERS FALLS

On the orders of the day:

Mr. A. A. HEAPS (North Winnipeg): Mr. Speaker, may I inquire if the Minister of the Interior (Mr. Stewart) has received any request from the province of Manitoba for the power site known as Seven Sisters falls? If so, is it the intention of the government to hand over to the provincial government that portion of the natural resources of the province?

Hon. CHARLES A. STEWART (Minister of the Interior): The Minister of the Interior cannot hand over at will the resources of any province. I may say that correspondence has passed between the Premier of Manitoba and myself with respect to Seven Sisters falls, and he has been kept fully informed of every move made.

Mr. J. S. WOODSWORTH (Winnipeg North Centre): Do I understand from the Minister of the Interior that no disposition of the Seven Sisters falls will be made without the consent of the provincial government?

Mr. STEWART (Edmonton): I should not like to say that any disposition would not be made without the consent of the provincial government, but it certainly will not be made without their being fully informed of every detail.

Mr. HEAPS: That is very unsatisfactory

PRIVILEGE—SIR GEORGE PERLEY

Sir GEORGE H. PERLEY (Argenteuil): Mr. Speaker, I rise to a question of privilege. In reading over the speech made by my hon. friend from East Calgary (Mr. Adshead) last Thursday evening I find that he got a mistaken impression regarding something I said that same afternoon. The hon. member is reported as follows:

I gathered from the hon. gentleman this afternoon that in his opinion a sort of imperial parliament should meet in London.

Now, Mr. Speaker, I doubt very much whether in these days anyone would suggest that an imperial parliament or a body to legislate for the empire should be formed, and certainly I would not. The suggestion I tried to make was that a plan might be found for administering the Foreign Office for the whole British commonwealth, formed on some such lines as the Imperial conference, and with representatives of each one of the self-governing parts of the empire on it. But I would say that such a committee could not and would not have any legislative functions whatever.

AUSTRALIAN BUTTER—DUMPING CLAUSE

On the orders of the day:

Mr. G. T. MacNUTT (Colchester): Mr. Speaker, I should like to ask the hon. Minister of Agriculture (Mr. Motherwell) if the dumping clause is now applied on butter importations from Australia and New Zealand that are sent here under the Paterson bonus scheme.

Hon. W. D. EULER (Minister of National Revenue): I might answer the hon. gentleman's question. No dumping clause has been applied on butter for some time.

GOVERNOR GENERAL'S SPEECH

ADDRESS IN REPLY

The house resumed from Friday, February 3, consideration of the motion of Mr. Ilsley for an address to His Excellency the Governor General in reply to his speech at the opening of the session.

Hon. ROBERT FORKE (Minister of Immigration): Mr. Speaker, I wish to add my congratulations to those which have already been extended to the mover and seconder of the address and to compliment them upon the admirable manner in which they performed their duty.

I was very pleased to read the speech from the throne, for I can endorse the statements made about the prosperity of Canada at the present time. I regret, however, that, speaking for my own province of Manitoba, last year conditions were not so satisfactory as they might have been. We were promised a very fine crop almost up to the time of harvest, but then rust attacked the crop and reduced materially both the yield and the grade. So that from the point of view of grain-raising it was not a great year for Manitoba. But I am pleased to be able to point out to the house that my province has to some extent ceased to be an exclusively grain-growing province. Mixed farming is largely carried on to-day, and through the sale of farm products, other than grain, our farmers there will not be in as difficult a position as they might have found themselves had they been relying entirely on grain-growing. I look upon this as a step in the right direction, for I think it will lead to the consolidation and prosperity of the whole farming community if more closely followed in the days that are to come.

During the short time I shall occupy the attention of the house I intend to take up the question with which I am more immediately concerned, namely, immigration. This has been a subject of considerable criticism during the last few months and in the press as well as in public speeches made by prominent individuals almost everywhere in the Dominion the matter has been discussed. There does not seem to be any unanimity in the ideas that have been expressed. You will find contradictory statements on the subject. It is said sometimes that the Department of Immigration is doing nothing, that no immigrants are coming in, and the suggestion is made that the door should be left wide open to allow all and sundry to enter Canada. Again, we find people complaining of the regulations as being too restrictive; the statement is made that the department is more restrictive than anything else in its operations. It is not very easy to form any opinion or to come to any conclusion regarding the criticisms which one reads and hears. One must simply come to one's best judgment by following closely the trend of events.

I came to this country a great many years ago as an immigrant, going west and taking part in public activities there in so far as they had to do with the opening up of a new country. We had a large inflow of immigration into western Canada and when I came to the department I fancied I knew a good deal about immigration and that perhaps I should be able to do some useful work in that direction. I have found, however, with larger experience and after coming more

closely into contact with the work as it is actually carried on, that there are a great many angles from which this question is to be viewed. I discovered that I had a good many things to learn before I should know everything regarding immigration into this new land of ours. I found no unanimous opinion anywhere. I am free to tell the house that scarcely a day passes that I do not receive letters blaming the department for not opening the door wide enough, while on the other hand I receive letters of complaint regarding the unemployment of Canadians although foreigners come in to take the place of our own natives. This is about the situation as it exists to-day so far as criticism is concerned.

I listened with a great deal of attention and, I may add, much pleasure to the speech delivered by the leader of the opposition (Mr. Bennett). The hon. member for West Calgary suggested that nothing was being done, that immigration was dwindling, notwithstanding the fact that we had the facilities for taking care of a population of 17,000,000. He said that there were 10,000,000 acres of arable land within twenty miles of railway communication. In the main these statements may be true, but I am pretty sure that when the hon. member makes the statement that there are 10,000,000 acres of arable land within twenty miles of a railway he knows that these lands are all occupied by or are in the possession of private individuals or public corporations and that it requires money to purchase such land. So that settlers coming into the country without the means of purchasing stock and implements and making necessary payments on their land are in no position to take advantage of what is offered in the way of vacant lands. This is perhaps one of the great difficulties we have to face in connection with the whole question of immigration. It is not impossible to-day to secure any number of immigrants; people in every country on the face of the globe are looking with longing eyes towards this Dominion. If the doors were wide open and it were made possible for all and sundry to come in we should have no difficulty in securing immigrants. But of what advantage would it be to have innumerable immigrants landing on our shores without the means of setting up for themselves on the land? Our own labourers would also object strenuously to any such immigration policy. I have read the speeches of prominent citizens, bank presidents and others, in which advice is given on the question of immigration, and the leader of the opposition the other day suggested that the question should be taken hold of and dealt with in a comprehensive way: vast sums of money ought to be spent. I have also heard that sort of statement made by bank presidents. I have never yet heard, however, any suggestion as to the manner in which the government should set about it and I have no authority from the government, nor do I think anyone else has at the present time, to spend vast sums in settling immigrants in this Dominion.

The activities of the department have been directed towards increasing the flow of people who are able to settle on the land and engage in agriculture. I was astonished the other day to read a statement attributed to Sir Charles Gordon in an address he delivered at the annual luncheon of the Canadian Pulp and Paper Association at Quebec. The report reads:

> Spending thousands of dollars annually to assist immigration was a policy opposed by Sir Charles.
>
> "Provide plenty of diversified employment here and you need not spend a single dollar to assist immigration", he said.
>
> "It is impossible and nonsensical for us to think that an immigration policy for putting people on the land is going to be a successful policy for this country", he said. "It cannot be done."

If that is so, the activities of the department are in large part wasted, because it is one of our endeavours to secure people who will come into the Dominion and cultivate the soil and help to develop our natural resources. I may refer to the steady flow of rural people towards the cities. This is not peculiar to Canada; it is a movement that is taking place throughout the world. And it is a problem with which it is quite difficult to cope. It is no satisfaction to me, and I am sure it is no satisfaction to anybody else, to see a foreign family coming in and taking the place of a good Canadian family who are obliged to move to the city; and this has taken place in numerous instances. Just how is this tendency to be stopped? It seems to me that it is a matter of remuneration. Love of country life is a sentiment that seems to be non-existent. Ownership of land does not appeal to the people of Canada as it does to the people of the old country; it does not appeal to our own native citizens as it does to the foreigner. I have heard of one foreigner who came to Canada and who, after taking up his 160 acres, went down on his knees in his farm and kissed the soil. Love of the soil is apparently entirely absent from the economic condition of our country to-day. And yet no country has ever been great, no country has endured whose roots were not firmly planted in the

soil. This is one of the great problems we have before us in Canada to-day—how to make our rural people contented.

I do not think I should ever have been in the House of Commons had it not been for my desire to do something to help the rural population and to make this country something more worth seeking than it has been. Most people agree to-day that an increased population would be beneficial. Canada is a land of vast distances and of great undeveloped resources, only needing capital and population. We have railways enough. I agree with the leader of the opposition that we have sufficient railway accommodation to take care of a population of 17,000,000. And we have a great deal of vacant land. We have also schools, churches, roads, bridges and various other conveniences which I am sure could be utilized by a much larger population than we have to-day. At the same time we are up against the problem I have referred to. We sometimes hear of manless land and landless man. I would say, bring the man to the land and it will solve the problem. That is not the big problem. There are much more difficult problems to be solved. It has often been said that a satisfied immigrant is the best immigration agent. I am sure I have often called the attention of the house to the fact that in order to make immigration a success one of the first and most necessary things is to see that the people we have are satisfied and that the people who come will be satisfied. The leader of the opposition says that the department is doing nothing. I might at least indicate the lines we are following. The Trades and Labour Council delegation appeared before the Prime Minister and members of the government to present their finding at the annual convention. The memorandum was prefaced by a quotation from a speech of my own, and I felt honoured when I found the labour men coming to the government with a quotation from a speech which I had made. With the permission of the house I will read the quotation:

> The reasons against a wide-open policy allowing the entry of all races and classes are convincing. Mere numbers of themselves would contribute nothing to Canada's prosperity. Idle men without means are never an economic asset, and may, on the contrary, become a very heavy drag upon the producing part of the population. It is essential that immigrants coming to this country, come not only to Canada but to employment. It is equally essential that in finding employment for themselves they do not displace others.

I made that speech in Toronto and it was reported in the Toronto Globe. I will quote a few lines from the statement of policy I made in another place. I said:

> 1. To recognize that while Canada requires increased population, quality rather than quantity is of first importance—in other words, that our immigrants must be selected with a view to their mental, physical, moral, industrial and racial fitness for settlement in Canada.
>
> 2. That limitation of numbers must be determined by the available supply of suitable classes and Canada's power of absorption.
>
> 3. That British immigration must always hold first place in importance and every legitimate effort used to increase the flow of people from the mother country.
>
> 4. Next after British immigration encouragement should be offered to a movement of settlers from the United States and from northwestern Europe—of those healthy, hardy people desirous of establishing themselves on land in Canada and becoming absorbed in our national life.

That, broadly, is the policy of the Department of Immigration. There is no wide, all-embracing and vast expenditure of money mentioned in any of those statements. I do not think the time has yet come for any such movement. I wish I had time to say a few words in regard to the visit I had the opportunity of making during the past summer to the Scandinavian countries, especially Norway, Sweden and Denmark. I had the privilege of meeting members of the government in all three of those countries, I received the most cordial reception and I found that they were very much interested in Canada; I also found no difficulty in conversing with them, as all were able to speak good English, and could even understand English when spoken with a Scotch accent. They were all interested in Canada. Most of them understood that we were not anxious for a large immigration from the large cities of Europe. I remember the minister in Sweden saying "We have lots of people in our large cities, but I know you are not looking for them." He also said they had quite a large surplus of rural population, and added, "If they do not emigrate they will go to the cities, and we would rather see them emigrate than make trouble in our larger cities on account of unemployment".

I found the same condition in Copenhagen. They had there the problem of people crowding to the cities, with resultant unemployment. They also had a large surplus in the rural population, young men growing up on the small farm, who had to move out and must find a home some other place—either go to the city or emigrate. After I saw those officials the Danish government gave me and my deputy a car in Copenhagen, and we

drove a great many miles through the country, visiting different farms. We talked with the people about their economic conditions, and I must say that I was delighted to meet the class of people I saw in those countries. They were frugal, industrious and intelligent, and we could find no better settlers to come to Canada and help develop this great country.

Reference is sometimes made to the immigration to Canada during the early years; 281,890 of the 1913 immigrants were from foreign countries, as against an immigration of 72,887 foreigners last year. A great many people have been very much exercised over the immigration which took place last year. To be fair, I think when the leader of the opposition was speaking he did not so much regret the number as the fact that the British immigration was outnumbering the foreign immigration.

Mr. BENNETT: The foreign outnumbering the British.

Mr. FORKE: Yes, and a good many people seem to be afraid we were getting too many foreigners, and yet in 1913 there were 281,890 foreigners.

Mr. BENNETT: What was the total number?

Mr. FORKE: The total number was 402,432 immigrants coming into Canada in 1913. This is sometimes mentioned to me as something we ought now to aim at. I do not agree with that opinion. The conditions in the earlier years of this century and the conditions that exist at the present time are not the same in any way. The period from 1901 to 1911 was an era of great railway building, something we shall never see the like of again on the North American continent. Thousands of miles were being built, British capital was flowing into the country, two and a half billions of British money came into Canada during those years and tremendous areas of the richest agricultural land in the world was being opened up for settlement from the building of the railway in the western provinces. Immigrants were coming in and towns and villages were springing up everywhere. Work could be had by everyone who came to the country, and consequently the country was able at that time to absorb a very large number of immigrants. The conditions to-day are entirely different. I am inclined to think that a good part of the immigration that came to Canada at that time was only loaned labour from Europe, because it is well known that during all those years money orders and cheques were continually going back to the countries from which those people came. When the era of railway building was ended a great many people went back to Europe and their labour was simply available for the years they were here. But conditions are different now. Our country offers splendid opportunities for the right class of people. I do not want to discourage anyone who wishes to come to Canada with the proper ambition and fitness for the work he shall be engaged in when he comes here. However, I want to take exception to the statement of the leader of the opposition that immigration is dwindling. That statement is rather misleading. In comparison with 1913 I would say "yes," but when compared with recent years I would answer "no."

I have some statistics here which show how immigration is related to economics. When deflation came in the price of agricultural products after the war, farmers were very much discouraged. Immigration fell off in 1922, although for a time after the war, when high prices were still maintained we had one or two very good years. However, the slump came and the prices of agricultural products were entirely out of parity with the prices of what the farmers had to purchase. Those engaged in agriculture at that time could see nothing but ruin staring them in the face. Fortunately a change for the better came, and prospects are very much brighter and very much more encouraging at the present time. Although in 1921 there were 130,569 immigrants into Canada, the following year the number dropped to 89,999. In 1922 there came from Great Britain, the United States, and northern Europe 68,365 persons, and from other countries 21,634, a total of 89,999. In 1923 there came from Great Britain, the United States and northern Europe—I group these countries because the people from those lands are very easily assimilated; they are people very much like our own and constitute the very best immigrants—56,515 persons, and from other countries 16,372 immigrants, a total of 72,887. Now let me compare the figures for 1921, 1922, 1923 with those of 1926 and 1927. These periods are for eleven months. I do not happen to have the immigration statistics for the month of December. However, the omission does not matter because there is not much immigration in the month of December. The figures of the comparative statement are as follows:

	Great Britain, U.S. and northern Europe	Other countries	Total
1921	87,536	43,033	130,569
1922	68,365	21,634	89,999
1923	56,515	16,372	72,887
1927	103,297	51,018	154,315

So that in 1927 we had 81,428 more immigrants than in the twelve months of 1923. It is said that figures can be made to prove almost anything. The figures used by the leader of the opposition were perfectly correct, but they were presented in a different manner from the way I am giving them. I think the figures as I am giving them present a better view of the situation.

Mr. BENNETT: You manage yours better.

Mr. FORKE: I have already stated that the main endeavour of the government has been to secure British immigration. I have heard complaints sometimes that our display in London is not one for Canadians to be very proud of. I am quite willing to admit that we do not make as large a display in London as some of the other dominions do. I hope, however, that in the near feature we shall be able to do a little more than we have done in the past. But I must remind the house of this fact: It is sometimes forgotten that the other dominions concentrate all their efforts in London itself, whereas we, on the other hand, have ten agencies throughout provincial England. At each of these ten points there is a resident agent with an office and staff where propaganda in behalf of immigration is in progress all the time. Lectures are given during the winter months, and members of the staff are available all the time for the purpose of advising intending immigrants. On my last visit to England I inspected all these agencies, and found them well equipped in every way. In each case the office is situated on the main street, and there is an attractive window display of Canadian products. Our efforts along this line are sometimes forgotten by visitors from Canada who simply go to London and see what is done there in connection with the other dominions. I think, perhaps, upon the whole that Canada carries on a more active propaganda for British immigration than any other dominion in the empire.

Mr. ADSHEAD: Do you seek to attract the agricultural population of England, or the industrial population?

Mr. FORKE: Anyone in Great Britain who passes the required moral and physical tests, and can pay his own passage money, is free to come to Canada; there is no restriction debarring him from doing so. Any British subject is free to come to Canada; he does not even require a passport. On the other hand you need a passport when you want to enter Great Britain.

Mr. BENNETT: I read in Saturday's paper that a British subject desiring to come to Canada had to answer ninety-four questions, but that no such questions were asked of continental immigrants. I do not wish to interrupt my hon. friend. My desire is simply to get information on this subject, and the hon. gentleman may answer the questions as he proceeds with his address.

Mr. FORKE: That could only refer to assisted immigrants, and it is not correct even in the case of those who are given assisted passages. It is one of those instances in which there is a certain amount of truth, but it is presented in such a way as to be absolutely misleading.

Mr. BENNETT: That seems to be the trouble.

Mr. FORKE: I might take this opportunity of giving a brief explanation here of the empire settlement and other schemes. First of all let me read a short extract from the act, explanatory of the purpose of the legislation:

> It shall be lawful for the Secretary of State, in association with the government of any of His Majesty's dominions, or with public authorities or private organizations either in the United Kingdom or in any part of such dominions, to formulate and co-operate in carrying out schemes for affording joint assistance to suitable persons in the United Kingdom who intend to settle in any part of His Majesty's oversea dominions.
>
> An agreed scheme under this act may be either:—
>
> (a) a development or a land settlement scheme; or
>
> (b) a scheme for facilitating settlement in or migration to any part of His Majesty's oversea dominions by assistance with passages, initial allowances, training or otherwise:

And here is a clause which is rather serious:

> The Secretary of State shall not agree to any scheme without the consent of the treasury.

That is the snag I ran up against when I was in Great Britain; I had to deal with the treasury. When you have to do with the immigration authorities you do not experience much trouble, but when you come to deal with the treasury the matter is a little more difficult.

I should like to say a few words in regard to assisted passages. Assisted passages are only for agriculturists and domestics, and the department has a system for nominating individuals or families who are to receive assisted passages. Nominations are made by the department, or by individuals in Canada who require agricultural or domestic help, or by department officials in Great Britain.

There is the matter of bulk nominations. This refers to bringing over settlers in large

groups by any recognized transportation, colonization, religious or social organization approved by the department. This applies to bringing out to Canada single Britishers or British families who will come to this country to work on the land, and organizations responsible for their arrival in Canada must guarantee to find them farm work for one year after their arrival here. After those concerned have discovered where openings exist for the employment of agricultural help from the old land, they turn in a list of the prospective employers and the estimated number of workers required to the nearest office of the land settlement board for approval. When this approval is given the workers may then be secured and brought to Canada. This is where all the trouble in regard to immigration and the criticism one reads about arrives. When one reads something terrible about the Immigration department, this refers not to the general run of British immigrants but to the assisted immigrants who come over here on payment of ten dollars and whose families, under seventeen years of age, come over free.

I may point out that at this time the two governments, the Dominion government and the Imperial government, with a refund from the transportation companies, are paying the balance of the assisted passage rates. The people who are given these rates state that they are coming out to assured employment, to work on the land, or to buy farms and settle upon them. The Dominion of Canada through the Immigration department is paying out hard cash to bonus those people to come and work on the land, and I do not see why there should be any criticism or fault found because the department takes some steps to make sure that those applications are bona fide, and that the applicants are coming to assured employment on the land or at least to be employed in agricultural pursuits.

Mr. ADSHEAD: Who guaranteed the employment of the hundreds of Slovaks that the Canadian Pacific Railway Company flooded the west with last year?

Mr. FORKE: I shall have a word to say later in regard to the railway agreement. I have often pointed out to officials of my department that you can get a man in Great Britain to promise that the transaction is perfectly straightforward. You know that a man is going out to work for a certain farmer on this side; but when he comes he finds that he and his employer are entirely incompatible, they cannot get along, and of course when a man is anxious to leave he leaves. I do not know that there is any recourse in such a case; this is a weakness in the scheme and it is not very easily got over. It will, however, be noticed that newspapers and public speakers who criticize the department, criticize it not so much for that as for the restrictions and blocks that are put in the way of people doing just what I have spoken about. What satisfaction is it to the Dominion of Canada to get immigrants to come to Canada at ten dollars a head and then find that they come to Canada for no other purpose than to cross the line just as soon as possible? I want hon. members to understand something about the difficulty encountered by the officials of my department, and how hard it is to meet situations which arise and which they know cannot always be explained in public. The British people are like the Canadian people; they are a fine people; but at the same time there are in Great Britain a few who are quite willing to come to Canada at the expense of the Canadian government on a payment of ten dollars apiece, and who will slip over into Uncle Sam's territory just as soon as they can. It is the duty of the department to prevent that sort of thing as far as possible.

In connection with the Department of Immigration we have a land settlement board, the personnel of which is exactly the same as that of the soldier settlement board, although we have not as many employees as we had at one time. Their duties are to assist immigrants who come to this country and to look after the carrying out of the three-thousand family scheme. In fact they are supposed to be at the service of every immigrant who comes into this country, and to give advice and assistance in buying land, implements and stock, and in fact advice in general. I think it will be found that those men are doing splendid service throughout the Dominion in connection with land settlement work.

We have also a scheme for bringing boys over to this country. The Dominion government and the Imperial government give a grant of eighty dollars for every boy between fourteen and seventeen years of age coming from a good home, and we are working in co-operation with the provincial government in regard to this scheme. The provincial governments of Nova Scotia, New Brunswick and Manitoba have come under this scheme and they are at the present time working in agreement with the Dominion authorities. The province provides the farm as a sort of centre to which these boys come; it is not supposed to be a place where they will stay for any length of time; it is merely a dis-

tributing centre giving the Dominion government time to find suitable farms for these boys. The provincial government provides ten dollars, the Dominion government ten dollars and the Imperial government twenty dollars, making a fund of forty dollars for expenses in connection with the handling of these boys, and it must be remembered that the Imperial government and the Dominion government have made a grant of eighty dollars which is ample to cover the passage money of these boys as fifty-five dollars or sixty dollars will pay for the passage. This is one of the best schemes we have undertaken in the Immigration department, and we are getting hundreds of boys between fourteen and seventeen years of age, not from institutions but from good homes. These boys are under the protection of the provincial government, and I believe in a few years when they grow up into young manhood they will be the very pick of our Canadian citizens. This is one of the most hopeful endeavours in which we are engaged at the present time.

Mr. WOODSWORTH: Do I understand the minister aright, that all boys of this class come from private homes?

Mr. FORKE: Most of the boys who are being brought over under this scheme come from private homes. I would not say they are all coming from private homes. We have corporations like the corporation of the city of Newcastle which has been engaged in this work and sending some boys who are selected from private homes. They are young boys who do not know where to go to look for work and this scheme appeals to them. I had the pleasure of talking to the Lord Mayor of Newcastle who was most enthusiastic and who pointed out to me numbers of good families who had boys to whom this scheme appealed particularly. Most of the boys are of this character. I am not dealing with some of the private institutions which can avail themselves of the assisted passage scheme. The Salvation Army are bringing out a number of boys who get exactly the same grant as those who are coming out to the provinces. There are other organizations that have farms in Great Britain where they are doing a certain amount of training. Continual pressure is being brought to bear by different organizations, more especially by church organizations, to be allowed to come under this scheme, so that they may bring boys out to a centre from which they can be distributed. We have not encouraged them because we believe the provincial government with their farm have the best centre from which work of this kind can be carried on. I have been particularly anxious to get into close cooperation with the different provincial governments in connection with all our immigration schemes and endeavours, and I believe the solution of many of our difficulties will be reached when we have the hearty cooperation, assistance and advice of our different provincial governments in connection with the activities of the federal Department of Immigration.

Mr. MURRAY MacLAREN (St. John-Albert): Mr. Speaker, before this debate closes there are some matters, three in all, to which I desire to make reference. The first is one to which my attention was recently drawn, and I now bring it before hon. members of the house. I may term it the incorrect orientation of Canada as presented by the cartographers of the government, or the geographical malposition of our country as shown on the maps.

The correct projection of a map shows the lowest part of the latitudinal line opposite the centre of the lower border, and the terminals of each latitude should be an equal distance from the lower corners. But what do we find? I have here the Year Book of 1926, and I ask hon. members to inspect the map opposite the first page. They will find that the latitude of forty-five degrees on the east side is seven hundred miles from the bottom, while on the west side it is only one hundred and fifty miles; in other words, the eastern portion of Canada is shown five hundred and fifty miles farther north than its true position. This same error will be found in the maps on pages 6, 17, 190 and 268. As a result of this the maritime provinces are projected to the north. The map is askew; the east is slewed up towards the north, and the province of Ontario and the western provinces are correspondingly depressed. One marvels that the city of Ottawa should have such cold winter weather when the cartographers have succeeded in placing Ontario so far south. The peculiar construction of the map, however, may throw some light on the chart which the Prime Minister used to speak about a few years ago.

The next example is found in a book issued by the Department of the Interior, and one produced at great expense—the Atlas of Canada, of 1915. Here there are at least six maps improperly constructed in the manner I have described. I presume that this atlas is now no longer being issued and therefore I refrain from making an analysis. I now refer to the map of 1924 issued by the Department of the Interior. It shows the same errors as those that I have mentioned. It

places my own city of St. John thirty miles north of Winnipeg, yet its true latitude runs through the northern portion of the state of Oregon. May I add that the whole province of New Brunswick is somewhat south of the forty-ninth parallel. Maps such as this, Mr. Speaker, are hanging in the members' rooms, they are in our colleges, in our libraries and schools, and in the offices of our immigration agents.

The maps as distributed by the Department of Immigration present the same inaccuracies. I do not suppose that the immigrants will study the lines of latitude to check up this strange arrangement, but they will look at the map with a view to seeing at what distance from the north pole a certain province is located. They wish to assure themselves, if possible, of coming to a moderate or temperate climate. It is not sufficient to say that this misrepresentation can be noted and checked up by observing the latitude. I would ask how many of the two hundred and forty-four members of this house—all intelligent observant men—have made this observation. I would ask how many of the general public are likely to do it. I think the answer is obvious.

But here is a still more important point. Many of these maps do not show the latitude, and therefore you cannot check them. Even a geographer would fail to read our geography correctly, as it should be read. An officer of the Royal Geographical Society was asked his opinion on these maps, and when I say these maps I am speaking of those which are incorrect, and they are numerous, although there are maps that are correctly represented, and this officer fully agreed that the projection of a map should be symmetrically placed upon the sheet, so that a curved parallel of latitude would cut eastern and western margins at the same height. He says that on good maps draughtsmen follow this rule, and it is broken only by people who make a map by cutting a portion of a more extensive map and do not trouble to adjust the projection.

Whether that is the true explanation with regard to our Canadian maps I cannot say, but this I do say, that undoubtedly they present a wrong impression and give wrong information to ourselves and to the world, and I draw this matter to the attention of the Minister of Trade and Commerce (Mr. Malcolm), the Minister of the Interior (Mr. Stewart) and the Minister of Immigration (Mr. Forke), and ask them to take such action as will avoid in future the perpetuation of the error.

[Mr. MacLaren.]

I now come to my second subject, Mr. Speaker, and that is the London treaty, or the London agreement, or the London resolutions of 1866 and the British North America Act of 1867. One hears frequently of the Quebec resolutions, one hears references beyond number to the British North America Act, but comparatively seldom to the London resolutions or the London agreement. The Quebec resolutions and the London resolutions are very similar. True, the Quebec resolutions were more fully discussed than the London resolutions. The Quebec resolutions were drawn up not only with the colonies of Ontario, Quebec, New Brunswick and Nova Scotia participating, but also the colonies of Prince Edward Island and the colony of Newfoundland. These resolutions were not finally accepted; on the contrary, several of the colonies failed to concur, and therefore there was a conference in London, where representatives from Ontario, Quebec, New Brunswick and Nova Scotia alone met, drew up afresh the resolutions or treaty, and signed the document at the Westminster Palace hotel on December 4, 1866. That is the fundamental document, the basis of confederation. On the London resolutions was framed the British North America Act. This act, I submit, is an enabling act. On what? On the terms of agreement entered into by the four provinces which proposed the confederation.

Now, the British North America Act does not necessarily contain all the provisions in the agreement; as a matter of fact it does not contain them all, although it contains them very largely. I noticed last session that the Prime Minister (Mr. Mackenzie King) in his presentation of the Duncan report reminded us of:

> The spirit which animated the fathers of confederation in their efforts to construct out of British North America a federal union under a system of government devised to protect the diversified interests of the several provinces and secure efficiency, harmony and permanency in the working of the union.

Where did the Prime Minister obtain that quotation? He obtained it from the second section of the London resolutions. I think we hear far too seldom of the basis of our confederation. I would especially call the attention of the house to one section of the agreement which is not contained in the act, and I should like to place it on Hansard. It is section 66:

> The communications with the northwestern territory, and the improvements required for the development of the trade of the great west with the seaboard, are regarded by this conference as subjects of the highest importance to

the federated provinces, and shall be prosecuted at the earliest possible period that the state of the finances will permit.

On that section may well be based the policy of transportation through Canada. It can be made the substantial basis for that policy, and also for the government providing the necessary facilities in Canadian seaports. I ask hon. members to read that section carefully. It is still in force. It is as much in force to-day as it was on the day of signature. In this connection I would direct attention to the addresses and papers written by Mr. A. P. Patterson of St. John. He has made a study of these matters and has written several papers in relation thereto which are very informative and illuminating, and I believe all would gain a great deal of information from their perusal, as I have myself.

Now, I ask, how often have the London resolutions been printed in the last sixty years? I venture to think almost never. I have in my hand a copy of the British North America Act with amendments, recently issued by the King's Printer. I examined this book and I failed to find the London treaty on which the act is based. This statute, I submit, is the enabling statute; the resolutions are the basis of our confederation. I would urge the government in any future issue of the British North America Act to incorporate the London resolutions. The document should be withdrawn from its dusty quarters, for it is a vital document to-day, and I believe that in the interests of right and justice it should be printed along with the act.

My third subject, Your Honour, is that in reference to the maritime claims and the implementing of the Duncan report. On pages 2336 and 2337 of revised Hansard of last session will be found the statement of the position taken by a considerable number of maritime representatives on this side of the house regarding the action that the government was taking in relation to maritime claims. May I say that I still adhere to that position. I believe I cannot do better than review the tabulated list of items which we then submitted to the house, and which were then regarded as still to be implemented by the government. I now propose to go over the list again and see what progress has been made in this respect. The first on the list is:

The restoration to Canadian ports of Canadian trade now passing through foreign ports.

It will be remembered that in this connection a resolution was passed by the house instructing the railway commission to investigate the causes of our trade passing through American ports, and to make recommendations as to how this trade might best be recovered for the upbuilding of our own ports. I am not aware that such a report has come back to the government; in any case it has not been presented to the house. I would urge, if it is not in course of preparation, that the action resulting from the passage of the resolution in this house should be followed up and that so important a matter be dealt with by the railway commission and submitted to parliament.

It may be presumed that the special reduction on the Transcontinental to the city of Quebec is a gesture or a move to assist in reaching the objective of recovering our trade. Should the rates be extended to St. John and Halifax then a further step will have been taken. May I urge that the specific report referred to from the railway commission be presented to the house.

Number 2 item of our list relates to the acquisition of certain railway lines in the maritime provinces and number 3 is the question of affording adequate protection to the steel and coal industries. I shall couple 2 and 3 for the same reason: the Postmaster General recently made a public statement to the effect that both matters were being dealt with at the present time by the government and he looked for some early solution.

Number 4 relates to additional ferry service between Prince Edward Island and the mainland, and an improvement in the coal and transportation service on the island. That is a matter on which I have no information and I presume the house will be informed during the session.

Number 5 refers to the enlargement of the scope and power of the railway commission. As will be recalled, this recommendation was not acceded to by the Prime Minister last year. He said that the effects were so far-reaching that sufficient time had not been afforded for full consideration but that in any case he did not think it applied immediately to the maritime provinces. I venture to think that it does apply; the enlargement of the scope and power of the railway commission does apply in some parts of the country much more than in others. I believe that it applies much more in the maritime provinces. I urge the government to accede to that recommendation. Its great value is that there is opportunity for the railway commission to try out portions of the country where industries do not thrive. The commission can try these out to ascertain how industries can be encouraged in those places where at present they do not thrive, because this is essential to the prosperity and contentment of us all.

Number 6: Further consideration of the question of reduced freight rates, either by agreement or otherwise, to points not now covered by the present legislation. I may say that there are several points not yet covered by legislation—all portions of the recommendation regarding the 20 per cent reduction—and first, that clause which deals with the international freight rates. The Minister of Railways (Mr. Dunning) made the statement that this question was full of difficulties and he could not arrange it. Well, railways are no more full of difficulties than is the human subject; life is full of difficulties. It is for the Minister of Railways to overcome these difficulties, and I ask him to continue his efforts to bring about what is a very important and a very essential condition for the maritimes.

The next point I wish to touch upon is that of overseas freight destined for the Atlantic division. Here is another point which has not been implemented—a subsection of the recommendations on freight rates. The Minister of Railways stated that in his opinion the proximity of the maritimes to the seacoast was a sufficient advantage and therefore he declined to accede. Is the Minister of Railways aware of this fact that, comparing freight rates between Montreal and St. John, specifically in the fourth class, the rates meet at Campbellton, giving Montreal an advantage of about 190 miles? I say that to accede to this portion of the recommendations is not only fair and wise but is necessary.

Then we come to another item under the same heading which has given rise to much dispute, and that is, the tariff as submitted by the Canadian National Railways on the 20 per cent reduction. After all, the railway commission is the body to settle this matter. Much disputing and arguing has been going on over the question, but after all it is for the railway commission to make the decision. What is the position? The Canadian National Railways submitted to the railway commission tariffs which were not accepted and the Canadian National was instructed to return with a revised tariff. It has not done so yet. I refrain from discussing the merits myself, but as the matter has been passed upon by the railway commission I think it is high time that the Canadian National re-submitted its tariff for approval and that the tariff be approved.

The last matter under freight rates has reference to opening the gateways which existed in Ste. Rosalie and St. John for years previous to the passing of the Canadian Freight Rates Act. As the house knows, these are gateways where two lines meet and where there can be a transfer from one line, say, the Canadian National to the other, the Canadian Pacific, without additional cost and obtaining the same through rate that was in existence for some years.

Following on the passage of the Canadian Freight Rates Act the Canadian National Railways applied to the railway commission for authority to close these two gates. Decision was given against the Canadian National and an appeal was taken to the Supreme Court of Canada, which ruled that Ste. Rosalie should remain open and St. John closed. As one result of gaining the 20 per cent reduction on freight rates in the maritimes we have lost the competitive route at St. John by the gateway being closed. I do not suppose for a moment that that was contemplated by those who framed the act. I presume it was accidental and incidental in the phraseology, but the fact is that the phraseology, especially in the ninth section of the act is such and was such that it curtailed the supervision of the railway commission and led to the finding of the Supreme Court of Canada. I urge, sir, that the government make such amendments to the act as shall authorize and enable the gate at St. John to be re-opened as it was previous to the act.

My friend the Postmaster General (Mr. Veniot) has been discussing the matter very fully recently and one point he stated was that he considered it unfair that the Canadian National should have to pass its freight to the Canadian Pacific Railway and that the Canadian Pacific Railway could not be called upon to reciprocate. Now, sir, I have heard good opinion giving a different construction as to the powers under the open gateway—so good that I have grave doubts of the accuracy of the opinion of the Postmaster General on that point.

Mr. VENIOT: Would the hon. member permit a question for the sake of information? Is there any order of the railway commission such as that issued against the Canadian National Railway, issued against the Canadian Pacific Railway, ordering them to hand over freight in that way?

Mr. MacLAREN: I cannot say. I have no knowledge one way or the other, but I give this as a good opinion of those better qualified than I am on a matter such as this, that it acts reciprocally, that what applies to one railway applies to the other. There is another matter in which the Postmaster General made a statement with which I am afraid I must differ, and that is that it is unfair to the Canadian National Railways. Let me say, that it is entirely a matter of service. The

open gateway means nothing in additional rates or less freight rates. It does not mean much in the matter of time, whatever there is I do not stress that, but what I emphasize is the rights of shippers, such as exist in many other parts of the country, that where possible they should have a competitive trade route. Why? What is the value of that. It is neither the money nor the time, but it is efficiency, it is service and whatever is obtained most favourably is obtained under competition. There is no disposition in our country to favour the Canadian Pacific Railway or the Canadian National. It is a matter of efficiency. If the service of the Canadian National Railways will satisfy the people, the Canadian National will retain its business, and so will the Canadian Pacific under similar circumstances. Neither railway need have fear, nor is there any ground for having fear, if the service is efficient and satisfactory.

The final paragraph of the statement reads:

Number 7. Further attention to the great fishing industry of the maritime provinces, including curing, storage and transportation facilities to central markets.

That is the protection, handling, and marketing of fish products and as we know a royal commission is now sitting, I trust the result of the commission, which has the possibility of a great finding, will lead to the preservation of our fish, effective handling and good marketing.

I believe I have shown to the house that there are a number of resolutions, or portions of resolutions, that have not yet been implemented. I do not refer to the Ste. Rosalie-St. John matter. I do not say that is a resolution at all. That was a matter arising out of the act, but I am referring to matters outside of it, and I am also referring to matters outside of the Saint John-Quebec railway question and the steel question. I say there are some resolutions not implemented. I cannot agree with the statement reported to have been made by the Postmaster General in St. John on the 18th January of this year that the government, with the exception of two resolutions, had implemented fully the Duncan report. I say, Sir, that I have shown to the contrary. I trust the Prime Minister will not accept the interpretation of my hon. friend the Postmaster General and I respectfully invite him to apply himself diligently to a further study of the maritime claims.

Mr. ROBERT MILNE (Neepawa): In rising at this time I should like to say that the people of the province from which I come appreciate the fact that the government intends to turn over to the western provinces their natural resources. I do hope, however, that they will not forget that a large part of our resources have already been taken, and that when the final adjustment is being made that factor of remuneration will be considered, in order to take care of those that have already gone. It is also gratifying to know that the government have taken active and definite steps to complete the Hudson Bay railway to the bay and that in a very short time we will be able to use that line to carry our produce from the prairie provinces to the markets of the world. It is also gratifying to hear of the prosperity of the Dominion generally. The trade figures certainly indicate that business in this country is good. The figures the bankers have given out indicate the same thing. But in spite of the fact that all these things tend toward prosperity, from my observation I am led to believe that the prosperity of our Dominion is not being distributed equally among all the different classes and districts of the Dominion. The agriculturists are the ones who have laid the foundation for the prosperity of the Dominion. They supply approximately half of our population. The figures that were given in the house some few days ago show that out of an export of $1,218,000,000, grain products were accountable for about $447,000,000. Last year the agricultural production was estimated to be in the neighbourhood of $1,660,000,000, which is a little less than the amount estimated for the previous year. I do not see that any fact has been presented to the house yet to indicate that agriculture is sharing in the prosperity of the country to the extent to which it is entitled. The recent census published in the province of Manitoba shows that in the whole of the province less than two per cent of the farm homes have running water, less than three per cent have electric light and less than 30 per cent have telephones. It seems to me this does not indicate that the people on the prairies are enjoying that prosperity which certain other sections and classes in this country are experiencing. Otherwise they would not be suffering from the lack of such requisites in their homes. Nowadays the telephone is considered indispensable in the home. It certainly is a necessity in the rural districts in the newer portions of the country where doctors, for example, live some distance away from their patients, and where the roads are far from good.

The income tax returns would indicate also that people engaged in agriculture are not as prosperous as they might be. Throughout

the whole of Canada only 3,643 farmers are paying income taxes, which serves to show that the vast majority do not earn enough to bring them into the taxable class.

Another thing which indicates, to my mind, that the rural parts of Canada are not as prosperous as they should be is the difficulty in getting immigrants to come and stay. If the conditions in Canada were such that people could go on the land and make a comfortable living there would be no difficulty in securing immigrants. The problem then would be to keep them from entering the country. To-day everybody is crying out for immigration and saying that if we could secure population our problems would be solved. That may be true, but the difficulty seems to be to retain settlers when we get them. In the province of Manitoba between 1921 and 1926 the population increased by a little over 28,000. During the same period the immigration into the province numbered about 30,000 souls so that not only did the province fail to keep its natural increase, but it lost 2,000 immigrants as well. These figures indicate that conditions are not as good as they might be. If we are to develop our country we must make the pursuit of agriculture more remunerative and profitable, because it is just as true to-day as in the pioneering days that the prosperity of the country depends upon the success of farming. There is no reason in the world why agriculture should not be enjoying a greater measure of prosperity than it actually does. No one has greater faith in the future of this Dominion, or of western Canada, than I have. From the point of view of production there is absolutely nothing wrong with the country nor with its agricultural class, which compares favourably with that of any other country.

One of the big drawbacks to the success of agriculture is the cost of production. The cost of transportation is also high, and that vitally affects the people of the west. Closely related to the cost of production and the cost of transportation is the tariff. The tariff tax is a tax that can be passed on to the consumer. In proof of this may I be permitted to quote from the Retail Trade Review for December, 1927, which makes the following statement:

> Indirect taxation, such as customs, excise and sales tax, can be imposed by the Dominion government because manufacturers and producers are supposed to indemnify themselves against the same by passing it on to their customers.

It was proven conclusively, I think, when the duty on automobiles was lowered, that the consuming public were able to buy automobiles cheaper. I think the same result would follow if the duty were lowered on other goods. Those of us who are engaged in the farming industry believe that if the tariff were reduced on implements of production and the necessities of life we would be able to live more cheaply. According to figures submitted to the tariff board it cost the people of Canada about $19,000,000 to maintain the cotton industry in this country for one year. I do not know what the cost of maintaining the boot and shoe or the woollen industry was, but the amount must have been considerable. Now those who are engaged in pioneering and developing our country, laying the foundations for a better and more prosperous nation, are the people who are called upon to pay these taxes in order that industries may accumulate wealth. In many cases that I know of the children of these taxpayers are very inadequately clad and are unable to go to school except when the weather is mild. Yet these privileged manufacturers come along and ask for higher tariffs, with the result that still greater burdens would be placed upon these poor people whose children, in many cases, are not only poorly clothed but insufficiently fed. They are the people who are being oppressed in order that certain classes of individuals may be able to accumulate wealth.

I do not want to speak at great length but I should like to refer to the duty on cement. Cement is largely used in the rural districts for foundations and floors for farm buildings. In the interest of the conservation of our supply of lumber we ought to encourage the use of cement rather than limit its consumption by the imposition of a tax. If it were for no other reason than that of the conservation of our timber, it would be worth while considering the matter of encouraging the use of cement, but we find a tax of eight cents per 100 pounds imposed on this commodity. I do not know whether this matter has been referred to the tariff advisory board, but we would be almost led to believe the Canada Cement Company, which practically controls the manufacture of cement in this country, is well able to do without a tariff, particularly when we know that during the last few months they split a melon, as the saying is, and presented many of the shareholders with new stock.

Paint is another material which from a conservation standpoint is equally as important as cement. If the buildings, machinery and equipment of the agricultural people are not kept painted, they deteriorate and waste away in a comparatively short time, and

therefore in the interest of conservation the use of paint should be encouraged instead of being hindered by the imposition of a tariff tax. White lead ground in oil bears at the present time a tax of 37½ per cent. To my mind this rate is absolutely unreasonable, and further if we have any idea of advertising our country to tourists and immigrants, nothing will attract greater attention and create a better impression than well-painted homes in rural districts and towns throughout Canada. Therefore the government would be well advised, instead of retaining this tax of 37½ per cent on white lead, to encourage the use of paint by lowering this tax.

Another tax about which I want to say a few words is the income tax which, in my opinion, is one of the fairest systems of taxation we have, although a definite effort appears to have been launched to eradicate it. In fact, in the same pamphlet to which I referred a short time ago it is declared specifically that they will not let anything stand in the way of their accomplishing the abolition of this tax. I consider this tax is fair because the people who have the income are the people who have to pay it. We hear a great deal about the crop in western Canada this year. It is true that we produced a tremendous quantity of grain, but in spite of that fact there were large areas in the prairies where the crop was far below normal on account of rust, hail, frost and a dozen and one other things that occur at times to take away from us what promises to be a very profitable crop. When we have a tax like the income tax, those people who have been unfortunate in their returns are the people who do not have to pay, while the people who have good returns, either through their work or because of favourable seasons or conditions, are the people who have to pay.

The tariff tax and the sales tax do not take into consideration the prosperity of the individual who pays the tax; they do not take into consideration, as the income tax does, the responsibilities of individuals in regard to their dependents. Generally speaking, the tariff tax and the sales tax have to be paid to a larger extent by people who are developing our natural resources. The people who are making this onslaught on the income tax state in their pamphlet:

> Indirect taxation, such as customs, excise and sales tax can be imposed by the Dominion government because manufacturers and producers are supposed to indemnify themselves against the same by passing it on to their customers.

I should like to ask these people who are so determined to abolish the income tax why the manufacturers are supposed to be exempt from taxation? What divine right have they that they should not help to bear the burden of the taxation of this country? This same circular makes this statement:

> Men and women out of employment, and those who do not earn enough to pay an income tax are indirectly but not directly interested in this subject.

In my opinion they are the people who are vitally interested. According to the latest returns of last year in regard to income tax only about ten per cent of our people pay this direct tax. If they are relieved of the income tax, this means that a burden of $55,500,000 will be thrown on the shoulders of the other ninety per cent of our people who have not sufficient revenues or salaries to be taxable. We are told that the income tax is preventing capital from coming to our country, but any person who has been following the development of Canada will readily realize that this is not the case. Let me ask the government not to make any further reductions in the income tax, but rather that they consider the advisability of taxing the incomes of speculators who speculate on our grain exchanges and stock markets. Those speculators serve no useful purpose; they employ no labour, and I see no reason why such speculation should not be taxed.

I have endeavoured briefly to show that the agricultural community, the people who are laying the foundation of our prosperity, are not receiving their proper share of the prosperity which this country is enjoying, and I suggest that a reduction of the tariff tax on the necessities of life and implements of production will assist those people in retainning what they have worked hard for, and what rightly belongs to them. I humbly suggest that the income tax be not reduced any further, but that consideration be given to the idea of placing a tax on the earnings of speculators who make money in our grain exchanges and bond houses.

Mr. D. M. KENNEDY (Peace River): Mr. Speaker, I have read the speech from the throne a number of times and I am not sure yet what to think of it. I do not know whether it was an attempt on the part of the government to hold the speech within certain limits as to the actual number of words employed in presenting it, or whether it was not possible for the government, in view of the celebrations and conferences held last year, to prepare an outline of the legislation that would come before parliament this session. Either the former must be true, or the government must have been so busy

celebrating the sixtieth anniversary of confederation last year that they have not yet made up their minds as to the legislation they intend to present to the house.

It seems to me, Mr. Speaker, that the speech from the throne ought to give us at least an idea of the line along which the government intends to proceed, because it is necessary that members should apply themselves as early in the session as possible to a consideration of the questions that are likely to come before them. Nearly every session, towards the close, contentious legislation is brought down involving large commitments of money, and also large principles, and the house has not the time required for proper study of the questions involved. If the speech from the throne is to be anything more than a mere curtain-raiser to the proceedings of the session, it ought to contain a suggestion at least as to the line along which the government intends to proceed during the session.

I take issue with the speech from the throne in its very first paragraph which says:

> It affords me much pleasure to meet you at the commencement of another session of parliament and to be able to congratulate you upon the marked prosperity of the country.

I am willing to admit that there is prosperity of a kind in the Dominion of Canada, but that is not prosperity of the whole country. The speech from the throne goes on to enumerate some of the things that indicate we have marked prosperity, and some of these at least I am willing to concede—the volume of trade and building construction, the growth in employment, the increased railway receipts, the expanding revenues, and business conditions generally. It seems to me that even to mention the growth in employment is itself a notable qualification of marked prosperity. We have to admit that to-day, while we are combing a part of the world for immigrants to come and settle on our lands, in large sections of Canada there is a good deal of unemployment. That is true of some of the mining districts in the province of Alberta, and it is generally true of the large cities throughout the Dominion. When the government speaks of the marked prosperity that exists throughout the country it seems to me that they are starting off and looking ahead to the session with a wrong conception; they are off on the wrong foot. If the Liberal party is going to live up to its traditions it must think of the people as a whole and not simply of the few who are enjoying marked prosperity. Here is a quotation from an address of the Right Hon. W. L. Mackenzie King at Aurora, Ontario, taken from Liberalism—a Canadian View:

> A situation such as exists in Canada to-day has not come into being over night. It is the result of forces which have been operating within the body politic for some years past and to which the war and exigencies of war have afforded favourable and exceptional opportunities. Were I to express the situation in a word, it would be that the political, industrial and, to a considerable extent, the social life of our country, to-day lies enthralled under the subtle and malignant influence of combined autocratic and plutocratic control, which seeks, the aggrandizement of a few individuals at the expense of the state, and is regardless wholly of the well-being of the people at large.

If democratic government is to continue in this country, and if the Liberal and Conservative parties are to continue to exist, they must have regard to something more than the increased revenues of the railways, increased prices of stocks, and an increased volume of trade. We shall have to speak of something more than a growth in employment before we shall be justified as representatives of all the people in talking of marked prosperity, unless we mean it is a black mark. We are not enjoying prosperity throughout the Dominion. We have a federal Department of Labour which has made some considerable investigation into the question of what is a reasonable standard of living. I do not wish to take up very much time in going into all the details, but according to the industrial and international relations committee report of 1926 a reasonable standard of living calls for an income of around $2,200 to $2,400 per annum. Other organizations throughout Canada and the United States have placed a reasonable standard of living for a family at about $2,200 to $2,500.

I now wish to examine—and I base my statements on the figures presented in the Canada Year Book—the returns that have come to agriculture and to our manufacturing industries, as well as to the people who work in those industries and to some of those who draw dividends, just to ascertain as far as possible what those returns are. The Canada Year Book of 1926 at page 188 shows the great divisions of industry—agriculture, forestry, fisheries, trapping, mining, electric power, construction, custom and repair, manufactures. For the purpose of my argument I wish to examine agriculture and manufactures. The estimated gross agricultural wealth of Canada in 1924 was $7,498,566,000. The net production for that year was $1,140,895,500. The net production represents an attempt to eliminate the value of the material consumed in the productive process. At page 674 of the same Year Book we are given the number of people employed gainfully in agri-

culture as well as in some other industries, and we find that about 1,023,706 males and 17,912 females were gainfully employed in agriculture in 1921. I have here, for anybody who wishes me to give it, the definition of employment on which these figures is based, but I may say that it does not include farmers' wives. Now there are some 700,000 farms in Canada, and I maintain that if the farmers' wives are going to be considered at all it will be necessary to add to the 17,000 odd females gainfully employed at least one woman for every farm. It is also necessary to make some allowance for the increase in population from 1921 to 1924. Without going into the details, I have estimated that the number of males gainfully employed in Canada in 1924—and I take that year because it is the last year for which we have complete figures in the Canada Year Book—was 1,094,259, and of females, 18,712. But if you add to the number of the females the difference between eighteen thousand and the number of farms in Canada you get considerably more. I will deal with that later.

We find the wage bill of agriculture, with a million males and eighteen thousand females, as being $704,574,956, leaving as a return on the capital investment after these wages are paid a sum equal to 5½ per cent. But if you add to the eighteen thousand females who are supposed to be gainfully employed in agriculture 690,000, being one woman for every farm in Canada, the amount that would be paid in wages would be $1,013,807,314, leaving for the capital investment the magnificent return to pay interest, taxes and everything else, of 1½ per cent.

I do not think it is unreasonable that the farmers' wives should be considered in estimating the wage bill of agriculture. According to the Canada Year Book the wage in agriculture averaged all over Canada amounted in 1926 to $636 for males and $461 for females. That is one reason why we have such articles as the following, which appeared in the Western Producer of August 18, 1927:

> The Dominion Bureau of Statistics has issued a preliminary report on the agricultural statistics of the provinces of Manitoba, Saskatchewan and Alberta as shown by the quinquennial census taken in June, 1926.
>
> The report showed a decrease in the number of occupied farms in all three provinces over the year 1921, when the last census was taken. The 1926 census showed 53,251 occupied farms in Manitoba as compared with 53,252 in 1921; 117,787 occupied farms in Saskatchewan as compared with 119,451; and 77,130 in Alberta as compared with 82,954.

And so on. Anyone who thinks that agriculture can be really described as prosperous when the average male wage is $646 a year including board, and the average female wage $461, including board, has a wrong view of what prosperity means. I am sorry that we should think of these conditions—and conditions as a whole are very little changed today from what they were in 1924—as being part of the marked prosperity of the Dominion.

The member for Neepawa (Mr. Milne) has given some figures regarding the actual living conditions on farms in Manitoba. Our bureau of statistics does not make surveys of this kind, and I think it ought to be provided with the necessary appropriation to enable it to do so. In the United States they have made such a survey, and in "Labour," published in Washington on August 20, 1927, we have the following:

> Survey Shows Bad Living Conditions Existing on Farms.
>
> A survey of living conditions on 10,000 farms in the west and north, conducted by the Department of Agriculture, reveals that only 20 per cent had bath tubs, only 32 per cent had running water in the house and 85 per cent had open outdoor toilets.
>
> Over one-third of the farm women were compelled to carry water for household use and their working hours averaged 11.3 hours per day.

Now I come to our manufacturing industries. I think conditions are somewhat different here, though not altogether so. According to the Canada Year Book, the capital invested in Canadian industries in 1924 was $3,538,813,460; the gross value of production, $2,695,053,582; the net value of production, $1,256,643,901; salaries and wages, $559,884,045—leaving a balance to be applied to interest and capital charges of $696,759,856, or a return of 19.6 per cent. The average of salaries and wages was $1,101.04. Some years ago a friend of mine who had had some experience in India informed me that in several sections of that country workers are not hired on the basis of a specific wage, but on what will constitute a meal or less for a day's work; that is, they are hired on the basis of a full stomach, a half stomach or a quarter stomach. What have we to show for our marked prosperity as between the people who are engaged in manufacturing and in agriculture in regard to the standard of living? A full living or stomach is $2,200; there is a half stomach to our employees in the manufacturing industries of about $1,100, and a quarter stomach for the farmers at $600 and $400 respectively. I submit, Mr. Speaker, that this is one reason why it has been easy to raise a dispute between farmers and workers in industry. People have said that

the only way you can help the farmers is to reduce wages in your manufacturing industry in order that your farmers may have better times, and vice versa. But as a matter of fact we cannot help people who are down at the $600 level by asking our industrial workers who have only half a standard wage to take anything less. But there is a place where it can be got, if it must be got in that way. I do not believe it must be. I believe it will be got by a better organization of our whole industrial life, so that our production will be cheaper and our exchange basis will be more near a parity. Where has the prosperity been going during these last few years and few months? What about the condition of our stock markets? An index from the long time or investors' point of view is published by the Bureau Monthly, based on a fixed list of stocks. In this index column 1 gives the weighted index numbers of the prices of the twenty-five best selling industrial and public utility common stocks on the Montreal and Toronto exchanges. In January 1925 in this column the price is 100; in January 1926, the third week, it had risen to 152.1, and continued steadily upwards with the exception of slight fluctuations until in the week ending December 31, 1927, it had reached 590.0, or an increase of nearly 500 per cent. I think I saw in one of the Ottawa papers on Saturday that the federal reserve board of the United States was going to increase the interest rate in order to check speculation.

Now I turn to the government. What was the policy of the Liberal party away back in 1919?—and they still proclaim it. It was a policy of promoting equal conditions, of giving equal rewards so far as industry is concerned. Well, what I have just referred to shows that industrial stocks are sky-rocketting, but the workers in agriculture and manufacturing industry are not getting what we recognize to be the standard living wage. Here is the Liberal platform of 1919, and it contains the following resolution as to the tariff:

Resolution on the Tariff

That the best interests of Canada demand that substantial reductions of the burdens of customs taxation be made with a view to the accomplishing of two purposes of the highest importance: First: diminishing the very high cost of living which presses so severely on the masses of the people; second: reducing the cost of the instruments of production in the industries based on the natural resources of the Dominion, the vigorous development of which is essential to the progress and prosperity of our country.

That, to these ends, wheat, wheat flour and all products of wheat; the principal articles of food; farm implements and machinery; farm tractors, mining, flour and saw-mill machinery and repair parts thereof; rough and partly dressed lumber; gasoline, illuminating, lubricating and fuel oils; nets, net-twines and fishermen's equipments; cements and fertilizers, should be free from customs duties, as well as the raw material entering into the same.

That a revision downwards of the tariff should be made whereby substantial reductions should be effected in the duties on wearing apparel and footwear, and on other articles of general consumption (other than luxuries), as well as on the raw material entering into the manufacture of the same.

That the British preference be increased to 50 per cent of the general tariff.

And the Liberal party hereby pledges itself to implement by legislation the provision of this resolution when returned to power.

Let me now read from the Liberal declaration of 1921:

The Liberal party led by honourable W. L. Mackenzie King stands for: government of the people—not by autocrats; government by the people—not by big interests; government for the people—not for a favoured few.

The other day the Prime Minister (Mr. Mackenzie King) made the following statement in his speech:

I say, Mr. Speaker, and I say it with considerable pride, that there has never been an occasion when one standing in the position of leadership of a government was able to give to this parliament a record of greater progress or a message of higher hope, present and future, than I have been enabled to give to this house to-day. . . It is not for me to say what the Minister of Finance will have to tell this house when he brings down his budget, but I for one shall be very much surprised if he does not show again this year, as in former years, reductions of the public debt, surpluses, and further tax reductions.

My point is this: The Liberal party came into power on a platform of drastic tariff reduction, a reduction which, notwithstanding the accomplishments spoken of by the Prime Minister the other day, is not anywhere near attainment yet. The Liberal party came into power on the platform of promised increases in direct taxation. The first few years they were in power, as we know, the Minister of Finance, Mr. Fielding, was up against a condition where his revenues were hardly equal to expenditures. But what is the state of affairs to-day? We have good times. If therefore the government cannot give effect to these promises this year when is it going to be done? The old arguments ran as follows: "When times are good, don't change them; and when they are bad don't touch things or they will fall to pieces." The Liberal party stands to-day in the position where the revenues are buoyant, and if their promises ever meant anything to them this is the session in which they should carry out the pledges to which I have alluded.

During the last election I was informed that some of my Liberal friends were very much peeved at me because I said that there was scarcely any difference between the Liberal and the Conservative tariff policies. I want to repeat that to-day, and so that there may be no misunderstanding, I should like to put on Hansard a statement covering all the years the Conservatives were in power, from 1888 to 1897 and from 1913 to 1922. I have given the Conservatives credit in each case for one year after they went out. In the statement I have given the figures regarding the Liberals from 1898 to 1912 and from 1922 to 1926. In both cases I show the average tariff collections against all dutiable imports and against all imports dutiable and free, and taking the whole period during which both parties were in power respectively I find that there is a difference of just .8 per cent in favour of the Liberals. If you take all the years the Conservatives were in power you will find that the collections on dutiable imports average 27.4 per cent while in the case of the Liberals, during the whole time they were in power, the collections averaged 26.6 per cent, or a difference of .8 per cent. Taking the figures covering all imports we find, in the case of the Conservatives, an average of 17.2 per cent and in the case of the Liberals, 16.4 per cent. The complete statement is as follows:

Page 462—Canada Year Book—

Conservatives 1888 to 1897		Liberals 1898 to 1912	
Dutiable	All	Dutiable	All
31.8	22	29.7	17.5
31.9	21.8	28.8	17.2
31.0	21.4	27.7	16.7
31.4	21.0	27.5	16.4
29.7	17.8	27.3	16.5
30.3	18.4	27.1	16.5
30.9	17.8	27.5	16.8
30.5	17.8	27.8	16.7
30.0	19.2	27.0	16.4
30.0	18.7	26.5	16.1
		26.7	16.5
307.5	195.9	27.5	16.7
		26.8	16.5
1913 to 1922		25.9	16.2
26.1	17.1	26.1	16.8

21.5	12.3	22.9	15.1
22.5	14.7	23.3	15.1
20.6	14.1	24.7	15.5
24.5	16.2		
		505.7	311.9
241.2	149.1		
307.5	195.9	Average 26.6	16.4
548.7	345.0		
Average 27.4	17.2		

With regard to the question of direct taxation, which has a bearing on what I shall say with reference to income tax, I want to read from the last paragraph of the Liberal platform giving the "resolution on financial condition and taxation":

> Whereas both Great Britain and the United States at present raise more than 80 per cent of their revenue by direct taxation, while Canada raises not more than 20 per cent:
>
> Be it and it is hereby resolved:
>
> 1. That the serious nature of the country's financial situation calls for the profundest consideration of all patriotic citizens, and the exercise of the severest economy by the government;
>
> 2. That increase of revenue must be sought from an equitable and effective imposition and collection of graduated taxes, on business profits and income, applicable to all incomes above reasonable exemptions;
>
> 3. Taxes on luxuries.

I have shown that the difference between the two policies, Conservative and Liberal, over a period of forty years has been just .8 per cent. Now, what happened last year in connection with the income tax? In spite of these declarations we had a straight cut of 10 per cent. I am opposed to reductions in the income tax. The declarations of the Liberal party, if they lived up to them, would lead them also to such opposition, and I think that the sooner we reach the stage where governments and everyone else besides live up to their commitments, their solemn pledges, their platforms, the better it will be for this dominion. If parties cannot do this, then let us put an end to this travesty; let us be frank with the people. It has been argued that we should abolish the income tax because of the fact that it keeps capital out of the country. The chief reason why the retail trade bureau wants to abolish the income tax is simply the fact that those who pay it cannot pass it on to others. In their pamphlet they say, "A direct tax is a tax that cannot be passed on". We do not tax the people because we like to do so; as I understand taxation, it is imposed because of the necessities of government. And there is nothing, from the standpoint of the restriction of trade, which is true of the income tax that is not true of any other tax. But when you come to the income tax you are taxing profits, something which people can pay without hurting themselves; and the only alternative, if we have not an income tax, is indirect taxation in the way of a customs tariff on the requirements of people who to-day are enjoying less than a reasonable standard of living. I hope therefore, in view of its past pledges, in view of the fact that the income tax is not a hardship, in view of the

fact that increasing capitalization in industry is not providing more employment but rather less, that the government will live up to its pledges and give all the reductions necessary this year in the direction it has promised in the past. Unless it does so it will become merely part and parcel of the Conservative party.

I wish to refer to one other subject—and I see my time is passing; however, we shall have other opportunities to express our views, regardless of the forty-minute rule. This is apparently a session of committees; we have been promised that one or two matters will be referred to committees—for example, the question of immigration. Last year we had a committee to which was referred the question of conditions in Athabasca at the last election. I think the Prime Minister has promised that the question will be referred to that committee again, or at least he said he was willing that it should be. But I should like to see another matter referred to a committee, and that is the whole question of campaign funds. The revelations made last summer before the royal commission which was then sitting are going to have their effect on the democratic institutions of the country if we cannot clean up the conditions referred to. I do not care what anybody says regarding the right of the private citizen to drink; I believe the people of Canada do not want the booze business at the bottom of our party system. A conviction is certainly taking hold in the minds of the people that those who have been violating the income tax and the business profits tax laws and who have stated that they had been paying into the party campaign funds of both political parties, were doing so for what was suggested, namely, for protection against a too vigorous application of the law to their case. Whatever may happen in the Department of National Revenue, I think we ought to open up the question before a parliamentary committee, to see if it is not possible to frame something in connection with the Elections Act that will at least make it possible for people in the Dominion of Canada to get a clear idea as to where the campaign funds of the two parties come from. We have had sneering remarks from across the house about the little group in this corner. We challenge you to divulge the source of your campaign funds, and all of them, as we have done. We may have our faults; we may be narrow in some respects, but we challenge both parties to meet us on that issue and to make public the source of the campaign funds which go into their treasury and help them to win their elections.

[Mr. Kennedy.]

I wish to say a word regarding the question of appointing diplomats. A diplomatic representative in Japan has been spoken of. Diplomats have done some good and some evil. I do not know whether it is anything to be condemned, but we might as well keep an eye on the past and try to understand the dangers we are running into as well as the advantages. The agricultural industry of this country is very largely standing on its own feet—it does get some help by way of demonstration from the experimental farms. The Minister of Trade and Commerce would do very well if he would appoint a few more trade commissioners to the orient. We are looking for an increased market for our wheat in the east, and wheat is the commodity which produces marked prosperity—according to the statements of many of the big business executives throughout the country. I think it would be a good thing if the Minister of Trade and Commerce could see his way to appoint a few more trade commissioners in the orient.

With regard to immigration, which has been discussed here this afternoon, we are all wondering why we do not get more immigrants. Why do we not get them as we did from 1901 to 1913? In the first place there seems to be a scarcity in Europe of the people we want as compared with the period from 1901 to 1913. We ask them to come in and establish themselves under conditions that are entirely different. What was the situation in 1901? We were building railways ahead of settlement, and settlers could have the pick of the land for a distance of two hundred miles along a line of railway. Conditions are different to-day; we are not building railways ahead of settlement. If the government could see its way to fulfil the promise the Prime Minister made to the people in the Peace River country at Edmonton a few years ago, we might have similar conditions and might not have the same difficulty in getting and holding immigrants. But there is a fundamental difference. What are we asking to-day? We are asking that the settlers come in and live as best they can, twenty, fifty or a hundred miles from a railway. We ask them to exist as best they can until in the face of their difficulties they furnish enough traffic to make a railway pay from the start. That was the attitude in this House of Commons on the government side last session. Even though we have made blunders in the past by being too optimistic we ought at least to meet the settler half way.

Mr. ROBERT McKENZIE (Assiniboia): Mr. Speaker, I desire to join with those on both sides on the house who have spoken on this question, in offering my congratulations to the mover and the seconder for the manner in which they have performed the tasks allotted to them. I cannot say, however, that I can congratulate the hon. member for Peace River (Mr. Kennedy) who has just spoken or agree with him in the apparently pessimistic view which he has taken of conditions as they exist at the present time in this fair country of ours. At the commencement of my brief remarks, Mr. Speaker, let me express my satisfaction and pride, which satisfaction and pride I believe are shared, not only by the members of this house, but by the people of the country generally, that the economic condition of this country is such that it was possible for the Governor General at the opening of parliament to express the optimistic views which he did. In the first paragraph of the speech he indicates his pleasure at meeting parliament and being able to congratulate it upon the marked prosperity of the country. He goes on to say that the volume of trade and of building construction, and growth in employment, the increased railway receipts, the expanding revenues, and business conditions generally, all bear testimony to a sound economic development which promises much in the way of substantial progress. I agree with previous speakers that the prosperity we are enjoying—because without doubt we are enjoying a measure of prosperity—is not evenly divided. I agree in that respect with the statement of the hon. member who has just spoken. As a matter of fact prosperity has never, at any period of its existence, been equally divided. I do not pretend to prophesy but I doubt whether the time will ever come, in this or any other country, when prosperity will be equally divided. In view of the statement made by One of old, "For ye have the poor always with you," I believe the same condition will prevail until the end of time.

Mr. WOODSWORTH: May I ask the hon. member if he considers that a desirable condition?

Mr. McKENZIE: No, but it is a condition which we cannot avoid. If we could we certainly would do so.

I should like to emphasize the part played by the western provinces in bringing about national prosperity. It has been said on more than one occasion in this house in my hearing, that agriculture is the key to our national prosperity. I believe that is true, and such being the case I should like to direct the attention of the house to the part that is played in that prosperity by the province from which I come, and to point out, as the hon. member for Neepawa (Mr. Milne) remarked, that notwithstanding the contributions which the western provinces are making towards prosperity they are not receiving their fair share of benefit. I have here a copy of a monthly review called Agricultural and Industrial Progress in Canada, a pamphlet issued by the Canadian Pacific Railway Company. It is not one of the latest issues but it is one which came to my hand and, in connection with the part played by Saskatchewan in the prosperity of Canada, I should like to read a few words under the heading "The Growth of Saskatchewan—Twenty Years' Progress," which illustrates better than any words of mine the point I wish to make. It says:

> The progress as an agricultural territory has been most marked, the province not only annually further consolidating its position as the wheat province of Canada, but striking out with such enterprise along other lines of agricultural endeavour that it has come to rank very high in many of them. In 1926 Saskatchewan was credited with producing 215,101,000 bushels of wheat, or over 50 per cent of the entire dominion production. Saskatchewan presents a very diffrent aspect, and its status is considerably changed, from that of twenty years ago. The province came into existence a raw, unpeopled territory of a few scattered villages. To-day it has seven cities—

This, Mr. Speaker, is not one of the latest monthly reports, and the number of cities has been increased to eight by the incorporation of the town of Yorkton as a city just about a week ago.

> —80 towns, 367 villages, 301 rural municipalities, and 4,698 school districts. In 1905 there were 80 industries, with an investment of less than $4,000,000, and a production value of $5,116,782. The last census showed 645 industries in the province with an investment of $30,269,547 and a gross production value of $36,313,931. The acreage under field crops in the province in 1906 was 3,271,436, and in 1926, 20,419,175. Twenty years ago Saskatchewan was importing butter even into its rural districts. To-day it has a production valued in excess of $21,000,000 annually and is steadily exporting butter.

This goes to show the importance of Saskatchewan in relation to the development of the country and the bringing about of prosperity. If it be true, and I believe it is, that agriculture is the key to our national prosperity, then the province of Saskatchewan plays an important part in that prosperity but has not reaped the benefits which it should.

The second clause in the speech from the throne deals with one of the most outstand-

ing events of the present year, if not for many years. I agree with preceding speakers, and I was impressed as they said they were, with the part which was taken and the enthusiasm which was shown in the celebration by our people of non-British origin. Not only was this true of the children but it was also true of the adults; in many districts they were intensely interested in the celebration. Some of the best addresses that were made during that celebration were made by children not born within the confines of Canada in some cases, and in other cases by children whose parents came to Canada as immigrants twenty and thirty years ago. I believe the celebration was of wonderful value to this country in helping to produce a better type of Canadian, and a stronger national sentiment not only among newcomers but also among our own people. In many instances our people learned more of their own country through the addresses which were delivered, and the pamphlets which were sent out from headquarters for their benefit. In this connection I would offer my congratulations to the Prime Minister upon the important part which he took in making that celebration the success it was. And let us hope that when the seventieth anniversary of confederation comes it will find him Prime Minister of Canada and that the celebration that will be brought on at that time will be better than the sixtieth anniversary because he will be able to profit by the experiences of this past year.

The next paragraph of interest deals with the visit of royalty and of the Prime Minister of Great Britain to our shores during the past year. But in the short time at my disposal I do not desire to speak further of matters of general significance. I would like to deal with a few items in the address which more directly affect the province from which I come and the constituency which I have the honour to represent. As one coming from the prairie provinces I am naturally interested in the statement in the address which, dealing with the Dominion-provincial conference and its results, reads:

> In the light of the discussions at the conference my ministers are continuing negotiations with the prairie provinces for the return of their natural resources.

We in Saskatchewan have never been as vitally concerned in the matter of the return of our natural resources as the people of Alberta or even of Manitoba, but we were pleased the other day at the statement made by the Prime Minister to the effect that not only would we receive our natural resources but we would still retain the subsidies which we had been receiving in lieu of those resources since we became a province. That is very encouraging to us and we will look forward to the fulfilment of these negotiations.

The leader of the opposition (Mr. Bennett), when he spoke on the debate on the address a week ago, rather twitted the government on the fact that in 1922 and 1923 in the speeches from the throne the matter of the return of the natural resources to the prairie provinces was featured very much in the same way as it is at the present time, but that so far no advance had been made. In view of the reply made by the Prime Minister, I believe there has been more advancement during the past year in that respect than there has ever been before. But I would like to impress upon the mind of the leader of the opposition that 1922 was not the first time that we heard of the return of the natural resources to the prairie provinces. I remember in the election campaign of 1911, the Hon. R. L. Borden, who was then leader of the Conservative opposition in this house and who was later Prime Minister of Canada, speaking not only at Weyburn but at other points throughout Saskatchewan, said to the electors:

> I will give to the prairie provinces something of much greater value to them than reciprocity. I will return to them forthwith their natural resources which are theirs by right.

Needless to say he did not implement that promise. That was at the time when the reciprocity campaign was on, which meant so much to the prairie provinces. In the light, however, of what we have learned from the statement of the Prime Minister, let us hope that this question, which has agitated for a long time the minds of politicians on both sides of this house and throughout the Dominion, will soon be satisfactorily settled. Some politicians whose minds have been agitated on this question have been really concerned for the good of their province, while others again have been very much concerned for what must be said to be nothing less than ulterior motives.

I should like at this time to speak briefly on another question which is of vital concern to the people of our province and the constituency which I represent, as well as to Canada as a whole. I refer to the reduction of taxation. Some time ago I received a pamphlet much the same, I believe, as the one referred to by the hon. member for Peace River, stating that the income tax in this country should be got rid of. We in the west do not share that view; we are not agreed at least that the income tax is the first tax that should be reduced. We take the stand that when reductions are made in taxation—

and we hope that reductions will be made from time to time—those reductions will be made along lines which tend most to lighten the burden of those least able to bear the burden of taxation. We do not look upon the income tax as being that tax which should be reduced first because, on account of the liberal exemptions that are granted under the Income Tax Act, we do not see where any hardship is imposed upon anyone. A man and wife, for instance, have an exemption of $3,000 before they are called upon to pay anything towards the income tax. If they have two children they have an exemption of $4,000; if they have four children they have an exemption of $5,000, and so on. No one can claim that any great hardship is imposed, but the same thing cannot be said with regard to some of the other taxes. There are certain features of the tariff and the sales tax, for instance, which directly affect the poor man's table and the clothing of himself and his family, and I would therefore hope that whatever reductions are made this year in taxation, they will not be made on the income tax unless relief is given also along the other lines which affect the common people of our country. It is possible, however, that there will be a necessity for making a few adjustments in the income tax in order to bring it up to date.

Coupled with the question of reduction of taxation, there is that of the reduction of our national debt. It is a source of great satisfaction to the people of Canada generally that during the past four years such substantial reductions in our national debt have been made. In looking over the public accounts which were brought down the other day, I noticed a few items which are of vital importance to us at this time in dealing with the question of the reduction of the national debt. During the last four years ending March 31, 1927, that is, during the years 1924, 1925, 1926 and 1927, the reduction in the national debt has been approximately $106,000,000. That, Mr. Speaker, is more than twice over the amount of all the reductions that had been made previously since confederation in our national debt. In all the other years since confederation down to the year 1924 the aggregate reductions in the national debt amounted to between $45,000,000 and $50,000,000, or less than half what the reduction has been in the last four years. That is a source of satisfaction to the people of Canada.

But there is something more. Not only have there been these reductions in the national debt, but there have been at the same time reductions in the taxation of our people. Comparison was made a few days ago by I think the hon. member for South Wellington (Mr. Guthrie) between the debt of the Dominion of Canada and the debt of the province of Ontario, and he deplored the fact and was inclined to criticize this government because the reductions that are being made in the public debt of the Dominion do not compare favourably with the debt reductions made by the province of Ontario. But, Mr. Speaker, there is no comparison between the national debt of Canada and the bonded indebtedness of our provinces or of our urban and rural municipalities. During the years of the war the national debt of Canada was increased by approximately two billions of dollars. That amount was paid out in the prosecution of the war. It was an expenditure for which no utility of any kind was provided, whereby even a portion of the interest on our national debt would come into the treasury by way of revenue—not one dollar. On the other hand, the bonded indebtedness of our provinces and municipalities, both urban and rural, has been incurred for the purpose of acquiring some utility. Various forms of utilities are provided by the bonded indebtedness of these other forms of government.

At six o'clock the house took recess.

After Recess

The house resumed at eight o'clock.

Mr. McKENZIE: Mr. Speaker, when the house rose at six o'clock I was discussing the national debt, and endeavouring to show that it was what might be called a dead weight debt; that is, no utilities had been provided for out of approximately the two billion dollars which was added to our burden of debt for war purposes. On the other hand we find that usually when a debt is incurred by one of our provinces or by a municipality it is incurred for the purpose mainly of providing some utility, and generally sufficient revenue is derived from that utility to pay interest on the indebtedness and to provide a sinking fund for its ultimate redemption. So that when we criticize the government for not reducing the national debt, and at the same time ask for a reduction of taxation, we ought to remember that we cannot expect the government to cut off the source of revenue by making such reduction and also reduce the national debt. The leader of the opposition (Mr. Bennett) both last session and this session has made some suggestions for the reduction of the national debt. I think it might be well for the government to follow those

suggestions, and then should the Conservative party ever regain power they would feel it their duty to continue the plan based on those suggestions and would be more diligent in reducing the national debt than they have been in the past.

Without going into any detail, I wish to endorse what has been said by the hon. member for Souris (Mr. Steedsman) and the hon. member for Lisgar (Mr. Brown) in relation to the permits which are issued at the customs ports to Canadians who desire to cross to the United States, and the difficulties that they sometimes encounter on their return to Canada. In this connection I would say to the Minister of National Revenue (Mr. Euler) that when the time comes for dealing with the final report of the royal commission on customs and excise, particularly the clause which advises a reduction of the number of ports, they consider carefully whether it would not be advisable to open more ports along the border rather than close any of the present ports. I believe that if we had more ports along the border line it would relieve a great deal of the difficulty complained of by the hon. gentlemen to whom I have referred. I am inclined to think that the report is right in the recommendation concerning railway ports and those ports situated a long way from the border, on account of the use that is now made of automobiles. In the constituency which I have the honour to represent there are three ports along the border, and I believe that in fairness to the people who desire to cross freely back and forth this number should be materially increased. Our law-abiding people should be granted every consideration, and I do not think that my proposal would in any way facilitate smuggling operations.

I had intended to discuss the immigration question, Mr. Speaker, but in view of what has been said by the minister himself (Mr. Forke) this afternoon there is no necessity for me to do so.

My final word, then, will be in regard to the tariff. Last session we did not expect the government to do anything by way of tariff reductions because of the fact that the tariff advisory board was just nicely getting into its stride. But the board having in the interim considered a hundred or more applications, I believe sufficient evidence has been adduced to prove that in fairness to the consuming public there should be some material tariff reductions. I am not going to enumerate the articles on which these reductions should be made. I endorse what has been said by other members in relation to the commodities which they think should carry a lower tariff. I hope that when the budget is brought down we will not be disappointed in this respect, or in respect to what I have said regarding the income tax.

Mr. W. G. ERNST (Queens-Lunenburg): Mr. Speaker, I wish to join the hon. gentlemen who have preceded me in congratulating the hon. member for Hants-Kings (Mr. Ilsley) and the hon. member for Provencher (Mr. Beaubien) who respectively moved and seconded the address in reply to the speech from the throne. I do so, however, sir, with this qualification: I regret that Providence, in the shape of a snowstorm, denied me the pleasure of hearing the hon. member for Hants-Kings, but I did have the opportunity of reading his speech, and I congratulate him more warmly on his moderate tone than I do on its wisdom. He was good enough to make reference to a letter of mine which I wrote during the electoral campaign of 1926, and by quoting one paragraph of it he sought to induce this house to draw the inference that I was a sectionalist.

Now, Mr. Speaker, I want to make only one or two observations in that connection. The first is that in so far as love of Canada is concerned and faith in her destiny I yield to no one; and, secondly, it seems to me a singular fact that whereas we have in the maritime provinces—and I am unhappy to have to admit it,—extreme sectionalists who term themselves secessionists, yet they have never found recruits in the ranks of the supporters of his majesty's loyal opposition. On the contrary, many of the most prominent of those self-styled secessionists are supporters of those hon. gentlemen who sit to your right, sir, and the chief paper of the Liberal party in Nova Scotia is avowedly secessionist. And I might make this further observation, that had the hon. member taken the house a little more completely into his confidence and reviewed the whole of that letter, it would have been apparent that the point I was making to the electors was that in 1921 Nova Scotia elected a solid Liberal representation to this house, and those hon. gentlemen supported the government and praised it, but they did nothing else; while those who came from the western parts were striving, and rightly striving, for the interests of their communities. The "solid sixteen" obtained nothing; the western members secured results. The inference to be drawn from the letter is that my hon. friend had better beware the fate which befell the "solid sixteen". It would be a pity for a man of his brilliant parts were he to ally

himself and be a martyr to the same unworthy cause as the "solid sixteen" espoused.

It is not my purpose this evening to go at any length into national questions—that is, national in the sense of being purely national, because we have many domestic questions which, while they are not purely national in their aspect, while they may be regional and provincial, even sectional, yet they are national because there can be no sound health in the body politic unless the whole body participates. Consequently I feel justified, if justification is necessary, in the references which I purpose making to the particular problems that beset the province whence I come—Nova Scotia.

In the first place, let me add my voice to what the hon. member for Cumberland (Mr. Smith) and the hon. member for St. John-Albert (Mr. MacLaren) have said with respect to carrying out in full the recommendations of the Duncan report. The hon. Postmaster General (Mr. Veniot) has seen fit to make reference to the fact that these recommendations have been almost entirely implemented. I would refer him to an issue of the Financial Post bearing date November 18, 1927. After perusing it he will know, if he does not know now, that the major portion of those recommendations have yet to be implemented. And I may tell him further that the people of the maritime provinces and their representatives who sit to your left, Mr. Speaker, will not be content till those recommendations have been implemented in full.

I pass now to another matter of provincial concern in a sense, and that is the old age pension legislation which was enacted at the last session of this house.

Mr. GARLAND (Bow River): Hear, hear.

Mr. ERNST: I quite agree with my hon. friend who has said, "hear, hear", in so far as the principle of old age pension is concerned. I hope the day will speedily come when this country can do away with its poorhouses and when people who have served to the best of their ability will be taken care of by the state instead of becoming objects of charity. But I regret that the hope held out by the hon. gentlemen who supported the present government party during the campaign of 1926 has not been fulfilled, the hope that the present Pension Act would apply to the country as a whole. That hope cannot possibly be realized. There are provinces which have adopted the legislation, but I hope to show the house that there are other provinces which cannot adopt it; and if it is not adopted throughout the whole country it is inequitable and is not a fulfilment of the promise made by the supporters of the government during the election campaign. Let us take as an instance the province of Nova Scotia. I think you will agree with me, sir, that no matter how good the intentions of a province may be, no matter how desirous it may be of carrying out the provisions of the pension legislation or assisting the federal government, before that can be done two things have to be looked into: first, what will it cost; and, second, has the province the means?

Now, the scheme of the legislation, briefly, is that the federal government will assist the provincial governments to this extent: they will pay an amount not exceeding $120 a year to every indigent person of seventy years of age, provided the provincial government pays a like amount. What does that mean? In Nova Scotia, according to the 1921 census, there are about 25,000 persons over seventy years of age. It is estimated by a competent authority in the province that one-half of these would be eligible under the present pension scheme if the provincial government adopted the legislation. Assuming that 12,500 persons had to be looked after, at $120 each, it would cost the provincial treasury about one and a half million dollars annually, not including the cost of administration. Take the argument one step further. In 1925 the Duncan commission took evidence in Nova Scotia and found that the province was in straitened circumstances, owing to the fact that its most important sources of revenue had been handed over to the federal treasury, without anything to offset that loss of revenue. The report recommended that to enable the province to balance its budget there should be an immediate lump sum increase in the amount of subsidy of $875,000 a year. Since 1925 Nova Scotia has not acquired any new sources of revenue. How then, if in 1925 the province needed $875,000 to enable it to balance its budget, can the federal government be sincere in the suggestion that the provincial government assume that additional burden of one and a half million dollars in order to carry out old age pension legislation?

Mr. NEILL: If my hon. friend will permit me—who keeps those old people now?

Mr. ERNST: Those old people are kept, in part, by their sons and daughters, and others are in the poorhouse. But the hon. gentleman who asks the question overlooks this fact. It has been argued that the adoption of the old age pension legislation will do away with the poorhouses. I have made inquiry personally, and I find that many inmates are under seventy years of age. This

means duplication instead of doing away with the poorhouses of the province. But to return to my subject: I ask, how can the federal government be sincere in requesting the provincial government to incur that expense, knowing that the increase in subsidy is necessary to meet present conditions? Bearing that in mind, there is only one of two possible solutions: Either the Dominion treasury must increase the subsidy to the provincial government to enable it to discharge the additional burden, or the scheme must be made purely federal in its operation. If the government is sincere in wanting to give old people pensions it must pass legislation which will be operative from coast to coast. It is for them to choose the solution. Had they been sincere in the first place they would have approached the provinces before enacting the legislation and obtained their opinions. It would be interesting indeed to know just what took place in that connection at the recent provincial conference, both with respect to the provinces which have taken up the scheme and with respect to the provinces which have not. In connection with old age pensions the circumstances are different in the various provinces, some having a larger percentage of their population requiring such relief. For instance, in British Columbia it was estimated that to put the legislation into operation would require two per cent of the gross provincial revenue. On the other hand, in Nova Scotia it would cost between 20 and 25 per cent of the gross provincial revenue. Therefore I ask the government, and I ask the hon. Minister of Labour (Mr. Heenan) in particular, to take care of the aged poor of the country, and at once introduce a federal scheme that will be Dominion-wide in its operation. What is the use of telling the people that the provincial governments should adopt the present legislation when those governments by reason of their financial condition cannot possibly do so? I ask him to introduce legislation providing for an old age pension scheme which will take care of the poor of the country, not only in one province or in another, but in each of the nine provinces of Canada.

Mr. HEENAN: Does the hon. gentleman know that some people down in that part of the country were advising an appeal against the law as it now stands, as being ultra vires of the federal government?

Mr. ERNST: I was not aware of that, but I was aware that the chief Liberal organ of Nova Scotia asked the government to make it a federal law.

[Mr. Ernst.]

There are only two other matters with which I purpose dealing. The first of these relates to the appointment of a royal fisheries commission to investigate the fisheries of the maritime provinces and the Gaspe peninsula. That commission has been sitting for some months.

Mr. CASGRAIN: And the north shore.

Mr. ERNST: Originally it was for the maritime provinces, but I believe it has been extended since. That commission has been taking evidence in all the maritime provinces and at some points in Quebec. It has been stressed by members on this side of the house that it is due to the fishing industry of the maritime provinces that the report be tabled this year, and that action be taken to carry out its recommendations. It is also necessary that action be taken for the alleviation of the difficulties of the fishing industry in these provinces. I want to tell hon. gentlemen who do not know just why that is necessary. Some few years ago Nova Scotia was the leading fish-producing province in Canada; to-day British Columbia leads and Nova Scotia is second. But still we have in Nova Scotia some 16,000 fishermen primarily engaged in the industry, 4,000 more who secondarily derive their living from that occupation, and scattered over the whole province thousands more directly affected by it. We have on our shores some of the finest fishing banks in the world, banks to which fishing fleets from far-off France resort. We have a large number of people there who are adaptable to the industry and who love the sea. And yet despite those facts, since 1914 the fishing industry of the province of Nova Scotia has lost 10,000 men, most of whom have gone to the United States to earn their living, because they do not wish to give up their calling, and are pursuing the industry at Gloucester or Boston. Such a state of affairs calls for a remedy. The position in the eastern part of the province is particularly acute. In view of the fact that this commission is sitting and will make its report it is not for me to prescribe a remedy, but it is for me to ask that some steps be taken to improve the conditions down there for the benefit of the people of Nova Scotia and the maritime provinces as a whole.

There is another matter also relating to the fishing industry which I purpose dealing with, and then I am done. I refer to the question I brought to the attention of the Minister of Marine and Fisheries (Mr. Cardin) last session. Repeatedly during last session I urged upon him the importance of

having storm warnings broadcast to the fishing fleets. I did that because in August, 1926, two schooners from the Lunenburg fleet went down, taking with them fifty men. Last year, during the progress of his estimates through the house, the minister assured me this would be done in 1927. I regret to say that nothing was done, and in August, 1927, we lost not two but four vessels and eighty men. The disaster is all the more appalling when we stop to think that in some measure this might have been prevented if the assurance given by the Minister of Marine and Fisheries had been carried out. The hon. minister is not in his seat now, but I ask him in all sincerity not to wait for the report of the royal commission but to take action during the present session. Let the details be dealt with later on, but let him make a start now in order that such a disaster may not occur in this or in future years so that when the vessels return next autumn there will not be any vacant chairs or aching hearts.

Miss AGNES MACPHAIL (Southeast Grey): I consider it something of a hardship to follow the very brilliant young member from Queens-Lunenburg (Mr. Ernst). We come again to the consideration of the speech from the throne, a speech which I feel sure was evolved in cabinet council, a speech that was written, I feel equally sure, by the first minister, and a speech that has been read to the assembled commoners and senators by His Excellency the Governor General. In view of the whole matter it is not surprising that when we return to the House of Commons on the day following the formal opening we find the supporters of the administration rising in their places and saying that it is a very good speech. One would hardly under the circumstances expect them to say anything else. However, after reading the speech very carefully I think myself it is an exceedingly clever speech—how adroitly it says nothing at all!

I should not want to fail to congratulate the mover of the address (Mr. Ilsley) on the very excellent speech he made; I most heartily congratulate him. And as for the seconder, my hon. friend from Provencher (Mr. Beaubien); he is so delightful that one can forgive him much, and when one remembers that he was elected as an independent in 1921 and in 1928 we find him seconding the motion which embodies the scant legislative program of one of the major parties in the house, I feel he needs much forgiveness.

Mr. BEAUBIEN: May I ask the hon. member a question? Did the hon. member not vote on previous occasions for addresses in reply to speeches from the throne without having had anything to do with the preparation of them?

Miss MACPHAIL: Yes, but I did not second them. The hon. member for Assiniboia (Mr. Mackenzie), who spoke this afternoon, said: "The poor we have with us always." I think he was smugly complacent. He reminded me of an anti-Baptist minister who took as his text, "Beware of divers." The member for Assiniboia lifted the text completely outside the content in order to condone a very iniquitous system. I wonder if he would like to hear some other quotations. I think he would enjoy this: "What mean ye that ye grind the faces of the poor?" "The instruments of the churl are evil." "He deviseth wicked devices to destroy the poor with lying words, even when the needy speaketh right." "He who mocketh the poor reproacheth his maker." "Inasmuch as ye have not done it unto the least of these, ye have not done it unto me." "Depart ye unto outer darkness." I think that might be a word of warning to the Liberal party, that unless they realize that the elimination of poverty of the masses is the work of government, the outer darkness of opposition awaits them.

In the many speeches made on the address in reply to the speech from the throne much has been said about prosperity. I do not consider that adding to the wealth of the wealthy should be called, from a national point of view, prosperity. I think it is as true as when the words were spoken by John Bright to the British government that "the nation of every country dwells in the cottage, and unless the excellence of your statesmanship is impressed there on the feelings and conditions of the people, rely upon it you have yet to learn the art of government." I am glad to admit that conditions in rural Canada and in the homes of the industrial workers are slightly better than they were five years ago, but prosperity as it is understood in this house is unknown to our people. I had the privilege, and I consider it a very great privilege, of visiting last summer very many rural homes in Ontario, Manitoba and Saskatchewan, and I certainly did not find in those homes the prosperity that I read about in the speech from the throne. I found people struggling to meet debt, and worrying over taxes and meeting the payment of their mortgages. I thought the conditions were particularly bad in the province of Manitoba. I believe it was said by some member this afternoon that they no longer grew grain in Manitoba. Well, I think that was true

this year. I was thinking that the people who are in that province, when they read the speech from the throne and read the speeches that were made about it, will be amazed to learn that this long looked for prosperity has arrived. I am sure that from the feel of their pocket-book they will not know it has arrived. I visited the area between Sperling and Carman, a very wealthy part of Manitoba. I talked to people who went out there many years ago, relatives of my own, and I was told by them and by their neighbours that not more than three people in that community would be able to pay their taxes this year. I would not call that prosperity. I think one would be safe in saying that not ten per cent of the homes in rural Canada have running water, a bathroom, electric light, and the labour saving devices which the development of power makes possible. I think it is true, and I believe everyone in this house who is familiar with rural conditions will agree, there is too little comfort and beauty in our rural homes. I think too that the people in those rural homes are rebelling against that condition.

I want now to quote very briefly from Means and Methods of Agricultural Education, by Professor Leake, as follows:

> Sometimes the drudgery of the farm is endured by the mother uncomplainingly, or even contentedly; but the daughter recoils from it with a growing discontent.

A little later he says:

> The great problem, how to keep the boy on the farm, is troubling many, but it would become much less a problem if we could devise ways and means of keeping the girl on the farm. The girls are even more dissatisfied with farm life than the boys, and are leaving in greater numbers. The lessened proportion of women in the country homes of Canada was one of the startling surprises of the last census.

I do not consider that we can boast of our prosperity until that prosperity has reached the homes of the mass of the people. I think it is quite likely that the prosperity that has undoubtedly arrived in certain classes and sections of Canada will continue and will increase, until possibly it reaches boom dimensions, and will be followed by a crash or a long depression comparable to the one out of which we are just emerging. What is the government doing toward determining the cause?

I read with very great interest most, if not all, of the very delightful book which was published and sent to us by the Department of Trade and Commerce, entitled "Diamond Jubilee of the Confederation of Canada: Sixty Years of Canadian Progress." On page 60 of this work I find that the estimated gross agricultural wealth of Canada is $7,508,257,000, and the annual production on that investment is $1,600,000,000. On page 89 of the same volume I find that the total investment in the manufacturing industry is $3,808,282,981 and the annual production on that investment $2,948,545,315. These figures, in brief, mean that agriculture requires a $7 investment for $1 of production, and industry a $3 investment for little better than $2 of production. Under the circumstances we cannot wonder that we have ever with us the problem of rural depopulation. Other figures were given this afternoon by the hon. member for Peace River (Mr. Kennedy), which I need not repeat, showing that while farm lands fell $1 an acre between the years 1925 and 1926, industrial stocks and bonds doubled in value. With these facts clearly before us we can understand why it is that an intelligent and virile people are no longer willing to stay and slave under conditions which are not being remedied and with respect to which no real attempt at remedy is being made. The farmers of Canada are gradually learning that that industry which fails to assume responsibility for marketing its own productions arrives last in this race for the consumer's dollar. They are gradually—I think with increasing rapidity—remedying this by co-operative marketing. However, even though the farmers would market all their products cooperatively there still would rest upon their backs the great burden placed there partly through a bad distribution system of other commodities, and partly as a result of legislation passed by an organized minority for their own benefit.

One of the things to which I refer is the present Bank act. I notice in the Weekly News of February 3rd, printed in Winnipeg, that the Bank of Nova Scotia made a dividend this year of 16½ per cent, which seems a snug little dividend. The Canadian Bank of Commerce made a dividend of 12 per cent, with a bonus of one dollar. It was the same with other banks; evidently they are all making very great profits. Now there is a general feeling in farming districts that our banking system is not all it should be, and that some reform along the line of setting up a bank of issue and rediscount should at once be instituted. The Canadian Council of Agriculture in April, 1927, passed a resolution to that effect, which I need not trouble the house to read.

Another thing with which the farmers are very familiar is the burden which is placed on them by the customs tariff. I feel it is true that the farmers all over Canada, re-

gardless of the province in which they live, but particularly in certain provinces, are looking to the government this year to bring down a general and very considerable reduction of the customs duties on those things that go to make up the cost of living, on the necessities of life and on the implements of production. I see no excuse which will enable the government to escape this time. I am sure that if there is any, they will find it, but it does not appear to me that there is any way of escape for them. They used to say they did not know just what to reduce, because of the danger of hurting some very necessary industry; but with the sittings held by the tariff board, the very excellent work that is being done by that body and the great quantities of data now before the government on this question, I cannot for the life of me see how they are going to say that they cannot now scientifically reduce the tariff. Of course they have a majority and that to me is not a hopeful thing.

I want to speak of another matter. I am pleased to know that Canada has a non-permanent seat on the council of the League of Nations. I think we are all very glad of that. I think we feel that Canada can do a very great work for humanity by being on that council. I believe the term is three years, although I am not quite sure as to the period. I hope that Canada, as an autonomous nation, will take a strong stand on the principle of arbitration, and will express her willingness to sign arbitration treaties with as many countries as are willing to sign them with us. There is no reason in the world why we should not do it. I believe it would be appreciated by other dominions and indeed by a large section of the people in the motherland.

I noticed, and I daresay all the other members of the house noticed, a very interesting editorial published in the Citizen this morning with reference to the International Joint Commission. It pointed out that for sixteen years Canada and the United States have had a board of arbitration working, and working with very great success, composed of three members from each country and that when it sits in this country a Canadian presides and when it sits in the other country an American presides. It is an interesting fact that all the questions that have been referred to this commission have been settled by the unanimous consent of the board in a way that has been pleasing to both countries. This is something of which both Canada and the United States ought to be very proud, and something that, without boasting, we could make known to the world. One feels that a rather tense atmosphere has recently arisen between the United States and Great Britain, and this is something that we all very deeply regret. I quite understand that I am a very simple soul, but I can see no reason why a commission similar to this cannot be set up between Great Britain and the United States.

Canada through her representative on the League of Nations should take a very strong stand against the international trade in arms and armaments. Somebody ought certainly to take a stand and there is no reason why we should not do so. I find in private life that people who stand around waiting for somebody else to give them a lead are not of very great consequence. We should have initiative both as individuals and as a country, and through our representative on the League of Nations we should take a strong stand on questions on which we feel strongly. That this would be acceptable to at least some people and, I believe, to a large number of people in the motherland is quite clear from this quotation from Arthur Ponsonby's book, Now Is The Time, at page 82. He says:

> Any disposition on the part of our dominions to refuse to join in these wars of European origin will be all to the good. The dead weight of a reasonable pacifism from that quarter might have a moderating effect on the home government.

