Canadian Institute for Historical Microreproductions / Institut canadian de microreproductions historiques

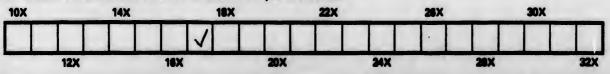

Technical and Bibliographic Notes/Notes techniques at bibliographiques

The institute has attempted to obtain the best original copy available for filming. Features of this copy which may be bibliographically unique, which may alter any of the images in the reproduction, or which may significantly change the usual method of filming, are checked below. L'Institut a microfilmé le meilleur exemplaire qu'il lui a été possible de se procurer. Les détails de cet exemplaire qui sont peut-être uniques du point de vue bibliographique, qui peuvent modifier une image reproduite, ou qui peuvent exiger une modification dans la méthode normale de filmage sont indiqués cl-dessous.

	Coloured covers/ Couverture de couleur		Coloured peges/ Pages de couleur	
	Covers damaged/ Couverture endommagée		Pages damaged/ Pages endommagées	
	Covers restored and/or laminated/ Couverture restaurée et/ou pelliculée		Pages restored and/or laminated/ Pages restaurées et/ou pelliculées	
	Cover title missing/ Le titre de couverture menque		Pages discoloured, stained or foxed/ Pages décolorées, tachetées ou piquées	
	Coloured maps/ Certes géographiques en couleur		Pages detached/ Pages détachées	
	Coloured ink (i.e. other than blue or black)/ Encre de couleur (i.e. autre que bleue ou noire)		Showthrough/ Transparence	
	Coloured plates and/or illustrations/ Planches et/ou illustrations en couleur		Quality of print varies/ Qualité inégale de l'Impression	
	Bound with other material/ Relié avec d'autres documents		Includes supplementary material/ Comprend du matériel supplémentaire

errata to

t e pelure, on à The copy filmed here has been reproduced thanks to the generosity of:

National Library of Canada

The images appearing here are the best quality possible considering the condition and lagibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shall contain the symbol \longrightarrow (meaning "CON-TINUED"), or the symbol ∇ (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

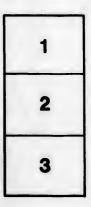

Bibliothèque nationale du Canada

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

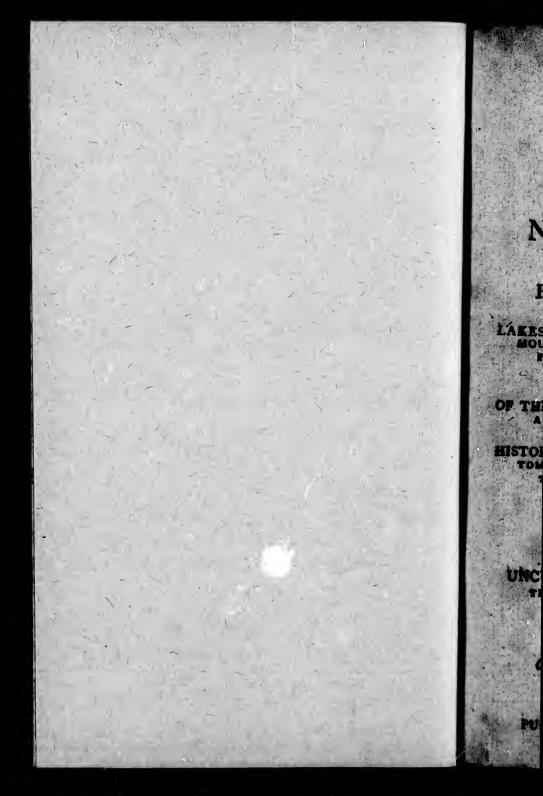

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par le premier plat et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole \longrightarrow signifie "A SUIVRE", le symbole \forall signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'Images nécessaire. Les diagrammes suivants illustrent la méthode.

JOSEPH BANKS, Esq.

PRESIDENT OF THE

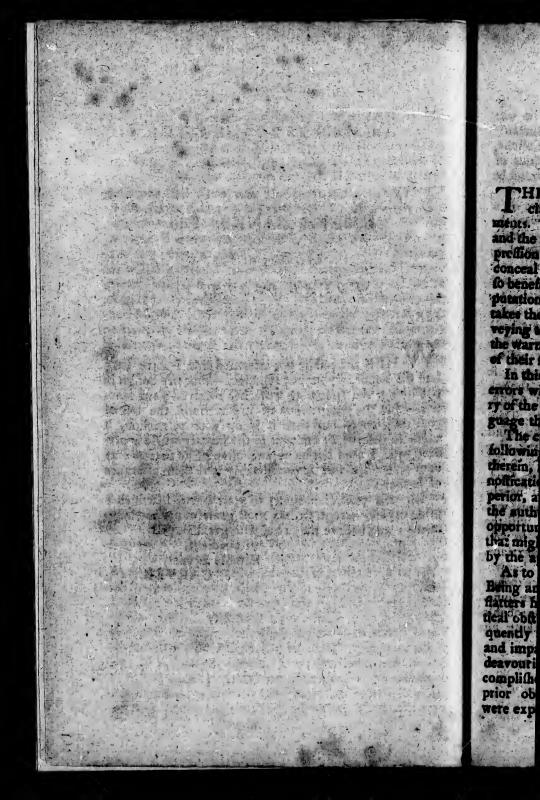

ROTAL SOCIETT.

SIR.

WHEN the public are informed that I have long had the honor of your acquaintance—that my defign in publishing the following work has received your fanction—that the composition of it has flood the teft of your judgment—and that it is by your permission, a mane to defervedly eminent in the literary world is prefined to it. I need not be apprehensive of its fuccels ; as your patronings will unquerisonably give them affarance of its merit.

For this public teftimony of your favor, in which I pride myfelf, accept, fir, my most grateful acknowledgments; and believe me to be, with grass respect,

Your obedient, humble invant. J. CARVER.

AN ADDRESS TO THE PUBLIC.

State States

188 1424

THE favorable reception this work has met with, claims the Author's most grateful acknowledgmeuts. A large edition having ran off in a few months, and the fale appearing to be full unabated, a new imprefilm is become necellary. On this occasion was he to conceal his feelings and pass over in filence, a difficient to beneficial and flattering, he would justly incur the imputation of ingratitude. That he might not do this, he takes the apportunity, which now prefents itself, of conveying to the public (though in terms; insidequate to the warm emotions of his heart) the feale he entertains of their favor ; and thus transmits to them his thanks. In this new edition, care has been taken to rectify thole errors which have unavoidably proceeded from the hurry of the piels, and likewife any incorrectuels in the language that has found its way into it.

The credibility of fome of the incidents related in the following pages, and fome of the flories introduced therein, having been queffioned, particularly the prognoffication of the Indian prieff on the banks of Lake Superior, and the flory of the Indian and his rattle finaks, the author thinks it necessary to avail himfelf of the face opportunity, to endeavor to eradicate any impreflion. Usit might have been made on the minds of his readers, by the apparent improbability of the face.

As to the former, he has related it just as it happened. Being an eye-witness to the whole transaction (and, he flatters himfelf, at the time, free from every trace of foeptical oblimacy or enthulianic credulity) he was confequently able to defcribe every circumfiance minutely and impartially. This he has done; but without endezvouring to account for the means by which it was accomplified. Whether the prediction was the refult of prior obfervations, from which certain confequences were expected to follow by the fagacious prieft, and the

fecurity from falle reports, gives out by its possestors, and might have been battered down with a few four pounders. Even in fituation, which was represented to be fo very advantageous, was found to owe its advantages to the fame fource. It cannot be denied but that fome Maps of thefe constries have been published by the French with an appearance of accuracy ; but their are of fo fmall a fise and drawn on fo minute a fcale, that they are nearly inexplicable. The fources of the Mittiippi, I can allert from my own experiences are greatly inced i for when I had explored them, and compared their fituition with the French Charts, I found them erroncoully reprefented, and am fatisfied that thefe Verv were only copied from the rude fketches of the Indians. Even to lately as their evacuation of Canada, they continued their fchemes' to deceive, leaving no traces by which any knowledge might occur to their conquerors ; for although they were well acquainted with all the Lakes, particularly with Lake Superior, having constantly a vetilel of confiderable burden thereon, yet their plans of them are very incorrect. I discovered many errors in the defortptions given therein of its illands and bays, during a progrets of eleven hundred miles that I couffed it in cances. They likewife, on giving up the polletion. of them, took care to leave the pla hes they had occupied, in the fame uncultivated flate they had found them ; at the fame time definoying all their aaval force. I obferved myfelf part of the hulk of a very large veffel, burnt to the water's edge, just at the opening from the Straits of St. Marie into the Lake.

These difficulties, however were not fufficient to deter me from the undertaking, and I made preparations for fetting out. What I chiefly had in view, after gaining, a knowledge of the manners, cufforms, languages, foil and natural productions of the different nations that inhable the back of the Multifippi, was to after the breadth of that valt continent, which extends from the Atlantic to the Pacific Ocean, in its broadeft part between 43 and 46 degrees northern latipude. Had I been able to accomplift this, I intended to have propoled to government to eftablift a polt in fome of their parts a-

boat the Straits of Annian, which, having been first difcovered by Sir Francis Drake, of could belong to the English. This I am convinced would greatly facilitate the discovery of a North well pallage or a communication between Hudion's bay und the Pacific Ocean. An event to definable, and which has been to often, fought for, bet without fuccels. Belides this important end a fettlement on that extremity of America would answer many good purpoles, and repayevery expence the eltab. liftment of it might occation: For it would not only difchole new fources of trade, and promote many uleful diferencies, but would open a paffage for conveying intelligence to China, and the English fettlements in the East indies, with greater expedition than a tedious voyage by the Cape of Good Hope, or the Straits of Magellan will allow of.

How fat the advatages arising from fuch an enterprize may extend, can only be afcertained by the favourable concurrence of future events. But that the completion of the fcheme, I have the honor of first planning and attempting, will fome time or other be affected. I make no doubt. From the unhappy divisions that at prelent fobfalt between Great Britain and America, it will probably be fome years before the attempt is repeated ; but whenever it is, and the execution of it carried an with propriety, thole who are fo fortunate as to fucceed, will reap, inclusively of the mational advantages that mult enfue, emolume at beyond their molt fanguine expenditions. And whill their fpirits are elated by their

fuccess, perhaps they may bellow fome commendations and bleffings on the perfon who first pointed out to them the way. These, though but a shadowy records, pence for all my toil, I shall receive with pleasure. To what power or authority this new world will be-

come comparent, after it has arisen from its prefent incultiverse the state of the state of the state of any more from time immemorial has been gradually programme towards the weit, there is no dotte but that at forme future period, mighty kingdoms will emerge from these wildernelles, and fately palaces and folemn temples, wish guilded (pires reaching the fkies, fupple at

desinding huts, whole only descentions are the flar-incour trophics of their vanquithed encanes. As fome of the preceding pallages have already infor-med the reader that the plan I had find down the pene-rating to the Pacific Ocean, proved abortive, into ne-cellary to add, that this proceeded not from its impracti-cability (for the further I went the more convinced I was that it could certainly be accomplified) but from un-forcing differentially be accomplified) but from un-that I was able to make fuch differences as will be utiful in any factor strengt, and prove a good foundation for fome more fortunate fuccefor to build upon. These I that is now her before the public in the following anges : some more corrungic luccentor to build apon. Their is fault now by before the public in the following gages ; and an facilitied that the greatest part of them have nev-erbeen published by any perion that has hitherto treated of the interior nations of the Indians ; particularly, the secount I give of the Naudowettics, and the finantials of the heads of the four great rivers that take their rife within a few leagues of each other, nearly about the cen-ter of this great continent, viz. The river Bourboo, which capture itself into Hudfon's have the maters of which empties fifelt into Hundfon's bay ; the waters of Shint Lawrence ; the Midlippi, and the siver Oregon, or the river of the west, that falls into the Pacific Ocean, at the Strains of Annian. The impediments that occasioned my returning, before had accomplified my purposes, were these. On my I had accos arrival at Michillimackinae, the remotelt English polt, in September 1766, I applied to Mr. Rogers, who was then Governor of it, to furnish me with a proper affortment of goods, as prefents for the indians who inhabit the track I intended to purfue. He did this only in part ; but promifed to supply me with firch as were accellary, when Freached the Falls of Saint Ambony. Lafterwards learned that the Governor fulfiled his promite in ordering the goods to be delivered to me ; him discle to whole eare he introfted them, infleed of come to to his orders disposed of them elfewhere Bilappointed in my expectations from this quarter, I thought it necessary to return to La Prairie Le Chien ; for

it was impossible to proceed any further without prefents to enfure me a favorable reception. This I did in

the begining of the year 1767, and finding my progress to the weltward thus retarded. I determined to direct my courfe northward. I took this ftep with a view of finding a communication from the heads of the Millifippi into Lake Superior, in order to make, at the grand Portage on the North-welt fide of that lake, the traders that ulually come, about this feation, from Michillimackinac. Of thefe I intended to purchaile grads, and then to purfue my journey from that quarter, by may of the lakes du Pluys. Dubois, and Ounipique to the heads of the siver of the welt, which, as I have faid before, falls into the Straits of Annian, the fermination of my intended.

I accomplified the former part of my defign, and reached late Superior in proper times but unluckily the traders limit there, acquainted, multipleter unluckily the goods to foars : their they had will them being barely inflicient to networe their seen downeds in their remoteparts. Thus difuppointed a fact and time, I found myfelf obliged to return to the place from whence I began my accountions which I did after continuing forme months on the much and and borders of Lake Superior, and enploring the bayers of react them copy themilelyes into this larget body different. As stundy be uppelled that I should lay before the public the reactions that the differenties, of to much immetance to every one who has any connections with

As strongy becapelled that I should lay before the public has sendous that thisle diffeometics, of formuch importanies to every one who has any connections with America, have not been imparted to them before, notwith finding they were made upwards of ten years ago, I will givenheue to the world in a flain and candid manner, and without bringing with them any complaints on accente of the ill treatment I have required. On my arrival in England, I prefeated a patition to his mugifity in council, praying for a reimbur lement of those finans I had repended in the ferrice of government. This manufactures and this lords committee of unde and planetices. This bordhips, from the remor of it thought the intelligence I could give, of formuch importance to the mained, that they ordered me to appear infore the bound. This mailings I obeyed, and underunt a long examination , much I believe to the fittif.

faction of every ford prefent. When it was finished, I requeiled to know what I should do with my papers; without helitation the first lord replied, that I might pub. lift them whenever I pleafed. In confequence of this permittion, I dispoted of them to a bookfeller ; but when they were nearly ready for the preis, an order was iffued from the council board, requiring me to deliver, without delay, into the plantation office, all my Charts and Journals, with every paper relative to the difcoveries I had made. In order to obey this command, I was obliged to repurchase them from the bookfeller at a very great expense and deliver them up. This fresh difburfement I endeavored to get annexed to the account I had already delivered in ; but the requeit, was denied me, notwithkanding I had only acted, in the difpofal of my papers, conformably to the permission I had received from the board of trade. This lofs, which amounted to a very confiderable fum, I was obliged to ar, and to rolt fatisfied with an indemnification for

my other experices Thus fituated, my only expectations are from the favor of a generous public; to whom I thall now communicate my Plans, Journals, and Observations, of which I luckily kept copies, when I delivered the originsis into the plantation office. And this I do the more readily, as I hear they are miflaid; and there is no probability of their ever being published. To those who are interested in the concerns of the interior parts of North America, from the contiguity of their possellions, or commercial engagements, they will be extremely afeful, and fully repay the sum at which they are purchased. To those who, from a landable curiolity, with to be acquainted with the mannets and cultures of every inhabitant of this globe, the accounts here given of the various nations that inhabit to valt a part of it, a country hitherto almost unexplored, will furnish an ample fund of 'amesiament, and gratify their most curies espectations. And L flatter myself they will be as favorably received by the public, as descriptions of islands, which affeed no other entertainment than what arises from their novelty; and diffeovering that form to promife very few advantages to this country, though acquired at an immense expence.

To make the following work as comprehensible and entertaining as possible, I shall first give my readers an account of the route I purfued over this immensie contigant, and as I pass on, describe the number of inhabtants, the fatuation of the rivers and lakes, and the productions of the country. Having done this I shall treat, in distinct chapters, of the manners, customs and languages of the Indians.

And here it is neceffary to befpeak the candor of the learned part of my readers in the perufal of it, as it is the production of a perion unufed, from oppolite avocations, to literary puriuits. He therefore begs they would not examine it with too critical an eye; especially when he affures them that his attention has been more employed on giving a just description of a country that possifes, in fome future period, to be an inexhaustible fource of riches to that people who shall be fo fortunate as to possife it, than on the file of composition; and more careful to render his language intelligible, and explicit, than impoth and florid.

TRAVELS,

WITH A

DESCRIPTION.

COUNTRY, LAKES, &c.

OT THE

IN June 1766, I fet out from Bofton, and proceeded by way of Albany and Niagara, to Michillimackinae, a fort fituated between the lakes Huron and Michigan, and diftant from Bofton 1300 miles. This being the uttermost of our factories towards the north welt, I confidered it as the most convenient place from whence I could begin my intended progress, and enter at once into the regions I deligned to explore.

Referring my readers to the publications already extant for an account of those parts of North America, that from lying adjacent to the back settlements, have been frequently described, I shall confine myself to a description of the more interior parts of it, which, having been but feldom visited, are consequently but little known. In doing this, I shall in no instance exceed the bounds of truth, or have recourse to those useless and extravagant exagerations too often made use of by trav ellers, to excite the curiosity of the public, or to increase their own importance. Nor shall I infert any observations, but such as I have made myself, or from the

6

26

credibility of those by whom they were related, am en. abled to vouch for their authenticity.

Michillimackinac, from whence I began my travels, is a fort composed of a ftrong flockade, and is usually defended by a garrifon of one hundred men. It contains about thirty houses, one of which belongs to the governor, and another to the commission. Several traders also dwell within its fortifications, who find it a convenient lituation to traffic with the neighboring nations. Michillimackinac, in the language of the Chipeway Indian, fignifies a tortoife ; and the place is fupposed to receive its name from an Ifland, lying about fix or feven miles to the north east, within fight of the fort, which has the appearance of that animal.

During the Indian war that followed foon after the conquest of Canada in the year 1763, and which was carried on by an army of confederate nations, compofed of the Hurons, Miamies, Chipeways, Ottowaws, Pontowattimies; Miffiffauges, and fome other tribes, under the direction of Pontiac, a celebrated Indian warrior, who had always been in the French interest, it was taken by furprize in the following manner : the Indians having fettled their plan, drew near the fort, and began a game at ball, a pattime much used among them, and not unlike tennis. In the height of their game, at which fome of the English officers, not fulpecting any deceit, flood looking on, they firuck the ball, as if by accident, over the flockade ; this they repeated two or three times, to make the deception more complete ; till at length, having by this means lulled every fulpicion of the fentry at the fouth gate, a party rushed by him; and the reft foon following, they took poffellion of the fort, without meeting with any opposition. Having accomplished their defign, the mdians had the humanity to fpare the lives of the greateft part of the garrifon and traders, but they made them all priloners, and carried them off. However, fome time after they took them to Montreal, where they were redeemed at a good price. The fort allo was given up, again to the English at the peace made with Pontiac, by the commander of Detroit the year following.

Having here made the necessary dispositions for purfuing my travels, and obtained a credit from Mr. Regers, the governor, on fome English and Canadian traders, who were going to trade on the Millifippi, and received alto from him a promife of a fresh supply of goods when I reached the falls of St. Anthony. I left the fort on the 3d of September, in company with these traders. It was agreed that they should furnish me with fuch goods as I might want, for prefents to the Indian chiefs, during my continuance with them, agrecable to the governor's order. But when I arrived at the extent of their route, I was to find other guides, and to depend on the goods the governor had promifed to fupply me with

We accordingly fet out together, and on the 18th arrived at fort La Bay- This fort is fituated on the fouthern extremity of a bay in the lake Michigan, termed by the French, the bay of Puants; but which fince the Englith have gained possession of all the fettlements on this part of the continent, is called by them, the Green Bay. The reason of its being thus denominated, is from its appearance; for on leaving Michillimackinac in the fpring feason, though the trees there have not even put forth their buds, yet you find the country around La Bay, notwithstanding the passage has not exceeded fourteen days, covered with the finest verdure, and vegetation as forward as it could be were it fummer.

This fort is also only furrounded by a ftockade, and being much decayed, is fcarcely defensible against small arms. It was built by the French for the protection of their trade, sometime before they were forced to relinquiss it and when Canada and its dependencies were furrendered to the English, it was immediately garrifoned with an officer and thirty men. These were made prisoners by the Menomonies soon after the furprise of Michillimackinac, and the fort has neither been garrisoned or kept in repair fince.

The bay is about ninety miles long, but differs much in its breadth; being in fome places only fifteen miles, in others from twenty to thirty. It lies nearly from

CARVER'S TRAVELS.

north eaft to fouth weft. At the entrance of it from the lake are a ftring of Iflands, extending from north to fouth, called the Grand Traverie. These are about thirty miles in length, and ferve to facilitate the palfage of cances; as they fhelter them from the winds, which fometimes come with violence across the lake. On the fide that lies to the fouth eaft is the nearest and beft navigation.

The Islands of the Grand Traverse are mostly small and rocky. Many of the rocks are of an amazing lize, and appear as if they had been fashioned by the hands of artifts. On the largest and best of these Islands stands a town of the Ottowaws, at which I found one of the most confiderable chiefs of that nation, who received me with every honor he could pollibly flow to, a Itran-But what appeared extremely fingular to me at ger. the time, and mult do to to every perion unacquainted with the cultoms of the Indians, was the reception I met with on landing. As our canoes approached the thore, and had reached within about three fcose rodf of it, the Indians began a fue-de-joy ; in which they fired their pieces loaded with balls; but at the fame time they took care to discharge them in such a manner as to fly a few yards above our heads : during this they ran from one tree or flymp to another, flouting and behaving as if they were in the heat of battle. At first I was greatly furprifed, and was on the point of ordering my attendants to return their fire, concluding that their intentions were hofile ; but being undeceived by fome of the traders, who informed me that this was their ufual method of receiving the chiefs of other nations, I confidered it in its true light, and was pleafed with the respect thus paid me.

I remained here one night. Among the prefents I made the chiefs, were fome fpirituous liquors ; with which they made themfelves merry, and all joined in a dance, that lafted the greateft part of the night. In the morning when I departed, the chief attended me to the fhore, and, as foon as I had embarked, offered up, in an audible voice, and with great folemnity, a fervent prayer in my behalf. He prayed "that the Great Spirit would would by day er blan dreams tion un he cont them.

would favor me with a profperous voyage; that he would give me an unclouded fky, and fmooth waters by day, and that I might lie down by night, on a beaver blanket, enjoying uninterrupted fleep, and pleafant dreams; and also that I might find continual protection under the great pipe of peace " In this manner he continued his petitions till I could no longer hear them.

I must here observe, that notwithstanding the inhabitants of Europe are apt to entertain horrid ideas of the forocity of these favages, as they are termed, I received from every tribe of them in the interior parts, the most hospitable and courteous treatment; and am convinced, that till they are contaminated by the example, and spirituous liquors of their more refined neighbors, they retain this friendly and inoffensive conduct towards strangers. Their inveteracy and cruelty to their enemies, I acknowledge to be a great abatement of the favorable opinion I would wish to entertain of them; but this failing is hereditary, and having received the fanction of immemorial custom, has taken too deep root in their minds to be easily extirpated.

Among this people I eat of a very uncommon kind of bread The Indians, in general, ufe but little of this nutritious food : whilk their corn is in the milk, as they term it, that is, just before it begins to ripen, they flice off the kernels from the cob to which they grow, and knead them into a paster. This they are enabled to do without the addition of any liquid, by the milk that flows from them; and when it is effected, they parcel it out into cakes, and enclosing them in leaves of the baffwood tree, place them in hot embers, where they are foon baked. And better flavored bread I never eat in any country.

This place is only a fmall village containing about twenty five houses and fixty or seventy warriors. I found nothing there worthy of further remark.

The land on the fouth east fide of the Green bay, is but very indifferent, being overfpread with a heavy growth of hemlock, pine, fpruce, and fir trees. The communication between lake Michigan and the Green

CARVER'S TRAVELS.

bay, has been reported by fome to be impracticable, for the paffage of any veffels larger than canoes or boats, on account of the fhoals that lie between the Iflands in the Grand Traverfe; but on founding it I found fufficient depth for a veffel of fixty tons, and the breadth proportionable.

The land adjoining to the bottom of this bay is very fertile, the country in general level, and the perspective view of it pleasing and extensive.

A few families live in the fort, which lies on the weft fide of the Fox river, and opposite to it, on the east fide of its entrance, are fome French fettlers who cultivate the land, and appear to live very comfortably.

The green bay or bay of Puants is one of those places to which the French, as I have mentioned in the introduction, have given nicknames. It is termed by the inhabitants of its coafts, the Menomonie Bay ; but why the French have denominated it the Puant or Stinking bay, I know not. The reafon they themfelves give for it is, that it was not with a view to miflead ftrangers, but that by adopting this method, they could converse with each other concerning the Indians; in their prefence without being understood by them. For it was remarked by the perfons who first traded among them, that when they were fpeaking to each other about them, and mentioned their proper names they inftantly grew fuspicious, and concluded that their visitors were either fpeaking ill of them, or plotting their deftruction. To remedy this they gave them fome other name." The only bad confequences ariting from the practice then introduced is, that English and French geographers, in their plans of the interior parts of America, give different names to the fame people, and thereby perplex those who have occasion to refer to them.

Lake Michigan, of which the Green Bay is a part, is divided on the north east from Lake Huron by the Straits of Michillimackinac; and is fituated between forty two and forty fix degrees of latitude, and between eighty four and eighty feven degrees of west longitude. Its greatest length is two hundred and eighty miles, its breadth about forty, and its circumference nearly fix hundre ands bi about t called i pleafan beautifu On t branch the nort Green 1

a part, by the between between ngitude. niles, its arly ir hundred. There is a remarkable firing of fmall Iflands beginning over against Askin's farm, and running about thirty miles south welt into the lake. These are called the Beaver Islands. Their stuation is very pleasant, but the foil is bare. However they afford a beautiful prospect.

On the north west parts of this lake the waters branch out into two bays. That which lies towards the north is the Bay of Noquets, and the other the Green Bay just described.

The waters of this as well as the other great lakes are clear and wholefome, and of fufficient depth for the navigation of large thips. Half the fpace of the country that lies to the eaft, and extends to Lake Huron, belongs to the Ottawaw Indians. The line that divides their territories from the Chippeways, runs nearly north and fouth, and reaches almost from the fouthern extremity of this lake, acrofs, the high lands, to Michillimackinac, through the center of which it passes. So that when these two tribes bappen to meet at the factory, they each encamp on their own dominions, at a few yards diffance from the flockade.

The country adjacent either to the east or west fide of the lake, is composed but of an indifferent foil, except where fmall brooks or rivers empty themfelves into it; on the banks of these it is extremely fertile. Near the borders of the lake grow a great number of land cherries, which are not lefs remarkable for their manner of growth, than for their exquilite flavor. They grow upon a fmall thrub, not more than four. feet high, the boughs of which are fc loaded that they lie in clufters on the fand. "As they grow only on the fand the warmth of which probably contributes to bring them to fuch perfection; they are called by the French, cherries de fable, or fand cherries. The fize of them does not exceed that of a fmall musket ball, but they are reckoned superior to any other fort for the purpose of Aceping in Spirits. There also grow around the lake, goofeberries, black currents, and an abundance of juniper, bearing great quantities of berries of the fineit fort." . Will it beg letal & emigine's .a it.

The

Sumack likewife grows here in great plenty; the leaf of which, gathered at Michaelmas, when it turns red is much effeemed by the natives. They mix about an equal quantity of it with their tobacco, which causes it to imoke pleafantly. Near this lake, and indeed about all the great lakes, is found a kind of willow, termed by the French bois rouge, in English, red wood. Its bark when only of one year's growth, is of a fine fearlet color, and appears very beautiful; but as it grows older, it changes into a mixture of grey and red. The stalks of this shrub grow many of them together, and rife to the height of fix or eight feet, the largest not exceeding an inch diameter. The bark being fcraped from the flicks, and dried and powdered, is also mixed by the Indians with their tobacco, and is held by them in the highest estimation, for their winter fmoaking. A weed that grows near the great lakes, in rocky places, they use in the summer season. It is called by the Indians Segockimac, and creeps like a vine on the ground, fometimes extending to eight or ten feet, and bearing a leaf about the fize of a filver penny, nearly round; it is of the fubftance and color of the laurel, and is, like the tree it refembles, an evergreen. These leaves, dried and powdered, they likewife mix with their tobacco; and as faid before, fmoke it only during the fummer. By these three fuccedaneums, the pipes of the Indians are well fupplied through every feason of the year; and as they are great fmokers, they are very careful in properly gathering and preparing them.

On the 20th of September, I left the Green Bay, and proceeded up Fox river ; ftill in company with the traders and fome Indians. On the 25th I arrived at the great town of the Winnebagoes, fituated on a fmall ifland, just as you enter the east end of the lake Winnebago. Here the queen who prefided over this tribe instead of a Sachem, received me with great civility, and entertained me in a very distinguished manner, during the four days I continued with her.

The day after my arrival I held a Council with the chiefs, of whom I asked permission to pass through

32

ty; the it turns r about , which and inof willish, red rth, is of ful; but of grey of them feet, the The bark powderacco, and heir winhe great r feason. eeps like eight or f a filver ance and refembles, ered, they d before, hefe three well fupas they properly

l with the Is through

their country on my way to more remote nations on bulinefs of importance. This was readily granted me the request being effeemed by them as a great compliment paid to their tribe. The queen fat in the council, but only afked a few questions or gave some trifling directions in matters relative to the ftate ; for worden are never allowed to fit in their councils, except they happen to be invelted with the fupreme authority, and then it is not cultomary for them to make any formal speeches as the chiefs do. She was a very ancient woman, finall in stature, and not much distinguished by her drefs from leveral young women that attended her. These her attendants seemed greatly pleased whenever I howed any tokens of respect to their queen, particularly when I faluted her, which I frequently did to acquire her favor. On these occasions the good old lady endeavored to allume a juvenile gaiety. and by her fmiles showed the was equally pleafed with the attention I paid her.

The time I tatried here, I employed in making the beft observations possible on the country and in collecting the most certain intelligence I could, of the origin, language and customs of this people. From these enquiries I have reason to conclude, that the Winnebagoes originally resided in some of the provinces belonging to New Mexico; and being driven from their native country, either by intestine divisions, or by the extensions of the Spanish conquest, they took refuge in these more northern parts about a century ago.

My reafons for adopting this inpposition, are, first; from their unalienable attachment to the Naudoweffie Indians (who, they fay, gave them the earliest fuccor during their emigration) notwithstanding their prefent refidence is more than fix hundred miles diftant from that people.

Secondly that their dialect totally differs from every other Indian nation yet discovered; it being a very incouth, guteral jargon, which none of their neighbors will attempt to learn. They converse with other nations in the Chippeway tongue, which is the prevailing language throughout all the tribes, from the Mohawks of Canada, to those who inhabit the borders of the Miffilippi, and from the Hurons and Illinois to fuch as dwell near Hudfons Bay.

Thirdly, from their inveterate hatred to the Spaniards. Some of them informed me that they had many excursions to the fouth welt, which took up feveral moons An elder chief more particularly acquainted me, that about forty-fix winters ago, he marched at the head of filty warriors, towards the fouth weft, for shree moons. That during this expedition, whill they were craffing a plain, they difcovered a body of men on horie back, who belonged to the Black People; for to they call the Spaniards. As foon as they perceived them, they proceeded with caution, and condealed themfelves till night came on ; when they drew to near as to be able to difcern the number, and fituation of their enemies. Finding they were not able to cope with fo great a fuperiority by day light, they waited till they had retired to reft; when they rushed upon them, and, after having killed the great. elt part of the men, took eighty horfes loaded with what they termed white ftone. This I fuppofe to have been filver, as he told me the horfes were fhod with it. and that their bridles were ornamented with the fame. When they had fatiated their revenge, they carried off their spoil, and being got to far as to be out of the reach of the Spaniards that had escaped their fury, they left the useless and ponderous burthen, and with which the horfes were loaded, in the woods, and mounting themfelves, in this manner returned to their friends. The party they had thus defeated, I conclude to be the caravan that annually conveys to Mexico, the filver which the Spaniards find in great quantities on the mountains lying near the heads of the Coleredo River : and the plains where the attack was made, probably fome they were obliged to pafs over in their way to the heads of the river St. Fee, or Rio del Nord, which falls into the Gulf of Mexico, to the west of the Missisppi. warriors. Their town contains about fifty houses, which are strongly built with pallifades, and the island on which it is structed, nearly fifty acres. It lies thirty five miles, eckoning according to the course of the river, from the Green Bay.

The fiver for shout four or five miles from the bay, has a gentle current ; after that fpace, till you arrive at the Winnebago Lake, it is full of rocks and very rapid. At many places we were obliged to land our cances, and curry them a confiderable way. Its breadth, in general, from the Green Bay to the Winnebago Lake, is between feventy and a hundred yards : the land on its borders very good, and thinly wooded with hickory, oak and hazel.

The Winnebago Lake is about fifteen miles long from east to well; and fix miles wide. At its foutheast corner, a river falls into it that takes its rife near fome of the northern branches of the Illinois River. This I called the Crocodile River, in confequence of a story that prevails among the Indians, of their having destroyed in fome part of it, an animal, which from their description must be a crocodile or an alligator.

The land adjacent to the Lake is very fertile, abounding with grapes, plums, and other fruits, which grow frontaneoufly. The Winnebagoes raife on it a great quantity of Indian corn, beans, pumpkins, fquather and watermelons, with fome tobacco. The Lake itfelf abounds with fifth, and in the fall of the year, with geefe, ducks and teal. The latter, which refort to it in great numbers, are remarkably good and extremely fat, and are much better flavored than those that are found near the fea, as they acquire their exceflive fatness by feeding on the wild rice which grows fo plentifely in these parts:

Having made fome acceptable prefents to the good eld queen, and received her bleffing, 1 left the town of the Winnebsgoes on the 29th of September, and about twolve miles from it, arrived at the place where the Fox River enters the Lake, on the north fide of it. We proceeded up this river, and on the 7th of October

reached the great Carrying Place, which divides it from the Ouifconfin.

The Fox River, from the Green Bay to the carrying place, is about one hundred and eighty miles. From the Winnebago Lake to the Carrying Place, the current is gentle, and the depth confiderable; notwithflanding which, it is in fome places with difficulty that canoes can pais through the obstructions they meet with from the rice stalks, which are very large and thick, and grow here in great abundance. The country around it is very fertile, and proper in the highest degree for cultivation, excepting in fome places near the river, where it is rather too low. It is in no part very woody, and yet can fupply fufficient to answer the demands of any number of inhabitants. This river is the greatest refort for wild fowl of every kind, that I met with in the whole course of my travels ; frequently the fun would be obscured by them for some minutes together.

About forty miles up this river, from the great town of the Winnebagoes, ftands a finaller town belonging to that nation.

Deer and Bears are very numerous in these parts, and a great many beavers and other futs are taken on the firearns that empty themselves into this river.

The river I am treating of, is remarkable for having been, about eighty years ago, the refidence of the united bands of the Ottigaumies and the Saukies, whom the French had nicknamed, according to their wonted cuftom, Des Sacks and Des Reynards, the Sacks and the Foxes, of whom the following anecdote was related to me by an Indian.

About fixty years ago, the French Miffionaries and traders having received many infults from this people, a patty of the French and Indians, under the command of Capt Morand marched to revenge their wrongs. The Captain fet out from the Green Bay in the winter, when they were unfulpicious of a vifit of this kind, and purfuing his route over the fnow to their villages, which lay about fifty miles up the Fox River, came upon them by furprife, Uuprepared as they

le parts, aken on er. for havce of the Saukies, to their urds, the anecdote

aries and is people, the comnge their en Bay in a vifit of w to their ox River, as they were, he found them an eafy conquest, and confequente ly killed or took prifoners the greatest part of them. On the return of the French to the Green Bay, one of the Indian Chiefs in alliance with them, whe had a confiderable band of the prifoners under his care, flopped to drink at a brook ; in the mean time his companions went on this which being oblerved by one of the women whom they had made captive, the fuddenly, ferred him with both her hands, whill he flooped to drink, by imergnifitely fusceptible part, and held him fast till he expired on the fpot. As the Chief from the extreme torture he fuffered, was unable to call out to his friends, or to give any alarm, they palled on without knowing what had happened : and the woman having cut the bands of those of her fellow prifoners who were in the rear, with them made her efcape. This heroine was ever after treated by her nation as their deliverer, and made a chiefess in her own right, with liberty to entail the fame honor on her deftendantsy an unusual diffinction, and permitted only on extraordinary occasions

About twelve miles before I reached the Carrying Place, I observed feveral fmall mountains which extended quite to it. Thefe indeed would only be effected as molehills, when compared with thefe on the back of the colonies, but as they were the first I had seen fince my leaving Ningara, a track of near eleven hundred miles, I could not leave them unnoticed.

The For River, where it enters the Winnebago Luis, is about fifty yards wide, but it gradually decreases to the Carrying Place, where it is no more than five yards over, except in a few places where it widens into small lakes, though still of a considerable depth. I cannot recollect any thing elfe that is remarkable in this river, except that it is so fergentine for five miles, as only to gain in that place one quarter of a mile.

The Carrying Place between the Fox and the Ouilconfin Rivers is in breadth not more than a mile and three quarters, though in fome maps it is fo delineated as to appear to be ten miles. And here I Cannet help remarking, that all the maps of these parts, I have ever

1. I ob

feen, are very erroneous. The rivers in general are defcribed as running in different directions from what they really do, and many branches of them, particularly the Millilippi, omitted. The diffances of places, likewife, are greatly misrepresented. Whether this is done by the French geographers (for the English maps are all copied from theirs) through defign, or for want of a just knowledge of the country, I cannot fay ; but I am fatisfied that travellers who depend upon them in the parts I vifited, will find themfelves much at a lofs. Near one half of the way, between the rivers, is a morals overgrown with a kind of long grafs, the reft of it plain with fome few oak and pine trees growing thereon. I observed here a great number of rattieinakes. Monf. Pinnifance, a French trader, told me a remaikable flory concerning one of these reptiles, of which he faid he was eye witnefs. An Indian belongng to the Menomonie nation, having taken one of them, found means to tame it; and when he had done this, treated it as a Deity; calling it his Great Father, and carrying it with him in a box, wherever he went. This the Indian had done for feveral fummers, when Monf. Pinnifance accidentally met with him at this Carrying Place, just as he was fetting off for a winters hunt. The French gentleman was furprifed, one day, to fee the Indian place the box which contained his God, on the ground, and opening the door, gave

this liberty ; telling him whill he did it, to be fure and return by the time he himfelf should be back, which was to be in the month of May following. As this was but in October Monsieur told the Indian, whose simplicity astonished him, that he fancied he might wait long enough when May urrived for the arrival of his great father. The Indian was so confident of his creature's obscience, that he offered to lay the Frenchman a wager of two gallons of rum, that at the time appointed he would come and crawl into the box. This was agreed on, and the fecond week in May following, fixed for the determination of the wager. At shat period they both met there again; when the Indian it down his box, and called for his great father.

places,

The fnake heard him not; and the time being now expired, he acknowledged that he had loft. However, without feeming to be difcouraged, he offered to double the bet, if his great father came not within two days more. This was further agreed on; when behold on the second day about one o'clock, the fnake arrived, and of his own accord crawled into the box, which was placed reatly for him. The French Gentleman vouched for the truth of this flory, and from the accounts I have often received of the docility of those creatures, I fee no reason to doubt his veracity.

I observed that the main body of the For siver came from the fouth well, that of the Ouilconfin from the north east : and also that some of the small branches of these two rivers, in descending into them, doubled waisin a few feet of each other, a little to the fouth of the Carrying Place. That two fuch rivers should take their rife to near each other, and after running fuch dife ferent courses, empty themselves into the fea at a distance fo amazing (for the former having paffed through feveral great lakes, and run upwards of two thousand. miles, falls into the Gulf of St. Lawrence, and the other, after joining the Miffilippi, and having run an equal number of miles, difembogues itself into the Gulf of Mexico) is an infrance fcarcely to be met in the extenfive continent of North America. I had an opportunity the year following, of making the fame observations on the affinity of feveral head branches of the waters of the St. Lawrence and the Miffilippi to each other ; and now bring them as a proof, that the opinion of those geographers, who affert, that rivers taking their rife to near each other, mult foring from the fame fource, is erroneous. For I preceived a vifibly diftinct feparation in all of them, notwithstanding, in fome places, they approached fo near, that I could have stepped from one to the other.

On the 8th of October we got our cances into the Ouifconfin River, which at this place is more than a hundred yards wide; and the next day arrived at the great town of the Saukies. This is the largest and helt built Indian town I ever faw. It contains about ninety

houses each large enough for feveral families. These are built of hewn plank, nearly jointed and covered with bark for compactly as to keep out the most penetrating rains. Before the doors are placed comfortable fields, in which the inhabitants fit; when the weather will permit; and fmoke their pipes. The fireets are regular and fpacious; for that it appears more like a civilized town, than the abode of favages. The land near the town is very good. In their plantations, which his adjacent to their houses, and which are nearly laid out, they raife great quantities of Indian corn, beans, spelons, fit. In that this place is effected the beft market for traders to furnish themselves with provisiont, of any within eight hundred miles of it.

The Saukies can raife about three hundred warriors, who are generally employed every fummer in making incursions into the territories of the Illinois and Pawnee nations, from wheace they return, with a great number of flaves. But those people frequently retallate, and in their turn, deftroy many of the Saukies, which I judge to be the reason that they increase no fafter.

Whill I flaid here I took a view of fome mountains that lie about fifteen miles to the fouthward, and abound in lead ore. I afcended on one of the highest of thefe, and had an extensive view of the country. For many miles nothing was to be feen but lefter mountains, which appeared at a diffance like haycocks, they being free from trees. Only a few groves of hickory, and stunted oaks, covered fome of the vallies. So plentiful is lead here, that I faw large quantities of it, lying about the firests in the town belonging to the Saukies, and it feemed to be as good as the produce of other countries.

On the 10th of October we proceeded down the river, and the next day reached the first town of the Ottigaumies. This town contained about fifty houses, but we found most of them deferted on account of an epidemical diforder that had lately raged among them, and carried off more than one half of the inhabitants.

The greater part of those who furvived, had retired into the woods to avoid the contagion.

On the 15th we entered that extensive river the Mizfilippi. The Ouifconfin, from the Carrying Place to the part where it falls into the Miffifipi, flows with a fmooth, but firong current; the water of it is exceedingly clear, and through it you may percieve a fine and fandy bottom tolerably free from rocks. In it are a few iflands, the foil of which appeared to be good, though fomewhat woody. The land near the river alfo feemed to be, in general, excellent; but that at a diffance is very full of mountains, where it is faid there are many lead mines.

About five miles from the junction of the rivers, I obferved the ruins of a large town, in a very pleasing fituation. On enquiring of the neighboring Indians, why it was thus deferted. I was informed, that about thirty yeare ago, the Great Spirit had appeared on the top of a pyramid of rocks, which lay at a little diftance from it, towards the well, and warned them to quit their habitations ; for the land on which they were built belonged to him, and he had occasion for it. As a proof that he, who gave them these orders, was really the Great Spirit, he further told them, that the grafs should immediately (pring up on those very rocks from whence he now addressed them. which they knew to be bare and barren-The Indians obeyed and foon after different that this miraculous alteration had taken place. They thewed me the spot, but the growth of the grafs appeared notways fupernatural. I apprehend this to have been a firstagem of the French or Spaniards, to answer some felfilly. view ; but in what manner they effected their purposes. I know not.

This people, foon after their removal, built a town on the bank of the Miffifippi, near the mouth of the Ouifcoufin, at a place called by the French, La Prairies les Chiens, which fignifies the Dog Plains; it is a large town and contains about three bundred families; the houfes are well built after the Indian mannes, and pleatantly fituated on a very sigh foil, from which they raife every necessary of life in great abundance. I fur here ma-

afortable weather reets are e like a l'he land ns, which atly laid n, beans, beft marifions, of warriors, making ad Pawt great

ay horfes of a good fize and fhape. This town is the great mart where all the adjacent tribes, and even those who inhabited the most remote branches of the Millifippi, annually affemble about the latter end of May, bringing with them their furs to dipose of to the traders. But it is not always that they conclude the fale here ; this is determined by a general council of the chiefs, who confust whether it would be more conducive to their interest, to fill their goods at this place or carry them on to Loulliana, or Michilimackinac. According to the decision of this council, they either proceed further, or return to their different homes.

The Mifflippi, at the entrance of the Ouifconfin, near which flands a mountain of confiderable height, is about half a mile over, but opposite to the last mentioned town, it appears to be more than a mile wide, and full of liflands, the foil of which is extraordinary rich, and but thinly wooded.

A little further to the well, on the contrary fide; a fmall river falls into the Miffifippi, which the French call Le Jaun Riviere, or the Yellow River. Here the traders who had accompanied me hitherto, took up their refidence for the winter I then bought a cance, and with two fervants; one a French Canadian, and the other a Mohawk of Canada, on the 19th proceeded op the Miffifippi.

About ten days after I had parted from the traders I landed as I usually did, every evening, and having pitched my tent, I ordered my men, when night come on, to lay themselves down to fleep. By a light that I kept burning I then let down to copy the minutes I had taken in the course of the preceding day. About ten o'clock, having just finished my memorandoms, I stepped out of my tent to fee what weather it was As I call my eyes towards the bank of the river, I thought I faw by the light of the Aars, which those bright, fomething that had the appearance of a herd of beating coming down a defcent at fome diffence ; will I was wondern Jack Winat they could be one of the number fuddenly fprung app and discovered to me the form of a man. or twelve of them running towards me. I immediately reentered the tent, and having awakened my men, ordered them to take their arms and follow me. As my first apprehentions were for my canoe, I ran to the water's fide, and found a party of Indians (for fuch I now difcovered them to be) on the point of plundering it. Before I reached them, I commanded my men not to fire till I had given the word, being unwilling to begin hoftilities unless or abfolutely required. Laccordingly advanced with refolution, close to the points of their fpears, they had no other weapons, and brandifing my hanger, afked them with a ftern voice, what hey wanted in They were fraggered an this, and perceiving they. were like to meet with a warm reception, turned about and precipitately retreated. We purfued them to any adjacent wood, which they entered, and we faw no more: of them. However, for fear of their return, we watch. ed alternately during the remainder of the night. The nest day my fervants were, under great apprehenfions, and earneally entreated me to return to the traders we had lately left. But I told them, that if they would not be effectmen old women (a term of the greatelt reproach among the Indians) they much follow me; for I was determined to purfue my intended route, as an Englishinan, when once engaged in un adventure hever retreated. On: this they got into the canee, and I walked on the there to guard them from any further attack. The party of Indians who had thus intended to plunder me, kafter wards found to be fome of those straggling bands, that aving been driven from among the different tribes to hich they belonged, for various crimes, now affociated hantelves together, and living by plander prove very coublefome to travellers who pais this way ; nor are evil a Indians of every tribe (pared by them. The traders ad before cantioned metters apon my guard against hent, and I would repeat the tame caution to those whole bufinels might call them into these parts, the the On the lift of November I arrived at Lake Pepin. hick is rather in extended part of the River Millifip as the French have thus descriminated, should two he Dir. d miles from the Outfoonlin .: The Millippi, below

43

this lake, flows with a gentle current, but the breadth of it is very uncertain, in fome places it being upwards of a mile, in others not more than a quarter. This river has a range of mountains on each fide throughout the whole of the way; which in particular parts approach near to it, in others lie at a greater diftance. The land betwist the mountains, and on their fides, is generally covered with grafs, with a few groves of trees intersperfed, near which large droves of deer and elk are frequentby feen feeding.

In many places pyramids of rocks appeared, refembling old ruinous towers; at others amazing precipices; and what is very remarkable, whill this fcene prefented itlelf on one fide, the oppofite fide of the fame mountain was covered with the finest herbage, which gradually afcended to its fummit. From thence the most beautiful and extensive prospect that imagination can form, opens to your view. Verdant plains, fruitful meadows, numerous iflands, and all these abounding with a variety of trees that yield amazing quantities of fruit without care or cultivation; fuch as the nut tree, the maple which produces fugar, vines loaded with rich grapes, and plumb trees bending under their blooming burdens, but above all, the fine river flowing gently beneath, and reaching as far as the eye can extend, by turns attract. your admiration and excite your wonder.

The lake is about twenty miles long, and near fix in breadth ; in fome places it is very deep, and abounds with various kinds of fift. Great numbers of fowl frequent alfo this lake and the rivers adjacent p fuch as ftorks, fwans, geefe, brants and ducks : and in the groves are found great plenty of turkeys and partridges. On the plains are the largeft buffaloes of any in America. Here 1 observed the ruins of a French factory, where it is faid capt. St. Pierre refided, and carried on a very great trade with the Naudoweffies, before the reduction of Canada.

MAbout firsty miles below this lake is a mountain remarkably fitnated; for it flands by itlelf exactly in the middle of the river, and looks as if it had flitden from the adjacent (hore into the fiream.) It cannot be term

ining th

ed an island, as it rifes immediately from the brink of the water to a confiderable height. Both the Indians and the French call it the Mountain in the River.

One day having landed on the fhore of the Miffifippi, fome miles below Lake Pepin, whilst my attendants were preparing my dinner. I walked out to take a view of the adjacent country. I had not proceeded far before I came to a fine, level, open plain, on which I perceived at a little diffance a partial elevation that had the appearance of an intrenchment. On a nearer inspection, I had greater reason to suppose that it had really been intended for this many centuries ago. NotwithRanding it was now covered with grafs, I could plainly difcem that it had once been a creat work of about four feet inheight, extending the belt part of a mile, and fufficiently capacious to cover five thousand men. Its form was fomewhat circular, and its flanks reached to the river. Though much defaced by time, every angle was diffinguifhable, and appeared as regular, and fathioned with as much military fkill, as if planned by Vauban himfelf. The ditch was not vilible, but I thought on examining more curioufly, that I could perceive there certainly had been one. From its fituation alfo, I am convinced that it must have been defigned for this purpole. It fronted the country, and the rear was covered by the river ; nor was liere any riling ground for a confiderable way, that commanded it ; a few ftraggling oaks were alone to be feen near it. In many places fmall tracks were worn acrofs it by the leet of the elks and deer, and from the depth of the bed of earth by which it was covered. I way able to draw centain conclusions of its great antiquity. I'examined all the angles, and every part with great attention, and have often blamed myfelf fince, for not encamping on the fpot, and drawing an exact plan of it. To thew that this description is not the offspring of a heated imagination, or the chimerical tale of a miltaken traveller, I find on enquiry fince my return, that Mons: St. Pierre, and feyeral traders, have, at different times, raken notice of fimilar appearances, on which they have formed the fame conjectures, but without examising them for minutely as I did. kind could exift in a country that has hitherto (according to the general received opinion) been the feat of war to untutored Indians alone, whole whole flock of military knowledge has only, till within two centuries, amounted to drawing the bow, and whole only breakwork, even at prefent, is the thicket 1 know not. I have given as exact an account as pollible, of this fingular appearance, and leave to future explorers of these diftant regions, to difcover whether it is a production of nature or art.

Perhaps the hints I have here given, might lead to a more perfect investigation of it, and give us very different ideas of the ancient state of realms that we at present believe to have been from the earliest period only the habitations of favages.

The Millilippi, as far as the entrance of the River St. Croix, thirty miles above Lake Pepin, is very full of ilands; fome of which are of a confiderable length. On whele alfo, grow great numbers of the maple or fugar tree, and around them vines loaded with grapes creeping to their very tops. From the Lake upwards, few mountains are to be feen, and those but fmall. Near the River St. Croix, relide three bands of the Naudoweffe Indians, called the River Bands.

This nation is composed, at prefent of eleven bands. They were originally twelve ; but the Affinipoils fome years ago, revolting, and feparating themselves from the others, there remain only at this time eleven. Those I met here are termed the River Bands ; because they chiefly dwell near the banks of this river : the other eight are generally diftinguished by the title, Naudoweffies of the Plains, and inhabit a country that lies more to the westward. The names of the former are the Nelogatiwonahs, the Mawtawbauntowahs, and the Shalifweentowahs; and confift of about four hundred warriors. A little before I met with these three bands, I fell in with a party of the Mawtawbauntowahs amounting to forty warriors, and their families. With these I relided a day or two, during which time five or fix of their aumber who had been out on an excursion, returned in great hafte and acquainted their companions that a arge party of Chippeway warriors, " enough," as they

expressed themselves, "to swallow them all up" were close at their heels, and on the point of at tacking their little camp. The chiefs applied to me and defired I would put myfelf at their head, and 'ad them out to oppose their enemies. As I was a manger, and unwilling to excite the anger of either nation, I knew not how to act; and never found myfelf in a greater dilem. ma. Had I refused to affift the Naudoweffies I fould have drawmon myfelf their difpleafure, or had 1 met the Chipeways with hokile intentions, I should have made that people my foes, and had I been fortunate enough to have eleaped their arrows at this time, on fome fature occasion should probably have experienced the feverity of their revenge. In this extremity I chose the middle courfe, and defired that the Naudoweffies would fuffer me to meet them, that I might endeavor to avert their fory. To this they reluctantly affented, being perfuaded, from the inveteracy which had long prevailed between them, that my remonstrances would be in vain. Taking my Frenchman with me, who could fpeak their language, I hadened towards the place where the Chipeways were supposed to be. The Naudoweffies. during this, kept at a diftance behind. As I approached them with the pipe of peace, a small party of their chiefs, confifting of about eight or ten, came in a friendly manner towards me ; with whom, by the means of my interpreter, I held a long conversation; the result of which was, that their rancor being by my perfualions in fome measure mollified, they agreed to turn back, with. out accomplishing their favage purpoles. During our discourse I could perceive, as they lay feattered about, that the party was very numerous, and many of them armed with mulkets.

