Ogilvie to Secretary of State (Dundas). Respecting fuel for St. Pierre and the orders given by him and by Rear Admiral King. Shall observe economy in the removal of the inhabitants from the islands. Shall carry into effect the plan, when agreed on, in regard to the prisoners and inhabitants of St. Pierre and Miquelon.

Col. Cor. N. S. vol. 23, p 201

February 9,  
Halifax.

Memorial of Jonathan Binney to be reinstated in his office. 366  
*Enclosed.* Certificate by members of the Council of Nova Scotia in favour of Binney. 369

Wentworth to King. That he has no objection to Binney being re-appointed to the Council. 370

February 10,  
Halifax.

Wentworth to Secretary of State (Dundas). The arrangements for taking Prince Edward (Duke of Kent) from Boston to Barbados. The risk from intrigues of Genet; the master of the vessel sent to carry the Prince is to keep his business at Boston secret. 204

1794.  
February 11,  
Halifax.

Wentworth to King. The fine passages of the "Roebuck" and other two vessels establish the safety of winter passages. Has sent the "Roebuck" to Boston for Prince Edward; the want of a frigate; measures taken for the Prince's safety. Engaged with Mitchell, agent for the army contractors, for two cargoes for the West Indies; subsequent lunacy of Mitchell; steps taken to prevent injury to the service. Has not yet obtained vessels to carry prisoners to Guernsey; will employ the snow, if the Prince does not take her, for the evacuation of St. Pierre and Miquelon. If an additional force would be useful to Sir Charles Grey in the West Indies, the 4th regiment might be employed; a party is in Newfoundland recruiting for Sir John Johnson's regiment; if three or four companies of the corps were to remain in garrison in Newfoundland, the 4th could be well spared. The "Earl of Mansfield" has been lying at immense expense waiting for convoy; she is loaded with masts suitable for the fleet under Jarvis and might be sent direct to Antigua; the immense saving this would effect; the interest of the contractors is to keep the vessel on demurrage and their agent has no regard for Government. Reminds him that Hartsborne & Tremain can supply flour to Government at a beneficial rate. Cape Breton might revert to its old connection with Nova Scotia. If Sydney requires to be garrisoned, one company should be enough: hopes that a company of his (Wentworth's) regiment may be selected. Sends fish, &c.

Letter of same date follows, that information be given to the owner of the "Roebuck" that she goes to the West Indies with Prince Edward, so that he may have her insured. A. & W. I. vol. 598

February 14,  
London.

Merchants trading to Halifax, to Secretary of State (Dundas). Asking for an interview before sending the usual supply of goods.

Col. Cor. N. S. vol. 23, p. 354

February 14,  
Whitehall.

Secretary of State (Dundas) to Wentworth. Approval of his remarks on the Acts and of the measures taken with respect to the public debt, &c. Regrets the decision of the Assembly in respect to Thompson's salary, but it should not be further urged. Wilkins, if an additional judge is appointed, should be enabled to sustain the dignity of his situation. Benning Wentworth to succeed Green as treasurer. Acknowledgement of the spirit of the Royal Nova Scotia Regiment. Has no doubt he has taken measures for the discovery of emissaries from Genet, or from any of the French Islands in the West Indies; how he is to deal with them.

Woolwich. Return of the effectives of the Royal Artillery at Halifax during  
February 28, 1793. 363  
Halifax. Return of the effective forces at Halifax during 1793. 364
- March 1,  
Whitehall. Secretary of State (Dundas) to Ogilvie. Returns received of the New  
Brunswick regiment, but not those of the Royal regiment of Nova Scotia.  
Regular monthly returns to be sent to him and to Dorchester. 199  
(Copy in Col. Off. N. S. vol. 2, p. 139.)  
Admiralty orders respecting the "Alligator." Col. Cor. N. S. vol. 32, p. 134
- March 10,  
Admiralty. Merchants trading to Halifax (signed by Robert Williams) to Secretary  
of State (Dundas). Send report that a French fleet was in Hamp-  
ton roads on the 10th of February. Col. Cor. N. S. vol. 23, p. 365
- March 15,  
London. Secretary of State (Dundas) to Wentworth. Is confident that the  
Royal regiment of Nova Scotia will be zealous in the execution of its  
duty wherever sent. Bayard has leave to retire; George Henry Monk  
to succeed. Measures for the recovery of British seamen, for removing  
the inhabitants of St. Pierre and Miquelon, and for sending the prisoners  
to Guernsey approved of. The sooner the removal takes place the bet-  
ter, in order that St. Pierre and Miquelon may no longer be considered  
as permanent settlements. 208  
(Copy in Col. Off. N. S. vol. 2, p. 141.)
- March 25,  
Halifax. Wentworth to Secretary of State (Dundas). Gratification of the Rev.  
Mr. Jones, and the adherents of the Catholic religion, at the favourable  
consideration given to his memorial. The emigrant families in Arichat  
have behaved with more discretion since they were ordered to take the  
oath of allegiance, and to renounce connection with democratic France.  
The first has been taken; the other will be publicly and solemnly ad-  
ministered; the punishment for infraction. Has been unable as yet to  
obtain vessels to carry the prisoners to Guernsey; one vessel has been  
secured to carry 100, but as they threatened to rise and carry the vessel  
to the Chesapeake, there to join the French squadron, they were not  
shipped. Some few are well disposed and will remain in the service of  
persons, who are to report their conduct regularly. Threats of the  
Jacobin Club, at Boston, that the islands of St. Pierre and Miquelon will  
be retaken; measures of prevention. Progress of the armed vessel  
"Earl of Moira;" she is to be sent to St. Pierre for the prisoners, with a  
crew of twelve, and a detachment of troops. The "Roebuck" packet  
arrived at Boston in time to save Prince Edward from taking passage in  
an unpleasant and not very safe little schooner. Has no doubt the  
"Roebuck" reached Barbados before the schooner reached Halifax,  
where she had arrived after a long and heavy passage. The gratification  
of the militia at the approbation of their conduct. Asks for naval pro-  
tection for Halifax, so that the militia might be able to attend to their  
farms at seed time and harvest, otherwise there would be great distress.  
Col. Cor. N. S. vol. 23, p. 213
- March 26,  
Halifax. Same to King. Dispatches forwarded to Hammond by his (Went-  
worth's) secretary. (Hammond was the first British Minister sent to  
the United States). Capture of Fort Bourbon, Martinico, on the 16th  
with comparatively little loss. 220
- April 2,  
Whitehall. Secretary of State (Dundas) to Ogilvie. Has no doubt that the in-  
habitants of St. Pierre and Miquelon will be sufficiently provided for.  
The danger of allowing any of them to settle in the province; they  
are all to be sent to Guernsey. 211

1794.  
 (Copy in Col. Off. N. S. vol. 2, p. 143.)
- May 5,  
Halifax. Ogilvie to Secretary of State (Dundas). Shall inform the inhabitants of St. Pierre and Miquelon that those who wish may go to the United States. Cannot send 200 of the Royal Nova Scotia regiment to Cape Breton, as it will not be completed to 800 this spring. Will order 50 to be in readiness so soon as the troops leave St. Pierre. Dorchester has informed Macarmick that no troops would be sent to Cape Breton, which must depend on naval defence. Col. cor. N. S., vol. 23, p. 243. 247
- May 6,  
Halifax. Same to the same. Has received notice that his request respecting the provisions captured at St. Pierre cannot be granted; what is to be done with the proceeds of other articles captured? Presumes that batt and forage will not be allowed. 245
- May 6,  
Halifax. Wentworth to the same. In consequence of the embargo in United States ports, he is sending from Nova Scotia supplies for the West Indies, hoping to disappoint any mischief intended to His Majesty's service in the West Indies by the embargo on exports from the United States. 230
- May 7,  
Halifax. Ogilvie to the same. Sends monthly return of the Royal Nova Scotia regiment as directed. Has forwarded returns regularly to Dorchester since the regiment was organized. 247  
*Enclosed.* Monthly return to 1st May. 249  
 The same to 17th September, 1793. 250
- May 7,  
Halifax. Wentworth to Secretary of State (Dundas). Thanks for approbation and for the appointment of Benning Wentworth to be treasurer. Has notified Bayard that he has leave to retire and Monk that he is to succeed to the majority. Long explanation of the causes that have delayed the completion of the Royal Nova Scotia regiment to its full strength. The recruiting is now proceeding and believes this will be the first regiment completed; as it stands it is composed of a fine body of men, as well clothed and as fit for service as any in the army. Reports the employment in which the armed snow "Earl of Moira" is engaged. The "Ellegood" is transporting French prisoners from Halifax to Guernsey; has drawn on the Treasury for provisions, pay, &c., for her equipment. The French fleet in the Chesapeake is said to amount to 250 sail. Such a fleet, with the inflamed state of American subjects and speeches in their legislatures, pointing out the provinces as objects of attack, makes the arrival of the squadron anxiously looked for. The necessity for a reinforcement of regular troops, as the militia cannot be kept permanently employed without running the risk of starving every family that depends on them. Suggests that invalids might be sent from the West Indies, as they would soon recover and make a good garrison. 234  
*Enclosed.* Monthly return of the Nova Scotia regiment. 242
- May 7,  
Whitehall. Secretary of State (Dundas) to Wentworth. Arrival of Prince Edward in the West Indies, in time to take part in the capture of Martinique, in which he distinguished himself. Approves of his having sent the "Earl of Moira" as well as the packet to Boston, also of the measures taken to secure the obedience of the settlers from St. Pierre and Miquelon. Refers to separate letter, for remarks on naval defence. 223
- (Copy in Col. Off. N. S. vol. 2, p. 144)
- May 8,  
Halifax. Wentworth to King. Shall execute the orders in secret letter of 27th September. Hammond strongly recommends every exertion from Nova Scotia to defeat the evil tendency of the American embargo. Is sending the articles required for the West Indies. Sends state of the force; it is sufficient to repel the threatened invasion. The good appearance of his own regiment; it was too ridiculous to call the men *sans culottes*. Thanks for the kind way in which Dundas and Burke have spoken of him and for the appointment of his brother-in-law to the 500

## Department of Agriculture—Archives.

1794.

treasury of Nova Scotia. The armed snow employed in carrying ordnance to Annapolis and Digby and in convoying the transport from New Brunswick for shipping the French prisoners; her future employment. The French fleet and convoy (250 vessels) in the Chesapeake probably sailed for Europe in April. If a strong fleet were sent it would probably bring the Chesapeake fleet into Halifax; the good effect that would have. Wishes he had discretionary powers about the mast ship; she would by this time have returned with invalids, who would make a good garrison. Is sending to the West Indies all the provisions he can spare; regrets that flour was not taken from Hartshorne & Tremain; 1,200 to 1,500 barrels could have been spared. Calls again attention to the repeal of instructions prohibiting the granting of land. Hopes to have the students removed into the college next autumn. "Madame St. Laurent (with a hundred names and titles)" is waiting a passage to England; her well known connection with Prince Edward; her elegance, good qualities, &c. Refers to his (Wentworth's) application for a baronetcy.

*Enclosed.* State of the force at Halifax to repel invasion: Royal Artillery, 80; King's Own, 102; Royal Nova Scotia regiment, 493; Tremain's Artillery, 65; Careening yard and adherents, 150; "Hussar" frigate, 200; the packet and merchantmen under Capt. Jones, 186; the militia from the country 1,229; 1st and 2nd battalion of Halifax militia, 1,670; civil branch of ordnance, 30; Lunenburg militia, prepared to march by a road cut for the purpose leading to that part of the country, 200; total 4,405.

 The same of Assembly. 141
- June 7, Halifax. Wentworth to King. Meeting of General Assembly; sends newspaper with his speech and copy of address in reply. The justification of his conduct respecting the militia. Expects a quiet session and will avoid all questions that can afford pretence for debates. Prince Edward will make a journey to New Brunswick; the "Zebra" will attend him; his improvement in deportment &c.; his agent to be assisted in getting his baggage, &c., sent. Prince Edward is anxious that Madame St. Laurent should be well accommodated in her passage out; is pleased with the militia, &c. A transport with 223 French prisoners is ready to sail. Vessels have been waiting for a favourable wind to convey the inhabitants from St. Pierre and Miquelon to Nova Scotia; sends charter party with remarks. Shipment of shingles, horses, &c., for the West Indies. Repeats application from British merchants in the United States for leave to withdraw their merchandise for safety to Nova Scotia, to which he had consented, subject to His Majesty's pleasure. If approved of, it will exceedingly influence the United States to moderation and peace. Leave given to import provisions for the navy from the United States, otherwise the ships cannot sail.  
 Address of the House of Assembly to the Governor's speech.
- June 11, Halifax. Wentworth to King. The delay to the sailing of the vessels, from a south-east gale; the "Zebra" is trying to work out to take Prince Edward on board at Annapolis; the Prince's growing excellence. Respecting his nephew Charles and his son Charles, for whom he asks his (King's) influence.
- June 21, Halifax. The three preceding entries in A. & W. I. vol. 598.  
 Same to the Secretary of State (Dundas). Thanks for approbation. The good effects produced by the destination of Murray's naval force. Arrival of the "Earl of Moira" from Quebec, with baggage, &c., for Prince Edward. Movements of vessels connected with the removal of inhabitants from St. Pierre and Miquelon. Prince Edward gone to New

June 23,  
Boston.

Description of two vessels loaded with provisions for Havre, France, and copies of correspondence between Commodore George (27th May) and the agent for the contractors for supplying the navy (31st May), respecting obtaining a supply from the United States. (Endorsed as enclosed in letter from Wentworth of 1st July, which is in Col. Cor. N. S. vol. 23). A. & W. I. vol. 598

July 1,  
Halifax.

Wentworth to King. Prince Edward has taken command to the general satisfaction of the people. Dispatch from Hamilton, dated Bermuda, 23rd June, reports the arrival of a French fleet at Guadaloupe with 2,000 troops; they effected a landing at St. Anne; Admiral Jervis in pursuit; expects soon to hear of the French fleet being captured. Provisions for the ships in harbour permitted to be imported from Boston, so that they are able to proceed to sea. The seizure by the Customs authorities of the vessels bringing the provisions, which were delivered to the contractors on their bonds; asks him (King) to obtain an order for release, the provisions being all for His Majesty's service. The difficulty of obtaining provisions for the vessels; encloses correspondence on the subject. The snow "Earl of Moira" gone to St. Pierre, relieving the "Zebra," sloop of war; the service rendered by the snow. The vessel with horses and shingles sails today, having been detained for want of wind. Reported capture of Arnold by the French squadron. The inferior quality of the clothing sent.

Col. Cor. N. S. vol. 23, p. 280

Halifax.

J. Lewis to Murdoch. Complains of the seizure of the "Pigou." Enclosed in King's letter of 12th August, which see.

July 4,  
Halifax.

Wentworth to Secretary of State (Dundas). Prince Edward has taken command and desires him (Wentworth) to represent the benefit to the service if he were allowed to issue a proclamation offering a free pardon to all deserters who should join one of the regiments, either regular or provincial. Col. Cor. N. S. vol. 23, p. 293

July 5,  
Whitehall.

Secretary of State (Dundas) to Wentworth. The rapid success in the West Indies renders the speedy arrival of shingles less necessary. The horses and all sorts of provisions will arrive very opportunely. Regrets that any circumstance should have delayed the completion of his regiment; the bad effect of Ogilvie's proclamation about deserters. Measures for the defence of Annapolis and Digby approved of. Has the strongest hopes for a termination of all differences with the United States. The arrival of Admiral Murray should, with the military force of the province, be a sufficient defence; will, however, send troops to obviate the necessity of calling out the militia to the prejudice of agricultural operations. Is gratified to learn of the safe arrival of Prince Edward; the King's pleasure that he is to command as Major General shall be communicated to His Royal Highness by Amherst. Hopes that the "Hussar" and "Blanche" will relieve the "Dedalus." Will not object to another £200 for the relief of the Micmacs; hopes this will be only a temporary measure, and that they will soon be released from dependence by their own efforts. 264

1794.  
 July 30,  
 Whitehall. (Copy in Col. Off. N. S. vol. 2, p. 149).  
 Secretary of State (Portland) to Ogilvie. The prize Act referred to the Attorney General for opinion. The proceeds of the provisions captured at St. Pierre are to be divided, in accordance therewith, between the land and sea forces. Col. Cor. N. S. vol. 23, p. 278
- August 5,  
 Wentworth. (Copy in Col. Off. N. S. vol. 2, p. 153).  
 Secretary of State (Portland) to Wentworth. Is glad to find that St. Pierre and Miquelon are evacuated, the more necessary as they are annexed to Newfoundland and inserted in Wallace's commission. Copies of letters to be laid before Prince Edward will show the probable number of troops ordered to Halifax. Col. Cor. N. S. vol. 23, p. 287
- August 12,  
 Whitehall. (Copy in Col. Off. N. S. vol. 2, p. 155).  
 King to Wentworth. Sends copy of letter from Lewis of the ship "Pigou"; he is to see that Lewis has no cause to complain of the Vice-Admiralty Court. The letter from Lewis was put into Grenville's hands by Jay. Col. Cor. N. S. vol. 23, p. 289  
*Enclosed.* Letter from Lewis to Murdoch, complaining of the seizure of the "Pigou." 291
- August 13,  
 Quebec. Dorchester to Wentworth. Sends Dansville to Halifax where he trusts he may be allowed to remain, it not being expedient for French subjects to reside at Quebec without express permission from His Majesty's ministers. Col. Cor. N. S. vol. 24, p. 13
- August 15,  
 "Resolution,"  
 Halifax. Vice Admiral Murray to Secretary of State (Dundas). Has just arrived from Sandy Hook, with part of the squadron to refit. Did not go up to New York, the country appearing to be governed by King Mob. Has conferred with Mr. Hammond and found him to be the steady clear, candid and firm minister represented. Col. Cor. N. S. vol. 25, p. 14C
- August 16,  
 Halifax. Same to the same. At the Hook, 30 miles below New York, had conversations with Hammond, the minister to the United States, and they mutually communicated their instructions. Shall deal with caution and firmness in his intercourse with the Americans. Did not go up to New York, as there was no answering for the actions of King Mob and any insult to the flag must have brought things to a serious issue, besides the loss of men, \$100 having been publicly offered them to desert. Shall return to the bar of New York in a few weeks. The coast being clear of French cruisers, asks that the packet may go from Halifax to New York as formerly, instead of returning direct to Europe from Halifax. The language used in the American Congress against the King and country is too shocking to repeat. Col. Cor. N. S. vol. 23, p. 371
- August 23,  
 Halifax. Wentworth to the same. Bayard has been informed of his promotion. Prince Edward has ordered a detachment of the Royal Nova Scotia regiment to relieve the 4th at St. John's, Newfoundland; the men are on board the snow "Earl of Moira," which is to take the 4th to St. Pierre and on the evacuation of the island is to convoy the 4th to Quebec returning with the fusiliers to Halifax; this saves the expense of a transport and allows Murray to employ a ship of war to cruise on the coast. Further on the evacuation of St. Pierre and Miquelon. The Royal Nova Scotia regiment has been mustered; return for July sent. 296  
*Enclosed.* Return. 300
- August 24,  
 Halifax. Chief Justice Strange to King. His efforts in the Council to obviate the differences and to maintain harmony between the two Houses. Wentworth's reserve towards him in questions of government. The building for the college (at Windsor) is being adorned; a portion is getting fitted up for a library, to be supplied with books, philosophical instruments &c., by private subscription. The means he has adopted to raise the necessary amount. A. & W. I. vol. 598

## Department of Agriculture—Archives.

1794.

Certificate from Major Thorne that William McIntosh, Quarter Master Sergeant of the 4th regiment, acted as commissary in the provision and fuel department from 11th June, 1793, to 11th September, 1794, and has not received any pay for performing the duty.

Col. Cor. N. S. vol. 26, p. 101

September 16,  
Halifax.

Vice Admiral Murray to Secretary of State (Dundas). Remains at Halifax for the protection of the town, which is in a most defenceless state, as it is reported that a large French squadron has arrived at Boston. The resources of the country have been unfairly represented; no dependence to be placed on the militia, as they are not amenable to military law and come and go as they please.

Col. Cor. N. S. vol. 25, p. 148

September 16,  
Halifax.

Wentworth to King. The pleasant relations between him and the commander-in-chief and the Admiral. How the Prince is housed, &c.; the care taken by him (Wentworth) to have his rank respected. The Prince's desire to have a more extensive command, and that he should have the 26th regiment. Major Barclay has applied for a military pension which is strongly recommended. Sends petition, No. 2, from James Meany, showing his sufferings. Sends Miller's report of colliery operations; the prospect of a large revenue from the collieries. The evacuation of St. Pierre and Miquelon completed; about 450 of the inhabitants will settle in Nova Scotia; the rest of the inhabitants and prisoners sent to Guernsey.

A. & W. I. vol. 598

September 16,  
Halifax.

Same to Secretary of State (Dundas). The late session of the Legislature conducted with harmony and attention to the public service. Sends address from the Assembly with remarks; the desirableness of a change in the law regulating the trade with Quebec. Arrival of the frigates "Cleopatra" and "Thisbe"; it is reported that a French fleet had gone into Boston. A frigate and a messenger by land sent for intelligence. The measures taken for defence; details given of armament,

1794.

people employed, &c. Peace in the province, the crops larger than usual, but the fishery has not been so abundant as in some former years; all other industries and commerce flourishing.

Col. Cor. N. S. vol. 23, p. 312

*Enclosed.* Address to the Lieut. Governor by the Assembly. 320

October 2,  
Whitehall.

Secretary of State (Portland) to Wentworth. Has transmitted to Amherst Prince Edward's recommendation that a free pardon should be issued to deserters who should enlist in any regiment in the province. The employment of the "Earl of Moira" is satisfactory. The gratitude of the inhabitants must be secured to Prince Edward for the care he is taking of the defence of Nova Scotia; his wishes respecting a reinforcement transmitted to Amherst. The supplying of the Micmacs with seed and tools is the effectual method of reducing the expense incident to their present course of life. 306

(Copy in Col. Off. N. S. vol. 2, p. 156).

October 4,  
Whitehall.

King to Wentworth. Transmits copy of a letter from Morse relative to the proclamation of a free pardon for deserters.

Col. Cor. N. S. vol. 23, p. 311

(Copy in Col. Off. N. S. vol. 2, p. 159).

October 11,  
Whitehall.

Secretary of State (Portland) to Wentworth. The detention of the packet at Falmouth enables him to answer letter of 16th September. Address presented to him (Wentworth) by the Assembly transmitted to Grenville and committee of Council. Although he is inclined to disbelieve the report of the arrival of 12 French ships of the line at Boston, yet it would not be improper to consult with Prince Edward as to the practicability of drawing out, arming and disciplining a certain number of militia to be allowed the same pay as the regular forces whilst employed. 327

Col. Cor. N. S. vol. 23, p. 327

(Copy in Col. Off. N. S. vol. 2, p. 159).

October 18-26.

Correspondence enclosed in Prince Edward's letter of 31st December, which see.

November 1.

Monthly return of the Royal Nova Scotia regiment. Enclosed in Prince Edward's letter of 5th November, which see.

November 5,  
Halifax.

Prince Edward to Secretary of State (Dundas). Transmits returns of the Royal Nova Scotia regiment for the months of September and October.

Col. Cor. N. S. vol. 25, p. 10

*Enclosed.* Returns dated 1st October and 1st November. 12, 13

November 6,  
Lambeth.

Archbishop of Canterbury to Secretary of State (Portland). Sends extracts from letters received from the Bishop of Nova Scotia, respecting the college at Windsor. 374

Col. Cor. N. S. vol. 23, p. 374

*Enclosed.* Extracts: 3rd October, 1791; 25th June and 26th November, 1792; 25th January, 25th March, 3rd May and 30th June, 1794; accounts of the progress of the buildings, &c. 376

November 7,  
Halifax.

James Putnam to Portland. Complains of the wrong done to him by a decision of the Supreme Court of Massachusetts, which infringes the provisions of the treaty of peace. Should any adjustment of the differences between His Majesty and the United States take place, is confident that the interests of private individuals who have suffered by the injustice of the treaty will be considered. 233

Col. Cor. N. S. vol. 24, p. 233

November 11,  
Halifax.

Wentworth to Secretary of State (Portland). Had as instructed, submitted certain dispatches to Prince Edward; he will report fully on the subject of defences in event of an attack. The persistent designs of the French for the destruction of Halifax. Sends monthly returns of the Royal Nova Scotia regiment; recruiting proceeds successfully; the inadequacy of the levy money; the good services rendered by the regiment. The loyalty of the province, which is prosperous. The harmony amongst all branches of the service.

Col. Cor. N. S. vol. 23, p. 329

## Department of Agriculture—Archives.

- 1794.
- November 11, Halifax. *Enclosed.* Monthly return. Prince Edward to Secretary of State (Portland). In consequence of the expected arrival of troops from the West Indies, every exertion has been made to provide barrack accommodation. Earnestly asks for a strong reinforcement of troops and artillery. The evacuation of St. Pierre and Miquelon complete; the guns rendered unserviceable and the shot sunk. Recommends granting Barclay's petition for a pension on account of his services and losses. Col. Cor. N. S. vol. 23, p. 337  
338
- November 12, Halifax. *Enclosed.* Sketch of the town and harbour of Halifax. (See also Col. Cor. N. S. vol. 25, pp. 14 and 32.) 342
- November 12, Halifax. Wentworth to King. Capture by the French fleet of the August packet and about 30 sail; they are sent to New York. Letters lost; papers mention that the Duke of Portland is at the Horse Guards, but do not say in what department. Hopes that he (Wentworth) will soon receive his spurs; his regiment now numbers 628 and will soon be complete; no clothing received; consequent suffering of the men, who do not complain. No merchant vessels have arrived for a year. There may be an absolute necessity to import essentials from the United States. Apprehended loss of Prince Edward's baggage, horses, carriages, &c., in the vessels taken by the French fleet. Improvement of the garrison; the removal of Ogilvie desired. Information respecting St. Pierre, &c. as in previous letters. A. & W. I. vol. 598
- November 12, Halifax. Return of lodging money. Enclosed in Wentworth's letter of 23rd July, 1796, which see.
- November 24, Halifax. Decree of Court of Admiralty received, respecting property captured at St. Pierre Miquelon. Enclosed in Ogilvie's letter of 26th December, which see.
- November 25, Halifax. Proceedings of Council concerning the capture of the brig "Mars," with letters from Prince Edward and Murray on the same subject. Enclosed in Wentworth's letter of 26th November, which see.
- November 26, Halifax. Wentworth to Secretary of State (Portland). Encloses letters from Prince Edward and Rear Admiral Murray. The brig "Mars" laden with provisions and clothing having been taken by the French and carried into Boston, he (Wentworth) has been obliged to accede to the requisitions of the commander-in-chief and Council to purchase and import her cargo. Col. Cor. N. S. vol. 24, p. 3
- Enclosed.* Proceedings of Council concerning the capture of the brig "Mars," with letters from Prince Edward and Murray on the same subject. 7
- December 1, Halifax. Monthly return of the Royal Nova Scotia Regiment. Enclosed in Wentworth's letter of 7th January, 1795, which see.
- December 10, Halifax. Wentworth to Secretary of State (Portland). Transmits memorial of Danseville, with copies of letters from Dorchester and Ogilvie respecting that gentleman. Col. Cor. N. S. vol. 24, p. 9.
- Enclosed.* Memorial of Danseville for permission to remain in Canada. 11
- December 20, Halifax. Wentworth to Secretary of State (Portland). As the militia could not be embodied for any length of time without greatly distressing the inhabitants, has raised a legion to consist of a thousand men, which corps will be ready to repair to any part of the province that may be invaded. It would also be expedient to select two flank companies in each regiment in addition to the artillery company; government would then have 2,000 men to depend on. Clothes and subsistence required. Col. Cor. N. S. vol. 24, p. 17
- (An extract is in Col. Cor. N. S. vol. 26, p. 17.)
- December 20, Halifax. Wentworth to Secretary of State (Portland), (separate). If his plan for raising a legion be approved of, requests that John Fisher, junior, be permitted to purchase and ship the clothing, &c. Col. Cor. N. S. vol. 24, p. 24

1794.  
December 21, Joshua Barnley to his brother. Enclosed in Wentworth's letter to  
Bordeaux. King of 18th April 1795, which see.
- December 21, Wentworth to Secretary of State (Portland). Dispatch of 2nd October  
Halifax. received. The removal of the inhabitants from St. Pierre and Miquelon  
has been conducted with care and economy, they have been placed in  
different harbours where fisheries are carried on. Many of them are  
Acadians, who rejoice to be restored to this province.  
Col. Cor. N. S. vol. 24, p. 26
- December 26, Ogilvie to Secretary of State (Portland). Has received duplicate of  
Halifax. Portland's letter of 30th July, with enclosure signifying His Majesty's  
pleasure that the proceeds of the provisions and other articles captured  
at St. Pierre and Miquelon should be distributed among the land and sea  
forces serving on that expedition. 51  
*Enclosed.* Copy of decree, 24th November, issued from the Court of  
Admiralty respecting property captured at St. Pierre and Miquelon. 53  
(Duplicates of letter and enclosure pp. 223 and 225).  
Agreement, 4th May, between Ogilvie and Captain Affleck respecting  
captures which should be equally divided between the army and navy.  
Col. Cor. N. S. vol. 24, p. 55  
Calculated proceeds of the provisions and articles captured at St.  
Pierre and Miquelon. 57  
(Duplicates at pp. 227, 229.)
- December 26, Wentworth and other Governors of King's College to Secretary of  
State (Portland). The sum of £1,500 is still required to finish the  
building; request His Grace's aid to obtain the same.  
Col. Cor. N. S. vol. 24, p. 45  
(Duplicate in Col. Cor. N. S. vol. 32, p. 136.)  
*Enclosed.* Account of money expended under the direction of the  
Governors of King's College at Windsor in Nova Scotia in the erecting  
a suitable building there which is as yet unfinished (two copies).  
Col. Cor. N. S. vol. 24, pp. 47, 49
- December 31, Prince Edward to Secretary of State (Portland). Submits a plan for  
Halifax. the defence of the islands of Cape Breton and St. John. The experiment  
of dividing these islands into separate governments has failed, they both  
prospered better under the administration of Nova Scotia.  
Col. Cor. N. S. vol. 30, p. 3
- December 31, Same to Dundas. Has not received the expected reinforcements from  
Halifax. the West Indies. Again urges the necessity of sending troops for the  
defence of the province. Col. Cor. N. S. vol. 25, p. 33  
*Enclosed.* Captain Tripp of the "Severn" to the commanding officer  
at St Domingo, 18th October. Desires to know what transports are  
intended to receive troops to be conveyed to Halifax and Quebec. Has  
orders to act as convoy to the transports. 37  
Brigadier General Harneck to Tripp. Has received no orders respect-  
ing the transports or troops. 39  
Tripp to Captain Martin of the "Magicienne," and senior officer at  
Port-au-Prince, 24th October. Wishes to know whether there may be  
troops at Jamaica destined for Halifax and Quebec or whether he ought  
to proceed immediately to Quebec. 41  
Martin to Tripp, 26th October. No troops can be spared for America;  
is of opinion that Tripp should proceed at once according to his orders  
from the Admiralty. 43
- December 31, Prince Edward to Dundas. Offers to raise a corps to be styled the  
Halifax. Royal Irish Fusileers, and desires the King's permission. 45  
1795,  
January 1, Monthly return of the Royal Nova Scotia regiment. Enclosed in  
Halifax. Wentworth's letter of 21st January, which see.

## Department of Agriculture—Archives.

1795.  
January 4,  
Halifax. Prince Edward to Dundas. Forwards by Capt. Vesey, his aide-de-camp, returns of the Royal Nova Scotia Regiment for November and December. Col. Cor. N. S. vol. 25, p. 49  
*Enclosed.* Monthly return of the Royal Nova Scotia Regiment. 51  
(By error this return is dated 1st December, 1795, should be 1794.)  
Monthly return of the Royal Nova Scotia Regiment dated 1st January, 1795. 52  
(The same returns were sent by Wentworth on 21st January.)
- January 8,  
Whitehall. Secretary of State (Portland) to Prince Edward. His (Prince Edward's) attention to his duties cannot fail to conduce to the safety of the district and tend to assist the spirit of cooperation which marks the conduct of every description of persons. The treaty with the United States will relieve him from apprehension in that quarter. The conduct of his regiment and of the militia is highly satisfactory. If he (Prince Edward) agree to the indulgence to the boys respited for a time, it will probably not be disapproved of. Col. Cor. N. S. vol. 24, p. 1  
(Copy in Col. Off. N. S., vol. 2, p. 161.)
- January 8,  
Whitehall. Secretary of State (Portland) to Prince Edward. His preparations for the reception of the troops from the West Indies and rendering the heavy guns at St. Pierre unserviceable are proper. Congratulates him on the conclusion of the treaty with the United States. His recommendation of Barclay transmitted to the Treasury. Col. Cor. N. S. vol. 30, p. 1  
(Copy in Col. Off. N. S., vol. 2, p. 163.)
- January 19,  
Halifax. Kearney to Wentworth. Reports that the pouches sent out for the Royal Nova Scotia Regiment are totally unfit for service and that the pouch belts, bayonet belts and gun slings are of a very inferior quality. Col. Cor. N. S. vol. 24, p. 237
- January 20,  
Halifax. Wentworth to Secretary of State (Portland). Recommends Benning Wentworth to fill the vacancy in the Council occasioned by the removal of John Butler Butler to reside in London. 30
- January 20,  
Halifax. Same to the same. Transmits monthly returns of the Royal Nova Scotia Regiment. Requests that a medicine chest may be sent for the use of the regiment. 32  
(The returns enclosed are the same as those sent by Prince Edward on 4th January.)
- January 23,  
Halifax. Wentworth to King. Remarks on his public proposals respecting the militia. Requests that clothing may be procured through his nephew; the inferior quality of some sent by Maitland & Co.; Bayard sick at New York; he is junior to Monk, who should therefore be promoted before him, but it has been proposed that Monk should be made a puisne judge in Montreal, which would remove difficulties. Is afraid the Chief Justice may be removed by promotion; entreats that the vacancy be not suddenly filled up on account of the importance of the office; his bad opinion of Uniacke, the Solicitor General. Reported resignation of Dorchester; Prince Edward has written to the Prince of Wales for his interest for the military command to himself and for the civil command to him (Wentworth); should, however, the Islands of St. John and Cape Breton be restored to Nova Scotia, he would not care to remove to Quebec. The disordered state of Cape Breton; Lieut.-Gov. M. (Macarmick) will be in London as soon as possible; the colliery contractors are petitioning for reimbursement of their expenses for rebuilding the wharf, road &c., recommends payment of £384.14.3. Hears that the French are obtaining a large quantity of timber and masts in New England. The desirableness of Ogilvie's removal. The liberality and good temper of Admiral Murray; his application for exemption from the duty on liquors &c., used in the Navy, which it will be difficult to grant.