He goes on to say things even more startling than that, but I will not take the time to read them to the house. I should like to draw the attention of our government to the fact that now in the quiet and sanity of peace time there are some things which we could do to show the world that we have definitely turned our backs upon old methods of settling international disputes. One is that the government should have full control of the manufacture of munitions. I see no reason why the manufacture of munitions which are designed to bring about the death of human beings should be in the hands of private individuals who can and who have used this power for private gain. Let us now make a law stating that, if the worst came to the worst at any time in the future and we must face war, all property will be administered by the state; that is, there would be a complete conscription of wealth. I feel this would have a moderating influence upon certain elements in Canada.

In this connection, while this may seem presumption on my part, I urge the government completely to divorce aviation, which is rapidly developing along civil lines, from the military department, and not only from the military department but from military personalities. It would seem reasonable that in the

near future we should form a department of transportation which would include aviation along with railways and canals, and national highways, if we should ever have such a thing.

I should like respectfully to ask the government when they intend to change the administration of the penitentiaries so that prisoners will be given as much work as they can comfortably do in a day and will be paid a decent wage for that work. We have heard a great deal about this; the house carried the resolution some time ago—let us have the legislation. We should go further than this, because it is only one little step, as we so often say in this house, in the right direction. A real study should be made of crime; we are all coming to the place where we admit that crime is caused by ignorance, poverty, lack of culture, lack of happiness. There are many things about the prisoners that need study besides the one that I have mentioned. In our whole system of taking care of prisoners we should look to the good that we can do to the prisoner while he is detained by the state, making him feel that the state is fair to him. That is why I want him to be paid a decent wage for his work, from which wage, of course, his keep must be deducted. We must never forget, too, that the family of the prisoner possibly suffers more than the prisoner himself, and when the prisoner comes out, there should be, shall we say, a fatherly hand of the government to guide that man into civil life, to re-establish him. So many of them when they first get out try for a few days or weeks to go in what we call a straight way, and not being able to do that they very soon revert to crime. Much could be done by the state to make these things better for the men and women.

My stand on immigration is exactly what it has always been since I came to this house, and that is that if we would turn our minds to remedying conditions in the primary industries in Canada and do less talking and less spending of money bringing in state-aided immigrants to this country, we would be getting further on the road we all want to travel. We should look to the quality rather than to the quantity of immigration that comes to Canada. Any immigration policy worthy of the name should hold sacred, first, the ultimate good of Canada and, second, the good of the immigrant. Sometimes I think the good of the immigrant is not very much considered, although I may be wrong in that. Particular care should be taken to guard immigrants who do not speak the English language against fraud on the part of our loyal citizens when those immigrants first arrive in this country. I have heard some amazing stories about what sometimes happens to non-English speaking immigrants when they first arrive in Canada and especially when they have some money. If we are going to have a stimulated immigration policy we might as well face the fact now as at any other time that we must inaugurate a policy of industrial or unemployment insurance. We simply cannot bring thousands of prospective settlers to this country letting them think we are going to take care of them and then not doing it when sickness or lack of employment or lack of warm clothing in our Canadian winter comes upon them. We must make up our minds one way or the other.

A week ago I was in the city of Windsor. I passed the factory of the General Motors, which was to be opened in a day or two but was not open at that time, and I saw actually hundreds of men standing in line waiting to see if they could get a job. I was with the librarian as we had come down to look through the library, and the reading rooms were not only comfortably filled but actually packed with men whom this tender-hearted woman said she could not turn out into the cold. There they were day after day as it was one warm place in the city of Windsor.

I hope during this session something will be done towards enabling married women to establish a legal domicile. This question has been debated in this house and as it was introduced by the hon. member for Dauphin (Mr. Ward) who, I believe, is a stepson of the government, I see no reason why they should not father his bill. The Canadian Council of Agriculture deals with the matter in this way:

> Whereas the Canadian Council of Agriculture has for the past number of years passed resolutions asking that the inequality in our law as between men and women in the matter of domicile be removed.
>
> Therefore be it resolved that we reaffirm our position on this question, and urge upon the Dominion government the enactment into law of Bill 111 introduced by W. J. Ward, M.P., Dauphin, enabling a woman for purposes of judicial separation or divorce to establish a legal domicile of her own.

I hope the government will look with very kind eyes upon this matter.

In closing, let me say that I am a member of an independent group. I am not interested in party politics; I am not interested in parties, although I must say in all fairness that I am very much interested in the people who compose the parties. I am at all times ready, and indeed anxious, to support legislation which to my mind is beneficial to the

constituency I have the honour to represent —I believe that is the correct form—and to the country as a whole. I want to help with legislation, but I can only help with it if the legislation is pleasing to the people who sent me here, and knowing what I do from six years in public life I fear that the legislative program of this session will not weary us too much. I do not believe that when you have a stable government—one with a very comfortable majority, you get good government. I may be wrong; I sometimes am, but I think not in this case, and so, having in power a stable government, one with a very comfortable majority, a majority that unfortunately has been added to by men who should have known better, I do not see how we can expect a legislative program that will be pleasing to our constituencies. But at least we are here to get for the common people of Canada the best that we can, and I am here sitting ready to be pleasantly surprised by the government.

Mr. R. H. JENKINS (Queens): Mr. Speaker, permit me first of all to congratulate the mover (Mr. Ilsley) and the seconder (Mr. Beaubien) of the address in reply to the speech from the throne, and at the same time to extend my sincere congratulations to the hon. leader of the opposition (Mr. Bennett) who has been elected to such a high and honourable position.

The speech from the throne has in general met with the approval of the members of this house.

There were, however, those who voiced disappointment that it did not go far enough, but we presume, Mr. Speaker, that the budget which will be brought down later on by the Finance minister (Mr. Robb) will supplement for our friends what the speech apparently lacked for them. From what the Prime Minister (Mr. Mackenzie King) has said, we can safely surmise that some pleasing revelations will be made, and from our experience of the last two years we may assume that our genial Finance minister will go even a little further than we hope or expect.

The speech, first of all, bears testimony to the fact that generally speaking conditions are good in Canada. I need not enlarge upon this phase of the subject, because it has been carefully covered by the speech of the Prime Minister and others who followed him; but I would just like to quote a few words from an address delivered by the vice-president and general manager of the Dominion bank at their annual meeting a few days ago:

> This is the land of opportunity. Those Canadians whose early recollections go back to confederation days cannot, when comparing the conditions then and now, but feel satisfaction and pride in the progress that, in spite of periodical setbacks, remains as the net result of sixty years. We can now look forward with confidence to a reasonable measure of fulfilment of a famous prophecy: "The Twentieth Century will belong to Canada."

A few words pertaining to conditions in my own province may not be amiss, Mr. Speaker. As a general rule we do not have any violent swings either upwards or downwards; things run along in a very even way. We have no great wealth and very little poverty. Our people as a rule are prosperous, and are willing to work and do their fair share in the upbuilding of Canada. In his report for this year, president R. L. Cotton of the Charlottetown board of trade says:

> So far as our city (Charlottetown) and our province is concerned, the year has been one of more than usual progress and prosperity.

The fox business was especially good, and high prices prevailed not only for live foxes, but for pelts as well. This brought a very large amount of outside money into the province which tended to stimulate and help along business in every line. I think it is safe to say, however, Mr. Speaker, that as far as farm conditions are concerned, 1927 would hardly equal 1926 owing to the fact that the prices of many commodities were rather low, notably those of pork and potatoes. We have had a very fair crop of the latter commodity, and thousands of bushels were exported to the southern United States for seed purposes, but the price prevailing was rather low and would not give the farmers a very great leeway over cost of production. I am thankful to say, Mr. Speaker, that the warehouse facilities provided at Charlottetown, Summerside, and Georgetown for the handling of this particular commodity are of great assistance to our people and we deeply appreciate the consideration of this government in relation thereto. Mr. Boulter, secretary of the potato growers' association in an interview with the press a few days ago stated:

> The volume of business during the fall season ending December 31, 1927 far exceeded that of any entire year of business since the association was organized. Considerably over one million bushels of potatoes were handled and twenty thousand bushels of turnips. The open fall aided greatly in the movements by water, the association having loaded in all sixteen steamers which would average over fifty thousand bushels per steamer. Three ports were used in loading, Summerside, Charlottetown and Georgetown. Without these added warehouses it would have been impossible to have moved such a large quantity by water. The Georgetown warehouse proved of exceptional value, as the seed shipped from this

port was for points south, whose growers would not under any consideration accept early shipments of seed. The fact, therefore, that the association was able to make these late shipments through Georgetown not only held the territory which they opened up last year, but allowed them to reach more distant markets, going even into Tennessee and Alabama, and seed shipments by water next year will in all probability be made as far as New Orleans in the gulf of Mexico. Many of our potatoes were also exported to Cuba and Canadian markets as well.

The sixtieth anniversay of confederation was duly celebrated in our province in common with other parts of the Dominion. We have a loyal and patriotic people and the celebrations were of a very high character

The speech from the throne refers to immigration. So far as Prince Edward Island is concerned we can only assimilate a limited number and they should be of a class of farmers who have some means at their command and who can go on the land, pay for it, purchase agricultural implements and not be hampered by debts of any kind. People of this sort are bound to make good, provided they are willing to work. We may also have a limited demand for farm help, but what we need above all else is to keep our own people on the farms. In this connection I should like to quote from the speech made in this debate the other day by the hon. member for North Timiskaming (Mr. Bradette), who made a speech that is well worth reading. At page 177 of Hansard he says:

> Let me go a step further. I do not believe we shall need so many immigrants, and I am sure we will not lose our population to such a great extent, if the government will do something to see that young Canadians are offered some inducement to go on the farms and stay there. As you know, the bright lights of the cities, with their theatres, dance halls and so on, are wonderfully attractive even to the urban population, so it is no wonder that the young people are attracted from the country.

I should also like to quote again from the address made by the vice-president and general manager of the Dominion bank at their annual meeting. He said:

> With respect to the important question of immigration, there is some encouragement in the fact that 1927 figures were the largest since 1913, and various colonization enterprises are proving successful, but the number of settlers is still very far short of our needs and capacity, and a more energetic policy by our government is required to revive the pre-war flow of newcomers. The shift of population from the country to the city in the older provinces is a constant and partly inevitable condition brought about because the increased use of machinery in agriculture releases man-power, and also by the concentration of mass-production industry in the large labour centres. An additional, and a regretable, cause is that many young men born on the farm seem not to care for the life. Our government should do everything possible to encourage our people to stay on the land.

One of the hon. members who spoke in this debate tonight referred to the fact that the young ladies were also dissatisfied. Our government should do everything possible to encourage the people to stay on the land. Some encouragement should be given to the sons of farmers to settle on the land, and if a scheme were devised whereby they would receive assistance along lines such as that of the soldier settlement scheme with a loan of money and easy payments thereon, it would I believe be a great deal better than making experiments with people who are not suitable to our country, and who will not make good. We have had quite a number of immigrants coming into our province in past years. Some of them have succeeded, and others unacquainted with farms conditions made a failure with us, the same as they would anywhere else.

At a meeting in Charlottetown the other day one of these gentlemen who came out from the old country stated in an address before the Rotary Club that he had an easier time on Prince Edward Island than he ever had at home. He was able to put a few dollars in the bank, something he could not do in the old land. This gentleman stated that it was detrimental to both countries to bring out unsuitable men, and when I see in Prince Edward Island, he said, big farms not half cultivated, I am convinced we should have more settlers of the right sort. He said:

> Coming to the Island is like coming home. The scenery is much the same. Loneliness and homesickness are not felt so much here. The people are kind and sociable. There are opportunities on the island for practical farmers with a little capital. In the old country many are just making a bare living on small holdings. The taxes and rent are a great handicap. For instance on 30 acres of land a man pays $450 per year rent and $100 in taxes.

This amount seems rather exorbitant, nevertheless it is what this report states:

> The farmers in the old country must be convinced first that it is to their advantage to immigrate. They will hesitate before selling their stock and home unless they know exactly how they will fare in Canada. The immigrant agent must tell them the plain truth about conditions here, tell them what the land is like, and what it will cost.
>
> In the old country the farmers work from 12 to 16 hours per day. There is no need of it here. He had an easier time than ever he had at home, and was able to put a few dollars in the bank, something he couldn't do there.

While here there is good land, with a good and easy market for the produce, handy to neighbours, with horses and barns ready for the settler and with land already cleared, there is an impression in the old country that Canada is a wild country overrun by wild beasts.

The hon. member for Southeast Grey (Miss Macphail) has just emphasized what has so often been emphasized in this house, that what we need is quality and not quantity.

The speech from the throne also refers to the fact that so far as the maritime provinces are concerned, the increases in subsidy recommended by the Duncan report will be continued this year. We firmly believe however, Mr. Speaker, when our claims are fully considered, that as a province we should receive much greater consideration in regard to subsidy allowance than we are receiving at the present time.

If the Prime Minister and his government in April 1926 had done nothing else but appoint the royal commission on maritime rights, they would be entitled to the gratitude not only of the maritimes, but of the whole Dominion; for a chain is only as strong as its weakest link, and our country between the two oceans is indissolubly bound together; otherwise the spirit and meaning of confederation could not possibly be carried out. It has been said that the maritimes believe that confederation must be held together by sentiment, by the strong influence of a truly national spirit, assured and supported by an equitable federal agreement. It is contended that if Canada is to become a nation imbued with a truly national spirit selfish sectionalism so often displayed in the past must disappear.

It was to bring about such a spirit, and at the same time see to it that the Atlantic provinces were placed on a level with other parts of Canada with respect to trade and commerce, transportation and all that enters into progress and development, that the Prime Minister and his cabinet conceived and carried out the idea of the royal commission on maritime rights. If the report of that commission will do nothing more than educate the people of the maritimes and the other provinces of Canada on this vital and all absorbing problem, then it will have done much in the way of benefiting trade and commerce and more closely cementing the bonds of confederation.

As was believed by all who understood the people down by the sea, the Duncan report confirmed the view that the faith and interest of the maritime provinces in the general prosperity of Canada are beyond question—for our people adhere sincerely to the opinion that the solution of the problems of our own and the other two provinces by the sea, should and can be found within the policies of this great Dominion.

The terms and conditions upon which Prince Edward Island entered confederation in 1873 contain the following significant provision:

> Efficient steam service for the conveyance of mail and passengers to be established, and maintained, between the island and the mainland of the Dominion, winter and summer, thus placing the island in continuous communication with the Intercolonial railway and the railway system of the Dominion.

Now, Mr. Speaker, it is well known, for it has often been stated and reiterated on the floor of the House of Commons, that this, the chief provision of the confederation pact so far as the island is concerned, has never been implemented according to the letter of the bond. So far as communication is concerned I believe that the government will carry into effect the recommendation of the Duncan commission, and provide another car ferry. Three years ago on the floor of this house I advocated that this matter should be dealt with, and I understand that the government for some time, through the Department of Railways, has been gathering information and making preparations for this desired improvement. We are sincerely hopeful that the Minister of Railways (Mr. Dunning) will see fit to place, if not in the main estimates at least in the supplementary ones, an appropriation for this much needed work. These facilities will have a tendency to keep our people in the province and will give us an added sense of security, more especially so far as trade and commerce is concerned; because, Mr. Speaker, you may produce the finest products in the world, but if you cannot market them in the best condition and when the demand requires, they will certainly depreciate in value. Before our car ferry service was installed, it has been proved from statistics that our farmers realized a little more then 50 per cent of the value in other parts of Canada for their produce, owing to the fact that they were compelled to ship everything out and glut the market before close of navigation. To-day we can ship out practically at all seasons, and with the fine quality we produce we are able to command excellent prices for our products, in the markets not only of Canada but the United States as well.

The fisheries of our province are worth annually well over a million dollars. The marketed value for the past few years has been: 1924, $1,201,772; 1925, $1,598,119; 1926, $1,358,934. The figures for 1927 are not yet available. Although the catch was about the

same as that of the preceding year, its value will be somewhat less owing to the lower prices prevailing. The lobster catch in 1927 was 62,233 cwts. as compared with 66,298 cwts. in 1926. This very important fishery is hardly holding its own. Prince Edward Island has adjacent to it fishing areas of great producing capacity, and there is no question that if better prices could be obtained such fisheries as those of cod, haddock, herring and mackerel could be largely developed.

The oysters of Prince Edward Island are, in quality, second to none, but the fishery has now dwindled to about a quarter of its proportions of years gone by. For instance, in 1901 the catch was 24,972 barrels, whereas in 1927 it was only 4,064 barrels. There is no question but that the beds were fished too heavily in years gone by, but the main cause for the reduction is that several years ago a disease broke out amongst the oysters in the far-famed Malpeque bay area, which resulted in the death of the oysters on all the beds in the bay proper. Oyster farming has proved itself just as feasible as land farming, and, where conditions are favourable, it has shown itself to be much more remunerative. The production of oysters under natural conditions about the island should leave no room for doubt that oyster culture would be successful there, if properly conducted. Keeping in view the areas that are regarded as suitable for oyster culture, there are the best of reasons for believing that, if properly conducted, the oyster fishery of Prince Edward Island could be made many times more valuable than it ever was, or is at the present time.

The situation is complicated by a division of jurisdiction, as while the regulation of this fishery comes under federal jurisdiction, the leasing of areas suitable for oyster farming is a provincial matter. It is understood that negotiations have been in process with the provinces for some time, whereby the full jurisdiction will be placed in the hands of the federal government, which has intimated that it is prepared to do what may be regarded as necessary to bring about an industry in oyster culture and cultivation, if such transfer of jurisdiction is made. I sincerely trust that this matter will receive the immediate consideration of the federal and our own provincial authorities.

As regards the fishing industry, I want to say how deeply indebted we are to this government for the appointment of the fisheries commission. The fishermen deserve every consideration from this house; they work hard and their hours are long and arduous. I do hope that when the report of this commission is submitted to parliament it will be given the most favourable consideration, because it is my sincere belief that our fishermen as a class have not in the past received that treatment which they should have been given.

In connection with our transportation problems, it is pleasing to note that the Postmaster General (Mr. Veniot) in cooperation with the Department of National Defence has placed in operation a weekly air mail service between Moncton and the Magdalen Islands. This service passes right over Charlottetown, and I think it would be a fine thing if the postmaster general could arrange to have any delayed mails which may be held at Moncton delivered promptly at Charlottetown. We are looking forward at no distant date to the establishment of a daily air service between the island and the mainland. This no doubt will assist the people of my province in some of their difficulties.

Our province never had crown lands in the general meaning of the term. Its lands were held by proprietors who had received them in grant from the British crown, and who leased them to settlers. In 1853 the legislature of the then colony empowered the government to purchase the land from the proprietors and to sell it outright to settlers. Before confederation approximately three-fifths of the land was bought from the proprietors either by the government, which paid for it out of current revenue, or by the tenants themselves.

One of the terms and conditions of our province's entry into confederation was:

> That as the government of Prince Edward Island holds no land from the crown, and consequently enjoys no revenue from that source for the construction and maintenance of local works, the Dominion government shall pay by half-yearly instalments, in advance, to the government of Prince Edward Island, forty-five thousand dollars per annum, less interest at five per centum per annum upon any sum not exceeding eight hundred thousand dollars, which the Dominion government may advance to the Prince Edward Island government for the purchase of lands now held by large proprietors.

Advances were drawn by the province against the sum allowed in the foregoing provision to nearly the full extent for the purpose of buying out the remaining absentee proprietorships and transferring the lands to their own settlers. In the nature of things, the transaction was a costly one to the province, from the point of view both of its administrative expense and of loss of interest as well. There was, in addition, a net cash loss of $190,000 on the principal outlay. The government submitted to the Duncan commission a detailed claim, showing a very considerable gross loss on these land transactions.

In a book called Confederation Documents I find that a conference was held on December 4, 1866, at Westminster Palace Hotel, London, England, of delegations from the provinces of Canada, Nova Scotia and New Brunswick. This conference was held for the purpose of arranging terms of union of those provinces. There were six members representing Canada, headed by Sir John A. Macdonald, Attorney General and Minister of Militia of Canada, five representatives from Nova Scotia and five from New Brunswick. At this conference the following resolution was passed and ordered to be forwarded to the Right Hon. the Earl of Carnarvon, Secretary of State for the Colonies:

That in case the colony of Prince Edward Island should hereafter desire to join the confederation of Canada, this conference recommends that the government of the confederation should deal with the question of compensation for the proprietary rights in the island in the most liberal spirit possible.

This resolution, Mr. Speaker, only goes to show that it was the desire of all parties to deal with our province in a fair and equitable way, and as the resolution states, in a most liberal spirit. That, I take it, is the spirit of confederation, and I firmly believe the people of this Dominion are willing to treat our province in this way.

We are sincerely grateful for the many recommendations made in the Duncan report which have been carried out. My hon. friend said that very few of these recommendations had been implemented. He is wrong. There are a few things which will have to be attended to in order to implement that report in full; two of these I have already alluded to, nomely, the increase in subsidy and the improvement of the car ferry service between Borden and Cape Tormentine, but we have yet a great deal to be accomplished so far as our railway facilities are concerned.

From the different parts of the province our people are crying out for better railway accommodation and also for branch lines in order that they may market their produce in a better and more efficient way. Our province is the most densly populated in the Dominion, and for this reason the transportation facilities should be increased. The hon. member for Queens (Mr. Sinclair) and myself have already presented a petition to the governor in council with regard to these branch lines, and I am hopeful that we shall receive some consideration. I understand that the member for Prince (Mr. MacLean) needs branch lines in his county, and no doubt he will later on present his case. In connection with a request for one of these branch lines, I have received a letter showing the amount of tonnage that might be expected on a section of the proposed railway. With the permission of the house I desire to put on Hansard this letter, which is signed by reliable men. It reads as follows:

In connection with the petition forwarded to the lieutenant governor in council, praying for a railway, from the petitioners of Rustico—North and South Cavendish, Mayfield and New Glasgow, we hereby submit the following estimate of business per year:

Exports

	Tons
Butter and cheese	135
Codfish	1,000
Lobsters	280
Mackerel	150
Herring	630
Smelts	50
Potatoes	22,500
Turnips	300
Hogs	500
Eggs	180
Poultry	685
	26,310

Imports

Laths and lobster supplies	280
Salt	300
Gasoline	140
Empty casks and rope, etc	30
Fertilizer	2,100
Coal	3,500
Merchanndise—	
(Dry goods, groceries)	1,330
	7,680

When the railway budget is before this house we shall take the opportunity of asking for a statement from the Minister of Railways (Mr. Dunning) regarding proposed railway improvements. I take the liberty of giving him this notice so that he may be prepared. On one branch of the railway system, known as the Murray Harbor line, we are running on the old narrow gauge, and this is a matter which should receive the serious attention of the railway authorities. The rolling stock is antiquated and out of date, and goods shipped on this particular line must in many cases be rehandled at Charlottetown, thus adding extra expense and damage to goods as well. I plead with the railway management that this matter shall receive immediate and careful consideration and, more than that, immediate action.

When all the recommendations, Mr. Speaker, of the Duncan report are carried into effect, no longer shall maritime rights be before the country. All that our people have asked for is justice under the confederation pact. This independent commission has acted with wisdom and discretion, and I am satisfied that the results will meet with the

approval of all. I believe the spirit of fair play and justice which actuates hon. members of this house will see to it that the people of my province shall equally enjoy all rights and advantages along with the rest of Canada, and so, Mr. Speaker, we shall have a happy, contented and prosperous people.

Mr. D. J. COWAN (Port Arthur-Thunder Bay): I desire, Mr. Speaker, to add my voice to those of other members who have joined in felicitating the mover (Mr. Ilsley) and the seconder (Mr. Beaubien) of the address in reply to the speech from the throne. This is the first time I have heard a speech moved and seconded in this house and I take it for granted that the words of commendation which have been uttered by hon. members are well merited.

At the outset I wish to make a few observations concerning a matter referred to in the speech of the hon. member for North Timiskaming (Mr. Bradette) regarding the Transcontinental railway. In the constituency I have the honour to represent there are several organized municipalities similar to those referred to by the hon. member. They do not obtain any taxes on property owned and operated by the national railways, and that gives rise to a peculiar situation. Some municipalities do collect from that railway which, prior to the formation of the Canadian National system, was known as the Canadian Northern. The town of Sioux Lookout, which is a thriving town in northern Ontario very close to the present development in the Red lake and Woman lake mining areas, is not in the fortunate position of obtaining taxation from that railway, and I desire to join with the member for North Timiskaming in urging upon the government, and particularly upon the Minister of Railways, that they take up this question at once and see to it that justice is done these organized municipalities.

In the speech from the throne reference is made to the successful inauguration of an air mail service between Rimouski and Montreal. Again I would suggest that, if that service is operating to the satisfaction of the department, an air service be established in the northern part of northern Ontario where it is impossible to secure railway communication and where the people, especially in the mining areas, are dependent for success and for the speedy transaction of business upon the early receipt and departure of mails.

There is one other matter not referred to in the speech from the throne but which the right hon. the Prime Minister (Mr. Mackenzie King) referred to and that was the development and construction of the international waterway, a subject by the way which appeals strongly to the people of the community in which I reside, namely, Port Arthur. It is particularly true that the towns and communities along the international waterway are interested in the development, and in the limited time at my disposal at this time I do not intend to go into any lengthy dissertation on that particular subject. Later during the session I hope to have an opportunity of saying a few words in that connection, but at this time I simply desire to say to the government that I think I represent the aspirations and thought of the people of the country when I urge that there should be no undue delay in pushing forward the construction of the international waterway. It will facilitate the movement of grain and other produce and traffic from the west, and now that the Welland canal is near completion—I understand it will be ready for use in 1931—every effort should be made to advance by all possible means the construction of the main portions of the international St. Lawrence waterway.

It is my purpose to-night to bring to the attention of the house a matter which I suggest has been entirely neglected by the government for the last six or seven years, a matter which pertains particularly to the district I represent. I think moreover it is of interest to the whole of Canada—I refer to what is known in our particular locality as the iron ore industry. I do not have to elaborate on this question at any great length, because I am sure that those who are readers of the newspapers and are interested in the development of that broad stretch of country between the east and the west of Canada are aware of the great development that is taking place there, and it is our hope that the iron ore industry in particular will receive attention from the government. The great area to which I refer, extending as you will notice from the Rouyn district of Quebec right through the Pre-cambrian shield of northern Ontario and through Manitoba to Saskatchewan, is the most highly mineralized area in the world. Geologists tell us that in that formation is found all the great mines that are in existence to-day. There is the Mysore in India, the Rand in South Africa; and that same formation is found in Norway and Sweden and in the northern part of Germany. Of this great Pre-cambrian shield ninety-five per cent is in Canada and five per cent in the United States, and in that five per cent in the United States we find the great Mesaba

range upon which to-day the prosperity of the United States in regard to steel production depends. Very little of that whole ninety-five per cent of the Pre-cambrian shield that exists in Ontario has been prospected. Surely if the proper means were taken by the government that whole area could be developed and we should find within it unlimited wealth.

I subscribe to the words uttered by the hon. member for Winnipeg South Centre (Mr. Thorson) when he stated that he hoped that in northern Manitoba would be found a continuation of the same mineralized area that we have in northern Ontario and northern Quebec. Apparently there is some ground for his belief that such is the case, for you will notice that in the last year or so the development of the Flin Flon on the boundary of Saskatchewan and Manitoba has been one of the greatest discoveries of this age. I sincerely hope that the area to which the hon. member for Winnipeg South Centre refers will enjoy equal prosperity with that of northern Ontario. Why do I bring this subject before the house? It is for this reason: There has been development in the past in this particular area. Up to 1921, of the iron ore smelted in Canada nearly thirty-three per cent was obtained from Canadian mines and smelted in Canadian furnaces, the balance coming from the United States. To-day there is not a single once of Canadian ore mined or smelted in Canada. Every ton that is brought in comes either from Newfoundland, which now provides at least thirty-three per cent of it, or from the United States. Surely the proposition does not require argument that we should develop our own resources. There is no doubt the mineral is there. There is no doubt that it should be developed.

You can apply the same reasoning to the pulp and timber resources of that north country. One thing which has helped Canada in regard to the balance of trade is the development of the pulp and timber resources of Ontario, and if the mineralized area of northern Ontario were developed to the same extent it should aid us in presenting a more favourable balance. The remedy I intend to suggest is not a new one; it has been adopted in the past. The government of the Right Hon. Sir Wilfrid Laurier introduced legislation in this regard in 1896. I heard one hon gentleman to-day state that Sir Wilfrid Laurier suggested that the twentieth century belonged to Canada. I think he must have had an idea that the Conservative party would be the leaders of the government during that century, and if they had been I have no doubt that this industry would not have been allowed to languish as it has, particularly during the last six years.

In 1898 a bounty of $3 per ton was made payable on pig iron, puddled bars, steel billets and ingots, and also a bounty of $2 per ton on pig iron produced from foreign ores. This did stimulate the industry, and progress was rapid. In 1904 the bounty was made applicable to the production of rolled round wire rods and certain other manufacturers of steel, and in 1909 to pig iron and steel produced by the electric process. From time to time the amount of the bounty was varied, and in 1912, the sum of $17,000,000 having been paid out in establishing the industry, all forms of direct government assistance were withdrawn. This ought to convince our friends to the right of the Speaker that if in that period of time to which I refer there was prosperity, surely the enactment of legislation now providing a bounty would make us more prosperous. In 1921 the last iron ore was produced in Canada and there had been paid out in bounties up to 1911 the sum of $17,000,000. For the next seven or eight years no further bounty was paid, and by 1921—which synchronized I think with the elections of that year—not another ton of iron ore was being produced in Canada. From that day to this there have been brought into Canada annually 750,000 tons of ore, one-third from Newfoundland and the other two-thirds from the United States. As I said a moment ago, it is a self-evident proposition that our own resources should be developed and manufactured into the finished article in Canada by Canadian labour.

The following companies have furnaces in Canada:

The Algoma Steel Corporation, Sault Ste. Marie, Ontario.—Has four furnaces with a combined capacity of 1,450 tons of pig iron daily. During 1922 they operated one furnace in January, two for the next seven months, and one only for the remainder of the year. This furnace is worked to only one-fourth of its capacity. It is situated within a few miles of where the greatest deposits of iron are found.

The Atikokan Iron Company, Port Arthur, Ontario.—Has one furnace of 175 tons daily capacity, which has been idle since 1911.

Canadian Furnace Company, Port Colborne, Ontario.—Has one furnace of 325 tons daily capacity.

Midland Iron & Steel Company, Midland, Ontario.—Has one furnace with capacity of 120 tons per day. Idle since October, 1919.

Parry Sound Iron Company, Midland, Ontario.—Has a furnace at Parry Sound of 90 tons daily capacity. Idle since October, 1919.

Standard Iron Company, Deseronto, Ontario.—Has one furnace of 60 tons daily capacity, that has not been in operation since June, 1919.

Steel Company of Canada, Hamilton, Ontario.—Is operating two furnaces with combined capacity of 750 tons daily.

The Canadian Steel Corporation.—Has erected at Ojibway, near Windsor, two large blast furnaces, but has not yet operated them.

As I have pointed out, millions of dollars have been invested in these furnaces, and with the cessation of the bounty formerly voted all of them are idle except one. Surely that is a striking statement to make in regard to an industry which should be one of the basic industries of Canada, and one which is so fraught with the possibilities of making this country one of the great manufacturing centres of the world. Because after all, steel and iron are basic products in the manufacturing industry in every country. The iron and steel industry is one which has helped to make the United States so exceedingly prosperous, and if proper methods were applied here, I have no doubt the same result would be secured in Canada.

Now the remedy which has been suggested for the present condition of affairs was suggested by the commission appointed by the Drury government in 1923. That commission brought in an unanimous finding and reported to the Ontario government in favour of providing a bounty on the iron ore mined and put through the furnaces of Ontario. They said, moreover, that at least one-half of the bounty should be paid by the Dominion, seeing that the Dominion would obtain direct benefit from the re-establishment of the industry. May I say that the Ontario legislative assembly has already put in force—I think they did it two years ago—legislation implementing that report, so that the province stands ready to-day to assist this government if it will only provide the other half of the bounty. It may be argued by those who are not interested in the development of our iron ores, or in the metal industries of Canada that such a bounty should not be granted. May I point out that bounties are already granted under various names and disguises? For instance, experimental farms are established at government expense to aid agriculture. Thoroughbred stock is distributed at the government's expense with the same object in view. To perpetuate the fishing industry hatcheries are maintained by the government at various points, and the credit of the province of Ontario is pledged for the production of cheap power. These are all bonuses of one kind or another, and I claim that the iron ore industry should be put upon the same basis.

I was very much struck with the remarks of the hon. member for Bow River (Mr. Garland) in favour of granting assistance for the transportation of Alberta coal. That is just as much of a bonus as the assistance I am urging in aid of iron ore. The hon. member is asking that Alberta coal be transported at a reduced rate. Such assistance as that should not be considered as anything else than a bonus. I have every sympathy for the eloquent member for Bow River in the address which he made. I believe that his appeal is sound, but I maintain that the claim I am now advancing is equally entitled to consideration. I do not think it is necessary to labour the subject any further. Where formerly hundreds of tons of iron ore were mined in this country, not an ounce is now brought forth. That statement in itself should be sufficient to commend the proposal I am making to the favourable attention of the government.

What benefits would result if the proposed aid were granted? In the first place the area to which I refer is sparsely settled; it extends from North Bay to the Manitoba boundary. Everyone knows that where a mining camp is established a town springs up immediately. Hon. members who have visited northern Ontario must have been struck with the Hollinger mine, which employs 3,000 people. That means support for at least 10,000 men, women and children. If only one mine were developed it would amply repay the government for the expenditure involved. It would create a more favourable balance of trade, because we are to-day importing from the United States and Newfoundland from two to three million dollars of iron ore per annum. Moreover the revival of this industry would provide employment for our own people. We have heard a great deal in regard to immigration. I am not so much concerned about immigration, although we need an increase of population. What I am interested in is the conservation of our population, the providing of an opportunity in Canada for the employment of our own people, retaining in this country those people who to-day are going to the United States on account of the pay cheque there being larger and more likely to be realized.

So I say that in this northern country mining must play no small part in the general

plan of Canada's development. Providing our own iron ore from our own resources is a splendid objective in itself, but even that may be considered only as a means to an end if we can colonize and develop our vast northern territory. In doing so we shall assist in solving our railway problem and in bridging the gap which exists between eastern and western Canada. Hon. members know very well that by developing our iron mines the farming community will be greatly aided because it will establish a profitable market for the commodities produced on the farm, to say nothing of the all-round development to which it will conduce. Therefore, Mr. Speaker, this is a matter which in all fairness the government should seriously consider in order that they may re-enact the legislation which existed from 1896 to 1921.

Mr. A. A. HEAPS (North Winnipeg): Two-thirds of the group to which I have the honour to belong have already spoken in this debate, and the only excuse I have for rising at this particular time is the fact that we represent a much larger number of electors than might be inferred from our numerical strength in this house. In the last federal election almost 50,000 electors throughout the Dominion cast their ballots for Labour candidates, so that hon. members can understand how few they are represented by, when there are only three Labour representatives in this house.

Since the opening of the session I have sat very patiently listening to speeches delivered by hon. members from all parts of the Dominion. I have listened to members from the maritimes outlining the conditions that exist in that part of the country. I have listened to their tales of woe and of the bad conditions that prevail there. The mining industry is to-day in a very bad state in Nova Scotia and in other parts of eastern Canada. The men are living there by the grace of their friends and whatever they can get from other sources. The mines are operating two or three days per month, and even at the present time a royal commission appointed by the Nova Scotia government is investigating two of the mines in order to find out why they are not operating on a better basis. That goes to show that the Duncan report of 1925 has not proved to be a solution of the mining problem in that province; conditions to-day being just about the same as they were prior to 1925.

I have listened this evening to the story of conditions in the fishing industry in Nova Scotia. I should like to have heard a little more from the hon. member for Queens-Lunenburg (Mr. Ernst) as to why the fishermen there receive approximately one cent per pound for their fish and by the time it comes to the consumer the latter has to pay anything from fifteen to thirty times as much for the same commodity.

I have also listened to members from Ontario telling us about the bad conditions that exist in that province, the large amount of unemployment in Toronto for instance, and the bad conditions among the farming community in the southern part of Ontario. I have listened to-day to the Minister of Immigration (Mr. Forke) telling us about the bad conditions amongst the farmers in Manitoba. The provincial government of Manitoba have even asked the Dominion government to assist in giving relief to the unemployed in the urban centres of that province. From Saskatchewan we have heard similar stories regarding the conditions of the farmers in that province.

When we come to Alberta we have heard similar stories from hon. members who represent that province in this house. We have been told about the bad conditions of the miners, about the unemployment in the cities, and the demand for a reduction in taxation on the necessaries of life. I listened the other day with a good deal of interest to the hon. member for Bow River (Mr. Garland) who discussed the coal question and who demanded a national fuel policy. The same demand for a national fuel policy has been made by members in other parts of the house, but I have not yet heard it stated what they mean by a national fuel policy. Do they mean the nationalization of the mines in this Dominion, or do they mean something else?

I desire to make one or two remarks in connection with the Alberta coal situation, because one of the large consumers of Alberta coal is the province of Manitoba. Ten years ago Manitoba was using very little, if any, Alberta coal. At the present time, as a result of the efforts of the Alberta government and efforts made in other directions, the domestic consumption of Alberta coal in Manitoba is approximately ninety per cent of the total. For that reason any action that is taken by the Alberta government or by this house in regard to the coal question, and particularly the Alberta coal question, is bound to be of interest to the people of Manitoba. The freight on coal is something which the people of Manitoba are interested in, and if the Dominion government or the railways are going to give a rate of $6.50 per ton on coal that is moved from Alberta right down, for

instance, into the centre of Ontario, then the people of Manitoba will expect equal treatment to that given to the people of that province. If a ton of coal can be moved for $6.50 from Alberta to Ontario, there is no reason why it should cost $4.50 to move a ton of coal from Calgary to certain parts of Manitoba.

Alberta has thought fit at a recent session of the legislature to impose a tax of five to nine cents per ton on all coal mined in that province. So far it has not been able to collect the tax because certain actions have been taken in the courts to test the legality of that legislation. As one representing the province of Manitoba I protest against legislation of that character. I cannot understand how a Farmer government, who have Farmer representatives in this house and who make speeches here objecting to taxing the necessities of life, can themselves tax a necessity of life for people in other parts of the Dominion of Canada. That tax of five to nine cents per ton which the Alberta government is endeavouring to impose upon coal mined in that province will add twenty-five cents per ton to every ton of coal sold, and will make it just so much more difficult for the mines of Alberta to compete with the mines of the United States. On the other hand the Alberta government come to the Dominion authorities and ask them to reduce freight rates. Before they do that they should take every possible step to see that Alberta coal is mined in the most efficient way and given to the people at the lowest possible rates.

Another thing I should like to see the provincial government of Alberta do is this: For many years efforts have been made to find out the actual cost of mining a ton of coal in many of the Alberta mines, but so far those efforts have been unsuccessful. Apparently nobody can tell us exactly what it costs to mine a ton of coal in Alberta. It appears from the knowledge I have obtained that an obstacle has always been created when the question is one of getting this information from the proper authorities. I believe, however, the cost of coal at the mine mouth at Alberta is approximately $4.50 per ton, and I want to know why coal mined under similar circumstances in the United States, where wages are slightly higher than they are in Alberta, can be mined for one-half the cost in that province. The question arises in my mind whether they are using the most efficient methods for the production of coal in Alberta. I think when people in other parts of the Dominion are called to the assistance of Alberta, they ought to be given these facts, and it would not be amiss if the provincial government of Alberta attempted to furnish these facts to the people of the Dominion.

As I stated a few minutes ago, I have listened to speeches which various hon. members have delivered describing conditions existing in their respective provinces, and with the exception of a few speakers from the government side not a solitary member has spoken of the prosperity which, it is claimed in the speech from the throne, prevails at the present time in Canada. Each member has got up and told of the conditions that prevail in his own particular province, and it is very hard for me to reconcile the speeches made in this house, coming from the government side, from the opposition side and from the group in this corner, with the talk of prosperity in the speech from the throne. If there is prosperity, then I am sure that it is not reflected in the speeches that have come from every part of this chamber.

The speech from the throne deals very little with the future; it deals with the past. It is not a speech that looks forward; it is a speech that looks backward. I believe that statesmanship, as a rule does not take the backward view, but the forward view.

The things that are in the speech from the throne I do not regard as of great and vital consequence. The important part of the speech refers to the appointment of ministers to France and Japan. I am sure that the unemployed of Winnipeg, the semi-employed miners of Nova Scotia, the fisherman who gets a cent a pound for his fish, and the unemployed in all parts of this Dominion, will feel that there is very little to rejoice over in the announcement that Canada is going to send ministers to France and Japan. That will neither fill their empty stomachs nor tell them where their next meal is to come from.

One omission from the speech from the throne, involving a matter which I think is of even greater consequence than the question of the appointment of two ministers abroad, is any reference to the reason why the Canadian government broke off friendly relations with soviet Russia. Both this session and last session we heard a great deal about the status of Canada. I am no great specialist on that question and do not understand it as deeply as some hon. members of this house do. But I am given to understand that one reason why the Dominion government broke off relations with Russia was because Great Britain had done

so. The only excuse of this government, if I remember correctly, was that it had followed the example of Great Britain. During the last session of this house we were told that Canada had achieved a new status at the last Imperial conference, and yet almost immediately that new status had been achieved, at one of the very first opportunities the government had of showing that new status, it meekly followed the example of the British government. There was no reason why Canada should have broken off relations with Russia; and besides, I think it was a rather dangerous policy for the government to pursue, for this reason: Supposing within the very near future another government comes into power in Great Britain—as is very likely; for I think it is generally admitted that the only reason the Baldwin government is being kept alive is that it wants to save funeral expenses—supposing a new government comes into power in Great Britain, is the Canadian government going to follow that new government in its foreign policy? If it is, then this government is likely to change its attitude every few years. The government ought to realize that in Great Britain at the present time there is a distinct cleavage between the two major parties in the House of Commons as to what their foreign policy and their relations with the other powers of the world should be.

It perhaps would be unfair if, while I am on my feet, I did not say a word about the Conservative party convention in Winnipeg last fall. I come from that city, and I was naturally very much interested in that convention. I must apologize to many of my friends in the Conservative party for the fact that I was not in Winnipeg at the time; I happened to be out of the city. Had I been there I should have been glad to show them some of the interesting things in Winnipeg and the province of Manitoba. However, I am interested in the platform the party drew up, and also in the fact that a new leader was selected. I was interested in the fact that the Conservative party had put labour legislation in its program, but I was sorry that its program of labour legislation made no reference to the repeal of that anti-labour legislation of the year 1919. I think it would have been quite appropriate if in the city of Winnipeg such a plank had been put in the forefront of the Conservative party's platform.

I want to congratulate, if I may, the new leader of the Conservative party (Mr. Bennett). I have been very much interested in the hon. member, interested long before I ever dreamed that I would be a member of this house, and I am rather surprised that he himself did not take a part in asking the Conservative party on that occasion in Winnipeg to do away with that legislation which this house so hurriedly passed in 1919—in the space I believe of about twenty minutes. I know the hon. leader of the opposition is a man of profound political thought and of deep religious convictions, and it is to me most surprising that one of such firm convictions should still in the year 1928 be willing to put a man into the penitentiary because he quotes certain sections of the Bible—I refer to certain portions of Isaiah. I am surprised that a man of such a democratic mind as the leader of the opposition should still wish in the year 1928 to put a man into the penitentiary because he desires to read certain kinds of books which can be found on the shelves of almost any library in the Dominion of Canada. That is the legislation which we have sought to repeal in this house—in fact the House of Commons has in three successive sessions passed a bill to repeal it but the bill has been rejected the same number of times by the other house.

I notice one other matter that is absent from the Conservative party platform, and that is the very good suggestion that the hon. member for West Calgary (Mr. Bennett) himself made in the house last year during the budget debate. On that occasion he suggested the conscription of money at four per cent; there is no such plank, however, in the Conservative party platform. If at any future time it is the fortune of the Conservative party to be the dominant party in this house, I trust that that particular suggestion of its leader will be put into effect.

There is one other statement— and I regret it exceedingly—that has been made by the hon. leader of the opposition in the course of the many speeches that he has made since he became the leader of his party. He has referred to the great asset that wealth is to a man in public life. I do not think wealth does give or ought to give priority to anyone who holds a responsible position in the public life of the Dominion of Canada. When the hon. leader of the opposition claims that the wealth he is fortunate enough to possess gives him a sort of prior claim to a position of responsibility, I think he is doing an injustice to a great many members of this house who are not so fortunate as to be possessed of any wealth at all. Wealth should give no prior rights to high office. In fact if we look at history we find that there have been very few really great men who have been wealthy and very few wealthy men who have been really great.

It has been admitted by the leader of the opposition that we are prosperous in this Dominion. I wonder who enjoys this prosperity. After we have listened to speeches by hon. gentlemen from all parts of the country no one will claim that the great masses of the people have benefited greatly by this so-called and one-sided prosperity. I believe the leader of the opposition is a director of one of the leading banks in this country, and a few weeks ago I read the annual report of this particular bank, covering a whole newspaper page, while at the same time, in the inside columns of the same eastern newspapers which carried this report, there appeared the story of an offence committed by an employee of this very bank. This particular employee, in his less thoughtful moments, had taken a few hundred dollars that belonged to the bank. He was a young man who had previously enjoyed an excellent reputation at the bank. Naturally he was arrested, and taken to court. He was about twenty years of age and it appeared in the course of the proceedings against him that prior to the Christmas festivities, while reflecting on the poverty in his own home, he was driven to desperation and took this money so that his own family might enjoy some of the good things which are customary at that time of the year. Then it came out that this young man, who occupied a fairly responsible position with the bank, was receiving $40 a month. Here we have in one column of a newspaper the report of the prosperity of this bank, while we find that the employees who have helped to build up these huge surpluses are receiving such miserable salaries as $40 a month. Bank presidents will speak of prosperity, but this man who was receiving $40 a month must be typical of thousands of others in similar institutions who are living on a wage barely sufficient to keep body and soul together.

The leader of the opposition has made one statement with which I am thoroughly in accord: he says he wants an educated democracy. I am prepared to go a long way with the hon. gentleman in an effort to reach that objective, and I feel sure that when we have attained it, when we have an educated democracy in Canada, there will be little left of either the Conservative or the Liberal party. I would suggest to the leader of the opposition, interested as he is in democracy, that perhaps in the future he might make a tour of the Dominion and address the masses of our people, telling them something about the democracy of Canada. I would venture a suggestion as to the nature of his text. The first question I would have him speak on is this: Who owns the wealth of Canada and who creates it? And secondly, I would suggest that he discuss the question of democracy in industry. In the third place, I would ask him to give some consideration to the question of a democratic second chamber.

This naturally leads me to a reference to the other chamber, which we are not allowed to mention directly in this house. Some years ago there was something in the Conservative platform about reforming the other chamber; I noticed in the Winnipeg platform recently formulated nothing to this effect. During the last election the Liberal party had something to say about reforming the Senate, but very little is said about that subject at this session of parliament.

Mr. BOURASSA: It is reforming itself.

Mr. HEAPS: My hon. friend is fairly correct, but I fancy that if there were a reversal of parties in the government of the country there might be a cry for reform on the part of those now in opposition. I do not think that the other chamber was ever intended to be a democratic institution, for I find in section 3 of the act creating it that this provision exists: that no man—no mention is made of women, because the appointment of ladies to that chamber has not yet been decided upon—shall become a member of that assembly unless he has a qualification to the extent of $4,000 in property. Now, bearing in mind the fact that this qualification was embodied in the act over sixty years ago, we can understand that the other chamber was never intended, as I say, to include any poor man. Four thousand dollars' worth of clear titled land in 1867 meant that a man must have a very considerable acreage before he could be elevated to the other chamber in that period of Canada's history.

Canada at the present time is governed or partly governed by two houses. In one house we have a democratic body elected by the people of the Dominion, while on the other hand we have an autocratic assembly, an irresponsible body which can do as it pleases. It may veto legislation passed in this house just as often as it likes and yet we do not seem to be doing anything to ensure that the express wish of the people shall be carried into effect as the law of the land. I do not believe that in any country in which there is an elective system you will find a body appointed in the same way as our second chamber is in Canada; and sooner or later this other chamber of parliament will have to conform to the will of the people. At the

present time there seems to be a disinclination on the part of the government to take any action in this regard although they said last year that this question would be dealt with. Well, it was partly dealt with by the provincial conference, and what has the conference resulted in? The work of the conference has been referred to in the speech from the throne, and while it is suggested that it was a happy gathering, I cannot understand why, if everything went so smoothly, it was considered necessary to hold it behind closed doors. Personally I do not like public bodies meeting behind closed doors under any circumstances, and the people of Canada were so much interested in the conference that the government might well have given the fullest publicity to its transactions. The conference was called originally for the express purpose of discussing the question as to what should be done with the second chamber, and now we find that no action is being taken merely because certain provinces say, forsooth, that they are not in favour of having anything done in the matter. In my opinion this House of Commons is just as representative of the people of the Dominion, under the British North America Act if you will, as are the nine provincial governments, and it seems to me that the conference has done more harm than good.

I should like to see this government take a bold stand on the question. Why could they not have proposed a dominion-wide referendum to ascertain the will of the people in regard to the Senate? There is nothing to be afraid of. The leader of the opposition, with his democratic feelings, could not possibly object to such a referendum in order to determine this particular question. At any rate, if the question were submitted to the electors there is no doubt at all in my mind as to what would be the outcome. One of my colleagues from Saskatchewan observed that the new members of the Senate are pledged to reform. Probably about eight or nine members have been appointed to that chamber under that pledge. But when you remember that there are ninety members odd in the other chamber—and some of these gentlemen have the happy faculty of living to a hundred and over—you can see how long it will take before pledges are received from them all.

The situation in the upper chamber to-day is such that it deserves some publicity. Thirty-two members of that honourable body are of the legal profession—thirty-two out of ninety-six. Twenty-five are directors of financial corporations; eighteen are merchants and manufacturers; six are medical men and eight are connected with the newspapers. The man who suggests that this body reflects the sentiments of this country is grossly mistaken and very far from the facts. Personally I am not in favour of a second chamber, but if there is to be one I think it should in some degree reflect the will of the people. It is all very well for hon. members to say that we must stand by the British North America Act. Let me say this in regard to that act: The British North America Act was made for the people of Canada and not the people of Canada for the British North America Act; and if the act does not conform to conditions as we find them in the country to-day, then we ought to amend it so as to bring it into conformity with existing conditions. Some of my hon. friends from the province of Quebec may be alarmed about any proposed amendments to the British North America Act. Let me assure them, as one member from the west, that there is no intention on the part of our western people to deprive the people of Quebec of any rights which may be guaranteed them under the act. Personally I should be entirely opposed to any attempt on the part of this house to infringe on any rights extended to the early settlers of this Dominion. At the same time, it would be unfair for any province, jealous as it may be of its own rights, to stand in the way of any attempt to amend the act to bring it more into conformity with modern conditions. There is nowhere in the world, so far as I am aware, a second chamber that has the powers which are enjoyed by the second chamber in Canada. It has been sometimes compared to the British House of Lords. But those who tell us that we should stand by the British North America Act overlook the fact that not more than seventeen years ago the British act governing the House of Lords was amended in respect of the relations between the two houses of parliament in Great Britain. In 1911 when the House of Lords attempted to veto certain legislation passed by the Commons, after they had rejected the budget, what happened? Immediately the Liberal Prime Minister of that day obtained from His Majesty a document empowering him to appoint to the House of Lords as many peers of the realm as might be necessary to over-ride the decision of that house, and that very threat to appoint several hundred gentlemen to the upper house disposed the lords to pass the measure which they had dared to reject. It took away their power of absolute veto. But we have no such right in Canada; we may pass legislation in this house a hundred times and have it re-

jected as often by the senate, if that body so wishes. The government cannot appoint one extra senator to carry into effect the wishes of the people; no appointment can be made except as a vacancy occurs. Gentlemen in this house, particularly my friends of the Conservative party, talk a great deal about following the example of Great Britain. But surely they must realize that our second chamber enjoys far greater powers than are exercised by the House of Lords. If they want to follow Britain's example—and I would suggest that they do in this regard—let them do as was done in Great Britain seventeen years ago: let them take away the right of veto from the second chamber.

I see that my allotment of forty minutes is up and I have no desire to exceed it. There are other matters which I should like to have dealt with but of course the limitation works in my case precisely as it does in others. I shall therefore conclude for the present and on some other occasion I may take up the subject where I now leave off.

Mr. LEO K. LAFLAMME (Montmagny) (Translation): Mr. Speaker, I crave the indulgence of members, as it is my first attempt to address this house. As representative of the county of Montmagny, I wish to make a few remarks on the speech from the throne. I heartily associate myself with the members who have preceded me in this debate, to congratulate the mover and seconder of the address in reply to the speech from the throne. Both performed their task in a praiseworthy manner and the congratulations which were extended to them were well deserved.

First, the speech from the throne mentions the prosperous state of the country. By this it wishes to convey the idea of the general prosperity of our Canada. As stated by the hon. member for Hants-Kings (Mr. Ilsley), if prosperity is not everywhere felt, in each and every riding represented by the hon. members of this house, to the extent that we could say that conditions are very good and even of the very best, nevertheless we cannot deny that the country as a whole is certainly prosperous. If prosperity is not evident everywhere, if all and each of us can point out certain weaknesses in special cases, due to the fact that we meet in a house where every one comes from a different riding, and where also we must look after the general business of the country, we cannot however refrain from really agreeing upon that statement contained in the speech from the throne: that our country is prosperous and has been so during the last fiscal year of 1927. The statements contained in reports from bank presidents and various corporations, not only are optimistic but clearly testify that the country has enjoyed an unparalleled prosperity during this last year. I shall not further emphasize this point as the leader of the government has clearly exposed the situation, and has made us realize the optimism which every well thinking Canadian should feel when he considers the general conditions existing in our country.

Some have asserted that we had no reason to congratulate ourselves upon the year 1927 being the occasion of the celebration of the sixtieth anniversary of Canada's confederation. This event was an excellent opportunity for Canadians to look back somewhat on the past. In all parts of the country we celebrated this anniversary, because we felt the need of commemorating what our predecessors had done for our country. It was well to recall the work done by the advocates of British institutions, it was necessary to remind the present generation, the young people, those who will follow in our footsteps, of the work accomplished by our forefathers in the various spheres in which they were engaged; it was also right to recall the struggles that our forefathers had to undergo for the vindication of responsible government. Especially within these last years this topic has been discussed in various ways and form; it was therefore well to recall these heroic struggles for the conquest of responsible government in order to obtain in Canada the same rights as British subjects enjoy in England.

These celebrations were also an opportunity for many to recall that the pioneers of this country came from the province of Quebec. On that occasion of July 1st, 1927, the opportunity presented itself to point out that those who had laid the corner stone of the first edifice in a great number of Canadian cities, were French or descendants of Frenchmen. At a time when we were speaking of unity and ties which should exist between the various races, we from the province of Quebec could not wish for a better opportunity to recall that those who cleared the land, the pioneers of our country, were our ancestors, in order to impress upon those who to-day live with us in this vast Dominion, that when we display our true and sincere love for the Canadian soil, it is because we really feel at home and are conscious that we took root here before any other.

A question of the utmost importance which should be borne in mind by Canadians, is that of immigration, as mentioned in the

speech from the throne. The hon. members who have preceded me in this debate, for the most part discussed it from their own viewpoint. This question of increasing our population raises a problem which interests every one of us. We should sincerely strive to build up our country, to increase its population so as to lessen the burdens which we are forced to carry, and we should also develop the natural resources of Canada. If we are to have an increase in population, we certainly should all have at heart that this increase reflects on the general welfare. If we find it necessary to bring in immigrants from foreign countries, Europe, the British Isles and elsewhere, not only should we insist that they be physically fit and sound of mind, but we should also seek to induce people who can really become Canadian citizens and think like Canadians that are now living in this country, so that they may be assimilated and join us in the ascending march towards progress. The problem is indeed a very interesting one, and here the question arises whether we should not give preference to those who were born in our country, who are more likely to remain here and foster its development. We should endeavour to solve the problem by doing our best to keep at home those who are born here. This immigration problem is also linked with that of emigration. Canadian born citizens have a natural desire to remain here; they wish to develop and build up this country which is dear to them. We should therefore find the means to keep this desirable population here, at least all those among our people who wish to settle in this country so as to further its expansion. Individual wealth must certainly promote that end, in fact it does contribute to the general wealth of a country, if we have the right kind of people to develop our natural resources. The latter will be unlimited because people will interest themselves and they will thus help most effectively in the general development and increase of the wealth of our country.

Surely, I shall be permitted, Mr. Speaker to comment briefly on the status of Canada For many decades past, Canadians' ideal was to reach the most autonomous state, almost independence. This idea has made great headway within these last years, and all of us look forward to the most complete autonomy possible. In the course of his travels through England, France and the United States, Sir Wilfrid Laurier himself expressed these views openly. He foresaw, in a more or less near future that the ties between Canada and England, and those between the British dominions and England, would gradually be loosened, and that all these dominions would one day obtain complete independence. The Liberals have always endeavoured to spread this autonomous idea, we cannot do otherwise since the Liberal ideals tend to greater freedom, especially since the war —this being a natural sequel of Canada's part in the treaty of Versailles together with the other dominions—and more so after England had practically acknowledged them as sovereign states. At the Imperial conferences of these last years, the delegates of the various dominions, as well as England's representatives, wished to emphasize and establish more and more our ascendency towards the most complete autonomy. This autonomous idea has made headway, especially since the dominions took part, as I mentioned a few moments ago, in the peace treaty of Versailles; the force of events has brought on this situation. England does not wish nor can it prevent the spread of this ideal, since she is herself the pillar of the free British institutions. I am however astonished that the hon. leader of the opposition (Mr. Bennett), and also the hon. member for St. Lawrence-St. George (Mr. Cahan), wish to impede somewhat the enthusiasm of Canadians for this conquest of complete autonomy while awaiting independence. If we take the time to consider the texts of international law, indeed it strikes us that they do not fit in with the present state of the dominions. The autonomy which they have acquired up to now, if it is not quite independence, has certainly created some embarrassment in the interpretation of international law. In certain spheres and in many aspects they are looked upon as sovereign states; as for instance, they can negotiate their own treaties through a minister of their own, without the assistance of an English ambassador. One must bear in mind that always, in regard to international law, nations have proceeded by evolution and when a situation had materialized, the wording of the international law conformed itself afterwards with the existing situation.

According to some people, we have no cause to rejoice in our status because there are still laws in force which curb our freedom. Well, if we have not really attained our ideal, let us take advantage at least of what is happening so as to keep before the public eye our imperial relations, and thus create a strong feeling in favour of such an ideal. Let every Canadian familiarize himself with the thought of a possible independence so

that, when the time comes, we will have no fear of accepting the responsibilities of the accomplished fact.

Mr. BOURASSA (Translation): Hear, hear.

Mr. LAFLAMME (Translation): Gradually, we shall acquire a national spirit and be proud of belonging to our country—a great, prosperous and more united Canada—because we shall have all worked for its expansion, its material and economic development, its conquest of complete autonomy, and its rank among the nations of the world.

On motion of Mr. Cantley the debate was adjourned.

On motion of Mr. Robb the house adjourned at 10.35 p.m.

Tuesday, February 7, 1928

The house met at three o'clock.

RAILWAY BELT WATER ACT

Hon. CHARLES STEWART (Minister of the Interior) moved for leave to introduce Bill No. 20, to amend the Railway Belt Water Act.

He said: This is the same bill that was passed by the Senate last year. In the dying days of the session it came before this house but, on behalf of some of the members from British Columbia who did not happen to be present at the time, the leader of the opposition of the day took exception to its being proceeded with, urging that the absent members wished to discuss it. The proposed bill seeks to amend two sections of the act of 1927, making it easier for the commissioner of water in British Columbia to administer the Water Act in the railway belt. A full explanation is contained in the marginal notes of the bill.

Motion agreed to and bill read the first time.

GOLD AND SILVER MARKING ACT

Hon. JAMES MALCOLM (Minister of Trade and Commerce) moved for leave to introduce Bill No. 21, to amend the Gold and Silver Marking Act.

He said: The object of the bill is to change the name of the Gold and Silver Marking Act to the Precious Metals Marking Act so as to include platinum, which recently has come into general use in the jewellery trade. It is also proposed to give the governor in council authority to make regulations covering the quantity and quality of material that may be used in what are termed plated articles.

Motion agreed to and bill read the first time.

POST OFFICE ACT AMENDMENT

Mr. T. L. CHURCH (Toronto Northwest) moved for leave to introduce Bill No. 22, to amend the Post Office Act (newspaper ownership).

He said: The object of the amendment is to provide for a uniform law, as in the United States, England and Australia, requiring sworn semi-annual statements from all newspapers, magazines, trade journals and other periodicals which contain articles designed to influence public opinion, giving the names and addresses of editors, owners and stockholders. There is a proviso that this act shall not apply to religious, fraternal, temperance, scientific or other such publications. The names of small stockholders are not required to be given.

Motion agreed to and bill read the first time.

THE MEXICAN SITUATION

On the orders of the day:

Hon. J. W. EDWARDS (Frontenac-Addington): I desire to ask the Prime Minister a question the answer to which I have no doubt will be of interest to many people in Canada. It is this: Has this government, by direct request or by correspondence, conversation or negotiation with the government of Mexico or with any representative of that government, intimated its desire that the consul general for Mexico in Toronto, Senor Medina Barron, shall be recalled?

Mr. SPEAKER: In view of the importance of the question I think the hon. gentleman should give notice.

Right Hon. W. L. MACKENZIE KING (Prime Minister): I agree entirely with you, Mr. Speaker.

Mr. EDWARDS (Frontenac): No doubt.

UNEMPLOYMENT IN NOVA SCOTIA COLLIERY DISTRICTS

On the orders of the day:

Hon. P. J. A. CARDIN (Minister of Marine and Fisheries): A few days ago the hon. member for Cumberland (Mr. Smith) referred to certain information he had obtained in regard to the use of American coal for bunker purposes on Canadian vessels. I promised to make inquiry into the matter and I am now in a position to state that the information submitted is absolutely incorrect. The policy of the department has always been to use Canadian coal for bunker purposes on Canadian vessels, and this policy has been followed more particularly in connection with the steamships Lady Laurier and Arleux, to which reference was made in the despatch in the newspaper and in the telegram read by my hon. friend. These two vessels have been using Canadian coal for bunker purposes and were so doing at or about the date indicated in the telegram and in the reference contained in the newspaper.

Mr. R. K. SMITH (Cumberland): Will the minister have the matter thoroughly investigated, in a formal manner—

Mr. SPEAKER: Order.

Mr. SMITH (Cumberland): Am I not permitted to ask a question?

Mr. SPEAKER: Yes, but not to argue the matter. I understand that the minister has answered a question asked by the hon. member the other day, and no argument may ensue.

Mr. SMITH (Cumberland): But am I not at liberty to ask another question?

Mr. SPEAKER: Yes, another question.

Mr. SMITH (Cumberland): That is what I am doing. Will the minister have the matter thoroughly investigated in a formal manner, rather than submit a statement of the circumstances, by wire exchanged between him and his officials. I feel sure it would be much more satisfactory to the people of Nova Scotia if such a formal investigation were held.

Mr. CARDIN: I shall have no objection at all to making an investigation of any kind if my hon. friend will give the names of those who are charging the government with not following the policy of using Canadian coal.

GOVERNOR GENERAL'S SPEECH

ADDRESS IN REPLY

The house resumed from Monday, February 6, consideration of the motion of Mr. Isley for an address to His Excellency the Governor General in reply to his speech at the opening of the session.

Mr. THOMAS CANTLEY (Pictou): Mr. Speaker, it is so seldom that I find myself in a position to return thanks to this government that I take the first opportunity this session to thank them for the compliment done my native province in selecting one of the younger members from Nova Scotia to move the address in reply to the speech from the throne. The member for Hants-Kings (Mr. Ilsley) spoke fluently and with considerable self-assurance, not even hesitating to cast some reflections upon the premier of the adjoining province of New Brunswick for certain statements made by him with which the hon. member told the house the great bulk of the people of Nova Scotia were not in accord. I think the statements made by the premier of New Brunswick on the occasion referred to met with the cordial support of the great bulk of the intelligence of Nova Scotia.

Again, the hon. gentleman in referring to the outcome of the Liberal-Conservative convention at Winnipeg last November stated when referring to the resolutions passed at the convention:

> This I cannot help thinking is an indication that even the opposition is coming around, getting into line, and that henceforth it will be more constructive, more truly national in its efforts and activities.

This, Mr. Speaker, is a striking example of the ignorance and arrogance of youth. More constructive, more truly national indeed! May I ask him which party and what party leaders brought about confederation? Which party in 1869 bought the lands of the Hudson's Bay Company and opened up and largely peopled the great lone spaces of the northwest? Which party built the Intercolonial railway? Which party in 1870 brought the province of Manitoba into the Dominion? Which party built the Canadian Pacific railway? Which party conceived and executed the Grand Trunk Pacific railway scheme?—and when it failed and threatened to bankrupt the national credit, opposed taking over the road and its incorporation in a national system of railways?—a system of which our friends opposite are now so proud? Which party advocated unrestricted reciprocity? Which party advocated continental free trade? Who played the "Linger Longer Lou" comedy in Washington? What was the Liberal election cry of 1911? Which was the more constructive, more truly national? Canadian history will say that beyond all question the Liberal-Conservative party was always the most constructive, the most truly national of any party in Canada. May I advise the hon. member

to go and ask his grandmother as to what is what and something of the history of his country.

From the applause which followed the eloquent address of the seconder the hon. member for Provencher (Mr. Beaubien), I have no doubt that he acquitted himself with much distinction, but unfortunately for me I was not able to follow him, as I have not the privilege of being acquainted with his mother tongue.

Now, Mr. Speaker, I desire to make the amende honorable as regards a statement made by me in this chamber last session. I am sorry that the Prime Minister (Mr. Mackenzie King) is not in his seat, for I should like to make this statement in his presence. On that occasion he was not in the house, and I regretted it at the time. I refer to what I said on April 12 last when I attributed to the right hon. gentleman a declaration in 1921 as to his policy on coal. On Friday last I quite accidentally discovered that that declaration was not made by him, but by Mr. Hance Logan, the then Liberal candidate in Cumberland; and while it is true that the statement quoted was made by Mr. Logan and not by the Prime Minister, the Prime Minister then occupied a seat on the platform with Mr. Logan, and as far as I know he did not in any way dissociate himself or his party from the policy then enunciated by Mr. Logan, a policy which was calculated to win the support of the electors of Cumberland. If any hon. gentleman cares to turn up the file of the Halifax Chronicle of October 6, 1921, he will readily see how I was led into the error referred to. May I assure you, Mr. Speaker, and the house that I attributed the statement to the Prime Minister in good faith, and I hope hon. members will acquit me of any wish or desire to profit by misrepresentations of any kind. To do so would in my opinion be dishonourable, and may I add repugnant to my sense of decency in debate. Therefore I take the first opportunity of apologizing to the right hon. the Prime Minister for having unwittingly attributed to him a statement made by Mr. Logan, his companion on that occasion.

Several members speaking from this side of the house who have already taken part in this debate have paid their respects to the speech from the throne in language which can hardly be considered complimentary. As to the marked prosperity of the country claimed by our friends opposite, may I say that our thanks are due to the Lord God of the Harvest, not to the government. For the past three years Canada has been blessed with abundant harvests, the proceeds of which have done much to bring prosperity to the country, the results of those abundant harvests being reflected more or less in every province. We in Nova Scotia have to some extent participated in those returns through orders for rolling stock, railway equipment and other materials, and our thanks we give to the source whence those blessings have come. The mover of the address pointed out that the prosperity had not been evenly distributed throughout the Dominion, a fact that I think should receive more consideration than the government has yet thought fit to give to it.

As to the great hullabaloo regarding Canada's position in the League of Nations as a result of our being given a non-permanent seat on the council of the league, I only wish our connection with the league was as non-permanent as the seat, for I consider our commitments in relation to the league a more than doubtful encumbrance. For the league to exercise effective control, if indeed it be ever in that position, it must use coercion and force. At best the League of Nations idea is a utopian scheme, a provider of places for dreamers and decayed statesmen.

As to the proposal for opening embassies and appointing ambassadors in France and Japan, as has already been done in Washington, we on this side consider such positions entirely unnecessary. What we do need in the way of representatives in foreign countries are commercial agents, and we cannot have too many of them, provided they are men of capacity, of character, of vision, and of energy.

I notice that the conference of provincial premiers held in November last was more or less a lively affair. Apparently there were frank expressions of opinion at that conference from the premiers of Quebec and Ontario, and possibly from the premier of one of the maritime provinces.

I should like to interject here that the coal miners and steel workers of Pictou county Nova Scotia, are not interested in the question of Canada's status or its representation on the League of Nations, or of appointing ambassadors to France and to Japan. What they want from the government of this country is

such legislation as will relight our idle blast furnaces, re-open our closed open hearth steel melting shops, and restart our rolling mills and big forging plants. We want to give the employment that we formerly gave, for instance in 1921 when the payrolls of the Nova Scotia Steel and Eastern Car plants in New Glasgow exceeded $5,000,000 per year. In 1925 the payrolls of these institutions were only 5½ per cent of what they were in the year previously referred to.

Mr. ILSLEY: To what year did my hon. friend refer?

Mr. CANTLEY: The year 1921 as against 1925. If I took the years of the war, from 1914 to 1918, the figures would be much greater.

Regarding the Duncan report, it will be noticed that the continuance of the money grant made last session is recommended. May I point out that so far as Nova Scotia was concerned, the grant which the Duncan report recommended should be paid forthwith was not paid during the session, or indeed until some months later. Then only one-quarter of the sum recommended was forthcoming. The sum of $133,000, representing the amount in dispute between the province of Nova Scotia and the federal government, then the subject of proceedings before the courts, was deducted in a most unfair and highhanded manner. May I say that I consider this action on the part of the government hasty, miserly ill-considered and decidedly high-handed.

I am always glad to be able to congratulate my friend the Minister of Railways (Mr. Dunning), and I can congratulate him now on the prompt, and I believe wise, decision at which he arrived in connection with the terminus of the Hudson Bay Railway. Nelson as the terminus of that railway was impossible. Of that we had ample evidence. On the other hand Churchill, so far as I am able to judge from the information available, is a much better port. I wish to say that if we in Nova Scotia have silently acquiesced in the Hudson Bay railway scheme it was by way of a concession to what we know to be the clearly expressed views and wishes of the people of the west who believe that that project is practicable. Many of us in Nova Scotia do not so believe, but we are loath to thwart the hopes and aspirations of the people in the west, and prefer that even larger amounts of money should be spent rather than that discontent on that score should be created in those western provinces. I should like our friends in the west to remember that when considering the causes of unrest and dissatisfaction in the maritime provinces.

As to immigration the Prime Minister a few days ago warmly defended the deputy minister of the department concerned. Nobody on this side of the house, so far as I can recall, made any complaint with respect to that official. Speaking here last year, or possibly the year before, I expressed my views quite clearly in regard to the capacity and character of the Deputy Minister of Immigration and they were not derogatory. The man primarily responsible to parliament for any shortcomings in connection with immigration is not the deputy, it is the minister, and perhaps the less I say in expressing my estimate of his capacity the more charitable I shall be. The best immigration policy this country could have, and we certainly need more people in Canada to support the burden of taxation due to the war expenditure and our overdeveloped railway systems, is not the expenditure of a larger amount of money on immigration—although probably that is desirable if such expenditure is wisely made and planned—but a sound fiscal system such as will provide work for our own people, and permit of the manufacture of our raw materials within the confines of Canada, as against the policy of sending out hundreds of millions of dollars for raw materials which we ourselves could supply. If we adopted such a policy as that, we could repeat in this country the successful results which have been witnessed among our neighbours to the south. Consider, Mr. Speaker, the humiliating position we witnessed last year when our new envoy to Washington went down on his knees and begged the United States government to allow some four thousand Canadians to cross the international boundary line each morning and earn their daily bread. Why should we be in that humiliating position? Why not provide work within our own country for our own people? We have been told on most excellent authority that $1,300,000,000 of the savings of the people are lying in the banks of Canada practically unused. We have in Canada more than sufficient capital to provide the facilities or the machinery to employ not only all the labour that we have here to-day but an immigration from Europe as

great as that which we had in 1913 when it was at its peak. Why do we not make use of this money?

As regards the Saint John and Halifax harbour commissions, all I wish to say at this time is that, as established, they in no way meet the intentions as expressed by Sir Andrew Rae Duncan and his fellow-commissioners who reported to the government in that connection.

We welcome the announcement in the speech from the throne as to the intentions of the government in regard to industrial and scientific research. I only hope that the facilities provided will be ample; that they will be under one competent head and that, in addition, adequate buildings, adequate accessories in the way of scientific instruments and that sort of thing will be provided, so that we shall have in this country an institution of scientific and industrial research commensurate with our position in the world to-day.

I wish to refer for a few moments to one of the follies of the government as illustrated in Bill No. 233 of last year, to encourage the production of domestic fuel from coal mined in Canada. Most of us will remember that this bill was submitted to and passed by the house last year. Let me ask the government: What progress has been made in that connection? What real encouragement does it give to the establishment of a coking industry in Canada? We on this side pointed out last year the entire inadequacy of the legislation to bring about the condition which its sponsors said would be effected. I repeat that what is needed in that connection is not such legislation as is provided by Bill No. 233, but an adequate duty on coke and on all forms of coal. If we are given that, no bounty will be desired or required and none ought to be paid.

Let us consider the situation for a moment. We have to-day in Cape Breton great numbers of miners who are idle due to the fact that, following the close of navigation on the St. Lawrence river, our maritime coal cannot reach the consuming centres of Quebec and eastern Ontario, no adequate provision having been made to reach those markets by rail after the season of closed navigation. What we need to meet that yearly recurring difficulty is that a rate should be given which will permit Nova Scotia coal to be carried to the eastern townships, Montreal and nearer Ontario points by rail during the winter months. Were we given a rate of one-third of a cent a ton per mile—and I particularly call the attention of the Minister of Railways (Mr. Dunning) to this,—a rate equivalent to that asked by our friends from Alberta, who ought to get and who I hope will get what they ask for, we would be able to bring up to the eastern townships, Montreal and the nearer points in Ontario, Ottawa and perhaps as far as Cornwall, sufficient coal to maintain our miners during the winter months with not full work, but with four or five days' work a week, which would be a godsend to them. This coal question will never be settled until some scheme is devised whereby we can move coal by rail during the winter months.

A few years ago we brought up some 260,000 or 280,000 tons of coal through Portland, but that was at a time when freight rates were less than one-half what they are to-day, when the cost of hauling in other directions was less. An attempt was made the year before last to do the same thing, with the result that the cost of shipment in the way I have indicated ran up to figures that made the business impossible. There is no use in our endeavouring to put the question to one side because it will not down. Any government responsible for carrying on the affairs of the country must face the situation and deal with it, and I trust the Minister of Railways will take the matter into consideration and make some effort to deal with it effectively. The Canadian National Railways sends down to the seaboard of the eastern provinces large numbers of cars loaded with material to be exported from this country, and a very considerable proportion of these cars are returning empty. What we ask for is that such rates will be given as will employ those returned empties in moving eastern coal to the eastern townships, Montreal and eastern Ontario. Last year we paid foreigners to mine for us 18,000,000 tons of coal, a quantity greater by more than 2,000,000 tons than all the coal mined in the Dominion of Canada during the same period. Why did we do that? To ask the question is practically to answer it, because every man of intelligence in this house knows why we did it. We gave to another set of foreigners orders for $226,000,000 worth of iron and steel. We had Mr. Massey begging at Washington that 4,000 of our people should be allowed to go over there to obtain a livelihood. A sane policy would give them three meals a day at home and would bring back a million of our people who have migrated to the other side. Why did they have to go over

there? Simply because most of us at home were fools.

Referring again to the question of winter coal, we landed at Montreal this past season 1,634 tons of English coke, nearly 5,000 tons of German coke and 13,000 tons of so-called Dutch anthracite. In all we landed at Montreal during the past season nearly 700,000 tons of European fuel. If our miners in Nova Scotia and Alberta had had orders for that quantity of coal to be mined during the winter, we would have less difficulty, less unrest and less suffering, than we have there to-day.

I would like the house to consider for a moment our situation in regard to iron and steel and the recovery made by Germany since the war.

Mr. DUNNING: Perhaps my hon. friend would permit me a question. As he knows, it is not intended to embarrass him because he knows the keen interest I take in this question of coal. I cannot quite understand the application of his last remarks with reference to coal imported into Montreal, presumably during the open season. Could not Nova Scotia coal have competed there, having a shorter water haul in the summer than the water haul from Europe? What is the deduction my hon. friend draws from that fact he cited?

Mr. CANTLEY: I quite understand the question, and I think I can give the minister a satisfactory answer. We in Nova Scotia, in Cape Breton particularly, mine during the summer months all the coal that we can mine with the number of men and the equipment that we have. But it is a seasonal business. We are busy for possibly seven months out of the year, and for four months we have no outlet. Now if that seven hundred thousand tons of coal had not come in, and the government would move in the way I suggested, we in Nova Scotia could have supplied that amount of coal. Is that a sufficient answer?

Mr. DUNNING: But the people who bought that coal bought it in the summer time. It came in by water. Why could they not have bought Nova Scotia coal?

Mr. CANTLEY: We produce all we can during the summer but are idle in the winter time; that is the answer. If I had five minutes' conversation with the minister, his intelligence is so great that I am sure I could convince him.

I was going on to refer to the recovery of the German steel industry after the war. I think it will be within the knowledge of most members of the house that, due to the Versailles treaty, Germany lost about forty-three per cent of her producing capacity in iron and steel. Notwithstanding that setback, Germany is rapidly regaining her position as a steel producer. Basing an estimate on the rate of progress towards the full recovery of her productive capacity, as shown by the figures for 1927, leaving aside the output for preceding years—there is every reason to believe that her production in 1928 will be considerably greater than it was in 1913 or in any other pre-war year in the history of the German empire. I would like the government to compare our stagnation, indeed retrogression, in Canada with the prosperity of the German empire so far as iron and steel is concerned, or even with that of Great Britain, or with that of the United States, although the latter country is not producing as much steel this year as they did two years ago. It would appear to me that the government seldom make a tariff change without hitting the Nova Scotia steel industry, as instance the drawbacks on agricultural implement steel, and later on the changes made in the tariff in favour of the automobile manufacturers. The policy of the government seems to be one of less and less protection for the basic industry which of all industries in this country has been sacrificed in favour of secondary industries.

I would now like to call the attention of the house to the matter of maritime unrest, and ask them to consider the case of Amherst, where in 1921 the Liberal candidate made his declaration as to coal duties and coal transport, and then visit the towns of Trenton and New Glasgow in Pictou county, where, during the same election campaign, the Hon. E. M. Macdonald, in the course of addresses in New Glasgow, Trenton and Stellarton, stated that the duty on coal was a fake duty and pledged himself, if returned to power, to put on a real duty of $1.50 per ton on coal, and also to give real protection to the steel industry. Then view Sidney Mines, where Mr. Kelly, during the same election contest, made promises of a similar character. Indeed, practically every supporter of the Liberal government in the province of Nova Scotia referred in much the same terms to the same subject, with the result that "a solid sixteen" supporters of the present government were returned to the house, with the subsequent result that while here they were as dumb as oysters in regard to the needs of their native province.

Within the last few days, if indeed they are not here to-day, a delegation from the town of Dartmouth, in the province of Nova

Scotia, has been pleading with the finance minister to save an industry in their town which has been established for well nigh a century, an industry which was in vigorous growth long before confederation, and which to-day, under a greatly reduced scale of tariff, is employing one hundred and sixty hands, representing a community of from six hundred to eight hundred persons, all of whom are entirely dependent on this industry, and will be thrown out of employment in the midst of the rigorous winter unless the finance minister comes to their assistance and extends to that industry the protection they ask. If he fails to do so, Dartmouth will be added to the tragedy of Amherst, New Glasgow, Trenton and Sydney Mines. I appeal to him to save the establishment, for he alone can do it, and no attempt to pass the responsibility to the maritime members, as was last week attempted, will avail those threatened with the loss of their livelihood and homes.

Mr. Speaker, may I remind the Minister of Finance that to bring into this country enormous quantities of coal and coke, quantities greater in the aggregate than we ourselves produce, and this while our miners both in Alberta and Nova Scotia are out of employment, is a matter of vital importance, and is viewed with alarm and grave discontent.

Speaking in this chamber on March 18th last, the first minister intimated that his government hoped that by accepting as they had the recommendations of the royal commission on maritime claims, virtually in their entirety, parliament and the country would recognize a wish to remove that question as largely as possible from the arena of sectional discord and party strife. Referring to this matter from my place here on April 12th last, I ventured to point out to the house that in effect but a small proportion of the recommendations of that commission, had the proposals of the government at that time really implemented. The situation differs now in no important respect from the position at that date, and, Mr. Speaker, I now again appeal to the first minister at once to carry into full and complete effect all the recommendations of the Duncan commission, and that in no niggardly way. If he do so, he and his government will do much to relieve a difficult situation in the maritimes and will bring to him the thanks of a million and a half of people who, as regards energy and achievement, have no superiors in this broad dominion.

Before closing, Mr. Speaker, may I say that the feeling in my native province has been well voiced by the four lines of Claude McKay's White Houses:

[Mr. Cantley.]

Your door is set against my tightened face,
And I am sharp as steel with discontent,
But I possess the courage and the grace
To bear my anger proudly and unbent.

The Prime Minister, if he would take counsel with the Minister of Finance, the Minister of Railways, and some others of his cabinet, could completely change the situation, and thereby earn the gratitude of the maritimes. I appeal to him to do so.

I wish to thank you for your courtesy, Mr. Speaker, and the House for the careful attention which it has been good enough to accord to me.

Mr. HENRI BOURASSA (Labelle): I hope the hon. member for Pictou (Mr. Cantley), for whom I have a great deal of respect, will not charge me with any discourtesy if I do not follow him in his speech, first because most of it was devoted to a question upon which he is an authority, and secondly because it is a question of a local nature which I expect will be treated by other members of the house who are equally familiar with it.

With regard to the mover and seconder of the address, I have already told them privately that I would spare them the dose of soapy tepid water which they have received every forty minutes since the opening of this debate, reserving to myself the right to express privately my admiration for the manner in which they have accomplished their duty.

With regard to the speech itself, my good friend from Bow River (Mr. Garland) has, in a somewhat critical or ironical vein, stated that he was looking for the day when, perhaps, the hon. member for Winnipeg North Centre (Mr. Woodsworth) and the hon. member for Labelle, (Mr. Bourassa), would move and second the address in reply to the speech from the throne. Well, with due respect to the throne, to the speech, to those who prepared it, and to the house, may I say, sir, that if the member for Winnipeg North Centre and myself ever have anything to do with the speech from the throne, it may be a little more crazy than the present speech but somewhat less stupid. I mean to say that it is a tradition of parliament that the speech from the throne should contain as few ideas and thoughts as possible, and as many words as may cover a certain number of pages of Hansard. In this respect the speech of this year is a modèle du genre. In fact, in my somewhat radical way of looking at things, it would be more practical to do away with the old custom of bringing in a so-called speech—which is not a speech—in the name of the crown, although the crown has nothing to do with it—talking about the times and the

weather and so forth, which we all know about by going out or remaining in, and about the great crops, some of which we know about and some of which we do not know about, according to the part of the country in which we live. In a so-called democratic country, supposed to be governed in a businesslike fashion, it would be simpler and more to the point if the government would bring down a ministerial program saying, "During this session we intend to propose such and such matters." The opposition might have a counter program, or if they saw fit to act on the lines designed by the able leader of the opposition (Mr. Bennett), they might decide not to prescribe until they were called on. But I suppose if any government attempted to do away with the old-time custom some of the members of this house who are attached, and especially those who pretend to be very much attached, to British precedent would have to cry out against revolution, because, as far as my limited knowledge of the history of parliament goes, the only practical and effective speech from the throne I have known of in the last three centuries is the one which Cromwell delivered when, pointing to the mace, he said, "What shall we do with this bauble? take it away." We have not reached that point of the English precedent yet.

With regard to the prosperity of the country, of course there is prosperity. You and I, Mr. Speaker, might remember that when we came here as young, unsophisticated youths we heard a speech from the throne; and it was then stated by the government of the day that the good times were to be attributed to the policy of the government, and that statement was contradicted by the members of the opposition. I think it was customary in past centuries, and it has been customary ever since. In the time of Louis Philippe in France, when Marshal Soult was head of the government, the French press stated that he had lost the battle of Toulouse, but when he was out of power they claimed he had won the battle of Toulouse—always the same battle.

There are indications of prosperity in the country. I think some of the elements of prosperity are due to the policy of this government. Some may be dated back to the policy that was in force when the hon. gentlemen opposite were in power. But I think the share of the government, of any government, in the growth of the country is not such that either party should boast about it from day to day, and week to week, at every session of parliament. In my mind, ignorant as I am on most questions, but having given some little thought to this issue, we consider too much the outside results of economic activity and do not look enough to the basic laws of economics. We should endeavour more than we do to generalize and harmonize as much as possible the elements of prosperity, from year to year, as between the various parts of the country and the various classes of people contributing to that prosperity.

I have heard with interest the speeches of the Prime Minister and of the leader of the opposition. May I take advantage of my older age to praise both of them for the general tone of those speeches? I agree with a good deal of what both have said, and perhaps a little more with what was said by the leader of the Progressive group (Mr. Gardiner). I will give one instance for example. The leader of the opposition insisted very strongly on the importance of increasing immigration into the country in order to enhance and support that prosperity. The leader of the government replied by insisting on the importance of importing capital as well as population in order to maintain that prosperity in a proper balance. But I think the leader of the progressive group went to the root of the question when he said that most of us had a wrong view of the nature and importance of the role played by capital, or what capital is. Capital is not money, as a matter of fact. The proportion which gold and silver, or even bank and state bills representing money, count in what is called capital in the world to-day is but a drop in a sea of water. Unfortunately, what is called capital, what is supported as such by legislation in most countries, and too often by a venal press, is not capital really representing the accumulation of real wealth, or the accumulation of productive labour, but fictitious capital represented by paper, which enlarges the so-called capitalization of industry and financial institutions, and calls upon the masses, the consumers and the ratepayers to bonify that capital. It is useless to talk about permanency of prosperity, about the real prosperity of this country, till this parliament and all the parties composing it have sufficient humility to understand that very few of us are capable enough, as parliamentarians, to deal with that tremendous problem, and that we should take time to borrow what enlightenment may be given to us by men most versed in problems of economic and social adjustment, in order to make a review, not only of the budget, not only of this or that source of public revenue, not only of this or that part

of our economic system, but a whole and comprehensive review of the complete economic fabric of this country.

Canada, situated as it is beside that tremendous country to the south of us, and connected with Great Britain, who in spite of all remains the centre of finance and trade in the world, can borrow from these countries true elements of prosperity and at the same time avoid the traps into which they have frequently fallen. The so-called prosperity which reigns, either in England or in the United States, produces these two evils—pauperism and extreme capitalism; and I claim that pauperism generally and extreme capitalism—capitalism too highly protected by the state—are the two evils which are threatening the economic balance of this country, as well as undermining social justice and the moral and physical happiness of the people. I shall not dwell further on this point, which may be dicusssed at greater length in connection with the budget.

With regard to taxation, I merely state now, what I have said in previous sessions: I will not allow to go unchallenged the argument so frequently advanced, that the province of Quebec is bound to a policy of high protection. I have said time and again, and I repeat it now, that every occasion on which the tariff issue has been before the people of Quebec, the vast majority of them have voted either for reform, or for reciprocity, or for some other form of reduction in protection. I do not want our western friends to remain under the impression that the mass of the good people of Quebec are led blindly by the nose by a handful of capitalists in Montreal.

As respects immigration, I submit respectfully to those gentlemen in this house who have discussed this phase of our national problems, that in my humble judgment they are taking but a very partial view of the situation. Immigration is but one of the factors of the dominant problem facing our people to-day. The thing of importance is what I would call the population difficulty. Everyone agrees that we have a territory vast enough to maintain millions upon millions of people, although regarding the manner in which we should set about increasing our population opinions vary. The most thoughtful men and women of my native province, to whatever party they may belong, hold the antiquated view that the best way of solving the population problem, is the one which was devised by the Creator of mankind in the beginning: I mean the cradle policy, if I may say so. There I am skating on pretty thin ice, when we see the leaders of both the great parties who have done so little to help in the solution of the problem. I do not know about the other leader; if he is in the same case the matter is worse still. It is time to cry, "Go forward." The second point I wish to make in this regard—and it is an important factor in our population problem—is the advisability, not so much of bringing more people in from outside, but of keeping at home our own people. I claim that it is the duty of the government, of the opposition, of all parties, the duty of all right-thinking Canadians, to see to it that economic and social conditions in Canada shall be such that Canadian-born citizens, or those who are Canadians by adoption, of whatever race or of whatever creed, who are living to-day in Canada and struggling to make the best of their situation, shall be given a fair chance to carry on. Whether these people live in the east or in the west, whether they make their homes in the city or labour on farms, we should see to it that economic conditions are such as to promote their welfare in some reasonable degree. Under a proper regime of social and economic justice in Canada there should be room for all well-thinking and right-acting citizens, but no room for sharks, beggars and exploiters.

The third factor to be considered in relation to this problem is one which I suggested many years ago in the old house and which I repeat now. It is this, that instead of offering such abnormal inducements to foreign immigrants, whether they come from the British Isles or from continental Europe, we should offer advantages, at least equal if not superior to those extended to outsiders, to the farmers of Quebec and Ontario as well as of the maritime provinces, who have a taste for the west and are desirous of settling in that part of our dominion where they feel that there is likelihood of their prospering. Many years ago, I once applied to the Department of the Interior for transportation facilities for a good sturdy farmer of my own constituency who desired to go west with his wife and five children; and to my amazement I discovered that it would have cost him five times more to go west than it would an immigrant from Liverpool or Manchester to come from England across the ocean and take up residence in Manitoba. It would cost, I say, five times the sum required in the case of such an outsider to take a Canadian from the province of Quebec to western Canada, where he could assist in developing our western territories. There is no reason why thousands of our own farmers who cross the border into the

United States, simply because our cities are over-populated and our farms are unsuitable for one reason or another, either because they are too small or because conditions are not just right, should not be enabled to move to western Canada and take up suitable land there. They will not take up bush lands, but they would go west if the conditions were favourable.

Now I come to my fourth point. Before going to Europe to look for immigrants, why not let us endeavour to bring back to this country Canadians—I mean, those willing to come back—who have had to settle abroad? They are not numerous, there is no use in deluding ourselves in that regard, but such of our fellow citizens as have gone away either from Quebec or Ontario, from Manitoba or the maritime provinces, who are willing to come back should be offered the best chances. The old maritime provinces have been bled for the last fifty years of some of their best blood. I have visited probably fifty towns in New England in the last half century or so, and have discussed the matter with various American citizens, formerly Canadians; and I have most invariably found that they had been obliged to emigrate from New Brunswick, Nova Scotia and Prince Edward Island, merely because no inducement had been offered them to go to western Canada. In parliament, of course, the advice had been very heartily given—go west! But when these people wanted to go west—no. The tramp in England, the revolutionary in France, or the socialist in Germany, these were all offered more attractive advantages than were held out to the natives of Nova Scotia, New Brunswick and Prince Edward Island, to go to Manitoba or Alberta and become Canadian citizens. I repeat, we should make a serious effort to bring back some of our Canadians, especially those who have not been out of the country for too long a time. Most of these people went to the United States under distressing circumstances. By birth, by habit, by tradition, by instinct, they are fit for a living in America generally. It ought therefore not to be a difficult matter to induce them to come back and settle in this country, if reasonable advantages were put in their way.

So far as British immigration is concerned, this seems to be a sore point with the leader of the opposition. However, I am going to speak my mind on this question, just as I will do on everything else, here and elsewhere. From a purely individual point of view—and we have of that many instances in this very house—we can get from the British Isles some of the best samples of manhood; and as far as I am concerned they will always be welcome to this country. But it is equally true that owing to the social and economic conditions which have been prevailing in the British Isles for years past, due to the fact that no government there has yet dared to offer to the millions of free citizens of England and Scotland the opportunity to possess an inch of their native land, the land for which their forefathers have laboured and bled for centuries, but which remains in the possession of His Grace the Duke of Westminster, or His Grace the Duke of Sutherland, to such an extent that at the present time there is more grazing and hunting land upon which the masses of England cannot settle than there is vacant land in Manitoba, Alberta and Saskatchewan in the hands of the grabbing railway companies and other speculators,—I say that due to that condition of affairs in the British Isles, you have now millions of people in the cities of England and Scotland who have been disconnected from the soil for generations. It is against their instinct, it is against their aspirations, it is against their very temperament to become again tillers of the soil. They talk about socialism and radicalism and communism in England; these are the outgrowth of the selfishness of the possessing classes. But I do not think that heretofore the efforts of all good Canadians, whether English or Scottish, or Irish, or French, or of any other blood, should be directed to making Canada an easy cure for the social evils of England and a safety valve for the selfishness of the possessing classes of that great country. From a social point of view, therefore, let us beware before we open our doors to anyone who may come from England with a heart full of hatred against all British institutions, with a heart full of rancour against every thing connected with the British system of government. Of course, if you wish to hasten the day of secession, if you want to precipitate Canada into a crisis with Great Britain, bring as many as you can of that kind of people to this country.

Mr. CLARK: What did the poorest of England do in the war; did they not fight for their country?

Mr. BOURASSA: Yes.

An hon. MEMBER: What did you do?

Mr. BOURASSA: They fought for their country, not for another country. Suppose Canada is at war—

An hon. MEMBER: They fought for France and for you.

Mr. BOURASSA: They fought for England, and did it well.

An hon. MEMBER: They fought for you too.

Mr. BOURASSA: That is a matter of opinion. I am simply saying—and every thoughtful Englishman and Scotchman is my witness—what is being uttered every day in Great Britain, where liberty of speech exists in fact and not merely in theory. I was in England last year, not for the first, the second, the third, the fourth or even the fifth time, and I made new acquaintances and was confirmed in the opinion which I held long before the war, that you have in England people of the right kind who want to send to the dominions—or the colonies as they still term them—the right kind of settlers; but you also have people, especially those belonging to the wealthy classes, who want to get rid of the poor and who say: We will send them to the colonies and let the colonial governments and parliaments deal with them.

An hon. MEMBER: No.

Mr. BOURASSA: It has been told me by some of the leaders of public opinion in England. From their point of view it is patriotic, they feel they are doing their duty in the best interests of their country. Let us be as careful of the welfare of Canada as they are of the future of England.

With regard to dealing with immigration wholesale, as has been suggested by the leader of the opposition (Mr. Bennett), I beg to differ with him also as to the means. I have had occasion in the last thirty years to find out that all great schemes of immigration, all tremendous policies of wholesale immigration have failed, whether under a Liberal or a Conservative government; while on the contrary every small and energetic enterprise conducted by the right kind of men, either in this country or in Scotland or in England or in the United States, to organize small settlements of the right kind of people, whom they lead to the place where they are to live and obtain for them there the conditions that will make them happy settlers,—those settlements to my personal knowledge have done wonders. I can speak of three in the west that I have known in the last thirty years, one French, one German and the other Scottish. The French settlement—I mean from Quebec—was made in the neighbourhood of Gravelbourg. Two or three men with a set idea of accomplishing something went there and secured a tract of land, made arrangements with the Department of the Interior here, and made an individual canvass of the right kind of people in the province of Quebec, brought them out, saw that they were properly settled and that they received what they had been promised, that is, the administration that they wanted, a municipality organized, and a church and a school built. To-day, after only fifteen or twenty years, you have there one of the finest settlements of the west. In the old days—I mean some twenty-five years ago—two or three gentlemen came to my room. They were delegates from certain German inhabitants of Dakota, born Americans, who wanted to come and live in Canada. They explained to me the manner in which they were organizing the settlement. They took up a tract of land somewhere between Regina and Prince Albert. I traversed that section many years ago. Previous to settlement it was a perfectly wild country and absolutely dry. I well remember the old railway from Regina to Prince Albert was in such a bad condition that they had to cut the train in two, and I saw antelopes near the track gazing at us and apparently thinking: What kind of beasts are coming to take our place? Those settlers found they could have that territory irrigated, and they brought in a whole colony of some two hundred people all farmers with the exception of a blacksmith and two or three mechanics. To-day that is one of the finest settlements in Saskatchewan between Regina and Prince Albert. I know of another one, although I have not visited it personally. It is a Scottish settlement that has been established near St. Paul de Metis, somewhere in Alberta. This again was organized by a Scotch priest and a few delegates in the same manner as the first Scottish settlements that were established in Prince Edward Island a few years after the conquest of Canada, and out of which practically arose the province which exists to-day. That shows that private but well reasoned initiative, if properly helped by the government, will operate in a much more practical way and will produce more enduring results than a wholesale policy of immigration inaugurated by such founders as the North Atlantic Trading Company of ill-fame.

But, sir, if we want to preserve our people, if we want to bring in from all countries the right kind of people, and induce them to stay in Canada instead of passing over to the United States after they have remained here sufficiently long to comply with the requirements of the quota law enforced by our neighbours to the south, there is something

more to be done. We have to put Canada on a proper economical and social basis, and there I come back to the point I spoke of at first. It is all very well to deal at this session with the tariff, at another session with the income tax; but as long as we do not develop in the minds and hearts of all Canadian men and women, fathers and mothers of families, that all in all—morally, intellectually, economically, socially and politically—their children will be better off in Canada than in the United States, or better off than they were either in England, Germany, Russia, France, Italy, or any other country they may come from, it is useless for us to talk of having a tremendous immigration policy to people our country. We will go on as we have done since confederation, under all governments, under all policies, not filling the country, but making of Canada the sieve through which the best of our blood, and the best of the foreign imported blood, goes to the United States.