Having hapily fucceeded in my undertaking. I returned without delay to the Naudoweffies, and defired they would inflantly remove their camp to fome other part of the country, left their enemies fhould repeat of the promife they had given, and put their intentions into execution. They accordingly followed my advice, and immediately prepared to frike their tents. Whilk they were doing this, they loaded me with thanks; and when I had feen them on board their onnos I purfued my route. To this adventure I was chiefly indebted for the friendly reception I afterwards met with from the Naudoweffes of the plains, and for the respect and honors I received during my abode among them.

And when Lawived many months after at the Chippeway village, near the Ottawaw lakes, I found that my fame had reached that place before me. The chiefs received me with great cordiality, and the elder part of them thanked me for the milchief I had prevented. They informed me, that the war between their nation and the Naudowellies had continued without interruption for more than forty winters. That they had long wished to put an end toit, but this was gener. ally prevented by the young warriors of either nation. who could not reftrain their ardour when they met. They faid, they flould be happy if forme chief of the fame pacific difposition as mylels, and who posselled an equal degree of refolution and coolnefs, would fettle in the country between the nations for by the interference of fuch a perion, an accommodation which on their part they fincerely defired, might be brought about. As I did not meet any of the Naudowellies afterwards, I had not an opportunity of forwarding to good a work. About thirty miles below the falls of St. Anthony, at which I arrived the tenth day after I left Lake Pepit, is a remarkable cave of an amazing depth. The Indiana term is Waken teebe, that is the dwelling of the Great Spirit. The entrance into it is about ten feet wide, the height of it five feet. The arch within is near en feet high and about thirty feet broad. Thebottom ffæ of its confilts of time clear fand About twenty feet from the entrance begins a lake, the water of which is transparent; and extends to an untearchable dilignce. for the darkness of the case prevents all attempts to an quire a knowledge of it. glyphics, which appeared very ancient, for time had nearly covered them with mole, fo that it was with difficulty I could trace them. They were cut in a rude manner, upon the infide of the walls, which were composed of a flone fo extremely foft that it might eafily be penetrated with a knife; a flone every where to be found near the Miffifippi. The cave is only acceffible by afcending a narrow, fleep paffage, that lies near the brink of the river.

At a little diffance from this dreary cavern, is the busying-place of feveral bands of the Naudoweffie Indians : though these people have no fixed refidence, living in tents and abiding but a few months on one fpot, yet they always bring the bones of their dead to this place; which they take the opportunity of doing when the chiefs meet to hold their councils, and to fettle all public affairs for the enfuing fummer.

Ten miles below the Falls of St. Anthony, the river St. Pierre, called by the natives the Waddapawmenclotor, falls into the Millifippi from the Welt. It is not mentioned by father Hennipen, although a large fair river t this omiffion I conclude, mult have proceeded from a fmall ifland that is fituated exactly at its entrance, by which the fight of it is intercepted. I fhould not have diffeovered this river myfelf, had. I not taken a view, when I was fearching for it, from the high lands oppolite, which rife to a great height.

Nearly over against this river, I was obliged to leave my onnoe, on account of the ice and travel by land to the Falls of St. Anthony; where I arrived on the 17th of November. The Miffisppi from the St. Pierre to this place, is rather more rappid than I had hitherte found it, and without if ands of any confideration.

Before I left my cance I overtook a young prince of the Monebago Indians, who was going on an embactime of the bands of the Naudoweffies Finding to Tintended to take a view of the Falls, he agreed to accompany me, his curiolity having been often excited by the accounts he had received from fome of his chiefs : he accordingly left his family (for the Indiane saver travel without their houfholds) at this place, un-

der the care of my Mohawk fervant, and we proceeded together by land, attended only by my Frenchman, to this celebrated place.

We could diffinctly hear the noise of the water ful fifteen miles before we reached the falls; and I was greatly pleafed and furprifed, when I approached the aften if work of nature; but I was not long at lib erty to indulge these emotions, my attention being called off by the behaviour of my companion.

The prince had no fooner gained the point that over looks this wonderful cafcade, than he began with an an dible voice to addrefs the Great Spirit, one of whole places of refidence he imagined this to be. He told him that he had come a long way to pay his adors tions to him, and now would make him the beft offen ings in his power. He accordingly first threw his pin into the stream; then the roll that contanied his tobaccor after these, the bracelets he wore on his arms and wrifts, next an ornament that encircled his neck, composed of beads and wires; and at last the ear-rings from his ears in short he prefented to his god, every part of his dreft that was valuable; during this he frequetly smote his breast with great violence threw his arms about, an appeared to be much agitated.

All this while he continued his adorations and a length concluded them with fervent petitions that the Great Spirit would conflantly afford us his protection on our travels, giving us a bright fun, a blue fky, and clear, untroubled waters; nor would he leave the place till we had fmoked together in honor of the Great Spirit.

I was greatly furprifed at beholding an infrance of fuch elevated devotion in fo young an Indian, and in flead of ridiculing the ceremonies attending it, as I obferved my fervant tacitly did, I looked on the print with a greater degree of refpect for these fincere mooth he gave of his piety; and I doubt not but that his offerings and prayers were as acceptable to the universal Parent of mankind as if they had been made with greater pomp, of in a confectated place. Indeed, the whole conduct of this young prince a

e proceeded

nee amazed and charmed mc. During the few days we were together, his attention feemed totally to be employed in yielding me every affiltance in his power; and even in fo thort a time, he gave me innumerable proofs of the most generous and difinterested friendship; fo that on our return I parted from him with great reluctance. Whill I beheld the artlefs, yet engaging manners of his unpolified favage, I could not help drawing a compartion between him and fome of the more refined inhabitants of civilized countries, not much, I own, in fawor of the latter.

The Falls of St. Anthony received their name from ather Louis Hennipen, a French millionary, who travelled into these parts about the year 1680, and was the irft European ever feen by the natives. This amazing body of waters, which are above 250 yards over, form most pleasing cattaract; they fall perpendicularly about thirty feet, and the rapids below, in the space of 800 yards more, render the descent considerably greater ; to that when viewed at a distance, they appear to be much higher than they really are. I he above mentioned traveller has laid them down at above fixty feet ; but he has made a greater error in calculating the height of the Falls of Niagara ; which he afferts to be buil feet : whereas from later obfervations accurately made, it is well known that it does not exceed 140 feet. But the good father I fear too often had no other foundation for his accounts, than report, or, at belt, a flight infpection. In the middle of the Falls ftands a fmall ifland, about forty feet broad and fomewhat longer, on which grow a few cragged hemlock and fpruce trees ; and about half way between this island and the eastern shore is a rock, lying at the very edge of the Fall, in an oblique polition, that appeared to be about five or fix feet broad, and thirty or forty long. These Falls vary much from all the others I have feen, as you may approach close to them without any intervening hill or precipice. The country around them is extremely beautiful. It

is not an uninterrupted plain, where the eye finds no relief, but composed of many gentle ascents, which in the summer are covered with the finest verdure, and inter-

The

sperfed with little groves, that give a pleafing variety to the prospect. On the whole, when the Falls are included, which may be seen at the diffance of four miles, a more pleafing and picturesque view cannot, I believe, be found through the universe. I could have willed that I had happened to enjoy this glorieur fight at a more seafonable time of the year, whill the trees and hillocks were clad in nature's gayeft livery, as this must have greatly added to the pleafure 1 received 3 however even then it exceeded my warmess expectations. I have endeavoied to give the reader as just an idea of this enchanting spot, as possible 3 but all description, whether of the pencil or pen, must fall infinitely thort of the original.

At a little distance below the Falls stands a small island, of about an acre and an half, on which grow a great sumber of oak trees, every branch of which able to support the weight, was full of eagle's nests. The reafon that this kind of birds refort in such numbers to this spot is, that they are here fecure from the attacks either of man or beast, their retreat being guarded by the rapids, which the Indians never attempt to pass, Another reason is, that they find a constant supply of food for themselves and their young, from the animals and fifs which are dashed to pieces by the Falls and driven on the adjacent shore.

Having fatisfied my curiofity, as far as the eye of man can be fatisfied, I proceeded on, fill accompanied by my young friend, till I had reached the river St. Francis, near fixty miles above the falls. To this river father Hennipen gave the name of St. Francis, and this was the stent of his travels as well as mine, towards the northweft. As the feafon was to advanced, and the weather fo extremely cold, I was not able to make fo many obfervations on these parts as I otherwise theuld have done.

It might however, perhaps, be neceffary to observe that in the little tour I made about the falls, after travelling fourteen miles, by the fide of the Missispi, I came to a river nearly twenty yards wile, which ran from the morth east, called Rum River. And the on 20th of Nov-

53

ember came to another termed Goole River, about twelve yards wide. On the 21ft I arrived at the St: Francis, which is about thirty yards wide. Here the Millippi itself grows narrow, being not more than ninety yards over; and appears to be chiefly composed of small branches. The ice prevented me from noticing the depth of any of these three rivers.

The country in fome places is hilly, but without large mountains; and the land is tolerably good: I obferved here many deer and carriboos, fome elk, with abundance of beavers, otters, and other furs. A little above this, to the north eaft, are a number of fmall lakes called the Thoufand Lakes; the parts about which, though but little frequented, are the beft within many miles, for hunting, as the hunter never fails of returning loaded beyond his expectations

The Miffifippi has never, been explored higher up than the the river St. Francis, and only by father Hennipen and myfelf thus far. So that we are obliged folely to the Indians, for all the intelligence we are able to give. relative to the more northern parts. As this river is not navigable from the fea for veffels of any confiderable burthen, much higher up than the forks of the Ohio, and even that is accomplified with great difficulty, owing to the rapidity of the current, and the windings of the river; those settlements that may be made on the interior branches of it, must be indifputably fecure from the attacks of any maritime power. But at the fame. time the fettlers will have the advantage of being able to convey their produce to the feaports, with great facility, the current of the river from its fource to its entrance into the Gulf of Mexico, being extremely favorable for doing this in fmall craft. "This might also in time be facilitatid in canals or fhorter cuts ; and a communication opened by water with New-York, Canada, &c. by way of the lakes. The forks of the Ohio are about nine hundred miles from the mouth of the Miffifippi, follow. ag the course of the river ; and the Missouri two hundred miles above thefe. From the latter it is about twenty miles to the Illinois River, and from that to the

y variety is are inar miles, a believe, be ished that it a more d hillocks nuft have ever even have enf this en-, whether of the ori-

It is

This

Ouifconfin which I have given an account of, about eight hundred more.

On the 25th I returned to my cance, which I had left at the mouth of the river St. Pierre ; and here I parted with regret from my young friend the prince of the Winnebagoes. This river being clear of ice, by reafon of its fouthern fituation, I found nothing to obfiruct my paffage. On the 28th, being advanced about forty miles, I arrived at a fmall branch that fell in to it from the north ; to which, as it had no name that I could diffinguifh it by, I gave my own. About forty miles. higher up I came to Forks of Verd and Red Marble Rivers, which join at fome little diffance before they enter the St. Pierre,

The River St. Pierre, at its junction with the Millifippi, is about a bunned yards broad, and continues that breadth nearly all the way I failed upon it. It has a great depth of water, and In iome places runs very brickly. About fifty miles from its mouth are fome rapids, and much higher up there are many others.

I proceeded up this river about two hundred miles to the country of the Naudowellies of the plains, which lies a little above the Forks formed by the Verd and Marble Rivers, just mentioned, where a branch from the fouth nearly joins the Miffouri River. By the accounts I recived from the Indians, I have reason to believe that the River St. Pierre and Miffouri, though they enter the Miffilippi twelve hundred Miles from each. other, take their rife in the fame neighborhood ; and this within the fpace of a mile.

The River St. Pierre's northern branch rifes from a sumber of lakes near the faining mountains ; and it is from fome of thefe. alfo, that a capital branch of the River Bourbon, which runs into Hudfon's Bay, has in fources.

From the intelligence I gained from the Naudoweftic Indians, among whom I arrived on the 7th of Decomber, and whole language I perfectly acquired during a relidence of five months ; and also from the accounts I afterwards obtained from the Affinipoils, who speak the fame tongue, being a revolved band of the

51

of, about ch I had d here I prince of f ice, by ng to obced about l in to it at I could orty miles. I Marble t they en-

Millifipnues that It has a ery brifkne rapids, I miles to

s, which lerd and ich from y the acfon to bethough com each od ; and

from a and it is b of the has its

udowefh of Dered durh the achils, who l of the Nudowefies; and from the Killiftinoes, neighbors of the Affinipoils, who fpeak the Chipeway language, and inhabit the heads of the river Bourbon; I fay from thele nations, together with my own obfervations, I have learned that the four molt capital rivers on the continent of North America, viz, the St. Lawrence, the Millifippi, the river Bourbon, and the Oregon or the river of the Welt (as I hinted in my Introduction) have their fources in the fame neighborhood. The waters of the three former are within thirty miles of each other; the latter, however is rather farther weft.

This flews that these parts are the highest lands in North America; and it is an inflance not to be parallelled on the other three quarters of the globe, that four rivers of fuch magnitude thould take their rife together, and each, after running separate courses, discharge their waters into different oceans at the distance of two thousand these from their sources. For in their passage from this to the Bay of St. Lawrence, east; to the Bay of M. Jos Jouth; to Hudsons Bay, north; and to the Bay at the Straits of Annian well, each of these traverse upwards of two thousand miles.

I shall here give my readers such reflections as occurred to me, when I received this interesting information, and had my numberless enquiries, aftertained the truth of it; that is, as far as it was possible to arrive at a certainty without a perfonal investigation.

It is well known that the colonies, particularly those of New England and Canada, are greatly affected, about the time their winter fets in, by a north welt wind, which continues for feveral months, and renders the cold much more intense there than it is in the interior parts of America. This I can, from my own knowledge, affert, as I found the winter, that I passed to the westward of the Missispi, far from severe; and the north west wind blowing on these countries considerable more temperate than I have often experienced it to be nearer the coast. And that this did not arise from an uncertainty of the from the small quantity of show that fell, and a total state of how those by these Indians, without which none of the more callern nations can poffibly travel during the winter.

As

As naturalis observe, that air resembles water in many respects, particularly by often flowing in a compact body; and that this is generally remarked to be with the current of large ftreams, and feldom acrois them, may not the winds that fet violently into the Bay of Mexico about the latter end of the year, take their courfe over the continent in the fame direction as the Millippi does; till meeting with the north winds (that from a fimilar caufe blow up the Bourbon from Hudfon's Bay) they are forced across the great lakes, down the current of the waters of the St. Lawrence, and united, commit those ravages and occasion those fevere winters, experienced in the before mentioned countries ? During their progrefs over the lakes they become expanded, and confequently affect a greater tract of land than they otherwife would do.

According to my feanty knowledge of natural philefophy, this does not appear improbable. Whether it is agreeable to the law s established by naturalists to account for the operations of that element, I know not. However, the description here given of the fituation of these valt bodies of water, and their near approach to each other, with my own undigested suppositions of their effect on the winds, may prove perhaps, in abler hands, the means of leading to many useful discoveries.

Un the 7th of December, I arrived (as I faid before) at the utmost extent of my travels towards the west ; where I met with a large party of the Naudoweffie Indians, among whom I relided feven months. Thefe conflituted a part of the eight bands of the Naudowelfies of the Plains; and are termed the Wawpeentow. ahs, the Tintons, the Afrahcootans, the Mawhaws, and the Schians. The other three bands, whole names are, the Schianefe, the Chongousceton, and the Waddapawjeftin, dwell higher up, to the welt of the river St. Pierre, on plains that, according to their account, are unbounded : and probably terminate on the coaft of the Pacific ocean. The Naudoweffie nation, when united, confilts of more than two thousand warriors. The Af-

finipoils, who revolted from them, amount to about three hundred; and league with the Killiftinoes, who live in a continual ftate of enmity with the other eleven bands.

As I proceeded up the river St. Pierre, and had nearly reached the place where these people were encamped, I observed two or three cances coming down the ftream; but no fooner had the Indians that were on board them, discovered us, than they rowed toward the land, and leaping affore with precipitation, left their cances to float as the current drave them. In a few minutes I perceived fome others; who, as foon as they came in fight, followed with equal speed, the example of their countrymen.

I now thought, it necessary to proceed with caution ; and therefore kept on the fide of the river opposite to that on which the Indians had landed. However, I fill continued my course, fatisfied that the pipe of peace, which was fixed at the head of my cance, and the Engliss colors that were flying at the ftern, would prove my fecurity. After rowing about half a mile further, in turning a point, I discovered a great number of tents, and more than a thousand Indians, at a little distance from the fhore. Being now nearly opposite to them, I otdered my men to pull directly over, as I was willing to convince the Indians by fuch a ftep, that I placed fome confidence in them

As foon as I had reached the land, two of the chiefs prefented their hands to me, and led me, amidft the aftonifhed multitude, who had moft of them never feen a white man before, to a tent. Into this we entered, and according to the cuftom that univerfally prevails amongevery Indian nation, began to finoke the pipe of peace. We had not fat long before the crowd became fo great, both around, and upon the tent, that we were in danger of being crufhed by its fall. On this we returned to the plain, where, having gratified the curiofity of the common people, their wonder abated, and ever afterthey treated me with great refpect

From the chiefs I met with the most friendly and hospitable reception ; which induced me, as the featonwas fo far advanced, to take up my refidence among

them during the winter. To render my flay as comfortable as possible, I first endeavored to learn their language. This I foon did fo as to make my(elf perfectly intelligible, having before acquired fome flight knowledge of the language of those Indians that live on the back of the fettlements : and in confequence met with every accommodation their manner of living would afford. Nor did I want for fuch amufements as tended to make fo long a period pais cheerfully away. I frequently hunted with them ; and at other times beheld with pleafure their recreations and pastimes, which I shall deferibe hereafter.

Sometimes I fat with the chiefs, and whilf we fmoked the friendly pipe, entertained them, in return for the accounts they gave me of their wars and excursions, with a narative of my own adventures, and a defoription of all the battles fought between the English and French in America, in many of which I had a perfonal thars. They always paid great attention to my details, and afked many pertinent questions relative to the European methods of making war.

I held these conversations with them in a great meafure to procure from them fome information relative to the chief point I had conftantly in view, that of gaining a knowledge of the fituation and produce, both of their own country, and those that lay to the weftward of them. Nor was I disappointed in my defigns ; for 1 procured from them much ufefal intelligence. They, likewife drew for me plans of all the countries with which they were acquainted ; but as I entertained no great opinion of their geographical knowledge, I placed not much dependence on them, and therefore think it unneceffary. to give them to the public. They draw with a piece of burnt coal, taken from the hearth, upon the infide bark of the birch tree ; which is fmooth as paper, and anfwers the fame purpoles, not with ft anding it is of a yellow. caR. Their fketches are made in a rude manner, but, they feem to give us as just an idea of a country, although the plan is not fo exact, as more experienced draftimen could do.

I left the habitation of these hospitable Indians the

tatter end of April 1767; but did not part from them for feveral days, as I was accompanied on my journey by near three hundred of them, among whom were many chiefs, to the mouth of St. Pierre. At this feafon, thele bands annually go to the Great Cave, before mentioned, to hold a grand council with all the other bands; wherein they fettle their operations for the enfuing year. At the fame time they carry with them their dead, for interment, bound up in buffaloes' fains. Belides those that accouncil d me, others were some before, and the reft w... to t

Never did I travel with fo cheerful and happy a company. But their mirth met with a fudden and temporary alloy from a violent ftorm that overtook us one day on our paffage. We had just landed, and were preparing to fet up our tents for the night, when a heavy cleud overfpread the heavens, and the most dreadful thunder, lightning, and rain iffued from it, that ever I beheld. The Indians were greatly terrified, and ran to fuch shelter as they could find; for only a few tents were as yet crected. Apprehenfive of the danger that might enfue from flanding near any thing which could ferve for a conductor, as the cloud appeared to contain fuch an uncommon quantity of electrical fluid, I took my fland as far as poffible from any covering ; chufing rather to be exposed to the peltings of the ftorm, than to receive a fatal ftroke. At this the Indians were greatly furprifed, and drew conclutions from it not unfavorable to the opinion they already entertained of my refolution. Yet I acknowledge that I was never more affected in my life: for nothing fcarcely could exceed the terrific fcene. The peals of thunder were fo loud that they flook the earth; and the lightning flashed along the ground in streams of fulphur; fo that the Indian chiefs themfelves, although their courage in war is usually invincible, could not help trembling at the horrid combustion. As foon as the form was over, they flocked around me, and informed me, that it was a proof of the anger of the evil fpirits, whom they were apprehenfive that they had highly of. fended . a. a. a. a.

had depolited the remains of their deceased friends in the burial place that stands adjacent to it, they held their great council, into which I was admitted, and at the fame time had the honor to be installed or adopted a chief of their bands. On this occasion I made the following speech, which I insert, to give my readers a specimen of the language and manner in which it is necessary to address the Indians, so as to engage their attention, and to render the speaker's expression consonant to their ideas. It was delivered on the first day of May 1767.

" My brothers, chiefs of the numerous and powerful Naudoweffies | I rejoice that through my long abode with you, I can now speak to you (though after an imperfect manner) in your own tongue, like one of your own children. I rejorce alfo, that I have had an opportunity to frequently to inform you of the glory and power of the Great King that reigns over the English and other nations : who is defeended from a very ancient race of lovereigns, old as the earth and waters ; whole feet fand on two great iflands, larger than any of you have ever feen, amidft the greateft waters in the world; whole head reaches to the fun, and whole arms encircle the whole earth : the number of whole warriors are . qual to the tices in the vallies, the stalks of rice in yonder marshes, or the blades of grafs on your great plains : who has hundreds of canoes of his own, of fuch amazing bignefs, that all the waters in your country. would not fuffice for one of them to fwim in; each of which have guns, not fmall like mine, which you fee efore you, but of fuch magnitude, that a hundled of your stoutest young men would with difficulty be able to carry one. And these are equally surprising in their operation against the great king's enemies when engaged in battle; the terror they carry with them, your language wants words to express. You may remember the other day when we were encamping at Wadawpaw. menefotor, the black clouds, the wind, the fire, the flupendous noife, the horrible cracks, and the trembling of the earth, which then alarmed you, and gave you reafon to think your gods were angry with you; not unlike

and the state of the second

iends in eld their the fame , chief of ollowing cimen of try to adn, and to eir ideas.

powerful ng abode er an ime of your opportund power and othient race shole feet you have e world; is encircle iors are . ce in yonour great m, of fuch ir country ; each of vou see eed of your ble to car. their opehen engahem, your remember adawpaw. re, the ftuembling of you reason not unlike

these are the warlike implements of the English, when they are fighting the battles of their gr-at king.

"Several of the chiefs of your bands have often told me, in times paft, when I dwelt with you in your tents, that they much wifted to be counted among the children and allies of the great king my mafter. You may remember how often you have defired me, when I return again to my own country, to acquaint the great king of your good difposition towards him and his subjects, and that you wifted for traders from the English to come among you,

⁴⁴ Being now about to take my leave of you, and to return to my country, a long way tewards the rifir g fun, I again alk you to tell me whether you continue of the fame mind as when I fpoke to you in council lath winter; and as there are now feveral of your chiefs here, who came from the great plains towards the fetting of the fun, whom I have never fpoke with in council before, I alk you to let me know if you are willing to acknowledge yourfelves the children of my great mafter the king of the Englifh and other nations, as I fhall take the first opportunity to acquaint him of your defires and good intentions.

"I charge you not to give heed to bad reports; for there are wicked birds flying about among the neighboring nations, who may whilper evil things in your ears against the English, contrary to what I have told you; you must not believe them, for I have told you the truth.

"And as for the chiefs that are about to go to Michillimackinac, I shall take care to make for them and their fuite, a strait road, smooth waters, and a clear sky; that hey may go there, and smoke the pipe of peace, and rest fecure on a beaver blanket under the shade of the great tree of peace. Farewell !"

To this fpeech I received the following answer, from he mouth of the principal chief.

"Goed brother ! I am now about to fpr : to you with the mouths of these my brothers, chiefs of the eight ands of the powerful nation of the Naudoweffies. We elieve and are well fatisfied in the truth of every thing

you have told us about your great nation, and the great king our greatelt father; for whom we fpread this beaver blanket, that his fatherly protection may ever reft eafy and fate amongft us his children: your colors and your arms agree with the accounts you have given us about your great nation. We define that when you return, you will acquaint the great king how much the Naudoweffies with to be counted among his good children.

"You may believe us when we tell you that we will not open our ears to any who may dare to fpeak evil of our great father the king of the English and other nations.

"We thank you for what you have done for us in making peace between the Naudoweffies and the Chipl eways, and hope when you return to us again, that you will complete this good work; and quite difpelling the clouds that intervene, open the blue fky of peace, and caufe the bloody hatchet to be deep buried under the roots of the great tree of peace.

"We with you to remember to reprefent to our great father how much we define that traders may be fent to abide among us with fuch things as we need, that the hearts of our young men, our wives and children may be made glad. And may peace fubfilt between us, fo long as the fun, the moon, the earth, and the waters thall endure. Farewell 12"

I thought it neceffary to caution the Indians again giving heed to any bad report that may reach them from the neighboring nations, to the difadvantage of the English, as I had heard, at different places through which I passed, that emissaries were still employed by the French to detach those who were friendly to the English, from their interest. And I faw, myself, feveral belts of Wampum that had been delivered for this purpose to fome of the tribes I was among. On the delivery of each of these, a talk was held, wherein the Indians were told that the English, who were but a petty people, had solution that country from their great father the king of France, whils he was assessed by the that he would foon awake, and take them again under his protection. I found were fent from Canada, by perfons who appeared to be well affected towards the government under which they lived.

Whilft I tarried at the mouth o the river St. Pierre, with these friendly Indians, I endeavored to gain intelligence whether any goods had been sent towards the falls of St. Anthony for my use, agreeable to the promise I had received from the governor, when I left Michillimackinac. But finding from some Indians, who passed by in their return from those parts, that this agreement had not been fuifilled, I was obliged to give up all thoughts of proceeding further to the north west by this route, according to my original plan I therefore returned to La Prairie le Chien, where I procured as many goods from the traders I left there the preceeding year, as they could spare.

As thefe, however, were not fufficient to enable me to renew my first defign, I determined to endeavar to make my way acrofs the country of the Chipeways to Lake Superior; in hope of meeting at the Grand Portage on the north fide of it, the traders that annually go from Michillimackinac to the north welt; of whom it doubted not but that I should be able to procure goods enough to answer my purpole, and also to penetrate through those more northern parts to the Straits of Annian.

And I the more readily returned to La Prairie le Chien, as I could by that means the better fulfil the engagement I had made to the Naudoweffies mentioned at the conclusion of my speech.

During my abode with this people, withing to fecure them entirely in the interest of the English, I had advised forme of the chiefs to go to Michillimackinac, where they would have an opportunity of trading, and of hearing the accounts that I had entertained them with of my countrymen, confirmed. At the fame time I had furnished them with a recommendation to the governor and given them every direction necessary for their voyage.

In confequence of this, one of the principal chiefs, and twenty five of an inferior rank, agreed to go to the en-

fuing fummer. This they took an opportunity of doing, when they came with the reft of their band to attend the grand council at the mouth of the river St. Pierre. Being obliged, on account of the difappointment I had just been informed of, to return to far down the Millilippi, I could from thence the more easily tet them on their journey.

As the intermediate parts of this river are much frequented by the Chipeways, with whom the Naudow, effies are continually at war, they thought it more prudent, being but a fmall party, to take the advantage of the night than to travel with me by day; accordingly ro fooner was the grand council broke up, than I took a friendly leave of these people, from whom I had received innumerable civilities, and purfued once more my voyage.

I reached the eastern fide of Lake Pepin the fame night, where I went affore and encamped as ufual. The next morning, when I had proceeded fome miles further, I perceived at a dittance before me, a finoke, which denoted that fome Indians were near; and in a

thort time difcovered ten or twelve tents, not far from the bank of the river. As I was apprehenfive that this was a party of the Rovers I had before met with, I knewnot what courfe to purfue My attendants purfuaded me to endeavor to pafs by them on the oppofite fide of the river : but as I had hitherto found that the beft way to enfure a friendly reception from the Indians, is to meet them boldly and without flowing any tokens of fear, I would by no means confent to their propofal. Inflead of this I croffed direcly over, and landed in the midft of them, for by this time the greateft part of them were flanding on the flore.

The first I accosed were Chipeways inhabiting near the Ottowaw Lakes; who received me with great cordiality, and shock me by the hand in token of friendship. At fome little distance behind these shocd a chief remarkably tall and well made, but of so shern an aspest, that the most undaunted person could not behold him without feeling fome degree of terror. He seemed to have passed the meridian of life, and by the mode

y of doto attend t. Pierre. ent I had the Mitfithem on

tar from e that this ith, I knewpurfuaded lite fide of e belt w₄₁ iaus, is to tokens of propofal. Jauded in eft part of

iting near great corof friendbod a chief ern an afnot behold He feemy the mode in which he was painted and tatowed, I difcovered that he was of high rank. However, I approached him in a courteous manner, and expected to have met with the fame reception I had done from U e others i but to my great furprife, he withheld his hand, and looking fiercely at me, faid, in the Chipeway tongue, "Cawin nithifhin faganoth," that is, " The Englifh are no good." As he had his tomahawk in his hand, I expected that this laconic fentence would have been followed by a blow; to prevent which, I drew a pittol from my belt, and holding it in a carelefs polition, paffed clefe by him, to let him fee I was not afraid of him.

I learned foon after from the other Indians, that this was a chief, called by the French the grand Sauter, or the great Chipeway Chief, for they denominate the Chipeways, Sauters. They likewife told me that he had always been a fleady friend to that people, and when they delivered up Michillimackinac to the English on their evacuation of Canada, the grand Sauter had fwom that he would ever remain the avowed energy of its new pofferflors, as the territories on which the fort is built belonged to him,

Finding him thus difpofed, I took care to be confantly on my guard whill I flaid; but that he might not fuppofe I was driven away by his frowns; I took up my abode there for the night. I pitched my tent at fome diftance from the Indians, and had no foomer laid myfelf down to reft, than I was awaked by my French fervant. Having been alarmed by the found of Indian mufic, he had run to the outfide of the tent, where he beheld a party of young favages dancing towards us in an extraordinary manner, each carrying in his hand a torch fixed on the top of a long pole. But I thall defer any further account of this uncommon entertainment, which at once furprifed and alarmed me, till I treat of the Indian dances.

The next morning I continued my voyage, and before night reached La Prairie le Chien ; at which place the party of Naudoweffies foon overtook me. Not long after, the Grand Sautor alfo arrived, and before

CHRVER'S THAVELS.

the Naudoweffies left that place to continue their journey to Michillimackinac, he found means, in conjunction with fome French traders from Louisiana, to draw from mc about ten of the Naudoweffie chiefs, whom he prevailed upon to go toward those parts.

The remainder proceeded, according to my directions, to the English fort; from whence I afterwards heard that they returned to their own country without any unfortunate accident befalling them, and greatly pleafed with the reception they had met with. Whilf not more than half of those who went to the fouthward, through the difference of that fouthern climate from their own, lived to reach their abode. And fince I came to England I have been informed, that the grand Sautor having rendeted himself more and more difguitful to the English, by his inveterate enmity towards them, was at length stabbed in his tent. as he encamped near Michillimackinac, by a trader, to whom I had related the foregoing flory.

I should have remarked, that whatever Indians happen to meet at La Prairie le Chien, the great mart to which all who inhabit the adjacent countries refort, though the nations to which they belong are at war with each each other, yet they are obliged to reftrain their enmity, and to forbear all hoftile acts during their ftay there. This regulation has been long established among them for their mutual convenience, as without it no trade could be carried on. The fame rule is observed alfo at the Red Mountain (afterwards differibed) from whence they, get the flone of which they, make their pipes; these being indispensable to the accommodation ef every neighboring tribe, a similar reftriction becomes needful, and is of public utility.

The river St. Fierre, which runs through the territosice of the Naudoweffies, flows through a molt delightful country, abounding with all the neceffaries of life, that grow fpontaneoufly; and with a little cultivation it might be made to produce even the luxuries of life. Wild rice grows here in great abundance; and every part is filled with trees bending under their loads of fruits, fuch as plums, grapes, and apples; the meadows are bles ; v angelic. eggs. are emi

he territodelightful s of life, ultivation es of life. und every r loads of he meadows are covered with hops, and many forts of vegitables; whill the ground is flored with uteful roots, with angelica, fpikenard, and ground nuts as large as hen's eggs. At a little diftance from the fides of the river are eminences, from which you have views that cannot be exceeded, even by the most beautiful of those I have already defcribed; amidit these are delightful groves, and fuch amazing quantities of maples, that they would produce fugar fufficient for any number of inhabitants.

A little way from the mouth of the river, on the north fide of it, ftands a hill, one part of which, that towards the Miffifippi, is composed entirely of white ftone, of the fame fort nature as that I have before defcribed; for fuch, indeed is all the ftone in this country. But what appears remarkable, is, that the color of it is as white as the driven fnow. The outward part of it was crumbled by the wind and weather into heaps of fand, of which a beautiful composition might be made; or, I am of opinion that when properly treated, the ftone itfelf would grow harder by time, and have a very noble effect in architecture.

Near that branch which is termed the Marble River. is a mountain, from whence the Indians get a fort of flone, out of which they hew the bowls of their pipes. In fome of these parts is found a black, hard clay, or rather . Aone; out of which the Naudoweffies make their family utenfils. This country likewife abounds with a milk white clay, of which china ware might be made equal in goodness to the Aliatic; and also with a blue clay that ferves the Indians for paint, with this laft they contrive, by mixing it with red flone powdered, to paint. themfelves of different colors. Those that can get the blue clay here mentioned, paint themfelves very much with it; particularly when they are about to begin their fports and pastimes. It is also effeemed by them a mark of peace, as it has a refemblance of a blue fky, which with them is a fymbol of it, and made use of in their speeches as a figurative expression to denote peace. When they with to flow that their inclinations are pa-

· " holding !! " and ?

cific towards other wibes, they greatly ornament both themselves and their belts with it.

Having concluded my business at La Prairie le Chein, I proceeded once more up the Missifippi, as far as the place where the Chipeway River enters it, a little below Lake Pepin. Here, having engaged an Indian pilot, I directed him to freer towards the Ottowaw Lakes, which lie near the head of this river. This he did, and 1 arrived at them the beginning of July.

The Chipeway River, at its junction with the Miffifippi, is about eighty yards wide, but is much wider as you advance into it. Near thirty miles up, it feparates into two branches, and I took my courfe through that which lies to the eaftward.

The country adjoining to the river, for about fixty miles is very level, and on its banks lie fine meadows, where larger droves of buffaloes and elks were feeding, than I observed in any other part of my travels. The track between the two branches of this river is termed, the road of war between the Chipeway and Naudoweffie Indians.

The country to the Falls is almost without any timber, and above that very uneven and rugged, and clofely wooded with pines, beach, maple, and birch. Here a most remarkable and astonishing fight prefented fielf to my view. In a wood on the east of the river, which was about three quarters of a mile in length, and in depth further than my eye could reach, I obferved that every tree, many of which were more than fix feet in circumference, was lying flat on the ground, torn up by the roots. This appeared to have been done by fome extraordinary hurricane, that came from the welt fome years ago; but how many I could not learn, as I found no inhabitants near it, of whom 1 could gain informa-The country on the west fide of the river tion. from being less woody, had escaped in a great mealure this havoc as only a few trees were blown dove

each fide of the river (which at this place is of no confiderable breadth) and lies adjacent to the banks of a fmall lake. This town contains about forty houfes, and can fend out upwards of one hundred warriors, many of whom were fine. flout young men. The houfes of it are built after the Indian manner, and have near plantations behind them; but the inhabitants, in general feemed to be the naftieft people I had ever been among. I obferved that the women and children indulged themfelves in a cuftom, which though common, in fome degree, throughout every Indian nation, appears to be, according to our ideas, of the most nauseous and indelicate nature; that of fearching each other's head, and eating the prey caught therein.

In July I left this town, and having croffed a number of fmall lakes and carrying places that intervened, came to a head branch of the river St. Croix. This branch I defcended to a fork, and then afcended another to its fource: Un both thefe rivers I difcovered feveral mines of virgin copper, which was as pure as that found in any other country.

Here I clime to a fmall brook, which my guide tho" ght might be joined at fome diftance by ftreams that was to fcanty, that my cance would by no means fwim in it; but having flopped up feveral old beaver dams, which had been broken down by the hunters, I was enabled to proceed fome miles, till by the conjunction of a few brooks, these aids became no longer necessary. In a fhort time the water increased to a most rapid river, which we descended till it entered into Lake Superior. This river 1 named after a gentleman that defired to accompany me from the town of the Ottagaumies to the carrying place on Lake Superior, Goddard's River. To the veft of this is another fmall river, which also empties into the take. This I termed Strawberry River, from the great number of flrawberries of a good fize and flavor that grew on its banks.

The country from the Ottowaw Lakes to Lake Superior, is in general very uneven and thickly covered with woods. The soil in fome places is tolerably good,

in others but indifferent. In the heads of the St. Croix and the Chipsway Rivers are exceeding fine furgeon. All the wildernels between the Millifuppi and Lake Superior is called by the Indians, the Molchettoe country, and hthought it molt justly named; for, it being then their feated, linever faw or full formany of those infects in my life.

The latter end of July I arrived, after having coafted through Weft Bay, at the Grand Portage, which lies on the north weft borders of Liake Superior. Here thole who go on the north weft trade, to the Lakes De Pluye, Dubols, &c. carry over their cances and baggage about nine miles, till they come to a number of small lakes, the waters of fome of which defeed into Lake Superior, and others into the river Bourbon. Lake Superior from Weft Bay to this place is bounded by rocks, except towards the fouth weft part of the Bay where I first entered it, there it was tolerably level.

At the Grand Portage is a finall bay, before the entrance of which lies an ifland that intercepts the dreary and unmersuper view over the lake, which otherwile would have prefented Rielf, and makes the bay ferene and pleafant. Here I met a large party of the Killiftinoe and Affinipoil Indians, with their respective kings and their families. They were come to this place in order to meet the traders from Michillimackmae, who make this their road to the north well. From them I received the following account of the Lakes that lie to the north weit of Lake Superior.

Lake Bourbon, the molt northern of those yet difcovered, received its name from fome French traders who accompanied a party of Indians to Hudfon's Bay fome years ago; and was thus denominated by them in honor of the royal family of France. It is composed of the waters of the Bourbon River, which as I have before observed, rifes a great way to the fouthward, not far from the northern heads of the Miffilippi.

This lake is about eighty miles in length, sorth and fouth, and is nearly circular. It has no very large illands on it. The land on the eathern fide is very good ; and to the fouth welt there are fome mountains : in ma-

ay other parts there are barren plains, bogs, and moraffes. Its latitude is between fifty two and fifty four degrees north, and it lies nearly fouth well from Hudion's Bay. As through its northern fituation the weather there is extremely cold, only a few animals are to be found in the country that borders on it. They gave me but an indifferent account either of the beafts, birds, or fifthes. There are indeed, fome buffalces of a finall fize, which are fat and g ood about the latter end of fummer, with a few moofe and carriboo deer : however, this deficiency is made up by the furs of every fort that are to be met with in great plenty round the lake. The timber growing here is chiefly fir, cedar, fprace, and fome maple.

Lake Winnepeck, or as the French write it, Lac Quinipique, which lies nearest to the foregoing, is composed of the same waters. It is in length about two hundred miles north and south; its breadth has never been properly ascertaized, but it is supposed to be about one hundred miles in its widest part. This lake is very full of islands; these are, however of no great magnitude. Many confiderable rivers empty themselves into k, which, as yet, are not diffinguished by any pames. The waters are flored with fifs, such as trout and flurgeon, and also with others of a smaller kind peculiar to their lakes.

The land on the fouth well part of it is very good, especially about the entrance of a large branch of the River Bourbon, which flows from the fouth well. On this river there is a factory that was built by the French, called Fort la Raine, to which the traders from Michil, imackinac refort to trade with the Affinipoils and Killiftinces. To this place the Mabahs, who inhabit a country two hundred and fifty miles fouth well, come also to trade with them; and bring great quantities of Indian corn, to exchange for knives, tomaliawks, and other articles. These people are supposed to dwell on some of the brauches of the River of the Weft. Lake Winnepeck has on the north east forme moun-

teins, and on the call many barren plains. The maple or lagar tree grows here in great plenty, and there is

argeon. tke Suountry, ng then e infects TRANK AN coafted hich lies ere those e Pluye, ge about all lakes, Superior. ior from rcept torft enter-

likewife gathered an amazing quantity of rice, which proves that grain will flowrifh in these northern climates as well as in warmer. Buffaloes, carriboo, and moofe deer, are numerous in these parts. The buffaloes of this country differ from those that are found more to the fouth only in fize; the former being much smaller; just as the black cattle of the northern parts of Great Britain differ from English oxen.

On the waters that fall into this lake, the neighboring nations take great numbers of excellent furs. Some of thele they carry to the factories and fettlements belonging to the Hudion's Bay Company, fituated above the entrance of the Bourbon River; but this they do with reluctance, on feveral accounts; for fome of the Affinipoils and Killiftmees, who usually traded with the company's fervants, told me, that if they could be fure of a conftant fupply of goods from Michillimackinac, they would not trade any where effer. They fhewed me fome cloth and other articles that they had purchafed at Hudfon's Bay, with which they were much diffatisfied, thinking they had been greatly impofed upon in the barter.

Allowing that their accounts were true, I could not help joining in their opinion. But this diffatisfaction might probably proceed, in a great measure, from the mtrigues of the Canadian traders ; for whilk the French were in poffeffion of Michillimackinac, having acquired a thorough knowledge of the trade of the north welt countries, they were employed on that account, after the reduction of Canada, by the English traders there, in the establishment of a trade with which they were themfelves quite unacquainted. One of the metheds they took to withdraw thefe Indians from their attachment to the Hudfon's Bay Company, and to engage the good opinion in behalf of their new employers, was by depreciating on all oceasions the Company's goods, and magnifying the advantages that would arife to them from trafficking entirely with the Canadian traders. In this they too well succeeded, and from this, doubtlefs; did the diffatisfaction the Affinipeils and Killiftines ex-

bented it the Hudf took thei to go an noes they beavers 1 that thei refide an habit are tories of wink dians we mong th ders tha to trade which is ny othe where t moft co Laco their ma fo calle banks : Lake h bon at nepeck. from ea breadth these of rupeds of the dians fo hunt This Superio waters other 1 tom. hented it; and this was the length of their journey to he Hudson's Bay factories, which, they informed me; took them up three months, during the fummer heats to go and return, and from the smallness of their canoes they could not carry more than a third of the beavers they killed. So that it is not to be wondered at, that these Indians should with to have traders come to refide among them. It is true that the parts they inhabit are within the limits of the Hudson's Bay territories; but the Company must be under the necessity of winking at an encroachment of this kind, as the Indians would without doubt protect the traders when a. mong them. Befides, the paffports granted to the traders that go from Michillimackinac give them liberty to trade to the north well about Lake Superior; by which is meant Fort La Reine, Lake Winnepeck, or ahy other parts of the waters of the Bourbon River, where the Couriers de Bois, or Traders, may make it most convenient to relide.

Lac du Bois, as commonly termed by the French in their maps, or in the English the Lake of the Wood, is to called from the multiplicity of wood growing on its banks ; fuch as oakes, pines, firs, fpruce, &c. This Lake lies fill higher upon a branch of the River Bourbon, and nearly east from the touth end of Lake Winnepeek. It is of great depth in fome places. Its length from east to welt about feventy miles, and its greates breadth about forty miles. It has but few islands, and thefe of no great magnitude. The files, fowls, and quadrupeds that are found near it, vary but little from those of the other two lakes. A few of the Killistinoe Indians fome time encamp on the borders of it to fish and hunt.

This Lake lies in the communication between Lake Superior, and the Lakes Winnepeck and Bourbon. It waters are not effected quite fo pure as these of the other lakes, it having, in many places, a muddy bettom.

Lar La Pluye, fo called by the French in English the kainy Lake, is supposed to have acquired this name from the first travellers, that passed over it, meeting with

an uncommon deal of rain; or, as fome have affirmed, from a milt like rain, occasioned by a perpendicular water fall that empties itself into a river which lies to the fourth weft

This Lake appears to be divided by an istmust, near the middle, into two parts : the west part is called the Great Rainy Lake, the east, the Little Rainy Lake, as being the least division. It lies a few miles further to the eastward, on the same branch of the Bourloon, than the last mentioned Lake. It is ingeneral very fullow in its depth. The breadest part of it is not more than twenty miles; its length, including both, about three hundred miles. In the west part, the water is wery clear and good; and fone excellent fish are taken in it. A great many, fowls refort here in the fall of the year. Moofe deer are to be found in great plenty, and like wife the eartiboo; whose this for breeches or gloves execeds by far any other to be met with in North Ameri-

ca The Lind on the borders of this Linke is effectived, in fome places, very good, but rather too thickly covered with wood. Here refides a confiderable band of the Chipeways. Eaftward from this Lake lies feveral fmall ones, which

extend in a firing to the great/carrying place, and from thence into Lake Superior. Between thefe little lakes are feveral carrying places, which render the trade to the north-welt difficult to accomplished and exceeding tedious, as it takes two years to make a voyage from Michillimackinac into these parts.

Red Lake is a comparitively finallilake, at the head of a branch of the Bourbon River, which is called by fome Red River. Its form is nearly round, and about firty miles in circumference. On one fide of it is a tolerable large ifland, clofe by which a finall river, anters. It bears almost fouth east both from I Lake. Winnepot and from Lake, du Bois. The parts adjacent are very little known or frequenteds even by the favaget. Itsenfelves.

Not far from this Lake, a little to the fourth, well, is another, called White Bear Lake, which is nearly about the fize of the laft mentioned of The waters that com-

pole this Lake, are the most nothern of any that fupply the Miffifippi, and may be called with propriety its most remote fource. It is fed by two or three fmall rivers, or rather large brooks.

A few miles from it, to the fouth eaft, are a great number of fmall lakes, none of which are more than ten miles in circumference, that are called the Thousand Lakes. In the adjacent country is reckoned the fineft hunting for furs of any on this continent; the Indians who hunt here, feldom returning without having their cances loaded as deep as they can fixin.

Having just before observed that this Lake is the utmost northern source of the Missippi, I shall here further remark, that before this river enters the Gulf of Mexico, it has run not less, through all its meanderings, than three thousand miles, or, in a straight line from north to fouth, about twenty degrees, which is nearly fourteen hundred English miles.

Theie Indians informed mer that to the north well of Laks. Winsepeek lies another, whole circumference vakly exceeded any they had given me an account of. They defcribe it as much larger than Lake Superior. But as it appears to be fo far to the north well, I thould imagine that it was not a lake, but rather, the Archipelago, or broken waters that form the communication between Hudfon's Bay and the northern parts of the Pacific Ocean.

There are an infinite number of fmall lakes, on the more weltern parts of the weltern head branches of the Miffilippi as well as between these and Lake Winnepeek, but none of them are large enough to suppose either of them to be the lake or waters meant by the Indians.

They likewife informed me, then fome of the northem branches of the Miffouri and iosthern branches of the St. Pierre have a communication with each other, except for a mile, over which they carry their cances. And by what I could learn from them, this is the road they take when their war parties make their excursions upon the Pawnees and Pawnawnees, nations inhabiting fome branches of the Miffouri River. In the country

belonging to thele people it it faid that Mandrakes are frequently found, a species of Root refembling human beings of both fexes, and that these are more perfect than fuch as are discovered about the Nile in Nether-Ethiopia.

A little to the north well of the heads of the Miffouri and St. Pierre, the Indians further told me, that there was a nation rather fmaller and whiter than the neighboring tribes, who cultivate their ground, and (as far as I could gather from their exprellions) in fome measure the arts. To this account they added that fome of the nations who inhabit those parts that lie to the well of the Shining Mountains, have gold fo plenty among them that they make their most common utenfils of it. These mountains (which I shall deferibe more particularly hereafter) divide the waters that fall into the South Sea from those that run into the Atlantic.

The people dwelling near them are fupposed to be fome of the different tribes that were tributary to the Mexican kings, and who fled from their native country, to feek an affylum in these parts, about the time of the conquest of Mexico by the Spaniards, more than two senturies ago.

As fome confirmation of this supposition, it is remark. ed, that they have chosen the most interior parts for their retreat being kill prepoffeffed with the notion that the fea coafts have been infelted ever fince with mon. flers vomiting fire, and hurling about thunder and lightning : from whole bowels iffued men, who with unleen inftruments, or by the power of magic, killed the harmlefs Indians at an aftonishing diffance. From fuch as thefe, their forefathers (according to a tradition among them that still remains unimpaired) fled to the retired abodes they now inhabit. For as they found that the floating monfters, which had thus terrified them could not approach the land, and that those who had descended from their fides did not care to make excursions to any confiderable diftance from them, they formed a refolution to betake themselves to some country, that lay from the fea coafts, where only they could be fecure from fuch diabolical enemies. They accordingly fet

is remarkparts for otion that with monand lightith unleen the harmfuch as on among he retired d that the em could d defcendurfions to ned a ref-, that lay he fecure lingly fet but with their families, and after a long percerination, fettled them felves near these mountains, where they concluded they had found a place of perfect security.

The Winnebagoes, dwelling on the Fox River (whom I have already treated of) are likewife fuppofed to be fome firolling band from the Mexican countries. But they are able to give only an imperfect account of their original relidence. They fay they formerly came a great way from the weftward, and were driven by wars to take refuge among the Naudoweffies; but as they are entirely ignorant of the arts, or of the value of gold, it is rather to be fuppofed, that they were driven from their ancient fettlements by the above mentioned emigrants, as they paffed on towards their prefent habitation.

These suppositions, however, may want confirmation; for the smaller tribes of indians are subject to such vatious alterations in their places of abode, from the wars they are continually engaged in, that it is almost imposfible to ascertain, after half a century, the original fituation of any of them.

That range of mountains, of which the Shining Mountains are a part, begins at Mexico, and continuing northward, on the back or to the east of California, feparate the waters of those numerous rivers that fall either into the Gulf of Mexico, or the Gulf of California. From thence continging their course fill north ward, between the fources of the Missifippl and the rivers that run into the South Sea, they appear to end in about forty feven or forty eight degrees of north latitude ; where a number of rivers arise, and empty themselves either into the South Sea, into Hudson's Bay, or into the waters that communicate between these two feas

Among these mountains, those that lie to the west of the River St. Pierre, are called the Shining Mountains, from an infinite number of chrystal stones, of an amaming fize, with which they are covered, and which, when the fun thines full upon them, sparkle so as to be seen at a very great distance.

This extraordinary range of mountains is calculated to be more than three thousand miles in length, without

any very confierable intervals, which I believe harpafies any thing of the kind in the other quarters of the globe, Probably in future ages they may be found to contain more riches in their bowels, than those of Indostan and Malabar, or that are produced on the golden coaft of Guinea; nor will I except even the Peruvian mines To the weft of these mountains, when explored by fu. ture Columbules or Raleighs, may be found other lakes, rivers, and countries, full fraught with all the necessaries or luxuries of life ; and where future generations may find an anylum, whether driven from their country by the ravages of lawless tyrants, or by religious perfecu. tions, or relactantly leaving it to remedy the inconvenien. ces ariling from a inperabundant increase of inhabitantsiwhether, I lay, impelled by thefe, or allured by hopes of commercial advantages, there is little doubt but their expectations will be fully gratified in thele rich and un-A ST SPACE STATISTICS exhaufted climes.

But to return to the ... finipoils and Killiftinoes, whom I left at the Grand Portage, and from whom I received the forcesing account of the lakes that lie to the north weft of this place.

I he traders we expected being later this feafon than ulual, and our numbers very confiderable, for there were more than three hundred of us, the flock of provisions we had brought with us was nearly exhaused, and we waited with impatience for their arrival.

One day, whill we were all expressing our withes for this deltrable event, and looking from an eminence in hopes of feeing them come over the lake, the chief prick belonging to the band of Killistinoes, told us, that he would endeavor to obtain a conference with the Great Spirit, and know from him when the traders would arrive. I paid little attention to this declaration, flippofing that it would be productive of fome juggling trick, juit fufficiently covered to deceive the ignorant fudians. But the king of that tribe telling me that this was chiefly undertaken by the prieft, to alleviate my anxiety, and at the fame time to convince me how much intered he had with the Great Spirit, I thought it accelfary to referain my animadvertions on his defigu:

afon than

The following evening was fixed upon for this fpiritual conference. When every thing had been properly prepared, the king came to me and led me to a capacious tent, the covering of which was drawn up, fo as to render what was translading within, visible to those who food without in We found the tent furrounded by a great number of the Indians, but we readily gained admiffin, and feated outfelves on fkins laid on the ground for that purpofe

In the centre I observed that there was a place of an oblong thape, which was composed of flakes fluck in the ground, with intervals between, to as to form a kind of cheft or coffin, large enough to contain the body of a man. These were of a middle fize, and placed at fuch a diffance from each other, that whatever lay within them was readily difference. The tent was perfectly illuminated by a great number of torches made of iplinters cut from the pine or birch tree, which the Indians held in their hands.