1795.  
January 24,  
Halifax. Wentworth to Secretary of State (Portland). Transmits bills of lading for horses and shingles shipped to the West Indies. Requests protection towards the completion of King's College, Windsor.  
Col. Cor. N. S. vol. 24, p. 37
- Enclosed.* Bill of lading, 30th May, 1794, for shingles in the brig "Mary," to the West Indies. 40
- Bill of lading, 2nd July, 1794, for horses and shingles shipped in the brig "Prince Edward," to the West Indies. 39
- Invoice and bill of lading, 2nd July, 1794, for a cargo of horses and shingles shipped from Nova Scotia to Martinico. 41
- January 25,  
Halifax. Wentworth to Portland. Solicits permission to give assent to an Act of the General Assembly to establish a lottery at their next session, to raise a sum not exceeding £2,000 sterling to be applied for the purpose of erecting bridges and improving roads within the Province. 43
- February 19,  
London. John Jay to Monroe, United States Ambassador in Paris. Sends letter by Col. Trumbull. Enclosed in Admiral Murray's letter to Dundas of 26th June, which see.
- March 12,  
Halifax. Wentworth's speech to the Council and Assembly at the opening of the session.  
Address of the Assembly in reply, 13th March.  
Address of the Council in reply, 15th March.  
(The speech and addresses are extracts from the journals; they were enclosed in Wentworth's letter of 18th April.)
- March 25,  
Halifax. Prince Edward to Secretary of State (Portland). The non-arrival of troops from the West Indies renders indispensable the dispatch of the reinforcements solicited. Suggests that the regular regiments might be recruited from the provincial corps were a bounty of five guineas offered as an inducement to the men to volunteer. The provincial regiment would be able to recruit every autumn in Newfoundland.  
Col. Cor. N.S. vol. 30, p. 10
- March 25,  
Halifax. Same to Dundas. Trusts that his requisition for a regiment of infantry, a company of artillery and an officer of engineers to be sent from Canada may be complied with. Answers the remarks of the Duke of Richmond, on the state of the fortifications, barracks, etc.  
Col. Cor. N.S. vol. 25, p. 53
- Enclosed.* State of the ordnance storehouses at Halifax, 24th March. 64
- Captain Straton, Royal Engineers, to Prince Edward. Gives a return of all the barracks and guard houses, their present state and repairs necessary, 27th March. 59
- Return, 30th March, of ordnance and carriages wanting for the service of the Royal Artillery, signed by Thomas Desbrisay, Capt. Com. R. A. 63
- (Two of the enclosures were of a subsequent date to the covering letter.)
- March 31,  
Paris. Benjamin Hichborn, of Massachusetts, to Monroe. Enclosed in Admiral Murray's of 26th June, which see.
- April 1,  
Halifax. Wentworth to King. Has been ill, but is now better. Called the Assembly earlier than he intended, to get through the business more quickly, there being less politics than in summer, when there is more leisure. Is afraid Cumberland will not be restored to the agency. The proposal to exchange 400 of the finest men in his regiment for an equal number of the worst and oldest of the 7th, but has not fully entered into the subject with Prince Edward; doubts the wisdom of the course, as it would probably put a stop to recruiting. Eulogy of Prince Edward. Relieved the best manned frigate in the squadron from a service

## Department of Agriculture—Archives.

1795.  
to which the armed snow "Earl of Moira" was competent; the frigate has sailed; hopes she will capture a French brig, with 400 tons of provisions. A. & W. I. vol. 598
- April 1, Halifax. Prince Edward to Dundas. Sends returns of the Royal Nova Scotia Regiment. Col. Cor. N. S. vol. 25, p. 66  
Returns. 68, 69, 70
- April 1, Halifax. Wentworth to Secretary of State (Portland). Acknowledges dispatch of 8th January. Commends the Nova Scotia regiment for its daily improvement and the men's constant attention to duty. The frigate "Hussar" sent to join Admiral Murray. Col. Cor. N. S. vol. 24, p. 67
- April 2, Whitehall. Secretary of State (Portland) to Prince Edward. His observations on the policy of establishing separate governments in the islands comprised in Nova Scotia are worthy of consideration. The part of his letter relating to works of defence has been transmitted to the Master General and Board and Ordnance. Sends copy of letter from the Treasury respecting supply of clothing for the militia to replace that which was captured. Colonel Danseville may remain on parole in Lower Canada, unless Dorchester consider it detrimental to the service. Col. Cor. N. S. vol. 30, p. 7  
(Duplicate in Col. Off. N.S. vol. 2, p. 165.)
- April 2, Whitehall. Same to the committee for building King's College. Has received the account of the expenditure of the £3,000 and their request for £1,500 more to complete the building; a sum will be placed in the estimates but the amount that can be spent advantageously each year is to be reported so that no more than that sum may make part of the estimates. Col. Cor. N. S. vol. 24, p. 59  
(Copy in Col. Off. N.S. vol. 2, p. 167.)
- April 7. Prince Edward to Wentworth. Enclosed in Wentworth's of 18th April, which see.
- April 9, Whitehall. Secretary of State (Portland) to Wentworth. Does not, under the exceptional circumstances, disapprove of his measures for supplying the fleet and army. Sends copy of letter from the Treasury respecting the clothing for the militia, to replace what had been captured. Danseville may remain on parole in Lower Canada, unless Dorchester should think it detrimental to His Majesty's interests. Directions are to be sent to refit the "Earl of Moira" in the careening dock at Halifax. His account of the orderly conduct of the inhabitants from St. Pierre and Miquelon, now in the province, is satisfactory. No doubt some relief must be given to the Indians during the severity of winter, but trusts that his and their exertions will enable them to raise sufficient for their subsistence. The appointment of Benning Wentworth to the Council approved of. The part of the letter respecting clothing for his regiment was transmitted to the Treasury; their answer is enclosed; also the part relating to medicines for the corps. Refers him, in regard to the college, to the letter addressed to himself and the rest of the committee. Has transmitted to the committee of Council copy of letter soliciting leave to assent to a bill to authorize a lottery to raise money for roads; should his suggestions be approved of, an additional instruction shall be sent. Col. Cor. N. S. vol. 24, p. 61  
(Copy in Col. Off. N. S. vol. 2, p. 168.)
- April 13, Halifax. Journals of Assembly from 12th March to date in margin.  
Journal of Council for same period.  
(Both enclosed in Wentworth's letter of 10th December, which see).
- April 14, Paris. Monroe to Secretary of State, Philadelphia. Enclosed in Murray's of 26th June, which see.
- April 15, Bordeaux. Fenwick, United States consul, to Randolph. Enclosed in Murray's letter of 26th June, which see.

1795.  
April 17,  
Halifax.  
April 17,  
Halifax.  
April 17,  
Halifax.  
April 18,  
Halifax.
- Wentworth to Prince Edward. Enclosed in Wentworth's letter of 18th April, which see.
- Same to the same. Enclosed in Prince Edward's letter of 19th April, which see.
- Estimate for North Barrack. Enclosed in Prince Edward's letter of 19th May, which see.
- Wentworth to Secretary of State (Portland). Being hardly recovered from a painful indisposition, is unable to transmit the reports completed. Militia Act passed this session remedies defects. Encloses speeches and addresses from the Council and Assembly.
- Col. Cor. N. S. vol. 24, p. 70
- Enclosed.* (1). Wentworth's speech at the opening of the Legislature, 12th March. 73
- (2). Reply of the Council, 15th March. 75
- (3). Address of Assembly, 13th March. 77
- (4). Wentworth's speech at the close of the session. 79  
(Enclosures 1 to 4 are extracts from the journals).
- (5). Prince Edward to Wentworth. Details the defensive measures taken and applies for 600 militia, which body of men must remain with him the whole of the working season. 81
- Wentworth to King (private). Has employed a confidential person to examine personally all the places in New England where masts can be got out. Cannot this year rely on any considerable supply from America. Will experience some difficulty in procuring the militia labour required by Prince Edward, as mechanics and labourers are seduced by the immense wages given in the United States, to emigrate thither. 89
- Enclosed.* Joshua Barney (Barnley previously) to his brother; arrived in Paris on the 3rd August. Describes his visit to the National Convention with Monroe, who was received with great enthusiasm. Members of the convention all agree in continuing the war against England until she is so reduced as never to have it in her power to trouble the peace of Europe. 93
- Wentworth to Prince Edward, 17th April. Acknowledges receipt of dispatch of 7th instant, and has taken measures to comply with his requisition. 85
- Account of the cost of clothing purchased at Boston for the Royal Nova Scotia regiment. 87
- (Duplicate at page 97).
- Secretary of State (Portland) to Prince Edward. Transmits copy of letter from the Board of Ordnance respecting the erection of batteries. Col. Off. N. S. vol. 2, p. 173
- Chief Justice Strange to King. Requests that the Rev. Dr. Brown (who is leaving after eight years' service) may be continued for another year upon the Parliamentary estimate for the province, which will enable him to bear the expense of removing himself and family to Scotland, to which country he has been invited to return. Col. Cor. N. S. vol. 24, p. 239
- Prince Edward to Dundas. Encloses letter addressed to Wentworth, with the latter's reply. Is using every exertion to put Halifax in a state of defence. Urges that the reinforcements he has so often applied for may be sent without delay. Col. Cor. N. S. vol. 25, p. 71
- Enclosed.* Prince Edward to Wentworth, 17th April. Desires that 600 of the militia be immediately embodied, to be employed in erecting and repairing the defences of the town and harbour. 75
- Wentworth to Prince Edward, 17th April. Has given orders for the militia to be embodied, but it will be impossible to assemble them before late in May or early in June. 77

## Department of Agriculture—Archives.

1795.  
April 23,  
Whitehall.

Secretary of State (Portland) to Prince Edward. His Royal Highness having written to Dundas on military matters, shall only deal with the suggestion for transferring a portion of the Royal Nova Scotia regiment to the 7th Fusiliers; by the conditions on which the men were enlisted, the regiment should remain on its present footing. Congratulates him on the marriage of the Prince of Wales.

Col. Cor. N. S. vol. 30, p. 14

(Copy in Col. Off. N. S. vol. 2, p. 174).

April 23,  
Whitehall.

Secretary of State (Portland) to Wentworth. Refers him to previous letter respecting clothing. Approves of his employment of the "Earl of Moira."

Col. Off. N. S. vol. 2, 173

April —.

Plan of George's Island. Enclosed in Prince Edward's letter of 19th May, which see.

Plan and section of a field work for Citadel Hill at Halifax. Enclosed in same letter.

7. Plan and section of a field work for Citadel Hill at Halifax (undated).

100

8. General plan of the works on Citadel Hill (undated).

101

May 22,  
Halifax.

Henry Duncan to Wentworth. Enclosed in Wentworth's letter of 28th May, which see.

May 25,  
London.

Rev. A. Brown to Garthshore. Requests he will thank Dundas for the important service he has done him in presenting him with the living of Lochmaben. He will be in pecuniary embarrassment unless government continues his allowance for another year; gives an account of his services in support of his claim.

Col. Cor. N. S. vol. 24, p. 241

May 25,  
Charlottetown

Thomas Wright to Mackenzie. Desires an appointment in the surveyors' department in Canada and relates his distressing situation.

245

May 26,  
Halifax.

Wentworth to King. The great assiduity and judgment exerted by Prince Edward in constructing and repairing the fortifications, barracks &c. Encloses an old chart describing the boundary between this Province and the late Province of Massachusetts, or rather the Eastern part thereof, called the territory of Sagadahoc. Solicits pension of £50 per annum for the widow of an officer recommended by Prince Edward.

171

1795. *Enclosed.* Copy of chart of Nova Scotia and territory of Sagadahok. Col. Cor. N. S. vol. 24, p. 177
- May 26, Halifax. Petition of Boadicea Goold, widow of the late Arthur Goold, to the Secretary of State (Portland). Prays that a part of the pension of her late husband may be continued to her. Recommended by Prince Edward. Col. Cor. N. S. vol. 30, p. 16
- May 28, Halifax. Wentworth to Secretary of State (Portland). Reports the arrival of Capt Cochran of the "Thetis" and Capt. Beresford of the "Hussar" bringing with them the "Prevoyante" and "La Raison," part of a squadron of five sail from Guadaloupe. Col. Cor. N. S. vol. 24, p. 178
- Enclosed.* Henry Duncan to Wentworth. Admiral Murray's return being hourly expected, requests that the packet may be delayed a day or two, as he may bring news which should be communicated at an early date to His Majesty's Ministers. 180
- June 1, Whitehall. Secretary of State (Portland) to Wentworth. The manner in which the session has been conducted is highly acceptable to His Majesty. The attention of Prince Edward and his (Wentworth's) judicious manner of seconding his exertions for defence merit entire approbation. The additional strength sent as well as the increase (he hopes completion) of his (Wentworth's) regiment cannot fail to relieve the militia from extra duties and the public from expense. Has recommended payment of bills drawn for clothing. Col. Cor. N. S. vol. 24, p. 101  
(Copy in Col. Off. N. S. vol. 2, p. 177).
- June 1, Halifax. Monthly return of St. John's Island Volunteers. Enclosed in Prince Edward's letter of 4th July, which see.
- June 1, Halifax. Monthly return of the Royal Nova Scotia regiment. Enclosed in Prince Edward's letter of 20th June, which see.
- June 20, Halifax. Prince Edward to Dundas. Forwards return of the Royal Nova Scotia regiment for May. Col. Cor. N. S. vol. 25, p. 102  
*Enclosed.* Return. 104
- June 22, "Argonaut." Capt. Ball to Admiral Murray. Transmits letter from the American Ambassador at Paris to the American Secretary of State. Enclosed in Murray's letter of 26th June which see.
- June 24, Halifax. Wentworth to Secretary of State (Portland). Acknowledges receipt of dispatch of 9th April. Has conveyed His Grace's letter to the trustees of the college. Has drawn on the Treasury for £500 sterling for payment of provisions issued to the militia. Transmits an Act to permit of a lottery. The armed snow "Earl of Moira" to cruise down the east coast of the province to drive off smugglers and protect the extensive fisheries. Col. Cor. N. S. vol. 24, p. 182
- June 24, Halifax. Vice Admiral Murray to Dundas. Groundless complaints are made against him and his officers by the United States Secretary of State. Encloses copy of letter from the United States Ambassador in France. The consuls at Philadelphia and Baltimore most diligent in conveying to him material intelligence; Sir John Temple at New York has been of no service. He (Murray) would have been arrested had he landed at New York. Col. Cor. N. S. vol. 25, p. 150
- June 26, Halifax. Same to the same. Encloses five letters. 152
1. John Jay to Monroe, United States Ambassador in Paris, 19th February. Sends letter by Trumbull, his Secretary, who will acquaint him (Monroe) with particulars concerning the treaty which, though signed, is not yet ratified. 154
2. Benjamin Hichborne, of Massachusetts, to Monroe. Communicates particulars of the late treaty between Great Britain and the United States, which he has learned from Trumbull. 31st March. 156

## Department of Agriculture—Archives.

- 1795.
3. Monroe to Secretary of State, Philadelphia, 14th April, respecting the treaty between Great Britain and the United States and the various parties in France. Col. Cor. N. S. vol. 25, p. 158
4. Fenwick, Consul at Bordeaux, to Randolph, 15th April. Gives an account of the state of affairs in France and particulars of the commerce carried on between the United States and France. 167
5. Capt. Ball to Admiral Murray, 22nd June. Transmits letter from the United States Ambassador at Paris to the Secretary of State and gives his reasons for opening the same. 169
- June 26,  
Halifax. Prince Edward to Secretary of State (Portland). Has begun the erection of temporary works and the repair of such old ones as are necessary for the immediate defence of the town and harbour. Urges that his requisition for troops be complied with to its full extent. Col. Cor. N. S. vol. 30, p. 18
- June 26,  
Halifax. Same to Dundas. Is glad that his requisition for reinforcements will be in part complied with. Would engage to have all the works and outposts put into complete order by the end of 1796, if supplied with additional troops. Col. Cor. N. S. vol. 25, p. 105
- July 1,  
Whitehall. Secretary of State (Portland) to Wentworth. The Acts passed seem well calculated to promote the safety and welfare of the province. Is glad that the bill respecting the property of married women was so well digested. The attention to the militia is highly commendable. Participates with him, in the satisfaction at the capture of the "Prevoyante" and "La Raison." Sends copy of letters from the Treasury respecting the clothing complained of. Col. Off. N. S. vol. 2, p. 179
- July 1,  
Halifax. Monthly return enclosed in Prince Edward's letter of 4th July, which see.
- July 3,  
Halifax. Wentworth and Governors of King's College to the Secretary of State (Portland). Acknowledge receipt of letter dated in April, that the King grants their request for a further sum of £1,500 towards the completion of the college. Col. Cor. N. S. vol. 24, p. 186
- July 4,  
Halifax. Prince Edward to the same. Has sent Lieut. Bartlett of the Royal Engineers to the Island of St. John to carry into effect the orders received from the Master General of the Ordnance. Should the Royal Nova Scotia regiment be reduced at the peace, a small bounty might be offered to such men as would voluntarily continue to serve His Majesty. Col. Cor. N. S. vol. 30, p. 22
- July 14,  
Halifax. Same to Dundas. Requests that at least 300 more draughts may be sent off to arrive by the beginning of autumn. Respecting the expenditure necessary for carrying on the new work, mode of payment, &c. Col. Cor. N. S. vol. 25, p. 109
- July 4,  
Halifax. Same to the same. Forwards returns of the volunteers of St. John Island and the Royal Nova Scotia regiment. 113
- Enclosed.* Monthly return, dated 1st June, of the volunteers of St. John's Island. 115
- Monthly return, dated 1st July, of the Royal Nova Scotia regiment. 117
- July 5,  
Halifax. Wentworth to Secretary of State (Portland). The fortifications and buildings necessary for the defence of the province are continued with unremitting assiduity and judgment by Prince Edward. On the arrival of the troops, the militia who are urgently needed on their farms can be dispensed with. Vice Admiral Murray intends applying for two companies of the Royal Nova Scotia regiment to act as marines. Col. Cor. N. S. vol. 24, p. 188
- July 5,  
Halifax. Same to the same. Reports that a small vessel belonging to and bound for Halifax from Bahama, laden with fruit, turtles and hides, put into Boston about nine days ago: surmising that the vessel was a Bermuda privateer, an outrageous assembly of men collected among whom were many French, and violently destroyed the cargo and burned the vessel. 191

1795.  
July 18,  
Halifax. Wentworth to Secretary of State (Portland.) Entreats his favourable consideration and protection, and that he would recommend His Majesty to establish the Royal Nova Scotia regiment. Lieut. Col. Kearny has four months leave of absence to go to England and will be happy to give every information on the subject of the regiment.
- July 18,  
Halifax. Same to King. Asks his support in the proposal to put the Royal Nova Scotia regiment on the establishment. Concerning Barclay's pension. Refers to his recommendation to contract with Hartshorne & Tremain's mills at Dartmouth, for flour; of the flour sent from Quebec to the garrison, 200 barrels were returned sour and unwholesome. Encloses applications from owners and masters of vessels for a convoy to Quebec; has sent the "Earl of Moira," which leaves a frigate to be better employed. Sends plan that throws light on the controversy respecting the boundaries between New England and New Brunswick. Col. Cor. N. S. vol. 24, p. 197
- July 18,  
Halifax. *Enclosed.* Application from owners and masters of vessels. Two plans of Passamaquoddy Bay, &c. A. & W. I. vol. 598  
Prince Edward to Secretary of State (Portland). Recommends Lieut. Col. Kearney, who is leaving for England to solicit the establishment of the Nova Scotia regiment. Considers that the adoption of the measure would be of great benefit to the country politically.
- July 18,  
Halifax. Same to Dundas. Has drawn bills on the Treasury on account of the barrack and fortifications now erecting. No dependence is to be placed on the militia, who have all left to get in their hay and corn harvests. Col. Cor. N. S. vol. 30, p. 28.
- August 1,  
Halifax. Monthly return. Enclosed in Prince Edward's letter of 30th August, which see. Col. Cor. N. S. vol. 25, p. 118
- August 5,  
Whitehall. Secretary of State (Portland) to Prince Edward. His satisfaction at the state of security in which he (Prince Edward) has placed his district. His letter respecting reinforcements transmitted to Dundas. Should the Royal Nova Scotia regiment be reduced, volunteers from it would be an acquisition to the regular troops. Col. Cor. N. S. vol. 30, p. 26  
(Copy in Col. Off. N. S. vol. 2, p. 181.)
- August 5,  
Whitehall. Same to the trustees of the College. In answer to their letter the sum of £500 will be put on the estimates for the ensuing year. Col. Cor. N. S. vol. 24, p. 193  
(Copy in Col. Off. N. S. vol. 2, p. 182.)
- August 5,  
Whitehall. Secretary of State (Portland) to Wentworth. The services of the town and country militia in erecting fortifications are highly commendable. His satisfaction at the passing of an efficient militia bill; has laid the lottery bill before the Council. Is pleased with the services of the "Earl of Moira," which he has notified to the Admiralty. The province will benefit by the exemption of the militia during harvest. Should any of his regiment be required on board the fleet, only volunteers are to be taken. Col. Cor. N. S. vol. 24, p. 195  
(Copy in Col. Off. N. S. vol 2, p. 183.)
- August 9,  
Petersham. Mackenzie, Lord Privy Seal to ——— Entreats his aid for Thomas Wright, whose case is most pitiable. Col. Cor. N. S. vol. 24, p. 243  
*Enclosed.* Extracts from letter of Thomas Wright, dated in Charlottetown, 25th May, 1795. 247
- August 17,  
Halifax. (See also p. 245.)  
Blowers to Admiral Murray. Enclosed in Murray's letter of 20th August, which see.
- August 20,  
Halifax. "Resolution."  
Admiral Murray to Dundas. French privateers, fitted out in harbours of the United States, are greatly on the increase. It would be an advantage if prize wine and brandy were admitted into Quebec from Halifax. Encloses papers relative to the matter. Col. Cor. N. S. vol. 25, p. 170

## Department of Agriculture—Archives.

- 1795.
- Enclosed.* Copy of opinion in 1790 to the Commissioners of Customs respecting the importation of goods from one British Colony to another. Col. Cor. N. S. vol. 25, p. 173
- Blowers to Murray, 17th August. Explains the various Acts relating to the importation of merchandise into the Colonies. 175
- August 25, Halifax. Chief Justice Strange to King. Recommends Stewart to fill the office of Chief Justice in Cape Breton, vacant by the death of Gibbons. The Rev. Dr. Brown acknowledges the civilities shown to him by King; should he (King) at any time require information about Nova Scotia, Dr. Brown is both able and willing to impart it. Desires to make a tour of the States, and asks leave to do so. Encloses letters from Osgoode. Col. Cor. N. S. vol. 24, p. 251
- August 26, Whitehall. Secretary of State (Portland) to Prince Edward. His recommendation to put the Royal Nova Scotia regiment on the establishment has been referred to the Duke of York; his (Portland's) high opinion of the corps. Col. Cor. N. S. vol. 30, p. 32  
(Copy in Col. Off. N. S. vol. 2, p. 185.)
- August 26, Whitehall. Secretary of State (Portland) to Wentworth. In answer to his dispatch, sends copy of letter of this date to Prince Edward on the subject of it. Col. Off. N. S. vol. 2, p. 186
- August 29, Halifax. Wentworth to Secretary of State (Portland). The Royal Nova Scotia regiment greatly in want of clothing. The "Earl of Moira" is of great assistance to Col. Le Maitre in quelling disturbances in the Bay of Chaleurs; she is now preparing to pursue two French-American privateers which have captured several small vessels on the western coasts. Col. Cor. N. S. vol. 24, p. 200
- August 30, Halifax. Prince Edward to Dundas. But little progress has been made with the public works, owing to the lack of reinforcements and the absence of the militia. Suggests the expediency of sending some of the corps composed of French emigrant Royalists to Canada. Has no hope of being able to complete his regiment by levies in Newfoundland, as there is much difficulty in procuring recruits for the new provincial corps in that country. Col. Cor. N. S. vol. 25, p. 124
- August 30, Halifax. Same to the same. Forwards return of the Royal Nova Scotia regiment for July. 120
- Enclosed. Return. 122
- August 30, Halifax. Prince Edward to the Secretary of State (Portland). Requests that passports may be sent to M. du Buc de Marentille, his wife and sister and the Marquis du Barrail, French Royalists, to reside in Lower Canada. Col. Cor. N. S. vol. 30, p. 34
- August 31, Rathbone Place. Lieut. Col. Kearney to the same. Has been sent over to England by the Royal Nova Scotia regiment to procure its establishment: by the rapid promotion in the regular service the officers in the regiment suffer much mortification and have no prospect of relief unless placed in the line. Trusts His Grace may favour their request. Col. Cor. N. S. vol. 24, p. 249
- September 1, Halifax. Monthly return. Enclosed in Prince Edward's letter of 27th October, which see.
- October 1. Monthly returns (two). Enclosed in Prince Edward's letter of 27th October, which see.
- October 7, Whitehall. Secretary of State (Portland) to Wentworth. Hopes the clothing for the regiment has arrived; should a second accident have happened, he is authorized to procure clothing on the spot. He has transmitted to the Admiralty an account of the services of the "Earl of Moira" in suppressing disturbances in consequence of a dispute between the Indians and fishermen. Col. Cor. N. S. vol. 24, p. 206.  
(Copy in Col. Off. N. S. vol. 2, p. 187).

1795.  
October 8,  
Whitehall. Secretary of State (Portland) to Prince Edward. In reply to a request for leave to M. du Buc de Marentille, his wife and sister and the Marquis du Barail to reside in Lower Canada, a strong fleet under Abercromby has been sent to reduce Guadaloupe, so that these gentlemen and the family may secure a safe return to the island. Abercromby has been informed of the matter. Col. Cor. N. S. vol. 30, p. 38  
(Copy in Col. Off. N. S. vol. 2, p. 188).
- October 26,  
Halifax. Return of the establishment of both battalions of the Royal Fusiliers. Enclosed in Prince Edward's letter of 27th October, which see.
- October 27,  
Halifax. Prince Edward to Dundas. The seven transports arrived with the draughts for his regiment; the number is far short of that required and many of the men most inefficient. Capt. Smyth, who is leaving for England, would be the fittest person to take charge of any further draughts which it may be possible to send. It would be advisable to send the invalids from the West Indies to Nova Scotia, where they would recover and be of use to the garrison. Col. Cor. N. S. vol. 25, p. 125
- October 27,  
Halifax. Same to the same. Forwards returns of the Royal Nova Scotia regiment for August and September. 131  
*Enclosed.* Returns. 133 134
- October 27,  
Halifax. Prince Edward to Dundas. Forwards return for September of the volunteers of St. John's Island, and that of the Royal Nova Scotia regiment for October. 135  
*Enclosed.* Return of volunteers of St. John's Island. 137  
Return 26th October of the Royal Nova Scotia regiment. Col. Cor. N. S. vol. 30, p. 46  
(See also Col. Cor. N. S., vol. 25, pp. 130 and 139.)  
Return of the establishment of both battalions of the Royal Fusiliers. Col. Cor. N. S. vol. 30, p. 47  
(See also Col. Cor. N. S., vol. 25, p. 129.)
- October 27,  
Halifax. Prince Edward to Secretary of State (Portland.) Has had no communication from Dundas or the Board of Ordnance on the subject of the defences of the province. The batteries and redoubts have been repaired and great progress made with all the works with the exception of the fort on Citadel Hill, to which their means have been inadequate. Trusts a reinforcement may arrive by the end of April, the draughts lately arrived consisted of the rawest recruits. It would be for the good of the service if New Brunswick were united to Nova Scotia for military purposes. Col. Cor. N. S. vol. 30, p. 40
- October 28,  
Halifax. Wentworth to the same. The clothing of the Royal Nova Scotia regiment having been captured by the enemy and the succeeding shipments not arriving, it was necessary to purchase. Has drawn bills of exchange to the amount of £522.5.4 sterling on the treasury. Col. Cor. N. S. vol. 24, p. 204
- October 28,  
Halifax. Same to King. Introduces Capt. Smyth, aide-de-camp to Prince Edward. Prince Edward feels much hurt at General Prescott being appointed to command him, and says it is "singularly hard and mortifying" that after so many years service in this country, Prescott should be put over him. Requests to have New Brunswick reunited to his command. The recruits for the Fusiliers and the 2nd battalion, are the most miserable wretches ever seen. Prince Edward is exchanging them into the Nova Scotia regiment under the pretence of transfers; this conduct prevents recruiting and is contrary to established rule. The Prince cannot resist the temptation of taking a fine man into his regiment, nor a fine horse into his stable at any rate whatsoever. 208
- October 31,  
"Argonaut." Capt. Ball to Wentworth. Enclosed in Wentworth's of 8th November, which see.
- November 1. Monthly return of volunteers of St. John's Island. Enclosed in Prince Edward's letter of 27th of December, which see.

## Department of Agriculture—Archives.

1795.  
November 5, Halifax. Proclamation forbidding the export of wheat, &c. Enclosed in Wentworth's letter of 8th November, which see.
- November 7, Halifax. Ogilvie to Secretary of State (Portland). Not having received commands on the subject of the distribution of the St. Pierre prize money forwards a triplicate of his letter of 26th December last, with the enclosures. Col. Cor. N. S. vol. 24, p. 221
- November 7, Halifax. Chief Justice Strange to King. Thanks for his kindness respecting proposed removal to Upper Canada. Regrets to hear of his illness. Mentions again his desire to visit the States next winter. 253
- November 8, Halifax. Wentworth to Secretary of State (Portland.) Dispatches received. The arrangement made to diminish the number of militia required from the interior country, and calling more from the sea coast regiments has been of the greatest use during the harvest season. The "Earl of Moira" is usefully employed in protecting the coasting trade. The high price given for provisions of all kinds in the United States may cause a scarcity in the province, therefore he had issued a proclamation forbidding the export of wheat, pork, &c., except by license. Should any detachment of the Royal Nova Scotia regiment serve on board ships of war, such service shall be temporary and consist of volunteers only. The prayer of the memorial of Rev. Mr. Jones, though approved by Dundas, has not been carried into effect; again recommends the case for favourable consideration. 212
- Enclosed.* Proclamation forbidding the exportation of wheat and other grain, flour, pease, beef, pork and other provisions until the first day of March next, unless by license. 217
- November 8, Halifax. Capt. A. J. Ball, of the "Argonaut," to Wentworth. Requests that the packet be detained until the 8th November, Vice Admiral Murray being expected, so that on his arrival he may have an early opportunity to forward his dispatches to the Admiralty. 219
- November 8, Halifax. Prince Edward to Portland (private). Recommends that Father Jones may have a small stipend allowed him from Government. He is very useful in keeping the fishermen in order. Col. Cor. N. S. vol. 30, p. 51
- December 1, Halifax. Monthly return of the Royal Nova Scotia regiment. Enclosed in Prince Edward's letter of 27th December, which see.
- December 3, Whitehall. Secretary of State (Portland) to Prince Edward. Dispatch with enclosures received; has transmitted to the Duke of York, to Dundas, and to the Ordnance such parts of his dispatch as are under their respective departments. Animadversion is due to the officers who passed such recruits for the Fusiliers as are complained of. Cannot understand why the Royal Nova Scotia regiment is not yet completed, steps should be taken to do so; draughts or transfers are not to be taken from that regiment, as its services are strictly confined to His Majesty's North American dominions. Col. Cor. N. S. vol. 30, p. 48
- December 3, Whitehall. (Copy in Col. Off. N. S., vol. 2, p. 191.) Secretary of State (Portland) to Wentworth. Sends confirmation of the lottery Act. Col. Off. N. S. vol 2, p. 190
- December 8, Southampton. Bayard to Secretary of State (Portland). Encloses a memorial sent to him by his son, Samuel Vetch Bayard, vouched for by Wentworth. Col. Cor. N. S. vol. 24, p. 255
- December 10, Halifax. Wentworth to Secretary of State (Portland). Transmits the proceedings of the General Assembly of the province, with observations; the prosperous and satisfactory state of the province. Col. Cor. N. S. vol. 26, p. 3
- Enclosed.* Journal of the Legislative Council from 12th March to 13th April, 1795. 9
- Journal of Assembly for the same period. 34

1795.  
December 15, Halifax. Wentworth to Vesey, secretary to Prince Edward. Enclosed in Wentworth's letter to King, of 17th April, 1796.
- December 15, Ordnance. Crew to Stratton. The Master General and Board of Ordnance approve of temporary works, &c. Enclosed in Prince Edward's letter of 23rd April, 1796.
- December 24, Halifax. Wentworth to Secretary of State (Portland). The "Earl of Moira," by cruising on the coast, has enabled the small vessels to get to their respective markets and return in safety. The "Favourite" Maxwell, master, with a valuable cargo, being discovered at anchor near Cape Sable by the "Moira"; Crosskill, by skilful exertions extricated the ship and convoyed her to the offing at Halifax on her way to Quebec, where she has since arrived. Has heard that the "Normande" and "Trajan," French sloops armed *en flute*, were at New York preparing to proceed to New London; has communicated this information to Capt. Home.  
Col. Cor. N. S. vol. 26, p. 57
- December 26, Halifax. Same to the same. Transmits memorial from the merchants of the town, respecting their commercial intercourse with Canada and the other British Colonies. Is convinced that considerable public benefit would result from due encouragement to accommodate the commercial connection between these provinces, and thus Nova Scotia would become the connecting *dépôt* of Canada with Great Britain. 60  
*Enclosed.* Memorial of the merchants of Nova Scotia to Portland. 63
- December 27, Halifax. Prince Edward to Dundas. Forwards return of the Royal Nova Scotia Regiment for November and that of the volunteers of St. John's Island for October. Col. Cor. N. S. vol. 25, p. 140  
*Enclosed.* Monthly return of the Royal Nova Scotia Regiment. 142  
The same for volunteers of St. John's Island. 143
- December 27, Halifax. Prince Edward to Secretary of State (Portland). Thanks for kind attention respecting the French Royalists; wishes he had known of the expedition to the West Indies in time to have offered his services. Sends abstract of accounts to the Treasury and renews his request for reinforcements to be sent early in the spring. Urgent need of provisions.  
Col. Cor. N. S. vol. 30, p. 55
1796.  
January 6, Whitehall. Secretary of State (Portland) to Prince Edward. Letter regarding Father Jones received; he ought to receive a competent provision from the Roman Catholic Bishop of Quebec; has written Dorchester on the subject. 53  
(Copy in Col. Off. N. S. vol. 2, p. 194.)
- January 6, Whitehall. Secretary of State (Portland) to Wentworth. Dispatches received; has sent copy of No. 18 to the Treasury. The good conduct of the militia deserves commendation; hopes that the progress of the works will admit of their numbers being reduced. The services of Crosskill, of the "Earl of Moira," have been of great utility. His proclamation prohibiting the export of corn and provisions except to British markets is proper. The men of his regiment are not to be draughted, transferred or exchanged into any other corps on any pretence. The case of Father Jones recommended to Dorchester. Col. Cor. N. S. vol. 26, p. 1  
(Copy in Col. Off. N. S. vol. 2, p. 195.)
- January 8, Whitehall. Secretary of State (Portland) to Ogilvie. His Majesty approves of the distribution of the money arising from the provisions &c., taken at St. Pierre. Col. Off. N. S. vol. 2, p. 197
- January —, Whitehall. Same to Wentworth. Leave of absence to be granted to Chief Justice Strange. 198
- February 8, Whitehall. Same to the same. Acts passed appear calculated to promote the prosperity of the Province; refers him to previous letter on the lottery Act. Is glad to find the "Earl of Moira" of such service. Has transmitted letter and memorial to the Committee of the Privy Council.  
Col. Cor. N. S. vol. 26, p. 69

## Department of Agriculture—Archives.

1796.

February 8,  
Whitehall.

(Copy in Col. Off. N. S. vol. 2, p. 200.)  
Secretary of State (Portland) to Prince Edward. His application to be transferred to the West Indies to engage in active service laid before the King. Parts of the dispatch sent to the respective departments. The plans and estimate of the works on Citadel hill and George's Island should be sent direct to the Ordnance so as to be included in their estimates. Col. Cor. N. S. vol. 30, p. 59

March 3,  
Halifax.

(Copy in Col. Off. N. S. vol. 2, p. 199.)  
Wentworth's speech to the legislature. Enclosed in Wentworth's letter of 17th April, which see.

March 4,  
Halifax.

Addresses of Council and Assembly. Enclosed in Wentworth's letter of 17th April, which see.

March 7,  
Whitehall.

Secretary of State (Portland) to Wentworth. Sends copy of letter to the Governor of New Brunswick to appoint an agent to bring forward information before the commissioners under the 5th article of the treaty of 1783. (The article relating to the boundaries is No. 2.) He is to furnish the agent with information, records, &c., respecting the boundary. Col. Cor. N. S. vol. 26, p. 71

April 11,  
Halifax.

(Copy in Col. Off. N. S., vol. 2, p. 201, where the day of the month is supplied.)

Journal &c., of the Council and Assembly, from 3rd March to date in margin. Enclosed in Wentworth's letter of 22nd December, which see.

April 16,  
Halifax.

Prince Edward to Secretary of State (Portland). Letters of 3rd December and 6th January only arrived on the 11th April. Recruiting in Newfoundland and elsewhere attended with very little success. Men have voluntarily exchanged from the Royal Nova Scotia regiment to other corps, no man has been forcibly draughted or transferred; to avoid further misrepresentation any further applications for exchange will meet with a refusal. There is no chance of completing the corps in a reasonable space of time, unless a higher bounty is offered or some other means devised for increasing its numbers; its services are invaluable; will give the corps every protection. Col. Cor. N. S., vol. 30, p. 61  
Same to Dundas. Transmits return. Col. Cor. N. S. vol. 31, p. 1

April 16,  
Halifax.

April 16,  
Halifax.

Wentworth to Secretary of State (Portland). Dispatches received, Prince Edward has promised not to take any more of the men belonging to the Royal Nova Scotia regiment; he (Wentworth) expects soon to complete it. The "Earl of Moir.," being refitted, sails on the 18th to cruise two or three days in Boston Bay for intelligence, afterward from Cape Sable to Canso to protect the fisheries and cover the daily expected arrivals of several valuable vessels from Europe and the West Indies.

Col. Cor. N. S. vol. 26, p. 73

April 16,  
Halifax.

*Enclosed.* State of the Royal Nova Scotia regiment. 76  
Wentworth to King. *Gazette* received containing news of the birth of a daughter to the Princess of Wales. 77

April 17,  
Halifax.

Same to the same. Letter of 7th December arrived on the 11th April after a passage of 84 days to New York; the vessel could have reached Halifax in 30 to 35 days and the letters have been delivered in New York a week later; dispatches to Quebec would have been delivered seven weeks earlier. Prince Edward wishes the packages for him sent by vessels to Halifax. He (Wentworth) had objected to men of the Royal Nova Scotia regiment being discharged by a medical board, as with the exception of four they are all able for duty; the transfer to the 7th regiment has been stopped; hopes now to complete the Royal Nova Scotia regiment; the Prince has given up his idea of incorporating men from it into the 7th Fusiliers; the good qualities of the regiment. Improvement in the province; hopes the prohibition to granting lands may soon

1796.

be removed. The importance of having a good line established between New Brunswick and Massachusetts Bay; the excellent mast timber that may be thus obtained.