But, sir, there is something more. If we want to attract the right kind of Europeans—and here I refer especially to the good people of Britain, to the right kind of Englishmen, of Welshmen, and of Scotchmen—it must be made clear to them that when they come to Canada they leave aside the quarrels and the war stress of Europe. It must be made clear to them that under this much disputed equality of status, upon which much discussion will take place for years to come without any solace for the common people, that Canada is not at war every time England may be at war. It means that Canada, situated as she is and occupying one-half of the continent of North America, having lived in peace for a century with the country to the south of us, is determined to maintain peace with all countries on earth, with all countries on both sides of the two oceans which wash her shores. In that respect I fully agree with the policy pursued by the present government in enhancing, gradually and not in any hurry, the position of Canada in the international world. They do it, and I know this to be the case, not only with the full assent but with the full sympathy of the best minded Englishmen. That is shown by the utterances of Mr. Ponsonby, who was quoted yesterday by the hon. lady member for Southeast Grey (Miss Macphail), but there are many Englishmen—not only radicals, not only Liberals, but some of the best Tories, some of whom I had the honour of meeting again last year—who want to see the dominions, but especially Canada, force, so to speak, the whole British Empire as a world power to impose a policy of peace upon the world. In that respect the presence of our representative on the council of the League of Nations is worth, to my mind, much more than many of the other emblems of liberty or of domination, of which we have boasted for many years in the past, because there can be no doubt that, on the council of the league, Canada is not sitting as a tool of the British government; Canada is represented as a nation. I said last year, and I repeat it to-day, that neither Sir Austen Chamberlain nor any responsible English statesman, would ever state that the British Empire was represented by two voices on the council of the League of Nations whilst other nations have only one. Of course, they know that Canada is there for her own sake, and they want her to be there as such. There is this further fact: In view of the present conditions of things in the world, England is the power which is most interested in making peace as permanent as it can be. I have said it in my own province, and I repeat it now, that I have the deepest admiration and the fullest sympathy for the attitude taken in the last six years by the British government, and I am prepared with my humble voice and through the influence of the Canadian government, to uphold that policy. Not as the slaves of England, but as free Britishers talking in the name of a free British country, we should take this position in face of the representatives of that magnanimous country: Now that you are talking peace, now that you are working for peace, we will help you out. The moment you unmuzzle your guns and work for war again, we will be against you. We are prepared not to leave you but to accompany you on the path of peace, never on the path of war. If we do that, if we do it at Geneva and elsewhere, we shall not only accomplish our duty to Canada but we shall have rendered a service to Great Britain, to the true Britain, to the Britain of the masses, to that great nation which has done so much to enhance ideas of liberty, properly balanced methods of government, ideas of social justice in spite of so many obstacles put in her way by some of her own people. If we do that we shall have accomplished our full duty as Canadians and as associates of the British nation.

In that regard again, I fully commend the policy of the government in appointing representatives of Canada, not only as trade commissioners, but as foreign ministers or residential ministers—the title is nothing to me. Because, take Europe for example. It is all very well to have a representative in France, an official representative, who now for the

first time in half a century will have the right to step in at the Quai d'Orsay and have a heart to heart talk with the foreign minister of France, a thing which he could not do before because he was considered only as a sub-clerk of the High Commissioner's office in London. I know as a matter of fact that both Mr. Fabre, and Mr. Roy, have been prevented from communicating with the French government because the Foreign Secretary of the time at London did not want them to be known as representing Canada. Now, however, they will be able to talk and exchange their views freely. If you have a representative in Berlin—

Mr. SPEAKER: I am sorry to interrupt the hon. member, but his time is up.

Mr. BOURASSA: I think I have three minutes yet, Mr. Speaker, I was looking at the clock.

Mr. SPEAKER: The hon. gentleman must respect the chair.

Mr. BOURASSA: Very well, Mr. Speaker, if my time is up I shall reserve the rest of my remarks for another occasion.

Mr. FINLAY MacDONALD (South Cape Breton): It is difficult at any time to address this house with confidence. That difficulty is intensified when one has to follow such a brilliant orator as the hon. member for Labelle (Mr. Bourassa). For the nice things that hon. gentleman said about the maritime provinces we are duly grateful. We had the honour of a visit from him last summer, and we all look back to that visit with a great deal of pleasure. The hon. member addressed several meetings in the maritime provinces, and although we do not agree with everything he says, we must all regard him as having a great deal of reason for the faith that is in him. It was evident that at least some of his remarks this afternoon were not receiving unanimous assent, particularly from members on this side of the house, but his remarks on immigration will, I believe, receive the commendation of a great many. The subject of immigration is a somewhat difficult one. Even our Minister of Immigration (Mr. Forke), in his speech yesterday, admitted that he had many things to learn with regard to immigration. From press reports in the various parts of this country it would appear that that opinion was fairly generally shared, and possibly the minister's statement was the only thing required to make it unanimous. I think we can agree with the hon. member for Labelle in regard to at least two of his grounds, first, the great desirability of retaining Canadians in our own country. That, I think, should be the first aim and object of an immigration department. The second, and one of equal importance, is the desirability of selected immigration. I, for one, am not in favour of throwing down the bars and allowing everybody to come to this country. We have at the present time three or four examinations of intending immigrants, one before they leave, one on the boat and one when they arrive. There should be but one examination, an examination before the immigrant breaks up his home and makes all his preparations for leaving his own country. That is the time when the one and final examination should be made.

With regard to the observation of the hon. member for Labelle that if England ever goes to war again, we shall be able to stand aloof, I think very few in this country will subscribe to that view. If England is at war, we are at war and there is no escape from that fact. We are either a part of the British Empire or we are not. If we are a part of it, we must bear our share of the responsibilities of that empire, and I believe that at the present time we are not bearing our full share of our responsibilities towards the empire.

With reference to the observation of the hon. member that in inducing immigrants to come to this country, it would be a greater attraction to them to hold out the higher moral ideals we have here than our material resources, I fear that many of us, who have not the same lofty ideals as the hon. member for Labelle has, will find it difficult to subscribe to that doctrine, and I am afraid that from a practical standpoint, when you endeavour to induce anyone from the old country or any other country to come to Canada, the material inducements will weigh more heavily with him than any moral inducement we can offer him.

The debate on the address in reply to the speech from the throne has on this occasion taken a very wide range. It is, of course, customary in a debate on the address to allow the widest latitude and to permit hon. members to discuss questions of interest to any part of Canada. This year for the first time in our history we have placed some restrictions on that, and although a member is allowed the widest latitude, he is circumscribed somewhat by the fact that he is obliged to confine himself to forty minutes. The debate on the address has already gone far enough to indicate that the wisdom of the rule which we adopted last year has been justified. It is pleasing to note that throughout all the speeches very kind references

were made and deservedly made to the hon. gentlemen who moved and seconded the address. I did not have the pleasure of hearing but I read both addresses, and I want to join in cordially congratulating both the hon. member for Hants-Kings (Mr. Ilsley) and the hon. member for Provencher (Mr. Beaubien) on the way in which they discharged their duties in that respect. With regard to the mover of the address, it may be said that a sort of maritime clannishness would make our congratulations to him a little more cordial; but in view of the remarks made by the hon. member for Pictou (Mr. Cantley), I fear that the house might regard with considerable diffidence any observations I might make lauding the clannishness that should distinguish maritime members. Although, however, we may and in all probability will hold divers political views, we can all rest assured that the hon. member for Hants-Kings and the other members from the maritime provinces will all be united on any matter affecting the interests of their home provinces.

In looking over previous debates of this character I think one strain, one general criticism, will be found to follow through all the speeches of the opposition, and that is that the speech from the throne contains very little to commend itself to the House of Commons. It is possible that, in days gone by, that criticism was not wholly warranted, but I do not think there is very much doubt that the criticism in regard to the present speech from the throne is that it is to be regarded as not much more than a curtain-raiser. There are in it some things that deserve consideration, and the first matter is the reference to the good results that flowed from the conference that took place last year between the various provinces and the federal governmnt. I am glad of that; I think the conference was a very wise move, and in years to come it will be found desirable at certain periods to hold such conferences, because with the growth of the newer provinces and the changing conditions throughout the whole of Canada, readjustments of relationships between the various provinces and the federal government will be found necessary. Of course, the various provinces are not all of the same political faith as the federal government, and it is very desirable that that should be the case. It is said that the view was held by Sir John Macdonald that it was very desirable that the various provincial governments should be opposed politically to the federal government because, if they were all of one political faith, he believed there would result a gigantic political organization that would be a menace to the state. Whether that is true or not, I think most of us on this side will subscribe to it, particularly as long as the present government remains in power.

It appears that several recommendations of the Duncan report are receiving consideration. The Duncan report which will no doubt take its place, Mr. Speaker, as one of the most important political documents in our history, has already done considerable good. It has given new life to the people of the maritime provinces and I think, if I might be allowed to say so, that the psychological effect of the Duncan report was of considerably more importance to those provinces than the material benefits that have so far flowed from it. Some over-enthusiastic admirers of the present government have gone to the length of saying that the recommendations of that report have been fully implemented by the government. This is not the case, and do not let us for one second imagine that such is the case. I am going to read an article from a magazine published in the maritime provinces entitled "The Busy East," reporting a speech made by Mr. Simms, who was president of the maritime board of trade and was largely instrumental in framing the case for the maritime provinces before the Duncan commission. Among other things in his address at St. John he said:

> The Financial Post of November 18 published a fair and accurate synopsis of the Duncan recommendations with what had been or left undone in the case of each. The synopsis in question shows that up-to-date, but two of the 30 recommendations have been fully implemented, i.e.: The passing of legislation to bonus coke ovens and the total payment of the immediate interim lump sum grants. Only one-half of these grants was paid as at July 1 last. However, at the recent Ottawa conference of premiers, the immediate payment of the other half was secured.
>
> Then five of the recommendations have been partially implemented. In the case of other 11 no action has yet been taken. Possibly, the remaining 12 may receive later attention.
>
> While not unduly impatient, and recognizing that such chronic and far reaching troubles do not often lend themselves to speedy adjustment, it is not unreasonable that the maritime provinces should be anything but satisfied with the action to date regarding the Duncan recommendations. Most maritime people fully appreciate that a lot of hard and unselfish work has been done by their ministers and members on both sides of the house have given our cause loyal support. This is so obvious that we see no reason why anyone should shrink from facing the facts of the case as they exist to-day.
>
> Surely no patriotic Canadian would deliberately make statements calculated to mislead the public as to the position of these recommenda-

tions, but we submit that certain statements have been made that admit of no alternative construction save that of ignorance of its true standing which is equally unfortunate in its effect.

As a result, many conscientiously believe that all of the recommendations have been implemented in toto, and that maritime troubles have consequently ceased to exist. Nothing could be further from actual fact. This statement is absolutely untainted by political partizanism. In our maritime effort there is no place for the distorting touch of party politics. We must strive to see and deal with things as they really are if we are to win for our provinces the justice and fair-play to which they are entitled. We must make their interests our one clear objective to which party politics are sedulously subserved. Thus, by being true to our provinces, we shall be true to ourselves and to Canada as a whole.

I do not know the political affiliations of Mr. Simms, but I know him to be a man of considerable standing in the maritime provinces, having been president for a number of years of the maritime board of trade. We must in all fairness realize that all of these things cannot be done in a day, and I think we are all satisfied that the government honestly intends to carry out the recommendations of this report. On this point I may say that the government gave as an excuse for not carrying out the recommendations of the Duncan report with regard to steel last year the fact that at that time the various steel companies in the maritime provinces were in litigation and the government did not think the time opportune for dealing with that question. The press the other day told us that all these difficulties have now been smoothed away, that a new and powerful organization has been formed, and that the ownership has changed hands. That was very good news indeed to the maritime provinces because we felt that any change would be for the better, and now that that objection has been removed we hope that the government during this session will do something in the way of implementing that particular recommendation in the Duncan report. Our hopes in that respect are heightened by a statement that was made by the Postmaster General (Mr. Veniot) in a speech made in his native province a short time ago. I am quoting from an editorial in the Halifax Star of January 21, 1928, a paper that is favourably disposed towards the present government. It says:

> An announcement of more than ordinary significance was made at Saint John by the Hon. P. J. Veniot. This is the report as given in the Saint John Telegraph:
>
> "The government of Canada has implemented to the full every recommendation of the Duncan report, with the exception of two—the Valley railroad project and the bounty to the Sydney steel plant. These two matters, however, were receiving the serious consideration of the government and within a few weeks the policy would be divulged, which would make every maritimer feel proud."

This has reference to the unfair treatment given the steel works by the customs tariff. The steel companies up in Ontario were organized later than the Sydney plant. They brought their coal in from the United States. There was a duty on coal. The steel companies were allowed a 99 per cent, drawback. In other words the government handed them back 99 per cent of the duties they paid on coal. That is, the other steel companies have been bonused for years out of the revenues of Canada, while the Sydney steel works could sink or swim. If the companies in Ontario deserved a bonus, then the Nova Scotia plant had a right to the same bonus. It is just an example of how the tariff is doctored to suit particular interests.

The Duncan commission saw the unfairness of it. It recommended "that a bonus should be given in respect of steel when Canadian coal is used in its manufacture, and that the bonus should be calculated on the basis of the present drawback for every ton of coal used in such manufacture."

Because of the litigation which was going on the government delayed action on this recommendation. Now action will be expected shortly. In fairness the back payments should be made—otherwise the Sydney plant is not placed on an equality with the steel plants in Ontario.

I do not know whether the minister was speaking out of turn or not, but whether he was or not, he certainly gave us hope in the maritime provinces, and we will wait patiently for the fulfilment of the promise of the Postmaster General.

There is one other matter which is the key-note of the speech from the throne, and that is the prosperity of Canada. We are told that this is a very prosperous country, and the speakers supporting the government have lauded the administration for what they have done to bring about this prosperity. Unfortunately, nearly all the speakers tinge their laudatory remarks with an undertone of regret that the prosperity which exists in Canada did not particularly affect the place where they live. Even the hon. Minister of Immigration (Mr. Forke), yesterday, while praising the government for what it had done, regretted that the province of Manitoba had not shared in the same prosperity and the same regret was expressed, I think, by the hon. gentleman who moved the address in reply. But we are prosperous. We know we are prosperous, because the government tells us so and the Prime Minister proves it. He read from reports of the various bank presidents, from the various financial interests throughout the country, setting forth the fact that we were prosperous. Now who are we

to say that we are not prosperous when these people tell us that we are? That is a very general statement. When I go to my own county I find a number of men and women there in dire distress. Thousands of men and women in Cape Breton to-day are in need of food and clothing. They are receiving assistance from their brotherhood, and from their town. Collections are being taken all over the province of Nova Scotia to send relief to the mining districts of my county in Nova Scotia. The same story comes to us from all the industrial centres. Members on the government side have told us of being approached on the way to the theatre by people looking for a hand-out. The same thing happens in the west. From everywhere comes the same story. But everywhere we are prosperous! The banks are prosperous, yet those of us who have to negotiate with them, or discount a note once in a while in a bank, have a very shrewd idea where the prosperity is coming from. We are the people who are making the banks prosperous, but we are not sharing in that prosperity. You cannot have a country half slave and half free. You cannot have a country half prosperous and half destitute. Such is the condition that exists in Canada to-day. This prosperity is illusive. No person appears to be able to put his finger on it and say where it is. It is difficult to find it, and it will be still more difficult to find out in what respect this government has in any way contributed to it, even if it did exist. In my county there is destitution. I have in my constituency as fine a body of men as is to be found on this continent—men who are anxious and willing to work, but cannot get work and men who have been in the habit of being employed in the mines but are told there is no work for them, and the men who are not paid at the same rate as miners in other parts of the country. From report No. 11 issued by the Labour department, which reached me the other day, I find that in Nova Scotia the miners received the following wages:

	Nova Scotia	Alberta	British Columbia
Contract miner	$6.62	$7.74	$6.76
Hand miner	4.15	5.50	4.52
Labour under ground	3.35	4.25	3.97
Labour surface	3.25	4.20	3.76
Carpenters	3.85	5.30 5.77	4.83
Blacksmiths	4.00	5.30 5.77	5.11

Every year for the past four or five years the same condition has existed. The miners are working a little in the summer and idle in the winter. They never make enough in the summer to carry them through the winter and are appealing to the people of the province of Nova Scotia for assistance. I have a statement, which I will ask permission to place on Hansard, of the number of days lost in the various mines in the county of Cape Breton in the year 1927. It is as follows:

	Days Lost	
No. 1B	11	Night 209
No. 2	104	
No. 4	92	
No. 5	85	
No. 10	73	
No. 11	70	
No. 12	64	
No. 14	83	
No. 16	66	
No. 22	84	
No. 24	84	
Princess	114	
Florence	118	

Now there must be some remedy for such a condition of affairs. The hon. member for Bow River the other day pleaded for a statutory rate which would be somewhat below the rate quoted by the railway commission—that is absolutely out of pocket expenses—for moving coal from Alberta to Ontario. The difference between the statutory rate that the hon. member wants and the rate that is fixed by the railway commission must be met, and must be met out of the federal treasury. That means that the industry in Alberta must be assisted out of the federal treasury to the extent of that difference. Yet this is the same gentleman who last year protested so strenuously against the granting of a bounty to coke ovens. Is not this a bounty he is asking for now? It is, call it by whatever name you like; it is assistance. Whether that assistance be given in the form of a refund of rates or as a bonus, the principle underlying both methods is the same. I am glad that the hon. member for Bow River has at last seen the light, and I can assure him that we will join with him in endeavouring to get that rate, because then we shall hope to share in it with him. On account of the distance separating us, I could not very well see what effect the hon. gentleman's remarks were having on the hon. member for Rosetown (Mr. Evans). I can imagine that his soul must have writhed in agony at the thought of a colleague of his preaching such a political heresy as that. A bonus! I do not know whether the hon. member for Rosetown was present or not, but if he was I am very much surprised in-

deed that he did not rise and protest against such utterances on the part of the hon. member for Bow River.

It would appear, as set forth by the hon. member for Pictou (Mr. Cantley) this afternoon, that the only possible hope for us just now is the statutory railway rate which the hon. member for Bow River has asked for. If we can obtain such a rate for the movement of coal from Cape Breton to Montreal, then we shall have gone far towards relieving a situation which is quite painful but which we have to face every day. The miners of Cape Breton appear to be of the same opinion, and I am in receipt to-day of a resolution passed by the New Waterford board of trade. New Waterford is one of the important mining districts in the county of Cape Breton and at a meeting of its board of trade held on January 26 this resolution was adopted:

Whereas, for the past five years the New Waterford coal mining district has suffered through intermittent unemployment during the winter months; and

Whereas, at the present time our three collieries are operating on an average of only two days per week; and

Whereas, relief from outside sources has been necessary for the sustenance of two thousand New Waterford families who are solely dependent upon the coal industry for their maintenance, which the aforesaid conditions render inadequate; and

Whereas, experts consider our coal to be the best available for domestic and metallurgical purposes; and

Whereas, there is an immediate market available in the province of Quebec sufficient to provide continuous employment at our collieries during the entire winter season; therefore

Be it resolved that, we respectfully ask you to recommend to the federal government a suitable adjustment of the existing freight rates over the Canadian National railways, in order to make it possible to market our coal in the province of Quebec and intervening points in competition with and in preference to the foreign product; and

Be it further resolved, that in view of the present economic distress in the New Waterford district, we respectfully ask for your immediate consideration of this serious condition.

I submit this resolution for the consideration of the government. I had hoped to say something in regard to the coke oven scheme brought down by the government last session, but I see that my time is up. As pointed out by the hon. member for Pictou this afternoon, that scheme is totally inadequate. However, we shall have an opportunity to discuss it later on in the session.

Mr. C. E. BOTHWELL (Swift Current): In taking part in the debate on the address I do so more particularly for the purpose of referring to certain matters that apply more especially to my own constituency than to Canada as a whole. I was interested in the speech from the throne in its reference to prosperity. Whether Canada is prosperous in the degree we have been told in this house by various hon. members, or whether, as the hon. member for South Cape Breton (Mr. MacDonald) has endeavoured to make us believe, it is not prosperous, I still feel that in the part of Canada from which I am fortunate enough to come and which I have the honour to represent conditions are nothing like those described by that hon. gentleman. When he refers to thousands in his district being in dire distress, I think that every hon. member will agree with me that there is no such distress in western Canada, notwithstanding that we have matters there which we feel call for some remedy.

I should be remiss in the discharge of my duties if I did not add my voice to the general congratulation which has been tendered to the mover and seconder of the address on the splendid way in which they presented the motion to the house. The reference which was made by the mover of that address to the part of the country which he represents, and which I believe is in the vicinity of the district represented by the last speaker, stressed the prosperity of the Dominion. I believe that the past year has been a most memorable one in Canada's history. Last year the people of this Dominion had brought to their notice more pointedly than ever before the stage of development which we have reached. The celebration in July served to bring to the attention of the Canadian people quite forcibly the fact that we had gone possibly further than any other country in the world in a shorter time, and I think that all evidences point to the fact that Canada as a whole is in a prosperous condition. I do not intend to deal with that phase of the situation. I want to refer more particularly to certain situations which have arisen in western Canada.

If you go back a number of years you will realize that the early pioneers in the west settled at great distances from railways, and these pioneers made it possible for the western prairies to be opened up for settlement. They made possible the adoption of a great immigration policy, as has been pointed out by the leader of the opposition (Mr. Bennett). These pioneers in many districts in western Canada are still living great distances from railways and I believe that this is one of the reasons why we have an immigration problem on our hands. During the two sessions that I have had the honour of representing my constituency in this house, this being my

third session, many bills for branch line railways have come up and been passed, providing largely for construction in the northern parts of the western provinces, opening up new territory, which is of course necessary; but only in some instances have they taken care of the older settled parts of the provinces where the pioneers are entitled to some consideration. I have in mind a district in the constituency which I have the honour to represent. There the settlers have been for some twenty-five or thirty years, and they are still hauling their products to market for distances varying from twenty-five to thirty-five miles. It is said that the territory belongs to the Canadian Pacific Railway Company, whose main line runs through it. This company may build branches there without coming to parliament for a charter, but it has not yet seen fit to do so. The Canadian National railway, however, is within twenty miles of Swift Current and a few more miles from the district I speak of—a pioneer district containing probably as fertile and productive land as is to be found anywhere in Canada. As I say, the Canadian National railway is only a little more than twenty miles away, and while the territory may be described as Canadian Pacific territory, nevertheless I feel that if the Canadian Pacific Railway Company does not take advantage of the situation, the Canadian National Railways should have an opportunity of building a branch line without subsequent competition from the Canadian Pacific. If it were possible for this house to take such steps as might be necessary to shut a railway company out of a district, if it will not give that district service, in order to let another railway company supply the transportation needs, I think it would be the part of wisdom to do so. We do not want any more paralleling of lines, but if the Canadian Pacific Railway Company does not see fit to build into such a district, then I believe it is the public duty of this parliament to see that the pioneers in such a district are served with proper transportation facilities, so that the country may be made available for settlement, and the boys and girls of the pioneers, instead of becoming disheartened and going to the cities or to the northern parts of Saskatchewan, Manitoba or Alberta, will be satisfied to stay at home and settle the vacant lands. You cannot expect them to do so today when those vacant lands are twenty-five to thirty-five miles from a railway.

We in the west were all happy to see the decision made by the Minister of Railways (Mr. Dunning) last summer in selecting the port for the Hudson Bay railway. I think he is to be congratulated on the stand he then took. The investigation apparently was fully made, and any person who reads the report of Mr. Palmer will, I am sure, feel satisfied that every reasonable precaution was taken to make the proper selection.

The railway into the Flin Flon area I also believe will be an advantage to the people of the west, and I feel that the government is to be congratulated upon their action in that connection. But at the same time I want to ask the minister, who has shown that he is able to take the initiative, not to overlook the district to which I refer; its transportation needs have been brought to his attention on many occasions. Only this morning I received the Swift Current Herald dated February 2, in which the following reference is made to the railway situation:

> With both the provincial and federal parliaments in session, and absorbing as we do the daily reports of proposed legislation, we are again moved to feel vituperative in connection with the situation existing in this district in the lack of railway accommodation. The board of trade has held indignation meetings with monotonous regularity; delegations from the outlying farming territory unserved by railways have come and gone; resolutions in hamperfuls have been forwarded to Ottawa; floods of oratory have been loosed—we have been sadly neglected, discriminated against, so on and so forth—and in the end we find ourselves in the same old position, and farmers are still hauling their grain the odd twenty-five miles or so.

And further on occurs this passage:

> A lot of people feel that if the government were given an indication that the voters, regardless of affiliation, are ready to stand up and protest emphatically—and protest by force of the ballot—this district would undoubtedly be given consideration without undue delay. When hard-shelled voters, who have voted the same party ticket since being granted a franchise, feel that way about it, why something's going to happen sooner or later.

I read that simply to show the feeling of the people in that particular district. A few years ago the Minister of Railways was the provincial treasurer of Saskatchewan. In that office he realized some of the financial difficulties of the city of Swift Current, and now when we have an opportunity of getting concerns such as the Cockshutt Plow Company, the John Deere Plow Company and the International Harvester Company to establish branches in the city, but find them hesitating to do so because of lack of access to the territory contiguous to Swift Current that should be served with railway facilities, I think he should take this into consideration, remembering what took place a few years ago in that particular city and district.

Another matter that I propose to deal with concerns the Post Office Department. When

a change was made in the postal rates it necessarily brought under consideration the scale of postmasters' salaries, as many of our postmasters are paid on a commission basis. The present schedule provides for payment of only $60 per year for the postmaster of an office whose annual revenue is under $100 That means that a postmaster out in the country is paid some $5 a month—hardly enough to clean the kitchen where the people of the district gather to get their mail. I know many hon. members have districts in their constituencies in which it is almost impossible to find anybody to look after the post office. When a man does take on the duty it is simply that the district may not lose the post office, not because he feels he is being adequately paid for his services. Now, the post office is a public service, and whether it is paying or not I submit does not matter; the people are entitled to get service. Therefore when the revision of salaries is being dealt with, I trust the Postmaster General will take into consideration the representations which have been made by the Dominion Postmasters Association. They asked for slight increases, and for the benefit of the house I should like to give the following comparative table of salaries paid these officials in this country and in the United States. The statement is as follows:

Revenue	Present salary	Proposed salary	American salary	Revenue	Present salary	Proposed salary	American salary
$	$	$	$	$	$	$	$
100	60	100	160	2,200	860	1,475	2,100
200	100	200	320	2,300	890	1,525	2,100
300	150	300	480	2,400	920	1,575	2,290
400	200	400	565	2,500	950	1,625	2,290
500	250	500	650	2,600	980	1,675	2,290
600	300	575	735	2,700	1,010	1,725	2,480
700	350	650	820	2,800	1,040	1,775	2,480
800	400	725	895	2,900	1,070	1,825	2,480
900	450	800	970	3,000	1,100	1,875	2,670
1,000	500	875	1,045	4,000	1,400	2,375	3,050
1,100	530	925	1,120	5,000	1,700	2,875	3,400
1,200	560	975	1,195	6,000	2,000	3,275	3,600
1,300	590	1,025	1,270	7,000	2,300	3,675	3,900
1,400	620	1,075	1,345	8,000	2,600	4,075	4,400
1,500	650	1,125	1,420	9,000	2,900	4,475	4,900
1,600	680	1,175	1,530	10,000	3,200	4,875	5,400
1,700	710	1,225	1,720	20,000	5,200	7,375	8,400
1,800	740	1,275	1,910	30,000	7,200	9,875	10,900
1,900	770	1,325	2,000	40,000	9,200	12,375	13,400
2,000	800	1,375	2,100	50,000	11,200	14,875	16,000
2,100	830	1,425	2,100				

Mr. VENIOT: Does the statement indicate or show that it includes commissions on post office orders, postal notes and stamps?

Mr. BOTHWELL: No, it does not.

Mr. VENIOT: Well the American salary is fixed, and no commission is allowed. That is the difference between the two systems.

Mr. BOTHWELL: There may be some allowance, but so far as the country offices are concerned the amount derived from the sale of money orders and postal notes is very small.

Mr. VENIOT: The record shows it.

Mr. BOTHWELL: There is another matter in connection with the post office situation to which I should like to draw your attention, and that has to do with the railway mail clerks. I am only going to make one comment with respect to them and it is this: In Canada railway mail clerks work on Sundays and on holidays, and are called on at night. The maximum salary, as I understand it, in Canada, is $1,800, whereas in the United States the maximum salary for railway mail clerks is $2,600. Then, too, the minimum salary of the Canadian railway mail clerks is $1,140, as compared with the minimum in the United States of $1,800. I think it would only be fair to say, however, that our mileage allowance is higher than it is in the United States.

Mr. VENIOT: There is no mileage allowance in the United States. The railway mail clerks there are allowed a lump sum for expenses.

Mr. BOTHWELL: Yes, that is quite correct, but the mileage allowance in this country reaches a greater total than is allowed in the United States. Application has been made to Ottawa for a revision of salaries, and when the salary schedules are being arranged by the Postmaster General I hope he will take the claims of the railway mail clerks into consideration as well as those of the postmasters, particularly postmasters in the smaller offices.

Again in connection with the Post Office Department it seems to me, Mr. Speaker, that some arrangement should be made whereby officers in the postal service of this country who are interested and efficient might be transferred from province to province, or from town to town, if health or family requirements make such a change necessary. We have some postmasters who are most interested and most efficient. We have some postmasters in small offices who have brought about tremendous increases in the postal revenue by reason of the interest they have taken in their work. To illustrate what I mean I may say that I have here a circular that was drafted and sent out by a certain postmaster last year after the reduction in the postal rates. This man is greatly interested in postal work, and if I read a portion of the notice he sent out it will serve to demonstrate the great enthusiasm which he entertains for his work. For example I would quote these passages:

There is no safer method for sending money than by post office money order, no matter how large or how small the amount may be. Because the public is learning more and more to appreciate the dependability which can be placed on the services rendered by the post office, explains why instances are increasing where people send thousands of dollars by post office money orders. This public confidence is growing, because:

1. The post office benefits everybody, and is absolutely impartial. It does not favour any one at the expense of anybody else, the rates being exactly the same to everybody, for whatever service may be rendered.

2. The post office carries your message or money safely, promptly and cheaply, and is at your service continuously.

3. The post office is your institution. It belongs to the public. The more you patronize it, the more will you help develop and extend its usefulness. Please remember, it does not operate with a view to create a surplus, but all its earnings are employed in improving the service. As you help create benefits, you likewise share them.

4. The post office is used by everybody in some way. Therefore, the surest way to reach anybody with a message or with money, is to employ the method which reaches the most people.

The cost of mailing a letter has been reduced to two cents. Think for a minute what a two-cent stamp will do for you. Everybody is benefited by this reduction. However, it means a tremendous reduction in the revenue of the post office, which can be off-set only by making greater use of all the different kinds of service which it offers, such as:

1. Writing more letters.
2. Sending out more advertising matter.
3. Sending more parcels by mail.
4. Taking advantage of the security offered by having parcels insured for a very small additional fee.
5. Registering all important letters or other items which affords added protection in handling.
6. Sending merchandise c.o.d. which secures prompt payment.
7. Sending money by post office money orders (these cover the globe) or, for small amounts payable in Canada only by using postal notes.

If you want to pay your taxes, or mortgage, or an account at some other point, or make a payment on land you have bought, or send money for any other purpose, remember, there is no safer method than by post office money order. If for any reason it should be lost or accidentally destroyed, you can obtain a duplicate, without one cent of expense.

These are some of the ways by which the post office serves you. You will admit it is a very good and useful service, and the way to maintain good service is to use it extensively. Therefore, use the post office in every way you can, and as often as you find it necessary to transact any kind of business which it can do for you.

I submit that a man who takes interest enough in his post office to get out matter like the foregoing is very much needed in the public service, and when it becomes necessary for him, through health or family reasons, to move to some other part of the country, surely it should be possible, under the Civil Service Act if you will, to have that man transferred in accordance with his own wishes. Corporations such as railway companies, banks and trust companies seem to shift their best men around from one province to another, or from one city or town to another. Why should not the same policy be pursued in the public service?

There is one other matter I should like to touch upon, and that is the question of federal grants for highways. Hon. members will recall that in 1919 an act was passed, making provision for an appropriation of some $20,000,000 to the various provinces in Canada to be expended in the construction of highways to be approved by the federal government. The latter was only to contribute some 40 per cent of the money re-

quired for building these highways, the provinces putting up the balance of 60 per cent. In the older settled parts of Canada, certainly in some parts, there are good highways, but that grant of $20,000,000 gave western Canada only a start because we have a tremendous mileage with a comparatively small population. The United States have made federal grants to the extent, I believe, of about $725,000,000—too much, I believe, judging from reports received from the United States as to how the people there feel they are taxed. I believe an appropriation such as was made in 1919 is within reason and would assist materially in regard to highways. As we hear from almost every speaker in the house we have on our hands an immigration problem. If we have good roads, we have practically on our doorstep about 120,000,000 people, many of whom are looking to Canada. With good roads and with the number of motor cars that are being used now, it is easy for these people to cross the line and to travel through Canada, but they are not coming in the numbers they would come if we had better roads. Interprovincial highways, transcontinental highways, highways north and south, which might be assisted by the federal government would be of inestimable value in settling the country. A visitor to the south of the line just a week or so ago, a man who is now controlling some thousands of acres of land in western Canada and a man who knows the type of farmers that are needed for the west as settlers, has this to say in speaking of the United States farmers:

> When the unrest and discomfort of the agricultural class is so freely admitted by the press, the politicians and the large land dealers in the cities, one may be sure it exists among the farmers to even a more intensified degree. I had the opportunity to learn this first-hand, not from chronic kicking individuals, but from highest authorities in the land business as well as from our own Canadian government agents.

In speaking about immigration to this country, he says:

> It is a large subject and no attempt will be made to touch its many aspects, but I am reliably informed by two Canadian government agencies as well as by colonization agencies and private conversation with some individual farmers that there is considerable immigration interest.

That is south of the line.

> While we maintain sixteen Canadian government agencies, and some of them are doing good work, it looks as if more could be done to promote the immigration of seasoned and experienced farmers with equipment to settle upon our lands; there is a class of such farmers available and they would bring no assimilation problem with them, and are even more adaptable to conditions here than our English cousins.
>
> The average American prospective immigrant is fully equipped with horses and machinery, stock, household effects, and enough money to take care of himself for perhaps a year, and would be prepared to rent or buy on a very easy payment plan.

My contention, therefore, in connection with grants to highways is that by good highways we would open up the country to such an extent that we would induce more settlement from across the line; we would induce more people to come from there, and travelling through the country as tourists, or in whatever way they come, they will make the best kind of immigration agents for us.

Coming again to railways, I think it was in 1926 that the hon. member for Kenora-Rainy River (Mr. Heenan) referred to the 1908 strike of railway shopmen in this country. I have been informed that the Canadian Pacific Railway Company are now laying off men when they attain 65 years of age, and because they took part in that strike of 1908, the company are refusing to pay their pensions. If this is a fact—and the facts are true in at least one case so far—I believe this is a matter with which parliament should concern itself. The railway companies, as I view the situation, have been paid in freight rates by the people of this country sufficient money to take care of their pension schemes. The money has been received by the railway companies but it is not being paid to those persons who have become entitled to it. I have in mind one instance of a man who worked for forty-five years for this company, and I am told that there are no black marks against him in connection with his service with the exception of the fact that he was out on strike in 1908. He went out on strike with the shopmen not knowing beforehand that a strike was about to be called; as a matter of fact he was acting in that particular capacity for only about eight days before the strike was called. On attaining the age of 65 years a few months ago he was laid off and a pension is refused. As I view that situation, it seems to me that the government of this country should take the matter up with the railway companies who have received the moneys that are payable by way of pension. I do not know what effect an appeal may have, but if an appeal does not have any effect, I hope and trust that action can be taken whereby such a condition cannot arise in the future. The

1908 strike, as I understand it, was a legal strike and the men are not entitled to be penalized to the extent to which they apparently are under the ruling made by the company.

There are many other matters which might be dealt with, but they can be discussed better on the budget debate and I just wanted to bring to the attention of the house at this time the matters to which I have referred, particularly in connection with those districts —the constituency which I have the honour to represent is not the only one by any means—which are apparently being discriminated against in regard to railway construction, when other portions of Canada are being served in order to bring in settlers from other countries to populate our country.

Mr. L. H. JELLIFF (Lethbridge): Mr. Speaker, in view of the hour and the reception which I understand is being held for Mr. Kellogg, I suggest that you call it six o'clock.

At six o'clock the house took recess.

After Recess

The house resumed at eight o'clock.

Mr. L. H. JELLIFF (Lethbridge): Mr. Speaker, in rising to make a few remarks in reference to the subject which is now before the house, I wish first of all to conform to the polite conventionalities which attend this occasion. I wish to extend my heartiest congratulations to the mover (Mr. Ilsley) and seconder (Mr. Beaubien) of the address in reply to the speech delivered at the opening of this session by His Excellency the Governor General. Congratulations have been showered upon the hon. members who performed this function, and very justly so; they carried out the task committed to them with credit both to themselves and to the constituencies which they have the honour to represent. But as I sat here quietly, reading the speech from the throne and listening to the eloquent comments upon it which were being made by the mover and the seconder, I could not help thinking that they were employing a great deal of rhetoric and exerting a very considerable effort in spreading their decorations over a barren fig tree; for I must admit that I am quite in agreement with the comments of a good many members who have spoken in this chamber as to the paucity of legislation forecast in the speech from the throne. This, to my mind, is particularly notable, and perhaps particularly open to criticism, when one has in mind the things which have been occurring throughout our country during the last year, especially the events in connection with the celebration of the diamond jubilee of confederation. All over this great land of ours from one end to the other, from the capital to the little school house away out on the prairie, we were eulogizing the magnificent efforts of the fathers of confederation who brought together the far-flung provinces of this Dominion into one great federal whole and gave us the opportunity for the development of this northern part of the north American continent. It seemed to me, Mr. Speaker, in view of all those celebrations, of the inspiration which comes from recounting the achievements and accomplishments of the great fathers of confederation, and of the manner in which the various booklets and publications issued in connection with the celebration have brought home to our people the wonderful development which has gone on here, that that inspiration should have been so great as to bring us, in our legislative program for this year, to a feeling which would raise our level infinitely beyond what it was before, and thus advance materially the development of the land we all love. That is the criticism I have to offer in reference to the speech from the throne, and to the absence therefrom of so many matters which have been discussed pro and con throughout the length and breadth of this land during the last year. It seems to me there should have been in the speech from the throne an indication of the measures which the government propose to lay before parliament during the present session.

As I have said, that is by way of criticism. There may be reasons for the omission of items of legislation with which I am not familiar. I have no desire to be unjust to the government in the matter; I have no desire to utter a single word which will embarrass them in carrying on the great work committed to their charge. On the contrary, I think it may fairly be said of me that in all things I have wished to uphold their hands and to help them. That, I believe, is the attitude to-day of every member in the group with whom I am associated, and also of those who sit on your left, Sir, in regard to the coal proposition, to which I wish to refer later.

I have referred to the mover and seconder of the address; I do not wish to omit mention of the newly selected leader of the opposition (Mr. Bennett). I want to associate myself with the remarks made on the opening day of the session by the leader of our group. The leader of the opposition is a citizen of my own province, one of whom we are all proud and who is qualified in every

respect to hold and to fill with efficiency the position to which he has been chosen. We in Alberta take especial pride in honouring the leader of the opposition in this house. We take especial pride in his attainments. He has raised himself to one of the highest positions, if not the highest, among the citizens of our province, and this by virtue of his sterling worth and exceptional industry, pluck and ability, and his name to-day is known not only in his own province but throughout Canada and wherever the English language is spoken. We are proud that he represents Alberta, at least in this house, and we feel that, with us and with the government as well, he will be of great assistance in the endeavour to solve the problems of western Canada and of Canada as a whole, with which he is so thoroughly acquainted.

There are not in the speech from the throne very many things with which I wish to deal. As I have observed, there is a notable lack of legislation mentioned in the speech, a fact which I regret for the reasons I have stated. During the last few months the newspapers and the people have been predicting what measures would be brought down this session. The press has been discussing the great problems which concern us as a people. I am going to read the prognostications of one newspaper and its view of the duty of this parliament and what is to be expected of it. And what is said in this article has, I presume, been repeated over and over again in other newspapers from one end of the country to the other. What I am about to read is taken from the Calgary Herald, which I take it is a Conservative paper, but a paper which none the less is highly respected in the west and which can rightfully assume to predict what it expects in the way of action by this parliament. I quote:

> The parliament of Canada is about to open the session of 1928. The government and members of parliament will have to deal this year with certain problems of exceptional national importance.
>
> The preparation of the budget is an annual task that involves much labour. The people of the country do not appreciate how much thought goes into it. One may safely say that no government or minister of finance treats lightly the duty of raising the money required by the country. The probable effects of changes in tariffs are not made with disregard of the interests of industry nor do those in positions of responsibility, of either party, ignore the tariff views of large bodies of Canadian opinion. This explains why the Canadian tariff has been fairly stable over a period of years. Governments have given careful thought to three main considerations: the desirability of promoting sound manufacturing and commercial development in Canada; the safeguarding of the interests of those who have to buy protected products, and the necessity of securing adequate revenues.
>
> Parliament will learn of the first recommendations of the newly-created tariff advisory board. Whether these recommendations will bear upon this year's budget is not yet known. The safer course would be for the government to abstain from any serious tariff changes at this session, and give parliament the opportunity of examining the new recommendations made by the board. This board has grave responsibilities, and the people of Canada can have confidence that it will act with a full realization of these responsibilities.
>
> Two other matters of first-class importance will come before the house. The question of the construction of the St. Lawrence waterway, which embraces large transportation and power problems and entails a huge expenditure of public money, is not one that any government will decide hastily. The other major matter that will be before parliament is that of Canadian coal for central Canada. Decision respecting this will rest with the government. It now has before it all the facts for which it asked when it instructed the railway board to ascertain the out-of-pocket expense to the railways of carrying Alberta coal to Ontario. The way for the laying down of a national policy has been cleared. Public opinion in Canada strongly favours such policy. The people of this country would like to see an experiment over a period of years made, to learn definitely whether a considerable substitution of Canadian fuel for American is an economic possibility.

I do not need to read further from this article. I have read it simply to indicate the current of thought in Canada at the present time and because it seems to me that attention should have been paid in the address to the matters therein referred to. Most of the things mentioned in that article—things which have been the subject of discussion from one end of Canada to the other—are omitted from the speech from the throne; at any rate they are not mentioned specifically. It may be, as I said a while ago, that there is some good reason for the government not mentioning those important issues. It may be that the policies referred to in this and other articles are difficult of solution, and the government do not feel that public opinion as yet is crystallized sufficiently in regard to them to proceed therewith. But on some of these matters I am sure the people are united in opinion from the Atlantic to the Pacific, and if there is one issue among those mentioned upon which there is unanimity it is that rates should be fixed by our railways which will carry Canadian coal from Nova Scotia and Alberta to central Canada, and so solve this coal problem.

I have a particular interest in this problem as member for the Lethbridge constituency,

which is one of the large producing coal sections of this country. I have in my hand an estimate from the Lethbridge Herald of the wealth produced during the past year in the Lethbridge freight district, and I want to read a few of the statements in this estimate so that the house may understand my intense interest in the solution of this coal problem. Here is an account, approximate to be sure, but carefully prepared by the leading newspaper of that district, which is constantly keeping track of the local production:

Wealth production of the Lethbridge division of the Canadian Pacific railway in 1927.

Wheat	$44,000,000
Other grain	6,000,000
Sheep and wool	1,800,000
Cattle and hogs	5,750,000
Poultry and poultry products	2,250,000
Dairy products	4,000,000
Potatoes and vegetables	1,250,000
Hay and feed	2,000,000
Honey	50,000
Total agricultural products	$67,100,000
Coal, oil and gas	$11,500,000

The coal production is second only in value to the great grain production which we have in that district. We have a large coal mining population; some of our mines are turning out 200,000 tons to 250,000 tons per annum, such mines employing from four to five hundred men. Consequently the problem of the movement of coal is a most serious one in that district. It is even more serious for Alberta as a whole.

I am looking at this problem to-night, Mr. Speaker, as I am addressing you briefly on the speech from the throne, from the human standpoint, the standpoint of employment for the men of that province. I have before me the annual report of the mines branch of the province of Alberta. Turning to page 53 I find that there are employed in the mines of the province, underground, 8,669 men, above ground, 11,365, a total of approximately 20,000 men. Now, multiply that by five to represent the families of these miners and you have 100,000 people in the province whose livelihood depends upon the mining and transportation of coal. In other words, one-sixth of the entire population of the province are intimately concerned, and to them it is a very serious problem. This report shows that the men are engaged for only half of each year. Beginning in February and continuing through March, April, May, June, July and August until some time in September the mines are practically idle, the miners are thrown out of employment, and at once we have a serious problem on our hands. Time and time again there have been presented to this house telegrams from the mining camps of Alberta asking for relief from the government. What we want is a rate which will move the great coal stores of Alberta and make them available for the people in the province of Ontario. I am in favour of a statutory rate for this purpose, and I am here to advocate it to-night. I do not want to embarrass my warm-hearted friend the Minister of Railways and Canals (Mr. Dunning). I do not want to embarrass the head of the Canadian National Railways and the Canadian Pacific Railway. I am interested in the success of those two great railway systems comprehending within their mileage as they do twenty-two thousand and seventeen thousand miles respectively; but I believe the executives of those railways can make rates that will move our coal to Ontario. I urge the government, either by the introduction of a bill fixing a statutory rate or by other means, to meet this situation so that the coal can be moved to the points where it is needed and the miners can be employed. As I stand here talking to-night my heart is with those miners and their families in the coal camps of Alberta. This is a matter of importance even to the Minister of Immigration (Mr. Forke), with whom I have a great deal of sympathy. Probably he has on his hands one of the hardest problems of any minister of the government. I say to him, if you solve this coal mining problem, you will help to solve your immigration problem so far as Alberta is concerned. In order to support their families those miners have to go from the mines for six months each year and find employment in other occupations. Relieve them from that necessity, especially from the necessity of assisting on the farms, and you afford an opportunity to place in that province a large number of farm immigrants, who in turn will ultimately become farmers and owners of farms themselves. In that way you will help, in a measure, to increase the population of the country and to solve the immigration problem.

The railways say that they cannot do what is suggested. In my boyhood days I heard a saying, which is attributed to Cardinal Richelieu, "In the lexicon of youth there is no such word as fail." I want to commend that saying to the presidents of our great railways. I do not believe we have yet reached that point where we have secured the highest efficiency or economy in the transportation of commodities in this country. I can remember the early days in farming in Alberta when we thought that a car that would haul 600 or 700

bushels of wheat to the market was doing us a pretty good service. Later on larger cars, which conveyed 1,200 to 1,300 bushels, were built. They were succeeded by cars carrying from 1,500 to 1,600 bushels, and to-day cars are operating on those lines that carry 2,000 bushels of wheat to the market. Also in place of the inferior engines of thirty years ago we have the great mogul engines of to-day. Transportation is developing; it is not at a standstill. I believe that these railway companies, with their efficient presidents and with the inventive genius which must exist in the ranks of their employees, can find a way of moving that coal, and moving it at a rate which will enable us to use Alberta and Nova Scotia coal in central Canada and thus be independent of outsiders in the matter of our coal supply. I am urging this matter on the Minister of Railways, and urging it in a friendly spirit. I believe that if he were to introduce a bill this session fixing a rate for the carriage of Alberta coal there is scarcely an hon. member who would not vote for it, —in fact the vote would be almost unanimous, because the people of Canada are insisting upon the solution of the coal problem, and so far as I can see this is the only way to solve it.

So far as the speech from the throne is concerned, there are one or two other matters upon which I should like to touch. Mention is made in the speech that the appointment of ministers to Japan and to France is contemplated. I am in hearty accord with that proposal. I believe the appointment of such representatives to those foreign countries with which we desire to do business and to extend our commerce can be of immense value to Canada. In that connection may I say, that when this matter came before me I was trying to recollect whether I had ever seen any report as yet as to what our representatives at present in foreign countries are doing. It seems to me that we should have reports from our representatives in foreign lands so that we may know exactly what they are accomplishing towards the expansion of our commerce. It does not seem to me to be essential that we should have at foreign capitals men who are simply representing us in a social and a political sense; that was fairly well done under the former regime. What we want is the appointment of representatives who can help to extend and increase the commerce of this country and afford further opportunities for marketing the products of Canada. We have had an ambassador at Washington now for almost a year, and I am rather curious to know what he has accomplished. I have seen no report of his activities, and I doubt whether any other member has done so. I do not doubt at all that Hon. Mr. Massey has been rendering useful service in Washington, but I believe it would be a good thing to take parliament and the country into the confidence of the government and give us each year a report as to what our representatives in foreign countries are doing to advance our business interests in the countries in which they are located.

For instance I have here a statement to which I should like to refer for a minute or two—and I am sure this will interest my hon. friend the Minister of Agriculture (Mr. Motherwell). It deals with an industry as regards which, it seems to me, something might have been accomplished on the other side of the line. I refer to the cattle trade. We were complimenting ourselves very highly here a few years ago on the fact that the embargo which restricted the importation of our cattle into Great Britain had been removed. Almost everybody who had anything to do with it was given the credit for helping to raise that embargo, but I do not think it was ever definitely determined to whom the credit really belonged. However, we expected that with that embargo removed a great trade in cattle would spring up with Great Britain. What has been the result? I have here a report, which I secured a day or two ago, from the Bureau of Statistics as to our exports of cattle to the United Kingdom. In that publication the number of cattle exported in 1923 to the United Kingdom is given as 57,672 head. In 1924 the export of cattle amounted to 79,435 head, and in 1925 the total was 110,868. We boasted that year a great deal as to what we had done in the way of securing a market in the United Kingdom for our cattle, In 1926, however, the exports fell off to 79,985 head, and for 1927 they dropped to 8,263 head. There may be a reason for that which I do not understand. Of course there have been strikes in the old country but I do not believe their beef-eating stopped to the extent that it would cause a fall in our cattle importations into Great Britain from 110,868 in 1925 to 8,263 in 1927. I am not finding fault with the government in regard to that although I am calling the attention of the Minister of Agriculture (Mr. Motherwell) to it. I am suggesting, in connection with this proposal to send ambassadors, representatives, high commissioners and trade agents to foreign countries, that they exert themselves to see that the trade of Canada is not only maintained but increased.

Let us look on the other hand at the importations into the United States. These are the exports of cattle to the United States for the same year:

Year ended December 31	Number
1923	120,947
1924	133,025
1925	149,067
1926	158,295
1927	283,004

That is in spite of a tariff against Canadian cattle entering the United States.

Mr. DEPUTY SPEAKER: Order.

Mr. JELLIFF: I regret that as my time is up I shall have to discontinue my remarks.

Mr. G. T. MacNUTT (Colchester): Mr. Speaker, I will occupy but a very short time in offering a few observations on the subject matter before the house. For the very eloquent and kindly words expressed by the hon. member for Lethbridge (Mr. Jelliff) in his certificate of character and integrity of our honoured leader (Mr. Bennett), on behalf of the members on this side, I extend to him our sincere thanks. This debate has been under discussion now for the past eight days and I am sure we all agree that it has been carried on in a most gentlemanly and kindly manner. As I sat in my seat on the opening day and listened to the eloquent speech of our honoured leader and the reply of the Prime Minister (Mr. Mackenzie King), I wondered if the Christian era had at last reached parliament hill.

So much has been said throughout this debate on many matters which I wished to discuss that I will not tire the house with any repetition. There is, however, in this house a custom that will bear repetition, and that is in hon. members extending to the mover and seconder of the address their felicitations. It is particularly pleasing for me to-night to offer to my fellow Nova Scotian the hon. member for Hants-Kings (Mr. Ilsley) and to the hon. member for Provencher (Mr. Beaubien) my congratulations on the very creditable way in which they performed a somewhat difficult task. In the great republic to the south of us, we Nova Scotians, or Bluenoses as we are sometimes called over there, are noted for three things: codfish, handsome girls, and college professors. I have no doubt that the Prime Minister, looking around him to select a member to move the address in reply to the speech from the throne, and make a good job of that task, would naturally look towards the little province down by the sea which has such a reputation as I have indicated and which has given to this great Dominion three of its prime ministers.

Throughout the debate on the address I have observed that there is a tendency on the part of a great majority of members who have spoken to confine their remarks largely to that part of the country from which they come, and I may be permitted to do the same, particularly as the hon. member for Hants-Kings interjected into his speech a distinctly maritime flavour. He volunteered to give this government some advice; he advised his government that down in Nova Scotia they wanted wider markets. The cry of "wider markets" is a very old one. Hansard has been loaded up with it from the day that it was first issued. It is a catch-cry that is used in this house at every session. Wider markets are desired when we produce more than we consume.

The hon. member for Hants-Kings referred to apples, which constitute a very large crop in that portion of Nova Scotia from which he comes. I confess that in regard to markets for apples the hon. member is much better informed than I am. I know, however, that the home market consumes about fifteen per cent of the apples that are raised in that province, while the British and European markets consume the remaining eighty-five per cent. I realize that if the whole crop of fruit from the Annapolis valley were thrown at one time upon the home market, the producers would receive barely enough, if enough, to pay for the package that contains the fruit, but I know further that from now until the new crop comes in next year it is almost impossible to buy in the stores of that province Nova Scotia apples. Our stores are filled up with a highly-coloured, poorly-flavoured apple imported from somewhere else. I would not venture to say that they are from Ontario or British Columbia when I have around me so many hon. members from those two great provinces.

Do we want wider markets for our butter when the province of Nova Scotia does not produce one-half of the butter it consumes? What the farmers of Nova Scotia do want is a policy which will give Nova Scotia products a preference over foreign products in the Canadian market. What we want is increased production to meet the demands of our own consumption. Our farmers cannot meet those demands in the face of the conditions that are confronting them to-day.

I asked a question yesterday in the house regarding the dumping clause, if it was still being applied to butter coming in from Australia, and the hon. Minister of National

Revenue (Mr. Euler) informed me that it had not been applied for some time. With butter coming into this country as it is, and has been—only a few days ago twenty-seven thousand packages arrived in Victoria, B.C., averaging about fifty-six pounds to the package—I say, Mr. Speaker, that with such conditions existing, our farmers have no incentive to endeavour to increase their production. Not only does this Australian butter come into the Canadian market at a duty of one cent a pound, but the farmers who produce that butter, the shippers and exporters from Australia and New Zealand are being paid by their own government a bonus of six cents a pound. These conditions, Mr. Speaker, in the province from which I come are driving our dairy farmers out of business.

From the county which I have the honour to represent, during the past seven months 2,000 of the best and highest butter fat-producing cows were shipped out, mostly to the United States, and as I left my home to come here American buyers were at that time loading several carloads more for shipment into their market. Our farmers are being driven out of business. Of course, we cannot stop our American friends from coming into Nova Scotia and buying our cows if they find they can buy them cheaper there than elsewhere. With a Canadian duty of one cent per pound and a duty of twelve cents protecting the American dairymen it is easy to see why our cows go to the United States. I do say that the government have it in their power to apply the dumping clause to stop the importation of this foreign butter that is driving our Nova Scotia farmers out of business. I have on the order paper a question asking when this dumping clause was applied and when it ceased to operate, and I may have something more to say about this matter in the future.

Do we want wider markets for our farmers? Let me read a resolution that was passed by the farmers of Nova Scotia at the annual meeting of the dairymen's association held in the town of Truro, the seat of the county which I have the honour to represent. This resolution was passed in January, 1927:

Whereas the agreement as negotiated between the Canadian and Australian governments has reduced the customs tariff on butter coming into Canada from 4 cents per pound to 1 cent per pound;

And whereas as a result of this agreement coming into effect October 1, 1925, the price on Canadian butter has been reduced more than the amount of the original duty;

And whereas this reduction has had a detrimental effect on winter dairying in Canada, affecting both the producer and manufacturer;

Be it therefore resolved that we, the dairymen's association of Nova Scotia in annual convention here assembled, do humbly pray that the Dominion government do restore the customs tariff to its original rated duty of 4 cents per pound or equal to the Australian bonus of 6 cents per pound, at the present session of parliament;

Further resolved that a copy of this resolution be sent to the hon. Minister of Agriculture, Ottawa, and each of the Nova Scotia M.P.'s as well as a copy to the Hon. J. A. Walker, Minister of Natural Resources, Halifax, asking the Nova Scotia government to use their good offices in our behalf.

I will now read the resolution that was passed by the same association in January, 1928:

Be it resolved that the Nova Scotia dairymen's association in annual session assembled in Truro, January 17th-18th, 1928, reaffirm the action of this association in passing a resolution at the annual convention, January 19th-20th, 1927, asking the government to cancel the clause of the Australian treaty and the order in council which allows butter to enter Canada at the rate of one cent per pound duty and cheese free and restore to the farmer that which was taken from him by the signing of this treaty and the order in council allowing New Zealand butter and cheese to enter Canada at the same rate of duty.

Further resolved that we request that the dumping clause be at once applied to all butter coming into Canada from New Zealand and Australia whether on direct sale or on consignment.

Further resolved that the copies of this resolution with the 1927 resolution attached be mailed to the members of the senate, the Right Hon. W. L. Mackenzie King, Prime Minister of Canada; the members of the government; the federal members for Nova Scotia, and the Minister of Natural Resources, Hon. J. A. Walker, Halifax.

Those are resolutions, Mr. Speaker, that were passed at a convention of hard-headed farmers, farmers who are members of the two old political parties in this country. They realize that the situation that exists in that province is for them a very precarious one. In view of these resolutions I do not think that the question of wider markets is receiving much attention from the farmers of that province.

Again, do we want wider markets for our pulpwood, when we have steamers leaving the shores of Nova Scotia almost like ferries, carrying the raw wood across into the American market, to be followed there by the young men of our province who follow the wood to find employment in American mills, working up into the finished product that wood that should have been manufactured at home. What we do want in Nova Scotia is home manufacture of our raw materials, and a fearless determination to develop our own heritage for the benefit of our own people. I

could go on and at considerable length mention many more of the products of the farm of which we do not produce in Nova Scotia nearly as much as we consume. I refer to cheese, to eggs and many more products.

So much has been said throughout this debate on the question of coal that I hesitate to venture upon it, particularly in view of the fact that the hon. member for Cape Breton South (Mr. MacDonald) and the hon. member for Pictou (Mr. Cantley) discussed that question this afternoon. I may, however, be permitted to congratulate the hon. member for Bow River (Mr. Garland), upon his very able speech in this house a few days ago. His analysis of the situation in the province of Alberta, having reference to the demand that an out-of-pocket cost rate be given the coal producers of that province, is so similar to our demand from the maritime provinces that I could not add anything to the splendid analysis of that subject which he gave upon that occasion. I might say that my hon. friend robbed me, in that able speech, of a good deal of matter that I intended to present to the house.

Canadian coal for Canadian people is a slogan that I believe should be sung throughout the whole of Canada. It is a national question. It is a question that can be solved, if it is energetically taken hold of. Give the railways the out-of-pocket cost on moving coal and you will at once bridge the great gulf which is now fixed between the coal producers in these provinces and the consumers in the central provinces. The coal operators of Alberta are demanding this out-of-pocket rate to overcome what is known as seasonal unemployment. During the summer months they have not sufficient market to keep their mines operating at full capacity, while in Nova Scotia, as was stated this afternoon by the hon. member for Pictou, we require this seasonal employment, and this out-of-pocket rate would give employment to our miners after the St. Lawrence river has been closed to navigation. During the summer months our mines are worked to capacity, but with the closing of the St. Lawrence the work automatically ceases and destitution soon follows.

I wish to compliment the hon. Minister of Railways (Mr. Dunning) on the fact that he is always a very good listener when matters pertaining to his own department are up for discussion. He interjected a question when the hon. member for Pictou was speaking, and asked why 700,000 tons of coal were brought from Germany and England into the metropolis of Montreal during the summer months. Why should this coal be brought such a great distance when it could be obtained from the mines in Nova Scotia, which are much nearer Montreal? From the shake of the hon. minister's head I do not think he quite understood the meaning of the remark of the hon. member for Pictou. Let me say, therefore, that during the open season of navigation our mines are worked to their full capacity. The people of the great metropolis of Montreal, knowing that they cannot get coal by the St. Lawrence route in winter, naturally have to store large quantities and keep it on hand, and not being able to get it from the mines of Nova Scotia, they had to obtain it elsewhere. What we ask is that this out-of-pocket cost which the Alberta government and the Alberta operators are asking for, be extended to the province of Nova Scotia. If that were done the necessity for buying and storing such large quantities of foreign coal during the summer months would be immediately eliminated.

Mr. DUNNING: I do not want to bother my hon. friend or interfere with the trend of his argument, but for the sake of clarity would he tell me just what he means by the out-of-pocket cost? That is important, of course.

Mr. MacNUTT: It is quite evident the Minister of Railways was not in his seat the other afternoon when the hon. member for Bow River made a splendid analysis of the matter with respect to out-of-pocket cost.

Mr. DUNNING: Yes, I was.

Mr. MacNUTT: There is a difference, I admit, between the contention of the operators, the government of Alberta, and that of the railway commission, as to the cost. The railway commission, as stated by my hon. friend from Bow River, claims that it costs as much to move empty cars as it does to move loaded ones. I do not think anyone believes that. I agree that the difference would not be so great as perhaps appears at first sight, but I do not believe it costs as much to move empty cars as it does to move loaded cars.

Mr. DUNNING: My hon. friend misunderstood me. I did not intend to interject an argument, but rather to find out whether he meant the out-of-pocket cost as determined by the board of railway commissioners, or the claimed out-of-pocket cost as stated by the hon. member for Bow River and others, who argued that the commission was in error? It has an important bearing, from my point of view, on the question of the transportation of coal from Nova Scotia.

Mr. MacNUTT: Not being an expert in rates I am not in a position to say whether the railway commission are right in their contention about the out-of-pocket cost, or whether the government of Alberta is right. But if they are right in their contention that it costs as much to move empty cars as to move loaded ones, I say we have thousands of cars coming into Nova Scotia during the winter months that of necessity must be returned to the central provinces, and if you take the out-of-pocket cost as mentioned by the hon. member for Bow River, I think the Canadian National Railway will be making money out of the transaction.

Mr. GARLAND (Bow River): I can assure the hon. member that the commission's figures are wrong.

Mr. DUNNING: I am sorry that I have created a misunderstanding. I was not asking whether the commission's figures were right or wrong, but I was asking whether the figures my hon. friend was giving as being so useful to his argument, were the commission's figures or the lower figures quoted by the hon. member for Bow River. The difference is material and would have an effect on the economic situation. If you say you are taking the lower figure, that is an answer to my question.

Mr. MacNUTT: I am free to admit I am taking the figures presented by the hon. member for Bow River.

Mr. DUNNING: And lower still if you could get them.

Mr. MacNUTT: Quite so. So much has been said on the question of immigration in the debate that I hesitate to make any reference to it. I understand we are to have a commission or committee appointed to investigate the Department of Immigration. The first duty of the department or of such a commission should be to find ways and means of keeping our own people in the country. If our own native sons cannot make a living in Canada—Canadians who succeed everywhere else in the known world—how, I ask, can we expect people from foreign countries to come here and succeed where such Canadians fail?

Mr. FORKE: The Immigration department will not be helped by any statements such as the hon. gentleman has just made.

Mr. MacNUTT: I am sorry to say I did not quite catch what the minister said. Yesterday, as the Minister of Immigration (Mr. Forke) was addressing the house, I could not help wondering when he told us that in his visit abroad he had met so many people who desired to come to Canada. Knowing as I do the conditions that obtain in the farming industry in my own province, conditions of which I have already spoken, I wondered why these intending immigrants referred to by the minister would come to Canada and go in for farming, especially dairy farming such as is carried on in my constituency, rather than go to Australia where they would receive a bonus of six cents on every pound of butter they might ship out. As I say, I could not help wondering as to this as the minister presented his case to the house

Now a word in regard to the Duncan report—because if a maritime member addressed the house and had nothing to say in that regard, the people at home would think that something was wrong with him. I was pleased to hear the Prime Minister (Mr. Mackenzie King), in his excellent speech a few days ago, assure the house that during this session the question of implementing the remainder of the recommendations contained in that report would be taken into consideration. The hon. member for Hants-Kings (Mr. Ilsley) spoke of improved conditions in the maritime provinces. In this we can agree: the carrying into effect of part of the Duncan report has had a wonderful influence on that section of the country; and what is more important is the moral feeling it has produced. The old feeling that existed in the maritime provinces against the rest of Canada is dying out and the maritimes to-day are facing the future with confidence and hope. A striking development has been in evidence in the growth of the cooperative movement among farmers' clubs, womens' institutes, egg circles, fruit companies, creameries and organizations having to do with potato and live stock shipping, all of which have taken heart anew. The people are looking not to the past but to the future. In the city of Halifax we have under construction two chateau type hotels which will cost millions of dollars, and believing that they are an index to prosperity we welcome them. There is no question that a better future awaits that little province and the people who are behind the construction of these hotels no doubt foresee such a development in the maritimes as warrants them in undertaking the expenditure. Tourist traffic will be doubled and trebled immediately. Those members who come from the interior provinces and who have not yet had a sniff of good salt air from the Atlantic, I invite to come down to Nova Scotia and receive the benefits from the change.

As we did a year ago, we on this side of the house are disposed to take the word of the Prime Minister at its face value. Our attitude will be one of watchful waiting during this session, and I want to assure the house that in taking this attitude we do not imply that the time has yet come when the sword can be sheathed.

Hon. J. E. SINCLAIR (Queens): It is my pleasure at this time to join with those who have preceded me in this debate in extending congratulations to the mover (Mr. Ilsley) and seconder (Mr. Beaubien) of the address upon the way in which they have discharged the honourable duty conferred upon them by the government. In continuing the debate I may be permitted for a moment or two to refer to some of the things that have been touched upon by the hon. member for Colchester (Mr. MacNutt). In the opening of his remarks he made the statement, with which I can pretty much agree, that we in the maritime provinces are renowned for our codfish, our handsome girls and our college professors. The only amendment we in Prince Edward Island would suggest to that sentiment is this: we would mention the handsome girls before the codfish.

Belonging as I do to the agricultural calling, I may perhaps be allowed to say a word in reference to the statements that have been made regarding the production of butter and other dairy produce in the maritime provinces. It has been claimed by many public speakers throughout Canada that our farmers are suffering as a result of the Australian treaty and that there is consequently no incentive to the butter and dairy producers in Canada. I was at a loss to gather, when the hon. member for Colchester was speaking, whether he put himself on record as being opposed to Americans coming here to buy our dairy cows, because I know that in the maritime provinces during recent years, especially since the policy was put into force of bringing these provinces into the disease free area, the eyes of American dairymen as well as of dairymen in central Canada have been turned towards the maritimes. There is an appreciable movement from the large dairies from time to time throughout the year to replenish their stock of dairy cows from disease-free areas, and that is largely the reason why we see so many leading dairymen coming to that part of the country, particularly during the summer season when cattle can be shipped. Further than that, a movement has developed in recent weeks, perhaps I should say months, from the West Indies, for dairy cattle from the maritime provinces. Shipments are now being collected for the West Indies. This movement is largely due to the fact that tests have demonstrated that the dairy cattle of the maritimes are freer from tuberculosis than the dairy cattle of any other section of the Dominion. I feel that if the hon. members who are interested will compare the prices of butter throughout Canada during the past few years they will find that those prices have not been depressed by reason of the competition of the butter producers in our sister dominions of Australia and New Zealand. If as a member of the empire we are going to advocate inter-imperial trade, how can we ask for a repeal of the Australian treaty and be loyal to our professions in that regard? As an agriculturist in direct touch with the work of finding markets for our dairy products, I am in a position to state that the main result of the importations of Australian butter has simply been to put the speculator in Canadian dairy products out of business rather than to injure the farmer. To-day we have a ready market all the year round in Great Britain for our dairy products. It is in the same market that the dairy farmers of Australia and New Zealand dispose of their surplus product. That market controls the price of butter in the markets of Canada, Australia and New Zealand. And undoubtedly the dairymen of Canada are ready to compete with the other sister nations of this great Commonwealth in supplying the British market. I cannot let the opportunity pass without saying that I am unwaveringly opposed to the suggestion made by the hon. member for Colchester that an additional duty of four cents a pound be imposed upon butter. As to the bonus, New Zealand butter—which I think is chiefly coming into Canada—does not enjoy the incentive of a bonus. The bonus system applies only in Australia, and I am not sure whether it is in full operation at the present time or not.

Before proceeding further, Mr. Speaker, let me refer to one or two of the outstanding points in the speeches that we have heard from representatives from the maritime provinces during the past few days. The hon. members for Pictou (Mr. Cantley), Cape Breton South (Mr. MacDonald), and Colchester (Mr. MacNutt), spoke to-day, and a few days previously we heard from the hon. members for Cumberland (Mr. Smith) and Queens-Lunenburg (Mr. Ernst), as well as my hon. friend from St. John-Albert (Mr. MacLaren). In all those speeches the one outstanding feature was their reference to the Duncan report on maritime claims, and each hon. member complained that the government had not fully implemented the

recommendations contained in that report. But, with some very slight exceptions, all those hon. gentlemen were very careful not to specify any particular recommendation that had not been implemented by the government as far as possible up to this time. Unconsciously they congratulated the government upon the effect produced in the maritimes by the Duncan report. The hon. gentleman who preceded me (Mr. MacNutt) said that it had had a wonderful effect in the maritimes. My hon. friend from South Cape Breton stated that the Duncan report gave new life to the maritimes. But my hon. friend from Pictou was more cautious—he said our thanks were due to the God of the harvest. However, in the latter part of his speech, when associating himself with the Minister of Railways (Mr. Dunning) in pressing the completion of the Hudson Bay railway and other western projects, he said: "Members from the west should remember our views when considering this dissatisfaction and unrest in the maritimes." As a maritimer, Mr. Speaker, I claim that such reference to the maritime provinces is unwarranted, and is not a true reflection of the spirit of our people at this time.

Now, sir, let us look at the Duncan report and see how far our friends are justified in raising this cry of inaction by the government. Taking the recommendations paragraph by paragraph, the first is that a money grant should be made to each of the maritime provinces. This recommendation has been implemented as far as possible to date, pending a general adjustment as recommended by the commission. The second recommendation is that there should be a reduction of twenty per cent in freight rates on all traffic which both originates and terminates at stations in the Atlantic division of the Canadian National railways, including export and import traffic, by sea, common to that division, and that the same reduction be also applied to the Atlantic division proportion of through rates on all traffic which originates at stations in the Atlantic division, excluding import traffic by sea, and is destined to points outside the Atlantic division. That has been implemented in full, with the exception of incoming freight by water destined for maritime points and the freight going out to United States points by rail and water originating in the maritime provinces. Our friends opposite claim that this also should be implemented. I am confident that a close perusal of the freight revenue statements that have been made by the Canadian National Railways at the end of each month from July 1 to December 31, 1927, will show that compared with the same volume and the same period in 1926 the freight earnings on the Atlantic region have shrunk 20 per cent. So that they have given full effect to what has been recommended by the Duncan commission. The figures that have been published bear out that statement to November 30, and the figures published to the end of the year will I am confident show a similar result.

Mr. CAHAN: Does that twenty per cent reduction apply on the same volume of freight?

Mr. SINCLAIR (Queens): On the same volume of freight as compared with the previous period of 1926.

Now, sir, on page 27 of the report will be found one of the recommendations of the Duncan commission with respect to Prince Edward Island. That recommendation is in two parts. First, it is recommended that a survey be made of the railroad with a view to straightening it and giving better accommodation. This survey was made during the past year. Then there is the recommendation for an improved ferry service between Prince Edward Island and the mainland. A survey was made during the past year with a view to implementing that recommendation and I would say here in passing, in harmony with my colleague (Mr. Jenkins) who spoke yesterday, that the increased volume of trade in Prince Edward Island demands that at the earliest possible moment greater capacity should be provided in connection with the ferry service. In the matter of the recommendation for improved facilities in connection with the Prince Edward Island railway and the ferry service the government have gone as far as it is humanly possible for them to go up to this date.

Mr. CANTLEY: Would it not be humanly possible for the government to have ordered the second ferry boat that is called for by the report?

Mr. SINCLAIR (Queens): If my hon. friend will scrutinize the report he will find that it does not recommend a second ferry boat.

Mr. CANTLEY: I have scrutinized the report as carefully as any member of this house.

Mr. SINCLAIR (Queens): I have the report here and if the hon. member questions my statement I shall be happy to demonstrate its accuracy. In further answer to his question I would say that neither the government nor the railway can act a year in ad-

vance of a thorough survey by the engineers to determine the type of boat that is required. It would not be doing justice to Prince Edward Island to award a contract for a boat until a thorough survey of the existing conditions had been carried out and a suitable type of boat designed. The ferry boat which at present carries out the service does not meet the requirements of the present day, and the government are doing everything possible to meet that deficiency. I feel that it will not be very long, therefore, before even the exacting imagination of the hon. member for Pictou (Mr. Cantley) will be satisfied.

A further recommendation in the Duncan report was that a survey should be made of the three ports of Prince Edward Island with a view to providing transportation facilities, particularly for potatoes and other products. That recommendation has been carried out also. A survey has been made and contracts have been awarded. Two of them have been completed, and the necessary facilities thus provided at Summerside and Georgetown were in use this year. As a result hundreds of thousands of bushels of potatoes have been shipped by water to southern markets. The work at Charlottetown has only been partly completed. However, a contract for the construction of deep water facilities on the improved lines in connection with the railway terminus there has been awarded, and we hope those facilities will be available for taking care of the crop in the fall of this year. So it would seem that notwithstanding the complaints of hon. gentlemen opposite, the recommendations for better harbour facilities in Prince Edward Island contained in the Duncan report have either been fully implemented, or are well under way.

As far as the bonus for the steel industry is concerned we all know that when litigation was pending it was not an opportune time to carry out the proposal. In regard to coking plants, however, legislation was passed at the last session to give effect to the recommendation of the commission in that regard.

Mr. MACDOUGALL: I do not wish to interrupt my hon. friend in the very excellent speech he is making. He has said that the litigation over the affairs of the British Empire Steel Corporation last year rendered the time inopportune for giving effect to the recommendation of the Duncan commission. Can he give us any assurance, now that the affairs of the company have been straightened out, that we can look for the required assistance in the budget when it is brought down?

Mr. SINCLAIR (Queens): The question my hon. friend asks indicates that he accepts my statement that it was inopportune to take any action when litigation was pending. In regard to his question I can tell him that I have always found it a wise thing to look for things to those from whom we are most apt to get them, and that his desire for information will be fully satisfied when the budget comes down.

On page 41 of the Duncan report are set forth recommendations as to the action the government should take with respect to certain railway problems in the province of New Brunswick. In regard to the Kent Northern railway the recommendation is that negotiations be opened with the company looking to its being taken over. I understand that recommendation has been acted upon, and negotiations of the kind referred to have been opened.

On page 42 of the report the recommendation was made for the appointment of a deputy minister of fisheries. May I point out that legislation was passed at the last session of parliament for the carrying out of that recommendation.

Mr. HANSON: Where is the deputy minister?

Mr. SINCLAIR (Queens): The implementing legislation has been passed, and it is for the department to carry out its provisions.

It was recommended also in the report that a geological survey be made of New Brunswick and Prince Edward Island, particularly in regard to the clays and road materials that are available for the building of roads in these two provinces, especially in the latter. During the past season the required survey was made to determine the quality as well as the quantity of the clays available. I am not so well posted with respect to New Brunswick, but as regards Prince Edward Island that recommendation was carried out by the mines branch during the past summer.

A further recommendation was that agriculture, in the case of Prince Edward Island, where it is the leading industry, should be deemed as under technical education. That recommendation has been carried out to the full by the Labour department in the administration of the Technical Education Act.

I think it is fair to say that on the whole the government have gone as far as it is possible for them to go in implementing the recommendations of the Duncan commission. I want to say to hon. gentlemen opposite from the maritime provinces that they have not given a correct account of conditions in the

maritimes by saying that discontent and unrest exist there, and that the people are finding fault with the government for not carrying out the recommendations of the Duncan report. I have shown how unjustified those charges are in every particular.

The past year has witnessed very striking events in the history of Canada. Shortly after parliament prorogued last year arrangements were set in motion for carrying out the celebration of Canada's diamond jubilee. That celebration was carried through in a manner very creditable to the government as well as to the committee who had charge of it. I think that all those who participated in the celebrations throughout Canada are to be congratulated upon the enlarged outlook it helped to provide for our people, affording to them as it did an opportunity for a calm review of the past and a survey of the present, as well as occasion for looking forward to the future with hope and confidence.

Shortly after that celebration we were honoured with the visit of their Royal Highnesses the Prince of Wales and Prince George, accompanied by the Prime Minister of Great Britain, and we all appreciate the honour that was conferred upon Canada by the visit of those estimable gentlemen. It created a spirit of nearness to and greater appreciation for the mother country to have for the first time a Prime Minister of Great Britain who was actually in power visit Canada.

There was about that time another incident that is an historic mark in Canada, and that was the holding in this country of the World's Poultry Congress. I had the honour of attending that congress, in which representatives from forty different countries of the world took part, and the congratulations of the parliament and the people of Canada are rightly due to our hon. friend in this chamber, the Minister of Agriculture (Mr. Motherwell) for the able way in which he handled the arrangements for the holding of that congress and brought it to a successful conclusion.

In passing, let me say to our friends of the Conservative party that they also had a meeting in Winnipeg which marks a period in the history of their party. I want to congratulate our friends of the Conservative party on holding that conference along democratic lines—I think it is the first time they have ever attempted to do so. The lead in that regard was given to them by the Liberal party some thirty-five or thirty-six years ago when they held a convention in 1893, and a similar convention was held by the Liberal party in 1919. I am glad to see our Conservative friends are taking a leaf from our book and following in that line. I can say further that the temper and wording of the resolutions which they adopted at the Winnipeg conference must have been affected by the exhilarating atmosphere of the west, because it was very rarely we saw them use the word "protection" in those resolutions. I want to congratulate them upon their choice of leader and to congratulate their leader (Mr. Bennett) upon his elevation to that high and important position in the ranks of his party.

Later on in the season we had another important meeting in Canada when the provincial premiers met with the federal government at Ottawa. I followed the discussion; but it is not my purpose at this time to refer in detail to the precis that was given to the press or the reports that we have of what took place, more than to say that a very favourable impression was created throughout this country, and we of the maritime provinces are looking for some substantial results when the government have time to give consideration to the matters which were discussed and which obtained the almost unanimous approval of the provincial representatives who attended that conference.

In the short time at my disposal I should like to speak of some matters in which the people of the little province of which I have the honour to be one of the representatives are directly interested. I was referring a moment ago to the recommendation by the Duncan royal commission in regard to increased transportation facilities. Had we had no Duncan royal commission the increases that were recommended would have to be carried out by the government of the day on account of the increased production that has taken place among the farmers of that province. We have a specialized industry of scientific agricultural development among our people in the raising of seed potatoes. This has developed to such a remarkable degree during the past three or four years that the potato production in Prince Edward Island during 1927 comes fourth in the list of the provinces of Canada as regards total production, and it is very nearly equal to that of New Brunswick. Only the provinces of Ontario and Quebec have a greater production of potatoes. This has caused a demand for increased transportation facilities, a demand which has been given voice by the people during the past season in a request for branch railways in that province. The people there have held several meetings, at which their representatives have been present, asking for improved railway service by the building of branch lines, and petitions have been circulated in some sections asking for that service.

I may point out that the growing of a potato crop is a little different from the growing of grain, particularly of wheat, as it is done in the west, because we have to market our crop within the season in which it is produced. We have only a few months and the time for marketing the crop is even further shortened by our Canadian winter. I would like to direct the attention of the Minister of Railways (Mr. Dunning) to this request for branch lines, and to say also that not only is there a need for branch railways, but there must be a further building of permanent highways in order to facilitate motor truck transportation. I was particularly pleased to hear the hon. member for Swift Current (Mr. Bothwell) this afternoon refer to that, and to what has been done in the United States in that regard. We cannot escape the thought that a certain amount of responsibility rests on the federal government for assisting in that work. I have under my hand a quotation which shows that we are not the only people who are looking at the building of permanent highways from this standpoint. As my hon. friend pointed out this afternoon, the United States government have spent a great deal of money in encouraging state legislatures to build through highways of a permanent nature. In Great Britain the same has been true of the central government, and I have in my hand a report from St. Austell, Cornwall, England, of July 9, of a speech delivered by the Prime Minister of Great Britain who uses these words:

> We promised to continue to agricultural ratepayers the relief already given during our term of office.
>
> We have kept that promise and made the relief permanent.
>
> We went a step beyond that by including farm buildings and relieving them of the larger part of their then net actual value for rating purposes.
>
> In 1925 and 1926 we passed two Acts in implementing that promise.
>
> Half the cost of maintaining roads and bridges has been taken off the shoulders of the local ratepayers and placed on the road fund.
>
> The government have paid one quarter of the cost of the second class roads and bridges—that is, the ordinary rural roads—in assistance of local rates.
>
> We feel that, great as the assistance that has already been given, the time has come when we ought to see if we cannot do a little more.
>
> I had a talk the other day with the Chancellor of the Exchequer on this subject.
>
> We have decided to raise a proportion of one-quarter on the second-class roads to one-third at a cost of another £500,000 a year, and to make this applicable from April 1 last.

Hon. members will see the trend that this matter has taken in Great Britain and the United States. In Canada we see similar requests coming from all parts of the country; I have under my hand a request from boards of trade of southern Alberta along the same lines. It seems to me that this is a matter which the Government must consider at a very early date, to ascertain if some means cannot be found to assist the building of permanent highways for the encouragement of motor truck traffic that will give relief to the people who are now asking for better transportation facilities, and will also help the exchequer of the provinces; because we know it is a fact that while the revenues of Canada are buoyant, the revenues of the provinces are decreasing considerably, especially in the maritimes.

There is another point in regard to railway matters in Prince Edward Island which was very well brought out by my colleague yesterday, and that was the necessity for the completion of the standardization of the island railway. I address myself particularly to the hon. Minister of Railways, because this matter calls for a capital expenditure and is a work which comes under the direction of his department. I feel that he is sufficiently familiar with the situation to know that the work must be done at an early date in order to give the people of that section of the island the service that is now available to those living along the portions of the road already standardized.

Mr. DUNNING: How are the people satisfied with the terminal work?

Mr. SINCLAIR (Queens): I have had no complaints whatever in regard to the terminal work. I think the expenditure that is being made this year in providing standard terminals in the city of Charlottetown meets with the approval of all our people. It is really a necessary part of the standardization work; in order to use the remaining narrow gauge equipment and take care of the running expenses of the standard equipment that is now in use on a portion of the road, it was necessary to have that terminal work done at this time as decided upon and requested by the engineers of the road.

There is another feature of the speech from the throne to which I should like to make reference. In the last paragraph it says that substantial assistance and improved facilities will be provided for industrial and scientific research. That, Sir, will meet with hearty approval from our people in Prince Edward Island, because there is no doubt that the advance of scientific agriculture in our province has been quite rapid during the past few years. I feel that an expenditure along that line will mean a great deal for the pro-

ducers of grain and root crops. I have in my hand a copy of an address delivered to the professional institute of the civil service of Canada at its meeting in the Chateau Laurier, Ottawa, on November 27th last, by Professor J. C. McLennan, of the University of Toronto, a noted scientist of whom Canada may well be proud. He says:

> By the use of "off-peak" electric power we can obtain vast amounts of such gases as oxygen, hydrogen and nitrogen, and such materials as phosphorus, magnesium and aluminium.

He says further:

> It will be possible, too, with the large supplies of oxygen, hydrogen, nitrogen, and phosphorus that we can secure by the use of our spare electric power, to build up immense industries for the production of artificial fertilizers, and these products can be used in ever increasing amounts to enrich our grass lands, to increase our hay and root crops and to increase —yes, double, at least in many places—the production of our grain fields.

That has a particular appeal to our people in Prince Edward Island. We have been growing our potato crop on artificial fertilizers. We have used considerable quantities of them, buying them in the markets of the world, but chiefly from Baltimore in the United States. Last year we used about thirty thousand tons of mixed fertilizers for the production of our crop. The amount in use has been increasing rapidly from year to year, and if fertilizers can be produced as here indicated from the waste energy of our electric power and the raw products of Canada can take the place of what we are now importing, it will certainly be a step in the right direction. By providing fertilizers for our people from our own natural resources, it will improve conditions generally in Canada, as well as help our trade balance. I think the action of the government in that regard is to be commended, and I hope that a liberal allowance will be made for the organization of an adequate research bureau in Ottawa.

Before closing, I might refer to a matter of probably local interest, which was also referred to last night by my hon. colleague. The speech from the throne speaks of the progress and development that has been made in Canada in aviation, particularly in regard to the carrying of the mails, and we are all glad to learn of that. My friend the Postmaster General (Mr. Veniot), of whom we are all proud in the maritimes, is to be congratulated upon inaugurating an air mail service in Canada and delivering the mail in a shorter time than it had been delivered previously. I am referring particularly to the weekly service that is now given the people of the Magdalen islands. No people in Canada were more in need of being brought closer to the mainland of Canada than our good friends in the Magdalen islands, and we are all glad to see that they are getting this service. We have an idea that perhaps the minister might see his way clear to supplement that service by giving to us in Prince Edward Island a similar service, which would not entail any great expense, now that he has the plane and the equipment at Moncton. During this season of the year particularly, from the first of January until the ice goes away in the spring, our service is often interrupted, and we have especially during week-ends and on certain days during the week when steam communication is interrupted, quite a long time to wait for the regular delivery of mail. If some system could be devised by the Postmaster General by which an air mail service could be given to the people of Prince Edward Island, as an initial step, to carry our delayed mails, I am sure it would be much appreciated by the province in anticipation of a regular aerial mail service.

I see Mr. Speaker is becoming restless and that my time is up. I thank the house for its attention.

Mr. L. W. JOHNSTONE (Cape Breton North-Victoria): Mr. Speaker, I should like to make a few remarks on the subject before the house. We are now in the closing days of the debate, and the main subjects dealt with in the speech from the throne have been so thoroughly discussed that there is very little left for one to say.

First I should like to congratulate the mover (Mr. Ilsley) and the seconder (Mr. Beaubien) of the address on the very excellent manner in which they performed their respective duties. Especially do I congratulate the mover, who is a maritimer; and I am glad that the government saw fit thus to honour the hon. member for Hants-Kings, who is keeping up that reputation for oratorical ability which in days gone by was so ably displayed by many who sat in parliament, made laws, and came from the little province by the sea.

I do not wish to appear either over-optimistic or pessimistic, Mr. Speaker. Although I do not deny that prosperity may exist in some parts of the country, especially in the west on account of the great wheat crop, the same cannot be said of the eastern part of Canada, where unemployment is very great and our principal industry, coal mining, is stagnant and comparatively idle. Prosperity in that district during the past few years has been unknown. Only a few days ago the citi-

zens of Halifax, the capital of Nova Scotia, clubbed together and raised a subscription of nearly $3,000 to help the mining district of Cape Breton. That district is in great want; certainly there is no wave of prosperity there. I want the house to understand distinctly that our people are not looking for relief or for charity; they want work. We find a mine only working 180 days in a year, the average wage being about $4.50; and I ask hon. gentlemen, how can a man keep a family when he is working only about half time, to say nothing of paying the debts incurred in the winter season when there is no work for him?

It does seem peculiar, Mr. Speaker, with the large coal fields in the west and in the east, that $100,000,000 of Canadian money should be spent on foreign coal. Why should not that money be kept in our own country? What a difference it would make in the matter of unemployment! I know of many miners from Cape Breton who are working in the coal fields of Philadelphia and being paid in American money for sending coal into their native country. Something must be wrong, and something ought to be done. The board of trade in Halifax has passed the following resolution, which has been confirmed by all the other boards throughout the province, composed as they are of all classes and creeds, political and otherwise:

Whereas in the calendar year 1926, Canada produced 16,457,484 tons of coal and imported 18,056,139 tons, including 4,242,932 tons of anthracite, and indications are to the effect that importations for the year 1927 will exceed those of 1926. The importation means the export of over $100,000,000 in payment therefor: and

Whereas in the year 1926 the steel plants of Canada produced only 649,390 tons of iron and steel products (which is less than one-half of their capacity output) while in the same year 922,482 tons of foreign iron and steel in directly competitive forms were imported into Canada, and about $50,000,000 exported in payment therefor;...

Therefore be it resolved that the parliament of Canada should adopt a national fuel-steel policy which recognizes Canada's need of these commodities of coal and steel and Canada's ability to fill that need, the aim of which policy should be to produce in Canada the coal and steel consumed in Canada so far as that is presently possible, and to take all steps necessary to ensure expansion of these industries so that they may ultimately give complete fulfilment to this national policy.

That was the resolution passed by the board of trade of Halifax, and which was sent to and concurred in by the different boards of trade throughout the country. What is the solution of this annual lack of employment in our coal centres? Last session we thought we had found a solution in the coke oven bill, but apparently we did not—and why? The answer is that these coke ovens are using American coal instead of Canadian coal, because the American coal comes in practically free and owing to the cost of transportation can be purchased more cheaply than Canadian coal. Now, Sir, I do not think that the way to build up our country is to close down our own industry and import our products from a foreign country. There are only two things I know of which will provide a remedy, namely, tariff and railway rates. We must have such railway rates that we shall be able to ship our coal by rail during the winter months, thus giving employment to our miners in Cape Breton. Let me quote a statement prepared by the Hon. G. S. Harrington, Minister of Public Works and Mines for Nova Scotia, with regard to a national fuel and steel policy:

That the Dominion of Canada adopt a national fuel and steel policy the aim of which is to produce in Canada the fuel and steel consumed in Canada; that the recommendations of the Duncan commission framed towards this end be made effective forthwith; and that all steps necessary from time to time to give full effect to this policy be taken by the parliament of Canada.

Present steps recommended:

1. Coking plants.
2. Subventions for carriage of coal west of Montreal.
3. Tariff consideration for imported coke, anthracite screenings and bituminous coal.
4. More favourable transportation rates.
5. Abolition of customs drawback for foreign coals entering Canada for coking as now allowed.

If this policy were put into force without delay the money now sent out of the country for the purchase of foreign coal would be spent in Canada, and in the next speech from the throne the government would be able to say truthfully and honestly that there was prosperity throughout the land.

The speech from the throne makes mention of the celebration during the past summer of the sixtieth anniversary of confederation. I wish to congratulate the government upon the success of the celebration. The organization of committees and the carrying out of the various plans were all that could be desired, and I think it was a great thing for Canada. When we recall the unanimous character of the demonstration, extending as it did from east to west and including every little hamlet, village and town we see how strongly the patriotic feeling prevailed; we realize that it showed plainly to other countries that Canada is essentially patriotic, no matter what a few propagandists or secessionists might say to the contrary.

With reference to the Dominion-provincial conference, I believe it will be a good thing

if the terms of that conference as agreed upon are properly carried out. If not, it is useless and a bill of expense. I am convinced that much good must have been accomplished by the representatives of the different provinces meeting and discussing matters with the federal government.

I have very little to say on that very important and well discussed matter of immigration policy. I am in favour of a commission to go into the whole business in order to find out what is the right policy to adopt. I do think that a certain number of immigrants might be turned to the maritimes. In Cape Breton we have splendid, fertile farms with no one to work them. I believe the local government is trying to formulate some scheme to relieve that situation. As I understand from the speech delivered by the Minister of Immigration (Mr. Forke) yesterday a conference with the different provinces is contemplated in the near future; I hope it will be productive of some good.

I do not wish to detain the house any longer, but I trust that, if not all, at least some of the few suggestions that have been offered to the government will be taken notice of, that our country will continue to prosper, and that this prosperity will extend over all parts of this fair Canada of ours.

Mr. HUGH ALLAN (North Oxford): I desire, Mr. Speaker, on behalf of my constituents to make a humble contribution to this debate. Much has been said of interest and importance by those who have participated in it, and they have presented their views in a manner becoming to them and in keeping with the dignity of this parliament. It would seem that the ground has been so thoroughly covered that there is nothing left to say; one can only repeat statements that have already been made. However, I should be recreant to my duty if I failed to compliment the hon. member for Hants-Kings (Mr. Ilsley) and the hon. member for Provencher (Mr. Beaubien) upon the splendid efforts they made a few days ago in moving and seconding respectively the address in reply to the speech from the throne. Significance is given to this performance by the fact that a member from the east and a member from the west were selected for this very important and honourable duty. Coming as they did from provinces whose interests are diverse, and influenced to some extent by varying shades of opinion peculiar to the localities they each represent, they were nevertheless in complete accord in pointing to the present prosperity and unity of Canada. While, therefore, it may be somewhat conventional and formal to congratulate these gentlemen upon their admirable speeches, I can still in all sincerity do so. Their effort left no doubt in the mind of any hon. member as to their ability, and I am sure they will prove potent factors in directing the destinies of the country.

Surely no one will say that the widespread prosperity which Canada enjoys to-day can be attributed wholly to the government in power; various factors have contributed to that prosperity. But I think it is only fair to say that the wise administration and leadership of the government, in shaping its policy and extending and widening the avenues of trade with other nations, have made for the progress which is now evident in Canada.

I desire also to tender my congratulations to the hon. member for West Calgary (Mr. Bennett) upon his being called to the very important and honourable office of leader of the great Conservative party, whose history down through the years, in connection with the development of the Dominion, will no doubt prove an inspiration to him and urge him to give of the best of his high attainments, his business acumen and his wide grasp of dominion affairs in the discharge of the onerous and multiform duties which of necessity must be imposed upon him in the position he now occupies.

Belonging as I do to what I may call the kindergarten class, I have much to learn regarding the scope of the functions of parliament and its influence upon the social, industrial and economic life of the country. Since coming here I have been trying as best I can to glean from the proceedings of the house something of parliamentary procedure and practice and of the elements which enter into the administration of our affairs. I recall that this parliament is made up of 245 members coming from the far flung reaches of a great dominion and representing a diversity of interests and innumerable shades of opinion; and this very fact presents a considerable problem. But this consideration ought not to obscure from the minds of hon. members the large problems of dominion-wide importance which it is essential we should keep before us if our individual local problems are to be solved in the light of the welfare of the Canadian people as a whole. Realizing this I am impressed with the serious responsibility that rests upon this parliament. All these elements I have mentioned, it seems to me, it should be the duty of parliament to merge into the great melting pot of discussion with the hopeful expectancy that, in the process, charity and tolerance will result in a greater and more united Canada.

We gratefully appreciate the gift which the great mother of parliaments has graciously bestowed upon us in the form of the machinery of government which we have and which is equal to the administration of our affairs, consistently with the possibilities of our national and international relationships. The constituency of North Oxford, which I have the honour to represent, while largely an agricultural district, contributes at the same time to the production of those things which are peculiar to urban centres. Lying on its southern boundary is the city of Woodstock, with its textile and spinning industry, furniture and vehicle manufacturing, printing presses and foundry, food and metal products, all nobly playing their part in weaving the colourful fabric of our national life. Nestled as that urban centre is in an environment of agricultural wealth which I think cannot be surpassed by any other county of this Dominion, it has also become famous during the last year or two through the enterprise of our stock breeders, whose animals have won prizes wherever exhibited; and being a constituency of broad fertile acres, dotted with comfortable and contented homes, it constitutes a valuable asset to our nation's wealth and is also a very desirable place in which to live.

But, Mr. Speaker, while we are thus favourably situated, we feel that our people are not receiving the consideration which is their due; they are not reaping rewards commensurate with what they are contributing to the national wealth. In a country of approximately 10,000,000 people where the production ratio per capita is not surpassed in the world, we feel that our large army of producers should receive consideration in proportion to their contribution to the nation. I do not think that I can properly be termed either a free trader or a high protectionist, but it does seem to me that greater relief would come to our people if the customs duties were somewhat lowered on many of the commodities that are in common use. I would not recommend reductions to a level that might injure our manufacturers, but I would recommend such reductions as would benefit the consuming public.

With regard to the coal situation, this matter has been under consideration by the government for some time. Recently an investigation was made and estimates presented by competent persons, an epitome of which was given to this house by the hon. member for Bow River (Mr. Garland) in the masterly address which he delivered a few days ago. It would appear that it is quite within the range of practicability to bring this valuable commodity from our sister province of Alberta eastward as far as Ontario. I appreciate the fact that there are difficulties in the way, but if it is possible to remove those difficulties, and if the proposition is economically feasible, I would suggest to the government that they give it a trial, without injury to our great carrier systems, so that Alberta coal might be able to compete in Ontario with the coal imported from United States markets.

With respect to immigration, I may say that our problem in Ontario is rather one of emigration, of keeping within the limits of our province our Canadian manhood and womanhood, which we believe cannot be excelled by the manhood and womanhood which may come to us from other shores. I am heartily in accord with the sentiments expressed last evening by the hon. member for Southeast Grey (Miss Macphail), that we should strive for quality rather than quantity in our immigration policy, that we should select that type of citizenship which is easily assimilated in our national life and which will be a valuable contribution to distinctive Canadianism.