In a few minutes the prief entored : when an amaze ing large elk's fkin being foread on the ground, just at my foet, he laid himfelf down upon it, after having fript himfelf of every garment except that which he wore close about his middle. Being now profirate on his back, he first laid hold on one fide of the fkin, and folded is over him, and then the other; leaving only his head uncovered. This was no fuoner done, than two of the young men who flood by, took about forty yards of Brong cord; made allo of an elk's hide, and rolled it tight round his body. To that he was completely fwathed within the fkin Being thus bound up like an Egyptian Mummy, one tork him by the heels, and the other by the head, and lifted him over the pales into the enclosure. I could all now discern him as plain as I had hitherto done, and I took care not to turn my eyes a moment from the object before me, that I might the more readily detect the attifice; for fuch I doubted not but that it would turn out to be.

The pricit had not fain in this fituation more than a few feconds, when he began to mutter. This he continued to to for fome time, and then by degrees grew

louder and louder, till at length he fpoke articulately; however, what he uttered was in fuch a mixed jargon of the Chipeway, Ottowaw, and Killistinoe languages, that I could understand but very little of it. Having continued in this tone for a confiderable while, he at last exerted his voice to its u most pitch, fometimes raving, and fometimes praying, till he had worked himfelt into such an agitation, that he foamed at his mouth.

After having remained near three dearters of an hour in the place, and continued his vociferation with unabated vigor, he feemed to be quite exhausted, and remain. ed speechles. But in an instant he sprung upon his feet, notwithitanding at the time he was put in, it appeared impossible for him to move either his legs or arms, and that king off his covering, as quick as if the bands with which it had been bound were burned afunder, he began to addrefs those who flood around, in a firm and audible voice. "My brothers," fail he, " the Great Spirit has deigned to hold a talk with his fervant, at my earnest request. He has not, indeed, told me when the perfons we expect, will be here; but to morrow, foon after the fun has reached his highest point in the heavens, a canoe will arrive, and the people in that will inform us when the traders will come."

Having faid this he stepped out of the enclosure, and after he had put on his robes, difmissed the assembly. I own I was greatly associated at what I had seen; but as I observed that every eye in the company was fixed on me with a view to discover my sentiments, I carefully concealed every emotion.

The next day the fun fhone bright, and long before noon all the Indians were gathered together on the eminence that overlooked the lake. The old king came to me and afked me, whether I had fo much confidence in what the prieft had forecold, as to join his people on the bill, and wait for the completion of it; I told him I was at a loft what opinion to form of the prediction, but that I would readily attend him. On this we walkwe together to the place where the others were affembled. Every eye was again fixed by turns on me and on the lake; when juft as the jun had reached his se-

nith, agr came arc Indians thout, a intereft t Spirit In lefs I attende on board ed all to their inva we did, n dings the the India However quired of traders ? them a fe here the f

fembly. 1 feen; but was fixed , I careful-

ong beford on the emng came to confidence people on told him prediction, is we walkvere affemon me and hed his zesith, agreeable to what the priest had foretold, a canoe came around a point of land about a leage diffant. The Indians no fooner beheld it than they fet up an universal front, and by their looks seemed to triumph in the interest their priest thus evidently had with the Great Spirit

In lefs than an hour the canoe reached the fhore, when I attended the king and chiefs to receive those who were on board. As foon as the men were landed, we walked all together to the king's tent, when, according to their invariable cuftom, we began to finoke ; and this we did, notwithstanding our impatience to know the tidings they brought, without alking any queltions; forthe Indians are the most deliberate people in the world. However, after fome trivial conversation, the king enquired of them, whether they had feen any thing of the traders? The men replied, that they had parted from them a few days before, and that they propoled being here the fecond day from the prefent. They according. ly arrived at that time greatly to our fatisfaction, but more particularly fo to that of the Indians, who found by this event the importance both of their priest and of their nation, greatly augmented in the light of a Branger.

This ftory I acknowledge appears to carry with it marks of credulity in the relator. But no one is lefs tindured with that weakness than myfelf. The circumftances of it I own are of a very extraordinary nature ; however as I can vouch for their being free from either exaggeration or mifreprefentation being myfelf a cool and dispaticnate observer of them all, I thought it necessary to give them to the public. And this I do without withing to millead the judgment of my readers, or to make any superfitious imprefitions on their minds, but leaving them to draw from it what conclusions they please.

I have already observed that the Assimption of whom I met here, are a revolted band of the Naudowetlies; who on account of some real or imagined grievances, for the Indians in general are very tenacious of their liberty, had separated themselves from

their countrymen, and fought for freedom at the expance of their cafe. For the country they now inhabit about the borders of Lake Winnepeck, being much further north, is not fo fertile or agreeable as that they have relinquished. They fill retain the language and manners of their former affociates.

The Killitinoes, now the neighbors and allies of the Atlinipoits, for they alfo dwell near the fame lake, and on the waters of the River Bourbon, appear to have been originally a tribe of the Chip ways, as they fpeak their language, though in a different dialect. Their nation conlifts or about three or four hundred warriors, and they feem to be a hardy, brave people. I have already gived an account of their country when I treated of Lake Winnepcek. As they refide within the limits of Hudfon's Bay, they generally trade at the factonies which belong to that company, but for the realons mentioned before; they frequently come to the place where I happened to join thein, in order to meet the traders from Michillimatkinac.

The anxiety I had felt on account of the traders' delay, was not much alleviated by their arrival. I again found my expectations difappointed, for I was not able to procure the goods I wanted from any of them. I was therefore obliged to give over my defigns, and return to the place from whence I first began my extensive circuit! I accordingly took leave of the old king of the Killistinoes, with the chiefs of both bands, and departed. This prince was upwards of fixty years of age, tall and flightly made, but he carried himfelf very even. He was of a courteous affable difposition, and treated me, as did all the chiefs, with great civility.

I observed that this people fill continued a cuftom, that appeared to have been univerfal before any of them became acquainted with the manners of the Europeans, that of complimenting firangers with the company of their wites f and this is not only practifed by the lower ranks, but by then chiefs themielves, who effect it the greatest proof of courtefy they can give a firanger. any of them Europeans, company of by the lower o effect it a firanger, ing coaffed round the north and east borders of Lake Superior, I arrived at Cadot's Fort, which adjoins to the Falls of St. Marie, and is fituated, near the fouth west corner of it. The country with a shuald what encound k

Lake Superior, formerly termed the Upper Lake, from its northern fituation, is fo called on account of its being fuperior in magnitude to any of the Lakes on that valt continent. If might jully be termed the Cafpian of America, and is fuppoied to be the largest body of fresh water on the globe. Its circumference, according to the French charts, is about fifteen hundred much but I believes that if it was coasted round, and the utmost enert of every bay taken, it would exceed fixteen hundred

dreduct shall be that is more to be which er all challes After I entered it from Goddard's River on the welt Bay, I coaffed near twelve hundred miles of the north and east faores of it, and observed that the greatest part of that extensive tract was bounded by rocks and unevenigroundif The water in general appeared to lie on a bed of rocks. When it was calm and the fun thone hight, I could fit in my canoe, where the depth was no. wards of fix fathoms, and plainty fee thuge piles of fone at the bottom of different thapes, fome of which ppeaced as if they were hewn. "The water at this time was as pure and transparent as air; and my canoe feam: das if it hung fuspended in that element. It was impollible to look attentively through this limpid medium the rocks below, without finding, before many minutes tere elapfed, your head fwim, and your eyes no long th ble ito behold the dazzling fcene, how a subjudy the I difcovered alfo by accident, another extraordinary property in the waters of this lake it I hough it was in he month of July that I paffed over it, and the furface of the water from the heat of the superambient air, impregnated with no imall degree of warmth, yet on letting town a cun to the depth of about a fachomit the rater drawn from thence, was fo excellively cold, that it ad the fame effect, when meeved into the mouth as in reactive that up of fee ne that he had nearly end The fituation of this lake is varioufly laid driven ; but tom the most exact observations I could to the, it lies

between forty fix and fifty degrees of north lattitude, and between eighty four and ninety three degrees of well longitude, from the meridian of London.

There are many islands in this lake, two of which are very large; and if the land of them is proper for cultivation, there appears to be fufficient to form on each a confiderable province; efpecially on Ifle Royal, which cannot be lefs than an hundred miles long, and in many places forty broad. But there is no way at prefent of afcertaining the exact length or breadth of either. Even the Funch, who always kept a finall fchoomer on this lake, whilft they were in possible of Canada; by which they could have made this difcovery, have only acquired a flight knowledge of the external parts of the e islands; at leaft they have never published any account of the internal parts of hem, that I could get any intelligence of.

Nor was I able to different from any of the converfations which I held with the neighboring Indians, that they had ever made any fattlements on them, or even landed there in their hunting excursions. From what I could gather by their different, they suppose them w have been, from the first formation, the refidence of the Great Spirit; and relate many ridiculous stories of enchantment and magical tricks that had been experienced by such as were obliged through stress of weather to take thelter on them.

One of the Chipeway chiefs told me, that fome d their people being once driven on an ifland of Maura pas, which lies towards the north eaft part of the lake found on it large quantities of a heavy, fhining, yellow fand, that from their defcription mult have been gold duft. Being fruck with the beautiful appearance of it in the morning, when they reentered their cance, they attempted to bring fome away; but a fpirit of an amazing fize, according to their account, fixty feet in height frode in the water after them, and commanded them u deliver back what they had taken awa. A Terrified a his gigantic flature, and feeing that he had nearly over taken them; they were glad to reftore their fining treat ortune, i

nat fome d of Maura of the lake ing, yellow e been gold arance of it canoe, they of an amazet in height her moleflation. Since this incident, no Indian that has ever heard of it, will venture near the fame haunted coaft. Befides this, they recounted to me many other fories of these islands, equally fabulous.

The country on the north and east parts of Lake Superior is very mountainous and barren. The weather being intenfely cold in the winter, and the fun having but little power in the fummer, vegetation there is very low; and confequently but little fruit is to be found on its fhore. It however produces forme few species in great abundance. Whortleberries of an uncommon/ e and fine flavor, grow on the mountains near the lase in a. mazing quantities; as do black currants and goofberries in the fame luxuriant manner.

But the fruit which exceeds all the others, is a berry refembling a rafberry in its manner of growth, but of a lighter red, and much larger ; its talle is far more delicious than the fruit I have compared it to, notwithftand. ing that it is fo highly effected in Europe : it grows on a thrub of the nature of a vine, with leaves fimilar to that of the grape and I am perfuaded that was it tranf. planted into a warmer and more kindly climate, it would prove a most rare and delicious fruit.

Two very large rivers empty themfelves into this lake, on the north and north east fide; one is called the Nipegon River, or, as the French pronounce it, Alianipegon. which leads to a band of the Chipeways inhabiting a lake of the fame name, and the other is termed the Michipicooton River, the fource of which is fituated towards James' Bay, from whence there is but a thor: carriage to another river, which empties itfelf into that bay, at a fort belonging to the company. It was by this paffage that a party of French from Michillimackinac, invaded the fettlements of that fociety in the reign of queen Anne. Having taken and deltroyed their forts, they brought the cannon which they found ded them to in them to the fortress from whence they had isfued; Terrified at thefe, were fmall brafs pieces, and remain there to the nearly over prefent time; having, through the ufual revolutions of ining treas fortune, returned to the possible of their former mas-without fur ters.

Not far from the Nipegon is a fmall river, that junt before it enters the lake, has a perpendicular fall from the top of a mountain, of more than fix hundred feet. Being very narrow, it appears at a diffance like a white garter fulpended in the air.

A few Indians inhabit round the eaftern borders of this lake, fuppofed to be the remains of the Algonkins, who formerly poffeifed this country, but who have been nearly extirpated by the Iroquois of Canada. Láke Superior has near forty rivers that fall into it, fome of which we of confiderable fize. On the fouth fide of it is a remarkable point or cape, of about fixty miles in length, called Point Chegomegan. It might as properly be termed a peninfula, as it is nearly (eparated from the continent, on the eaft fide, by a narrow bay that extends from eaft to weft. Canoes have but a fhort portage acrofs the ifthmus, whereas if they coaft it round, the voyage is more than an hundred miles.

About that diffance to the weft of the cape just de foribed, a confiderable river falls into the lake, the head of which is composed of a great affemblage of small ftreams. This river is remarkable for the abundance of virgin copper that is found on and near its banks. A metal which is met with also in feveral other places on this coast. I observed that many of the small islands, particularly those on the eastern shores, were covered with copper ore. They appeared like beds of copperas, of which many tons lay in a small space.

A company of adventurers from England began, foon after the conqueft of Canada, to bring away fome of this metal, but the diftracted fituation of affairs in America has obliged them to relinquift their fcheme. It might in future times be reade a very advantageous trade, as the metal, which colts nothing on the fpot, and requires but little expense to get it on board, could be conveyed in boats or canoes through the falls of St. Marie, to the life of St. Jofeph, which lies at the bottom of the Straits near the entrance into Lake Huron; from thence it might be put on board larger veffels, and in them tranfported acrofs that lake to the falls of Niagara; there being carried by land acrofs the portage, it might be

It might is trade, as and require conveyed in e, to the life f the Straits m thence it them tranfgara t there it might be conveyed without much more obstruction to Quebec. The cheapness and ease with which any quantity of it may be procured, will make up for the length of way that is necessary to transport it before it reaches the sea coast, and enable the proprietors to send it to foreign markets on as good terms as it can be exported from other countries.

Lake Superior abounds with a variety of fifth, the principal and best are the trout and flurgeon, which may be caught at almost any feason in the greatest abundance. The trouts in general weigh about twelverounds, but fome are caught that exceed fifty. Befides thefe, a species of white fish is taken in great quantities here, that refemble a fhad in their fhape, but they are rather thicker, and lefs bony; they weigh about four pounds each, and are of a delicious tafte. The best way of catching these fish is with a net; but the trout might be taken at all times with the hook. There are likewife many forts of fmaller fifh in great plenty here, and which may be taken with eafe; among these is a fort refembling a herring, that are generally made use of as a bait for the trout Very fmall crabs, not larger than half a crown piece, are found both in this and Lake Michigan.

This Lako is as much affected by florms as the Atlantic Ocean ; the waves run as high, and are equally as dangerous to fhips. It difcharges its waters from the fouth eaft corner, through the Straits of St. Marie. At the upper end of thefe Straits flands a fort that receives its name from them, commanded by Mons. Cadot, a French Canadian, who being proprietor of the foil, is fill permitted to keep poffellion of it. Near this fort is a very flrong rapid, againft which though it is impoffible for cances to afcend, yet when conducted by careful pilots, they might pafs down without danger.

Though Lake Superior, as 1 have before observed, is supplied by near forty rivers, many of which are confiderable ones; yet it does not appear that one tenth part of the waters which are conveyed into it by these rivers, are carried off at this evacuation. How such a superabundance of waters can be disposed of, as it must cer-

88

tainly be by fome means or other, without which the circumference of the lake would be continually enlarging, I know not: that it does not empty itfelf, as the Mediterranean fea is fuppofed to do, by an under current, which perpetually counteracts that near the furface, is certain; for the thream which falls over the rock is not more than five or fix feet in depth, and the whole of it paffes on through the Straits into the adjacent lake; nor is it probable that fo great a quantity can be abforbed by exhibitions; confequently they mult find a paffage through fome fubterranean cavities, deep, untathomable, and never to be explored.

The falls of St. Marie, do not descend perpendicularly as those of Niagara or St. Anthony do, but confist of a rapid which continues near three quarters of a mile, over which canoes well piloted might pass.

At the bottom of these falls, nature has formed a most commodious station for catching the fish which are to be found there in immense quantities. Perfons standing on the rocks that lie adjacent to it, may take with dipping nets, about the months of September and October, the white fish before mentioned; at that seafon, together with several other species, they crowd up to this spot in such amazing shoals, that enough may be taken to supply, when properly cured, thousands of inhabitants throughout the year

the Straits of St. Marie are about forty miles long, bearing fouth eaft, but varying much in their breadth. The current between the falls and Lake Huron is not fo rapid as might be expected, nor do they prevent the navigation of thips of burden as far up as the Ifland of St. Jofeph.

It has been observed by travellers that the entrance into Lake Superior, from these firaits, affords one of the most pleasing prospects in the world. The place in which this might be viewed to the greatest advantage, is just at the opening of the lake, from whence may be seen on the left, many beautiful little islands that extend a considerable way before you; and on the right, an agreeable succession of small points of land, that project a little way into the water, and contribute, with the isl-

e entrance one of the e place in vantage, is nay be feen t extend a ght, an athat project with the iffands, to render this delightful bafon (as it might be termed) calm and fecure from the ravages of those tempestuous winds by which the adjoining lake is frequently troubled.

Lake Huron, into which you now enter from the ftraits of St. Marie, is the next in magnitude to lake Superior. It lies between forty two and forty fix degrees, of north latitude, and feventy, nine and eighty five degrees of weft longitude. Its fhape is nearly triangular, and its circumference about one thousand miles.

On the north fide of it lies an island that is remarkable for being near an hundred miles in length, and no more than eight miles broad. This island is known by the name of Manataulin, which fignifies a place of fpirits, and is confidered by the Indians as facred as those already mentioned in Lake Superior.

About the middle of the fouth weft fide of this lake, is Saganaum bay. The capes that feparate this bay from the lake, are eighteen miles diftant from Each other; near the middle of the intermediate fpace ftand two iflands, which greatly tend to facilitate the paffage of canoes and fmall veffels, by affording them fhelter, as without this fecurity it would not be prudent to venture acrofs fo wide a fea; and the coafting round the bay would make the voyage long and tedious. I his bay is about eighty miles in length, and in general about eighteen or twenty miles broad.

Nearly half way between Saganaum Bay and the north west corner of the Lake, lies another, which is termed Thunder Bay. The Indians, who have frequented these parts from time immemorial, and every European traveller that has passed through it, have unanimously agreed to call it by this name, on account of the continual thunder they have always observed here. The bay is about nine miles broad, and the same in length, and whilk I was passing over it, which took me up near twenty four hours, it thundered and lightened during the greatest part of the time to an excessive degree.

There appeared to be no visible reason for this, that I could discover, nor is the country in general subject to thunder, the hills that flood around were not of a

rema: kable height, neither did the external parts of them feem to be covered with any fulphurious fubftance. But as this phenomenon mult originate from fome natural caule, I conjecture that the fhores of the bay, or the adjacent mountains, are either impregnated with an uncommon quantity of fulphurious matter, or contain fome metal or mineral apt to attract in a great degree, the electrical particles that are hourly borne over them by the paffant clouds. But the folution of this, and those other philosophical remarks which cafually occur throughout these pages, I leave to the difcuffion of abler heads.

The fifth in Lake Huron are much the fame as thole in Lake Superior. Some of the land on its banks is very fertile, and proper for cultivation, but in other parts it is fandy and barren. The promontory that feparates this lake from Lake Michigan, is composed of a vaft plain, upwards of a hundred miles long, but varying in its breadth, being from ten to fifteen miles broad. This tract, as I have before observed, is divided into almost an equal portion between the Ottowaw and Chipeway Indians. At the north east corner, this lake has a communication with Lake Michigan, by the Straits of Michilimackinac, already described.

I had like to have omitted a very extraordinary circumftance, relative to thefe ftraits. According to obfervation, made by the French, whilf they were in poffeffion of the fort, although there was no diurnal flood or ebb to be perceived in thefe waters, yet, from an exact attention to their ftate, a periodical alteration in them has been difcovered. It was obferved that they arofe by gradual, but almost imperceptible degrees till they had reached the height of about three feet. This was accomplified in feven years and a half; and in the fame fpace they gently decreased, till they had reached their former fituation; fo that in fifteen years they had completed this inexplicable revolution.

At the time I was there, the truth of these observations could not be confirmed by the English, as they had been only a few years in possession of the fort; but they all agreed that fome alteration in the limits of the straits ernal parts of rious fubftance. from fome natof the bay, or gnated with an tter, or contain a great degree, porne over them on of this, and cafually occur fcuffion of abler

e fame as those on its banks is , but in other omontory that is composed of s long, but varyeen miles broad. divided into alowaw and Chiprner, this lake an, by the Straits

CARVER'S TRAVELS.

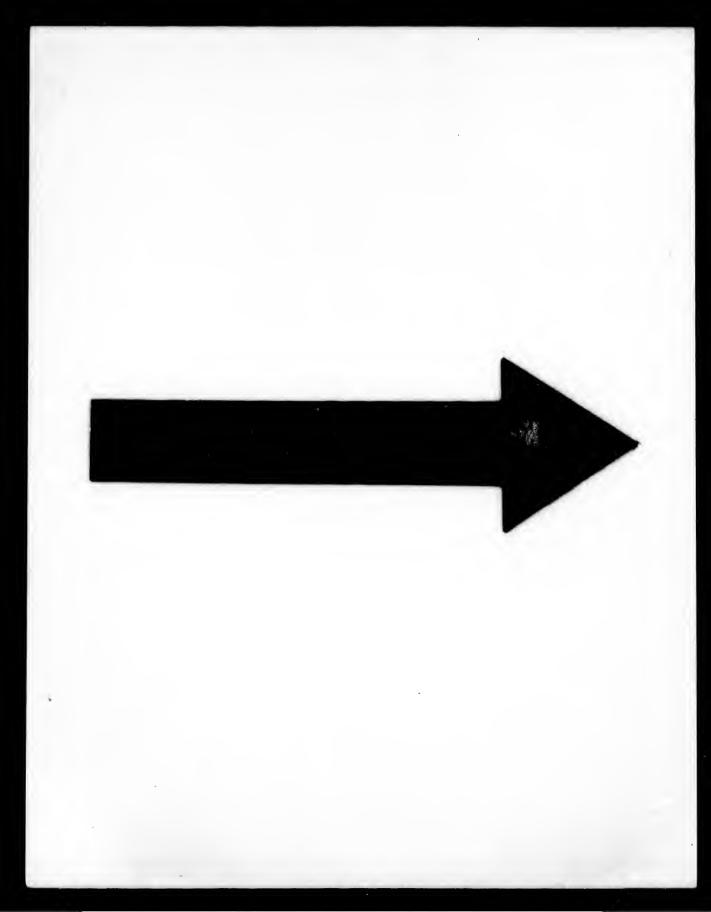

was apparent. All these lakes are to affected by winds, as fometimes to have the appearance of a tide, according as they happen to blow; but this is only temporary and partial.

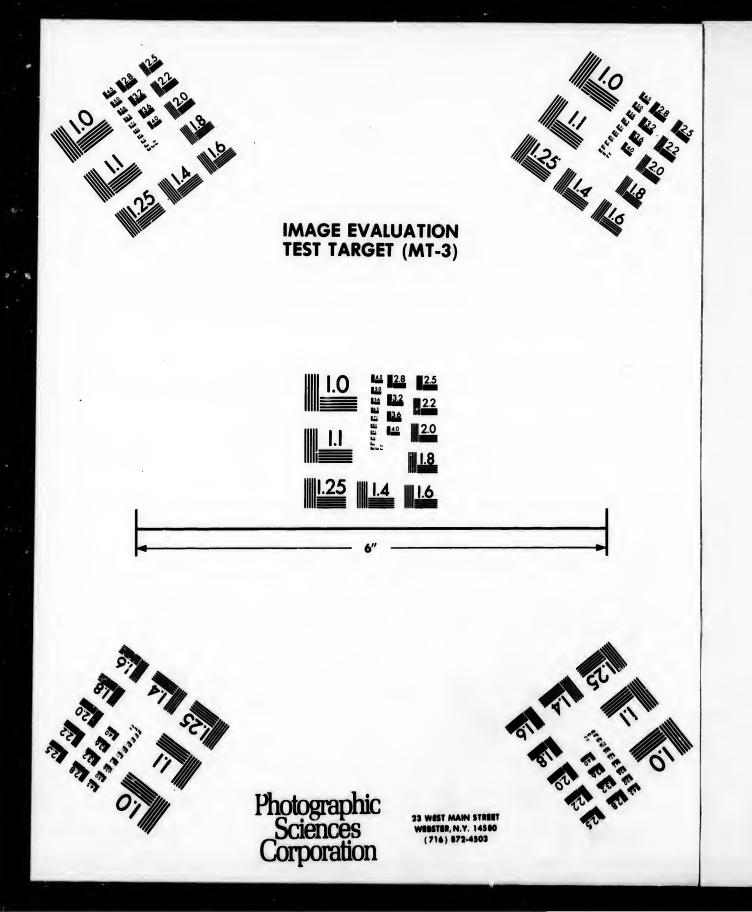

A great number of the Chipeway Indianslive feattered around this lake, particularly near Sagandum Bay. On its banks are found an amazing quantity of fand cherries, and in the adjacent country nearly the faure fruit as those that grow about the other lakes.

From the falls of St: Marie 1 leafurly proceeded back to Michillimackinac, and arrived there the beginning of November 1767, having been fourteen months on this extensive tour, travelled near four thousand miles, and visited twelve nations of Indians lying to the west north of this place. The winter fetting in foon afte arrival. I was obliged to tarry there till June following, the navigation over Lake Huron for large vessels not being open, on account of the ice, till that time. Meeting here with fociable company, I passed these months very agreeably, and without finding the hours tedions.

One of my chief amufements was that of fifting for trouts. Though the Straits were covered with ice, we found means to make holes through it, and letting down firong lines of fifteen yards in length, to which were fixed three or four hooks baited with the fmall fifth before defcribed, we freequently caught two at a time of forty pounds weight each; but the common fize is from ten to twenty pounds. Thefe are most delicious food. The method of preferving them during the three months the winter generally lafts, is by hanging them up in the air and in one night they will be frozen fo hard, that they will keep as well as if they were cured with falt.

I have only pointed out in the plan of my travels the circuit I made from leaving Michillimackinac till I arz rived again at the fort. Those countries that lie nearer the colonies have been to often and to minutely defcrib. ed, that any further account of them would be ufelefs. I shall therefore only give my readers in the remainder of my journal, as I at first proposed, a description of the other great lakes of Canada, many of which I have

navigated over, and relate at the fame time a few particular incidents that I trult will not be found inapplicable or uninteresting.

In June 1768 I left Michillimackinac, and returned in the Gladwyn Schooner, a veffel of about eighty tons burthen, over Lake Huron to . Lake St. Claire, where we left the thip, and proceeded in boats to Detroit. This lake is about ninety miles in circumference, and by the way of Huron River, which runs from the fouth corner. of Lake Huron, receives the waters of the three great lakes, Superior, Michigan, and Huron. Its form is rather round, and in fome places it is deep enough for the navigation of large veffels, but towards the middle. of it there is a bar of fand, which prevents those that are loaded from palling over it. Such as are in ballaft only may find water to carry them quite through ; the cargoes, however, of fuch as are freighted mull be taken out, and after being transported across the bar in boats re-thipped again. A down the man the set

The river that runs from Lake St. Claire to Lake Eric (or rather Strait, for thus it might be termed from its name) is called Detroit, which is in Erench, the Strait. It runs nearly fouth, has a gentle current, and depth of water fufficient for fhips of confiderable burthen. The town of Detroit is fituated on the western banks of this river, about nine miles below Lake St. Claire.

Almost opposite on the eastern shore, is the village of the ancient Hurons : a tribe of Indians which have been treated of by fo many writers, that adhering to the restrictions I have laid myself under of only. describing places and people little known, or incidents that have passed unnoticed by others, I shall omit giving a description of them. A missionary of the order of Carthusian Friars, by permission of the bishop of Canada, resides, among them.

The banks of the River Detroit, both above and below thefe towns, are covered with fettlements that extend more than twenty miles; the country being exceedingly fruitful, and proper for cultivation of wheat, Indian corn, oats, and peas, It has also many fpots of fine pafto French th ter the c are more it is bad

that exing exceeheat, Infpots of fine pasturage; but as the inhabitants, who are chiefly French that submitted to the English government, after the conquest of these parts by General Amhers, are more attentive to the Indian trade than to farming, it is badly cultivated.

The town of Detroit contains upwards of one hundred houfes. The fireets are fomewhat regul ir, and have a range of very convenient and handfome barracks with a fpacious parade at the fouth end. On the welt fide lies the king's garden, belonging to the governor, which is very well laid out, and kept in good order-The fortifications of the town confift of a firong flackade, made of round piles, fixed firmly in the ground, and lined with palifades. Thefe are defended by fomefmall battions, on which are mounted a few indifferent cannon of an inconfiderable fize, just fufficient for its defence against the Indians, or an enemy not providedwith artillery.

The garrifon in time of peace, confifts of two hundred men, commanded by a field officer, who acts as chief magistrate under the governor of Canada. Mr. Turnhuil, captain of the 6th regiment, or Royal Americans, was commandant when I happened to be there: This gentleman was defervedly effeemed and respected; both by the inhabitants and traders, for the propriety of his conduct; and I am happy to have an opportunity of thes publicly making my acknowledgements to him for the civilities I received from him during my flay. In the year 1762, in the month of July, it rained on . this town and the parts adjacent," a fulphure ous water of the color and confiftence of ink; fome of which being collected into bottles, and wrote with, appeared perfect. ly intelligible on the paper and answered every purpose of that ufeful liquid Soon after, the Indian wars already ipoken of, broke out in these parts. I mean not to fay that this incident was ominons of them, notwithftanding it is well known that innumerable well attefted inflances of extraordinary phenomena happening before extraordinary events, have been recorded in almost every age by historians of veracity ; I only relate the circumstance as a fact, of which I was informed by

many perfons of undoubted probity, and leave my readers, as I have hitherto done, to draw their own conclufions from it.

Pontiac, under whom the party that furprifed Fort Michillimackinac, as related in the former part of this work, acted, was an enterprifing chief or head-warrior of the Miamies. During the late war between the Englifh and the French, he had been a fleady friend to the latter, and continued his inveteracy to the former, even after peace had been concluded between thefe two nations. Unwilling to put an end to the depredations he had been fo long engaged in, he collected an army of confederate Indians, confisting of the nations before enumerated, with an intention to renew the war. However, inflead of openly attacking the English fettlements, he laid a fcheme for taking by furprife those forts on the extremities which they had lately gained possefilion of

How well the party he detached to take Fort Michillimackinac fucceeded, the reader already knows. To get into his hands Detroit, a place of greater confequence, and more confumate art. He of courfe took the management of this expedition on himfelf, and drew near it with the principal body of his troops. He was however, prevented from carrying his defign into execution, by an apparently trivial and unforefeen circumftance. On fuch does the fate of mighty Empires frequently depend !

The town of Detroit, when Pontiac formed his plan, was gardioned by about three hundred men commanded by Major Gladwy gallant officer. As at that time every appearance ar was at an end, and the Indians feemed to be on friendly footing. Pontiac approached the Fort, without exciting any fulpicions in the break of the governor or the inhabitants. He encamped at a little diffance from it, and fent to let the commandant know that he was come to trade; and being defirous of brightning the chain of peace between the Englifh and his nation, defired that he and his chiefs might be admitted to hold a council with him. The governor fill unfulpicious, and not in the leaft doubting the fincerity

his plan, ommand-As at that ind the Inapproachthe break nped at a dant know efirous of nglifh and it. be `advernor fiill fincerity of the Indians, granted their general's request, and fixed on the next morning for their reception

The evening of that day, an Indian woman who had been employed by major Gladwyn, to make him a pair of Indian fhoes. out of curious elk fkin, brought them home. The major was to pleased with them that intending thefe as a prefent for a friend, he ordered her to take the remainder back, and make it into others for himfelf. He then directed his fervant to pay her for those fhe had done, and difmiffed her. The woman went to the door that led to the fireet but no further; fhe there loitered about as if fhe had not finished the business on which fhe came. A fervant at length observed her, and afked her why fhe ftaid there ; fhe gave him, however, no answer.

Some thort time after, the governor himfelf faw her ; and enguired of his fervant what occasioned her flay. Not being able to get a fatiffactory anfwer, he ordered the woman to be called in. When the came into his prefence he defired to know what was the reafon of her loitering about, and not haftning home before the gates were thut, that the might complete in due time the work he had given her to dc. She told him after much hefitation. that as he had always behaved with great goodnefs towards her, the was unwilling to take away the remainder of the fkin, because he put so great a value upon it ; and yet had not been able to prevail upon herfelf to tell him fo. He then afked her, why the was more reluctant to do fo now than the had been when the made the former pair. With increased reluctance the answered, that the never should be able to bring them back.

His curiofity being now excited, he infifted on her difclofing to him the fecret that feemed to be firugling in her bofom for utterance. At laft on receiving a promife that the intelligence file was about to give him hould not turn to her prejudice, and that if it appeared to be beneficial, the fhould be rewarded for it; the informed him, that at the council to be held with the Indians the following day, Pontiac and his chiefs intended to murder him; and after having maffacted the garrifon and inhabitants, to plunder the town. purpose all the chiefs who were to be admitted into the council-room, had cut their guns fhort, fo that they could conceal them under their blankets; with which at a fignal given by their general, on delivering the belt, they were all to rife up, and instantly to fire on him and his attendants. Having effected this, they were immediately to rush into the town, where they would find them. selves supported by a great number of their warriors, that were to come into it during the litting of the council, under pretence of trading, but privately armed in the fame manner, Having gained from the woman ev. ery necessary particular relative to the plot and also of the means by which the acquired a knowledge of them, he difinified her with injunctions of fecrecy, and a promile of fulfilling on his part with punctuality, the engagements he had entered into.

The intelligence the governor had juft received, gave him great uncatine's; and he immediately confulted the officer who was next to him in command, on the fubject. But that gentleman confidering the information as a flory invented for fome artful purpofe, advifed him to pay no attention to it. This conclution, however, had happily no weight with him. He thought it prudent to conclude it to be true, till he was convinced that it was not fo; and therefore, without revealing his fulpicions to any other perfor, he took every needful precaution that the time would admit of. He walked round the fort during the whole night, and faw himfelf that every fentinel was on duty, and every weapon of defence in proper order.

As he traversed the samparts, which lay nearest to the Indian camp, he heard them in high festivity, and, little imagining that their plot was discovered probably pleasing themselves with the anticipation of their success. As soon as the morning dawned, he ordered all the garsison under arms; and then imparting his apprehensions to a few of the principal officers, gave such directions as he thought necessary.

At the fame time he fent round to all the traders, to inform them, that as it was expected a great number of Indians, would enter, the town that day, who

"I'n at confiderably ceducid, in wat with difficulty the major could defend the towar informating which, he held out against the Indiana till he mag schowed, as the tills they made but few attacks on the place, and object introdices blocked of the reduct

Whe Gladwigh Schooner (that in which I afterwards isk my palling from Michillimackinan to Detroit, and while i fince learn was lost with all her enew, on Lake Eric through the oblinacy of the commander, who could not be prevailed upon to take in fufficient ballaft) arrived about this time, near the town, with a reinforcement, and neceffary fupplies. But before the veffel could reach the place of its defination, it was most vigsmully atticked by a detachment from Pontiac's army. The Indians furrounded it in their cances, and made great havoc among the crew.

At length the captain of the schooner, with a confidrable number of his men being killed, and the favages beginning to climb up the fides from every quarter, the lieutenant (Mr. Jacobs, who afterwards commanded, and was loft in it) being determined that the ftores fould not fall into the enemy's hands, and feing no other alternative, ordered the gunner to set fire to the powder room, and blow the thip up. This order was on the point of being executed, when a chief of the Hutons, who understood the English language, gave out his friends the intention of the commander. On receiving this intelligence, the Indians hurried down the fides of the fbip with the greatest precipitation, and got a far from it as pollible; whilk the commander immediately took the advantage of their confernation, and arrived without any further obstruction at the

This featonable fupply gave the garrifon fresh spiritas

CARVER'S 'ENAVELS.

and Pontiac being now adaptinced that is would not be in his power to reduce the place, propoled an accommodation ; the governor willing as much to get rid of fuch troublefome enemies, whoreastructed the intercourle of the traders with the neighboring nations, liftened to his propolale, and having pidenied advantageous, themis, agreed to apeace. The Indians foon after feparated, and returned to their different pravinces ; nor have they fince thought proposition diffurbe so leaft in any great degree the trangeling of their parts of lot the two blod of Pontiae henceforward fermed to have laid alide the animolity he had hitherto borne towards the dinglilh, and apparently became their zealous friendle 10 ie. ward this new attachment, and to infure a continuance of it, government allowed him a handlome perfect. But his relifers and intrigueing foirit would not fuffer him to be grateful for this allowance, and his ; conduct at length grew fulpicious; fo that going in the year 1767, to hold a council in the country of the Illinois, a faithful Indian, who was either commissioned by one of the English governors, or infligated by the love he bore the English nation, attended him as a fpy ; and being convinced from the fpeech Pontiac made in the council, that he fill retained his former prejudices against those for whom he now professed a friendship, he plunged his knife into his heart, as foon as he had done fpeaking, and laid him dead on the foot. But to return from this digrellion. Lake Erie receives the waters by which it is fupplied from the three great lakes, through the liraits of Detroit, that he at its north west corner. I his lake is situated between forty one and forty three degrees of north latitude, and between feventy eight and eighty three degrees of weft longitude. It is near three hundred miles long tiom caft to well, and about forty in its broadell part : and a remarkable long narrow point lies on its north fide, that pro jects for feveral miles into the lake towards the fouth eaft. There are feveral islands near the west end of it fo infelted with rattleinaker, that it is very dangerous to land on them. It is impoffible that any place can produce a greater kind of all thele reptiles than this does, particularly of the water fnake. The lake is covered

this does,

is covered

The most remarkable of the different species th_t infest this lake is the hissing snake, which is of the small speckled kind and is about eight inches long. When any thing approaches, it flattens itself in a moment, and its spots, which are of various dyes, become visibly brighter through rage; at the same time it blows from its mouth, with great force, a subtile wind, that is reported to be of a nauseous smell; and if drawn in with the breach of the unwary traveller, will infallibly bring on a decline, that in a few months must prove mortal, there being no remedy yet discovered which can counteract its baneful influence.

The flones and pebbles on the flores of this lake are most of them tinged, in a greater or less degree, with spots that refemble brass in their color, but which are of a more fulphureous nature. Small pieces, about the fize of hazleduts, of the fame kinds of ore, are found on the fands that lie on its banks, and under the water. The navigation of this lake is effected more danger-

ous than any of the others, on account of many high lands that lie on the borders of it and project into the water, in a perpendicular direction for many miles together; fo that whenever fudden florms arife, canoes and boats are frequently loft, as there is no place for them to find a fhelter.

This lake discharges its waters at the north east end, into the river Niagara, which runs north and fouth, and is about thirty fix miles in length; from whence it falls into Lake Ontario. At the entrance of this river, on its eastern shore, lies fort Niagara; and about eighteen miles further up, those remarkable falls which are efteened one of the most extraordinary productions of nature at prefent known.

As these have been vilited by so many travellers and s frequently described, I shall omit, giving a particu-

lar defcription of them, and only obferve, that the waters by which they are fupplied, after taking their rile near two thousand miles to the north west, and passing through the lakes Superior, Michigan, Huron, and Eric, during which they have been receiving constant accumulations, at length rush down a supenduous precipice of one hundred and forty feet perpendicular ; and in a strong rapid, that extends to the distance of eight or nine miles below, fall nearly as much more : this river foon after empties itself into Lake Ontario.

The noise of these falls may be heard an amazing way. I could plainly diffinguish them in a calm morning more than twenty miles. Others have faid that at particular times, and when the wind fits fair, the found of them reaches fifteen leagues.

The land about the falls is exceedingly hilly and uneven, but the greatest plat of that on the Niagara river is very good, especially for grass and passurage.

Fort Niagara flands nearly at the entrance of the weft end of lake Untario, and on the east part of the firaits of Niagara. It was taken from the French in the year 1759, by the forces under the command of fir William Johnfon, and at prefent is defended by a confiderable garrifon.

Lake Ontario is the next and leaft of the five great lakes of Canada. Its fituation is between forty three and forty five degrees of latitude, and between feventy fix and feventys nine degrees of welt longitude. The form of it is nearly oval, its greatest length being from north eaft to fouth welt, and in circumference, about fix hundred miles. Near the fouth east part it receives the waters of the Ofwego River, and on the north east difcharges itself into the River Cataraqui. Not far from the place where it isses, fort-Frontenae formerly ftood, which was taken from the French during the last war, in the year 1758, by a finall army of Provincials under col. Bradftreet.

At the entrance of Ofwego River flands a fort of the fame name, garrifoned only at prefent by an inconfiderable party. This fort was taken in the year 1766, by the French, when a great part of the garrifon which

t the wa. their rile and paffing and Erie, tant accuprecipice and in a th or nine river foon

confifted of the late Shirley's and Pepperel's regiments, were maffacreed in cold blood by the lavages.

In lake Ontario are taken many forts of fifth. among which is the Ofwego bals, of an excellent flavor, and weighing about three or four pounds. There is alfo a fort called the cat head or pout, which are in general very large; fome of them weighing eight or ten pounds; and they are effected a rare difth when properly dreffed. On the north weft part of this lake, and to the fourth east of lake Huron, is a tribe of Indians called Miffitianges, whofe town is denominated Foronto, from the lake on which it lies; but they are not very numerous. The country about lake Ontario, effectively the more north and eastern parts, is composed of good land, and in time may make very flourithing fettlements

The Oneida lake fituated near the head of the river Olwego, receives the waters of Wood creek, which takes its rife not far from the Mohawk's river. These two lie fo adjacent to each other, that a junction is effected by fluices at fort Stanwiz, about twelve miles from the mouth of the former. This lake is about thirty miles long from east to weft, and near tifteen broad. The country around it belongs to the Oneida Indians.

Lake Champlain, the next in fize to lake Ontario, and which lies nearly east from it is about eighty miles in length, north and fouth, and in its broadest part fourteen. It is well stored with fish, and the lands that lie on all the borders of it, and about its rivers, very good. Lake George, formerly called by the French, lake St. Sacrament, lies to the fouth welt of the last mentioned lake, and is about thirty five miles long from north call to fouth welt, but of no great breadth. The country around it is very mountainous, but in the vallies the land is tolerably good

When these two lakes were first discovered, they were hown by no other name than that of the Iroquois lakes; and I believe in the first plans taken of those parts, were so denominated. The Indians also that were called the Iroquois, are fince known by the name of the five Mohawk nations, and the Mohawks of Canada. In the late war, the former, which confist of the Onondagoes, the Oneidas, the Senecas, the Tufcarories, and Iroondocks, fought on the fide of the English : the latter which are called the Cohnawaghas, and St. Francis Indians, joined the French.

A valt tract of land that lies between the two laft mentioned lakes and lake Ontario, was granted in the year 1629, by the Plymouth company, under a patent they had received by king James I. to fir Ferdinando Gorges, and to captain John Mason, the head of that family, afterwards diffinguished from others of the fame name, by the Mafons of Connecticut. The countries specified in this grant are faid to begin ten miles from the heads of the rivers that run from the east and fouth into lake George and lake Champlain; and continuing from these in a direct line westward, extend to the mid. dle of lake Ontario; from thence, being bounded, by the Cataraqui, os river of the Iroquois, they take their courfe to Montreal, as far as fort Surrell, which lies at the junction of this river with the Richlieu; and from that point are enclosed by the last mentioned river till it returns back to the two lakes.

This immenfe fpace was granted by the name of the Province of Laconia, to the aforefaid gentlemen, on fpecified conditions and under certain penalties; but none of these amounted in case of omiflion in the fulfilment of any part of them, to forfeiture, a fine only could be exacted.

On account of the continual wars to which these parts have been fubject, from their fituation between the settlements of the English, the French, and the Indians, this grant has been fuffered to lie dormant by the real proprietors. Notwithstanding which, several towns have been settled fince the late war, on the borders of lake Champlain, and grants made to different people by the governor of New York, of part of these territories, which are now become annexed to that province.

There are a great number of lakes on the north of Canada, between Labrador, lake Supperior, and Hudfon's Bay, but these are comparatively small. As they lie out of the track that I pursued, I shall only give a funmary account of them. The most westerly of these

north of and Hud-As they ly give a rly of these in the laker Nipiling and Tamilaming of the first her at the head of the French sives and runs into lake humment the other on the Octowaw river, which empties itself into the Cataraqui at Montreal. These lakes are each about one hundred miles in sirch afrances. The next is take Miltaffin, on the head of Rupert's river, that falls into James' Bay. Chilis lake is fo irregwar from the large points of land by which it is interfeded on every fide, that it is difficult either to deferibe it that or to afcertain its fize. It however appears on the whole to be more than two hundred miles in size sumference.

Lake St John, which is about eighty miles round, and of a circular form, lies on the Saguenay river, direfly north of Quebec, and falls into the St Lawrence, fomewhat north eaft of that city. Lake Manitonagone lies near the head of the Black river, which empties itfelf into the St Lawrence to the caftward of the laft mentioned river, near the coaft of Labrador, and is about fixty miles in circumference. Lake Persibi, lake Wincktagan, lake Etchelaugon, and lake Papenouagane, with a number of other fmall lakes, lie near the heads of the Buitard river to the north of the St. Lawrence, Many others which it is unneceffary to particularize here, are alfo found between the lakes Huron and Ontario.

The whole of those I have enumerated, amounting to upwards of twenty, are within the limits of Canada ; and from this account it might be deduced, that the northern parts of North America, through these numerous inland seas, contain a greater quantity of water than any other quarter of the globe.

In October 1768, I arrived at Bolton, having been abient two years and five months, and during that timetravelled near feven thousand miles. From thence, as foon as I had properly digested my journal and charts. I set out for England to communicate the discoveries I had made, and to render them beneficial to the kingdom. But the profecution of my plans for reaping these advantages have hitherto been obstructed by the unhappy divisions that have been fomented between Great

CARYER SITRAVELES

Britalis and energoisenes by their monthal energies Should Beace date more be reflored, biloubt not but that the contaries II have defcribed will prove a more abundant force of tiches to this nation than either its Eaft in Were Malian Hettlements st and I thall not only pride myfelf, but fincerely rejoice in being the means of pointing det to it to valuable an acquilicion pier it a the inter -Tal cannot conclude the account of my extentive trave ele; without exprelling my gratitude to that beneficent being who invitibly protected me through those perils which shavoidably mend fo long a tour among fierce 113151.1.23 and untutored favages.

"At the lame time let me not be acculed of vanity or prefumption, if 'I declare that the motives alledged in the introduction of this work, were not the only ones that induced me to engage in this arduous undertaking: My view were not folely confined to the advantages that accrue either to mylelf, or the community to which I belonged ; but nobler purpoles contributed principal. ly to urge me on.

The confined flate, both with regard to civil and religious improvements, in which fo many of my fellow creatures remained, arouled within my bolom an irrefifible inclination to explore the almost unknown regions which they inhabited; and as a preparatory flep towards the introduction of more polifhed manners, and more humane fentiments, to gain a knowledge of their language, cultoms, and principles.

I confess that the little benefit too many of the Indian nations have hitherto received from their intercourse with those who denominate themselves Christians, did not tend to encourage my charitable purpoles ; yet as-many, though not the generality, might receive fome benefit from the introduction among them of the polity and religion of the Europeans, without retaining only the errors or vices that from the depravity and perverfion of their professors are unhappily attendant on these, I determined to perfevere.

Nor could I flatter myfelf that I should be able to accomplifh alone this great defign ; however, I was willing to contribute as much as lay in my power towards

be able to , 1 was wiler towards it. In all public , dertakings would every one do this, and furnish with crity his particular share towards it, what stupenduous works might not be completed.

It is true that the Indians are not without fome funfe of religion, and fuch as proves that they worship the great creator with a degree of purity unknown to nations who have greater opportunities of improvement ; but their religious principles are far from being to faultless as described by a learned writer, or unmixed with opinions and ceremonies that greatly leffen their excellency in this point. So that could the doctrines of genuine and vital christianity be introduced among them, pure and untainted, as it flowed from the lips of its divine instructor, it would certainly tend to clear away that fuperflitious or idolatrous drofs by which the rauonality of their religious tenets are obscured. Its mild and beneficent precept would likewife conduce to foften their implacable dispositions, and to refine their favage manners; an event molt defirable; and happy thall I effeem myfelf, if this publication shall prove the means of pointing out the path by which falutary inftructions may be conveyed to them, and the conversion, though but of a few, be the confequence.

which is apparently diffinct between most of the Indians, tends to afcertain that this population was not effected from one particular country, but from feveral neighboring ones, and completed at different periods.

Moft of the hiftorians, or travellers that have treated on the American Aborigines, difagree in their fentiments relative tothem. Many of the ancients are fuppoled to have known that this quarter of the globe not only exifted, but alfo that it was inhabited. Plato in his Timzus has afferted, that beyond the ifland which he calls Atalantis, and which, according to his defeription, was fituated in the wettern ocean, there were a great number of other iflands, and behind thole a vaft continent.

Oviedo, a celebrated Spanish author of a much later date, has made no scruple to affirm that the Antilles are the famous Hesperides so often mentioned by the poets; which are at length reftored to the kings of Spain, the descendants of king Hesperus, who lived upwards of three thousand years ago, and from whom these Islands received their name.

Two other Spaniards, the one, father Gregorio Garcia, a Dominican, the other father Joleph De Acolta, a Jefuit, have written on the origin of the Americans. The former, who had been employed in the millions of Mexico and Peru, endeavored to prove from the traditions of the Mexicans; Peruvians, and others which he received on the spot, and from the variety of characters, cultoms, languages, and religion observable in the different countries of the new world, that different nations had contributed to the peopling of it.

The latter, father De Acofta, in his eramination of the means by which the first Indians of America might have found a passage to that continent, differedits the conclusions of those who have supposed it to be by fea, because no ancient authors has made mention of the compass: and concludes, that it must be either by the north of Asia and Europe, which adjoin to each other, or by those regions that lie to the southward of the Straits of Magellan. He also rejects the affertions of such as have advanced that it was peopled by the He-

bre ws.

prio Gar. Acofta, a Cans. miffiont , the trawhich he f charac. ie in the erent nahation of ca might dits the by fea, n of the aby the h other, d of the rtions of the HeJohn de Laet, a Flemish writer. has controverted the opinions of these Spanish fathers, and of many others who have written on the same subject. The hypothesis he endeavors to establish, is, that America was certainly peopled by the Scythians or 'Fartars : and that the transmigration of these people happened foon after the dispersion of Noah's grandfors. He undertakes to show that the most nonthern Americans have a greater resomblance, not only in the features of their countenances, but also in their complexion and manner of living, to the Scythians, Tartars, and Sameides, than that of any other nations.

In aniwer to Grotius, who had afferted that fome of the Norwegians paffed into America by way of Greenland, and over a vafi continent, he fars, that it is well moun that Greenland was not difcovered till the year 964 ; and both Gomera and Herrera inform us that the Chichimiques were fittled on the Lake of Mexico 72t. He adds, that these favages according to the uniform radition of the Mexicans who disputested them; came from the country fince called New Mexico, and from the Neighborhoad of California ; confequently North America mult have been inhabited many ages before it could receive any inhabitants from Norway, by way of Greenland.

It is no lefs certain, he observes, that the real Mexicans founded their empire in 902, after having fubdued the Chichimiques, the Otomia, and other barbarous nations, who had taken possellion of the country round the Lake of Maxico, and each of whom spoke a language pecaliar to themselves. The real Mexicans are likewise supposed to come from some of the countries that lie near California, and that they performed their journey for the most part by land; of course they could not come from Norway.

De Laet further adds, that though fome of the inhabitants of North America and have entered it from the north weft, yet, as it is related by Pliny, and fome other writers that on many of the illands near the wefters coast of Africa, particularly on the Canaries, form ancient edifices were feen, it is highly probable

112

from their being now deferted that the inhabitants may have passed over to America; the passage being neither long nor difficult. This migration, according to the calculation of those authors, must have happened more than two thousand years ago, at a time when the Spaniards were much troubled by the Carthagenians; from whom having obtained a knowledge of navigation, and the construction of thips, they might have retired to the Antiles, by the way of the western ifles, which were exactly half way on their voyage.

He thinks that Great Britain, Ireland, and the Or. cades were extremely proper to admit of a fimilar conjecture. As a proof, he inferts the following paffage from the hiftory of Wales, writen by Dr. David Powel, in the year 1170.

This hiltorian fays, that Madoc, one of the fons of Prince Owen Gwynnith, being difgulled at the civil wars which broke out between his brothers, after the death of their tather, fitted out feveral veffels, and having provided them with every thing necessary for a long voyage, went in queft of new lands to the weftward of Irehand, there he difcovered very fertile countries, but defitute of inbabitants; when landing part of his people, he returned to Britain, where he raifed new levies, and afterwards transported to this colony.