*Enclosed.* Wentworth to Vesey (Secretary to Prince Edward), 15th December. Refuses after full consideration his consent to the transfer of men from the Royal Nova Scotia regiment to the 7th Fusiliers pointing out the evil results &c.

Details of duty done at Halifax and the outposts in February.

Letter and enclosures in A. & W. I. vol. 598

April, 17,  
Halifax.

Wentworth to Secretary of State (Portland). The General Assembly met on the 3rd of March, and was prorogued on the 11th of April. Transmits his speech to both Houses with their answers. The embargo laid on the exportation of flour from Canada suddenly raised the price, fuel has also been scarce and dear. The French prisoners from Miquelon have been afforded increased aid to preserve them from suffering; their good behaviour fully justifies this relief. The Indians have been kept from starving by the gracious charity of His Majesty; several families have applied themselves to agriculture; it is to be hoped that their necessities will gradually lead them into habits of civilization and enable them to provide for their own subsistence and clothing.

Col. Cor. N. S. vol. 26, p. 77

*Enclosed.* Wentworth's speech, 3rd March, to the Council and Assembly. 82

Address of Council 4th March. 84

Address of Assembly, same date. 86

Wentworth's speech, 11th April. 88

(The speeches and addresses are extracted from the journals).

Wentworth to King. Letter with estimate for 1796, received. 90

April 23,  
Halifax.

Prince Edward to Secretary of State (Portland). Should fresh active operations be contemplated in the West Indies, offers his services. Desires to know whether the expenses incurred on account of the works now in progress are to be paid by the Board of Ordnance. Encloses letter from the Board to Major Stratton, Commanding Royal Engineer; it would have been more regular in point of military etiquette if the Master General had written direct to him (Prince Edward).

Col. Cor. N. S. vol. 30. p. 65

*Enclosed* Crew to Major Stratton, 15th December, 1795. The Master General and Board of Ordnance approve of the temporary works recommended for the defence of Halifax and desire that the same be carried into execution. 69

April 25,  
Halifax.

Strange to King. In taking advantage of his leave of absence will proceed by the States to secure a neutral bottom; offers his services.

A. & W. I. vol. 598

April 25,  
Halifax.

• Wentworth to Secretary of State (Portland). Has received letter of the 7th March, with the several enclosures relating to the settlement of the boundary line between the United States and the province of New Brunswick. Will render every assistance in his power in this business, the proper line includes some valuable reservations of timber fit for masts for the Navy. Col. Barclay will send the dispatches by the "Tartar" frigate.

Col. Cor. N. S. vol. 26, p. 92

April 28,  
Halifax.

Same to King. Will carry out his desires stated in letter of 7th March. His disappointment at the money promised to Windsor College being omitted from the estimates, as expenses had been incurred on the faith of the promise. Again urges the repeal of the instructions prohibiting the granting of lands, as there is no prospect of sales. Asks for 50,000 or 60,000 acres; had lost double that quantity in New Hampshire. Finds an obstruction to shipping horses in the United States for the

## Department of Agriculture—Archives.

- 1796.
- expeditions to the West Indies; can ship 120 horses from Nova Scotia suitable for that service. Strongly recommends Putnam to be appointed deputy barrack master general for the district. The mortality among the convalescents, &c., in the West Indies, in consequence of them not being sent to Nova Scotia. A. & W. I. vol. 598
- May 8,  
Halifax. Ogilvie to Secretary of State (Portland). Has directed the distribution of the money arising from the sale of the provisions &c., captured at St. Pierre and Miquelon to be made according to the plan submitted and approved of. Encloses and recommends a memorial from Clarke, commissary of prisoners of war; also recommends an allowance to Sergeant McIntosh. These accounts will close all his (Ogilvie's) disbursements in consequence of the expedition. Col. Cor. N. S. vol 26, p. 97
- Enclosed.* Memorial, 5th May, of James Clarke for an allowance for his services as acting commissary of French prisoners. 99
- Certificate from Major Thorne that William McIntosh quarter-master sergeant of the 4th regiment, acted as commissary of the provision and fuel department from 11th June, 1793, to 11th September, 1794, for which he received no payment. 101
- May 19,  
Halifax. Prince Edward to Dundas. Transmits return. Col. Cor. N. S. vol. 31, p. 7
- Enclosed.* Return.
- May 21,  
Halifax. Wentworth to King. Encloses memorial from Acadians requesting that a French refugee clergyman may be sent to them for whom they will provide a decent maintenance; speaks highly of their loyalty. The "Assistance" from New York, has sent in a cargo ship bound from France to New York with French Royalists and Irish emigrants on board, trusts he will be able to persuade the latter to settle in the province. The French emigrants are so poor they must have some aid, if they can be made as useful as those from Miquelon they will be a treasure to the community worth purchasing. The "Earl of Moira" is cruising in the Gulph of St. Lawrence to protect the fisheries; as she is well armed and manned and a fair sailer, a stranger would find it difficult to escape her. She will take a company of the 4th regiment to Quebec and save upwards of 600 guineas for transport. Hopes that a French priest may soon be sent. Col. Cor. N. S. vol. 26, p. 102
- Enclosed.* Memorial of Amable Doucet and other Acadians to Wentworth requesting his help to obtain the services of a French Royalist clergyman. 106
- June 1,  
Whitehall. Secretary of State (Portland) to Wentworth. Has no doubt that Prince Edward will during the harvest dispense with the services of the militia in completing the fortifications. His pleasure at the manner in which the business of last session was conducted. His Majesty relies with confidence on his exertions towards settling the boundary. 95
- (Copy in Col. Off. N. S. vol. 2, p. 202.)
- June 3,  
Jamaica. Earl of Balcarres to Wentworth. Enclosed in Wentworth's letter of 23rd July, which see. An extract of letter of same date to Prince Edward, of the same nature with an additional paragraph, enclosed in Prince Edward's letter of 15th August.
- June 6,  
Whitehall. Secretary of State (Portland) to Prince Edward. The King is highly pleased with his offer of service and with his attention to the details of the district under his command. Sends copy of answer from the Ordnance respecting the drawing of bills for service which are to be discharged by the Board of Ordnance. Col. Cor. N. S. vol. 30, p. 71
- (Copy in Col. Off. N. S. vol. 2, p. 204.)
- June 13,  
Whitehall. Secretary of State (Portland) to Wentworth. Learns from Lord Balcarres, Lieut. Governor of Jamaica, that it is necessary to send from that island about 800 or 900 maroons, who may be ordered to Halifax. This is not His Majesty's wish and orders have been sent to Balcarres

1796.

accordingly, but as these people may arrive before the dispatch can reach, he is to provide for their subsistence, &c., in a manner not inconsistent with the safety of the inhabitants. Has not time, owing to the immediate departure of the packet, to prescribe further arrangements. Col. Cor. N. S. vol. 26, p. 108

(Copy in Col. Off. N. S. vol. 2, p. 206).

July 9.

Lieut. Pernet to Lieut. Col. Kearney.

July 13,  
Halifax.

Bulkeley to Crosskill.

July 14,  
Halifax.

Crosskill to Wentworth. These three papers were enclosed in Crosskill's memorial of 23rd July, which see.

July 15,  
Whitehall.

Secretary of State (Portland) to Wentworth. The maroons written about are probably now on their voyage. It has been judged proper that they should, for the present, be permitted to remain in Nova Scotia, to be employed (if possible) either as they wish, or in some other way for the public benefit, or at least in such a way as to avoid danger. Leaves it to him (Wentworth) to make arrangements for their employment which may enable them to support themselves; sends correspondence with Balcarres to enable him to judge of the circumstances. The young men might be engaged on the work of fortifying. He is to draw on the Treasury for expenses, sending vouchers, &c.; to try to make arrangements for these expenses to be repaid by Jamaica. Thinks the Sierra Leone Company would be inclined to take them as settlers, were they sent in small parties. Col. Cor. N. S. vol. 26, p. 110

(Copy in Col. Off. N. S. vol. 2, p. 208.)

July 16,  
Halifax.

Testimony in favour of Crosskill.

July 17,  
Halifax.

Smyth, aide-de-camp to Prince Edward, to Crosskill.

July 18,  
Halifax.

Wentworth to Crosskill. These three papers were enclosed in Crosskill's memorial of 23rd July, which see.

July 22.

James Clarke to Brook Watson. Thanks him for his friendly letter to Wentworth, who would readily have recommended him to Lord Grenville; but Moore, the consul at Rhode Island, is permitted by the Government of the States to remain as agent. Col. Cor. N. S. vol. 26, p. 204

July 23,  
Halifax.

Wentworth to Secretary of State (Portland.) Sends copy of a letter from Balcarres, Lieut. Governor of Jamaica; all the maroons have arrived in good health; they will remain on board the transports till His Majesty's pleasure is received. The French from Miquelon, fearing the cruellest punishment should they hereafter fall into the hands of their countrymen, desire to return to France in a cartel ship expected next month. Has agreed to this request, as their usefulness can no longer be relied upon; their removal is much regretted, as they have been very useful both in the fisheries and in fitting out vessels for the merchants. The "Earl of Moira" seized and brought into Halifax a small sloop from Boston, carrying on a contraband trade; she has just sailed to convoy a mast-ship and three transports to Quebec. Has drawn for lodging money for the Royal Nova Scotia regiment upon the Lords of the Treasury. Vice-Admiral Murray attacked with a severe paralytic stroke, but is now out of danger. 114

*Enclosed.* Balcarres to Wentworth, 3rd June. The General Assembly of Jamaica having decided that the maroons should leave the island, and there being a great scarcity of provisions at Port Royal, he is under the necessity of sending them to some other port, and requests they may be permitted to anchor at Halifax till the King's pleasure is known. Recommends Quarrell, member of Assembly, who accompanies them. 118

## Department of Agriculture—Archives.

1796.

Return of lodging money due to the officers of the staff of the Royal Nova Scotia regiment, between the 13th April and 12th November, 1793. Col. Cor. N. S. vol. 26, p. 120

July 23,  
Halifax.

Memorial of Crosskill, master of the "Earl of Moira," to the Secretary of State (Portland). Concerning his dismissal from the command of the vessel and detailing his services. 206

*Enclosed.* Lieut. Pernette to Kearney, 9th July. Reports the desertion of five men of his detachment from on board the "Earl of Moira." The captain and mate set the watches and exercised solo authority; trusts he will not, under these circumstances, be charged with neglect of duty. 214

Bulkeley to Crosskill, 13th July. Is commanded by Wentworth to send copy of a letter from Pernette to Kearney, of the Royal Nova Scotia regiment, in order that he (Crosskill) may explain his conduct upon the occasion alluded to. 212

Crosskill to Wentworth, 14th July. Gives his account of the desertion of the five men from on board the "Earl of Moira." 216

Smyth, aide-de-camp to Prince Edward, to Crosskill, 17th July. The motives which induced the Prince to give his opinion to Wentworth that the command of the "Earl of Moira" should be changed, were, that proper discipline could not be kept on board a vessel fitted for war unless commanded by a commissioned officer able to exercise martial law. 222

Wentworth to Crosskill, 18th July. Notifying the appointment of Fawson to command the "Earl of Moira," and expressing approbation of Crosskill's conduct whilst in command. 224

Testimony of the officers and crew, 16th July, in favour of Crosskill whilst in command of the "Earl of Moira." 226

July 24,  
Halifax.

Wentworth to King. The critical state of Admiral Murray's health; his high character. Should a successor be appointed, asks that he (Wentworth) may be recommended as a fit person to be consulted. The master of the "Tartar" has brought back his vessel; 20 of the crew were brought to Halifax by the "Earl of Moira," part go by the "Princess Royal," and the rest will assist to navigate a mast ship to Plymouth. Arrival of maroons from Jamaica who are not yet landed; they will make useful labourers. The Chief Justice will report the state of the province. Warrant to issue letters of marque is much wanted. A. & W. I, vol. 598

July 24,  
Halifax.

Prince Edward to Dundas. Enclosing monthly return.

Col. Cor. N.S. vol. 31, p. 10

*Enclosed.* Return. 12

July 25,  
Halifax.

Wentworth to Secretary of State (Portland). Has arranged with Prince Edward to relieve the maroons from their confinement on board ship and employ them voluntarily as labourers on the fortifications at nine pence per day, provisions, lodging and clothing being found them.

Col. Cor. N.S. vol. 26, p. 122

August 3,  
Whitehall.

Secretary of State (Portland) to Ogilvie. From his correctness, etc., leaves it to himself to settle what allowance should be made to Clarke and McIntosh for their respective services. Col. Off. N.S. vol. 2, p. 212

August 13,  
Halifax.

Wentworth to Secretary of State (Portland). Dispatches received; is happy that the measures taken for the comfort of the maroons have met with His Majesty's approval. Disease has broken out on board the "Dover" transport; she is now being purified and is to be sent for the accommodation of Dorchester and family, who were shipwrecked on the island of Anticosti. Describes the settlements bought for the maroons, and trusts to have them all settled by Michaelmas.

Col. Cor. N.S. vol. 26, p. 126

1796. *Enclosed.* Memorandum of sundry articles required to be imported from England for the use of the maroons. Col. Cor. N. S. vol. 26, p. 132
- August 15, Prince Edward to Secretary of State (Portland). Will close his accounts with the Treasury, which he trusts may be found satisfactory, and in future the storekeeper will call on the Board of Ordnance for all expenses connected with the new works. Is making every exertion to defend the harbour in case of attack. Is sending home the invalids of his regiment by the "Hussar," with a particular report of their condition to prevent them when discharged from re-entering as sound men. Advises that the convalescents from the Leeward and Windward islands may be sent to Halifax in the month of May every year; the climate would recruit their health, and their services during the summer months would be of great advantage; at Bermuda fresh meat and vegetables cannot be procured in sufficient quantity. Reports the arrival of the maroons; a part of them employed on the new works on Citadel Hill. Col. Cor. N.S. vol. 30, p. 73
- August 15, Halifax. *Enclosed.* Extract, 3rd June, from letter from Balcarres to Prince Edward. Same as letter to Wentworth of same date, with an additional paragraph. 79
- August 15, Halifax. Prince Edward to Dundas. Transmits monthly return. Col. Cor. N.S. vol. 31, p. 26
- September 5, St. John's, Newfoundl'd. *Enclosed.* Return. 28  
Sir James Wallace to Prince Edward. Enclosed in Prince Edward's letter of 25th September, which see.
- September 6, London. Boylston to King. Reminds him of his promise to refer the memorial of his father (Hallowell) to Wentworth; trusts it may be sent by the mail of this month. Col. Cor. N. S. vol. 26, p. 236
- September 6, Petty Harbour. Lawrence Kirby to Wallace. Enclosed in Prince Edward's letter of 25th September, which see.
- September 7, Whitehall. Secretary of State (Portland) to Wentworth. His letters have removed anxiety about the maroons, to examine whether the climate can be rendered un hurtful to them. Is doubtful whether the removal to Sierra Leone of the loyal negroes from Georgia and the Carolinas, settled in Nova Scotia, answered the humane end proposed. Information to be sent, so that a judgment may be formed of the advantages or disadvantages that would attend the removal of the maroons. Col. Cor. N. S. vol. 26, p. 124
- September 8, Whitehall. (Copy in Col. Off. N. S. vol. 2, p 212.)  
Secretary of State (Portland) to Wentworth. Informed the College Committee that £500 would be put in the estimate for 1796, for the building; it has been omitted, but he has requested the Treasury to honour bills to that amount, the sum to be inserted in the estimates for 1797. Col. Off. N. S. vol. 2, p. 214
- September 8. W. Scott to Secretary of State (Portland). In consequence of a conversation with King, takes the liberty of sending extract from letter which he has received on the subject of the removal of the maroons. Col. Cor. N. S. vol. 26, p. 228
- Enclosed.* Extract (undated and unsigned) from a letter characterising the removal of the maroons to Halifax as little short of a national murder, on account of the severe climate. The Sierra Leone company might agree to receive them, or they might be sent to one of the unsettled Bahama Islands. 230
- September 18. Prince Edward to Dundas. Sends monthly return. Col. Cor. N. S. vol. 31, p. 23
- Enclosed.* Return. 19

## Department of Agriculture—Archives.

1796.  
September 20,  
Halifax. Wentworth to Secretary of State (Portland). Describes the condition and settlement of the maroons. Quarrell and Ochterlony, commissary and assistant commissary, are most zealous and disinterested in their efforts for the welfare of these people, who have no desire to return to Jamaica, nor to be sent to Sierra Leone. The Rev. Benjamin Gerrish Gray, appointed minister, and to teach the children. Col. Cor. N. S. vol. 26, p. 136
- September 24,  
Halifax. Wentworth (unsigned) to Secretary of State (Portland). Sir James Wallace has sent intelligence of a descent made by a French squadron on the harbour of Bay of Bulls. Ordered the militia to be in readiness to march at a moment's notice. Has forwarded the news to Admiral Murray (now much recovered), also to Prescott, Carleton, Fanning and Matthews. Clothing urgently required. The fortifications in the harbour are in such a state of defence, that any enterprise attempted by the enemy need cause no alarm to the inhabitants of the town. 142
- Enclosed.* Wallace to Wentworth. A French squadron consisting of five sail of the line, three large frigates and a corvette, has been for some days on the coast, destroying fishing vessels and other boats. It is now at anchor in the Bay of Bulls. 146
- September 24,  
Halifax. Extract from letter from Wentworth to Portland respecting militia, dated 20th December, 1794. The whole letter is at its date.
- September 24,  
Halifax. Wentworth to King. Descent of the French on Newfoundland; Halifax prepared to repel any attack. Du Buc de Marentille has received a passport to remove with his family into the interior. Movements of vessels, amongst others the "Earl of Moira" had relieved Lord Dorchester and family and brought them here (Halifax). (The "Active" with Lord Dorchester and family on board, was wrecked on the west end of Anticosti on the 15th July. His Lordship and family left in a schooner for Percé.) Further praise of Prince Edward. Abundant harvest with propitious weather. Report received that bills drawn according to the estimate are to be protested; the distress this will cause the officers. Applies for a supply of stationery. A. & W. I. vol. 598
- September 25,  
Halifax. Prince Edward to Secretary of State (Portland). Reports the arrival of a French squadron off Newfoundland about the 4th September. Has requested Admiral Murray to sail immediately with the whole of his squadron for the protection of the coast. Is making every exertion to repel the expected attack, but owing to the lack of the reinforcements so often and urgently solicited the new works are not nearly so forward as could be wished. Col. Cor. N. S. vol. 30, p. 83
- Enclosed.* Wallace to Prince Edward, 5th September, respecting the French squadron in the Bay of Bulls. 85
- Kirby to Wallace, 6th September. Nine ships of war in the Bay of Bulls; does not suppose there are troops on board. 86
- September 27,  
London. Milligan & Mitchell to Secretary of State (Portland). Send copy of letter addressed to the Admiralty and request His Grace's influence in support of their application. Col. Cor. N. S. vol. 26, p. 232
- Enclosed.* Milligan & Mitchell to the Admiralty, same date. Having received orders to ship a quantity of goods to Halifax for the use of the maroons and it being highly important that the supply should arrive before the winter, request that a ship of war may carry the goods or a convoy be ordered to the ship now loading. 233
- October 4,  
London. Boyleston to King. Encloses duplicate of a memorial from his father to the Duke of Portland and requests that it may be forwarded to Nova Scotia. 234
- October 4,  
St. John's,  
Newfoundl'd. Aldridge to Prince Edward. Respecting the French fleet. Enclosed in Prince Edward's letter of 29th October, which see.

1796.  
October 5,  
Whitehall. Secretary of State (Portland) to Prince Edward. Has sent extracts from his letters to the departments having charge of the subjects stated. Has written fully to Wentworth respecting the maroons. Col. Cor. N. S. vol. 30, p. 81  
(Copy in Col. Off. N. S. vol. 2, p. 215.)
- October 6,  
Whitehall. King to Wentworth. Transmits copy of memorial from Hallowell to be reported on. Col. Off. N. S. vol. 2, p. 216
- October 6,  
Whitehall. Secretary of State (Portland) to Wentworth. His letter has largely anticipated the information required; his arrangements approved of. As soon as the maroons are settled, orders shall be given as to their instruction by a clergyman of the Church of England. Col. Cor. N. S. vol. 26, p. 134  
(Copy in Col. Off. N. S. vol. 2, p. 216.)
- October 6,  
Halifax. Prince Edward to Dundas. Sends monthly return. Col. Cor. N. S. vol. 31, p. 32
- Enclosed.* Return.
- October 8,  
Halifax. Wentworth to Secretary of State (Portland). Sends accounts of sundry disbursements made for the Indians from October, 1793, to August, 1796; the supplies are granted to them on the express condition that the men, about 150 of whom are able to bear arms, shall assist to repel any invasion. Satisfactory state of the maroons. Encloses newspaper with the latest intelligence from Newfoundland. Admiral Murray's arrival with part of the squadron adds considerably to the safety of the province. Col. Cor. N. S. vol. 26, p. 152
- Enclosed.* G. H. Monk, Indian Agent in Nova Scotia. His account to 31st August. 156  
Vouchers (16) for various accounts paid by Monk. 158 to 182  
Extract from a letter in the *Weekly Chronicle* from Trepassey, dated 9th September, respecting the French squadron off the coast of Newfoundland. 183
- October 9,  
Halifax. Wentworth to King. Had hoped to send more news from Newfoundland, as there are two vessels off the harbour supposed to be from there. The feeble state of Murray's health; repeats the request for an introduction to his successor and that he be recommended to consult him (Wentworth). Abundant crops &c. The illness of commissioner Duncan. A. & W. I. vol. 598
- October 14,  
Halifax. Memorial of John Ruggles. Enclosed in Prince Edward's letter of 29th October, which see.
- October 28,  
Halifax. Wentworth to Secretary of State (Portland). Dispatches received; communicated on the subject of their contents with Prince Edward and Admiral Murray; the latter, unfortunately, is suffering from a relapse of the paralytic disorder. Every possible exertion will be made to injure the property and possessions of the Crown of Spain. Requests that the warrant or commission to issue letters of marque may be sent. The French fleet under Admiral Richery has departed from Newfoundland, after doing little damage; they have probably proceeded to the United States for provisions. The militia evinced great alacrity and loyalty on being summoned to assemble. Admiral Richery would have encountered a determined and spirited defence had he attacked Halifax. Col. Cor. N. S. vol. 26, p. 185
- October 29,  
Halifax. Same to the same. Has partially answered dispatch in previous letters. Is fully persuaded that the climate will be found healthy and comfortable for the maroons. The negroes brought into the province in 1783 were circumstanced very differently from the maroons, who are provided with every necessary and have zealous and kindly commissaries to reside amongst them and attend to their wants. 189

## Department of Agriculture—Archives.

1796.  
October 29,  
Halifax. Wentworth to Secretary of State (Portland.) Has received letter that £500 was granted towards finishing King's College at Windsor. Requests that any sums lapsing on the Parliamentary grant for the ministers in the province, may be applied to finish the church at Windsor, which is in an incomplete state; the inhabitants are not able to finish it. Col. Cor. N. S. vol. 26, p. 197
- October 29,  
Halifax. Prince Edward to the same. Transmits memorial of Ruggles, a loyalist, whose case he recommends. Col. Cor. N. S. vol. 30, p. 101  
*Enclosed.* Memorial of John Ruggles, with testimonial from Wentworth. Requests compensation for his services during the war. 103
- October 29,  
Halifax. Prince Edward to Secretary of State (Portland). Gives an account of the present state of the defences and what further progress will probably be made during the next season. Should the province be attacked when the squadron is cruising, their situation would be critical as their whole force amounts to barely 1,500 men. 93  
*Enclosed.* Aldridge to Prince Edward, (extract). Gives details of the movements of the French fleet, with a list of their ships. 99
- October 31,  
Ordnance. Crewe to Secretary of State (Portland). Enclosed in Portland's letter to Prince Edward of 1st November, which see.
- November 1,  
Whitehall. Secretary of State (Portland) to Prince Edward. Has the utmost confidence in his ability and zeal should the province be attacked. Sends copy of letter from the Ordnance for his guidance and information. Col. Col. N. S. vol. 30, p. 87  
*Enclosed.* Crewe (Ordnance) to King. The Board will not be responsible for the cost of the works now in progress for the defence of Halifax harbour; the previous consent and approbation of the Master General and Board required by his Majesty's regulations of 7th September, 1791, not having been obtained, 89  
(Copy of letter in Col. Off. N. S. vol. 2, p. 218).
- November 1,  
Whitehall. Secretary of State (Portland) to Wentworth. His Majesty's approbation of the manner of providing for the maroons; the expense to be borne by Jamaica till the maroons can support themselves. His co-operation with Prince Edward to repel an attempt by the squadron under Richery is laudable and no doubt is entertained that the exertions to this end will be seconded by the inhabitants. Col. Cor. N. S. vol. 26, p. 150  
(Copy in Col. Off. N. S. vol. 2, p. 219).
- November 2,  
Whitehall. King to Wentworth. In consequence of representation that bills drawn for the first quarter of 1796, in accordance with the estimate had been noted for protest, the Treasury has issued orders to pay a moiety of the grant for this year to the agent. Col. Off. N. S. vol 2, p. 221
- November 2,  
Whitehall. Secretary of State (Portland) to Prince Edward. Has received, with surprise, advice from the Treasury that bills have been drawn to the amount of £3,662 8s 8d, on account of fortifications and barracks. Cannot make provision for any expense incurred, otherwise than in strict conformity to the Kings' instruction of 7th September, 1791. Col. Cor. N. S. vol. 30, p. 91  
(Copy in Col. Off. N. S. vol. 2, p. 222).
- November 4,  
Halifax. Prince Edward to Dundas. Monthly return sent. Col. Cor. N. S. vol. 31, p. 43  
*Enclosed.* Return.
- November 10,  
Halifax. Wentworth to King. Dr. Smith is competent for the situation in Cape Breton, but not qualified for the office of Chief Justice at Halifax. The peculiar qualifications of Strange; if promoted it will be difficult to find a suitable successor. Capt. Straton, engineer, who takes this letter, is a good man, asks him (King) to present him at the Duke's levee. Believes the maroons enjoy comfort and happiness; they are entirely

1796. under his care, the commissioners being entire strangers to such business and the admiral too old. Recommends his nephew, Lieut. Aphorp of the "Resolution," for promotion. A. & W. I. vol. 598
- November 10, Memorial of the members of the Protestant dissenting church and congregation in Halifax to Sir John Wentworth, praying that the salary or annuity granted to their late pastor, Dr. Andrew Brown, may be continued to their present pastor, the Rev. M. Gray. Col. Cor. N. S. vol. 27, p. 12  
Halifax.
- November 13, M. Bulkeley to Chief Justice Strange. Informs him of Freke Bulkeley's death. Had requested Dr. Almon to acquaint him of the expected event; so that he (Strange) might explain Mr. Bulkeley's position, which is ill understood at home. 218  
Halifax. (The month is illegible but is, without doubt, November, as in the margin.)
- November 13, Richard Bulkeley to Strange. His son Freke has died after a few days illness. The Governor has promised that whoever succeeds to the office of secretary of the province, he (Bulkeley) shall suffer no pecuniary loss. 220  
Halifax.
- No date. Strange to King. Encloses two letters from the Bulkeleys, whose condition is truly piteous. The arrangement at present proposed by no means fulfils the expectations that were at first held out on the death of Freke Bulkeley. Trusts Mrs. Bulkeley may be included in any scheme proposed, should she survive her husband. 216
- November 14, Ogilvie to Secretary of State (Portland). Requests in consideration of his long services, that he may be appointed secretary to the garrison of Annapolis vacant by the death of Freke Bulkeley. The appointment is a military sinecure and may fairly be considered as a douceur for an old officer. 3  
Halifax.
- November 15, Prince Edward to the same. Letter of the 5th October received. Requests him to present two enclosures to their Majesties. Col. Cor. N. S. vol. 30, p. 110  
Halifax.
- November 16, Wentworth to the same. Communicates the death of Freke Bulkeley and recommends Benning Wentworth to be secretary, registrar and clerk of the Council and secretary of Annapolis, and James Putnam to be marshal of the court of vice-admiralty, to fill the appointments vacant by his (Bulkeley's) death. If Wentworth succeeds to the above offices, recommends Michael Wallace to be treasurer of the province in his stead. Col. Cor. N. S. vol. 27, p. 5  
Halifax.
- November 16, Same to the same. Gives particulars relative to the provincial appointments recommended in his public letter. 8  
Halifax.
- November 17, Same to the same. Encloses a memorial presented by the elders on behalf of the Presbyterian church at Halifax, and recommends the same. 10  
Halifax.
- November 24, Account of pay due to James Clarke and William McIntosh. Enclosed in Ogilvie's letter of 24th December, which see.  
Halifax.
- November 26, Prescott to Prince Edward. Enclosed in Prince Edward's letter of Quebec. 1st February, 1797, which see.
- November 28, Wentworth to King. A memorial goes by this conveyance for 70,000 acres for a large settlement and for iron works, &c.; recommends that the request be granted. The political feeling in the United States; French designs on Nova Scotia, New Brunswick, Newfoundland and Canada; strong fortifications the best answer. A. & W. I. vol. 598  
Halifax.
- November —, Extract of proceedings relative to droit of Admiralty concerning the seizure of the Spanish brigantine "Neustra." Col. Cor. N.S., vol. 27, p. 243
- December 6, Alexander Blair to the Secretary of State (Portland). Submits petition for His Grace's consideration. Col. Cor. N.S. vol. 26, p. 238  
Portland Place
- December 9, Same to King. Desires to know the result of the determination of Portland respecting his petition. 240  
Place.

## Department of Agriculture—Archives.

1796.  
December 14,  
Whitehall. Secretary of State (Portland) to Wentworth. Is satisfied with the attention paid to the Indians, but the expense far exceeds the appropriation, which was to be regularly diminished. The amount is £656; whilst, by referring to previous letters, he will see it was not expected to exceed £200. Has informed the Admiralty that the commission to issue letters of marque against Spain was not sent. The King's approbation of the spirit and loyalty of the people of Nova Scotia, whilst Richery remained on the coast, is to be communicated. His report of the conduct of the maroons far exceeds expectation; looks forward to them becoming useful subjects. Quarrell's conduct has not escaped the King's notice; he has appointed him to the Council of Jamaica. Will attend to the application for a sum to complete the new church at Windsor. Col. Cor. N. S. vol. 26, p. 199
- (Copy in Col. Off. N. S. vol. 2, p. 224).
- December 15,  
Whitehall. Secretary of State (Portland) to Prince Edward. His dispatches laid before the King. The part relating to the fortifications, sent to the Ordnance, does not include the booms to the North-West Arm, as these were caused by an emergency, and the cost will be defrayed by the Treasury. Has remitted to Dundas the request for a reinforcement; that must depend on the exigencies of the general service. Col. Cor. N. S. vol. 30, p. 107
- (Copy in Col. Off. N. S. vol. 2, p. 229).
- December 15,  
Whitehall. Secretary of State (Portland) to Prince Edward. Has sent letter enclosing memorial from Ruggles to the proper department. Shall do all in his power to assist, but entreats him to consult Wentworth on the subject of rewards for such services as Ruggles rendered, to which the ministry had set bounds. Col. Cor. N. S. vol. 30, p. 105
- (Copy in Col. Off. N. S. vol. 2, p. 228).
- December 21,  
Halifax. Wentworth to Secretary of State (Portland). Has drawn on the Treasury for £800 sterling for expenses incurred in refitting the "Earl of Moira," rendered necessary by damage she had received by running on an undescribed reef of rocks. Supplies have been distributed for the relief of the Indians, some of whom begin to cultivate corn and roots. The stores have arrived from London for the use of the maroons, and as they are comfortably clothed and fed their apprehensions of the severity of the winter have subsided. Prince Edward has acceded to Capt. Mowatt's application and permitted one sergeant, one drummer and thirty able bodied privates to embark and act as marines on board the "Assistance" until the following April. Col. Cor. N. S. vol. 27, p. 14
- December 22,  
Halifax. Same to the same. Transmits the Acts and journals of the last session of the General Assembly of Nova Scotia, with explanations. 29  
*Enclosed.* Journal of Legislative Council of Nova Scotia, from 3rd March to 11th April, 1796. 35  
The same of the Assembly. 65
- December 24,  
Halifax. Ogilvie to Secretary of State (Portland). Encloses a copy of the account of allowances made with His Grace's sanction. 19  
*Enclosed.* Account of pay due to James Clarke, acting commissary of French prisoners, and William McIntosh, acting commissary of provisions and fuel to the troops on the Island of St. Pierre. 21  
Prince Edward to Mathews (extract). Enclosed in Prince Edward's letter of 1st February, 1797, which see.
- December 26,  
Halifax. Wentworth to Secretary of State (Portland). Has examined Hallowell's memorial, and reports that 5,000 acres out of the 20,000 acres granted to him were allotted by mistake of the surveyors to the disbanded regiment of the late Lord Charles Montagu. These 5,000 acres are now of considerable value, and Hallowell by his successful endeavours to improve the country merits compensation. Col. Cor. N. S. vol. 27, p. 95

1796.  
December 30,  
Halifax. Wentworth to Secretary of State (Portland). Has received circular letter, dated 27th October, notifying that hostilities had taken place between Great Britain and Spain. Col. Cor. N. S. vol. 27, p. 97
1797.  
January 6,  
Mansion  
House. Brook Watson to Secretary of State (Portland). Trusts that whoever succeeds to the office of Secretary of the province, vacant by the death of Freke Bulkeley, may be obliged to fulfil the engagement he (Freke Bulkeley) entered into with his father, to pay him part of the salary. 212  
*Enclosed.* Memorial of Richard Bulkeley, on behalf of his father, Hon. Richard Bulkeley, late Secretary of Nova Scotia, to Secretary of State (Portland). Through the death of his son and successor, he is left without support at the age of 74. 214
- January 7,  
Halifax. Prince Edward to Dundas. Transmits monthly return. Col. Cor. N. S. Vol. 31, p. 46  
*Enclosed.* Return.
- January 10,  
Transport  
Office. Richard George to King. Solicits the appointment of Secretary of the province vacant by the death of Freke Bulkeley, for his brother-in-law, Thomas Cochran, jr., whose father is one of the Council for the province, and was speaker of Assembly. Col. Cor. N. S. vol. 27, p. 222  
Mandamus from the King granting Alexander Blair and James Glenie several parcels of land. Enclosed in Blair's letter of 7th February, which see.
- February 1,  
Halifax. Prince Edward to Secretary of State (Portland). Transmits letter from the President of the Council of Cape Breton, and extracts from correspondence with Prescott. The conduct of the French in America is so flagrant that probably the United States ports may be shut against them, in which case they would make every effort to become masters of Halifax. Represents the inadequacy of his forces to repel an attack, particularly if the squadron is cruising to the southward. Col. Cor. N. S. vol. 30, p. 112  
*Enclosed.* Mathews to Prince Edward, 6th December, 1796. Requests that a company may be sent for the protection of the coal mines; also that a small breast work may be erected at Arichat, where the principal fishery is carried on. Encloses letter from the contractors for the coal mines. 116  
Tremain & Stout to Mathews, 1st December. Request that he will inform Prince Edward of the exposed position of the coal mines; a very small hostile force could destroy the works and thus deprive the garrisons of Halifax and Newfoundland of their supply of coal. 118  
Prescott to Prince Edward, 26th November. Owing to the political state of the province of Quebec, is unable to send any reinforcement to Halifax. 122  
(For other correspondence on this subject, see Canadian Archives, series Q., vol. 78, p. 170).
- February 1,  
Halifax. Prince Edward to Secretary of State (Portland). Solicits his interest and protection in favour of Major Prevost, formerly a British officer. Col. Cor. N. S. vol. 27, p. 236
- February 3,  
Whitehall. Secretary of State (Portland). Sends letters and enclosures, that the Ordnance service in Nova Scotia is impeded by the clerks, artificers and labourers being called on for militia duty; he is to give the matter consideration. As the Act by which the Ordnance officers are made subject to militia duty is, no doubt, provincial, he is to report on the subject. 1  
(Copy in Col. Off. N. S. vol. 2, p. 231).
- February 7,  
Portland  
Place. Alexander Blair to King. Requests him to transmit the enclosed mandamus to the Governor of Nova Scotia. Col. Cor. N. S. vol. 27, p. 224

## Department of Agriculture—Archives.

1797.

*Enclosed.* Mandamus from the King granting to Alexander Blair and James Glenie several parcels of land as described in annexed schedule. Col. Cor. N. S. vol. 27, p. 230

February 16,  
Halifax.

Schedule of lands running along Francklin's manor. 232  
Prince Edward to Secretary of State (Portland). Knows that the Board of Ordnance had the power to reject defraying the expense of works, the estimates and plans for which had not been previously submitted, but conceives that he acted in obedience to the 5th article of the instructions in which particular provision is made for sudden emergency when it is absolutely necessary for works of defence to be immediately undertaken, without first obtaining His Majesty's sanction. Vindicates his conduct respecting the expenses for the works and explains his reasons for drawing bills on the Treasury.