Finally, Mr. Speaker, I want to extend my congratulations to the right hon. Prime Minister (Mr. Mackenzie King) and those who were associated with him in planning and carrying out the splendid celebration last July of the diamond jubilee of confederation, an event which I am sure placed vividly before the minds of our people the great progress which Canada has made during the last sixty years. It gave to us a background of our history of which every Canadian may well be proud. With that background before us, how we recalled the suffering, privation and toil of our early pioneers, who by their masterly qualities of heart and mind converted the wilderness into a cultivated land dotted with happy and contented homes; how we recalled those illustrious statesmen who in the face of almost insurmountable difficulties, bitterness and strife succeeded in consolidating the scattered provinces into one great Dominion and won for us self government—an achievement splendid beyond anything that we can imagine. Looking to the past and remembering all that the years have brought us as a united Dominion, with a vision and outlook widened by reason of the altitude of the years upon which we stand, shall we not declare our faith to-day that this splendid Canada of ours is assured by divine Providence of an outstanding place in the world, and that our great legislative body will continue to function with dignity and

will diligently apply itself to the tasks which confront it? Thus shall we perfect the vision of those illustrious men whose deeds we celebrated last year and hand down to posterity a heritage worthy of the age in which we live.

On motion of Mr. Veniot the debate was adjourned.

On motion of Mr. Dunning the house adjourned at 10.30 p.m.

Wednesday, February 8, 1928

The house met at three o'clock.

PRIVATE BILLS

FIRST READINGS

Bill No. 23, to incorporate the St. Clair Transit Company.—Mr. Goodison.

Bill No. 24, to incorporate the Highwood Western Railway Company.—Mr. Coote.

Bill No. 25, to incorporate Niagara Gorge Bridge Company.—Mr. Hay.

REPORT

Report of Federal District Commission and statement of receipts and expenditures of the commission for year ending March 31, 1927.—Mr. Robb.

RAILWAY ACT AMENDMENT

Mr. T. L. CHURCH (Northwest Toronto) moved for leave to introduce Bill No. 26, to amend the Railway Act. (Special rates on coal.)

Hon. CHARLES DUNNING (Minister of Railways and Canals): Explain.

Mr. CHURCH: By this amendment, and as a start towards a national coal supply, coal mined and coked in Canada will be carried for domestic use on the same preferential terms as grain and flour are now carried.

Motion agreed to and bill read the first time.

TARIFF ADVISORY BOARD—EVIDENCE

On the orders of the day:

Mr. H. B. ADSHEAD (East Calgary): I would like to ask the Minister of Finance (Mr. Robb) to lay on the table the evidence given before the tariff advisory board with regard to cotton.

[Mr. Allan.]

Hon. J. A. ROBB (Minister of Finance): I will see if the evidence is ready, and will try to lay it on the table tomorrow or the next day.

PRIVILEGE—MR. POULIOT

NEWSPAPER COMMENT ON SPEECH IN THE HOUSE

On the orders of the day:

Mr. JEAN FRANÇOIS POULIOT (Temiscouata): Mr. Speaker, I rise to a question of privilege. My attention has been drawn to an article appearing on the front page of the Montreal Gazette under date of February 6, of this year. The article is headed:

Compromise in School Rates is Suggested

Below that appears the sub-heading:

Provincial Liberals Object to Criticism of Taschereau by J. F. Pouliot, M.P.

I have a few comments to make on this article, so I intend to take it up paragraph by paragraph, and it begins as follows:

Special to the Gazette. Quebec, February 4: For the present at least it is not intended to name a commission to revise the Quebec municipal code. The last revision was approved by the legislature in 1915—

That is wrong; it was done in 1916.

—and amendments to the Municipal Code are not very frequent.

This is another mistake, because inside of ten years two hundred amendments have been made to the eight hundred articles of the code.

Premier Taschereau is not suffering from a lack of offers to revise the code, and only recently answered in the negative to a request of Jean-Francois Pouliot, Liberal M.P. for Temiscouata, that he be appointed to undertake the work.

Some hon. MEMBERS: Hear, hear.

Mr. POULIOT: Well, Sir, to satisfy hon. members on both sides of the house, I will tell them now that I have nothing offensive to say about Mr. Taschereau to-day, and I will make my reply to this article as short as possible. First I would like to know if there is some expert or artist in quotations in the department of the Attorney General of Quebec who subtilizes documents in file and falsifies texts? I do not believe there is. I rather believe it comes from the correspondent of the Gazette in Quebec, who is the janitor of the falsehood factory or Ananias club of Quebec, and if such a thing happens once more I will name him so that the country will know the fellow as he is. I received only one letter from Mr. Taschereau in that connection, and I will read to the house that section of the letter in connection with this article. The municipalities association of Quebec asked the

government to make a new draft of the Quebec municipal code because of the very many amendments which had been made, and I wrote telling Mr. Taschereau that if he wanted me to act as commissioner for this purpose I would gratefully accept. That part of the report is true, but my letter was written a long time before the house opened; it was written on November 4, while Mr. Taschereau was giving interviews to the papers in Ottawa during the Dominion-provincial conference. I received his answer when he went back to Quebec, and I will read the French text, which I shall be glad to show any hon. member of the house, and I hope Mr. Taschereau will not deny his signature. On November 12th ult., he acknowledges receipt of my letter of November 4, and the last paragraph of his letter reads as follows:

Je ne manquerai pas, au cours de la prochaine session, de faire part à la chambre de votre proposition.

I will translate that into English for the benefit of my English-speaking friends, and I wonder if they will take it as an affirmative or a negative answer. No one will change this letter, because I keep it in a steel file. The last paragraph is as follows:

I will not fail during the next session to submit your proposition to the legislative assembly.

Contrary to Esau, who sold his birthright for a mess of pottage, I have no hesitation in saying that if I have to choose between a job offered by any government, any company or any individual, and freedom of speech, I will always choose freedom of speech.

Now I crave the indulgence of the house to read further from this article, which is as malicious as it is slanderous, not only against myself but against every member of this house from the province of Quebec.

The attack which Mr. Pouliot made upon Premier Taschereau in his speech in the House of Commons had aroused considerable feeling here,—

This I did not expect.

—and especially the statement that the provincial Liberals have regard for their federal brothers only when there is a provincial election. Provincial Liberals maintain that such is not the case, but if anything the situation has been the reverse. The Liberals have been in power at Quebec since 1897, which has meant handling of considerable patronage, and during the dark ten years, from 1911 to 1921, when the federal Liberals were out of power this patronage had to be spread so as to care for the victims of 1911,—

I was not one of them; do I look like a victim?

—and at times the butter was very thin,

There was no question of Australian butter at that time.

—and there was no jam whatever owing to the care bestowed upon the federal Liberals.

My answer to that is that the young man who wrote that article is known as a buffoon in Quebec. His bread is well buttered, and I am sure that he is jammed with that well buttered bread. The article goes on to say:

Provincial judgeships, positions as crown prosecutors—

I am not a judge, I am not a crown prosecutor.

—and other positions have been handed out by the Quebec Liberal government to distressed federal friends—

He should name them.

—and it has always been the provincial Liberal organization which has furnished the fighting means at federal elections—

I never knew that.

—not to mention the fact that the two official Liberal organs in the province receive their government support from Quebec, and not from Ottawa.

I draw that statement to the attention of the Prime Minister (Mr. Mackenzie King) and of the Finance minister (Mr. Robb).

Hence, provincial Liberals who have had to make way for the needs of federal Liberals fail to appreciate the attack made by Mr. Pouliot on Premier Taschereau.

I hope the house will allow me to answer that by a little story. When I was at college an elderly cousin of mine called on me the first year I was a boarder, and brought me once a bag of six very small strawberry tartlets. During the following summer she called at our house and when she found I was not very polite to her she said: "Why are you so impolite when I fed you last year?" Mr. Speaker, I have just a word more to add and it is this: I do not believe that false, malicious, slanderous story comes from Mr. Taschereau because I think he is enough of a gentleman to take the responsibility of what he says. But whomsoever it comes from I say to him that I despise a man who will make such insinuations. If Mr. Taschereau is not satisfied with what I have said, let him produce and lay on the table of the Quebec legislative assembly the official correspondence that has taken place between us since 1921.

GOVERNOR GENERAL'S SPEECH

ADDRESS IN REPLY

The house resumed from Tuesday, February 7, consideration of the motion of Mr. Ilsley for an address to His Excellency the Governor General in reply to his speech at the opening of the session.

Hon. P. J. VENIOT (Postmaster General): Mr. Speaker, in rising to say a few words on the address in reply to the speech from the throne, I desire at the very outset to extend my personal congratulations to the leader of the official opposition (Mr. Bennett). Some hon. members from the west told this house that they felt proud he had been chosen, because the great Conservative party had to go to the west to find a leader. I wish to say to our friends from the west who spoke in that way that we in the maritime provinces are very jealous of the honours that come to us, and that we cannot allow the west to take all the credit in regard to the choice made of the leader of the opposition. The hon. gentleman, I regret to say, is not in his seat at the present moment. I should like to see him there because I, as one New Brunswicker, would like to extend my personal congratulations to him as another New Brunswicker. It was in that province that he saw the light of day although, it is true, in one of its smallest counties. But coming from that small county, as he does, he occupies to-day the greatest position in the gift of the party to which he has adhered for so many years. I as a New Brunswicker feel proud of the fact that one of the great political parties in this country has chosen a native of my province to lead it and to help it in shaping its course for the future.

I have only forty minutes at my disposal, and I have certain important points which I wish to lay before the house. Therefore as regards the gentlemen who moved and seconded the address I will merely repeat what has been well said already as to the splendid way in which they discharged their duties. Not only do I congratulate them, but I hope they will long live to enjoy the position they now hold in the hearts of the people who have sent them here as their representatives.

I would not have spoken on the address, Mr. Speaker, had it not been that certain members from the maritime provinces have thought fit to cast doubt upon some statements I made at two meetings, one at Amherst, Nova Scotia and the other at St. John, N.B., in relation to what is known as "maritime rights", a subject now worn pretty nearly threadbare. Doubt having been cast upon the statements I made on those occasions I wished to take the very earliest opportunity to prove to this house that I was correct when I said that there were only ten direct recommendations made in the Duncan report, and it is beyond doubt that there were only ten such direct recommendations, putting to one side suggestions and expressions of feeling on the part of the commission, as well as arguments advanced by those who presented themselves before the commission. I make that statement now and I defy honest contradiction of it. Out of those ten direct recommendations, eight were implemented to the extent that it was practicable to implement them by legislation, by the various departments of the government, leaving two recommendations yet to be implemented and which, I understand, are to-day receiving the consideration of the government. Having made the statement that there were only ten direct recommendations, I intend to deal with those recommendations, and to show to the house the propaganda that has been instituted in the maritime provinces by certain persons. I am not going to attribute any motives to these persons, but I am going to lay the facts before the house and let the house come to a decision thereon. I remind hon. members of the action taken by parliament, and by this government last winter, of the consideration shown to the claims of the maritime provinces by our friends from the west, from Ontario, from Quebec, and from British Columbia. On that occasion all joined hands in an endeavour to obtain redress of the wrongs, so-claimed, of the maritimes; and in view of that action it is humiliating to think that to-day certain people in the maritime provinces are attempting to make a political football of what has already been done, and what may yet remain to be done, in connection with this important question. Is it any wonder that there is doubt in the minds of the people from the other provinces, who stood so loyally by the maritimes last winter as to whether we were sincere or not? Is there any wonder that some of those from other provinces who cooperated with us may entertain a feeling that we in the maritime provinces can never be satisfied? Is it any wonder that those of us on both sides of this house who have been advocating those rights—and I wish to give credit to our Conservative friends for the manner in which they stood by my colleague in the government and myself on this question—have, within the last two or three months, heard rumours that it is impossible to satisfy the maritime provinces?

Let me take up the first recommendation of the Duncan report in regard to the money grants to the provinces. That recommendation has been implemented to the full. Every suggestion made in the recommendation has been carried out. Let me correct the statement of the hon. member for Pictou (Mr. Cantley) that the extra subsidy was not paid

to the Nova Scotia government during the session of parliament of last year. How could it be paid then? Why does the hon. member wish to leave the impression that the government of this country was keeping back that payment? The hon. gentleman should know that a certain practice prevails which regulates the payment of subsidies. These subsidies are paid twice a year on the first of July and the first of January, and on the first of July of last year a cheque was sent to the public treasury of Nova Scotia. If, as the hon. gentleman states, anything was kept back of money due to Nova Scotia by this government, that money was kept, not out of the extra subsidy, but out of the regular subsidy that was due Nova Scotia. That shows how the false impression was created and spread about, causing dissatisfaction.

Mr. CANTLEY: Was it not the recommendation of the Duncan commission that the amount of $875,000 should be paid forthwith?

Mr. VENIOT: I was coming to that. The hon. gentleman has now given me the very ammunition I want and I thank him for doing so. There is another attempt on the part of somebody to leave the impression that the government of this country are tardy in paying this amount because the Duncan commission used the word "forthwith." Of course it did but parliament had to vote the money. The money could not be paid forthwith without a vote of this house and it could not be paid by the government until parliament voted it.

Mr. CANTLEY: Why did the government not get the vote?

Mr. VENIOT: We did not forget to vote it. The hon. gentleman himself took a part in that vote. But the money could not be paid until the sanction of the proper authority in the person of the Governor General of this Dominion had been obtained and he had signed the act making it imperative upon the federal government to pay over these subsidies. What are the facts? This house rose late in the month of April of last year, and after the business of the house had been cleaned up and royal sanction had been given to all the bills that had been passed, this amount was paid on the first of July. On the 17th November, within seven months after the prorogation of parliament, the second amount was paid. The government did not wait to carry out the usual practice and pay the money only on the first of January. My hon. friend did not state that to the house and those who are using that argument are using it like the chairman of the board of trade of the city of Saint John, who used that argument at a meeting on the sixth day of December in that city. The Premier of New Brunswick who was sitting by his side allowed that statement to go without contradiction, or at least no contradiction appeared in the report, when he knew that that amount had been paid to New Brunswick four weeks prior to the date that the chairman was addressing the board of trade in that city. That is a sample of the propaganda which is circulated throughout the maritime provinces in connection with the Duncan report.

Let me come now to transportation and freight rates. A great deal has been said in regard to the question of transportation and the reduction of freight rates. It has been stated and the statement has been circulated broadcast by the boards of trade of Halifax and Saint John, the Saint John Telegraph-Journal and the Premier of New Brunswick, that the general average reduction was only sixteen per cent. I have in my possession a return which I asked for and received yesterday from the railway commission. The reason I asked for this return was because I wished to place it before the house. It shows the work done in checking up the twenty per cent reduction given by the Canadian National Railways from the first day of July to the present moment, and I am going to ask the permission of the house to place that return on the record because, as it is rather lengthy, it would take too much of the forty minutes at my disposal to read it. This, however, is what it will contain:

1. Statement of traffic affected by the rate reduction under the Maritime Freight Rates Act, 1927, showing charges as billed and as would be on basis of rates in effect on June 30, 1927; also the proportion accruing to the eastern lines out of the rates in effect June 30, 1927, with the percentage of reduction in such eastern lines proportion, on traffic moving wholly within territory Levis-Diamond Junction and east thereof.

2. The same on traffic moving from east of Diamond Junction to points in Canada west thereof.

3. The same covering traffic billed from Saint John, N.B. between October 1 to 14, inclusive, to points within territory Levis-Diamond Junction and east thereof, as well as traffic moving from Saint John, N.B., to points in Canada west of Diamond Junction.

I ask the hon. senior member for the city of Saint John (Mr. MacLaren) to pay par-

ticular attention to this, and to study these figures carefully when they appear in Hansard to-morrow. He will see that the reduction was not sixteen per cent.

Mr. MacLAREN: I made no statement in reference to any percentage.

Mr. VENIOT: I did not say that the hon. gentleman did. I asked him to study the figures and he will see that the reduction was not sixteen per cent, but more. The reason why I am calling his attention to this is because the propaganda on the sixteen per cent reduction originated in the city of Saint John, the home city of my hon. friend. As I have known him now for a number of years to be honest and conscientious in anything he wishes to advance, I feel sure that when he finds out that the statement advanced by the board of trade, of which I believe he is a member, the Saint John Telegraph-Journal and the Premier of New Brunswick, is not right, he will be honest enough to stand up in public in the city of Saint John at the first opportunity and point out that those gentlemen were wrong and that I was right.

Mr. MacLAREN: I would wish for a ruling of the railway commission which I shall be pleased to accept.

Mr. VENIOT: I am giving the finding of the railway commission up to date when I am submitting these figures for the records. They have not yet completed the full revision of the tariff submitted by the Canadian National Railways. The statement is as follows:

Statement of traffic affected by rate reduction under The Maritime Freight Rates Act, 1927 showing charges as billed and as would be on basis of rates in effect on June 30, 1927; also the proportion accruing to the eastern lines out of the rates in effect June 30, 1927, with the percentage of reduction in such eastern lines proportion.

Statement covers traffic billed from October 1st. to 14th. inclusive, 1927.

Traffic moving wholly within territory Levis-Diamond Junction, Que., and east thereof.

Freight Charges—	
As waybilled on reduced rates	$208,736 62
As would be at rates on June 30, 1927	260,988 42
Amount of reduction	52,251 80
Percentage of reduction	20.02%

Traffic moving from east of Diamond Junction to points in Canada west thereof.

Freight Charges—	
As waybilled on reduced rates	$189,854 78
As would be at rates on June 30, 1927	215,169 96
Amount of reduction	25,315 18
Proportion of charges east of Diamond Junction out of rates on June 30, 1927.	123,557 98
Percentage reduced charges is of eastern lines proportion on June 30, 1927.	20.49%

Summary.

Total freight charges—	
As waybilled on reduced rates	$398,591 40
As would be at rates on June 30, 1927	476,158 38
Total amount of reduction	77,566 98
Total proportion of charges east of Diamond Junction out of rates on June 30, 1927	384,546 40
Percentage reduced charges is of eastern lines proportion as of June 30, 1927	20.17%

Statement compiled from revenue figures furnished by the General Auditor of Revenues, Canadian National Railways under date of January 4, 1928.

Statement of traffic affected by rate reduction under The Maritime Freight Rates Act, 1927, showing charges as billed and as would be on basis of rates in effect on June 30, 1927; also the proportion accruing to the eastern lines out of the rates in effect June 30, 1927 with the percentage of reduction in such eastern lines proportion.

Statement covers traffic billed from July 18th to 30th and from October 1st to 14th inclusive, 1927.

Traffic moving wholly within territory Levis-Diamond Junction, Que. and east thereof.

Freight charges—	July 18th to July 30	October 1st to October 14	Total of both periods
As waybilled on reduced rates	$182,345 55	$208,736 62	$391,082 17
As would be at rates on June 30, 1927	228,811 34	260,988 42	489,799 76

Proportion of charges east of Diamond Junction out of rates as of June 30, 1927	5,228 12
Percentage of reduction in charges is of eastern lines proportion as of June 30, 1927	20.18%

Summary.

Total freight charges—	
As waybilled on reduced rates	$25,165 71
As would be at rates as of June 30, 1927	30,289 42
Total amount of reduction	5,123 71
Total proportion of charges east of Diamond Junction out of rates as of June 30, 1927	25,871 30
Total percentage of reduction in charges as of eastern lines proportion as of June 30, 1927	19.80%

Statement compiled from revenue figures furnished by the General Auditor of Revenues, Canadian National Railways under date of January 4, 1928.

What does this statement show? It shows in the first category that I mentioned a reduction of 20.02 per cent, in the next category a reduction of 20.49 per cent, and so on. As regards traffic moving out of Saint John, the reductions amount to 19.71 per cent on traffic to points within territory Levis-Diamond Junction and east thereof, and 20.18 per cent on traffic to points west of Diamond Junction. Yet in the face of that the Saint John board of trade, on the word of a so-called freight expert, sends out to the world the statement that the Canadian National have refused to comply with the orders of the railway commission and that all that we are getting today is a 16 per cent reduction.

Let me call the attention of the hon. senior member for the city of Saint John to a state-

ment which he made yesterday and which is not in accordance with the facts. The hon. gentleman, if I mistake not—and if I am wrong I know he will correct me—stated that the Canadian National Railways had submitted a freight schedule to the railway commission and that the railway commission had returned it to them with orders to revise their schedule to give a 20 per cent reduction. I want to say now—and I am not saying this in contradiction of the hon. gentleman personally because I believe that he was misinformed and got this so-called information through the instrumentality of the Saint John board of trade—that that statement is absolutely false. I make that statement boldly because within ten minutes after the hon. gentleman made his statement on the floor of this house, I called up the railway commission and quoted him verbatim and in reply the railway commission said, No. As a proof of the fact that the hon. gentleman's statement is not correct, let me say that we are now using that very same schedule to check up all the freight carrying of the Canadian National Railways in order to see if their schedules come within the twenty per cent reduction as recommended by the Duncan report, and so far we find that they do.

Mr. MacLAREN: May I ask if the tariffs of the Canadian National Railways have yet been approved by the railway commission?

Mr. VENIOT: I did not say they had been. I said that the railway commission have the schedules that were submitted on July 1, 1927, and that they are checking them up, and that checking shows the percentages that I show here. When they are through checking them up it will be found, I am positive, that the same ratio or proportion of reduction will be carried right down through the whole schedules as submitted to be effective July 1, 1927.

Mr. QUINN: You will add jam to the bread and butter.

Mr. VENIOT: It would be better if the hon. gentleman would add some sense to his interjections.

Mr. MACDONALD (Richmond-West Cape Breton): Very parliamentary language for a minister.

Mr. VENIOT: There is another gentleman from the eastern provinces who is feeling the shoe pinch.

Dealing with the question of freight rates and the figures I am submitting to the house, I wish to say that it is not a question of paper reductions such as are being asked for by certain so-called freight rate experts independent of the volume moving, but it is the percentage reduction of traffic as it actually moves over the line. In the case of a general reduction, the percentage reduction of the traffic as it actually moves is the only real test of what has been done, and the figures I have given are no paper reduction but represent the actual reduction calculated on the quantity of freight moved over the line in comparison with the quantity moved over the line previously at a higher rate. No better criterion can be found or accepted.

Let me go further. The third paragraph deals with port development and export. This question is divided into four sections dealing respectively with Canadian trade, Canadian ports, statutory harbour commissions, port development, maritime trade and harbour facilities. So far as this recommendation of the Duncan report is concerned, it has been carried out by the establishment of the harbour commissions. I know that certain persons in Nova Scotia maintain that Halifax should be put upon the basis of an absolutely national port and should not be called upon to pay any revenue or meet any of the expenses incumbent upon the development of that port in the way of interest, and so forth. The people of St. John have accepted the Duncan report, have accepted the commission, and are prepared to do their share in carrying on the affairs of that harbour, and to meet so far as possible the amounts necessary to pay interest on the capital that will be expended in the greater development of the port of St. John. Halifax is no better than St. John.

While I am not going to refer at all to the attitude that the people of Halifax assumed up to a certain period, let me say that Halifax finally has accepted the action of this government in implementing the Duncan report, and I am proud to learn that they are going on working out that recommendation, and I hope, and dearly hope, that both St. John and Halifax will in the very near future become great grain-exporting ports of the Dominion of Canada. That is the end to which we should work, and so long as I have a voice in the affairs of this Dominion, so long as I have the honour to occupy a seat in this house—

Mr. McGIBBON: It will not be long.

Mr. VENIOT: You cannot knock us out. My hon. friend is whistling to keep his courage up. So long as I occupy a seat in this house, and I expect to occupy my seat long after my hon. friend is politically dead, I shall put forth my very best efforts, whether I succeed or not, and I feel I shall succeed, in helping

to build up the ports of the maritime provinces, and not only to carry out all that the Duncan commission recommends, but as the years go by and the trade of Canada grows, the government of this country will have an eye to it that St. John and Halifax will come into their own. I have confidence in the government and Prime Minister of this country. The Prime Minister stated from his place in the house last session what the government intended to do, and he said that he would carry out what he had stated. I had absolute faith in him when he made that statement, and he has done nothing since that would tend to shake that faith no matter by whom held.

Now I come to the trade policy. What do we find? The Duncan report recommended that the Dominion government should apply its mind to this proposition in the light of maritime province interests and having regard also to the position of other provinces concerned with these same products—that is, the basic products of the maritime provinces, the products of the forest and of the sea—with a view to entering into closer trade relations with the United States so that the products of the forest and of the fishing industry would be allowed to enter the American market on reciprocal terms.

Our friends of the opposition have been attempting, either in this house or in the country, to condemn the present government, saying that we have been inactive in that respect. Would it not make anyone smile, Mr. Speaker, to hear a Conservative blaming a Liberal government because they did not get down on their knees every day in the week, and twice on Sunday, pleading with the Americans to give reciprocity to Canada? Our friends are not consistent. The Prime Minister in laying before this house the program which the government intended to follow in regard to these recommendations pointed out that there is to-day, and always has been under Liberal rule, a clause in the tariff which gives power to the Governor General in Council to enter into reciprocal negotiations with the United States in regard to natural products, and the gentleman who went before the Duncan commission and asked that we enter into closer reciprocal trade relations with the United States was no less a gentleman than the Prime Minister of New Brunswick, the Hon. Mr. Baxter, the one who led the phalanx in 1911 when we were trying to get reciprocity with the United States and who went up and down New Brunswick telling the people that it was disloyal to have any truck or trade with the Yankees. Perhaps I will be pardoned if I say that that is the class of political bunkum that hon. gentlemen are interested in, and that is being spread as propaganda throughout the length and breadth of the maritime provinces.

Mr. McGIBBON: Like Moses Asiz.

Mr. VENIOT: What did the hon. member say? He never opens his mouth that he does not put his foot in it.

Now I come to category 4 of this recommendation, respecting the coking plant. I am not going to discuss at length the question of the coking plant. The Duncan commission recommended certain things and the government have implemented this recommendation to the full. An attempt may be made to state otherwise, because the government has not yet dealt with the coal duty to protect Canadian coal. Be that as it may, the Duncan report in that respect has been implemented.

Then we go on and take the question of the bounty on steel. The recommendation so far as the bounty on steel is concerned, has not been implemented. At the very moment the Duncan report was being prepared by this house the tariff board was considering the question of the bounty on steel. The Duncan report recommended that they should also deal with the question of the duty on coal and the tariff board have this question now before them.

Having dealt with these recommendations which pertain particularly to Nova Scotia and New Brunswick, let me say that I intended to deal with the recommendations that pertain to Prince Edward island, but my hon. friend from Prince Edward Island (Mr. Sinclair) in a well thought out speech, in a speech consisting of strong arguments, pointed out how the government had fully implemented the Duncan report, so far as Prince Edward Island was concerned. I said a few minutes ago that propaganda was started in New Brunswick in order to belittle what has been done under the Duncan report. Let me give you an example. I hold in my hand an extract from the St. John Telegraph-Journal dated October 14, and this is what I find:

> A synopsis of the Duncan report, submitted yesterday at the meeting of the council of the board of trade, showed that of the thirty recommendations therein contained two had been implemented, seven had been partially implemented, there had been nothing at all done with nine, and there was a possibility that the remaining twelve might receive attention at some later date.

There is a statement that is going out to the country. A more glaring misrepresentation of facts has never been printed in the

province of New Brunswick or any other section of Canada. The board of trade of St. John, occupying as it does, a position of responsibility, should be careful of the information they send out to the public. Another example of the way these misrepresentations are made will be found in the Financial Post, and I may say here that the reporter or representative of the Financial Post toured the province of New Brunswick and got certain information which was unfounded in fact, and he got part of it from the board of trade in St. John. On that information he based a certain statement published in the Financial Post and referred to yesterday by an hon. member from the province of Nova Scotia. This starts out by stating that the commission recommended the maintenance of St. John Rosalie gateway. No such recommendation is to be found within the four corners of the book containing the recommendations of the Duncan report. The Duncan report referred to the St. John and Ste. Rosalie gateways, only in so far as that question was, and is now, before the railway commission, as being one of importance to the maritime provinces, but it made no recommendation with regard to it. Again we find a recommendation that something be done by way of treaty to better the maritime markets in the United States for fish and forest products. This paper states that nothing has been done. It has been pointed out that we have authority to deal with that situation. But it takes two parties to make a bargain. When we undertook to deal with the United States some years ago the party opposite told us they did not wish to have reciprocity in natural products, and some gentlemen on the other side indicated that they were strong supporters of that policy. When we again took up matters in a mutual way with our friends to the south, we got for reply the Fordney bill, which places a tariff wall between the United States and Canada in respect to our natural products. That is the answer we got, and yet they are sending out propaganda that this government is content to do nothing, and this propaganda is fostered by the Conservative party in New Brunswick at least, if not in the other two provinces. Their representatives stand up in the house and say that because you have not applied to the United States for reciprocity, you cannot expect—

Mr. MacLAREN: Not to interrupt, but for the sake of completeness, may I remind my hon. friend of the recommendation at the bottom of page 25—relating to the powers of the railway commission?

Mr. VENIOT: I will deal with that; I am not through. Give me time to get through with the matters I am now dealing with. So far as extending the powers of the railway commission is concerned, it was distinctly pointed out last night on the floor of this house that to undertake to extend such powers would not only require an amendment to the Railway Act, but would destroy the whole rates structure of the Dominion. My hon. friend who now puts the question to me sat in this house last winter and agreed with and applauded that statement.

Mr. MacLAREN: No, not at all.

Mr. GUTHRIE: Never.

Mr. VENIOT: All the statements touching the Duncan report and the reasons why this and that recommendation could not be carried out were accepted by hon. members opposite without a murmur.

Mr. MacLAREN: Not at all.

Mr. VENIOT: Did the hon. gentleman protest?

Mr. MacLAREN: Yes I protest.

Mr. VENIOT: You do now, but did you last winter?

Mr. MacLAREN: I approved of what was being granted, certainly.

Mr. VENIOT: Why did you not protest?

Mr. MacLAREN: My position was—

Mr. VENIOT: I do not think I should be confined to forty minutes after all these interruptions.

Mr. MacLAREN: The hon. member is asking for the interruptions.

Mr. VENIOT: When the hon. gentleman spoke I did not interrupt. Now let me refer to the argument used yesterday by the hon. gentleman in regard to the gateway at St. John. He said it was absolutely necessary to have this gateway opened for competitive purposes and so prevent railway monopoly. How can there be any monopoly and how can there be a competitive reason for its existence when the Canadian National Railways are compelled to make the 20 per cent rate reduction recommended by the Duncan report, but it is not compulsory on the other railway system; and if the latter do so it will have to be along the lines which govern in relation

to the Canadian National system. There can be no need of competition in order to do justice and give fair play to the maritime provinces. I am not going to attempt to discuss in detail the principle of open gateways, but I do say to my hon. friend that this is the only instance in the railroad history of the world where one railway is compelled to hand over freight originating in its own territory to a competing railway that does not touch that territory at all. If our friends opposite can accept such a principle then it is up to them to justify it.

In conclusion, Mr. Speaker, I wish to refer to some statements made by my hon. friend from Pictou (Mr. Cantley) in the course of his speech yesterday. Referring to a passage in the speech of the hon. member for Hants-Kings (Mr. Ilsley) in moving the address my hon. friend stated:

> This Mr. Speaker, is a striking example of the ignorance and arrogance of youth.

Then he proceeds:

> May I ask him which party and what party leaders brought about confederation?

Surely this is the first time I ever heard that the Conservative party could claim the sole credit of bringing about confederation. The fathers of confederation were Liberals and Tories alike. What was Sir Leonard Tilley at the time of confederation?—a good substantial Liberal. True, he changed his policy later on in 1887, but he stood as a Liberal for confederation. Who were the Liberals of Quebec and Ontario who stood for confederation? Their names are recorded in our history. And confederation never would have been possible, so far as Nova Scotia was concerned, had it not been that Joseph Howe at last waived his opposition to the proposal. But my hon. friend hands it down as authentic history that the Conservative party brought about confederation. Then he goes on:

> Which party in 1869 bought the lands of the Hudson's Bay Company?

Not the Conservative party; it was a coalition government in 1869 that took this step. My hon. friend is falsifying Canadian history. He also asked:

> Which party built the Intercolonial railway?

The Intercolonial railway had to be built as part of the pact of confederation, and Liberals and Conservatives brought that about. True, the railway was built under a Conservative government which took office in 1871, but my hon. friend has no right to claim any credit for his party in respect of this national undertaking. And he also put this question:

> Who played the "Linger Longer Lou" comedy in Washington?

Why, if my hon. friend will only read the history of his own party he will find that the first to play the "Linger Longer Lou" comedy were the Conservatives under Sir John A. Macdonald and under Sir George Foster and under Sir Charles Tupper; they took those frequent trips to Washington to induce the United States government to enter into certain reciprocal arrangements with this country. Now, if my hon. friend's expression, "This is a striking example of the ignorance and arrogance of youth," could be applied to the hon. member for Hants-Kings, might I not say that his interpretation of history is a striking example of that forgetfulness which comes with old age?

If I have any further time at my disposal, Mr. Speaker, I should like to touch on one more point in connection with freight rates which I overlooked. The chairman of the St. John board of trade in the course of his annual report to the board at a banquet held in December made this statement—

Mr. BENNETT: You are past your time.

Mr. VENIOT: Is my time up?

Mr. SPEAKER: Yes.

Mr. R. B. HANSON (York-Sunbury): Mr. Speaker, I do not know that I should have had the temerity to intervene in this debate had it not been for the characteristically bombastic speech of the Postmaster General (Mr. Veniot) who has just taken his seat. Down in New Brunswick the utterances of the hon. gentleman amount to nothing, and I do not think they will mean very much here after the members of this house have had an opportunity of hearing him a few more times. The people of my native province have taken the measure of the hon. gentleman—

Mr. VENIOT: And the courts have taken your measure.

Mr. HANSON: —they determined in August, 1926, that he should no longer be premier, and he is here as a member of this administration by the pure force of circumstances.

Mr. VENIOT: What about the circumstances that brought you before the courts?

Mr. SPEAKER: Order.

Mr. HANSON: I do not intend to emulate the example of the hon. gentleman. I should like to see the debate conducted on a little higher plane, and for that reason I do not

propose to follow him in the manner of his presentation; but I do desire to make a few remarks with reference to the subject matter of his address. Before I do so, however, I should like to advert for a moment to the speech from the throne. It is the most remarkable document of its kind that I have ever read. I defy anyone to say that it lays down any constructive policy, or that any single paragraph holds out the slightest hope to the business men of this country. Certainly it contains nothing that holds out any hope to the industries of the Dominion; there is no hope held out to those who are seeking employment—and in my part of the country they are many; there is no hope held out to our manufacturing industries, and it is absolutely mute on the question of fiscal policy. It is easy to say that the country is prosperous. The Prime Minister (Mr. Mackenzie King) said so the other day in the very eloquent and very extended remarks that he addressed to the house; but saying that a thing is so, and its being actually so, are two entirely different propositions. I submit that having had three or four good crops, and Providence having been kind to some persons in the Dominion, in that respect there is a substantial amount of new wealth. We are all glad of that, no one more so than I. But as to there being real prosperity, I have yet to be shown. In the province of New Brunswick I am very sorry to have to say that conditions have not improved. I say this very reluctantly, for there is no one in this house who takes a greater interest in the industrial development of my province than I do. I am doing everything that is humanly possible, within my humble sphere of influence, to extend industry in New Brunswick, and I shall continue to do so whether or not I am a member of this house.

I do not intend to refer to the question of national status that has been raised in the speech from the throne and in the course of this debate more than to remark that as a humble student of international law I submit this as a sound proposition, that Canada is not a sovereign state and never will be so long as she is an integral part of the British Empire. I am content that she never should be a sovereign state.

Just for a moment or two I would like to refer to the speech of the Minister of Immigration (Mr. Forke), who, I am sorry to see, is not in his seat. He made a speech in this house a day or two ago which I followed with the greatest possible care, as well as I could hear him. I have not taken the opportunity of reading his remarks as recorded in Hansard, but the impression made upon me by his speech was that it was a confession of impotence and inability to meet the situation. I have one suggestion to make. At the recent annual meeting of the shareholders of the Canadian Bank of Commerce, Sir John Aird, that great financier who appeared before the banking and commerce committee of this house some time ago, made a most constructive suggestion. It was to the effect that if the Department of Immigration of this country found itself unable to cope with the situation, a round-table conference should be called with the heads of the colonization departments of the railways, the immigration departments of the provincial governments and all others interested in this great national work, in order if possible to arrive at some solution of this problem—because it is a real national problem which is capable of solution and should be dealt with at the earliest possible time if this country is to grow as every hon. gentleman in this house desires it to grow. I commend that suggestion to the Minister of Immigration. He will receive assistance from the members of the provincial governments; I know that the government of New Brunswick are sincerely anxious to cooperate with the federal Department of Immigration in the solution of this problem, and I venture to give the minister the assurance that he will not find the provincial government of New Brunswick, Conservative though it may be, actuated in the slightest degree by any political considerations. What we in New Brunswick want in the first place is to retain our own native born, and then we want a healthy influx of desirable immigrants from the British Isles. I cannot place too much emphasis on the word "British", because if you look back on the experience of the United States, particularly during the year 1917, but both before and after that time as well, you will see the result of the mixed immigration policy pursued for so long by that great country, which brought about the quota system and a policy of discrimination that should be adopted by any country desiring to remain white, or to remain British, as is the case with Canada.

I am sorry the Postmaster General is not in his seat. I do not for a moment venture to suggest that he has left the house because of anything I might say, because I am quite sure that the hon. gentleman has courage; I have never known him to run away from a fight. He is a professional politician, and I do not use that term in any derogatory sense at all, because I quite appreciate that a man who becomes a member of a federal cabinet must become more or less of a professional

politician. I am not a professional politician but a commercial lawyer, and I feel it is due to the people of New Brunswick, whom he has attacked here this afternoon, and especially the associated boards of trade of the maritime provinces, that there should be some reply to the references he has made.

The hon. minister referred at great length to the Duncan report and to the carrying out of its terms by the present government. I should like to refer for a moment to what took place in this house last session with regard to that report. We have all read the Duncan report many times; personally I have studied it with the greatest possible care. We all heard the Prime Minister read a very carefully prepared statement in this house last session as to the attitude of the government in regard to the recommendations of Sir Andrew Rae Duncan and his associates, and I am bound to say that the people of the maritime provinces were heartened both by the report and by the attitude of the Prime Minister as representing the government of the country. But to say, as the Postmaster General has said, not only from his seat in the house this afternoon but at two public functions in the maritime provinces within the past few weeks, that the government has implemented eight out of the ten major recommendations of the Duncan report, is, in my humble opinion and in the opinion of other close observers, very wide of the mark to say the least. Let me take up some of the more important points to which my hon. friend alluded this afternoon.

Mr. DUNNING: Would my hon. friend clear up one point for me? I would like to know whether there are ten recommendations or thirty.

Mr. HANSON: It all depends on what you call specific recommendations. While there are ten major recommendations, I suggest that altogether, major and minor, there are thirty-two recommendations.

Mr. DUNNING: Everyone who reads the report gets a different idea as to the number of recommendations.

Mr. HANSON: I suggest to the hon. gentleman that he read it again and make up his own mind.

Mr. DUNNING: I have done so, and have honestly endeavoured to carry them out.

Mr. HANSON: I know my hon. friend has read it, but as to the last part of his remark, I say to him that he has only partly carried out the recommendation affecting his department, and if I have time I intend to refer to that recommendation dealing with international freight rates which, so far as I know, he has not attempted to put into effect.

Now let us refer for a moment to the money grants, which are of such great importance to the provincial governments. There is no doubt that the recommendations of the Duncan report in regard to this matter were as clear and as specific as the English language could make them. If anyone desires to look them up they will be found at page 19 of the report, and at the risk of taking up some of my very valuable time I will read them. I find this forty minute rule a very cramping thing, although I must confess that I was a party to it in the special committee last year. This is what I find in the report:

> We do not feel, however, that it would be right or wise that the maritime provinces, in their present state of grave necessity, with deficits accumulating against them in their ordinary revenue and expenditure, should be left in suspense until a re-assessment is made by the Dominion government, and accordingly we recommend that immediate interim lump-sum increases should be made in the payments to the three maritime provinces. . . . .

If that meant anything at all it meant that just as soon as the government received authority from parliament, immediate lump-sum payments should be made, but that was not done. If I remember correctly parliament prorogued on April 14, and the first payment was not made until July 1, which is not "immediate" within the terms of the Duncan report. Even then, only fifty per cent of the sum voted by parliament as a minimum lump-sum payment was paid, and at first it was proposed to hold the second payment until January 1 of this year. What did that mean? It simply meant that the provincial government of New Brunswick could not balance its budget for the then current fiscal year, because in that province the fiscal year ends on October 31, and I believe in Nova Scotia the fiscal year ends on September 30, a month earlier. The idea was to hold back fifty per cent of the lump sum due so that both the provincial governments, which happened to be Conservative governments, would be compelled to go to the people and say that they had a deficit.

Mr. DUNNING: Oh, no.

Mr. HANSON: I have not a doubt in the world that that was the idea in mind. More than that: the Prime Minister, if I read his recent statement aright, and I think I do, did not on this specific recommendation accept the underlying principle of the Duncan report. As I understand the underlying

principle of Sir Andrew Rae Duncan's recommendation in respect to this very vital matter, it was that this interim lump sum payment should be paid and continually paid until the whole question should be finally settled as between the federal treasury and the other provinces, but that these payments were to be over and above and outside any consideration which could be given to the claims of other provinces for increased federal subsidy. That is the way I understand that principle. The Prime Minister specifically said—if my recollection serves me aright, I am sorry at the moment I have not his actual words under my hand—that they could not accept that recommendation. Now what does that mean? It means that my friend the Premier of New Brunswick and my friend the Premier of Nova Scotia have got to convince the treasury not only of the dominion but of every one of the other provinces that we in the maritime provinces, because of what we lost when we went into confederation, are entitled to that extra lump sum over and above any other consideration that may be given to the other provinces. Not only have we got to fight a battle with the treasury department of Canada; we have to fight it out with every one of the other provinces. Surely that is not what was recommended. We do not know exactly what happened at the Dominion-provincial conference, and I shall have something to say about that in a moment. For reasons which seemed to be good, and perhaps were good, we have no official report of the debates which took place at that conference. However, I do know that "the 'coon came down" and the payments were made less what this government kept back from Nova Scotia. Ultimately the payments were made—because I believe, of the good sense and the good conscience of the Minister of Finance (Mr. Robb); I want to pay him that tribute.

Now with respect to freight rates: this is an intricate matter, which no hon. member can hope to encompass in the course of the few minutes that are allowed under the present rule, but he can at least present a summary. The maritime freight rates act did not contain all the things which it ought to have contained. Primarily, I think, the Minister of Railways is responsible for that, and accepts full responsibility. Under that act the Canadian National Railways did file their tariff. My hon. friend the Postmaster General laboured at great length this afternoon to prove that under these schedules the national system had given more than a twenty per cent reduction in the rates covered by the act. Well, my answer to that is this: If more than seven months have elapsed since those schedules were filed with the railway commission, why have they not been approved by the commission? Does it take seven months to check up the schedules that were filed on June 29 last? There is another reason. It is that the schedules as filed do not, I believe, in the opinion of the railway commission fill the bill under the act.

Mr. DUNNING: Can my hon. friend show that?

Mr. HANSON: No, I cannot. I am trying to reason as closely as I possibly can, and I am expressing that as a proper inference from the non-activity of the commission in the matter. Now what do we find? We find that the board of railway commissioners did make an order which the national railways sought to evade. I am coming now to the question of the so-called "gateways." I quite appreciate that this is a technical question and one about which the average man ought not to express an opinion too freely. But I understand the principle is laid laid down by the interstate commerce commission in the United States, and is acted upon in that country, that a railway initiating shipments of freight has a right to the long haul, or the longest possible haul. That is a principle which the national railways are seeking to have incorporated in our freight rate structure, or in our sphere of transportation, in reference to all long hauls initiated on their lines in the maritime provinces. That is a principle which has never been enforced in the maritime provinces, and the primary reason, I believe—I want to be absolutely fair about this; the minister need not shake his head, because he will not find any fairer minded man in this house than I am—the reason is that the system grew up when there was no national railway system and the Intercolonial railway was the only railway operating there. I think that is correct. Now the condition which has prevailed in the maritime provinces in that respect has been of infinite value to every shipper of freight in that part of the country. He will get no special advantage in freight rates, but he will get something which is almost as good—the advantage of the competition in service, and no shipper in the maritime provinces is willing to forego that to-day.

Mr. DUNNING: Will my hon. friend permit a question? Does he agree to the extension of that principle throughout Canada, that the shipper should have the right to

order the transfer to a competing railway of a carload of his goods at the nearest transfer point?

Mr. HANSON: I am not going to answer that question, because I do not know what the effect of it is. The minister does or should know.

Mr. DUNNING: That is the real problem.

Mr. HANSON: But what happens? Perhaps this will be the best answer to the Minister of Railways. The management of the national railways objected to the order of the railway commission. They wanted the Ste. Rosalie and St. John gateways closed. The railway commission ruled that they were not to be closed, and we have the spectacle of the government of this country through its influence and control—perhaps I had better take that back.

Mr. DUNNING: Yes.

Mr HANSON: It may not have been the government; I want to be fair. But we have the spectacle of the management of our national railways—

Mr. DUNNING: That is better.

Mr. HANSON: That is accurate I think. We have the spectacle of the management of the national system, which is responsible to the government for the management of the railway, appealing to the Supreme Court of Canada from the decision of the board of railway commissioners on this very important matter. It may be they could have done it without the consent of the government; my own opinion is that if the Minister of Railways had said "no" they never would have appealed, and he will have to answer for that to us down below.

Mr. DUNNING: I shall have pleasure in answering right here.

Mr. HANSON: Very good.

Mr. DUNNING: I do not expect to follow my hon. friend "down below."

Mr. HANSON: I will admit that and say, down east. I am attributing nothing to the hon. minister. What happened as a result of that appeal to the supreme court? The Ste. Rosalie gateway was kept open and the St. John gateway was closed. I want to speak with all respect and perhaps I have not sufficient knowledge, but I must say that I cannot understand why one gateway was ordered closed and the other was kept open. However, that is the present state of the law. So that neither the Minister of Railways, the Postmaster General, nor anyone else, can say that as a legal proposition the management of the Canadian National Railways was right.

Has the Duncan report been implemented on this matter of transportation? I say no. I want to tell the house that the great mass of forest products traffic originating on the national lines as well as the Canadian Pacific in my native province is destined for points in the United States. Give us that twenty per cent reduction to which we are entitled under the Duncan report and we will get a dollar on every thousand feet of lumber we ship across the line. Under present conditions in the sawn lumber business, about which I claim to know something, that may make all the difference between a loss and a profit. Let me tell the Minister of Railways and his colleague who sits beside him (Mr. Veniot) that the New Brunswick shippers of forest products will never be satisfied until this matter is straightened out properly and we receive the twenty per cent reduction on international freight rates.

Mr. DUNNING: Could the hon. member frame an amendment to the statute which would be within the competence of this parliament and which would render that effective?

Mr. HANSON: I have never tried, but I will undertake to try, and I will undertake to present it to the house if the Minister of Railways will give it support.

Mr. DUNNING: After it was passed, would shippers of goods on international lines under that rate get a freight rate twenty per cent less than they have to-day?

Mr. HANSON: My information is that they would.

Mr. DUNNING: My information is positively to the contrary, and I am negotiating.

Mr. HANSON: The answer depends on where you are getting your information. My hon. friend gets his from Sir Henry Thornton. I do not go to him for information; I get my information from those who have made representations directly to the American railways, to the traffic managers of those big companies, and who tell me they have no doubt that we shall get the benefit of the twenty per cent reduction if the government will do this.

Mr. DUNNING: The American railways definitely refuse.

Mr. HANSON: We have had the spectacle this afternoon of the Postmaster General making a very determined attack on the gentlemen of the board of trade of the city of St. John. I do not know that I am called upon

to intervene between him and them. I think Mr. Alexander Paterson, who is the gentleman who is responsible more than any other man for the information put out from time to time by the Saint John board of trade in reference to freight rate matters, will, in his own good time and in his own inimitable way, deal with the Postmaster General. He cannot slander a body composed of men like Mr. L. W. Simms, one of the finest gentlemen in Canada.

Mr. VENIOT: Somebody is leading him astray.

Mr. HANSON: He is not the kind of man who will be led astray. He is to-day vice-president of the Canadian Manufacturers' Association and next year he will be president of that body. That shows his standing not only in his community but in the whole of the Dominion, and I venture to say the people of New Brunswick will not have the slightest hesitation in choosing between the veracity of the Postmaster General and that of Mr. Simms. I will say that much by way of defence of one whom I consider a very fine cultured gentleman and one who has been slandered to-day by the Postmaster General.

Mr. VENIOT: He was not slandered.

Mr. HANSON: As regards my friend and former colleague, Mr. Baxter, I have no fear that he will not be able to take care of the Postmaster General in due course and at the proper time.

Mr. VENIOT: We have often met.

Mr. HANSON: He usually has done so whenever they have met. I do not understand, and I deny as specifically as I know how to deny anything, that the agitation which was initiated by the associated boards of trade of the maritime provinces was fomented in any way by the Conservative party in those provinces. If it had been I certainly should have been one of the first to know about it; I think hon. members will give me credit for being in the party councils far enough at all events for that purpose. The agitation against the method and manner in which the Canadian National Railways have implemented the action of this parliament was started by the associated boards of trade of the maritime provinces, which include in their membership many good outstanding Liberals, and in no way, shape or form was this agitation fomented by the Conservative party in New Brunswick. It so happens, however, that they took their case to Mr. Baxter and, able advocate as he is—no abler in the maritime provinces—he presented their case as and when he thought it was necessary to do so. I have never yet seen it answered by anybody, least of all by the Postmaster General in the three-hour tirade which he delivered in the Admiral Beatty hotel at St. John just before Christmas. These are two of the recommendations of the Duncan report that have not been implemented. Time will not allow me to go into them all.

I should like to take up the question of fiscal policy. It is a far cry back to reciprocity, and the least hon. gentlemen opposite say about it the better, I should think. I do not see any signs of the Liberal party wanting to resurrect this corpse. Least of all do I see any sign of any responsible political leader in the United States wanting to revive this policy, and I think reciprocity may well be left to the limbo of the past. But there is need of a fiscal policy as regards the industries of the maritime provinces. There is an immediate need in respect to the steel industry, and I ask the Minister of National Defence (Mr. Ralston), as the gentleman representing Nova Scotia in this government: What are you going to do about the steel industry? Time presses and the industry will not wait. What has happened in the town of New Glasgow? There are, for instance, silent hearths and ninety-three per cent of the workmen have crept away to the United States. Will the government get them back? If so, let us get them back quickly before it is too late.

What is the government going to do for other industries in the maritime provinces? I am not specially interested in coal and steel, although I am to a limited degree interested in coal. I witnessed the spectacle the other day in the town of McAdam in my riding of Virginia coal being burned on Canadian Pacific locomotives. This coal was landed and dumped at McAdam within seventy-five miles of a coal mine in my riding that was opened up and established to serve the Canadian Pacific. The Canadian Pacific buy of course, in the cheapest market. In that case let us have a little intelligent application for once of the dumping clauses.

Mr. VENIOT: Does the hon. member mean to say that the Canadian Pacific can buy West Virginia coal cheaper than Minto coal?

Mr. HANSON: They are buying it.

Mr. VENIOT: The hon. gentleman is mistaken.

Mr. HANSON: I am not mistaken. I have seen the invoices.

Mr. VENIOT: I have the information from Sir Thomas Tait, and he gives an entirely different statement.

Mr. HANSON: I know the coal is landed in McAdam, for duty purposes at all events, at five dollars a ton and Minto coal cannot be landed at McAdam for five dollars a ton. I have seen the invoices.

Mr. VENIOT: That is not with the duty added.

Mr. HANSON: We want some declaration of fiscal policy from this government regarding the boot and shoe industry in my constituency. What has happened? The British preference has been extended and extended and extended so that to-day the people who make the Hartt shoe, the finest made in Canada, are just able to hang on by the skin of their teeth. They do not know what day they may close. The Minister of Railways laughs. This is no laughing matter in the city of Fredericton.

Mr. DUNNING: I rise to a point of order. The hon. member accused me of laughing at something he stated, which would make it appear in the record that I was laughing at the disaster which he was depicting in connection with an industry. Not only was I not laughing at the disaster he was depicting, but I was not laughing at all.

Mr. HANSON: I accept absolutely the statement of the minister.

Mr. DUNNING: It was very cute of the hon. member to do that.

Mr. HANSON: I am quite willing to take the minister's statement; I do not think he would laugh at a situation such as that. But what does he think of the situation down in Dartmouth, at the rope works? One after another, since 1921, the industries of my province, due to the pernicious lack of policy of this government, have dwindled away, failed and gone hence, never to return so long as we keep this government in power. I think the case of the rope works at Dartmouth is one of the saddest that has come under my observation in many days. The only thing that I can contemplate with more horror is that this government, at the behest of their friends from Saskatchewan, should interfere with the cotton schedules in the next budget. If that is done, we shall have one, two, three or four more deserted towns in the province of New Brunswick. Let me paint you a little picture. On the banks of the Nashwaak river, in the county of York, lies the beautiful little town of Marysville, built by a great pioneer of industry in the province of New Brunswick, the late Alexander Gibson. It is the only memorial to his memory now in existence. He had the option, having amassed a huge fortune in the lumber industry, of investing either in railway securities or in industry. He put his money into industry, and in the eighties he built in that beautiful little town the largest cotton mill that up to that time had been erected in Canada. For many years that cotton mill has supplied employment for seven hundred intelligent and well-paid mechanics and operators. The annual payroll of that mill is $700,000, the average wage per head being $1,000 per annum. Since 1921 they have found it difficult enough to keep that mill going at seventy per cent capacity. What does that mean? Operating at only seventy per cent of its capacity means all the difference between a decent livelihood for the operators in that mill and the strictest penury. To-day the shadow is hanging over that town. I have had the mayor and representatives of the men come to me and beg me to do everything I can to counteract the pernicious action of the gentleman who is fathered by the members for western Canada before the tariff board. They asked: What will become of this town if this mill shuts down?

There is not another wheel turning in the town. What will become of the entire community if you rob it of an annual cash payroll of $700,000? I want to tell you, Mr. Speaker and gentlemen of the House of Commons, that if the cotton schedules are interfered with in the next budget the first thing that will happen will be that two mills in the city of Saint John will be closed at once. The Milltown mill is operating on short time now, and the Marysville mill is in great jeopardy. What does that mean? Assuming for the purpose of argument, which I do not admit for one minute, that the tariff schedules represent a tax, as gentlemen on the other side are so fond of saying, it has been figured out—I have not figured it out myself, nor have I attempted to verify it, but in the brief submitted by the cotton manufacturers it is figured out that it amounts to five cents per head for each resident of Canada. There are gentlemen in this house and in the Liberal party who for the sake of five cents per head saved to their constituents would rob that industry of the protection that is necessary for its very existence. I thank you, Mr. Speaker and the house for your very kind attention.

Mr. LIGUORI LACOMBE (Laval-Two Mountains) (Translation): Mr. Speaker, at a time when our most enlightened statesmen are endeavouring to create in this country a national sentiment, the attitude of our hon. friends of the opposition, who persistingly criticize the sessional program, seems to me very strange.

On the 2nd of February last, the hon. member for Argenteuil (Sir George Perley) was disturbed at the thought of the proposed appointments of Canadian ministers to France and Japan. He criticized the government for creating a legation in Washington and stated that the commissioner for Canada, in Paris, owed his appointment to certain reasons of a sentimental order. Disregarding the general feeling of his riding which, on December 6, 1921, together with all the other ridings of the provinces of Quebec, had repudiated Sir Robert Borden's policy, he had the boldness to proclaim that the ex-Prime Minister had done more than any other to make us the masters of our own destinies. I well know that the hon. member would not dare advocate such a claim in his electoral division, neighbouring mine, and that his protest against the new status of our Dominion would meet with very few followers.

Pursuing his speech, the hon. member for Argenteuil outlined to this House the various aspects considered by the hon. leader of the opposition, regarding the dangerous complications which might arise from the appointment, by Canada, of ministers in foreign countries. Would the hon. member inform this House as to how these so-called complications would arise? Does he fear a conflict over the jurisdiction of the Imperial government, and that of our country? Whence would arise this conflict since the British Empire, according to the text itself of the proceedings of the last Imperial conference, is composed of "autonomous communities equal in status, and freely associated as members of the British Commonwealth of Nations."

Following the hon. member for Argenteuil, the hon. representative for South Wellington (Mr. Guthrie), expressed the same fears. The former pro tempore leader of the opposition astonished nobody. Speaking as generalissimo of his party, on February 26, 1927, at the ninth annual banquet of the Princess Patricia Club, he stated: "that Canada should confide to England the care of deciding questions of general interest to the empire as it was practised in 1914 at the declaration of war". But the ex-leader of the opposition did not stop there. He proclaimed highly, and this in time of peace, that Canada was not doing its share in the defence of the empire.

Mr. Speaker, according to the statements of these hon. gentlemen, I have no fear in asserting that their attitude is an obstacle in promoting a Canadian spirit in this country. Their policy makes them more imperialist than the inhabitants of the British Isles themselves. Their policy is a hindrance to the realization of true Canadian national spirit, at present so much sought by all well thinking citizens of Canada.

I followed with much interest the speech delivered in this house by the hon. member for St. Lawrence-St. George (Mr. Cahan). I read and re-read attentively the historical, legal and scientific observations which he eloquently made on the new status of Canada. Less imperialist than his hon. colleagues whose statements I have just commented upon, the hon. member hesitates to declare himself upon our old vassal state and that of our present rank of nation in the world. However, in the concluding remarks of his speech, he notices "in this country much agitation and irritation as to questions of race and religion," and he further wavers. How absurd! Where is to be found, sir, that great unrest? Whence comes that outbreak of quarrels of which my hon. friend speaks? Quite the contrary, and in this I share the conviction of my hon. friend for Charlevoix-Saguenay—I know no country in the world where law is more respected. Heaven preserve us from trouble makers, propagandists of communism or bolshevism! Coming back to the so-called agitation and irritation noticed by my hon. friend, let me point out to him that, more than at any time perhaps since confederation, we witness the triumph of the ideas of his illustrious leader, Sir John A. Macdonald, who stated: "There exists no conquering or conquered race in this country." If the hon. member wishes to be honest about it, he will agree with me that it is wonderful to have succeeded in making a nation with such an immense country, by conciliating the various sections of the population and which, already moved by the same patriotic spirit, is the envy of the world, thanks to its prosperity in all spheres: agriculture, finance, industries of all kinds, and natural resources.

In my capacity of representative of a riding almost exclusively composed of farmers, I have the honour to draw the attention of the house to the total agricultural returns in Canada, amounting to $1,600,387,100 for the year just ended. Who can tell us the amount of energy displayed by our Canadian farmers

to obtain such results? The government which, at present, is entrusted with the destinies of the country has rendered great services to the farming class. It has brought down the cost of production by reducing the duties on farm implements. It has found new markets for the sale of farm products. As regards vegetable and animal products alone, our farmers have exported last year, the amount of $796,871,009. Kindly note, Sir, that these statistics do not comprise the exports of lumber and other similar products which belong to the soil.

In the province of Quebec alone—an ideal country for farming, dairy industry and the raising of cattle—the output reached the remarkable figure of $282,739,000. This is a wonderful achievement. Yet, our rural population will continue to face the future with confidence inasmuch as those in charge of the country's welfare will lend them their generous assistance. That is why, I rather think that the hon. Minister of Finance (Mr. Robb) in bringing down his next budget, will extend to our deserving farming population an encouraging and recomforting message. Let us bear in mind that agriculture is the barometer of national prosperity. It is also the mother of all other industries. From the most remote ages it has fed the world, and under the benevolent eye of Providence, it carries on its sublime mission, which is to spread life, fecundity and happiness among the nations. Let me now say a few words with regard to our financial situation. England and the United States alone surpass our country for the average wealth per capita. The sale of Canadian bonds in 1926, amounted to $565,278,644, and in 1927, to $616,464,400, that is an increase of more than $50,000,000 in one year. But a more important fact to note, is that Canada has been the principal purchaser of its bonds to the amount of $305,461,186, compared with the United States which only purchased to the amount of $300,304,547.

Is this not an irrefutable proof of our country's prosperity? However, the beneficial results of a rigid economic policy do not stop here. The surplus of revenue over expenditure, as brought out in the auditor general's report is more than $73,000,000 for the fiscal year 1926-27, notwithstanding a decrease in the taxation resulting from the war. Alas! shadows must intervene to spoil the picture and the treasurer of Canada informs us that the high handed proceedings of the Right Hon. Mr. Meighen, when he grabbed power in spite of the popular will, in 1926, cost the country the fabulous sum of $1,844,479, representing the expenditure which resulted from the general elections on September 14, 1926. In the short interval which elapsed between dissolution of parliament, on July 2, 1926, and the meeting of the 16th Parliament of Canada, on December 9, of the same year, an unconstitutional government found it possible to expend $80,671,982 by governor general's mandates. Of this amount, nearly $1,000,000 was taken from the treasury without even the slightest authority from the people's representatives.

My hon. friends of the opposition have always been very fond of inquiries. Perhaps they would relish less an inquiry made on the misdeeds of their short but evil administration. We had planned an economic policy and built up the finances of the country. Our hon. friends of the opposition coming in by the backdoor, in spite of all traditions and constitutional usage, seized upon the occasion to batter in the public treasury. Compare, sir, our opponents' policy with ours.

Allow me, sir, to broach the important problem of immigration. I am pleased to note that the Canadians who have emigrated to the neighbouring republic, are coming back in large numbers. I highly appreciate the government's efforts with a view to repatriating our people. In the course of the year 1927, 40,245 Canadians returned to this country. I think that, for the present, repatriation is our best policy on immigration. Let our government therefore increase their generous efforts to induce our people, who have emigrated, to recross the border. Certain experts in statistics figure out that the number of French Canadians living in the United States is a million. I think that with a little encouragement and persuasion, many among them would agree to return home.

During the year 1927, 154,318 immigrants have come to us from the British Isles, United States and other countries. A rigorous selection should be resorted to. It would be the greatest mistake to increase the number of unemployed to the detriment of our people. These new comers should all be settled in colonization areas and take up farming. We only need immigrants who have passed both the sanitary and moral tests, and I am aware that the government is now keeping a strict watch as to this matter. We must also bear in mind that these immigrants will become Canadian citizens and they must therefore not be refractory to assimilation.

The speech from the throne mentions the visit of the Secretary of State for Dominion Affairs. Like the hon. member for Charle-

voix-Saguenay it is impossible for me to arrive at a definite conclusion as to the reason of his trip to our country. On the other hand, the Monthly Review, writing on the agricultural and industrial progress in Canada, mentions a project that the Right Hon. Mr. Amery has submitted or will submit to the Canadian government. The scheme would consist in bringing over to this country from Great Britain, a few hundred army men who have already undergone training in the most modern ways of farming. These immigrants would be guaranteed work for the next five years. This, in my opinion, is a delicate question, and full of consequences. If in fact these people from the British Isles come to Canada on condition and on a formal undertaking that they will take up farming, very well! But if on the other hand, deserting their new inheritance, they are to benefit some day from the famous clause of the Civil Service Act which would give them, with a minimum of qualification, preference over our young men, I think, that it is my duty to condemn beforehand a scheme which would favour strangers to the detriment of our people! However, I have faith in the executive of my country, in their wisdom and the cautiousness they will display in solving this problem.

I cannot refrain from mentioning the interest that is shown by the government in regard to aviation. The aerial communications are on the eve of a period of development unknown heretofore, and Canada owes it to her pride to step out with the other countries in this new sphere of activity. Already, from the Atlantic to the Pacific associations have been formed in the principal centres of the Dominion. They will be called upon to render valuable services in the commercial sphere as well as in research and topographical work. Air mail service will increase and extend our commercial and industrial relations. I therefore must congratulate the government on such laudable initiative, providing however that in this as well as in other matters, their first aim is the primordial interest of Canada.

Mr. Speaker, a more and more brilliant future is in store for our country. Under the enlightened guidance of distinguished statesmen, such as the right hon. Prime Minister and his colleagues, we have reasons to expect much. Already, we are in a position to compare most favourably with the old Europe. If, for instance, we glance over France, Belgium or Italy, if we inquire on the spot into the economic and financial situation of these various countries, we are filled with the legitimate pride of having nothing to envy them. One sees on the other side of the Atlantic pitiful workers toiling for the derisive salary of 15 or 20 francs per day, that is 60 or 80 cents of our monetary value. Generally speaking, all classes of society are happy on Canadian soil. Our public service, our systems of transportation offer to the tourists comforts unknown over there. It is true that the genius of these great nations has accumulated artistic treasures, which speak more to the heart and soul than a nugget of gold, but the day when our young Canada so full of promises will have reached its glorious zenith, it will be the finest country in the world.

Hon. S. F. TOLMIE (Victoria, B.C.): Mr. Speaker, it is not my purpose to impose on the mover (Mr. Ilsley) and the seconder (Mr. Beaubien) of the address any formal congratulation, but just in passing I should like to wish them the compliments of the session, and save time that way. We often hear a great deal about the prosperity of Canada, and it is true that we are enjoying a certain amount of prosperity. Why not? We have perhaps one of the richest countries in the world in natural resources, one of the richest per capita to be found anywhere. We have enjoyed in addition to that excellent prices for our basic metals and, until recently, good prices for our timber. We have been blessed with three or four years of good growing conditions and excellent crops, and have been able to place our crops on a market that was bare in comparison with what it was immediately before the war, largely due to the fact that Russia and some other countries were not producing to the extent that they were before the war took place. Then again we have had cheap money available. Money has been getting cheaper as the world has been getting back to normal business conditions, so that we have been able to secure capital for the development of our resources at fairly easy rates. After all, therefore, you cannot attribute this prosperity to the actions of the present government; if the Conservative party had been in power under similar conditions I think our modesty would have prevented us from claiming credit for it. Taking it all in all I think it has been a matter of good luck on the part of the Liberal party rather more than anything else.

The question of our status has occupied a good deal of the time of the house, and I do not propose to trespass on the time of hon. members by discussing the matter at any length; I think there are many other matters in which the rank and file of the Canadian people are more interested. Speaking from my own experience, having lived

a little more than half a century on the Pacific coast, I can recall several occasions during that period when it was a very lucky thing indeed that Canada was a part of the British Empire. My experience has led me to think that we should try to get closer to that empire rather than endeavour to see how far out of it we can get and still remain in it. Looking into the future, and having regard to the tremendous development that will take place on the Pacific coast within the next few years, we shall unquestionably find it to our benefit to be part of and cooperate with the great British Empire, and to learn at the earliest possible moment to do our duty towards that empire and help to carry a part of the heavy burden now almost entirely imposed on the mother country.

I think the matter which has been referred to by one or two of the previous speakers, the emigration of our young men and women, is one of the greatest tragedies that we have to face. We educate our young people in our universities and schools at considerable expense, only to find that when they are ready to undertake employment there is no employment offering for them in their own country. We can only keep them at home by offering them equal treatment to that which they will receive in the United States or elsewhere. They must be paid wages just as attractive; they must be given working conditions that are at least just as good, and we must have work offering for them in sufficient volume to engage them when they are ready to undertake it. To-day then we should make the best of our opportunities. We have a country, as I have already pointed out, rich in natural resources, and we should try to have the Canadian people themselves develop these resources to the fullest possible extent. We have a tariff to use if we wish. I am not one of those who think that the only good we can get out of the tariff is by raising it. In certain cases where a lowering of the tariff would get us more business, by making bargains with other countries and so forth, let us adopt that course. In other cases where a certain amount of protection is necessary, let us apply protection, always using the tariff as an instrument to better the conditions in our country and to keep the work here for our own people. We must cut out sectionalism. We must take a country-wide view of the whole situation, a Canadian rather than a provincial or district view. We must keep under consideration all the various activities in this great country of ours, always remembering that conditions are not the same in one part of the country as they are in another, and adopt a system of give and take, if we are going to build up a united Canada. No one should expect any special treatment in his particular line. We should adopt as a principle the policy of manufacturing our raw products at home to the fullest possible extent, although I fully realize that this cannot be applied in every case—that it cannot be applied to as great an extent as we would like to apply it.

In the matter of wheat, I think we should adopt the principle of putting through the processes of manufacture in Canada every bushel of wheat we possibly can, and selling that product in raw form only where we cannot manufacture at home. Two great advantages would result from this policy, first, the work it would provide for our own people, and second, and almost as important, the retention of the offal, the bran and shorts that are left over after the manufacture of flour, for the use of our live stock men in building up that very important branch of agriculture.

Then in regard to our timber, we should manufacture our woods as much as we possibly can. There are certain conditions under which it pays us better to export timber in the form of logs. There are certain conditions of the market on the Pacific coast under which it would pay us to ship the logs out of the country and receive the cash for them rather than hold them on a slow market and have them injured by the teredo worm or depreciated in value from other causes.

At one time in British Columbia we shipped the bulk of our minerals south of the line to be refined; some went to Wales. Down on the Columbia river below Rossland, in West Kootenay, we have a little town of eight thousand people, built up entirely by refining our raw ores instead of shipping them away. What has been the result? This town of eight thousand people has been established; the payroll is eight million dollars per year; the refinery require certain other things not directly connected with the refining, making it necessary for them to buy in one single year five thousand tons of structural steel, three and a half million bricks, four and a half million feet of lumber, and one carload of cement every two days throughout the year. They are buying these things in British Columbia and building up a great consuming centre where our farmers and agriculturists can sell their products without paying heavy freight rates to far distant markets. What I want to point out is this, that if we had still continued the old system of shipping out our raw products, we should not be deriving the benefits that I have described.

In my opinion we should remove any inequalities in the tariff which are detrimental to the development of Canada. Particularly do I refer to agricultural products on which in the tariffs between Canada and the United States the balance is in favour of our neighbours. As you know, Mr. Speaker, they are in a very much better position than we are for the production of early produce, such as eggs, vegetables and fruits of various kinds, which they are able to ship into our country against a very low tariff in comparison with that demanded of our shippers in the event of their finding it necessary to market their surplus south of the line.

Let us learn, too, to run Canada for the benefit of the Canadian people first—for those people who stay in the country, who pay our taxes and conduct the government. Take the woollen industry as another illustration of what I have been urging. Our manufacturers have been protected to a certain extent until the woollen industry has reached a production volume of about one hundred million dollars per year. But look at our sheep population. Our farmers receive no protection for their raw wool. What do we find as a result? Australia with a sheep population of ninety-seven million; Great Britain—a small country in area—with over twenty million; little New Zealand with twenty-seven million; the United States with between thirty and forty million—and Canada with only two and three-quarter million. Why? Our wool has never been protected, and we have not had the stabilizing effect that the protection of wool would bring about. Compare this condition with that in the United States. They have a tariff on raw wool running as high in some cases as forty-five cents a pound, with the result that their wool and sheep industry is on a sound basis and is making more and more progress from year to year.

We should encourage the consumption of home products in every way possible. I am a very firm believer in keeping our Canadian dollar circulating in the country as long as we possibly can. I might suggest to the hon. Minister of Marine and Fisheries (Mr. Cardin), as was pointed out by a previous speaker, that one of the most practical ways of doing this would be to make sure that Canadian coal is burned in government ships. Then, taking into consideration the fact that we are importing from the United States nearly seven hundred million dollars' worth of products every year, and that many of those products could be produced in this country, I think very good results would be obtained by making a careful analysis of the imports and selecting those particular lines which we can produce here at a profit, and then stimulating and encouraging in every way their production at home instead of importing them from another country.

In this particular connection we might begin on butter almost right away. While I am strongly in favour of cultivating trade within the empire, I do think that the butter-maker of Canada is receiving unfair treatment under present conditions. Even my good friend the Minister of Agriculture (Mr. Motherwell) I know will admit that it is useless for our dairymen to attempt in the middle of winter the production of butter with stored feed, such as hay, grain, ensilage, and so forth, in competition with the grass butter of New Zealand; but this is what they are up against at this time of the year. It is all nonsense to tell us that the Canadian dairyman was very much delighted with the tariff of one cent per pound on butter coming from Australia and New Zealand; at least, judging by the papers, I do not think there is any evidence of delight on his part in some of the reports that I have seen. I have in my hand a report of a meeting in Toronto, held on November 22 and 23, at which the hon. Minister of Agriculture was present. It is interesting reading:

> Hon. W. R. Motherwell, Dominion Minister of Agriculture, met with a rather warm reception from the National Dairy Council of Canada in the King Edward Hotel yesterday, and heard, in no uncertain terms, the council's attitude toward the Australian trade treaty.
>
> The minister came as a speaker, but most of his remarks were devoted to an answer to an address by J. A. Caulder, of Regina, Sask., president of the council, who outlined the whole situation, and told of the effect the treaty had on the dairy industry in Canada.
>
> Mr. Motherwell made a half-hearted defence of the treaty, at best, and advised the members of the council to send a strong deputation to Ottawa to meet the government on the matter.
>
> The Australian treaty, said the president, was put over when we were asleep. We were not awake to its effect on us.
>
> During the winter of 1925-26, there were few ill-effects, and Australia did not benefit through the treaty. At that time, consignment business in butter was prevented, because it came under the anti-dumping regulations. Thus we could tell when shipments of butter from Australia and New Zealand were due in Canada, and govern ourselves accordingly. We were able to keep the price up to normal, and experienced little difficulty.
>
> The next winter, however, was different. There was the strike in England, which injured our market there, and we found ourselves with an over-supply on our hands. New Zealand took advantage of the treaty and sent in large quantities of butter, on which it could undersell us. The farmers of Canada simply stopped milking their cows.

Now consignment business has been taken out from under the anti-dumping regulations. Cargoes of Australian butter can be unloaded in New York under bond and held until the Canadian market is ripe for it, and we never know when the market is going to be flooded with this butter. Butter can similarly be dumped under consignment at Halifax or Vancouver and held there for sale.

I have two attitudes on this treaty, said Mr. Motherwell. I have my own personal opinion, and as a member of the government which sponsored the treaty, I have my public opinion.

Mr. MOTHERWELL: Might I ask my hon. friend if that report is from the Mail and Empire?—because they did not have a reporter there, and they conveniently left out the word "not." I said, "I cannot have two opinions."

Mr. TOLMIE: The report is from the Mail and Empire.

Mr. MOTHERWELL: I thought so. They had no reporter there.

Mr. TOLMIE: I am not surprised that my hon. friend is not feeling very comfortable about the concessions given to Australia and New Zealand in connection with the importation of butter into Canada. He realizes, I am quite sure, just as well as I do that it is an utter impossibility for us to compete under the conditions I have described—the manufacture of grass butter in the Antipodes, because they have spring and summer down there when we are in the middle of winter—while our butter is being produced under the highest cost basis of the whole year. We heard the other day that it did not have very much effect on our market. I read in the Market Examiner, published in Calgary under date of February 2, that a cut of two cents a pound became effective on the market on Wednesday of last week. According to this paper increasing make and rumours of New Zealand butter on the market were mainly responsible, which shows that these people were of the opinion that this imported butter has had a serious effect. Apparently the rumours were very well founded, because I find the following despatch appearing in one of our morning papers dated February 3, and coming from Victoria:

Twenty-seven thousand boxes of butter were included in the cargo of the R.M.S. Niagara, which arrived here to-day from Australia and New Zealand.

That number of cases of butter, with fifty-six pounds to the case, gives a total of 1,512,000 pounds. The average Canadian cow produces 150 pounds of butter per year, but even if we are generous and say the average cow produces 250 pounds per year it would mean that the amount of butter brought in on this one boat would keep 6,048 Canadian cows busy for a whole year. If we allow ten cows to the farm this would mean 600 mixed farms nicely established in this country of ours which would help to conserve our market for our own people; and there would certainly be less cause for migration to the United States.

Another serious result from this importation of butter is that the dealer on the prairies, who used to buy the surplus grass butter and keep it in cold storage for use in the winter, now buys his butter from New Zealand and Australia and brings it in just when he likes, consequently he does not make as great an effort to buy the summer butter when it is produced in quantities. The question has been asked once or twice why this has not had the effect of lowering the market price, but I think anyone who understands the situation fully is aware of the fact that in the United States a tremendous demand has sprung up for our cream and milk, and in that way large quantities are shipped out south of the line. So I would say that the government have been particularly lucky in that this developing American market appeared after this legislation was introduced.

Another matter which I would like to refer to is the absolute necessity of paying our technical experts in agriculture and many other departments of government sufficient wages to retain them in Canada. Just the other night I was in conversation with a gentleman from Australia, and he informed me that he had purloined two experts from the Department of Agriculture, because he was able to more than double their present salaries. One of these experts is a man connected with a developing industry here, the tobacco industry, but he is going to Australia where he will doubtless render very excellent service, and his departure will be a loss to this country. We should recognize the ability of these men and pay them enough so that some other country cannot come along and pick off the tops whenever they feel that way inclined. We have established in Canada a very enviable reputation wtih regard to the health of our animals. This has only been brought about by a splendid corps of experts engaged in this particular line, under what is known as the health of animals branch of the Department of Agriculture. These men have rendered excellent service; one of the important reasons which induced the British government to consider the removal of the cattle embargo was the fact that Canada could boast of having the cleanest herds in the world, free from most animal contagious diseases. These

men should be paid sufficient money to enable us to retain their services, particularly those who show special aptitude along certain lines, pathological or research.

Another matter which I think is of vital importance to this country is land settlement and colonization. If Canada needs anything it needs people; proper colonization would go a long way towards solving our railway problems and would assist equally in lowering our taxes, besides giving a great stimulus to industry and putting many acres of valuable land to work. I was rather surprised to hear the leader of the opposition (Mr. Bennett) criticized to some extent because he laid the actual conditions before this house. It was insinuated by my hon. friends opposite that we should adopt a sort of Doctor Coué attitude; that by continually telling ourselves we were prosperous, after a time we should be prosperous. I do not think we need hide anything in this country. We should lay our cards on the table face up, because there is no worse advertisement for Canada than to have a man come here intending to settle and expecting certain conditions, only to be disappointed. I would tell the settler in the first place that there are many opportunities in Canada, but that if he is to succeed he must expect to work. I would also make it very clear that there is no room here for the loafer who cannot afford to loaf. The spendid opportunities which exist in this country should be brought to the attention of the capitalist, but it should also be made clear to him that while capital invested intelligently and carefully will bring in good returns, Canada is not by any means fool-proof. We should welcome those who are willing to become Canadians and who will work for the progress of Canada. As far as the question of health goes I certainly agree with the government that we should make our inspections on the other side of the ocean. We have brought about the high standard of health of our animals by the strict application of the regulations of the department, and if it is necessary to insist on the health of imported animals it is all the more necessary for us to insist on the health of the people we bring to this country to lay the foundations for future generations.

Let us look for a moment at conditions in British Columbia. There we have a country larger than Washington, Oregon and California combined; larger than France and Italy, with Switzerland thrown in, and when it comes to the Alpine scenery of Switzerland, we have enough scenery of a similar character in British Columbia to bury twenty-five Switzerlands and have sufficient left to entertain all the tourists who come our way. We are very rich in natural resources, particularly in mines. Since the first mine was opened in British Columbia we have produced mineral wealth to the value of $900,000,000, and last year we produced mineral products to the value of $70,000,000. The country is rich from the west shore of Vancouver Island to the Alberta boundary, with minerals scattered in various districts between those points, and also from the forty-ninth parallel on the south to the Alaskan boundary on the north. So far as prospecting goes, our country has been merely scratched, and the mines already developed clearly indicate that mining in that province is a sound commercial success. Then again, west of the Rockies we have half of the standing commercial saw timber in the whole of Canada, and timber to the value of $82,000,000 was sold from our province last year. We produced 46 per cent of all the fish produced in Canada last year, and the value of our agricultural production amounted to $71,000,000. In addition to that we have a magnificent climate, and we have our splendid ports open the year round, unhampered by frost or ice. In addition to that we are very well located from a geographical standpoint, having easy access to the hundreds of millions of people on the other side of the Pacific, and having access also to the Atlantic side of this continent and to the ports of Europe through the Panama canal. British Columbia is about the same age as the states of Washington and Oregon, and is very little younger than the state of California as far as settlement is concerned. One would think that under these conditions we should have people flocking to British Columbia in thousands and tens of thousands, looking for an opportunity to locate. But what is the actual situation? While the three states to the south of us can boast of a population of 5¾ millions, we have but 550,000 people in the whole province of British Columbia. To show you how we are developing in comparison with some of these states, let me say that there are 160 million acres of range lands, and we are using 6 per cent of those lands at the present time, while the state of Washington is using 69.7 per cent of lands of the same character. We are importing 75 per cent of the meat that we require in that province, while the state of Washington is supplying her own meat and exporting the balance to other states. We used 12½ million pounds of butter last year in British Columbia. We purchased 7½ million pounds outside of the province, producing only 5 million pounds at home. These conditions show the absolute necessity of settlement in

that great province bordering on the Pacific ocean. The opportunities there for development are very great indeed, and as I pointed out, the settlement of these lands will bring about such a condition of prosperity as we have not enjoyed up to the present time.

Then with regard to the return of the railway lands to British Columbia: I am pleased to know that the commissioner gave a favourable judgment in connection with this matter, and that the government has intimated in the speech from the throne its desire to return those lands to the province. When British Columbia entered confederation in 1871 one of the provisions was that a railway should be constructed across this country to the Pacific coast, and there was a strong desire on the part of the British government at that time to have connection with their eastern settlements on the Asiatic side of the Pacific. British Columbia not only gave a grant of forty miles of land along the railway, twenty on each side of the line, but contributed in the ordinary way towards the construction of this great road. At that time apparently it was not realized what a great national project it would be; in fact it was stated that the line would never pay for the axle grease used in its operation and that the whole resources of the British Empire could never build and maintain the road. Well, you all know how absurd that prediction was. The railway has turned out to be one of the greatest national projects for the development of Canada that has ever been completed in its history. The Canadian Pacific railway was the pioneer across the prairies of the west. It has developed those great stretches of country, has contributed in no small degree to the growth of British Columbia, and has brought prosperity to Canada as a whole. Under those conditions we in British Columbia feel that being the only province in the whole Dominion which contributed land to that great national highway it is only fair that those lands which were given in trust for the purpose of building that railway should be returned to us now that the enterprise is finished and has accomplished so much. This policy has been pressed by the Conservative party ever since the year 1891.

I sincerely hope that before the end of the session the government will give us an intimation of what it proposes to do in the matter of railway communication into the great Peace river country, connecting that vast rich area with some point on the Pacific coast. This is something that will be looked forward to with great interest by all the people located on the Pacific.

There is one other matter I wish to refer to before taking my seat, and that is the necessity of building good roads throughout this country. Since the advent of the automobile the building of roads is a much more serious proposition than it has been in the past. Roads require to be widened. They must have better surfaces than ever before, be much straighter, possess fewer curves, and so forth. All these requirements tend to make road building much more expensive than it was in former years. The Dominion government after all is a very large user of our roads. The Post Office department, of course, uses our roads daily; in fact every department uses the roads more or less during the year. I should like to suggest to the government that no more popular move could be made than the adoption of the policy brought into effect by the Conservative party in 1919 and kept in operation until 1924, under which certain grants were made to the various provinces in proportion to population. That legislation was much appreciated by all the provinces, and was taken advantage of to the fullest possible extent. These improved highways are necessary to automobiles, and we must remember that the auto truck has come into use to an enormous extent within recent years. Any move therefore, along this line would be warmly welcomed by the people of Canada.

Mr. W. J. LOVIE (Macdonald): Mr. Speaker, in rising to make a few remarks in this debate I congratulate the government upon the fact that it is able to announce in the first paragraph of the speech from the throne that Canada is prosperous. Trade returns all bear out that contention and so far in this debate nothing has been brought forward to controvert the fact.

Certain parts of the prairie provinces have been visited with an epidemic of rust, something that is getting all too common, and the results of which are disastrous to field crops. The crop of the year 1927, although large in the aggregate has not a high money value on account of much of it being low grade, due largely to the ravages of rust. In the province of Manitoba the oat crop was promising but it was practically a failure due to the rust epidemic, and oats both for seed and feed purposes will have to be purchased. For this state of affairs we do not blame the government as they have no control over climatic conditions. On the contrary we give the Minister of Agriculture and his department credit for the amount of research work already accomplished along the line of developing rust resistant strains of

wheat. I would say, however, that what has been accomplished with respect to agricultural research has hardly touched the fringe of the question, and far more strenuous efforts will have to be made, and more money spent upon agricultural research work if results comparable with the importance of the industry are to be obtained. I would here impress upon the Minister of Agriculture just as the hon. member for Victoria (Mr. Tolmie) who spoke before me did, the necessity of paying to men trained in agricultural research work salaries commensurate with the importance of that work, and sufficiently high to prevent Canadian universities and other countries taking those experts away. If the regulations of the Civil Service Commission prevent the payment of adequate salaries, means must be found to overcome that limitation, because investigation of the rust problem is a question of national importance. The rust epidemic strikes at the basic industry of Canada, the industry which is the very foundation of Canada's prosperity. Agriculture is by far the most important industry in this country, and unless it is prosperous no other industry can hope to succeed. In order to bear out that contention may I quote from a speech delivered by Daniel Webster at a meeting of farmers in Boston in 1840. On that occasion that distinguished statesman said:

> Agriculture feeds us; to a great degree it clothes us; without it, we could not have manufactures, and we should not have commerce. These all stand together, but they stand together, like pillars in a cluster, the largest in the centre, and the largest is agriculture. Let us remember, too, that we live in a country of small farms, and free-hold tenements; a country, in which men cultivate with their own hands, their own fee-simple acres; drawing not only their subsistence, but also their spirit of independence, and manly freedom from the ground they plough. They are at once its owners, its cultivators, and its defenders. And whatever else may be undervalued, or overlooked, let us never forget that the cultivation of the earth is the most important labour of man.
>
> Man may be civilized, in some degree, without great progress in manufactures, and with little commerce with his distant neighbours, but without the cultivation of the earth, he is, in all countries, a savage. Until he steps from the chase, and fixes himself in some place, and seeks a living from the earth, he is a roaming barbarian. When tillage begins, other arts follow. The farmers, therefore, are the founders of human civilization.

To show the importance of agriculture in our country, let me say that the Canadian Review for 1926-27 gives the gross wealth of Canada's great primary industry of agriculture as approximately $7,817,718,000 for the year 1926. The figures from the same source for the value of the total production of agriculture are $1,668,175,000, while from forests the total value of production for the same period was $209,276,561; from mines, $241,245,898, and from fisheries, $56,360,633, or a total value from forest, mines and fisheries for the year 1926 of $506,883,092. It will thus be seen that agriculture, with a total production value of $1,668,175,000 for 1926, and forest, mines and fisheries combined, with a total production value of $506,883,092, has to its credit a total production value of $1,161,292,000 in excess of the other three sources of wealth combined.

It is too much for the producers in an industry, which produces $1,121,447,000 value of field crops in a single year and which is being menaced by the scourge of rust until it is in danger of total extinction, to ask that the prosecution of research work along the lines of finding and developing rust-resistant varieties of grain should be carried on vigorously and no expense spared in the prosecution of the work? What has already been spent upon rust research work has brought excellent results, but it is only a drop in the bucket compared with what will have to be spent by the Minister of Agriculture and his associates if success in dealing with the rust question is going to crown their efforts.

I wish to say a word on the Hudson Bay railway question. For the past forty years or more this Hudson Bay railway has been a live question in Canada around election time, but I am pleased to see by the speech from the throne that work is proceeding rapidly towards the completion of the railway. I wish to congratulate the Minister of Railways upon the energetic manner in which he carried out the work of selecting a terminal for the railway and also upon his prompt decision that Churchill was the better of the two ports in question. I have carefully studied the Palmer report upon both Nelson and Churchill, and from the data contained therein I have no difficulty in arriving at the conclusion that Churchill is by far the better ocean terminal for the Hudson Bay railway, and the wonder is that it was not selected years ago.

In conjunction with what the hon. member for Victoria (Mr. Tolmie) has said, I wish to say a few words about highway construction in Canada. A few years ago the federal authorities voted a lump sum of money which was paid over to the different provinces for highway construction upon the basis of population. I think the Dominion government was prepared to pay one-third of the construction costs up to a certain limit per mile,

but my information is that that money is all expended. As the provincial governments of the prairie provinces are embarking upon quite an extensive program of highway construction, something which is long overdue, I would ask the Dominion authorities to vote this session a substantial sum of money to be paid over to the different provinces upon a mileage basis, to assist in the construction of all-weather roads.

Regarding the tariff, let me say right here that Manitoba members, in common with all members from the prairie provinces, are pledged to insist upon and support a policy of tariff reduction. Everyone living between the Red river and the Rocky mountains is opposed to a tariff higher than is necessary to produce sufficient revenue to run the affairs of government. They realize that a high tariff is an injustice because it allows one class of people in a country to levy toll upon the other classes; in other words, to levy taxes upon their neighbours for their own special benefit. From the commencement of the session of 1922 until the close of the session of 1926 protection of Canadian industries and still higher protection was steadily preached in season and out of season from the Conservative side of the house. Not a word was said about the agriculturists in western Canada, a class who, by no stretch of the imagination, can derive any benefit from a protective tariff, but who can be badly hampered in their operations by the enhanced cost of living and production caused by protection. Canada which is raising around 400,000,000 bushels of wheat per annum has to find an export market for a large part of that commodity as well as for other agricultural products, and upon all products of which a portion is exported, the export price sets the price for home consumption.

Because Canada is an exporting country she requires to have a very low tariff to enable trade to flow freely across her boundaries. No nation can export its surplus commodities unless it is prepared to import at the same time, and no nation can purchase the surplus products of another without paying for them in goods. International trade is not carried on with gold as a medium of settlement, but goods pay for goods to the mutual benefit of both parties to the transaction. Before last session the tariff advisory board had only been a short time at work, and consequently the Finance minister did not feel justified in making tariff reductions as the evidence in none of the cases submitted to the board was completed. But now that the evidence is completed in a good many cases that have come before the board, the consumers in the country as a body are looking forward to tariff reduction during this session of parliament. In the matter of the cotton tariff schedule which was argued before the tariff board, the evidence brought out the fact that Canadian consumers of cotton paid for their requirements in cotton $19,000,000 above import value. The Canadian people paid $19,000,000 partly in taxes and partly in higher prices to keep this industry in Canada. In spite of that the cotton manufacturers had an application before the tariff board for an increase in the duties on cotton, but they certainly have not established any claim for higher duties unless it be on the assumption that they wish to be regarded as recipients of compassionate grants from the Canadian people.

One word now about immigration and I have finished. The speech from the throne mentions immigration and I would just say this, that it is something very strange if Canada, with its far-flung territory and vast resources, with a population of three persons to the square mile, while the United States has a population of thirty-five to the square mile, cannot support a population of more than nine or ten million people such as we have at present. We must take a broad view of the immigration question. Canada can support twenty million of a population just as easily as she supports half that number now, and were there that many in Canada, all settled and doing well, Canada would be more prosperous than she is at present.

Criticism is being levelled at the Minister of Immigration (Mr. Forke) by some for bringing immigrants into the country, and by others for not bringing in a sufficient number; and almost everyone thinks he could run the Department of Immigration a good deal better than it is being run; but if he had a try at it for a year he would find that in spite of the most rigid selection of immigrants that could be practised, misfits would get into the country and cause trouble. I commend the scheme which the minister mentioned that he had in view of bringing boys from the old land, from good homes, and giving them a year's training in agriculture in Canada under the supervision of the Department of Immigration. They certainly will not all make farmers: it is not to be expected they will, but there is no reason why they will not make good citizens and take to the ways of the land of their adoption very quickly. That the years from fourteen to eighteen is a very good age for a boy to emigrate, I can attest to from personal experience, as it was

when I was sixteen years of age that I crossed the Atlantic as an immigrant and made Canada my home, a choice, Mr. Speaker, which as the years have rolled past, I have seen no reason to regret.

At six o'clock the house adjourned, without question put, pursuant to standing order.

Thursday, February 9, 1928

The house met at three o'clock.

MINISTERS OF THE CROWN

BILL TO OBVIATE NECESSITY OF RE-ELECTION UPON ACCEPTANCE OF OFFICE

Mr. S. W. JACOBS (Cartier) moved for leave to introduce Bill No. 28, to remove the necessity of the re-election of members of the House of Commons of Canada on acceptance of office.

Some hon. MEMBERS: Explain.

Mr. JACOBS: Mr. Speaker, I had the honour of introducing this bill last year, but it failed to be enacted into law owing to the somewhat precipitate prorogation of parliament. I am introducing it again in the hope that it may be passed this year. The bill is similar in its provisions to the measure which was enacted in 1926 by the British parliament, and since that time by certain of the states of the Commonwealth of Australia and the Dominion of New Zealand. Its purpose is set forth in one paragraph, to the effect that a member of parliament on attaining cabinet rank is not obliged to submit himself to his constituents for re-election. I think this provision will appeal to many in this house, to those who are on the front benches as well as to those who hope to be.

For the information of the house I may say that the statute was passed by the British House of Commons on the 15th July, 1926. It became law in New South Wales in 1906, and was also passed in the state of Tasmania and the Dominion of New Zealand. In some of the other states it has not yet been enacted into law. I shall have something further to say when the bill is read a second time.

Motion agreed to and bill read the first time.

RAILWAY ACT AMENDMENT

RETURN TICKETS

Mr. S. W. JACOBS (Cartier) moved for leave to introduce Bill No. 29, to amend the Railway Act (Return tickets).

Some hon. MEMBERS: Explain.

[Mr. Lovie.]

Mr. JACOBS: Mr. Speaker, I had the honour of introducing this bill, or one similar to it, on several previous occasions. It was strongly opposed by the two railway companies, which makes me believe that it must be for the benefit of the people. The bill is copied from the act which is in force in England, and its provisions are to be found in the one section which reads as follows:

> A return ticket issued by any railway company between any two points in Canada shall be accepted by any other railway company whose line runs between the same terminals.

I introduced the bill first in the parliament of 1922. I think it was introduced subsequently, but it had some rough sledding and did not emerge from the railway committee. The intellectual calibre of the present parliament being so much higher than that of previous parliaments I hope the measure will be enacted into law this session.

Motion agreed to and bill read the first time.

GOVERNOR GENERAL'S SPEECH

ADDRESS IN REPLY

The house resumed from Wednesday, February 8, consideration of the motion of Mr. Ilsley for an address to His Excellency the Governor General in reply to his speech at the opening of the session.

Mr. F. P. QUINN (Halifax): Mr. Speaker, in rising to resume the debate on the address in reply to the speech from the throne, may I be permitted to join with hon. members who have preceded me, not in offering a dose of soapy, tepid water, to quote the words of the hon. member for Labelle (Mr. Bourassa), but rather in sincerely congratulating the hon. member for Hants-Kings (Mr. Ilsley), who so ably moved the address and the hon. member for Provencher (Mr. Beaubien) who so ably seconded it. Both of these hon. gentlemen acquitted themselves very creditably when you consider the poor material which was placed at their disposal.

Before proceeding further I want to draw to the attention of hon. members a very discourteous retort made to me by the Postmaster General (Mr. Veniot) during the course of his address yesterday. The hon. gentleman was telling the house how well the recommendations of the Duncan report had been implemented by this government, and he was quoting figures to show that on some commodities an excess of twenty per cent reduction had been made. Having in mind the words of the hon. member for Temiscouata (Mr. Pouliot) when he referred to bread and

butter and jam being handed out by the premier of Quebec to one of his political favourites, the Postmaster General used that term, and during his address I interjected the remark:

You will add jam to the bread and butter.

The reply of that hon. gentleman was:

It would be better if the hon. gentleman would add some sense to his interjections.

I did not make the remark in an offensive way; I consider it was very appropriate to the occasion, and I resent the implication of the Postmaster General that there was no sense in the remark. I leave it to the decision of hon. members if there was not as much sense in my interjection as there was in the whole speech of the Postmaster General.

While I am dealing with that hon. gentleman, may I bring another matter to the attention of the house? This is what he said in his speech yesterday:

Let me call the attention of the hon. senior member for the city of St. John to a statement which he made yesterday and which is not in accordance with the facts. The hon. gentleman, if I mistake not—and if I am wrong I know he will correct me—stated that the Canadian National Railways had submitted a freight schedule to the railway commission and that the railway commission had returned it to them with orders to revise their schedule to give a 20 per cent reduction. I want to say now—and I am not saying this in contradiction of the hon. gentleman personally because I believe that he was misinformed and got this so-called information through the instrumentality of the St. John board of trade —that that statement is absolutely false. I make that statement boldly because within ten minutes after the hon. gentleman made his statement on the floor of this house, I called up the railway commission and quoted him verbatim and in reply the railway commission said, No.

Let me read a letter from the secretary of the Board of Railway Commissioners under date of July 30, 1927.

ALISTAIR FRASER, ESQ., K.C.,
Commission Counsel,
Canadian National Railways,
Montreal.

DEAR SIR,—

File 34822

Referring to this matter, I am instructed to say that at a late meeting of the board consideration was given to the tariffs filed by your company under the authority of the Maritime Rates Act, and that the rates shown in such tariffs are inconsistent with provisions of the act and cannot be approved by the board; also that your company is directed to file forthwith, in place of the tariffs so already filed by it and not approved, such tariffs as are required by section (3) of the said act showing a reduction of approximately twenty per cent below the tolls or rates existing on the first of July, 1927.

That is the answer to my hon. friend, and I will leave it to the judgment of the house how much consideration can be given to statements made by him.

I will proceed to deal with the address of the hon. member for Hants-Kings who said:

Canada is prospering; we no longer talk of being on the eve of prosperity; we are enjoying prosperity. That prosperity has been briefly mentioned in the speech from the throne, and is more fully dealt with in the reports or addresses which have been presented by the presidents and general managers of the great Canadian banks to their shareholders during the last few weeks. These addresses tell the story of a greater progress than has ever before been experienced in the history of Canada, a greater prosperity than Canada has ever enjoyed.