The Flemish author then returns to the Scythians, between whom and the Americans he draws a parallel. He observes that several nations of them to the north of the Caspian Sea, led a wandering life; which, as well as many other of their castoms, and way of living, a grees in many circumstances with the Indians of America. And though the refemblances are not absolutely perfect, yet the emigrants, even before they left their own country, differed from each other, and went not by the same name. Their change of abode effected what remained.

He further fays, that a fimilar likeness exists between feveral American nations, and the Samerides who are fettled according to the Rufflan accounts, on the great River Oby. And it is more natural, continues he, to suppose that colonies of these nations palled over to

OVEL 10

This writer makes many other remarks that are e qually fenfible, and which appear to be juft ; but he intermixes with these some that are not so well founded. Emanuel de Moraez, a Portuguele, in his hiltory of Brazil; afferts that America has been wholly peopled by the Carthagenians and Ifraelites. He brings as a proof, of this affertion the difcoveries the former are known to have made at a great diffance beyond the coalt of Africa. The progress of which being put a ftop to by the fenate of Carthage, those who hapened to be then in the newly discovered countries, being cut off from all communication with their countrymen, and deflitute of many necessaries of life, fell into a flate of barbarism. As to the lirzelites, this author thinks that nothing but circumcifion is wanted in order t v conflitute a perfect, refemblance between them and the Brazilians.

George De Hornn, a learned Dutchman, has likewife written on this fubject. He fets out with declaring, that he does not believe it possible America could have been peopled before the flood confidering the flort space of time which elapsed between the creation of the world and that memorable event. In the next place he lays it down as a principle, that after the deluge, men and other terrestrial animals penetrated into that country both by fea and by land; fome through accident, and fome from a formed defign. I hat birds got thither by flight; which they were enabled to do by refling on the rocks and islands that are feattered about the ocean.

He further observes, that wild beasts may have found a free passage by land; and that if we do not meet with horses or caule (to which he might have added elephants, camels, rhinoceros, and beasts of many other tinds) it is because those nations that passed thicker, were either not acquainted with their use, or had no convenience to support them.

Having totally excluded many nations that others have admitted as the probable first fettlers of America.

314

for which he gives fubftantial reafons, he fuppoles that hit began to be peopled by the north; and maintains the primitive colonies foread themfelves by the means of the ifthmus of Panama through the whole extent of the continent. the well and the second of the second of the

He believes that the first founders of the Indian colonies were Scythians. That the Phænicians and Car. thagenians afterwards got footing in America acrofs the Atlantic Ocean, and the Chinefe by way of the Pacific And that other nations might from time to time have landed there by one or other of thele ways, or might pofficity have been thrown on the could by tempelts: fince, through the whole extent of that continent, both in its northern and touthern parts, we meet with undoubted marks of a mixture of the northern nations with those who have come from other places. And lafily, that fome Jews and christians might have been carried there by fuch like events, but that this mult have happened at a time when the whole of the new world was alteady peopled. 的复数的现在分词 网络拉克河口

After all, he acknow edges that great difficulties attend the determination of the queftion. "I befe, he fays, are occasioned in the first ple ce by the imperfect knowl. edge we have of the extremities of the globe, towards the north and fouth pole ; and in the next place to the havoc which the Spanjards, the first discoverers of the new world, made among its most ancient monuments; as witness the great double road betwixt Ouito and Cuzco, an undertaking to ftupenduous, that even the most magnificent of those executed by the Romans cannot he compared to it.

He supposes also another migration of the Phoenicians, than those already mentioned, to have taken place; and this was during a three years voyage made by the Ty rian fleet in the lervice of king Solomon. He afferts on the authority of Jolephus, that the port at which this embarkation was made, lay in the Mediterranean. The ficet he adds, went in queit of elephant's meth and peacocks to the western coalt of Africa, which is l'arfifb ; then to Ophir for gold, which is Haite, or the ifand of Hifpaniola ; in the latter opinion he is supporttaken by

ed by Columbus, who, when he discovered that island, thought he could trace the furnaces in which the gold was refined.

To thele migrations which preceded the chriftian era, he adds many others of a later date from different nations, but these I have not time to enumerate. For the fame reafon Lam obliged to pais over numberleis writers on this fubject ; and thall content myfelf with only giving the featuments of two or three more The first of thefe is Pierre De Charlevoix, a Frenchman, who, in his journal of a voyage to North Ameriez made fo lately as the year 1720, has recapitulated the opinions of a variety of authors on this head, to which he has fubjoined his own conjectures. But the latter cannot without fome difficulty be extracted, as they are fo interwoven with the paffages he has quoted. that it requires much attention to difcriminate them. He feems to allow that America might have received its first inhabitants, from Tartary and Hyrcania. This he confirms, by observing that the lions and tigers which are found in the former, must have come from thole countries, and whole pallage ferves for a proof that the two hemispheres join to the northward of Afiz. He then draws a corroboration of this argument, from a story he lays he has often heard related by father Grollon, a French Jefuit, as an undoubted matter of falt

This father, after having labored fome time in the miffions of New France, paffed over to those of China. One day as he was travelling in Tartary, he met a Huron woman whom he had formerly known in Canada. He afked her by what adventure the had been carried into a country to diffant from her own. She made anfwer, that having been taken in war, the had been conducted from nation to nation, till the had reached the place at which the then was.

Monfieur Charlevoix fays, further, that he had been affured mother Jefuit, paffing through Nantz, in his return from China, had celated much fuch an other affair of a Spanish woman from Florida. She also had been taken by certain Indians, and given to those of a more

diffant country; and by these again to another nation till having thus been fucceflively passed from country to country, and travelled through regions extremely cold, the had at last found herself in l'artary. Here the had married a l'artar, who had attended the conquerors in China, where the was then fettled.

He acknowledges as an allay to the probability of thefs flories, that those who had failed fartheft to the eaftward of Alia, by purfuing the coaft of Jeffo, or Kamfchatka, have pretended that they had perceived the extremity of this continent ; and from thence have concluded that there could not poffibly be any communication by land. But he adds that Francis Guella, a Spaniard, is faid to have afferted, that this feparation is no more than a firmit, about one hundred miles over, and that fome late voyages of the Japanefe give grounds to think that this firmit is only a bay, above which there is a paffage over land.

He goes on to observe, that though there are few wild bears to be met with in North America, except a band of tigers without spots, which are found in the couptry of the Iroquois, yet towards the tropics there are lions and real tigers, which, notwithstanding, might have come from Hyrcania and Tantary; for as by advancing gradually southward they met with climates more agreeable to their natures, they have in time abandoned-the northern countries.

He quotes both Solinus and Pliny to prove that the Scythian Anthropophagi once depopulated a great ertent of country, as far as the promontory Tahin ; and also an author of later date, Mark Pol, a Venetian, who, he fays, tells us, that to the north east of China and Tartary there are valt uninhabited countries, which might be fufficient to confirm any conjectures concerning the retreat of a great number of Scythians into America.

To this he adds that we find in the ancients the names of fome of these nations. Pliny (period of the Tabians; Solinus mentions the Apulears, who had for neighbors the Maffagetes, whom Pliny fince affures us to have entirely difappeared. Amnianus, Marcellinus

morefsly tells us, that the fear of the Antropophagi aliged feveral of the inhabitants of those countries to take refuge elfewhere. From all thefe authorities Mons. Charlevoix concludes, that there is at least room. to conjecture that more than one nation in America had Scythian or Tartarian original.

He finishes his remarks on the authors he has quoted, by the following observations : It appears to me that this controverfy may be reduced to the two following articles ; first, how the new world might have been peopled; and fecondly, by whom, and by what means t has been peopled.

Nothing he afferts, may be more eafily answered than the first. America might have been peopled as the three other parts of the world have been. Many diffirulties have been formed on this fubject, which have sen deemed infolvable, but which are far from being 6. The inhabitants of both hemispheres are certainly the defcendants of the fame father ; the common parent af mankind received an express command from heaven people the whole world, and accordingly it has been eopled.

To bring this about it was necessary to overcome all afficulties that lay in the way, and they have been got wer. Were these difficulties greater with respect toopling the extremities of Alia, Africa, and Europe, the transporting men into the islands which lie at a sociiderable diftance from those continents, than to pais. wer into America ? certainly not.

ahin ; and Navigation, which has atrived at for great perfection tian, who, within thele three or four centuries, might pollibly have ten more perfect in those carly ages than at this lay. The can believe that Neah and, his immediate deudants knew less of this art than we do? That the uider and pilot of the largest thip that ever was, a thip at was formed to traverie an unbounded ocean, and cients the boild formerly thoats and quick and the communicatid to many floats and quicklands to guard against, d to the of his defeendants who furvived him, and whole means he was to execute the order of the arcellinus reat Creator'; I fay, who can believe he flould not

have communicated to them the art of failing upon an ocean, which was not only more calm and pacific, but at the fame time confined within its ancient limits ?

Admitting this, how eafy it is to pais, exclusive of the passage already described, by land from the coast of Af. rica to Brazil, from the Cavaries to the western Islands, and from them to the Antiles? from the British Isles, or the coast of France, to Newfoundland, the passage is neither long nor difficult; I might fay as much of that from China to Japan, or the Philippines, to the Isles of Mariannes; and from thence to Mexico.

There are islands at a confiderable ways from the continent of Afra, where we have not been furprifed to find inhabitants, why then fhould we wonder to meet with people in America 1 nor can it be imagined; that the grand fors of Noah, when they were obliged to feparate, and foread themfelves in conformity to the defigns of God, over the whole earth, fhould find it abfolutely impolible to people almost one half of it.

I have been none copious in my extracts from this author than I intended, as his reafons appears to be folid, and many of his obfervations juft. From this encomium, however, I must exclude the stories he has introduced of the Huron and Floridan women, which I think I might venture to pronounce fabulous.

I shall only add, to give my readers a more comprehensive view of Monsieur Charlevoiz's differtation, the method he proposes to come at the truth of what we are in fearch of.

The only means by which this can be done, he fays, is by comparing the language of the Americans with the different nations; from whence we might fuppole they have peregrinated. If we compare the former with those words that are confidered as primitives, is might pollibly fet us upon fome happy difcovery. An this way of afcending to the original of nations, which is by far the least equivocal, is not fo difficult as might be imagined. We have had, and fill have, traveller and missionaries who have attained the languages that are fooken in all the provinces of the new world it would only be necessfary to make a collection of the

mammers and vocabularies, and to collate them with he dead and living languages of the old world, that pass for originals, and the simililarity might easily be paced. Even the different dialects, in fpite of the almations they have undergone, ftill retain enough of the mother tongue to furnish confiderable lights.

Any enquiry into the manners, cuftoms, religion, or traditions of the Americans, in order to difcover by that means their origin, he thinks would prove fallacious. A disquisition of that kind, he observes, is only capable of producing a falfe light, more likely to dazzle, and to make us wander from the right path, than to lead us with certainty to the point proposed.

Ancient traditions are effaced from the minds of fuch meither have not, or for feveral ages have been without those helps that are necessary to preferve them. And in this fituation is full one half of the world. New events, and a new arrangement of things, give rife to new traditions, which efface the former, and are themfelves faced in turn. After one or two centuries have paffed, there no longer remain any traces of the first traditions ; and thus we are involved in a flate of uncertainty. He concludes with the following remarks, among many others. Unforefeen accidents, tempelts, and thipwrecks, have certainly contributed to people every habtable part of the world :, and ought we to wonder after his, at perceiving certain refemblances, both of perfons and manners between nations that are most remote from ach other, when we find tuch a difference in those that order on one another! As we are destitute of historic-I monuments, there is nothing. I repeat it, but a knowladge of the primitive languages that is capable of bowing any light upon these clouds of impenitrable larkness.

By this enquiry we flould at leaft be fatisfied, among hat prodigious number of various nations inhabiting It as might America, and differing fo much in languages from each ther, which are those who make use of words totally. world the configuration of the old world, and the confequently must be reckoned to have passed over America in the earlieft ages, and those, who, from

the analogy of their language with fuch as are at preent used in the three other parts of the globe, leave room to judge that their migration has been more recent, and which ought to be attributed to fhipwrecks, or to fome accident fimilar to those which have been spoken of in the course of this treatife.

I thall only add the opinion of one author more, before 1 give my own fentiments on the fubject, and that is of James Adair, etq. who refided forty years among the Indians, and published the history of them in the year 1772. In his learned and fysiematical history of those nations, inhabiting the western parts of the most fouthern of the American colonies; this gentleman without hesitation pronounces that the American aborigines are defeended from the Israelites, either whils they were a maritime power, or foon after their general captivity.

This defcent he endeavors to prove from their religicus rites, their civil and martial cuftoms; their mariage es, their funeral ceremonies, their manners, language, traditions, and from a variety of other particulars. And fo complete is his conviction on this head, that he fancies he finds a perfect and indifputable fimilitude in each. Through all thefe 1 have not time to follow him, and fhall therefore only give a few extracts to flow on what foundation he builds his conjectures, and what degree of credit he is entitled to on this point:

Fic begins with obferving, that though fome have fuppoed the Americans to be defeended from the Chinefe, yet neither their religion, laws, nor cultoms agree in the lealt with those of the Chinefe, which fufficiently proves that they are not of this line. Ecfides; as out belt fains are row almost half a year in failing for China (our author does not here recoiled that this is from a high northern latitude, series the line, and then back again greatly to the northward of it, and not directly athwart the Pacific ocean, for only one hundred and eleven degrees) or from thence to Europe, it is very unlikely they flould attempt fuch dangerous diffeoveries, with their fuppofed fmall veffels, again frapid currents and in dark and teckly Montoons. He fun improbative was unactive their count miles diff twice as f are not in skill, or f fmall coa little varia thirty and could not reftly cor

fome have no the Chitoms agree i fufficientides; as not g for Choi i from a then buck not, directly fred and eis very undiffeoveries, id currents He further remarks, that this is more particularly improbable, as there is reafon to believe that this nation was unacquainted with the ufe of loadstone to direct their course. China, he fays, is abont eight thousand miles distant from the American continent, which is twice as far as across the Atlantic Ocean. And we are not informed by the ancient writer of their maritime skill, or so much as any inclination that way, befides fmall coafting voyages. The winds blew likewife, with little variation from east to welt within the latitudes thirty and odd, north and fouth; and therefore these could not drive them on the American coaft, it lying direftly contrary to fuch a courfe.

Neither could perfons, according to this writer's account, sail to America from the north by the way of Tartary or uncient Scythia ; that, from its fituation, never having been or can be a maritime power; and it is utterly impracticable, he fays, for any to come to America by fea from that quarter. Belides, the remaining traces of their religious ceremonies and civil and martial culoms are quite oppolite to the like veltiges of the old Scythians. Even in the moderate northern climates there is not to be feen the least trace of any ancient flately buildings, or any thick fettlements, as are faid to remain in the lefs healthy regions of Peru and Merico. And feveral of the Indian nations affure us, that they croffed the Miffifippi before they made their prefent northern fettlements ; which connected with the former arguments, he concludes will fufficiently explode that weak opinion of the American Aborigines being lineally descended from the Tartars or ancient Scythians.

Mr. Adair's reasons for supposing that the Americans derive their origin from the Jews are,

First, because they are divided into tribes, and have chiefs over them' as the Israelites had.

Secondly, because, as by a first permanent divine precept, the Hebrew nation were ordered to worship, at Jerusalem. Jehovah the true and living God, so do the Indians, filing him Yohewah. The arcient Heathens, be adds, it is well known worshiped a plurality of gods,

122

but the Indians pay their religious devoirs to the Great beneficent inpreme holy Spirit of Fire, who refides as they think above the clouds, and on earth alfo with unpolluted people They pay no adoration to images, or to dead perfons, neither to the celeficial luminaries, to evil fpirits, nor to any created beings whatever,

Thirdly, because, agreeable to the theocracy or divine government of Israel, the Indians think the deity to be the immediate head of their state.

Fourthly, becaufe, as the Jews believe in the minis. tration of angels, the Indians also believe that the higher regions are inhabited by good spirits.

Fifthly, becaufe the Indian language and dialects appear to have the very idiom and genius of the Hebrew. Their words and fentences being exprefive, concife, emphatical, fonorous, and bold; and often, both in letters, and lignification, are fynonymous with the Hebrew language.

Sixthly, becaufe they count their time after the manner of the Hebrews.

Seventhly, because in conformity to, or after the manner of the Jews, they have their prophets, high priests, and other religious orders.

Eighthly, because their festivals, fasts, and religious rites have a great refemblance to those of the Hebrews.

Ninthly, because the Indians, before they go to war, have many preparatory ceremonies of purification and faiting, like what is recorded of the Inachtes.

Tenthly, because the same taste for ornaments, and the same kind are made use of by the Indians, as by the Fiebrews.

Thefe and many other arguments of a fimilar nature Mr. Adair brings in fupport of his favorite fyftem ; but I fhould imagine, that if the Indians are really derived from the Hebrews, among their religious ceremonics, on which he chiefly feems to build his hypothesis, the principal, that of circumcifion, would never have been laid afide, and its very remembrance obliterated.

CARVER'S TRAVELS.

however either endeavor to reconcile them, or to point out the errors of each, but proceed to give my own fentiments on the origin of the Americans; which are founded on conclutions drawn from the most rational arguments of the writers I have mentioned, and from my own observations; the consistency of these I shall leave to the judgment of my readers.

The better to introduce my conjectures on this head, it is neceffary first to afcertain the distance between America and those parts of the habitable globe that approach nearest to it.

The continent of America, as far as we can judge from all the refearches that have been made near the poles, appears to be entirely feparated from the other quarters of the world, That part of Europe which approaches nearest to it, is the coast of Greenland, lying in about feventy degrees of north latitude; and which reaches within twelve degrees of the coaft of Labrador, fituated on the north east borders of this continent. The coaft of Guinea is the nearest part of Africa ; which lies about eighteen hundred and fixty miles north east from the Brazils. The most callern coast of Asia, which extends to the Korean Sea on the north of China, projects north east through eastern Tartary and Kamfchatka to Siberia, in about fixty degrees of north latitude. Towards which the western coasts of America, from California to the Straits of Annian, extend nearly north weft, and lie in about forty fix degrees of the fame latitude.

Whether the co, inent of America fireaches any further north than these firaits, and joins to the eaftern parts of Afia, agreeable to what has been afferted by fome of the writers I have quoted, or whether the lands that have been dilcovered in the intermediate parts are only an archipelago of islands, verging towards the opposite, continent, is not yet afcertained.

It being, however, certain that there are many confiderable islands which lie between the extremities of Afia and America, viz. Japan, Yeso or Jedso, Gama's Land, Behring, Isle, with many others discovered by Tschirikow, and besides these, from fifty degrees north there appearing to be a cluster of islands that reach as far as Siberia, it is probable from their proximity to America, that it received its first inhabitants from them.

This conclusion is the most rational I am able to draw, fuppoling that fince the Aborigines got footing on this continent, no extraordinary or fudden change in the pofition or furface of it has taken place, from inundations, carthquakes, or any revolutions of the earth that we are at prefent unacquainted with.

To me it appears highly improbable that it should have been peopled from different quarters, across the Ocean, as others have afferted. From the fize of the fbips niade use of in those early ages, and the want of the compais, it cannot be supposed that any maritime nation would by choice venture over the unfathomable ocean, in fearch of diftant continents. Had this howev. er been attempted, or had America been first accidental. ly peopled from thips freighted with paffengers of both fexes, which were driven by ftrong eaflerly winds acrofs the Atlantic, thefe fettlers must have retained fome traces of the language of the country from whence they migrated; and this fince the difcovery of it by the Europeans must have been made out. It also appears extraordinary that feveral of these accidental migrations, as allowed by fome, and these from different parts, thould have taken place.

Upon the whole, after the most critical enquiries, and the maturest deliberation, I am of opinion, that America received its first inhabitants from, the north east, by way of the great Archipelago just mentioned, and from these alone, But this might have been affected at different times and from various parts : from Tartary, China, Japan, or Kamschatka, the inhabitants of these places refembling each other in colour, features, and shape, and who, before some of them acquired a knowledge of the arts and sciences, might have likewise refembled each other in their manners, customs, religion, and language

airies, and nat Amerh eaß, by and from at differtary, Chithefe pland fhape, nowledge refembled gion, and

tion and one, and the unpolified fituation of others. The former have become a commercial people, and dwell in houses formed into regular towns and cities ; the latter live chiefly in tents, and rove about in different hordes without any fixed abode. Nor can the long and bloody wars these two nations have been engaged in, exterminate their hereditary fimilitude. The prefent family of Chinese Emperors is of Tartarian extraction ; and if they were not fensible of fome claim belide that of conquest, to numerous a people would fearcely fit quiet under the dominion of strangers.

It is very evident that fome of the manners and cuftoms of the American Indians refemble those of the Tartars; and I make no doubt but that in some future era, and this not a very far diftant one, it will be reduced to a certainty, that during fome of the wars between the Tartars and the Chinese, a part of the inhabitants of the northern provinces were driven f10m their native country, and took refuge in some of the isles before mentioned and from thence found their way into America. At different periods each nation might prove victorious, and the conquered by turns fly before their conquerors; aud from hence might arise the source of the Indians to all these people, and that animosity which exists between so many of their tribes.

It appears plainly to me that a great fimilarity between the Indians and Chinefe is confpicuous in that particular cuftom of flaving or plucking off the hair, and leaving only a fmall tuit on the crown of the head. This mode is faid to have been enjoined by the Tartatian Emperors on their acceffion to the throne of China, and confequently is a farther proof that this cuftom was in use among the Tartars; to whom as well as the Chinefe, the Americans might be indebted for it.

Many words also are used both by the Chinese and Indians, which have a resemblance to each other, not only in their found, but their signification. The Chinese call a flave, shungo ; and the Naudowessie Indians, whose language from their little intercourse with the Europeans, is the least corrupted, term a dog, shungush. The former denominate one species of their tea, show-

fong ; the latter call their tobacco. fhoufaffau, Many other words used by the Indians contain the fyllables che, chaw, and chew, after the dialect of the Chinese.

There probably might be found a fimilar connection between the language of the Tartars and the American Aborigines, were we as well acquainted with it as we are, from our commercial intercourse, with that of the Chinese.

I am confirmed in these conjectures, by the accounts of Kamichatka, published a few years ago by order of the Empress of Russia. The author of which fays, that the lea which divides that peninfula from America is full of islands; and that the distance between Tichukotiki. Nofs a promontory which lies at the eaftern extremity of that country, and the coast of America is not more than two degrees and a half of a great circle. He further fays, that there is the greatest reason to suppose that A. fia and America once joined at this place, as the coafts of both continents appear to have been broken into capes and bays, which answer each other ; more especially as the inhabitants of this part of both refemble each other in their perfons, habits cuftoms and food. I heir language, indeed, he observes, does not appear to be the fame, but then the inhabitants of each diffrict in Kamfchatka fpeak a language as different from each other, as from that fpoken on the oppolite coaft. Thefe observations, to which he adds, the fimilarity of the boats of the inhabitants of each coaft, and a remark that the natives of this part of America are wholly ftrangers to wine and tobacco, which he looks upon as a proof that they have as yet had no communication with the natives of Europe, he fays, amount to little lefs than a demonstration that America was peopled from this part of Afia.

The limits of my prefent undertaking will not permit me to dwell any longer on this fubject, or to enumerate any other proofs in favor of my hypothefis. I am, however, fo thoroughly convinced of the certainty of it, and fo defirous have I been to obtain every teltimony which can be procured in its fupport that I once made an offer to a private fociety of gentlemen, who were cu-

not permit enumerate I am, howinty: of it, teftimony nce made o were curious in fuch refearches, and to whom I had communicated my fentiments on this point, that I would undertake a journey, on receiving fuch fupplies as were needful, through the north east parts of Europe and Afia to the interior parts of America, and from thence to England; making as I proceeded, fuch observations both on the languages and manners of the people with whom I should be convertant, as might tend to illustrate the dostrine I have here laid down, and to fatisfy the curiofity of the learned and inquisitive : but as this proposal was judged rather to require a national than a private support, it was not carried into execution.

I am happy to find fince I formed the foregoing conclutions, that they correspond with the sentiments of that learned historian, Doctor Robertson; and tho' with him, I acknowledge that the investigation, from its nature, is to obfcure and intricate, that the conjectures I have made can only be confidered as conjectures, and not indiffutable conclusions, yet they carry with them a greater degree of probability than the suppositions of those who aftert this continent was peopled from another quarter.

One of the Doctor's quotations from the journals of Behring and Tichirikow, who failed from Kamichatka about the year 1,41, in quelt of the New World, appears to carry great weight with it, and to afford our conclutions firm fupport : " Thefe commanders having haped their course towards the east, discovered land, which to them appeared to be part of the American continent; and according to their observations, it feems to be fituated within a few degrees of the north welt coaft of California They had there fome intercourfe with the inhabitants, who leemed to them to refemble the North Americans; as they prefented to the Ruffians the Calumet or Pipe of Peace, which is a fymbol of friendhip universal among the people of North America, and an utage of arbitrary institution peculiar to them." One of this incomparable writer's own arguments in support of his hypothesis is also urged with great judgment, and appears to be nearly conclusive. He fays, "we may lay it down as a certain principle in this

enquiry, that America was not peopled by any nation of the ancient continent, which had made confiderable progrefs in civilization. The inhabitants of the New World were in a flate of fociety fo extremely rude, as to be unacquainted with those arts which are the first effays of human ingenuity in its advance towards im. provement. Even the most cultivated nations of A. merica were Arangers to many of those fimple inven. tions, which were almost coeval, with fociety in other parts of the world, and were known in the earlieft periods of civil life. From this it is manifest that the tribes which originally migrated to America, came of from nations which mult have, been no lefs, barbarous than their polterity, at the time when they were trit difcor. ered by the Europeans. If ever the use of iron had been known to the lavages of America, or to their progenitors, if ever they had employed a plough, a loom, or a forge, the utility of these inventions would have preferved them, and it is impossible that they should have been abandoned or forgotten."

he was on his travels; by fome of his own party. That gentleman's journals falling into father Hennigen's hand, he was enabled by them to publish many interesing particulars relative to the Indians. But in fome respects he fell very flight of that knowledge which it was in his power to have attained from his long refi lence among them. Nor was he always (as has been already oblerved) exact in his calculations, or jult in the intelligence he has given us.

The accounts published by the other two, particularly those of Charlevoix, are very erroneous in the geograph. ic. I parts, and many of the stories told by the Baron are: mere delutions.

Some of the Jefuits, who heretofore travelled into these parts, have also written on this subject ; but as few, if any, of their works have heen translated into the English language, the generality of readers are not benclitted by them ; and, indeed, had this been done they would have reaped but few advantages from them, as they have chieffy confined their observations to the religious principles of the lavages, and the fteps taken for al Children W their conversion

Since the conquest of Canada, fome of our own countrymen who have lived among the Indians, and learned their language, have published their observations; however as their travels have not extended to any of the interior parts I treat of, but have only been made among the nations that border on our fettlements, a knowledge: of the genuine and uncontaminated cultoms and man. pers of the Indians could not have been acquired by them.

The fouthern tribes, and those that have held a confant intercourfe with the French or English, cannot have preferved their manners or their cultoms in their original purity. They could not avoid acquiring the vices with the language of those they conversed with ; and the frequent intoxications they experienced through can. I he the baneful juices, introduced among them by the Eudicious re- ropeans, have completed a total alteration in their char-

Hennipen, by the af- aders. ies of the ted whilk

or ulages are only to be observed ; their real and unpoluted cultom, could be seen among those nations alone that have held but little communication with the provinces. These I found in the northwest parts, and there fore flatter myself that I am able to give a more just account of the customs and manners of the Indians, in their ancient purity, than any that has been hitherto published. I have made observations on thirty nations, and though most of these have differed in their languages, there has appeared a great fimilarity in their manners, and from these I have endeavored to extract the following remarks.

As I do not propose to give a regular and connected fystem of Indian concerns, but only to relate such particulars of their manners, customs, &c. as I thought most worthy of notice, and which interfere as little as possble with the accounts given by other writers, I must beg my readers to excuse their not being arranged systematically, or treated of in a more copious manner.

The Indian nations do not appear to me to differ fo widely in their make, color, or conflictution from each other, as represented by fome writers. They are in general flight made, rather tall and ftraight, and you feldom see any among them deformed, their fkin is of a reddifh or copper color; their eyes are large and black, and their hair of the fame hue, but very rarely is it cured; they have good teeth, and their breath is as fweet as the air they draw in; their cheek bones rather raifed, but more fo in the women than the men; and the former are not quite fo tall as the European women, however you frequently meet with good faces and agreeable perforts among them, although they are more inmploy mu clined to be fat than the other fex.

I fhall not enter into a particular enquiry whether hem out we the Indians are indebted to nature, art or the temperature of the climate for the color of their fkin, nor fhall with Europ I quote any of the contradictory accounts I have read on this fubject : I fhall only fay, that it appears to me to be the tincture they received originally from the hands of their Creator ; but at what period the variation which is at prefent visible, both in the complexion and feat.

of many nations took place. at what time the Eumean whiteness, the jetty hue of the African, or the opper caft of the American were given them ; which the original color of the first inhabitants of the earth, which might be effeemed the most perfect, I will not tend to determine.

Many writers have afferted, that the Indians, even at e maturelt period of their existence, are only furnishwith hair on their heads ; and that not with flanding e profusion with which that part is covered, those arts which among the inhabitants of other climates re usually the feat of this excreicence, remain entirely, ree from it. Even Dr. Robertson, through their misprefentations, has contributed to propagate the error; ad supposing the remark justly founded, has drawn everal conclusions from it relative to the habit and temerature of their hodies, which are confequently invaid But from minute enquiries, and a curious infpecion, I am able to declare (however respectable I may old the authority of these historians in other points) hat their affertions are erroneous, and proceeding from he want of a thorough knowledge of the cultorns of the Indians.

After the age of puberty, their bodies, in their natral flate, are covered in the fame manner as those of he Europeans. The men, indeed, efteem a beard very mbecoming, and take great pains to get rid of it, nor ther raifed, s there ever any to be perceived on their faces, except ; then they grow old and become inattentive to their ap. men, how pearance. Every crition efflorefcence on the other parts ! nd agrees, of the body is held unfounly by them, and both fexes re more in mploy much time in their extirpation.

Europeans; thefe exchange their furs for blankets, fhirts, and other apparel, which they wear as much for ornament as necellity. The latter faiten by a girdle around their waifts about half a yard of broadcloth, which covers the middle parts of their bodies. Those who wear fhirts never make them fast either at the wrist or collar; this would be a most infufferable confinement to them They throw their blanket loose upon their shoulders, and holding the upper fide of it by the two corners, with a knife in one hand, and a tobacco pouch, pipe &c. in the other; thus accoutred they walk about in their villages or camps : but in their dances they feldom wear this covering.

Those among the men who with to appear gayer than the reft, pluck from their heads all the hair, except from a pot on the top of it, about the fize of a crown piece, where it is permitted to grow to a confiderable length : on this are faftened plumes of feathers of various colors, with filver or ivory quills. The manner of cutting and ornamenting this part of the head diffinguishes different nations from each other.

They paint their faces red and black, which they efteem as greatly ornamental. They also paint themleves when they go to war; but the method they make use of on this occasion differs from that wherein they use it merely as decoration.

The young Indians, who are defirous of excelling their companions in finery, flit the outward rim of both their ears; at the fame time they take eare not to feparate them entirely, but leave the flefh thus cut, flill untouched at both the extremities, around this fpongy fubflance, from the upper to the lower part, they twilt brafs wire, till the weight draws the amputated rim in a bow of five or fix inches diameter, and drags it almost down to the shoulder. This decoration is estemd to be excelfively gay and becoming.

It is also a common cultom among them to bore their noles, and wear in them pendants of different forts. I observed that sea shells were much worn by those of the interior parts, and reckoned very ornamental; but how they procure them I could not learn;

kets, fhirts, h for orna. dle around oth, which I hofe who he wrift or onfinement upon their y the two cco pouch, ey walk alances they

They go without any covering for the thigh, except that before spoken of, round the midale which reaches down half way the thighs ; but they make for their legs fort of flucking, either of fkins or cloth ; thefe are fewed as near to the shape of the leg as possible, fo as to admit of being drawn on and off The edges of the stuff of which they are composed are left annexed to the feam, and hang loofe for about the breadth of a hand; and this part which is placed on the outfide of the leg, is generally drnamented by those who have any communication with Europeans, if of cloth with ribhands or lace, if of leather, with embroidery and porcus pine quills curioufly colored. Strangers who hung mong the Indians, in the parts where there is a great deal of fnow, find these flockings much more convenient than any others.

Their fhoes are made of the fkin of the deer, elk, or buffaloe : thefe, after being fometimes dreffed according to the European manner, at others with the hair remaining on them, are cut into thoes, and fathioned fo as to be cafy to the feet, and convenient for walking. The edges round the ancle are decorated with piec of brais or tin fixed around leather firings about an inch long, which being placed very thick, make a che full tinkling noife, either when they walk or dance. The women wear a covering of fome kind or other from the neck to the knees. Those who trade with the Europeans wear a linen garment, the fame as that uled by the men, the flaps of which hang over the petticoat. Such as dress after their ancient manner, make a kind of fhift with leather, which covers the body but not the arms. I heir petticoats are made either of leather or cloth, and reach from the wailt to the knee. On their legs they wear flockings and floes, made and ornamented as those of the men.

They differ from each other in the mode of dreffing their heads, each following the cultom of the nation contained to which they belong, and adhering to the form

1. 1.69 .40

The

Asu

They

made use of by their ancestors from time immeme.

I remarked that most of the females, who dwell on the east fide of the Millifippi, decorate their heads by enclosing their hair in ribbands, or in plates of filver i the latter is only made use of by the higher ranks, as it is a coffly ornament. The filver they use on this occasion, is formed into thin plates of about four inches broad in feveral of which they confine their hair. That plate which is nearest the head is of a confiderable width; the next narrower and made so as topass a little way under the other, and gradually tapering, detcend to the waist. The hair of the ladian women being in general very long, this proves an expensive method.

But the women that live to the well of the Miffifip pi, viz. the Naudoweffles, the Affinipoils, &c. divide their hair in the middle of the head, and form it into two rolls, one against each ear. These rolls are about three inches long, and as large as their wrists. They hang in a perpendicular attitude at the front of each ear, and descend as far as the lower part of it.

The women of every nation generally place a fpot of paint about the fize of a crown piece, against each ir; fome of them put paint on their hair, and for petimes a small fpot in the middle of the forehad.

The Indians, in general, pay a greater attention to their drefs, and to the ornaments with which they decorate their perfons, than to the accommodation of their huts or tents. They confiruct the latter in the following fimple and expeditious manner.

Being provided with poles of a proper length, they fallen two of them acrofs, near the ends, with bands made of bark. Having done this, they raife them up, and extend the bottom of each as wide as they propule to make the area of the tent i they then erect others of an equal height, and fix them fo as to support the two orincipal ones. On the whole they 153 the skins of the elk-or deer, fewed together, in quantity sufficient to cover the poles, and by lapping over to form the door. A great number of skins are sometimes required

ace a fpot of tgainft each r hair, and of the fore-

attention to h they decoion of their the follow-

ength, they with bands is them up, ney propose it others of ort the two he fkins of y fufficient form the es required for this purpose, as some of their tents are very capacious. That of the chief warrior of the Nandowellies was at least forty feet in circumference, and very commodious.

They observe no regularity in fixing their tents when they encamp, but place them just as it fuits their conwnieney.

The huts alfo, which those who use not tents, cred when they travel, for very few tribes have fixed abodes, or regular towns, or villages, are equally simple, and almost as foon constructed.

They fix fmall pliable poles in the ground, and bending them till they meet at the top and form a femi-circle, then haft them together. Thele they cover with mats made of rufhes platted, or with birch bark, which they carry with them in their cances for this purpole.

Thefe cabins have neither chimnles nor windows i here is only a fmall aperture left in the middle of the roofs through which the fmoke is difcharged, but as this is obliged to be ftopped when it rains or fnows violently, the fmoke then proves excedingly troublefome.

They lie on fkins, generally those of the bear, which are placed in rows on the ground; and if the floor is not large enough to contain beds fufficient for the fccommodation of the whole family, a frame is erected about four or five feet from the ground in which the younger part of it fleep.

As the habitations of the Indians are thus rude, their domethic utenfils are few in number, and plain in their formation. The tools wherewith they fathion them are fo awkward and defective, that it is not only impossible to form them with any degree of neatness or elegance, but the time required in the execution is fo confiderable, as to deter them from engaging in the manufacture of fuch as are not absolutely necessary.

The Naudoweffies make the pots in which they boilt their victuals of the black clay or fione mentioned in my journal : which refifts the effects of fire, nearly as well as iron. When they roaft, if it is a large joint, of

C.

hey place nees cloie polture, climate, s, render, On those rom their

y laboriint, leave r hunting parties the former will not deign to bring home the game, but fend their wives for it, though it lies at a very confiderable diftance.

The women place their children foon after they are born on boards fuffed with toft mois fuch as is found a moraffea or meadows. The child is laid on its back in one of this kind of cradles, and being wrapped in fkins or cloth to keep it warm, is fecured in it by fmall bent pieces of timber.

To these machines they fasten strings, by which they have the to the branches of trees; or if they find not trees at hand, fasten them to a stump or stone, whils they transact any needful business. In this position are the children kept for fome months, when they are taken out, the boys are suffered to go naked and the girls are covered from the neck to the knees with a shift and a short peticoat.

The Indian women are remarkably decent during their mentitual illnefs. Those nations that are most remote from the European fettlements, as the Naudoweffes,&c. are more particularly attentive to this point; tho' they all without exception adhere in fome degree to the fame cuftom.

In every camp or town there is an apartment appropriated for their retirement at this time, to which both fingle and married retreat, and feelude themfelves with the utmost firstenels during this period from all fociety. Afterwards they purify themfelves in running fireams, and return to their different employments.

I'be men on these occasions most carefully avoid holding any communication with them; and the Nandowellies are forigid in this observance, that they will not suffer any belonging to them to fetch fuch things as are necessary, even inclifrom these female lunar retreats, tho' the want of them is attended with the utmost inconvenience. They are also so fuperstitious as to think, if a pipeltem cracks, which among them is made of wood, that the possibility has either lighted it at one of these poluted first or held fome converse with a woman during her retirement, which is effeemed by them most difgrace. ful and wicked.

The Indians are extremely circumspect and deliber. ate in every word and action ; there is nothing that hur. ries them into any intemperate warmth, but that inveter. acy to their enemies, which is rooted in every Indian reart, and never can be eradicated. In all other inftan. ces they are cool, and remarkably cautious, taking care not to betray on any account whatever their emotions. If an Indian has discovered that a friend is in danger of being intercepted and cut off by one to whom he has rendered himfelt obnoxious ; he does not inform him in plain and explicit terms of the danger he runs by purfuing the track near which his enemy lies in wait for him, but he first coolly afks him which way he is going that day ; and having received his answer, with the same in. difference tells him that he has been informed that a dog lies near the loot, which might prohably do him a milchief. This hint proves sufficient ; and his friend avoids the danger with as much caution as if every defign and motion of his enemy had been pointed out to him.

This apathy often flews itfelf on occasions that would call forth all the fervor of a fusceptible heart. If an Indian has been absent from his family and friends many months, either on a war or hunting party, when his wife and children meet him at some diffance from his habitation, inftead of the affectionate fenfations that would naturally arife in the break of more refined beings. and be productive of mutual congratulations, he continues his courfe without paying the leaft attention to those who furround him, till he arrives at his home. He there fits down and with the fame unconcern as if he had not been ablent a day, Imokes his pipe ; thoic of his acquaintance who followed him, do the fame ; and perhaps it is feveral hours before he relates to them the incidents which have befallen him during his ablence, though perhaps he has left a father, brother, or fon on the field, whole lofs he ought to have lamented, or has been unfuccefsful in the undertaking that railed him from his home.

that would rt. If an ends many when his from his trons that efined beations, he attention his home. concern as pe; those the fame ; s to them is ablence, r fon on d, or has atted him

Has an Indian been 'engaged for feveral days in the chafe, or any other laborious expedition, and by accident continued thus long without food, when he arrives at the hut or tent of a friend where he knows his wants may be immediately fupplied, he takes care not to flow the leaft fyonptoms of impatincee. or to betray the extreme hunger by which he is tortured ; but on being invited in, fits contentedly down, and fmokes his pipe with as much compolure as if every appetite was allayed, and he was perfectly at eafe ; he does the fame if among ftrangers. This cuftom is firicitly adhered to by every tribe, as they eltern it a proof of fortitude, and think the reverfer would entitle them to the appelation of old womon.

If you tell an Indian that his children have greatly, fignalized themfelves against an enemy, have taken many scalps, and brought home many prisoners, he does not appear to seel any extraordinary pleasure on this orculon; his answer generally is, "it is well," and he makes very little enquiry about it. On the contrary, if you inform him that his children are flain or taken prismers, he makes no complaints, he only replies, "it does not fignify;" and probably; for some time at least, afkenot how it happened.

This feeming indifference, however, does not proceed from an entire suppretion of the natural affections; for notwithstanding they are esteemed favages, I never faw among any other people greater proofs of parental or filial tenderness; and although they meet their wives after a long absence with the focial indifference just mentioned, they are not, in general, void of conjugal affection.

Another peculiarity is observable in their manner of paying their visits. If an Indian goes to visit a particular perion in a family, he mentions to whom his visit is intended, and the rest of the family immediately retiring to the öther end of the hut or tent, are careful not to come near enough to interrupt them during the whole of the conversition. The fame method is pursued if a man goes to pay his respects to one of the other fer t

but then he must be careful not to let love be the subject of his discourse, whill the day tight remains.

The Indians discover an amasing fagacity, and acquire with the greatell readiners any thing that depends upon the attention of the mind. By experience and an acute abfervation, they attain many perfections to which the Europeans are firangers. For initance they will crole a foreft or a place which is two hundred miles in breaded, and reach with great exactners the point at which they intended to arrive, keeping during the whole of that space in a direct line, without any material deviations ; and this they do with the fame cafe, whethen the weather be fair or cloudy.

With equal acutencis will they point to that part of the heavens the fun is in, though it be intercepted by clouds or fogs. Besides this, they are able to purfue with incredible facility the traces of man or bealt, either on leaves or grais ; and on this account it is with great difficulty a flying enemy effeques diffeovery.

They are indebted for these talents not only to nature, but to an extraordinary command of the intellectual faculties, which can only be acquited by an puremitted attention, and by long experience.

They are in general very happy in a retentive memory 1 they can reconsulate every particular that has been traced of in connecil, and semember the easel time when these were held. Their belts of wampum preferve the fubliance of the treaties they have concluded with the neighboring tribes for ages back, to which they will append, and refer with as much perforculty and readings, as Europeans can to their written records.

Every nation pays great refpect to old age. The advice of a father will feldom meet with any extraordinary attention from the young Indians, probably they receive it with only a bare affect; but they will tremble before a grandfather, and fubmit to his injunction with the nemotic electity. The words of the ancient part of their community are effected by the young as oracles. If they take during their funting parties any game that is reckoned by them delicions, it is immediately prefented to the eldelt of their relations.

They never fuffer themfelves to be overburdened with care, but live in a flate of perfect tranquility and contentment. Being naturally adolent, if provision jul fufficient for their fublifience can be procured with intie trouble, and near at hand, they will not go far, or take any estraordinary pains for it; though by fo doing they might acquire greater plenty, and of a more estimable kind.

Having much leiture time they indulge this indolence to which they are to prone, by eating, drinking, or fleeping, and rambling about in their towns or camps Buy when neceffity obliges them to take the field, either to oppose an enemy, ar to procure themfelves food, they are alert and indefatigable. Many inflances of their idivity, on these occasions, will be given when I treat of their wars:

The infatuating spirit of gaming is not coafined to Earope i the Indians also feel the bewitching impulse and often loose their arms, their apparel, and every thing they are pollefied of. In this case, however, they do not follow the example of more refined gamelters; for they neither murmer not repine; not a fretful word elcapes them, but they bear the sowns of fortune with. a philosophic composite!

The greatest blemish in their character is that favage disposition which impers them to treat their enemies with a feverity every other nation shudders at. But if they are thus barbarous to those with whom they are at war, they are friendly, hospitable, and humane in peace. It may with truth be faid of them that they are the worst enemies, and the best friends, of any people in the whole world

The Indians in general are ftrangers to the paffion of paloufy ; and brand a man with folly that is diffruitful of his wife. Among fome bands the very idea is not how i as the most abandoned of their young men very rulely attempt the virtue of married women, nor do there often put themfelves. In the way of folicitation. Yet the Indian women in general are of an amorous temperature, and before they are married are not the kit elterned for the indifference of their paffions. The Indians in their common flate are firangers to all diffinction of property, except in the articles of domentic use, which every one confiders as his own, and increases as circumflances admit. They are extremely liberal to each other, and supply the deficiency of their friends with any superflaity of their own.

In dangers they readily give affiftance to thole of their band, who ftand in need of it, without any expectation of return, emept of thole just rewards that are always conterred by the Indians on merit. Governed by the plain and equitable laws of nature, every one is rewaited folely according to his deferts ; and their equality of condition, manners and privileges, with that conflant and fociable familiarity which prevails throughout every Indian nation, animates them with a true and patriotic fpirit, that tends to the general good of the fociety to which they belong.

If any of their neighbors are bereaved by death, or by an enemy of their children, thole who are poffelled of the greatest number of flaves, supply the deficiency; and these are adopted by them, and treated in every respect as if they really were the children of the perion to whom they are projected. The Indians, except thole who live adjoining to the

The Indians, except those who live adjoining to the European colouiss, can form to themselves no idea of the value of money; they confider it when they are made acquainted with the uses to which it is applied by other nations, as the fource of innumerable evils. To it they attribute all the mischiefs that are prevalent a mong Europeans, such as treachery, plundering, devaltations, and murder.

They effects it irrational that one man fhould be polfeffed of a greater quantity than another, and are amazed that any bonor fhould be annexed to the poffeffion of it. But that the want of this ufflefs metal fhould be the caufe of depriving perfons of their liberty, and that on account of this partial diffribution of it, great numbers fhould be immured within the dreamy walls of a prifon, cut off from that fociety of which they conflitute a past, exceeds their belief. Nor do they fail, or hearing this part of the European fyftem of government

ALC: A LESS

THEIR MAINOD OF RECEOFING TIME, Cd.

ONSIDERING their ignorance of altronomy, ne is very rationally divided by the Indians. Those the interior parts (and of those I would generally be iderflood to fpeak) count their years by winters; or, they express themselves; by fnows.

Some nations among them reckon their years by oons, and make them confill of tweive fynodical or mar months, oblerving, when thirty moons have wanto add a supernumerary one, which they term the moon ; and then begin to count as before. They y a great regard to the first appearance of every moon, d on the occasion always repeat fome joyful founds, etching the fame time their hands towards it. Every month has with them a name exprellive of Mr

feason; for inflance, they call the month of March (in which their year generally begins at the first New Moon after the vernal Equinox) the Worm Month of Moon; because at this time the worms quit their intreats in the bark of the trees, wood, &c, where they have sheltered themselves during the winter.

The month of April is termed by them the month of Plants. May, he month of Flowers June the Fiot Moon. July the Buck Moon. Their reasons for this denominating these is obvious.

Auguit, the Sturgeon Moon ; because in this month they catch great numbers of that fifh

September, the Corn Moon ; because in that month they gather in their Indian corn

October, the Iravelling Moon; as they leave at this time their villages, and travel towards the place where they intend to hunt during the winter

November, the Beaver Moon; for in this month the beavers begin to take fhelter in their houles, having laid up a fufficient flore of provisions for the winter leafon.

December, the Hunting Moon ; because they em-

January, the Cold Moon, as it generally freezes har der, and the cold is more intenfe in this than in any other month.

February, they call the Snow Moon, becaufe more fnow commonly falls during this month, than any other in the winter.

When the moon does not thine they fay the moon is dead; and fome call the three laft days of it the naked days. The moon's first appearance they term its coming to life again.

They make no division of weeks; but days they count by fleeps; half days by pointing to the fun at noon; and quarters by the rifing and the fetting of the fun: to express which in their traditions they make use of very fignificant hierogly phics.

The indians are totally unkilled in geography at well as all the other feiences, and yet, as I have before hinted, they draw on their birch bark very exact chart or maps of the countries with which they are acquaint

ave before ract chatt acquaint The latitude and longitude is only wanting to makethem tolerably complete.

Their fole knowledge in altronomy confifts in being ale to point out the pole flar; by which they reguine their courfe when they travel in the night.

They reckon the diffance of places not by miles or leagues, but by a days journey, which, according to the belt calculations I could make, appears to be about wenty English miles. These they also divide into halves and quarters, and will demonstrate them. in their maps with great exactness; by the the hieroglyphics just mentioned, when they regulate in council their war parties, or their most distant hunting excursions.

They have no idea of anthmetic; and though they are able to count to any number, figures as well as letters appear mysterous to them, and above their commehention.

During my abode with the Naudoweffies, some of the chiefs observing one day a draft of an eclipie of the moon, in a book of altronomy which I held in my hand, they defired I would permit them to look at it. Happening to give them the book shut, they began to count the leaves till they came to the place where the plate was. After they had viewed it, and asked many questions relative to it, I told them they need not to have taten so much pains to find the bas on which it was drawn, for I could not only tell in an inftant the place, without counting the leaves, but also how many pretended it.

They feemed greatly amazed at my affertion, and begged that I would demonstrate to them the possibility of doing it. To this purpose I defired the chief that held the book, to open it at any particular place, and jult shewing me the page catefully to conceal the edges of the leaves, so that I might not be able to count them.

This he did with the greatest caution; notwithstanding which, by looking at the folio, I told him, to his great surprise, the number of leaves. He counted them regplarly over, and discovered that I was exact. And when, after repeated trials, the Indians found I could

do it with great readinels, and without ever erring in my calculation, they all feemed as much aftonished is if I had raifed the dead. The only way they could ac. count for my knowledge, was by concluding that the book was a spirit, and whispered me answers to what ever I demanded of it.

This circumstance, trifling as it might appear to those who are less illiterate, contributed to increase my confequence, and to augment the favorable opinion they already entertained of me.

CHAPTER V.

OF THEIR GOVERNMANT, UE.

EVERY separate body of Indians is divided inte bands or tribes ; which band or tribe forms a little community with the nation to which it belongs. As the nation has fome particular fymbol by which it is diffinguilhed from others, fo each tribe has a badge from which it is denominated ; as that of the eagle, the papther, the tiger, &c. &c. One band of the Naudoweffies is represented by a snake, another a tortoife, a third a squinrel, a fourth a wolf, and a fifth a buffalo. Throughout every nation they particularize themfelves in the fame manuer, and the meaneft perfon among them will remember his lineal defcent, and diffinguish himself by his refpective family.

Did not many circumstances tend to confute the fup polition, I flould be almost induced to conclude from this diffinction of tribes, and the particular attachment ci the Indians to them, that they derive their origin, a tonie have afferted, from the lfraelites.

Belides this, every nation diftinguifh themfelves by the manrer of confiructing, their tents or huts. And four their a well verfed are all the Indians in this diffinction, the fuch then have appends to be no difference on the nicelt of all enable

elves by the nction, that

evation made by an European, yet they will immedistely difcover, from the polition of a pole left in the round, what nation has encimped on the fpot many months before.

143

Every band has a chief who is termed the great chief or chief warrior ; and who is cholen in confideration of his experience in war, and of his approved valor, to direct their military operations, and to regulate all concerns belonging to that department, But this chief is not confidered as the head of the fate ; belides the great warrior who is elected for his warlike qualifications, there is another who enjoys a pre-eminence as his creditary right, and has the more immediate management of their civil affairs. This chief might with greater. propriety be denominated the Sachem ; whole affint is necessary in all conveyances and treaties, to which he affixes the mark of the tribe or nation.

Though these two are confidered as the heads of the and, and the latter is usually denominated their king, tet the Indians are lenfible of neither civil or military abordination. As every one of them entertains a high opinion of his confequence, and extremely tenacious of his liberty, all injunctions that carry with them the apmarance of a politive command are inflantly rejected with fcorn.

On this account, it is feldom that their leaders are fo indifcreet as to give out any of their orders in a peremptory fule ; a bare hint from a chief that he thinks fuch thing necellary to be done, inftantly aroufes an emulaton among the inferior ranks, and is immediately execud with great alacrity. By this method the difguilful part of the command is evaded, and an authority that falls little fhort of an abfolute fway inflituted in its room. Among, the Indians no visible form of government is stablished; they allow of no fuch diffinction as magesrate and fubject, every one appearing to enjoy an indeandence that cannot be controlled. The object of govmment among them is rather foreign than domethic; And to for their attention feems more to be employed in prefervag fuch an union among the members of their tribes as he nicelt of will enable them to watch the motions of their enemies,

and act against them with concert and vigor, than to maintain interior order by any public regulations. If a scheme that appears to be of service to the community is proposed by the chief, every one is at liberty to choose whether he will affilt in carrying it on ; for they have no compulsory laws that lay them under any restrictions. If violence is committed or blood shed, the right of revenging these missemenors is left to the family of the injured : the chiefs assume neither power of inflicting or moderating the punishment.

Some nations, where the dignity is hereditary, limit the fucceffion to the female line. On the death of a chief, his fifter's fon fometimes fucceeds him in preffer, ence to his own fon, and if he happens to have no fifter, the nearest female relation assumes the dignity. This accounts for a woman being at the head of the Winnebago nation, which, before I was acquainted with their laws, appeared strange to me.