Col. Cor. N. S. vol. 30, p. 127

List of clothes for the Royal Nova Scotia regiment.

Col. Cor. N. S. vol. 27, p. 234

March 21,  
Whitehall.

(Endorsed. "Copy sent to the Treasury, 17th February, 1797)."  
Secretary of State (Portland) to Prince Edward. Extracts from his letters respecting defence sent to Dundas and to the Admiralty. Attention has been paid to his applications for reinforcements so far as the general service would permit. Militia should be called out and constantly embodied, in addition to the present force; this will provide for Cape Breton, but the calling out of the militia should be made as little inconvenient as possible and the force should be dismissed when the season does not admit of attack. To communicate with Wentworth on the subject.

Col. Cor. N. S. vol. 30, p. 124

March 23,  
Halifax.

(Copy in Col. Off. N. S. vol. 2, p. 232).  
George Leonard to Jona Odell (printed) with observations. Thanks for general statement, which will be useful to Blowers.

Col. Cor. N. S. vol. 27, p. 238

March 29,  
Whitehall.

(See also Col. Cor. N. S. vol. 32, p. 142).  
Secretary of State (Portland) to Wentworth. His Majesty approves of the arrangement in the Council, consequent on the death of Bulkeley, with the same charges in favour of his father, on account of his long and faithful services. The same salary to be continued to Grey (Gray?) pastor of the Presbyterian church of Halifax, as was paid to his predecessor. Refers him to letter of 14th December, with respect to expenses for the Indians. His satisfaction at the activity of the officers and crew of the "Earl of Moira."

Col. Off. N. S. vol. 2, p. 236

April 3,  
New York.

Isaac Ogden to —— (one of Prince Edward's staff). Respecting the intrigues of the French in Canada. Enclosed in Prince Edward's letter of 23rd April, which see.

April 3,  
Grosvenor  
Square.

Sydney to Secretary of State (Portland). Prince Edward has commanded him to give particulars concerning Major Prévôt, whom he (Sydney) can strongly recommend as a person of merit deserving of some appointment for the sacrifices he has made in support of his loyalty.

Col. Cor. N. S. vol. 27, p. 235

April 20,  
Halifax.

Wentworth to King. Has received circular of 5th January.

Col. Cor. N. S. vol. 27, p. 23

April 20,  
Halifax.

Same to the same. Has received letter of 17th December, 1796, with printed copy of the answer to the Spanish manifesto. 25

April 20,  
Halifax.

Same to the same. Has received letter of 2nd November, concerning the bills which had been noted for protest by Cumberland, agent for the province; the bills have since been paid. 27

April 21,  
Halifax.

Same to Secretary of State (Portland). The maroons have passed through the longest and most rigorous winter known since the first settlement of Halifax, much better than could have been expected. Has been obliged to give more aid to the Indians to prevent them from starv-

1797.  
 ing or robbing the dispersed inhabitants ; owing to unavoidable accidents the Indians have been unable to provide at all for their own maintenance. Quarrell expresses his thankfulness for having been appointed to the Council of Jamaica. Col. Cor. N. S. vol. 27, p. 99
- April 22, Wentworth to King. Has granted leave of absence to go to England to Leonard, superintendent of fisheries. 106  
 Halifax.
- April 23, Prince Edward to the same. Has not been able to complete the boom across the harbour ; is glad that the undertaking is approved of. Trusts that Dundas may attend to his representations respecting the present force at Halifax, which is insufficient for its defence. Col. Cor. N. S. vol. 30, p. 139  
 Halifax.
- April 23, Same to the same. Transmits copy of letter from Judge Ogden. It is the general opinion in the United States and Canada that Halifax will be attacked. Trusts the Minister for War may provide troops before it is too late. 141  
 Halifax.
- Enclosed.* Ogden to one of Prince Edward's staff. Respecting the intrigues of the French in Canada. 143
- April 23, Same to Dundas. Transmits monthly returns. Col. Cor. N. S. vol. 31, p. 54  
 Halifax.
- Enclosed.* Return.
- April 23, Thomas Meanwell to Walpole. Transmits a recital of circumstances, which Capt. Smith, of the maroons, wishes may be communicated. Col. Cor. N. S. vol. 28, p. 10  
 Halifax.
- April 23, Montagu James, a maroon, to the same. Trusts he will have the goodness to present petition to the Secretary of State ; hopes for relief from the present miserable situation. Col. Cor. N. S. vol. 27, p. 247  
 Halifax.
- (See also copies in Col. Cor. N. S. vol. 28, pp. 12 and 241.)
- April 23, Wentworth to Secretary of State (Portland). Requests that copies of the commissions of the Governors of the province may be transmitted, as the boundary line may be transcribed in them. The "Earl of Moira" brought the mail from New York ; has ordered Fawson to cruise between Cape Ann and Cape Canso for the protection of the "London" and other vessels expected to arrive. Col. Cor. N. S. vol. 27, p. 108  
 Halifax.
- April 24, Same to King. Prince Edward considers certain of the offices held by the late Secretary Bulkeley to be subject to his patronage ; the position of Bulkeley and his son in relation to these offices. He (Wentworth) proposes to appoint Putnam to be Secretary of the province. Proposal of the maroons to be embodied in a regiment under Ochterlony, encumbered with a train of women and children double the number of the men, and to remove to the Cape of Good Hope, where they would be dangerous. The only safe place for them is Nova Scotia, owing to the climate where they have no people to revolt with or to corrupt them. The difficulties of their settlement from the ruinous scheme held out to them and from Ochterlony's hopes of making a fortune by going in command of them. The difficulties in the management of the maroons. Illness of Lady Wentworth. His guest (Prince Edward) "avoids the matrimonial scheme mentioned some time ago." A. & W. I. vol. 598  
 Halifax.
- April 25, Same to the same. Lady Wentworth better. Dissatisfaction of Prince Edward at the appointment of Prescott. He will avoid matrimonial snares, which he suspects. A. & W. I. 598  
 Halifax.
- May 6, Prince Edward to Dundas. Encloses monthly return. Col. Cor. N. S. vol. 31, p. 59  
 Halifax.
- Enclosed.* Return.
- May 7, Wentworth to Secretary of State (Portland). Reports that by a resolution of the Assembly of Jamaica the expense for each maroon after July next is to be limited to £10 sterling per head, which sum will be altogether inadequate ; entreats to have instructions on the subject. 111  
 Halifax.

## Department of Agriculture—Archives.

1797.  
May 7,  
Halifax. Wentworth to King. The provision made by Jamaica for the maroons is totally inadequate; hopes they will be placed under his care. Their foolish scheme for being sent to India and let loose with arms in their hands. Cruisers sent to protect vessels arriving on the coast. A. & W. I. vol. 598
- May 10,  
Whitehall. Secretary of State (Portland) to Prince Edward. His explanation regarding the works carried on is satisfactory; shall recommend to the Treasury to pay certain parts of the bills and those for the expense of the tower, if not provided for by the Ordnance; how the work should be authorized. A regiment of the Irish Brigade will be stationed in Nova Scotia during the summer. Col. Off. N. S. vol. 2, p. 240
- May 20,  
Halifax. Wentworth to King. Letter from Portland of 8th December received. Col. Cor. N. S. vol. 27, p. 118  
(Dated "December" 20, an evident error; it is endorsed as having been received on 29th June.)
- May 28,  
Preston, N.S. Wentworth to Montagu James and Smith (maroons). Enclosed in Wentworth's letter of 2nd June, which see.
- May 31,  
Maroon town. Oxley to Wentworth. Enclosed in Wentworth's letter of 2nd June, which see.
- June 1,  
Whitehall. Prince-Edward to Dundas. Transmits monthly return. Col. Cor. N. S. vol. 31, p. 64  
*Enclosed.* Return.
- June 1,  
Halifax. Prince Edward to Dundas. Has received the very satisfactory information that a regiment of the Irish Brigade may shortly be expected. Should they be removed in the autumn, as intimated, trusts that an equal number of troops may be sent next spring to replace them. 62
- June 1,  
Halifax. Same to Secretary of State (Portland). Has applied for 600 of the militia to be embodied, but does not think any reliance can be placed upon their services. Is expecting the arrival of a regiment of the Irish Brigade. Col. Cor. N. S. vol. 30, p. 147
- June 2,  
Halifax. Wentworth to the same. The maroons complain of the severity of the climate notwithstanding they are in good health and strength having only two cases of sickness among 532 persons. Has promised to transmit their request to be removed to a warmer climate, but has persuaded them to try another year, to which suggestion they agreed. Col. Cor. N. S. vol. 27, p. 120  
*Enclosed.* Wentworth to Montagu James and Capt. Smith, maroons. Owing to mis-information and want of sufficient experience of the climate and manner of providing for their families the maroons have been alarmed and fear they cannot live in Nova Scotia. He (Wentworth) desires they will further represent their wishes that day 12 months, namely on 28th May, 1798; in the meantime to exert their best endeavours to cultivate the land and improve the buildings and estate on which they now reside. 128
- June 3,  
Halifax. John Oxley, surgeon, to Wentworth. Report on the present health of the maroons. 126
- June 3,  
Halifax. Wentworth to Secretary of State (Portland). Is preparing to embody 600 militia in accordance with the request of Prince Edward; some clothing for them must be supplied by government 130
- June 3,  
Halifax. Same to the same. Is glad that the arrangements made to fill the vacancies caused by the death of Bulkeley are approved of. Has secured £200 per annum to be paid to Bulkeley senior during his life. 133
- June 3,  
Halifax. Richard John Uniacke to the same. Trusts his long services may be considered and that he may succeed Blowers as Attorney General of the province. 241
- June 3,  
Maroon Hall. Capt. Andrew Smith, maroon, to Charles Samuel. Describes the condition of the people. Col. Cor. N. S. vol. 28, p. 20
- June 4. Quarrell to Walpole. Enclosed in Walpole's letter, received 6th July, which see.

1797.  
June 5,  
Duke Street
- Robert Eyre to Secretary of State (Portland). Requests assistance to compel John Brittain, prize agent on the surrender of St. Pierre and Miquelon, to satisfy the just claims of the 65th regiment.  
Col. Cor. N. S. vol. 27, p. 239
- June 6,  
Halifax.
- Speech of Wentworth to the Legislature.
- June 7,  
Halifax.
- Address of the Council in reply.
- Same of the Assembly. Speech and addresses, enclosed in Wentworth's letter of 8th July, which see.
- June 12,  
Whitehall.
- Portland to Prince Edward. Letter of the 23rd of April received. Reinforcements will be sent from the West Indies. Trusts that the measures taken by the Government in Canada will frustrate the views of the French.  
Col. Cor. N. S. vol. 30, p. 145
- June 12,  
Whitehall.
- Secretary of State (Portland) to Wentworth. Has no doubt the Acts passed will tend to the welfare of the province, but doubts the sufficiency of four days exercise in time of peace to preserve the militia in discipline. His report on Hallowell's case renders it deserving of immediate attention. Can easily conceive that the length of the winter and the delusive hopes of serving as a corps at the Cape of Good Hope were obstacles to the maroons becoming domesticated; they must be put right on the subject of serving as a corps at the Cape of Good Hope and the conduct they must observe in the colony be explained to them; the expenses incurred on their account till they can support themselves is to be defrayed by Jamaica, as agreed upon. Should the commissary stationed in Nova Scotia to defray expenses be withdrawn, a proper arrangement must be made for the future payments. He will apply to the Bishop of London for an allowance for civilizing the maroons. Sends copy of commission for the governor of Nova Scotia, showing the boundaries, but local investigation must proceed to show that the St. Croix claimed is the one intended in the treaty.  
Col. Cor. N. S. vol. 27, p. 114.
- (Copy in Col. Off. N. S., vol. 2, p. 242.)
- June 12,  
Whitehall.
- Secretary of State (Portland) to Prince Edward. Refers him to previous letters in answer to dispatches received. In consequence of intelligence at Quebec of the enemy's views, has no doubt they will be frustrated.  
Col. Off. N. S. vol. 2, p. 246
- July 1,  
London.
- Pepperell to Secretary of State (Portland.) Recommends Blowers to succeed Strange as Chief Justice of Nova Scotia.  
Col. Cor., N. S. vol. 27, p. 245
- July 6,  
London.
- Walpole to the same. Transmits letter from Quarrell. Trusts His Grace will have no objection to grant the order requested.  
Col. Cor. N. S. vol. 28, p. 14
- (Undated, received on the date in the margin).  
*Enclosed.* Quarrell to Walpole dated 4th June. Requests him to forward an order from Portland sanctioning transport of two maroons from Halifax to England. 16
- July 8,  
Whitehall.
- Secretary of State (Portland) to Wentworth. There is no doubt that the expenses of the offices vacated by the death of Bulkeley must be paid by the occupant; how far that may affect the views of Bulkeley the father, in respect to the emoluments to be derived by him from them, must be left to himself (Wentworth); the King cannot interfere.  
Col. Cor. N. S. vol. 27, p. 136
- (Copy in Col. Off. N. S. vol. 2, p. 248).
- July 8,  
Whitehall.
- Secretary of State (Portland) to Wentworth. In answer to letter respecting the maroons, sends duplicate of letter of 12th June; the most perfect submission to the law and to the authority of those appointed to superintend them is expected. Has no doubt he has arranged with

 Whitehall. Secretary of State to Wentworth (private).  
 Col. Cor. N. S. vol. 27, p. 140
- July 29,  
 Whitehall. Same to Leonard. Sends commission appointing him superintendent of the trade and fisheries on the coast of the North American colonies, with observations on his duties. Col. Off. N. S. vol. 2, p. 251
- July 30,  
 Halifax. Muster roll of militia. Enclosed in Wentworth's letter of 13th August, which see.
- August 2,  
 London. Walpole to Greville. Reminds him to speak to Portland about giving an order to send over two of the maroons from Halifax.  
 Col. Cor. N. S. vol. 27, p. 247
- Same to Secretary of State (Portland). Undated letter (about the same time as the preceding) enclosing papers relative to the maroons.  
 Col. Cor. N. S. vol. 28, p. 8
- August 3,  
 Whitehall. King to Wentworth. Transmits copy of letter from the under Secretary at War relative to the appointment of Benning Wentworth to be Secretary to the Lieut. Governor of Nova Scotia *vice* Bulkeley deceased.  
 Col. Off. N. S. vol. 2, p. 254
- August 8,  
 Dartmouth. Quarrell to Captain Howe. Enclosed in Wentworth's letter of 12th August, which see.
- August 9,  
 Maroon Hall. Howe to Quarrell. Enclosed in Wentworth's letter of 12th August, which see.
- August 11,  
 Halifax. Monthly report of militia. Enclosed in Wentworth's letter of 13th August, which see.
- August 12,  
 Halifax. Petition on behalf of near 600 maroons begging to be removed to a more congenial climate. Col. Cor. N. S. vol. 28, p. 237
- August 12,  
 Halifax. Prince Edward to Secretary of State (Portland). Is gratified that his explanation respecting the new works has been satisfactory; reports their progress. No reinforcements have yet arrived and only 500

1797.

militia embodied, who are not worth more than a third of that number of disciplined soldiers. Col. Cor. N. S. vol. 30, p. 149

August 12,  
Halifax.

Prince Edward to Dundas. Sends monthly return.

Col. Cor. N. S. vol. 31, p. 82

*Enclosed.* Return.

August 12,  
Halifax.

Wentworth to Secretary of State (Portland). Letter of 12th June received and in obedience thereto, will inform the maroons that they are not to expect a removal from the province. Unworthy practices are resorted to by interested persons to make them complain of the climate, &c. Captain Howe, of the Royal Nova Scotia Regiment, has been appointed to take charge of them; they will be more comfortable without Ochterlony. Trusts that the Government of Jamaica will still supply the necessary funds for settling the maroons. Encloses letter from Quarrell and Howe's reply, with list of bills drawn by Quarrell on Milligan & Mitchell. Col. Cor. N. S. vol. 27, p. 157

*Enclosed.* Quarrell to Howe, 8th August. Requests him to answer certain queries relative to the maroons which, with the answers, he desires to transmit to England. From his (Howe's) long residence in Jamaica and knowledge of the maroons, no one is so fit to take charge of them. 162

Howe to Quarrell 9th August. Acknowledges letter of the 8th inst. and thanks him for his good opinion. Replies to queries sent. Considers that the maroons can live comfortably in Nova Scotia and will work if encouraged. 164

List of bills drawn by Quarrell as commissary for the maroons on Milligan & Mitchell amounting to £6,050 4. 8. sterling. 174

August 13,  
Halifax.

Wentworth to King. Letter shall be forwarded to Barclay at Boston, where the commissioners meet. Further respecting the maroons; Ochterlony dismissed; the loss caused to Jamaica by his measures.

A. & W. I. vol. 598

August 13,  
Halifax.

Same to Secretary of State (Portland). The militia embodied at Halifax continue to do duty in the most orderly manner. Sends muster roll and morning report of the day before. Prince Edward desired an addition of 200 rank and file to the present battalion, but on learning what distress such a levy would occasion has agreed to suspend the measure; the crops which are abundant need all available hands. The "Earl of Moira" has taken Barclay, boundary commissioner, to Boston; he is possessed with so many proofs, that the inhabitants of Massachusetts are generally convinced that their claim is untenable.

Col. Cor. N. S. vol. 27, p. 176

*Enclosed.* Muster roll, 30th July, of six companies of the Nova Scotia militia. 179

Morning report, 11th August, of the embodied militia. 181

List of bills drawn on the Treasury for the expenses of the pay and clothing for the militia embodied at Halifax, at the requisition of Prince Edward, amounting to £2,500 sterling. 182

August 14,  
Fort Towns-  
hend.

Vice-Admiral Waldegrave to Prince Edward. Enclosed in Prince Edward's letter of 28th August, which see.

August 24,  
Halifax.

Prince Edward to Waldegrave. Enclosed in Prince Edward's letter of 28th August, which see.

August 28,  
Halifax.

Prince Edward to Secretary of State (Portland). Encloses letter from Vice-Admiral Waldgrave with his reply. Col. Cor. N. S. vol. 30, p. 159

*Enclosed.* Vice-Admiral Waldegrave to Prince Edward, 14th August. According to the terms of his commission he is military as well as civil Governor of Newfoundland and cannot acknowledge any superior in North America. 163

## Department of Agriculture—Archives.

1797.

Prince Edward to Waldegrave, 24th August. Quotes the commission of Lieut. Governor Prescott, in which he (Prescott) is nominated commander-in-chief within the Island of Newfoundland. Encloses papers explaining why he addressed Waldegrave as merely civil Governor.

Col. Cor. N. S. vol. 30, p. 107

Copy of Order-in-Council to determine the authority of civil governors over the forces stationed in the respective Provinces of North America, transmitted in dispatch from Secretary of State of 9th February, 1765. 175

Copy of instructions by Dorchester to Prince Edward, dated 7th June, 1794, on his (Prince Edward's) taking the command of Nova Scotia and its dependencies. 177

Extract from letter from Dorchester to Prince Edward, 7th June, 1794, enclosing warrant to empower him to hold courts martial. 179

Extract from letter from Dorchester to Ogilvie, 6th December 1788. Requests him to give orders to the military officers of the highest rank at St. John's Newfoundland, to send the usual returns respecting the expenditure of provisions, Lieut. Governor Elford (Elliott) having refused to forward said returns. 181

Steele (Treasury) to Dorchester, 16th December, 1789. Is desired to give instructions to the Lieut. Governor of Newfoundland to render an exact account of provisions received. 183

September 1,  
Halifax.

Wentworth to Secretary of State (Portland). The appointment of Blowers to be Chief Justice meets with universal approval; recommends Richard John Uniacke to be Attorney General and Jonathan Sterns to be Solicitor General. Col. Cor. N. S. vol. 27, p. 186

September 1,  
Halifax.

Same to the same (private). Dispatch received; has informed Uniacke of his readiness to recommend him to be Attorney General in succession to Blowers appointed Chief Justice. Sterns cheerfully acquiesces in the appointment and will act with zeal as Solicitor General. Acknowledgment of Blowers for his appointment. 190

(See also A. & W. I. vol. 598.)

September 1,  
"Thetis" at  
Halifax.

Capt. Cochrane to Secretary of State (Portland). Solicits a grant of 20,000 acres in either of the four adjoining provinces.

Col. Cor. N. S. Vol. 27, p. 249

September 7,  
Whitehall.

Secretary of State (Portland) to Prince Edward. Regrets the long delayed departure of the Irish Brigade, especially as agriculture had suffered by the calling out of the militia, whose men may return to their usual employments on the arrival of the reinforcement. Has written to the Admiralty in reference to the services of their officers in placing the boom. Col. Cor. N. S. vol. 30, p. 157

(Copy in Col. Off. N. S. vol. 2, p. 254.)

September 10,  
Halifax.

Wentworth to King. Thanks for letter respecting the law appointments; his feelings respecting Uniacke all buried, and he looks forward to his appointment being very useful; removal of the animosity between Uniacke and Sterns. The progress made by the maroons since they have been placed in charge of Howe. Hopes of seeing the Irish Brigade so as to relieve the embodied militia for the harvest. In event of peace, hopes the discharge of seamen and troops may be left to him to avoid the expense incurred in 1783. A. & W. I. vol. 598

September 10,  
Halifax.

Prince Edward to Dundas. Transmits monthly returns.

Col. Cor. N. S. vol. 31, p. 89

*Enclosed.* Return.

September 11,  
Whitehall.

Secretary of State (Portland) to Wentworth. The King's satisfaction at the harmony that prevailed in the General Assembly; he relies on the continuation of their loyalty. Is sorry that the late departure of the Irish Brigade compelled him to keep the militia so long embodied; hopes before this reaches he has been able by the arrival of the reinforcement to permit them to return to their homes. Is sorry to learn

1797.

that he had been obliged to endorse some of Quarrell's bills, they having been protested; the legislature of Jamaica will, however, prevent a recurrence of this. The orderly conduct of the maroons is satisfactory. Col. Cor. N. S. vol. 27, p. 184

(Copy in Col. Off. N. S. vol. 2, p. 256.)

September 11,  
Halifax.

Wentworth to King. Sends returns from Oxley, surgeon to the maroons; intends to visit their settlement; nature of the investigation.

ing. Quarrell is detained on account of the non-payment of his bills by the island of Jamaica. The brig "Brothers," with a valuable cargo, was wilfully stranded near Liverpool, in the province; the crew are now in gaol awaiting their trial. Col. Cor. N.S. vol. 27, p. 200

*Enclosed.* Return of the sick, and the number of the maroons from 1st October to 1st November—2 sick, 5 births since last return; total number, 550. 205

November 7,  
Halifax.

Prince Edward to Secretary of State (Portland). The Irish Brigade has not yet arrived; the want of it has been essentially felt during the past summer, the militia not being worth the expense they cost. A second company of artillery is urgently required.

Col. Cor. N.S. vol. 30, p. 189

November 7,  
Halifax.

Same to Dundas. Transmits monthly return.

Col. Cor. N.S. vol. 31, p. 92

November 8,  
Halifax.

Wentworth to Secretary of State (Portland). Entreats His Grace's protection for the memorial from the officers of the Royal Nova Scotia regiment. Prince Edward has recommended their solicitation to the Duke of York.

Col. Cor. N.S. vol. 27, p. 207

*Enclosed.* Memorial from the officers.

209

(Duplicates of letter and memorial are in A. & W. I. vol. 598.)

November 8,  
Halifax.

Wentworth to King. Reports the changes among the officers of the Royal Nova Scotia regiment; the promotion of Captain Thesiger; application of McLean, who should not be promoted as he does not manifest a disposition to show good temper in the House of Assembly, of which he is a member. Quotes precedents to show why he (Wentworth) should be appointed Colonel of the regiment, although not previously holding military rank. Lawless state of Cape Breton; suggests sending Dr. Smith there as Chief Justice. The mortification of the officers of the Nova Scotia regiment at foreign officers being put over their heads.

A. & W. I. vol. 598

November 15,  
Halifax.

Report to the commissioners to examine into the practicability of opening an inland navigable communication between the harbour of Halifax and the basin of Minas, signed by Isaac Hildreth and Theophilus Chamberlain. The report proposed that there should be twenty locks, the positions of which are given; to be faced with dressed freestone and backed with rubble; calculated to "chamber" a vessel of 50 feet keel and 16 feet beam, drawing from 4 to 5 feet of water; a plan accompanies the report. (The report and plan are laid in loose at the end of B. T. N. S. vol. 30, the latest date in that volume (other than this report) being 1790.)

B. T. N. S. vol. 30

November 19,  
Halifax.

Wentworth to King. Reports the discovery of an attempt by an officer of government handsomely provided for (name not given) to create disaffection; proposes such measures as may nip the attempt in the bud. Stranding in a storm of the brig "Sisters;" cargo saved. Dangerous illness of Murray, Provost marshal of Cape Breton; should he die, recommends Brenton to succeed. No word of the Irish Brigade; arrival of the "Paxton." If the Quebec convoy has not arrived it will be too late for this season.

A. & W. I. vol. 598

December 12,  
Whitehall.

Secretary of State (Portland) to Prince Edward. Ogilvie appointed to administer in Cape Breton and made President of the Council. A detachment to be placed under Ogilvie sufficient for the defence of Cape Breton against any sudden attack.

Col. Cor. N. S. vol. 30, p. 187

(Copy in Col. Off. N.S. vol. 2, p. 263.)

December 22,  
Halifax.

Prince Edward to Secretary of State (Portland). Part of the men of the Irish Brigade have arrived; it is feared that two of the transports are lost. Many officers having remained in Ireland and about 200 men having been disembarked through sickness, hopes that the residue of the

1797.

regiment may be dispatched early in March. Encloses estimates for completing the works; copies have been forwarded to the Master General of Ordnance. Col. Cor. N. S. vol. 30, p. 193

*Enclosed.* Estimate for works on Citadel Hill, George's Island, new tower at Point Pleasant and new artillery barracks. 195

Extract of letter from Prince Edward to Master General of Ordnance, of 16th December forwarding estimates for completing various works. 215

December 25,  
Halifax.

Prince Edward to Dundas. Transmits monthly return.

Col. Cor. N. S. vol. 31, p. 100

*Enclosed.* Return.

December 27,  
Halifax.

Wentworth to King. Instruments for the survey of the St. Croix received; copy of Champlain's works wanted. Loss of the frigate "Tribune" and nearly all the officers and men. The good discipline of the Royal Nova Scotia regiment in assisting, during which it lost one officer, two sergeants and four privates; encloses papers on the subject with remarks. The regiment does all the outpost duty. The transports of the Irish Brigade are safe in port, except the ship "Elizabeth." The "Briton" is in Liverpool in distress; the "Earl of Moira" has gone to her relief. One American East Indianman is in great distress at Shelburne, which had parted with another in still greater danger; relief has been ordered for them. The Quebec merchantmen had not arrived in the St. Lawrence when navigation closed. Convoy wanted for vessels from Halifax. Health of Lady Wentworth, &c. A. & W. I. vol. 598

*Enclosed.* General order by Prince Edward, thanking the officers and men who went to assist the frigate "Tribune"; laments the loss by drowning of Lieut. James, two sergeants and four privates of the Royal Nova Scotia regiment whilst assisting; free rations ordered for their widows and orphans. Application from Capt. Cochrane (18th December) for a party of the Royal Nova Scotia regiment to act as marines on board H. M. S. "Driver."

Capt. Hardy to Wentworth (21st December). The good conduct of the detachment of the Royal Nova Scotia regiment serving as marines on board H. M. S. "Thisbe."

Murray, senior officer in Halifax harbour (13th December). His appreciation of the conduct of the officers and men of the Royal Nova Scotia regiment in assisting the crew of H. M. S. "Tribune."

Charles Fraser, customs officer, Parrsborough. The good services rendered by the same regiment in assisting the revenue officers.

December 28,  
Whitehall.

King to Wentworth. Sends copy of letter from Freeling, secretary to the Post Office, that the packet boats are never to be detained, except when the good of the service may actually require it.

Col. Off. N. S. vol. 2, p. 264

1798.  
January 5.

Accounts of supplies issued to Indians. Enclosed in Wentworth's letter of 24th April, which see.

January 16,  
Halifax.

Prince Edward to Dundas. Transmits monthly return.

Col. Cor. N. S. vol. 31, p. 103

*Enclosed.* Return.

February 4,  
Tunbridge  
Wells.

Cumberland to King. Is incapable of suffering bills to be disgraced when he has the power to prevent it. The grant of 1796 was withheld for above a year. Wishes the Governor would make out the first bills to 30th June, when there is a good chance of them not arriving before the money is in hand. Col. Cor. N. S. vol. 28, p. 263

February 6,  
Halifax.

Brenton to King. Respecting his appointment to be Chief Justice of Cape Breton. 274

February 6,  
Halifax.

Prince Edward to Dundas. Transmits monthly return.

Col. Cor. N. S. vol 31, p. 106

*Enclosed.* Return.

## Department of Agriculture—Archives.

1798.  
February 7,  
Whitehall.

Secretary of State (Portland) to Wentworth. The appointment of Brenton approved of. The King cannot grant the memorial of the officers of the Royal Nova Scotia regiment to have rank in the army, although he fully appreciates their services. His (Wentworth's) account of the militia and of the services of the "Earl of Moira" are highly satisfactory. Shall represent to Balcarres the necessity for the Assembly of Jamaica to make provision for defraying the expenses of the maroons. Capt. George Thesiger to be major of the Royal Nova Scotia regiment, in room of Monk, retired on half pay.

Col. Cor. N. S. vol. 28, p. 1

(Copy in Col. Off. N. S., vol. 2, p. 265).

February 8,  
Whitehall.

Secretary of State (Portland) to Prince Edward. Has transmitted to the Board of Ordnance his desire for a second company of artillery; it would be inexpedient at this moment to send a detachment from the Irish Artillery. Has received advice of the arrival of all the transports with the 6th regiment, except one, which appears to have put into Placentia Bay. The result of the consideration by the Board of Ordnance of the estimates shall be sent.

Col. Cor. N. S. vol. 30, p. 217

(Copy in Col. Off. N. S. vol. 2, p. 267).

March 1,  
Halifax.

Return of maroons from 1st February to 1st March. Enclosed in Wentworth's letter of 10th March, which see.

March 7,  
Halifax.

Blowers to King. Acknowledges his (King's) good offices and recommends Brenton to be Chief Justice of Cape Breton.

Col. Cor. N. S. vol. 28, 276

March 7,  
Halifax.

Same to the Secretary of State (Portland). Returns thanks for his appointment to be Chief Justice.

278

March 8,  
Whitehall.

Secretary of State (Portland) to Wentworth. To avoid the heavy expense of protest, has recommended the Treasury to pay bills received without advice; all bills drawn must be accompanied by the proper vouchers.

p. 5

(Copies are in Col. Cor. N. S. vol. 32, p. 143; and in Col. Off. N. S. vol. 2, p. 269, the day of the month being given in the latter only).

March 10,  
Whitehall.

Secretary of State (Portland) to Wentworth. Sends copy of letter from Sewell, agent for Jamaica, that the cost of the maroons and the time it continues far exceed the expectations of the Assembly of Jamaica. Reminds him (Wentworth) of the instructions that he was not to interfere in the management of their affairs, except when called upon as Lieut. Governor to assist in their maintenance, with a view to enable them to maintain themselves as early as possible.

Col. Cor. N. S. vol. 28, p. 3

(Copy in Col. Off. N. S. vol. 2, p. 270.)

March 10,  
Halifax.

Wentworth to King (private). Lady Wentworth's state of health renders her immediate voyage to England indispensably necessary. Encloses letter from Brenton accepting the Chief Justiceship of Cape Breton. The maroons are quiet and orderly, and do not suffer from the rigour of the winter; some persons are wicked enough to try to make them discontented. A French privateer was trying to intercept the packet which has, however, arrived safely. Details the mutinous conduct of Tonge, naval officer. Begs his protection for Cunningham who is going to England for settlement of a claim. Prince Edward warmly recommends his case. Affairs in Cape Breton uncomfortable. McKinnon, the Secretary, is confined in gaol; if the island reverts to Nova Scotia would be glad if Coxe is employed. Col. Cor. N.S. vol. 28, p. 31

Return of sick and number of maroons from 1st February to 1st March.

37

1798.  
March 18,  
Tunbridge  
Wells. Cumberland to King. Is unable to furnish the names of persons on the civil establishment of Nova Scotia who were included in the Parliamentary estimate as desired. Col. Cor. N. S. vol. 28, p. 268
- March 19,  
Whitehall. Secretary of State (Portland) to Wentworth. Sends copy of explanatory article to the treaty with the United States. Col. Off. N. S. vol. 2, p. 272
- March 21,  
Whitehall. Same to Walpole. A petition from the maroons having been lost, requests him (Walpole) to procure an authenticated copy. Col. Cor. N. S. vol. 28, p. 231  
(Copy in Col. Off. N. S. vol. 2, p. 273.)
- March 22,  
London. Walpole to Secretary of State (Portland). The copy and original of the petition [from the maroons] are identical; he has compared the two; another can be obtained from Halifax if desired. Col. Cor. N. S. vol. 28, p. 233  
(Undated and unsigned; it is endorsed: "Hon. Mr. Walpole," and is an answer to Portland's note of the previous day, 21st March.)
- March 23,  
Bruton Street. Walpole to Secretary of State (Portland). Transmits copy of petition from the maroons. Col. Cor. N. S. vol. 28, p. 270
- March 24,  
Whitehall. King to Wentworth. Confusion respecting the affairs of the maroons, caused by the loss of a memorial handed by Walpole to Portland. A. & W. I. vol. 598
- March 26,  
Whitehall. Secretary of State (Portland) to Walpole. Desires to know whether the maroon who brought the petition can ascertain that it was authentic and witnessed, as it purports to be, by Fitzgerald. Col. Cor. N. S. vol. 28, p. 235  
(Copy in Col. Off. N. S. vol. 2, p. 274.)
- April 4,  
Whitehall. Secretary of State (Portland) to Wentworth. The immense expense and long continuance of the burden caused by the maroons; his duty as Lieut. Governor towards them. Col. Cor. N. S. vol. 28, p. 25  
(Copy in Col. Off. N. S. vol. 2, p. 275.)
- April 4. Copy of charges made against the management of the maroons transmitted to Wentworth on the date in margin. Col. Cor. N. S. vol. 28, p. 29
- April 6,  
Park Lane. Walpole to Secretary of State (Portland). The maroon who delivered the petition has returned to Halifax and cannot, therefore, give the required information. 239
- April 18,  
Whitehall. Secretary of State (Portland) to Sewell. Has laid before the King the joint address of the Council and Assembly of Jamaica requesting that some mark of favour may be bestowed on the Earl of Balcarres; the address has been graciously received. 250
- April 19,  
George Street. Sewell to King. Gives extract from a letter of Wentworth's to Lord Balcarres, dated in Halifax, 4th August, 1797, concerning the maroons. "At length they were prevailed on to complain. Petitions to the King, privately and insidiously concealed from me were prepared, and "under the direction of Mr. Ochterlony sent home." Col. Cor. N. S. vol. 27, p. 226  
(The year is not on the letter, but the reference to Wentworth's letter of August, 1797, indicates that it was written in 1798. The month and day are given.)
- April 21,  
Halifax. Lieut. Allen to Wentworth. Enclosed in Wentworth's of 24th April, which see.
- April 23,  
Halifax. Blowers to King. In case his letter of 7th March has not arrived, repeats his acknowledgments and forwards duplicate of his letter to the Secretary of State. Col. Cor. N. S. vol. 28, p. 282
- April 23,  
Halifax. Prince Edward to Secretary of State (Portland). Dispatches received. Again represents the need of reinforcements to the full extent so often solicited. Col. Cor. N. S. vol. 30, p. 219

## Department of Agriculture—Archives.

1798.  
April 23,  
Halifax. Prince Edward to Dundas. Transmits monthly return.  
Col. Cor. N. S. vol. 31, p. 109
- Enclosed.* Return.  
Prince Edward to Dundas. The first part of the regiment of the Irish Brigade arrived at the end of last November; the remainder was only collected during the last few weeks after having been buffeted about all over the coast. The moment these men begin to be of service, they are ordered away. To make an effectual resistance in case of attack, nothing short of two regiments, with a second company of artillery, will be sufficient. 112
- April 23,  
Halifax. Wentworth to Secretary of State (Portland). Brenton desires to express his sense of the honour conferred upon him by his appointment to succeed Strange in the Council. The officers and men of the Royal Nova Scotia regiment give one week's pay (£199.12.10) towards the public service, and Capt. Allen of the same regiment gives half his pay during the war. The island of Jamaica not having provided for the support of the maroons, he (Wentworth) has been obliged to draw on the Treasury. Has written repeatedly to the Governor of Jamaica that all expenses incurred for the maroons are to the account of the island of Jamaica. Encloses accounts and vouchers for disbursements to the Indians. Col. Cor. N. S. vol. 28, p. 39
- April 24,  
Halifax. *Enclosed.* Lieut. John Allen to Wentworth, 21st August. Gives half his pay to carry on the war. 44  
Accounts and vouchers for disbursements to the Indians. 46 to 84  
Dr. Oxley to Wentworth. Enclosed in Wentworth's letter of the 23rd June, which see.
- May 3,  
Cole Harbour. Memorial of Capt. John Solomon. Enclosed in Wentworth's letter of 23rd June, which see.
- May 10,  
Halifax. Wentworth to Secretary of State (Portland). The inhabitants of Halifax have subscribed nearly £4,000 sterling to aid Government in carrying on the war. Col. Cor. N. S. vol. 28, p. 88
- May 12,  
Halifax. James Stewart to Thomas Coutts. Hopes to succeed to the office of Solicitor General for Nova Scotia and requests him (Coutts) to inform King of his pretensions to that office. 286
- May 12,  
Halifax. Prince Edward to Dundas. Transmits monthly return.  
Col. Cor. N. S. vol. 31, p. 118
- Enclosed.* Return.  
Extract from a letter from the Bishop of Nova Scotia to the Archbishop of Canterbury, praying that in consideration of his failing health and advanced age he may have the help of a commissary. Col. Cor. N. S. vol. 28, p. 314
- May 17. Blowers to King. Recommends James Stewart to succeed to the office of Solicitor General, vacant by the death of Sterns. 292
- May 24,  
Halifax. Secretary of State (Portland) to Prince Edward. Sends copy of letter to Prescott, informing him that Newfoundland is excepted from his command. Col. Cor. N. S. vol. 30, p. 223  
(Copy in Col. Off. N. S. vol. 2, p. 277.)
- May 25,  
Whitehall. Unsigned (Dundas?) to Prince Edward. It is at present impossible to comply with the requisition for troops. Col. Cor. N. S. vol. 31, p. 114
- May 31,  
Parliament Street. Secretary of State (Portland) to Wentworth. Has informed the Treasury that he cannot recommend the payment of bills drawn on account of the maroons, as the expenses have to be paid by Jamaica; refers him to previous letters on the subject. The legislature has voted supply till July next and he has no doubt that Balcarres can induce it to take further measures. Has recommended payment, on account only, of bill drawn for the "Earl of Moira," which far exceeds the average cost. Col. Cor. N. S. vol. 28, p. 85
- June 7,  
Whitehall.