I may say to the hon. member for Hants-Kings that the progress of any country cannot be measured by the success of its banking, financial and brokerage institutions. I recall at the end of last year reading in the press of my native city of Halifax that a certain brokerage firm had granted a bonus of two hundred per cent to all its employees. Is that an indication of prosperity? Of course it is of brokerage firms and financial institutions; but I ask my hon. friend from Nova Scotia: Did that apply to the farmers, the people engaged in agricultural pursuits in his province? Did that apply to the fishermen of the maritime provinces? Did it apply to the miners and men engaged in other labouring pursuits? He knows the answer and the house knows it. So we cannot judge as to the prosperity of this country by the success of our banking and financial institutions. Further on in his speech the hon. member said:

. . . a very real reason for the tardiness on the part of the maritime provinces to share in the prosperity of Canada. That cause is the lack of markets for agricultural products in that part of the Dominion.

The hon. member for Colchester (Mr. MacNutt) pointed out very clearly how that applied to the dairymen of Nova Scotia and how the government have in their own hands the remedy with regard to the dairymen of that province. I ask: Does it apply to the farmers, for instance, to the producers of potatoes? May I suggest to the hon. member for Hants-Kings, who comes from a potato-growing district, that if he is looking for wider markets he should go to the Minister of Railways (Mr. Dunning), because a market is to be found in his department. Last summer while the Hudson Bay expedition was being equipped they paid $12.50 a

barrel for potatoes from South Carolina to go to Hudson bay. There is a wider market for the hon. member.

As has been pointed out very ably by the representatives of the island of Cape Breton, there is great distress among the coal miners there, and when this same Hudson Bay expedition was being outfitted, all their boats and the supplies for Hudson Bay, all their coal supplies came from the United States.

Mr. DUNNING: My hon. friend is absolutely and completely wrong.

Mr. QUINN: I can bring the proof of it. I have not got it under my hand, but I can bring it.

Mr. DUNNING: That all the supplies—

Mr. QUINN: Coal supplies, I said.

Mr. DUNNING: Again I state that that statement is absolutely false.

Mr. BENNETT: I think the minister should withdraw that statement, Mr. Speaker. I raise the point of order.

Mr. SPEAKER: I would ask the hon. gentleman not to use that expression. It is rather harsh.

Mr. BENNETT: Withdraw!

Mr. DUNNING: Am I instructed to withdraw it, Mr. Speaker?

Mr. SPEAKER: I think it would be better, to set an example to the house.

Mr. DUNNING: I shall endeavour to keep in order, Mr. Speaker, but the statement of the hon. gentleman is certainly not in accordance with the facts.

Mr. QUINN: Then, Mr. Speaker, I will ask to have the report tabled in this house regarding the purchase of supplies for the Hudson Bay expedition.

Mr. DUNNING: You will certainly get it.

Mr. QUINN: The hon. member for Hants-Kings also said in his address:

> In addition to that, the production in many lines of agricultural endeavour has increased quite considerably. There is also a revival of interest in mining in Nova Scotia and the other maritime provinces as well, which in itself is very promising.

I notice that the hon. member did not mention where credit was due for the increased production in many lines of agriculture in his native province. That credit is due, Mr. Speaker, to the present administration in Nova Scotia which has seen fit to appoint a department of natural resources, administered by a competent head, under which there has been a great increase in agricultural production in Nova Scotia in the last two years. If my hon. friend is honest, and I am sure he is, he will give full credit to the Department of Natural Resources of Nova Scotia for the wonderful progress that has been made in agriculture in that province; and similarly with regard to the increased activity in mining, which has been due to the splendid administration of the local mines department.

Dealing with the Duncan report the hon. member for Hans-Kings said:

> Harbour commissioners have also been appointed for the city of Halifax, and it is hoped that this body will give some degree of direction and unity to the efforts of the people of that city to improve existing conditions.

I have not much to say by way of criticism as to that. We will first give the commission a chance to work. There may be some criticism in another session, but for the present all I wish to say to the Prime Minister and his cabinet in that regard is that if they had given more consideration to the business qualifications than to the political affiliations of the board, a better board might have been secured.

Considerable criticism has been levelled at the Department of Immigration, and justly so. Let me ask the Minister of Immigration (Mr. Forke) if he can justify the dismissal of the caterer of the Immigration department at Halifax other than for political reasons, other than for the purpose of appointing a political follower of his own party who was very badly in need of a job. George Foley held that position to his credit and in a way that has won for him praise from every transportation company operating out of Halifax. There was never a word of complaint, never a criticism about his conduct of the catering of the Immigration department at Halifax, and I tell this house and the minister that he cannot justify the dismissal of that gentleman. When hon. gentlemen talk about the progress and prosperity of Canada, I conclude that the progress they have in mind is to drive every man, woman and child who is not of the same political faith as themselves out of this country to the United States or some other country.

I am going to bring to the attention of the house a case which perhaps the Minister of Immigration will have an opportunity to explain. It is a case which came under my personal observation. I refer to the McConachie case. The minister knows the case

very well. This man McConachie, a Scotch miner, located in Lanarkshire, Scotland, served all through the great war, was wounded, and treated in hospital in England for a considerable time. Due to post-war conditions, he could not get work in his native country, and he decided to emigrate to Canada. He came out here to Glace Bay and obtained employment, and worked there continually for eighteen months. He has letters of recommendation as to his character, efficiency, and honesty, from the manager of the mines in Glace Bay. He saved his money and made a home so that he could bring out his wife and little family from Scotland. Finally he was able to send for them, and his wife with five little children made preparations to emigrate. First there was a mental and physical examination by the roster doctor in their home. This the family passed successfully. They came to Glasgow, where they had to undergo a similar examination, which they passed successfully. They disposed of all their household effects, and sailed on board the steamship Letitia, where, according to the regulations, the ship's physician again subjected them to an examination, which they passed successfully. They arrived in Halifax in December, about a week before Christmas, where another examination was made by I think Dr. Rutherford, who works in Quebec during the summer months and in Halifax during the winter. That doctor discovered that the infant child of fourteen months was feeble-minded. I have interviewed many medical men of prominence since this case came to my attention, and up to the present time I have failed to find a single physician who would say that a doctor can speak with any degree of certainty as to the mental condition of a child of fourteen months. That family was detained in Halifax in the Immigration department, and eventually the case came to my attention, and I visited the family and made personal observations. Here was a bonny little Scotch woman, virile and strong, with a healthy, red face; as good a specimen of a Scotch woman as you could possibly get, and they are all pretty good. There were five children, ranging in age from eight years down to fourteen months. I went into the immigration office about five o'clock in the evening; the family were sitting there with the father, who had come from Glace Bay to meet them. When I told them who I was, in company with the immigration chaplain, tears rolled down the cheeks of that father and mother when they told me of their case and how they had been detained there for three weeks. I asked for the story of the McConachie family, and he showed the baby to me in the arms of its mother. The baby's back was turned to the father, but when he said "Come, Bunny, come to father," the baby turned around, put out her arms and went to the father. That was the mentally defective child. I did not see any evidence of the Mongolian type to which the department referred in connection with this child. I stood there talking to the father and mother for three or four minutes, while the baby was in the arms of its father. Then the mother turned to the child and called it by name, and it turned and put out its arms and went to its mother. I went over and chuckled the little kiddie under the chin, and it smiled at me.

Some hon. MEMBERS: Oh, oh.

Mr. QUINN: It could not do otherwise. I offered it a little candy, and it put out its little hand and took it, and this was the child said to be mentally defective and feeble-minded.

What was the position of the Department of Immigration? They said the child must be deported to Scotland, and I suppose that is what my friend the minister calls encouraging British immigration. I wired the minister to this effect:

> Strongly protest against deportation McConachie family owing alleged feeble-mindedness child aged one who was examined and passed in Scotland by doctor selected Canadian government. Sailing was approved your department and family broke home. Husband working for and highly recommended by Dominion Coal. Has good home ready. Consider deportation of desirable family criminal and grievous blunder. Strongly urge admittance.
>
> FELIX P. QUINN, M.P.

Here is the answer, and hon. members will keep in mind that this child had been examined four times.

> Your wire. There is no doubt. . . .

Three doctors said the child was not feeble-minded while one said she was, so I submit that this is the judgment of the Minister of Immigration.

Mr. FORKE: I protest against any such statement as the last. The hon. member must know that matters of this kind are dealt with by the Department of Health and not by the Department of Immigration. I have nothing in the world to do with it.

Mr. QUINN: This telegram was sent to Robert J. Forke, Esq., Minister of Immigration, and the reply came back signed by Robert J. Forke, M.P., Minister of Immigration. I realized at the time that it was a case where the understrappers should not be dealt with, and I wanted to deal directly with the minister in charge of that department.

Mr. FORKE: You have the advantage just now; that is all I have to say.

Mr. KING (Kootenay): Mr. Speaker, just to clear up the point—

Some hon. MEMBERS: Order.

Mr. QUINN: There is no doubt—

Mr. KING (Kootenay): I thought the house would like to have it cleared up.

Some hon. MEMBERS: Order.

Mr. QUINN: This is the reply I received:

Your wire. There is no doubt as to the mental condition McConachie child. She has been definitely certified as feeble-minded with no prospect ever developing to anything near normal. Law specifically prohibits entry to Canada feeble minded persons. Apparent carelessness roster doctor cannot be accepted as grounds for admission prohibited immigrant who will require institutional or other care throughout lifetime. Decision to deport all members family was due to statement of mother that if child not admitted all wished to return. Cannot agree that action of carrying out requirements law is either criminal or grievous blunder. In final analysis Canada is entitled to protection from possible liability lifetime maintenance child. Father subsequently requested that other children be allowed remain with him in Canada and request complied with.

ROBERT FORKE.

Now, sir, I followed that up with a letter under date of January 7, as follows:

Replying to your wire of the 4th instant I have personally investigated the McConachie case and have seen the infant Margaret, who is alleged to be feeble-minded, and I protest against deportation for the following reasons:

Firstly, there is conflict of medical opinion. Roster doctor certified infant to be mentally and physically fit, and you are aware that roster doctors are selected because of their good standing and are appointed for express purpose of preventing deportations on physical or mental grounds, and therefore their opinions should have great weight.

Secondly, the infant, being only one year old, it is not possible to forecast with any degree of certainty what its future mental condition will be.

Thirdly, the board of immigration officers who investigated the case were very favourably impressed with the family.

So was I:

Fourthly, I protest on humane grounds. The husband's father, mother, brother, sisters and all relatives are settled in Nova Scotia and all are, like himself, doing useful work. The mother, on receipt of letter from immigration authorities in England approving of sailing, sold her home, and if now deported would have no home or friends to go to.

Lastly, I consider the deportation under such circumstances criminal, inhuman and a grievous blunder. It is clearly a case to be dealt with under section 4 of the Immigration Act, which was framed not only to safeguard the interests of Canada but to deal with justice to the immigrant as well.

For the above reasons I insist that this family should have admittance to Canada.

Now let me quote section 4 of the Immigration Act:

The minister may issue a written permit authorising any person to enter Canada, or having entered or landed in Canada to remain therein without being subject to the provisions of this act. Such permit shall be in the form A of the schedule to this act, and shall be expressed to be in force for a specified period only, but it may at any time be extended or cancelled by the minister in writing.

McConachie wired to the Minister of Immigration first, asking for a special board of three doctors, the expense of which he was prepared to bear, and by whose decision he was willing to abide, but to that wire he received no reply. When he has a chance I will ask the Minister of Immigration to say why section 4 was not applied in this case, because the mental condition of this infant could not be forecast with any degree of certainty.

Mr. FORKE: Might I reply now?

Some hon. MEMBERS: Order.

Mr. FORKE: The hon. member asked me to tell him.

Some hon. MEMBERS: Order.

Mr. QUINN: Then I have the final letter from the minister:

I am in receipt of your letter of the 7th instant, having reference to the case of Margaret McConachie, and have carefully perused the same. You state that there is a conflict of medical opinion, apparently basing the said statement on the grounds that the roster doctor passed the child. Whilst it is true that the roster doctor did not certify the child as being mentally defective, the evidence on file very clearly indicates that had she been properly examined, she would have been so certified. There is no conflict of medical opinion in so far as the medical officers of the Department of Health are concerned; in fact, there is a unanimous opinion on the part of both of these officers who personally examined the child, and their diagnosis was approved of by the chief medical officer of the Department of Health at Ottawa. It would be a most unreasonable attitude to ignore the diagnosis of three experienced Canadian medical officers and accept as establishing mental fitness the fact that a roster doctor had passed the child.

You state that it is not possible to forecast with any degree of certainty what the child's future mental condition will be, in view of the fact that it is now only one year old. I am unable to accept this statement, and my remark on the point in question is based on the statement of the chief officer of the immigration medical service of the Department of Health that "in the present instance (referring to the case of Margaret McConachie) with the physical characteristics of the type described as Mongolian, the mental deficiency is quite inseparable from the physical abnormalities as set out in the history. We are of the opinion,

therefore, that there is not the least prospect of the mentality of Margaret McConachie ever developing to anything near normal."

I fully agree that the child should never have been passed by the roster doctor and that the return of the child and her mother will cause hardship. This phase of the question was very carefully considered before a final decision was reached; in fact the whole circumstances were painstakingly weighed both by the officials of the department and myself prior to the decision being reached that the child could not be allowed entry. Had the child's disability been one which could reasonably be expected to respond to treatment and a cure effected, there would have been no hesitancy in allowing entry under permit. The evidence, however, is all the other way. I do not deny that the interests of immigrants are entitled to every consideration, but even above this must be placed the interests of Canada, and I may say very frankly that the admission of a feeble-minded child whose lifetime must be spent either under the care of her parents, other relatives, friends, or the state, with all that that implies, would not be in the interests of the country, and it was on these grounds principally that the decision to carry out the law was arrived at.

Yours very truly,

ROBERT FORKE.

Sir, law is law, regulations are regulations—but justice is justice. My hon. friend laughs. I ask him to come down with me to Halifax, walk out to the pier on a black, dreary day in the middle of January, look at the steamship there, lines cast off, and that buxom little Scotch woman, with a baby of fourteen months over her shoulder, standing on the deck, weeping bitterly, distracted, while her husband remains on the pier with four little bairns ranging from two and a half to eight years of age clinging to him, bidding farewell to his wife, who is banished forever. I appeal to you, sir, on the grounds of Christianity, on the grounds of humanity, yes, on the grounds of British patriotism, if this is the treatment to give to a British soldier who was willing to risk his life in the defence of his country. Yes, law is law, but I have often heard quoted the words of a prominent lawyer and former attorney general of my native province: There was never a law made but there could be found in it a hole large enough to ride through on horseback. The Minister of Immigration might have found a hole and admitted the McConachie child. Certainly he might have admitted the child under a special permit. McConachie himself was willing to accept a temporary permit for the child so that it might be admitted for a few months and be given a chance to develop, and at the expiration of that period to have a final examination, the result of which would be conclusive.

One other matter was dealt with very ably yesterday by the hon. member for York-Sunbury (Mr. Hanson)—the tragedy which is about to happen in my constituency through the threatened closing down of an industry in the town of Dartmouth which employs an average of 100 to 150 men with four or five hundred dependants. A delegation was here last week from the board of trade of the city of Halifax and the town of Dartmouth, asking for certain tariff concessions so as to save that industry from extinction. We are losing our industries in the maritimes as one by one they are being gradually driven away from us. Here is an opportunity for the government to do something to protect this industry. If tariff concessions are not made the industry will close down in the course of another four or five weeks, and Nova Scotia in general and Dartmouth in particular will suffer the loss of four or five hundred souls. Where will they go? They cannot go to the great west, for they are not farmers and would be no good on the prairies, and there is no need for them in our larger cities where logically they should go. Their only refuge is across the line to join their brothers and sisters. That apparently is the policy of the government. But I hope not, and I appeal to their judgment to do something to protect this little industry in the constituency of Halifax.

Mr. THOMAS McMILLAN (South Huron): Mr. Speaker, my first words must be words of congratulation to my hon. friends from Hants-Kings (Mr. Ilsley) and Provencher (Mr. Beaubien) for the manner in which they discharged their duties as mover and seconder of this address. Their messages not only reflect credit upon themselves but on the constituencies which sent them here. I am also pleased to offer my congratulations to the hon. member for West Calgary (Mr. Bennett) upon his elevation to the high position of the leadership of his party. I wish him long life and every success in the office which he now holds, and I am certain that in his keeping the best traditions of the great Conservative party will be nobly maintained.

But, sir, I do not know that I would have risen in this debate had it not been for the peculiarly consequential role which my hon. friend the late acting leader of the Conservative party (Mr. Guthrie) assumes—the role of a lecturer on courage. His message to the hon. Minister of Finance was really amusing. What was more amusing still was the peculiarly consequential air with which he endeavoured to criticize the administration on its financial record. It is my purpose, in so far as I am able in the few minutes at

my disposal, to try to place the record of this government before the house and country in comparison with that of the Conservative administration which preceded it. In order to do so it is only right that I should refer back to the history of this country at the close of the Laurier administration, which in a period of fifteen years brought the Dominion to a stage of development of which every citizen is proud, at an increase in ordinary expenditure of less than four million dollars per annum. When their successors assumed the reins of power they found the treasury overflowing and the country in a prosperous condition. What was the result of their financial administration? They threw away the country's money to such a degree that at the end of three years there had been an increase in ordinary expenditure, not of $4,000,000 per annum, as was the case with their predecessors, but of over $36,500,000. If you look back over the records of that time you will find that even their own political friends and their party press were accusing them of squandering the finances of the country like a lot of drunken sailors. That was before the war. Then came the war, and in its direction and prosecution, together with the enactment of the War-time Elections Act and the act respecting the voting of soldiers, there came one of the most diabolical records of mismanagement and maladministration which had ever stained the pages of Canadian history. As regards that financial maladministration, what is the record? During the war they borrowed and added to the national debt, up to the year 1920, nearly $14,000,000 more than the entire cost of the war, saddling not only the people of Canada generally but our brave soldier boys, after they returned, with a burden which should never have been imposed upon them. The following statement shows that during the war the government did not collect even sufficient to run the country, outside of war cost:

Year	Total Revenue Receipts	Disbursements	Deficit	Spent on War and Demobilization Account
1914–15..	$ 133,073,482	$ 248,098,526	$ 115,025,044	$ 60,750,476
1915–16..	172,149,393	339,702,502	167,553,109	166,197,755
1916–17..	232,701,294	498,203,118	265,501,824	306,488,815
1917–18..	260,778,953	576,660,210	315,881,257	343,836,802
1918–19..	312,946,747	697,042,212	384,095,465	446,519,439
1919–20..	349,746,335	785,769,611	436,123,276	346,612,955
	$1,461,396,204	$3,145,576,179	$1,684,179,975	$1,670,406,242
			1,670,406,242	
			$ 13,773,733	

That burden should never have been created had that administration been conducted as it ought to have been. There was no reason why they could not have levied and collected hundreds of millions per annum, so that at the close of the war no one would have felt any additional taxation. Had that course been followed the national debt would now be comparatively light.

Mr. SPENCE: Oh, talk some sense.

Mr. McMILLAN: My friends do not like to hear this sort of thing, but I am afraid I shall have to point out the facts. As I say, they borrowed and added to the national debt $14,000,000 more than the entire cost of the war, and the financial situation was such that when the present Liberal administration—

Mr. SPENCE: Did you belong to the Liberal party then?

Mr. McMILLAN: If I am interrupted it will only mean five minutes to be added to my time. I was about to observe that when the present Liberal administration took office their first task was to bring order out of chaos. They were faced with the enormous annual expenditure of over $463,000,000 and they could reduce taxation only as their carefully considered and gradually diminishing expenditures would permit. Nevertheless their record is good. I am not going to go over it in detail, but I should like to have the privilege of placing the figures on Hansard so that every hon. member may have an opportunity to study them. As regards the increase in the national debt under the Conservative administration during the war, I have figures in tabulated form which, with your permission, Mr. Speaker, I will give to Hansard.

Mr. GARLAND (Bow River): Read them.

Mr. McMILLAN: Along with this I will show the result of five years of Liberal administration.

Some hon. MEMBERS: Read it.

Mr. SPENCE: Read it; that will take up your time.

Mr. McMILLAN: The statement shows that at the beginning of the Liberal regime, as at March 31, 1922, the total expenditure—

Mr. SPENCE: Mr. Speaker, I submit that the hon. gentleman ought to read the figures.

Some hon. MEMBERS: Order.

Mr. SPENCE: Let him read it.

Mr. McMILLAN: I say, the statement shows that there was a total annual expenditure for all purposes of $463,528,000. I am not going to go over the figures, but with your permission, Mr. Speaker, I will place them on Hansard.

Some hon. MEMBERS: No.

Mr. SPENCE: Read them.

Mr. McMILLAN: You do not want to see them in print; you do not want to have them placed on Hansard. At the end of five years, if you take as the basis the last year of the Conservative administration,—and it is not as high as it was previously—you will find that in that five year period, ending with March 31, 1927, there has been a saving of over $447,000,000, made up as follows:

		Reduction
March 31, 1923	$434,735,277	$ 28,793,112
March 31, 1924	370,589,247	92,939,142
March 31, 1925	351,169,803	112,358,586
March 31, 1926	355,445,308	108,083,081
March 31, 1927	358,555,751	104,972,638
Reduction in 5 years taking 1922 as basis..		$447,146,359

Mr. SPENCE: Have you got the money?

Mr. McMILLAN: Hon. gentlemen will find the details in the public accounts. Now what about the railway situation? We know that a very important question in the minds of the Canadian people at that time was this: Will the financial situation of the Canadian railways overwhelm the country or will the government be able to surmount it? During the last two years of the Conservative administration the receipts of the National railways failed to meet ordinary expenditure by over $46,000,000, but when the Liberal government assumed the reins of power they consolidated the National system, bringing it under a board of efficient management. With what result? At the end of two years—

An hon. MEMBER: Louder.

Mr. McMILLAN: You do not like to hear the facts stated. At the end of two years of Liberal administration, instead of a deficit, and a failure of receipts to meet ordinary expenditure, there was a surplus of over $23,000,000. In other words, as between the management of the previous administration and that which has been exercised under the present government, there is a difference in favour of the latter of over $69,000,000. That favourable showing has continued from year to year until, for the calendar year 1926, the revenue exceeded ordinary expenditure by over $48,225,000. For the last year we have not received the entire returns, but the gross receipts were more; and the only reason why there will not be an equally favourable showing is the fact that there have been a reduction in freight rates and an increase in wages of employees. Added to this, there is the circumstance that in the west conditions were such that grain could not be moved, up to the end of the calendar year, to the same degree as formerly.

Mr. SPENCE: Do you blame the government for that?

Some hon. MEMBERS: Order.

Mr. McMILLAN: As regards the national debt, what do we find? On March 31, 1927 the national debt, according to the public accounts, amounted to $2,422,000,000 odd. During the last two years of the Meighen administration, that is 1920-1922, they were compelled to increase the national debt by over $173,000,000. No reasonable individual would expect that in one year the Liberal administration would be able to balance the budget. They were compelled the first year, 1922-23, to borrow, and increase the national debt by $31,000,000. But since that time what do we find? I read from the public accounts that in 1924 the reduction in net debt was over $35,000,000, in 1925, $345,589; in 1926, $27,706,000, and in 1927, over $41,000,000, or a total reduction in the four years of $105,000,000, and during the first nine months of the present financial year, ending December 31, there has been a further reduction of some $55,000,000.

Now, Mr. Speaker, that is not the only thing which stands to the credit of this government. If my hon. friends opposite are not very well satisfied with these figures possibly they will be less satisfied before I get through. While, during the last few years, the record of the Conservative opposition was anything but commendable, this government has been making history. It took its stand and faced its difficulties in such a masterly way as to show that Liberalism has been doing things which will go down into history as constituting some of the brightest pages in all our political life. Despite its record of economy and efficiency and its substantial reductions in the customs

tariff, when, at the close of the election of 1925, the Liberal party found itself in the position of being unable to meet parliament with a clear majority of the house, did the Right Hon. Mackenzie King show any disposition to hog the spoils of office for the benefit of his political friends? Did he show any disposition to commit the government to any undesirable course of action? Not at all. During the whole of that emergency his action was such as to show that he was exceedingly anxious to preserve and uphold the best traditions of parliamentary government in this country. Having suffered personal defeat in his own riding he absolutely refused to open up any constituency or to make any public appointment in order to get a position for himself, as previous prime ministers had done, until such time as the representatives of the people should meet and decide for themselves who should lead and direct the affairs of government. Once they had done so, and had given a further mandate to the Liberals to carry on, he and his government proceeded to place before the House of Commons the most advanced program of legislation ever presented to parliament during any single session since confederation. So good was that program, and so much of it was able to receive the assent of parliament and of the crown before the explosion took place, that when the election did come, apart from the masterly way in which he was able to put the constitutional situation before the people, there is no doubt that the Robb low-tariff budget had more than anything else to do with turning the Liberal slump of the previous year into a splendid victory. Never in our history had any government redeemed itself in one short year. It was a triumph for legislation and good government. During all the previous session there was strong opposition to the Liberals, but the electorate having realized what real efficiency and tariff reduction did mean, swallowed it, went to the polls, and asked for more, and we have every indication that before the end of this parliamentary term they will not be disappointed in their expectations.

Now, sir, let us look just a little further into that situation. When, owing to the defection of a certain number of his supporters, the administraion of the Right Hon. Mackenzie King was unable to command the support of a majority of this house, did he haggle, or twist and turn, in order to hang on to the spoils of office? Not a moment. When it developed that he was unable to carry on with that dignity befitting a great parliamentary institution, that moment he asked the Governor General, as was his right, for an appeal to the people, to let them pronounce as to what should be the verdict. When that appeal was refused he resigned the premiership at once and handed over the seals of office. But when the shadow government began to act unconstitutionally, in trying to get control of the public business of this country and of the public funds, and wrongfully to advise the Governor General, the Right Hon. Mackenzie King assumed the role of a statesman, displayed all the qualities of an outstanding parliamentary leader—not only on the floor of parliament where he stood head and shoulders over every other member of the house but outside in the country at large. In parliament he compelled the members of that shadow government to sit like children at his feet. He gave them a good castigation, and compelled every one of them to admit that they had not taken the required oath of office, but that they were acting in a most unjustifiably unconstitutional manner. In the succeeding election, in the face of all the epithets and scandal hurled at the Prime Minister and his brilliant leading lieutenant, he was able to put the public issues before the country on such a high plane as not only to rivet the attention of the people but command their confidence and support. That attitude, apart from the Robb low-tariff budget, was what won the election, supported as the Liberal leader was by the great majority of the primary producers and general consumers of the country, men and women who do not importune cabinet ministers or the tariff board through deputations, not because they are not vitally interested but because according to the general nature of affairs they cannot afford to do that kind of thing. This must be done for them and the tariff board appointed by this government is busily engaged in performing that investigation in a most exhaustive and impartial manner which, I am satisfied, will have its beneficial effect in the very near future.

The Liberal policies of low tariff generally and reciprocal trade with our neighbours are the two great factors which will lead to a permanently successful agricultural industry and to the encouragement of shipping, industry and international trade. Canada can no longer continue to live within herself. We have become citizens of the world. Our international trade increase since 1913 has been nothing short of marvellous. With less than ten millions of people we now stand fifth among the great commercial nations, and we enjoy a per capita trade of almost double that of many other countries. Situated in such a pivotal position on the northern half

of this American continent, on the straight way between the orient and the British dominions of Australia and New Zealand on the one hand and the old world markets on the other, with two highly equipped lines of transcontinental railways and such a heritage of still largely undeveloped natural resources, our policy ought to be gradually to scale down all needless trade barriers and to go forward to meet the open competition of the world. We are now meeting that competition successfully, and if given the proper lead there is no reason why we cannot continue to fortify and improve our present favourable situation. As a great British economist has said, unless the United States and many other countries cease telling their people to "trade here" and "don't trade there," the world will sooner or later face an economic cataclysm from which no country can escape. To be thoroughly equipped against such an emergency, if we would realize and fully appreciate our great opportunities, it is our duty and in the highest interests of the Canadian people gradually to scale down all needless trade barriers and to "let Canada lead the way."

The election of the 14th September, 1926, settled once and for all the role which governors general must assume in this country; they must recognize that the will of the Canadian people is supreme and must respect, abide by, and carry out the will of the people as expressed in the advice given by the responsible prime minister of the day, who is and who ought to be the only official medium of communication and advice. Moreover, that role was confirmed during the deliberations of the recent Imperial conference where the people of Canada, through the medium of our two great Canadian leaders, led the way. That conference, representing all the dominions of the empire, unanimously agreed to define their position and mutual relation as autonomous communities within the British Empire, equal in status, in no way subordinate one to another in any aspect of their domestic or external affairs, while united by common allegiance to the crown and freely associated as members of the British commonwealth of nations.

When my hon. friend the acting leader of the Conservative party, after that conference, undertook to throw cold water on its achievements and charged that it was with a feeling of disloyalty to the crown that Liberals ventured to assert our equal status with the motherland and the other dominions in their own spheres, he was effectively silenced by Premier Stanley Baldwin of Great Britain, who in Toronto on August 7, 1927, declared:

> I defy anyone to find two statesmen who pull together better for the good of the empire then Mr. Mackenzie King and myself.

That was a clincher; that was the last word. It was uttered by a great Conservative, the Prime Minister of Great Britain, and uttered in the heart of ultra-loyal, Tory Toronto. Surely such an expression emanating from such a source should give the quietus once and forever to that hollow disloyalty cry which we have so often heard in the past.

Just recently moreover along came Lieutenant Colonel, the Right Hon. Mr. Amery, British Secretary of State for the Dominions, preaching the same Mackenzie King doctrine. Listen to what he said:

> The war, he said, had placed the empire's nations on a new footing of equality, and this status had been completely accorded them at the last empire conference. While the conference marked a great constitutional development, it could not surprise any student of empire affairs. The conclusions of the conference were implicit in their very foundations of empire.

Again he said:

> The conference had laid down in the first place the complete equality of British nations—that none was subordinate to another.
>
> "Canada is no more subordinate to Britain than Britain is to Canada", he declared: "That principle was laid down for the whole empire with absolute unanimity. How shall we use this equality?"

Mark you, Mr. Speaker, these are all Conservatives, but they are the right kind of Conservatives; these are all big men.

Further, it is recognized that the official channel of communication is now between prime minister and prime minister, as representing the respective governments, rather than through the medium of the Governor General as in days gone by, and this is the only enduring way. British statesmen realize perfectly that the broad foundations of liberty and equality upon which the British Empire rests would be rent asunder if they interfered with the freedom of the dominions. They know that the people of the dominions are their own people. They know that liberty with them is a passion; that they and their forebears left the native heath of the old land to pursue the search after freedom, and that freedom and liberty is as dear to them as life itself. As matters now stand, the political foundation of the British Empire rests, as the government of Great Britain has always rested, upon no written constitution, and this great empire will no doubt press forward from strength to strength and clear away these quibbling legalities which we have heard so much about, and which will gradually disappear as the snow before the noonday sun. I am sure we are all pleased to know

that we have definitely settled the status upon which the dominions of the empire rest, and that our status is as it was first proclaimed, and afterwards maintained, by our great Canadian Liberal leaders. Canada has blazed the way for all the dominions from confederation downwards. It was the position which was first asserted and upheld by that great Canadian Sir Wilfrid Laurier, afterwards supported by Sir Robert Borden, and now at the recent conference carried to its full fruition under the guidance of Canada's two greatest Canadians, the Right Hon. W. L. Mackenzie King and his worthy colleague the Minister of Justice (Mr. Lapointe). This I consider as one of the great outstanding pages of Canadian history which will stand forever as a monument to the foresight and statesmanship as well as the honour of our great Canadian leaders.

I would like to voice my approval of the stand which this government took before the recent conference of the premiers of the provinces as expressed through the medium of the hon. Minister of Justice when he said that we should be allowed to amend our own constitution as circumstances and conditions warrant. The slogan announced by my hon. friend the member for South Wellington (Mr. Guthrie) a year ago, "Hands off the British North America Act," seems rather absurd when viewed in the light of recent history. What are the facts?

1. In 1871 the parliament of Great Britain passed another British North America Act permitting the parliament of Canada to establish new provinces, and making provision for their constitution, administration and the altering of their limits.

2. In 1875 the parliament of Great Britain passed an act repealing a section of the British North America Act and allowing the parliament of Canada to define the powers, privileges and immunities of the Senate and the House of Commons.

3. In 1886 the British parliament passed another British North America Act allowing the Canadian parliament to make provision for the representatives of the territories in the Senate and the House of Commons.

4. In 1907 the British parliament passed an act providing for payments to be made to the provinces.

5. In 1915 the British parliament altered the constitution of the Senate by increasing the number of senators from seventy-two to ninety-six to provide for representation of the western provinces in that body.

All these changes you will find cited in Kennedy's Documents of the Canadian Constitution. These are all amendments to the British North America Act which the British parliament passed as a matter of course at the request of the parliament of Canada, and I voice my approval of the words of the Minister of Justice when he proposed merely to dispense with a needless formality, to make the form correspond with the substance.

Mr. SPEAKER: The hon. gentleman's time is up.

Mr. WILLIAM IRVINE (Wetaskiwin): Mr. Speaker, happily I think this debate is drawing to a close. The range of the discussion has been as wide and varied as the national interests have seemed to be to the hon. members taking part, and properly so. If I understand the theory aright which underlies the latitude permitted in this debate it is that when hon. members representative of all the different groups in the house have presented their views to parliament, the government of the day will be in a better position to draft and to promote the legislation of the session. With this understanding, I wish to make a few remarks before endorsing the vote of thanks proposed to His Excellency which is now before the house.

The speeches of the mover (Mr. Ilsley) and the seconder (Mr. Beaubien) were such as to do them credit. The felicitations so generously extended by all members of the house who have spoken in this debate to the hon. leader of the opposition (Mr. Bennett) are not only well merited, but they have been listened to with great pleasure, coming as they do upon an occasion when it appears to be recognized as the proper thing to permit the higher human elements to rise above the clash of party strife and warfare. I gladly add my congratulations to those of hon. members who have preceded me, and in so doing I feel that it would not be out of place, nor would it be resented by any member of this house, were I to make a passing reference to his predecessor in his distinguished office, the Right Hon. Arthur Meighen. It is no doubt with mingled feelings, sir, that we recall his presence here. Some who so recently fought with him will recall his presence with pleasure. Those who fought against him may recall his presence with fear. But all of us will recall his presence with admiration and respect. In making mention of his services to our country both as Prime Minister during the darkest period of our history and subsequently as leader of His Majesty's loyal opposition, I but do honour to myself and indicate a sense of appreciation of a distinguished public servant which well becomes this house. I shall not now make any attempt

to place an estimate upon those services or even to make a summary of his efforts; suffice it to say that the high qualities which he brought to his exalted office and the singleness of purpose with which he devoted those qualities to the service of Canada, have earned for him an honoured place in our history. To his successor, who is equally gifted, I merely say that the country expects much from him, and I could not wish anything better for any man than that he be enabled to measure up to so great an opportunity for service.

Now, sir, I will address myself to the consideration of only one matter mentioned in the speech from the throne, the existence of which I notice has been denied by some hon. members who have taken part in the debate but which, on the other hand, has been vociferously re-established and re-asserted by those who have been speaking in support of the speech from the throne. I refer to the prosperity of our country. In accepting the popular meaning of that term, with certain mental reservations as to the extent and adequacy of the prosperity indicated, I have no intention of denying its presence. However, I regard the very mention of prosperity in the speech from the throne as being in the nature of an announcement, as though prosperity were not normally to be expected. If prosperity were a normal condition, as it might very well be, there would be no need for any announcement concerning it, but as things are prosperity is fittingly mentioned in the speech from the throne. To me, that amounts to the announcement of a welcome visitor, which comes to us at uncertain intervals, and I am very glad that the government have had notice of his arrival. I rise now not only to welcome that visitor with the government, but to insist that the government shall take at this session of parliament, and at subsequent sessions, steps which will compel that welcome visitor to become a permanent member of our family, if such be possible. In other words, I rise to urge a consideration which may lead to the stabilization of prosperity.

I am very glad to note that the government were too wise to claim that prosperity was coming to Canada through any particular act of theirs. I do not say this in any criticism of the government, I merely wish to indicate that if the government had claimed credit for the announced prosperity they would also have to take the blame for the unemployment and depressions which have characterized our Canadian industrial life for the last ten years, and they would also have to accept the responsibility for the depression and unemployment which will inevitably follow the prosperity which they have now announced.

This indicated prosperity brings us face to face with the chief problem of modern industrial life. Anyone who is at all observant must be convinced that industry and business move in fitful cycles of prosperity, alternating with dreaded cycles of depression. General reflection on this phenomenon has been crystallized into a few very definite opinions which vary, naturally, and which have been frequently expressed in this chamber. These different opinions have been brought forward in this chamber voluminously during periods of depression and to-day, Mr. Speaker, I wish to review some of these opinions because I anticipate that they will be repeated a few years hence when dealing with the next period of depression. Hon. members who voiced these convictions will probably recognize them, but I draw them to your attention now if for no other reason than to show just how far we are from analyzing in a scientific way the real problem before us, and how much further we are from finding a satisfactory solution thereof.

The first opinion which I wish to recall will be that of the Minister of Finance. I do not, of course, refer to the present Minister of Finance because he may not be in that position when these speeches are next made, but whoever may be the Minister of Finance at that time will take the attitude that neither his department, the financial institutions in general nor the government will accept any responsibility for the unemployment and depression which he will, of course, deplore. His attitude is not hard to picture; "Deus Vult" will be his helpless cry, he will reluctantly admit that unemployment is present, and out of the very sympathy of his human heart he will be sorry for the sufferers, but the only thing he will be able to do will be to give a very small pittance of charity and hope for the return of the tide of prosperity.

Then there is another opinion which we have heard expressed and which we will doubtless hear again, that is that unemployment is caused by men who absolutely refuse to work. No explanation will be given of the fact that these men charged with refusing to work were the men who did work the year before, when prosperity was at its height, and no explanation will be given of the fact that because of their very industry the shelves of the warehouses will be piled high with goods which cannot be removed and consumed thus carrying out the very aim of industry itself.

Another opinion will be that the depression which will then be prevalent was caused by something done or something left undone to the tariff, but that is such a well known ex-

cuse that I pass it by without further comment. It has been dinned into the ears of the people of Canada for the past sixty years, and we are all familiar with it.

Then another opinion will be expressed, which will be that the hungry, unemployed people of that period should do penance for their lack of thrift. It will be said that out of their income during the period of prosperity they should have saved a good deal of money, and should be able to live in luxury without doing anything at all.

There is still another opinion, sir, which we have not heard expressed so much in this house, perhaps, but which we have certainly heard in other places. I refer to the opinion that the conditions of our industrial life are directly due to the decadent capitalist system; that there is no cure for it; that it must be destroyed, and that revolutionary methods must be adopted for its destruction. With this latter opinion, sir, I have no particular sympathy; I think the capitalist system was evolved to produce goods, and in that aim it has not failed at all. I also believe that revolution is the last resort of the ignorant, so I am not particularly in favour of the last opinion to which I have referred. I would say this about it, however; the revolutionary, a product of industrial stupidities which we tolerate, hurls his challenge across the waste and chaos and inhumanity of the civilization which we endorse, forcing us to attempt to find an optimistic philosophy for the conditions of life. In other words, we are content with the dry as dust excrescences of an old outworn economic theory which belongs to what is known as the "dismal science." Happily for the future, however, these are not the only opinions. There are those to-day who believe—not as the result of any blind credulity, but by reason of an inevitable conclusion derived from a close scientific analysis of industrial phenomena—that the depression which we have so often deplored is preventable; and if that is so, then those in authority should be held responsible for its recurrence.

What are the facts on which this hopeful belief is based? What are the steps in the analysis that leads to this conclusion? Everyone knows that prosperity comes gradually and finally ends in a boom. The boom slumps and ends in a depression. When prosperity begins naturally everyone in his own interest does the very thing which is needed to bring more prosperity; that is to say, when prosperity begins the psychological element begins to work—manufacturers and other producers of goods increase their means of production, and the money spent in this way increases the consumers' purchasing power, and on goes the prosperity wave. And if bad times come a similar process is followed. In other words, the individual acts in the way described because he does not expect that the tendency which he has noticed, whether one of depression or of prosperity, can be stopped. He well knows that there is no agency to which he can look for any assistance.

Now, is there a way by which extreme depressions may be avoided? Is there a way by which prosperity may be made permanent? I will summarize briefly the essential factors which suggest the possibility of a stabilized prosperity. First, no one will deny that Canada is well equipped with natural resources, with plant facilities and with man power to increase production ad lib. No one will deny that much of the invested capital in Canada to-day is returning a poor profit, and in some cases is entirely lost, because it has been invested in manufacturing facilities the product of which cannot be purchased. The next thing to be noticed is that the people in Canada actually desire more goods. I refer to the statement of conditions as made by the hon. member for Southeast Grey (Miss Macphail) on Monday night. She pointed out that a very large percentage of the homes of our rural people could be very much improved, and that these rural people are very anxious to have them improved; that is, they desire more goods and higher standards of living. And undoubtedly it would be well for them if they could get more goods and higher standards of living. Why, in face of the capacity of manufacturing industry to produce plenty, and in the face of their desire for plenty, do they not have plenty?

Let me follow the steps of the reasoning in this regard. They do not have plenty because they do not create plenty; they do not create plenty because plenty cannot be sold. We are not in a position to buy any more than is being now created. More could not be sold if it were produced because consumers do not have sufficient income with which to buy more. The best proof of this is shown in the extensive selling on the instalment plan which has taken place in the last few years. It is estimated that during the past year three billion dollars worth of goods was sold or moved in the United States on the instalment plan. I am not advocating the instalment plan—do not forget that. I think the instalment plan is mathematically impossible, and that some day it must stop. I merely use this fact to indicate that if these people had had the money they would have bought the three billion dollars' worth of

goods in cash instead of on the instalment plan. It is merely a fact to indicate that if the people had more money they would buy more goods.

Since producers cannot produce any more goods than consumers can consume, and since consumers cannot consume any more goods than they can buy and pay for, it is surely our duty to inquire into the sources of their income. Where do consumers get their money? Well, I think anyone will be ready to answer that consumers generally get their money in the form of wages, dividends, interest, profit and so forth. But the point to be emphasized is that all such moneys come from industry; and industry, on the other hand, has no other source of receiving its money than from the consumer, while the consumer has no other source of receiving purchasing power but from industry. Thus there is a constant circuit flow of money from industry to the consumer, and from the consumer back again to industry. So that if industry does not receive enough money from the consumer to buy its output, then its output cannot be bought out. Similarly, if consumers do not receive sufficient money from industry to pay for the output, it cannot be paid for. If industry therefore paid back to consumers all the money which consumers have sent to industry, and if, on the other hand, consumers could buy goods with all the money they received as wages, dividends, interest, profits, and so forth, from industry, we would have a pretty steady circuit flow; we would be able to buy a fixed volume of goods at a certain level of price.

But these things do not run so smoothly as that. We are living under a profit system, and consequently the man who produces goods must sell them for a price higher than it cost him to produce them. Moreover, it is necessary for corporations and individuals to save, and money that is saved appears first in the production of more goods, so that there is a constant tendency to pile upon the shelf goods that represent a surplus, not above the capacity of consumers to consume, but above the possibility of consumers to pay for with the wages they receive in the process of production. The right flow of money would be that amount which would balance the goods flowing into the market, and it is the lack of an agency to regulate that right flow of money that accounts for the recurrent depression and unemployment against which I am speaking.

But let us ask now, why it is that an agency of this character has not been established, that is to say, an agency for the purpose of regulating the proper flow of money into the market. The reason is that orthodox economists, those who wrote their treatises prior to the modern development and prior to the modern problem, are the accepted authorities, regardless of the fact that their theories are contradicted by facts known to every business man capable of noting a fact. What is that obsolete theory to which those in authority give a blind allegiance? It is the assumption that no agency is required to regulate the flow of money, because, forsooth, John Stuart Mill and Adam Smith have assumed that if producers obtain sufficient money for production, then consumers automatically will obtain sufficient to buy out their production. I want to explode this theory of the orthodox economists.

I will ignite the explosive by asking this question: Why cannot the money expended in production enable the consumers to buy the output? What is the reason? I indicated it a few moments ago but I will discuss it more in detail now. Money expended in production cannot buy the output because, in the first place, we are living under what is known as the profit system. I am not speaking against the profit system—I am merely pointing out a fact: We are living under a profit system and that means that the producer must get more for the goods he sells than it costs him to produce them. No man will go into business on any other condition. No man will do anything that will not yield him something in return, whether it be in the form of material wealth or in the way of satisfaction of a psychological kind. But be that as it may, since the producer has to sell his goods for more than it costs him to produce them where will the extra money come from? The money paid out in production is the only money the consumers have to buy with. Consequently there must remain on the shelves of the warehouse a surplus which represents the difference between the amount of money distributed in the process of production and the selling price of the goods. But that is not the only difficulty. Corporations must save. They have to replenish plant and extend it when necessary and this compels them to put by some reserve. Individuals must also save. It is a very admirable characteristic, we are told, to save money, and I am not arguing against it; it is necessary. But every dollar that the individual saves helps to hasten depression. Money saved usually is turned back into further production. But, you say, the consumer's dollar is bound to be somewhere. Yes; but let me show you where it

usually is when we want it. Suppose it is in the bank: During the period of depression one thing that the bank finds it very difficult to do is to lend money to anyone, so that the consumer's dollar lies there out of the circuit flow and to that extent it is not functioning. The consumer is denied goods in consequence.

Some hon. members in this house may call me a theorist and on that assumption will disregard my plea. Meanwhile hon. gentlemen are giving their tacit endorsement to a theory which underlies our whole industrial system and to which are chargeable the most spectacular failures of that system; a theory which is proven to be false by every fact relevant to the subject. In further pursuance of my theme, I anticipate a question which some thoughtful member may possibly have in mind at this point. That question is this: What is the cause of a period of prosperity, since I have indicated that there is never enough money under the ordinary industrial system in the hands of consumers to buy out production? My answer is that prosperity invariably comes during periods of capital expenditure. This capital expenditure causes prosperity because the money expended in capital facilities immediately finds its place in the market for goods. And this increases the purchasing power of the consumer for the reason that, as yet, no goods have come from the facilities in question to balance the amount of money expended, as I have indicated. In this way capital expenditure always helps purchasing power. Let me illustrate this point. Suppose we have in this city a large boot and shoe factory and a period of depression is gradually closing in upon us. The shelves are being crowded with goods which cannot be sold. When the depression is beginning to settle on the factory, when they are paying off their hands, let us assume that the construction of a huge two million dollar plant—say for hydro electric purposes—is undertaken. Immediately construction work begins money is paid out in wages and so forth. But that plant so far has produced no goods to go on the market, it is distributing $2,000,000 of money which is available for the purchase of some of the boots which have been lying on the shelves of the boot and shoe factory which I have supposed. I might cite many instances, such as for example the marked development of the automobile business in the United States. That was a new industry a few short years ago whereas to-day it is chief in volume of production among the industries of the United States. The automobile industry on the other side produced

last year seven-eighths of the world's output, and in cars and car supplies there was spent in that country six billion dollars. United States prosperity in the last ten years, as compared with the poverty or lack of prosperity in other countries, has been due in large part to this expenditure in automobiles, but this has been so only because the automobile industry has been a growing one. A stabilized industry will not increase the purchasing power of the people because it does not enlarge plant equipment to the same extent as a new industry.

All periods of prosperity are caused by capital expenditure in the manner I have set forth. But just as soon as the goods begin to flow to the market from the new capital facilities, depression sets in and continues until conditions warrant the repeating of the process. In other words, we are prosperous when all the money expended on future production, together with all expended on current production, enables us to buy all the goods available. The position may be made even more clear when I say that in order to be able to buy the output of capital facilities now in use we must build new ones, and in order to buy the output of the new ones we must build still more new ones. When we stop this process disaster immediately overtakes us.

There can be only one solution to this problem, no matter how brought about, and that is our people must in some way be enabled to buy and pay for as much as they can produce of consumers' goods or the full equivalent in the product of other countries. That is to say: There must be sufficient money in the hands of consumers, together with our imports, to balance our industrial output. Someone will ask, why can we not ship our surplus to foreign countries? We can; but if you have not enough money to buy the surplus which you have at home you have not enough with which to buy the imports which, in the proper course of business, should be exchanged for exports. No country is unwise enough to ship goods out without having an equivalent in imports, and what is the use of getting imports without having money with which to pay for them.

I propose now to devote the remaining portion of my remarks to making a few suggestions with a view to the stabilization of the prosperity which is now beginning to make itself felt throughout the country,—suggestions which I shall direct not only to the government but to parliament. I may be mistaken in my estimation of the power of parliament. But at present I regard parliament as being greater in authority than

any government, even allowing for the blighting influences of the party system upon it. There are on the order paper resolutions proposing the nationalization of banks and the establishment of a federal reserve system. At the moment I am not interested in these particularly but I refer to the federal reserve system by way of illustration. The chief contribution of the federal reserve banks in the United States has been to stabilize the money market. I will not describe the process by which this is accomplished. We need such an institution in Canada, but that alone would not solve our difficulty. We require an agency of some sort which will do for industry and business that which the federal reserve system has done for money,—to regulate the flow of money to balance with production, so that there shall be neither too much nor too little in circulation at one time. In finding a remedy for the present state of affairs in this regard, the first step is to discover something which at present nobody knows, and yet to discover which is well within the range of human intelligence. That something which no one knows but which might be found out is this: How much money do the consumers require to enable them to buy the current output? And how much of that amount is now furnished by the producers of goods in the form of payment for services? I propose, Mr. Speaker, that we set up a federal board which shall collect from every available source: (1) Such information and such data as are required to indicate the correct amount of the consumer's income; (2) With such information in their possession the board would next advise the government how its fiscal policy should be guided in respect to such information; (3) The board shall also determine the exact time at which public expenditures undertaken by the government shall be launched, the manner of its financing, and the extent to which it shall be put within a given time. In times of prosperity the government could shorten up its public works program, while it would extend that program in order to stem a tendency towards depression. In this way the control of money in proper relation to production would be possible. I should like to explain this more fully, but time will not permit.

There is talk, sir, of a great waterway that may cost $400,000,000. I can imagine that the government in the near future may authorize the launching of that scheme without thought of its direct effect upon the industrial life of the country. But surely the letting loose of $400,000,000, without a balancing of goods in the market, ought to receive some consideration by any government. I suggest, sir, that this government should organize such a board as I have indicated which board both by its own acts, and by the data which it will be in a position to furnish, will be enabled to give leadership to business in general. The very fact that business men would know that the matter was in control, that depression was not going to descend upon them, would encourage them to carry on, and thus prosperity would be doubly certain. I would characterize the proposal submitted in the words of Foster and Catchings—the economists of the Pollak foundation, who in their latest book, The Road to Plenty, say in respect to it:

> This is a solution of the problem which is radical in that it goes to the bottom of the difficulty; a solution which is revolutionary in that it involves the overthrow of accepted ideas and the adoption of an entirely new controlling purpose. At the same time the solution must be conservative in that it leaves unchanged all those established institutions which are generally regarded as essential; a solution which is commonplace in that it requires us to do little more than we are already doing.

I conclude by saying to this government and this parliament that if nothing radical and constructive is done the prosperity now heralded will depart in haste before the certain avenger depression. To do nothing is equivalent to making a decision to continue to have our periodic depressions with all their accompaniment of human suffering.

Mr. A. M. YOUNG (Saskatoon): After the very learned discussion we have had on economic matters I am not able as yet to determine what the effect will be on the price of wheat, but I do hope the effect will be good. The hon. member (Mr. Irvine) said he was not a theorist. I hope after I have had time to study his speech I shall find that he was quite correct in that statement.

I desire at the beginning to congratulate the mover and the seconder of the address in reply to the speech from the throne. I listened with very great pleasure indeed to the speech of the mover, the hon. member for Hants-Kings (Mr. Ilsley). He is a distinguished graduate of the university of Dalhousie, a distinguished son of Nova Scotia, and a most worthy representative of the constituency. I was very much pleased indeed to note the spirit of optimism in the speech which he made. I should like to apply my remarks equally to the hon. member for Provencher (Mr. Beaubien) who seconded the address. In this great Canada of ours where two great races dwell, personally I am pleased indeed that this particular hon. member was chosen for the task of seconding the address.

I should like also to offer my congratulations to the Conservative party in that they were guided by the practice of the Liberal party in deciding to hold a national convention, which took place in Winnipeg not very long ago. It was very interesting to some of us to note the resolutions passed there, and we feel quite sure that the very atmosphere of the place tempered the spirit of some of those resolutions. I may add that we were exceedingly disappointed at the fact that no sooner had the convention closed than many eastern newspapers published directions to the new leader to the effect that they hoped he would not be guided by the resolutions passed there. Those of us on the outside of that convention had the idea that one of its purposes was to select a leader for the Conservative party, but apparently such was not the case. It now appears that the great Conservative party met in national convention for the purpose of selecting a leader of the opposition. I hold in my hand a clipping from the Dalhousie Gazette of November 17th, and I should like to quote what it says in that regard. First of all I may say that the hon. leader, after his election, received many telegrams of congratulation, and among them was one from the president of the students' council of Dalhousie university, of which my hon. friend is a very honoured graduate, and of which I also have the honour to be an alumnus. This telegram of congratulation was published in the Dalhousie Gazette, and to it the leader of the opposition replied as follows:

Dear Mr. GODSOE,

I have not had an opportunity until today to thank you for the very kind message which you sent to me on behalf of the council of the students on the occasion of my election as leader of the opposition in the House of Commons.

As you will note, this is a written statement, and therefore more likely to be exact. I do not wish to be too technical but the hon. gentleman himself makes much of a few legal technicalities with respect to our present national status, and indeed in all the speeches which I have heard him deliver in this house in the past two or three years he has been most critical of technicalities. I feel confident that he will not object to my observations at this time.

Mr. BENNETT: I desire to point out that it is a statutory office. There is a description of it in the statutes.

Mr. YOUNG (Saskatoon): I will come to that a little later.

Mr. BENNETT: You will never come to it.

[Mr. A. M. Young.]

Mr. YOUNG (Saskatoon): I have the fullest confidence that my hon. friend will not object to my observations at the present time.

I understand the statutory nature of the position of leader of the opposition in this house. It is true that with the house constituted as it is at present, the leader of the Conservative party becomes ipso facto the leader of the opposition, but according to the statement of the hon. gentleman himself he was elected not as leader of the Conservative party but as leader of the opposition.

Mr. HOCKEN: That is very fine hair splitting.

Mr. YOUNG (Saskatoon): I remember a great and historic people who occupied a position somewhat parallel to that of the Conservative party in this country. They required a leader, so did the Conservative party. They were in the wilderness, so was the Conservative party. This great people chose as their leader a gentleman by the name of Moses, and he was a great leader. In Christian charity, with which Liberals are so richly endowed, let me add that we are most happy in our hope that the hon. gentleman from West Calgary will have a long apprenticeship in the position to which he says he has been called, so that he may attain to that sphere of greatness which history accords to that other leader of whom I have just spoken. Should the Conservative party, by some political misfortune, some day come into power, the hon. leader of the opposition will find himself in the same predicament as Moses, who was permitted to see the promised land but not to enter therein.

Mr. HOCKEN: May I point out to the hon. gentleman that Moses sinned? That is why he was not allowed to enter the promised land.

Mr. YOUNG (Saskatoon): I should not like to say how many sins the hon. gentleman who has just spoken has committed. According to the hon. gentleman's mature and considered statement in the letter from which I have just quoted he would not be permitted to cross over with his party, for they had elected him to that position, which only those in the wilderness can occupy. The record goes on to say that Moses, when he was old, after being permitted to see the promised land, died in the wilderness. The rest of the parallel is left to one's imagination, except to add that the Conservative party must find the Joshua who at this moment is unknown, and perhaps as yet unborn.

Let me add this: To the leader of the opposition, a distinguished son of a splendid province, a graduate of no mean university, I offer my sincere congratulations. He has wonderful mental capacity; his talents are well trained; he is well skilled in the law and he has a wide knowledge of political affairs. May I sincerely and honestly predict for him that he will have a very successful career in the position to which he has been chosen? I want to add one thing further. After the leader of the opposition was chosen he made many speeches in western Canada. I read those with pleasure and I was sorry that I did not happen to be in my city the day he was visiting there, but I had an opportunity of hearing him at Regina the next night. In the west he delivered speeches filled with a lofty idealism and a sound note of Canadian patriotism, and I want to compliment him sincerely on the high note which he sounded in those western provinces. Perhaps there might be just a tinge of regret at one section where I saw great tears in his eyes, and I might be pardoned for thinking of the rich young ruler when he suggested the great heart-wrench it was when he was leaving those big interests with which he had been associated for such a long time. Apart from that little thing I desire to compliment him on the lofty tone which he sounded out in the west. One thing which struck me as being very pleasing was that he said that Canada was prosperous.

I wish also to congratulate the Prime Minister (Mr. Mackenzie King) on the excellent and admirable address which he delivered the other day in this chamber. It was one of his best efforts and one which will go down to history as showing the present position of this country. The Liberal party has a leader of which it may well be proud and Canada has a prime minister in whom it may have great pride and satisfaction. It was a treat to the house to listen to those lofty utterances setting forth facts which, I am sure, it is good for this country to know.

To come to the question of the speech from the throne, I understand some of my hon. friends opposite are not very well satisfied with the speech. The first paragraph states:

> It affords me much pleasure to meet you at the commencement of another session of parliament and to be able to congratulate you upon the marked prosperity of the country.

Then it goes on to speak about the volume of trade and many other things, but I propose to let that stand for the moment. Mention is next made of the celebration of the sixtieth anniversary of confederation, but even this does not seem to suit our hon. friends opposite. We on this side of the house had hoped that they would at least rejoice in that great event, but apparently they did not do so. The speech goes on to refer to the visit of the Prince of Wales, Prince George and the Prime Minister of Great Britain, and in my judgment this visit and the occasion of the celebration of the sixtieth anniversary of confederation last summer were effective in making Canada better and more favourably known throughout the world, and should have aroused the patriotism and pride of every Canadian. To me at least that reference in the speech from the throne is an excellent one.

The next reference is to Canada's seat on the League of Nations. May I ask hon. members opposite if they do not think that is something worthy of recognition and note? I personally consider it a very distinct compliment to this great country, and may I hope that, situated as we are in the northern half of this North American continent, where peace has reigned for the last one hundred years and more, our representation in that league will be of great effect in the interest of peace, not only on this continent but throughout the whole world.

The speech from the throne goes on to refer to the proposal to have ministers to Japan and France. I was much surprised to hear the caustic criticism which came from different hon. members on the other side of the house in regard to this matter. Last year when we were considering the question of opening up an embassy at Washington, very severe criticism was raised. Why are hon. members not criticizing that to-day? We hear very little, if any, criticism of it at all. That was, of course, an experiment, but it is one which now they know they dare not criticize because the people are convinced that it was a wise step in the right direction. I had hoped that this proposal to send ministers to foreign countries would at least be one of the things in which members in all parts of the house, representing all parties, might be unanimous, and it would be very much better for this country had some hon. members considered this matter more carefully before entering into the criticism we heard here. I believe our representatives to France and Japan will prove equally as capable and important as our representative to the United States has proven.

As regards the Dominion-provincial conference, will any hon. member say that that conference has not done a great deal, and will not do still more in the interests not only of the Dominion as a whole, but of the several provinces? It is another matter of which we should be proud.

The speech from the throne also refers to the Hudson Bay railway. Perhaps the completion of this railway is not a matter of much interest to some hon. members opposite. It was for a long time our impression in western Canada that some hon. gentlemen opposite were not very enthusiastic in regard to the project; in fact it has been so stated on the public platform and in the press. Let me congratulate the Minister of Railways (Mr. Dunning) on the way in which he handled this project from the time he became Minister of Railways. I believe this railway will be a great scuccess and will open up a part of our country which may prove the richest part of the whole of western Canada. Those of us who live in that part of the country do not lightly regard that paragraph in the speech from the throne, and even if hon. gentlemen opposite have seen fit to belittle the speech from the throne, we on this side of the house believe the Hudson Bay railway is a work of great importance, a work which will be in the interest not only of western Canada but of Canada as a whole.

I should like to make a short reference to the speech which the hon. member for Bow River (Mr. Garland) delivered in this house a few days ago. I desire to congratulate him on his address; generally speaking I think it was well delivered and well thought out. I have no doubt whatever that from his point of view it might be reasonably effective, but I should like to say to the hon. member that on some points our ideas are slightly different from his. In his very great modesty he pointed to some of the things which have been done in the last two or three years and he took much credit to himself in regard to them. He pointed out two or three other members in his group to whom he also gave credit, and he would leave the house and the country to infer that the responsibility for all this good legislation we have was attributable to him and his associates. In so far as they may have contributed something, I always welcome that kind of action in this chamber, but from his address I almost came to the conclusion that the Liberal party and the Conservative party on the other side are practically wasting their time in being here; that had we left everything to just a few members in that corner of the house, it would have been done more expeditiously and possibly just a little better.

Miss MACPHAIL: Hear, hear.

Mr. YOUNG (Saskatoon): The hon. member who has just said "hear, hear" apparently agrees with the idea that two or three can run the country, but some of us think otherwise. The hon. member for Bow River made reference to the transportation of Alberta coal to Ontario. If this can be accomplished in a fair and proper manner, I am entirely and absolutely behind the scheme; I want there to be no mistake about that. But let us consider the situation which confronts us at the present time. The matter was referred to the board of railway commissioners to find out the various costs of transporting coal, the out of pocket cost, the inclusive cost, and the cost plus profit. We have an official report from that body.

Perhaps I should pause to say that I hate to criticize any official body, but I have had some little experience with the board of railway commissioners, as nearly all of us have had, particularly those of us who come from western Canada and were interested in the removal of the discrimination on the rates on grain eastbound and westbound. Now there was in 1925 legislation passed by this house which said specifically that if discrimination existed, that discrimination should be removed. The matter was referred to the board of railway commissioners, and if they found that any discrimination existed, that discrimination was to be removed forthwith, and forthwith means at once. What happened? In western Canada we found that they dilly-dallied over the question for months and months, even years, so that two crops of grain had to be moved at rates that were a very great discrimination against the farmers of northern Alberta, of northern Manitoba, and of northern Saskatchewan particularly. Consequently I am not so very much enamoured of this board of railway commissioners, and I am going to say this, that any board or any individual who will deliberately set at naught the will of parliament and the will of the people of this country should be removed from office, I care not what board or what individual it is. I am not, therefore, speaking now with any too great satisfaction in the finding of the railway board on the coal rate, but I want to say that up to the present time this board is still an independent board created by parliament to investigate this very matter, and so long as they remain that board I think we must accept their official finding.

What was that official finding? It was that the railways can move that coal from Alberta to Ontario at an out of pocket cost of $7.22. The hon. member for Bow River questions that figure. It is possible that the figure is not correct; I am not an expert on this question, but I do say this, Mr. Speaker, that for this house to adopt the principle of a statutory

rate on coal, or on any other commodity, which is less than the official finding made by an independent official body, would be going too far.

Mr. McGIBBON: Would the hon. gentleman apply the same principle to coal as to wheat, which is now being moved at a loss?

Mr. YOUNG (Saskatoon): I would apply the same thing to coal as to wheat, but I would like to contradict the impression my hon. friend would give the house, that wheat is being moved at a loss.

Mr. McGIBBON: That is the verdict of your own department.

Mr. YOUNG (Saskatoon): It might take me forty minutes to convince the hon. gentleman, so I shall not take the time now.

I was saying that in face of the official finding of that board, I do not think parliament would be justified in making a statutory rate lower than the rate named in that schedule. Suppose, for instance, that any person feels that the board did not go sufficiently into the matter, what is the obvious course? It is a further reference back to the board, or to some other body. But I repeat, I would not like to see any statutory rate enacted by parliament that would go in the face of an official finding such as we have before us at the present time.

I was a little bit surprised that some hon. gentlemen opposite who are so fond of talking protection did not have another solution for this problem; I was surprised that they did not advocate raising the tariff from three to five dollars a ton to keep out American coal. Then our Tory friends in Toronto would necessarily have to buy their coal in Canada; the railways would be able to get a proper rate for carrying the coal, and the transportation cost would have to come out of their own pockets. I am surprised that that argument was not advanced. But no, the suggestion was not this, either from Alberta or from Ontario. That would not suit us they said. What they wish to do is to have a statutory rate which will be less than the out of pocket cost, and the citizens of the rest of Canada must make up the deficit. Our friends opposite have a funny way of invoking the aid of protection and the tariff when it suits them, and of adopting the very opposite principle if their pockets are going to be hit.

We must all recognize the fact, Mr. Speaker, that we in western Canada must bear the additional cost of that undue and unjust protection which they ask for on their manufactured commodities.

Mr. HOCKEN: No chance!

An hon. MEMBER: Bunk!

Mr. YOUNG (Saskatoon): The hon. gentleman who has just spoken is, I believe, the editor of the Orange Sentinel and knows more about that commodity than I do. I will leave it right there when he says it is bunk.

Mr. HOCKEN: How clever!

Mr. YOUNG (Saskatoon): Not clever, but just a fact.

I want to say one word about prosperity. We all remember the two or three elections we have had in the last few years, and what was the whole cry by the Tories from one end of the country to the other during those election campaigns? It was that Canada was going to ruin under the Liberal rule. We had that cry when the tariff was reduced on agricultural implements. They said then: If you touch the tariff on agricultural implements, the agricultural implement industry will go out of business. But what have we found? We have lived a sufficient length of time since then to know that that argument can never be used in this country again. The agricultural implement manufacturers were never so prosperous as now. We heard the same cry when the duties on automobiles were reduced. We were asked to have pity on those poor unfortunate automobile manufacturers, those men who started on a shoestring and developed a business that ran into millions. We all remember how our friends opposite were so solicitous about these poor manufacturers. We remember how that delegation came down from Oshawa and settled on the lawn in front of this building, carrying flags and banners telling us that their homes would be closed down, to say nothing of their factories. But what did we find? We find that there are more automobiles in Canada to-day than ever, and also that the automobile manufacturers are more prosperous than they ever were before.

There is another thing. The Right Hon. Arthur Meighen when he was leader of the opposition—and I must say that I quite agree with many of the things said about him by the hon. member for Wetaskiwin (Mr. Irvine), in this chamber this afternoon—made the statement: If I can be shown that by putting on an extra duty the price of an article is going to be raised, I would not be in favour of putting it on. Well, we all know what happened in connection with the automobile industry. The tariff was reduced, and are we paying the same prices for automobiles as we did before the tariff was reduced? Every-

one in this country knows that the price of automobiles has gone down, and gone down markedly.

Mr. KAISER: Because of the tariff?

Mr. YOUNG (Saskatoon): The very gentleman who is now interrupting me, when it was proposed to reduce the automobile duties, came to me with tears in his eyes and tugged at my coat tails pleading with me to try and get my friends to have pity on these poor manufacturers. Oshawa will be closed down, he said, if you put these new duties into effect. Well, every time I meet him now in the corridors I ask him, "Is Oshawa still on the map?" and he replies, "You cannot hurt Oshawa." Let me tell you, Mr. Speaker, that the only way in which Oshawa could be hurt would be to let some of his friends get into power and put a higher tariff on automobiles.

Coming to the question of unemployment, there is a little unemployment throughout Canada. There is in my own city, and I have no doubt there is in this city. The hon. leader of the opposition took his cue on unemployment from the fact that he saw a few men sitting on snow wagons clearing the streets for us to get through here. Let me say this, as one having had experience with regard to unemployment: There is less unemployment to-day than we have had for years and years, and no man can deny that. I know very well that in the city in which I live, under Conservative rule, we had the lines of unemployed waiting for their turn at the soup kitchens, but we were not shouting about it even then. We do not believe it is good Canadianism to bring it up to-day, when there are a few unemployed as there always will be in a country with such seasonal employment as we have in Canada.

Mr. McGIBBON: They have all gone to the United States now.

Mr. YOUNG (Saskatoon): My hon. friend is not thinking of leaving, is he? I want to say that Canada is prosperous, and the people are no longer fooled with remarks such as those. Compare this country with some of the European countries and then talk about it. Ours is a land flowing with milk and honey. Only the other day I was speaking to a gentleman who has been in the central European countries for two years; he came into my own home to discuss the whole question of prosperity in Canada as compared with European countries, because it is only by comparison that we can get a fair idea of what is taking place. When we compare this country of ours with any other country under the sun we are bound to say that we are proud of the country in which we live, in spite of some of the grumble-peddlers we have even in this chamber.

I would like to say a word now to my hon. friends from the maritime provinces. I am a native son of Nova Scotia and am proud of it. Almost a quarter of a century ago I left Nova Scotia for the west, but I return year after year and I am proud and glad to go back to those little provinces by the sea, because there is a charm about them which even that western atmosphere of optimism does not take away at all. Last year, Mr. Speaker, when we had the great question of maritime rights before this house, what did we do on this side of the chamber? Did we try to throw cold water on the proposition which was placed before us? No; we were sympathetic, and we assisted in doing what we felt was only right when we passed the legislation implementing the report of the Duncan commission; we felt that it was in the interests of the maritime provinces. But what did we hear this year? Did we hear thanks from hon. members opposite? Let me say that those of us who sit on this side of the house were bitterly disappointed and hurt; those of us who tried to assist every member from the maritime provinces sitting opposite to get those bills through last year felt hurt at the criticism which we have heard during this debate. The government of this country went far to implement all the recommendations of that report. Sometimes I go back to Nova Scotia, where I always enjoy a visit, and talk a good deal to some of my Liberal friends down there. I do not suppose it will be of interest to the house to know what we talk about, but I have a lot of Tory friends in Nova Scotia as well.

An hon. MEMBER: Conservatives.

Mr. YOUNG (Saskatoon): Yes, Conservatives, if you will; it all means the same thing down there. I have talked to a large number of these Tories, and I can say that I would rather listen to the sentiments expressed by them and expressed in this chamber during this debate by the Postmaster General (Mr. Veniot), the mover of the address and, the hon. member for Queens (Mr. Sinclair) and I would rather believe those to be the real sentiments of Nova Scotians, than what we have been hearing from the other side of the house. I have talked to a large number of these Tories, or Conservatives if you will, since this house rose last year, and what did they say to me?

They said, "We did send up a lot of members to the House of Commons, but we are sick and tired of hearing those members continually grumbling. We can say to you that that is no part of the sentiment of the people of the maritimes with regard to these matters." But we come back to another session this year and find the same amount of grumbling, as though nothing had been done in line with the report of the Duncan commission. Those Tories to whom I spoke in Nova Scotia went even a step further, and if it is any comfort to the members of the Conservative party I will tell them what they said: "While we supported them last year, we now feel very differently in the matter." They said to me, "When the Prime Minister was here he promised us a commission and said he would implement the findings of that commission whatever they might be, and added, the government of Canada went very much further in implementing that report than we had even hoped for. We felt that the Prime Minister was making the same political promises we used to hear in the maritime provinces, but we now see that he is a man of his word; up to the present he has done everything he said he would do and even more, and hereafter we are going to put our faith and confidence in the government which gave us what we asked for rather than in those men who did nothing but grumble about what we wanted."

I would like to touch for one moment on some of the remarks made by the hon. member for Queens-Lunenburg (Mr. Ernst). He spoke about old age pensions. We in western Canada who spoke from public platforms during the last election said we did not believe that the Tory party in Canada were favourable to old age pensions, and now what do we find? British Columbia has passed legislation implementing the federal act: Manitoba and Saskatchewan have done the same thing, and they certainly have not Tory governments. We find that apparently Nova Scotia does not intend to take advantage of this legislation, and Ontario has already spoken through its premier. Those provinces both have Conservative governments. We find that when we come to social legislation in the interests of the masses of the people, we have to trust to the Liberal party or we will never get it.

Mr. hon. friend from Queens-Lunenburg said that in his province more than fifty per cent of the people over seventy years of age were indigent. I know the province of Nova Scotia personally, and I do not believe for one moment that more than fifty per cent of the people over seventy years of age there are indigent; as an old Nova Scotian I resent any such statement being made in this house. Even if there were a few people in my province who were poor, I would not like the word to go about that more than half the old people were paupers. I ask any man if it is good Canadianism to broadcast a statement of that kind to the world. Why not recognize and realize the fact that if Canada is to be made great statements of that kind will never do.

Now just a word or two about immigration, because I am afraid my time is almost up. I would like to say that this matter of immigration is so vital and so important that our forty minute rule was condemned when the Minister of Immigration (Mr. Forke) was cut off in the middle of his speech. For one, I would have liked to hear him continue, because I never like to make two bites of a cherry. He may have an opportunity to renew the subject later, but I believe this house and this country wanted a full statement from him with regard to immigration matters. Let me say at the outset that I would like to see all the immigrants we can assimilate, all who are healthy and willing to work, brought to this country from Great Britain, but I do not want to stop there. In our western provinces we have the finest example to be found in any country in the world; we have some of the best settlers this country has ever had, people who came from some of the European countries. The hon. member for Yorkton (Mr. McPhee), who gave a very admirable address in this house a short time ago, gave the names of some of those in his constituency who during the sixtieth anniversary of confederation this summer gave some of the most patriotic addresses, and were awarded first prize for their efforts. Just a few days before coming back to Ottawa we had a banquet of the agricultural societies, at which approximately 300 or 400 people were present, and at this banquet awards were presented for the judging contests held at recent fairs in Saskatoon. In one instance we found that a young Russian Mennonite whose name for the moment I have forgotten and who has been only three years in this country, carried off the highest award for judging at that particular contest. If you go to the university of Saskatchewan, which happens to be located in my home city, you will find on the attendance lists names which some of us could not pronounce, not at the bottom of the list but at the heads of their classes, and you could not have finer Canadian citizens. Let us have all the British immigrants we can get, as quickly as we can assimilate them, but I hope that some gentlemen throughout this country will cease this con-

tinual propaganda against the men and women who come from other countries, but who are making citizens of whom we are proud. Let me go further; if you want a fine virile race in this country; if you want to be a great, patriotic people, criticisms of that character certainly hinder a great deal more than they help. Oh, I have heard recently of some instances of racial and religious prejudices not only in my own province but over the whole Dominion. I hope that that kind of thing will be eliminated from this great Dominion which we are now building.

I was very much surprised indeed, Mr. Speaker, to hear the hon. leader of the opposition (Mr. Bennett) a few days ago say:

> Within the last three hours I had a cable from a friend of mine in London who is tremendously interested in this question,—
>
> The medical examination of immigrants in the old country.
>
> —saying that the regulations now in existence are preventing people from coming to Canada. He said also that the new medical regulations were absurd, to give his exact words. I am not going to pass judgment upon them myself; I was very careful to tell the house that this was a cable from a friend vitally interested in these matters, not in any sense from a political point of view at all.

Of course. I submit, Mr. Speaker, that the hon. gentleman having had that telegram only three hours previously he should not from his seat in this house proclaim to the world that the new medical regulations are absurd without first investigating every last thing that could be investigated to ascertain whether the medical examination of immigrants overseas is being properly or improperly carried out. True, he was careful to say that he did not do such and such. Then, as they say in the record of the two black crows: Well, why bring this matter up now? I claim that propaganda of this kind does much to discourage immigration. I have for years advocated, and I still advocate a full medical inspection of immigrants on the other side. I listened this afternoon to the pathetic case which the hon. member for Halifax (Mr. Quinn) brought to our notice—and even with all its pathos I must congratulate him that he had in his pocket a little bit of candy for the kid—but I am sincerely of opinion that these examinations should take place on the other side and that they should be thorough. If on the way over something serious develops which was not apparent at the time of examination, that should be brought to the attention of the immigration authorities here, and if any immigrants give misinformation to our officials I have very little sympathy for them. I have had a good many cases brought to my attention, some of them almost as bad as that cited by my hon. friend this afternoon, but I always found after careful investigation that one of the facts which I discovered had never been told before, and this one fact governed the whole case. We must have the entire facts in front of us before we can pass judgment on these cases.

Immigration is a very important question, and medical inspection of immgrants is a very important question; then let us be fair in our criticism of the department. Sometimes unfortunately too many people, not excepting hon. members, accept a little hearsay evidence and then place it before the public. If I may digress for a moment, I was very much surprised at a telegram read by my hon. friend from Cumberland (Mr. Smith). I took out a clipping from my own paper, the Saskatoon Star, headed—

Mr. SPEAKER: The hon. member's time is up.

At six o'clock the house took recess.

After Recess

The house resumed at eight o'clock.

Hon. J. W. EDWARDS (Frontenac-Addington): In offering my congratulations to the mover (Mr. Ilsley) and the seconder (Mr. Beaubien) of the address, I do so not as a formal act of courtesy but rather as a tribute to the courage displayed by these gentlemen in tackling the job without any basis on which to make a speech. The speech from the throne adds one more precedent to a government which has become famous for its precedents. It contains absolutely nothing. His Excellency the Governor General might just as well have handed to you, Mr. Speaker, a blank roll of paper tied with royal blue, and a suitable address in reply would have been a snapshot of the Prime Minister (Mr. Mackenzie King), arrayed in his Windsor uniform, with decorations up to date, and with the Latin motto underneath: "Ex nihilo nihil fit"—"Out of nothing nothing comes."

In the zigzag course pursued by them since 1921, the government have performed some very strange acts. In the session of 1926 the bill of fare was a veritable political chop suey, composed of carefully selected titbits, well soaked in oil in order that they might be easily swallowed. It was swallowed with the result, as you know, that there was an epidemic of political indigestion ending in

the dissolution of parliament. In the session of 1927 they instructed the cook to leave out the oil, the result in that case being that everything was dry and indigestible; and the government, choking on its own food, had to call in the medical experts of the supreme court and later consult the specialists of the privy council.

The hon. member for Bow River (Mr. Garland) was, I thought, unduly harsh, not so much perhaps in the words he used as in what they implied, in his references to the seconder of the address. In that great book which contains the titled people of the Dominion of Canada, the Parliamentary Guide, the hon. member for Bow River refers to himself, in the write-up which he has furnished, as a man of no politics whatever—"politics none." The hon. gentleman who seconded the address (Mr. Beaubien) calls himself a National Progressive. Well, I rather think that inasmuch as he apparently has a title, has some politics, as the designation quoted would indicate—and it is indicated in a vague way I am bound to admit—while the hon. member for Bow River has no politics, the seconder of the address evidently is going somewhere under some lead. The hon. member for Bow River, on the other hand, seems to be basking in his own smiles and learning at the feet of his own philosophy. I confess that I do not know what a National Progressive is, but I will candidly say that I like the sound better than "Liberal Progressive." I have concluded that the Liberal Progressive is a sort of half-way house between the Progressive party and the Liberal party. I have endeavoured to get some definitions of the term Liberal Progressive. One person suggested to me that a Liberal Progressive was a variety of politician sitting on the fence—you will pardon me if I use the expression which my informant used, but I will take it back if you tell me to—a political mugwump with his mug on one side of the fence and his wump on the other.

Mr. BEAUBIEN: Will the hon. gentleman give us a definition of "Liberal Conservative?"

Mr. EDWARDS (Frontenac): If I thought it would have any effect on the hon. gentleman, or if I were sure his grey matter was properly functioning so as to take it in, I should not mind spending a week-end with him for the purpose of enlightening him on the point. Another person told me that a Liberal Progressive was a sort of politician who could stomach neither the Liberal party nor the Progressive in its entirety, but who tacked the two ends together in the hope of fooling the electors and trying to make them believe that he possessed the best qualities of both Liberals and Progressives—if there are any best. But, Mr. Speaker, while we have the address in reply to the speech from the throne seconded by a National Progressive instead of a Liberal—

Mr. HANSON: That is something new.

Mr. EDWARDS (Frontenac): That is nothing new—certainly not, because we have as a cabinet minister the Minister of Immigration and Colonization (Mr. Forke), who has not yet reached the point where he can call himself a Liberal. He still calls himself a Progressive; I refer you to the authority already cited, the Parliamentary Guide. In what position the Minister of Immigration is I do not know. He calls himself a Progressive and he is a minister in a Liberal government. It strikes me he is somewhat in the same situation as we are told Mahomet's coffin was in: 'twixt heaven and hell and fit for neither place.

We have been told, Mr. Speaker, that there are evidences of prosperity in this country. Surely no person could deny that for a moment. What are the evidences of prosperity? One of the evidences in living form is our ambassador in Washington. Half a million dollars has been spent there to provide him with a residence. Another evidence that we have lots of money in this country—which is an indication of prosperity of course—is the fact that hundreds of thousands of dollars have been spent in tearing down a whole block right here in the city of Ottawa. Then we have, of course, the further present evidence of a bountiful harvest, due entirely to the wisdom of the government. We have also, as an evidence of prosperity, the export of millions of dollars worth of raw material. That proves that we have the raw material or it could not be exported. A further evidence of our prosperity lies in the fact that we are exporting thousands of Canadians across the line to work up that raw material and ship it back to us. Then, as a further evidence of our prosperity, we have the fat salaries which are being drawn by deputy ministers, and by those who have been fortunate enough to be appointed on commissions. We also have the subsidizing of foreigners to come from Europe to Canada to force Canadians out of this country. On the other hand I call the particular attention of the member for Saskatoon (Mr. Young) to this fact. In speaking this afternoon he rather ridiculed

the idea of the existence of unemployment. Well, as to that I refer him to page 186 of Hansard of this session, and to the statement made by the Minister of Immigration that scarcely a day passes but he receives complaints regarding unemployment in this country.

I might also refer, as further evidence of prosperity or the lack of it, to the fact that officials of the civil service, men who are going up and down this country doing important and useful work for the Dominion, are receiving entirely inadequate salaries for the duties they discharge. The same is true with regard to rural postmasters and rural mail-carriers throughout the country, who are so niggardly paid. It will be hard to make them believe that this country is prosperous when they receive such insignificant stipends. I refer also to the shameful manner in which our returned soldiers have been and are being used; I refer to the steel plants, and the other factories which are idle in this country and which should be operating. I refer also to the fact that thousands of men are out of work; that thousands who ought to be employed are denied work in this country, and that one of the most important functions of our ambassador in Washington has been to plead with the government of the United States to allow "out of work" Canadians to cross the border to get that employment which is denied to them at home.

Another matter to which I would briefly refer is the question of "equality of status" of this country, so much and so frequently talked about. I am sure the people of Canada deeply appreciate the wonderful work which was done for this country by the Prime Minister and the Minister of Justice (Mr. Lapointe) when, with their wonderful personality and influence, they went over to the old country and succeeded in wresting from the motherland another Magna Charta, another charter, of freedom for this Dominion. In that connection, Sir, I might say that in so far as there is any changed status in the Dominion it started at the time Canadians left this country and went to South Africa to answer the call of duty there, sent by a Liberal government at the time and sent on the c.o.d. principle. That act on the part of Canadians at the time of the South African war startled the world to some extent. It startled the world but perhaps did not convince it that Canada was any more than an impulsive young nation. But, Sir, any change which has really come to this country and to its status in the eyes of other nations came because of the splendid work done by our soldiers in the Great war from 1914 to 1918, and it ill becomes the Prime Minister, or any of his government, to try to arrogate to themselves the glory for any change in the relations of this country towards other parts of the world, to try to take that glory away from the men who really brought to Canada the distinction it enjoys to-day.

In that connection, Sir, I want to refer just for a moment to a remark made by the hon. member for Labelle (Mr. Bourassa).

Some hon. MEMBERS: Oh, oh.

Mr. EDWARDS (Frontenac): I can well understand the audible smile of hon. gentlemen opposite; I take that as an indication of the contempt with which they accept the utterances of the hon. member for Labelle. The hon. gentleman in question said in the course of his speech:

> From a social point of view, therefore, let us beware before we open our doors to anyone who may come from England with a heart full of hatred against all British institutions, with a heart full of rancour against everything connected with the British system of government. Of course, if you wish to hasten the day of secession, if you want to precipitate Canada into a crisis with Great Britain, bring as many as you can of that kind of people to this country.

It seems to me that it comes with ill grace from the member for Labelle to talk about others exhibiting a hatred of anything British, or having rancour in their hearts against British institutions and ideas of government. He, least of all, should mention that. But when he speaks, as he does, about the bringing of English settlers here as likely to produce a crisis between this country and the motherland, I would remind him that a man is not known by the way he trims his beard, or by the way he curls his moustaches, or by the elegant language which his education permits him to use. Something more than that is needed to constitute the man; and, Sir, we cannot forget that even the roughest and most uncouth apaches from the dives of Paris had something within their being that struck fire when their country called, that even the worst roughneck from Whitechapel, London, had within him something which struck fire when his country called. I know that the hon. member for Labelle cannot appreciate much less understand those sentiments; but I say to you, Sir, that if I had to depend upon any person to carry this country through a crisis I would rather have this country filled with apaches from the dives of Paris and with roughnecks from the slums of London than depend in a national crisis on men of the stamp of the hon. member for Labelle.

Some hon. MEMBERS: Order.

Mr. EDWARDS (Frontenac): Order what? I have stated what I have stated and I mean exactly what I say. The proof is there—that when the crisis did come and the tocsin of war was sounded, the lowest of the low, those who had had no advantages at all, had in their souls a spark which has never existed in that of the hon. member for Labelle.

I have just one word to say with regard to the question of natural resources and it is this—that the proposal to bind Alberta and Saskatchewan for all time, and to use their own property as a bribe, will take its place in history as the most brazen subversion of freedom this country has ever seen. I want to add this further statement that Alberta and Saskatchewan believe autonomy means self-government for them as much as for the other provinces. They believe that if advice from distinguished visitors when they are passing through this country is unwelcome, tyrannical dictation to the western provinces is even more so.

This house was startled this afternoon by a presentation of facts by the hon. junior member for Halifax (Mr. Quinn), who placed before us the McConachie case. I want to add a few items to that to show the house that it is not an isolated case and that the department presided over by the Minister of Immigration and Colonization, no matter what his efforts may be, no matter how honest he may be in those efforts, is very inefficiently and unfairly managed. The McConachie case is fresh in the minds of all hon. members. It was clearly stated to us this afternoon. Let me cite a few more cases in which the treatment was somewhat different. This afternoon there was placed on the table by the Minister of Immigration a return from which I cite a case of a boy of nine years of age who, because of deafness, was unable to pass the medical examination, but to whom the minister granted a permit to enter this country. I cite another case of a man of thirty-five years of age from Norway with his wife and two children. He could not pass the medical examination; he was medically unfit to come into this country, but the Minister of Immigration and Colonization gave him a permit to enter because he possessed $508. At least that is the reason stated in the return brought down by the minister.

Let me cite another case, that of Patrick McGorman, an Irishman, twenty-five years of age. He was certified at the port of entry as being feeble-minded and illiterate. But he had a brother in Toronto who said he would keep an eye on him and this man was given a permit by the minister to enter this country as a desirable citizen. I find here the case of Mrs. Mary Holt, fifty-one years of age. The record states that she had a mental breakdown for which she was under treatment in Scotland. She, however, had a husband in this country who seemed to be able to receive her and who guaranteed that she would not become a public charge, and she was given a permit to enter. There is another case of a man named James Moore, who was reported at the port of entry as being physically defective and liable to become a public charge. Was he kept out by the minister? No, the minister signed his name to a permit and that man, liable to become a public charge, was admitted into the Dominion of Canada as a citizen.

Another case is that of Evelyn Crozier, eighteen years of age, suffering from psychopathic inferiority or emotional instability. She, however, was given a permit to come in, the minister explaining that they thought in a different environment she might improve somewhat, and they were going to give her a chance. Another lady, Nannie Torrens, was reported by the medical board as being of poor physique, with spinal trouble and heart disease which would prevent her from earning her own living, but this did not prevent the minister from giving her a permit to enter Canada as a citizen of this country. Another case is that of an Austrian Jew, thirty-five years of age, who was examined and rejected, but in view of certain representations made to the department he was allowed to remain in Canada. Who, I ask the minister, made the representations? Who is the power behind the throne in some of these cases?

Mr. FORKE: The hon. member knows that these are only permits for a stated period.

Mr. EDWARDS (Frontenac): I know they are permits. That is exactly what I am saying. The McConachie family asked for a permit, but there was no permit for Mrs. McConachie with her infant child to stay here for even a few months.

Another case is that of a woman with an unpronounceable name, thirty-one years of age, who came from Poland. She was reported by the doctors as having valvular disease and being of poor physique generally. She had a six year old son with her. Her husband is in Saskatchewan, and the minister was influenced by the fact that there was a suitable home for her there. A bond of indemnity was given to the government that this person would not become a public charge.

There was a suitable home for Mrs. McConachie and her baby to come to in this country. Was she given any opportunity to furnish a bond? None whatever.

The next is the case of Angelo Castenello, a Spaniard, twenty-six years of age, who came in first as a stowaway, and who did not report for years. He was then examined and rejected but he was allowed to stay. Another man, eighteen years of age, who came from Hungary, had been in this country but a short time when he was arrested on a charge of breaking, entering and theft, and he was sentenced to six months' imprisonment. The report of the minister says that the offence was a small one. The man was also reported as being dull mentally and suffering from several diseases, probably inherited. He was given a permit by the minister to stay in Canada with his parents, from whom we suppose he inherited those several diseases. He is a fine type of citizen to allow to remain in this country! That is an example of the great efficiency in the Department of Immigration! We are getting a wonderful population in this country, are we not?

Mrs. Julia Haber, who came from Poland with her husband and five children, suffered from toxic adenomatous goitre, but she was allowed to enter this country. Another case is that of a boy, seven years old, who came to Canada with his parents and who was certified at Quebec as being feeble-minded. The doctors at the port said that he might improve enough to avoid danger but he would never be able to earn his own living. His family, however, were here to look after him and he was given a permit. This boy, seven years old, and reported as being feeble-minded, probably knew enough to step out of the way of an automobile going along the street. They give him credit for that much sense and he is allowed in, but Mrs. McConachie is separated from her family and has to return to the old country with a baby fourteen months old.

The next case is that of James Murray, fifty-five years of age, blind in one eye and defective vision in the other. The minister's report states that this would seriously affect his ability to maintain himself, but it did not affect the minister so as to prevent him from granting a permit to this man to enter this country.

It appears that there is some influence behind the present Minister of Immigration and Colonization directing his efforts. It is hard for me to believe that the Minister of Immigration and Colonization is a heartless man, but I have never had brought to my attention a more cruel incident than the sending of the McConachie woman out of this country, and in the light of the cases which I have cited, and which the minister himself reported in the return which he placed on the table to-day, I ask him now across the floor of the house if he will reconsider the matter and allow this McConachie woman to come here for a while under a permit.

Mr. FORKE: When I consider that the McConachie—

Mr. EDWARDS (Frontenac): No. My question can be answered in the negative or affirmative at once.

Mr. FORKE: I can answer it.

Mr. EDWARDS (Frontenac): If the minister wants to make any explanations, he can make them later on, but he is not going to get up and make a speech. The reason he wants to make a speech on this matter is to endeavour, if possible, to excuse an act of his which is absolutely inexcusable.

Mr. FORKE: Unfair.

Mr. EDWARDS (Frontenac): Unfair, the minister says. I might answer that remark in this way: Having regard to the minister's action in the McConachie case, he is the last man in this country who should ever use the word unfair.

The matter of immigration, Mr. Speaker, is a matter of immigration and emigration, both of which are covered by the word migration. Migration has always exercised a very great influence in shaping world history and determining the destinies of nations and their standards of civilization. Time will not permit me to refer to the three great migrations to Canada which have had an influence in shaping the standard of civilization in this country, but I would direct the attention of the house to the fact that in the forty years between 1881 and 1920 we received in this country 4,640 000 immigrants, which together with the natural increase should have given Canada a population to-day of at least sixteen millions. In the last fifty years we have only added to our population some six millions all told, while in twenty years, between 1820 and 1840, the United States population increased from nine to seventeen millions. We have spent, not only this government, but provincial governments, and the different transportation systems, millions of dollars in bringing immigrants to Canada. But it is not merely a question of bringing them here; it is a question also of retaining them after we get them here.

Immigration is more than a problem of numbers. It is, Mr. Speaker, a problem of the advisability and possibility of mixing old world and new world racial and cultural characteristics. It is a problem of what Canada will be and the part Canada will play in world affairs in the years that are to come. We do not want Canada to be eighty-five per cent rural, like Russia, nor do we want Canada to be about seventy-two per cent urban, like the United States. We should aim in the matter of immigration to get immigrants until our population is fairly balanced in terms of occupation. Another thing which we should aim at was indicated by President Coolidge in his address to congress in December, 1923. I quote his words:

> America should be kept for Americans. To do this we can admit only those whom we can assimilate, namely, those whose backgrounds traditions and so forth are similar to ours, and those who come for the purpose of making America their home, and who will be partakers of the American spirit.

Those words, Mr. Speaker, might very well apply to the immigration policy that we should adopt for the Dominion of Canada. The strangers within our gates must have it impressed upon their minds that this is a British country, and that the union jack and the English language are the distinctive signs of our common Canadian citizenship.

Some hon. MEMBERS: Oh, oh.

Mr. EDWARDS (Frontenac): What does that laugh mean?

Mr. MORIN (St. Hyacinthe): Does the hon. member think that those who were born here and have lived here for three generations are not as good Canadians as himself?

Mr. EDWARDS (Frontenac): Why, my dear sir, I was born here. Since 1921 Canada has lost to the United States at least six hundred thousand native-born Canadians. That number alone represents a loss of home markets to our farmers of $52,500,000, and a loss to our manufacturers of $145,800,000, a total of $208,300,000; and in addition, to that, most of the six hundred thousand native-born Canadians that we have lost since 1921 have established homes in the United States, which makes the loss greater than the figure mentioned. Professor Irving Fisher says that the average value to the state of each productive citizen is $3,000. I do not know whether that is true or not, but fix it at whatever figure you will, the loss to this country by our native-born Canadians migrating to the United States is a very considerable sum.

The Minister of Immigration says that the government policy is to settle people on the land, and in the next breath he refers to the steady flow of rural people to the cities. Why is that flow taking place? Because of a foolish tariff policy which discriminates against our Canadian farmers. In his excellent speech the other day the hon. member for South Essex (Mr. Gott) gave some very interesting figures. He showed that in one week 128 carloads of tomatoes were brought into Canada, and during seven consecutive weeks 1,911 carloads of early vegetables. The hon. member for Victoria, B.C. (Mr. Tolmie) also gave the house some interesting figures. He stated that the province of British Columbia consumed 12,500,000 pounds of butter, of which 7,500,000 pounds were imported. He also stated that 75 per cent of British Columbia's meat consumption was imported. Across the line in the state of Washington nearly 70 per cent of the lands of that state are occupied and producing, as compared with only a fraction of that amount in the province of British Columbia. During the year ending November, 1926, we imported butter to the amount of $3,324,339 from Australia and New Zealand, and last year $3,503,833 or a total of $6,828,-172, representing 20,000,000 pounds of butter imported in two years into Canada from other countries—20,000,000 pounds of butter which the Canadian farmer should have made himself, and representing nearly $7,000,000 which should have gone into the pockets of our Canadian farmers.

I notice that the Minister of Immigration lumped the figures of immigrants coming in from the United States, the British Isles and Scandinavia. Why did he do that? Because had he separated the figures it would have shown the utter uselessness and inefficiency of his immigration policy; it would have shown that he was not getting from the British Isles the immigration which he says it was the object of the government to obtain. Let me give the figures for just one year. In 1927, 49,784 immigrants came to this country from the British Isles, and 73,182 from continental Europe. That situation is made worse by the fact that in 1926, 94,631 Canadians went to the United States, of whom 56,957 came back, leaving a net loss of 37,674 Canadians. Deduct that from the number of British who came to this country, 49,784, and it will be seen that our net gain of British subjects was in that year 12,110, as against 73,182 non-British.

Where is this going to stop, Mr. Speaker? I say it is high time that serious consideration should be given to this matter by the government and members of this house. We want more immigrants in Canada, it is true,

and we want immigrants of a selected type. I submit with all due regard to those who apparently may differ from me that it should be the object of this government or of any government in the Dominion of Canada to facilitate and encourage in every way possible the bringing in of immigrants from the motherland rather than from continental Europe. That is the only way we can build up this country along the lines on which we hope to see it grow.

Hon. CHARLES A. DUNNING (Minister of Railways and Canals): Mr. Speaker, I shall not take up many minutes of the short time that is allotted to me under the new rules to congratulate at any length the mover (Mr. Ilsley) and the seconder (Mr. Beaubien) of the address. Suffice it to say that I associate myself fully with all the congratulations which have been extended to them by previous speakers; they were indeed well earned. The duty was never more fittingly discharged than by the two hon. gentlemen who on this occasion were entrusted with that task. I do want, however, to take a moment to felicitate my old personal friend and political enemy the leader of the opposition (Mr. Bennett), upon his attaining the high and responsible position of leader of his party. I entered somewhat into his feelings as he addressed the house the other day on the speech from the throne; my memory went back to those delightful addresses which those of us who come from western Canada have been accustomed to hear during past years from my hon. friend. They were all delivered with that charming abandon and graceful freedom of utterance. He was at all times capable of releasing a veritable Niagara of eloquence—and usually informed eloquence—upon any subject which he undertook to discuss. As I say, I entered into his feelings the other day, because the restraint of responsibility was upon him for the first time, or at all events that was the first occasion upon which I have had the pleasure of listening to him since he assumed a position of responsibility. I know how it feels to be robbed of that freedom of utterance, as one is bound to be robbed of it when the sense of responsibility bears heavily. I can only hope and trust that in the discharge of the duties to which my hon. friend has been called he will not lose that charm and eloquence which have been so characteristic of him during the years which are past.

With regard to this question of prosperity, there appears to be some criticism from those opposed to the government that reference should have been made to it in the speech from the throne. There is a disposition on the part of the opposition to develop the idea that Providence is looking after this country in spite of the government.

Some hon. MEMBERS: Hear, hear.

Mr. DUNNING: Now I have it, have I not? Well, Mr. Speaker, I take rather the opposite view; I take the view that it is a good thing for the country to have the kind of government with which Providence will consent to co-operate. It is a matter which should give pleasure to all Canadians, whatever their political views may be, that it is possible to feel from coast to coast the throb of renewed economic energy in spite of the blue ruin stories from my hon. friends across the way. Every indicator which business men accept and which economists consider to be standard goes to prove that the people of this Dominion of Canada are to-day enjoying a measure of prosperity which is enjoyed by very few nations of the world.