Each family has a right to appoint one of its chief to be an affiliant to the principal chief, who watche over the interest of his family, and without where confern norming of a public nature can be carried into ere cution. These are generally chosen for their ability in speaking; and such only are permitted to make oration in their councils and general affectibles.

In this body, with the hereditary chief at its head the fupreme authority appears to be lodged; as by it determination every transaction relative to their hunting to their making war or peace, and to all their public concerns are regulated. Next to thefe, the body of war riors which comprehends all that are able to bear arms hold their rank. This division has fometimes at its head the chief of the nation, if he has fignalized himself b any renowned action, if not, fome chief that has render ed himself famous.

In their councils, which are held by the foregoinmembers, every affair of confequence is debated ; and no enterprife of the leaft moment undertaken, unleis i there meets with the general approbation of the chieft They commonly affemble in a but or tent appropriate to this purpose, and being feated in a circle on the

IV ANY of the Indian nations neither make use of bread, falt, or fpices ; and fome of them have never fen or tafted of either The Naudoweffies, in particplar, have no bread, nor any fubilitute for it. They eat the wild rice which grows in great quantities in difforegoint frent parts of their territories; but they boil it and ated ; and at it alone. They also est the field of the beats they at it alone. They also eat the flesh of the beasts they till, without having recourfe to any farinaceous fubfance to abforb the groffer particles of it. And even when they confume the fugar which they have estraded

from the the maile tree, they use it not to render fone other food palatoble; but generally eat it by itself. Neither have they any idea of the use of milk alshough they might collect great quantities from the buffalo or elk; they only confider it as propper for the nutriment of the young of these beafts during their tender state. I could not perceive that any inconveniency attended the total difuse of articles effected fo necessary, they are in general healthy and vigorous

One difh however, which answers nearly the fame purpose as bread, is in use among the Ottagaumies, the Saukies, and the more caftern nations where Indian com grows, which is not only much effermed by them, but is reckoned citremely palatable by all the Europeans who enter their dominions. This is sumposed of their untipe com as before deferibed, and beans in the fame Aate, boiled together with beat's field, the fat of which moiltens the pulse, and renders it beyond comparison delicious. They call this food Succatos.

The Indians are far from being Cannibals, as they are faid to be. All their victuals are either roafted or boiled; and this in the extreme. Their drink is generally the broth in which it has been boiled.

Their food confifts of the field of the bear, the buffalo, the elk, the deer, the beaver, and the racoon; which they prepare in the manaer jult mentioned. They ufually eat the field of the deer which is naturally dry, with that of the bear which is fet and juicy; and though the latter is extremely rich and luscious, it is never known to cloy.

In the pring of the year the Naudoweffies eat the infide back of a thrub, that they gather in fome part of their country; but I could pather learn the name of it, or difcover from whence they got it. It was of a brittle nature and eafily matricated. The tafte of it was a greeable, and they faid it was extremely nourifhing. In flavor it was not unlike the turnip, and when received into the mouth refembled that root both in its pulpous and frangible nature.

The lower ranks of the Indiane are encoedingly nafty

They usually dance either before or after every meals and by this cheerfulness probably render the Great Spirto whom they confider the mielves as indebted for every good, a more acceptable facrifice than a formal ad unamimated thanksgiving. The men and women wilt apart : and each fex invite by turns their companions, to partake with them of the food they happen to have ; but in their domeftic way of living the men and "公安县之前,在海东大部城中,一边部分事 women eat together.

No people are more holpitable, kind, and free than the Indians. They will readily thare with any of their own tibe the last part of their previsions, and even with hole of a different nation if they chance to come in when they are eating. Though they do not keep one ommon flock, yet that community of goods which is o prevalent among them, and their generous disposiion, render it nearly of the fame effect. And the article the When the chiefs are convened on any public bufinefs they always conclude with a feast, at which their festive ty and cheerfulnels knows no limits.

They always dance, as I have observed, at their feasts. In these as well as all other dances, every man rifes in his turn, and moves about with great freedom and boldsels; finging as he does fo, the exploits of his succetors. During this the company who are feated on the ground in a circle, around the dancer, join with him in making the cadence, by an odd tone, which they ut ter all together, and which founds, "Heh, heh, heh." These notes, if they might be fo termed, are articulated with a hayfh accent, and trained out with the utmost force of their lungs: fo that one would imagine their strength mult be toon exhautted by it; inflead of which, they repeat it with the fame violence during the whole of their entertainment.

The women particularly those of the western nations. dance very gracefully. They carry themfelves ered, and with their arms hanging down clofe to their fides, move first to the right, and then back again to the left. This movement they perform without taking fleps as an European would do, but with their feet conjoined; moving by turns their toes and heels. In this manner they glide with great agility to a certain diftance, and then return; and let those who join in the dance be ever fo numerous, they keep time to exactly with each other, that no interruption enfues. During this, at flated periods, they mingle their farill voices, with the hoarfer ones of the men, who at around (for it is to be observed that the fexes neverintermix in the fame dance) which, with the mulic of the drums and chichicoes; make an agreeable harmony. in the

The Indians have feveral kind of dances, which they use on different occasions, as the Pipe or Calumet Dance, the War Dance, the Marriage Dance, and the Dance of the Sacrifice. The movements in every one of these are diffimilar; but it is almost impossible to convey any idea of the points in which they are unlike.

Different nations likewife vary in their manner of dancing. The Chipeway throw themfelves into a greater variety of attitudes than any other people; fometimes they hold their heads creft, at others they bend them almost to the ground; they recline on one fide,

1.5%

hich they et Dance, he Dance he of these nvey any

anner of o a greate; iomeney bend one fide, ind immediately after on the other. The Naudoweffies arry themfelves more upright, flep firmer, and move ore gracefully. But they all accompany their dances with the difagreeable noise jult mentioned in the field of the Pipe Dance is the principal, and the most pleafing to a spectator of any of them, being the leaft franne, and the movement most graceful. It is but on parficular occasions that it is pled i as when ambaffadors, for an enemy arrive of of peace, of when anpers of eminence pais anoug, their territories.

"Flie War Dance, which they use both before they to dit on their war parties, and on their seturn from them, finites terror into firangers. It is performed, as the others, amidil a circle of warriors; a chief generalby begins it, who moves from the right to the left, fingmg'at the fame time both his own exploits, and those of is ancelters. When he has consluded his account, of any memorable action, he gives a violent blow with his war club against a post that is fixed in the ground, near the outer of the affembly, for this purpose.

"Env one dances in his turn, and recapitulates the wondrous deeds of his family, till they all at last join in he dante. Then it becomes truly alarming to any franger that happens to be among them, as they throw memietves into every horrible and terrifying polture that can be imagined, rehearling at the lame time the mets they expect to act at and their enemies in the field. Buting this they hold their thang knives in their hands, ith which, as they whirf about, they are every moment in danger of cutting each other's throats ; and did they. for thun the threatened mitchief with inconceivable dexcrity; it could not be avoided. By these motions they intend to represent the manner in which they kill, fcalp, and take their prifoners. I'o heighten the fcene, they fet up the fame hideous yells, cries, and war whoops they ule in time of action : fo that it is impoffible to confider them in any other light than as an allembly of demons. I have frequently joined in this dance with them, but h loon cealed to be an amulement to me, as I could not By side my apprelientions of receiving fome dreadful

wound, that from the violence of their geftures mut have proved mortal

I found that, the nations to the weftward of the Milli Sppi, and on the borders of Lake Superior, fill continno to make nie of the Pavewaw or Black Dance. The people of the colonies tell a thouland ridiculous fories of the devil being railed in this dance by the Indiana But they allow that this was in former times, and is now nearly extind among thole who five adjacent to the European fettlements ... However, & diforvered that it was fill used in the interior parts ; and though I did not ac tually fee the devil railed by it. I was witnefs to fom fccaes that could only be performed by fuch as deal with him, or were very orgert and destrous jugglers. Whilf I was among the blowdowetlies, s.danes which shey thus termed, was performed. Before the dance began, one of the Indians was admitted into a fociety which they denominated Wahon Kitchewah, that is, the Friendly Society of the Spirit. I his fociety is compoled of perions of both teres, but fush only can be admitte ed into it as are of unerceptionable character, and who secsive the appropation of the whole body. To this admillion faceeeded the Pawwaw Dance (in which I law nothing that could give rife to the reports I had heard) and the whole, according to their ufual cultom, concluded with a grand feat,

The initiation being attended with fome very ingu lar circumliances, which, as I have before obferved mult be either the effect of magic, or of amazing dex terity, I shall give a particular account of the whole procedure. It was performed at the time of the new moon, in a place appropriated to the purpose, near the centre of their camp, that would contain about two hundred people. Deing a ftranger, and on all occasions treated by them with great civility, I was invited to fee the ceremony, and placed clofe to the rails of the enclofure.

Hoput twelve o'clock they began to allemble ; when the fun shope bright, which they confider as a good omen, for they never by choice hold any of their pub-be meetings unless therefy be clear and anclouded. A

their best apparel; and after them came the head information of chiefs first appeared, who were dreffed information, clad in a long robe of rich furs, that trailed on a ground, attended by a retinue of fifteen or twenty rions, painted and dreffed in the gayest manner. Next lowed the wives of fuch as had already been admittlines the fociety; and in the rear a confused heap of a lower ranks, all contributing as much as lay in their ower to make the appearance grand and fhowy.

When the affembly was feated, and filence proclaimtope of the principal chiefs arole, and in a fhort but afferly speech informed his audience of the occalion when we will be acquainted them that one of their only men willed to be admitted into their fociety is at taking him by the hand prefented him to their view, king them at the fame time, whether they had any bection to his becoming one of their community. No objection being made, the young candidate was beed in the centre, and four of the chiefs took their fta-

the close to him ; after exhorting him, by turns, not built under the opperation he was about to go through at to behave like an Indian and a man, two of them ob hold of his arms, and caufed him to kneel; anotht placed himfelf behind him, to as to receive him when e fell, and the laft of the four retired to the diffance of bout twelve feet from him exactly in front.

This difpolition being completed, the chief that flood effore the kneeling candidate; began to fpeak to him with an audible voice. He told him that he himfelf as now agitated by the fame fpirit which he fhould in few moments communicate to him; that it would nike him dead, but that he would inftantly be reflored gain to life: to this he added, that the communication owever terrifying, was a necessary introduction to the dynatages enjoyed by the community into which he was on the point of being admitted.

As he fooke this, he appeared to be great agitated ; ill at fait his emotions became fo violent, that his countrance was difforted, and his whole frame convulted. At this juncture he threw fomething that appeared both the fame and color lists a fmall bean, at the young many

which feemed to enter his mouth, and be infantly fell as motionlefs as if he had been fhot. The chief that was placed behind him received him in his arms, and, by the affiftance of the other two, laid him on the ground to all appearance bereft of life.

Having done this, they immediately began to rub his limbs, and to firike him on the back, giving him fuch blows as feemed more calculated to ftill the quick, than to raife the dead. During these extraordinary applications, the speaker continued his harangue, defiring the spectators not to be surprised, or to despair of the young man's recovery, as his present inanimate situation proceeded only from the forcible opperation of the spirit. on faculties that had hitherto been unused to imspirations of this kind.

The candidate lay feveral minutes without fenfe or motion; butatlength, after receiving many violent blows he began to difcover fome fymptons of returning life — Thefe, however, were attended with ftrong convultions, and an apparent obstruction in his throat. But they were foon at an end; for having difcharged from his month the bean, or whatever it was that the chief had thrown at him; but which on the closest infpection I had not perceived to enter it, he foon after appeared to be tolerably recovered.

This part of the ceremony being happily effected, the officiating chiefs difrobed him of the clothes he had ufually worn, and put on him a fet of apparel entirely new. When he was dreffed, the fpeaker once more took him by the hand and prefented him to the fociety as a regular and thoroughly initiated member, exhorting them, at the fame time, to give him fuch neceffary affiftance, as being a young member, he might frand in need of. He then also charged the newly elected brother to receive with humility, and to follow with punctuality the advice of his elder brethren.

All those who had been admitted within the rails, now formed a circle around their new brother, and the mulic firking up, the great chief fung a fong, celebrating as usual their martial explicit. The only mulic they make use of is a drum, which is

remponed of a piece of a hollow tree curioufly wrought, and over one end of which is firained a fkin, this they beat with a fingle flick, and it gives a found that is far from harmonious but it just ferves to beat time with. To this they fometimes add the chichicose, and in their war dances they likewife use a kind of fife, formed of a reed, which makes a thrill harfh noife.

The whole affembly were by this time united and the ance began; feveral fingers affilted the mufic with their voices, and the women joining in the chorus at tertain intervals they produced together a not unpleafing but favage harmony. This was one of the molt agreeable entertainments I faw whilk I was among them.

I could not help laughing at a fingular and childifh infom I-observed they introduced into this dance, and which was the only one that had the least appearance of conjuration. Molt of the members carried in their hands an otter or martin's skin, which being taken whole from the body and filled with wind on being compressed made a fqueaking noife through a fmall piece of wood organically formed and fixed in its mouth. When this infrument was prefented to the face of any of the company, and the found emitted, the perfon receiving it infantly fell down to appearance dead. Sometimes two or three, both men and women, were on the ground together ; but immediately recovering, they role up and joined again in the dance. This feemed to afford even the chiefs themfelves, infinite divertion: 1 afterwards learned that these were their Dii Penates or Household Gods.

After fome hours fpent in this manner the feast began; the diffues being brought near me. I perceived that they confisted of dog's flesh; and I was informed that all their public grand feasts they never made use of any other kind of food. For this purpose, at the feast I am now speaking of, the new candidate provides fat dogs, if they can be procured at any price.

In this culom of cating dog's flefh on particular occalions, they refemble the inhabitants of fome of the countries that lie on the north call borders of Afia. The author of the account of Kamichatka, published

by order of the empreis of Ruffia (before referred to) informs us, that the people inhabiting Koreka, a country north of Kamfchatka, who wander about in hordes like the Arabs, when they pay their worthip to the evil beings kill a rein deer or a dog, the fielh of which they eat, and leave the head and tongue flicking on a pole with the front towards the east: Alfo that when they are a. fraid of any infectious diffemper, they kill a dog, and winding the guts about two poles, pais between them. These coftoms, in which they are nearly imitated by the Indians, feem to add friength to my fupposition, that America was first peopled from this quarter.

I know not under what clais of dances to rank that performed by the Indians who came to my tent when I landed near Lake Pepin, on the banks of the Miffifippi as related in my journal. When I looked out, as I there mentioned, I faw about twenty naked young Indians, the molt perfect in their flape, and by far the handfoment of any I had ever feen, coming towards me and dancing as they approached, to the mulic of their drums. At every ten or twelve yards they halted and fet up their yells and cries.

When they reached my tent, I asked them to come in; which, without deigning to make me any anfwer, they did. As I observed that they were painted red and black, as they usualey are when they go against an enemy, and perceived that fome parts of the war dance were intermixed with their other movements, I doubted not but they were let on by the inimical chief who had refused my falutation : 1 therefore determined to fell my life as dear as possible. To this purpose, I remion of th ceived them fetting on my cheft, with my gun and formed th pistols beside me, and ordered my men to keep a they usua watchful eye on them, and to be also upon their bappen to guard

The Indians being entered, they continued their dance alternately, finging at the fame time of their heroic en d to imp ploits, and the fuperiority of their race over every othered an e ei people. To enforce their language, though it was in the mo-uncommonly nervous and exprefive, and fuch as would beir wive of itfell have carried terror into the firmest heart, a thom I f

referred to) ka, a counhordes like evil beings, ey eat, and le with the hey are a. a dog, and ween them. mitated by supposition, arter. o rank that tent when I e Miffifippi, d'out, as l d young In. by far the owards me ific of their halted and

to come in;

head of every period they flruck their war clubs aminit the poles of my tent, with fuch violence, hat I expected every moment it would have tumbled on us. As each of them, in dancing round paffed tole by me, they placed their right hands over their res, and coming close to me, looked me fleadily in the ace, which I could not conitrue into a token of frieadhip. My men gave themfelves up for loft, and I acknowledge for my own part, that I never found my appreequions more tumultuous on any occalion.

When they had nearly ended their dance, I prefented to them the pipe of peace, but they would not accept it. Ithen, as my last refource, thought I would try what melents would do : accordingly I took from my cheft ome ribands and trinkets, which I laid before them. These seemed to flagger their resolutions, and to avert in some degree their anger ; for after holding a confultation together, they fat down on the ground, which I confidered as a favorable omen.

Thus it proved, as in a fhort time they received the pipe of peace, and lighting it, first prefented it to me. and then imoked with it themselves. Soon after they took ap the prefents, which had hitherto lain neglected. nfwer, they and appearing to be greatly pleafed with them, departed d red and in a friendly manner. And never did I receive greater inft an ene pleafure than at getting rid of fuch formidable guefts. war dance It was never in my power to gain a thorough know!-, I doubted edge of the deligns of my vilitors. I had fufficient ef who had realon to conclude that they were holtile, and that their ined to fell that, at to late an hour, was made through the infligapole, I remion of the grand Sautor ; but I was afterwards ingun and formed that it might be intended as a compliment which to keep a they usually pay to the chiefs of every other nation who upon their happen to fall in with them, and that the circumstances in their conduct, which had appeared fo fufpicious to their dance me, were merely the effects of their vanity, and defign-heroic ex ed to imprefs on the minds of thole whom they thus vis. every othered an elevated opinion of their valor and prowefs. ugh it was in the morning before I continued my route, feveral of h as would heir wives brought me a prefent of fome fugar, for ft heart, a whom I found a few more ribands.

The dance of the facrifice is not fo, denominated from their offering up at the fame time a facrifice to a ny good or evil fpirit, but is a dance to which the Nau, doweffies give that title from being ufed when any public fortunate circumftance befals them. Whill I refided among them a fine large deer accidentally firaged into the middle of their encampment, which they foon deftroyed. As this happened just at the new moon, they efteemed it a lucky omen ; and having roafted it whole every one in the camp partook of it. After their feaft, they all joined in a dance, which they termed, from its being fomewhat of a religious nature, a dance of the facrifice.

CHAPTER VIII.

OF THEIR HUNTING.

TUNTING is the principal occupation of the Indians; they are trained to it from their earlieft youth and it is an excercife which is effected no lefs honorable than necessary towards their fublistence A desterous hunter is held nearly in as great effimation by them as a diffinguished warrior. Scarcely any device which the ingenuity of man has discovered for enfnaring of defiroying those animals that fupply them with food or whose fixing are valuable to Europeans, is unknown to them.

Whill they are engaged in this exercife, they flak off the indolence peculiar to their nature, and becom active perfevering, and indefatigable. They are equaly fagacious in finding their prey, and in the means the use to deftroy it. They differen the footfleps of the bealts they are in pursuit of, although they are imperceptible to every other eye, and can follow them will certainty through the pathlefs foreft.

The bealts that the Indians hunt, both for their flefh

which they fubfill, and for their fkins, of which they make their apparel, or barter with the Europeans for neceffaries, are the buffalo, the elk, the deer, the moofe, carriboo, the bear, the beaver, the martin, &c. I defer giving a defeription of these creatures here, and shall only at present treat of their manner of hunting them.

The route they shall take for this purpose, and parties that shall go on the different expeditions are fixed in the general councils, which are heldsome time in the lummer, when all the operations for the ensuing winter are concluded on. The chief warrior, whose province it is to regulate their proceedings on this occasion, with great foremulty issues out an invitation to those who choose to attend him; for the Indians, as before observed, acknowledge no superiority, nor have they any idea of compulsion; and every one that accepts it, prepares himself by faiting feveral days.

The Indians do not fall as fome other nations do, on the riches and most luxurous food, but they totally abitain from every kind either of victuals or drink ; and fuch is their patience and refolution, that the most extreeme thirst could not oblige them to take a drop of water ; yet amids this severe abstinence they appear cheerful and happy.

The reasons they give for thus failing, are, that it enables them freely to dream, in which dreams they are informed where they shall find the greatest plenty of game ; also that it averts the displeasure of the evil fpirits, and induces them to be propitious. They also on these occalious blacken those parts of their bodies that are uncovered.

The fait being ended, and the place of hunting made known, the chief who is to conduct them, gives a grand tealt to thole who are to form the different parties; of which none of them dare to partake till they have bathed themfelves. At this fealt, notwithstanding they have falsed to long, they eat with great moderation; and the chief that prelides employs himfelf in rehearing the feats of thole who have been molt successful in the buliness they are about to enter upon. They foon after fet out

on the march towards the place appointed, painted or rather bedawbed with black, amidit the acclamations of all the people.

It is impoffible to defcribe their agility or perfeverance, whill they are in purfuit of their prey; neither thickets, ditches, torrents, pools, or rivers ftop them; they always go firait forward in the most direct line they poffibly can, and there are few of the favage inhabitants of the woods that they cannot overtake.

When they hunt for bears, they endeavor to find out their retreats; for, during the winter, these animals conceal themselves in hollow trees, or make themselves holes in the ground, where they continue without food, whilf the severe weather lasts.

When the Indians think they have arrived at a place where thefe creatures ufually haunt, they form themfelves into a circle according to their number, and moving onward, endeaver as they advance towards the centre, to different the retreats of their prey. By this means, if any lie in the intermediate fpace, they are fure of a roufing them, and bringing them down either with their bows or guns. The bears will take to flight at fight of a man or a dog, and will only make refutance when they are extremely hungry, or after they are wound ed.

The Indian method of hunting the buffalo is by form ing a circle or a fquare, nearly in the fame manner a when they fearch for the bear. Having taken their dif ferent flations, they fet the grafs, which at this time is rank and dry, on fire, and thefe animals, who are extremely fearful of that element, flying with precipitation before it, great numbers are henced in a final compass, and fearcely a fingle one efcapes.

They have different ways of hunting the elk, th deer, and the carriboo. Sometimes they feek them ou in the woods, to which they retire during the fever of the cold, where they are easily flot from behind th trees. In the more northern climates they take the ad vantage of the weather to delively the elk; when th fun has just firength enough to melt the flow, and th trolt in the night forms a kind of creft on the furfac

the elk, the ek them out the feverity n behind the take the ad i when the ow, and the the furface this creature being heavy, breaks it with his forked hoofs, and with difficulty extricates himfelf from it : at this time therefore he is foon overtaken and destroyed.

Some nations have a method of hunting thefe animals which is more easily executed, and free from danger. The hunting party divide themfelves into two bands and choing a ipot near the borders of fome river, one party embarks on board their canoes, whilf the other forming themfelves into a femi circle on the land, the flanks of which reach the flore, let loofe their dogs, and by this means route all the game that lies within thefe bounds ; they then drive them towards the river, into which they no founer enter, than the greatest part of them are immediately dispatched by those who remain in their canoes

Both the elk and the buffalo are very furious when they are wounded; and will return fiercely on their purfuers and trample them under their feet, if the hunter finds no means to complete their defiruction, or does not feek for fecurity in flight to fome adjacent tree; by this method they are frequently avoided, and fo tired with the purfuit, that they voluntarily give it over.

But the hunting in which the Indians, particularly those who inhabit the northern parts, chiefly employ themselves, and from which they reap the greatest advantage, is the beaver hunting. The season for this is throughout the whole winter, from November to April; during which time the far of these creatures is in the greatest perfection. A description of this extraordinary animal, the construction of their huts, and the regulations of their almost rational community, I shall give in another place.

The hunters make use of several methods to destroy them. Those generally practised, are either that of taking them in shares, cutting through the ice, or opening their causeways

As the gyes of these animals are very quick, and their bearing exceedingly acute, great precaution is necessary ry in approaching their bodies; for as they feldom go

far from the water, and their houses are always built close to the fide of some large river or lake, or dams of their own conftructing, upon the leaft alarm they haft. en to the deepelt part of the water, and dive immediate. ly to the bottom; as they do this, they make a great noife by beating the water with their tails, on purpole to put the whole fraternity on their guard.

They take them with fnares in the following manner; though the beavers usually lay up a sufficient flore of provision to ferve for their fublittence during the winter, they make from time to time excussions to the neighboring woods to procure further supplies of food. The hunters having found out their haunts place a trap in their way, baited with fmall pieces of bark, or young thoots of trees, which the beaver has no fooner laid hold of, than a large log of wood falls upon him, and breaks his back ; his enemies, who are upon the watch, foon appear, and inflantly difpatch the helplefs animal. At other times, when the ice on the rivers and lakes is about half a foot thick, they make an opening through it with their hatchets, to which the beavers will foon halten, on being diffurbed for a fupply of freth air. As their breath occasions a confiderable motion in the water, the hunter has fufficient notice of their approach. and methods are eafly taken for knocking them on the head the moment they appear above the furface.

When the houses of the beavers happen to be near a fivulet, they are more eafily deftroyed i the hunter then cut the ice, and fpread a net under it, break down the cabins of the beavers, who never fail to make to wards the deepelt part, where they are entangled and taken. But they must not be suffered to remain there long, as they would foon extricate themfelves with their teeth, which are well known to be excellively tharp and ftrong.

The Indians take great care to hinder their dogs from touching the bones of the beavers The realons they gir for these precautions, are, first, that the bones are foer fixty. Se ceffively hard, that they fpoil the teeth of the dogs : and fecondly, that they are apprehensive they shall so exact they are

perate the fpirits of the beavers by this permittion, as to render the next hunting featon unfuccefsful. The fkins of these animals, the hunters exchange with the Europeans for neceffaries, and as they are more valued by the latter than any other kind of furs, they pay the greatest attention to this species of hunting.

When the Indians deftroy buffalos, elks, deer, &c. they generally divide the flesh of fuch as they have taken among the tribe to which they belong. But in hunting the beaver a few families usually unite and divide the spoil between them. Indeed, in the first instance they generally pay fome attention in the division to their own families; but no jealoufies or murmurings are ever known to arife on account of any apparent partiality in the the the second we be

Among the Naudoweffies, if a perfon fhoots a deer, buffalo, &c. and it runs to a confiderable diftance before it drops, where a perfon belonging to another tribe, being nearer, first flicks a knife into it. the game is confidered as the property of the latter, notwithflanding it. had been mortally wounded by the former. Some nations to the fouthward, I have been ine dogs ; and formed, do not continue their military exerciles after ball fo exa they are fifty. the second be and been and the second s

In every band or nation there is a felect number who

are filled the warriors, and who are always ready to ach either offentively, or defentively, as occasion requires. These are well armed, bearing the weapons commonly in use among them, which vary according to the fituation of their countries. Such as have an intercourse with the Europeans make use of tomahawks, knives, and fire arms; but these whose dwellings are fituated to the westward of the Mississippi, and who have not an opportunity of purchassing these kind of weapons, use bows and arrows, and also the Casse. Tete, or War Club.

The Indians that inhabit fill further to the weftward, a courtry which extends to the fouth Sea, ule in fight a warlike inftrument that is very uncommon. Having great plenty of horfes, they always attack their enemies on horfeback, and encumber themfelves with no other weapon than a flone of a middling fire, curioufly wrought, which they fasten by a string, about a yard and a half long, to their right arms, a little above the elbow. These flones they conveniently carry in their hands, till they reach their enemies, and then fwinging them with great dexterity, as they ride full fpeed, never fail of doing execution. The country which these tribes poffets, abounding with large extensive plains, those who attack them feldom return ; is the fwiftnefs of their horles, on which they are mounted, enables, them to o. vertake even the fleeteft of their invaders."

The Naudoweffies, who had been at war with this reighbors, people informed me, that unlefs they found moraffes or thickets to which they could retire, they were fure of unopeans being cut off: to prevent this they always took care whenever they made an onfet, to do it near fuch retreats as were impaffable for cavalry, they then having a great the territor advantage over their enemies, whole weapons would not to fecure there reach them

there reach them Some nations make use of a javelin, pointed with bone altorned t worked into different forms; but their Indian weapons onlider frain general are bows and arrows, and the thort club al fringement ready mentioned. The latter is made of a very hard at fo ofte wood, and the head of it fashioned round like a ball, a which are of hout three inches and a half diameter; in this round Though

part is fixed an edge refembling that of a tomahawk, ther of fieel or fint, which wer they can procure. The dagger is peculiar to the Naudoweffie nation. and of ancient confiruction, but they can give no account how long it has been in ufe among them. It was originally made of fint or bone, but lince they have had communication with the European traders, they have formed it of fteel. The length of it is about ten inches, and that part close to the handle nearly three in. ches broad. Its edges are keen, and it gradually tapers towards a point. They wear it in a fheath made of deer's leather, neatly ornamented with porcupine quills; and it is utually bung by a firing; decorated in he fame manner, which reaches as low only as the breaft. The curicus weapon is worn by a few of the wincipal chiefs alone, and confidered both as an ufeful parament, and an ornamental badge of fuperiority. I observed among the Naudowellies a few targets or hields' made of raw buffalo hides, and in the form of hole used by the ancients. But as the number of these. was fmall, and I could gain no intelligence of the zre in which they fast were introduced among them, I fupble those I saw had descended from father to fon, for many generations.

The reafons the Indians give of making war against one another, are much the fame as those urged by more civilized nations for diffurbing the tranquility of their reighbors. The pleas of the former are however in genmoraffes or trai more rational and juft, than fuch as are brought by vere fure of Europeans in vindication of their proceedings.

yet the most uncultivated among them are well ac quainted with the right of their community to the domains they posses, and oppose with vigor any encroach. ment on them.

Notwithstanding it is generally supposed that from their territories being fo extensive, the boundaries of them cannot be accertained, yet I am well affured that the limits of each nation in the interior parts are laid down in their rude plans with great precision. By theirs, as I have before observed, was I enabled to regulate my own ; and after the most exact observations and en. quiries I found very few inflances in which they erred. But interest is not either the most frequent or most powerful incentive to their making war on each other. The pattion of revenge, which is the diffing uithing char. acteriftic of these people, is the most general motive, Injuries are felt by them with exquisite fensibility, and vengeance purfued with unremitted ardor. To this may be added, that natural excitation which every Indian becomes fenfible of, as foon as he approaches the age of manhood to give proof of his valor and prowefs. As they are early possessed with a notion that was ought to be the chief business of their lives, that there is nothing more defirous than the reputation of being great warrior, and that the fcalps of their enemies, or a number of prifoners are alone to be effected valua ble, it is not to be wondered at that the young Indian are continually refiles and uneasy if their ardor is reprefied, and they are kept in a flate of inactivity. El ther of these propensitives, the desire of revenge or the gratifications of an impulse, shat by degrees become habitual to them, is fufficient, frequently, to induce them to commit holtilities on fome of the neighboring na tions.

When the chiefs find any occasion for making war they endeavor to aroufe these habitudes, and by the means foon extite their warriors to take atms. I'o the purpose they make use of their martial eloquence, near ly in the following words, which never fails of provin effectual; "the bones of our deceased countrymen is incovered, they call out to us to revenge their writing

well ac. o the doencroach-

that from ndaries of **fured** that ts are laid By theirs, n regulate ons and en. they erred. ent or molt each other. ifting charral motive. libility, and r. To this h every Inroaches the nd prowefs. on that wat s, that there n of being enemies, or med valua ung Indians ardor is re-Rivity. Ei enge or the ees become induce then hboring na

and we mult fatisfy their request. Their fpirits cry out against us. They mult be appealed. The genii, who are the guardians of our honor, infpire us with a refolmtion to feek the enemies of our mundered brothers. Let us go and devour those by whom they were flain. Sit therefore no longer inactive, give way to the impulse of your natural valor, anoint your hair; paint your fate, fill your quivers, cause the forest to refound with your fongs, confole the fpirits of the dead and tell them they thall be revenged."

Animated by these exhortations the warriors fnatch heir arms in a transport of fury, sing the song of war, ad burn with impatience to imbrue their hands in the sood of their enemies.

Sometimes private chiefs affemble fmall parties and take excursions against those with whom they are twar, or fuch as have injured them. A fingle warrior, rompted by revenge or a defire to show his prowers, ill march unattended for feveral hundred miles, to imprife and cut off a straggling party.

Thefe irregular fallies however, are not always approvd of by the elder chiefs, though they are often obliged a connive at them; as in the inflance before given of a Naudoweffie and Chipeway nations

But when a war is national, and undertaken by the community, their deliberations are formal and flow. he elders affemble in council, to which all the head arriors and young men are admitted, where they des ver their opinions in folemn speeches, weighing with attrity the nature of the enterprife they are about to gage in, and ballancing with great fagacity the lyantages or inconveniences that will arile from it. Their priefts are also confuited on the subject, and evh, fometimes, the advice of the most intelligent of their umen is afked.

If the determination be for war, they prepare for it th much ceremony.

The chief warrier of the nation does not on all detions head the war party himfelf, he frequently deties a warrier of whole valor and prudence he has a od opinion. The perfor thus fixed on being first be-

dawbed with black, observes a fatt of several days, during which he invokes the Great Spirit, or deprecates the a ger of the evil ones, holding whilk it lafts no converte with any of his tribe. The man and the

He is particularly careful at the fame time to obferv his dreams, for on these they suppose their success will in a great measure depend ; and from the firm perfus fion every Indian actuated by his own prefumption thoughts is imprefied with, that he shall march forth to certain victory, these are generally favorable to hi wifhes

After he has fafted as long as cuftom prefcribes, h affembles the warriors, and holding a belt of wampun in his hand, thus addresses them :

Brothers ! by the infpiration of the Great Spirit now speak to you, and by him I am prompted to carry into execution the intentions which I am about to dif clofe to you. The blood of our deceased brothers not yet wiped away ; their bodies are not yet covered and I am going to perform this duty to them."

Having made known to them all the motives that in duce him to take up arms against the nation with whom they are to engage, he thus proceeds : " I have them fore refolved to march through the war path to furpri them. We will eat their flefh and drink their blood we will take fcalps and make prifoners; and fhoul we perifh in this glorious enterprife, we shall not be for ever hid in the duft, for this belt shall be a recompend to him who buries the dead." Having faid this, he lay the belt on the ground and he who takes it up declan himfelf his lieutenant, and is confidered as the feccond. command ; this, however, is only done by fome diffi guifhed warrior who has a right by the number of h fealps to the poft.

Though the Indians thus affert that they will eat th field and drink the blood of their enemies, the threat only to be confidered as a figurative expretiion. / No withit anding they fometimes devour the bearts of the they flay, and drink their blood by way of bravado, to gratify in a more complete manner their reven

will eat the the threat i etfion. No arts of tho bravado, o heir reveng et they are not naturally anthropophagi, nor ever feed

The chief is now walked from his fable covering, aninted with bears fat, and painted with their red paint, in fuch figures as will make him appear most terrible to is enerries. He then fings the war fong, and enumentes his warlike actions. Having done this he fixes his eyes you the fun, and pays his adorations to the Great Spirit, in which he is accompanied by all the warpors.

This ceremony is followed with dances, such as I have before deferibed; and the whole concludes with a failt which usually confilts of dog's flesh

This feaft is' held in the hut or tent of the chief warnor, to which all those who intend to accompany him in his expedition fend their dishes to be filled; and during the feast, notwithstanding he has falled to long, he fits composedly with his pipe in his mouth, and recounts the valorous deeds of his family.

As the hopes of having their wounds, thould they receive any, properly treated, and expeditionally cured, mult be fome additional inducement to the warriors to expose hemfelves more freely to danger, the prietits, who are lo their doctors, prepare fuch medicines as will prove efficacious With great ceremony they carry various roots and plants, and pretend that they impart to them the power of healing.

Notwithstanding this superstitutions method of proceeing, it is very certain that they have acquired a knowledge of many plants and herbs that are of a medicinil quality, and which they know how to use with great hills

From the time the refolution of engaging in a war is faen to the departure of the warriors the nights are fpent in effivity and the days in making the needful preparations. If it is thought neceffary by the nation going to war, o folicit the alliance of any neighboring tribe, they fix pon one of their chiefs who fpeaks the fame language if that people well, and who is a good orator, and end to them by him a belt of wampum, on which is pecified the purport of the embaffy in figures that ey-

ery nation is acquainted with. At the figur time he carries with him a hatcher painted red.

As foon as he reaches the camp or village to which he is defined, he acquaints the chief of the tribe with the general tennor of his committion, who immediately affembles a council, to which the embaffador is invited. There having laid the hatchet on the ground he holds the belt in his hand and enters more minutely into the occasion of his embasily. In his speech he invites them to take up the hatchet, and as soon as he has finithed speaking delivers the belt.

If his hearers are inclined to become auxiliaries to his nation, a chief fleps forward and takes up the hatch. ct and they immediately efpolife with fpirit the caufe they have thus engaged to fupport. But if on this application neither the belt or hatchet are accepted, the emisflary concludes that the people whose affiltance he folicits have already entered into an alliance with the foes of his nation, and returns with speed to inform his countrymen of his ill fucces.

The manner in which the Indians declare war against each otner, is by fending a flave with a hatchet, the handle of which is painted red, to the nation which they intend to break with; and the meffenger, notwith. Randing the danger to which he is exposed from the fudden fury of those whom he thus fets at defiance, executes his commission with great fidelity.

Sometimes this token of defiance has futh an inflantaneous effect on those to whom it is presented, that in the first transports of their tury a small party will iffue forth, without waiting for the permiffion of the elder chiefs, and flaying the first of the offending nation they meet cut open the body and stick a hatchet of the fame kind as that they have just received, into the heart of their flaughtered foc. Among the more remote tribes this is done with an arrow or spear, the end of which is painted red. And the more to exasperate, they difmember the body, to show they esteem them not as men, but as old women.

The Indians feldom take the field in large bodies, a fuch numbers would require a greater degree of indul

in to provide for their Jubliftence, during their tedious marches through the dreary forelts, or long voyages ovellikes and rivers, than they would care to beltow. "Their armies are never encumbered with baggage or illitary flores." Each warrior, belides his weapons, arries with him only a mat, and whillt at a diftance from the frontiers of his enemy supports himself with the game he kills or the fifth he catches.

When they pais through a country where they have to apprehentions of meeting with an enemy, they use very little precaution; fometimes there are fearcely a dozen warriers left together; the reft being disperfed in purluit of their game; but though they should have roved to a very confiderable distance from the war path; they are fire to arrive at the place of rendevous by the bout uppointed.

"They always pitch their tents long before fun fet; and being naturally prefumptuous, they take very litle care to guard against a furprife. They place great confidence in their Manitous, or household gods, which they always camy with them; and being perfuaded that they take upon them the office of centinels, they feep very fecurely under their protection.

These Manitous, as they are called by some nations, but which are termed Wakons, that is spirits, by the Naudoweffies, are nothing more than the otter or martin skins I have already described, for which however, they have a great veneration.

After they have entered the enemy's country; no pcople can be more cautious and circumfpect; files are no longer lighted, no more thouting is heard, nor the game any longer purfued. They are not even permitted to fpeak; but mult convey whatever they have to impart to each other by figns and motions.

They now proceed wholly by ftratagem and ambufeade Having different their enemies, they fend to reconnoitre them; and a council is immediately held, during which they fpeak only in whilpers to confider the intelligence imparted by those who were sent out. The attack is generally made just before day break, at which period they suppose their soes to be in the

fides. 1 black and

When

foundeft fleep. Throughout the whole of the preceding night they will lie flat on their faces, without, ftirring ; and make their approaches in the fame pollure, creeping upon their hands and feet till they, are got within bowfhot of those they have defined to delynction. On a fignal given by the chief warrior, to which the whole body makes answer by the most hideous, yell, they all flart up, and discharging their arrows in the same inflant without giving their adversaries time to recover from the confusion into which they are thrown, pour in upon them with their war clubs or tomahawks.

The Indians think there is little glory to be acquired from attacking their enemies openly in the field; their greatest pride is to furprife and destroy. They feldom engage without a manifest appearance of advantage. If they find the enemy on their guard, too. Strongly entrenched. or superior in numbers, they stetize provided they have an opportunity of doing so. And they esteem it the the greatest qualification of a chief warrior, to be able to manage an attack, so as destroy as many of the enemy as possible, at the expense of a few men.

Sometimes they fecure themfelyes behind trees, hillocks, or ftones, and having given one or two rounds, retire before they are difcovered. Europeans, who are unacquainted with this method of fighting too often find to their coft the deftructive efficacy of it

General Braddock was one of this unhappy number. Marching in the year 1755, to attack fort Du Quefne, he was intercepted by a party of French and confederate Indians in their intereft, who by this infiduous method of engaging found means to defeat his army, which confifted of about two thousand brave well difciplined troops. So fecurely were the Indians pofted, that the English fearcely knew from whence or by whom they were annoyed. During the whole of the engagement the latter had fearsely a fight of an enemy; and were obliged to retreat without the fatisfaction of being able to take the least degree of revenge for the havoe, made among them. The Gene. al paid for his temerity- with his life, and was accompanied in his fall by a great num-

Quefne,he confederate us method which condifciplined l, that the rhom they ngagement and were being able woc made crity- with great numher of brave fellows ; whill his invincible enemies had only two or three of their number wounded. When the Indians fucceed in their filent approaches, and are able to force the camp which they attack, a fcene of horror that exceeds description, enfues. The farage fiercenels of the conquerors, and the desperation of the conquered, who well know what they have to expect should they fall alive into the hands of their affailints, occasion the most extraordinary exertions on both The figure of the combatants all befmeared with fides. black and red paint, and covered with the blood of the fain, their horid yells, and ungovernable fury, are not to be conceived by those who have never croffed the Atlantic.

I have frequently been a fpectator of them, and once bore a part in a fimilar icene. But what added to the horror of it was, that I had not the confolation of being able to oppose their favage attacks. Every circumfance of the adventure ttill dwells on my remembrance, and enables me to defcribe with greater perfpicuity the brutal her cencis of the Indians when they have furprifed or overpowered an enemy.

As a detail of the maffacre at fort William Henry, in the year 1757, the scene to which I refer, cannot appear foreign to the defign of this publication, but will here to give my readers a just idea of the ferocity of

this people, I shall take the liberty to infert it, apologizing at the same time for the length of the digression, and those egotisms which the relation renders unavoidable.

General Webb, who commanded the English army in North America, which was then encamped at fort Edward, having intelligence that the French troops under Monf. Montcalm were making fome movements towards fort William Henry, ne detached a corps of about fifteen hundred men, contilling of English and Provincials, to strengthen the garrison. In this party went as a volunteer among the latter.

The apprehentions of the English General were not without foundation; for the day after our arrival we aw lake George (formerly lake Sacrament) to which

it has contiguous, covered with an immenfe number of boats; and in a few hours we found out lines attacked by the French general, who had just landed with elevon thousand Regulars and Canadians, and two thoufand Indians. Colonel Monro, a brave officer, commanded in the fort, and had no more than two thoufand inter hundred men with him, our detailment included.

With these he made a gallant defence, and probably would have been able at last to preserve the fort, had he been properly supported, and permitted to continue his efforts. On every summers to suffered the most honorable terms, his answer repeatedly way. That he yet found himself in a condition to repet the most vigorous attacks his beflegers were able to make : and it he thought his present force infufficient, he could foon be supplied with a greater number from the adjacent army.

But the colonel having acquainted general Webb with his fituation, and defired he would fend him fome freth troops, the general diffatched a meffenger to him with a letter, wherein he informed him that it was not in his power to affilt him, and therefore gave him orders to furrender up the fort on the best terms he could procure. This packet fell into the hands of the French general, who immediately fent a flag of trucz, defiring a conference with the governor.

They accordingly met, atended only by a fmall guard in the centre between the lines; when Monf. Montcalm told the colonel, that he was come in perfon to demand poffeffion of the fort, as it belonged to the king his mafter. The colonel replied, that he knew not how that could be, nor fhould he forrender it up whill it was in his power to defend it.

The French general rejoined, at the fame time delive I happer ering the packet into the colonel's hand, "Ity this authority do I make the requisition." The brave governor had no fooner read the contents of it, and was convinced that fuch were the orders of the commander in chief, and not to be difobeyed, than he hung his heator to tak in filence, and refustantly entered into a negociation.

fmall guard Montcalm in to demand ing his mafot how that lift it was in

time deliv-By this aubrave goverit, and was commander ung his heat egociation.

In confideration of the gallant defence the garrifon had made, they were permitted to march, out with all the honors of war, to be allowed covered waggons to transport their baggage to fore Edward, and a guard to protect them from the fury of the favages. The morning after the capitulation was figned, as day broke, the whole garrilon, now conflitting of about wo thousand men, belides women and children, were drawn up within the lines, and on the point of marching off, when great numbers of the Indians gathered about, and began to plunder. We were at first in hopes mat this was their only view, and fuffered them to proced without oppolition. Indeed it was not in our power to make any, had we been to inclined; for though we were permitted to carry off our arms, yet we were not allowed a fingle round of ammunition. In these hopes however we were difappointed; for prefently ome of them began to attack the fick and wounded, when fuch as were not alle to crawl into the ranks; notwithstanding they endeavored to avert the fury of their enemies by their flirieks or groans, were foon difpatched:

Here we were fully in expectation that the diffurbance would have concluded; and our little army began to move; but in a fhort time we faw the front division driven back, and discovered that we were entirely encircled by the favages. We expected every moment that the guard, which the French by the articles of capitulation, had agreed to allow us, would have arrived, and put an end to our apprehentions; but none appeared. The Indians now began to firip every one without exception of their arms and clothes, and those who made the least refistance felt the weight of their tomahawks.

I happened to be in the rear division, but it was not ong before I thared the fate of my companions. Three, or four of the favages laid hold of me, and whill fome held their weapons over my head, the others diffobed me of my coat, waitcoat, hat, and buckles, omitting not to take from me what money I had in pocket. the lines on to the plain, near, which a French centinel was polted I ran to him and claimed his protection; but he only called me an English dog, and thrust me with violence back again into the midft of the Indians. I now endeavored to join a body of our troops that were crowded together at fome diftance ; but innumer. able were the blows that were made at me with differ. ent weapons as I paffed on ; luckily, however, the fav. ages were to close together, that they could not firike at me without endangering each other. Notwithstand. ing which one of them found means to make a thruft at me with a spear, which grazed my fide, and from another I received a wound, with the fame kind of weapon, in my ankle At length I gained the fpot where my countrymen flood, and forced myfelf into the midle of them. But before I got thus far out of the hands. of the Indians, the collar and wriftbands of my thirt were all that remained of it, and my flefh was fcratch. ed and torn in many places by their favage gripes.

By this time the war whoop was given, and the Indians began to murder those that were nearest to them without diffinction. It is not in the power of words to give any tolerable idea of the horrid fcene that now en. fued; men, women, and children were difpatched in the most wanton and cruel manner, and immediately fcalped. Many of these favages drank the blood of their victims, as it flowed warm from the fatal wound. We now perceived, though too late to avail us, that we were to expect no relief from the French ; and that contrary to the agreement they had fo lately figned to allow us a sufficient force to protect us from these infults, they tacitly permitted them; for I could plainly perceive the French officers walking about at fome diftance, difcourling together with apparent unconcern. For the ponor of human nature I would hope that this flagrant breach of every facred law, proceeded rather from the favage dispolition of the J- ns, which I acknowledge it is fometimes almost impossible to control, and which might now unexpectedly have arrived to a pitch not eafily to be reft ained, than to any premeditated defign in the French commander. An unprejudic.

ed observer would, however be apt to conclude, that a body of ten thousand christian troops, most christian troops, had it in their power to prevent the massacre from becoming to general. But whatever was the caule from which it arole, the confequences of it were. freadful, and not to be paralleled in modern hiltory. As the circle in which I flood enclosed by this time was much thinned, and death feemed to be approaching with haity ftrides, it was proposed by some of the molt refolute to make one vigorous effort, and endeavor to force our way through the favages, the only probshle method of preferving our lives that now remained. This, however desperate, was refolved on, and about wenty of us forung at once into the midft of them. In a moment we were all leparated, and what was the fate of my companions I could not learn till fome months after, when I found that only fix or feven of them effected their defign. Intent only on my own hazardous fituation, I endeavored to make my way through my favage enemies in the best manner possible. And I have often been aftonished fince, when I have recollected with what composure I took, as I did, every necellay flep for my prefervation Some I overturned, being at that time young and athletic, and others I pafed by, dextroully avoiding their weapons; till at laft two very flout chiefs of the most favage tribes, as I could diftinguish by their dress, whose firength I could not refift, laid hold of me by each arm, and began to force me through the crowd.

I now refigned myfelf to my fate, not doubting but that they intended to difpatch me, and then to fatiate their vengeance with my blood, as I found they were hurrying me towards a retired fwamp that lay at fome diftance. But before we had got many yards, an English gentleman of fome diffinction, as I could difcover by his breeches, the only covering he had on, which were of fine fearlet velvet, rushed close by us. One of the Indians inflantly relinquished his hold, and fpringingon this new object, endeavored to feize him as his prey; but the gentleman being strong, threw him on the ground, and would probably have got away, had

not he who held my other, arm, quitted me to affift his brother. I leized the opportunity, and haftened away to join another party of English troops that were yet unbroken, and flood in a body at fome diftance. But before I had taken many fleps, I hastily call my eye towards the gentleman, and faw the Indian's tomahawk gash into his back and heard him utter his last groan; this added both to my speed and desperation.

I had left this flocking icene but a few yards, when a fine boy about twelve, years of age, that had hitherto eicaped, came up to me, and begged that I would let him lay hold of me, fo that he might fland fome chance of getting out of the hands of the favages. I told him that I would give him every affiltance in my power, and to this purpole bid him lay hold; but in 2 few moments he was torn from my fide, and by his fhrieks I judge was foon demolified. I could not help forgetting my own cares for 2 minute, to iament the fate of fo young a fufferer; but it was utterly impoffible for me to take any any methods to prevent it.

I now got once more into the midit of friends, but we were unable to afford each other any fuccor. As this was the division that had advanced the furtheft from the fort, I thought there might, be a poffibility (though but a bare one) of my forcing my way through the outer ranks of the Indians, and getting to a neighboring wood, which I perceived at fome diffance. I was full encouraged to hope by the almost miraculous prefervation I had already experienced.

Nor were my hopes in vain, or the efforts I made ineffectual. Suffice it to fay, that I reached the wood; but by the time I had penetrated a little way into it, my breach was fo exhausted, that I threw myself into a brake, and lay for fome minutes apparently at the laft gafp. At length I recovered the power of n spiration; but my apprehensions returned with all their former force, when I faw feveral favages pais by, probably in purfuit of me, at no very great diffance. In this fituation I knew not whether it was better to proceed, or endeavor to conceal myself where I kay, till

means of their communication with the Europe found its way among them, and made an equal has to what they themselves had done. The methods t purfued on the first attack of that malignant diford rendered it fatal Whilft their blood was in a ftate fermentation, and nature was firiving to throw out peccant matter, they checked her opperations by plun ing into the water ; the confequence was that they ed by hundreds The few that furvived were tra formed by it into hideous objects, and bore with the to the grave deep indented marks of this much drea ed difeafe. 5.45 D 40

Monfieur Montcalm fell foon after on the plains Ouebec

That the unprovoked cruelty of this commander w not approved of by the generality of his countrym I have fince been convinced of by many proofs. U only however, which I received from a perfor who w witness to it shall I at prefent give A Canadian me chant, of fome confideration, having heard of the in render of the English fort, celebrated the fortunate vent with great rejoicings and hofpitality, according t the cultom of that country ; but no fooner aid the ner of the mailacre which enfued reach his ears, than out an immediate flop to his feftivity, and exclaime in the feverelt terms against the inhuman permission declaring at the fame time that those who had conni ed at it, had thereby drawn down, on that part of the king's dominions the vengeance of Heaven. I'o the he added, that he much feared the total lois of the would defervedly be the confequence. How truly th prediction has been verified we well know.

But to return-though the Indians are negligent guarding against furprifes, they are alert and dextron in furprifing their enemies. In their caution and pe feverance in fealing on the party they defign to attac they add that admirable talent, or rather inftinction qualification I have already described, of tracing of shole they are in purfuit of. On the Imoothelt grad on the hardeft earth, and even on the very flones, w they differer the traces of an enemy, and by the in

e Euro per in equal han methods the mant difords s in a flate throw out d ions by plun s that they o d were tran ore with the much dread

e segligent i and dextroution and per ign to attacher infkindlin of tracing on ootheft graft by flones, wi by the lba the footsteps, and the distance between the prints, difpull not only whether it is a man or woman who palled that way, but even the nation to which they long. However incredible this may appear, yet from many proofs I received whils among them of their maxing fagacity on this point, I fee no reason to difedit even these extraordinary exertions of it When they have overcome an enemy, and vistory is clonger doubtful, the conquerors first dispatch all such they think they shall not be able to carry off without reat trouble, and then endeavor to take as many prifners as possible; after this they return to scalp those the are either dead, or too much wounded to be taken with them.

At this bulinefs they are exceedingly expert. They has the head of the difabled or dead enemy, and placing one of their feet on the neck, twilt their left hand, in the hair; by which are always kept in good order talping knives, which are always kept in good order for this cruel purpose, and with a few destrous flockes ake off the part that is termed the fcalp. They are for spedipious in doing this; that the whole time required carcely exceeds a minute. These they preferve as monments of their prowers, and at the fame, time as proofs of the vengeance they have inflicted on their enemies.

If two Indiams foize in the fame inftant a prifoner, and feem to have an equal claim, the contell between hem is foon decided; for to put a fpeedy end to any differe that might arife, the perfor that is apprehenfive he shall lose his expected reward, immediately has retourse to his tomahawk or war club, and knocks on the head the unhappy cause of their contention.