1798.  
June 7, London. (Copy in Col. Off. N. S. vol. 2, p. 278.)  
Coutts to King. Requests him to read letter from Stewart (enclosed).  
Col. Cor. N. S. vol. 28, p. 284
- (For letter, see 12th May.)  
June 8, Preston. Capt. Howe to Wentworth. Enclosed in Wentworth's letter of 23rd June, which see.
- June 8, London. Coutts to King. Stewart's application is to succeed Sterns, whose death is daily expected. Trusts Portland may signify to Wentworth his approbation of the desired appointment. Col. Cor. N. S. vol. 28, p. 288  
The following were enclosed in Wentworth's letter of 23rd June, which see.  
Address of the Legislative Council, 11th June.  
Moody to Wentworth, 12th June.  
Oxley to Wentworth, 16th June.  
Captains of ships of war to Admiral Vandeput, 16th June.  
Admiral Vandeput to Wentworth, 17th June.  
Rev. Benjamin Gerrish Gray to Wentworth, 18th June.  
Embarkation return, 19th June.  
T. Chamberlain to Wentworth, 20th June.  
Hartshorne & Tremain to Wentworth, 20th June.  
Bulkeley to Wentworth, 20th June.  
Wentworth to Admiral Vandeput, 20th June.
- June 20, Whitehall. Secretary of State (Portland) to Sewell, agent for Jamaica. Respecting the maroons and the necessity that the legislature of Jamaica make provision for their maintenance. Col. Off. N. S. vol. 2, p. 281
- June 22, Halifax. Leonard to King. Has drawn on him for £500. There is no ship or boat available and he must annually visit the whole coast or he cannot promote the views of Government. Col. Cor. N. S. vol. 28, p. 294  
*Enclosed.* Correspondence between Liston, Temple and Leonard, relative to the trade and fishery in North America. 296
- June 22. William Timms, messenger, memorial for an additional allowance of £9.10 per month for five months, the length of time he had a state prisoner in his custody 306  
Certificate of Richard Ancell, that messengers were allowed in the year 1794 £20 per month for the custody of state prisoners. Timms is the only one who did not receive a similar allowance. 304  
(The memorial is undated; the certificate, apparently attached to it, is dated as in margin.)
- June 23, Halifax. Memorial by Leonard for Portland's support to enable him to carry out the King's orders; must have a vessel and boats to be employed solely under his directions. 308
- June 23, Halifax. Wentworth to Secretary of State (Portland). Is confirmed in his opinion respecting the state of the maroons. Transmits letters from gentlemen employed amongst them. 93  
*Enclosed.* Howe to Wentworth, 8th June. Describes the efforts of Ochterlony to spread discontent among the maroons and his own endeavours to carry out Wentworth's plans for their benefit. 94  
Hartshorne & Tremain to Wentworth. Enclose certificate that the prices charged by them for flour &c., for the maroons, were lower than those fixed for the assize of bread, as an answer to the accusation against him (Wentworth) that he had purchased from them when others were offering at a lower price. 105  
This letter enclosed a certificate. 106  
Dr. Oxley to Wentworth, 16th June. Having seen the anonymous letter received by him (Wentworth), which not only casts reflections on him (Wentworth) but on the rest of the gentlemen connected with the maroons, gives a long account of the measures taken for their welfare and Ochterlony's schemes to baffle them. 107

## Department of Agriculture—Archives.

1798.

- John Moody to Wentworth, 12th June. As all the members of the maroon commission have been accused of interested motives in their efforts to settle these people, considers it the duty of each individual member to vindicate his conduct. Col. Cor. N. S. vol. 28, 112
- Rev. Benjamin Gerrish Gray to Wentworth. Defends himself and him (Wentworth) from the anonymous charges brought against them for their management of the maroons. 115
- Chamberlain to Wentworth, 20th June. His indignation against the authors of the charges made against him (Wentworth) with respect to the maroons; the failure of his efforts due to the unfaithful conduct of Ochterlony. Gives a long account of the work done among the maroons. 123
- Oxley to Wentworth, 3rd May. Requests he may not be obliged to occupy part of the school house as ordered by Howe. 162
- Memorial, 10th May, of Capt. Solomon, praying for promotion. 164
- June 23, Halifax. Wentworth to Secretary of State (Portland). The General Assembly met on the 8th; transmits proceedings. Capt. Fawson of the "Moirá" had an engagement with a French privateer which, however, managed to escape. Owing to the presence of the brig, three unarmed vessels, for which the privateer was lying in wait, arrived safely. 137
- Enclosed. Journal of Assembly. 141
- Address of the Legislative Council, 11th June. 144  
(An extract from the journal).
- Wallace to Wentworth, 23rd June. Has received a great part of the subscription for carrying on the war, in bills of exchange; shall only require from the deputy paymaster about £1,000 sterling in bills. 148
- Same to the same, undated. Encloses bills to the amount of £2,621 10s. 11d. sterling on account of the voluntary contribution in aid of Government. 146
- Embarkation return, 19th June, of the Royal Nova Scotia regiment for Cape Breton. 150
- Account in the *Weekly Chronicle*, 23rd June, of the presentation of colours to the Royal Nova Scotia regiment by Prince Edward. 153
- June 23, Halifax. Wentworth to Secretary of State (Portland). The Vice-Admiral and captains of the ships of war on the station consider Bulkeley unequal to the duties of judge of Vice-Admiralty; they desire that he will depute Brenton to act. Transmits representations on the subject. 154
- Enclosed. Admiral Vandeput to Wentworth. Transmits letters from the captains under his command, and requests that the grievance complained of may be redressed. 156
- Captains of ships of war in the port of Halifax to Vandeput, 16th June. Complain that many of the late decisions of the Admiralty court appear to be contradictory, and their interest and that of the other officers and ships' crews are materially injured. Request that an investigation be ordered. 156 A
- Wentworth to Vandeput, 20th June. His letter and that from the captains have been laid before the Council. Encloses Bulkeley's answer. 158
- Bulkeley to Wentworth, 20th June. The officers have the usual remedy for the grievance complained of—that of appeal. 157
- June 26, Halifax. Wentworth to King. Begs him to present memorial to Portland. Recommends Barclay as a fit person to be consul at New York. The United States almost, if not completely, at war with France. 160
- July 1, Whitehall. Secretary of State (Portland) to Wentworth. The zeal of the officers and men of his regiment and the voluntary subscriptions of the inhabitants of Nova Scotia are sources of satisfaction to the King. There being no funds from Jamaica to meet the bills drawn for the maroons, 547

1798. he has recommended the Treasury to pay them on account, for the honour of Jamaica; hopes that a proper agent has been dispatched from the island to take charge of subsisting the maroons. Col. Cor. N. S. vol. 28, p. 90
- July 4, Whitehall. (Copy in Col. Off., N. S., vol. 2, p. 286).  
King to Leonard. Transmits letter from the Commissioner of Customs respecting his appointment of deputies, and desires him to report on the subject. Col. Off. N. S. vol. 2, p. 289
- July 5, Portland Place. Samuel Rogers to King. Has received a letter from Leonard, dated Boston, 15th May, stating that he had used all possible diligence since his imprisonment in France to get to his station, and was that day about to sail for New Brunswick. Col. Cor. N. S. vol. 28, p. 290
- July 7, Halifax. Journals of Legislative Council and Assembly. Enclosed in Wentworth's letter of 20th November.
- July 31, Whitehall. Secretary of State (Portland) to Wentworth. Copies of his letters and enclosures respecting the maroons have been sent to Balcarres, and also of the correspondence with Sewell. Trusts that Jamaica will see the transaction in its proper light; desires him to make a report and send accounts. The King's satisfaction at the loyal spirit of the legislature and at the voluntary subscriptions in the province. Has transmitted to the Admiralty his letter respecting the establishment of a court of Vice-Admiralty in Nova Scotia. Col. Cor. N. S. vol. 28, p. 166
- August 1, Whitehall. (Copy in Col. Off. N. S., vol. 2, p. 291).  
Secretary of State (Portland) to Wentworth. In the case of Hallowell, although the restraining Act prohibits making new grants, it does not prevent doing justice to an individual who has suffered from the mistake of a surveyor; he is, therefore, to order a survey, &c., of a quantity of lands equal to those he lost by the mistake, and he is to be allowed to occupy these until the withdrawal of the restricting Act permits of the land being made a perpetual grant. Col. Cor. N. S. vol. 28, p. 170
- August 2, Whitehall. (Copy in Col. Off. N. S. vol. 2, p. 294).  
Secretary of State (Portland) to Prince Edward. The representation of the force necessary in Nova Scotia has been sent to Dundas. Refers him to previous letter respecting the command in Newfoundland. Col. Cor. N. S. vol. 30, p. 225
- August 14, Halifax. (Copy in Col. Off. N. S. vol. 2, p. 297).  
Prince Edward to Secretary of State (Portland). Dispatch received. Several flagrant abuses exist in the military department of Newfoundland; he was about to report these matters to the several departments, but after His Grace's letter he must not interfere. Col. Cor. N. S. vol. 30, p. 227
- August 14, Halifax. Same to Dundas. Feels that he has done his duty in stating the weakness of the means of defence at his disposal and laments that his request for a reinforcement cannot be complied with. Col. Cor. N. S. vol. 31, p. 121
- August 14, Halifax. Same to the same. Transmits monthly returns. 123  
An undated letter sends returns from November, 1797 to August, 1798 for the island of St. John. 128
- August 15, Fenchurch Street. Returns follow in both cases  
Philip Sansom to King. Wishes to know whether Leonard's bill for £500 will be paid when due. Col. Cor. N. S. vol. 28, p. 310
- August 16, Halifax. Wentworth to King. Is unable though illness to write officially. The inhabitants of the province have subscribed 500 guineas in order to present a diamond star to Prince Edward. The voluntary subscription in aid of Government is still accumulating. The United States wish to borrow some pieces of French cannon, brought from Charleston to Halifax; Liston advises acquiescing in the demand, which would promote the

1798.

King's interests throughout America. Prince Edward has met with an accident on horseback. Col. Cor. N. S. vol. 28, p 175

*Enclosed.* Address of the Governor, Council and Assembly to Prince Edward in presenting him with a diamond star, and Prince Edward's reply. 181

Wallace to the Governor. He is remitting by the "Resolution" about £900 sterling in government bills at par, on account of the voluntary subscription for carrying on the war. 183

August 19,  
Clandon  
House.

Archbishop of Canterbury to Secretary of State (Portland), Encloses an extract from a letter lately received from the Bishop of Nova Scotia and recommends his request. 312

August 24,  
Halifax.

Halliburton, surgeon, to Dr. Nooth. Details the condition of Prince Edward. Enclosed in Wentworth's letter of 12th September, which see.

Letters from Almon, surgeon, to Dr. Nooth, 25th August, from Prince Edward to Wentworth, 26th August, and to Prescott, 29th August, are enclosed in the same letter.

September 1,  
Halifax.

Prince Edward to Secretary of State (Portland). In consequence of a fall from his horse, he is strongly advised to go to England. Encloses a letter for the King and requests Portland's good offices in case he has to quit his command without leave. Col. Cor. N. S. vol 30, p. 229

September 3,  
Whitehall.

Secretary of State (Portland) to Wentworth. A quantity of French ordnance to be lent to the United States is to be returned to Halifax when demanded; he is to see that the pieces are delivered.

Col. Cor. N. S. vol. 28, p. 173

(Copy in Col. Off. N. S. vol. 2, p 298).

September 12,  
Halifax.

Wentworth to King, Is still indisposed and unable to complete his public accounts. Prince Edward has suffered severely from the fall from his horse. Vindicates Barclay from the accusations made against him by an anonymous writer "Philocles." Col. Cor. N. S. vol. 28, p. 185

*Enclosed.* Halliburton, surgeon, to Dr. Nooth, 24th August. Details the condition of Prince Edward and the means taken for his relief. 192

Almon, surgeon, to Nooth 25th Aug. Gives an account of the accident to Prince Edward, the injuries he sustained and the treatment he has received. 194

Prince Edward to Wentworth, 26th August. Messrs. Halliburton and Almon advising his return home in consequence of his accident, he wishes to have the opinion of Dr. Nooth and requests that he (Wentworth) will permit the brig "Maira" to go to Quebec to bring that gentleman. 190

Prince Edward (unsigned) to Prescott, 29th August. Has met with a very severe accident by his horse falling upon him; requests that Dr. Nooth may be sent to Halifax. Should he advise, as do the other doctors, that he should go to England, requests that he (Prescott) would sanction his (Prince Edward's) resigning the command. 196

September 12,  
Halifax

Prince Edward to Dundas. Transmits monthly return.

Col. Cor. N. S. vol. 31, p. 150.

*Enclosed.* Return.

September 26,  
Halifax.

Prince Edward to Secretary of State (Portland). Dispatch received. Regrets that the exigency of the public service does not admit of reinforcements being sent for the protection of Halifax and the province of Nova Scotia generally. Col. Cor. N. S. vol. 30, p. 233

September 26,  
Halifax.

Same to same. As Dr. Nooth also advises him to go, he will leave about the 12th October in the "Topaz" frigate. Hopes that he (Portland) may prepare the King's mind to receive him favourably after an absence of thirteen years and a half. 231

September 29,  
Halifax.

Account of the dreadful storm that occurred on the 27th, from the *Weekly Chronicle*. Enclosed in Wentworth's letter of 30th September, which see.

1798.  
September 30, Halifax. Wentworth to King. Prince Edward sails for England in the "Topaz" frigate about the 10th or 14th October. Great destruction of property caused by a dreadful hurricane that swept over the town and harbour. Introduces Lawrence Hartshorne, an opulent merchant, who can give detailed information of the damage.  
Col. Cor. N. S. vol 28, p 200  
205
- October 3. *Enclosed.* Account of the storm.  
Copy of obligation by United States Secretary for War.
- October 15, Boston. Liston to Wentworth.  
The two immediately preceding documents enclosed in Wentworth's letter of 17th November, which see.
- October, 16, Halifax. Prince Edward to Dundas. Transmits monthly returns.  
Col. Cor. N. S. vol. 31, p. 153
- October 19, Isleworth. *Enclosed.* Returns.  
Blair to King. The mandamus for a grant of land which he received from the Privy Council Office on the 6th February, 1791, and requested King to forward to the Governor of Nova Scotia, had not been received on the 18th June, 1798.  
Col. Cor. N. S. vol. 28, p. 316
- October 25, Providence, R. I. Declaration as to the true river St. Croix. Enclosed in Wentworth's letter of 17th November, which see.
- November 2, Halifax. Wentworth to Secretary of State (Portland). Reports the state of the Council.  
Col. Cor. N. S. vol. 28, p. 211
- November 9, Whitehall. Secretary of State (Portland) to Wentworth. Has been informed by the Treasury of bills drawn for the expenses of the "Earl of Moira"; his surprise at the great increase since he was first authorised in 1794 to employ the vessel; an explanation of the reason for this is required. The accounts, also, are unsatisfactory.  
206  
(Copy in Col. Off. N. S. vol. 2, p. 300.)
- November, 10, Whitehall. King to Wentworth. Transmits report from the Advocate General, that there do not appear to be sufficient grounds for Brenton being deputed by Bulkeley to officiate in his room as judge of the Vice Admiralty Court.  
Col. Off. N. S. vol. 2, p. 304
- November 10, Halifax. ———to Dundas. Transmits monthly return.  
Col. Cor. N. S. vol. 31, p. 156
- November 12, Halifax. *Enclosed.* Return.  
Memorial of Moses de les Dernier. Enclosed in Captain George's letter of 26th July, 1799, which see.
- November 14, Halifax. Memorial of John Butler Butler and George Thesiger to Wentworth for a grant of land.  
Col. Cor. N. S. vol. 29, p. 208
- November 17, Halifax. Wentworth to Secretary of State (Portland). Is still indisposed; entreats for indulgence respecting the public business. Bulkeley has authorised Brenton to act as his deputy in the Court of vice Admiralty and given him the whole of the emoluments of the office. Transmits abstracts and vouchers for expenditures on behalf of the maroons, who are improving in industry and are settling to good effect.  
Col. Cor. N. S. vol. 28, p. 213  
(An extract is in Portland's of 4th January, 1799).
- Enclosed.* Copy of the obligation entered into by the United States Secretary of War to reland the cannon lent to the United States by the British Government free of expense in any part of His Majesty's American Dominions if required.  
220  
(Another copy is at p. 224).
- Liston to Wentworth, 15th October. The President has dispatched two armed vessels to Halifax, to fetch the guns formerly belonging to the "Foudroyant."  
218
- Declaration of commissioners appointed to decide the true river St. Croix, 25th October.  
216

## Department of Agriculture—Archives.

1798.  
November 17, Halifax. Brigadier Murray to———. Has delivered the cannon and shot to Captain Sever, agreeable to an arrangement made by Prince Edward before sailing for England. Col. Cor. N. S. vol. 28, p. 222
- November 17, Old Brompton, Richard Bulkeley to King. Complaints having been made to Portland respecting the proceedings of the court of Admiralty in Nova Scotia, which tend to the prejudice of the judge (his father,) trusts he may have an opportunity of replying to the charges. 318
- November 20, Halifax. Wentworth to Secretary of State (Portland). Transmits proceedings of the General Assembly; gives list of Acts passed, with remarks. Col. Cor. N. S. vol. 33, p. 35
- Enclosed.* Journal of Legislative Council, from 8th June to 7th July. 99
- Journal of Assembly for the same period. 130
- December 10, Halifax. Wentworth to King. Family matters. Reported death of Temple at New York; recommends Barclay to succeed as consul. Laments the dissonances at Quebec. (For the quarrels between Prescott and his Council, see Archives, series Q, vols. 80 to 83). Inconvenience caused by the delay in sending the estimates. Change of feeling in the United States towards Great Britain and complaints of heavy taxation; application from 300 families to remove from the United States to Nova Scotia; if lands were granted, points out the value of such an immigration. A. & W. I. vol. 598
- December 18, Clermont, N.S. Memorial of the Bishop of Nova Scotia for the appointment of an ecclesiastical commissary, with a salary. Col. Cor. N. S. vol. 34, p. 445
- December 28. Bishop of Nova Scotia to the Society for the Propagation of the Gospel. The missionaries have received no allowance from Government, owing to the estimate for 1798 not having arrived. It would be more convenient were they allowed to draw on the provincial agent in London; hopes the society will aid in effecting this change. Col. Cor. N. S. vol. 29, p. 253
- No date. Petition of the maroons, complaining of their removal from Jamaica to Halifax. Col. Cor. N. S. vol. 28, p. 18
1799.  
January 3, Whitehall. (A duplicate is at p. 272.) King to Wentworth. Transmits estimate for 1799. Col. Off. N. S. vol. 2, p. 305
- January 4, London. Thornton to Secretary of State (Portland). Transmits petition from the maroons in Nova Scotia. Col. Cor. N. S. vol. 29, p. 210
- January 4, Whitehall. *Enclosed.* Petition to the House of Commons, undated. 212
- Secretary of State (Portland) to Thornton. Acknowledges receipt of petition, but has some doubts of its genuineness; encloses extract from a letter of Wentworth's, dated 17th November, 1798, showing his opinion of the progress the maroons are making. Will forward petition and letter to Wentworth. 215
- Enclosed.* Extract from Wentworth's letter; the whole letter will be found at its date, 17th November.
- January 11, Whitehall. Secretary of State (Portland) to Wentworth. The cannon from Halifax are to be presented unconditionally to the United States, instead of being lent. Col. Off. N. S. vol. 2, p. 306
- January 17, Whitehall. Same to the same. Transmits what purports to be a petition from the maroons to ascertain if it is genuine and how it could have been sent without his knowledge. To report the actual state of the maroons and when they may be expected to subsist themselves. Col. Cor. N. S. vol. 29, p. 1
- (Copy in Col. Off. N. S. vol. 2, p. 307.)
- January 20, Whitehall. Secretary of State (Portland) to Wentworth. Barclay to be appointed to the Council. His satisfaction at the report of the loyalty, harmony and prosperity which prevail. Refers him to previous letters on the subject of the maroons. His ignorance of what provision has been

1799. . . . . made in Jamaica; the caution to be observed in expenditure. Has communicated to Grenville the part of the letter relating to the proceedings of the boundary commissioners. Col. Cor. N. S. vol. 29, p. 3  
(Copy in Col. Off. N.S. vol. 2, p. 308, where it is dated 21st.)
- January 25, Secretary of State (Portland) to Wentworth. Has transmitted the Whitehall. accounts to the various departments to have them examined; calls serious attention to the necessity of providing the vouchers. Col. Off. N.S. vol. 2, p. 311  
Copy of observations on accounts sent by Wentworth, relative to the maroons, transmitted on this date to Wentworth. Col. Cor. N. S. vol. 29, p. 8
- February 24, King to Portland (unsigned and unaddressed). Sends the resolution Whitehall. of the Sierra Leone company with a note from Thornton relative to the maroons in Nova Scotia. Advises their removal as, according to Butler's account, they will never settle in Nova Scotia, and Wentworth's judgement is not to be relied upon in the matter. 220  
*Enclosed.* Thornton to King. Encloses copy of a resolution of the court of directors of the Sierra Leone company on the subject of the maroons. A ship is likely to sail to Africa shortly, by which it is desired to send orders if possible. 224  
Resolution of the directors that they will be willing to undertake the superintendence of the maroons if they are placed in the neighbourhood of their colony. 226
- March 5, Secretary of State (Portland) to the Sierra Leone company. Thanks Whitehall. for communication respecting the proposed removal of the maroons from Nova Scotia to Africa. The importance of the settlement; no time should be lost in effecting so desirable an object. Trusts that instructions may be sent to the Governor to secure any island on the coast that may be required for their establishment. Suggests that the expense might be met by the exportation to the coast of rum and tobacco, that being the best market, and also to send such articles as the maroons may require; they will carry with them implements of husbandry and necessaries. The expense of their subsistence to be put a stop to, as soon as they can subsist themselves. 10  
(Copy in Col. Off. N.S. vol. 2, p. 312.)
- March 11, Thornton to King. Respecting the settlement of the maroons by the Coleman Street. Sierra Leone company. Col. Cor. N. S. vol. 29, p. 228  
*Enclosed.* Resolution of the Sierra Leone company, 8th March. Desire the Government to dispatch a cutter immediately to Sierra Leone to apprise the Governor and Council of the intended settlement of the maroons. 232
- March 19, Thornton to King. The "Triton" ordered to Plymouth. Coleman Street. 233
- March 22, Same to the same. Sends with this a letter to the Secretary of State Coleman Street. (Portland) and a copy of that part of the dispatches of the Sierra Leone directors which respects the settlement of the maroons in Africa. 235  
*Enclosed.* Thornton to Portland. Sends copy of dispatches from the directors of the Sierra Leone company. 237  
Copy of part of the dispatch of the Sierra Leone company to their Governor and Council respecting the settlement of the maroons. 239
- April 3, ——— to Dundas. Transmits monthly return. Halifax. Col. Cor. N. S. vol. 31, p. 159  
*Enclosed.* Return.
- April 10, Wentworth to Secretary of State (Portland). There being no base Halifax. coin in the province, considers the proclamation might be postponed. Col. Cor. N. S. vol. 29, p. 20

## Department of Agriculture—Archives.

1799.  
April 13,  
Halifax.

Wentworth to Secretary of State (Portland.) Transmits accounts and vouchers to December last for sub-sistence and settlement of maroons. The settlers at Boydville are industriously pursuing their labours; those at Preston are still deluded with schemes of returning to Jamaica. Those that refuse to work shall receive no further supply of provisions.

Col. Cor. N. S. vol. 29, p. 22

April 14,  
Halifax.

Same to King. His state of health. Sends specimens of the progress made in the Maroon schools. The difficulties with the men; they neglect cultivation, hoping to be kept in idleness. Expected arrival of the "Earl of moira" from New York, with the January and February dispatches, hopes she will bring in the French brig loading with provisions for Guadaloupe, covered under American names. It is supposed there are important papers from the Jacobin family concealed in the packages. Confinement of Miller and Parson Cossit in gaol at Cape Breton on some paltry charge. Happy state of Nova Scotia. Memorial enclosed.

*Enclosed.* Memorial from Sybilla Margaret, widow of Houseal, missionary to the Protestant Germans at Halifax, for a pension.

Specimens of papers by boys in the maroon school at the examination. Letter and enclosures in A. & W. I. vol. 598.

April 17,  
Gower Street.

Morice to King. Sends extract from a letter from Bishop of Nova Scotia.

Col. Cor. N. S. vol. 29, p. 251

April 25,  
Halifax.

(For enclosure see 28th December.)

Wentworth to Secretary of State (Portland). Has removed into the country on account of his health; the province being in a peaceable state, his presence in town is not necessary. Encloses memorial from the German congregation of Halifax, which he recommends.

Col. Cor. N. S. vol. 29, p. 27

*Enclosed.* Petition, same date, from the German congregation of St. George's Church, Halifax, praying that the Rev. George. Wright may be appointed their minister.

May 2,  
Halifax.

Vieih to the Bishop of Nova Scotia. Enclosed in Wentworth's letter of 17th August, which see.

May 4,  
Halifax.

Memorial of Margrett, widow of Foster Hutchinson. Enclosed in Wentworth's letter of 5th May, which see.

May 5,  
Halifax.

Wentworth to Secretary of State (Portland). Dispatches received. Will reply to the memorial of the maroons, that if it had not been for the machinations of artful and designing men they would long ago have been reconciled to the soil and climate of the country. Encloses memorial from Mrs. Hutchinson and letter and petitions from the maroons.

Col. Cor. N. S. vol. 29, p. 31

*Enclosed.* Memorial of Widow Hutchinson, that the pension allowed to her husband may be continued to her.

33

Petition from the maroons, 5th May Represent the need they have of an addition to their stock; they thankfully recognize his kindness and liberality towards them and disapprove of the mistaken conduct of their brethren at Preston. The school at Preston is too far distant to be of any use to their children, they are anxious for instruction.

35

Benjamin Gray (a maroon) to Wentworth. Is about to be married and desires assistance. The woman can spin, knit, sew, cook and wash.

37

May 15,  
Kensington  
Palace.

Duke of Kent to Dundas. Sends memorandum respecting the various points to be settled before his departure for America. Col. Cor. N. S. vol. 31, p. 163

*Enclosed.* Memorandum. Desires that his command may be precisely of the same extent as that of the admiral on the Halifax station and that Bermuda may be included in the commission. Requests that Newfoundland may be mentioned in the most pointed and clear manner in his commission to avoid misapprehension and disputes with the admiral. Suggests that there should be a commissary general and bar-

1799. rack master general for the whole of the North American provinces, these officers to be responsible for the conduct of those under them, which would tend to prevent abuses in their respective departments. Col. Cor. N. S. vol. 31, p. 165.
- May 18, Madras. Strange to King. Reminds him that Hutchinson is a fit person for the Bench of Nova Scotia. Col. Cor. N. S., vol. 29, p. 273.
- May 18, Madras. (Duplicate at p. 271). Strange to Wickham. Recommends Foster Hutchinson (lineally descended from Governor Hutchinson of Massachusetts) for a seat on the Bench of Nova Scotia. Requests him (Wickham) to mention the matter to Portland and King. 281
- May 21, Clermont, N.S. Bishop of Nova Scotia to Veith. Enclosed in Wentworth's letter of 17th August, which see.
- May 23, Halifax. Wentworth to King. Long account of the condition of the maroons; the intrigues carried on to make them discontented, &c. The reported negotiation with the Sierra Leone Company to remove the maroons to Africa. Their determination to get to Jamaica, so that precautions must be redoubled there; had the maroons been left alone they would have been a quiet and happy people. A. & W. I. vol. 598
- May 23, Annapolis Royal. Deposition by Barclay respecting the maroons, and the efforts made by Wentworth to provide for them and to lessen expenditure. A. & W. I. vol. 598
- May 24, Halifax. Wentworth to King. Approves of the transfer of the maroons to the Sierra Leone Company; how the cost of their removal could be lessened; the satisfaction of the inhabitants at their being taken away. A. & W. I. vol. 598
- May 25, Halifax. Deposition of Thomas Barclay. Enclosed in Wentworth's letter of the 30th May, which see.
- July 27, Halifax. Wentworth to King. Arrangements for conveying Barclay to his consulate were approved of by Murray, who afterwards changed his mind and interposed obstacles; he (Wentworth) will carry out the first arrangement. Encloses correspondence with Murray on the subject. The correspondence follows. A. & W. I. vol. 598
- May 30, Halifax. Wentworth to Secretary of State (Portland). Gives an account of the condition of the maroons; encloses a statement of facts, with depositions and letters relating to the settlement. Col. Cor. N. S. vol. 29, p. 50
- Enclosed.* Statement of facts, 29th May, respecting the settling of maroons in Nova Scotia, signed by Wentworth. 56
- Deposition of Thomas Barclay, 25th May, that Wentworth had done all in his power for the comfort and welfare of the maroons, but that his efforts were frustrated by evil disposed persons. Wentworth derived no benefit from the maroons; on the contrary, he had been put to expense and inconvenience. 74
- May 30, Halifax. Wentworth to Secretary of State (Portland). Dispatches received. Barclay has been unable to take his seat in Council, to which he was nominated; his duties as Consul General to the Eastern United States require his constant residence in New York. Has received circular letter respecting the islands in Passamaquoddy Bay. 76
- May 30, Whitehall. Secretary of State (Portland) to Wentworth. Has received notice from the Treasury that he has drawn bills for the subsistence of the maroons. Although repeatedly desired to send vouchers with all accounts, these orders have been disregarded, so that he will stand personally charged with the amount of every bill drawn on the Treasury. In the meantime, to save the heavy charge for protesting, has recommended payment. Has transferred to the Treasury the accounts for the maroons to 31st December, to be examined by the proper departments;

## Department of Agriculture—Archives.

1799.  
calls attention to the inaccuracies in the abstracts and accounts, and is surprised that the accounts last received contain charges for expenditures so far back as 1797. Col. Cor. N. S. vol. 29, p. 38  
(Copy in Col. Off. N. S. vol. 2, p. 318.)
- May 31,  
Dartmouth. Fraser, surgeon to the maroons, to Wentworth. Has not been able to trace the smallest symptom of distress or suffering by a scarcity of provisions among the maroons, although the allowance has been stopped. The soil allotted to them is good, and if they had worked, each family might now have supported itself. Col. Cor. N. S. vol. 29, p. 70
- June 2. Duke of Kent to Dundas. States the number of troops necessary for the defence of British North America. Col. Cor. N. S. vol. 31, p. 169
- June 4,  
Kensington Palace. *Enclosed.* Recapitulation of the number of troops requisite. 173  
Vesey to Wichkam. The Duke of Kent hopes that the allowance to French emigrants in Nova Scotia may not be discontinued. Col. Cor. N. S. vol. 29, p. 255
- June 10,  
Whitehall. Secretary of State (Portland) to Wentworth (secret). Respecting maroons. 42
- June 10,  
Whitehall. Same to the same. Approves of his not issuing the proclamation against base coins, there having been no necessity to do so in his province. Refers to previous letters on the maroons. The recommendation of Wright would incline him to recommend his appointment to be minister of the German congregation, but that is subject to the jurisdiction of the Bishop of Nova Scotia. Sees no reason for erecting the German church into a separate parish, although it is right that the property and privileges belonging to the church and burying ground should remain unaltered. 47  
(Copy in Col. Off. N. S. vol. 2, p. 323.)
- June 17,  
Gower Street. Morice to King. Intimates the hope of the Society for the Propagation of the Gospel, that another Government allowance may be granted for Nova Scotia in the next estimates. Col. Cor. N. S. vol. 29, p. 257.
- June 17,  
Gower Street. Same to the same. The Society considers Wright a very proper person to succeed Houseal as minister of the German congregation at Halifax. 259
- June 24. Prince Edward to Secretary at War (extract). Enclosed in the Duke of Kent's letter of 17th September, which see.
- June 24,  
Freetown. Governor and Council of Sierra Leone to Prescott and Wentworth. Trust that if one of His Majesty's ships convoy the transports, she may remain some time for the protection of the settlement. Request that a few guns should be sent. Detail the preparation making for the reception of the maroons, who will probably be placed on a small island called the Bananas. They particularly request that the express terms of their admission may be read and explained to them. Col. Cor. N. S. vol. 29, p. 200
- June 26,  
Downing Street. Dundas to Secretary of State (Portland). Enclosed in the Duke of Kent's letter of 9th September, which see.
- June 27,  
Whitehall. Secretary of State (Portland) to Dundas. Enclosed in the Duke of Kent's letter of 9th September, which see.
- June 27,  
Halifax. Certificate to the master of the "Nelson". Enclosed in Wentworth's letter of 29th September, which see.
- July 2,  
Halifax. Wentworth to Secretary of State (Portland). The General Assembly convened; encloses his speech and the answers; the revenue bill not passed. Encloses the deposition of Capt. Moody relating to maroon affairs. Col. Cor. N. S. vol. 29, p. 84
- Enclosed.* Speech, addresses, &c.  
(These are extracts from the journals).