With especial reference to those blue ruin cries, I was much interested to note that hon. members opposite, in their addresses, have very largely abandoned the line which was taken very generally a few sessions ago. During the first session I had the privilege of occupying a seat in this house, we were fed day after day with the story that if this government were not turned out of power immediately, in a very short time Canada would not be a fit place in which to live, and it would be impossible for our people to live and function in this country. Yes, that line has been abandoned to-day by my hon. friends opposite, and it is to their credit that this has been done. The only ones retaining it are certain maritime province Tories who are still singing the same old blue ruin song in spite of the improvement which is manifest to-day in the general condition even of the maritime provinces.

I want to devote just a few moments to the points which have been raised with respect to the Hudson Bay railway. I do not intend to discuss the matter at any great length, because I expect to have an opportunity at a later date, possibly in committee of supply, to answer any questions which members of the house may wish to ask with regard to this matter. In his admirable and restrained address the leader of the opposition rather doubted the authority of the government to proceed in the manner which we adopted during the year 1927 and which we have followed up to date. I can only refer him in that connection to Hansard of last session, and to the vote which was passed by this parliament in the same manner every

other vote in connection with the Hudson Bay railway project has been passed since it was commenced, no matter under what governmental leaders. May I direct my friend to page 2151 of Hansard for last year, where I was asked the question direct by the hon. member for South Wellington (Mr. Guthrie):

At what port, may I ask?

On that occasion my answer on behalf of the government was:

I have indicated, Mr. Chairman, that we expect to be guided by the investigation in that regard.

Later on the hon. member for Muskoka-Ontario (Mr. McGibbon) asked the following:

When do you expect Mr. Palmer's report?

In reply to which I said:

Not later than August?

Yet we are given to understand by the leader of the opposition that the government should have obtained Mr. Palmer's report in August and then stayed our hands with regard to the prosecution of the work until parliament had met and passed upon it. That was not my understanding of the will of parliament as expressed last session. The whole trend of the discussion on the vote, and indeed the size of the vote itself, is evidence to the contrary. My hon. friend also made reference to the fact that the first speech which he delivered in this house, in 1911, contained a plea for the immediate construction of the Hudson Bay railway. I was curious enough to look up that speech, and I find in it, as my hon. friend has stated, a plea for the immediate completion of the Hudson bay route. He evidently had faith in it at that time; he emphasizes his faith and then goes on to say:

It will provide an additional transportation route by means of which millions of bushels of grain that will be produced on the fertile prairies of the west will find access to the markets of the world, and even although that route be open only for a very short time in the year, it will afford that measure of relief which the absolute necessity of the case demands. It is of the highest possible importance, not only that the best route with the best grades be chosen, but that the terminals also shall be the best that can be provided. I am convinced that the determination of these questions by the government, after proper consideration, will commend itself to the people of every portion of this great Dominion.

In 1911 my hon. friend was quite content to have these great questions determined by the government, and I submit that last session this house, by its action upon the vote for that purpose placed before it, did give the government the necessary authority to act as the government has acted in connection with the matter. My hon. friend addressed the house on the Hudson Bay railway not only in 1911, but also in 1926. Hon. members who were present on that occasion will remember that the Tory party was divided on the question of the advisability of completing the Hudson Bay route. Several very strong addresses were delivered, notably by my hon. friend from St. Lawrence-St. George (Mr. Cahan) indicating the belief on the part of a large proportion of hon. members opposite that the whole project was utter folly, could not possibly have any national value, could not possibly fulfil the purposes for which it is being developed.

Mr. CAHAN: Did you find that in my speech?

Mr. DUNNING: Yes, most certainly.

Mr. CAHAN: I doubt it very much.

Mr. DUNNING: It would take up too much of my time to quote his speech now, but I would suggest to him that he read it over himself.

Mr. CAHAN: I asked for a later and wider investigation as to the strait and the bay.

An hon. MEMBER: Read his speech.

Mr. DUNNING: I do not want to take up my forty minutes reading my hon. friend's speech; I want to make my own.

Mr. CHAPLIN: Accept his statement now.

Mr. DUNNING: Of course, I accept any statement my hon. friend makes, but I do commend him to the reading of his own speech in the light of what has transpired since. My hon. friend from West Calgary had undergone a change of heart between 1911 and 1926, because in the latter year he said:

I could not vote to send the railway to Nelson. I say that because I have not adequate information that would convince me that the expenditure of the money necessary, some $29,000,000 or $30,000,000 would be in the public interest.

Mr. BENNETT: Hear, hear.

Mr. DUNNING: He was quite sure in 1911, but when seven-eighths of the railway had been built by 1926 he thought we ought to have an investigation about it.

Mr. BENNETT: What is wrong about it?

Mr. DUNNING: I want to read further:

My mind is open; I have no preconceived notions, no prejudices and no bias with respect to this question. On the evidence as I have read it—I have read all the evidence that has been available—there seems to be a marked conflict of opinion.

Then later on the suggestion is made that:

—the minister take steps immediately to demonstrate beyond any peradventure the feasibility of navigation in the straits. The minister has indicated, although not in so many definite terms, that he will at some future day ask parliament to support such a vote. . . No one in this house can say authoritatively that from the evidence we have before us it is an economic certainty that the Hudson Bay railway if constructed to the bay would successfully, efficiently or economically serve the purposes in mind.

In 1911 he told us of the millions of bushels of grain that would go by that route. Let me continue his speech:

That, it seems to me, can be ascertained only by a thorough examination on the part of those competent to make such an examination, not on the land but on the sea

I commend my hon. friend for his view in that regard, but I would point out this: That examination of the straits has been commenced. Is my hon. friend from West Calgary now satisfied? Have his doubts been removed by the work which has up to now been done?

Mr. CAHAN: We have no report of it yet.

Mr. DUNNING: Exactly, and yet the great Conservative party and its leader are now ready to support the completion of the Hudson Bay route. That is exactly my point, Mr. Speaker, that in 1926 everything was doubtful. In the minds of many hon. gentlemen opposite the whole thing was completely wrong. My hon. friend the leader of the opposition said: investigate. The government agreed that an investigation should be conducted. He wanted nothing more done until the investigation was completed. The investigation is not yet completed, but my hon. friend to-day is nevertheless—may I take it that my hon. friend the leader of the opposition is now convinced that the Hudson Bay route is practicable, that it is good sound business for the Dominion to develop it along the lines that the government is doing? He does not answer. I am afraid that the change of view of my hon. friend and his friends must be ascribed to other reasons than those which he stated would alone satisfy him in the session when the vote was made to which I have been referring.

There is just one other matter with reference to the Hudson Bay at this time that I should refer to. My hon. friend from Halifax (Mr. Quinn)—I am sorry he is not in the house—

Mr. QUINN: Yes.

Mr. DUNNING: Ah, yes. He stated this afternoon something to the effect that economic conditions in his province could be cured by the Minister of Railways buying Canadian goods for the Hudson Bay work. I trust I am not misquoting my hon. friend. Then he went on to say that the Minister of Railways had purchased West Virginia potatoes—

Mr. HANSON: No, Carolina potatoes and Virginia coal.

Mr. DUNNING: Carolina potatoes and Virginia coal. I managed to have myself declared out of order by describing the statement as false, Mr. Speaker, and of course I cannot now under the rules of the house say that it is false, but I can place upon the record a report from the purchasing agent of the department with reference to all the purchases made by the Department of Railways and Canals in that connection, and leave the house to judge whether my hon. friend's statement was true or false.

Mr. QUINN: I am quite certain it was.

Mr. DUNNING: False?

Mr. QUINN: I am quite certain that it was true.

Mr. DUNNING: Now will my hon. friend please listen:

As requested by you I beg to submit herewith details of coal and potatoes purchased in Nova Scotia in connection with the boats which sailed from Sydney and Halifax to the Hudson bay last fall on account of the Hudson Bay railway terminals. The steamship Canadian Raider, which sailed from Sydney, had a cargo made up as follows: 3,840 tons run of mine steam coal, supplied by the Dominion Coal Company, Limited, Sydney.

Does my hon. friend say that the Dominion Coal Company was supplying West Virginia coal from Sydney? Is that true or false?

Mr. BENNETT: That is out of order.

Mr. DUNNING (Reading):

Ten tons of blacksmith coal in bags supplied also by the Dominion Coal Company, Sydney.

And here is what my hon. friend hangs his hat on:

408 tons anthracite stove coal in bags, supplied by S. Cunard and Company, Limited, Halifax.
Supplied for the stoves in the camps at Hudson bay.

Similar coal to that which was sent by the government which supplied those stoves, and of which my hon. friend was a supporter when the Nelson terminals were first commenced under a Tory government. I do not call them traitors to Canada because they did that; it was a sound, wise thing to do. But why should we be blamed for supplying 408 tons

of anthracite coal to burn in the very anthracite stoves supplied by the Conservative government? There was also:

100 tons approximately of general cargo, including canned goods, meats, hardware, etc., purchased from Canadian firms in Halifax and Sydney. No potatoes were forwarded by the department on this ship.

Mr. BENNETT: What about the potatoes for the ship's own use? That is what he was talking about.

Mr. DUNNING: I will come to that in connection with the next ship. I shall be very glad to give my hon. friend the information. Here it is:

The tug St. Ann, which sailed from Halifax, had a cargo of: 238 gross tons of screened bunker coal, supplied by S. Cunard and Co., Ltd., of Halifax; 16 net tons screened Sydney coal in bags, supplied by S. Cunard and Co., Ltd., Halifax; 45 bushels of potatoes for the crews use supplied by Nickerson and Crease, Ltd., Halifax.

And the purchasing agent adds that, although he had instructions to see that they were Canadian potatoes, he could not positively swear that those forty-five bushels were Canadian potatoes. And would it be a terrible thing, I submit to the leader of the opposition, for forty-five bushels of potatoes to be purchased for the crew of a ship going to Hudson bay, which potatoes, from the information at hand, might or might not be Canadian?

I come next to the tug Ocean Eagle: 380 gross tons of screened bunker coal supplied by Cunard & Sons, 170 net tons, Sydney screened coal, 30 gross tons screened bunker coal supplied by the Nova Scotia Steel & Coal Company Limited, North Sydney—and they of course would not be supplying West Virginia coal—and also 45 bushels of potatoes for the crew's use. Again I cannot say positively, I cannot swear, that there might not have been a Yankee potato among them.

An hon. MEMBER: Why?

Mr. DUNNING: Why? Well, Mr. Speaker, we have not yet reached the point where we insist upon a brand being placed upon potatoes.

Mr. McGIBBON: Tell us the price.

Mr. DUNNING: I have not got it here but I shall be delighted to ascertain it for my hon. friend.

Mr. QUINN: I gave it this afternoon.

Mr. DUNNING: If the Conservative party has reached such a pass that it requires to make all this fuss about forty-five bushels of potatoes it is indeed in bad straits. Let me say in conclusion on that point that the policy of my department, under instructions from the minister, is to purchase Canadian supplies wherever they can economically be secured, and that policy will be continued so long as I have the honour to occupy my present position.

With regard to fuel and the need, as stated by a number of hon. members, for what is described as a national fuel policy, I shall say very little at this stage because I know that my colleague the Minister of Mines (Mr. Stewart) is working on the matter in the same conscientious manner as he has been doing ever since the information came to him from the railway commission regarding the question. I should like, however, in reference to the phrase "national fuel policy," to commend to the members of this house the advice offered by the leader of the opposition in a recent speech, wherein he warned the public of Canada not to be led astray by catchwords.

Mr. BENNETT: I am glad you read it.

Mr. DUNNING: Well, I have yet to hear a definition of what would constitute a national coal policy. What should be the details of such a policy and upon what principles should it rest? If it is to rest upon the same principles that underlie that other noble catchword so often used by my hon. friends opposite—the Conservative national policy, which means that all the people are to be taxed for the benefit of a few—then I for one do not want any extension of that kind of principle in our national life. Even those of us who do not believe in the principle of high protection, who do not wish to see our protective tariff go ever higher and higher, as hon. gentlemen opposite seem to wish, must contend with what has been built up through the years, and in justice to all those who are dependent upon a fiscal policy which has been in existence in this country for so many years, it is necessary for us to use caution and prudence in interfering with it. That constitutes an additional reason why we should be doubly careful not to embark upon other so-called national policies which have as their basis the taxation of the many for the benefit of the relatively few.

Mr. McGIBBON: That's cheap; it comes from Saskatchewan.

Mr. DUNNING: We have found it rather dear than cheap in practice. As regards the desirability of fostering so far as possible Canadian industry through the medium of transportation organizations, I need hardly say that I am in hearty accord with the principle and will do all I can to promote it.

I have given evidence in the past of my interest in the matter and will continue to do all I can to further efforts in this direction. However, let me lay down this principle in connection with transportation: It is my duty to watch the interests of transportation in this country, and if the state, for state reasons, desires to fix a rate for the carriage of goods which is below a fair and reasonable level from the standpoint of the transportation companies, and in the view of the railway commission, then the state should not ask these companies to bear the loss but should vote it in parliament on the same principle as is applied in the Maritime Freight Rates Act. I say this in the interests of the people's railway. If we are to expect esprit de corps, that devotion to duty, that pride in the institution on the part of its officers and men, without which success is impossible, then we must hold up before these officers and employees an incentive to have their institution make both ends meet. But we cannot do that if we force the railways to bear an expenditure, ordered by the state, below what is declared to be a fair and reasonable rate.

With regard to maritime freight rates, I laboured with others, notably the two ministers from the maritime provinces, to evolve last session a measure which would carry out the desires, the aspirations of the maritime people in this regard; and I am astonished to-day at the manner in which our work in this matter—work which has been commended by the people of the maritime provinces of all political shades of opinion—has been complained about and condemned by the maritime Tories in this house. I am very thankful that these hon. gentlemen, although temporarily representing the people of the maritime provinces in this house, do not really represent them in their attitude towards the government on the question of freight rates in those provinces. The people of the maritime provinces have given ample evidence to myself and other members of the government of their appreciation of what has been done in the way of reducing freight rates. My hon. friends talk about paper rates, and they insist that the government has been niggardly in the matter—no, not the government; because the attack has been directed against the Canadian National Railways. One hon. gentleman, the member for York-Sunbury (Mr. Hanson) I believe intimated that he would not take Sir Henry Thornton's word; he went elsewhere, "to the American traffic men," he said. He did not go to our own railways. More Virginia potatoes.

[Mr. Dunning.]

After all, what is the real test as to whether or not the people of the maritime provinces have received the benefits which this parliament contemplated they should derive from the act? The real test is whether or not they are having their traffic moved to-day, under the act, at twenty per cent less than it was moved a year ago; and I venture the statement that the figures given by the Postmaster General (Mr. Veniot) prove—it will be proved progressively as time goes on—that the freight bills of the people of the maritime provinces with respect to traffic movements under the act will be shown to be twenty per cent less than they would have been had the Maritime Freight Rates Act not been passed. That is an incontrovertible fact. So far as international rates are concerned, when the matter was dealt with in the house last year I gave the information to the best of my ability. I pointed out that the international joint rate was controlled neither by the railway commission of Canada nor by the interstate commerce commission of the United States, and that I was convinced from information supplied by American railways that were the rates reduced twenty per cent on the Canadian side, the United States in self protection would see to it that Canadian shippers did not get the advantage of that reduction. In an interjection when my hon. friend from York-Sunbury was speaking yesterday I mentioned that to him. He indicated that I got my information from the wrong source. I got it from Sir Henry Thornton, and he did not believe Sir Henry Thornton. Well, I do.

Mr. HANSON: I did not say anything of the sort. I said—

Some hon. MEMBERS: Sit down.

Mr. HANSON: The minister will allow me to correct him. What I did say was that I did not go to Sir Henry Thornton for information. I said nothing more and nothing less.

Mr. DUNNING: The implication certainly was that my hon. friend had little confidence in information supplied by Sir Henry Thornton. However, I will leave it at that. The matter can easily be settled if the veracity of the management of the Canadian National Railways is questioned. If my hon. friend does not choose to take his information from that source I suggest to him that he obtain a letter from the traffic and operating vice-presidents of the American railroads undertaking that if this twenty per cent reduction is put into force on the Canadian side with respect to the Canadian proportion of the

through rate, they will not take steps to enlarge the total international through rate. If my hon. friend will get that sort of offer from the American railroads then his information may indicate the American roads have changed their views since one year ago when the matter was negotiated with them, and I shall under those circumstances be glad to take into consideration an amendment to apply the reduction to international rates as well as to the rates now in force under the Maritime Rates Act.

I do not know how many minutes I have left, but I want to say a word or two about this "gateway" question. I doubt if the members of the house are really familiar in detail with what constitutes the open gateways my hon. friends opposite are making such a noise about. The open gateway, as referred to by maritime Tory members, would mean this, and I will apply a simple illustration in my own case, in western Canada: My farm is situated a few miles from a Canadian National railway station. Twenty miles down the line is an interchange point with the Canadian Pacific railway. What my hon. friends are contending for is that when I ship a carload of grain from the Canadian National station I should have the right to say to that company: You must turn this car over to the Canadian Pacific railway at the interchange point twenty miles away and let that railway haul the car to Fort William or Port Arthur. That is what the open gateway means. And what is the history of them in Nova Scotia and New Brunswick? They came about in a perfectly understandable manner. In the days when the Intercolonial railway did not extend beyond Levis, in the days when it was not a part of a national railway system, in the days when it was necessary for a shipper to get off the Intercolonial line and on to the Canadian Pacific somewhere, they were allowed, for convenience sake, to interchange at St. John and Ste. Rosalie. Now the Intercolonial is part of a great national railway system capable of taking freight from the shipper to any large centre anywhere in Canada Nowhere on the North American continent does the principle prevail that a shipper can direct a railway company to hand over a carload of freight to another railway company to haul to a destination which the first railway conveniently serves. Nowhere does that prevail. My hon. friends do not even argue that it means anything material in an economic sense to the people of the maritime provinces. Does it mean lower rates? No. Does it mean any saving? No; their claim was it meant competition. Well, I am a believer, so long as our present system prevails, in a measure of competition but there is wise, sane competition, and foolish and unsound competition. I submit that if the principle of the open gateway were applied all over Canada we would have this kind of competition between our two great railway systems. The Canadian Pacific railway would be sending canvassers to me, located on the Canadian National railway, to attempt to get me to tranship my goods to the Canadian Pacific lines at the earliest opportunity, and conversely the Canadian National railways, I think, would be compelled to do the same thing in connection with Canadian Pacific railway points. I submit that we would be introducing a species of competition into our railway business which would not be advantageous but for which the people of Canada would be compelled to pay very large sums because of the expense involved.

Mr. BENNETT: Ste. Rosalie is left an open gateway.

Mr. DUNNING: By order of the Supreme Court of Canada it is left an open gateway. I shall not go into the legal aspects of the matter; I am merely discussing the principle of it on this occasion as applied to railroading generally throughout Canada and the North American continent. I might, however, ask my hon. friends this question: Does the Conservative party of this country stand for the creation of open gateways of the description of the St. John and Ste Rosalie gateways from one end of Canada to the other? That is a very simple question. Tories from the maritime provinces speaking in the house here have made it very clear what they want. Although it does not mean anything to their people financially; although it means no advantage to them at all but does mean robbing the people's railway of freight which it originates, they nevertheless want this privilege kept up in these two cases. Now I am willing to concede to the people of the maritime provinces in principle, on account of their peculiar condition, on account of the conditions of confederation, all that has gone before in the way of legislation, but I am not willing to concede that they are entitled to something which will not benefit them, but which will simply benefit the competitor of the Canadian National railways in these cases. Nor can I be accused of being unfair to the management of either of the two great railways systems, I endeavour to hold the scales evenly. I would say the same thing if

the railway affected in this case were the Canadian Pacific instead of the Canadian National.

May I say in conclusion, because my time is nearly up, that the hon. member for York-Sunbury (Mr. Hanson) in his address resented the fact that the Canadian National railway appealed to the railway commission and to the court in this matter. At first he stated that the government of Canada was behind it. Then he corrected himself and said that at least the government could have stopped the appeal. I wish hon. gentlemen would consider what that means. The management of the Canadian National railway lines, under our law, is just as free to use the railway commission and the judicial institutions of this country in what they believe to be the interests of the national railway as the management of the Canadian Pacific is free to use the same institutions in the interests of their railway. I submit that it will be a bad day when any minister of railways puts his hand on the shoulder of the management of the Canadian National railway, in connection with a case before the railway commission or the court, and will say "do thus and so". Does my hon. friend from York-Sunbury want that condition to prevail? Does he want the government to interfere with the management of the railway in a matter which, under the law at present, is wholly within the competence of the management? Yesterday, if I can understand the English language, he said he thought the government should have interfered. Mr. Speaker, I submit that such interference would be entirely contrary to the principle upon which we have established our national railway system. It is perfectly clear what the division of responsibility is between the government and the Minister of Railways on the one hand, and the management of the system on the other, and certainly it does not include any right to the minister to interfere with matters which are wholly matters of management in the case of the ordinary railway company.

Mr. SPEAKER: Time. Is the house ready for the question?

Mr. J. G. ROSS (Moose Jaw): Mr. Speaker, first of all I wish to congratulate, as others have done, the mover (Mr. Ilsley) and the seconder (Mr. Beaubien) of the address, and I also wish to congratulate the new leader of the opposition (Mr. Bennett) on his election to that position.

I do not intend to take up the time of the house with any lengthy discussion on many points in the speech from the throne. In this evening's Ottawa Citizen I noticed an article on coal and I desire to take a few moments to discuss this matter. The article reads:

> $7 Ton Rate Expected for Albert Coal
> President E. W. Beatty of C.P.R. in Capital To-day in Connection with Such Arrangement.
>
> A freight rate in the vicinity of seven dollars a ton for the movement of Alberta coal to the central markets of Ontario is the basis of negotiations which are now in progress between the Interior department and the railway system. President Beatty, of the C.P.R., was here in connection with the matter to-day and it is said to be coming to a head.
>
> A few days ago an Alberta delegation urged upon the government a statutory rate of $6.50 per ton and this demand was supplemented by arguments in the House. Objections have been imposed, however, and obstacles encountered. The railways do not take kindly to the fixed rate, while members from Saskatchewan and Manitoba have made it clear that, if Ontario points are to receive such a rate they will insist upon a proportionately low rate to points in their territory. There is unlikely to be any statutory fixed rate.
>
> Instead, what is hoped for is a seasonal movement for a term of years, the railways agreeing voluntarily to a rate of seven dollars and the Dominion government protecting them from any loss. Any such scheme would require the sanction of the Railway commission but not legislation by parliament. For such an arrangement in the near future the outlook is considered hopeful.

I do not pretend to be an expert on coal and I am going to try as an ordinary layman of the Dominion of Canada, to give my views upon this subject. We have heard a great deal of talk in this house and there has been a great deal of propaganda by the press in Canada and through our mails in regard to movements of coal from the maritime provinces and also from Alberta to central Canada. First of all I desire to deal briefly with the situation in the maritime provinces. We are told in this house and we are asked through the press to use Canadian coal. The maritime provinces believe that the people of central Canada should buy their fuel instead of buying fuel from the United States. I asked the dominion fuel board to give me some figures in regard to coal imported into Nova Scotia and I find from their figures that, during 1926, the last year for which I have the statistics, 52,957 tons of anthracite coal were imported into Nova Scotia, which has plenty of its own coal. Nevertheless these gentlemen come here and tell us that central Canada should burn Nova Scotia coal, although they do not burn it themselves. Nova Scotia also imported 76,978 tons of bituminous coal. The other day, during the debate on the address, there was some

discussion in regard to prices of coal in Nova Scotia and I find that the laid-down cost of coal at Halifax is as follows:

Run of mine—

From—	Laid down cost per ton
Inverness	$6 35
Sydney	7 35
Springhill	6 85
Acadia	6 65
Lump coal—	
From—	
Inverness	$8 35
Sydney	7 85
Springhill	7 35
Acadia	7 15

As against this coal at these prices, anthracite coal is sold in Halifax at a laid-down cost of $12.35, or a retail cost of $15.50 a ton. Coke is sold in Halifax at $12.75 retail for United States coke, $12.75 for Besco coke, and $11.60 for coke of the Nova Scotia Tramways Company of Halifax. I understand that Nova Scotia coke from the tramways company has up to date been all made from United States coal. If Nova Scotia cannot compete with her coal in Nova Scotia against United States coal, how can we ever fix things up so as to have her compete with United States coal in Ontario and Quebec? You might raise the tariff, but I do not believe that would help anybody, in fact, it would hurt the central provinces a great deal. And even though some hon. members may say: Let them have a taste of their own medicine, I do not believe in that, because two wrongs never made a right, and a tariff in this connection is certainly wrong.

In regard to coal in what is known as the acute fuel area of Ontario and Quebec, I find that there were imported into that acute fuel area in 1926:

	Tons
Anthracite	2,500,000
Coke	900,000
Bituminous coals for domestic purposes	600,000

The people of certain parts of Alberta are asking for a rate to be put on coal to be moved to Ontario and, as this article pointed out, they expect to get it. In my opinion any such rate should not be fixed to apply only to central Canada. We are all Canadians, and if any rate is fixed—although I am against fixing any rate which does not include all the costs of the railways,—every part of Canada should receive the same fair treatment. I do not say that the railways should make any large profit out of this, but the cost to the railways should be covered. If not, you will have the people of Canada as a whole paying the costs for a few of the people of Canada. This is not right; it is a form of protection in which I do not think even my Alberta friends believe.

What are the costs of coal in Ontario to-day, and what coals has Alberta to compete with in Ontario? First of all there is United States anthracite coal, which is laid down in the city of Toronto for $12 a ton. I have here a report which was got out by the Department of Mines, and which was specially asked for by this house, showing the results of tests that were made comparing Alberta fuels with the bituminous and anthracite coals of the United States, and coke. The tests were very fair, because a certain number of tons of each kind of fuel were burned under the most favourable conditions. According to this report the bituminous coals from Pocahontas or New River and the Pennsylvania smokeless coal were equal to anthracite when burned under proper conditions. Certain coals from Alberta, from Canmore, semi-anthracite, I believe, when burned under proper conditions stood up with the American anthracite. It took 1.3 tons of Alberta coal from the foothills to equal one ton of anthracite, and 1.493 to 1.673 tons of coal from the prairie districts, such as Drumheller and Lethbridge, to equal one ton of anthracite. In other words, you would have to burn practically one and a half tons of these coals to get the results you would get from one ton of anthracite.

I will now give the prices of American coal laid down in the city of Toronto, and these are not the retail prices, but the prices without the dealer's profit and delivery cost. Bituminous coal laid down in Toronto costs from $7.25 to $8.75 per ton. These are Pocahontas coals and Pennsylvania smokeless coal in lump, which are comparable according to the coal dealer in this country with Alberta coal, although according to this report from which I have quoted, the tests that were made show that they were better than the Alberta coal. Bituminous coal laid down in Toronto costs from $7.25 to $8.75 per ton, and yet our friends from the province of Alberta think that Alberta coal can compete in Ontario if they are given the $6.50 rate they are asking for.

Mr. KENNEDY: Would the hon. member identify the tests that were made?

Mr. ROSS (Moose Jaw): I am quoting from the report of the Department of Mines, Canada, showing tests of various fuels, table No. 5, showing the relative values of various fuels tested compared with American anthra-

cite and based on pounds of fuel fired per therm (100,000 B.T.U.) delivered to the cooling-water of the system.

I was giving the prices. Alberta coals, at Lethbridge, lump at the mine, cost to-day $5.50 per ton; Lethbridge egg, $4.25; Drumheller lump, $3.85 to $4.25, at the mine; Coalspur double screened lump, $5.50; furnace, $5; egg, $4.75; Foothills lump, over five inches, $5.50; over one and a half inches, $5; egg, $4.75; Edmonton, six inch lump, double screened, $5; lump, one and a half inches and up, $4.50.

Suppose Alberta did get a rate of $6.50 per ton. With these mine prices their coal would cost over $10 per ton in Ontario. At the present time Alberta coal must be laid down in Ontario at not higher than $8.50 per ton if it is to compete with Pocahontas and Pennsylvania smokeless coal. In London, Ontario, at the present time there is a coal being laid down known as Virginia red jacket, which costs at the mine $2.25, plus freight $3.70, plus duty, 50 cents, or a total of $6.45 to the dealer in London. That is lower than the freight rate my hon. friends from Alberta are asking for. How can Alberta coal compete there?

If you take Alberta coal as against anthracite, assuming a price even of $4 per ton at the mine for Alberta coal, and a freight rate of $6.75, that coal landed in Toronto would cost $10.75. According to the tests it takes one and one-third tons of the Foothills coal to equal one ton of anthracite, which would bring the price of Alberta coal to over $14 in comparison with American coal, which is actually being laid down in Toronto to-day for $12 a ton.

If we have to subsidize things in this country there are plenty of things that we might better subsidize than coal to the advantage of the whole people of this country. Why not, develop the market west of the lakes before the Ontario market? The country west of the lakes in 1926 imported 78,800 tons of anthracite and 1,314,000 of bituminous coal. Let us try and get that market first. If you cannot capture the Winnipeg market, where your coal rate is less than you are asking for from Alberta to Toronto, how can you expect Alberta coal to compete in Toronto?

The other day in this house one hon. gentleman took exception to the finding of the board of railway commissioners. I do not hold any brief for the board, but so long as you have a court int his country to decide these questions, you should abide by the decisions of that court until you set up another in its place.

[Mr. J. G. Ross.]

The hon. member for Bow River (Mr. Garland) takes exception to the finding of the board with regard to the $7.22 rate. He says that that figure is incorrect. He is somewhat in the position of a plaintiff, who, because the judge and jury find against him, says the court ought to be dismissed. I shall not go into the full report of the board of ralway commissioners, but will deal with the high lights brought out by the hon. member for Bow River, and then try and give the facts as I have ascertained them.

The first statement to which I take exception will be found on page 112 of Hansard, in these words:

> —I am prepared to accept Sir Henry Thornton's statement that he can haul coal at $9 a ton, pay the share of the over-head and make a substantial profit.

I submit that Sir Henry Thornton never made any such statement, and I believe that was to the knowledge of the hon. member, in all probability, because I understand he was on the committee which investigated this matter, and he questioned Sir Henry Thornton regarding these very points. I do remember a statement appearing in the press some time ago purporting to come from Sir Henry Thornton, who said that if the mine owners in Alberta were willing to shave their price, if the dealers in eastern Canada were willing to shave their price, then he would shave the price of the railway cost and take $9. I think that was the statement made by Sir Henry Thornton.

The second statement made by my hon. friend was to this effect:

> So far does it go that it actually takes cognizance of the wear and tear to the steel rails. . . It takes into consideration every other possible charge. . . which can possibly be attributed to coal. . .

Nevertheless, while before the railway commission the railway companies were allowed to charge the wages of the crew on the train carrying that coal and the cost of the coal in the tender, they were not allowed to charge the cost at which the coal was picked up at the place from where it was taken. Alberta coal had no charge against it for freight until it was beyond Winnipeg; it had to be hauled all the way from the Alberta mines to Winnipeg before any charge for carrying that coal could be made by the railway. Then there was another item of cost which could not be taken into consideration. If Alberta coal supplanted a million tons of American coal in Ontario, we must remember that to-day the Canadian National Railways haul that million tons of coal from the boundary at a profit of say 25 cents a ton. Then who is

going to pay the quarter million dollars which would be lost in that case? It would have to be paid by the people of Canada, of course, if you take away that profitable business from the railway companies.

The next point with which I wish to deal in the speech of my hon. friend is his suggestion that if 10,000 cars of coal were hauled to eastern Canada the traffic back to the west would become so very much greater. Of course there would be some additional freight, but the position in regard to the railways to-day is that they are hauling back empty cars even now, and if you bring down 10,000 cars more it is not going to help them at all. In 1925 the Canadian National Railways hauled back 8,000 empty cars to western Canada, and in 1926 they hauled back 10,000 empty cars. My hon. friend also said that the railway commission found that it cost as much to haul back the empty trains as to haul down the full ones. I take exception to that statement; it does cost as much per gross ton, and I believe that is what the railway commission said. In other words, included in a train hauled down here are so many thousand tons of train and so many thousand tons of coal, and the railway commission said that it would cost as much per ton to take the empty car back as it would cost per ton to bring down the full car, and I think that is absolutely right.

The next point is with regard to the repairs to railway cars. My hon. friend stated that a fair rate for repairs to all the cars over the whole system was $121.90 per year; That certain experts worked out a figure of $209.52, but that the railway commission did not take either figure but placed the cost at $424.85 per car. As a matter of fact, the railway commission did accept the theory of Mr. Oliver, who was employed by the people interested in bringing Alberta coal to eastern Canada, plus 11 per cent per car mile. You cannot set up a price for repair work on cars per year. If one car stays on a siding all year and another is in service all the time naturally the one continually in service will have a much higher repair cost, so you must take the per car mile cost, which I believe was done by the railway commission.

The next point was in connection with the loading of the cars, and it would seem that my hon. friend made a big point there, because it looked as though the railway commission had taken an unfair load for the cars. My hon. friend said that the average of the national system was 36 tons to the car, while the average of the Canadian Pacific railway was 38 tons to the car. I have the exact figures here, taken from page 29 of the annual report of the Canadian National Railways for 1926, item 162. The average loading for 1925 was 24.59 tons and for 1926 24.39 tons, or about 12 tons less than the amount given by my hon. friend. American loadings are given as 27.4 tons for 1926 and .27 tons for 1927. On page 36 of the Canadian Pacific Railway Company's annual report for 1926 the car loadings, stated by my hon. friend to be 38 tons, were given as 26.63 tons for 1925 and 26.76 tons for 1926.

Mr. GARDINER: Does that apply to coal?

Mr. ROSS (Moose Jaw): That applies to all cars, which was the way my hon. friend gave it.

Mr. GARDINER: Does that apply to coal?

Mr. ROSS (Moose Jaw): No, but I will give you the figures. The railway commission took as their basis the figure of 33.4 tons, and they got that figure from the actual loadings of Alberta coal in connection with the experiment of 2,000 cars which were shipped east. Is it unreasonable to take that as the actual figure? Why should my hon. friend say it is unfair?

Mr. SPENCER: Was it not said that that coal was put in small cars on purpose?

Mr. ROSS (Moose Jaw): No, it was not. As a matter of fact, if you will look up the evidence given before the railway commission, you will find that Mr. Stutchbury, who was very much interested in the moving of Alberta coal, went to the superintendent at Edmonton and asked him to put the coal in the smallest cars possible, because he could not sell coal in the big cars if they were fully loaded.

Mr. SPENCER: He wanted it well distributed at that particular time.

Mr. ROSS (Moose Jaw): Yes, and they always want that in the coal business. The small car is what is wanted all through western Canada, and in the smaller towns throughout eastern Canada. The actual loadings out of Drumheller this last year were 34 tons to the car. When a man in a small town is buying a car of coal he telephones and makes it known to the people in the surrounding country that he has a car load on hand. Now, he has a better chance of getting that small car unloaded than if he ordered a big car, with the advantage that he does not have to unload the coal into his bin, thus saving cost. That is why the small car is in demand all over Canada.

Now, Mr. Speaker, I am absolutely in favour of moving Alberta coal to Ontario or to any other part of Canada provided it can be done on its own feet—provided it can be done without making the rest of the Dominion pay a

toll. I do not believe in that, and never will. My hon. friend from Bow River made a very fine political speech for his own riding where the coal miners are. He is one of the party or group who have stood upon the platforms of western Canada for the last four or five years and told the people that the old line politicians, Liberal and Conservative, were trying to hoodwink the electorate into believing certain things. What did he do with his own electors the other day? He tried to dangle in front of them the hope that if a $6.50 rate could be put in, Alberta coal could be hauled to central Canada and they would make a good living out of the business, when he knows perfectly well that that cannot be done. And were they to get this $6.50 rate the Alberta coal producers would be using protection against other parts of the Dominion, and they do not believe in protection. We in western Canada do not believe in protection at all. Why should my hon. friend from Bow River get up in this house and plead for protection for the coal industry because it happens to be in his constituency, any more than my Conservative friends across the way should plead similarly because they happen to have some other kind of industry in their constituencies? They are not thinking of all the people of Canada, they are thinking only of their own small localities.

I simply wanted, Mr. Speaker, to put these facts before hon. members and before the people, because thousands of dollars' worth of literature is going all over the Dominion today in an attempt to foment and ferment another sore spot in the country, which this house will some day have to fix up, and I think that propaganda should be stopped, and stopped right now. We had a maritime question to fix up last year. They may have been right, they may have been wrong; I do not question whether they were or not; but whether they were right or wrong we could not allow a sore spot to continue in the Dominion; we had to fix it up. Now hon. gentlemen are going around the country spreading their propaganda and telling the people of Ontario that they can sell Alberta coal in Ontario in competition with other coal, leading the coal producers of that province to believe that prosperity will be theirs when the rate mentioned is in force. Although they know full well that no rate can be put in operation that will carry Alberta coal to compete, in Ontario, yet they are dangling that prize in front of the people's eyes, thus making another sore spot in Canada for us to fix up some other day.

[Mr. J. G. Ross.]

Mr. O. B. PRICE (Westmorland): Mr. Speaker, it was not my intention to enter into this discussion, but certain statements having been made from the other side of the house, I feel it my duty as a maritime man to refute them. This afternoon the hon. member for Saskatoon (Mr. Young) expressed himself as somewhat dissatisfied with the claims that were being made for the people of the maritime provinces, and he led one to believe that they were not entitled to what consideration they have been given during the past year by the present administration. I regret very much that the hon. gentleman comes originally from the province of Nova Scotia, because I do believe that had he visited his native province in recent years he could not possibly criticize the maritimes as severely or feel quite as bitter as he does regarding maritime rights.

I wish, Sir, to direct the attention of the house to the conditions under which the people of the maritime provinces obtained certain concessions, if you may so term them, last year. The government in appointing Sir Andrew Rae Duncan chairman of the commission could not have chosen a better man, and no doubt those who were associated with him were sincere men. They went through the country from place to place and got what data they could regarding conditions existing in the maritimes, and they tried to evolve some system whereby the people might be given that which was due them. When it is remembered that the maritime provinces came into confederation in opposition to their own judgment, and the part they have played since that time, I think every consideration should be shown to them. It is not necessary for me to relate what the maritimes have contributed to confederation, but it may be said that they joined with Quebec and Ontario in the purchase of the western lands and contributed their part to the funds which went to the development of the western provinces. I believe the Duncan report is very fair in its recommendations, and undoubtedly it has met with the approval not only of this house but of the country at large.

It has been claimed that we are not entitled to the special rates recommended by the Duncan report. I wish briefly to point out the reason why we are so entitled. From our geographical position we are now only following out the system which has been adopted by the United States. There had been no serious attempt made to recognize the geogrgaphical position of the maritime provinces with regard to transportation. The

railways participate in and encourage the lower westbound rates from the Atlantic seaboard of the United States, but do not carry this same principle into Canadian territory. In other words, while there is a differential westbound rate from all north Atlantic ports in the United States to points in the central states and the central provinces of Canada, the rates applied to the maritime provinces are equal both ways. This is not a tariff wall of protection for the shippers situated on the eastern extremity of the United States, but a rate that permits them to overlap their competitor and do business in at least a fair proportion of the country. Otherwise they would be confined to the territory east of their central competitor, while the competitor in the central territory could ship both ways. For example, the rates from Boston and Portland are lower westbound than eastbound for the same mileage, over the same route, for the same class of merchandise and for the same class of service, as follows:

	Cents lower
Boston to Chicago via the all U.S.A. route	7
Boston to St. Louis, via the all U.S.A. route	7
Boston to Chicago via the Canada and U.S.A. route	12
Boston to St. Louis via the Canada and U.S.A. route	12
Boston to Montreal	7
Boston to Toronto	15
Boston to Ottawa	11
Boston to London	15
Boston to Hamilton	15

I point these things out in order that hon. members may have an idea of what the present rates are where differentials are allowed. I would refer now to our land policy, which was copied from the United States after the revolutionary war. At that time thirteen states of the union found themselves in possession of vast territories extending from the Atlantic to the Mississippi and north to the great lakes. Each state contended that extension was due it. Finally it was decided that the matter should be left in the hands of the federal congress with the request from the various states that a proper division be made of the proceeds, affording equitable treatment to all. In the case of the maritime provinces we did not participate in the lands which we assisted Quebec and Ontario in purchasing to constitute this Dominion of ours. We have not to date shared in any division that has been made. While we are perfectly free to say that we are in favour of a return of their natural resources to the western provinces, it must be borne in mind at the same time that the maritime provinces have also their rights in that territory.

I was amazed the other day at the remarks made by the Postmaster General (Mr. Veniot) in which he heartily eulogized the leader of the opposition (Mr. Bennett). I am glad to observe that he has had a change of heart since he addressed a Liberal gathering in Montreal recently, when he expressed the opinion that the Conservative party had chosen from our ranks the man whom it was easiest to defeat. No doubt the hon. gentleman will claim, as he has done on many occasions, that he has been misquoted. In St. John he stated his regrets that St. John-Albert was not represented in the federal house. This was very complimentary indeed to the members who have the honour to come from that constituency.

The Postmaster General has been a very busy man. I referred last year to the large number of postmasters and postmistresses who had been dismissed. Now, I do not believe that the government to-day is in favour of these wholesale dismissals. I do not believe they meet with its approval. I would refer here to one dismissal in particular which has taken place recently. In this case the same mail that conveyed seasons greetings from the Postmaster General and Deputy Postmaster General as well, to the Postmaster at Fox Creek, in my constituency, also carried notice of dismissal to the man who held the office at the time. The people in that community are very largely supporters of the present administration. Apart from three or four families, members of the patronage committee, every family in the constituency has petitioned the government in this matter. The population of the constituency is dwindling owing to the policy of this government. Apart, I say, from three or four families, members of the patronage committee in that district, the people to a man and woman have signed a petition praying that the previous postmaster be reinstated in his office.

To give you an idea of the way in which this patronage committee operates in my constituency, I wish to read a letter from the late Liberal candidate in the district to Mr. Theophile Brisson, a former supporter of the government:

Dorchester, January 12th, 1928.

Mr. THEOPHILE BRISSON,
Fox Creek.

Dear Sir,

I wish to acknowledge your letter with enclosed petition opposed to the change in the Fox Creek post office.

This action was taken at the request of the Moncton parish No. 11 Liberal committee. I am sorry their action does not meet with your approval, and I note a copy of the petition has been sent to the Postmaster General.

Yours very sincerely,

H. R. EMMERSON.

The reply received from the minister was as follows:

Ottawa, January 10, 1928.

Mr. THEOPHILE BRISSON,
Fox Creek, N.B.

Dear Sir,

I acknowledge receipt of yours of the 3rd instant with request. In reply, I will say that the order has already been given for the change and it is not my intention to withdraw it.

Yours truly,

P. J. VENIOT.

In other words, ninety-nine per cent of the people of that constituency are not to have their wishes carried out. In addition to this, a large petition was forwarded to the Postmaster General as well as to the candidate in the constituency.

Reference has been made by the Postmaster General to the attitude of various boards of trade and of the people generally throughout the maritime provinces, to the effect that the people are not appreciative of what has been done for them; and the suggestion is made that action is being taken at the present time under the cloak of the boards of trade and various organizations, of a political nature. May I say that I had the pleasure of attending a banquet given to the Minister of National Defence (Mr. Ralston) and the Postmaster General some time about June 15 last, and perhaps on no previous occasion, for some time past, had political differences been so largely eliminated as they were then. The press had suggested it and the advice had been complied with 100 per cent. The gathering was representative of both political parties and a general get together spirit prevailed throughout. Members of various boards of trade were present. The premier of New Brunswick had made many complimentary references to both the Minister of National Defence and the Postmaster General and had stated that:

The only way to get cohesion is to back up these two men and to present a united front.

It is more regrettable that the Postmaster General should think it necessary now to open a tirade against the Premier of New Brunswick and also to make most unbecoming references to the hon. member for York-Sunbury (Mr. Hanson). As regards the hon. member for York-Sunbury, let me say that he pays 100 cents on the dollar, owns his property in his own name, has no judgments standing against him, and has the esteem of the citizens of Fredericton as well as of the people throughout his constituency. I would add that the references to him indulged in by the minister were not in keeping with the high office which the Postmaster General fills at present.

The Prime Minister (Mr. Mackenzie King) a few days ago referred to the unemployment situation and claimed that unemployment in Canada was diminishing. The Prime Minister no doubt knows very well that Dominion employment bureaus are not to-day doing the same business which they formerly did. Political patronage has come to the front to such an extent that those desiring employment as clerks, stenographers or skilled labourers in the government service are obliged to appeal to Liberal patronage committees. In relation to any work involving emolument all questions are referred to the patronage committee. As an instance of this, I would point out that the bridge and building department of the Canadian National Railways has seen fit to drop permanent employees previously employed in order to take on employees who have given evidence of having supported the Liberal government. Recommendations have been accepted from the patronage committees over the heads of the Department of Railways. As a matter of fact anyone who is familiar with the working of the bridge and building department of the Canadian National Railways knows that it is recognized as a temporary department, and that while employees therein may be in the permanent service and may be contributing to the provident fund, there are only certain months of the year during which they are permitted to work. There are months when they have no employment of any description. For that reason, together with the fact that they must remain in the service a good many years before they can participate in the benefits of the provident fund—they must have attained the age of sixty and have been fifteen years in continuous service—I submit that they should be given special consideration from the standpoint of protecting their position. They are not given that protection. As a matter of fact men who have been in the service for many years have been removed and their positions given to young men who are not qualified.

As another evidence of the kind of patronage system which prevails I may say that the Dominion employment bureau, situated in the city of Moncton, had placed a man as a stationary engineer. While on his way to

take up the position he was told by a member of the Liberal patronage committee that it was useless for him to go where he had been commissioned, because he was on the wrong side of politics, and another man was given the place and permitted to run a stationary engine although he was not qualified for that position under the laws of the province.

During the speech of the Prime Minister in this debate he was asked by the hon. member for Muskoka (Mr. McGibbon) this question:

Is the Prime Minister aware that in the last five years more Canadians crossed to the United States than the number of immigrants who, from all sources, came to this country?

The Prime Minister replied that he was not aware of this but if the hon. member for Muskoka was anxious to encourage immigration he would not advertise such a condition. The Prime Minister's reply is the measure of his manly attitude in dealing with public questions: Do not let the truth be known lest it prevent immigration from coming to Canada. Why spend millions of money in bringing immigrants into Canada when the result is to force Canadians to leave the country in order to get employment? The hon. leader of the opposition has pointed out that the first thing to do is to provide employment for our own people. In taking that stand he is on safe ground. That attitude is borne out by the statements made by the president of the Bank of Montreal in an address at the annual luncheon of the Canadian Pulp and Paper Association at Montreal, when he said that it was physically impossible to stem the tide of emigration to the United States without having tariff protection equal to that of the latter country. If Canada were a dominion of the British Empire as remote from countries as Australia, then she might be able to continue the present moderate policy of protection. But existing as she does in close proximity to a highly industrialized neighbour, Canada will never keep her own sons and the people brought in by immigration without adequate protection for industrial enterprise. Any policy which does not provide for the industrial employment of immigrants, as well as for the settling of newcomers on the land, will result in failure. Of the immigrants that this country can secure, thirty, forty or fifty per cent will have to be given industrial employment. Canada must have more population, but more population will not come while there is so much unemployment in industrial centres, and a restricted home market for the products of the farm.

The other day we had evidence, and I regret it very much, of the deplorable condition of the Consumers Cordage Company of Dartmouth. That concern is asking for a little support from the present administration. It is applying for a little more protection, and I would ask the Minister of Finance (Mr. Robb) to consider seriously the needs of this small concern, which is employing something like 150 people. That protection is needed in order to enable the concern to compete against cord and rope which are coming in from the United States. Unless something is done to alleviate its condition this firm will be absolutely obliged to close down, there is no doubt about it.

Reference has been made to the Australian treaty, and I may say that this treaty is having a prejudicial effect upon the production of butter in my constituency. The people there have a very short season. They experience difficulty in getting about the country during the winter time owing to the very heavy roads. They are handicapped by a very early fall and a very late spring. If the Minister of Finance wishes to encourage these people he should come to their assistance. This applies to those engaged in the dairy industry not only in the maritime provinces but throughout Canada. I have in mind one creamery in my own constituency which used to market its products in the city of Halifax. At the present time, however, they have three months' supply of butter on their hands and are unable to unload it owing to the local market being flooded with New Zealand butter. Under present conditions they cannot compete with the imported product, and throughout the country farmers are declaring that unless they can get a little protection they will not continue in the dairying business. I think the situation is one which calls for the earnest attention of the Minister of Agriculture (Mr. Motherwell).

One of the hon. members for Queens (Mr. Sinclair) the other day spoke of the conditions in Prince Edward Island and seemed to be thoroughly satisfied with them. May I point out that in 1871 the population of Prince Edward Island was 94,021, but that in 1921 it had decreased to 88,650. I cannot see what cause for satisfaction my hon. friend has in the existing conditions in Prince Edward Island. With a decrease in population it is surely time to do something in the way of increasing local industries, or to bring about greater development there. During the administration of Sir Robert Borden improved means of communication between Prince Edward Island and the mainland were established in the shape of a car ferry service be-

tween Point Borden and Cape Tormentine. It was also intended to provide other facilities if the development of business warranted it. As a matter of fact the present government would be amply justified in doing something further for Prince Edward Island along these lines.

The people of the maritime provinces are very sympathetic towards the desire of the people of Alberta to find a market for their coal in the province of Ontario, and greatly admire the pluck and enterprise which they are displaying in connection with that movement.

In connection with the movement of immigrants to Canada we believe the maritime provinces are discriminated against in the matter of rates. For instance suppose that an immigrant arrives at Quebec instead of Halifax: it will cost such a person more to travel to the maritime provinces than would a ticket to the western prairies. That is a condition which should not exist. This matter rests with the passenger service association, but it is worth while drawing the attention of the Minister of Railways (Mr. Dunning) to it.

Before concluding my remarks I wish to direct attention to some expenditures which are being made by the government at the present time. I believe the King government to be one of the greatest spendthrift administrations we have ever had, and if the people were conversant with the facts they would express their opinion in no uncertain way. For example, millions of dollars are being spent in this beautiful city. I congratulate Ottawa upon what the government is doing for it, but I think that when the people throughout Canada realize the enormous sums which have been expended and are still being spent here, they will have something to say to the present administration at the next election. During the last fiscal year nearly twenty millions of dollars were spent in the city of Ottawa and district, including the following items:

Civil service salaries..	$14,974,385 58
Public buildings, repairs, improvement, furniture, etc.. ..	623,058 17
Heating, including salaries of engineers, firemen, etc..	389,915 91
Lighting..	99,001 68
Water..	39,829 39
Elevator attendants..	99,001 68
Telephone service..	95,000 00
General caretaking..	364,298 58

What I desire to point out particularly is the expenditure of the federal district commission amounting to $3,338,881.47, of which nearly $2,500,000, or, to be exact, $2,483,443.11, was for the construction and maintenance of the numerous parks, driveways, gardens, greenhouses, playgrounds and other things considered necessary in the general scheme for the beautification of the national capital. The itemized figures are as follows:

Maintenance of greenhouses	$ 91,278 67
Macdonald garden cost..	262,176 70
Maintenance and construction work on King Edward avenue and park	206,807 12
The national park..	212,253 94

Of which $132,354.83 was for construction and $79,899.11 for maintenance.

Rideau canal driveway cost, $701,886.03.

Of which $299,078.35 was for construction and $402,817.68 for maintenance.

In the face of these expenditures, how much will appear in the estimates for highway construction in the different provinces of Canada? I say to the Minister of Public Works (Mr. Elliott) and to the Minister of Finance that when this condition of affairs is known to the general public, I believe the government will be properly censured for the action which it has taken in bringing about such enormous expenditures.

In conclusion, I wish to make reference to the Provident Fund Act of the Intercolonial and Prince Edward Island Railway employees. Some years ago a minister of railways of that day gave it as his opinion that an amalgamation should be made of the Grand Trunk fund and the Intercolonial railway and Prince Edward Island railway fund and a better basis worked out whereby all employees could be treated alike. I believe the action of the government a few years ago in raising the minimum pension of Canadian National railway employees from $20 to $30 a month was very commendable, and in my opinion we should in the near future have that minimum raised to $50 a month. These employees are contributing and doing the best they can to keep up their end of the scheme. In times past they have contributed more than the government, particularly when the government was contributing $100,000 per annum.

Mr. A. W. NEILL (Comox-Alberni): Mr. Speaker, I did not intend to take part in the debate, but I was so intrigued by the remarks of the hon. member for Moose Jaw (Mr. Ross) that I would like to give him a little backing up from the point of view of another province. We hear a great deal these days of national policy; I think the word "national" has been rather overworked and in no case has it been more so than in connection with the fuel policy. We hear at every turn of a national fuel policy and a national coal policy. What

do they amount to when they are examined? The other day I heard an hon. member from Nova Scotia state that he had a national coal policy to announce for the benefit of Canada. I prepared myself to listen to him with great interest, because we have a very serious coal problem in British Columbia; but the hon. gentleman had not got into his stride before it developed that his idea of a national coal policy was purely a selfish provincial policy, asking for an increased tariff for the benefit of Nova Scotia alone. Notwithstanding the fact that he was aware—and he must have been aware, because I told him so last year and, I think, the session before—that if his object was attained of an increased duty of one dollar a ton on bituminous coal imported into Canada, that would mean the ruin of our coal mines in British Columbia because our market is largely in the United States and as we have a reciprocal duty with the United States it would mean that their duty would also be increased a dollar a ton—notwithstanding this he elaborated his view, under the guise of a national coal policy, that we should have a largely increased duty on coal. That, however, was not so remarkable except that his attitude was purely provincial, selfish and narrow; but it was not so illogical in one way because he belongs to a party which believes in the principle of tariffs and still higher tariffs as a remedy for all ills.

But what shall be said when we come to the suggested coal policy of the other end of Canada, that put forward by the press in a very expansive way and by some of the members from Alberta? Their idea of a national coal policy appears to be that this house shall impose upon the two railway companies of Canada a statutory rate vastly below what the coal can be economically carried at. Sir Henry Thornton has the credit of being a capable administrator, and that has been well demonstrated. If he could carry this coal at a rate that would be ever so slightly profitable to him there is no question that, owing to the volume of it, he would be very anxious to carry it. The fact that he has turned it down and cannot meet the wishes of hon. members from Alberta is proof that the statutory rate asked, no matter how it may be camouflaged, is an attempt to put into effect a rate that Sir Henry Thornton and the Canadian Pacific cannot economically maintain. That is the full and absolute and only meaning that can be taken out of this demand for a statutory rate. If I were to talk in the langugae of the man on the street and not in the language of this parliament I would say, perhaps, that that smacks strongly of what is popularly known as "graft", if we accept the meaning of graft—taking from many people either money or privileges for the benefit of a few people, because that is what is proposed in this case. This comes with particularly bad grace from hon. members who, a few years ago, could not find it in their hearts to protect the children and the dairy farmers of Canada by voting against the encouragement and manufacture of oleomargarine. Of course I refuse to no one the right to change his mind on principles if he sees fit to do so. I only mention this in passing and drop a flower on the grave of political consistency.

As I have said, I have no objection to the principle of protection. As hon. members have perhaps heard me say before, I have no political morals on the question of tariffs, and I would cheerfully advocate protection to-day if I thought it was for the benefit of my province or district, or free trade to-morrow. I do not believe it is a matter of religious belief that should be adhered to, and this saves me from getting into many an awkward position. If this desire for assistance in regard to coal mined in Alberta were put into the form of a bonus—because that is the least vicious form of protection there is, and is far preferable to a tariff—I would have no great objection; but I have a strong objection to its being camouflaged as a rate at the expense of our national railways, because this means the undermining of the whole system, expensively built up, of our government owned railway. Where is this thing going to stop? Because you cannot give to one man and deny another. If Nova Scotia gets its rate rake-off and Alberta gets its hand-out, who is to be the next, and where is this principle going to stop?

There is another phase of the matter that attracts my attention as a representative from British Columbia, and more particularly from the coal mining sections of that province. If the coal mines of Alberta have to be pap-fed to-day by a rate east, how long will it be before they will want to be wet-nursed on a rate west into Vancouver? The one would logically, undeniably, follow the other, and where then would our coal mines on Vancouver island come in? They are struggling very hard at present against the competition of fuel oil, and it would obviously be unjust to saddle them with the burden of an unfairly reduced rate from Alberta, of which they would have to pay a portion, in order to ruin their own industry. We have a coal problem in British Columbia, and we have not come whining to this house about it and asking to be pap-fed. Our coal mines are deep, they

are expensive to work, and we are losing our market to American fuel oil. I investigated this question on one occasion with a view to seeing whether we could not find an outlet by shipping our coal, which is on the seaboard, by means of the government merchant marine ships to Montreal or Toronto via the Panama canal, and I have reason to believe that the same reduction that is asked to be given on Alberta coal, which means a present of two dollars a ton, if given on British Columbia coal going to Montreal or Toronto via the Panama canal, might enable our coal carried by the government merchant marine ships to compete in the coal markets of Montreal and Toronto. But we have not asked that, because we did not think it sound policy that we should come here and ask for our profits to be boosted or our business to be supported by the other parts of Canada, especially when it would mean involving the Canadian government railways and the allied merchant marine in a rate that would be economically unsound and bound to lead to heavy deficits. Once you start that principle, where are you going to stop?

I shall not detain the house further, Mr. Speaker, because I understand it is the wish to get through by eleven.

I did not have the advantage of hearing the remarks of the Minister of Railways (Mr. Dunning), and I do not know what coal policy he referred to or what his views will be, but I earnestly hope, if the government thinks it necessary to give a subsidy in connection with Alberta coal, that the money will be voted in the estimates as a straight bonus to that industry, and only on coal going east, and not mixed up or camouflaged with a rate on the railway which will be disastrous to our Canadian National Railways.

Motion (Mr. Ilsley) agreed to.

On motion of Mr. Mackenzie King, seconded by Mr. Robb, it was ordered that the address be engrossed and transmitted to His Excellency the Governor General by such members of the house as are of the honourable the Privy Council.

SUPPLY

Hon. J. A. ROBB (Minister of Finance) moved:

That this house will at its next sitting resolve itself into a committee to consider of a supply to be granted to His Majesty.

Motion agreed to.

[Mr. Neill.]

WAYS AND MEANS

Hon. J. A. ROBB (Minister of Finance) moved:

That this house will at its next sitting resolve itself into a committee to consider of the ways and means for raising the supply to be granted to His Majesty.

Motion agreed to.

MAIN ESTIMATES FOR 1928-9

A message from His Excellency the Governor General transmitting estimates for the financial year ending March 31, 1929, was presented by Hon. J. A. Robb (Minister of Finance), read by Mr. Speaker to the house, and referred to the committee of supply.

On motion of Mr. Mackenzie King, the house proceeded to government notices of motions.

PUBLIC PRINTING AND STATIONERY ACT AMENDMENT

Hon. FERNAND RINFRET (Secretary of State) moved that the house go into committee at the next sitting to consider the following proposed resolution:

That it is expedient to amend the Public Printing and Stationery Act in relation to advances authorized to be made to the king's printer for the purchase of materials, to execute orders and requisitions and payment of wages, and to provide that the total amount of such advances shall at no time exceed the sum of seven hundred thousand dollars or such sum as may hereafter be determined, from time to time, by the governor in council.

He said: His Excellency the Governor General, having been made acquainted with the subject matter of this resolution, recommends it to the favourable consideration of the house.

Motion agreed to.

CANTEEN FUNDS

Hon. J. L. RALSTON (Minister of National Defence) moved that the house go into committee at the next sitting to consider the following proposed resolution:

That it is expedient to provide for the disposition and allotment of the canteen funds which were accumulated during the war by certain units of the Canadian Expeditionary Force in Canada, the Canadian Siberian Forces and by the forces stationed at St. Lucia (British West Indies), resulting from the profits of canteens and other like institutions operated by the several units and formations, and for the administration of the same by the provincial board of trustees appointed under the Canteen Funds Act, chapter 34 of the statutes of 1925.

He said: His Excellency the Governor General, having been made acquainted with

the subject matter of this resolution, recommends it to the favourable consideration of the house.

Motion agreed to.

NATIONAL BATTLEFIELDS COMMISSION

Hon. J. A. ROBB (Minister of Finance) moved that the house go into committee at the next sitting to consider the following proposed resolution:

That the Minister of Finance be authorized to pay to the National Battlefields Commission the sum of seventy-five thousand dollars a year for a period not exceeding ten years from the first day of April, 1928, to be expended by the commission for the purposes of and subject to the provisions of the Act respecting the National Battlefields at Quebec.

He said: His Excellency the Governor General, having been made acquainted with the subject matter of this resolution, recommends it to the favourable consideration of the house.

Motion agreed to.

LOAN OF $500,000,000

Hon. J. A. ROBB (Minister of Finance) moved that the house go into committee at the next sitting to consider the following proposed resolution:

That the governor in council be authorized to raise by way of loan under the provisions of the Consolidated Revenue and Audit Act such sum or sums of money as may be required, not to exceed in the whole the sum of five hundred million dollars, for paying or redeeming the whole or any portion of loans or obligations of Canada and for purchasing and withdrawing from circulation unmatured securities of Canada; the principal and interest to be charged upon and payable out of the consolidated revenue fund.

He said: His Excellency the Governor General, having been made acquainted with the subject matter of this resolution, recommends it to the favourable consideration of the house.

Motion agreed to.

DOMINION NOTES ACT AMENDMENT

Hon. J. A. ROBB (Minister of Finance) moved that the house go into committee at the next sitting to consider the following proposed resolution:

That the Dominion Notes Act be amended to provide that the governor in council may establish branch offices of the Department of Finance for the redemption of Dominion notes (in addition to those already authorized), at such other place or places in Canada as the governor in council, on the recommendation of the treasury board, may authorize.

He said: His Excellency the Governor General, having been made acquainted with the subject matter of this resolution, recommends it to the favourable consideration of the house.

Motion agreed to.

ELECTRICITY INSPECTION ACT

Hon. JAMES MALCOLM (Minister of Trade and Commerce) moved that the house go into committee at the next sitting to consider the following proposed resolution:

That it is expedient to amend and revise the Electricity Inspection Act to bring it into conformity with the existing conditions in electricity, in regard to the commercial unit of supply, the units of electrical measure, inspection standards, the verification of meters, and other related matters, and to provide for the appointment of a director and such assistants as may be deemed necessary.

Motion agreed to.

On motion of Mr. Mackenzie King the house adjourned at 10.45 p.m.

Friday, February 10, 1928

The house met at three o'clock.

ADMIRALTY ACT AMENDMENT

Hon. ERNEST LAPOINTE (Minister of Justice) moved for leave to introduce Bill No. 30, to amend the Admiralty Act.

Mr. GARDINER: Explain.

Mr. LAPOINTE: Under the law the Exchequer court in Canada is a court of admiralty and as such has within Canada all the jurisdiction, powers and authority conferred by the Admiralty Act of 1890. The Privy Council in recent cases has decided that this should not apply to the changes which have been made giving additional powers to the High Court of Admiralty since 1890. This bill is to give to the Admiralty court all the powers which courts of the same class have in England.

Motion agreed to and bill read the first time.

SUPREME COURT ACT AMENDMENT

Hon. ERNEST LAPOINTE (Minister of Justice) moved for leave to introduce Bill No. 31, to amend the Supreme Court Act.

Mr. GUTHRIE: Explain.

Mr. LAPOINTE: By this bill the spring sittings of the court, which, as the law stands at the present time, are fixed for the first Tuesday in May, will be advanced to the

fourth Tuesday in April. This is done because it will be more convenient for the judges and, I believe, also for the lawyers.

There is another somewhat important amendment by which it is intended to confer upon the court discretionary power in special cases to receive evidence in addition to that which is embodied in the stated case. The Privy Council in England and the High Court of Appeal in England have such powers and it has happened in a Canadian case that the supreme court here had no authority or discretion to allow the filing of a plan while, when the case was before the Privy Council, the Privy Council allowed the filing of that plan. This is for the purpose of giving the supreme court the same discretionary power as the Privy Council has in that matter.

Motion agreed to and bill read the first time.

DOMINION ELECTIONS ACT

Mr. L. P. BANCROFT (Selkirk) moved for leave to introduce Bill No. 32, to amend the Dominion Elections Act (voting by clergymen, teachers and students).

Some hon. MEMBERS: Explain.

Mr. BANCROFT: This bill seeks to amend paragraph (c) of section 29 of the Dominion Elections Act, which reads as follows:

> (c) Who has ordinarily resided in Canada for at least twelve months and in the electoral district wherein such person seeks to vote for at least two months immediately preceding the issue of the writ of election.

As the election writs are usually issued about two months before election day, the present act disfranchises all persons who change their places of residence during four months immediately preceding the date of an election. Clergymen changing pastorates usually do so during July or August, school teachers begin their duties about September 1, and students in the higher institutions about October 1. Every federal election since 1896 has been held during the fall months. All clergymen, teachers and students, who in following their respective duties, change their place of residence within four months preceding the date of an election are disfranchised under the present act.

This amendment exempts clergymen, teachers and students from paragraph (c) of section 29, provided that they can satisfy the registrar that they are othewise qualified to have their names placed on the voters' list. This amendment affects approximately 12,000 clergymen, 63,000 teachers and 75,000 students.

Motion agreed to and bill read the first time.

FARMERS BANK—STATEMENT

Hon. J. A. ROBB (Minister of Finance): May I have unanimous consent to place on the table a return?

Mr. SPEAKER: By unanimous consent.

Mr. ROBB: On the 3rd February the hon. member for Halton (Mr. Anderson) asked for a statement showing the revenues and expenditures of the Farmers Bank. I now place on the table a statement supplied to me by the liquidator.

BURIAL OF INDIGENT SOLDIERS

On the orders of the day:

Mr. H. B. ADSHEAD (East Calgary): I would like to ask the Minister of Soldiers' Civil Re-establishment whether any payments have been made since last session in regard to the burial of indigent soldiers, as was promised by the Prime Minister on the last day of the session?

Mr. SPEAKER: This question will serve as a notice.

PRIVILEGE—MR. QUINN

On the orders of the day:

Mr. F. P. QUINN (Halifax): I rise to a question of privilege. Yesterday I made in this house a statement regarding the purchase of potatoes by the government for the Hudson Bay expedition, and the Minister of Railways stated in the house last night that only forty-five bushels had been purchased. I received to-day from a reliable produce firm in Halifax the following telegram.

Mr. SPEAKER: Order. On the orders of the day being called it is not permissible to read telegrams or messages.

Hon. R. B. BENNETT (Leader of the Opposition): If Your Honour pleases, the point taken was not a question on the orders of the day but a question of privilege of the member himself. Your Honour probably did not hear him.

Mr. SPEAKER: No telegrams or documents which are not laid on the table of the house may be read even on a question of privilege.

Mr. BENNETT: As I understand it, Mr. Speaker, he may state the contents of the telegram.

Mr. SPEAKER: Certainly.

Mr. BENNETT: That is what I understand he proposes to do. He was charged yesterday with having made a false statement, and he is now speaking on a question of privilege with regard to his own reliability with respect to the matter.

Mr. QUINN: I will give reliable information which I obtained by wire from Halifax to-day to the effect that 450 barrels of potatoes were supplied to this Hudson Bay expedition at the price of $12 per barrel, when native potatoes could have been supplied in Halifax for one-third the cost.

Mr. DUNNING: Surely, Mr. Speaker, I now have the privilege of replying. I wish to state positively that the Department of Railways and Canals made no such purchase.

Mr. BENNETT: Do I understand the Minister of Railways and Canals to say that no department of the government purchased these potatoes? Is he trying to hide behind the Department of Railways and Canals?

Mr. DUNNING: Yesterday in connection with this matter the hon. member for Halifax (Mr. Quinn) referred directly to myself and the Department of Railways and Canals. I made no investigation beyond the limits of my own department and the work on the Hudson Bay of that department. As to what may have happened elsewhere, my hon. friend can address his question to those who are responsible, but with respect to my department I assert positively that the statement which I gave last night was correct in every particular.

Mr. SPEAKER: In order to make the point of order perfectly clear, Bourinot, page 336, as quoted in Beauchesne's Parliamentary Rules and Forms, says:

> Nor is it in order to read articles in newspapers, letters or other communications, whether printed or written, emanating from persons outside the house, and referring to, or commenting on, or denying anything said by a member, or expressing any opinion reflecting on proceedings within the house.

That is my authority in objecting to the reading of the telegram.

OLD AGE PENSIONS

On the orders of the day:

Mr. WILLIAM IRVINE (Wetaskiwin): May I ask if it is the intention of the government to amend the Old Age Pension Act at this session of parliament with a view either to making it a federal responsibility or at least increasing the proportion of the federal responsibility?

Right Hon. W. L. MACKENZIE KING (Prime Minister): There is no intention to amend the act this session.

CANADIAN NATIONAL RAILWAYS

ROSEDALE-BULLPOUND BRANCH LINE

Hon. CHARLES A. DUNNING (Minister of Railways and Canals) moved the second reading of Bill No. 6, to confirm a certain agreement made between the Canadian Pacific Railway Company and the Canadian National Railway Company.

Motion agreed to, bill read the second time and referred to the select standing committee on railways, canals and telegraph lines.

PATENT ACT AMENDMENT

Hon. FERNAND RINFRET (Secretary of State) moved the second reading of Bill No. 7, to amend the Patent Act.

Motion agreed to, bill read the second time, and the house went into committee thereon, Mr. Johnston in the chair.

On section 1—manufacture for reasonable requirements.

Mr. BENNETT: What change does this make in the existing law?

Mr. RINFRET: As I explained somewhat briefly on the first reading, the purpose of this amendment is to bring the Patent Act into conformity with the terms of the international convention for the protection of industrial property, which was agreed to at The Hague conference in 1925. Canada was represented at that conference by Mr. Frederick Herbert Palmer, Canadian government trade commissioner, and we were a party to the convention, which was signed on our behalf by our representative. The intention now is to incorporate in the Patent Act the changes which were agreed upon at The Hague conference.

Hon. members will notice that the changes that are being made are underlined in the bill before them. It has always been the law that every patentee must satisfy the reasonable requirements of the public with reference to his patent. It was thought by The Hague conference that this provision might be made clearer, and that every country that was a party to the convention should agree not only that the patented article should meet the requirements of the public, but that it should be manufactured in the country. That is the reason, Mr. Chairman, for the amendments that are proposed to subsections (b) and (c) of section 40 of the act. Subsection (b) as proposed to be amended will read:

Any person interested may present a petition to the commissioner alleging that the reasonable requirements of the public with respect to a patented invention have not been satisfied—

Then follows the addition:

—or that the patentee has failed to adequately manufacture the patented invention in Canada.

and so forth.

Mr. GARDINER: What is the minister's definition of "reasonable requirements" of the public? How does he arrive at his definition?

Mr. RINFRET: I believe that the very reason why this change is proposed is that there was confusion as to just what was meant by that phrase. It has often been the experience of the department, and I believe of similar departments in other countries, that after an article has been patented, the patent simply lies there in oblivion without any attempt being made at all to give the public the benefit of the invention. I would interpret the words "reasonable requirements of the public" to mean that the public could reasonably buy the patented article, and that it should be on the market in sufficient numbers to be available to any purchaser. I believe the reason for the change in the section which is now embodied in the bill amending the original act is to make the act clear, not only that the patentee is required to see that the requirements of the public are looked after, but to see that the patented article is manufactured in the country.

Mr. McGIBBON: Does that mean that he will lose his right if he does not manufacture the article?

Mr. RINFRET: No. There is provision made in regard to that. We will come to it in another section. If the requirements of the public are not satisfied, or if the patentee fails to manufacture the article, any citizen may apply for a license to manufacture the article.

Mr. McGIBBON: That is terrible.

Mr. RINFRET: That has been the law for a long while.

Mr. McGIBBON: It robs a man of his right.

Mr. GARDINER: Referring to paragraph (b), it is provided that the patentee be ordered to supply the patented article at a reasonable price. I would ask the minister whether he has any organization in his department which can determine whether a patented article is sold at a reasonable price or not.

[Mr. Rinfret.]

Mr. RINFRET: It is pretty hard to determine what is a reasonable price. I suppose there is competition. I suppose a reasonable price is arrived at having reference to the prices of similar articles. In the case of a patented article which would be in a class by itself I would interpret this section as being within the discretion of the department to determine, whether the price is reasonable or not, but I may say there is no intention on the part of the department to fix the price of the article. The only discretion is to determine whether the patented article is sold at a reasonable price, and if not the department would have authority to grant a license to someone else, in order to place a similar article at the disposal of the public at a lower price. I think that is what it would mean.

Mr. GEARY: Section 40 subsection (c) provides for that very thing—that the commissioner may fix the price.

Mr. GUTHRIE: I would call the attention of the minister to the glaring defect in the drafting of the section which I know as a literary man he will appreciate. The draftsman has employed the practice of splitting the infinitive. At the end of the nineteenth line I find the words:

Or that the patentee has failed to adequately manufacture.

If it were made to read "has failed to manufacture adequately," I think it would be more in harmony with literary taste and good English.

Mr. BENNETT: If my hon. friend the minister will look at paragraph (c) of section 40 he will observe on the second page of the bill the provision that the order shall not be made less than one year after the thirteenth day of June 1923. All those words are wholly unnecessary in 1928, because he is merely re-enacting a section which has been repealed. To speak of 1923 at this time in 1928 would obviously have no application at all and might as well be deleted from the bill.

Mr. RINFRET: I would ask my hon. friend to make that point clear to me.

Mr. BENNETT: The statute apparently was passed prior to 1923, and provision is made that no order shall be issued before the expiration of three years from the date of the patent and "not less than one year after the thirteenth day of June one thousand nine hundred and twenty-three". Obviously any order that can be made in 1928 must be at least one year after the 13th day of June, 1923. Those words can have no possible application.

Mr. RINFRET: It saye "not more than one year after the passing of the act".

Mr. BENNETT: That was originally intended, but you have substituted the words, "not less than one year after the thirteenth day of June, one thousand nine hundred and twenty-three". This is five years later.

Mr. RINFRET: What are you reading from?

Mr. BENNETT: From the top of page 2, paragraph (c). I think that is obvious.

Mr. RINFRET: There is a mistake somewhere, because my copy does not read the same as my hon. friend's. I do not know whether the mistake has been made by the law officers or not. I think we had better let the section stand. I observe that the bills that have been placed at the disposal of the members are different from the one I have. My copy reads:

Provided that such an order shall not be made before the expiration of three years from the date of the patent, and not less than one year after the passing of this act.

Mr. BENNETT: That is perfectly clear.

Mr. RINFRET: I never intended anything different from that, so that I would like to amend the bill.

Mr. BENNETT: I think you had better let the section stand, so as to have no doubt about it, and make the amendment in the meantime.

Section stands.

On section 2—Revocation of patent time limit.

Mr. BENNETT: That section has the same provision at the beginning of subsection 1 and fixes the time at not less than three years after the date of the passing and not less than one year after the thirteenth day of June one thousand nine hundred and twenty-three.

Mr. RINFRET: That is a mistake in the printing of the bill. It was never intended to be drafted that way. If that is the only objection perhaps my hon. friend will agree that we should correct it now.

The CHAIRMAN: Is it agreed we should make the change now?

Sir GEORGE PERLEY: I think it should go back to the department.

Mr. BENNETT: Make the amendment, but do not take the bill out of committee.

The CHAIRMAN: We will revert to section 40, or clause 1 of the bill. In line 8 the words:

—thirteenth day of June one thousand nine hundred and twenty-three—

will be stricken out. The clause will then read:

—after the passing of this act.

The same amendment will be made in line 22 of section 41, or clause 2.

Mr. BENNETT: The minister will take the bill out of committee so the law officers of the crown may see that it is actually in conformity with his intention?

Mr. RINFRET: Yes.

Amendments agreed to.

Sections 1 and 2 as amended agreed to.

The CHAIRMAN: Section 3.

Mr. GEARY: That is the same trouble.

Mr. WOODSWORTH: Mr. Chairman, I have not been able to follow at this end of the chamber what is going on. We are interested in investigating new industrial processes. In case of a new process being discovered which should be generally adopted, is adequate provision made in this bill to protect the general public by making it possible that the new process may be generally adopted throughout the country?

Mr. RINFRET: That would be covered by the act generally. I consider that our Patent Act gives to the public adequate protection with respect to any process such as my hon. friend refers to. But that would hardly come within the scope of this bill. Its only object is to incorporate in our Patent Act the changes which were agreed upon by the countries which met at The Hague two years ago. Of course, a discussion of the Patent Act generally is quite in order while this bill is before the house, but it is not the intention of my department to suggest any other changes than those that were agreed upon at that conference.

Mr. ANDERSON (Halton): Since discussion of the act in general is in order, may I ask the minister: Would it be possible for a patentee to lose his patent at the end of three years if he had not by that time commenced to manufacture under it?

Mr. RINFRET: He does not lose his patent, but it is then open to any citizen to apply to the department for a license to manufacture the patented article, the patentee having failed to avail himself of the privilege granted to him.

Mr. ANDERSON (Halton): Has there not been some objection as to the length of time? Many patents are very complicated and possibly expensive to make, and the person holding the patent might not be able to get his finances ready within the three years.

Mr. RINFRET: Then the minister, on the advice of the commissioner of patents, has discretion to grant or refuse a license.

Section 3 agreed to.

Progress reported.

CANADIAN NATIONAL RAILWAYS

ROSEDALE-BULLPOUND BRANCH LINE

Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, I would ask permission of the house to rescind the order to refer Bill No. 6 to the committee on railways and canals, and later I would move to have the bill committed to the committee of the whole.

Mr. SPEAKER: By leave of the house.

Some hon. MEMBERS: Carried.

Mr. SPEAKER: Carried, by leave of the house.

Hon. CHARLES A. DUNNING (Minister of Railways): moved:

That Bill No. 6, to confirm a certain agreement made between the Canadian Pacific Railway Company and the Canadian National Railways Company be now committed to committee of the whole.

Motion agreed to and the house went into committee thereon, Mr. Johnston in the chair.

On section 1.—Agreement ratified and confirmed.

Mr. GARDINER: Is this the form of agreement that is generally entered into between two railway companies under such circumstances?

Mr. DUNNING: I do not think it would be correct to say that this is the general form of agreement. I do not know that any such general form exists; the form depends upon the peculiar circumstances of the case. As my hon. friend knows, both railway companies in 1924 desired to construct a line through the territory covered by what is now known as the Rosedale-Bullpound branch line, and the railway committee of this house decided that it was in the interests of Canada to have the railway companies get together on a joint section through that district. From 1924 until now the two companies have been endeavouring to agree to the precise terms of a contract between them covering the construction and operation of that joint section. These terms have now been hammered out to the satisfaction of both companies, and the department has reviewed the matter in so far as it may be said to affect the general interests of the public. The bill now before the committee is the result. It was thought desirable to have parliament ratify the agreement in view of the circumstances attendant upon its inception.

Section agreed to.

Bill reported, read the third time and passed.

TRADE MARK AND DESIGN ACT

Hon. FERNAND RINFRET (Secretary of State) moved the second reading of Bill No. 8, to amend the Trade Mark and Design Act.

Hon. R. B. BENNETT (Leader of the Opposition): This bill, like many others now on the order paper, purports to amend a chapter of the revised statutes of Canada. These statutes came into force on the 1st day of February of this year, and virtually before they have become effective legislation is actually prepared to amend them. This is a very great waste of public money; moreover, it is a considerable inconvenience not only to judges and to the legal profession but also to the community generally. I took up five bills the other day, one after the other, each of which proposes a trifling amendment to a statute that came into force on the 1st day of February of this year. I submit that the government, with a little care, might have provided against that contingency because it is not only, as I say, inconvenient, but expensive to the public that this necessity should arise.

Mr. RINFRET: I agree with my hon. friend; his point is well taken as regards such amendments as we may be tempted to submit to the house as a matter of general practice. However, I plead in favour of this bill that it is in the same predicament as a previous one which I presented to the house for second reading this afternoon. The intention is to bring our statutes into conformity with decisions arrived at by an international congress at which we were represented.

Mr. BENNETT: That was in 1925, as my hon. friend will remember.

Mr. RINFRET: I quite agree that it would have been desirable to have had these amendments agreed upon last year, but as my hon. friend knows, last session was very

brief and it was not possible to attain all the results which we might have aimed at had parliament sat longer. When we prorogued in April these changes were hardly in form for presentation to the house.

Sir GEORGE PERLEY: Did not the minister bring in last year an amendment to the Patent Act?

Mr. RINFRET: I think it was dropped. I suggest that if we are to have an interchange of views we had better go into committee on the bill.

Motion agreed to, bill read the second time, and the house went into committee thereon, Mr. Johnston in the chair.

On section 1—Minister may refuse to register trade mark in certain cases.

Sir GEORGE PERLEY: The minister might give us some explanation of this; we have not had an opportunity to read the bill. Is it in accordance with the views of the international congress that these clauses have been drafted in this way?

Mr. RINFRET: Yes. My hon. friend will get an idea of what is proposed if he will refer to the explanatory notes. Section 11 of the act sets out a number of reasons for which the minister may refuse to register any trade mark, and it is proposed to add to the list two further reasons which are intended to bring our legislation into conformity with a resolution adopted at The Hague, and which appears as "article 6 bis" on the second page of the bill:

Article 6 bis

The contracting countries undertake to refuse or invalidate, either administratively if their legislation so permits, or at the request of an interested party the registration of a trade mark which constitutes a reproduction or imitation liable to create confusion with a trade mark considered by the competent authority of the country of registration to be well-known there as being already a mark of a national of another contracting country and used for products of the same or a similar kind.

Subsections (f) and (g) are intended to carry out that purpose.

Section agreed to.

Sections 2 to 5 inclusive agreed to.

On section 6—Filing of application already filed in another country.

Mr. BENNETT: I would ask the minister whether, in view of the provisions of the revised statutes of 1927, the situation is properly described by saying that section 52 of the act, as enacted by section 3 of chapter 28 of the statutes of 1923, is repealed, or whether it is not proper to say that a section of the revised statutes, of which this is now a part, is repealed.

Mr. RINFRET: Perhaps we might report progress. I shall look into that point.

Progress reported.

SAINT JOHN AND QUEBEC RAILWAY

Hon. CHARLES A. DUNNING (Minister of Railways and Canals) moved the second reading of Bill No. 9, to authorize an extension of time for the completion of the St. John and Quebec Railway between Centreville, in the county of Carleton, and Andover, in the county of Victoria, N.B.

Mr. BENNETT: Explain.

Mr. DUNNING: When the bill was introduced I made an explanation. If we go into committee now I shall be glad to deal with any phase of the matter.

Motion agreed to, bill read the second time, and the house went into committee thereon, Mr. Johnston in the chair.

On section 1—Extension of time.

Mr. DUNNING: As I stated when the bill was first introduced, the St. John and Quebec Railway Company is owned by the province of New Brunswick, the government of which province has requested an extension of time for the completion of this branch. The section now before the house is designed to give the Minister of Railways power to grant that extension.

Mr. BENNETT: My sole reason for directing attention to the bill is that in my opinion the company became dead on the first day of December 1927. The time within which the minister might extend the period for construction expired on December 1 last, and inasmuch as it expired on that day there ceased to be a company. So I suggest that additional sections should be added to the bill to make it clear beyond doubt that the corporation as such still exists, because by virtue of the extension having expired before legislation was introduced, the company is no longer existent.

Mr. DUNNING: That point naturally arose in giving consideration to the matter, and I adopted the obvious course for a poor layman; I referred it to the legal department of the government, the Department of Justice, and it is on the advice of the Department of Justice that the bill is presented in its present

form. I am sorry I cannot discuss the legal niceties of the situation with my hon. friend, but apparently the Department of Justice is satisfied that this will effect the purpose desired.

Mr. BENNETT: I have no desire to enter into any legal discussion, but after the first day of December last there was no longer a company.

Mr. DUNNING: I doubt that.

Mr. BENNETT: If my hon. friend will take the trouble to look at the statutes of 1925 he will find that the power of the minister was extended until December 1, 1927, and when that date was passed there was no longer any right to construct a railway, and with the right to construct the railway the corporate powers of the company vanished, partially at least. It is a matter on which the Department of Justice can more readily advise than I can, but we are now giving that power until 1930, although the company as such suffered the legal result following the expiration of the period of time allowed.

Mr. DUNNING: Does my hon. friend say that the company has gone out of existence?

Mr. BENNETT: I said partially.

Mr. DUNNING: I would point out that this company is in existence as the owner of certain railway lines in the province of New Brunswick which are leased and operated by the Canadian National Railways. Therefore the company must of necessity continue to exist; it could not have become defunct on December 1 of last year. The point with respect to that, as I understand it, was that the power of the minister to extend the time expired on that date. That point was referred to the Department of Justice, who have advised me that if it is dealt with in this manner it will be satisfactory and will effect the purpose desired. However, I will leave the bill in committee for the present.

Progress reported.

EXPERIMENTAL FARMS STATIONS ACT AMENDMENT

Hon. W. R. MOTHERWELL (Minister of Agriculture) moved the second reading of Bill No. 10, to amend the Experimental Farms Stations Act.

Mr. BENNETT: There is a principle involved in this bill, Mr. Speaker. Parliament created these establishments and provided that parliament itself should determine what areas should thereafter be acquired and what moneys should be expended. This amendment substitutes the governor in council, on the report of the minister, and while one need not have any lack of confidence with respect to the present incumbent of that office I think it desirable, where it is possible, that we should not extend the powers of the governor in council beyond what has heretofore been the case, when parliament may reasonably exercise the power without any inconvenience. That is the situation with respect to this measure, involving as it possibly may very large expenditures of public money.

Mr. MOTHERWELL: I would point out that preceding governments have been acquiring other farms for the last thirty or forty years without any authority whatever. The original bill prescribed the acreage limitation of the first five farms, but that has been entirely disregarded ever since. We just discovered that by accident last fall, and I want to remove that limitation and have some authority for enlarging old farms and purchasing new ones.

Motion agreed to, bill read the second time and referred to the select standing committee on agriculture and colonization.

SEEDS ACT AMENDMENT

Hon. W. R. MOTHERWELL (Minister of Agriculture) moved the second reading of Bill No. 11, to amend the Seeds Act.

Mr. G. G. COOTE (Macleod): May I ask the minister if it is proposed to send this bill to the standing committee on agriculture and colonization?

Mr. MOTHERWELL: Yes, Mr. Speaker.

Mr. TOLMIE: Will the minister just give us a word of explanation?

Mr. MOTHERWELL: I did explain it on the first reading, but I will do so again. There are two main amendments proposed, the first having to do with the rearranging of the names. This has been threshed out by the seed growers of the west on several occasions, and the names and grades of the various registered seeds are rearranged as shown on page 2 of the bill. That has been quite a moot question in the west; it was discussed for many years, and I would like it to go to the agricultural committee. In regard to the other amendment, two years ago parliament authorized the minister to license new varieties of seed grain. That matter of licensing has been somewhat abused. The minister has no authority to refuse a license when the variety is not a sound one; for

instance, a license has to be granted regardless of the quality of the grain. I am asking for authority for the minister, after submitting the matter to an advisory board, to decline to grant a license when it has been proven by test that the variety of grain does not stand up to a minimum quality of seed grain. Those are the two chief amendments in the bill. The rest are minor amendments to iron out the old act so as to make it more workable in practice. No new principle is involved in any of the amendments except the two to which I have referred, namely, the reclassification of names and the right to refuse a license to varieties until they are tested in actual practice.

Motion agreed to, bill read the second time and referred to the select standing committee on agriculture and colonization.

DAIRY INDUSTRY ACT AMENDMENT

Hon. W. R. MOTHERWELL (Minister of Agriculture) moved the second reading of Bill No. 12, to amend the Dairy Industry Act.

Motion agreed to, bill read the second time and referred to the select standing committee on agriculture and colonization.

ROYAL MILITARY COLLEGE OF CANADA

Hon. J. L. RALSTON (Minister of National Defence) moved the second reading of Bill No. 13, respecting the Royal Military College of Canada.

Mr. BENNETT: Will the minister explain what he proposes in this bill? I have had correspondence from various people about it.

Mr. RALSTON: This bill is intended to bring up to date the provisions of the act respecting the Royal Military College. As a matter of fact, the provisions which were in the revised statutes of 1906 and which have been continued until the present time, have not been in accordance with the practice which has been adopted in the department since 1910 or 1911. I refer particularly to the matter of qualifications for admission, which, under the old act, are passed on by boards in the provinces and which, by regulation and practice, have been passed upon by a central board, depending upon the certificates held by applicants from educational institutions in the provinces. With regard to the number of students the act provides a limitation of 120, which has been exceeded practically every year since 1913 with the exception, I think, of two. The provision limiting the pay of the staff was exceeded as far back as 1913. This bill is intended, as the explanatory notes show, to remove those limitations and to provide for admission under regulations made by the governor in council which will be published in the Canada Gazette.

Mr. BENNETT: The real fact of the matter is that this is a statute to repeal the existing statute, under which parliament has some control and had made certain provisions, and to substitute for it the discretion of the governor in council. In other words, it becomes purely a political control as distinguished from a parliamentary control. I submit that this is a step in the wrong direction, especially with respect to the Royal Military College, an institution which has rendered great service to this country and which has graduated very distinguished men who have brought great credit to Canada both at home and abroad. Whatever may have been the defects of that system, it is certain, with respect to education, that graduates of that institution have taken a foremost place in almost every part of the world in many branches of human endeavour, not solely confined to military achievements. The number of students that could attend this institution was limited by statute, and quotas were provided for the various provinces. The control with respect, not to the quota but to the pay and the sum total of the numbers that could attend, was a parliamentary control. Heretofore the quota has been regulated by considerations that were referable to that military provision, and while the payments, the character of the instruction given and the government and control of the institution were, perhaps, under the control of the governor in council, there were in the statute itself details with respect to those matters.

A number of old graduates are tremendously interested in this institution, and some of them feel—and I hope they are wrong—that this endeavour at this time to take the control of it entirely out of parliament and to substitute for it practically a political control, as all control by governor in council is, cannot but be fraught with disaster to the institution. There is a feeling that it would be much better if an effort were made to create for the institution a body of government that would be entirely removed from political control. To what extent that may or may not be possible, the minister is perhaps better able to speak than I; but it occurs to me, and I think those of us who read the bill will see, that the minister has substituted control by governor in

council for what was once a real and effective parliamentary control, disregarded though it may have been. It was the duty of the government not to disregard it. The fact that this was done in 1913 does not justify its being done in 1927. The fact is that the provisions of the statute have been disregarded, and if the number of students is to be increased from 120 to 150, this should be done by parliament and not through regulations of the governor in council. I submit that that is the effect of this legislation, and when the matter is being further considered in committee I shall have some detailed observations to make which, possibly, will be better made then than now. I desire, however, to protest against this substitution of control by governor in council for parliamentary control, more especially in view of the observations which the Prime Minister (Mr. Mackenzie King) was so prone to make in days long since past and, I presume happily forgotten when he was at the left of the Speaker.

Motion agreed to, bill read the second time, and the house went into committee thereon, Mr. Johnston in the chair.

On section 1—Short title.

Mr. GUTHRIE: As I understand this bill, the present act which has been on the statute book of Canada since about the year 1876 and the Royal Military College Act, chapter 131 of the revised statutes which came into force on the 13th of February last, will be wholly repealed and this new brief act substituted therefor. I concur entirely in the remarks of the leader of the opposition particularly in regard to the purpose of this amendment. If hon. members will read this short act, they will see that in every instance the control of this worthy institution is taken out of the hands of parliament and placed in the hands of the Minister of National Defence. There may be something to be said in favour of such a method in regard to an educational establishment, but I do not believe that parliament is ready to yield up all control of this particular institution to the minister as he proposes in this bill. By subsection 2 of section 2 it is provided that:

> Such institution shall be known as The Royal Military College of Canada, and shall be located in some one of the garrison towns of Canada, and shall be under the direction and management of the Minister of National Defence.

In other words, it is to be the creature of the minister, and this whole government institution is to be carried on really by him, though nominally under the authority of the governor in council, which would act, of course, upon the recommendation of the Minister of National Defence to the cabinet of this government.

All the regulations for the governance of the college are to be made in that way. All appointments are to be made on the recommendation of the Minister of National Defence, and all military appointments will be made exclusively on his recommendation. There is a saving clause that civilians shall be appointed under the provisions of the Civil Service Act. Salaries are to be fixed by the governor in council, not by parliament. The number of candidates attending the college is to be regulated by the minister himself, or by the governor in council. All the supplies for the college are to be purchased under the authority of the minister or of the governor in council. Parliament, if this bill passes, will surrender entire control of this institution to the Minister of National Defence.

Now that was not the original intention when this college was instituted in this country away back about the year 1874. The country is proud of this institution. Parliament has always been pretty jealous of the management of this institution, and it has been a matter of pride to the House of Commons in days gone by that they have been consulted in regard to any change in the management of the Royal Military College. I do not feel that the system which has done so well for over half a century should be altered now. I do not say that under the management of the present Minister of National Defence it would be made a political organization, but that would be possible if this act is passed in its present form. My own view is that we should retain as much as possible the principle of the old act whereby parliament kept control of this institution. I do not say that the old act should be maintained intact. There may be changes which should be made, but this is nothing short of a bold attempt to replace the old act and place all the power in the hands of a member of this government. I do not think that is a sound principle in regard to an institution of this kind.

Mr. RALSTON: I regret very much, Mr. Chairman, that my hon. friends have felt it necessary to suggest that the purpose of this act was anything such as they have mentioned. I want to assure this house as earnestly as I possibly can that the purpose of this act is exactly as I have stated, namely, to bring the statute in line with the practice which has been observed in connection with this institu-

tion for a number of years. It is possible that someone with more discretion than I have and less boldness would have allowed the situation to continue as it has been for the last several years, but I have felt that the statute should conform with what has been the practice, and that I should come to parliament and ask for the act to be amended accordingly, and that is why I am here.

I do not think my hon. friends have read carefully the old act, because I assure them, and I hope to be able to convince this committee in a moment by reference to the old act, that the governor in council was the controlling body under the act as originally passed and as it has been administered for all these years. I am going to refer to some sections of the old act just to show this committee that that is the situation. Section 5 of the old act provides that all the staff of the college shall be appointed by the governor in council, and shall hold office during pleasure. My hon. friend suggests that what is intended here by giving the governor in council control is to create a political machine.

Mr. BENNETT: I did not say a political machine. I was very careful not to say that; I would not say it for a moment.

Mr. RALSTON: I accept my hon. friend's statement. I took that inference from it, but I am glad I was wrong. I say that the old act provides that the staff as at present appointed shall be appointed by the governor in council, and this new act does nothing to disturb that practice except that it provides that the civilian staff shall be appointed under the terms of the Civil Service Act, which I think hon. members of this committee will agree is at least not extending the jurisdiction of the governor in council or making it any more likely that this act will be used for that purpose.

Subsection 2 of section 6 of the old act says that there shall be a subordinate civilian staff of such strength as the governor in council deems necessary.

Then section 7 provides that the salaries, pay and allowances shall be fixed from time to time by the governor in council.

The next provision is that a board of examiners shall be appointed by the governor in council.

Subsection 2 of section 8 provides that the board shall be authorized to examine candidates for admission to the college as cadets, and to give certificates in such form as is provided to such as are able to qualify according to the regulations in that behalf; and the regulations, under section 4, are made by the governor in council.

Section 9 provides that the examiners shall transmit to the department a report of the names of all candidates for the information of the governor in council.

Section 11 provides that the candidates shall be selected by the governor in council from the list of names forwarded by the board of examiners.

Section 12 provides that the governor in council may, in addition to the number of cadets limited by this act, select other candidates and other students and allow them to attend the institution.

I have perhaps gone into this matter a little more carefully than my hon. friends, and I want to be quite frank with them, as I endeavoured to be when I spoke a moment ago, and to say to them that the changes made by this new act are not changes such as are suggested by them. The governor in council will have no more power under this act than before, except in these two respects: (1) Under the old statute the number of students is limited to one hundred and twenty. That number by this act is struck out because, as I have stated, for years past the number of students has been a great many more than one hundred and twenty; but remember, the report of this department is laid on the table, and the number of students is always given in that report, and I do not think there has ever been any objection on that count.

Mr. EDWARDS (Frontenac): Why not leave to parliament instead of to the governor in council the matter of fixing the number of students?

Mr. RALSTON: I am not averse to that if this committee thinks it is the proper thing to do.

Sir EUGENE FISET: That is exactly what is the practice, because the minister has to come to parliament with his estimates, and every hon. member then has the opportunity to ask how many students there are, and the minister has to give an explanation with regard to the Royal Military College, for he cannot run it without money.

Mr. RALSTON: I was just going to say that parliament has control of the estimates. The minister is on the floor when his estimates are up, and any member can ask him how many students there are. I think that gives parliament ample control over the number of students because we cannot put students in there unless parliament votes the money. There will be no

difference in the matter of quota for the provinces from what it has always been. Hon. members will realize that we cannot put students in there without having money to take care of them. That is the reason this measure is presented. I can assure my hon. friend and this house that there will be no difference in the matter of quota from what there has been. An endeavour has been made to divide the number of students fairly among the different provinces, and it was only when some provinces did not take up their quota that other provinces were entitled to put in more than otherwise would have been their share.

Mr. EDWARDS (Frontenac): In regard to the number of students allowed by the act, may I ask if we are to understand that the number has been regulated by the cost —if that is the regulating factor, or if not, what has been the factor determining the number of students who would receive instruction at the institution?

Mr. RALSTON: I have only had to do with it for the last year, but I understand that it is a matter of accommodation more that anything else; that is to say there is only room for a certain number of students. I think the accommodation at the present time is taxed to its utmost; that is from 190 to 200 students.

Mr. EDWARDS (Frontenac): I think the accommodation there is altogether inadequate and that it should have been increased long ago.