Having completed their purposes, and made as much havoc as possible, they immediately retire towards their own country, with the spoil they have acquired, for fear of being pursued.

oothelt grate Should tis be the cafe, they make use of many fraty flones, we sgeme to elude the fearches of their purfuers. They by the that fometimes featter leaves, fand, or due, over the prints of their feet; fometimes tread in each other's footfieps; and fometimes lift their feet to high and fread to light) ly, as not to make any imprefier on the ground. But if they find all their pretautions unavsiling, and that they are near being overtaken, they first difpatch and fealp their priforers, and then dividing, each endeavors to regain his native country by a different route. This prevents all further purfait; for their purfaers now defpairing, either of gratifying their revenge, or of releafing their of their friends who were thad captives, return home.

If the fuccessful party is to lucky as to make good their retreat unmulented, they haften with the greatest expedition to reach a country where they may be perfectly iccure; and that their wounded companions may not retard their flight, they early them by turns in hiters, or if it is in the winter feafou draw them on fledges.

Their litters are made in a rude manner of the branches of the trees. Their fledges confilt of two fmall thin boards, about a foot wide when joined, and near fix feet long. The torepart is turned up, and the fides are Lordered with fmall bands. The Indians draw there carriages with great rate be they ever fo much loaded, by means of a firing which paffes round the broatt. This collar is called a Metump, and is in ufe throughout America, both in the fettlements and the interival parts. Those wied in the latter are made of leather, and very curiodily wrought.

The priferers during their march are guarded with the grisatell care. During the day, if the journey is over land, they are always held by fome of the victorious party; if by water; they are faftened to the cande. In the night time they are firstened along the ground quite maked, with their legs, arms, and neck fattened to hooks fixed in the ground. Befides this, cords are tied to their arms or legs, which are held by an Indian, who inftantly awakes at the fealt motion of them.

Notwithilanding fuch precautions are usually taken by the Indians, it is recorded in the annals of New Eng. land; that one of use weaker ter, almost alone, and un-

are ofually taken mals of New Eng. of alone, and unalifted, found means to elude the vigilance of a party of warriors, and not only to make her escape from them, but to revenge the cause of her countrymen

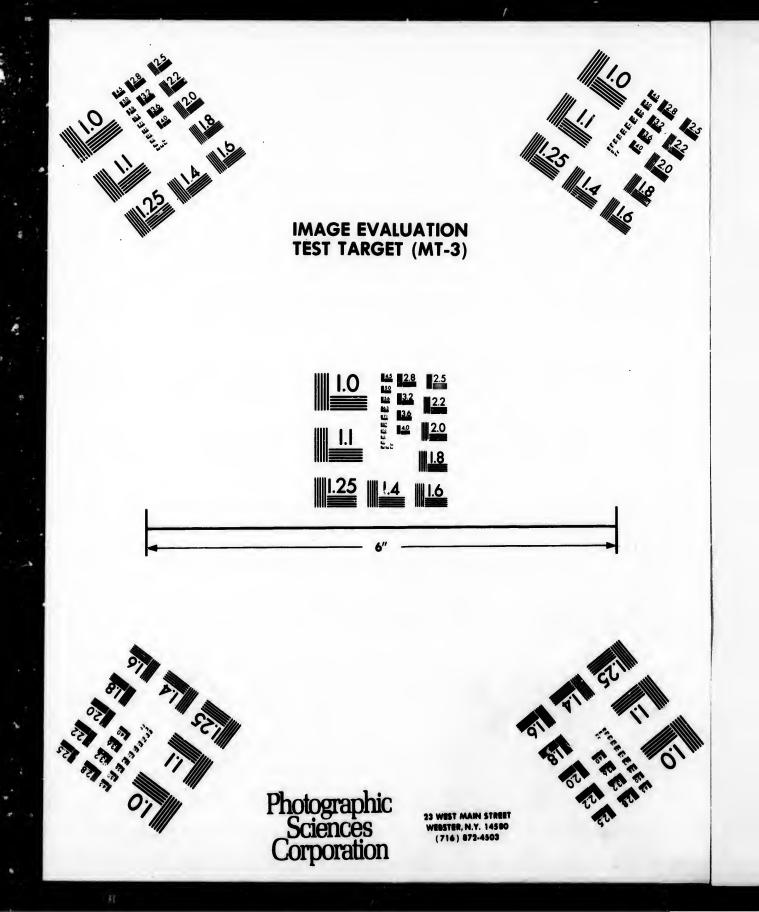

Some years ago, a fmall band of Canadian Indiaus, confifting of ten warriors attended by two of their wives, made an irruption into the back fettlements of New England. They lurked for fome time in the vicinity of one of the most exterior towns, and at length, after having killed and fcalped feveral people, found means to take a woman, who had with her a fon of about twelve years of age. Being fatisfied with the execution they had done, they retreated towards their nat we country, which lay at three hundred miles diftance, and carried off with them their two captives.

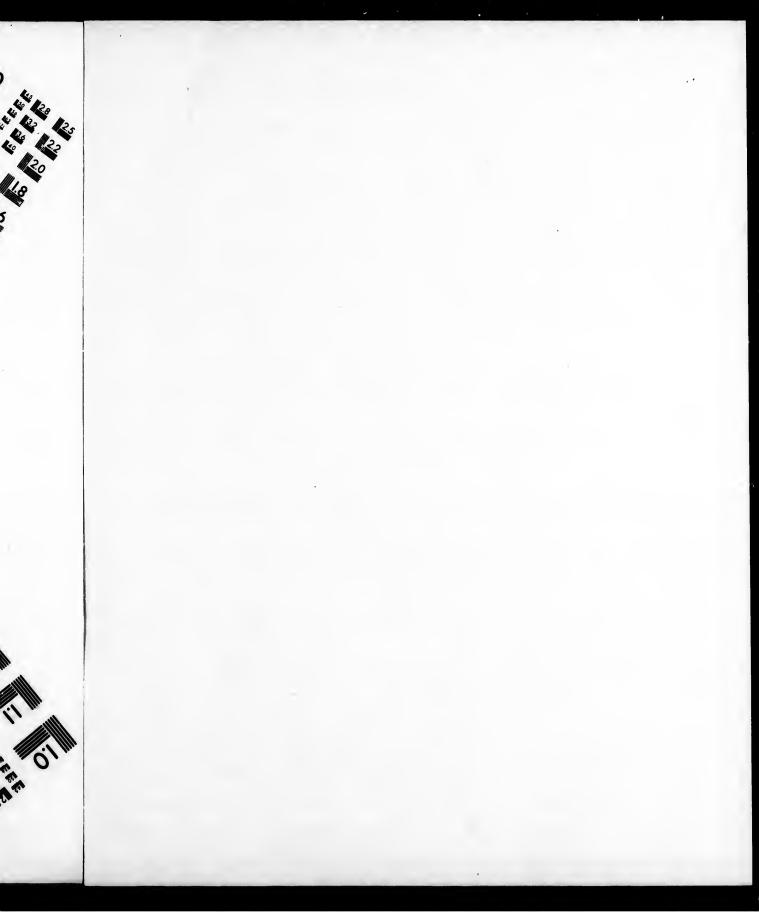

The fecond night of their retreat, the an, whole name, if I miltake not, was Rowe, formed a refolution worthy of the molt intrepid hero. She thought the fhould be able to get from her hands the manacles by which they were confined, and determined if the did fo to make a defperate effort for the recovery of her frcedom. To this purpole, when the concluded that her conquerors were in their foundelt fleep, the flrove to flip the cords from her hands. In this the fucceeded ; and cautioned her fon, whom they had fuffered to go unbound, in a whitper, against being furprifed at what the was about to do, the removed at a diffance wit's great varinefs the defensive weapons of the Indians, which lay by their fides.

Having done this, fhe put one of the tomahiwks into the hands of the boy, bidding him to follow her example; and taking another herfelf, fell upon the fleeping Indians, feveral of whom fhe inftantly difpatched. Buther attempt was nearly fruftrated by the imbecility of her fon, who wanted both ftrength and refolution, made a feeble flroke at one of them, which only ferved to awaken him; the however fprung at the rifing warrior, and before ne could recover his arms, made him fink under the weight of her tomahawk; and this the alternately did to all the roft, except one woman, who awoke in time, and made her efcape.

The heroine then took off the fcalps of her vanquish-

ed enemies, and feizing also those they were carrying a way with them as proofs of their fuccess, the returned in triumph to the town from whence the had to lately been dragged, to the attonithment of all her neighbors, who could icarcely credit their fenses, or testimonies the bore of her amazonian intrepidity.

During their march they oblige their prifoners to fing their death-fong, which generally confifts of thefe or fimilar fentences: "I am a going to die, I am about to fuffer; but I will bear the feverest tortures my enemies can inflict, with becoming fortitude. I will die like a brave man, and I shall go to join the chiefs that have fuffered on the same account." These fongs are continued with the necessary intervals, until they reach the village or camp to which they are going.

When the warriors are arrived within hearing, they fet up different cries, which communicates to their friends a general hiltory of the expedition. The number of death cries they give, declare how many of their own party are loft; the number of war-whoops, the number of prifoners they have taken.

It is difficult to defcribe these cries, but the beft idea I can convey of them is, that the former confifts of the found whoo, whoo, whoop, which is continued in a long thrill tone, nearly till the breath is exhautled, and then broken off with a fudden elevation of the voice. The latter, is a loud cry, of much the fame kind, which is modulated into notes by the hand being placed before the month. Both of them might be heard to a very confiderable diftance.

Whilit these are uttering, the perfons to whom they are defigned to convey the intelligence, continue motionless and all attention. When this ceremoy is performed, the whole village iffue out to learn the particulars of the relation they have just heard in general term, and accordingly as the news prove mournful or the contrary, they answer by fo many acclamations or crites of lamentations.

Being by this time arrived at the village or camp, the women and children arm themfelves with flicks and bladgeons, and form themfelves into two ranks, through

187

e carrying a. the returned ad fo lately r neighbors, fimonies the

oners to fing of thefe or e, I am atortures my I will die the chiefs that efe fongs are il they reach g.

their friends number of f their own , the num-

he beft idea onfifts of the ied in a long d, and then voice. The d, which is laced before 1 to a very

whom they ontinue monoy is perarn the pari in general nournful or imations or

or camp, the flicks and aks, through which the prifoners are obliged to pais. The treatment hey undergo before they reach the extremity of the line, is very fevere. Sometimes they are fo beaten over the head and face, as to have fearcely any remains of life; and happy would it be for them if by this ulage as end was put to their wretched beings. But their termentors take cave that none of the blows they give prove mortal, as they with to referve the miferaile fufferers for more fevere inflictions.

After having undergone this introductory difcipline, they are bound hand and loot, whill the chiefs hold a council in which their face is determined.

Those who are decreed to be put to death by the usual torments, are delivered to the chief of the warriors a fach as are to be spared, are given into the hands of the chief of the nation : fo that in a short time all the priformers may be assured of their fate, as the sentence now prenounced is irrecoverable. The former they term being configued to the house of death, the latter to the house of grace.

Such captives as are pretty far advanced in life, and have acquired great honor by their warlike deeds, always atone for the blood they have spilt, by the tortures of fire. Their fucces in war is readily known by the blue marks upon their breatts and arms, which are as legible to the Indians as letters are to Europeans.

The manner in which these hieroglyphics are made, is by breaking the skin with the weth of sish, or sharpened fints, dipped in a kind of ink made of the loot of pitch pine. Like those of the uncleat picts of Britain these are esteemed ornamental; and at the same time they serve as registers of the heroic actions of the warrior, who thus bears about him indefiable marks of his valor.

The prifoners defined to death are foon led to the place of execution, which is generally in the centre, of the camp or village; where, being fiript, and every part of their bodies blackened, the fkin of a crow or raven is fixed on their heads. They are then bound to a

2.20%

fake, with faggots heaped around them, and obliged. for the last time, to fing their death fong.

The warriors, for fuch it is only who commonly fuffer this punishment, now perform in a more prolix manner this fad folemnity. They recount with an audible voice. all the brave actions they have performed, and pride themselves in the number of enemies they have killed. In this rehearfal they spare not even their tormentors. but ftrive by every provoking tale they can invent, to irritate and infult them. Sometimes this has the defired effect, and the fufferers are dispatched sooner than they otherwife would have been. the

There are many other methods which the Indians make use of to put their prisoners to death, but these are only occasional; that of burning is most generally 小学気、気を

Whilk I was at the chief sown of the Ottagaumies, an Illinois Indiau was brought in, who had been made prifoner by one of their war-parties. I had an opportunity of feeing the cultomary cruelties inflicted on their captives, through the minuteft of their process. After the previous steps necessary to this condemnation, he was carried, early in the morning, to a little dif. tance from the town, where he was bound to a tree.

This being done, all the beys who amounted to a great number, as the place was populous, were permitted to amufe themfelves with flooting their arrows at the unhappy victim. As they were none of them more than twelve years old, and were placed at a confiderable diftance, they had not ftrength to penetrate to the vital parts, to that the poor wretch flood pierced with arrows, and fuffering the confequent ag , for more than two days.

During this time he fung of his war like exploits flon to He recapitulated every firatagem he had made use of to ad fluor furprise his enemies ; he boafted of the quanties of fcalps which he possesses is he boafted of the guanties of fcalps which it he possesses is a boafted of the prisoners he had taken whit the He then deferibed the different barbarous methods by glangt then to receive inconceivable pleafure from the recitate of the horrid tale.

But he dwolt more particularly on the crualties he

the utmost limits of credibility : it is, however, certain that these favages are possibled with many heroic qualities, and bear every species of misfortunes with a degree of fortitude which has not been outdone by any of the ancient heroes either of Greece or of Rome.

Notwithitanding thele acts of feverity exercised by the Indians towards those of their own fpecies, who fall into their hands. fome tribes of them have been remarked for their moderation to fuch female prifuners, belonging to the English colonies as have happens ed to be taken by them Women of great beauty have frequently been carried off by them, and during a march of three or four hundred miles, through their retired foreff, have lain by their fides without receiving! any infult, and their chaftity has remained inviolate, Infrances have happened where female captives, who have been pregnant at the time of their being taken, have had the pangs of child birth come upon them in the midft of folitary woods, and favages their only companions; yet from thele, favages as they were, have they received every affiltante their fituation would ad. mit of, and been treated with a degree of delicacy and burnanity they little expected.

This forbearance, it mult be acknowledged, does not proceed altogether from their disposition, but is only inherent in those who have fome communication with the French millionaries. Without intending that their natural enemies, the English, thould enjoy the benefit of their labors, these fathers have taken great pains to inculeate on the minds of the Indians the general principles of humanity, which has diffused itself through their manners, and has proved of public utility.

Those prifoners that are configned to the house of grace, and these are commonly the young men, women, and children, await the disposal of the chief, who, as ter the execution of such as are condemned to die; hold a coulcil for this purpose.

A herald is fint round the village or camp, to give notice that fuch as have lost any relations in the late expedition, are defired to attend the distribution which is about to take place. Those women who have lost their

ions or hubbands, are generally fatisfied in the first place; after these, such as have been deprived of friends of a more semate degree of contanguinity, or who choose to adopt fome of the youth.

The division being made, which is done, as in other cases, without the least dispute, those who have received any thus, lead them to their tents or huts; and having inbound them, wash and dress their wounds if they happen to have received any; they then clothe them, and give them the most comfortable and refreshing food their flore, will afford

Whilk their new domestics are feeding, they endeavor to administer confolation to them; they tell them that as they are redeemed from death, they must now be cheerful and happy; and if they ferve them well, without murmuring or repining, nothing that be wanting to make them fuch atonement for the loss of their country and friends as circumstances will allow of. If any men are spared, they are commonly given to the widows that have lost their hulb ands by the hand of the enemy, should there be any such, to whom, if they happen to prove agreeable, they are foon married But should the, dame be otherwise engaged, the life of him who falls to her lot is in great danger; especially if the fancies that her late hulband wants a flave in the coun-

try of spirits, to which he is gone.

When this is the cafe, a number of young men take the devoted captive to some distance, and dispatch him without any ceremony : after he has been spared by the council, they confider him of too little confequence to be entitled to the torments allotted to those who have been judged worthy of them.

The women are usually distributed to the men, from whom they do not fail of meeting with a favorable reception. The boys and girls are taken into the families of fuch as have need of them, and are confidered as slaves and it is not uncommon that they are fold in the fame capacity to the European traders who come among

negociation with the band from whom they have been taken, for an 'exchange' All that are captivited by both parties, are enter put to death, scloped, or made flaves of. And fo particular are every nation in this reflect, theat if any of their tribe, even a warrior, should be taken prifoner; and by chance be received into the house of grace, either as an adopted perfor of a flave, and should afterwards make his creape; they will by no means receive him, or acknowledge him as one of their band.

The condition of such as are adopted, differs not in any one infrance from the children of the nation to which they now belong. They affame all the rights of those while places they supply, and frequently make no dif. ficulty of going in the war parties against their own countrymen. Should, however, any of these by chance make their escape, and be after wards retaken, they are effected as unnatural children and ungrateful perfors, who have deletted and made war upon their parents and benefactors, and are treated with uncommon lewerty.

That part of the prifoners which are confidered as Inaves, are generally distributed among the chiefs; who Hirquently make prefents of tome of them to the Euroipean governors of the out pofts, or to the fuperintendants or commiffaries of Indian affairs. I have been informed that it was the Jefuits and French millionaries that firth occafioned the introduction of these unhappy captives into the ferthements, and who by to doirg taught the Indians that they were valuable.

Their views indeed were laudable, as they imagined that by this method they thould not only prevent much barbarity and bloodhed, but find the opportunities of ipreading their religion among them encreased. To this purpose they encouraged the traders to purchase such flaves as they met with.

The good effects of this mode of proceeding were not however equal to the expectations of thefe pious fathers. Initead of being the means of preventing cruely and blocdfhed, it only caufed differtions between the Indiag nations to be carried on with a greater degree

It might still be faid that fewer of the captives are tormented and put to death, fince these expectations of receiving to valuable a confideration for them have been excited than there usually had been ; but it does not appear that their accustomed cruelty to the warriors they take, is in the leaft abated; their natural defire of vengeance must be gratified ; they now only become more alliduous in fecuring a greater number of young prifoners, whill those who are made captive in their defence, are tormented and put to death as before.

The millionaries finding; that contrary to their withes, their zeal had only ferved to increase the fale of the nozious juices applied to the governor of Canada, in the year 1693, for a prohibition of this baneful trade. An order was islued accordingly, but it could not put a total ftop to it; the French Couiier de Bois were hardly enough to carry it on clandeflinely, notwithflanding the penalty annexed to a breach of the prohibition was a confiderable fine and imprisonment.

Some who were detected in the proffecution of it. withdrew into the Indian countries, where they intermarried with the natives, and underwent a voluntary banifhment. These however, being an abandoned and debauched fet, their conduct contributed very little either towards reforming the manners of their new relations, or engaging them to entertain a favorable opinion of the religion they professed. Thus did these indefatigable, religious men, fee their designs in fome measure once more frustrated.

However, the emigration was productive of an effect which turned out to be beneficial to their nation. By the connection of their refugres with the Iroquois, Mif-Mauges, Huron, Miamies, Powtowottomits, Puants,

Menomenies, Algonkins, &c. and the conftant reprefentations these various nations received from them of the power and grandeur of the French, to the aggrandizement of whose monarch, notwithstanding their banissues, they fill retain their habitual inclination, the Indians infensibly prejudiced in favor of that people, and I am perfuaded will take every opportunity of shewing their attachment to them.

And this even in defpite of the difgraceful effimation they must be held by them, fince they have been driven out of Canada; for the Indians confider every conquered people as in a flate of vaffalage to their conquerors. After one nation has finally fubdued another, and a conditional fubmifion is agreed on, it is cuftomary for the chiefs of the conquered, when they fit in council with their fubduers, to wear petticoats, as an acknewledgement that they are in a flate of fubjection, and ought to be ranked among the women. Their partiality to the French has however taken too deep root for time itfelf to eradicate it.

CHAPTER X.

OF THEIR MANNER OF MARING FLACE, SE.

I HE wars that are carried on between the Indian nations are in general hereditary, and continue from age to age with a few interruptions. If a peace becomes neceffary, the principal care of both parties is to avoid the appearance of making the first advances.

When they treat with an enemy, relative to a fufpenfice of hostilities, the chief who is commissioned to undertake the negocistion, if it is not brought about by the mediation of fome neighboring band, abates nothing of his natural haughtines i even when the affairs of his country are in the work fituation, he makes no consti-

to a fufpenoned to unht about by ates nothing uffairs of his no concelons, but endeavors to purfuade his adverfaries that it their interest to put an end to the war.

Accidents fometimes contribute to bring about a pace between nations that otherwise could not be pretailed on to listen to terms of accommodation. An instance of this, which I heard of in almost every nation I paffed through, I shall relate.

About eighty years ago, the Iroquois and Chipeways, wo powerful nations, were at war with the Ottagaunies and Saukies, who were much inferior to their adverfaries both in numbers and ftrength. One winter near a thousand of the former made an excursion from the Ontario, by way of Toronto, towards the territories of their enemies. They coasted lake Huron on its east and northern borders, till they arrived at the island of St Joseph, which is situated in the straits of St. Mane. There they crossed these straits upon the ice, about fisteen miles below the falls, and continued their routefill westward. As the ground was covered with show to prevent a discovery of their numbers, they marched in a fingle file, treading in each other's footsteps.

Four Chipeway Indians, passing that way. observed this army, and readily guessed from the direction of their march, and the precautions they took, both the country to which they were hastening, and their defigns.

Notwithtanding the nation to which they belonged was at war with the Ottagaumies, and in alliance with their invaders, yet from a principle which cannot be accounted for, they took an inftant refolution to apprife the former of their danger. To this purpole they haftened away with their ufual celerity, and taking a circult to avoid difcovery, arrived at the hunting grounds of the Ottagaumies, before fo large a body, moving in fo cautious a manner, could do. There they found a party of about four hundred warriors, fome of which were Saukies, whom they informed of the approach of their enemies.

The chiefs immediately collected their whole force, and held a council on the fteps that were to be taken for their defence. As they were encumbered with their families, it was impossible that they could retreat in

time ; they therefore determined to choose the most advantageous spot, and to give the Iroquois the best reception in their power.

Not far from the place where they then happened to be, flood two fmall lakes, between which ran a narrow neck of land about a mile in length, and only from twenty to forty yards in breadth. Concluding that the Iroquois intended to pass through this defile, the united bands divided their little party into two bodies of two hundred each. One of these took post at the extremity of the pass that lay nearest to their bunting grounds, which they immediately fortified with a breast work formed of palifades ; whilf the other body took a compais round one of the lakes, with a defign to hem, their elemies in when they had entered the defile.

Their firatagem fucceeded ; for no fooner had the whole of the Iroquois entered the pafs, than, being provided with wood for the purpole; they formed a fimilar breaft work on the other excremity, and thus enclosed their enemies.

The Iroquois foon perceived their fituation, and immediately held a council on the measures that were neceffary to be purfued to extricate themfelves. Unluckily for them a thaw had just taken place, which had fo far diffolved the ice as to render it impassible, and yet there full remained fufficient to prevent them from either passing over the lake on rafts, or from fwimming across. In this dilemma it was agreed that they should endeavor to force one of the breast works ; but they foon foundthem too well defended to effect their purpose.

Notwithstanding this difappointment, with the usual composure and unapprehensiveness of Indians, they amaled themselves three or four days in fishing. By this time the ice being quite diffolved, they made themfelves rafts, which they were enabled to do by some trees that fortunately grew on the spot and attempted to cross one of the lakes.

They accordingly fet off before day break ; but the Ottagaumies, who had been watchful of their motions, perceiving their defign, detached one hundred and fifty men from each of their parties, to oppose their landing.

but the motions, and fifty landing. These three hundred marched so espeditionally to the sher fide of the lake, that they reached it before their sponents had gained the flore, they being retarded by beir goles flicking in the mud.

As foon as the confederates arrived, they poured in sheavy fire, both from their bows and mulquetry, on the Iroquois, which greatly difconcerted them; till the finter finding their fitzation deformate, leaped into the water, and fought their way through the enemies. This however, they could not do without lofing more than half their men-

After the Iroquois had landed, they made good their retreat, but were obliged to leave their enemies mafters of the field, and in possession of all the furs they had taten during their winter's hunt. Thus dearly did, they pay for an unprovoked excursion to such a diffance from the route they ought to have purfued, and to which they were only impelled by a fudden define of cutting off fome of their ancient enemies.

But had they known their livength, they might have destroyed every man of the party that opposed them; which even at the first onfet was only inconfiderable, and when diminished by the action, totally unable to make any stand against them.

The victorious bands rewarded the Chipeways, who had been the means of their fuccefs, with a fhare of the fpoils. They prefied them to take any quantity they chose of the richeft of the furs, and fent them under an efcort of fifty men, to their own country. I he difinturefted Chipeways, as the Indians in general are feldom actuated by mercenary motives, for a confiderable time refused these prefents, but were at length purfuaded to accept of them.

The brave and well concerted refulance here made is the Ottaganmies and Saukies, aided by the mediation of the Chipeways, who laying alide on this occasion the animolity they had to long borne those people, approved of the generous conduct of their four chiefs, were to gether the means of effecting a reconciliation between these nations; and in process of time united them all the bands of amity.

And I believe that all the Indians inhabiting that extentive country, which lies between Quebec, the banks of the Miffifippi north of the Guifconfin, and the fettlements belonging to the Hudfon's Bay Company, are at prefent in a flate of profound peace. When their refilefs difpolitions will not fuffer them to remain inactive, thefe northern Indians feldom commit hoftilities on each other, but make excursions to the fouthward, against the Cherokees, Choftahs, Chickafaws or Illinois. Sometimes the Indians grow tired of a war which, they have carried on against fome neighboring nationfor many years without much fuccefs, and in this cafe they feek for mediators to begin a negociation. Thefe

being obtained, the treaty is thus conducted : A number of their own chiefs, joined by thofe who have accepted the friendly office, fet out together for the country of their enemies ; fuch as all cholen for this purpole, are chiefs of the molt extensive abilities, and of the greateft integrity They bear before them the pipe of peace, which I need not inform my readers is of the fame nature as a flag of truce among the Eutopeans, and is treated with the greateft respect and veneration, even by the most barbarous nations. I never heard of an inflance wherein the bearers of this facred badge of friendfhip were ever treated difrespectfully, or its rights violated. The Indians believe that the Great Spirit never fuffers an infraction of this kind to go unpunished.

The pipe of peace, which is termed by the French the calumet, for what reafon I could never learn, is about four feet long: The bowl of it is made of red marble, and the ftem of it of a light wood, curioufly painted with hieroglyphicks in various colors, and adorned with feathers, of the moft beautiful birds; but it is not in my power to convey an idea of the various tints and pleating ornaments of this much effeemed Indian implement.

Every nation has a different method of decorating these pipes, and they can tell at first fight to what band it belongs. It is used as an introduction to all treaties, and great ceremony attends the use of it on these occa-

decorating what band all treaties, these occaThe affiftant, or aiddecamp of the great warrior, when the chiefs are affembled and feated, fills it with tobacco mixed with the herbs before mentioned, takingcare at the fame time that no part of it touches the ground. When it is filled, he takes a coal that is thoroughly kindled, from a fire that is generally kept burning in the midit of the affembly, and places it on the tobacco.

As foon as it is fufficiently lighted, he throws off the toal. He then turns the flem of it towards the heavens, after this towards the earth, and now holding it horizontally, moves himfelf round till he has completed a circle ; by the first action he is supposed to prefent it. to the Great Spirit, whole aid is thereby fupplicated ; by the fecond, to evert any malicious interpolition of the evil fpirits; and by the third to gain the protection of the fpirits inhabiting the air, the earth, and the waters. Having thus fecured the favor of those invisible agents, in whole power they suppose it is either to forward or obftruct the iffue of their prefent deliberations, he prefents it to the hereditary chief, who having taken. two or three whiffs, blows the fmoke from his mouth. fift towards heaven, and then around him upon the ground .

It is afterwards put in the fame manner into the mouths of the ambaliadors or ftrangers, who observe the fame ceremony, then to the chief of the warriors, and to all the other chiefs in turn, according to their gradation. During this time the perfon who executes this honorable office holds the pipe flightly in his hand, as if he feared to prefs the facred instrument; nor does. any one prefume to touch it but with his lips.

When the chiefs who are inftructed with the commiffion for making peace, app, oach the town or camp to which they are going, they begin to fing and dance the fongs and dances appropriated to this occafion. By this time the adverfe party are appriled of their arrival, and, at the fight of the pipe of peace divelling themfelves of their wonted enmity, invite them to the habitation of the great chief, and furnifh them every conveniency during the negociation.*

200.

A council is then held; and when the speeches and debates are ended, if no obstructions arise to put a stop to the treaty, the painted batchet is buried in the ground, as a memorial that all animolities between the contending nations have ceased, and a peace taken place. Among the ruder bands, such as have no communication with the Europeans, a war club, painted red is buried, instead of the hatched.

A belt of wampum, is also given on this occasion, which ferves as a ratification of the peace, and records to the latest posterity, by the bieroglyphics into which the beads are formed, every flipulated article in the treaty.

These belts are made of shells found on the coasts of New England and Virginia, which are fawed out into beads of an oblong form, about a quarter of an inchlong, and round like other beads. Being strung on leather strings, and several of them sewed neatly together with fine sinewy threads, they then compose what istermed a belt of wampum.

The fhells are generally of two colors, fome white and others violet; but the latter are more highly efferemed than the former They are held in as much effimation by the Indians, as gold, filver, or precious flones, are by the Europeans

The belts are composed of ten twelve, or a greater number of firings, according to the importance of the affair in agitation, or the dignity of the perfon to whom it is prefented. On more triffing occalions, firings of these beads are prefented by the chiefs to each other, and frequently worn by them about their ne tks, as valuable ornament.

1 2 3 1 1 1 2 1 M

S I have before observed, the Indians are greatly addicted to gaming. and will even stake, and lose with empolure, all the valuables they are policified of. They mule the nielves at feveral forts of games, but the principal and most esteemed among them is that of the ball, which is not unlike the European game of tennis. The balls they use the rather larger than those made. she of at tennis, and are formed of a piece of deer fkin ; which being moiftened to render, it supple, is stuffed hard with the hair of the fame creature, and lewed: with its finews. The ball flicks, are about three feet ong, at the end of which there is fixed a kind or racket, elembling the palm of the hand, and fallioned of. hongs cut from a deer fain. In these they catche he ball, and throw it to a great diffance, if they are ist prevented by fome of the oppolite party, who fly to intercept it.

This game is generally played by large companies, hat fometimes confift of more than three hundred; and t is not uncommon for different bunds to play against ach other.

They begin by fixing two poles in the ground at aout fix hundred yards apart, and one of these goals. dong to each party of the combatants. The ball is nown up high in the centre of the ground, and in a next line between the goals : towards which each parsi endeavors to firike it, and which foever fide first uses, it to reach their own goal, reckons towards the ame.

They are to exceeding dexterous in this manly exerile, that the ball is utually kept flying in different diclions by the force of the rackets, without touching te ground during the whole contention; for they are bt allowed to catch it in their hands. They run with mazing velocity in purfuit of each other, and when.

one is on the point of hurling it to a great diffance, an antagonift overtakes him, and by a fudden froke daftes down the ball.

They play with formuch vehemence that they frequently wound each other, and fome times a bone is broken ; but notwithstanding these accidents there never appears to be any fpite on wanton exertions to effect them ; nor do any disputes ever happen between the parties.

There is another game also in use among them worthy off remark, and this is the game of the bowl or platter. This game is played between two perfons only. Each perfon has fix or eight little bonnemot unlike a peachflone either in fize or these, except that they are quadrangular, two of the fides of which are colored black, and the others white. These they throw up into the air, from whence they fall into a bowl or platter placed underneath, and made to spin round.

According as these bones prefent the white or black fide upwards they reckon the game; he that happens to have the greatest member turn up of a fimilar color, counts five points; and forty is the game.

The winning party keeps his place; and the lofer yields his to another who is appointed by one of the umpires, for a whole village is fometimes concerned in the party, and at times one band plays against another.

During this play the Indians appear to be greatly agitated, at every decifive throw they fet up a hideous flight. They make a thousand contortions, addreffing themfelves at the same time to the bones, and loading with imprecations, the evil spirits that affift their succesful antagonists.

At this game fome will lofe their apparrel, all the moveables of their cabins, and fometimes even their liberty, notwithit and ing there are no people in the univerfe more jealous of the latter than the Indian are.

CHAPTER XII.

OT THEIR MARRIAGE CIREMONIES, Se.

the fail we dry a good the the course

HE Indians allow of polygamy, and perfons of very rank indulge themfelves in this point. The thiefs in particular have a feraglio, which confifts of an incertain number, ufually from fix to twelve or fourteen. The lower ranks are permitted to take as many as there is a probability of their being able, with the children hey may bear to maintain. It is not uncommon for m Indian to marry two fifters ; fometimes if there hapen to be more the whole number ; and not withflanding this (as it appears to civilized nations) unnatural mon, they all live in the greateft harmony.

The younger wives are fubmiffive to the elder; and hofe who have no children, do fuch menial offices forhofe who are fertile, as caufes their fituation to differ but little from a flate of fervitude. However they perform every injunction with the greatest cheerfulnels, thopes of gaining thereby the affection of their huflands, that they in their turns may have the happinels of becoming mothers, and be entitled to the respect atendant on that flate.

It is not uncommon for an Indian, although he takes a himfelf fo many wives, to live in a flate of continence with many of them for feveral years. Such as are not fortunate as to gain the favor of their hufband, by heir fubmiflive and prudent behavior, and by that mans to fhare in his embraces, fontinue in their virgin ate during the whole of their lives, except they happen be prefented by him to fome firanger chief, whole note among them will not admit of his entering into more lafting connection. In this cafe they fubmit to a linguation of their hufband without murmuring; and are not difpleafed to the temporary anion. But if tany time it is known that they take this liberty withate first receiving his confeat; they are punifhed in the me manner as if they had been guilty of adultary:

This cultom is more prevalent among the pation, which lie in the interjor parts, than among those that are nearer the settlements, as the manners of the latter are rendered more conformable in some points to those of the Europeans, by the intercourse they hold with them. The Indian nations differ but little from each other in their marriage ceremonies, and less in the manner of their divorces. The tribes that inhabit the borders of Canada, make use of the following cultom.

When a young Indian has fixed his inclinations on one of the other fex, he endeavors to gain her confent, and if he fucceeds, it is never known that her parents ever obtruct their union. When every preliminary is agreed on, and the day appointed, the friends and acquaintance of both parties affemble at the house or tent of the old eff relation of the bridegroom, where a feaft is prepar ed on the occasion.

The company who meet to affift at the feftival are fometimes very numerous : they dance, they fing, and enter into every other diversion theally made use of on any, of their public rejoicings.

When these are finished, all those who attended inerely out of ceremony depart, and the bridegroom and bride are left alone with three or four of the near of and oldelt relations of either fide; those of the bridegroom being men, and those of the bride, women Prefently the bride attended by these few friends having withdrawn herfelf for the purpose, appears a one of the doors of the house, and is led to the bride groom, who liands ready to receive her. Having not taken their flation, on a mat placed in the centre of the boom, they lay hold of the extremities of a wand, about four feet long, by which they continue sparted, whill the old men pronounce fome thort harrangues fuitable to the occasion.

The married couple after this make a public decla ration of the love and regard they entertain for each other, and full holding the rod between them, dance and fing. When they have finished this part of the entermony, they break the rod into as many pieces t

ublic decla in for each bem, danc y pieces &

hany pieces as there are witneffes prefent, who each ke a piece, and preferve it with great care. The bride is then seconducted out of the door at hich the entered, where her young companions wait to tend her to her father's house ; there the brideg room obliged to feek her, and the marriage is confumated. ery often the wife remains at her father's house till the as a child, when the packs up her apparrel, which is Il the fortune the is generally poffelled of, and accomanies her hulband to his habitation.

When from any diflike a feparation takes place, for hey are feldom known to quartel they generally give heir friends a few days notice of their intentions, and emetimes offer realins to justify their conduct. The witneffes who were prefent at the marriage, meet on he day requeited, at the house of the couple that are aout to leparate, and bringing with them the pieces of od which they had received at their puptials, throw them nto the fire, in the presence of all the parties.

This is the whole of the ceremony required, and the eparation is carried on without any murmurings or ill till between the couple or their relations; and after a ew months they are at liberty to marry again. When a matriage is thus diffolved, the shildren which ave been produced from it, are equally divided be-

ween them ; and as children are elleemed a treasure y the Indians, if the number happens to be odd, the ioman is allowed to take the better half.

Though this cuflom feems to encourge ficklene's and quent feparations, yet there are many of the Indiana the have but one wife and enjoy with her a flate of conubial happinels not to be exceeded in more refined fo-There are also not a few inftances of women ieties, referving an inviolable attachment to their hufbands, rcept in the cales before mentioned, which are not cons fidered as either a vielation of their challity of fidelity. Although I have faid that the indiaminations differ ery little from each other in their marsiage ceremoier, there are fome exceptions. The Naudoweffies part of the net ingular method of celebrating their marriaget. which feems to bear to refemblance to those made use

of by any other nation I paffed through. When one their young men has fixed on a young woman he a proves of he difcovers his pation to her parents; w give bim an invitation to come and live with them their tent.

He accordingly accepts the offer, and by fo doing gages to refide in it for a whole year, in the charact of a menial fervant. During this time be hubts, a brings all the game he kills to the family; by whi means the father has an opportunity of feeing wheth he is able to provide for the fupport of his daugh and the children that might be the confequence of the union. This however is only done whilf they are you men, and for their first wife, and not repeated like t cob's fervitudes.

When this period is expired, the matriage is folm ized after the cuftom of the country, in the following manner: Three or four of the oldeft male relations the bridegroom, and as many of the bride's, accomthe bridegroom, accompany of the bridegroom, accomthe bridegroom, accomthe bridegr

The chiefs and warriors, being here affembled to ceive them, a party of the latter are drawn up in to ranks on each fide of the bride and bridegroom imn diately on their arrival. Their principal chief then quaints the whole affembly with the defign of the meeting, and tells them that the couple before the mentioning at the fame time, their names, are come avow publicly their intentions of living together as m and wife. He then afks the two young prople als nately, whether they defire that the union might the place. Having declared with an audible voice that the do to the warriors fix their arrows, and difcharge the over the heads of the married pair 1 this done, the chi pronounces them man and with.

The bridegroom then turns round, and bending body, takes his wife on his back, in which manner carries her amidit the acclamations of the speciators his tent. The ceremony is succeeded by the most platical feast, the new matried man can afford, and for

206

dances, according to the ufual cuftom, conclude feftival.

Divorces happen fo feldom among the Naudoweffics, at I had not an opportunity of learning how they are complified.

Adultary is effected by them a heinous crime, and nifhed with the greateft right. The hufband in thefeits bites off the woman's nofe, and a feparation inframenfues. I faw an infrance wherein this mode of punment was inflicted, whill I temained among them. Is children, when this happens, are diffributed accordto the usual cultom observed by other nations, that they are equally divided.

Among the Indians as well as European nations, ere are many that devote them elves to pleafure, d notwithit and ing the accounts given by fome modm writers of the frigidity of an Indian conditution, some the zealous votaries of Venus. The young warors that are thus difposed. feldom want opportunities of gratifying their pation; and as the mode usually plowed on these occasions is rather fingular, I shall deribe it.

When one of thefe young debauches imagines from s behavior of the perion be his choien for his mitrefs, that he fhall not meet with any great obfiruction. Is his fuit from her, he purfues the following plan. Is has been already obferved, that the Indians acmowledge no fuperiority, nor have they any ideas of abordination, except in the neceffary regulations of their har or hunting parties; they confequently live nearly is fate of equality, purfuant to the first principles of ature. The lover therefore is not apprehentive of any heck or control in the accomplificment of his purpoles, the can find a convenient opportunity for completing:

As the Indians are also under no apprehension of robbers, or fecret enemies, they leave the doors of their ents or huts unfaitened during the night, as well as inthe day. Two or three hours after fun fet, the flaves are people cover the fire, that is generally burning

in the midft of their apartment, with afher, and retire.

Whill darkoefs thus prevails, and all is quiet, one. of these fons of pleasure, wrapped up closely in his blan. ket, to prevent his being known, will fometimer enter the anartment of his intended millreis. Having firlt lighted at the imothered fire a imall iplinter of wood, which answers the purpois of a match, he approaches the place where the reposes, and gently pulling away the covering from her head, jogs her till the awakes. If the then rifes up, and blows out the light, he needs no further confirmation that his company is not dilagrees. ble + but if, alter he has discovered himfelf. the hides her head, and takes no notice of him, he might rell af. fured that may further folicitations will prove vain, and that it is necellary immediately for him to retite. During his flay he conceals the light as much as poffible in the bollow of his hands, and as the tents or. room of the Indiana are ufually large and capacious, es without detection . It is faid that the younghe elta women who admit their lovers on these occasions, take great care, by an immediate application to herbs, with the potent efficacy of which they are well acquainted, to prevent the effects of these flicit amors from becom-

ing visible.; for should the natural confequences ensue, they must forever remain unmarried. The children of the lodians are always diftinguished by the name of the mother : and if a woman marries several bufbands, and has iffue by each of them, they are called after her. The reason they give for this, is,

that as their offspring are incebted to the father for their fouls, the invisible part of their effence, and the motherfor their corporeal and apparent part, it is more rational that they should be distinguished by the name of the latter, from whom they indubitably derive their being, than by that of the father, to which a doubt might sometimes arife whether they are justly entitled.

There are fome ceremonies made use of by the kndians at the imposition of the name, and it is considered by them as a matter of great importance; but what these are I could never learn, through the fecterly ob-

aved on the occasion. I only know that it is usually iven when the children have paffed the age of inncy.

Nothing can exceed the tenderneis flown by them to heir offspring; and a perion cannot recommend himif to their favor by any method more certain, than by ying some attention to the younger branches of their amilies. I can impute, in fome measure, to the prefus I made to the children of the chiefs of the haudoselies, the hospitable reception I aret with when among

There is fome difficulty attends an explanation of the aner in which the Indians diffinguilh themselves, m each other. Besides the name of the animal by shich every nation and tribe is denominated, there are, thers that are perfonal, and which the children receive om their mother

The chiefs are also diffinguished by a name that has wher fome reference to their abilities, or to the hierohyphic of their families ; and thely are acquired after hey arrive at the age of manhood. Such as have figged themfelves either in their war or hunting parnor are pollefied of fome enunent qualification, reaive a name that ferves to perpetuate the fame of thele tions, or to make their abilities confpicuous. Thus the great warrior of the Naudowellies was name d Ottahtongoomlificah, that is the Great Father of liakes ; ottah being in English father, tongoom groat, and liftcah a fnake. Another chief was called Houah; awiating which means a fwift running over the mountales. And when they adopted me a chief among them, they named me Shebaygo, which figuifies a writer, or a perfon that is curious in making hierogly phice, as they ian me often writing.

OF THERE RELEASE

I'T is very difficult to attain a perfect knowledge of the religious principles of the Indians. Their ceremonies and doctrines have been to often ridiculed by the Europeans; that they endeavor to conceal them; and if after the greateft intimacy, you defire any of them to explain to you their fyftem of religions to prevent your ridicule, they intermix with it many of the tenets they have received of the French millionaries, fo that it is at laft rendeted an unintelligible jargon and not to be depended upon

Such as I could difcover among the Naucoweffee (for they allo were very referred in this point). I that give my readers, without paying any attention to the accounts of others. As the religion of that people from their fluation appears to be totally unadulterated with the fuperflitions of the church of Rome, we that be able to gain from their religious cuftoms a more per fequidea of the original tenets and ceremonies of the In dians in general, than from those of any nations that approached nearer to the fettlements.

It is certain they acknowledge one Supreme. Being or Giver of Life, who prelides over all things. The Chipeways call this being Manitou, or Kitchi Manitou the Naudoweffies, Wakon or Tongo Wakon, that is the Great Spirit, and they look up to him as the four of good, from whom no eyil can proceed. They all believe in a bad fpint, to whom they affrim great pow er, and fuppole that through his uneans all the evil which befall mankind are inflicted. To him therefor do they pray in their diffreffet, begging that he wouk either avert their troubles, or moderate them when the are no longer avoidable.

They fay that the Great Spirit, who is infinitely good neither wiftes or is able to do any mifchief to mankind but on the contrary, that he flowers down on them a

But at

the bleffings they deferve ; whereas the cvil fpirit is continually employed in contriving how he may pusifi the human-race ; and to do which he is not only poffeffed of. the will, but the power.

They hold also that there are good spirits of a losser degree, who have their particular departments, in which they were constantly contributing to the happiness of, mortals. These they suppose to preside over all the extraordinary productions of nature; such as those lakes rivers, on mountains that are of ungommon magnitude ; and likewise the beaks, birds, filhes, and even vegitables, or flongs that acceed the relt of, their species in fize or, so flongs that acceed the relt of, their species in fize or, so flongs that acceed the relt of, their species in fize or, so flongs that acceed the relt of, their species in fize or, so flongs that acceed the relt of, their species in fize or, so flongs that acceed the relt of, their species in fize or, so flongs that acceed the relt of their species in fize or, so flongs that acceed the relt of their species in fize or, so flongs that acceed the relt of their species in fize or, so flongs that acceed the relt of their species in fize or, so flongs that acceed the relt of the species of the superior, or the banks of the Millippi, or any others great hody of water, they present to the Spirit who relides there fome kind of offering, as the prince of the; Winnebagoes did when he attended me to the falls of. St. Anthony.

But at the fame time I fancy that the ideas they any ner to the word fpirit, are very different from the conceptions more enlightened nations entertain of it. They appear to falhion to themfelves corporeal reprefentations of their gods, and believe them to be of a human form_j, though of a nature more excellent than man.

Of the fame kind are their featments relative to a futurity. They doubt not but they shall exist in some future flate; they however fancy that their employments there, will be similar to those they are engaged in here, without the labor and difficulties annexed to them in. this period of their existence.

They confequently expect to be translated to a delightful country, where they shall always have a clear, unclouded sky, and enjoy a perpetual spring; where the forests will abound with game, and the lakes with sift, which might be taken without a painful exertion of skill, or a laborious parsuit; in short, that they shall live forever in regions of plenty, and enjoy every gratification they delight in here, in a greater de-

The priefs of the indians who are at the fame, time their phyficians, and their conjusers ; while they heal their wounds or cure their discales, they interpret their dreams, give them the protective charms; and fatisfy that defire which is to prevalent among them of fearching into futurity.

How well they escute the latter part of their profellional engagements, and the methods they make ule of on fome of their oscalions. I have already thewn in the szertions of the prieft of Killiftinoes, who was fortunate enough to fucceed in his extraordinary attempt near Lake Superior. They frequently are fuccefsful, likewife in administering the falubrions herbs they have acquired a knowledge of ; but that the ceremonies they make use of during the administration of them contributes to their fuccefs, I shall not take upon me to affirt.

When any of the people are ill, the perfon who isinvefted with this tripple character of doctor prieft and magician, fits by the patient day and night, rattling in his cars a goad fhell filled with dry beans, called a Chichicoue and making a difagreeable noife that cannot be well defcribed.

This uncouth harmony one would imagine fhould diffuels the fick perfor and prevent the good effects of the doctor's prescription; but on the contrary they believe that the method made use of, contributes to his recovery, by diverting from his malignant purposes the evil spirit who has inflicted the diforder; or at least that it will take of his attention, fo that he shall not increase the malady. This they are credulous enough to imagine he is constantly on the watch to do, and would carry his inveteracy to a fatal length if they did not thus charm him.

fs. But be proerit ; the , will be through aperiority ame, time they heal pret their and fatisfy of fearch-

their pro-

make ule ady fhewn ho was fory attempt fuccelsful. they have ionies theym contrib. on me to afthe stand of the set fon who is prieft and ratiling in lled a Chicannot be fine Khould d effects of ry they be. es to his re. poles the e. at least that not increase gh to imawould carlid not thus I could not differentiat they make use of any other religious containing than those I have deforibed; indeed, on the appearance of the new moon they danceand fing; but it is not evident that they pay that planet any adoration; they only feem to rejoice at the return of a luminary that makes the night cheerful, and which ferrers to light them on their way when they travel in the absence of the fun.

Notwithitanding Mr. Adair has afferted that the nations among wheth he refided, observe with very little variation all the rites appointed by the Mofaic Law, I own I could never discover among thole tribes that lie but a few degrees to the north well, the least traces of the lewish religion, steept it be admitted that one particular female cuttom and their divisions in o tribes, carry with them proof fulficient to establish this affertion.

The Vervices and French mellionaries have also preended that the Indians had, when they first travelled no Americal forme notions, though these were dark and onfored, of the christian infitution ; that they have een greatly aginated at the fight of a cross, and given wors by the impressions made on them, that they were et entirely unacquisited with the facted mysteries of Christianity. Therefore fay that these are too glaring blucdities to be credited, and could only receive their siltence from the zeal of those fathers, who endeavord at once to give the public a better opinion of the tecels of their millions and to ade support to the cause by were engaged in.

The Indians appear to be in their religious principles, and and unintrusted. The doctrines they hold are wand timple, and fuch as have been generally imprefd on the human mind, by fome means or other, in the off ignorant ages. They however have not deviated introj other uncivilized nations, and too many civilized as have done, into idelations modes of worthip i they merate indeed and in the offerings to the wonderful its of scatton, as I have before observed; but wheththole rites are performed on account of the imprefion of extended and appearances make on them, or

The human mind in its uncultivated flate is apt to alcribe the extraordinany occurrences of nature, fuch as carthquakes, thunder, and hurricanes, to the interpolition of unfeen beings ; the troubles and difatters also that are annexed to a favage life, the apprehentions attendant on a precariaus fublistence, and those numberleis inconveniences which man in his improved flate has found means to remedy, are supposed to proceed irem the interpolition of evil fpirits ; the favage confequently lives in continual apprehentions of their unkind attacks, and to avert them has recourse to charms, to the fan. taffic ceremonies of his prieft; or the powerful influence. of his Munitous Ecar has of course a greater thare: in his devotions than gratitude, and he pays more attention to deprecating the wrath of the evil than to fecuring the favor of the good beings,

The Indians, however, entertain these, abfardities in common with those of every part of the glabe who have not yet been illuminated by that religion, which, only can differ the clouds of fuperfittion and ignorance, and they are as free from error as a people can be that has not been favored with its infructivedofinities.

Pains and weaknefies in the flomach and breaft are fonctimes the refult of their long falling, and confumptions of the enceflive fatigue and violent exercises they expose themfolives to from their infancy, before they have fufficient frength to support them. But the diforder to which they are most subject, is the pleurisy; for the removal of which, they apply their grand remealy and prefervation against the generality of their complaints, successful the supervises of the seconplaints, for the second secon

The manner in which they conftruct their flowes for this purpose is as follows: They is several small poles in the ground, the tops of which they twill together. fo as to form a rotunda: this frame they cover with skinsor blankets; and they lay them on with formuch nicety, that the air is kept from entering through any sevsice; a small space being only left, just sufficient to creep in at, which is immediately after closed. In the middle of the confined building they place red hot stones, on which they pour water till a steam arises that produces a great degree of heat.

This caufes an inflantaneous performation which they increase as they please. Having continued in it for fome time, they immediately haften to the nearest firearin and plunge into the water ; and after bathing therain for about half a minute, they put on their clothes, fit down and imoak with great compositive, thoroughly purfuaded that the remedy will prove efficacious. They often make use of this sudoriferous method to refresh themselves, or to prepare their minds for the management of any buliness that requires ancommon deliberavion and fagacity.

They are likewife afflicted with the dropfy and paralytic complaints, which, however, are but very feldom known among them.

As a remedy for these as well as for severs they make the of lotions and decoctions, composed of herbs, which the physicians know perfectly well how to sompound

3-813

and apply. But they never truft to medicine alone, they always have recourse likewise to fome depiritious ceremonies, without which their patients would not think the phylical preparations fulficiently powerful.

With equal judgment they make use of fimples for the cure of wounds, fractures, or bruises; and are able to extract by these, without incluon, splinters, iron, or any other fort of matter by which the wound is caused. In cures of this kind they are extremely desterous, and complete them in much less time than might be expected from their mode of proceeding.

With the Ikin of a make, which thole reptiles annually fhed, they will also extract fplinters it is amazto fee the fudden efficacy of this application, notwith-Randing there does not appear to be the leaft moifture remaining in it.

It has long been a fubjed of dispute, on what continent the veneral difeate first received its destructive power. I his dreadful malady is supposed to have originated in America, but the literary contell fill remains undecided ; to give fonce elucidation to it I shall remark, , that as I could not difcover the least traces among the Naudowellies, with whom I refided to long and was alfo informed that it was yet unknown among the more welt-Mein nations, I think I may venture to propounce that at had not its origin in North America. Those nations that have any communication with the Europeans, or the fouthern triber, are greatly stillicted with it ; but tithey have all of them acquired a knowledge of fuch certain and exceditious remedies, that the communicasion is not attended with any dangerous confequences. Soon after I fet out on my travels, one of the traders whom I accompanied, complained of a violent gonorrhea, with all its alarming tymptons : this increased to fuch a degree, that by the time we had reached the town of the Winnebagoes, he was unable to travel: Having made his complaint known to one of the chiefs of that tribe, he told him not to be unealy, for he would engage that by the following his advice, he thould be able in a few days to purfue his journey, and in a little longentime be entitely free from his diforder.