1799. Deposition of Capt. Moody relating to the maroons, 2nd July. Col. Cor. N. S. vol. 29, p. 96
- July 3, Halifax. Wentworth to King. Arrival of Lady Wentworth and son. The college at Windsor has now rooms to accommodate 30 students; reports the arrangements for their comfort. There is a necessity for the charter and a proper president is required; asks his (King's) influence in favour of Ashley of Brazenose, Oxford; the provision made for his support. A. & W. I. vol. 598
- July 9, Whitehall. King to Brownrigg. Enclosed in Duke of Kent's letter of 9th September, which see.
- July 13, Whitehall. Secretary of State (Portland) to Wentworth. Transmits letter from Brownrigg to King, enclosing one from Murray. To prevent misunderstanding as to the command of the troops, sends copy of circular of 9th February, 1765. Col. Cor. N. S. vol. 29, p. 78  
(Copy in Col. Off. N. S. vol. 2, p. 325).
- July 15, Halifax. Deposition of Wallace. Enclosed in Wentworth's letter of 22nd July, which see.
- July 17, Whitehall. King to Wentworth. Requests his opinion whether Butler would require a new mandamus before taking his seat in the Council. Col. Cor. N. S. vol. 29, p. 80
- July 17, "Royal William." Parker to King. Has delivered to Capt. Wolley of the "Arethusa," the packet addressed to the Duke of Kent. 261
- July 17, Horse Guards. Brownrigg to King. Wentworth's letter and enclosures laid before the commander-in-chief, who intends to submit to His Majesty the propriety of removing General Murray from Nova Scotia. A. & W. I. vol. 598
- July 18, Whitehall. Secretary of State (Portland) to Wentworth. Agrees with the Duke of Kent in the advantages of making the provincial troops fencible, to serve in any province, but as they were raised as a provincial corps to serve only in their own province, a change, if decided on, can only be by the voluntary act of the men. From previous offers of general service made by the Nova Scotian regiment has no doubt that corps will voluntarily extend its services, in which case he is to concert measures with the Duke of Kent to carry it out. Col. Cor. N. S. vol. 29, p. 82  
(Copy in Col. Off. N. S. vol. 2, p. 326).
- July 19, Halifax. Blowers to Wentworth. Enclosed in Wentworth's letter of 22nd July, which see.
- July 20, Halifax. Wentworth to Secretary of State (Portland). Reports the state of the Council. Col. Cor. N. S. vol. 29, p. 100
- July 21. Duke of York to Duke of Kent. Enclosed in the Duke of Kent's letter of 9th September, which see.
- July 22, Halifax. Wentworth to Secretary of State (Portland). The revenue bill is passed, the appropriation bill is now under consideration. Transmits the accounts of the Royal Nova Scotia regiment, and a deposition of Wallace, relative to maroon affairs. 103  
*Enclosed.* Deposition, dated 15th July, of Michael Wallace, relating to maroon affairs. 109
- Blowers to Wentworth, 19th July. The accounts of the Royal Nova Scotia regiment have been audited by the Council; those of the maroons cannot be examined till after prorogation. 107
- July 24, Halifax. Journals of Council and Assembly. Enclosed in Wentworth's letter of 24th May, 1800, which see.
- July 26, Transport Office. Captain George to King. Transmits memorial to be laid before Portland. Col. Cor. N. S. vol. 29, p. 263  
*Enclosed.* Memorial of Moses De Les Dernier to Secretary of State (Portland). Prays for a grant of 20,000 acres in Nova Scotia, in consideration of his services. The memorial is undated; testimonials are dated 12th November, 1798. 265

## Department of Agriculture—Archives.

1799.  
August 10,  
Wallerton. Walpole to Secretary of State (Portland). Sends petition from the maroons in America. As His Grace doubted the genuineness of a former petition, has endeavoured to verify the signatures of the enclosed, but without success. Col. Cor. N. S. vol. 29, p. 267  
*Enclosed.* Petition of the maroons to the King, dated ——— August, 1798. 269
- August 16,  
Halifax. Ogilvie to Dundas. Forwards the return of the Royal Nova Scotia regiment, dated 1st August. Col. Cor. N. S. vol. 31, p. 174  
*Enclosed.* Return. 176
- August 17,  
Halifax. Wentworth to Secretary of State (Portland). Dispatches received; will be prepared to embark the maroons when the ship arrives. Encloses two letters respecting the succession of Wright to the church occupied by the late Mr. Houseal. 120  
*Enclosed.* Adolphus Vieth, elder and trustee of the German congregation of St. George to the Bishop of Nova Scotia, dated 2nd May. The Rev. George Wright having been chosen as the minister by a large majority of the congregation, a small number desire to have a German appointed, he (Vieth) desires the Bishop to express his opinion on the subject. 126  
Bishop of Nova Scotia to Vieth. Assures him of his wish to serve the congregation. Speaks highly of Wright's character and abilities and thinks it more advisable to have an English than a German minister. 128
- August 17,  
Halifax. Wentworth to Secretary of State (Portland). The session closed on 24th July. Transmits speech, &c. 130  
*Enclosed.* Speech, &c., extracted from the journals.
- August 18,  
Halifax. Wentworth to Secretary of State (Portland). Gives an account of several attempts to set fire to the dockyard, a reward of £200 has been offered for the discovery of the offenders. Col. Cor. N. S. vol. 29, p. 138
- August 18,  
Halifax. Wentworth to King. The past session has not been so good humoured as formerly, chiefly owing to the machinations of Tonge, who has also not a little assisted in causing the discontent of the maroons. Encloses specimens of the hand writing of the maroon school boys. Is taking every precaution for the safety of the dockyard. Capt. Thompson wishes to continue in the post office service, requests him (King) to promote his wishes. The college at Windsor is now ready for the patent of incorporation; desires that the Rev. Mr. Ashley of Brazenose, Oxford, may be immediately sent out as president. 142  
*Enclosed.* Five specimens of the hand writing of maroon school boys. 148
- September 17,  
Whitehall. Secretary of State (Portland) to Wentworth. Repeats that vouchers must be sent with bills drawn on the Treasury; refers to those for subsistence of the maroons and for the hire of the "Earl of Moira." No further bills will be paid without vouchers; he has only recommended payment of the present bills on account and to stand as a personal charge against him (Wentworth). 115  
(Copy in Col. Off. vol. 2, p. 328).
- September 9,  
Whitehall. Secretary of State (Portland) to Wentworth. Is glad to find that the revenue bill had been agreed to, as it would have been detrimental to the province had it been rejected. The importance of the insolvent bill. Refers him on the subject of maroons to letter of 10th June. Col. Cor. N. S. vol. 28, p. 118  
(Copy in Col. Off. N. S. vol. 2, p. 332).
- September 9,  
Halifax. Duke of Kent to Wentworth. Enclosed in Wentworth's letter of 26th September, which see.
- September 14,  
C. Fourchu. Robertson to Foreman, Grassie & Co. Enclosed in Wentworth's letter of 29th September, which see.

1799.  
September 17, Prince Edward to Secretary of State (Portland). Has received warrant as Commander-in-Chief to empower General officers commanding the several districts to convene courts martial, but has received no authority to delegate his power of putting into execution such sentences as the courts may award. Col. Cor. N. S. vol. 30, p. 235  
Halifax. *Enclosed.* Prince Edward to the Secretary at War, 24th June, (extract). On the subject of putting into execution the sentences awarded by court martial. 237
- September 26, Wentworth to Secretary of State (Portland). Dispatch, with enclosures, received. Regrets that a remark of his made at an entertainment given by Brigadier General Murray should have given rise to apprehensions that he (Wentworth) intended to extend his military power and caused Murray to report such a trivial matter to the Duke of York. Col. Cor. N. S. vol. 29, p. 166  
Halifax. *Enclosed.* Duke of Kent to Wentworth, 9th September. Communicates His Majesty's pleasure that the provincial corps should be placed on the footing of fencibles and encloses papers for his information. 170
- Dundas to Secretary of State (Portland), 26th June. The Duke of Kent, having been appointed Commander-in-Chief in British North America, has suggested that the provincial regiments should be placed on the footing of fencibles to serve throughout North America generally; desires that the Governors of the several provinces be instructed accordingly. 176
- Secretary of State (Portland) to Dundas, 27th June (unsigned extract.) The services of the provincial regiments being confined to their respective districts, any extension must be voluntary on their part. 180
- King to Brownrigg. Transmits letter from Portland to Dundas, desiring him to lay it before the Duke of York. 178
- Duke of York to Duke of Kent, 21st July (extract). His Majesty approves of the provincial corps in North America being placed on the footing of fencibles, the measure not to be carried into execution until the dispositions of the corps are ascertained. 174
- September 27, Wentworth to Secretary of State (Portland). Dispatch, with enclosures received, recommending that the provincial regiments should be put on the footing of fencibles. The regiment of Nova Scotia cheerfully acceded to the project; encloses copy of their address. 168  
Halifax. Copy of address (with signatures) to Wentworth from the Royal Nova Scotia regiment (undated) expressing their willingness to accept the rank of fencibles and to serve in any part of the continent of North America. 182
- September 27, Wentworth to King. Safe arrival of the Duke of Kent after a passage of 43 days; he has entered upon his command with great activity. Butler's situation as deputy commissary general would not permit him to attend the Council regularly, it would, therefore, be inexpedient to appoint him; Brenton is admitted to the only vacant seat. Recommends Belcher and Forsyth for the next vacancies. Trusts if his regiment is to be made completely fencible, that he may receive the usual pay and emoluments. 183  
Halifax.
- September 29, Same to Secretary of State (Portland). Encloses letter of service for the schooner "Nelson"; not having letters of marque, a prize she captured was taken possession of by H.M.S. "Brunswick." Requests he may be furnished with the usual authority to issue letters of marque and reprisal. 187  
Halifax. *Enclosed.* Certificate, 27th June, granted by Wentworth to the master of the schooner "Nelson." 189

## Department of Agriculture—Archives.

1799.

- Robertson to Foreman, Grassie & Co. In consequence of the deficient commission of the schooner "Nelson," H. M. S. "Brunswick" took possession of a prize she had captured. Col. Cor. N. S. vol. 29, p. 190
- Capt. Freeman's report of a cruise in the "Charles Mary Wentworth" and his proceedings against His Majesty's enemies. 192
- September 30, Wentworth to Secretary of State (Portland). Has not been able to  
Halifax. discover the incendiary who endeavoured to destroy the dockyard, although the reward was increased from £200 to £600. Considers it was the work of individual malice and not a concerted plan. 194
- October 8, Secretary of State (Portland) to Wentworth. Sends this letter by  
Whitehall. Ross, who is to take charge of the maroons, as agent for the Sierra Leone Company. 157
- (Copy in Col. Off. N. S. vol. 2, p. 334.)
- October 9, Secretary of State (Portland) to Wentworth. The fear and dislike of  
Whitehall. part of the maroons to accompany the rest to Sierra Leone; all, however, must be embarked without exception. The eight families who are incorrigibly bad should not be allowed to settle with the rest, but should be set down by themselves on some other part of the coast of Africa, with a sufficient supply of provisions &c. There should be no difficulty before their departure to reconcile quarrels among the maroons; but as they are to retain no weapons, no serious danger is to be apprehended. Refers to previous letter respecting the German congregation of St. George's Church; he shall take the King's pleasure on the proposal that £200 be granted towards enlarging or rebuilding the church. Congratulates him on the conduct of the General Assembly; the money granted to repair the post roads will be of advantage and the sum for the erection of a mansion for the Lieut.-Governor is a flattering mark of attention to His Majesty's representative. His concern at attempts to set fire to the careening yards; hopes the precautions taken will prevent the execution of so wicked a design. Col. Cor. N. S. vol. 29, p. 159
- (Copy in Col. Off. N. S. vol. 2, p. 335.)
- October 19, Secretary of State (Portland) to Wentworth. In consequence of re-  
Whitehall. strictions lately imposed by the Emperor of Russia on the exportation of timber, the Admiralty represent that it would be a material advantage if masts, spars and deals could be imported from the United States to be deposited in Halifax for the use of the Navy. He is, therefore, to allow such importation and a bill of indemnity shall be submitted to Parliament to sanction the proceedings. Col. Off. N. S. vol. 2, p. 340
- October 22, Wentworth to Secretary of State (Portland). The transport "Asia"  
Halifax. will bring one of the regiments ordered to Halifax. The maroons shall be embarked without delay on arrival of the transports. Sends letter from the Governor and Council of Sierra Leone, respecting the maroons. Col. Cor. N. S. vol. 29, p. 192
- (For enclosure see at its date, 24th June.)
- November 6, Sabatier to King. Respecting the appointment of his brother-in-law,  
Clifton. Foster Hutchinson, to a legal appointment in Nova Scotia. Col. Cor. N. S. vol. 29, p. 275
- November 9, Zachary Macaulay to King. The slave-traders are inimical to the  
Sierra Leone work of the company; desires that Government may dispatch an armed  
office. vessel to Sierra Leone for the protection of the settlement. 277
- November 19, Wickham to the same. Transmits letter from Strange recommending  
Augsburg. Foster Hutchinson. 279
- (For enclosure see at its date, 18th May.)
- November 22, Duke of Kent to Secretary of State (Portland). Reports the unex-  
Halifax. pected arrival of the Duke of Orleans and his brothers, which has placed him in a most embarrassing position. Mathews, Attorney-General of Cape Breton, being represented as a man of a very turbulent and vindic-

1799. tive disposition, advises his recall, which may put an end to the long existing feuds and controversies in that island.
- November 27, Col. Cor. N. S. vol. 30, p. 23 9  
Halifax. Wentworth to King. The brig "Earl of Moira" has returned with her convoy from Quebec, after a most tempestuous passage. Has directed the master of the "Asia" to be vigilant and determined, as the maroons are exceedingly disposed to mischief. The Royal Nova Scotia regiment is at a loss to conceive what is intended by the late measure [for its establishment] as it was originally raised without limitation and always volunteered for every duty proposed. Tonge, naval officer, is disturbing the peace of the province by his insidious practices. The Duke of Orleans and his two brothers arrived on the 30th ult; dined with the Duke of Kent and left for New York to take passage to England.
- December 3, Col. Cor. N. S. vol. 33, p. 1  
Halifax. Same to the same. Wrote on 29th (the letter is dated 27th). The 26th regiment has embarked on board the "Asia" transport; lack of sailors to navigate the vessel will delay the departure of the maroons; if any proper vessels can be had, will hire them instead of waiting till the "Asia" is ready. 7
- December 8, Duke of Kent to Dundas. Gives a statement of the present force in  
Halifax. North America and an estimate of that which appears to be additionally necessary. The Newfoundland fencibles are composed of an infamous set of men; two thirds being United Irishmen, they should be removed if possible to some other station. Col. Cor. N. S. vol. 31, p. 177
- December 19, List of effects furnished by Madame de Longueville to the British  
Halifax. army during the three months the troops occupied the post of St. John. (The claim was attested before Judge Brenton at Halifax on the date in the margin; so far as can be made out, it arose from the British occupation of St. Domingo, which was placed under British protection in 1793.) A. & W. I. vol. 598
- December 20, Wentworth to Secretary of State (Portland). Will pay particular  
Halifax. attention, as directed, to the right of waterway in Passamaquoddy Bay. Transmits six documents to prove the right of Great Britain to the islands in the Bay of Passamaquoddy. Col. Cor. N. S. vol. 33, p. 147
- Enclosed.* (1). Extracts from the records of grants of land in Nova Scotia. 161  
(2). Plan of that part of the Bay of Fundy called Passamaquoddy. 164  
(3). Extract from grant of King James to Sir William Alexander. 166  
(4). Extract from commission to Governors of Nova Scotia describing the boundaries. 168  
(5). Extract from Act of Parliament 15, George III. cap. 10, sec. 12. 170  
(6). President Adam's deposition concerning the true river St. Croix. 172
- December 21, Wentworth to Secretary of State (Portland). Has received printed  
Halifax. regulations of 10th September, respecting fortifications, &c., to which due obedience shall be paid. 17
- December 21, Disputes among various parties in the United States, an extract from  
Halifax. the *Weekly Chronicle*. 16
- December 21, Wentworth to King. Will transmit report early in January of pro-  
Halifax. vincial business; the province has been prosperous, particularly in its commerce. 9
- December 21, Same to Secretary of State (Portland). Dispatches delivered to him  
Halifax. by Ross, employed by the Sierra Leone Company to attend the maroons to Africa. Has not been able to hire transports at a reasonable rate to accommodate the maroons. The German congregation of the Church of England are thankful for the arrangement made to annex them as a chapel of ease to the Rectory of St. Paul's. 11

## Department of Agriculture—Archives.

1800.  
January 15,  
Halifax.

Duke of Kent to Dundas. Has purchased a vessel for the purpose of conveying dispatches from headquarters to the distant parts of the command; requests that an order be obtained to fit out the vessel and repair her from time to time in the dockyard at Halifax.

Col. Cor. N. S. vol. 31, p. 187

January 20,  
Halifax.

Wentworth to King. The transport "Asia" cannot leave Quebec this winter, and there are no vessels in the harbour capable of conveying the maroons to Sierra Leone. Great scarcity of cash, all money being sent to the United States, where it is at a premium of 14½ per cent.

Col. Cor. N. S. vol. 32, p. 145

(Duplicate in vol. 33, p. 27).

January 20,  
Whitehall.

Secretary of State (Portland) to Wentworth. Has transmitted to the Duke of York and to Dundas the report of the alacrity with which the officers and men of the Royal Nova Scotia regiment at and near headquarters had acceded to the proposal of putting the regiment on the footing of fencibles, and that it was expected the detachments at the outposts would do the same. The prize money for the capture made by the "Lady Nelson" should go to the owners, officers and crew; H. M. S. "Brunswick" has no claim to it; how those concerned are to substantiate their claim. Is surprised at the requisitions from Sierra Leone, and no less at his idea for a moment of complying with them. Clothing and provisions for the maroons are to be sent from London, and they are to be ready to embark with their implements of agriculture and other effects immediately after the arrival of the "Asia" at Halifax; he is not to purchase the brandy and tobacco he spoke of. Since writing the above he (Portland) has received dispatch that the "Asia" is detained at Quebec and cannot sail this season, and that he has purchased the brandy and tobacco in direct contravention of orders; he is to sell these articles, drawing on the Treasury for the loss only, or if he has already drawn for the whole amount he is to remit the proceeds. All he has to do with the maroons is to see that they are ready and to have them embarked; as soon as possible after that he is to dispose of their lands, buildings and the effects they have left to compensate, as far as the proceeds will go, for the expense attending them.

Col. Cor. N. S. vol. 33, p. 19

(Copy in Col. Off. N S. vol. 2, p. 342).

February 12,  
Coleman  
Street.

Thornton to King. Has received letter from Ross, who reports that the maroons are willing to go on the terms proposed; the "Asia" had not then arrived, and the freight asked by the Halifax shipowners was considered by Wentworth as too high. No ground has yet been bought for the maroons at Sierra Leone. There is dread of an attack by French frigates, and the Sierra Leone Company is sending out an armed ship. Gives particulars respecting Sierra Leone, its forts, &c.

Col. Cor. N. S. vol. 34, p. 449

February 13,  
Whitehall.

King to Thornton. The "Asia" is locked up in the ice at Quebec; another vessel will be sent for the maroons, with the same quantity of stores, &c., as were sent by the "Asia." Wentworth has unadvisedly bought stores at Halifax on the requisition of the Governor and Council of Sierra Leone, who did not know that the stores were to be sent out in the vessels intended for the conveyance of the maroons. 453.

February 23,  
Halifax.

Wentworth to King. Reports the ill health of himself and family. The Assembly convened; a reduction of duties proposed. The factious course of Tonge; his attempt to supplant Uniacke as speaker checked by a great majority against his proposal. Tonge's attempts to embarrass the government have always been unsuccessful, yet he perseveres. Ships to carry the maroons to Sierra Leone cannot be obtained. The date when the ships ought to leave, so as to avoid the rainy season on the coast. The maroons are ready to embark at an hour's notice; Tonge

1900.

- is trying to keep two families but shall not be allowed. It was fortunate the "Asia" did not arrive, as she imported a putrid fever into Canada, afterwards conveyed to Cape Breton in the "Hope," which was driven ashore in a snow storm; deaths of people in the hospital from the infection; everything in contact with the sick recommended to be burned. Sends return of the Royal Nova Scotia Regiment; its employment on outpost duty. Bernard will be appointed agent for the province instead of Cumberland. Has been informed that naval stores are to be imported from the United States for the careening yard; suggests a bounty on timber imported from the colonies into the United Kingdom; the value of various kinds of timber, &c. The good health of Prince Edward. He (Wentworth) is sending apples to him (King). The attempt of the Assembly to increase rather than to lessen duties, the country members being desirous of this as their constituents contribute little and draw considerable grants. A. & W. I. vol. 598
- February 24, Beckwith to Lord Newark. Asks His Lordship's influence towards  
Halifax. obtaining for him the office of prothonotary. Col. Cor. N. S. vol. 34, p. 457
- February 26, Wentworth to King. The Assembly has voted Tonge ineligible for  
Halifax. the county of Halifax; Wallace has been re-elected and taken his seat. Col. Cor. N. S. vol. 33, p. 33
- February 27, Wood to King. Asks him to remind Dundas of his promise of an ap-  
Halifax. pointment made in 1793 and to obtain for him the office of prothonotary. Col. Cor. N. S. vol. 34, p. 477
- Enclosed.* Copy of memorial by Wood to Parr, dated 3rd May, 1787, that he should not be suspended from his office until he could lay his case before His Majesty's ministers. Parr certifies to the truth of the memorial, but must obey orders. 481
- Certificate by the Chief Justice, law officers and advocates, of Wood's fidelity and ability. 485
- Memorial (undated) by Wood to Dundas to be reinstated in his office. 489
- Wood to King dated — February, 1793, on the same subject. 493
- March 5, Sabatier to King. Asks for an interview in relation to the memorial  
London. of Hutchinson of Halifax and encloses letter from Wickham on the subject. A. & W. I. vol. 598.
- Enclosed.* Wickham to Sabatier, 19th November, 1799.
- March 31. Strange to Nepean. Encloses information required from Pemberton. Col. Cor. N. S. vol. 32, p. 157;
- Enclosed.* Statement by Pemberton that in lieu of fees to the Chief Justice of Nova Scotia, an allowance of £200 a year was agreed to be paid. 158

- April 4, Beckwith to Newark. Repeats his request for His Lordship's influ-  
Halifax. ence to obtain for him the office of prothonotary and states the circumstances leading to the application. Col. Cor. N. S. vol. 34, p. 473
- April 6, Wentworth to King. The General Assembly was occupied with con-  
Halifax. tested elections since which time revenue and appropriations have been discussed. Differences of opinions between the Council and Assembly on the making of roads; the Council concurs in granting £5,000 or £6,000, but thinks it necessary to diminish the taxes, as being burdensome to commerce; the payment of the debt being effected and a fund secured for public buildings, the public faith requires that the taxes should not continue; both the Houses are attached to their plans. Is afraid that from the fomenting of dissensions in the Lower House, the session may not end happily. The appointment of Bernard as agent was unanimous; all other departments remain. He (Wentworth) has

## Department of Agriculture—Archives.

1800.

- discovered a large reserve of good mast timber; the advantage of this to Great Britain. The attention paid to his son at Washington by the president and others. A. & W. I. vol. 598
- April 27, Wentworth to King. His illness. The supplies of brandy and tobacco purchased for the maroons through misconception can be sold without loss. Ross, the agent for the Sierra Leone company, protests against the maroons sailing before August on account of them arriving in the rainy season if they sailed earlier; he (Wentworth) believes the climate to be bad and that no preparations will be made for their reception; the French have ravaged the whole coast except that of Sierara Leone, which was too poor to tempt even French rapacity. Dissensions in the General Assembly; hopes the session may close amicably. Differences respecting the money bills sent to the Council have been settled by a conference of both Houses on his (Wentworth's) advice; encloses documents relative to the dispute. Bernard's appointment as agent. Wetheral, in the confidence of Prince Edward, goes to London; it is believed the Prince wishes for the command in Ireland and for a grant of the coal mines in Cape Breton.
- Halifax.
- Enclosed.* Address of the Legislative Assembly to Wentworth, on the differences between the Assembly and Council, dated 23d April.
- Answer, dated 26th April. The letter and enclosures in A. & W. I. vol. 598.
- April 30, Skerrett to the Duke of Kent. Enclosed in the Duke of Kent's letter of the 24th May, which see.

Journal of Assmby, from 7th June to 24th July, 1799. 230
- May 27, Halifax. Wentworth to King. Admiralty reports received, which have been of great use at the trial of two vessels seized by the "Cleopatra." The French-Egyptian correspondence shows the unprincipled views and measures of France. Arrival of Major General Despard and Judge Advocate on the way to Cape Breton. Determination of Prince Edward to return to London, with or without leave. Mutiny in the Newfoundland regiment suppressed; how the men should be disposed of. A. & W. I. vol. 598
- May 27, London. Audit Office to Secretary of State (Portland). Call attention to the neglect by Wentworth to transmit accounts of the receipts and expenditures in Nova Scotia. A. & W. I. vol. 598
- June 10, Halifax. Wentworth to Secretary of State (Portland). Has received orders for the maroons to go on board the "Asia" for Sierra Leone. The correspondence enclosed will show the state of readiness in which the maroons are to embark. Immediately after their departure, the estates purchased for their use shall be advertised for sale, and accounts completed; expects to sell the brandy and tobacco without loss. The "Earl of Moira" is to take Despard to Sydney; the further employment of that vessel on the coast. Col. Cor. N. S. vol. 34, p. 1
- Enclosed.* Wentworth to Sherriff. The maroons are ready to embark when the "Asia" is ready. 5
- Answer to Sherriff that the "Asia" requires additional men before she can sail. 9
- Account of provisions on board the "Asia" for the maroons. 13
- June 11, Halifax. Wentworth to King. The "Earl of Moira" is sailing to-day for Cape Breton with Despard; he has no mandamus to act as President of the Council. A. & W. I. vol. 598
- June 18, Whitehall. Secretary of State (Portland) to Wentworth. Is surprised to find after repeated orders, that the vouchers for the accounts have not been sent; he is to do so at once, under pain of His Majesty's high displeasure. No bills will in future be paid unless accompanied by proper vouchers. Col. Off. N. S. vol. 2, p. 353
- June 21, Halifax. Wentworth to Secretary of State (Portland). The General Assembly met on the 20th of February, and closed on the 2nd of May; sends Acts and the journals of Council and Assembly. Gives reasons for the passing of the various Acts, and remarks on the proceedings as shown in the journals. Col. Cor. N. S. vol. 34 p. 21
- Enclosed.* Journal of Legislative Council. 61  
Journal of Assembly. 173  
"Observations upon an Establishment proposed to be made on the Isle of Sable; for the relief of the distressed and the preservation of property." 283  
"Statement of Facts relating to the Isle of Sable." 297
- June 22, Hinde Street. Spry to Secretary of State (Portland). The only way of making him a money compensation for the lands taken is by a vote of Parliament; asks His Grace to represent the case to Pitt officially. 499
- July 19, Whitehall. Secretary of State (Portland) to Wentworth. With the exception of some unpleasant discussions between the Council and Assembly, has satisfaction at the proceedings of the legislature in 1798, 1799 and this year; cannot understand why the Council did not agree to the conference with the Assembly, which would have settled the points in dispute. Takes it for granted that the "Asia" sailed immediately after the date of his (Wentworth's) letter; is not satisfied with the conduct of Shirreff, agent for the transports, in respect to the delay. Col. Cor. N.S. vol. 34, p. 15

July 22,  
Halifax.

July 23,  
Halifax.

Wentworth to Secretary of State (Portland). Transmits loyal address on the escape of the King from the attempt on his life. (The attempt was that made by Hadfield, a discharged soldier, who fired at the King in Drury Lane Theatre, in May.) The "Earl of Moira," after landing Despard and family on Cape Breton, proceeded to the coast to protect the trade, fishery and revenue, defrauded by smugglers from the United States, two of whom were seized and are now on trial; other movements of the "Earl of Moira." The injurious effects of the clandestine trade on the merchants of the province. Some men obtained for the "Asia" and a detachment of invalids to serve as marines. The maroons are to begin to embark on the 28th, and it is hoped will sail on the 2nd of August. 311

*Enclosed.* Address of the Lieutenant Governor and Council to the King. 319

August 1,  
Halifax.

Memorial of Boadicea, widow of Arthur Goold, stating her husband's services and asking for part of his pension. A recommendation from Wentworth is attached. 505

August 6,  
Halifax.

Wentworth to Secretary of State (Portland). The maroons are embarked on board the "Asia," 551 persons, all in good health except three and some suffering from the infirmities of old age; sends list of the property carried with them. Since the "Asia" arrived in Quebec and they knew they were to sail in her; they have been careless of their tools and have clandestinely sold some, but they still have an abundant supply for three years. Sends copy of letter written to Gray, acting Governor, and to Ludlam, of the Council of Sierra Leone. If the wind permit, the ship is to sail to-morrow; shall at once proceed to dispose of the estates and place the amount in the Treasury, as directed, and close and settle the accounts. 323

*Enclosed.* Return of baggage belonging to the maroons. The names and property belonging to each are given. At the end are receipts, certificates of packers &c. 327

Wentworth to Gray, 5th August. Sends receipt for the stores for maroons. States that they believed the people of Jamaica were to maintain them in idleness and that in Sierra Leone they might obtain slaves, women and labourers by their own valour. 419

August 6,  
Halifax.

Same to King. The maroons embarked and ready to sail; their gratitude and apprehension for the future. Prince Edward is probably now in London; he says vehemently he will never return to Nova Scotia. The satisfactory manner in which Hartshorne & Tremain completed the flour contract last year; the unsatisfactory contract, this year with the additional cost of importing and the uncertainty of receiving the flour in proper time; the cost of the existing system for the supply of other stores. Sends information relative to the maroon war, obtained with difficulty after the embarkation of the maroons. A. & W. I. vol. 598

*Enclosed.* Newspaper, with account of the sailing of the Duke of Kent.

Deposition of Robert Fowler respecting the origin of the maroon war in Jamaica, made at Dartmouth, 4th August.

August 29,  
Halifax.

Wentworth to King. Fires in the wood near the town; precautions to prevent the explosion of 1,000 barrels of powder stored in an old dry wooden barn. Has removed to Bedford Basin to escape the smoke &c. A fishing village has been destroyed; York redoubt is surrounded by fire, but the powder there is stored in a good stone magazine. In spite of the drought and fires, chiefly on the coast from Cape Sable to Halifax, the crops generally promise to be good. The fisheries are restricted by

1890.

- the high cost of wages and provisions ; other branches have more than made this up, besides the value of the prizes brought in. Sends memorial from Tremain & Stout, lessees of the collieries ; the increased cost by the change of system ; how supplies of fuel are now obtained. Distress caused by the non-arrival of the estimate. The successful sale of the maroon estates. Offer by the maroons to supply slaves from Sierra Leone ; mistake of the philanthropists in importing these ferocious slave hunters in the hope of putting an end to the slave trade ; the grief of Thornton and Wilberforce when they discover their mistake. Remarks on the proper method of dealing with the maroons and the duty of Jamaica in their removal. A. & W. I. vol. 598
- September 15, Wentworth to King. Is going to Windsor in relation to the college and will afterwards make a tour of the province. Disputes relative to the issue of marriage licenses ; his good understanding with the Bishop of Nova Scotia and his efforts in favour of the Church of England. Col. Murray still refuses to transfer the civil government of Cape Breton to Despard. A report has been received from the United States that the people are waxing warm about the interruption to their trade. A. & W. I. vol. 598
- Halifax.
- October 6, S. Bernard to the same. As agent for Nova Scotia he has been instructed to point out the inconvenience of the present boundary between that province and New Brunswick. Encloses a question which might be submitted to Carleton so as to obtain the opinion of New Brunswick on the subject. Col. Cor. N. S. vol. 34, p. 509
- Abingdon Street.
- Enclosed.* The question proposed. 511
- October 17, Secretary of State (Portland) to Wentworth. The general tenour of the Acts passed last session conduces to the interest of the province. The discussion respecting the rights and privileges of the Assembly may have arisen from the present constitution ; hopes they are now so well defined as not to leave room for differences. His relief at the sailing of the maroons ; the enormous expense attending them, that and the incorrectness of the accounts are matters of serious import. The King's satisfaction at the loyal address on his escape. The proposal respecting Sable Island requires mature consideration ; the first step is to have it surveyed and a place looked out for a lighthouse &c. ; desires to have further information. 427
- Whitehall.
- (Copy in Col. Off. N. S. vol. 2, p. 357, where the day of the month is supplied.)
- November 8, Wentworth to King. Has returned from his tour ; the prevalence of small-pox. Arrival of the "Mary" in 18 days. Murray still refuses to give up the civil government ; he and Despard have both named Councils. The improved state of the college at Windsor ; improvement and prosperity throughout the province. Recommends the establishment of six new missions of the Church of England to encourage a spirit of loyalty. French interests prevailing in the political affairs of the United States. He (Wentworth) disapproves of the appointment to the Council of a commissary, although he has a great regard for Butler. A. & W. I. vol. 598
- Halifax.
- November 10, Leonard to the same. Was gratified to learn that the sum of £600 was to be allowed for a vessel ; had hired one accordingly and proceeded to check the illegal traffic of the Americans. Will have a small vessel contracted for on his return and in the meantime has drawn for £400 in part of the first year's allowance. Col. Cor. N. S. vol. 34, p. 513
- St. John, N.B.
- Enclosed.* Report by Leonard of his proceedings as superintendent of trade and fishery. 517
- Report by his son as deputy. 525
- November —. Memorial of Leonard that his son may succeed him and that he may himself be appointed a consul in the United States. A. & W. I. vol. 598

## Department of Agriculture—Archives.

1800.  
December 13, Halifax. **Mary**, widow of Richard Bulkeley, to King. Her destitute condition, having no resource but in the benevolence of her Sovereign. With this letter will be handed a memorial to Portland. Col. Cor. N. S. vol. 34, p. 533
- 537
- Enclosed. Memorial.*
- December 25, Halifax. **Wentworth** to King. Death of Bulkeley; recommends Andrew Belcher and William Forsyth to succeed to the Council, adding Charles Mary Wentworth to make up the three required. Brenton appointed to succeed Bulkeley in the Vice-Admiralty Court. Recommends George Thesiger to succeed Henry Newton as Collector of Customs, in event of Newton's death or retirement; recommends, should the appointment take place, that £150 should be paid to the widow and £50 to the eldest daughter till married, to be paid from the income of the office. Prospects of the election in the United States. The ravages of small-pox in the province increased by the reluctance to submit to inoculation. A subscription to the amount of 300 guineas has relieved the urgent distress. The winter is mild and the markets plentiful. A. & W. I. vol. 598
- December 31, Halifax. **Naval officer's** return of vessels entered and cleared at Halifax. Col. Cor. N. S. vol. 35, pp. 1, 3
- No date. **Rough memorandum** of Parr's allowances and Wentworth's present salary. Col. Cor. N. S. vol. 32, p. 84
- Rough notes** respecting Nova Scotia, Newfoundland, the fisheries, &c., &c. 155
- Memorial** of Richard John Uniacke to Secretary of State (Portland) for compensation for his services. Col. Cor. N. S. vol. 34, p. 437
- Enclosed. Memorial* to Governor Parr, stating his services in 1783, acting instead of the Attorney General, Gibbons, in suits for the escheating of lands for the purpose of settling the loyalists. The memorial is also undated, but a certificate from Parr that the services were rendered is dated 30th December, 1790. 439
- Wentworth** to Treasury, 7th December, 1792. Uniacke performed the services stated in his memorial to the Treasury, was promised the usual fees and is entitled to be paid. 441.
- The date of the memorial to Portland as being 1800, is only conjectural, Portland being Secretary of State from 1794 to 1801.
1801.  
February 7, Kensington Palace. **Duke of Kent** to King. In consequence of the death of Bulkeley, recommends Belcher to succeed him in the Council. A. & W. I. vol. 598
- February 16, Bath. **Butler** to the same. Applies to be appointed to the Council in room of Bulkeley, deceased. A. & W. I. vol. 598
- March 2, Whitehall. **Secretary of State** (Portland) to Wentworth. Sends copy of letter from the Audit Office complaining of his neglect to send the annual accounts and vouchers and copy of one which his (Wentworth's) conduct compelled him to write to the Treasury, desiring them to withhold his salary till the accounts are furnished. In event of non-compliance he shall feel compelled to recommend his (Wentworth's) recall. Col. Off. N. S. vol. 2, p. 360
- March 5, London. **Isted** to King. Transmits letters forwarded by Despard and asks what answers he is to give.
- Enclosed.* Two letters from the Duke of Kent, dated 15th February, one to Portland relative to Murray's conduct, the other to Murray, forbidding him to interfere with the civil government.
- Letter and enclosures** in A. & W. I. vol. 598.
- March 12, London. **Goudge** to King. Desires to know whether two bills left at the Treasury are likely to be paid. A. & W. I. vol. 598

1801.  
April 9,  
Halifax.

Wentworth to King. Is sending dispatch by Brymer one of the Council. The instruction to encourage the growth of hemp is to be considered on the 15th, by the Council and others; the favourable quality of the intervale land for this crop. Iron of the best quality is in the province; its production would be greatly encouraged if ordered into the government works at the price for which it is imported. There is an abundant supply of timber in the province for masts, yards and bowsprits. Relief afforded to the sufferers from small pox: state of the province, &c. A. & W. I. vol. 598

April 24,  
London.

W. Smith to King. Asks for return of papers; he would not take notice of a slanderer, but when he (King) declares he cannot place confidence in him (Smith), asks for the charges against him that he may defend himself. A. & W. I. vol. 598

April 25,  
Halifax.

Wentworth to Secretary of State (Portland). Instructions for the detention of Russian, Swedish and Danish vessels and various documents as to style and titles, &c. [consequent on the union with Ireland] have been recorded and published. The steps he has taken to promote the culture of hemp: the climate and immense quantities of the soil are suitable; skilled persons for rotting and dressing, and good seed are wanted. Has had the accounts for various services audited; as soon as the sales of land can be completed, all the accounts shall be closed and transmitted. States the case of Gad Saunders, a negro, convicted of murder; recommends him for pardon. Col. Cor. N. S. vol. 35, p. 5

*Enclosed.* Report, 2nd February, of Blowers on the case of Saunders. 13

Letter from Blowers, of same date, advising that the sentence be suspended. 17

April 25,  
Halifax.

Wentworth to Secretary of State (Portland). Is sending accounts and vouchers for the expenses connected with the settlement and subsistence of the maroons. 21

April 26,  
Halifax.