Mr. RALSTON: The other point is that there is a provision in this act that the salaries paid to the staff shall not exceed $60,000. That, as I say, was exceeded long, long ago—I must confess I do not know how. I do not know how it got by the Auditor General, but apparently these salaries have been paid for a number of years, and I felt when I was submitting a vote to the house on the estimates I did not want to ask for a greater amount with this limitation in the act.

Mr. BENNETT: That is taken out of the present act.

Mr. RALSTON: Yes. The third point is in regard to the terms of admission. Under the old statute a board of examiners was appointed by the governor in council in each military district. For some years it was felt unnecessary to have a board of examiners in each military district, and what was done was to constitute a board in Ottawa composed of professors from the Royal Military College and other educational authorities and have applicants for admission send to that board their certificates from the various educational institutions in the provinces. The qualifications were not always uniform because the educational systems in the provinces were not uniform, and it was felt that when you were giving an opportunity to the different provinces to send in students you should have regard to the educational opportunities provided in these provinces and arrange the qualifications of students from those provinces accordingly, rather than setting up one arbitrary board under the act which board would determine the qualifications without respect to those conditions. This act provides that the regulations for admission shall be made by the governor in council. I do not think that in principle any different from the provisions of the old act, which were that a board of examiners should be appointed by the governor in council, and that the government should have the power of selecting from the names submitted by the board those who were to be accepted. My hon. friend mentions the clause which provides that the minister shall have the administration and management. I want to draw his attention to the fact that the minister is mentioned in two sections of the old act, and it of course has been the practice that the minister should manage the institution. This is just making it definite as under the act it looked as if the commandant of the Royal Military College might be in control. It was felt that it should be definitely under a department of the government and that is why this provision appears.

Mr. McGIBBON: Could the minister tell us the minimum qualifications with regard to age and so on?

Mr. RALSTON: I think it is sixteen up to nineteen, and the academic qualifications—

Mr. BENNETT: They shall not be under fifteen or over twenty.

Mr. RALSTON: I think it is sixteen and nineteen, and the educational qualifications have to do with the certain standards in the various provinces. I am afraid I cannot give them to my hon. friend off hand.

Mr. EDWARDS (Frontenac): I think roughly speaking it is equivalent to arts matriculation.

Mr. RALSTON: I think so, speaking generally.

Mr. ADSHEAD: Do I understand that the method of control now proposed is virtually the same as it was under the old act which

gave certain authority to the governor in council, except that civilians employed are to be under the Civil Service Act whereas they were not under that act before?

Mr. RALSTON: I think I can make that general statement—yes. Under the old act there was a limitation placed upon the number of students and the amount to be paid to the staff. That has been cut out but the practice is the same as has existed in the department for a good many years.

Mr. BENNETT: I think, with all deference, that the minister has somewhat confused the position we have taken. With respect to fundamental principles parliament should govern. With respect to the government of the institution, dependent upon changed conditions from day to day, it is obvious regulations must be made and they are made by the governor in council, but parliament should not be shorn of its authority with respect to essential matters which essential matters, Mr. Mackenzie, when he introduced the bill creating the Royal Military College over fifty years ago, provided for. But in 1876 these matters were thought unimportant from an educational standpoint. There were limitatations which he thought important. One was the limitation of the number of students and parliament has maintained that, although it may be that with the growth of the country the number should be increased.

Mr. RALSTON: I think my hon. friend will agree with me that it will be exceedingly bad practice to attempt to include in the consolidation of the statutes amendments such as these, and it would be far better to come to parliament and say what the amendments are.

Mr. BENNETT: My hon. friend knows perfectly well that I would agree with him with respect to that, but I am complaining that a revision should be proclaimed on the first day of February, and that before the revision became effective legislation had been prepared which rendered five or six sections of the revised statutes of no value. This is not a revision; this is the substitution of an old act for a new one. The original act has been on the statute book since the establishment of the institution. Section 15 reads:

> A sum not exceeding the rate of three hundred dollars per annum, and such allowances as are, from time to time, authorized by the governor in council, may be paid for each cadet during such period as he remains at the college, to meet the ordinary expenses of living, and the procuring of uniform.

And added to that is section 7:

> That the money spent for salaries, pay and allowances, shall not exceed the total sum of $60,000. Details of such salaries shall appear in the annual report laid before parliament by the minister.

Mr. RALSTON: What is the section the hon. member is reading?

Mr. BENNETT: I am reading from the revision of 1927. Section 15 was the one I first read, and then section 7. Then follows this, and I regard it as being so important for reasons that I have had occasion to point out to the minister more than once. Section 11 of the old act provides:

> The number of cadets in attendance at any one time shall not exceed one hundred and twenty.
>
> 2. The term for which they shall be admitted shall not exceed four years.
>
> 3. They shall be selected by the governor in council from the list of names forwarded by the board of examiners in the order of merit in which they pass their preliminary examination.

Whatever else may be said, since 1876 down to 1927 there was no opportunity for what might be called political influence determining the type of men who should attend that college, because it was provided they should be selected in the order of merit in which they passed their preliminary examination. I regard that to be essential with respect to this one single institution of an educational character that is maintained by the Dominion. There are those who believe its curriculum should be extended, that it should undertake scientific education in a broader sense than now prevails. I have just sent out to obtain a copy of the Christmas number of the college magazine in which appear two articles, one by a former graduate who served with distinction during the war, and the other by a professor of the institution in reply. But that single subsection, I say to the minister during many years' observation I have found to be the most powerful influence for the purpose of controlling the type and character of the men who went to the institution to be found in any of our statutes, namely, that those cadets should be selected in the order of merit in which they passed their preliminary examination. Where is that in the bill?

Mr. RALSTON: I have said to my hon. friend that I do not think the practice of having provincial boards has been observed for quite a number of years. I do not know what he means by saying that he has observed it to be very essential and beneficial. As I said before, the central board of examiners have made the selection.

Mr. BENNETT: I do not think my friend the minister has caught the point. There is a provision for a board of examiners in section 8 of the old act. They shall transmit to the department a report of the names of all candidates who succeed in obtaining certificates, for the information of the governor in council, with a report of each meeting. Then follow the conditions of entry, and it is provided by subsection 3 of section 11 that they shall be selected by the governor in council from the list of names forwarded by the board of examiners in the order of merit in which they pass their preliminary examination. The governor in council may delegate that power to a general board or to the adjutant general but the statutory provision is imperative:

They shall be selected in the order of merit in which they pass their preliminary examination.

During the long years in which the Liberal government had control of this institution, because of the merit of many young men not of that faith they were able to get into the institution, for they had merit. This bill wipes that out, and I do ask the minister to return to the statute that provision which made merit the condition of entry to the institution, not political influence. That is the position I take in respect to it.

Mr. RALSTON: That expression is what I object to. I thought my hon. friend disavowed any idea of there being political influence.

Mr. BENNETT: I want to prevent it.

Mr. RALSTON: If anyone wants to be diabolical enough to keep a young man out of the Royal Military College because of his politics, it can be quite easily done under the present statute by the selection of such a board of examiners—

Mr. BENNETT: Oh no.

Mr. RALSTON: I hope my hon. friend does not believe that that situation could exist.

Mr. BENNETT: I saw it tried once.

Mr. RALSTON: Under the present act.

Mr. BENNETT: But it did not succeed because of that statute.

Mr. RALSTON: I say to my hon. friend that if anybody could be black-hearted enough to desire to keep out a young man because of his political faith, he could do so by the selection of a board of examiners of a certain stripe.

[Mr. Ralston.]

Mr. BENNETT: No, the candidates for admission have papers sent them. My hon. friend does not mean that seriously?

Mr. RALSTON: I mean it as seriously as my hon. friend means that the governor in council would deliberately pass over a young man, certified by the board of examiners as having reached the required standard of merit, and say to him: We cannot take you even though you have that standing.

Mr. BENNETT: My hon. friend understands that what we seek is to put it out of their power to do so.

Mr. RALSTON: I say you put it out of their power just as effectually by reason of the fact that the board of examiners have all the say as to the order in which the candidates shall be placed; they are the ones who say what merit rating the candidate shall have. If they fix a certain order of merit, then the governor in council will automatically select the candidates so certified.

Mr. BENNETT: That is not what it says. I am—

Mr. RALSTON: My hon. friend will permit me. The provision to which he is referring is that the candidates who have been certified by the board of examiners shall be selected by the governor in council in the order of merit in which they passed their preliminary examination. I say that if anyone was so black-hearted as to want to shut out a young man from the institution, all he would need to do would be to have the board of examiners report the candidates in the order of merit that he desired.

Mr. BENNETT: Surely my hon. friend does not mean that. Conditions may be bad, but you cannot get a board of examiners like that.

Mr. RALSTON: My hon. friend is implying that we can get a governor in council black-hearted enough to do that sort of thing.

Mr. BENNETT: No, my hon. friend is overlooking this fact. Parliament, under Alexander Mackenzie, who took very great pride in founding the Royal Military College, thought it was highly desirable to have inserted in the statute a provision that would ensure against the very conditions I have referred to. It may be as my friend says, that it is not necessary to invoke that provision, but when it is there is it not a deterrent, is it not a valuable safeguard?

Mr. EDWARDS (Frontenac): And Alexander Mackenzie did not imply by it any lack of confidence in his own integrity or that of his government.

Mr. BENNETT: Quite so. I do suggest to my hon. friend that it is highly desirable to retain that safeguard in the public interest, to prevent any effort being made to secure entrance other than on the standard of merit provided by the statute.

Mr. RALSTON: The only way such an effort could be made would be for the governor in council deliberately to pass over the young man who is shown to be higher on the list than another young man.

Mr. BENNETT: It is not the governor in council, it is the minister who would act.

Mr. RALSTON: I beg my hon. friend's pardon.

Mr. BENNETT: My hon. friend has overlooked the fact that this institution by subsection 2 of section 2 of this bill is to be under the direction and management of the Minister of National Defence.

Mr. RALSTON: My hon. friend has overlooked the provision that the number of cadets in attendance at the college and the conditions of entry shall be as from time to time authorized by the governor in council.

Mr. BENNETT: Quite so. But there is no provision such as was in the old statute regarding the meritorious marks of candidates for entry, and it is because of that provision that this institution has for so many years been so free from what might be called the difficulties and the baneful influences of politics. I recall in the days of my youth when going down to New Brunswick at Christmas always seeing upon the train large numbers of young men, cadets from Kingston, on their way home, and although a Liberal government was in power at Ottawa, the application of that section for selection by the governor in council of cadets from the list of names forwarded by the board of examiners, in the order of merit in which they passed their preliminary examination, ensured that the lists from every part of Canada determined the selection. Hence it was that those lists were hung out from year to year, and the person at the top of the list knew he was going to be able to get into the Royal Military College, because a uniform examination, as my hon. friend will recall, was ultimately fixed in every province. It made no difference how luxurious might be the surroundings of the youth or how wealthy might be his home, he was perfectly certain he could not get into the college if his marking was 50 and there were a dozen men ahead of him with 70. I think the provision that Alexander Mackenzie put in the statute fifty years ago my hon. friend will be well advised to retain in this bill. In addition there is the other point I advanced, that regulations must always be made—he and I will agree about this—to give effect to a principle that parliament determines, but parliament must not leave it to the governor in council to determine fundamental matters with respect to legislation.

Mr. RALSTON: I tried to convey to my hon. friend that I did not see any real deterrent if anyone were really determined to rob a young man of his rightful place according to merit, either under the old act or under the new. We are entirely agreed on the principle, and my suggestion is that if there is any object in having an express provision, I might undertake to have in the regulations a clause for selection on merit. Would that meet my hon. friend's views?

Mr. GUTHRIE: Is there any sound objection to putting it in the act?

Mr. RALSTON: I do not think so.

Mr. GUTHRIE: That would settle the difficulty.

Mr. RALSTON: Except that we are providing that all administration shall be a matter of regulation.

Mr. BENNETT: This is more than a question of administration.

Mr. GUTHRIE: It is fundamental. To make it statutory would answer many objections that might be raised. We have confidence in the present minister who is at the head of the defence department; but he may not occupy that position very long. In fact, rumour has it that the minister will hold much higher positions in the service of the country. Suppose, then, he were supplanted and the Postmaster General took his place; we might not have the same confidence in him.

Mr. EDWARDS (Frontenac): God forbid.

Mr. ROSS (Kingston): Is not the principle which is at the moment being advocated the principle that is in force and has been recognized?

Mr. RALSTON: Certainly.

Mr. ROSS (Kingston): That is to say, every student entering the college is selected according to his standing, which is indicated by the Department of Education. The selec-

tion is made on the basis of matriculation, and the marks are reported by the Department of Education and adopted as the standard. I do not see any objection to this principle being adopted, although I hardly think it could be followed 100 per cent. For example, a student might apply for admission to the college and, while having a very high standing in classics, he might be very low in mathematics. In that event he would be a total failure in that institution. I believe the board does select those students who are most suited to the line of work followed in the institution, but they make their selection on the basis of the student's mathematical proficiency. I see no objection to embodying in the statute a provision along this line. I do foresee, however, some friction in the case of a student having, as I say, a high standing in classics and a low standing in mathematics, because the natural inclination would be to select those who had the best standing in the latter branch of studies. The choice of students depends upon merit, and I believe that in the large percentage of cases this principle is followed.

As regards the limitation of the number of students admitted, I think the minister would be well advised to withdraw any provision in this direction. The number of students entering the college depends very largely upon the severity of the examination, and the examinations in institutions of this nature are quite severe; so that between 15 and 20 per cent of the students naturally fail. One year you might have a class exceptionally high in mathematics and allied subjects, while another year the class might be low in this respect. The result is that the percentage of failures varies: more students fall out one year than another. The tendency is to increase the number of applicants coming in each year in the fourth year, which as we understand it is really the first year, and I think the minister is wise in what he proposes in this regard.

Mr. EDWARDS (Frontenac): In this matter standards are fixed and always have been fixed by educational institutions such as our universities, and these standards have to be met by those who desire to enter. In Ontario and Quebec, and in fact in all the provinces, the standard generally is covered by the word "matriculation", and those who are capable of passing the matriculation examination have the right to enter these institutions of learning. There is practically no restriction so far as numbers are concerned. When the act was first passed a limitation was set upon the number of students who might attend the Royal Military College, and it was because of that limitation that the Hon. Mr. Mackenzie introduced that particular section providing for the manner in which the limited number should be selected. But because the Mackenzie government incorporated in the act the stipulation that the students who passed the examination for entrance to the Royal Military College should be selected in order of their merit, as indicated by their marks, is no reason why one should infer that Mr. Mackenzie lacked confidence in the integrity and honesty of his own government and of himself. He made that provision because he saw that where the number of students was limited, and so long as it was limited, there must be some other standard of selection than the mere passing of an examination. In making the selection of those who might enter the institution, if the allotted number were not exceeded, the order of merit made no difference. But if the number who passed the examination, some with high and others with low marks, exceeded 120 or whatever the prescribed number might be, then the students who were chosen would be selected from the best as indicated by their percentages in the examination. What possible objection could there be to such a rule? What objection could there be to putting it in the act? No better means could be devised of selecting the students, and under that system the college has certainly done remarkably well in the past. It has made a record not only in Canada but throughout the world; it has become famous. And since my first entry into this house it has always been a matter of satisfaction to me to observe the manner in which estimates in connection with the Royal Military College have been received by members, irrespective of party or of the government in power. The representatives of the people in this house have at all times, at least in the last twenty years, shown by their willingness to vote money for the institution the confidence which they have in its efficiency. That I think is partly due to the sense of fair play: that where, say, 150 pass an examination and only 120 can be selected, the principle shall be followed of making the selection according to the marks obtained in examination. That is a wise safeguard, and it is just and fair. Nor does it in any sense, in my opinion, reflect upon the integrity of the governor in council or of the minister.

Mr. RALSTON: I presume that this section was intended to provide that, if the board of examiners for Nova Scotia, let us

say, submitted a list of names, then the governor in council, so far as the students from that province were concerned, should select from the highest. That is to say, the privilege must be allotted to the various provinces.

Mr. BENNETT: According to the quota.

Mr. RALSTON: Yes. As I have said, we do not have separate boards for each province, but the qualifications are based on matriculation examinations for various universities in the provinces, and it is a little difficult to see just how we could work out a provision of that kind having regard to the fact that you might not have them in order of merit so far as passing any standard examination is concerned. I wonder if my hon. friend would accept this suggestion, simply an undertaking on my part, that I will see to it that a provision is placed in the regulations to the effect that merit shall govern in the selection of candidates.

Mr. BENNETT: If my hon. friend were to continue to be minister in perpetuity I would be quite satisfied, but unfortunately an order in council passed to-day may be rescinded to-morrow, as we all know, and under these circumstances I submit that the minister would be well advised to think the matter over and see if he cannot provide in the statute itself that merit shall be the determining factor. Perhaps before the bill comes out of committee he may be able to think it ought from that angle, not because I have the least suspicion in the world that he would not continue to do it by regulation, but because the frailties and weaknesses of human nature are not unknown to him as well as to all of us who are engaged in political warfare. While I do not think the government would be likely to repeal such a provision, they might find some palpable or apparent excuse or reason for so doing, to cover up some such real reason as I have suggested. I hope the minister will think it over, and perhaps we can discuss the matter further in private.

Mr. RALSTON: I can only say with regard to myself that "I fear the lady doth protest too much" with regard to my probity. I thought that suggestion might be acceptable, because after all I know my hon. friend believes I am sincere in the undertaking and that the government would see that that undertaking was carried out. I do not think any government would be well advised to strike out such a provision if put in a regulation in view of the discussion we have just had. I can assure my hon. friend that I believe this is the most workable way of doing it; I think it will appeal to him as a lawyer as the best way to preserve this principle, if he wants it preserved in black and white. The principle is preserved in practice and will be preserved whether it is in the statute, the regulation, or left unwritten.

Mr. ROSS (Kingston): May I ask another question? What does the word "civilian" refer to in section 4? Does it mean the substaff, the employees of the institution, or the higher staff?

Mr. RALSTON: As I understand it, that has to do as well with the professional staff, everyone not on the military staff. We are not discussing that section yet, but perhaps since we are going all over the bill we might as well deal with it now.

Mr. ADSHEAD: Do I understand the minister to say that he is going to insert in the regulations, if not in the statute, a provision that merit shall be the predominant factor for entrance to the college? If so, I think he is well advised.

Mr. RALSTON: I will be glad to do that, and I will consult further with my hon. friend about it.

Section agreed to.

On section 2—Name.

Mr. EDWARDS (Frontenac): Why not say that the college shall be located where it is at present?

Mr. RALSTON: I would not think of locating it in Halifax, for the present, and that is as far as I can go.

Mr. ROSS (Kingston): I do not suppose the situation of the college will ever be changed, but at present the section reads "situated in a garrison town" or words to that effect, and of course it is not situated in a garrison town.

Mr. BENNETT: Under the old act the words "permanent force" were defined, and the words "garrison town" had a meaning which they have not now.

Mr. GEARY: Why not distinctly say "in the city of Kingston"?

Mr. ROSS (Kingston): I would be glad to have that, but it is not in the city of Kingston.

Mr. EDWARDS (Frontenac): We have the honour of having the college in the constituency of Frontenac-Addington, which is not exactly a garrison town.

Mr. GEARY: Well, if it is not in Kingston I do not want it put there.

Mr. EDWARDS (Frontenac): We can cover it exactly by saying "near Barriefield, in the township of Pittsburg, in the county of Frontenac."

Sir EUGENE FISET: I do not think the college is located in accordance with this present act, because I do not believe it is situated in a garrison town.

Mr. RALSTON: We have some of the R.C.H.A. there. I am quite satisfied to say "at or near".

Mr. EDWARDS (Frontenac): I think we should amend it by adding the words "or near" after the word "in", to make it read "in or near some one of the garrison towns. . ."

Mr. RALSTON: That would cover it.

Section as amended agreed to.

Section 3 agreed to.

On section 4—Staff

Mr. GEARY: The hon. member for Kingston (Mr. Ross) drew attention to the use of the word "civilian". Subsection 1 divides the establishment into military and civil sections; subsection 2 deals with the military side of the establishment while subsection 3 deals with the civilian side. Some of the professors at the Royal Military College are not soldiers, so far as I know; I believe there are civilian professors at that institution. Do they come under subsection 3? They are not officers, and they are on the civil side of the establishment.

Mr. RALSTON: As I understand it, they come under subsection 3.

Section agreed to.

Sections 5 and 6 agreed to.

On section 7—Number of cadets.

Mr. BENNETT: This section might stand. I should like to discuss it with some of my friends who are more familiar with this phase of the matter than I am.

Section stands.

Section 8 agreed to.

On section 9—Supplies by cadets.

Mr. BENNETT: I understand at present there is a limit as to the cost to each cadet, is there not?

Mr. RALSTON: Yes.

[Mr. J. W. Edwards.]

Mr. BENNETT: That is perhaps one of the reasons that men of great merit without much money have sometimes been attracted to that institution. This clause as it reads would preclude a continuance of that condition. Is that correct?

Mr. RALSTON: Except that section 15 of the old act states: "a sum not exceeding the rate of $300 per annum," and such allowances as are granted from time to time.

Mr. BENNETT: But those are allowances. The hon. member for Rimouski (Sir Eugene Fiset) is perhaps more familiar with this matter than any other hon. member. The usual cost was $300, plus a monthly sum that ran from $10 to $25. Is that about correct?

Sir EUGENE FISET: Yes.

Mr. BENNETT: This clause as it now stands would make it possible to raise the price of education at that institution to the same figure as obtains, for instance, in the university of Toronto or any of the larger universities, and it might run up to $1,000 per annum.

Sir EUGENE FISET: It might under this clause.

Mr. BENNETT: Is it not desirable to continue the idea that was in the minds of the framers of the act establishing this institution? As clause 1 states, the institution is designed for a special purpose, namely, to train men in a particular class of work, and the idea was to attract to the institution men of known, demonstrated merit, to receive education at a very low cost. I know that at the present moment—and my hon. friend will recall a circumstance of last fall in that connection—a man of limited means, who is of very great ability, is finding in that institution an education which he otherwise could not get.

Mr. RALSTON: The matter is, of course, one for the house. It would mean a commitment of the country perhaps greater than the commitment at the time the act was passed, because $300 meant a good deal more then than it does now. The payments which are made are still continued at $300 a year, except for the first year when there is an extra $250 for outfit.

Mr. BENNETT: Under that very section?

Mr. RALSTON: No. That has been the practice.

Mr. BENNETT: But the section states $300 plus allowance for uniform.

Mr. RALSTON: Has my hon. friend any suggestion in that respect? It seems to me that it might not be well to limit the amount to $300.

Mr. BENNETT: That is the matter I desire the minister to think of. Obviously it is not for a private member to judge what the amount should be. I was thinking the minister might have some idea of what would be an adequate and a proper figure under the circumstances.

Mr. RALSTON: I wanted to find out from my hon. friend if he was suggesting the retention of that exact sum?

Mr. BENNETT: No.

Mr. RALSTON: Or a definite amount?

Mr. BENNETT: A definite amount and the retention of the spirit of the section.

Mr. McGIBBON: What is the average cost per annum?

Mr. RALSTON: $1,681. That is exclusive of capital.

Mr. McGIBBON: Is that the average cost to the pupil or to the country?

Mr. RALSTON: To the country.

Mr. McGIBBON: What is the cost to the pupil?

Mr. RALSTON: $1,450 for four years: the first year $550 and the next three years $300 each. The cost to the country is $1,681 per annum.

Section stands.

Section 10 agreed to.

Mr. RALSTON: Will the leader of the opposition consider now, if he can, the effect of subsection 2 of section 3, which is that these regulations, in which I am intending to insert a provision making merit the factor, are published in the Canada Gazette and have the force of law, so that due publicity is given to them? This is not a question of an order in council which may be stuck away on a file somewhere. Possibly my hon. friend will consider that as fulfilling the idea he has in mind.

Mr. BENNETT: That is why I said that if my hon. friend would permit the bill to stand, I thought perhaps a dozen words of conversation with him would make clear what I have in mind rather than that I should say it here. What he suggests may be the basis on which we can arrive at a definite conclusion.

Progress reported.

56103—23½

RAILWAY BELT WATER ACT

Hon. CHARLES STEWART (Minister of the Interior) moved the second reading of Bill No. 20, to amend the Railway Belt Water Act.

Motion agreed to, bill read the second time and the house went into committee thereon, Mr. Johnston in the chair.

On section 1—Short title.

Mr. STEWART (Edmonton): As I pointed out the other day when this bill was introduced, last year this amendment was passed by the Senate, where it was introduced, and it arrived in this house too late to be considered, chiefly owing to the fact that some interested members from British Columbia were not present when the bill came up for consideration. The purpose of the bill is briefly to suspend section 11 and to repeal section 12 of the act. In British Columbia the federal government control the railway belt and the Peace River block and they have the administration of the natural resources in that territory in British Columbia. The British Columbia legislature passed a water act for the governance of the supplies of water under provincial jurisdiction and the federal government adopted the provincial bill. The water rights in the federal belt were administered by the provincial bill. The water rights in the federal belt were administered by the provincial authorities under the control of a minister of the provincial government. In 1924 they consolidated their act and in 1926 we sought to bring our water rights act into conformity with the British Columbia act. Some difficulties arose when we were bringing our act into conformity with theirs with regard to certain Indian rights under the Indian department, over which I have control, and the question arose as to whether the rights of riparian owners were sufficiently safeguarded. We therefore inserted in our bill, in addition to the sections of the British Columbia bill, sections 11 and 12, which provided that in certain cases specified in section 11, before the actual confirmation of the license by the provincial authorities could take place there must be consent by the Minister of the Interior. This was very much resented by the department in British Columbia, and for a time there was a complete cessation of the issue of permits, because, they said, the control was wrested from them and retained by the Minister of the Interior. After careful consideration I came to the conclusion that it was not

worth while to have this controversy go on because interested parties were suffering in consequence, and I agreed last year to the introduction of a bill, which was introduced in the Senate, not repealing section 11 in its entirety but suspending its operation until it might be required, when it could be put in force by order in council as set out in the bill.

So far as section 12 is concerned, we have decided that the rights of the riparian owners are safeguarded by section 4 of the act itself, and that there is no real necessity for its retention.

Mr. FRASER: I am pleased indeed to hear the explanation of the minister. When his amendments were introduced in 1926 I made some objection, but at the present time what I am interested in is to know if under the present amendments any rights held by the users of water in the railway belt are affected in any shape or form, and also whether under the amendment made in 1926 any rights have been acquired which could not have been acquired without the consent of British Columbia. Those are the two principal points I would like cleared up. I might point out to the minister, as I did when this matter was up before, that you might as well give a man a piece of land on the top of mount Everest as to give him land in the railway belt without water, for without water the land is of no use in many parts of that belt. I should like to be assured, therefore, that the rights of the users of water in the railway belt of British Columbia will not be interfered with.

I was not aware until now that this legislation was the result of a little family quarrel. Apparently the Minister of the Interior and the Minister of Lands in the province of British Columbia have had a little jar between themselves. We quite understand our Minister of Lands out in British Columbia, and I am glad to see that the Minister of the Interior has felt a little touch of Mr. Pattullo's temper in connection with this matter.

Mr. STEWART (Edmonton): I wish to assure the hon. member that the suggestion of section 11 in the first place was merely on account of what we thought was a somewhat arbitrary action in connection with one particular license. I think that difficulty has been straightened out. So far as the administration is concerned we are in complete conformity with the Water Belt Acts of the province itself, but we are retaining the right so that if at any future time we need to exercise it for the protection of any individuals who live in the water belt, it may be done. The two acts are now in complete conformity. The administration had really ceased until I agreed that I would introduce these amendments. Then it went on as usual, and is now going on as it had been previously. I had no authority to issue any permit. I simply took the authority, as my hon. friend will notice by section 11, to refuse to acquiesce in case of a formal protest, and by so doing I held up the issue of the permit.

Mr. FRASER: There have been no changes, then?

Mr. STEWART (Edmonton): No.

Mr. TOLMIE: I understand from the speech from the throne that these lands are soon to be transferred to British Columbia. Are not these the lands that the speech refers to?

Mr. STEWART (Edmonton): Quite true.

Mr. TOLMIE: If they are going to be transferred, why change the act, because then the lands will be under provincial jurisdiction?

Mr. STEWART (Edmonton): In the light of my experience with the Alberta resources, I think it might be well to have this provision. Of course, if the lands were transferred there would be no necessity for the Dominion government to act at all.

Section agreed to.

Section 2 agreed to.

On section 3—Repeal.

Mr. BENNETT: Why should section 12 be repealed? It protects only the domestic water.

Mr. STEWART (Edmonton): If my hon. friend will look at section 4 he will see that the rights of the riparian owners are amply protected. Section 4 says:

> No grant made after the sixth day of June, one thousand nine hundred and thirteen, by the crown of lands in the railway belt, or of any interest therein, shall vest in the grantee any exclusive or other right, title or privilege in, to or in respect of any watercourse, or in, to or in respect of the bed or shores of any watercourse, unless and except in so far as any right, title or privilege to the bed or shores of any watercourse is expressly set out and described in such grant, saving the right of every riparian proprietor to the use of water for domestic purposes.

That clause gives him ample protection.

Section agreed to.

Bill reported, read the third time and passed.

GOLD AND SILVER MARKING ACT

Hon. JAMES MALCOLM (Minister of Trade and Commerce) moved the second reading of Bill No. 21 to amend the Gold and Silver Marking Act.

Motion agreed to, bill read the second time, and the house went into committee thereon, Mr. Johnston in the chair.

On section 1—Title of act changed.

Mr. MALCOLM: There are just three changes in the act. The first is the inclusion of platinum as a precious metal. That requires a change in the title of the act. The second is to give to the governor in council power to make regulations as to the quality and quantity of precious metal to be used in what shall be termed plated, metal filled, gold-fiilled or silver-filled articles, to get away from some of the cheap, spurious articles that are sold. This measure will permit the governor in council to make regulations covering the thickness and weight of this rolled metal. The third amendment is to provide that the trade mark of the manufacturer shall be stamped on all his goods. That prohibits him from importing contract goods and selling them as the genuine article.

Section agreed to.

Sections 2 and 3 agreed to.

On section 4—Platinum to be applied only to certain articles.

Mr. MALCOLM: Any article marked platinum shall be 95 per cent platinum and not more than 5 per cent iridium.

Mr. BENNETT: Why not provide that the act shall not come into force until a certain date, so that those who have stock on hand may be permitted to dispose of it?

Mr. MALCOLM: There will be a discussion shortly with those interested in various trades as to regulations, and when the regulations are satisfactorily adjusted that matter will be attended to.

Mr. BENNETT: But the bill comes into force when it is assented to, and I suggest that it come into force on the first day of July, 1928, or some other suitable date, so that everyone will have notice and will be able to deal with the situation.

Mr. MALCOLM: I will amend the bill on the third reading.

Mr. BENNETT: Better leave the bill in committee, so that we can deal with it in committee.

Progress reported.

PUBLIC PRINTING AND STATIONERY

AMENDMENT OF ACT RESPECTING ADVANCES TO THE KING'S PRINTER

Hon. FERNAND RINFRET (Secretary of State) moved that the house go into committee to consider the following proposed resolution:

That it is expedient to amend the Public Printing and Stationery Act in relation to advances authorized to be made to the king's printer for the purchase of materials, to execute orders and requisitions and payment of wages, and to provide that the total amount of such advances shall at no time exceed the sum of seven hundred thousand dollars or such sum as may hereafter be determined, from time to time, by the governor in council.

Motion agreed to and the house went into committee, Mr. Johnston in the chair.

Mr. BENNETT: What is it about?

Mr. RINFRET: The purpose of this resolution, Mr. Chairman, and of the bill that will follow it, is to provide the king's printer with the working capital necessary to enable him to carry out the responsibility imposed upon him by the statute. As hon. gentlemen are aware, the king's printer has to execute printing of all kinds required by the houses of parliament and by every branch of the service of the government of Canada, and has to provide all stationery and office appliances required by the houses of parliament and the various branches of the service. He has to edit the Canada Gazette, and has to be the distributing agent of the various departments for their respective publications, and to be the exclusive sales agent of all the official publications. He has to audit the accounts for all advertising undertaken on behalf of the departments of the government. Under the terms of the statute the Minister of Finance authorizes advances to the king's printer, and the king's printer remits to the receiver general all moneys received for services rendered by the department. The king's printer necessarily carries an extensive and varied assortment of paper and other printing and binding supplies, estimated to average in value approximately $350,000, and a stock of goods classed generally as stationery and office supplies estimated to average in value approximately $150,000; and that amount increases with the large increase in the work of the different departments.

Mr. BENNETT: The minister wants $700,000?

Mr. RINFRET: The amount required for printing and binding is $350,000. Funds must be provided, therefore, first for the maintenance of this permanent stock, the details

of which are of course continually changing, and also for meeting contingent expenditure arising between the date of service rendered and receipt of payments due on account of same. Section 38 of the statute as it stands provides that the Minister of Finance may authorize the advance to the king's printer of a sum not to exceed $200,000, but for many years, as far as my information goes, and for last year, as I know personally, having been in charge of the department, the amount advanced to the king's printer has much exceeded the amount provided by the statute. Two causes have combined to render this sum insufficient properly to meet the king's printer's present necessities. The first is a very large increase in all branches of the activities of the department and the second is the change in money values, which necessarily has its influence upon the wages of the different employees of the printing bureau and the general expenditure connected with it. Therefore it is proposed by this resolution and the bill which will follow to increase the amount which is provided by the statute from $200,000 to $700,000. As I have explained, this is not an expenditure at all; it is merely a readjustment. In past years the auditor general has brought to our attention the fact that we were exceeding the terms of the statute. There was some confusion as to the meaning of it. The statute said that the advance should not at any time exceed $200,000; I believe the intention of it was very clearly to say that it should not exceed cumulatively that amount, but it was interpreted for the sake of carrying on as if no one advance should exceed $200,000. We find that we cannot carry on the printing work with that rather small amount, and therefore we propose now to bring the working of the printing bureau into clearer harmony with the spirit of the statute by providing that the Department of Finance will be authorized to make advances to the amount of $700,000. As I have said, to-day we carry a stock in excess of $500,000, and it is likely to increase with the years to come. So we want to provide for the future, and thus meet the wishes of the leader of the opposition that parliament should not be called upon to amend statutes all the time.

The other part of the resolution providing that from time to time the sum may be determined by the governor in council is to cover this contingency. In 1926, although the session was very much prolonged the estimates could not be voted, and the printing bureau found it very hard to carry on, even had it been possible to be advanced the amount now provided for by the resolution.

[Mr. Rinfret.]

As I have explained, this legislation will not have the effect of increasing our expenditure in the printing bureau; it will merely put an end to the somewhat confused interpretation of the statute that has obtained in the past, and bring its workings into clearer harmony with the spirit of the statute.

Mr. ADSHEAD: I presume that other departments are charged for the work done by the printing bureau and the bureau credited accordingly.

Mr. RINFRET: Yes.

Mr. ADSHEAD: How much credit has been given to the printing bureau for such work?

Mr. RINFRET: My hon. friend will observe in the estimates that parliament votes to every department a certain amount of money for stationery and printing. The departments pay that money to the printing bureau, and at once it is turned over to the receiver general.

Mr. ADSHEAD: Then the printing bureau itself is very nearly self-sustaining?

Mr. RINFRET: Absolutely so.

Mr. BENNETT: There is only one difficulty about it, and that is the alternative suggestion that the amount may exceed $700,000. This, added to the provision in the statute, might just as well eliminate the limitation of $700,000 entirely, because the resolution reads:

—such advances shall at no time exceed the sum of seven hundred thousand dollars, or such sum as may hereafter be determined from time to time by the governor in council.

So all this resolution does is to give a blanket power to the extent of two or three million dollars any time they want to exercise it, and the $700,000 is what my hon. friend the Minister of Railways would describe as a joke. That is the real effect of the resolution as it reads.

Mr. RINFRET: We expect most confidently that we shall never require the amount, but we want to provide for such a contingency as that which arose in 1926. Personally I do not think that contingency will ever recur, for I believe this government will always have such a strong majority in the years to come that we shall never see a repetition of the session of 1926.

Mr. BENNETT: You were beaten that session.

Mr. RINFRET: Perhaps my hon. friend would consent to the resolution passing, and when the bill is in committee I shall be only too pleased to give consideration to his remarks.

Mr. BENNETT: I desire the minister to understand that I quite appreciate the necessity for the department having working capital, but no resolution should be adopted by this house that with one line imposes a limitation and with the next line removes it. The resolution says that the limitation of the working capital shall be $700,000—that is one line; the next line says "or such sum as the governor in council may authorize"—which may be two million dollars. I am quite content to accept the minister's suggestion, but surely he is not going to frame a bill which in one section imposes a limitation and in another removes it.

Mr. RINFRET: I do not agree with my hon. friend. We are not imposing a limitation, rather we are increasing the former limitation. There would be less excuse for the government to make use of the last lines of this resolution and increase the limitation placed on the working capital.

Mr. BENNETT: But with the last lines there there is no limitation at all.

Mr. RINFRET: I will not insist on that last provision.

Mr. BENNETT: I thought not.

Mr. RINFRET: But really I cannot see it the way my hon. friend puts it. The intention of the government is to increase the limitation to $700,000, and it is only in exceptional cases that the government would take the responsibility of exceeding it. There would have to be good reasons for doing so.

Mr. BENNETT: The resolution should end at "seven hundred thousand dollars," if what my hon. friend says is his intention. However, we can discuss that when the bill comes up, I do not wish to waste the time of the house now.

Resolution reported, read the second time and concurred in. Mr. Rinfret thereupon moved for leave to introduce Bill No. 33, to amend the Public Printing and Stationery Act.

Motion agreed to and bill read the first time.

NATIONAL BATTLEFIELDS COMMISSION

AUTHORIZATION OF ANNUAL GRANT OF $75,000

Hon. J. A. ROBB (Minister of Finance) moved that the house go into committee to consider the following proposed resolution:

That the Minister of Finance be authorized to pay to the National Battlefields Commission the sum of seventy-five thousand dollars a year for a period not exceeding ten years from the first day of April, 1928, to be expended by the commission for the purposes of and subject to the provisions of the act respecting the national battlefields at Quebec.

Motion agreed to and the house went into committee, Mr. Johnston in the chair.

Mr. BENNETT: The minister might give us an explanation of this.

Mr. ROBB: The National Battlefields Commission was created by act of parliament some years ago and since 1912 they have been receiving various sums annually.

Mr. BENNETT: What have they been getting from 1912 up?

Mr. ROBB: In 1912-13 they received $116,500; in 1913-14, $145,000; in 1914-15, $143,000; in 1915-16, $118,000. The grant dropped during the years of the war and last year they received $75,000. It has been represented to us that they would get along better if they knew every year just what they would receive, so that they might make their plans accordingly. They have made some arrangements regarding the Quebec battlefields. These will be enlarged and some new walks put in. The members of the battlefields commission are: Sir George Garneau, LL.D., Quebec; Hon. A. Turgeon, C.V.O., C.M.G., Quebec; Robert Bickerdike, Esq., Montreal; Hon. Senator T. Chapais, Quebec; N. A. Dussault, Esq., M.D., Quebec; Hon. Wm. H. Price, Toronto; Hon. L. A. Taschereau, Quebec, and Dr. A. G. Doughty, Ottawa.

Resolution reported, read the second time and concurred in. Mr. Robb thereupon moved for leave to introduce Bill No. 34, respecting the National Battlefields at Quebec.

Motion agreed to and bill read the first time.

LOAN OF $500,000,000

REDEMPTION OF LOANS AND PURCHASE OF UNMATURED SECURITIES

Hon. J. A. ROBB (Minister of Finance) moved that the house go into committee to consider the following proposed resolution:

Resolved, that the governor in council be authorized to raise by way of loan under the provisions of the Consolidated Revenue and Audit Act such sum or sums of money as may be required, not to exceed in the whole the sum of five hundred million dollars, for paying or redeeming the whole or any portion of loans or obligations of Canada and for purchasing and withdrawing from circulation unmatured securities of Canada; the principal and interest to be charged upon and payable out of the consolidated revenue fund.

Mr. BENNETT: Explanation, please; we do not want to agree to the principle of it.

Mr. ROBB: The government have maturing in 1933 $446,000,000 odd and in 1934 $535,000,000 odd; between those dates we have other and smaller maturities.

Mr. BENNETT: Can you give the amounts?

Mr. ROBB: We have:

In 1928..	$53,000,000
1929..	60,000,000
1930..	65,000,000
1931..	77,000,000
1932..	73,000,000

I have given the round numbers. The leader of the opposition especially knows that these maturities carry a rather high rate of interest.

Mr. BENNETT: Some are tax-exempt.

Mr. ROBB: We expect, if the revenues are maintained and we practise reasonable economy, to retire part, through cash, and our hope is all, of the maturities, up to 1933. Money is cheap in the markets of the world to-day, and I am advised by financiers that it will be a good time, within perhaps the present year or next year, to do some re-financing and get these high rates of interest out of the way as well as the bonds that are exempt from income tax. The committee knows that we cannot do this without authority. I welcome this opportunity of saying—because I do not wish to be bombarded by bond brokers during the session—that it is not the intention of the government immediately to take advantage of the powers which we shall receive from parliament. When we have time to do so we shall work out a plan which we believe will save the country a considerable rate of interest; and it will possibly satisfy many bondholders if we can re-finance by giving them other maturities of a longer term. That is the situation, and that is why we ask this authority from parliament.

Mr. BENNETT: We can discuss the matter in committee, because there are certain observations that should be made on the question.

Motion agreed to and the house went into committee, Mr. Johnston in the chair.

Progress reported.

At six o'clock the house took recess.

After Recess.

The house resumed at eight o'clock.

PRIVATE BILLS

SECOND READINGS

Bill No. 15, respecting certain patent applications of William H. Millspaugh.—Mr. Jacobs.

Bill No. 16, respecting certain patent applications owned by The British Steel Piling Company, Limited.—Mr. Jacobs.

Bill No. 18, respecting a certain patent owned by Canadian Cinch Anchoring Systems, Limited.—Mr. Jacobs.

Bill No. 24, to incorporate the Highwood Western Railway Company.—Mr. Coote.

Bill No. 25, to incorporate Niagara Gorge Bridge Company.—Mr. Hay.

NIAGARA FALLS MEMORIAL BRIDGE COMPANY

Mr. G. H. PETTIT (Welland) moved the second reading of Bill No. 14, to incorporate the Niagara Falls Memorial Bridge Company.

Mr. SPEAKER: I must inform the house that as yet the committees have not been struck, but we might follow the practice in England, where bills are referred by anticipation to the committees to be struck. Is that the pleasure of the house? Carried.

Hon. R. B. BENNETT (Leader of the Opposition): Mr. Speaker, it would seem to me that instead of being referred to the standing committee on miscellaneous private bills this bill should go to the committee on railways and canals, because it deals with railways and the Railway Act is applicable to a certain extent.

Mr. PETTIT: This bill came before the private bills committee last year, and that would seem to be the proper committee.

Mr. SPEAKER: I think under the circumstances the point taken by the leader of the opposition is a good one, and this bill should be referred to the select standing committee on railways, canals and telegraph lines.

Motion agreed to, bill read the second time and referred to the select standing committee on railways, canals and telegraph lines.

ST. CLAIR TRANSIT COMPANY

Mr. W. T. GOODISON (West Lambton) moved the second reading of Bill No. 23, to incorporate the St. Clair Transit Company.

Hon. R. B. BENNETT (Leader of the Opposition): This would seem to be another bill which should be referred to the committee on railways and canals rather than the committee on miscellaneous private bills.

Mr. SPEAKER: That would seem to be right.

Hon. LUCIEN CANNON (Solicitor General): A bill similar to this was considered by the committee on miscellaneous private bills last year.

Mr. SPEAKER: Perhaps if the objects of the bill were explained we would know the committee to which it should be referred.

Mr. GOODISON: The object of the bill is to incorporate a company to build a bridge across the St. Clair river between the cities of Sarnia, Ontario, and Port Huron, Michigan.

Mr. SPEAKER: Under the circumstances I think it should be referred to the committee on railways, canals and telegraph lines.

Motion agreed to, bill read the second time and referred to the select standing committee on railways, canals and telegraph lines.

ELECTRICITY AND FLUID EXPORTATION

LICENSES FOR EXPORT OF ELECTRICAL POWER OR ENERGY

On the order for the second reading of Bill No. 2, to regulate the exportation of electric power.—Mr. Stewart (Leeds).

Hon. R. B. BENNETT (Leader of the Opposition): May I, on behalf of the hon. member for Leeds, move the second reading of this bill?

Mr. LAPOINTE: The sponsor of the bill should be present to explain it.

Mr. BENNETT: I can explain it. The bill provides that the power which is now vested in the governor in council with respect to grants of licenses for the exportation of electric energy shall be vested in parliament and not in the governor in council. Shortly that is the whole purport of the bill.

Mr. SPEAKER: In the absence of Mr. Stewart (Leeds), Mr. Bennett, seconded by Mr. MacDonald (South Cape Breton) moves that Bill No. 2, to regulate the exportation of electric power, be now read a second time.

Hon. CHARLES STEWART (Minister of the Interior): This is rather an important bill. I am not rising to object particularly to the bill, but it is one that, I think, we should be given an opportunity to study before we enter into active discussion on it, and I would suggest that my hon. friend let it stand in order to give us that opportunity.

Mr. BENNETT: The difficulty is that it might never be reached again. I appreciate the point taken by the Minister of the Interior. The bill could go to the committee of the whole house and there it could be dealt with on the understanding, if need be, that the house was not committing itself to the principle of the bill.

Mr. STEWART (Edmonton): That is the difficulty.

Mr. BENNETT: I am moving the second reading now for the hon. member for Leeds, who realizes that, unless this is done now, he may never have another opportunity this session. That has frequently happened, and I think the subject matter of the bill is well worthy of consideration by this house because it involves questions of first-rate importance, although it is true there are conflicting opinions with regard to the matter. There is, however, a general tendency towards believing that, with respect to the exportation of electric energy, parliament should be consulted because of unfortunate incidents that sometimes arise by reason of such licenses being granted, and then when the power may be required by domestic purposes at home, it is found that there have been created abroad vested interests of such a character that the cancellation of the license is regarded as an unfriendly act. Parliament, therefore, should consider these matters in every detail before a license is granted. I should like if possible, on behalf of the hon. member for Leeds, to advance the bill to that extent on the understanding that the house in committee will deal with the principle of the measure because, after all, if the house in committee kills the measure, that is the end of it.

Hon. JAMES MALCOLM (Minister of Trade and Commerce): As the exportation of gas and electricity is handled by my department, I am more or less interested in this bill and I should prefer to have the sponsor of the bill here to make some explanations as to its importance. It is quite true that, as the leader of the opposition says, the bill takes from the governor in council and hands to parliament the power to control the exportation of electricity, but I do not think any hon. member realizes more than does the leader of the opposition that parliament cannot always control the exportation of elec-

tricity. From time to time such exceptions arise where the quantity involved is not great and, in fact, we have have had an exception of this kind in the last two months. During the time of the Vermont flood, power was cut off from that state, and it was absolutely essential—in fact at the request of the premier of New Brunswick that a temporary slight increase should be granted in the amount of power exported from New Brunswick to that neighbouring state. I contend that parliament could not have been called to deal with that emergency.

Mr. BENNETT: That could be covered by the bill.

Mr. MALCOLM: I can hardly see how it is covered by the bill or I would have been willing to let the bill proceed. I had hoped that the sponsor was going to explain how he would handle several emergencies that might arise and make his bill non-effective. I would ask the leader of the opposition to let this bill stand and I will do everything I can to have it come up again, because I realize its importance.

Mr. BENNETT: That is all that can be fairly said by anyone. I fully appreciate my hon. friend's position.

Motion stands.

CIVIL SERVICE ACT AMENDMENT

CIVIL SERVICE COUNCILS

Mr. J. S. WOODSWORTH (Winnipeg North Centre) moved the second reading of Bill No. 4, to amend the Civil Service Act.

Right Hon. W. L. MACKENZIE KING (Prime Minister): If my hon. friend in whose name this bill stands would have no objection to its going to the committee on industrial and international relations in order to be reported on by that committee before it is passed by the house, the government would have no objection to the second reading.

Motion agreed to, bill read the second time and referred to the committee on industrial and international relations.

CRIMINAL CODE AMENDMENT

PROPOSED REPEAL OF SECTION 198, RESPECTING BLASPHEMOUS LIBEL

Mr. J. S. WOODSWORTH (Winnipeg North Centre) moved the second reading of Bill No. 5, to amend the criminal code.

[Mr. Malcolm.]

Mr. LAPOINTE: I would like my hon. friend to give explanations of his purpose in amending this section.

Mr. WOODSWORTH: This piece of legislation has come down to us from a very early date. It has rarely been used in England and, so far as we can discover, it has been used only once in Canada, namely, last year, when for the first time most people in this country realized that such a law was on the statute books. It was then used in the case of Ernest V. Sterry, of the city of Toronto, who was charged with blasphemy on the ground of his having written an article entitled "The Jewish God". In connection with the trial Judge Coatsworth made the following statements which, I think, will give us some idea of the interpretation which may be placed upon this statute:

> The Bible, the holy scriptures, are to us the revelation of God's will concerning us and all His people. We look upon the Bible as the basis of every good law in our country.

In the light of some of the recent controversies we might very well ask: Which Bible? Judge Coatsworth continues:

> When a man begins to express his opinions in a way that hurts others then he should be curbed whether his opinions are right or wrong.

I submit, Mr. Speaker, that that goes too far if we are to have any liberty in the expression of opinion in this country. Judge Coatsworth's interpretation is:

> When a man begins to express his opinion in a way that hurts others, then he should be curbed whether his opinions are right or wrong.

I may say that after I introduced this bill last year, I received a number of communications endorsing the measure which I proposed, a great many of them coming from clergymen of various denominations who felt that it was not at all necessary in order to protect religion that this legislation as it now stands should continue on the statute books. Articles of protest were written at the time, and perhaps one of the best was that by a Toronto Jewish rabbi. As the Jewish people were the people who might be supposed to be most offended by the blasphemy, since it was concerning the Jewish god, possibly I may be permitted to read just two or three paragraphs from this defence of Mr. Sterry. Rabbi Isserman refers to the old Jewish idea of blasphemy. Going back to the early days, he states:

> Because of this power of names, the ancient Israelite never pronounced the name of God.

That was the beginning of the idea. The name of God itself was so sacred that it

could not be pronounced, and hence anybody who in any way said anything concerning the God of that day was regarded as a blasphemer. Further than that, there were at that time certain social implications. As this writer says:

> Blaspheming his name, which meant besmirching his character, made the deity very angry, and man therefore hastened to punish the offender in order to mollify the righteous anger of God. For the whole tribe would be held to account for one man's unpunished offence against God.

It was out of that atmosphere that the idea in regard to blasphemy evolved. The writer of this article then goes on to trace the gradual evolution of the idea of God. He says:

> The God whom men feel desires the death of the blasphemer has been supplanted and displaced in the history of Israel.

Again:

> For this narrow and limited idea of God represents a stage in the evolution of religion. It represents an epoch in man's growing and evolving consciousness of God.

Again:

> It is incorrect to speak of the God idea of the Bible—for the Bible reveals many concepts about God.

Again:

> Organized religion need not fear the attacks of unbelievers. It has capable spokesmen. It has excellent organization. It has public opinion and the press to aid it. It has funds at its disposal. It has printing presses and authors and thinkers who are ready to break lances in its behalf. It will weather all attacks. It may purge itself when necessary, but it will endure and no pious people need fear any one publication or any one group of heretics.

He concludes with these words, which I commend to the house:

> And, truly, I do not believe that words blaspheme the Deity—but rather deeds. Injustice is blasphemy. Prejudice is blasphemy. War is blasphemy. Poverty is blasphemy. Persecution is blasphemy. Evil in life and deed, and not in word, is blasphemy. The God of to-day is pained, not by words, but by acts, and as I look on the history of humanity, the greatest blasphemies that I know of were committed by men dedicated to God, who though walking with psalms on their lips and symbols of God in their hands, kindled the faggots which burnt the heretical blasphemers. That was real blasphemy—men dedicated to love burning in the name of God a fellow human created in His image. And from such blasphemy may all of us be protected and saved.

I think, Mr. Speaker, perhaps the spirit of a Jewish rabbi, who might have been expected to have been the most offended by the article in question may very well be emulated by the public at large in regard to a matter of this kind. One of the difficulties with this legislation as it now stands is that there is no definition of blasphemy. The beliefs of one religious group are undoubtedly blasphemies in the eyes of other groups. I wonder if I may recall to the minds of some members of the house the thirty-nine articles of the Church of England. In the thirty-first article I read this:

> Wherefore the sacrifices of Masses, in the which it was commonly said, that the priest did offer Christ for the quick and the dead, to have remission of pain or guilt, were blasphemous fables, and dangerous deceits.

I submit, Mr. Speaker, that a man ought to be able to hold in this country his opinion with regard to masses without being in danger of being charged before the courts with blasphemy.

Mr. GEARY: So he can; he can hold any opinion he likes.

Mr. WOODSWORTH: He cannot hold these views because he may express them and it may hurt others. That is the point.

Mr. GEARY: The hon. member is reciting from a judgment that has nothing whatever to do with the decision in the case.

Mr. WOODSWORTH: I am giving the interpretation that may be given, and that has been given. I would say that undoubtedly many of the beliefs held by the Jews are blasphemies in the eyes of a Christian, that many of the beliefs held by Christians are blasphemies in the eyes of the Jews. We have in Alberta the sect of the Mormons, and there was some amendment made to their incorporation by this parliament a year or so ago. Many of their beliefs are absolutely blasphemous in the eyes of orthodox Christians. The rationalists, of whom Sterry was one, undoubtedly hold beliefs that are considered blasphemies in the eyes of orthodox Christians. The religious beliefs of Catholics are considered blasphemies by those who are responsible for the prayer book.

An hon. MEMBER: Oh, no.

Mr. WOODSWORTH: While my friend may be an authority upon law, he may not be an equally good authority on ecclesiastical matters. The views held by the modernists are undoubtedly blasphemies in the eyes of the fundamentalists, and the views of the fundamentalists are blasphemies in the opinion of the modernists. I need not recall to this house that in his day Socrates was accused of blasphemy, and even Jesus of Nazareth was accused of blasphemy by his orthodox contemporaries.

I submit, without going into this matter any more fully—perhaps already I have dealt with it further than is necessary—that it is not desirable for us to retain on the statute books a law of this character. As I said previously it has been invoked only once in the history of Canada. It stands, however, as a menace to the free expression of religious opinion. I know there is a safeguarding clause here which says:

Provided that no one is guilty of a blasphemous libel for expressing in good faith and in decent language, or attempting to establish by arguments used in good faith and conveyed in decent language, any opinion whatever upon any religious subject.

The article in question, which I have read carefully, is no more extreme than many articles which are written, in perhaps less popular language, in the theological journals of a great many bodies that are carrying on religious work here in Canada. This man Sterry may have been infelicitous in his way of expressing himself, but I repeat that it is dangerous to leave on the statute books a law which may be invoked against an individual for expressing himself along religious lines.

Hon. ERNEST LAPOINTE (Minister of Justice): The section which the hon. gentleman wishes to repeal reads as follows:

Every one is guilty of an indictable offence and liable to one year's imprisonment who publishes any blasphemous libel.

(2) Whether any particular published matter is a blasphemous libel or not is a question of fact: Provided that no one is guilty of a blasphemous libel for expressing in good faith and in decent language, or attempting to establish by arguments used in good faith and conveyed in decent language, any opinion whatever upon any religious subject.

That section is pretty broad. Perhaps my hon. friend does not realize what would be the effect of this bill if it were adopted into law. Our criminal code is in large part a codification of the common law, but it is specially provided that the common law still exists in respect to cases which are not provided for in the code. The repeal of the section to which my hon. friend has reference would not have the effect of repealing the common law, and under the common law those gentlemen whom my hon. friend desires to protect would be prosecuted more severely than under the code. The provisions of the code are rather a modification of the common law by making it less strict and less severe than it would be if this section were repealed. The house must see by the language of the section that any opinion may be freely expressed on any religious subject provided that nothing is said which would really constitute an outrageous reflection upon the religious feeling of the community. After all, this is the law in most countries. It is the law in England; it is the law in the United States of America, and I do not think we should be so anxious to protect people who really want to offend what is the religious feeling of the people of Canada. This is a Christian country, and with all the freedom of speech we have, of which I am myself an advocate, I do not think that this section in either code has worked any injury. I do not know the circumstances of the case my hon. friend mentions, which seems to have been the cause of the present bill, but if the verdict in that case was strict, as does occasionally happen, that does not mean that the law is necessarily wrong. I understand the case was appealed from the decision of the magistrate to the appellate division of the high court of Ontario, and that the verdict and sentence were affirmed. I should certainly not be disposed to accept this bill and I will vote against the second reading, because I am opposed to the principle.

Mr. G. R. GEARY (South Toronto): It is so seldom that I have been able to associate myself fully with the Minister of Justice (Mr. Lapointe), that I do it now with a great deal of pleasure. I agree with all he has said. The case arose in Toronto, and it speaks well for the Canadian people that there has been only one occasion where a man has been charged under that particular section of the code. As the Minister of Justice has said, there is no limit to free speech and free discussion of religious belief from any aspect or point of view whatever in this Dominion, so long as it is properly done. But when a man goes the length of writing the article which is complained of in the prosecution to which my hon. friend refers, it is well that we have on the statute books of the country a provision which forbids such a thing and punishes the man who attempts to do it. I do not think my hon. friend would be very well pleased to read the article or to associate himself with the statements made in it.

Mr. WOODSWORTH: I have read the article.

Mr. GEARY: Aloud, I mean.

Mr. WOODSWORTH: I should be glad to read it.

Mr. GEARY: I should be sorry to hear that the hon. member would be glad to use the language contained in it.

Mr. WOODSWORTH: No, I would not myself use that language, but I am willing to

read aloud the article. I think the sentiments expressed are those that were being taught in a great many theological institutions of the country.

Mr. GEARY: Then will my hon. friend tell me why he objects to the legislation on the statute book? It is only aimed at the way things are said. Things can be said in decent language and discussed properly as decent men discuss these matters, and there is no law on the statute book to prevent it. It is only when it is done in the sort of way it was done in this case that the criminal code punishes the man who does it.

Mr. ADSHEAD: As the seconder of the motion for the second reading of the bill I might say a word. The argument of the Minister of Justice (Mr. Lapointe) would go to show that this section ought to be repealed, because if I heard him correctly he stated that if the section were repealed the penalties under the common law would be much more severe than under the code. Then would it not be better to repeal the section and have the common law in force, which would punish a man more severely?

Mr. LAPOINTE: That was not the purpose of the bill.

Mr. T. W. BIRD (Nelson): In order to protect my hon. friend from Winnipeg North Centre (Mr. Woodsworth) from any unjust reflection, I intend on his behalf to read this article and to make a comment. The article is taken from a publication known as the Christian Inquirer, a publication I do not know anything about.

Mr. BENNETT: I rise to a point of order. Having regard to the rules of parliament, should we have read in the house an article which has been held by the court to be a blasphemous libel?

Mr. SPEAKER: How can I decide the point when I have not heard the article read? I am informed that it has been decided that a certain theory was held to be blasphemous; the case came before the court, and the court sustained the charge. I am also informed that there was an appeal, and I am told the appeal was dismissed. But we are also a tribunal; this is the highest court in the land. Perhaps my hon. friend has reference to something else.

Mr. BENNETT: In the British parliament the word "damn" has been held under their rules to be unparliamentary—it was held to be improperly used. When the courts of the country have decided that a matter is blasphemous—and admittedly what is asked to be read is an article that was so held to be blasphemous—I think we come within the rules that exclude that form of language from being placed upon Hansard. I just wish to turn up the rule in respect of words that may be considered objectionable.

Mr. SPEAKER: Before the hon. gentleman proceeds, I should like to hear the authorities on this point. Would he mind letting me have the so-called blasphemous libel for perusal?

Mr. BIRD: Mr. Speaker, I am not reading this as an expression of my own opinion; I am going to read it for the edification of the Commons and—

Some MEMBERS: Order.

Mr. SPEAKER: I am asking the hon. gentleman to facilitate my task. I am informed that this article has been declared by the courts to be a blasphemy, and objection is taken now to its being read to the house by reason of its having been so declared. Now, if the hon. gentleman would let me have the corpus delicti I would be in a position to pronounce upon it. I do not say that I would declare it to be out of order.

Mr. BIRD: Mr. Speaker, I was insisting on reading the article so that I might relieve you of the responsibility of saying whether it is blasphemous.

Mr. SPEAKER: Before the hon. gentleman proceeds, I should like to hear what the hon. leader of the opposition has to say with respect to the objection he took a moment ago. Perhaps he has his authorities now to quote to the house.

Mr. BIRD: Perhaps I might fill up the time by saying—

Mr. BENNETT: Mr. Speaker, standing order 41 deals with questions of decorum:

> No member shall speak disrespectfully of His Majesty, nor of any of the royal family; nor of the governor or person administering the government of Canada; nor use offensive words against either house or against any member thereof. No member may reflect upon any vote of the house, except for the purpose of moving that such vote be rescinded.

That will be found on page 95 of Beauchesne's Parliamentary Rules and Forms, second edition. Then follows a long list of references that had been held objectionable up to 1899. I had not looked up the rule when I made my observations. On page 101 the character of the language that a member may use is dealt with. I make

this objection on behalf of what I consider to be the traditions of this house and of parliament. I am only the leader of the opposition, and I leave it to the leader of the house and those who comprise the majority to make any observations they may please with respect to this matter.

Mr. McGIBBON: Surely, Mr. Speaker, the Prime Minister will have something to say.

Mr. DUNNING: You are in a hole, and want us to get you out of it.

Mr. McGIBBON: Oh no.

Mr. MACKENZIE KING: I have every confidence in the judgment of Mr. Speaker on a matter of this kind.

Mr. BIRD: I might proceed by saying that I have perused the article in question, and whether I am allowed to read it or not, I think I cannot be prevented from giving my opinion—

Mr. LAPOINTE: Hear, hear.

Mr. BIRD: —as to its blasphemous character.

Mr. BENNETT: Hear, hear.

Mr. BIRD: Now, I take part in this discussion in order to protect my friend from Winnipeg North Centre (Mr. Woodsworth) from what I consider to be the unjust objection of my friend from South Toronto (Mr. Geary) in trying to leave the impression that he was defending something that is monstrous.

Mr. GEARY: Mr. Speaker, may I rise to a point of order? I do not care particularly what my hon. friend thinks of this article, but I wish to say again that I do not think my friend from Winnipeg North Centre would like to read the article aloud, and I do not think it would sound any better if my friend from Nelson (Mr. Bird) undertook to do so.

Mr. BIRD: Well then, my hon. friend is content to take it either way.

Mr. GEARY: He does not need to.

Mr. BIRD: It is open to me to give my opinion whether it is a nice thing to do or not. He is not the sole judge of decorum in this house.

Mr. SPEAKER: Before the hon. gentleman proceeds, let me say that I do not think the point of order is well taken. True, in footnote (c) to standing order 41 it is said that:

A member while speaking must not refer to any matter on which a judicial decision is pending.

[Mr. Bennett.]

The footnote is based on May, page 296. But in the present case a judicial decision is not pending; it has been rendered; and there is no power to prevent parliament passing legislation after a judgment has been rendered to rectify what may be considered an injustice or an infringement of individual liberty by such judgment. I may say that I have read the article, and although to me personally it is highly objectionable, yet this is the temple of freedom of speech. And I hope every hon. member will understand the meaning I attach to the other words that I am about to utter: This is not only the temple of freedom of speech, it is the temple of freedom of thought. I cannot prevent an hon. member from expressing his views even on a matter of this nature if he honestly and decently expresses those views. Under the circumstances I think I should give the broadest freedom possible to any member who brings before the house a subject of the nature of that now in question.

Mr. BIRD: Mr. Speaker, I want it to be clearly understood that I hold no brief for the language of the article, nor for the views behind that language. I may say also that out of deference to what seems to be the view of a large section of the house I have no intention now of reading the article; but I will refer to it and try to give to the house what I consider to be a fair account of its tenor.

Mr. SPEAKER: I had forgotten to say this in support of my ruling. The house is familiar with the famous Bradlaugh case. From time immemorial in the House of Commons in England no member after having been enrolled could take his seat without subscribing to a certain oath. Mr. Bradlaugh came, not once, not twice, but I think three times to the table of the clerk of the House of Commons and positively refused to take the oath. The same thing occurred in the case of Daniel O'Connell fifty years before. In his case the law was amended. It was also amended in the case of Mr. Bradlaugh. I cite the Bradlaugh case because Mr. Bradlaugh did not believe at all in what constituted the oath. He was an atheist. To-day in England free-thinkers as well as believers can take their seat and declare what they believe in. I think the law was also amended to meet the conscientious objections of Quaker members of the British Commons. I simply state these cases to show that the greatest freedom of speech and freedom of thought exists under British institutions.

Mr. BENNETT: Mr. Speaker, I desire to point out to you—

Mr. BIRD: Mr. Speaker, I—

Mr. BENNETT: I am speaking to the question of order. Mr. Bradlaugh was acquitted on a charge of blasphemous libel.

Mr. BIRD: I had the floor before, Mr. Speaker.

Mr. SPEAKER: Order.

Mr. BENNETT: In Mr. Bradlaugh's case the rules of the house required that the oath should be taken. He declined to take that oath; there was nothing analogous to this case in that, but he was subsequently brought before the courts and Lord Coleridge summed up the whole situation. I merely refresh your honour's memory with respect to the Bradlaugh case; there is nothing analogous to this at all. Standing at the bar of the house he declined to take the oath because he said he was an atheist and was not bound by any oath. The rules of the house required that he take an oath and he declined to do so.

Mr. SPEAKER: The rules were amended accordingly.

Mr. BENNETT: No, there was a statute enacted.

Mr. BIRD: If I may be allowed to do so I will now finish what I started to say. This article is a burlesque on the story of creation; true, it is expressed in rather vulgar language, but the house can take it from me that this article expresses the story in a manner not more disrespectful than the language you might hear at any society tea table throughout this country. It is becoming customary to speak of that story with more or less disrespect. This gentleman, whoever he is, has followed the example of his betters; he has undertaken to criticize that story in a manner which, as I have said, makes his article something of a burlesque, but not one bit worse than the discussions of men who are supposed to be more respectable than he is. I could go to almost any theological college in Canada and find professors of Old Testament history who give, during their lectures, an account of the story of creation not one whit more respectable than this article. They might use more polite language, more scholarly and erudite expressions, but it would be no different in meaning. This unfortunate man happily does not belong to the elite; he is apparently some rough-mannered, long-haired individual who jumps on a soap box somewhere in the holy city of Toronto, which stands four-square against the waves of heterodoxy sweeping over the country, a city hallowed by its staunch support of all that is orthodox and traditional both in fiscal theory and in biblical belief.

A great deal of fuss has been made about nothing; this theory of creation given in this article is commonly held from one end of Canada to the other. It is taught in our Sunday schools and in our day schools in language which is perhaps a little more correct, yet my hon. friend thinks it terrible, and warns the hon. member for Winnipeg North Centre and myself not to read it. I can tell him that I have read it with great gusto. I was also pleasantly surprised to find how sensitive the hon. leader of the opposition is for the traditions and faith of the house; he even interrupted me in the little time I had at my disposal to deal with this matter.

Mr. W. G. ERNST (Queens-Lunenburg): Mr. Speaker, I would like to make just one observation. The hon. member who brought this bill before the house quoted in support of it articles of certain faiths. I sent out for the standard work on criminal law in Canada, Crankshaw's Criminal Code, and turned up the section in question. The Minister of Justice (Mr. Lapointe) has already read it, but I would like to read just one or two comments which appear under that section. The first of these will be found on page 203 of the 1924 edition:

> A blasphemous libel consists in the publication of any profane words vilifying or ridiculing God, Jesus Christ, the Holy Ghost, the Old or New Testament or Christianity in general, with intent to shock and insult believers, or to pervert or mislead the ignorant and unwary; and if a publication be "full of scurrilous and opprobrious language, if sacred subjects are treated with levity, if indiscriminate abuse is employed instead of argument, then a design to wound the religious feelings of others may be readily inferred. But where the work is free from all offensive levity, abuse and sophistry, and, in fact, the honest and temperate expression of religious opinions conscientiously held and avowed, it is not a blasphemous libel.

I pass on merely to read one quotation from a judgment of Lord Coleridge, who was Lord Chief Justice of England, in the case of the King against Ramsay and Foote, in which he said:

> If the decencies of controversy are observed, even the fundamentals of religion may be attacked, without a person being guilty of blasphemous libel.

That is the law which this amendment is designed to change.

Motion (Mr. Woodsworth) negatived.

LOAN OF $500,000,000

REDEMPTION OF LOANS AND PURCHASE OF UNMATURED SECURITIES

The House resumed consideration in committee of the following proposed resolution, Mr. Johnston in the chair:

Resolved, that the Governor in Council be authorized to raise by way of loan under the provisions of the Consolidated Revenue and Audit Act such sum or sums of money as may be required, not to exceed in the whole the sum of five hundred million dollars, for paying or redeeming the whole or any portion of loans or obligations of Canada and for purchasing and withdrawing from circulation unmatured securities of Canada; the principal and interest to be charged upon and payable out of the consolidated revenue fund.

Mr. GUTHRIE: May we have some explanation?

Mr. ROBB: I gave the explanation before six o'clock.

Mr. BENNETT: There is a very great deal to be said with respect to this matter, because it is involved in the application of a principle which has been applied on several occasions in Great Britain, but I shall not endeavour to discuss the matter to-night. I will reserve my criticism and suggestions for the second reading of the bill, without in any sense concurring in the resolution now before the house.

Mr. IRVINE: Just as a matter of information I wish the Minister of Finance would inform the committee how he proposes to borrow money, say next year, at a rate of interest which may range from one per cent to four per cent, to retire bonds paying five and one-half per cent in 1932 or 1933, as the case may be, without losing money? I do not see how it can be done.

Mr. ROBB: That is quite a reasonable question, Mr. Chairman, and if we find that at the rates of interest which are suggested we cannot convert these outstanding bonds, we will not do it. I think the record of the government goes to show that any re-financing has always been done at a low rate of interest, and that will be the policy followed in this case. We are simply asking parliament to give us the authority so that if we find it possible to convert these outstanding loans at a rate of interest sufficiently low to save the country something on the interest, we will do so. We are told by financial men from time to time that there are frequent transactions going through their books involving these outstanding bonds, and we are advised that by a refunding arrangement, enabling people who hold these outstanding bonds now at a high rate of interest to refund them, we will save money. Let me say now that we will try to provide in future that in loans of this magnitude it will be possible for the Minister of Finance to call in these bonds, if he finds the market so working that it will be to the advantage of the country to do so, and refund them again at a low rate of interest.

Mr. GARDINER: Before six o'clock the minister gave us various items which were to be refunded in the next few years. I believe the first large item was about $446,000,000, due in 1933, and in 1934 we have another large sum of about $511,000,000. The other figures given by the minister ranged from $53,000,000 to $73,000,000, in different issues, and he also made the statement that he expected to pay the smaller bond issues in cash up to 1932. In view of the fact that the real refunding will be in connection with the larger loans, is it within the power of the minister to call in those issues before they mature, and pay them off or refund them? I suppose that would be a question of bargaining, but I would like the minister to explain the situation.

Mr. ROBB: We have no authority to say to my hon. friend or to any other person holding these bonds, "Bring in your bonds and we will give you cash for them." We believe, however, that we can put a price on them which will be attractive and which will permit us to refund them at a rate of interest which will result in a saving to the country.

Mr. IRVINE: Could the minister give us any idea as to where these bonds are held?

Mr. ROBB: No, I have no idea where these particular bonds are held, but I can give the house information as to the bonds payable outside of Canada. Between 1929 and 1952 there are payable in New York bonds to the value of about $225,874,000, while there are bonds maturing in London between 1934 and 1960, inclusive, amounting to $311,668,138.39. The debt of the country is largely held in Canada.

Mr. IRVINE: May I ask if any portion of the bonds which the minister contemplates retiring by this loan are tax free bonds?

Mr. ROBB: That information is not on record; I have just sent out for it, but there is a considerable proportion of these bonds which are tax free.

Mr. MATTHEWS: The 1933 bonds are tax free, while the 1934 bonds are taxable.

Mr. GARDINER: Has the minister any information as to where these different issues were floated, whether in Canada or abroad?

Mr. ROBB: Most of them are payable in Canada; some are payable in New York while some are payable in both Canada and New York. In New York we have $60,000,000 due in 1929; in 1931 we have $25,000,000 due; in 1935 we have $874,000 due in Canada and New York; in 1936 we have $40,000,000 due, and in 1952 we have an issue amounting to $100,000,000. The rest are all payable in Canada, with the exception of a loan of $45,000,000 maturing in 1930, which is payable in New York and Canada. Let me repeat that we hope to be able to retire out of revenue, without going into the market, the maturities of 1928, amounting to $53,000,000; the maturities of 1930 amounting to $65,000,000, the maturities of 1931 amounting to $52,000,000 and those of 1932 amounting to $73,000,000, but it is too much to expect the Canadian people to take care of the larger maturities of 1933, although they may take care of them in part.

Mr. MATTHEWS: I believe I can answer the question which was asked by my hon. friend. The 1933 issue is payable in Canada only; it is non-taxable and is apparently the issue which this $500,000,000 is intended to retire. That issue is not payable anywhere except in Canada.

Mr. IRVINE: Mr. Chairman, at the risk of making myself appear ridiculous to hon. members of this house who may claim to be high financiers, I desire to offer just one suggestion which I have made to the minister on previous occasions, but which I regret to say he has not as yet seen fit to accept. I do not believe we will have a better opportunity than the present to take over our own bonds. When all is said and done, the bonds which will be issued for this loan of $500 000,000 will be issued against the credit of Canada. I care not if the minister has to go to New York to get the loan, he will have to take Canada in his pocket; he will have to deposit Canada in Wall street and go to the front door to borrow back a portion of Canada at 4 per cent or 5 per cent as the case may be. I am still at a loss to know why that credit, which is good enough for Wall street, is not good enough for Canada, and I still wait for the minister to answer the question.

Mr. ROBB: I do not want to be discourteous to my friend, but I repeat that the debt of Canada is largely held by Canadians, and in this refunding operation we propose to give Canadians the preference. But I say to the bond men and to the bankers of Canada that they will have to meet the rates of the world to get the business, or we will go elsewhere.

Resolution reported, read the second time and concurred in. Mr. Robb thereupon moved for leave to introduce Bill No. 35, to authorize the raising, by way of loan, of certain sums of money for the public service.

Motion agreed to and bill read the first time.

DOMINION NOTES ACT AMENDMENT

ADDITIONAL BRANCH OFFICES FOR REDEMPTION OF DOMINION NOTES

Hon. J. A. ROBB (Minister of Finance) moved that the house go into committee to consider the following proposed resolution:

That the Dominion Notes Act be amended to provide that the governor in council may establish branch offices of the Department of Finance for the redemption of Dominion notes (in addition to those already authorized), at such other place or places in Canada as the governor in Council, on the recommendation of the treasury board, may authorize.

Mr. BENNETT: Explain.

Mr. ROBB: The statute as it stands at present limits the power to open offices at places designated in the statute. The object of this resolution is to authorize the governor in council to establish additional assistant receiver general's offices as the increased business of the country may require.

Motion agreed to and the house went into committee, Mr. Johnston in the chair.

Mr. BENNETT: What is the real necessity for this? For years the work has been done in this way with offices at Toronto, Montreal, Halifax, St. John, Winnipeg, Victoria, Calgary.

Mr. ROBB: Charlottetown, Regina.

Mr. BENNETT: Yes, one in each province, and Dominion of Canada notes and coupons are all payable at those points. Now the government proposes to create other ones at additional expense for buildings and office staffs; further difficulties will arise in connection with claims for the redemption of our standard securities which are payable at any offices of the receiver general, and added charges will be made by the banks for services

thus rendered. Is there a demand for this, and from whom does it come? The committee has a right to know.

Mr. ROBB: There is some demand from business interests in different parts of the country.

Mr. BENNETT: Where?

Mr. ROBB: I might as well be frank with my hon. friend. In British Columbia they say it is not convenient for large business firms to go over to Victoria, to transact this business.

Mr. BENNETT: I agree with my hon. friend. When the Bank Act was revised on the last occasion, I was in the house and a discussion took place as between Victoria and Vancouver. I think it was stated at that time that, inasmuch as not very much difficulty was involved and there was a branch office at Victoria, there was no necessity for establishing one at Vancouver. All that is involved is whether they will carry these things round in their hands to an office which will cost a great deal of money or transmit them by a form they have to Victoria. In the United States they have no such numbers of branch offices as we have. The redemptions are made at the federal reserve branch banks and some states do not have them at all, as my hon. friend knows.

Mr. ROBB: My hon. friend seems to understand the matter quite well, but does he not realize that we have some obligations towards the business men of the country?

Mr. BENNETT: Surely.

Mr. ROBB: The business men of the country from time to time represent that this would be more convenient and they are particularly pressing out in British Columbia. My hon. friend must remember that this country is growing very rapidly.

Mr. BENNETT: The United States is somewhat larger.

Mr. ROBB: I think he can trust us not unduly to enlarge the expenditures of this department, which, in fact, has this year shown a reduction in the cost of administration.

Mr. GUTHRIE: Is this for the convenience of the business men as such, or the banks?

Mr. ROBB: Largely the banks.

[Mr. Bennett.]

Mr. GARDINER: This resolution states that it is necessary to create further offices for the redemption of Dominion notes. Would the minister tell us how this work is carried on, how these Dominion notes are redeemed, with what, and so forth?

Mr. ROBB: The offices of the assistant receivers general do exactly the same work as the head office in the capital of the country. The functions of these offices are to distribute to the banks Dominion notes and specie, to make advances to them under the provisions of the Finance Act and to act as registrars of notices of intention to give security under section 88 of the Bank Act. They also act as transfer agents in connection with the registration and de-registration of Dominion bonds. Principal and interest of government bonds and certain guaranteed issues of the Canadian National Railways are also payable at these offices.

Mr. BENNETT: It was asserted, rightly or wrongly, that to have more than one office in a province complicated the situation very greatly with respect to registration and de-registration of the very bonds that were mentioned and that, therefore, there should be only one in each province. In the province of Quebec, where very large business is transacted, it was suggested that there should be a transfer office at the city of Quebec as well as at the city of Montreal, and I recall all these discussions that took place. The banks, of course, would like to have one at every second door, but that is no reason why they should have one for their convenience and why this Dominion should go to the expense of establishing a second receiver general's office in any one province. If my hon. friend will pardon me I will take him through a transaction of this kind. The banks have a certain amount of legal tender which they carry and there are certain provisions with respect to the redemption of notes, but very few redemptions take place in outlying sections. All the banks do is to go to the receivers general's office when they require legal tender and they get it in bills of $500, $1,000, $10,000, $1 or $2; but, generally speaking, the banks carry them in their own treasury. Desirous as I am of assisting business, I cannot see how we are going to do that by going to the expense of establishing another receiver general's office. I think I know exactly why this is being done. It is for the purpose of giving a little

more convenience for some people who are affected and not for the business community at all. As surely as you put it on the statute books, the next week you will be called upon to implement your promise and then you will have to have another building, a deputy of the receiver general and another staff; you will have to put your silver and gold in that office and you will then have two offices that will serve no greater purpose than one. If the minister will go down to the receiver general's office in the city of Montreal he will see exactly what I mean. I have no doubt he has followed these transactions himself from day to day. They are very simple.

Mr. TOLMIE: It is no serious trouble to do business in the city of Victoria. The whole province of British Columbia does business there; it is the capital of the province. If we listened to all these demands, probably we should have to establish four or five more capitals throughout the country. There is an excellent steamboat service with the island, with two lines of boats running every day, boats as fine as any afloat. The people are accustomed to do their business there, and it is no more trouble to carry on this business in Victoria than if you had branches established elsewhere. In addition, I am quite sure that the moment you create this precedent in British Columbia you will have numerous demands of the same kind from other provinces.

Mr. GUTHRIE: While this office is called a branch office of the Department of Finance for the redemption of Dominion notes, is it not an office also for the issue of Dominion notes to the banks? Can the banks go to the receiver general's office and obtain Dominion currency?

Mr. ROBB: Yes, under the Finance Act, if they require money quickly they can get it there.

Mr. GUTHRIE: They can get it from the receiver general's office?

Mr. ROBB: Yes.

Mr. GUTHRIE: And when they obtain it, it is in the form of Dominion notes?

Mr. ROBB: Legals. We have made such progress to-day, Mr. Chairman, that I do not want to delay the business of the house at all. I am simply bringing this measure forward at the request of the business men of British Columbia.

Mr. BENNETT: The business men, or the banks?

Mr. ROBB: Yes, representing the business men of that province; and they say to me that Vancouver now has become one of the largest shipping ports in the world open all the year round. But if the representatives of British Columbia in this house do not want this additional service I will let the matter stand. I will not say that I will wipe it off the order paper. I move that the committee rise and report progress.

Mr. BENNETT: Edmonton wants an office too.

Mr. GUTHRIE: So does Guelph.

Progress reported.

ELECTRICITY INSPECTION ACT

Hon. JAMES MALCOLM (Minister of Trade and Commerce) moved that the house go into committee to consider the following proposed resolution:

That it is expedient to amend and revise the Electricity Inspection Act to bring it into conformity with the existing conditions in electricity, in regard to the commercial unit of supply, the units of electrical measure, inspection standards, the verification of meters, and other related matters, and to provide for the appointment of a director and such assistants as may be deemed necessary.

Motion agreed to and the house went into committee, Mr. Johnston in the chair.

Mr. BENNETT: Will the minister explain this resolution?

Mr. MALCOLM: During the past twenty years, as every member of the house knows, remarkable progress has been made in all electrical equipment, and the terms used in the Electricity Inspection Act of 1907 do not cover all the equipment in use to-day for the measurement of electricity. It is therefore proposed to revise the act. It is also proposed to amend the sections relating to the officers, to bring them under the terms of the Civil Service Act. It is proposed also to eliminate a number of sections that are considered to be beyond the power of the Dominion parliament, also to eliminate some sections that are obsolete. When we consider the bill section by section I am sure the house will realize that a good deal of the old bill is obsolete due to the rapid changes that have taken place in all things electrical.

Mr. BENNETT: What about standards?

Mr. MALCOLM: Electrical standards are provided for in the bill.

Mr. BENNETT: Where are they to be formed?

Mr. MALCOLM: We hope it will be here.

Mr. GARLAND (Bow River): I was not quite clear on one point. I note that provision is to be made for the appointment of a director and such assistants as may be deemed necessary. I presume these appointments will be made under the Civil Service Act.

Mr. MALCOLM: Yes.

Resolution reported, read the second time and concurred in. Mr. Malcolm thereupon moved for leave to introduce Bill No. 36, to amend and revise the Electricity Inspection Act.

Motion agreed to and bill read the first time.

CANTEEN FUNDS

Hon. J. L. RALSTON (Minister of National Defence) moved that the house go into committee to consider the following proposed resolution:

That it is expedient to provide for the disposition and allotment of the canteen funds which were accumulated during the war by certain units of the Canadian Expeditionary Force in Canada, the Canadian Siberian forces and by the forces stationed at St. Lucia (British West Indies), resulting from the profits of canteens and other like institutions operated by the several units and formations, and for the administration of the same by the provincial board of trustees appointed under the Canteen Funds Act, chapter 34 of the statutes of 1925.

Hon. R. B. BENNETT (Leader of the Opposition): There are many members on this side of the house who are very deeply interested in this matter. I mentioned to my friend the minister (Mr. Ralston) that they were not here this afternoon, and I find since that they have gone to their homes outside of the city, not thinking that this measure would be reached this evening. If it is at all possible for the minister, consistent with his transaction of public business, to let the matter stand in order that they might have the opportunity to be here and discuss it, it would be greatly appreciated. I refer to the men who saw service overseas.

Mr. RALSTON: Stand.

Motion stands.

BUSINESS OF THE HOUSE

Mr. MACKENZIE KING: This being Friday it would require the unanimous consent of the house if we were to go into committee of supply this evening. I do not know whether hon. gentlemen opposite are agreeable.

Mr. BENNETT: I should like to say that we are agreeable, but the gentlemen who had prepared themselves to discuss the estimates of the Minister of Agriculture (Mr. Motherwell) with my friend the former minister (Mr. Tolmie) are not able to do so to-night. We have done a pretty good day's work, and I think perhaps we had better adjourn.

Mr. MACKENZIE KING: I agree with my hon. friend. We have done a very good day's work.

On motion of Mr. Mackenzie King the house adjourned at 9.30 p.m.

Monday, February 13, 1928

The house met at three o'clock.

TARIFF ADVISORY BOARD

Hon. J. A. ROBB (Minister of Finance): On Wednesday, February 8, the hon. member for East Calgary (Mr. Adshead) asked that the evidence given before the tariff advisory board with regard to cottons be tabled. I now place on the table copies of the evidence.

SELECT STANDING COMMITTEES

Right Hon. W. L. MACKENZIE KING (Prime Minister) presented the report of the special committee appointed to prepare and report lists of members to compose the select standing committees of the house as follows:

No. 1

ON PRIVILEGES AND ELECTIONS

Messieurs

Beaubien,
Bell (Hamilton),
Bell (St. Antoine),
Bennett,
Bird,
Blatchford,
Cannon,
Clark,
Cotnam,
Denis (Joliette),
Duff,
Edwards (Frontenac-Addington),
Elliott,
Goodison,
Gott,
Hanson,
Jacobs,
Johnston (Long Lake),
Kellner,
Kennedy,
King (Kootenay East),
Lapointe,
McPhee,

Mr. MACKENZIE KING moved that the report be concurred in.

Motion agreed to.

Mr. MACKENZIE KING moved:

That the lists of members composing the select standing committees of the house under standing order 63 be printed in Hansard.

Motion agreed to.

POWERS OF COMMITTEES

Mr. MACKENZIE KING moved:

That the select standing committees of the house shall severally be empowered to examine and inquire into all such matters and things as may be referred to them by the house, and to report from time to time their observations and opinions thereon, with power to send for persons, papers and records.

Motion agreed to.

BANKRUPTCY ACT AMENDMENT

Mr. J. C. BRADY (Skeena) moved for leave to introduce Bill No. 38, to amend the Bankruptcy Act (Attendance for examination).

Mr. LAPOINTE: Explain.

Mr. BRADY: In very large and sparsely populated areas such as are to be found in northern British Columbia, and, I take it, in other parts of Canada, the debtor who has made an assignment is obliged under the act, with severe penalties for non-compliance, to travel very often hundreds of miles in order to present himself for examination before the official receiver, who under the present act is persona designata. The purpose of this bill is to save the debtor from having to travel hundreds of miles, as is sometimes the case, in northern British Columbia, and no doubt the same condition is found in other parts of Canada as well. If there is any further explanation required, I shall be glad to give it on the second reading of the bill.

Motion agreed to and bill read the first time.

IMMIGRATION OF MINERS

On the Orders of the Day:

Mr. A. W. NEILL (Comox-Alberni): I would like to ask the Minister of Immigration (Mr. Forke) a question; I see he is not in his place at the moment, but perhaps he can give me an answer to-morrow. I will first call his attention to a news item appearing in the Sunday Times, of London, England, of December 4, 1927. It consists of only one sentence, which I will read:

"Every unemployed miner in Great Britain," said Mr. H. H. Stevens, M.P., of Vancouver, who arrived in Liverpool yesterday on the Canadian Pacific liner Melita, "can be found employment in the Canadian mines, provided he is physically fit."

In the absence of the hon. member for Vancouver Centre (Mr. Stevens) I doubt whether he said that, for I give him credit for more sense, but the statement was published on the apparent authority of an ex-minister of the crown and is calculated to do great harm in Great Britain by inducing destitute miners to come out here. I would ask the Minister of Immigration if he would see to it that the great publicity means that he has at his command be used to inform the people in Great Britain that there is no scope for miners in this country, but that, on the contrary, we have large numbers on both the Atlantic and Pacific coasts either idle or working only part time.

ST. JOHN RIVER STORAGE COMPANY

On the order:

Second reading of Bill No. 17, respecting the St. John River Storage Company.—Sir Eugene Fiset.

Sir EUGENE FISET: Stand.

Mr. J. F. POULIOT (Temiscouata): I rise to a point of order, Mr. Speaker. Section 92 of the British North America Act provides:

In each province the legislature may exclusively make laws in relation to matters coming within the classes of subjects next hereinafter enumerated.

And subsection 11 of that section reads:

The incorporation of companies with provincial objects.

Now what is this bill?

Sir EUGENE FISET: The bill is not yet before the house.

Mr. POULIOT: Yes, but I rise to a point of order.

Mr. DEPUTY SPEAKER: There is nothing before the house at the moment, and the point of order about to be raised by the hon. member (Mr. Pouliot) cannot be raised at this stage.

Hon. ERNEST LAPOINTE (Minister of Justice): My hon. friend from Rimouski (Sir Eugene Fiset) is not proceeding with this bill to-day, I understand, so I think my hon. friend from Temiscouata (Mr. Pouliot) should wait until he does proceed before he raises his point of order.

Mr. POULIOT: But I understood this bill was up for second reading.

Mr. LAPOINTE: But he is not proceeding with it to-day.

[Mr. Neill.]

Mr. DEPUTY SPEAKER: The hon. gentleman rose as soon as the order was called. The hon. member for Rimouski said "Stand" and therefore there is nothing before the house.

Mr. POULIOT: All right, we will take it up to-morrow.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

IMPERIAL CONFERENCE OF 1926

Mr. CAHAN:

1. Has an expert committee been appointed, in compliance with the recommendations contained in the report of the inter-imperial relations committee to the imperial conference of 1926, to enquire into, report upon and make recommendations concerning,—

(i) Existing statutory provisions requiring reservation of Dominion legislation for the assent of His Majesty or authorizing the disallowance of such legislation?

(ii) a. The present position as to the competence of Dominion parliaments to give their legislation extra-territorial operation;

b. The practicability and most convenient method of giving effect to the principle that each Dominion parliament should have power to give extra-territorial operation to its legislation in all cases where such operation is auxiliary to provision for the peace, order and good government of Canada; and

(iii) The principles embodied in or underlying the Colonial Laws Validity Act, 1865, and the extent to which any provisions of that act ought to be repealed, amended or modified in the light of the existing relations between the various members of the British commonwealth of nations as described in said report of the inter-imperial relations committee?

2. If such expert committee has been appointed, when were the appointments made, and who were appointed, on the recommendation of the government of Canada, as Canada's representatives on said committee?

3. Has said committee reported?

4. Will the report and recommendations of said committee be submitted to the Canadian parliament during the present session?

5. Was a special sub-conference appointed or constituted to meet, at or about the same time as said expert committee, to consider the general question of merchant shipping legislation, and particularly, to consider and report on the principles which should govern, in the general interest, the practice and legislation relating to merchant shipping in the various parts of the empire, having regard to the change in constitutional status and general relations which have occurred since existing laws were enacted?

6. Has the proposed sub-conference been held, and who were members thereof?

7. Who were appointed to represent the government of Canada at the said sub-conference?

8. Has the said sub-conference reported?

9. Will the report of the said sub-conference be submitted to the Canadian parliament during the present session?

Mr. MACKENZIE KING:

1. The Secretary of State of Dominion Affairs, in his recent visit to the dominions, was in conference with the several governments as to the date for the meeting of the committee which will be most convenient to all concerned. It is understood that as a result of this exchange of views a time of meeting will be announced shortly.

2-4. Answered by No. 1.

5. The position is the same as in the case of the expert committee.

6-9. Answered by No. 5.

CANADA—FRANCE POSTAL RATES

Mr. PARENT:

1. Is the postal rate for letters, books and newspapers or magazines and periodicals between Canada and France the same as between Canada and Great Britain?

2. If not, why?

Mr. VENIOT:

1. No.

2. An effort is being made at the present time to negotiate lower postal rates between Canada and France, but the French postal authorities have pointed out the existing financial conditions in France and the necessity in that country for the government considering the postal service as a source of revenue. They have also pointed out that should the rates of postage between France and Canada be reduced, they would quite possibly be met with requests from other countries that the rates between France and those countries should be similarly reduced, and that this may prove an important factor in dealing with the question under consideration.

MAIL TRANSPORTATION COSTS

Mr. WOODSWORTH:

1. What proportion of His Majesty's mails are transported over the Canadian National railways?

2. What amount was paid last year to the Canadian National railways, and what amount to the Canadian Pacific railway for the transportation of mails?

Mr. VENIOT:

1 and 2. Expenditures on account of the railway mail service for the whole of Canada for fiscal year, 1926-27:

Canadian Pacific railways	$3,670,530 40
Canadian National railways	3,169,609 61
Other railways	484,406 77
Total	$7,324,546 78

The above figures represent approximately the percentage of mails carried by the different railways.

In every case the department has to be governed by the requirements of the postal service in the territory served by the railway, but wherever it is possible to do so preference is given to the National railways in the carriage of the mails and the establishment of new services.

JAPANESE IMMIGRATION

Mr. BLACK (Yukon):

1. Of what does the present arrangement consist, if any, between Canada and Japan limiting immigration to Canada from Japan?

2. Under that arrangement what is the maximum number of Japanese persons of each sex admissible to Canada annually?

3. How many Japanese of each sex have been admitted to Canada each year since 1925?

Mr. MACKENZIE KING:

1. The arrangement is based upon an exchange of notes effected in 1907, between the Minister of Foreign Affairs of Japan and the Hon. Rodolphe Lemieux, wherein the Japanese government stated that it was not its intention to insist upon the full enjoyment of the rights and privileges of entry, travel and residence which it considered were guaranteed by the treaty of 1894 between His Britannic Majesty and the Emperor of Japan, and that it would take efficient means to restrict emigration to Canada.

2. Under this arrangement, as modified by a further exchange of notes in 1923, it was understood that the Japanese government would not issue passports to household servants and agricultural labourers going to Canada in excess of one hundred and fifty a year. No maximum number of Japanese persons of each sex admissible to Canada annually is set, as in addition to the preceding classes, those admitted include returning Japanese and their families.

3.

Fiscal year	Adult Males	Adult Females	Children under 18	Totals
1924-25	182	269	50	501
1925-26	126	205	90	421
1926-27	115	250	110	475

CANADA GRAIN ACT—INTERPRETATION

Mr. CAMPBELL:

Has the Department of Justice yet given a reply to a question recently submitted to it by the board of grain commissioners asking for the department's interpretation of certain clauses in the Canada Grain Act?

Mr. LAPOINTE: Yes.

CANADA HOUSE—EMPLOYEES

Mr. NEILL:

1. How many regular employees are there in Canada House, London, England?

2. Of these how many are Canadian born, or have spent five or more years, in Canada?

Mr. LAPOINTE:

Department of External Affairs

1. There are thirty-five regular employees in the high commissioner's office in London.

2. Of these five are Canadian born, or have spent five or more years in Canada.

Department of Health

1. 10.

2. Canadian born 5. Records of the Department do not contain any information relative to the number of years spent in Canada by those who are not Canadian born.

Department of Immigration and Colonization

1. 62.

2. 14.

Department of Public Works

1. 14.

2. 2.

Department of the Secretary of State

Office of the Custodian and the Clearing Office

1. 1.

2. Nil.

Department of Soldiers' Civil Re-establishment

1. 10.

2. Born in Canada, nil. Canadian residents for 5 years or more 2.

Department of Trade and Commerce

1. 5.

2. 1.

REVISION OF THE STATUTES

Mr. BLACK (Yukon):

1. To date what has been the cost of the revision of the Dominion statutes now being made?

2. What are the names of the commissioners?

3. What has been paid to each: (a) as salary or remuneration; (b) as expenses?

Mr. LAPOINTE:

1. $123,173.49.

2. Members ex officio, the Minister of Justice and the Solicitor General: President, The Right Honourable Sir Charles Fitzpatrick, G.C.M.G., K.C., Vice-President, E. L. Newcombe, C.M.G., K.C. (to September 19, 1924), Vice-President, E. R. Cameron, K.C., Commissioners, H. H. Dewart, K.C. (deceased), E. J. Daly, F. R. McD. Russell, K.C., L. A. Rivet, Alex. MacGregor.

3.

	(a)	(b)
Sir Charles Fitzpatrick	$15,569 86	$1,921 80
H. H. Dewart (deceased)	1,189 50	260 00
E. L. Newcombe (to Sept. 19, 1924)	2,085 75	40 00
E. R. Cameron	8,669 35	79 10
E. J. Daly	9,522 82	
F. R. McD. Russell	9,522 82	4,600 00
L. A. Rivet	9,522 82	920 00
Alex. MacGregor	6,777 95	720 00

PREVENTIVE SERVICE SEIZURES

Mr. GARLAND (Bow River):

1. What was the gross revenue deposited to the credit of the receiver general on account of customs preventive service seizures for each of the fiscal years ending March 31, 1923-1924-1925-1926-1927, and for the 9 months ending December 31, 1927?

2. What was the amount of salaries and expenses, respectively, of the preventive service during each of the said periods?

3. What was the number of officers employed during each of the said periods?

Mr. EULER:

1. Gross revenue from Customs-Excise Preventive Service seizures during the fiscal years under-mentioned.

Fiscal Year	Customs Seizures	Excise Seizures	Total
1922-23.	$103,717 04	$222,717 72	$326,434 76
1923-24.	334,877 43	268,148 99	603,026 42
1924-25.	224,801 45	205,183 31	429,984 76
1925-26.	181,054 29	132,587 25	313,641 54
1926-27.	306,342 27	123,260 95	429,603 22
1927-28. (9 mos)	*425,788 10	*106,658 86	532,446 96

* In addition 70,534 gallons of liquors have been seized, having a duty paid value of $830,750 50.