The for him ly afb, a grows in the use ed, and 1 fortnig ed that h If frol cold, the they fcar no comm and it is : the dexte ceed in fh malleable They r

he has a nourifhme pay great of the dife of food the Their d the phyfic ple believe vally made gain intell complaint by the bet discover fo the phyfic thefe fuper Sometin iles from ler is cont his opinior inds fome the Indian remonie have alread

The chief had no fooner faid this than he prepared for him a decoction of the bark of the roots of the prickly afh, a tree fcarcely known in England, but which grows in great pleaty throughout North America; by the use of which, in a few days he was greatly recovered, and having received directions how to prepare it, in a fortnight after his departure from this place, perceived that he was radically cured.

If from exceflive exercise, or the extremes of heat or cold, they are effected with pains in their limbs or joints, they fcarify the parts affected. Those nations who have no commerce with Europeans do this with a sharp flint; and it is furprising to see, to how fine a point they have the dexterity to bring them; a lancet can scarcely exceed in sharpness the instruments they make of this unmalleable substance.

They never can be convinced a perfon is ill, whilk he has an appetite; but when he rejects all kinds of nourifhment, they confider the difeafe as dangerous, and pay great attention to it; and during the continuance of the diforder, the phyfician refufes his patient no fort of food that he is defirous of.

Their doctors are not only fuppoied to be skilled in the physical treatment of difeases, but the common people believe that by the ceremony of the Chichicoue usvally made use of, as before described, they are able to gain intelligence from the spirits, of the cause of the complaints with which they are afflicted, and are thereby the better enabled to find remedies for them. They discover something supernatural in all their diseases, and the physic administered must invariably be aided by these superstants.

Sometimes a fick perfon fancies that his diforder atiles from witchcraft; in this cafe the phyfician or juggler is confulted, who, after the ufual preparations, gives his opinion on the flate of the difeafe, and frequently finds fome means for his cure. But notwithflanding the Indian phyficians always annex these fuperflitious cremonies to their preferiptions, it is very certain, as I have already observed, that they exercise their art by

principles which are founded on the knowledge of fimples, and on the experience, which they acquire by an indefatigable attention to their operations.

The following flory, which I received from a perfon of undoubted credit, proves that the Indians are not only able to reafon with great acutencies on the caufes and fymptons of many of the diforders which are attendant on human nature; but to apply with equal judgment proper remedies.

In Peneblect a fettlement in the province of Maine, in the northeaft parts of New England, the wife of a foldier was taken in labor, and notwithftanding every neceffary affiftance was given her, could not be delivered. In this fituation the remained for two or three days, the perfons round her expecting the next pang would put an end to her existence.

An Indian woman, who accidentally paffed by, heard the groans of the unhappy fufferer, and enquired from whence they proceeded. Being made acquainted with the defperate circumflance attending the cafe, fhe told the informant, that if fhe might be permitted to fee the perfon, fhe did not doubt but that fhe fhould be of great fervice to her.

The furgeon that had attended, and the midwife, whe was then prefent, having given up every hope of preferving their patient, the Indian woman was allowed to make use of any methods the thought proper. She accordingly took a handkerchief, and bound it tight over the nole and mouth of the woman : this immediately breught on a fuffocation ; and from the firuggles that confiquently enfued, the was in few feconds delivered. The moment, this was atchieved, and time enough to prevent any fatal effect, the handkerchief was taken effille lorg fuffering patient thus hapily relieved from her pains, from after perfectly recovered, to the aftenifilment of all those who had been witheffes to her despetate fittuation.

The reafon given by the Indian for this hazardous method of proceeding was, that defperate diferders requi e defperate remedies; that as the observed the ex-

218

ertions of nature were not fufficiently forcible to effect the defired confequence, the thought it necellary to augment their force, which could only be done by fomemode that was violent in the extreme.

CHAPPER XV.

OF THE MANNER IN WHICH THEY TREAT THEIR DEADS

AN Indian meets death when it approaches him in his hut, with the fame refolution he has often faced him in the field. His indifference relative to this important article, which is the fource of fo many apprehentions to almost every other nation. is truely admirable. When his fate is pronounced by the physician, and it remains no longer uncertain, he harangues those about him with the greatest composure.

If he is a chief and has a family, he makes a kind of funeral oration, which he concludes by giving to his childien fuch advice for the regulation of their conduct as he thinks neceffary. He then takes leave of his friends; and iffues out orders for the preparation of a feaft, which is defigned to regale those of his tribe that come to pronounce his ulogium.

After the breath is departed, the body is dreffed in the fame attire it usually wore whill living, his face is painted, and he feated in an erect pofture on a mat, or fkin, placed in the middle of the hut, with his weapons by his fide. His relations being feated round. each harangues in turn the deceased; and if he has been a great warrior, recounts his heroic actions nearly to the following purport, which in the Indian language is extuemely poetical and pleasing:

"You still fit among us, Brother, your perfor retains its usual refemblance, and continues fimilar to ours, without any visible deficiency, except that is has loss the power of action. But whither is that breath flown.

which a few hours ago fent up I.noke to the great Spir. it? Why are those lips lilent, that lately delivered to us exprettive and pleating language ? why are those feet motionless, that a thort time ago were fleeter than the deer on yonder mountains ? why ufelels hang those arms that could climb the talleft tree, or draw the toughest bow ? Alas ! every part of that frame which we lately beheld with admiration and wonder, is now become as inanimate as it was three hundred winters ago. We will not, however, bemoan thee as if thou walt forever loft to us, or that thy name would be buried in oblivion; thy foul yet lives in the great country of fpirits, with those of thy nation that are gone before thee; and though we are left behind to perpetuate thy fame, we fhall one day join thee. Actuated by the respect we bore thee whilk living, we now come to tender to thes the laft act of kindness it is in our power to beltow; that thy body might not lie neglected on the plain, and become a pray to the beafts of the field, or the fowls of the air, we will take care to lay it with those of thy predeceffors who are gone before thee ; hoping at the fame time, that thy fpirit will feed with their fpirits, and be ready to receive ours, when we also thall arrive at the great country of fouls."

In fhort speeches fomewhat similar to this does every chief speak the praises of his departed friend. When they have so done, if they happen to be a great distance from the place of interment, appropriated to their tribe, and the person dies during the winter season, they wrap the body in skins, and lay it on a high stage built for this purpose, or on the branches of a large tree, till the spring arrives. They then, after the manner deforibed in my journal, carry it, together with all those belonging to the same nation, to the general burial place, where it is interred with some other ceremonies that I could not discover.

When the Naudoweffies brought their dead for interment to the great cave, I attempted to get an infight into the remaining burial rites; but whether it was on account of the tlench which arole from fo many bodies, the weather being then hot, or whether they choic to

keep this part of their cultoms fecret from me, I could not difcover; I found, however, that they confidered my curiofity as ill timed, and therefore I withdrew.

After the interment, the band to which the perfon belongs, take care to fix near the place fuch hieroglyphics as shall shew to future ages his merit and accomplishments. If any of these people die in the summer, at a distance from the burying ground, and they find it impossible to remove the body before it putrefies, they burn the field from the bones, preferving the latter, bury them in the manner described.

As the Indians believe that the fouls of the deceafed employ themfelves in the fame manner in the country of fpirits, as they did on earth, that they acquire their tood by hunting, and have there, alfo, enemies to contend with, they take care that they do not enter thofe regions defencelefs and unprovided ; they confequently bury with them their bows, their arrows, and all the other weapons ufed either is hunting or war. As they doubt not but they will likewife have occasion both for the neceffaries of life, and thofe things they effeem as ornaments, they ufually deposit in their tombs fuch fkins or fluffs as they commonly made their garments of, domestic utenfils, and paint for ornamenting their perfons.

The near relations of the deceased lament his loss with an appearance of great forrow and anguish; they weep and howl, and make use of many contortions, as they fit in the hut or tent around the body, when the intervals between the praises of the chiefs will permit.

One formality in mourning for the dead among the Naudoweffies is very different from any mode I obferved in the other nations through which I paffed. The men, to fhew how great their forrow is, pierce the flefh of their arms, above the elbows, with arrows; the fears of which I could perceive on those of every rank; in a greater or lefs degree; and the women cut and gafa their legs with fharp broken flints, till the blood flows very plentifally.

Whilf I remained among them, a couple whofe tent was adjacent to mine, loft a fon of about four years of

age. The parents were fo much affected at the death of their favorire child, that they purfued the ufual teffimonies of grief with fuch uncommon rigor, as through the weight of forrow and lofs of blood, to occasion the death of the father. The woman who had heretofore been inconfolable, no fooner faw her hufband expire, than the dried up her tears, and appeared cheerful and refigned.

As I knew not how to account for fo extraordinary a transition, I took an opportunity to alk her the reason of it : telling her at the fame time, that I should have imagined the loss of her husband would rather have occasioned an increase of grief, than such a studden diminution of it.

She informed me, that us the child was fo young when it died, and unable to fupport itfelf in the country of fpirits, both the and her hutband had been apprehenfive that its fituation would be far from happy; but no fooner did the behold its father depart for the lame place, who not only, loved the child with the tendereft affection, but was a good hunter, and would be able to provide plentifully for its fupport, than the ceafed to mourn. She added, that the now faw no reafon to continue her tears, as the child on whom the doted, was happy under the care and protection of a fond father, and the had only one with that remained ungratified, which was that of being herfelf with them.

Expretions to replete with unaffected tendernels, and fentiments that would have done honor to a Roman matron, made an impretion on my mind greatly in favor of the people to whom the belonged, and tended not a little to counteract the prejudices I had hitherto entertained, in common with every other traveller, of Indian infentibility and want of parental tendernels.

Her fubsequent conduct confirmed the favorable opinion I had just imbibed; and convinced me, that, notwithstanding this apparent fuspension of her grief, fome particles of that reluctance, to be separated from a beloved relation, which is implanted either by nature or custom in every human heart, still lurked in hers. I observed that she went almost every evening to the foot

of the t band an of her h tive mo tion of been for whilft f an imita be fuspe . I o the foot of the tree, on a branch of which the bodies of her hufband and child were laid, and after cutting off a lock of her hair, and throwing it on the ground, in a plaintive mournful fong bemoaned its fate. A recapitulation of the actions he might have performed, had his life been fpared, appeared to be her favorite theme; and whilf the foretold the fame that would have attended an initiation of his father's virtues, her grief feemed to be fufpended :---

"If thou hadit continued with us, my dear fon," would the cry, " how well would the bow have become thy hand, and how fatal would thy arrows have proved to the enemies of our bunds. Thon would it often have drank their blood, and eaten their flefh, and nu. marous flaves would have rewarded thy toils. With anervous arm wouldit thou have feized the wounded buffalo, or have combated the fury of the enraged bear. Thou would thave overtaken the flying elk, and nave kept pace on the mountain's brow with the fleetest deer. What feats might it thou not have performed, had it thous faid among us till age had given thee firength, and thy father had instructed thee in every Indian accomplish. ment I. In terms like these did this untutored favage bewail the loss of her fon, and frequently would the pais. the greatest part of the night in the affectionate employ.

The Indians in general are very first in the observance of their laws relative to mourning for their dead." In fome nations they cut off their hair, blacken their faces, and fit in an creft posture, with their heads close. ly covered, and depriving themfelves of every pleafure. This feverity is continued for feveral months, and with fome relaxations the appearance is fometimes kept up for feveral years. I was told that when the Naudoweffiesrecollected any incidents of the lives of deceased relations, even after an interval of ten years, they would howl to as to be heard at a great diftance. They would fometimes continue this proof of respect and affection for feveral hours ; and if it happened that the thought occurred, and the noife was begun towards the evening, those of their tribe who were at hand would join with them.

274

CHAPTER XVI.

CONCISE CHARACTER OF THE INDIANS.

HE character of the Indians, like that of other uncivilized nations, is composed of a mixture of ferocity and gentlenefs. They are at once guided by paffions and appetites, which they hold, in common with the fiercest beasts that inhabit their woods, and are possessed of virtues which do honor to human nature.

In the following eftimate I thall endeavor to forget on the one hand the prejudices of Europeans, who ufually anaex to the word Indian, epithets that are difgraceful to human nature, and who view them in no other light than as favages and canibals, whilft with equal care I avoid my partiality towards them, as fome mult naturally arife from the favorable reception I met with during my flay among them.

At the fame time I shall confine my remarks to the nations inhabiting the wellern regions, fuch as the Naudoweffies, the Ottagaumies, the Chippeways, the Winnebagoes, and the Saukies; for as throughout that diverfity of climates, the extensive continent of America is composed of, there are people of different dispositions and various characters, it would be incompatible with my prefent undertaking to treat of all thefe; and to withe drea give a general view of them as a conjunctive y nature, hody

body. That the Indians are of a cruel, revengeful, inexora-ble difpontion, that they will watch whole days unmind-rovifion re ful of the calls of nature, and make their way through iftance, pathlefs and almost unbounded woods, fublishing only urfuit of on the feanty produce of them, to purfue and revenge dies. themfelves of an enemy; that they hear unmoved the If they a piercing cries of fuch as unhapily fall into their hands very adva-and receive a diabolical pleasure from the cortures the teir counce inflict on their prisoners, I readily grant; but let us lood overing the on the reverse of this terrifying picture, and we that the find them temperate both in their diet and rotations (1 a more a repeater a

We shall likewife fee them focial and humane to those whom they confider as their friends, and even to their adopted enemies; and ready to partake with them of the last morfel, or to risk their lives in their de-. fence. We an the state state of the second

In contradiction to the report of many other travellers, all of which have been tinctured with prejudice, I can affert, that notwithstanding the apparent indifference with which an Indian meets his wife and children after a long abfence, an indifference proceeding rather from cultom than infentibility, he is not unmindful of the claims either of connubial or parental tendernefs ; the little ftory I have introduced in the preceeding chapter, of the Naudoweffie woman lamenting her child, and the immature death of the father, will elucidate this point, and enforce the affertion much better than. the most fludied arguments. I can make use

CHAPTER XVII.

216 - 12 I Stand I and and an and a second s

OF THEIR LANGUAGE, HIEROGLYPHICS, Sc. Willing That day with a tribung to a the second

But They want a start of the and it was in I HE principal languages of the natives of North America may be divided into four classes, as they conif of fuch as are made use of by the nations of the Iromois towards the eastern parts of it, the Chipeway or Algonkins to the northwelt, the Naudoweffies to the well, and the Cherokees, Chickafaws; &c to the fouth. One or other of these four are used by all the Indiana to inhabit the parts that lie between the coaft of Lab. ader north, the Floradas fouth, the Atlantic ocean eaft.

ader north, the Fioradas fouth, the Atlantic ocean eaft, enge towards and, as far as we can judge from the difcoveries hith-ne made, the Pacific ocean on the weft. But of all thefe the Chipeway tongue appears to be opriety of an he most prevailing; it being held in tuch efteem, that the are totally he Chiefs of every tribe, dwelling about the great lakes, manity, they is to the weftward of thefe on the banks of the Miffifip-any bounds, i, with those as far fouth as the Ohio; and as far north that the Hudfon's bay confishing of more than thirty different ribes, fpeaking this language alone in their councils, otwithstanding each has a peculiar one of their own. It will probably in time become univerfal among fubject more if the Indian nations, as none of them attempt to make gularity. The reurfions to any great diffance, or are confidered as rs on the pre galified to carry on any negociation with a diffant band, ceffury; as by niefs they have acquired the Chipeways, to whom it is nat-

228

ural, the Ottawaws, the Saukies, the Ottagaumies, the Killiftinoes, the Nipegons, the bands about Lake Le Pluye, and the remains of the Algonkins, or Gens de Terre, all converfe in it, with fome little variation of a dialect; but whether it be natural to those nations, or acquired, I was not able to discover. I am, however, of opinion that the barbarous and uncouth dialect of the Winnebagoes, the Menomonies, and many other tribes, will become in time totally extinct, and this be adopted in its ftead.

The Chipeway tongue is not encumbered with any unneceffary tones or accents, neither are there any words in it that are fuperfluous; it is also easy to pronounce, and much more copious than any other Indian language.

As the Indians are unacquainted with the polite arts, or with the feiences, and as they are firangers to ceremony, or compliment, they neither have nor need an infinity of words wherewith to embellifh their difcourfe. Plain and unpolifhed in their manners, they only make use of fuch as ferve to denominate the necessaries or conveniences of life. and to express their wants, which is a flate of nature can be but few.

As the Indians are not acquainted with letters, it is very difficult to convey with precision the exact found of their words.

Although the Indians cannot communicate their ideas by writing, yet they form certain hieroglyphics, which, in fome measure, ferve to perpetuate any extraordinary transaction, or uncommon event. Thus when they are on their excursions, and either intend to proceed, or have been on any remarkable enterprife, they peel the bark from the trees which lie in their way, to give intelligence to those parties that happen to be at a diffance, of the path they must purfue to overtake them.

The following inflance will convey a more perfect idea of the methods they make use of on this occasion, than any expressions I can frame.

When I left the Miffifippi and proceeded up the Chipeway River, in my way to lake Superior, as related in my journal, my guide, who was a chief of the Chipe ways that dwell on the Ottowaw lake, near the heads of

the r of th ually fore t fome He arive their expre gaumi ikins, with a fymbo furthe which defign my Fr and ro fignific appear The offies, a ly intel receive town d Englift Chipew the Chi my, the had th their na Som armoria nels, an I never the fym

d up the Chip-, as related in of the Chipe ar the heads of

the river we had just entered, fearing that fome parties of the Naudoweffies, with whom his nation are perpetually at war, might accidentally fall in with us, and be fore they were apprifed of my being in company, do us fome mifchief, he took the following fteps.

He peeled the bark from a tree, near the entrance of ariver, and with wood coal, mixed with bear's greafe, their usual substitute for ink, made in an uncouch, but expressive manner, the figure of the town of the Ottagaumies. He then formed to the left a man dreffed in kins, by which he intended to represent a Naudoweffie, with a line drawn from his mouth to that of a deer, the fymbol of the Chipeways. After this he depictured fill further to the left a canoe as proceeding up the river, in which he placed a man with a hat on ; this figure was defigned ro represent an Englishman, or myself, and my Frenchman with a handkerchief tied round his head and rowing the canoe; to these he added several other fignificant emblems, among which the Pipe of Peace sppeared painted on the prow of the canoe.

The meaning he intended to convey to the Naudowoffices, and which I doubt not appeared to them perfect. ly intelligible, was that one of the Chipeway chiefs had received a speech from some Naudoweilie chiefs, at the town of the Ottagaumies, defiring him to conduct the Englishman, who had lately been among them, up the Chipeway river; and that they thereby required, that the Chipeway, notwithstanding he was an avowed enemy, thould not be molefied by them on his paffage, as he had the care of a perfon whom they effecmed as one of their nation.

Some authors have pretended that the Indians have armorial bearings, which they blazon with great eragnefs, and which difting uith one nation from another : but I never could obferve any other arms among them than occasion, than the symbols already described.

CHAPTER XVIII.

OF THE BEASTS, BIRDS, FISHES, REPTILLS, AND IN. SFCTS, WHICH ARE FOUND IN THE INTERIOR PARTS OF NORTH AMERICA.

F thefe I fhall, in the first place, give a catalogue and afterwards a description of fuch only as are eithe peculiar to this country or which differ in fome materia point from those that are to be met with in other realm

OF THE BEASTS.

The Tiger, the Bear, Wolves, Foxes, Dogs, the Ca of the mountain, the Wild Cat, the Buffalo, the Dee the Elk, the Moofe, the Carrabou, the Carcajou, th Skunk, the Porcupine, the Hedghog, the Woodchuck the Racoon, the Martin, the Fisher, the Musquash, Squin oled to I rels, Hares, Rabbits, the Mole, the Weezel, the Mouf the Dormouse, the Beaver, the Otter, the Mink, an alk Bats.

Bats. The W The TIGER of America refembles in fhape those of hole which Africa and Afia, but is confiderably fimaller. Nor do ney have it appear to be fo fierce and ravenous as they are. The secies, a color of it is a darkifh fallow, and is entirely free from yes; no fpots. I faw one on an ifland in the Chipeway rive or raveno of which I had a very good view, as it was no great di ttack a i tance from me It fat up on its hinder parts like a dog effl of th and did not feem either to be apprehensive of our ap s they o proach, or to discover any ravenous inclinations. It errible n however very feldom to be met with in this part of the f which world. world.

The BEARS are very numerous on this continen There but more particularly fo in the northern parts of it, an which di contribute to furnish both food and beds for almost every norther ry Indian nation. Those of America differ in many re the found pects from those either of Greenland or Russia, they be ing not only fomewhat smaller, but timorous and into The D

Dogs, the Ca o, the Deer

nlive, unless they are pinched by hunger, or fmarting om a wound. The fight of a man terrifies them ; and dog will put feveral of them to flight. They are exemely fond of grapes, and will climb to the top of the gheft trees in queft of them. This kind of food renis their flefh exceffively rich, and finely flavored ; and is confequently preferred by the Indians and traders that of any other animal. The fat is very white, nd befides being fweet and wholefome, is posself d of one valuable quality, which is, that it never loys 'The inhabitants of these parts, constantly anint themfelves with it, and to its efficacy they in a great peafure owe their agility. The feafon for hunting the ear is during the winter; when they take up their a. ode in hollow trees, or make themselves dens in the nots of those that are blown down, the entrance of which hey flop up with branches of fir that lie scattered about. from these retreats it is faid they flir not whils the Carcajou, the reather continues fevere, and as it is well known that Woodchuck bey do not provide themfelves with food, they are fugfquash, Squin oled to be enabled by nature to fublis for fome months el, the Mouff without, and during this time to continue of the fame he Mink, an ulk

The WOLVES of North America are much lefs than thape those the which are met with in other parts of the world. Her. Nor do hey have, however, in common with the reft of their ney are. The pecies, a wildness in their looks, and a ferceness in their ely free from yes; notwithstanding which, they are fur from being ipeway rive bravenous as the European wolves, nor will they ever is no great di utack a man, except they have accidentally fed on the arts like a dog left of those flain in battle. When they herd together, we of our ap is they often do in the winter, they make a hideous and actions. It i errible noise. In these parts there are two kinds; one his part of the which is of a fallow color; the other of a dun, inclin-ing to a black. The WOLVES of North America are much lefs than ng to a black.

this continen There are two forts of FOXES in North America, this continent. There are two forts of FOALS in North America, parts of it, an which differ only in their color, one being of a rediffi for almost every norm, the other of a grey; those of the latter kind that er in many rease found near the river Missispi, are extremely beau-tussia, they be lifely, their hair being of a filver grey. rous and ind The DOG Semployed by the Indians in hunting appear

to be all of the fame fpecies; they carry their ears ered, and greatly refemble a wolf about the head. They are exceedingly useful to them in their hunting excursions, and will attack the fierceft of the game they are in purfuit of. They are also remarkable for their fidelity to their matters; but being ill fed by them, are very troublefome in their huts or tents.

The CAT of the Mountain is in fhape like a cat, only much larger. The hair or fur refembles also the fkin of that domestic animal; the color, however, differs, for the former is of a reddifh or orange caft. but grows lighter near the belly. The whole fkin is beautified with black fpots of different figures, of which those on the back are long, and those on the lower parts round. On the ears there are black firipes. This creature is nearly as fierce as a leopard, but will feldom attack a man.

The BUFFALO, of which there are amazing numbers in the parts, is larger than an ox, has thort black horns, with a large beard under his chin, and his head is fo full of hair, that it falls over his eyes, and gives him a frightful look. There is a bunch on his back which begins at the haunches, and increasing gradually to the shoulders, reaches on to the neck. Both this excrescence and its whole body are covered with long hair, or rather wool, of a dun or moufe color, which is exceedingly valuable, efpecially that on the fore part of the body. Its head is larger than a bull's with a very fort neck; the breaft is broad, and the body decreases towards the buttocks ; Thefe creatures will run away at the fight of a man, and a whole hera will make off when they perceive a tingle dog. The flefh of the buffalo is excellent food, its hide is extremely useful; and the hair very proper for the manufacture of various articles.

There is but one species of DEEK in North Amerioa, and these are higher and of a fimmer make than those in Europe. Their shape is nearly the same as the European, their color of a deep fallow, and their horns very large and branching. The deer is the swiftest on the American plains, and they herd together as they do in other countries.

The] balk equ deer, on than the grey, an difh caff as that a prodig persons are not teeth or of those lat, and are rour horns ev gust the Notwith nature h e deer. as that o on mofs

th Amerimake than ame as the their horns fwifted on r as they

The ELK greatly exceeds the deer in fize, being in balk equal to a horfe. It's body is shaped like that of a deer, only its tail is remarkably thort, being not more than three inches long. The color of its hair, which is grey, and not unlike that of a camel, but of a more reddifh caft, is nearly three inches in length, and as coarfe as that of a horfe. The horns of this creature grow to a prodigious fize, extending fo wide that two or three perfons might fit between them at the fame time. They are not forked like those of a deer, but have all their teeth or branches on the outer edge. Nor does the form of those of the elk refemble.a deer's, the former being flat, and eight or ten inches broad, whereas the latter are round and confiderably narrower. They fhed their horns every year in the month of February, and by August the new ones are nearly arrived at their full growth. Notwithstanding their fize, and the means of defence nature has furnished them with, they are as timorous as e deer. Their fkin is very useful and will drefs as welk as that of a buck. They feed on grafs in the fummer, on mofs or buds in the winter.

The MOOSE is nearly about the fize of the elk, and the horns of it are almcft as numerous as that animal's; the ftem of them, however, is not quite fo wide, and they branch on both fides like those of a deer. This creature also sheds them every year Though its hinder parts are very broad, its tail is not above an inch long. It has feet and legs like a camel; its head is about two leet long, its upper lip much larger than the under, and the nostrils of it are fo wide that a man might thrust his hand into them a confiderable way. The hair of the moole is light grey, mixed with a blackish red. It is very elastic, for though it be beaten ever fo long, it will retain its o. riginal shape. 'I he flesh is exceeding good food, easy of digettion, and very nourifhing. The note or upper lip, which is large and loofe from the gums, is effeemed a great delicacy, being of a firm confistence, between marrow and griftle, and when properly dreffed, affords, a rich and luscious difh. Its hide is very proper for leather, being thick and frong, yet foft and pliable. The pace of this creature is always a trot, which is fo

expeditious, that it is exceeded in fwiftnefs but by few of its fellow inhabitants of thele woods. It is generally found in the forefts, where it feeds on mofs and buds. Though this creature is of the deer kind, it never herds as those do. Moft authors confound it with the elk, deer or carrabou, but it is a species totally different as might be discovered by attending to the description I have given of each.

The CARRIBOU is not fo tall as the moofe, however, it is fomething like it in fhape, only rather more heavy, and inclining to the form of an afs. The horns of it are not flat as those of the elk are, but round like those of the deer; they also meet nearer together at the extremities, and bend more over the face than either those of the elk or moofe. It partakes of the fwiftness of the deer, and is with difficulty overtaken by its purfuers. The fleth of it likewise is equally as good, the tongue particularly is in high efteem. The fixin being fmooth and free from veins, is as valuable as fhamoy,

The CARCAJOU, which is of the cat kind, is a terrible enemy to the preceding four fpecies of beafts. Heeither comes upon them from fome concealment unperceived, or climbs up into a tree, and taking his flation on fome of the branches, waits till one of them driven by an extreme of heat or cold, takes thelter under it ; when he faftens upon his neck, and opening the jugular vein, foon brings his prey to the ground. This he is enabled to do by his long tail, with which he encircles the body of his adverfary ; and the only means they have to thun their fate, is by flying immediately to the water; by this method, as the carcajou has a great diflike to that element, he is fometimes got rid of before he can effect his purpofe.

The SKUNK is the moll extraordinary animal that the American woods produce. It is rather left than a polecat, and of the fame fpecies; it is therefore often miltaken for that creature, but is very different from it in many points. Its hair is long and fhining, variegated with large black and white fpots, the former molily on the fhoulders and rump; its tail is very bufly, like that of the fox, part black, and part white like its body; its

lives ch dinary foon as diftance tile a n that the ference almost f over the French, Bete Pu describe creature of it fall greeable or if any tollerabl your fig dreaded. fætid eff penetrat withitan and to r uralifts them that ies, near water - to ed the u horrid f great can frequent and good carcale, provision tice there name. mail that for than a fore often it from it ariegated holly on , like that bedy; it?

lives chiefly in the woods and hedges ; but its extraordinary powers are only thewn when it is purfued. As foon as he finds himfelf in danger, he ejecis, to a great distance from behind, a imali stream of water, of fo fubtile a nature, and at the fame time fo powerful imell, that the air is tainted with it for half a mile in circum. ference ; and his purfuers, whether men or dogs, being almost fuffocated with the stench, are obliged to give over the purfuit. On this account he is called by the French, Enfant du Diable, the Child of the Devil; or Bete Puante, the Stinking Beaft. It is almost impossible to describe the noifome effects of the liquid with which this creature is supplied by nature for its defence. If a drop of it falls on your clothes, they are rendered fo difagreeable that it is impossible ever after to wear them; or if any of it enters your eyelids, the pain becomes intollerable for a long time, and perhaps at laft you lofe. your fight. The fmell of the fkunk, though thus to be dreaded, is not like that of a putrid carcafe, but a ftrong fætid effluvia of musk, which displeases rather from its. penetrating power than from its naufeoufnels. It is notwithitanding confidered as conducive to clear the head, and to raife the spirits. This water is supposed by naturalists to be its urine; but I have diffected many of them that I have fhot, and have found within their bodies, near the urinal veffel, a fmall receptacle of water totally diffinct from the bladder which contained the urine, and from which alone I am fatisfied the hourid Rench proceeds. After having taken out with great care the bag wherein this water is lodged, I have frequently fed on shem, and have found them very fweet. and good; but one drop, emitted' taints not only the carcafe, but the whole houfe, and renders every kind of provisions, that are in it, untit for use. With great juftice therefore do the French give it fuch a diabolical. name.

The PORCUPINE of America is in bulk about the fize of a fmall dog, but is both thorter in length, and not fo high from the ground. It varies very much from those of other countries both in its shape and the length of its quills. The former is like that of a fox,

except the the head, which is not fo fharp and long, but refembles more that of a rabbit. Its body is covered with hair of a dark brown, about four inches long, greac part of which are the thickness of a firaw, and are termed its quills. These are white, with black points, hollow and very firong, especially those that grow on the back. The quills ferve this creature for defensive weapons; and if they pierce the flesh in the least degree, they will fink quite into it, and are not to be eztracted without incition. The Indians use them for boring their ears and noles, to infert their pendants, and also by way of ornament in their flockings, hair,&c. befides which, they greatly efteem the flesh.

The WOODCHUCK is a ground animal of the fur kind, about the fize of a martin, being nearly fifteen inches long; its body however is rounder, and its legs thorter; the fore paws of it are broad, and confiructed for the purpose of digging holes in the ground, where it burows like a rabbit; its fur is of a grey color, on the redificant, and its field is tolerable food.

The RACOON is fomewhat lefs in fize than a beaver. and its feet and legs are like those of that creature, but fhort in proportion to its body, which refembles that of a badger. The shape of its head is much like a fox's, only the ears are fhorter, more round and naked ; and its hair is allo fimilar to that animal's, being thick, long, foft, and black at the ends. On its face there is a broad firipe that runs across it, and includes the eyes, which are large. Its muzzle is black and at the end roundifh like that of a dog'; the teeth are also fimilar to these of a dog in number and fhape; the tail is long and round, with annular stripes on it like those of a cat; the feet have five long flender toes, armed with tharp claws, by which it is enabled to climb up trees like a monkey, and run to the very extremities of the boughs. "It makes nfe of its fore feet, in the manner of hands, and feeds itself with them. The flesh of this creature is very good in the months of September and October, when fruit and nuts on which it likes to feed, are plenty.

The MARTIN is rather larger than a fquirrel, and fomewhat of the fame make; its legs and claws howev-

er, ar and ro of a c biown ern p much ered w than it ii any The for the be a di the pro ing but a large fo muc actly th of their it migh ture it Aruction piece of and in p on when other fr winter t part by main qu elt reaso fpring SQU Americ and the thofe of differ fr femble being fi with red than the ruffet g ander p

Its ears are fhort, broad, and roundifh, and its eyes fhine in the night like those of a cat. The whole body is covered with fun of a brownish fallow color, and fome in the more northern parts are black; the fkins of the latter are of much greater value than the others. The tail is covered with long hair, which makes it appear thicker than it really is. Its flefth is fometimes eaten, but is not i' any great efteem.

The MUSQUASH, or MUSK-RAT, is fo termed for the exquisite musk which it affords It appears to be a diminutive of the beaver, being endowed with all the properties of that fagacious animal, and wants nothing but fize and ftrength, being not much bigger than a large rat of the Norway breed, to rival the creature it fo much refembles. Was it not for its tail, which is exactly the fame as that of an European rat, the ftructure of their bodies is fo much alike, effectially the head, that it might be taken for a small beaver. Like that creature it builds itself a cabin, but of a less perfect conflruction, and takes up its abode near the fide of fome piece of water. In the fpring they leave their retreats, and in pairs fubfilt on leaves and roots till fummer comes on when they feed on ftrawberries, rafpberries, and fuch other fruits as they can reach. At the approach of winter they feparate, when each takes up its lodging apart by itfelf in fome hollow of a tree, where they remain quite unprovided with food, and there is the great. eft reason to believe, sublist without any till the return of fpring

SQUIRRELS. There are five forts of fourierls in America; the red, the grey, the black the variegated and the flying. The two former are exactly the fame as those of Europe; the black are fomewhat larger and differ from them only in color; the variegated also refemble them in fhape and figure, but are very beautiful, being finely flying and for grey, and fometimes with red and black The flying fquirrel is much lefs than the European, being about five inches long, and of a ruffet grey or afh color on the back, and white on the under parts. It has black prominent eyes, like those of

the moufe, with a long, flat, broad tail. By a membrane on each fide, which reaches from its fore to its hind legs, this creature is enabled to leap from one tree to another, even if they fland a confiderable diffance apart; this loofe fkin, which it is enabled to firetch out like a fail, and by which it is buoyed up, is about two inchesbroad, and is covered with a fine hair or down. It feeds upon the fame provisions as the others and is eafily tamed.

The BEAVER. This creature has been fo often treated of, and his uncommon abilities fo minutely def. cribed, that any further account of it, will appear unneceffary ; however for the benefit of those of my readers who are not to well acquainted with the form and properties of this fagacious and ufeful animal, I shall give a concife description of it. The beaver is an amphibious quadruped, which cannot live for any long time in the water, and it is faid is able to exist entirely without it, provided it has the convenience of fometimes bathing. itfelf. The largest beavers are nearly four feet in length, and about fourteen or fifteen inches in breadth over the haunches; they weigh about fixty pounds. Its head is like that of an otter, but much larger ; its fnout is pretty long, the eyes fmall, the ears fhort, round, hairy on the outlide, and fmooth within, and its teeth very long ; the under teeth ftand out of their mouths 2bout the breadth of three fingers, and the upper half a finger, all of which are broad, crooked, ftrong and tharp ; belides those teeth called the inciffors, which row double, are fet very deep in their jaws, and bend the the edge of an axe, they have fixteen grinders, eight on each fide, four above and four below, directly opposite to each other. With the former they are able to cut down trees of a confiderable fize, with the latter to break the hardest fubstances. Its legs are fhort, particularly the fore legs, which are only about five inches long; and not unlike those of the badger the toes of the fore feet are feparate, the nails placed obliquely, and are hollow like quills ; but the hind feet are quite different, and furnished with membranes between the toes.

he latter

ort, par-

ve inches

es of the

ely, and

te differ-

the toes.

By this means it can walk though but flowly, and is able to fwim with as much eafe as any other aquatic animal. The tail has fomewhat in it the refemblance of a fifh, and feems to have no manner of relation with the reft of the body, except the hind feet, all the other parts being fimilar to those of land animals. The tail is covered with a skin furnished with scales, that are joined together by a pellicle ; these scales are about the thickness of parchment, nearly a line and a half in length, and of a hexagonical figure, having fix corners ; it is about eleven or twelve inches in length, and broader in the mildle, where it is four inches over, than either at the 100t or at the extremity. It is about two inches thick near the body, where it is almost round, and grows gradually thinner and flatter to the end. The color of the beaver is different according to the different climates in which it is found. In the most northern parts they are generally quite black; in more tem perate, brown; their color becoming lighter and lighter as they approach towards the fouth. The fur is of two forts all over the body, except at the feet, where it is very flort; that which is the longest, is generally in length about an inch, but on the back it fometimes extends to two inches, gradually diminishing towards the head and tail. This part of the fur is harfh, coarfe and fhining, and of little use; the other part confists of a very thick and fine down, fo foft that it feels almost like filk, about three quarters of an inch in length, and is what is commonly manufactured. Castor, which is useful in medicine, is produced from the body of this creature ; it was formerly believed to be its tefticles, but later discoveries have shown that it is contained in four bags, fituated in the lower belly. Twoof which, that are called the superior, from their being more elevated than the others, are filled with a foft, refinous, adhefive matter, mixed with fmall fibres, greyish without, and yellow within, of a frong, difagreeable, and penetrating fcent, and very inflammable. This is the true calloreum; it hardens in the air, and becomes brown, brittle, and friable. The inferior bags contain an uncluous liquor like honey; the

color of which is a pale yellow, and its odor fomewhat different from the other, being rather weaker and more difagreeable; it however thickens as it grows older, and at length becomes about the confiftence of tallow. This has also its particular use in medicine; but it is not fo valuable as the true caftoreum.

The ingenuity of these creatures in building their cabins, and in providing for their fublistence, is truely wonderful. When they are about to chufe themfelves a habitation, they affemble in companies fometimes of two or three hundred, and after mature deliberation fix on a place where plenty of provisions and all necessaries are to be found. Their houses are always fituated in the water, and when they can find neither lake nor pond adjacent, they endeavor to fupply the defect by ftopping the current of fome brook or fmall river, by means of a caufeway or dam. For this purpose they set about felling of trees, and they take care to choose out those that grow above the place where they intend to build, that they may fwim down with the current. Having fixed on those that are proper, three or four beavers placing themfelves round a large one, find means with their ftrong teeth to bring it down. They also prudently contrive that it shall fall towards the water, that they may have the lefs way to carry it. After they have by a continuance of the fame labor and industry, cut it into proper lengths, they roll thefe into the water, and navigate them towards the place where they are to be employed. Without entering more minutely into the measures they pursue in the construction of their dams, I shall only remark, that having prepared a kind of mortar with their feet, and laid it on with their tails, which they had before made use of to transport it to the place where it is requisite, they construct them with as much folidity and regularity as the most experienced workmen could do. The formation of their cabins is no lefs amazing. I hefe are either built on poles in the middle of the imall lakes they have thus formed, on the bank of a river, or at the extremity of fome point of land that advances into a lake. The figure of them is r fomewhat er and more s older, and allow. This it is not fo

ilding their e, is truely themfelves metimes of iberation fir l necessaries fituated in ke nor pond by Ropping means of et about fel. it those that build, that aving fixed vers placing with their o prudently r, that they hey have by ry, cut it inwater, and cy are to be ely into the their dams, kind of mortails, which to the place ith as much enced work. bins is no lefs s in the midmed, cn the me point of re of them is

CARVER'S TRAVELS.

round or oval, and they are fashioned with an ingenuity equal to their dams. Two thirds of the edifice flands above the water, and this part is fufficiently capacions to contain eight or ten inhabitants. Each beaver has his place alligned him, the floor of which he curioufly frews with leaves, or fmall branches of the pine tree, to as to render it clean and comfortable ; and their cabins are all fituated fo contiguous to each other, as to allow of an eafy communication. The winter never fui prifes these animals before their buliness is completed; for by the latter end of September their houses are finished. and their flock of provisions is generally laid in. These confist of finall pieces of wood whose texture is fort, fuch as the poplar, the afpin, or willow, &c. which they lay up in piles, and dispose of in fuch manner as to preferve their molflure. Was I to enumerate every inftance of fagacity that is to be difcovered in these animals, they would fill a volume, and prove not only end tertaining but inftructing.

The OTTER. This creature alfo' is amphibious, and greatly refembles a beaver, but is very different from it in many respects. Its body is nearly as long as a beaver's but confiderably lets in all its parts. The muzzle, eyes, and the form of the head are nearly the fame, but the teeth are very unlike, for the otter wants the large incifors or nippers that a beaver has; inflead of thefe, all his teeth, without any diffinction, are thaped like those of a dog or wolf. The hair also of the former is not half to long as that belonging to the latter, nor is the color of it exactly the fame, for the hair of an otter under the neck, ftomach and belly, is more greyith than that of a beaver, and in many other respects it likewife varies. This animal, which is met with in molt parts of the world, but in rach greater numbers in North America, is very mischievious, and when he is elofely purfued, will not only attack dogs but men.

It generally feeds upon fifh, cipcially in the fummer, but in the winter is contented with the bark of trees, or the produce of the fields. Its flefh both taftes and fmells of fifh, and is not wholefome food, though it is fometimes eaten through necesility.

The MINK is of the otter kind, and fubfills in the fame manner. In fhape and fize it refembles a polecat being equally long and flender. Its fkin is blacker that that of an otter, or almost any other creature; "as black as a mink," being a proverbial expression in America it is not however fo valuable, though this greatly de pends on the feason in which it is taken. Its tail is round like that of a fnake, but growing flattish towards the end, and is entirely without hair. An agreeable musky fcent exhales from its body; and it is met with near the fources of rivers on whole banks it chiefly lives.

The Eagle, the Hawk, the Night Hawk, the Fift Hawk, the Whippoorwill, the Raven, the Crow, the Owl, Parrots, the Pelican, the Crane, the Stork, the Cormorant, the Heron, the Swan, the Goofe, Ducks, the Teal, the Loon, the Water Hen, the Turkey, the Heath Cock, the Partridge. the Quail, Figeons, the Snipe, Larks, the Woodpecker, the Cuckoo, the Blue Jay, the Swallow, the Wakon Bird, the Black Bird, the Red Bird, the Thrush, the Whetsaw, the Nightingale, the King Bird, the Robin, the Wren, and the Humming Bird.

The EAGLE. There are only two forts of eagles in these parts, the bald and the grey, which are much the same in fige, and similar to the shape of those of other countries.

The NIGHT HAWK. This bird is of the hawk fpecies, its bill being crooked, its wings formed for fwillnefs, and its fhape nearly like that of the common hawk; but in fize it is confiderably lefs; and in color rather darker. It is fcarcely ever feen but in the evening, when at twilight, it flies about, and darts itfelf in wanton gambols at the head of the belated traveller. Before a thurtler flower these birds are feen at an amazing height in the air affembled together in great numbers, as fwallows are obferved to do on the fame occation. fubfills in the oles a polecate blacker that re ; "as black in America greatly de tail is round towards the ceable mufky with near the lives.

CARVER'S TRAVELS.

The WHIPPOORWILL, or as it is termed by the adians, the Muckawifs. This extraordinary buil is mewhat like the last mentioned in its shape and color. aly it has fome whitish fluipes acrols the wings, and te that is feldom feen till after fun fet. It alfo is nevmet with but during the ipring and fummer months. As foon as the Indians are informed by its notes of its eturn, they conclude that the frost is entirely gone, in thich they are feldom deceived ; and on receiving this furance of milder weather, begin to fow their corn. It acquires its name by the noile it makes, which to the copie of the colonies founds like the name they give it, whip poor-will; to an Indian ear muck-a-wife. The words, it is true, are not alike, but in this manner they like the imagination of each 1 and the circumstance is proof that the fame founds, it they are not rendered ertain by being reduced to the rules of orthography, night convey different ideas to different people As: bon as night comes on in fe birds will place themfelves in the fonces, flumps, or fit is that is near fome house, nd repeat their melanc. en notes without any variaion till midnight. The Indians, and fome of the inabitants of the back fettlements, think if this bird perch. n upon any house, that it betokens fome milhap to the habitants of it.

The FISH HAWK greatly refembles the latter in ts fhape, and receives his name from his food, which is generally fift ; it fkims over the lakes and rivers and fometimes feems to lie expanded on the water, as he hovers fo clufe to it, and having by fome attractive powendrawn the fifth within its reach, darts fuddenly upon them. The charm it makes use of is fuppoled to be an oil contained in a small bag in the body, and which nature has by fome means or other, fupplied him with the power of using for this purpole; it is however very certain that any bait touched with a drop of the oil collefted from this bird is an irrefillible lure for all forts of fifth, and infuse; the angler great fuccefs.

The OWL. The only fort of owls that is found on the banks of the Milliuppi is extremely beautiful in its plumage, being of a fine deep yellow or gold color, pleafingly shaded and spotted. Th

Th.

Th

Th

The CRANE There is a kind of crane in these parts, which is called by father Henipen a pelican, that is about the fize of the European crane, of a greyish color, and with long legs; but this species differs from all others in its bill, which is about twelve inches long, and one inch and an half broad, of which breadth it continues to the end, where it is blunted, and round like a paddle; its tongue is of the fame length.

DUCKS. Among a variety of wild ducks, the different species of which amount to upwards of twenty I shall confine my description to one fort, that is, the wood duck, or. as the French term it, Canard Branchus. This fowl receives its name from its frequenting the woods and perching on the branches of trees, which no other water fowl (a characteristic that this still preferves) is known to do. It is nearly of a fize with other ducks; its plumage is beautifully variegated, and very brilliant. The field of it alfo.as it feeds but little on fish, is finely flavored, and much superior to any other fort.

The IEAL. I have already remarked in my jourmal, that the teal found on the Fox river and the head branches of the Miffifippi, are perhaps not to be equaled for the fatness and delicacy of their field by any other in the world. In color, shape, and fize they are very little different from those found in other countries.

The LOON is a water fowl, fornewhat lefs than a teal, and is a species of the dobchick. Its wings are short, and its legs and feet large in proportion to the body; the color of it is a dark brown, nearly approaching to black; and as it feeds only on fifh, the field of it is very ill flavored. These birds are exceedingly nimble and expert at diving, fo that it is almost impossible for one perfon to short them, as they will dexterously avoid the shot by diving before they reach them; fo that it requires three perfons to kill one of them, and this can only be done the moment it raises its head out of the water as it returns to the surface after diving. It however only repays the trouble taken to obtain it, by the excellent sport it affords.

243

efs than a wings are tion to the approach. a fielh of it gly nimble poffible for oully avoid fo that it id this can nut of the ... It howit, by the The PARTRIDGE. There are three forts of partridges here, the brown, the red, and the black, the first of which is most etteemed. They are all much larger than the European partridges, being nearly the fize of a hen pheafant; their head and eyes are alfo like that bird, and they have all long tails, which they fpread like a fan, but not erect; but contrary to the custom of those in other countries, they will perch on the branches of the poplar and black birch, on the buds of which they feed early in the morning and in the twilight of the evening, during the winter months, when they are calily fhot.

The WOOD PIGEON is nearly the fame as ours, and there are fuch prodigious quantities of them on the banks of the Miffifippi, that they will fometimes darken the fun for feveral minutes.

The WOODPECKER. This is a very beautiful bird; there is one fort whole feathers are a mixture of various colors; and another that is brown all over the body, except the head and neck, which are of a fine red: As this bird is fuppofed to make a greater noife than ordinary at particular times, it is conjectured his cries then denote rain.

The BLUE JAY. This bird is fhaped nearly like the European jay, only that its tail is longer. On the t p of its head is a creft of blue feathers, which is raifed or let down at pleafure. The lower part of the neck behind; and the back, are of a purplill color, and the upper fide of the wings and tail, as well as the lower part of the back and rump, are of a fine blue; the extremities of the wings are blackith, faintly tinctured with dark blue on the edges, whill the other parts of the wing are bared acrofs with black in an elegant manner. Upon the whole this bird can fearcely be exceeded in beauty by any of the winged inhabitants of this of other climates. It has the fame jetting motion that jays generally have, and its cry is far more pleafing.

The WAKON BIRD, as it is termed by the Indians, appears to be of the fame forcies as the birds of paradife. The name they have given it, is expressive of its fuperior excellence, and the veneration they have for it p

214

the wakon bird beind in their language the bird of the Great Spivit It is nearly the fize of a fwallow, of a brown color, thaded about the neck with a bright green ; the wings are of a darker brown than the body ; its tail is composed of four or five feathers, which are three times as long as its body, and which are beautifully thaded with green and purple. It carries this fine length of plumage in the fame manner as a peacock does, but it is not known whether it ever raifes it into the erect polition that that birds fometimes does. I never faw any of thefe bird, in the colonies, but the Naudowellie Indians caught feveral of them when I was in their country, and feemed to treat them as if they were of a fuperior rank to any other of the feathered race.

The BLACK BIRD. There are three forts of birds in North America that bear this name; the firlt is the common, or as it is there termed, the crow black bird, which is quite black, and of the fame fize and thape of those in Europe, but it has not that! meledy in its notes which they have In the month of September this fort fly in large flights, and do great mischief to the Indian corn, which is at that time just ripe. The fecond fort is the red wing, which is rather fmaller than the first species, but like that it is black all over its body, except on the lower rim of the wings, where it is of a fine, bright, full fcarlet. It builds its neft, and chicfly reforts among the fmall buffes that grow in meadows and low, fwampy places. It whiftles a few notes. but is not equal in its fong to the European black bird. 'I he third fort is of the fame fize as the latter, and is jet black like that but all the upper part of the wing, just below the black, is of a fine clear white; as if nature intended to divertify the fpecies, and to atone for the want of a melodious pipe by the beauty of its plumage ; for this alfo is deficient in its mufical powers. The beaks of every fort are of a full yellow, and the females of each of a rulty black like the European.

The **RED** BIRD is about the fize of a fparrow, but with a long tail, and is all over of a bright vermillion color. I faw many of them about the Ottawaw lakes, but T in form was en

Carp;

but I could not learn that they fung. I did observed in some other parts a bird of nuch the same make, that was entirely of a fine yellow:

The WHE I'SAW is of the cuckoo kind; bring like that, a folitary bird, and fcarcely ever feen In the tunmer months it is heard in the groves, where it makes a noise like the filing of a flw, from which it receives its name. The KING HIRD is like a fwallow, and feems to be of the fame fpecies as the black martin or fwift. It is called the king bird because it is able to mather almost every bird that thes. Thave often feer to down a hawk.

The HUMMING BIRD. This beautiful bird. which is the fmallelt of the feathered inhabitants of the air, is about the third part of the file of a wren, and is haped extremely life it Its legs, which are about an mch long, appear like two fmall needles, and its body is proportionable to them. But its plumage exceeds. description . On its head it has a small tuft of jetty, thining black; the break of it is red, the belly white. the back, wings, and tail of the finest pale green; and fmall fpecks of gold are fcattered with inexpreflible grace over the whole; belides this, an almost impreceptible down foftens the colors, and produces the most pleating thades. With its bill, which is of the fame dis minitive lize as the other parts of its body; it extracts from the flowers a moilture which is its nourifhment ; over thefe it novers like a bee, but never lights on them, moving at the fame time its wigs with fuch velocity. that the motion of them is imperceptible ; notwith flanding which they make a humming noife, from whence ite receives its nan:e.

The STURGEON. The fresh water flurgeon is fhaped in no other refpect like those taken near the fea, except in the formation of its head and tail; which are falhioned in the fame manner, but the body is not fo angulated, nor are there to many horny fcales about it as on the latter. Its length is generally about two feet and a half on three feet long; but in circumference not proportionable, being a flender fith. The flefh is exceed. ingly delicate and finely flavored; I caught fome in the head waters of the river St. Croix that far exceed. ed trout. The manner of taking them is by watching them as they lie under the banks in a clear fiream, and dartingat them with a fill fpear ; for they will not take a bait. There is alfo in the Midlifippi, and there only, another fort than the fpecies I have defcribed, which is fimilar to it in every respect, except, that the upper jaw extends tourteen or fifteen inches beyond the under ; this extensive jaw, which is of a griftly substance, is three inches and a half broad, and continues of that breadth, fomewhat in the thape of an oar, to the end, which is flat. The fieth of this filh, however, is not to be compared with the other fort, and is not fo much eftemed even by the Indians.

The CAT FISH. This fifth is about eighteen inches long; of a brownifh color, and without fcales. It has a large round head, from whence it receives its name, on different parts of which grows three or four firong, fharp horns about two inches long. Its fins are allo very bony and firong, and without great care will pierce the hands of those who take them. It weighs commonly about five or fix pounds; the field of it is exceflively fat and lufcious, and greatly refembles that of an eel in its flavor.

The CARP and CHUB are much the fame as those in England, and nearly about the fame fize,

e, the Wall the, the Was ter Snake, the Hiffing Snake, the Green Snake, the Thorntail Snake, the Speckled Snake, the Ring Snake, the Fwo headed Snake.