Same to King. A bank has been projected in Halifax and the capital raised. Shall have an act of incorporation passed, but with a suspending clause. Application to be made for five or six missionaries; the good effect of such an increase. The February packet spoken and supplied with provisions. Return of the "Cleopatra" and "Andromache"; unsuccessful attempt to cut out a guarda costa at Cuba, but several prizes were taken. Private news. A. & W. I. vol. 598

May 30,  
Halifax.

Same to Secretary of State (Portland). Reports the state of the Council; had recommended Andrew Belcher, William Forsyth and Charles Mary Wentworth for the vacancies; now adds the name of Lawrence Hartshorne. Col. Cor. N. S. vol. 35, p. 25

May 30,  
Halifax.

Same to the same. His sorrow that the delay in transmitting vouchers should have been thought to arise from neglect: many of the accounts were transmitted to the different offices. A complete statement shall be sent by Reynett, paymaster of the 7th regiment, who promises to deliver it. The delays were unavoidable and he asks that the suspension of his salary may be removed. 29

June 6,  
Whitehall.

Secretary of State (Portland) to Wentworth. Is happy to find there is so favourable a prospect for the cultivation of hemp. Pardon issued for Gad Saunders, a negro convicted of murder. Col. Off. N. S. vol. 2, p. 362

June 7,  
Kensington |  
Palace.

Gordon to King. Sends extract from letter from Despard to Bowyer, respecting Murray.

*Enclosed.* Extract.

Letter and extract in A. & W. I. vol. 598.

June 20,  
Halifax.

Wentworth to Secretary of State (Portland). Sends copies of his speech, addresses, &c., at the meeting of the General Assembly. The good disposition of both Houses; difficulty of obtaining a quorum of

## Department of Agriculture—Archives.

1801.

Council, owing to the illness of members; was obliged to fill up vacancies. Two privateers on the coast, suspected to be in search of two mast ships; the "Earl of Moira" sent for intelligence and to take the mast ships in charge. Col. Cor. N. S. vol. 35, p. 33

(The enclosures, speech, &c., 37, 41, 45, are extracts from the journals).

July 3,  
Halifax.

Wentworth to Secretary of State (Portland). Is sending accounts by Bingham, Reynett having been prevented from going; there has been no avoidable delay. A large ship from Boston, loaded with flour, wrecked on Sable Island; relief sent; sends copies of instructions to Coleman, his report, &c.; he is fully persuaded that a light-house of wood can be erected with safety on Sable Island, the same as those on Nantucket; shall send description and estimate of cost. The Assembly has voted £600 to maintain three families on the island to give assistance to shipwrecked people. Shall get two cannon, one to be placed at each end of the island to be used as signals. Report from the "Earl of Moira" of her timely arrival at Annapolis, to repress the misconduct of American fishermen who carry on an illicit trade, which should be suppressed conformably to the treaties between Great Britain and the United States. Col. Cor. N. S. vol. 35, p. 49

*Enclosed.* List of accounts to be delivered to the Audit Office. 57

Instructions to Seth Coleman to proceed to the relief of the shipwrecked persons on Sable Island. 61

Coleman's report. 65

Plan of Sable Island. 69

Address of the Assembly on the state of Sable Island and proposing that three families should be settled there for the preservation of life and property. 71

Report of the master of the "Earl of Moira." 75

Petition of the inhabitants of the county of Annapolis, complaining of the conduct of American fishermen and asking for relief. 83

July 4,  
Halifax.

Wentworth to Secretary of State (Portland). Clothing and accoutrements wanted for the regiment of Nova Scotia. 87

July 8,  
Halifax.

Same to King. Account sent; asks that the suspension of the payment of his salary may be removed. The bill for the incorporation of the bank rejected by the Assembly, which has also resolved to spend £20,000 on roads, bridges, markets, &c.; this resolution not yet concurred in by the Council. The estimate for the year not yet received. If a Court of Admiralty is constituted for Nova Scotia, asks that his son be appointed registrar. Arrival of the June packet. Leave of absence has been granted to Belcher, lately appointed to the Council, and to Stewart, Solicitor General. A. & W. I. vol. 598

July 18,  
London.

Croke to the same. Has reason to believe he will be appointed judge of the Vice-Admiralty Court at Halifax; asks that he be appointed to a seat in the Council. A. & W. I. vol. 598

July 8,  
Kensington  
Palace.

Duke of Kent to the same. Sends an extract from Despard's letter, which will show Murray's conduct to have been worse than believed.

Extract follows. A. & W. I. vol. 598

July 27,  
Halifax.

Wentworth to Secretary of State (Portland). Close of the session of the legislature; the harmony that prevailed; liberal grants made for roads, bridges and other accommodation. A committee appointed to prepare buildings for Sable Island; preparations also making for means of communication, for provisions, &c.; hopes to have the establishment completed by 10th October. Five hundred people who were prepared to emigrate from Scotland to the United States have resolved to come to Nova Scotia; 120 are arrived; many are employed and others settled on lands in convenient situations. To open roads, &c., the Assembly has voted £1,000 currency. St. George's chapel opened for public worship.

1801. Agrees with the Bishop of Nova Scotia as to the importance of having churches of the Church of England throughout the province to guard against mendicant migratory new-light teachers, who are badly disposed to the duty of loyalty; dwells at length on the mischief these people cause and how that can be averted. Col. Cor. N. S. vol. 35, p. 91
- July 28, Secretary of State (Portland) to Wentworth. His explanation received of the cause of the delay in the receipt of vouchers. Shall do what he can to relieve him from his disagreeable situation, caused by the suspension of his salaries. Approves of the appointment to the Council of Andrew Belcher, William Forsyth and Charles Mary Wentworth. Col. Off. N. S. vol. 2, p. 363  
Whitehall.
- August 22, Nepean to King. The Admiralty request that orders may be sent to Halifax to admit Vice-Admiralty prisoners to the common gaols till a proper gaol can be provided. Col. Cor. N. S. vol. 35, p. 211  
Admiralty.
- August 26, Wentworth to Secretary of State (Portland). Has received order to suspend the embargo on Swedish and Russian vessels. People and materials for Sable Island are in a forward state of preparation, but transport delayed for want of vessels; the "Earl of Moira" is in pursuit of three French privateers, which have captured three or four vessels; as soon as the privateers are captured or driven off, the "Earl of Moira" shall be employed to assist the settlement. Only one house and part of another, sufficient for shelter, can be built with the £600 granted. The first will be furnished with provisions, boats, &c., under the conduct of Morris, a man of experience in nautical affairs. Sends copy of the Act for the preservation of persons and property shipwrecked on the Island. A grant has been made for the erection of a light house on the Gut of Annapolis; the inhabitants have subscribed an additional sum. Report on the culture of hemp; the want of good seed; asks that two or three families, conversant with cleaning hemp, may be procured. Reports the perfect state of good order, loyalty, peace and prosperity in the province. Death of Deschamps on the 13th current; has summoned Hartshorne to the Council, and George Henry Monk to succeed on the Bench. Death this morning of Thomas Cochrane; recommends Michael Wallace, Richard George Uniacke and Charles Hill as eligible to succeed him in the Council. 107  
Halifax.
- Enclosed.* Extract from the appropriation Act respecting the growth of hemp. 117
- September 3, Secretary of State (Hobart) to Wentworth. His satisfaction with the harmony in the General Assembly. The grants for roads, &c., cannot but conduce to the comfort and advantage of the inhabitants. The settlement of three families on Sable Island for the preservation of life is a desirable measure, and the grant by the Assembly of £600 should enable him to carry the measure into effect. The liberal policy of relief to persons desiring to become settlers should be of advantage to the province. His satisfaction at the opening of St. George's Chapel; his (Wentworth's) attention should be paid, in concert with the Bishop, to encourage the constant performance of public worship according to the rites of the Church of England. Shall transmit to the Treasury the representation respecting clothing. The Admiralty complain that there is no accommodation for Vice Admiralty prisoners; they are to be admitted to the common gaol. 99  
Downing Street.
- (Copy in Col. Off. N. S. vol. 1, new series, p. 1.)
- September 7, Order-in-Council appointing Andrew Belcher, William Forsyth and Charles Mary Wentworth to the Council of Nova Scotia. Col. Cor. N. S. vol. 35, p. 215  
Weymouth.
- September 18, Wentworth to Secretary of State (Portland). At the request of the Governors of King's College, he prays for a charter; the usefulness of the College. The sum of £1,000, part of the £1,500 granted, has been  
Windsor.

well applied; the other £500 shall be applied to finish the building, so far as the amount will enable that to be done.

Col. Cor. N. S. vol. 35, p. 123

- 127
- September 21, Treasury. *Enclosed.* Memorial from the Governors of King's College. Addington to Sullivan. Transmits for opinion voucher attached to a bill for £43 10s. 7½d, drawn on the Treasury for medicines, without advice. 219
- September 26, Halifax. Wentworth to Secretary of State (Hobart). Has been informed that the Department of the Colonies has been placed in His Lordship's hands. Shall transmit the Acts and journals so soon as they can be prepared. Prosperous state of the province and complete change of the feelings of the people as to the future; liberal grants have been made for various objects (enumerated); commerce has recovered activity, wealth is increasing, and the fishery is revived. Encloses address praying that Halifax may be divided into three counties also that the counties of Annapolis and Shelburne be each divided into two counties. The materials and men for Sable Island will be ready to sail within a week. The French privateers have been driven off, and fled from the ports in Massachusetts to the West Indies with two prizes. 131
- 139
- September 29, Soho Square. *Enclosed.* Memorial from the Legislative Assembly for the division of counties. Knox to Cumberland. Asks him to direct payment to Leonard of £600, granted Parliament for a vessel, for which Leonard has drawn. 223
- October 1, Treasury. Addington to Sullivan. Neither Leonard nor his deputies should have power, as superintendent of fisheries, to seize vessels; in revenue matters he must be subordinate to the Collector and Comptroller of Customs. The Treasury desire that Leonard be directed to send a list of his deputies, that the commissioners of Customs may grant commissions to such of them as may be necessary for the purpose of their appointment. 227
- October 9, Tunbridge Wells. Cumberland to Knox (?). The bill drawn by Leonard for a vessel can only be paid by special order. 231
- 235
- October 13, Soho Square. *Enclosed.* Noble to Cumberland, 1st October. The bill drawn by Leonard cannot be passed at the Audit Office until an account is presented of the disposal of the money, attested by the Governor. Knox to Sullivan. The agent for Nova Scotia does not consider himself authorized to pay Leonard's bill for £600, for a vessel. Encloses extract from King's letter authorizing Leonard to draw. He (Knox) having already paid £400, asks that an order be given for payment of that amount, reserving the remaining £200, till vouchers be sent. 239
- 243
- October 13, Downing Street. *Enclosed.* Extract from King's letter to Leonard, dated 6th February. Secretary of State (Hobart) to Wentworth. The King's satisfaction at the favourable report of the state of the province. Approval of the steps taken to encourage the culture of hemp. Shall communicate the decision respecting vacancies. 121
- 127
- (Copy in Col. Off. N. S. vol. 1. (new series), p. 5.)
- October 13, Downing Street. Secretary of State (Hobart) to Wentworth. Attention has frequently been called to the great expense incurred for the defence of the colonies. Peace being ratified, he may without loss of time effect every possible reduction. The officer in command of the navy can afford protection to the province, so that the hire of the armed vessel is to be immediately discontinued. Col. Off. N. S. vol. 1. (new series), p. 8
- October 18, London. Cumberland to Sullivan. Knox's reasoning and the extract from King's letter, will justify the issue of an order for payment of the amount drawn on Knox, but without such an order he could not pass Knox's receipt as a voucher at the Audit Office. Col. Cor. N. S. vol. 35, p. 247

1801.  
October 20,  
London. Comptroller of the Army Accounts to the Treasury (extract). Sends list of bills drawn by Wentworth for clothing. 147  
Col. Cor. N. S. vol. 35, p. 251
- October 26,  
Treasury. Vansittart to Sullivan. Transmits memorial from Knox for payment of Leonards's bill for £600. 255
- October 27,  
Halifax. Wentworth to Secretary of State (Hobart). Sends reports of the progress of the proposed establishment on Sable Island. There are 14 persons left on the island amply supplied with provisions; the houses, it is supposed, will be comfortably habitable by the first of December. Everything was safely landed but the rockets, which shall be sent next spring: they are intended to accompany the firing of cannon as signals. 147  
*Enclosed.* Instructions to James Morris, appointed to superintend the establishment on Sable Island. 151  
Report, 10th October, by the commissioners, of the shipment of stores for Sable Island, on board of the "Earl of Moira." The duties of Morris, superintendent, and of his people to take measures for warning vessels off; Morris has been directed to obey Wentworth's instructions. The "Earl of Moira" and the schooner sailed on the 6th instant. 163  
Report 17th October, that the "Earl of Moira" has returned after landing the men, materials, stores, &c. 167  
Report, 13th October, Sable Island, by James Morris, of the safe arrival and landing of the party and stores on Sable Island, all well. The directions and signals he has adopted for the guidance of ship wrecked crews to a place of relief. 171  
Sable Island, 12th October. Request by Patrick King, to be allowed to remain on Sable Island; engages to serve under Morris. 175  
Schedule of live stock, provisions, &c., for Sable Island. 179  
18th October. Report by Capt. Fawson of the "Earl of Moira" of his voyage to Sable Island; recommends that two light houses be built, one on each end of the island; that guns be provided for signals; small houses built and boats kept at the sides of the pond; the island is well fitted for grazing cattle. There is a quantity of wild fruits; there should be no difficulty in growing potatoes and other roots; reports the number of wild horses; lobster, shell and other fish are plentiful in the pond, which is frequented by blue winged ducks and other wild fowl in abundance. States the arrangement of signals, &c. The best time to visit the island is between June and September. 183  
(Duplicate of this is at p. 195.)
- October 29,  
Bath. Knox to Sullivan. The application to the Treasury was presented before his last to him (Sullivan), but he did not withdraw it, as he wished to get an official explanation that might serve as a guide for the future drawing of bills. 259
- October 30,  
Treasury. Vansittart to the same. In reference to the order to remove the suspension of the payment of Wentworth's salary, transmits extract from letter from the Audit Office and desires to know whether, after consideration, Lord Hobart is still of the same opinion respecting the suspension. 263  
*Enclosed.* Audit Office (extract). The cause of suspension of the payment of Wentworth's salary was his neglect to send vouchers; as these have not yet been received, they cannot recommend the removal of the suspension. 267
- October 31,  
Abingdon  
Street. Scrope Bernard to the Archbishop of Canterbury. Sends copies of proposed charter and warrant for the same for the college of Nova Scotia; had hoped that the endowment might be £1,500 per annum. 271  
*Enclosed* Objects solicited by the province of Nova Scotia, dated 4th July. (1). Charter and endowment for the new college. (2). An increased number of missionaries. (3). A revival of the resolution of the

## Department of Agriculture—Archives.

1801.

- House of Commons of November, 1775, to permit the importation of wines, oranges, lemons, currants and raisins direct from the place of growth. (4). To obtain a revival of the bounty on the importation of timber from British America. (5). Port regulations to prevent the interference of the United States, with trade between British America and the East and West Indies. (6). To obtain a revision of the boundary between Nova Scotia and New Brunswick, which at present cuts through the township of Cumberland. (7). The appointment of an engineer or engineers to report (a). On the working of mines; (b). The opening a communication by water from Halifax through Minas Basin to the Bay of Fundy; (c). The formation of an interior road to promote settlement. Col. Cor. N. S., vol. 35, p. 275
- November 4, Downing Street. Secretary of State (Hobart) to Wentworth. Shall refer to the King the addresses for the division of counties and for a charter to King's College. 143
- (Copy is in Col. Off. N. S. vol. 1 (new series) p. 6).  
The charter of King's College was granted on 12th May 1802, and is among the patent rolls, 42 George III, part 9, No. 7.
- November 13, Garlick Hill. Brook Watson & Co. to Chapman. The bill for the salary of the Bishop's commissary in Nova Scotia has been refused payment. Suggest that it was omitted in the estimate by a similar mistake to that which happened in the case of the Bishop's salary which was, however, ordered to be paid. Col. Cor. N. S. vol. 35, p. 279
- November 21, Treasury. Addington to Sullivan. Transmits bill drawn by Wentworth for the "Earl of Moira," to be informed whether it should be paid. 283
- November 24, London. John Butler Butler to Sullivan. Represents the cause of his not obtaining his seat in the Council and the justice of his claim to the present vacancy. 287
- December 3, Downing Street. Sullivan to Leonard. Transmits copy of letter from the Treasury; in the performance of his duties he is to act in conformity to the opinion of the Commissioners of Customs. Col. Off. N. S. vol. 1. (new series) p. 7
- December 12, Treasury. Addington to Sullivan. The Treasury has directed payment of the six months salary to the commissary of the Bishop of Nova Scotia. Col. Cor. N. S. vol. 35, p. 291
- No date. Wentworth to Secretary of State (Hobart). His happiness at the approbation of his proceedings. Has made public the preliminaries of peace, 1st October, ratified on the 10th following, between His Majesty and the Republic of France; trusts that peace will be attended with improvements in the province. Has sent orders to the sheriffs to admit into the county gaols prisoners committed by the Vice-Admiralty courts. 203

## APPENDIX

TO THE

# REPORT OF THE MINISTER OF AGRICULTURE

ON

## EXPERIMENTAL FARMS.

—:—

OTTAWA, 30th November, 1894.

SIR,—I have the honour to submit for your approval my eighth annual report of the work done and in progress at the several experimental farms established in different parts of the Dominion.

You will also find appended reports from the following officers of the Central Experimental Farm: From the Agriculturist, Mr. James W. Robertson; from the Horticulturist, Mr. John Craig; from the Chemist, Mr. Frank T. Shutt; and from the Entomologist and Botanist, Mr. James Fletcher. A report is also submitted from the Poultry Manager, Mr. A. G. Gilbert.

From the branch experimental farms there are reports from Mr. Wm. M. Blair, superintendent of the experimental farm for the Maritime Provinces, at Nappan, Nova Scotia; from Mr. S. A. Bedford, superintendent of the experimental farm for Manitoba, at Brandon; from Mr. Angus McKay, superintendent of the experimental farm for the North-west Territories, at Indian Head; and from Mr. Thos. A. Sharpe, superintendent of the experimental farm for British Columbia, at Agassiz.

These reports contain particulars of the results of the experimental work which has been conducted in agriculture, horticulture and arboriculture embodying the outcome of much practical work in the fields, orchards, barns, dairy and poultry buildings; also of scientific investigation of chemical problems in the laboratory and the careful study of the life history and habits of noxious insects and plants, with suggestions of measures calculated to lessen the injury they cause. Also details of the experiments which have been carried on during the past year in bee-keeping.

The increasing demand among farmers for these reports is a gratifying indication of the desire for information among this class of the community and of the high esteem in which these records of the work of the experimental farms are held. It is hoped that the facts brought together in the present issue will be found quite as valuable to the agricultural community as those contained in any of the preceding reports.

I have the honour to be, sir,

Your obedient servant,

WM. SAUNDERS,

*Director.*

The Honourable  
The Minister of Agriculture,  
Ottawa.

# Experimental Farms.

## ANNUAL REPORT

ON THE

# EXPERIMENTAL FARMS.

REPORT OF THE DIRECTOR.

(*WM. SAUNDERS, F.R.S.C., F.L.S. F.C.S.*)

The results of eight years of experimental work covering nearly all the departments in which the farming class of the community is engaged, together with the testing of fruits, vegetables, poultry, economic and ornamental trees, shrubs, plants and flowers, are shown in the accumulation of a mass of facts relating to these several subjects, the recital of which gives increasing value to the annual reports of the experimental farms. Where conclusions are drawn from the results of the tests of a single year, they are frequently found to be unreliable as a guide, and since no two seasons are alike, they can scarcely be repeated with similar returns; but where such tests have been carried on through a series of years the average results may be taken as fairly trustworthy.

The very low prices which continue to prevail for wheat and the coarse grains, the returns from the sale of which give now but a small margin beyond the cost of growing, has obliged many farmers to turn their attention to more profitable methods of disposing of these crops than by their bulk sale in the markets.

The census for 1890 shows that the number of persons engaged in agricultural pursuits in the Dominion of Canada—farmers and farmers' sons—was in that year 649,506. These with the families depending on them will, it is estimated, make up 45 per cent of the entire population of the country. Where so large a proportion of the community depend for their livelihood on the cultivation of the soil, it is of the utmost importance for the welfare and prosperity of the entire country that their efforts should be directed into the most profitable channels. The experiments which have been conducted at the Central and branch Experimental Farms have demonstrated that wheat, as well as other grain, may be made a greater source of profit if fed to steers and swine and thus converted into beef and pork, than by selling these crops in their crude state, at present prices. The feeding of these grains mixed with suitable succulent food, such as ensilage, to cows and converting their milk into cheese and butter, has also been shown to be more profitable than the sale of such grain. Hence the dairying industry has grown very rapidly in Canada of late years, and the demand for first class dairy products seems to be almost unlimited. This branch of farm work has also this great advantage, that the elements of fertility which have been taken from the land by the grain during the process of its growth, is, to a very large extent, restored to the soil in the barnyard manure. It has also the further advantage, when butter-making is carried on during the winter months, of giving additional employment to the farm hands during that season. The more general feeding of a proportion of wheat to swine and cattle will also consume some part of the large stock which has been grown in excess of the requirements of mankind, and which has, no doubt, had the effect of bringing down the price to the present unusually low and unremunerative figure.

## DISTRIBUTION OF SEED GRAIN.

The work carried on with grain, at the Experimental Farms, has not been limited to the testing of varieties and determining which sorts promise to be the more profitable for general growth, but during the past six years the endeavour has been made to improve the character and quality of the various sorts of grain grown in Canada, by the distribution of samples among farmers, for seed, of those sorts which have given the best returns. The good results of this continued effort are now beginning to appear in many districts, where these newer and more productive sorts of grain are fast replacing some of the less prolific varieties formerly in cultivation. At the outset, when the applications for samples were fewer, there was no difficulty in sending two or three samples to each applicant; but the number of requests received has increased so largely that it was found necessary, last year, to reduce the number of samples sent to each individual to two, and later in the season, to one. With this limitation the available stock was all promised by the middle of February, when the lists had to be closed and the many later applicants could not be supplied. As it is very desirable that this distribution be as general as possible, it is proposed to limit the number of samples during the coming season to one for each individual.

The distribution provided for from the Central Experimental Farm, for 1895, will consist chiefly of the most promising varieties of oats, barley, wheat, pease and potatoes, all of which have been grown on the Experimental Farms for this purpose. The several branch farms will also distribute, as heretofore, samples to the farmers residing in the provinces and territories where these institutions are established.

The samples sent out from the Experimental Farm at Ottawa during the early months of 1894, were distributed as follows:

*Prince Edward Island.*

Wheat .....	176
Spring Rye .....	18
Pease .....	73
Potatoes .....	286
	1,003

Number of applicants supplied, 379.

*Experimental Farm, Agassiz, B.C.*

Oats .....	117
Barley .....	89
Fall Wheat .....	31
Spring Wheat .....	83
Pease .....	95
Potatoes .....	141
	556

Number of applicants supplied, 482.

Making a total of 2,496 samples supplied to 1,356 applicants by the branch Experimental Farms. This, added to the distribution made at the Central Farm, gives a total of 23,414 samples to 14,942 applicants.

The branch Experimental Farms also supplied a large number of farmers in their several districts, with new and promising sorts of grain in bags of two bushels each. These were sold to farmers at a slight advance on the ordinary prices prevailing at the time, for such grain.

## EXPERIMENTS WITH OATS.

Comparative tests have been made with 36 varieties of oats, for earliness, yield and other qualities. These were all sown on clay loam and about the same time, on plots of  $\frac{1}{20}$  of an acre each, excepting the varieties known as Banner and Abundance, which were on plots of  $\frac{1}{10}$  of an acre. The previous crop was Indian Corn, and the land was manured in the spring of 1891 with about 20 tons of barnyard manure to the acre; it also received an application of wood ashes late in the autumn of 1893, about 150 bushels to the acre. The treatment of the land was as follows: It was gang-ploughed very shallow in the autumn of 1893, after harvesting, to cover and start into growth any shed grain or weed seeds lying on the surface. Later in the autumn, it was ploughed seven to eight inches deep, and it was disc-harrowed and harrowed with the smoothing harrow in the spring, before sowing. All the varieties were sown on April 18th and 19th.

## OATS, Test of Varieties.

Name of Variety.	Date of ripening.	No. of days Maturing.	Length of Straw.	Character of Straw.	Length of Head.	Kind of Head.	Yield per Acre.	Weight per Bushel.	Proportion Rusted.

## Experimental Farms.

Several of those included in this table are new varieties :

*Wallis*.—This originated with Mr. John Wallis, of Ferguson, Ont., and is said to have occurred as a sport in a field of Banner. It is a promising oat, a vigorous grower and prolific, stiff in straw—but no stiffer than Improved Ligowo, Abundance or Banner. It resembles Banner when growing.

*Bavarian*.—This is a promising sort; has been among the best as to yield, during the past season; straw stiff.

*Imported Irish*.—This is an oat which was imported from Ireland; it is a branching sort; a vigorous grower; fairly stiff in the straw; and has yielded well.

*Lincoln*.—A promising variety with a branching head; has given a good yield; has a stiff straw, somewhat resembling Banner.

*White Monarch*.—A branching variety not particularly promising; with fairly stiff straw, not so stiff as that of some of the other leading varieties; this has not yielded so well as most of the other sorts tested.

*Columbus*.—This variety was imported from Germany in the spring of 1893, but was not reported on last year, owing to the unfavourable conditions which prevailed, the crop of all varieties of oats having been almost destroyed by rust. This variety has done well during the past season; is a vigorous grower, with fairly stiff straw, and seems to be worthy of more extended trial in the eastern provinces; at the western farms it has not succeeded so well.

### FIELD CROPS OF OATS.

*Prize Cluster*.—Soil heavy clay loam; previous crop was barley. Manured with about 18 tons per acre of barnyard manure in the autumn of 1893, when it was ploughed under. The land was disc-harrowed in the spring of 1894 and harrowed with smoothing harrow before seeding;  $3\frac{3}{4}$  acres; sown April 24th;  $1\frac{1}{2}$  bushels per acre; ripe July 23rd; time to mature, 90 days; yield per acre, 32 bushels 33 lbs.; weight per bushel,  $33\frac{3}{4}$  lbs.; length of head, 9 to 11 inches; branching; length of straw, 44 to 48 inches; all standing well; a strong, even growth; leaves and stems considerably rusted.

Another field was sown with this variety, comprising 18 acres of sandy loam of rather poor quality. This was manured in the spring of 1894 with about 18 tons of barnyard manure per acre. The manure was ploughed under, and the land disc-harrowed and harrowed with smoothing harrow, before sowing. Sown May 2nd;  $1\frac{1}{2}$  bushels per acre; ripe July 28th; time to mature, 87 days; yield per acre, 18 bushels 7 lbs.; weight per bushel,  $33\frac{3}{4}$  lbs.; length of head, 7 to 9 inches; branching; length of straw, 36 to 46 inches: straw standing well; leaves and stems considerably rusted.

*Poland White*.—On soil partly heavy clay loam and part peaty; previous crop was experimental plots of barley and oats; manured in the autumn of 1893 with about 18 tons of barnyard manure per acre, when it was ploughed under. The land was disc-harrowed in the spring of 1894 and harrowed with smoothing harrow before seeding;  $2\frac{1}{2}$  acres; sown April 24th;  $1\frac{1}{2}$  bushels per acre; ripe July 24th; time to mature, 91 days; yield per acre, 35 bushels 9 lbs.; weight per bushel,  $38\frac{1}{2}$  lbs.; length of head, 9 to 11 inches; branching; length of straw, 42 to 45 inches; all standing well; made a strong, even growth; leaves and stems considerably rusted.

*Banner*.—On soil part peaty, part clay loam and part sandy loam; previous crop was a mixed grain crop grown for fodder; manured in the spring of 1892 with about 18 tons of barnyard manure per acre. This land was ploughed in the autumn of 1893; disc-harrowed and harrowed with smoothing harrow before seeding, in spring of 1894;  $7\frac{1}{4}$  acres; sown April 25th;  $2\frac{1}{4}$  bushels per acre; ripe July 30th; time to mature, 96 days; yield per acre, 29 bushels 24 lbs.; weight per bushel,  $32\frac{3}{4}$  lbs.; length of head, 7 to 9 inches; branching; length of straw, 36 to 42 inches; all standing well; growth uneven on account of variation in soil; no rust observed.

*Golden Giant*.—Soil about half clay loam and half sandy loam ; previous crop was mixed grain grown for fodder ; manured in spring of 1892 with about 18 tons of barnyard manure per acre. The land was ploughed in the autumn of 1893 ; disc-harrowed and harrowed with smoothing harrow before seeding, in 1894 ; 3 acres ; sown April 25th ;  $2\frac{1}{2}$  bushels per acre ; ripe August 9th : time to mature, 106 days ; weight per bushel,  $31\frac{1}{2}$  lbs. ; length of head, 9 to 11 inches ; sided ; length of straw, 36 to 48 inches ; straw stiff and all standing well ; made a strong, even growth ; leaves and stems considerably rusted.

*Wallis*.—Soil, sandy loam ; previous crop was pease ; manured in the spring of 1893 with about 18 tons of barnyard manure per acre ; ploughed in the autumn of 1893 ; disc-harrowed and harrowed with smoothing harrow before seeding, in spring of 1894 ; four acres ; sown April 25th ; 2 bushels per acre ; ripe August 3rd ; time to mature, 100 days ; yield per acre, 36 bushels 17 lbs. ; weight per bushel 34 lbs. ; length of head, 7 to 10 inches ; branching ; length of straw, 36 to 44 inches ; straw stiff and stood up well ; growth strong and even ; leaves and stems considerably rusted.

*Bavarian*.—Soil, sandy loam : previous crop was pease ; manured in the spring of 1893 with about 18 tons of barnyard manure per acre ; ploughed in the autumn of 1893 ; disc-harrowed and harrowed with smoothing harrow before seeding in spring of 1894 ;  $2\frac{3}{4}$  acres ; sown April 25th ; 2 bushels per acre ; ripe August 3rd ; time to mature, 100 days ; yield per acre, 37 bushels 30 lbs. ; weight per bushel,  $34\frac{1}{2}$  lbs. ; length of head, 7 to 10 inches ; branching ; length of straw, 36 to 42 inches ; straw stiff and stood up well ; growth strong and even ; leaves and stems considerably rusted.

*Bonanza*.—Soil, light sandy loam, most of it of poor quality, with a "hard pan" subsoil ; previous crop was oats ; manured in autumn of 1891, with about 18 tons of barnyard manure per acre ; ploughed in the autumn of 1893 ; disc-harrowed and harrowed with smoothing harrow before seeding, in spring of 1894 ;  $1\frac{3}{4}$  acres ; sown April 27th ;  $1\frac{1}{2}$  bushels per acre ; ripe July 25th ; time to mature, 89 days ; yield per acre, 19 bushels 4 lbs. ; weight per bushel,  $32\frac{1}{2}$  lbs. ; length of head, 7 to 9 inches ; branching ; length of straw, 24 to 42 inches ; straw rather weak and growth uneven ; leaves and stems considerably rusted.

*Welcome*.—Soil, light sandy loam, with a "hard pan" subsoil, most of it of poor quality ; previous crop was oats ; manured in the autumn of 1891, with about 18 tons of barnyard manure per acre ; ploughed in the autumn of 1893 ; disc-harrowed and harrowed with smoothing harrow before seeding, in spring of 1894 ; 3 acres ; sown April 27th ;  $1\frac{1}{2}$  bushels per acre ; ripe July 27th ; time to mature 91 days ; yield per acre, 16 bushels 13 lbs. ; weight per bushel,  $37\frac{1}{2}$  lbs. ; length of head, 7 to 9 inches ; branching ; length of straw, 24 to 26 inches ; straw rather weak and growth very uneven on account of variations in soil. This land was flat and the crop suffered from water lying in spots owing to excessive rains.

*Early Blossom*.—Soil, part peaty and part sandy loam of poor quality ; previous crop was mixed grain grown for fodder ; manured in the spring of 1893 ; with about 18 tons of barnyard manure per acre ; ploughed in the autumn of 1893 ; disc-harrowed and harrowed with smoothing harrow before seeding, in spring of 1894 ; 1 acre ; sown April 27th ;  $1\frac{3}{4}$  bushels per acre ; ripe August 1st ; time to mature, 96 days ; yield per acre, 24 bushels 24 lbs. ; weight per bushel, 35 lbs. ; length of head, 6 to 10 inches ; sided ; length of straw, 30 to 42 inches ; straw stiff and stood up well ; leaves and stems considerably rusted.

*Abundance*.—Soil, part peaty and part sandy loam of poor quality ; previous crop was mixed grain grown for fodder ; manured in spring of 1891 with 18 to 20 tons of barnyard manure per acre ; ploughed in the autumn of 1893 ; disc-harrowed and harrowed with smoothing harrow before seeding, in spring of 1894 ;  $1\frac{1}{2}$  acres ; sown April 27th ;  $2\frac{1}{2}$  bushels per acre ; ripe July 30th ; time to mature, 94 days ; yield per acre, 36 bushels 1 lb. ; weight per bushel,  $30\frac{1}{2}$  lbs. ; length of head, 8 to 10 inches ; branching ; length of straw, 36 to 44 inches ; straw stiff and stood up well, but on account of variability of soil the growth was uneven ; leaves and stems considerably rusted.

# Experimental Farms.

## EXPERIMENTS WITH BARLEY.

Twenty-nine varieties of barley have been tested during the past season, fourteen of which were two-rowed sorts, and fifteen six-rowed. These were all sown on plots of  $\frac{1}{2}$  acre each. The soil was a clay loam of fair quality ; it was manured in the spring of 1891 with about 20 tons of barnyard manure to the acre ; it also received an application of wood ashes late in the autumn of 1893, about 150 bushels to the acre. The land was gang-ploughed very shallow after harvest, in the autumn of 1893, to cover and start into growth any shed grain or weed seeds lying on the surface ; later in the autumn it was again ploughed seven to eight inches deep, and it was disc-harrowed and harrowed with the smoothing harrow in the spring, before sowing. The two-rowed varieties were all sown on April 21st and 22nd, and the six-rowed sorts April 20th and 21st.

### FIELD CROPS OF BARLEY.

Only one variety of barley was sown in field crop. This was Canadian Thorpe, a two-rowed sort. It was sown on clay loam ; previous crop was corn and beans. The land was manured in the spring of 1893,—before sowing the corn and beans,—with from 18 to 20 tons of barnyard manure per acre. It was ploughed in the spring of

1894, and harrowed with smoothing harrow before sowing.  $8\frac{1}{2}$  acres, sown April 21st; 2 bushels per acre; ripe July 22nd; time to mature, 92 days; yield per acre, 25 bushels 13 lbs.: weight per bushel  $49\frac{1}{4}$  lbs.; length of head, 3 to  $3\frac{1}{4}$  inches; length of straw, 36 to 42 inches; all standing well; some rust on leaves, very little on stems; no smut.

### EXPERIMENTS WITH FALL WHEAT.

Fourteen varieties of fall wheat have been under test during the past season, most of them in plots of  $\frac{1}{10}$  acre each. They were all sown on September 13th, 1893, and harvested from the 15th to the 18th of July, 1894. The soil was a sandy loam which had a light coating of manure in the spring of 1893, about 10 tons to the acre. The previous crop was oats. After the oats were harvested the land was gang-ploughed lightly to start weeds and shed grain and ploughed again about 7 inches deep, and harrowed with smoothing harrow before sowing.

The Manchester, Early Red Clawson and Willit's were all injured by depredations of birds; but for this, the crop of these varieties would have been reported larger.

#### FALL WHEAT—TEST OF VARIETIES.

Tasmania .....	48 to 58	Fairly stiff..	2 to 3	Bearded..	25 10	61 $\frac{1}{2}$	"

### EXPERIMENTS WITH SPRING WHEAT.

During the season of 1894, thirty-six varieties of spring wheat were tested, twenty-seven of these were on plots of 1-20th acre each, and nine on plots of 1-40th acre. The land was clay loam adjoining the experimental plots of barley, and received a similar application of manure in the spring of 1891, and of ashes in the autumn of 1893. The preparation of the land also was the same as that for the experimental plots of oats and barley.

Several of the varieties which show a comparatively small yield, would have been reported as giving more liberal returns but for the depredations of sparrows, which were most persistent in their attentions, especially to the later ripening sorts. Particulars of growth, yield, &c., will be found in the following table:—

# Experimental Farms.

### EXPERIMENTS WITH PEASE.

Thirteen varieties of pease were sown on plots of 1-20th acre each, excepting the Golden Vine pea, which occupied only 1-40th of an acre. The land on which these were sown was a clay loam adjoining the experimental plots of barley. For particulars as to treatment and preparation of land, see "Experimental plots of Barley."