2. Amount of salaries and expenses respectively, of the preventive service for each of the fiscal years ended March 31, 1923, 1924, 1925, 1926, 1927, and for 9 months ended December 31, 1927.

Fiscal years	Salaries	Expenses	Total
1922-23.	$113,433 21	$120,789 93	$ 234,223 14
1923-24.	118,004 93	169,201 51	287,206 44
1924-25.	167,546 19	149,121 28	316,667 47
1925-26.	216,900 95	169,757 06	386,658 01
1926-27.	285,842 27	317,299 13	603,141 40
9 mos. to Dec. 31, 1927.	392,136 12	718,135 49	1,110,271 61

3. Number of employees in preventive service (including boats) during fiscal years 1922-23, 1923-24, 1924-25, 1925-26, 1926-27, and the first nine months of 1927-28:

1922-23	127
1923-24	170
1924-25	186
1925-26	299
1926-27	400
First 9 months of 1927-28	662

UNDESIRABLE PUBLICATIONS

Mr. ALLAN:

What steps are being taken by our government to suppress or prevent undesirable publications from entering Canada?

Mr. LAPOINTE (For the Secretary of State):

Department of National Revenue

Section 11 of the Canada Customs Tariff, 1907, provides that;—"The importation into Canada of any goods enumerated, described or referred to in schedule C to this act is prohibited; and any such goods imported shall thereby become forfeited to the crown and shall be destroyed or otherwise dealt with as the Minister of Customs directs; and any person importing any such prohibited goods, or causing or permitting them to be imported, shall for each offence incur a penalty not exceeding two hundred dollars."

Item 1201, schedule "C" of the Customs Tariff, 1907, classifies as prohibited goods:—"Books, printed paper, drawings, paintings, prints, photographs, or representations of any kind of a treasonable or seditious, or of an immoral or indecent character."

Collectors or other customs officers seize goods which are obviously immoral or indecent, and if their importation is general, as in the case of a publication, a circular is issued prohibiting its importation into Canada. Imported publications, concerning which doubt exists, are forwarded to the department by collectors, and other persons, and are carefully examined. If found to be of the character set forth in item 1201 of the tariff, they are prohibited.

Post Office Department

Undesirable publications are being prohibited transmission in the mails under paragraph (d) subsection 1 of section 9 of the Post Office Act as amended in 1913.

PENETANGUISHENE WHARF

Mr. THOMPSON:

1. What amount was expended by the government in 1927 on the Penetanguishene wharf?
2. To whom were the several amounts paid, and for what purposes?

Mr. ELLIOTT:

1. $1,483.20.

2. Frank Payette, $348 for services as foreman; Joseph Robillard, $120 for services as carpenter; Joseph Desrochers, $55 for services as carpenter; H. Robillard, $8 for services as labourer; Alfred Lacroix, $8 for services as labourer; Andrew Marion, $78 for services as labourer; Joseph Butman, $16 for services as labourer; H. Lortie, $16 for services as labourer; John Desrochers, $5 for services as carpenter; M. A. Gendron, $33.10 for hardware; The C. Beck Mfg. Co. Limited, $391.34 for lumber; The McGibbon Lumber Co., Ltd., $58.97 for lumber; P. Payette Co., $315.64 for timber; Adjutor Gignac, $30.15 for blacksmithing.

CATTLE—RESTRICTED AREAS

Mr. CAYLEY:

1. How many restricted areas have been established in Ontario, and where?
2. How many cattle in each area?
3. What are the conditions governing establishment of a restricted area?

Mr. MOTHERWELL:

1. The entire county of Prince Edward and that part of Murray township in the county of Northumberland, which lies south of the Murray canal and adjacent to the county of Prince Edward.

2. 24,184.

3.

(1) Upon receipt of a request from the government of any province and upon compliance with the provisions of these regulations the government of Canada will, whenever it appears desirable to the Minister of Agriculture so to do, assist in the eradication of bovine tuberculosis from a restricted area in the manner hereinafter provided.

(2) Applications may be made to the Dominion Department of Agriculture by the Minister of Agriculture of the provincial government, stating that the province is desirous of federal aid in the eradication of bovine tuberculosis from a restricted area, upon and subject to the provisions of these regulations, and stating: (a) the location and boundaries of the proposed area; (b) the approximate number of cattle within it; (c) that a majority consisting of at least two-thirds of the cattle owners in the proposed area are in favour of having their cattle tested for the eradication of tuberculosis, and (d) that the provincial government whenever requested by the federal department of agriculture will assist in the enforcement of these regulations by conducting prosecutions of persons accused of obstructing or refusing to assist federal inspectors engaged in the work of testing cattle, and persons who, in any way, refuse to obey the regulations made hereunder.

(3) Upon the approval of the federal Minister of Agriculture of any such application, a proclamation may be published in the Canada Gazette constituting the proposed area a restricted area within the meaning of these

regulations, whereupon all provisions of these regulations shall apply to said restricted area.

(4) The said area shall be a quarantined area in so far as bovine tuberculosis is concerned. Cattle may only be moved into or out of the area under the following conditions:—

(a) Fully accredited cattle accompanied by a certificate of a veterinary inspector may enter the area without test.

(b) Cattle from herds under the supervision of the health of animals branch for the eradication of tuberculosis may enter the area without test if accompanied by a certificate signed by a veterinary inspector showing the date of the last test.

(c) Other cattle intended to remain within the area shall be subjected to the tuberculin test by a veterinary inspector or approved veterinarian before admittance to the area.

(d) Cattle for entry into the area for exhibition purposes or other temporary stay, not covered by sections (a) and (b) shall be subjected to the tuberculin test by a veterinary inspector or approved veterinarian before admittance to the area.

(e) Cattle for immediate slaughter consigned to approved slaughter-houses only may be brought into the area without test, but shall not be allowed to come in contact with other cattle and shall be kept isolated on the premises until slaughtered.

(f) Cattle in transit across the area by rail shall not be unloaded except at a point designated for that purpose where they may be kept from contact with other cattle within the area.

(g) Cattle shall not be driven across the area by road unless special permission has been obtained in writing from the Veterinary Inspector in charge of the area.

(5) Owners of cattle within the area will be required to assist the veterinary inspectors making the test by assembling the cattle when requested and giving whatever additional help as may be reasonably expected. Owners when requested must furnish meals and bed for the inspector while conducting the test.

(6) Suitable transportation from farm to farm within the area for the officers of the health of animals branch must be provided by the provincial government.

(7) Use of syndicate or joint bulls will be permitted in herds that are equally free from disease but not otherwise. For instance, a bull from a herd that has contained reactors shall not be used in a herd that has passed a clean test.

[Mr. Motherwell.]

(8) All cattle within the area shall be submitted to the tuberculin test as soon as practicable by veterinary inspectors or accredited veterinarians*; and shall be retested whenever deemed necessary by the veterinary director general.

(9) Reactors to the test shall be marked for identification and shall be disposed of by slaughter under inspection forthwith.

(10) Compensation for reactors slaughtered by order of the veterinary inspector duly authorized under the act may be granted as provided in sections 6 and 7 of the Animal Contagious Diseases Act.

(11) Compensation will not be paid for reacting grade bulls, steers, or animals affected with lumpy jaw.

(12) The feeding of animals within a restricted area on by-products of cheese factories, skimming stations and butter factories is prohibited, unless the said by-products have first been sterilized by heat.

* An accredited veterinarian for the purposes of these regulations means a veterinary practitioner authorized by the veterinary director general to conduct tests under the regulations of the health of animals branch.

PRINCE RUPERT PUBLIC BUILDING

Mr. BRADY:

1. Has the government a lease of the building now used for post office, customs, and marine and fisheries departments, in Prince Rupert?
2. If so, who is the lessor, and for how many more years does said lease extend?
3. What is the annual rental paid by the government for its lease of said building?
4. When does the present lease expire?
5. Has the lease recently been renewed, and if so, on what date?
6. Who recommended its renewal?
7. If the lease has not yet expired, is it the intention of the government to renew said lease?

Mr. ELLIOTT:

1. Yes.
2. (a) Mrs. Cora E. Black; (b) Five years from June 1, 1927.
3. $6,540.
4. June 1, 1932.
5. (a) Yes; (b) June 1, 1927.
6. The various departments interested.
7. Answered by No. 5.

BUTTER AND CHEESE IMPORTS

Mr. MacNUTT:

1. What is the total quantity of butter: (a) imported into Canada from Australia and New Zealand since the signing of the Australian treaty; (b) what quantities were imported into each province since the signing of the treaty?

2. What is the total quantity of cheese imported into Canada from Australia and New Zealand since the signing of the treaty: (a) what quantities were imported into each province since the signing of the treaty?

3. When was the dumping clause applied to these products?

4. On what date, if any, did the dumping clause cease to exist?

Mr. EULER:

1 and 2:

Statement of Imports of Butter and Cheese From Australia and New Zealand Entered for Consumption in Each Province of Canada From October 1st, 1925, to January 31st, 1928.

Item and Province	Oct. 1st, 1925, to Mar. 31st, 1926	Apr. 1st, 1926, to Mar. 31st, 1927	Apr. 1st, 1927, to Jan. 31st, 1928	Total, Oct. 1st, 1925, to Jan. 31st, 1928
BUTTER:	Lb.	Lb.	Lb.	Lb.
From Australia:—				
Nova Scotia	222,376	.....	.....	222,376
New Brunswick	28,056	.....	.....	28,056
Quebec	445,648	411,544	99,288	956,480
Ontario	1,081,528	151,472	42,000	1,275,000
Manitoba	56,000	28,000	.....	84,000
Alberta	84,000	.....	.....	84,000
British Columbia	567,894	210,308	192,584	970,786
Total, Dominion	2,485,502	801,324	333,872	3,620,698
From New Zealand:—				
Nova Scotia	.....	266,000	219,738	485,738
Quebec	868,000	548,744	359,034	2,775,778
Ontario	55,712	1,138,200	1,763,531	2,957,443
Saskatchewan	.....	.....	68,600	68,600
Alberta	39,719	.....	195,946	235,665
British Columbia	1,379,535	2,951,592	4,288,265	8,619,392
Total, Dominion	2,342,966	4,904,536	7,895,114	15,142,616
CHEESE:				
From Australia:—				
British Columbia	270	18	3,132	3,420
Total, Dominion	270	18	3,132	3,420
From New Zealand:—				
British Columbia	.....	15	137,441	137,456
Total, Dominion	.....	15	137,441	137,456

3. The Department ascertained first in February, 1926, that butter imported from Australia was subject to dumping duty on account of the application of the Patterson scheme which became effective in Australia January 1st, 1926. Instructions were then issued as to the assessment of special duty on such importations. The department has no record of the application of dumping duty to butter from New Zealand, or cheese from Australia or New Zealand.

4. Section 6 of the customs tariff, 1907, is still in force.

HARTLAND, N.B. POSTMASTERSHIP

Mr. JONES:

1. Who were applicants to the Post Office department or to the Civil Service Commission for the position of postmaster at Hartland, New Brunswick, rendered vacant by the death of postmaster J. E. McCollom?

2. By what persons or organizations was each applicant recommended?

3. Who, if any, of such applicants were returned soldiers?

4. What applicants were appointed or recommended by the Civil Service Commission?

5. Which recommendations or appointments were rejected by the Post Office department, and on what grounds?

6. Which appointment or recommendation was accepted by the Post Office department?

7. Did anybody consult personally, or by letter, with the Postmaster General or Post Office department at Ottawa in reference to such applications, and if so, on behalf of what applicant or applicants?

8. If so, what grounds were presented by said party or parties on behalf of such applicant?

9. Was any recommendation made to the said party or parties to the postmaster general, or to any official of his department on behalf of any applicant by the liberal committee at said Hartland?

Mr. VENIOT:

1. Sarah Catherine Currie.
Edward Wallace Laskey.
J. Stirling King.
Edward Albert Britton.
Frank Hagerman.

2. E. A. Britton—Kenneth W. Keith.
O. I. Clark.
J. U. Montgomery.
Frank A. Acton.
A. G. Baker.
Rev. C. LeRoi Mooers.
Major H. Priestman.

Miss S. C. Currie—W. Steadman Smith.
Kenneth W. Keith.
I. A. J. Ward.
M. L. Hayward.
A. G. Dickinson.
R. J. Potts.

F. Hagerman—H. Ward Ginson.
A. F. Campbell.
C. J. Dunphy.
Albion R. Foster.

J. S. King—A. E. Plumer.
M. G. Harmer.
George Jackson.

E. W. Laskey—Garnett W. Birmingham.
C. G. Anslow.
Wendal P. Tedlie.
H. N. Boyer.
F. E. Sayre.
A. D. McCain.

3. Edward Albert Britton.

4. Edward Albert Britton.
Sarah Catherine Currie.
Edward Wallace Laskey.

5. (a) Edward Albert Britton. Unsuitable on account of age and in interest of public service; (b) Sarah Catherine Currie. Unsuitable.

6. Edward Wallace Laskey.

7. Postmaster General consulted parties in Hartland regarding Mr. Britton and Sarah C. Currie.

8. Representations were received to the effect that Mr. Britton and Sarah C. Currie were unsuitable on grounds of age or of character or general qualifications.

9. Yes.

NARCOTIC DRUGS

Mr. ANDERSON (Halton):

1. How many physicians were convicted for violation of the Opium and Narcotic Drug Act, in each province, during the year 1927?

[Mr. Jones.]

2. How many physicians were convicted through the use of drug addicts as spotters?

3. How many drug addicts are there in the employ of the Department of Health as detectives under the act?

Mr. KING (Kootenay):

1.

Quebec	4
Ontario	10
Alberta	1
Total	15

2. None. Agents are not employed who are known to be using narcotics at the time of engagement and, should it be subsequently learned or suspected that such an agent is addicted to narcotics, every effort is made to restrain the usage until the case or cases under investigation are completed, when he is immediately released.

If an agent is engaged who is known or even suspected of having, at some previous time, been so addicted, he is placed in the hands of an experienced and reliable officer of the Royal Canadian Mounted Police and works entirely under his immediate supervision, and his movements and actions are checked by police officers, who give corroborative evidence when required.

3. None.

TELEPHONE COMPANIES—TAXES

Mr. CHURCH:

1. What federal taxes does the Bell Telephone Company pay per annum?

2. What federal taxes does the provincial owned government telephone systems pay (a) in Manitoba, (b) in Saskatchewan, (c) in Alberta?

Mr. EULER: It is contrary to the practice of the department to give information which would disclose the business of an individual concern.

CORKERY, ONT., RURAL MAIL ROUTE

Mr. GARLAND (Carleton):

1. What is the name of the contractor who has the contract for carrying mail on Corkery rural route No. 1, in the county of Carleton?

2. What were the names of those who tendered for this work and the amount of their respective tenders?

3. When does the contract expire?

4. Will tenders be called for at the expiration of the present contract?

5. What complaints, if any, were made to the department during the last twelve months regarding delivery under the present contractor?

Mr. VENIOT:

1. Wm. J. Egan.

2. Tenders were last invited for this service in January, 1920, when the following were

received: Michael Kennedy, Corkery, $900 per annum; Frank Forrest, Corkery, $1,000 per annum, provided post office was transferred to his charge.

The contract which was awarded to Michael Kennedy at $900 per annum has since, by regular transfers and renewals, passed into the hands of Wm. J. Egan.

3. March 31, 1932.

4. As this contract has still four years to run, the probable action on its expiration has not yet received consideration.

5. Only one complaint on file into which inquiry was instituted and adjustment made.

IMPERIAL TOBACCO COMPANY

Mr. DENIS (St. Denis):

1. What quantity of tobacco was manufactured by the Imperial Tobacco Company during the year 1927?

2. Under what classification were these tobaccos manufactured?

3. What was the quantity of tobacco manufactured in each class?

4. What are the excise duties on each class of tobacco manufactured?

Mr. EULER: It is contrary to the practice of the department to give information which would disclose the business of an individual concern.

GREAT LAKES SHIPPING CONDITIONS

Mr. CHURCH:

1. Has the attention of the government been called to the following despatch in Evening Telegram, Toronto, Wednesday, February 8, 1928, as follows: the National Association of Marine Engineers of the great lakes district, in convention at the Walker House to-day, will make an effort to determine the cause and blame for conditions existing in shipping circles upon the great lakes, why some of the largest Canadian bulk freighters and the largest on the great lakes are tied up in dock for as long as three months during the summer season, while American shipping interests practically monopolize the bulk of trade?

2. If so, what is the situation?

3. What steps will the government take to protect Canadian bulk freighters?

Mr. MACKENZIE KING: I should like to draw attention to the wording of this question. The hon. member asks whether the attention of the government has been called to a certain despatch in the Evening Telegram, Toronto, of Wednesday, February 8th, 1928. I would say in regard to questions of the kind that it is really impossible for the government to give an answer that would be at all satisfactory. A newspaper item is a matter of general interest. Members of the government may have their attention drawn to particular items, but it can seldom be said that the government has its attention drawn to items in the press. So far as giving information to the house is concerned, a specific question should be asked, and if that is done it will be answered in so far as it is possible or deemed advisable to give the information; but it is impossible satisfactorily to answer questions which relate simply to newspaper items.

Mr. DEPUTY SPEAKER: Dropped.

RIDEAU CANAL RETAINING WALL

Mr. GARLAND (Carleton):

1. What has been the cost up to the 1st of February of the new Rideau Canal retaining wall at Ottawa?

2. How many men were employed on this work?

3. Who recommended the men so employed?

4. What are the necessary qualifications for a man desirous of securing employment on this work, and what steps does he have to take in order to secure employment?

Mr. DUNNING:

1. $175,500.

2. 376.

3. Members of parliament for the city and district.

4. Physical fitness and the recommendation referred to in answer No. 3.

PACIFIC GREAT EASTERN RAILWAY

Mr. TOLMIE:

1. Have any negotiations taken place or are negotiations now pending for the acquisition of the Pacific Great Eastern Railway by the government of Canada or the Canadian National Railways?

2. If so, what progress has been made?

Mr. DUNNING:

1. As a result of representations made at the Dominion-provincial conference, the president of Canadian National Railways has been requested to investigate the railway problems presented by several provinces, including British Columbia, in relation to possible acquisition by Canadian National Railways.

2. Answered by No. 1.

QUESTIONS PASSED AS ORDERS FOR RETURNS

SHIPMENTS OF GRAIN

Mr. STEWART (Leeds):

1. What was the total number of bushels of Canadian grains of different kinds that passed through Welland canal eastbound during season of navigation 1927?

2. What was the total number of bushels of Canadian grains of different kinds unloaded at Buffalo during season of navigation 1927?

3. What was the total number of bushels of Canadian grain of different kinds unloaded at Georgian bay ports during the season of navigation 1927?

4. What was the total number of bushels of Canadian grain of different kinds shipped by water from the ports of Port Arthur and Fort William, and Duluth, eastbound, during the season of navigation 1927?

5. What was the total number of bushels of Canadian grain of all kinds exported from the ports of Montreal and Quebec during season of navigation 1927?

6. What was the total number of bushels of American grain of all kinds exported from the ports of Montreal during the season of navigation 1927?

RIDEAU HALL

Mr. WOODSWORTH:

What public moneys have been expended for the past ten years for the maintenance of the governor-generalship, classified as salaries, upkeep of Rideau Hall, travelling expenses, general expenses, etc?

CANADIAN NATIONAL RAILWAYS—FUNDED DEBT

Mr. WHITE (Mount Royal):

What amount, if any, of the funded debt of the Canadian National railways is included in the debt of the Dominion, as published monthly in The Canada Gazette?

WHEAT GRADES—WESTERN INSPECTION DIVISION

Mr. COOTE:

What number of cars of wheat of each grade were inspected at each inspection office in the western inspection division from October 1, 1927, to December 31, 1927?

CUSTOMS PROTECTIVE SERVICE—VESSELS

Mr. CANTLEY:

1. How many vessels were employed in the customs protective service in maritime provincial waters during the calendar year 1927?

2. What are the names, type and dimensions of such vessels?

3. What number of seizures of vessels were made during 1927, what were the names of such vessels seized and how were they disposed of?

4. What was the value of spirits, and of goods seized on such vessels during 1927?

5. What was the cost of operation of the fleet of vessels employed in the customs protective service in the maritime provincial waters during the calendar year 1927?

6. What vessels were added to the service during 1927, by whom built and what dimension and type?

7. How many of said vessels are the property of the department, what names or numbers are they known by?

8. What vessels employed in said service are chartered or hired, and what are their dimensions, type and hire rate?

9. How many additional vessels will be placed in the service during 1928, and what will be their dimensions, type, where built, by whom, and at what cost?

10. Are any vessels for the customs protectinve service now on order?

11. If so, of what dimensions, type, and where are they being built and at what cost?

[Mr. H. A. Stewart.]

IMMIGRATION REGULATIONS—MEDICAL EXAMINATION

Mr. CHURCH:

1. Has any change been made in immigration regulations in countries where medical examinations of immigrants are made?

2. If so, what are the changes, who authorized the same and why?

3. To what countries do the new regulations apply, (a) in Great Britain, (b) the United States, (c) the continent of Europe?

4. Does the said new examination apply to (a) Germany, and (b) Italy?

JAPANESE IMMIGRATION

Mr. NEILL:

1. How many Japanese landed in Canada for the first time, according to Canadian government returns, during the calendar year 1927?

2. At what ports did they land?

3. How were they classified as to: (a) occupation; (b) sex?

CHINESE IMMIGRATION

Mr. NEILL:

1. How many Chinese landed in Canada for the first time, according to Canadian government returns, during the calendar year 1927?

2. Of those entering how many came as: (a) members of the diplomatic service and their servants; (b) merchants; (c) students; (d) under section 9, chapter 38 of the Chinese Immigration Act, 1923 (permits)?

3. What was the classification as to occupation of those admitted under said section 9, chapter 38?

4. During the year were any existing permits renewed or extended for a further period, and if so, how many and for what further period?

IMMIGRATION—ASSISTED PASSAGES

Mr. CLARK:

1. To what countries is an assisted passage available?

2. How many immigrants, specifying country of origin, has Canada secured under the system of assisted passage by years?

3. What is the total cost to the immigrant of an assisted passage?

4. What has been the total cost to Canada by reason of the system of assisted passage?

5. What is the cost of transportation to an immigrant other than one given assisted passage, from (a) Copenhagen, (b) London, (c) Blaine, U.S.A., to (a) Edmonton, (b) Vancouver?

6. What assistance is given to last mentioned immigrants in locating and acquiring lands. (a) financially, (b) otherwise?

7. What is the cost of transportation to a Canadian residing in (a) Halifax, (b) Vancouver, who desires to locate on land in the vicinity of Edmonton?

8. Is any assistance given by the government of Canada to Canadians desirous of settling upon the country's vacant land (a) financially, (b) in location of lands, (c) in acquiring of lands, (d) otherwise?

9. What proportion of immigrants, specifying country of origin, have settled upon agriculture lands in (a) 1923, (b) 1924, (c) 1925, (d) 1926, (e) 1927?

10. What proportion of the last mentioned immigrants have remained upon agricultural lands?

11. What proportion of all immigrants coming into Canada for the years referred to in paragraph 9 have remained in Canada?

SOLDIER SETTLEMENT

Mr. CLARK:

1. Has the Department of Immigration or other department of the public service sent representatives of the soldier settlement board to Great Britain?

2. If so, for what purpose?

3. How many representatives have been sent and from what provinces?

4. Are such representatives instructed to secure settlers for lands vacated by ex-service men settled pursuant to the provisions of the Soldier Settlement Act?

5. Are lands formerly occupied by soldier settlers disposed of to new settlers on terms more favourable than those enjoyed by the former soldier settlers?

6. Are ex-service Canadians not now on the land given a prior opportunity of settling the last mentioned lands upon the terms offered the new settler?

7. Are loans available to-day to ex-service Canadians desirous of settling upon the land?

IMMIGRATION, 1921-27

Mr. CHURCH:

1. What number of immigrants arrived in Canada during the years 1921-1927, (a) from Great Britain, (b) the continent of Europe, and (c) the United States?

2. What sums of money during these years were spent on each of the above-mentioned classes?

DOMINION REVENUE AND SUBSIDIES

Mr. CHURCH:

1. What was the total revenue of the government from all sources for the last year of record?

2. What subsidies and other payments were paid to the various provinces the last year of record?

3. What portion of this estimated cash revenue is contributed by each of the nine provinces and the respective amounts from each province?

4. After deducting cash subsidies from actual cash contributions of each province to federal revenues, what is the rate per capita on the last census per province of cash taxes paid per head, and what net cash taxes are paid by each province?

UNOPPOSED MOTIONS FOR PAPERS

CIVIL SERVICE SUPERANNUATION

Mr. CHEVRIER:

For a return showing:—

1. The number of contributors to superannuation fund No. 1 as of date 1st December, 1927.

2. The number of contributors to superannuation fund No. 2 as of date 1st December, 1927.

3. The number of contributors to superannuation fund No. 5 as of date 1st December, 1927.

4. The number of contributors to the retirement fund as of date 1st December, 1927.

5. The number of former contributors to superannuation fund No. 1 who are now contributing to Fund No. 5.

6. The number of former contributors to superannuation fund No. 2 who are now contributing to Fund No. 5.

7. The number of former contributors to the retirement fund who are now contributing to fund No. 5.

8. The amount standing to the credit of superannuation fund No. 2 as of date 1st December, 1927.

9. The amount standing to the credit of superannuation fund No. 5 as of date 1st December, 1927.

10. The amount standing to the credit of the retirement fund as of date 1st December, 1927.

11. The amount voted by parliament as contribution to superannuation fund No. 2 for fiscal year ending 31st March, 1927.

12. The total amount provided by parliament as contributions of employer to superannuation fund No. 5 since that fund was established.

13. The amount voted by parliament as contributions of employer to superannuation fund No. 5 for the fiscal year ending the 31st of March, 1927.

14. The total disbursements on account of gratuities from superannuation fund No. 5 for the year ending 31st of March, 1927.

15. The total disbursements on account of gratuities from superannuation fund No. 5 for period from 31st March, 1927, to 1st December, 1927.

16. The total disbursements on account of annuities from superannuation fund No. 5 for the year ending 31st March, 1927.

17. The total disbursements on account of annuities from superannuation fund No. 5 for the period from the 31st of March, 1927, to 1st of December, 1927.

18. The total disbursements on account of superannuation fund No. 1 for the year ending 31st of March, 1927.

19. The total disbursements from superannuation fund No. 2 for the year ending 31st of March, 1927.

20. The total amount of interest paid by the government for the use of the amount at the credit of superannuation fund No. 5 during the fiscal year ending 31st of March, 1927.

EXPORT OF ELECTRIC POWER

Mr. STEWART (Leeds):

1. For a copy of all orders in council relating to the exportation of electric power.

2. Of all leases and renewals thereof containing provisions relating to the exportation of electric power.

3. Of all regulations passed by the governor in council relating to the exportation of electric power.

RAILWAY BELT WATER ACT

Mr. FRASER:

For a copy of all correspondence, telegrams, reports and memoranda exchanged between the government of Canada and the government of British Columbia or any official or officials of either or both governments, relating to amendments to the Railway Belt Water Act, section 5, chapter 15, statutes of 1926.

CANADIAN GOVERNMENT STEAMERS—BUNKERING

Mr. SMITH (Cumberland):

For a copy of all correspondence, telegrams, reports, resolutions and agreements, or other documents exchanged between any government department, member of the government, or government official at Ottawa; with anyone in the city of Halifax, or elsewhere in the province of Nova Scotia, during 1927; and up to the present in 1928, on the matter or subject of the fueling or bunkering of Canadian government steamers (not the C.G.M.M.).

GRADING OF LIVE STOCK ETC.

Mr. KENNEDY:

For a copy of all correspondence, letters, telegrams, reports and other documents received by the department of Agriculture or any other department of the government of Canada since January 1, 1927, relating to the grading of live stock or live stock products for home or export markets or to the Legislation proposed or passed regarding live stock and live stock products in the session of 1927.

CLEARING OF LAND BY FIRE

Mr. KENNEDY:

For a copy of all correspondence, letters, telegrams, and other documents in the custody of the Department of the Interior or other department of the government, relating to the clearing of land by fire.

ROCKFORD, SASK., POST OFFICE

Mr. CAMPBELL:

For a copy of all correspondence, letters, and other documents in connection with the removal of the post office of Rockford, Saskatchewan, from the residence of Mrs. M. Montgomery to that of Mr. M. Weightman.

MALONECK, SASK., POST OFFICE

Mr. CAMPBELL:

For a copy of all correspondence, letters, and other documents in connection with the removal of the post office of Maloneck, Saskatchewan, from the residence of Mr. W. S. Jones to another part of the district.

SAINT FRONT, SASK., POSTMASTERSHIP

Mr. CAMPBELL:

For a copy of all correspondence, letters, and other documents in connection with the dismissal of Joseph Lalonde from the position of postmaster at Saint Front, Saskatchewan, and in connection with the appointment of his successor.

POPLAR BLUFF, SASK., POSTMASTERSHIP

Mr. CAMPBELL:

For a copy of all correspondence, letters, and other documents in connection with the dismissal of Mr. W. Stasink from the position of postmaster at Poplar Bluff, Saskatchewan, and the removal of the office from the original location.

[Mr Fraser.]

HYAS, SASK., POSTMASTERSHIP

Mr. CAMPBELL:

For a copy of all correspondence, letters, and other documents in connection with the proposed change in the position of postmaster at Hyas, Saskatchewan.

FORT PELLY, SASK., POSTMASTERSHIP

Mr. CAMPBELL:

For a copy of all correspondence, letters, and other documents in connection with the dismissal of J. Schram from the position of postmaster at Fort Pelly, Saskatchewan, on the charge of political partisanship; and also all similar papers in connection with the appointment of his successor.

GOVERNMENT REPORTS—PUBLICATION IN FRENCH AND ENGLISH

Mr. PARENT:

For a return showing:—

1. A list of the various government reports published in the English language only.
2. A list of the various government reports published in only one of the two official languages.
3. The number, title of publication and place where printed, giving the name of the department responsible for the printing and publication, including engraving and photographs.

SOUTH SAULT RAPIDS DAM

Mr. STEWART (Leeds):

For a copy of all correspondence, telegrams, resolutions, orders in council, reports or other documents in the custody of any department of the government of Canada or of the joint International Waterways Commission, in any way relating to the construction or maintenance of a dam in the South Sault rapids of the river St. Lawrence between Barnhart island and the main shore of said river, in the state of New York.

DIVERSION OF WATER AT MASSENA, N.Y.

Mr. STEWART (Leeds):

For a copy of all correspondence, telegrams, orders in council, reports, resolutions, agreements or other documents, in the custody of any department of the government of Canada or of the joint International Waterways Commission, in any way relating to the diversion of water for power purposes at or near Massena, in the state of New York.

JUDGES' SALARIES AND PENSIONS

Mr. CAMPBELL:

For a copy of the memorandum presented to the government by the county and district court judges recently, in connection with their appeal for an increase of salary and the granting of a pension.

NUT MOUNTAIN, SASK., POSTMASTERSHIP

Mr. CAMPBELL:

For a copy of all letters, correspondence, and other documents in connection with the dis-

missal of Mr. H. Stevens from the position of postmaster at Nut Mountain, Saskatchewan, on the charge of political partisanship, and also in connection with the appointment of his successor.

NATIONAL SYSTEM OF BANKING

Mr. J. S. WOODSWORTH (Winnipeg North Centre) moved:

That, in the opinion of this house, the time has come for the establishment of a national system of banking.

He said: Mr. Speaker, in 1925 I moved a resolution looking in the direction of such action in these words:

That, in the opinion of this house, it is not in the interests of the country at large that the privilege of issuing currency and of controlling financial credit should be granted to private corporations.

In 1926 I moved a resolution similar in terms to that now under discussion. I recognize very clearly that a fully developed system of national banking is not immediately practicable. In fact, the terms of my resolution have been criticized by some of my friends as suggesting that we would at once wipe out all private banks. That is by no means the thought behind the resolution. On the other hand, some have suggested that we already have a national banking system. But I do not think that it will seriously be contended that the present system is "national" in the sense of being nationally controlled. My resolution would look to a larger measure of control of the existing chartered banks, and more than that, towards more widespread public banking facilities. In my speech two years ago in support of the resolution I then moved I said that it seemed to me there were certain measures which might be adopted. First of all, currency should be issued by the government. Secondly, our postal savings banks should be developed and modernized and freed from red tape. Thirdly, the provincial savings banks might be given full banking privileges. Fourthly, there should be larger facilities for cooperative credit. Fifthly, a central bank board should be created.

Now, Mr. Speaker, it would seem to me that it is in this last direction we must look if we would make a beginning in a thoroughgoing system of national banking. It is quite possible that with the enlargement of the functions of the present treasury board we might be able to work out a central bank board which would be responsible for the issue of currency and would become a bank of re-discount. I might say that at the present time there is considerable agitation in Great Britain for the nationalization of the Bank of England, which we all recognize is there functioning as a central bank, but is still under private control.

Mr. SANDERSON: Would the hon. member permit a question? For my own information I should like to know wherein his scheme of a national banking system differs from our present system of banking?

Mr. WOODSWORTH: I will devote the next half hour to an explanation of that point. I would respectfully ask the Minister of Finance (Mr. Robb) to allow this resolution, if possible, to go before the banking and commerce committee. I have no clear cut and dogmatic scheme to propose to the house at this moment; it does not seem to me that this would be wise. I will say however that there is a very widespread feeling in the country that some better means should be devised than that which exists just now for affording the public wider banking facilities and more properly controlling the issuance of currency and re-discounting. Policies with regard to these matters might be worked out in committee.

In answer to the question just put to me, I should like to submit some of the considerations which have led me to urge this step. The need for a national control of our financial system arises first of all from the concentration of financial and industrial control which today places our resources very largely in the hands of comparatively few individuals or corporations. In 1922 information was placed on Hansard by Mr. Andrew McMaster showing how fifteen men controlled corporations with assets amounting to $4,285,000,000. The total assets of the four largest banks in Canada—the Bank of Montreal, the Royal Bank of Canada, the Bank of Nova Scotia and the Canadian Bank of Commerce—on November 30, 1927, were given at $2,529,488,192. I have in my hand a list of the directorates of these four big banks. This list was prepared by Mr. J. McA. Conner of Toronto and I notice that on the boards of these four banks there are ninety-two directors, these directors averaging fourteen directorates each: that is to say, each man, on the average, is a director on fourteen boards. The outstanding example is that of Sir Herbert Holt, who is becoming a sort of Canadian Stinnes, branching out into almost every department of industry and commerce.

Mr. CASGRAIN: Why not?

Mr. WOODSWORTH: I am not blaming him for so doing— I fancy many other men would be glad to do likewise. I am merely stating facts as they exist and as revealed by this list, which as Mr. Conner says, is not

complete but subject to constant revision. With the consent of the house I would ask that this list in so far as it relates to Sir Herbert Holt be incorporated in Hansard. It shows altogether some 135 directorates:

Royal Bank of Canada.

Sir Herbert Holt.
- Montreal Light, Heat & Power Consolidated.
  - Montreal Light Heat & Power Co.
  - Montreal Gas Co.
  - The Royal Electric Co.
  - Montreal & St. Lawrence Light & Power Co.
  - Imperial Electric Co.
  - Lachine Rapids Hydraulic & Land Co.
  - Citizens Light & Power Co.
  - Temple Electric Co.
  - Standard Light & Power Co.
  - Provincial Light, Heat & Power Co.
  - Cedar Rapids Mfg. Co.
  - Merchants Light Heat & Power Co.
  - Quebec-New England Hydro. Elec. Corp.
  - Dominion Light & Power Co.
  - St. Pauls Electric Light & Power Co.
  - Montreal Electric Co.
- The Shawinigan Water & Power Co.
  - Canadian Carbide Co.
  - Can. Electric Product Co.
  - Shawinigan Engineering Co.
  - North Shore Power Co.
  - Electric Service Corp.
  - Laval Electric Co.
  - Continental Heat & Light Co.
  - Athabasca Water & Power Co.
  - Shawinigan Falls Terminal Ry. Co.
  - Three Rivers Traction Co.
  - St. Francis Water & Power Co.
  - Sorel Light & Power Co.
  - St. Maurice Power Co.
  - Thetford Mines Electric Co.
  - Beauharnois Electric Co.
  - Portneuf Hydro Electric Co.
  - Consolidated Electric Products Co.
- The United Securities Ltd.
  - The Montreal Tramways.
  - The Montreal Land & Development Co.
  - The Miacet Chemical Corp.
  - The Montreal Hydro Electric Co.

  - Cumberland Ry. & Coal Co.
  - Halifax Shipyards Co.
  - Nova Scotia Land Co.
  - Wasses Steamboat Co.
  - Sydney Lumber Co.
  - Jas. Pender Co. Ltd.

It seems to me that when you have such vast power placed in the hands of one man or corporation it is high time that business

men generally throughout the country asked themselves whether they were getting that opportunity for development which might be afforded if there were a wider distribution of financial control. My contention is that a few men not directly responsible to the people are able to manipulate the whole of the money and credit of the country in their own interests. Perhaps we in the west feel this more keenly than do the people in eastern Canada. We all know that the two great banking centres in Canada are Toronto and Montreal. All the institutions are centred there and we often feel that industrial concerns that have their headquarters in these two cities are apt to get credit facilities that are not accorded in the same measure to other institutions with headquarters in other parts of the country. In fact, I am not so sure that throughout Canada there is not a rising feeling that Canadian money ought not to flow so easily and freely to enterprises outside the Dominion. Why should Canadian money be sent to Cuba or Mexico or various republics in South America when apparently we require money for purposes of development in this country itself?

Some hon. gentlemen may remember a rather remarkable statement made during the election of 1925 by Sir Clifford Sifton. He said:

> We are rapidly approaching that condition in which two or at most three banks will be doing the whole of the business of the Dominion and you will have the spectacle of about three men sitting on the whole of the funds of the people of Canada deposited in the banks and deciding to whom they will loan these funds.

And again:

> If anything would justify an armed rebellion against the established condition of affairs I think such a consummation of our banking system is the one thing that would justify it.

An hon. MEMBER: Sedition.

Mr. WOODSWORTH: Somebody suggests that this is sedition. Well, such an utterance might be seditious in the mouths of some of my comrades in the working class, but I suppose it is comparatively safe for Sir Clifford Sifton to make this statement.

I ask, in the next place, why should the banks be given the valuable franchise of issuing currency? Long ago certain people approached the great teacher of that day and asked him a question concerning taxation. He produced a penny and put this query to them: Whose image and superscription is this? I would produce two bank notes, first, a dollar bill, and would ask the same question: Whose is the image and superscription? And the answer?—King George's. But I produce a ten dollar bill and when I ask the same question—whose image and superscription does this bear?—the answer is: the image and superscription of Sir Frederick Williams-Taylor and the image and superscription of Sir Vincent Meredith. In Canada, it would appear, the one dollar bill is good enough for the king, while with the fives and tens and everything higher, quite evidently, we admit the sovereignty of the money kings. There are some gentlemen in this house who sometimes upbraid us for what they regard as our lack of patriotism. Let me say to my patriotic friends to-day, "Help me to put the king's image and superscription on every bill in Canada."

I want now to pass on to a still more important consideration, namely, the control of credit. I take it that credit to-day is recognized as the life blood of trade; we cannot do business nowadays without credit. We all recognize how essential it is. And yet, as I pointed out a little while ago, credit is concentrated in the hands of comparatively few. More than that, I say that credit largely determines the purchasing power of the dollar. A few years ago a farmer said to me, "I am not going to put my money in the bank any longer; I am going to keep it in my jeans where it will be safe". I remarked, "You don't know the power of the banks. You may put your dollar into your pocket and fancy that it is safe, but when it comes out it may be worth only fifty cents". That is high class juggling, and in all seriousness it is the power which is possessed by private corporations to-day.

I wish to spend a few minutes on this economic aspect, which I know is not altogether easy; it is a technical question. It has been generally recognized that the amount of money in circulation is closely connected with the price level. Some practical bankers, absorbed in the routine of their business and thinking of currency only, are apt to take the position that changes in the price level lead to the expansion or contraction of the volume of money in circulation. Other bankers of note and most economists lay stress on the fact that the amount of money largely determines the price level. I am not going into that rather technical question, but I would quote such a leading economist as Professor Taussig, who says:

> Double the quantity of money, and, other things being equal, prices will be twice as high as before and the value of money one-half. Halve the quantity of money, and other things being equal, prices will be one-half of what they were before and the value of money double.

Mr. CAMPBELL: That is, prices as measured in terms of money.

Mr. WOODSWORTH: Yes, as we always do measure prices. When there was only gold in existence, the expanding trade of the world had to be taken care of by the discovery of new deposits of gold until the invention of bank notes came about. That helped immensely; in fact, without bank notes I do not see how the enlarged trade of the world possibly could have been taken care of. There was still the old fashioned theory that the bank notes represented gold, but during the war we learned that gold was not of any very great consequence after all, but that the quantity of bank notes might alter the cost of living. We all know what happened in Germany and Russia, and later on in France; the printing presses were set to work, and the faster the money was printed the less that money was worth, and conversely the higher the cost of living rose. So we learned that it was not merely the quantity of gold which determined the cost of living but the quantity of bank notes in circulation as well.

That is generally accepted now, but I would submit that there is a third kind of money. I know the bankers do not like to admit that it is money, but we have very good authority for calling it such. I refer to the chequeing system, because it is by the chequeing system to-day that we do some 96 per cent of the business of Canada. Cheques function as money, and I submit that the amount of credit issued affects the price level, or in other words the purchasing power. If you put so much more gold into circulation you send prices up; if you put so many more bank notes into circulation you raise the price level, and if you extend the credit of the country without extending the volume of business you also raise the price level. This is the most important matter in this connection, yet over this extension or contraction of credit the government has absolutely no control. The only way you can increase the quantity of gold is to discover new gold fields or to improve the processes of mining; the control of bank notes comes either directly or indirectly under the government, but the extension or the contraction of credit is a matter entirely under the authority of the banks themselves.

In 1926, when this matter was last debated in this house, the hon. member for St. Lawrence-St. George (Mr. Cahan) made a contribution to the debate by "talking out" the resolution.

Mr. CAHAN: I had only three minutes in which to speak, if I remember correctly.

[Mr. Woodsworth.]

Mr. WOODSWORTH: Just before six o'clock my hon. friend moved the adjournment of the debate, which he knew very well would shut off further discussion for that year. He characterized speeches from this corner of the house, presumably including my own, as "wild and irrelevant propaganda," and suggested that there was "no limit to ignorance."

Mr. CAHILL: That was a good deal to say in three minutes.

Mr. WOODSWORTH: That was indeed a lot to say in three minutes. To-day I would like to quote some authorities which I think even the hon. member for St. Lawrence-St. George may accept. There are a number of lawyers in this house, so perhaps we may think of this as a court room, and my star witness to-day is Right Hon. Reginald McKenna, chairman of the Midland bank of England, a noted banker known all over the world and one to whom, since he has become a director of the Canadian Pacific Railway, I presume even the people in St. James street will have to listen. I would quote from his speech as I found it reported in Saturday Night under date of April 5, 1924, in which he discusses this question of trade stability as follows:

> Ups and downs in trade we are bound to have but wise monetary policy can always prevent the cyclical movement from going to extremes.

He discusses the amount of money and the price level to which I referred a few moments ago, and says:

> If the price level be unchanged, an increase in the volume of trade will require an increase in the volume of bank credit and currency, that is to say, money.

I said a little while ago that by "money" I included not merely gold and bank notes but also cheques, and I would now give as my authority Mr. McKenna, who says very clearly:

> I understand by it—

That is, money.

> —all currency in circulation among the public and all bank deposits drawable by cheque.

Mr. MALCOLM: Will my hon. friend permit a question? He does not suggest that a cheque, which is merely an order to a banker to pay some money, is cash? If I heard him correctly, he quoted Mr. McKenna as saying that bank deposits payable by cheque were money.

Mr. WOODSWORTH: Quite so, but the Minister of Trade and Commerce knows perfectly well that in commercial banking loans are classed as deposits. I think we should have that very clearly in mind. Mr. McKenna is not thinking merely of savings de-

posits but also loans which are classed as deposits. Dealing with the question of the quantity of money he says:

> Under the system which prevails in our country there is only one method by which we can add to or diminish the aggregate amount of our money. Gold coin is no longer minted, and additional paper currency is not issued except to meet the demands of the public. . . The amount of money in existence varies only with the action of the banks in increasing or diminishing deposits. . . Every bank loan and every bank purchase of securities creates a deposit, and every re-payment of a bank loan and every bank sale destroys one.

He deals very specifically with the way in which we have thus given to the banks the power of really making money. He uses this phrase:

> While banks have this power of creating money—

I do not believe many citizens of Canada realize that the banks are given the right in this way actually to manufacture money. I am not talking now of bank notes but about the third kind of money, cheques. The issue of such loans has the same far-reaching economic effect as the issue of currency. "Coining" was at one time a capital offence; now we have handed over to the banks the privilege of manufacturing money. I would not suggest that we again make coining a capital offence because I am against capital punishment, but surely it is a serious thing to give over that great power to private corporations.

I am going to anticipate one or two objections which may be raised here. Someone may ask, "What about the gold standard?" —on which we were all brought up. Mr. J. M. Keynes, in Monetary Reform, says:

> Gold itself has become a "managed" currency.

Professor Gustav Cassel, a banker of international repute who is by no means a great radical, speaking before the institute of Bankers in London on June 11, 1924, said:

> The gold standard can no longer be regarded as an absolutely objective standard outside every political discussion.

And Mr. McKenna, in his report of a year ago says:

> Thus we see that the gold standard is by no means the "automatic" mechanism it is commonly alleged to be, since the bank merely by buying, or selling, lending or calling in loans, can within limits prompt an expansion or contraction of credit regardless of movements of gold.

Let me repeat that:

> —regardless of movements of gold.

Those in the house in 1923 will recall the ridicule poured upon Mr. W. C. Good, then a member of this house, and my hon. friend the member for Wetaskiwin (Mr. Irvine), because in their arguments they connected the quantity of money with the price level. I would suggest that already their position is being vindicated.

Even our Canadian bankers are beginning to see the light. The Royal Bank of Canada in April, 1927, refers to Mr. McKenna's speech as "the outstanding financial speech of the year,—a remarkable description of the relationship between commercial and industrial activity on the one hand, and the quantity of money in circulation on the other."

Mr. C. E. Neill, president of the Canadian Bankers Association at the annual general meeting in 1926—and let me say I am quoting from the Montreal Gazette, which again I presume is a safe paper to quote from in this connection—said:

> With the United States and India absorbing gold, other countries are learning that the regulation of the quantity of currency may serve their purpose in securing stable currency just as well as the maintenance of heavy gold reserves.

"Stable currency", says Mr. Neill. He has either not sensed or wishes to conceal the more important factor of credit. Mr. McKenna has no such fears as our Canadian bankers seem to have. He gives a lesson in applied economics. I quote again from Mr. McKenna:

> An increase of credit gives rise to a greater demand for commodities, stimulates trade, and brings more people into employment.

He discusses the bogey of "easy money"; and you remember that when we brought forward our proposals before, all that was necessary for the advocates of the present system to do was to get up and denounce us as "advocates of easy money". We were nothing of the kind but we did say that credit should keep pace with the development of business, and we suggested that that had not been the case under the policy which had prevailed some years ago in this country. Here is what Mr. McKenna has to say with regard to the danger of inflation:

> If the supply of new money does no more than keep pace with the increase in production, there is, in fact, no inflation whatever.

Now let me ask who determines the quantity of money? I said a little while ago that in the old days of gold money it was decided very largely by the activities of the miner. In the case of paper it is either directly or indirectly under the control of the government. I suggested however that

the expansion of credit facilities comes entirely within the powers of the private banks. What has Mr. McKenna to say on this point?

Apart from the action of a bank, the public in practice are powerless to increase or diminish permanently the total of money.

And incidentally he disposes of the idea of driving money out of the country. We are told that if we put some of our theories into practice it will drive money out of this country. Yes, somebody behind me suggests, the income tax—it would drive money out of the country. Here is what Mr. McKenna says:

It is not the money that moves, but the title to the money.

Which in its effect upon the financial structure of the country is an entirely different matter. Again Mr. McKenna has this to say:

Fluctuations in the quantity of money cannot under present conditions be accounted for by anything done independently either by the public or the government.

I pause for a moment to emphasize the last statement. If the quantity of money, as we tried to show, affects the price levels, the cost of living for the masses of the people, it seems most extraordinary that the public, or even the government, should have no voice whatever in deciding the quantity of money, and hence in determining the price level. Yet that is the statement, as I interpret it, made by Mr. McKenna.

Now let us take a look back to see how the monetary policy actually worked out in Canada, especially a few years ago. What did the banks do in the years immediately succeeding the war? Some of you business men, some of you industrialists, some of you farmers know the hard sledding that you had when the rigorous application of deflation came. How did this deflation affect the banks? Well, I would point out that the banks did not suffer very much. If you care to look at the pamphlet Diamond Jubilee of Confederation in Canada, Sixty Years of Canadian Progress, at page 116 you will see that the assets of the banks show but a very slight decrease during those years, nothing at all comparable to the decrease that took place in the assets of most of the private firms in this country. I come back to Mr. McKenna; I must not forget my "star witness"; I should like to have his help in this debate. He says:

To check the growth of credit when the population is steadily increasing and vast numbers of men and women are out of employment is obviously to cut off all hope of trade expansion. . . . What actually ensues when the money decreases is long continued trade depression.

The particular political party which happens to be in power at the moment is not responsible in my opinion for trade expansion or trade depression. I may say that the immediately previous paragraph quoted is not in the document issued by the Royal bank which contains portions of Mr. McKenna's speech. That document, however, does quote Mr. McKenna as to the need for a new financial system. Mr. McKenna further says:

An exhaustive enquiry into the principles on which a central bank should be founded and should conduct its operations would be of immense service to the public. The present system may have suited conditions in 1844, when deposit banking was in its infancy. It might conceivably suit conditions to-day, but if so, only as the results of accident. It has survived for eighty years by virtue of its own suspension in times of crisis, the phenomenal supersession of the use of currency by that of cheques, and fortuitous discoveries of gold. The vital need for the future is to ensure that the maintenance of prosperity, with a growing population and ever-improving standard of living, both requiring an expansion in the volume of trade, shall not be hampered by false restrictions on the quantity of money.

I would emphasize his closing words as follows:

We need careful and expert consideration of the theoretical basis and practical technique of our credit and currency system.

If this resolution goes to the banking and commerce committee I hardly can hope that in that committee we shall have any very careful consideration of the theoretical bases and practical technique of our credit system; but I would say that we can consider the matter with a view to its ultimate reference to a committee or commission of experts who would give full consideration to the subject and place before us data upon which we could form an intelligent judgment. I do not think I need to add anything more along these lines.

I might note that a declaration by thirty-one nations at the economic conference at Genoa in 1922 was in favour of stable currencies and a stabilized price level through control over the national credits. So that the principle is recognized by the international financiers. Without going into detail regarding what other nations have done, I think I might have time to read just a short note concerning the Commonwealth Government Bank of Australia:

In exercising central banking functions since 1924, the Commonwealth Government Bank, it was stated, has given considerable assistance to other financial institutions. In the twelve

months to the end of June last, the profits of the bank, excluding the note issue department, amounted to £580,987, as compared with £461,296 in the previous year.

The benefits of the rural credits department of the bank were extended to wool, wheat, cotton, wine, butter, eggs, egg pulp, peanuts, canned and pulped fruits, dried fruits, osmiridium, broom millet, arrowroot, maize, and fortifying spirit. The turnover of this department for the year was £8,004,577, as against £2,732,392 in 1926.

The profits of the note issue department of the bank were £1,136,476, of which £852,357 was paid to the consolidated revenue fund and £284,119 to the capital of the rural credits department.

This information, I might say, ought to be reliable because it comes from the Commercial Intelligence Journal issued by this government.

If I might recapitulate what I have been trying to say, I would urge that we need greater government control than we have at present because we have reached a stage of industrial and financial development when a few men, not directly responsible to the people, control the money practically of the whole people of Canada.

Secondly, the banks still have in their own hands the valuable franchise of issuing currency. This should not be given to any privileged group. The issue of money is essentially a government function.

Thirdly, I went on to speak of the control of credit. It is necessary to have some central control in order that the weaker portions of the country and the weaker industries can be protected against those strong concerns which now are working in such close cooperation with the banks. Further, as undoubtedly, according to the authorities I have quoted, the amount of money in circulation, including the credit which is given, has a direct bearing on the costs of living it is all important that this function, too, should be controlled by officials who are responsible to the public, and not to irresponsible private corporations.

There is a fourth point which I have not had time to develop, but which I shall simply mention in closing, and that is that if some plan of this kind could be carried out it would assist materially in government financing. Only the other day we had introduced by the government a proposal to raise a loan of $500,000,000 for Canada. I suppose the way we will raise that money is to go out on the money market and pay a high rate of interest, with commission charges, and all that kind of thing. Surely, if we had even a fully developed savings bank system, we could do better. If we had an institution along the line I have indicated, the government would then be enabled to do its own financing on much more advantageous terms than is possible under the present system.

I think that these considerations which I have tried to advance, Mr. Speaker, are sufficient to warrant us in at least going so far as to discuss this matter in the committee that is being set up to deal with matters relating to banking in this country. When a few years from now we come to a revision of the Bank Act, we shall be told that we must deal with the Bank Act itself, that there is no time to go into more fundamental questions relating to finance. I would therefore suggest that as we are not now pressed for time, we take advantage of the opportunity to study this matter. In this way the consensus of opinion of the whole committee will be obtained, and as I have suggested this might possibly lead to the formation of some sort of commission of experts which would indicate to the government the lines along which Canada could best proceed.

Mr. H. E. SPENCER (Battle River): Mr. Speaker, I had hoped that the Minister of Finance (Mr. Robb) would make a statement to the house with regard to the resolution which has been placed before the house by the hon. member for Winnipeg North Centre (Mr. Woodsworth), and thereby save further discussion; but if he wishes first to hear it further discussed I shall be glad to submit a few words in regard to it.

The subject under discussion is I think one of the most important we have had to consider. It is a subject that now is coming before this house annually, a subject to which more and more people throughout this Dominion are giving a great deal of study. Although some six years ago when it was first brought up in the house the subject was more or less ridiculed, and the chamber was usually empty while the discussion was proceeding, I am very glad to notice that to-day quite a large number of members are becoming interested in this question.

I am interested in the resolution because it is one step towards asking the government to take some hand in the control of the credit of this country. To-day we have a monopoly in the hands of a very few men, a monopoly which is not in my opinion the best thing for any country. A monopoly is never a good thing, and a monopoly in finance is the worst of all. The recommendation, therefore, to have some sort of government

control even through a bank of federal rediscount would in my opinion be a very good thing for Canada as a whole.

In recommending changes it is always well to state what is the matter with the present system. To-day we have in Canada just eleven private organizations called banks, whereas twenty years ago we had some thirty-two; so you see, Mr. Speaker, that it is becoming a closer and closer monopoly year by year, and rumours are abroad that possibly other mergers are going to take place. As the hon. member who preceded me (Mr. Woodsworth) said, these banks are highly centralized and the head offices of them all except one are centred in two cities in central Canada, although their branches stretch throughout the length and breadth of this Dominion for a distance of over four thousand miles. The main interest of a private organization such as a bank is to make profits: the main interest of a public institution would be to give service.

The argument that is put forward in favour of a branch system of banking is that in some parts of the country deposits accumulate more quickly than in others, and through the branch system these deposits can be transferred to other parts of the country where there is greater use for them. That argument might be all right for people who have not given any thought to this question, but those who have studied the subject at all know that it is far from the fact. If it were a fact, then we should have to admit that the carrying on of our trade, its development and its increase, must be regulated absolutely in the light of the amount of money that can be saved, which of course would be absurd. We all know that trade is carried on largely on credit supported by collateral. What is credit? In the view of a well-known economist, it is the power to produce and deliver goods and services. If industry is carried on by loans, and loans are created by security being lodged with the bankers, and loans, as the hon. member for Winnipeg North Centre (Mr. Woodsworth) said a few minutes ago, create current deposits, it is not necessary in that case to borrow from savings. Bankers do their business largely on other people's credit. This is made possible by what is known as banker's created credit. Thus there is no limit to the amount of check money or credit that can be created if the bankers so wish, only they must have a fair proportion of their assets of a liquid character.

I assume my statement with regard to loans creating deposits may be challenged, and I therefore wish to place before you support of my argument from well known men. Professor Adam Shortt, who is considered quite an orthodox economist, addressing the students at the university of Manitoba in 1919, gave the following information:

> Thus a credit of $5,000,000 granted to the government is merely an entry in the bank's books, and when drawn upon by the government in favour of munition industries, transportation companies, and supply purveyors of all kinds, much of it may not leave the books of the individual bank involving nothing more than debit and credit entries in its ledgers. Even when the parties to whom the credits are transferred keep their accounts with different banks the interchange of such credits between the banks through the clearing house practically offset each other in the long run. Thus a credit of even $5,000,000 on government account makes little or no drain on the individual bank, and none at all on the general circle of banks, unless it comes to a matter of foreign exchange.

Professor Soddy of Oxford University outlines the situation in the following words, and is supported by the Hon. Reginald McKenna and Major C. H. Douglas, London, England:

> Another and most important fact to be emphasized, is that virtually all the money in the hands (or banking accounts) of the community originally came into existence in the form of loans from the banking system. It can come from nowhere else, nor otherwise than as loans. This fact, which reverses all the old concepts of loans as money taken out of pre-existing deposits, is demonstrated fully in Major Douglas's works, and, in fact, has since been endorsed by Mr. McKenna, the chairman of the Midland bank. The order of procedure is as follows:
>
> (1) Money is printed or written into existence by the banks:
>
> (2) It enters circulation as a loan to somebody:
>
> (3) It is then spent, and then becomes a "deposit" in the name of the receiver.

Under the present system we have a monopoly in the case of a few institutions which, as I say, are all-powerful in regard to the control of industry. It is perfectly natural that they do not want that monopoly broken. They would not be in favour of banks of re-discount if this house decided to create them.

The hon. member who preceded me referred to the matter of interlocking directorates. I am not going to take up the time of the house in any repetition of the statement, but it is well known that the interest of industry and finance sometimes clash where other people want to start up in lines of industry in which certain men in the financial world are all-powerful. It is quite possible they would do their best to stop the setting up of industries in opposition to their own.

Sometimes it is said that this banking system of ours in Canada is good because it is based on the British system. That statement itself in my opinion will not stand analysis, for this reason: that whatever may be perfectly beneficial to a country about half the size of Alberta is not necessarily the best thing for a country which covers half the continent. As has been said before, possibly to the people of central Canada the system may be fairly serviceable, but to other parts of Canada thousands of miles from the central part it certainly is not the best system. For instance, in years gone by I have known of a blanket order to go out to bank managers in towns of western Canada, towns that are giving service to a district probably twenty miles square, to stop all credits or loans to people in that vicinity. It is quite possible that sixty per cent of the people in those particular districts had no credit and could not show sufficient security, but forty per cent were men of good standing who were in a position to place a security behind their loan, and these blanket orders were particularly hard on that forty per cent, as well as unfair to the country in general.

The British banking system was based on a bill passed as far back as 1844. It may have served the needs of industry at that time, but since 1844 industry and transportation facilites and so on have altered tremendously. In no period for the last thousand years have there been so many alterations, and therefore it is easy to realize that a system which was all right in 1844 is not all right to-day. I cannot support the member for Winnipeg North Centre too readily when he refers to the great power that has been given to our chartered banks in creating what is usually termed cheque money. The late Sir Edmund Walker, giving evidence before the banking and commerce committee in 1923, stated that ninety-six per cent of our business transactions are carried on by a medium otherwise than by cash or by notes.

The hon. member for Winnipeg North Centre has anticipated me in the peculiar instance he cited that those who attempted to increase the coinage of the realm would be severely punished; and the same would apply of course to those who attempted to increase the number of notes in circulation; but those two media to-day represent only four per cent of the exchange we use, and therefore our greatest attention should be concentrated on what is termed the checking system. I am not against the use of this system by the banks, but I am against the monopoly right given to them of dictating to men or to corporations whether they shall make use of their credit or not. The Right Hon. Reginald McKenna has already been quoted by my hon. friend in regard to the checking system, but I wish to repeat the quotation to support my argument. He said:

> The amount of money in existence varies only with the action of the banks in increasing or diminishing deposits. We know how this is effected. Every bank loan creates a deposit, and every repayment of a bank loan destroys one.

The Elements of Banking, written by Mr. H. D. Macleod, contains the following:

> The essential and distinctive feature of a "bank" and a "banker" is to issue credit payable on demand, and this credit may be put into circulation . . . . and serve as money.

Further on occurs the following passage:

> When it is said that a great London joint stock bank has perhaps £25,000,000 of "deposits" it is almost universally believed that it has twenty-five millions of actual money to "lend out"—

Please mark this:

> —as it is erroneously called . . . . . It is a complete and entire delusion. These "deposits" are not "deposits" in cash at all. . . . . They are nothing but an enormous superstructure of credit.

We should do something in the interests of the public to take away the control of credit in this country from the few in whose hands it is now centered. In this connection it is interesting to observe that this is not only a national question, it has become international in its scope, and it will be found that people the world over are taking a keen interest in solving the problem. In Great Britain you will find papers that are given solely to its study, and there is also considerable activity in Australia. Indeed it is a very live subject, and undoubtedly this house should concern itself in finding a solution.

I should like to bring to my assistance in this matter the views of a few prominent men. First let me quote Sir Charles Addis. Writing in the Edinburgh Review, of July 1918, he said:

> The bigger the bank the greater the danger that with the lapse of time it will become entrenched in a bed of vested interests, inimical to change, discountenancing the introduction of new ideas and discouraging the more efficient methods of young and vigorous competitors.

The late Woodrow Wilson, in his book, The New Freedom, published in 1913, wrote:

> The great monopoly of this country—
>
> The United States.
>
> —is the monopoly of big credits. . . . . A great industrial nation is controlled by its system of credit. Our system of credit is concentrated. The growth of the nation, therefore, and all

our activities are in the hands of a few men who . . . . . chill and check and destroy genuine economic freedom.

The last authority I bring to my support is no other than the late W. E. Gladstone. We have heard him quoted a great deal by the hon. member for West Calgary (Mr. Bennett) and consequently I take pleasure in placing this citation on Hansard:

From the time I took office as chancellor of the exchequer I began to learn that the state held, in the face of the bank and the city, an essentially false position as to finance . . . . The hinge of the whole situation was this: The government itself was not to be a substantive power in matters of finance, but was to leave the money power supreme and unquestioned. In the conditions of that situation I was reluctant to acquiesce, and I began to fight against it by financial self-assertion from the first. . . . . I was tenaciously opposed by the governor and deputy governor of the bank, who had seats in parliament, and I had the city for an antagonist on almost every occasion.

I trust that when the hon. Minister of Finance realizes the good company we are keeping in our quest for information on this important subject, he will not hesitate to favour this resolution going to the banking and commerce committee.

It has often been a surprise to me to hear that so much foreign capital is sought to develop Canadian industry, and I have wondered why it is necessary to go outside for this help. We know perfectly well that industry is carried on by a system of loans, those loans being made possible by the collateral that is placed at the disposal of the financial institution making the loans; that only on the basis of the collateral are loans made, and that those loans create current deposits that can be drawn on by the borrowers. Now, if this Canadian collateral is good enough for financial houses in the United States, Great Britain or elsewhere, why is it not good enough for our financial houses? Is it that they are too conservative in character? If so, we cannot blame the other institutions making a harvest on the profit of these loans. But I should like to see Canadian financiers taking a little more interest in Canadian development, because the collateral is just as good a security to them as to outsiders.

I would favour some sort of a institution in the shape of a federal bank of re-discount for various reasons. Believing it would be a great boon to the country in every way, I would recommend the formation of such a bank for the following reasons:

1. It could perform the duties now carried out by the treasury board by discounting securities of present or future banks.

[Mr. Spencer.]

2. It could take over certain duties now carried out by the Canadian Bankers' Association with regard to notes.

3. It could serve the purpose of the central gold reserve.

4. The note circulation redemption fund could be handled by it.

5. Through it could be done all government business.

6. It could and should issue all notes.

7. It could take care of the work of buying and selling securities to guard against sudden inflation or deflation which is so deadly damaging to both trade and the standard of living.

Mr. ROBB: Will my hon. friend tell the house whether or not he desires the federal reserve bank to lend directly to and take deposits from the public, or does he expect it to deal with the banking system now in existence? It is important that he make that point clear, because his speech does not tally with that of the mover of the resolution. My hon. friend desires to take away from the government the business we now have under the Finance Act, while the mover of the resolution wants to give us more business.

Mr. SPENCER: In my opinion it should be entirely government business; it is more on the basis of the Australian bank. In conclusion, I cannot do better than quote from a speech delivered by the Right Hon. Reginald McKenna to the shareholders of the Midland bank in 1926 when advocating reform of the Bank of England. At the close of his address he said:

The subject is too large to permit of my entering into detail on an occasion like this, but I am convinced that it merits the most disinterested and painstaking investigation. An exhaustive inquiry into the principles on which a central bank should be founded and should conduct its operations would be of immense service to the public. The present system may have suited conditions in 1844, when deposit banking was in its infancy. It might conceivably suit conditions to-day, but if so only as the result of accident. It has survived for eighty years by virtue of its own suspension in times of crisis, the phenomenal supersession of the use of currency by that of cheques, and fortuitous discoveries of gold. The vital need for the future is to ensure that the maintenance of prosperity with a growing population and ever-improving standard of living, both requiring an expansion in the volume of trade, shall not be hampered by false restrictions on the quantity of the money.

Mr. JOHN EVANS (Rosetown): I wish to add my voice to what has been said in support of the motion, not because I can better present the case than it has already been submitted by the mover of the resolu-

tion (Mr. Woodsworth), and my hon. friend (Mr. Spencer). This is a business that touches the life of all industry and for that reason I wish briefly to cite some of my own experiences to show the absolute power which is placed in the hands of bankers over credit and industry to-day. In the banking system we have another of those public utilities in private hands controlled and operated for private profit, rather than for service to the people. There are in this nation many things which the people use, such as railways, the telegraph, the telephone, transportation and express services, and so forth, which can rightly be called public utilities. And a public utility should never be in private hands to make profit for private companies; it should always be publicly owned and operated at cost. It is only on that basis that the industry of any country can assume the proportions it should when credit is free to all who may be able to use it.

Of all public utilities, I believe the banking business in private hands has become now about the most unbearable, not because it does not give service—service it does give—but from the fact that the more service it gives the more intolerable it is felt to be. It profits on the adversity of the people who have to avail themselves of it, and this is so because of the great power that comes from the concentration of wealth and industry. It is likely that the reports of the last annual meetings—I have not been able to peruse them all myself—will show that our banking system this year will make many millions of dollars of profit out of the earnings of the people, so that industry in the coming year will be so much more dependent on those who now control credit. No small business man to-day can get any moderate amount of money from the banks under about 9 per cent—and when I say 9 per cent I know exactly what I am speaking of because I am speaking from experience. It is thus that men in a small way are closed out, with the result that industry is still further concentrated in the hands of the few. Not only do these directors of industry concentrate control of business by granting or withholding credit as they see fit, but they are ever on the lookout for any renegade banking business which is not part and parcel of the banking association. I can remember when more than forty chartered banks existed in this country, when the population was indeed not over two-thirds of what it is to-day. It is quite evident that these big institutions entirely control the credit and industrial activities of the nation. When such concerns as, for instance, the Merchants' Bank and the Bank of Hamilton of past days found it hard sailing they were taken in tow by the stronger banks. But this was not so in the cases of the Home Bank and the Farmers' Bank. In connection with the Bank of Hamilton and some others, there was no problem of compensating the depositors, as in the case of the Farmers' Bank and also the Home Bank. This latter institution was under attack from the banking combine from the time of its first appearance, and I can well remember when the Grain Growers' Grain Company did their banking business with this bank. I can remember later on when an attempt was made to wreck both the Home Bank and the Grain Growers' Grain Company, and these two institutions were only saved at that time by the timely intervention of the Scottish Co-operative Wholesale Company, which then had representatives in this country. The Home Bank was always looked upon as a renegade and usurper by those who held the legal right, given by this parliament, to prevent the workers and farmers from using their credit, and to fleece them of their earnings. Indeed, sir, to further draw on my experience, I can clearly remember loading a car of wheat on the siding at Saskatoon, after having to wait several days and travel around a good deal before I got the car. When that car was filled I took my bill of lading to the chartered banks in that city, of which there were five at that time, and asked for an advance of $300 on that car of wheat, which was worth from $850 to $900 at least. I was refused by each of the five banks. Having returned to the bank with which I used to conduct my business, the then Bank of Hamilton, I pleaded with the manager to let me have $300 in order to meet an instalment due on a mortgage on my farm. He said, "The only thing wrong with that bill of lading is that it has the wrong name on it." My car was billed to the Grain Growers' Grain Company, which afterwards became the United Grain Growers. The manager said, "You take that back and change the name and I will give you all the money you want." I did not do so; I ran the risk, and managed to meet my obligation only three days late.

These experiences only go to show the complete control exercised by these men over every industry and activity of this nation; because the Grain Growers' Grain Company was doing business with the Home Bank, both these institutions were to be put out of business, and I was up against it. I say that banking is the business of the

people, and it should be done by the government to a greater extent than is now the case. I think we should begin with a central government bank, to have the sole right of note issue and to provide for full discount privileges, so that the requirements of all producers could be adequately met at rates of interest which would only cover the cost. I believe this to be necessary at this time, and I want to tell this house that production on the farms of Canada is hampered to-day because of the lack of this measure. I believe we have come to the time when industry and credit and the sole control of the activities of the nation should not be left in the hands of a few private persons for their own personal benefit. It is a wrong principle.

I believe further that a system of education should be inaugurated in order to make the people of Canada alive to this bondage which is so hampering the activities of our country. Surely it is not too much to expect that those occupying chairs of economy in our educational institutions from one end of the Dominion to the other should come forward with something worth while in language everyone can understand, but because the control of industry and credit has fallen into the hands of a few people who form such a complete ring, even the mouths of our chief educationalists have been closed for years past, and nothing is forthcoming even from our great professors of economy looking to the emancipation of the working classes and the small producers. We cannot go on forever in this way, with every moneyed interest and industrial concern linked up with the politician. For that reason I say the politician is the keystone in the arch, which is absolutely wrong in this advanced age, with an intelligent people such as we have in Canada to-day.

There are several reasons for this reform, and the first is to prevent the autocratic control of credit, which means the autocratic control of industry, and the control of the rates of interest and the power of inflation and deflation, from which we have suffered so much since the war. We should also prevent the investment of the earnings of the workers abroad, to the detriment of the development of our own national resources, which has a good deal to do with the unemployment existing at present. Surely it is evident to everyone that these things are needed, because it seems quite possible that the factors which made the lot of thousands of farmers so hard since the war may come about again; it is not such a remote possibility. If I read the newspapers aright I can see a tendency even to-day to bring about war between the two greatest nations of the world, who can pay the most for their ammunition should there be another great struggle. It is being hinted to-day that the United States and Great Britain may be at each other's throats within a few years, and I believe that those men who to-day control industry and credit are trying to create an attitude of mind which would make such a thing possible, for the sake of satisfying their greed.

For these reasons and also to bring the matter just as it is before the people of this country I propose to support the resolution.

Mr. A. M. CARMICHAEL (Kindersley): Mr. Speaker, the resolution before the house is very important; it states that the time has come for the establishment of a national system of banking. The mover of the resolution (Mr. Woodsworth) intimated that he would like to see it come before the banking and commerce committee where it could be more fully and perhaps more properly discussed. I think perhaps that would be the best place to bring out the details of what the hon. member has in mind. I am not sure that I shall have the pleasure of being on that committee this year. On account of the reduced membership of our committees I believe it has worked out that I am deprived of a seat on the banking and commerce committee; therefore I should like to give expression to a few thoughts here in connection with this resolution.

I regret to see so many empty seats when such an important resolution is before the house. Proportionately there are considerably more members from this little independent corner of the house present than there are members representing the two major parties. I wonder why? The hon. member for Rosetown (Mr. Evans) stated that banking is the people's business. I believe it is, and that it should be done by the government.

I am not going to deal at any great length with our Canadian banking system, but I want to discuss more particularly a system which is in vogue in the commonwealth of Australia. Before taking up the Australian system, though, I should like to give utterance to a few pertinent thoughts in connection with our own banking system. Perhaps it is not common knowledge that in Canada since 1867, that is in a period of sixty years, there have been thirty-three different banks absorbed by others. But that is not the most serious point in connection with our banking system. In sixty years from 1867 to 1927 there have been

twenty-six bank insolvencies in Canada. That is something that is very serious, and therefore I am rather surprised that every hon. member of this house is not interested in the present discussion to the extent, at least, of being here and listening to what is being said. The last insolvency was that of the Home Bank in 1923. Following that calamity we were called upon to appropriate something like $3,000,000 for the payment of those who lost deposits in that unfortunate affair, and it is whispered that efforts are being made to get an additional sum of money from the government coffers to liquidate further debts in connection with the Home bank failure. At the present time there are just eleven banks in Canada and they are faring very well. Their profits, as disclosed in the annual report for the year 1926, were over $21,000,000, and their dividends amounted to over $15,500,000. The rates of dividend ran all the way from five per cent in the case of the Weyburn Security bank to sixteen per cent in the case of the Bank of Nova Scotia, very healthy dividends indeed.

One point we should bear in mind in connection with our banking system—and it has been touched on by previous speakers—is that the privilege of the note issue is in the hands of the banks themselves. The stability of our banks is often commended, but is it a very commendable feature that we have had twenty-six bank insolvencies in sixty years?

In Australia they had on June 30, 1925, twenty-one banks in operation with a paid-up capital of almost £64,000,000, which would be about $311,000,000 of our money. In that capital is included £4,000,000 of the Commonwealth of Australia. That £4,000,000 is capital which accrued from the earnings of the bank, somewhat different from the capital utilized by the other privately owned banks. No dividends or bonuses have been declared by the Commonwealth Bank of Australia, but the other banks have declared dividends. I am mentioning these points just to show that the fact that there is a commonwealth bank in Australia does not prevent other banks from carrying on a very profitable business. In the case of the dividends declared by the other banks in 1925 7 per cent was the lowest, the next was 8 per cent, and still another 9 per cent. Six of the banks declared a dividend of 10 per cent, three a dividend of 12 per cent, one a dividend of 12½ per cent, another a dividend of 15 per cent, and the Western Australia bank a dividend of 17½ per cent. These figures show that the banks there are quite prosperous. In addition to these dividends there have been reserve profits accrued to the amount of over £40,000,00. Included in that are profits of the Commonwealth bank to the extent of a little over £3,000,000.

The bank with which I wish to deal most particularly is the Commonwealth Bank of Australia, which was incorporated by act of parliament in 1911. The capital according to the act of incorporation was to be £1,000,000. In 1914 it was increased to £10,000,000, and then in 1924 there was a further increase to £20,000,000. But here is something of note in connection with the capital of the bank. While this bank has authority for a capital of £20,000,000 there is a sum of £4,000,000 which has been transferred to capital account from the reserve and redemption fund. The treasury department has authority to borrow £6,000,000 and lend it to the bank if it should be needed, in addition to the amount of capital which is authorized by statute. So far the bank has not seen fit to utilize any more than the £4,000,000 derived from accrued profits. Under the original act the management of the bank was placed under a governor and deputy governor appointed by the governor general. In 1924 an amendment was enacted creating a board of directors composed of the governor and seven other directors. Here is another feature of the act. The net profits from the operation of the bank were to be distributed in this way: one-half were to go to the bank reserve fund, and the other half to redemption fund. The first half was to enable the bank to pay off any liabilities, and the second to repay the treasurer for organization expenses, and so on, or to redeem debentures if any should be issued for the purposes of capital; or to go to the excess debts of the commonwealth. In 1924 there was a further amendment under which one-half of the profits went to the bank reserve fund and one-half to the national debt sinking fund. Those provisions are incorporated in section 30 of the statute.

Another point in connection with the bill incorporating this bank is that under section 33 of the act in question the commonwealth of Australia is responsible for all moneys due by the bank. I am sure that most of the people who place deposits in it feel that they have a greater security when they know that the Commonwealth of Australia is back of those deposits. The Commonwealth Bank of Australia was opened for business on January 20, 1913. On the first day of its business, deposits of £2,341,720 were placed with it, or a little over $11,000,000 of our money. Those funds were from the different departments of government. About six months previous to the opening of the bank, savings banks had been

opened throughout the country for the taking in of the savings of the people. In 1913 the State Savings bank of Tasmania was taken over and in 1920 the State Savings bank of Queensland. In the early operations, the Commonwealth bank paid interest at three per cent on the savings of the people up to £300, but later on, according to the year book of 1925, the interest paid was three and one-half per cent on the first £1,000, and three per cent on the next £300.

Here is another important feature. In December of 1920, the Australian note issue was handed over to the Commonwealth bank—a feature which we deprecate in this country as belonging to the privately owned banks. I have never been able to ascertain just what profits are made by our Canadian banks because of this privilege. I am quite satisfied that if that privilege were exercised by the government of the country the profits of our banks would not be nearly as large; but just what the profit is, it is difficult to say. In Australia this privilege of note issue was put under the control of a board composed of the governor, the secretary of the Australian Commonwealth bank, a member of the treasury board, and two outstanding financial experts.

It is very interesting to note the business done by the savings banks in the Commonwealth of Australia after this national bank commenced operations. I am not going to read the whole table because it would be wearisome and would take considerable time, but I am sure it is interesting enough to all hon. members to have it placed on Hansard. I have tabulated the operations from June 30, 1913, which is approximately six months after the banks commenced business, up to June 30, 1925, showing the business for each year separately. At the end of the first six months there were over eighty-three thousand depositors with deposits of £2,500,000 in the Australian Commonwealth savings bank department. At the end of June, 1925, there were over one million depositors with over £42,000,000 deposited to their credit. With the consent of the house, I will hand this statement to Hansard:

	Number of Depositors	Amount of Credit
June 30, 1913	83,558	£ 2,693,971
June 30, 1914	143,143	4,645,268
June 30, 1915	210,361	7,420,647
June 30, 1916	278,536	9,477,896
June 30, 1917	356,344	12,442,847
June 30, 1918	419,720	15,227,534
June 30, 1919	489,010	17,789,423
June 30, 1920	539,795	17,982,402
June 30, 1921	824,756	36,190,390
June 30, 1922	869,017	38,056,980
June 30, 1923	922,777	40,150,890
June 30, 1924	977,240	41,071,099
June 30, 1925	1,032,482	42,313,086

Hon. members will also be interested in the general business done by the bank. At the end of June, 1913, there was a debit in the general banking business of over £24,000. There was also a debit in the savings bank business of over £22,000 or a total debit of £46,637. Some might think it was not a very profitable business if it went into debt right at the start. It is true it went into debt the first year, but the next year the debit balance was not quite so large; the third year there was a credit balance of over £2,000, and every year since there has been an increase in the credit balance, which on June 30, 1925, stood at almost £5,000,000. That is the net total of the bank's business. As this is a statement that might be of interest to hon. members I should like to hand it to Hansard for publication:

Bank Business—Savings and General Bank

	General Bank	Savings Bank	Net Total
June 30, 1913..	dr. £ 24,329	dr. £ 22,308	dr. £ 46,637

Mr. ADSHEAD: Under the Australian system could there be any such catastrophe as occurred in connection with the Home bank?

[Mr. Carmichael.]

Mr. CARMICHAEL: I think such a catastrophe would be practically impossible with a bank like the Australian Commonwealth bank, because the resources of the

whole Australian Commonwealth, its lands, forests, mines, fisheries and everything else of value, are at the back of the commonwealth bank. One part of their statute provides that the Australian Commonwealth is responsible for the bank's business.

Mr. McQUARRIE: Might I ask what class of business this bank engages in?

Mr. CARMICHAEL: At the start of its operations the business taken over was chiefly government business, along with what in this country we might term municipal business; later the bank branched out and now carries on a general banking business, but a feature is that its major business is with government departments.

Mr. McQUARRIE: What I wanted to ascertain was whether or not they did any discounting.

Mr. CARMICHAEL: In competition with the other twenty banks in Australia they carry on a general banking business the same as our Canadian banks do.

Another point that perhaps is worth emphasizing is that the interest paid by the Australian Commonwealth bank on deposits is three and one-half per cent on the first £1,000 and then three per cent on the next £300. Compare that with the interest paid by our Canadian banks on deposits, which is only three per cent.

Then looking at the other side, at the interest charged by the Australian Commonwealth bank on loans made, we find that it runs about six per cent, with loans to corporations being less than six per cent in many cases; that is, loans to municipalities, school districts, church organizations, and the like are made in many cases at less than six per cent. The spread, therefore, is not more than two and one-half per cent. How different it is in our own country! The hon. member for Rosetown (Mr. Evans) stated that the ordinary man in the west has to pay nine per cent interest on loans. Possibly a great many of them will get their loans at eight per cent, but some of them have to pay nine per cent. Now the spread from three to nine per cent is six per cent, in comparison with the spread in Australia of two and one-half per cent; yet we find that the Australia Commonwealth bank has made considerable money. In 1925 the profits of the Commonwealth bank were almost £5,000,000, or in our money $24,280,919. Under their act one half of that was put into the bank reserve fund and the other half used to retire their national debt.

It seems to me, Mr. Speaker, that this is a pretty safe and good kind of business for the Dominion of Canada. If the profits in banking are as large as the dividends declared by our Canadian banks would lead us to believe, why should not the people of Canada, through the government, have a share in those profits? Our national debt at the present time is of such staggering proportions that it makes one dizzy even to think of it. We have been merely nibbling at it in a sort of hit-and-miss fashion in the last few years, and up until four years ago missing more often than hitting. The total reduction made is very slight indeed in comparison with the amount of our national debt; in fact, it is not equal to the accumulative interest year by year. If we can further augment our treasury receipts by a legitimate business which rightly belongs to us, would it not be good business for us to do it? We have in Canada a number of post offices that take care of the savings of the people. On March 31, 1926, we had in our post office savings account $24,035,669, and we had Dominion savings of $8,794,870. In addition to these sums the province of Ontario has a savings department in connection with its government; just what they have accumulated I do not know. I believe the province of Quebec also has certain savings accounts in connection with either their provincial or their urban governments. Then we have the different departments of the government that at times have large balances. We have also our city, town, rural and village municipalities which handle considerable sums of money each year. We have also our various school districts. If all those different items were accumulated within the borders of a federal bank or a bank similar to the Australian National bank, we should have enough to carry on the business of the banks just as they do in Australia, without the issue of bonds to raise any capital. It seems to me, Mr. Speaker, that this would be a safe business as well as a profitable business.

I regret that the mover of the resolution has not told us just what particular line he would like to have followed. I think he said he had no dogmatic line to present to the house. Possibly in committee he will have; or perhaps the Minister of Finance (Mr. Robb) will have something in view which he will present to the house. In the meantime I submit to his serious consideration a study of the history of the Australian Commonwealth bank, which in a period of fifteen years has made an enviable name for itself in that little island country. While we are not sure what we might do in Canada if we launched on a similar scheme, the history of that bank would

lead us to believe that we would have no reason to fear if we in this country saw fit to adopt such a scheme and carry it out.

Mr. C. E. BOTHWELL (Swift Current): Mr. Speaker, personally I have no objection to discussing in the banking and commerce committee the matter that has been before the house this afternoon, but I believe that the resolution as it is put to the house is not sufficiently clear to enable an intelligent discussion of it there. The hon. mover of the resolution (Mr. Woodsworth) stated that he did not believe that a national system of banking was immediately practicable, and made the further statement that he had no clear-cut scheme to propose, but he suggested that it might go before the banking and commerce committee, where some thought might be brought out that would enable us to develop some banking scheme.

Mr. WOODSWORTH: I said a fully developed national banking scheme.

Mr. BOTHWELL: I am glad of the explanation. However, I took it from the remarks made by the hon. gentleman that he did not have any clear-cut scheme, following the words he originally used.

I have listened to the remarks of the various speakers, and they all seem to have different ideas as to what a national system of banking is. So far as I am concerned I have always entertained the belief that we have at the present time in this country a national system of banking.

Mr. ROBB: Hear, hear.

Mr. CASGRAIN: Hear, hear.

Mr. SPENCER: Privately controlled.

Mr. BOTHWELL: That is not stated in the resolution. What the resolution may be intended to mean further I do not know, but taking its wording and the remarks of the proposer, I gather that what is meant by the resolution is that in the opinion of this house the time has come to consider the establishment of some new national system of banking. That is the only meaning I can gather from the remarks the hon. member has made.

Then referring to the speech of the hon. member for Rosetown (Mr. Evans), I take it that he has in mind some system of banking that would shut out private banks of every description. The hon. member for Kindersley (Mr. Carmichael), on the other hand, seems to favour the Australian system where they have a Commonwealth bank that enters into competition with the privately-owned banks of that Commonwealth.

[Mr. Carmichael.]

Mr. HEAPS: Would the hon. member tell me whether he has in mind any system which he thinks should be instituted?

Mr. BOTHWELL: I have not. I must say that I have not considered what new system of banking should be instituted. I do not believe that the members who have spoken have fully considered what kind of system they would like definitely to propose. At least I have not been able to gather that from their remarks this afternoon. There is no doubt that fault can be found with our banking system in some respects, but before this house should go on record as saying that the time had come for the establishment of a national system of banking, without knowing something of what is meant by those terms, I think it should have some definite system or proposal before it. If it were possible to refer the whole banking system to the banking and commerce committee and there discuss it, we might gain something from that discussion, but to carry a resolution which means, if I place the right construction on it, doing away with our present system without providing anything to take its place, is I submit, Mr. Speaker, to take a step that in the light of experience we would not be justified in taking.

Mr. SPENCER: Would my hon. friend be in favour of having the question discussed before the banking and commerce committee?

Mr. BOTHWELL: I have no objection to having it discussed, but not the resolution in the form in which it stands. With the change I suggested I would have no objection to a discussion of the resolution in committee. I would not like to go on record as saying that the time had come for the establishment of a new, national system of banking, but probably the time has come to consider and discuss some new system. If it is suggested that the resolution as it now is drawn should go to the banking and commerce committee, then I am opposed to it. It has been stated by the hon. member for Rosetown (Mr. Evans) that in his opinion every public utility should be owned by the public, and I take it that his idea is that all such things as railways, telegraphs, telephone lines, banking institutions and other corporations should be owned, controlled and operated by the government. That may be an ideal system, but we will have to go a long way in this country yet before we will be able, from the standpoint of the public, to take control of all these things that may be considered public utilities. It is rather difficult to define the term "public utilities." It is

very broad, and may include practically everything that we do from the standpoint of production as well as from the standpoint of what we ordinarily term public utilities in a municipality.

I was rather surprised at the hon. member's suggestion that at the present time the United States and Great Britain are being agitated by the moneyed interests toward war. I do not believe for a moment, Mr. Speaker, that that is the situation. I do not believe that the moneyed interests, so-called, have anything to do with the newspaper reports that have been published recently respecting the relations between the two countries, and I do not believe that the moneyed interests are in any way fomenting trouble in that quarter.

The hon. member for Kindersley (Mr. Carmichael) in rising to speak saw fit to direct the attention of the house to the fact that a number of members were not in their seats. It has been suggested that Hansard is being used for political purposes, and from the remark he then made I can only conclude that he used it for that particular purpose, because just at the very time, if he had taken the trouble to count the members of the two old parties in their seats, he would have found that his little group who were in attendance did not compare with the number of those present representing the government and the official opposition. But I would also like to draw his attention to this fact, that at that very time many of his own little group were not in their seats, and of those present representing the United Farmers of Alberta, the Progressives and Labour, their combined strength amounted to only a dozen.

Mr. HEAPS: It is hardly fair to reflect on the Labour group; we were here one hundred per cent.

Mr. BOTHWELL: There was no distinction made by the hon. member for Kindersley at the time, and I took the trouble to count what he apparently considered the "little group" in that corner of the house.

Mr. CARMICHAEL: Did he also count the number of members present from the two old parties?

Mr. BOTHWELL: I counted on this side of the house twenty-four.

Mr. SPENCER: Out of a hundred and sixteen.

Mr. BOTHWELL: I would suggest that in the opening remarks of the mover of the resolution may be found an explanation why all hon. members were not in their seats, for he said that the time is not immediately practicable for the establishment of a national banking system, or some such words.

Mr. WOODSWORTH: The hon. gentleman again will do me the credit to quote me correctly. I said: The time is not immediately practicable for the establishment of a fully developed system of national banking.

Mr. BOTHWELL: I quoted the words I took down at the time. But I want to be fair to the hon. gentleman; he may have added other words. Certainly he did state later that we had not a fully developed system. With practically every member in the house considering that we have now a national banking system, and the resolution calling for the establishment of a national system of banking, I can quite realize that members generally would not take the resolution as seriously as they would if the hon. gentleman had placed some definite proposition before the house.

Hon. J. A. ROBB (Minister of Finance): Mr. Speaker, I rise to say that personally I have no objection to the resolution going before the banking and commerce committee. But I do take exactly the same exception to its wording as does my hon. friend from Swift Current (Mr. Bothwell), and I hope that if it is referred to the banking and commerce committee for further inquiry and study my hon. friend who has presented it will confer with the hon. member for Swift Current and so modify his resolution that the house will not be understood to declare that Canada has not a national system of banking. Because, Mr. Speaker, I submit that when you compare the banking system and the bank failures of Canada in recent years with the bank system and bank failures of any other country in the same period, there can be no doubt that Canada has much reason to be proud of her system.

May I say at once that I have no pretensions to expert knowledge of banking. My experience with bankers has largely been that of a borrower, and the greatest kindness they have ever done me was when sometimes they refused to loan me money, for money borrowed must be paid back. And I submit to my hon. friend that when they ask the Dominion to go directly into the banking business—and I believe they are men of good judgment—it would seem that they have not carefully reviewed the record of the experience of the government in loaning money out in that particular part of the country which they represent.

Now, there is one feature, sir, that I desire to put on record. In the first place, my hon. friend in moving his resolution took some exception to the business that Canadian banks have been doing outside Canada, and he emphasized the point by asking: Why should we send Canadian money into other countries when it is needed at home for home development? Well, had my hon. friend carefully reviewed the published statements that are sent to the Department of Finance every month, he would have learned that our Canadian banks in doing business in other countries in competition with the banks of other nations are bringing more money into this country than they are sending out. Let me give the house the statement to December 31 last. My hon. friend can check up the records for each month and get the average. According to the published figures the aggregate commercial loans of Canadian banks elsewhere than in Canada were $264,708,072, and the aggregate deposits $374,425,788; or $110,000,000 more was received in deposits than paid out in loans in those countries. That money was available whenever Canada needed it. My hon. friend will observe that I am speaking of commercial loans. It is true that our banks had other deposits and other liquid loans outside of Canada. But the reason Canadian banks make these liquid loans outside the Dominion, largely in New York and in London, is that there is no liquid investment for the money at home, and rather than have it lie idle it is sent to New York and to London, where, although it is earning small interest, it is available whenever Canada needs it for the requirements of her own commerce.

Before I take up more particularly what our own Canadian banks are doing, may I reply to the remarks of the chief whip of the United Farmers of Alberta group to the effect that while our system may be satisfactory for the east it is not satisfactory so far as the west is concerned. He thinks that we should adopt another system and that the Dominion of Canada should go into the banking business, loaning money and making it available for all who want it in all parts of Canada and particularly of the west. If I do not do the hon. gentleman justice I want him to correct me.

Mr. SPENCER: That is entirely incorrect so far as my statements went. I advocated that the institution be used as a government bank only.

Mr. ROBB: Well, we have had experience in loaning money. We know what it costs to loan money when governments go into the loaning business, for we have now on the books of the department over $2,000,000, loaned largely in 1915, and some of it loaned away back in 1880. This money was loaned on good security and to-day we cannot find the gentlemen who borrowed it, so that the department is considering the probability of the money ever being recovered. It is a question whether it will not be altogether lost.

Mr. EVANS: Is the minister taking into account the tremendous inflation and deflation which occurred during those years and which operated detrimentally to the whole farming industry of western Canada?

Mr. ROBB: At the time that money was loaned in the west the security was considered ample. But that is not the only experience of loaning money that we have had in this country. We have loaned not only in western Canada but in all the provinces over $100,000,000 under the soldier settlement scheme. And what is the position when the banking business is brought into politics? Hon. gentlemen have come to parliament year after year and have asked the government to revalue the lands on which the money has been loaned, informing parliament that the soldiers were not able to meet their payments. Perhaps they were right; I am not saying that they were not. But the general result is that under the re-valuation legislation the country stands to lose about $16,000,000. That is our experience when Canada goes into the loaning business.

My hon. friend from Kindersley (Mr. Carmichael) made reference to the Australian system; he spoke of the Commonwealth Bank of the government of Australia and told what it was doing for that country. And my hon. friend who moved the resolution (Mr. Woodsworth) as well as the hon. member for Rosetown (Mr. Evans) complained that a small group of men, about sixty I think, comprising an interlocked directorate, were handling the big business of the country. Now what was the condition in connection with the Commonwealth Bank of Australia? That bank, until after the death of Sir Dennison Millar, was managed solely by Sir Dennison Millar, the man in control. He was a real czar, for even the treasurer of the commonwealth government had nothing to say. Sir Dennison Millar alone was president, general manager and board of directors. I have nothing to say against the Commonwealth Bank of Australia; it is a good bank.

Mr. CAMPBELL: Was he not responsible to the government?

Mr. ROBB: Perhaps he was. He was an excellent banker, a trained Scottish banker, brought up in one of the Scottish banks, and invited to assume absolute control of the Commonwealth Bank under the law. But what has been the record of the Commonwealth Bank of Australia as regards the loaning of money to farmers and business men in that confederation? The records show that most of the assets of the Commonwealth Bank consist of dominion and colonial loans. Investments in British colonial and commonwealth government securities comprise the great bulk of the business, while bills discounted, loans and advances to customers, and other sums due the bank constitute about 7½ per cent of its assets. As I say, investments in British colonial government securities, commonwealth government securities, fixed deposits, bills receivable in London, and so on, are the large proportion of the business of that bank. While therefore the Commonwealth Bank of Australia may be useful to the federal government in floating loans, it certainly is of very small special value to the commercial community of Australia and to the farmers. Hon. gentlemen say, "It is a splendid thing for the government of Australia to have gone into this business'. Well, I invite them to compare the financial position of Canada, when Canada goes into the markets of the world to borrow money, with the position of the government of Australia. I am not saying a word against Australia; I do not suggest to what extent she has been successful in making loans. But I do say that Canada has no lessons to learn from Australia in the matter of banking or so far as the credit of the country is concerned.

The important point to bear in mind is this: A bank has always to maintain national confidence, so that the savings of the people may be deposited with it and be used for commercial purposes, the money being distributed where it can earn money instead of, as under the old system, being tucked away in a stocking and remaining there, useless both to the person owning it and to the community. I say, therefore, that it is imperative in Canada that we should do everything possible to maintain confidence in our banking system.

Hon. gentlemen opposite tell us that the banks in Canada are being gradually absorbed into the larger institutions and that whereas years ago we had a considerable number of banks—I forget how many—we are reduced at the present time to eleven or twelve. That is true. But what is the reason? Why is it that the request comes to the government from time to time for the merging of banks? Why is it that that splendid little bank, with headquarters in western Canada—

An hon. MEMBER: The bank of Weyburn.

Mr. ROBB: No, I am referring to an eastern bank that moved west. A few years ago, as Minister of Finance, I had to go there and urge upon one of the strong banking institutions of the country to take over that concern —I am referring to the Union Bank—simply because I feared that we should have in Canada, if this were not done, a condition worse than existed in the case of the Home Bank. Well, what led to that state of things? One reason was that the bank had probably advanced more money than it should have done to two particular ventures in western Canada. But there was another reason, just as there is another reason why banks to-day, in order to carry on, find it necessary to get their forces together. And what is that reason? It is this, that big customers themselves throughout the country desire to do business with a large bank.

Some hon. gentlemen opposite come from a part of the country where one of the largest mergers in Canada has taken place—the western wheat pool. I am in favour of this, but I would point out to these gentlemen that such a concern cannot do business with small banks; it requires an institution that is able to take care of its commitments. And the same thing that is going on in connection with the wheat pool is taking place in eastern Canada. I will be frank with the house and say that representations are made to us from time to time that, because of mergers and the desire of these mergers to avail themselves of banks that will properly take care of their business, the smaller banks are having hard sledding. These small banks say, "Some of our customers who used to do business with us are now looking for larger and stronger banks." These are questions that might be considered by the banking and commerce committee, but I submit to my hon. friends opposite—and I hope they will agree with me—that it is not a good thing to have it go out to the world that Canada has not now a national banking system. As a matter of fact, under the Finance Act, we have. This is not the first time the question has been proposed for submission to the banking committee. Hon. gentlemen will recall that it was submitted in 1923 and again in 1924. Experts were brought here from Washington and the matter was gone into. In the course of the debate leading up to the referring of a resolution to the banking committee the question was asked, Why should not Canada have a system similar to the federal reserve bank of the United States? A gentleman was brought here and appeared as

a witness before the banking committee and he declared—his evidence may be referred to if hon. gentlemen wish to consult it—that under the Finance Act we are in Canada providing economically all the facilities that are required for carrying on the business of the country, and that we are doing work equally as good as that performed by the federal reserve system in the United States. I mention this in support of the statement made by my hon. friend from Swift Current (Mr. Bothwell) that Canada has now a national banking system. And when hon. gentlemen say that the banks are given the right to put out all the money issued, the records show that of the Dominion notes issued—apart from coins issued by the Dominion—on the 31st day of December, 1927 there were $220,835,000 of Dominion notes outstanding, while bank circulation at the same date amounted to $182,747,000. So there was then outstanding a greater amount of Dominion notes than bank notes.

Mr. SPENCER: Did not the greater part of that $220,000,000 comprise notes of large denominations used by the banks alone?