The RATTLE SNAKE There appears to be two fpecies of this reptile; one of which is commonly termed the Black, and the other the Yellow 1, and of these the latter is generally considered as the largest. At their full growth they are upwards of five feet long, and the middle part of the body, at which it is of thegreatest bulk, measures about nine inches round. From that part it gradually decreafes both towards the head and the tail. The neck is proportionably very fmall. and the head broad and depressed. These are of a light brown color, the iris of the eye red, and all the upper part of the body brown, mixed with a ruddy yellow. and chequered with many regular lines of a deep black, gradually, thading towards a gold color. In thort the whole of this dangerous reptile, is very beautiful, and could it be viewed with lefs terror, fuch a variegated arrangement of colors would be extremely pleasing. But these are only to be seen in their highest perfection at the time this creature is animated by refentment; then every tint rullies from its Subcutaneous receis, and gives the furface of the fkin a deeper frain. The belly is of a palifh blue, which grows fuller as it approaches the fides, and is at length intermixed with the color of the upper part. The rattle at its tail, from which it receives its name, 's composed of a firm, dry, callous, or horny fubiliance if a light brown, and confifts of a number of cells which articulate one within another, like joints ; and which increase every year, and make known the age, of the creature Thefe articulations being very loose, the included points firike againft the inner furface of theconcave parts or rings into which they are admitted, and as the fnake vibrates, or fnakes its tail makes a ratthing noife. This alarm is always given when it is apprehentive of danger; and in an inftant after forms itfelf into a fpiral wreath, in the centre of which appear the head creek, and breathing forth vengeance, againft either, man or bealt that thall dare to come near it." In this attitude he awaits the approach of his enemies.

rattling his tail as he fees or hears them coming on. By this timely intimation, which heaven feems to have provided as a means to counteract the mischief this veno. mous reptile would otherwife be the perpetrator of, the unwary traveller is apprifed of his danger, and has an opportunity of avoiding it. It is however to be observed, that it never acts offenfively ; it neither purfies nor flies from any thing that approaches it, but lies in the polition described, rattling his tail as if reluctant to hurt. The treth with which this ferpent effects his poifonous purpoles are not those he makes use of on ordinary cccalions, they are only two in number, very fmall and tharp pointed, and fixed in a finewy fubitance that lies near the extremity of the upper jaw, refembling the claws of a cut; as the root of each of these, might be extended, contraded, or entirely hidden, as need requires, are two fmail bladders which nature has fo constructed, that at the fame inflant an incilion is made by the teeth, a drop of a greenilh, poifonous liquid enters the wound, and taints with its dettructive quality the whole mail of blood. In a moment the unfortunate victim of its wrath feels a chilly tremor run through all his frame, a fweiling immediately begins on the fpot where the teeth-had entered, which fpreads by degrees over the whole body, and produces on every part of the fixin the variegated hue of the fnake. The bite of this reptile is more or lefs venomous, according to the featon of the year in which it is given. In the dog days, it often proves instantly mortal, and especially if the would is made among the linews fittated in the back pars of the leg, above the heel; but in the fpring, in autumn, or during a cool day which might happen in the fummer, its bad effects are to be prevented by the immediate application of proper remedies ; and these Providence has bounteoufly fupphied, by cauting the Rattle Snake Plantain, an approved antidotz to the poifon of this creature, to grow in great prohision where ever they are to be niet with "I here are likewife feveral other remedies befides this for the venom of its bite. A decoction is made of the buds or bark of the white ofh, taken internally prevents its pernicious effects. Salt

248

is a newly discovered remedy, and if applied immediately to the part, or the wound be walked with brine, a cure might be affored. The fat of the reptile alfo rub. bed on it, is frequently found to be very efficacious. But though the lives of the perions who have been bitten might be preferved by thefe, and their health in fome degree reflored, yet they anually experience a flight return of the dreadful fymptons about the time they receiv. ed the inftillation. However remarkable it may appear. it is certain, that though the venom of this creature affects, in a greater or lefs degree, all animated nature, the hog is an exception to the rule, as that animal will readily deftroy them without dreading their poifonous fangs. and fatten on their flesh. It has been often observed, and I can confirm the observation, that the Rattle Snake is charmed with any harmonious founds, whether vocal or infirumental; I have many times feen them, even when they have been enraged, place themfelves in a liftening poflure, and continue immoveably attentive and fusceptible of delight all the time the mulic has last. ed. I should have remarked, that when the rattle inake bites, it drops its under jaw, and holding the upper jaw ered, throws itfelf in a curve line, with great force, and as quick as lightning, on the object of its relentment. In a moment after, it returns again to its defensive pofture having difengaged its teeth from the wound with great celerity, by means of the polition in which it had placed its head when it made the attack. It never exa tends itself to a greater distance than half its length will reach, and though it fometimes repeats the blow two or three times, it as often returns with a fudden rebound to its former state. The black rattle fnake differs in no other respect from the yellow, than in being rather small. er, and in the varigation of its collors, which are exactly reverfed : one is black where the other is yellow, and vice versa. They are equally venomous. It is not known how these creatures engender; I have often found the eggs of feveral other species of the snake, but notwithstanding no one has taken more pains to acquire a perfect knowledge of every property of these reptiles than myfelf, I never could difcover the manner in which

Th

they bring forth their young. I once killed a female that had feventy young ones in its belly, but these were perfectly formed, and I faw them just before retire to the mouth of their mother, a place of fecurity, on my approach. The gall of this ferpent, mixed with chalk, are formed into little balls, and exported from America, for medical purpoles They are of the nature of Gafe coign's powders, and an excellent remedy for complaints incident to children. The flefh of the fnake alfo dried and made into broth, is much more putritive than that of vipers, and very efficacious against confumptions. The LONG BLACK SNAKE. These are also of two forts, both of which are exactly fimilar in thape and fize, only the belly of one is a light red, the other a faint blue; all the upper parts of their bodies are black and fealy. They are in general from fix to eight feet in length, and carry their heads, as they crawl along, about a . sot and a half from the ground. They eatily climb the highest crees in purfuit of birds and fourrels which are their chief food ; and these, it is faid, they charm by their looks, and render incapable of efcaping from them. Their appearance carries terror with it to those who are unacquainted with their inability to hurt, but they are perfectly moffensive and free from ven-

The STRIPED or GARTER SNAKE, is exactly the fame as that species found in other climates.

The WATER SNAKE is much like the rattle flake in fhape and fize, but is not endowed with the fame venomous powers, being quite harmlefs.

The HISSING SNAKE I have already perticularly deforibed, when I treated, in my journal, of Lake Erie

The GREEN SNAKE is about a foot and an half long, and in color fo near to grafs and herbs, that it cannot be differend as it lies on the ground; hapily, however, it is free from venom, otherwife it would do an illimite deal of mitchief, as those who pass through the meadows, not being able to perceive it, are deprived of the power of avoiding it.

The THORN TAIL SNAKE. This reptile is

found in many parts of America, but is very feldom to be feen. It is of a middle fize, and receives its name from a thora like dart in its tail, with which it is faid to inflict a mertal wound.

The SPECKLED SNAKE is an aqueous reptile about two feet and an half in length, but without venom. Its thin which is brown and white, with fome fpots of sellow in it, is used by the Americans as a cover for the bandles of whips, and it renders them pleafing to the fight.

The RING SNAKE is about twelve inches long ; the body of it is entirely black; except a yellow ring which it has about its neck, and which appears like a narrow piece of riband vied round it. This odd reptile is frequently found in the bark of trees and among old

The TWO HEADED SNAKE. The only inake of this kind that was ever feen in America, was found about the year 1762, near lake Champlain, by Mr. Park, a gentleman of New England, and made a prefent to lord Amherit. It was about a foot long, and in fhape like the common inake, but it was furnished, with .two heads esa Sty fimilar, which united at the neck. Whether this was a diffind species of inakes, and was able to propagate its likenefs, or whether it was an accidental formation, I know not.

The TORTOISE or LAND TURTLE. The hape of this creature is fo well known that it is unneceftary to deferibe it. There are feven or eight forts of them in America, fome of which are beautifully variegated, even beyond defeription. The fhells of many have fpots of red, green, and yellow in them, and the chequer work, is composed of fmall fquares curioufly disposed. The most beautiful fort of these creatures are the fmalleft, and the bite of them is faid to be vero-

s reptile is

animal creation, in the country I treat of, I shall only take notice of two of them; which are termed the Swift and Slow Lizard

The SWIFT LIZARD is about fix inches long, and has four legs and a tail. Its body, which is blue, is prettily striped with dark lines shaded with yellow; but the end of the tail is totally blue. It is fo remarkably agile, that in an instant it is out of fight, nor can its movement be perceived by the quickest eye; so that it might more justly be faid to vanish, than to run away. This species are supposed to poison those they bite, but are not dangerous, as they never attack perfons that appreach them, choosing rather to get fuddenly out of their reach.

The SLOW LIZARD is of the fame fhape as the fwift, but its color is brown; it is moreover of an oppofite difposition, being altogether as flow in its movements as the other is fwift. It is remarkable that these lizards are extremely brittle, and will break off near the tail as easy as an icicle.

Among the reptiles of North America, there is a fpecies of the toad, termed the TREE TOAD, which is nearly of the fame fhape as the common fort, but fmaller and with larger claws. It is ufually found on trees, flicking clofe to the bark, or laying in the crevices of it; and fo nearly does it refemble the color of the tree to which it cleaves, that it is with difficulty diffinguifhed from it. These creatures are only heard during the twilight of the morning and evening, or just before and after a flower of rain, when they make a croaking noise fomewhat fariller than that of a frog, which might be heard to a great diffance. They infest the woods in fuch numbers, that their responsive notes at these times make the air resound. It is only a furmer animal, and neyer to be found during the winter.

INSECTS.

allels of latitude; and the fpecies of them are fo numerous and diverfified that even a fuccinct defeription of the whole of them would fill a volume; I shall therefore confine mylelf to a few, which I believe are almost peculiar to this country; the Silk Worm, the Tobacco Worm, the Bee, the Lightning Bug, the Water Bug; and the Housed Bug.

The SILK WORM is nearly the fame as those of France and Italy, but will not produce the fame quantity of filk.

The TOBACCO WORM is a catterpillar of the fize and figure of a filk worm, it is a fine fea green color, on its rump it has a fting or horn near a quarter of aninch long.

The BFES, in America principally lodge their honey in the earth to fecure it from the ravages of the bears, who are remarkable fond of it.

The LIGHTNING BUG or FIRE FLY is about the tize of a bee, but it is of the beetle kind, having like that infect two pair of wings, the upper of which are of a firm texture, to defend it from danger. When it flies, and the wings are expanded, there is under these a kind of coat, configured also like wings, which is luminous ;and as the infect paffes on, caufes all the hinder part of its body to appear like a bright fiery coal. Having placed one of them on your hand, the under part only thines, and throws the light on the space beneath ; but as foon as it foreads its upper wings to, fly away, the whole. body which lies behind them appears illuminated all around. The light it gives is not constantly of the fame magnitude, even when it flies; but feems to depend on the expansion or contraction of the luminous coat or: wings, and is very different from that emitted in a dark night by dry wood or fome kinds of filh, it having much more the appearance of real fire. They leem to be fenlible of the power they are possessed of, and to know the most fuitable time for exerting it, as in a very dark night they are much more numerous than at any other time. They are only feen during the fummer months of June, July, and August, and then at no other time but in the night. Whether from their color, which is of a dufky

brown, they are not then differnable, or from their retiring to holes and crevices, I know not, but they are never to be different in the day. They chiefly are feen in low fwampy land, and appear like immunerable transfernt gleams of light. In dark nights when there is much lightning, without rain; they feem as if they wilhed either to imitate or affitt the flathes y for during the intervals, they are uncommonly agile, add endeavor to throw out every ray they can collect. Notwithflanding this effulgent appearance, there infects are perfectly harmlefs, you may permit them to crash upon your hand, when five or fiz, if they freely exhibit their glow together, will enable you to read almost the finalleft print.

The WATER BUG is of a brown color, about the fize of a pea, and in fhape nearly oval; it has many legs, by means of which it paffes over the turface of the water with fuch incredible fwiftness, that it feems to flide or dart itleif along.

The HORNED BUG, or as it is fometimes termed the STAG BEETLE, is of a duffy brown color nearly approaching to black, about an inch and an half long, and half an inch broad. It has two large borns which grow on each fide of the head, and meet horizontally, and with these it pinches very hard; they are branched like those of a flag, from whence it receives its name. They fly about in the evening, and prove very 'trouble, form to those who are in the fields at that time.

I must not omit that the LOCUST is a feptennial infect, as they are only isen, a small number of firaglers excepted, every feven years, when they infell thele parts and the interior colonies in large (wamps) and do a great deal of mifchief. The years when they thus arrive are denominated the locust years.

CHAPTER XIX

State Barrier and Brithman Arthurs Arthurs and a strate

with declars of the

OF THE TREES, SHRWES, ROOTS, HERES, FLOWERS, SC.

L SHALL here observe the fame method that 1 have pursued in the preceeding chapter, and and having given a lift of the trees, &c. which are natives of the interior parts of North America, particularize such only as differ from the produce of other countries, or, being little known, have not been described.

Adda and a start of TREES.

The Oak, the Pine Tree, the Maple, the Afh, the Hemlock, the Bafs or White Wood, the Cedar, the Elm, the Birch, the Fir, the Locust Tree, the Poplar, the Wickopic, the Spruce, the Hornbeam, and the Button Wood Tree.

There are feveral forts of oaks in thefe parts; the black, the white, the red, the yellow, the grey, the fwamp and the chefnint oak : the five former vary but little in their external appearance, the flape of the leaves, and the color of the bark being fo much alike, that they are fcarcely dillinguilhable; but the body of the tree when fawed discovers the variation, which chiefly confists in the color of the wood, they being all very hard, and proper for building. The fwamp oak differs materially from the others both in the fhape of the leaf, which is finaller, and in the bark, which is fmoother ; and likewife as it grows only in a moilt, gravelly foil. It is efteemed the toughest of all woods, being fo strong yet pliable, that it is often made use of inftead of whalebone. and is equally ferviceable. The chefnut oak alfo is greatly different from the others, particularly in the thape of the leaf, which much refembles that of the chefnut tree, and for this reason is so denominated. It is neither fo Arong as the former fpecies, nor fo tough as the latter, but is of a nature proper to be split into rails

for fences, in which flate it will endure a confiderable time.

The PINE TREE That species of the pine tree peculiar to this part of the continent, is the white, the quality of which I need not describe, as the timber of it is so well known under the name of deals. It grows here in great plenty, to an amazing height and fize, and yields an excellent turpentine, though not in such quanticies as those in the northern parts of Europe.

The MAPLE. Of this tree there are two forts, the hard and the foft, both of which yield a lufcious juice, from which the Indians, by boiling, make very good fugar. The fap of the former is much richer and fweeter than the latter, but the foft produces a greater quantity. The wood of the hard maple is very beautifully veined and curled, and when wrought into cabinets, tables, gunflocks, ac is greatly valued. That of the foft fort differs in its texture, wanting the variegated grain of the hard i it alfo grows more itraight and free from branches, and is more eatily fplit. It likewife may be diftinguifhed from the hard, as this grows in meadows and low land, that on the hills and uplands. the leaves are fhaped alike, but those of the fort maple are much the largeft, and of a deeper green.

The ASH. There are feveral forts of this tree in these parts, but that to which I shall confine my descrip. tion, is the yellow alh, which is only found near the head branches of the Millifippi. This tree grows to an amazing height, and the body of it is fo firm and found, that the French traders who go into that country from Louisiana, to purchase furs, make of them periaguays; this they do by excavating them by fire, and when they are completed, convey in them the produce of their trade to New Orleans, where they find a good market both for their veffels and cargoes. The wood of this tree greatly refembles that of the common aff; but it might be diffinguilaed from any other tree by its bark ; the rofs or out lide bark being near eight inches thick, and indented with furrows more than fix inches deep, which make those that are arrived to a great bulk appear vaccommonly rough ; and by this peculiarity they may

250

this tree in my deferip. nd 'near the grows to an and found, untry from beriaguays; d when they ce of their ood market rood of this afh ; but it y its bark ; nches thick, nches deep, bulk appear ty they may

be readily known. The rind ot infide bark is of the fame thickness as that of other trees, but its color is of a fine bright yellow, infomuch that if it is but flightly handled, it will leave a flain on the fingers, which cannot eafily be walked away; and if in the fpring you peel off the bark. and touch the fap, which then rites between that and the body of the tree, it will leave fo deep a tincture that it will require three or four days to wear it off. Many useful qualities belong to this tree. I doubt not will be different of it time, belides its proving a valuable acquisition to the dyer.

The LIEMLOCK I HEE grows in every part of America, in a greater or lefs degree.

It is an evergreen of a very large growth, and has leaves fornewhat like that of the yew; it is however quite utelefs, and only an incumbrance to the ground, the wood being of a very coarfe grain, and full of wind flakes or cracks.

The BASS or WHITE WOOD is a tree of a middling fize, and the whiteft and fofteft wood that grows ; when quite dry it fwims on the water like a cork ; in the fettlements the turners make of it bowls, trenchers and diffies, which wear fmooth, and will laft a long time ; but when applied to any other purpose it is far from derable.

The BUT TON WOOD is a tree of the largelt fize, and moight be diffinguilled by its bark, which is of the original to the matter of the confidence and nature of fize. With this the Indians pay their cauces, and it greatly exceeds pitch, or any other material afually appropriated to that purpole t for befides its adhefive quality, it is of fo oily a nature, that the water cannot penetrate through it, and its repelling power abates not for a confiderable time. The BUT toN WOOD is a tree of the largelt fize, and might be diffinguilled by its bark, which is quite fmooth and prettily mottled. The wood is very propper for the use of cabinet makers. It is covered with fmell hard burs which firing from its branches, that ap-

The Butter or Oil Nut, the Walnut, the Hazel Nut, the Beech Nut, the Pecan Nut, the Chefnut, the Hickory.

The BUTTER or OIL NUT. As no mention has been made by any author of this nut, I shall be the more particular in my account of it. The tree grows in meadows where the foil is rich and warm. The body of it feldom exceeds a yard in circumference, is full of branches, the twigs of which are fort and blunt, and its' leaves refemble those of a Walnut. If he nut has a shell more like that fruit, which when ripe is more furrowed and more eafily cracked ; it is also much longer and larger than a walnut, and contains a greater quantity of kernel, which is very oily, and of a rich agreeable flavor. I am perfuaded that a much purer oil than that of olives might be extracted from this nut. "The infide bark of this tree dies a good purple ; and it is faid, varies in its made according to the month in which it is gathered. I have here the stand when she have the

The BEECH NUT. Though this tree grows exact. ly like that of the fame name in Europe, yet it produces nuts equally as good as chefnuts ; on which bears, martins, fuuirrels, patridges, turkies, and many other birds and beafts feed. The nut is contained, whilf growing, in an outfide cafe, like that of a chefnut, but not fo prickly ; and the cost of the infide fhell is alfo fmooth like that; only its form is nearly triangular. Valt quantities of them lie fcattered about in the woods. and fupply with food great numbers of the creatures just mentioned. I he leaves, which are white, continue on the trees the whole winter. A decoction made of them is a certain and expeditious cure for wounds which arife from burning or fealding; as well as a reftorative for those members that are nipped by the froft. and fitted. The PECAN NUT is fomewhat of the walaut kind,

but rather imaller than the walnut, being about the fize of a mildle acorn, and of an oval form i, the fhell is eafily cracked, and the kernel thaped like that of a walnut. This tree grows chiefly near the Allinois River.

The HICKORY is also of the walnut kind, and bears a finit nearly like that tree. There are feveral forts of them, which vary only in the color of the wood. Being of a very tough nature, the wood is generally ufed for the handles of axes, &c. It is also very good fire, wood, and as it barns, an excellent fugar diffuls from it.

Tak the statistic and a statistic and see and see all the second s

reason of the land a the water, don the state of the of the

I need not to observe that these are all the spontaneous productions of nature, which have never received the advantages of ingrasting, transplanting, cr. manuring.

The Vine, the Mulberry Tree, the Crab Apple Tree, the Plumb Tree, the Chesty Tree, and the Sweet Gum Tree,

The VINE is very common here, and of three kinds ; the first forthardly deferves the name of a grape ; the fecond much relembles the Burgundy grape, and if exposed to the fun a good wine might be made of them. The third refembles Zant currants, which are forequently used in cakes, &c. in England, and if proper care was taken of them, would be equal if not superior to those of that country.

The MULBERRY TREE is of two kinds, red and webitquand nearly of the tame fize of thole of France and Italy, and grow in fuch plenty, as to feed any quantity of alk worms. The CHAB APPLE TREE bears a fruit that is much larger and better flavored than thole of Ey-

The PLUM TREE. There are two forts of plums in this country, one large fort of a purple caft on one fide, and red on the reverse, the second totaliy green, and much smaller. Both these are of a good flavor,

259

and are greatly effected by the Indians, whole taffe is not refined, but who are fatisfied with the productions of nature, in their unimproved flate

The CHERRY TREE. There are three forts of cherries in this country; the black, the red and the fand cherry; the two latter may with more propriety be ranked among the fhrubs, as the bufh that bears the fand cherries almost creeps along the ground, and the other rifes, not above eight or ten feet in height ; however, I shall give an account of them in this place. The black cherries are about the fize of a current, and hang in clufters, like grapes ; the trees which bear them, being very fruitful, they are generally loaded, but the fruit is not good to cat, however, they give an agreeable flavor to brandy, and turn it to the color of clarret. The red cherries grow in the greatest profusion, and hang in bunches, like the black fort just defcribed ; to that the buffles which bear thom appear at a diffance like folid bodies of red matter. Some people admire this fruit, but they partake of the nature and take of alum, leaving a dilagreeable roughnels in the throat, and being very aftringent. As I have already defcrib. ed the fand cherries, which greatly exceed the two other forts both in flavor and fize, I fhall give no farther description of them. The wood of the black cherry tree is very uleful, and works well into cabinet ware. the stand have - 3 A. 17 2

The SWEET GUM TREE or LIQUID AM-BER (Copaim) is not only extremely common, but it affords a balm the virtues of which are infinite. Itsbark is black and hard, and its wood to tender and fupple, that when the tree is felled, you may draw from the middle of it rods of five or fix feet in length. It cannot be employed in building or furniture, as it warpscontinually. Its leaf is indented with five points like a: flar. This balta is reckoned by the Indians to be ans excellent febrifuge, and it cures in two or three days.

SHRUBS.

The Willow, Shin Wood, Sumac, Saffafras, the Prickiy Afh, Moofe Wood, Spoon Wood, Large Elder, Dwarf Elder, Poifonous Elder, Juniper, Shrub Oak, Sweet Fern, the Laurel, the Witch Hazle, the Mirtle Wax Free, Winter Green, the Feyer Bufh, the Cranberry Bufh, the Goofeberry bufh, the Current bufh, the Whirtle Berry, the Rafberry, the Black Berry, and the Choak Berry.

The WILLOW. There are feveral fpecies of the willow, the molt remarkable of which is a fmall fort that grows on the banks of the Miffilippi, and fome other places adjacent. The bark of this fhrub fupplies the beaver with its winter food ; and where the water has walked the foil from its roots, they appear to confit of fibres interwoven together like thread, the color of which is of an inexpressibly fine featlet ; with this the Indians tinge many of the ornamental parts of their drefs.

SH1N WOOD. This extraordinary flutb grows in the forefts, and rifing like a vine, runs near the ground for fix or eight feet, and then takes root again; in the fame manner taking root, and foringing up fucceffively, one ftalk covers a large fpace; this proves very troublefome to the hafty traveller, by striking against his fhins, and entangling his legs; from which it has acquired its name

The SASSAFRAS is a wood well known for its medicinal qualities. It might with equal propriety be termed a tree as a fhrub, as it fometimes grows thirty feet high ; but in general it does not reach higher than those of the fhrub kind The leaves, which yield an agreeable fragrance, are large, and nearly separated into three divisions. It bears a reddiff brown berry, or the fize and shape of Pimento, and which is fumetimes used in the colonies as a subfitute for that spice. The bark or roots of this tree, is infinitely superior to the wood for its use in medicine, and I am surprised it is fo feldom to be met with, as its efficacy is for much greater. The PRICKLY ASH is a thrub that sometimes grows to the height of ten or fifteen feet, and has a leaf

exactly refembling that of an ash, but it receives the epithet to its name from the abundance of fhort thorns with which every branch is esvered, and which renders it very troublefome to those who pais through the fpot where they grow thick. It also bears a fearlet berry, which when ripe, has a fiery tafte, like pepper. The bark of this tree, particularly the bask of the roots, is highly effected by the natives for its medicinal qualities. I have already mentioned one inflance of its efficacy, and there is no doubt but that the decodion of it will expeditiously and radically remove all impurities of the blood.

The MOOSE WOOD grows about four feet high, and is very full of branches; but what renders it worth notice, is its bark, which is of to firong and pliable a texture, that being peeled off at any reason, and twifted, makes equally as good cordage as hemp.

The SPOON WOOD is a species of the laurel, and the wood when fawed refembles box wood.

The ELDER, commonly termed the poifonous elder, nearly refembles the other fort in its leaves and branches, but it grows much fireighter, and is only found in Iwamps and moif foils. This thrub is endowed with a very extraordinary quality, that renders it poilonous to fome conflitntions, which it effects if the perion only approaches within a few yards of it, whilft others may even chew the leaves or the rind without receiving the least detriment from them : the poifon however, is not mortal, though it opperates very violently on the infected perfon, whole body and head fwell to an amazing fize, and are covered with eruptions, that at their height refemble the confluent imall pox. As it grows also in many of the provinces, the inhabitants cure its venom by drinking faffron tea, and annointing the external parts with a misture composed of cream and marsh mallows.

The SHRUB OAK is exactly fimilar to the oak tree, both in wood and leaves, and like that it bears an acom, but it never rifes from the ground above four or five feet, growing crocked and knotty. It is found thicky n a dry gravelly foil.

ves the ep. ort thorns th renders gh the fpot riet berry, oper. The is roots, is isal qualiof its effioction of it npurities of

laurel, and

oisonous elleaves and and is only hrub is enthat renders it effects if yards of it, he rind with-: the poilon es very viod head fwell h eruptions, fmall por. the inhabitand annointcomposed of

the oak tree, as an acorn, four or five found chicfly ders.

The WITCH HAZLE grows very buffy, about ten teet high, and is covered early in May with numerous white bloffoms. When this furub is in bloom, the Indians effect it a further indication that the froft is entirely gone, and that they might fow their corn. It has been faid, that it is pofferfied of the power of attracting gold or filver, and that twigs of it are made use of to diffeover where he veins of these metals lie hid; but I am apprehentive this is only a falacious flory, and not to be depended on; however that fuppolition has given it the name of Witch Hazle.

The MIR ! LE WAX TREE is a fhrub about four teet high, the leaves of which are larger than those of the common mirtle, but they finell exactly alike. It bears its fruit in bunches, like a nofegay, rifing from the fame place in various stalks, about two inches long; at the end of each of these is a little nut. containing a kernel, which is wholly covered with a gluey subflance, which being boiled in water, fwims on the furface of it; and becomes a kind of green wax; this is more valuable than bees wax, being of a more brittle nature, but mixed with it makes a good candle, which as it burns, fends forth an agreeable stent.

WINTER GREEN. This is an ever green, of the fpecies of the myrtle, and is found on dry heaths ; the flowers of it are white, and in the form of a refe, but not larger than a filver penny ; in the winter it is full of red berries, about the fize of a floe, which are fmooth and found ; these are preferved during the fevere feasion by the lnow, and are at this time in the higheft perfection. The Indians eat these berries, efteeming them very balfamic, and invigorating to the flom ach. The people inhabiting the interior colonies fleep both the fprigs and berries in beet, and use it as is diet drink for cleanfing the blood from foorbutic difor-

The FEVER BUSH grows about five or fix feet high ; its leaf is like that of a lilach, and it bears is reddifh herry of a fpicy flavor. The flaiks of it are excelfively brittle. A decellion of the buds or wood is an

the

SI

excellent febrifuge, and from this valuable property receives its name. It is an ancient Indian remedy for all inflammatory complaints, and likewife much effeemed on the fame account, by the inhabitants of the interior parts of the colonies.

The CRANBER KY BUSH. Though the fruit of this buff greatly refembles in fize and appearance that of the common fort which grows on a finall vine, in moraffes and bogs, yet the buff runs to the height of ten or twelve feet; but it is vary rarely to be met with. As the meadow cranberry, being of a local growth, and flourifhing only in moraffes cannot be transplanted or cultivated, the former, if removed at a proper feason, would be a valuable acquifition to the garden, and with proper nurture, prove equally as good, if not better.

The CHOAK BERRY. The thrub thus termed by the natives grows about five or fix feet high, and bears a berry about the fize of a floe, of a jet black, which contains feveral fmall freeds within the pulp. The juice of this fruit, though not of a difagreeable flavor, is extremely tart, and leaves a roughnels in the mouth and throat when eaten, that has gained it the name of choak berry.

BOOTS AND PLANTS.

THE WAY AND AND THE

Elecampane, Spikenard, Angelica, Sarlaparilla, Ginfang, Ground Nuts, Wild Potatoes, Liquorfee, Snake Root, Gold Thread, Solomon's Seal, Devil's Bit, Blood Root, Oniors, Garlick, Wild Parfnips, Mandrakes, Hellebore White and Black:

SPIKENARD, vulgarly called in the Colonies Petty-Morrel. This plant appears to be exactly the fame as the Afiatic ipikenard, fo much valued by the ancients. It grows near the fides of brooks in rocky places, and its flem which is about the fize of a goole quill, forings up like that of angelica, reaching about a foot and an half from the ground. It bears bunches of berries in all telpeds like those of the elder, only rather larger. These we of fuch a balfamic nature, that when intufed in for-

265

arilla, Ginríce, Snake s Bit, Blood drakes, Hel-

onies Pettythe fame as he ancients. places, and uill, fprings oot and an berries in all rger. These infed in fpirits, they make a most palatable and reviving cordial. SASSAPARILLA. The root of this plant, which is the most estimable part of it, is about the fize of a goafe quill, and runs in different directions, twined and crooked to a great length in the ground ; from the principal flens of it fprings many fmaller fi-bers, all of which are tough and flexible. From the root immediately thoots a stalk about a fool and a half long, which at the top branches into three, ftems ; each of these has three leaves, much of the Shape and fize of a walnut leak; and from the fork of each of the three flems grows a bunch of bluith white flowers, refembling those of the spikenard. The bark of the roots, which alone fhould be used in medicine, is of a bitterifh flavor but aromatic. It is defervedly esseemed for its medicinal virtues, being a gentle fudorific, and very powerful in attenuating, the blood, when impeded by grois humors

GINSANG is a root that was once supposed to grow only in Korea, from whence it was usually exported to Jappan, and by that means found its way into Europe : but it has been lately discovered to be a native of North America, where it grows to as great perfection, and is equally valuable. Its root is like a small carrot, but not fo taper at the end; it is fometimes divided into feveral branches, in all other respects it resembles fasaparilla in its growth. The taske of the root is bitterish. In the eastern parts of Afia it bears a great price, being there confidered as a panacea, and is the last refuge of the inhabitants in all diforders. When chewed it certainly is a great firengthener of the fromach.

GOLD THREAD. This is a plant of the fmall vine kind, which grows in fwampy places, and lies on the ground. The roots fpread themfelves juft under the furface of the morafs, and are eafily. drawn up by handfuls. They refemble a large entangled, fkein of thread, of a fine, bright gold color; and I am perfuaded would yield a beautiful and permanent yellow dye. It is also greatly effected both by the Indians and colspits, as a remedy, for any forenefs in the mouth, but the tafte of it is exquisitely bitter. SOLOMON'S SEAL is a plant that grows on the fides of sivers, and in rich meadow land. It rifes in the, while to about three feet high, the Italits being two feet, when the leaves begin to foread themfelves and reach a foot further. A part in every root has an imprefilon upon it about the fize of a fixpence, which appears as if it, was made by a feal, and from thefe it receives its name. It is greatly valued on account of its being a fine purifier of the blood.

DEVIL's BIT is another wild plant which grows in, the fields, and receives its name from a print that feems to be made by teeth in the roots. The Indians fay that this was once a univerfal reme dy for every diforder that human nature is incident to ; but fome of the evil fpirits envying mankind the possession of the evil fpirits cine, gave the root a bite, which deprived it of a greatpart of its virtue.

BLOOD ROOT. A fort of plantzin that fprings out of the ground in fix or feven long rough leaves, the veins of which are red; the root of it is like a fmall carrot, both in color and appearance; when broken, the infide of it is of a deeper color than the out fide, and diftils feveral drops of juice, that look like blood. This is a firong emetic, but a very dangerous one.

HERBS.

Balm, Nettles, Cinque Foil, Eyebright, Sanicle, Plantain, Rade Shake Plantain, Poor Robin & Plantain, Toad Plantain, Maiden Hair, Wild Dock, Rock Liverwort, Noble Liverwort, Bloodwort, Wild Beans, Ground Ivy, Water Creffes, Yarrow, May Weed, Gargit, Skunk Cabbage or Poke, Wake Robin, Betony, Scabious, Mullen, Wild Peafe, Moufe Ear, Wild Indigo, Tobacco and Cat Mint.

SANICLE has a root which is thick towards the upper part, and full of fmall fibres below; the leaves of it are broad, roundih, hard, fmooth, and of c une thining green; a ftalk rifes from these to the height of a foot,

rs on the ifes in the two feet. d reach a efflon upars as if it. its name. fine puri-.

nicle. Planntain, Foad Liverwort, Fround Ivy, git, Skunk bious, Mulobacco and

leaves of it ine thining be of a foot which is quite findoth and free from knots, and on the top of it are leveral finall flowers of a redifh white, fliaped like a wild role. A tea made of the root is vulnerary and balfamic:

RATTLE SNAKE PLANFAIN. This uleful herb is of the plantain kind, and its leaves, which spread themicives on the ground, are about one inch and an half wide, and five inches long ; from the centre of these arifes a finall stalk, nearly fix inches long, which bears a little white flower; the root is about the fize of a goole quill; and much bent, and divided into feveral branches. The leaves of this herb are more efficacious than any other part of it for the bite of the reptile from which it receives it name; and being chewed and applied immediately to the wound, and fome of the juice swallowed, feldom fails of averting every dangerout fymptom. So convinced are the Indians of the power of this infallible antidote, that for a triffing bribe of fperitous liquor, they will at any time permit a rattle fnake to drive his fange into their fielh. It is to be remarked that during those months in which the bite of these creatures is most venomous, that this remedy for it is in its greatelt perfection, and most luxuriant in its growth.

POOR ROBIN'S PLAN LAIN is of the fame fpecies as the laft, but more diminutive in every refpect is to receives its name from its fize, and the poor land on which it grows. It is a good medicinal herb, and often administered with success in fevers and internal weakness.

TOAD PLANTAIN refembles the common plantain, only it grows much ranker, and is thus denominated, because toads love to harbor under it.

ROCK LIVERWORT is a fort of Liverwort that grows on rocks, and is of the nature of kelp or mols. It is effected an excellent remedy against declines.

GARGIT or SKOKE is a large kind of weed, the leaves of which are about fix inches long, and two inches. and an half broad; they refemble those of fpinage in their color and texture, but not in fhape. The root is very large, from which fpring different stalks that run.

eight o. ten feet high, and are full of red berries : These hang in clusters in the month of September, and are generally called pigeon berries, as those birds then feed on them. When the leaves first foring from the ground, after being boiled, they are a nutritions and wholesome vegetable, but when they are grown nearly to their full fize, they acquire a poilonous quality. The roots applied to the hands or feet of a perfon afflicted with a fever, prove a very powerful absorbent.

SKUNK CABBAGE or POKE is an herb that grows in moift and fwampy places. The leaves of it are about a foot long, and fix inches broad, nearly oval, but rather pointed. The roots are compoled of great numbers of fibres, a lotion of which is made use of by the people in the colonies for the cure of the itch. There iffues a fluong mufky fmell from this herb, fomething like the animal of the fame name before defcribed, and on that account it is fo termed.

WAKE ROBIN is an herb that grows in fwampy lands; its root refembles a fmall turnip, and if tafted will greatly influme the tongue, and immediately convert it from its natural fhape into a round hard fubftance; in which flate it will continue for fome time, and during this ao other part of the mosth will be affected. But when dried, it lofes its aftringent quality, and becomes beneficial to mankind, for if grated into cold water, and taken internally, it is very good for all complaints of the bowels.

WILD INDIGO is an herb of the fame species as: the second state of the fame species as the second state of the second state of

BI

WILD RICE. This grain, which grows in the greatest plenty throughout the interior parts of North. America, is the molt valuable of all the fpontaneous productions of that country. . Exclusive of its utility as a fupply of food for those of the human species, who inhabit this part of the continent, and obtained without any other trouble than that of gathering it in, the fweetnels and nutritious quality of it attracks an infinite num. ber of wild fowls of every kind, which flock from diftant. climes, to enjoy this rare repait ; and by it become inexpreflibly fat and delicious. In future periods it will be of great fervice to the infant colonies, as it will afford them a prefent support, until in the course of cultivation. other fupplies may be produced ; whereas in those realms which are not furnished with this bounteous gift of nature, even if the climate is temperate and the foil good, the first fettlers are often exposed to great hardthips from the want of an immediate refource for neceffary food. This uleful grain grows in the water where it is about two feet deep, and where it finds a rich, muddy foil. The stalks of it, and the branches or ears that bear the feed, refemble oats both in their appearance and manner of growing. The stalks are full of joints, and rife more than eight feet above the water. The natives gather the grain in the following manner : nearly about the time that it begins to turn from its milky flate and to ripen, they run their canoes into the midft of it. and tying bunches of it together, just below the ears, with bark, leave it in this fituation three or four weeks loner, cill it is perfectly ripe. About the latter end of September they return to the river, when each family having its feparate alotment, and being able to diftinguish their own property by the manner of fastening the

270

urithment educed it , and bake oned that in which emely nu-

ws in the of North ontaneous sutility as s, who ind without the fweetinite num. om distant come inexs it will be will afford ultivation. s in those nteous gift nd the foil reat harde for necelater where rich, mvdr ears that arance and ioints, and the natives arly about fate and of it, and ears, with eeks lon end of Sepmily havdiftinguish lening the

fleaves, gather in the portion that: belongs to them. This they do by placing their cances close to the bunchof rice, in fuch polition as to receive the grain when it falls, and then beat it out, with pieces of wood formed for that purpole. Having done this, they dry it with imoke, and afterwards tread or rub off the outlide hulk; when it is for use they put it into the fkins of fawns, or young buffalos, taken off nearly whole for this purpose, and sewed into a fort of fack, wherein they; preferve it till, the return of their harveft. It has been . the subject of much speculation, why this spontaneous grain is not found in any other regions of America, or . in those countries fituated in the fame parallels of latitude, where the waters are as apparantly adapted for its. growth as in the climate I treat of. As for inftance, none of the countries that lie to the fouth and east of the great lakes, even from the provinces north of the Carolinas, to the extremities of Labrador, produce any of this : grain. It is true I found great quantities of it in the : watered lands near : Detroit, between lake Huron and lake Erie, but on enquiry I learned that it never arrived nearer to maturity than just to bloßom ; after which . it appeared blighted, and died away. This convinces me that the north well wind, as I have before hinted, is . much more powerful in these than in the interior parts ; and that it is more inimical to the faults of the earth, after it has paffed over the lakes, and become united with the wind which joins it from the frozen regions of the north, than it is farther to the weltward.

BEANS. These are nearly of the same shape as the European beans, but are not much larger than the smallof fize of them. They are boiled by the Indians, and a eaten chiefly with bear's field.

The SQUASH. They have also feveral species of the Melon or Pumpkin, which by fome are criled fquath. es, and which ferve many nations partly as a substitute for bread. Of these there is the round, the crane neck, the small flat, and the large oblong squash. The smallet forts being boiled, are eaten during the summer a vege-

etables, and are all of a pleasing flavor. . The crane neck, which greatly excels all the others, are usually hung up. for a winter's flore, and in this manner might be preferv. ed for leveral months. it will you was sone wither I was and the and in addition of many and the way of a back of the second 32 to Stort and the of the second of the second second second second ind works want and a state of a start of selection in the With the State of the second state of the second states avalation for the second of th Sural and the second Provide an and the spectral stress of the second Ratha manager in the substitute and only and the state in about the second of the set water to the second of the in an and the for the set of the second to the second to the second a man when and the set of the set and the second of the second en la construction de la 1957 to still of parents is not which the built built out and the second A Barris where in in the second she has been she was she was she was a she was a she was . + Y & T?

"I HE countries that lie between the great lakes and River Millippi, and from thence Touthward to Weft Florida, although in the midk of a large continent, and at a great diftance from the fea, are fo lituated. that a communication between them and other realms might conveniently be opened ; by which means those empires or colonies that may hereafter be founded or planted therein, will be rendered commercial ones. The great river Millilippi, which runs through the whole of them, will enable their inhabitants to establish an intercourse with foreign climes, equally as well as the Euphrates, the Nile, the Danube, or the Wolga do those people which dwell on their banks, and who have no other convenience for exporting the produce of their own country, or for importing those of others, then boats and refiels of light burden; notwithstanding which, they we become powerful and opulent states.

The Miffilippi, as I have before obferred, runs from north to fouth, and paffes through the molt fertile and temperate part of North America, czeluding only the extremities of it, which verge both on the torrid and frigid zones. Thus favorably fituated, when once its banks are covered with inhabitants, they need not long be at a lofs for means to establish an extensive and profitable commerce. They will find the country towards the fouth almost fpontaneoufly producing filk, cotton, indigo, and tobacco; and the more northern parts, wine, oil, beef tallow, Ikins, Luffalo wool, and furg; with lead, copper, iron, coals, lumber, corn, rice, and fruits, belides earth and barks for dying.

These articles, with which it abounds even to profufion. may be trainforted to the occan through this river without greater difficulty than that which attends the conveyance of merchandife down fome of those I have just mentioned. It is true that the Miffilippi being the boundary between the English and Spanish fettlements, and the Spaniards in possellion of the mouth of it, they may obstruct the passage of it and greatly disheauten thole who make the first attempts ; yet when the advantages that will certainly arise to fettlers, are known, multitudes of adventurers, allured by the prospect of fuch abundant riches, will flock to it, and establish themselves, though at the expence of rivers of blood.

But should the nation that happens to be in possession of New Orleans prove unfriendly to the internal settlers, they may find a way into the gulph of Mexico, by the river Iberville, which empties itlelf from the Miffilippi, after pating through lake Maurenas, into lake Ponchartrain, which has a communication with the fea, within the borders of West Florida. The river Iberville branches off from the Miffilippi about eighty miles above New Orleans, and though it is at prefent choaked up in fome parts, it might at an inconfiderable expense be made navigable, fo as to answer all the purposes proposed.

Although the English have acquired fince the last peace a more extensive knowledge of the interior parts than were ever obtained before, even by the French, yet many of their productions fill remain unknown. And though I was not deficient either in affiduity or attention during the fhort time I remained in them, yet I must acknowledge that the intelligence I gained was not to perfect as I could with, and that it requires further refearches to make the world thoroughly acquainted with the real value of thefe long hidden sealms.

The parts of the Millippi of which no furwey has hitherto been taken, imount to inwards of eight hundred miles, following the course of the ftreafil, that is, trom the Illinois to the Ouifconlin rivers. Plans of fuch as reach from the former to the gliph of Mexico, have been delineated by ftveral hands and I have the pleafure to find that an actual furwey of the intermediate parts of the Millifippi, between the Illinois river and the fea, which the Ohio, Cherokee, and Ouabache rivers, taken on the fpot by X very ingenious gentleman,* is now

. Thomas Hutchings, efq captain in his majefty's 60th; or royal American repintent of foot.

published. I flatter myself that the observations therein contained, which have been made by one whose knowledge of the parts therein described was acquired by a perional investigation, aided by a folid judgment, will confirm the remarks I have made, and promote the plan I am here recommending.

I fhall also here give a concise description of each, beginning, according to the rule of geographers, with that which lies most to the north.

It is however neceffary to observe, that before these settlements can be established, grants mult be procured in the manner cultomary on such occasions, and the lands be purchased of those who have acquired a right to them by a long possession; but no greater difficulty will attend the completion of this point, than the original founders of every colony on the continent met with to observed their intentions; and the number of Indiaus who inhabit these tracts being greatly inadequate to their extent, it is not to be doubted, but they will readily give up for a reasonable confideration, territories that are of little use to them; or remove for the accommodation of their new neighbors, to lands at a greater distance from the Midlippi, the navigation of which is not effential to the welfare of their communities.

The country within these lines, from its fitu-No. 1. ation, is colder than any of the others ; yet I am convinced that the air is much more temperate than in those provinces that lie in the fame degree of latitude to the east of it. The foil is excellent, and there is a great deal of land that is free from woods in the parts adjoining to the Millifippi ; whillt on the contrary the north eastern borders of it are well wooded. Towards the head of the river St. Croix, rice grows in great plenty, and there is abundance of copper. Though the falls of St Anthony are fitnated at the fouth east corner of this division, yet that impediment will not totally obstruct the navigation, as the river St. Croix, which runs through a great part of the fouthern fide of it, enters the Millilippi is it below the falls, and flows with fo gentle a current, that it affords a convenient navigation for boats. This tract is about one hundred miles from north welt to fouth east, and one hundred and twenty miles from north east to fouth welt.

No. II: This track, as I have already deferibed it in my Journal, exceeds the higheit encomiants I can give it; notwithftanding which it is entirely uninhabited, and the profusion of bloffings that nature has showered on this heavenly spot, return unenjoyed to the lap from whence they sprang. Lake Pepin, as I have termed it after the French, lies within these bounds; but the lake to which that name properly belongs is a little above the river St Croix; however, as all the traders call the lower lake by that name, I have so denominated it, contrary to the information I received from the Indians. This colony lying in unequal angles, the dimensions of it cannot be exactly given, but it appears to be on an avarage about one hundre I and ten miles long, and eighty broad.

No. 111. The greatest part of this division is fituated on the River Quifconfin, which is navigable for boats about one hundred and eighty miles, till it reaches the carrying place that divides it from the Fox River. The land which is contained within its limits, is in fome parts mountainous, and in the other confilts of fertile meadows and fine pasturage. It is furnished also with a great deal of good timber, and, as is generally the cale on the banks of the Milliuppi and its branches, has much fine, open, clear land, proper for cultivation. To these are added an inexhaultible fund of riches, in a number of leads mines which lies at a little distance from the Ouisconfia towards the fouth, and appear to be uncommonly full of Although the Saukies and Ottagaumies inhabit a 010. part of this tract, the whole of the lands under their caltivation does not exceed three hundred acres It is in length from east to well about one hundred and fifty miles, and about eighty from north to fouth.

No. 1V. This colony confifts of lands of various denominations, fome of which are very good, and others very bad. The best is situated on the borders of the

Green Bay and the Fox River, where there are innumerable acres covered with fine grafs, molt part of which grows to an altonithing height. This river will afford a good navigation for boats throughout the whole of its courfe, which is about one hundred and eighty miles, except between the Winnebago Lake and the Green Bay ; where there are feveral carrying places in the fpace of thirty miles. The Fox River is rendered remarkable by the abundance of rice that grows on its fhores, and the almost infinite numbers of wild fowl that frequent its banks. The land which lies near it appears to be very fertile, and promifes to produce a fufficient fupply of a the necessaries of life for any number of inhabitants. communication might be opened by those who shall fetthe here, either through the Green Bay, Lake Michigan, Lake Huron, Lake Erie, and Lake Ontarion with Canada, or by way of the Ouisconfin into the Miffisippi. This divition is about one hundred and fixty miles long. from north to fouth, and one hundred and forty broad.

No. V. This is an excellent tract of land, and, confidering its interior lituation, has greater "advantages than could be expected ; for having the Millifippi on its weltern borders, and, the Illinois on its fouth-east, it has as free a navigation as molt of the others. The northern parts of it are fomewhat mountainous, but it contains a great deal of clear land, the foil of which is excellent, with many fine fertile meadows, and not a few rich mines. It is upwards of two hundled miles from north to fouth, and one hundred and fifty from east to west.

No. VI. This colony being fituated upon the heads of the Rivers Illinois and Ouabache, the former of which empties itself immediately into the Millifippi, and the latter into the fame river by means of the Ohio, will readily find a communication with the fea through thefe. Having also the River Miamis passing through it which runs into Lake Erie, an intercourfe might be ellablished. with Canada alfo by way of the lakes, as before pointed ont. It contains a great deal of rich fertile land, and though more inland than any of the others, will be as valuable an acquisition as the best of them .From north

to fouth it is about one hundred and fixty miles, from east to weft one hundred and eighty.

No VII. This division is not inferior to any of the foregoing. Its northern borders lying adjacent to the Ultimois river, and its wellern to the Millilippi, the fituation of it for eftablishing a commercial intercourfe with foreign nations is very commodious. It abounds with all the neceffaries of life, and is about one hundred and fitty miles from north to fouth, and fixty miles from caft to welt; but the confines of it being more irregular that the others, I cannot exactly afcertain the dimensions of it No. VIII. This colony having the River Ouabacher running through the centre of it, and the Ohio for its fouthern boundary, will enjoy the advantages of a free navigation. It extends about one hundred and forty miles from north to fouth, and one hundred and thirty from east to weft.

No. 1X X, and XI. being fimilar in fituation, and furnified with nearly the fame conveniences as all the others, I shall only give their dimensions. No. IX. is about eighty miles each way, but not exactly fquare. No. X is nearly the fame form, and about the fame eztept. No XI is much larger, being at leaft onehundred and fitty miles from north to fouth, and one hundred and forty from eaft to weft, as nearly as from its irregulatity it is possible to calculate.

After the description of this delightful country I have already-given, I need not repeat that all the spots I have thus pointed out as proper for colonization, abound not only with the necessaries of life, being well stored with rice, deer, buffaloes, bears, &c. but produce inequal abundance such as may be termed luxuries, or at least those articles of commerce before sected which the innabitants of it will have an opportunity of exchanging for the needful productions of other countries.

The difcovery of a north-weft paffage to India has been the fubject of innumerable difquintions. Many effort the vice have been more be were of Harling bet 18

advantages that would refult from this much-wished for different, its utility being already too well known to the commercial world to need any elucidation ; I shall only confine myself to the methods that appear most probable to enture success to future adventurers.

the many attempts that have hitherto been made for this parpole, but which have all been rendered abortive, to have turned the fpirit of making uleful relearches into another channel, and this most interelling one has t been given up as impracticable ; but, in my opinion. their failure rather proceeds from their being begun at an improper place, than from their impracticability. All navigators that have hitherto gone in fearch of is pallage, have first entered Hudion's Bay ; the consence of which has been, that having (pent the featon airing which only those leas are navigable, in exploring ny of the numerous inlets lying therein, and this with t discovering any opening, terrihed at the approach of inter, they have hallened back for fear of being frozen. and confequently of being obliged to continue till the orn of fummer in those bleak and dreary realms. Even h as have perceived the coafts to enfold themielyes, d who have of course enters ained hopes of fucceeding. we been deterred from proffecuting their vorage, left winter fhould let in before they could reach a more emperate climate.

Thele apprehentions have discouraged the boldeft ad sturers from completing the expeditions in which they engager, and fruitrated every attempt. But as it at been discovered by fuch as have failed into the northnn d rts of the Pacific Ocean, that there are many inlets hich verge towards Hudson's Bay. It is not to be doubte ed but that a pallage might be made out from that marter, if it be fought for at a proper lealon. And foold these expectations be disappointed, the explorers would not be in the fame hazardous lituation with those who let out from Hudion's Bay, for they will always be fure of a fafe retreat; through an open fea, to warmer regions, ever after repeated difappointments. And this onfidence will enable them to proceed with greater refolution, and probably be the means of effecting when the much discumpletion or minioity has prevented. These realons for altering the plan of inquiry after this convenient pallage, carry with them fuch complition that in the year 1756, Richard Whitworth, Eld, and been Parliament for Stafford, a geneleman of an exam-live knowledge in geography, of an active apper prilling dipolition, and whole benevolant mind is ever ready to promote the happines of individuals, or the welfale of the public, from the representations made to him of the expediency of it by mytelf and others, intended to usve actors the continent of America, that he might actuary to carry a fehrme of this kind into execution. to carry a fcheme of this kind into execution. He defigned to have, purfied nearly the fame rout that 1 did) and after having built a fort at Lake Pepin. that 1 and 1 and after having built's fort at Labe Pepu, to have proceeded up the Rriver St. Plerre, and from thence ap a branch of the Rriver St. Plerre, and from thence ap a branch of the Rriver Missore, till having diffeovered the fource of the Oregin or River of the Well, on the other fide the formult of the lands that divide the wapers which run into the Gulph of Mexico from those that fall into the Pacific Orean, he would have failed down that river to the since where it is fail to empty Sc. fall near the Straits of Annual History there established another lettlement on form foot that appeared bert calculated for the Support of his people, in the heighbourhood of four of the inlets which tend towards the north call, he would from thence have towards the north eaft, he would from thence I n his refearches. This gentle man was to have been tended in the expedition by Colonel Rogers, my Gi others, and to have taken out with him s function 3 and ot thers, and to have taken out with him a fuffici te of artificers and mariners for building the for and vehicle necellary on the occasion, and for navigation latter in all, not left then fifty of lixty man, I'h grants and other requisites ive this purpole were even nearly completed, when the prefent troubles in Ameri-ea began, which put a keep to an enterprise that promises to be of "theonesivable advantage to the British doming ions."

to be of "inconceivable advantage to the British domine" one of tom the state of the British domine of tom the state of the state of the state of the state and had been state of the state of the state of the state dest to have a state of the state of the state of the state dest to have a state of the st