## FIELD CROPS OF PEASE.

Six varieties of pease were sown on larger plots, all on clay loam and in the same field. The previous crop was experimental plots of grain. This land was in meadow from 1889 to 1892 and has received no manure since 1888, when an application of 18 tons per acre was made. It was ploughed in the autumn of 1893 and disc-harrowed and harrowed with smoothing harrow in the spring of 1894, before sowing.

*Prussian Blue.*—One-half acre; sown April 24th; 2½ bushels per acre; ripe July 31st; time to mature, 98 days; yield per acre, 30 bushels 20 lbs; weight per bushel, 65½ lbs.; vines made a fairly strong and even growth.

*New Potter.*—One-half acre; sown April 24th; 2½ bushels per acre; ripe August 1st; time to mature, 99 days; yield per acre, 20 bushels; weight per bushel, 63 lbs.; pea large, vines rather long and fairly strong in growth. The land was flat and this plot suffered in spots from water lying on the ground owing to the frequent rains.

*Creeper.*—One-half acre; sown April 24th; 2½ bushels per acre; ripe July 30th; time to mature, 98 days; yield per acre, 25 bushels 40 lbs.; weight per bushel, 64½ lbs.; vines short, pea small; much like the variety known as Crown.

*Canadian Beauty.*—One-third acre; sown April 24th; 3 bushels per acre; ripe August 1st; time to mature, 99 days; yield per acre, 12 bushels 17 lbs.; weight per bushel, 63 lbs. This is a large pea and the vine is a strong, vigorous grower.

*Large White Marrowfat.*—1½ acres; sown April 24th; 3 bushels per acre; ripe August 1st; time to mature, 99 days; yield per acre, 12 bushels 5 lbs.; weight per bushel, 62½ lbs. A large pea; vines made strong growth; was considerably injured in spots by water, owing to excessive rains followed by hot sun.

*Mummy.*—2¼ acres; sown April 24th; 3 bushels, per acre; ripe July 31st; time to mature, 98 days; yield per acre, 28 bushels 38 lbs.; weight per bushel, 65 lbs. Pea above medium size; vine a strong, coarse, upright grower.

All these plots, excepting Prussian Blue, were more or less injured by water, on account of frequent rains and the compact nature of the soil not permitting the water to be carried off promptly by the under drains.

## EXPERIMENTS WITH CORN.

Twenty-two varieties of Indian corn were tested as to earliness and yield of fodder. The land was sandy loam, which had a light coating of manure in the spring of 1893,

## Experimental Farms.

about ten tons to the acre. The previous crop was oats. The land was ploughed in the autumn of 1893, and disc-harrowed and harrowed with smoothing harrow before sowing, in spring of 1894. The area occupied by each sort was two rows three feet apart and 80 feet long. The estimate of yield has been based on the weight of the two rows 50 feet long.

The varieties numbered 18, 30 and 43 are cross-bred sorts which have been produced at the Central Experimental Farm by fertilizing Mitchell's Extra Early with pollen of the Rural Thoroughbred White Flint.

The sowing of all took place on May 23rd, and the following table shows the results obtained :—

## EXPERIMENTS WITH TURNIPS.

Fifteen varieties of turnips were tested on plots adjoining each other, all having similar treatment. The soil was light sandy loam. The previous crop was oats. On these plots 150 lbs. of Royal Canadian Fertilizer was used per acre, applied on top of drills. The seed was sown in drills 2½ feet apart; and the yield of the crop has been calculated from the quantity obtained from two rows, each 90 feet long. Two sowings were made of each sort of seed, the first on May 12th, and the second on June 12th. The results are given in the following table. It will be observed that in all cases but one the earlier sown plots gave the largest yields.

## FIELD CROP OF TURNIPS.

One acre only was sown as a field crop. The soil was a light sandy loam; the previous crop was wheat. This land received an application of 200 lbs. per acre of Royal Canadian Fertilizer, which was applied on top of drills. It was ploughed in the autumn of 1893; gang-ploughed and harrowed in the spring of 1894. The drills were 2 feet apart. Variety, Prize Purple Top Swede. Sown, June 12th; came up June 16th; and was pulled Oct. 29th; yield, 22 tons, 1,249 lbs.

## EXPERIMENTS WITH MANGELS.

Eleven varieties of mangels were tested in adjoining plots, soil sandy loam. The previous crop was oats. Two sowings were made in each case, in drills 2½ feet apart, the first on April 27th, the second on May 11th, and the crops on both were pulled on October 15th. The variety chosen for this test was Mammoth Long Red. The yields in this case were also larger in every instance from the earlier sown plots. The returns have been calculated from the weight of roots obtained from two rows, each 90 feet long.

## Experimental Farms.

### FIELD CROPS OF MANGELS.

Mammoth Long Red or Gatepost. One acre of this variety was sown on heavy sandy loam, the previous crop was mixed grain. The land was ploughed in the autumn of 1893, and gang-ploughed and harrowed with the smoothing harrow in the spring of 1894. On these plots, 150 lbs. of Royal Canadian Fertilizer were used per acre applied on top of drills. The seed was sown in drills  $2\frac{1}{2}$  feet apart on May 3rd; came up May 13th; pulled October 17th. Yield 21 tons 150 lbs.

A second acre of the same variety was sown on land adjoining, of the same character, which was prepared and fertilized in the same way as that last mentioned. The seed was sown May 3rd; came up May 13th, and the mangels were pulled October 16th. Yield 21 tons 1,248 lbs.

A third acre also of Mammoth Long Red was sown on light sandy loam, the previous crop was wheat. The land received the same treatment as the last two plots referred to. The seed was sown May 9th; came up May 19th, and the roots were pulled October 12th. Yield 15 tons 1,905 lbs.

### EXPERIMENTS WITH CARROTS.

Fifteen varieties of these roots were sown, on adjoining plots in rows eighteen inches apart. The soil was a light sandy loam, and the previous crop was oats. The land received a dressing this spring of Royal Canadian Fertilizer, applied on the top of the drills, at the rate of 150 lbs. per acre.

Two plots of each sort were sown, the first on April 27th, the second on May 11th, and the roots on both were pulled on October 12th. The yield in each case has been calculated from the product of two rows each 90 feet long. With these plots also, all those earlier sown gave a much larger yield than those sown later.

#### FIELD CROPS OF CARROTS.

$\frac{1}{2}$  acre. Soil, light sandy loam; previous crop was wheat; ploughed in autumn of 1893; gang-ploughed and harrowed in spring of 1894; drills 2 feet apart; dressed with Royal Canadian Fertilizer, 200 lbs. to the acre, applied on the crest of the drills immediately after sowing. Variety, Improved Short White; sown April 27th; came up May 10th; pulled October 15th; yield per acre, 24 tons 1,960.

$\frac{1}{2}$  acre. Soil, sandy loam ; previous crop was wheat ; ploughed in autumn of 1893 ; gang-ploughed and harrowed in spring of 1894 ; drills 2 feet apart ; dressed with Royal Canadian Fertilizer, 200 lbs. per acre, applied on the crest of the drills immediately after sowing. Variety, Mammoth White Intermediate ; sown April 27th ; came up May 10th ; pulled October 16th ; yield per acre, 24 tons 840 lbs.

1 acre. Soil, heavy sandy loam ; previous crop was grain ; ploughed in the autumn of 1893 ; gang-ploughed and harrowed in spring of 1894 ; drills 2 feet apart. Variety, Improved Short White ; sown May 1st ; came up May 13th ; pulled October 30th ; yield 29 tons 1,403 lbs.

1 acre adjoining the above. Soil and treatment the same. Variety, Mammoth White Intermediate ; sown May 1st ; came up May 13th ; pulled October 25th ; yield 27 tons 106 lbs.

### EXPERIMENTS WITH SUGAR-BEETS.

Six varieties of sugar-beets have been under comparative test, on adjoining plots alongside of the carrot plots, on similar light sandy loam, the treatment of which was the same, both as to preparation and fertilizing. The seed was sown in rows eighteen inches apart, and the yield has been calculated from the product of two rows, each 90 feet long. Two sowings of the seed were made : the first, on April 27th, the second, on May 11th, and the crops on both were pulled on October 15th. The earlier sown plots gave in every instance the larger yield.

### EXPERIMENTS WITH POTATOES.

Fifty-two varieties of potatoes have been grown on adjoining plots with the object of gaining information as to their relative earliness, productiveness and quality. The soil in which they were planted was a sandy loam which was manured in the spring of 1893 with a light coating of barnyard manure, at the rate of 10 to 12 tons per acre. The potatoes for planting were cut into pieces with two to three eyes each and planted in rows  $2\frac{1}{2}$  feet apart, and 1 foot apart in the rows. They were all planted on May 21st and 22nd, and dug on Sept. 18th and 19th, and the yield per acre has been calculated in each case from the weight of tubers obtained from two rows, each 66 feet long. No rot was observed in any of the varieties this season.

## SUMMARY OF CROPS GROWN ON THE CENTRAL EXPERIMENTAL FARM DURING THE YEAR 1894.

	Tons.	Lbs.
Hay.....	200	
Clover, cut green and put into silo.....	10	1,300
Indian Corn, cut for ensilage.....	225	1,116
Indian Corn and Horse Beans grown together and cut for ensilage.....	55	1,165
Horse Beans grown separately and cut for ensilage.....	66	790
Sunflower heads, used in ensilage.....	8	1,475
Mixed crop, cut green and cured as hay.....	7	1,390
Mixed crop, cut ripe.....	17	1,290
Turnips.....	38	64
Carrots.....	99	228
Mangels.....	77	1,962
Sugar Beets.....	17	283
Total.....	824	1,063
	Bush.	Lbs.
Wheat.....	27	50
Rye.....	141	26
Oats.....	1,564	30
Barley.....	268	5
Pease.....	163	3
Potatoes.....	322	41
Total.....	2,487	35

In the estimate of grain, the products of the small test plots are not included.

## TESTS OF THE VITALITY OF GRAIN AND OTHER SEEDS.

During the season of 1894 the number of samples of seed grain and agricultural seeds tested and reported on was 2,157. The average vitality of the more important cereals has been higher than last year: wheat showing a percentage of growth of 90.5 for 1894, as against 81.8 in 1893. Oats also stand well, showing the very high average of 95.5 in 1894, as against 93 in 1893. Barley 89, as against 84.9 in 1893; and pease 79.5, as against 65.7. Showing that the harvest weather throughout the Dominion was more generally favourable in 1894.

The fact that some of the samples of oats showed under 11 per cent of germinating power, wheat under 12 and barley under 24 per cent, shows that the conditions have not been universally favourable, and indicates also the necessity for such yearly tests, so that farmers who suffer from bad harvest weather may receive the information they need to guide them in selecting suitable grain for seed. Where the vitality of the samples received is low, the farmers sending them are advised to feed such cereals and buy grain for seed with a much higher percentage of vitality. This timely information prevents many from sowing poor seed, which would be certain to give poor returns. Every farmer who desires to have samples tested should forward them in good season, sending not less than one ounce in each case. These can be sent to the Central Experimental Farm at Ottawa free through the mail, and the tests of vitality can usually be completed and reported on within a fortnight after they are received.

## Experimental Farms.

The building in which these tests are conducted is shown below (Fig. 2); there also the distribution of samples of seed for testing is carried on.

Fig. 2.

### RESULT of Tests of seeds for vitality, 1893-94.

Rain or snow fell on 173 days during the 12 months.

Heaviest rainfall in 24 hours, 1·19 inches, on June 20th.

Heaviest snowfall in 24 hours, 22 inches, on January 30th.

During July rain fell on 15 days, and on 16 days in November.

April and August show the lowest number of days on which rain fell during the season, viz. : 7 and 9 days respectively.

WILLIAM T. ELLIS.

## TESTS OF THE ACTION OF FERTILIZERS ON SOME CROPS.

In the Annual Report of the Experimental Farms for 1893, details are given on pages 8 to 24 of the results of a series of tests which were carried on during the previous five or six years with the object of gaining information regarding the effects which follow the application of certain fertilizers and combinations of fertilizers on the more important crops. The particulars there given covered the results of six years experience with crops of wheat and indian corn and five years experience with crops of oats, barley, turnips and mangels. The experience was also given as to the results of similar tests conducted for three years with carrots and one year with sugar beets.

These experiments are being continued ; and as explanatory regarding the preparations made and the general plan, together with the way in which it has been carried on the following paragraphs are quoted from the report of 1893.

“ A piece of sandy loam, more or less mixed with clay, which was originally covered with heavy timber, chiefly white pine, was chosen for these tests. The timber was cut many years ago, and among the stumps still remaining when the land was purchased, there had sprung up a thick second growth of trees, chiefly poplar, birch and maple, few of which exceeded six inches in diameter at the base. Early in 1887, this land was cleared by rooting up the young trees and stumps and burning them in piles on the ground from which they were taken, the ashes being afterwards distributed over the soil as evenly as possible, and the land ploughed and thoroughly harrowed. Later in the season it was again ploughed and harrowed, and most of it got into fair condition for cropping.”

“ The plots laid out for the experimental work with fertilizers were one-tenth of an acre each, 21 of which were devoted to experiments with wheat, 21 to barley, 21 to oats, 21 to Indian corn or maize, and 21 to experiments with turnips and mangels. Owing to the difficulty and unavoidable delay attending the draining of some wet places, it was not practicable to undertake work on all the plots the first season. The tests were begun in 1888 with 20 plots of wheat and 16 of Indian corn ; and in 1889 all the series were completed excepting six plots of roots, Nos. 16 to 21 inclusive, which were available for the work in 1890.” In all cases the plots in each series have been sown on the same day.

“ In 1890 it was found that all the grain plots had become so weedy that the growth of the crops was much interfered with, and with the view of cleaning the land one-half of each of the wheat and oat plots was sown with carrots in 1891, and one-half of each of the barley plots with sugar beets. In 1892 the other half of each plot in each of these series was sown with carrots. In 1893 it was thought desirable to continue this cleaning process, and carrots were again sown on the half of the wheat and oat plots occupied with this crop in 1891, and also on the half of the barley plots cropped with sugar beets that year.” In 1894 the one half of the oat plots was sown again with carrots and the half of the plots devoted to wheat and barley have been planted with potatoes.

#### TREATMENT OF SOIL.

“ The treatment of the soil on all the grain plots has been to gang-plough soon after harvest, and after the shed grain and weeds have well started to plough again about 7 inches deep. In spring the plots have been disc-harrowed twice before applying the fertilizers and again harrowed with the toothed or smoothing harrow before sowing. On those plots where barnyard manure has been used, the manure has been lightly ploughed under as soon as possible after it has been spread on the land and harrowed with the smoothing harrow before sowing. Wherever barnyard manure is spoken of it is understood to be a mixture of horse and cow manure in about equal proportions.”

It is proposed to give each year in the annual report a summary of these permanent fertilizer plots, taking the average yield of the whole of the previous period adding the results of the current year and then giving the average yield for the full time. The experience of each year will add materially to the value and reliability of the tests for the whole period.

#### WHEAT PLOTS.

The seed sown on each of these plots from the beginning has been in the proportion of  $1\frac{1}{2}$  bushels per acre ; and the varieties used were as follows. In 1888-89 and '91 white Russian, and in 1892-93 Campbell's White Chaff. In 1894 the Rio Grande wheat was sown April 19th, came up April 29th and was ripe August 8th requiring from the date of sowing to maturity a period of 111 days. Shortly before sowing the Rio Grande it was tested as to vitality and found to be very deficient in germinating power, less than half the kernels sprouted. As it was not practicable then to secure better seed, double the usual quantity of seed was sown namely : three bushels per acre, which gave a proportion of growth on each plot of about the usual thickness.

The season of 1894 at Ottawa has been more favourable for the growing of spring wheat than any other season during the seven years these tests have been carried on excepting that of 1891, and the yields taken as a whole are about one third above the average. This year the plot on which the rotted manure was used has yielded at the rate of 2 bushels 29 lbs per acre more than that on which the fresh manure was used. This gain however is not sufficient to offset the previous gains of the fresh manure plot and it still averages a little better than any other plot in the series.

## BARLEY PLOTS.

The quantity of seed sown per acre on the barley plots was 2 bushels in 1889, 1890 and 1891,  $1\frac{1}{2}$  bushels in 1892 and 1893, and two bushels in 1894. Two-rowed barley has been used for seed throughout the whole period. The varieties used were as follows: 1889, 1890 and 1891, Saale; 1892, Goldthorpe; 1893, Duckbill; and in 1894, Canadian Thorpe, a selected form of the Duckbill. In 1894, the Canadian Thorpe was sown April 19th, came up April 27th, and was harvested July 28th, requiring from the date of sowing to maturity a period of 100 days.

The yield of the barley plots in 1894 is a little under the average of past seasons. The plot fertilized with fresh barn-yard manure continues to give a better yield with this crop than the manure well rotted, better also than any of the artificial fertilizers either single or combined. The common salt *Sodium chloride* continues to give good returns.

## OAT PLOTS.

The quantity of seed sown per acre on the oat plots was 2 bushels in 1889 and 1890; 1½ bushels in 1891, 1892 and 1893, and 2 bushels in 1894. The varieties used were as follows: In 1889, Early English; 1890, 1891, 1892, 1893, Prize Cluster; and in 1894, Banner. The Banner was sown April 19th, came up April 29th, and was harvested July 28th, requiring from the date of sowing to maturity a period of 100 days. While individual plots have varied somewhat, the yield of oats has been a little higher, on the whole, during 1894, than the average of the five years past.

## CORN PLOTS.

The experiments with the plots of Indian corn have been conducted with the object of obtaining the largest weight of well matured green fodder for the silo and to have the corn so far advanced when cut that the ears shall be in the late milk or glazed condition. Each plot has been divided from the outset into two equal parts, on one of which—known as No. 1—one of the stronger growing and somewhat later ripening sorts has been tried, and on the other, marked No. 2, one of the earlier maturing varieties. During the first four years one of the dent varieties was tested under No. 1. The Mammoth Southern Sweet was tried in 1888, 1889 and 1890. In 1891 the Red Cob Ensilage was used and in 1892, 1893 and 1894, a free growing flint variety, the Rural Thoroughbred White Flint, was tested. On the other half of the plot (No. 2) the Canada Yellow Flint was used in 1888, 1889 and 1890, the Thoroughbred White Flint in 1891, and Pearce's Prolific in 1892, 1893 and 1894. For the first four years the No. 1 series was planted in drills 3 feet apart, using about 24 pounds of seed to the acre and thinning the plants, when up to 6 or 8 inches apart, and the No. 2 in hills 3 feet apart each way and 4 or 5 kernels in a hill. During the past three years both sorts have been grown in hills. The corn in both series of plots was planted in 1894 on May 23, and cut September 18th. The yield of fodder on these plots during the past season has been considerably below the average.

### PLOTS OF MANGELS AND TURNIPS.

In conducting these experiments the roots only have been taken from the land, the tops have always been cut off and left on the ground to be ploughed under so that the plant food they have taken from the soil may be returned to it. One half of each one-tenth acre plot in the series has been devoted to the growth of mangels, and the other half to turnips. The preparation of the land has been the same for both these roots. It has been ploughed in the autumn after the crop is gathered, disc-harrowed once in the spring, harrowed with smoothing harrow once, then ridged and sown.

In 1889, the variety of mangel used was the Mammoth Long Red. In 1890, three varieties were sown: 15 rows of Mammoth Long Red, 6 of Mammoth Long Yellow, and 6 of Golden Intermediate on each plot. In 1891, each plot again had three varieties: 18 rows of Mammoth Long Red, 3 of Yellow Fleshed Tankard, and 6 of Golden Tankard. In 1892, 1893 and 1894, one variety only has been used, namely, the Mammoth Long Red. From 4 to 6 lbs. of seed have been sown per acre, each year, in rows  $2\frac{1}{2}$  feet apart. In 1894, the mangels were sown May 9, came up May 19, and were pulled October 11.

Two varieties of turnips were sown on the half plots devoted to these roots in 1889: 25 rows of Carter's Prize Winner, and 2 rows of Carter's Queen of Swedes; and in 1890, a single variety: Carter's Elephant Swede. In 1891, six varieties were sown: 6 rows of Lord Derby Swede, 4 of New Giant King, 3 of Imperial Swede, 6 of Champion Swede, 4 of Purple Top Swede, and 4 of East Lothian Swede. In 1892, the Improved Purple Top Swede was sown, and in 1893 and 1894, the Prize Purple Top Swede. The land used for the turnips, which are usually sown later than the mangels, is allowed to stand after disc-harrowing, then cultivated once and ridged immediately before sowing. In 1894, the turnips were sown June 12, came up June 16, and were pulled October 15. The plots of both mangels and turnips have yielded, during the past season, a little better than the average of previous years.

## Experimental Farms

### CARROT PLOTS.

Carrots have been sown on alternate halves of the oat plots for the past four years, for the purpose of cleaning the land from weeds. This work was begun in 1891, and the plots have been sown each year with the variety known as the Improved Short White. In 1894, carrots occupied the west half of the plots. The seed was sown April 24, came up May 7, and the roots were pulled October 18. The crop, this year, is considerably below the average of the three preceding years.

### POTATO PLOTS.

The alternate halves of the wheat and barley plots which were occupied by carrots and sugar beets in 1891, 1892 and 1893, as explained in the annual report for 1893, were planted with potatoes in 1894. These were planted in rows 2½ feet apart with the sets one foot apart in the rows.

Those after wheat were planted May 7th came up May 21st and were dug September 20th. On each of these plots there were 20 rows of Lee's Favourite and 7 rows

of Wonder of the World. The accompanying table gives the yield of each variety for each plot and the total yield both in tons and bushels per acre.

Those after barley were planted May 8th came up May 21st and were dug September 22nd. On each of these plots there were 12 rows of Thorburn, 12 rows of Beauty of Hebron, and 3 rows of Early Rose. In the table the yield of each variety for each plot is given, also the total yield both in tons and bushels per acre.

The average yield of the different varieties per row putting the plots all together is as follows, the conditions as far as they can be determined being about equal :—

Beauty of Hebron.....	406½ lbs.
Wonder of the World.....	406½ do
Thorburn.....	357 do
Lee's Favourite.....	332¾ do
Early Rose.....	235½ do

COMPARISON OF RESULTS FROM THE USE OF EQUAL QUANTITIES OF BARN-YARD MANURE,  
FRESH AND WELL ROTTED.

On examination these tables of results all show that the best returns are obtained in growing all of the crops referred to from the use of barn-yard manure, and that in a large proportion of cases the yields are in favour of the fresh manure as compared with that well rotted when used in equal weights. The following table summarizes the relative advantage in yield on both sides during the whole course of these experiments :—

				In favour of well rotted Manure, 15 tons per ac.		In favour of Fresh Manure, 15 tons per ac.	
				Bush.	Lbs.	Bush.	Lbs.
Wheat, average yield per acre for 7 years							84
Barley	do	6	do			1	40 <sup>8</sup>
Oats	do	6	do			3	28
				Tons.	Lbs.	Tons.	Lbs.
Corn (Plots 1)	do	7	do			2	1,878
do (Plots 2)	do	7	do		1,170		
Mangels	do	6	do		1,765		
Turnips	do	6	do			1	483
Carrots after oats	do	4	do			2	1,155
do wheat	do	3	do			1	810
do barley	do	2	do		1,205		
Sugar beets after barley, average yield per acre for 1 year				1	270		
Potatoes after wheat	do		1 do		1,830		
do barley	do		1 do				1,100

These results seem to show that fresh barn-yard manure gives on the average greater fertility to the soil than an equal weight of manure well rotted. This subject is a most important one in the economy of manures, since during the process of thorough rotting, barn-yard manure loses about 40 per cent of its weight, to which must be added the cost of twice handling and that of turning once or twice during the process of fermentation. As stated in the report for 1893, the reason why the fresh manure is equal to the rotted, weight for weight, probably lies in the fact that the liquid portions of the manure, the richest in nitrogen have much of this most valuable constituent volatilized and lost during the process of rotting.

SAMPLE HEDGES ON THE CENTRAL EXPERIMENTAL FARM.

In the annual report of the Experimental Farms for 1889 a brief reference was made to ten varieties of trees and shrubs, the suitability of which for hedge purposes was being tested. The many inquiries which have since been made regarding shrubs and trees suitable for hedges from all parts of the Dominion, has led to an extension of this work not only at the central farm but also at the branch farms. These latter will be reported on hereafter. The trial hedges at the central farm now number forty-six in all, ten of which were planted in 1889, fourteen in 1890, nine in 1891, and thirteen in 1894. In planting these hedges the young shrubs or trees have all been put in in single rows and at a uniform distance of fifteen inches apart. These hedges have been planted in sections of fifty feet in length and ten feet apart arranged in a tier covering nearly 500 feet. The object lesson given by this comparative test has interested a large number of the visitors to the farm, and many hedges have been planted on private grounds as a result of the information gained here. These hedges are usually pruned twice a year, the first time in June and the second sometime in August, depending on the season and the growth the hedges have made. None of them have yet

## Experimental Farms.

developed sufficient strength to serve the purpose of inclosure of land against cattle without fencing, but many of them are very ornamental and would serve an admirable purpose as dividing lines between neighbours in towns and cities where strong fences are not required or for separating a lawn from the fruit or kitchen garden.

### HINTS ON HEDGE PLANTING.

In planting hedges the young shrubs or trees of deciduous species should not be more than one and a half to two feet high, and at the time of planting should be cut back to six or eight inches above ground to encourage a thick growth at the bottom, a single row fifteen inches apart is all that is necessary in any case. When planting evergreen hedges, young bushy trees from twelve to eighteen inches high should be chosen, and these will need but little trimming when planted, just sufficient to make the plants even in height and width. If evergreens are cut severely back so as to deprive them of much of their foliage they are unable readily to replace such loss and are liable to suffer permanent injury from such treatment. When planting a hedge it should have a space of at least two feet on either side of it clear of grass, and this land should be kept free from weeds and hoed occasionally during the summer; as the hedge grows, this space will need widening. The after trimming will necessarily vary in degree depending on the annual growth made, and the taste of the grower. Many of the species to be referred to can be easily propagated from cuttings. Such cuttings should be made late in the autumn unless otherwise directed, after the leaves have fallen; they should be from six to eight inches long; the lower end should be cut off smoothly just below the bud, the upper end just above the bud. When the cuttings are planted they should be put out in rows from one to two feet apart and about six inches apart in the rows and buried so that the upper bud shall be just above the ground. They may be planted in beds as soon as they are cut or they may be tied in small bundles and buried in the garden a foot or so below the surface and the earth mounded up over them, or buried in moist sand in a cellar and planted very early in the spring. During the winter there forms on the ends of the cuttings a granular growth called a "callous," from which young roots start in the spring. Well established plants suitable for hedge planting may usually be grown in a single season from such cuttings if they are well cared for and in most cases no special skill is required to secure successful results. The method of propagation of each species will be given with other particulars under their special headings in the following list.

### LIST OF TREES AND SHRUBS TESTED FOR HEDGES.

1. Siberian Pea Tree. *Caragana arborescens*.—This hedge was planted in 1889. Its present height is 4 feet 6 inches, width near base 3 feet, it has made good growth and forms a compact and very pretty hedge. The foliage is neat, and early in the summer it is covered with small bright yellow pea-shaped flowers. It is a native of Siberia, is very hardy and has succeeded well on all the experimental farms, including the farms at Brandon, Man., and Indian Head, N.W.T., and promises to be one of the most useful bushes in cultivation for general hedge purposes. The Siberian pea tree is easily grown from seed, which may be sown when fully ripe in the autumn or early in the spring.

2. American or White Elm. *Ulmus Americana*.—Planted in 1889, present height 5 feet 4 inches, width near base 3 feet 6 inches. Beginning with young trees about two feet high and cut back, followed by regular training, this makes a compact, hardy and useful hedge. On account of its tendency to make strong growth, it requires more attention than some others. Raised from seed. Young seedlings of this tree of suitable size, may be found in many localities in the woods.

3. Russian Mulberry. *Morus Tatarica*.—Planted in 1889, present height 5 feet 6 inches, width near base 5 feet. This hedge is very handsome and compact and has grown more both in height and width than most of the others. It is easily kept in order, but is not entirely hardy, the tips of the branches are winter-killed more or less

every year, but not enough to disfigure the hedge. This may be grown either from seed or cuttings.

4. Norway Spruce. *Picea excelsa*.—This hedge was planted in 1889, with young trees from 15 to 18 inches high, it now averages 4 feet 6 inches in height, with a width near its base equal to its height. It is very compact and handsome, forming a solid mass of green all through the year. This tree is grown from seed, but is of slow growth, young trees requiring 3 to 4 years to attain a height of 15 to 18 inches. Suitable young trees of this species can usually be obtained from nurserymen at reasonable prices.

5. Honey Locust. *Gleditsia triacanthos*.—Planted in 1889, height 4 feet 3 inches, width near base 4 feet. This tree has a beautiful fern-like foliage, but it is too tender for hedges for the Ottawa district. Trees planted singly are occasionally found to be quite hardy, but in hedges they kill out more or less, making the hedge irregular and unsightly. This tree is also a very strong grower and hence requires more frequent clipping to keep it in shape than most others, which makes it less desirable for this purpose. It is quite hardy in Western Ontario, where it is being used in some localities to a considerable extent for farm hedges. Its rapid growth makes it very unsuitable for this purpose, as the cost of labour required to keep a hedge of honey locust in good shape would be much more than the price of ordinary fencing, and if neglected each specimen struggles to become a tree, the more vigorous rapidly outgrow and smother the weaker ones, and the plantation soon becomes unsightly.

6. White Spruce. *Picea alba*.—This native evergreen makes one of the most desirable of all evergreen hedges. Planted in 1889, present height 3 feet 3 inches, width near base 3 feet 3 inches. This hedge is very compact and handsome, is not quite so rapid in growth as the Norway spruce, but is more dense in its compactness and makes a wall of constant greenness, and requires less clipping to keep it in order. In form it is beautifully regular. In many localities young trees may be found in abundance in the woods. If these are used, they should not be more than 12 to 18 inches high when transplanted, and would be better if put into nursery rows in garden soil for a year, removing at the end of that time into hedge row those specimens which have become established, and are fairly even in height and bushiness. The young trees may also be raised from seed, but like the Norway spruce, they make slow growth; they may be bought ready for planting from the nurseryman.

7. Common Barberry.—*Berberis vulgaris*. Planted in 1889, present height 4 feet 3 inches, width near base 4 feet. The common barberry makes a thrifty hedge, of a compact and regular form, and from its habit of sending up new shoots every year from the base it becomes after a time so thick as to be almost impenetrable, the foliage are dark green, the leaves small, nearly round and finely serrated. The flowers are small, greenish yellow and in long clusters, and later in the season the bright scarlet berries add to the attractiveness of this hedge. The barberry is easily grown from seed.

8. Hemlock Spruce.—*Tsuga Canadensis*. Planted in 1889, height 2 feet 6 inches, width near base 2 feet. This beautiful native evergreen succeeds best in positions somewhat sheltered and rarely does well for any considerable time in a hedge. It does not grow thriftily and branches occasionally die, giving the hedge an irregular appearance. On this account it cannot be recommended for hedge purposes in the Ottawa district.

9. Purple Barberry. *Berberis vulgaris purpurea*.—Planted in 1889, height 4 feet, width near base 3 feet, 6 inches. This is a purple-leaved variety of the common barberry referred to under No. 7. The purple-leaved variety is scarcely so strong a grower as the common green form, but it seems to be equally hardy and it makes in every way as good a hedge, and has the advantage of a rich purple hue which forms a pleasing contrast with other trees and shrubs. As this bush does not always come true to colour when grown from seed, it may be multiplied by suckers or layers, or it may be grown from well ripened cuttings.

10. Prickly Ash. *Zanthoxylum Americanum*.—Planted in 1889, height 3 feet 6 inches, width near base 3 feet. The prickly ash makes a fairly compact and prickly

## Experimental Farms.

hedge with a neat and pretty foliage, but its tendency to sucker is an objection to its use for hedge purposes.

11. Japan Rose. *Rosa Rugosa*.—Planted in 1890, height 3 feet 6 inches, width near base 4 feet. This bush makes a fairly compact hedge and grows rapidly, the foliage is larger than that of most roses, and the leaves are thick and glossy, and are seldom injured by insects. When in bloom its large deep rose coloured flowers are handsome and fragrant. The flowers are succeeded by clusters of very large bright red fruit attractive throughout the winter. The tendency of this shrub is towards a spreading growth, and a hedge of it needs more frequent clipping than some others. Its tendency to sucker is also against it. It may be propagated by seed and by suckers.

12. Golden-leaved Spiræa. *Spiræa opulifolia aurea*.—Planted in 1890, height 5 feet, width near base 5 feet. This is one of the handsomest hedges in the group, thrifty and compact in form, a rapid grower and is perfectly hardy. When the foliage expands in the spring it is of a brilliant golden hue, and it retains more or less of this colour until near the end of the season. This hedge contrasts finely with adjacent hedges with green and purple foliage, and is a striking object on account of its unusual colour during the greater part of summer.

13. Red-leaved Rose. *Rosa rubrifolia*.—Planted in 1890, height 4 feet, width near base, 3 feet 6 inches. This makes a pretty hedge, its small, neat foliage retaining a decided purplish red colour until the autumn. It is almost free from thorns and bears clusters of single pinkish, rose coloured flowers, followed by bunches of large scarlet fruit which remain on the bushes all winter. It does not, however, form a compact hedge, but is thin towards the base, and hence is not so desirable as some others. This is easily grown from seeds and most of the seedlings come true to colour.

14. Arbor Vitæ. *Thuja occidentalis*.—Planted in 1890, height 3 feet, width near base 3 feet. This valuable native tree makes a first class evergreen hedge, one of the best. It is compact, neat, of a rich green throughout the summer, assuming a duller shade during the winter months. It is very hardy, and does not require much care or trimming, although it bears cutting well. In addition to the hedge of 50 feet there is more than a mile of this hedge on the Central Experimental Farm, forming a boundary line on each side of one of the main roads passing through the farm. Arbor vitæ hedges have also been planted in several other places as a margin for inclosures adjacent to the buildings. These hedges are all good specimens, they have made regular and even growth, and are much admired by visitors. In many parts of Canada young trees of this species can be obtained from the woods, they should be transplanted when not more than 12 to 18 inches high into nursery rows and grown for a season, when the most thrifty plants should be selected to form the hedge, and when planted they should be trimmed so as to be even in height. Young and well rooted plants can also be obtained from the nurseries.

15. Baker's Rose. *Rosa Bakeriana*, planted in 1890, height, 2 feet 3 inches width near base 2 feet. This is a European wild rose which is tender in this climate, it kills back badly every year and is of no value here for any purpose.

16. Lilac. Seedlings of *Syringa vulgaris alba*.—Planted in 1890, height 4 feet 3 inches, width near base 3 feet 6 inches. The shrubs which form this hedge were raised from seed of the White Lilac, procured in Germany. They were from 12 to 18 inches high when planted, have grown well and have made a compact and shapely hedge, no flowers have yet been produced. The foliage is large, glossy and handsome, and the hedge is very attractive.

17. Sweet Briar. *Rosa rubiginosa*.—Planted in 1890, average height 3 feet 6 inches, width near base 3 feet, but very irregular. This bush has a straggling habit in growth, it also lacks hardiness and is of no value for hedge purposes in Ottawa.

18. Thunberg's Barberry. *Berberis Thunbergii*.—Planted in 1890, height 2 feet 4 inches, width at base 3 feet. This is a recently introduced species from Japan brought over in 1883. It makes one of the prettiest hedges in cultivation where a low growing hedge is desired. It is neat, very compact and regular in growth, is very hardy and retains its foliage during summer nearly to the ground. It bears clusters of flowers in the spring of a greenish straw colour tinged with red, which are followed by brilliant

scarlet berries. In the autumn the leaves turn to a fiery red and the bush then becomes one of the most striking objects to be found. After the leaves fall the scarlet berries hang as ornaments on the bare branches during the winter. This valuable bush is easily grown from seed.

19. White Pine. *Pinus Strobus*.—Planted in 1890, height 3 feet 3 inches, width near base 3 feet. This tree makes a handsome and useful evergreen hedge as it is hardy and maintains most of its lively green colour throughout the winter when many other evergreens look dull. The young trees grew irregularly for a year or two, but are now making a symmetrical and compact hedge, which does not require much clipping and appears to bear cutting well. Young white pine trees may be found in the woods in many parts of Canada when they may be transplanted and cared for as directed under arbor vitæ (No. 14), or they may be purchased from the nurseries.

20. Snowberry. *Symphoricarpos racemosus*.—Planted in 1890, height 3 ft. 3 in., width 3 ft. 3 in. This makes a rather weak growing and straggling hedge, the wood of which usually kills back at the tips here in winter; it also has a habit of suckering which is objectionable. Is not desirable in the east where much better hedges can be grown, but on the experimental farm for the North-west Territories at Indian Head, where this shrub and an allied species *S. occidentalis* grows wild, it has been found to make a useful hedge for garden purposes.

21. Pliant Viburnum. *Viburnum lantana*.—Planted in 1890, height 3 ft. 3 in., width near base 3 ft. This bush has large, handsome and deeply veined foliage, bears clusters of white flowers in the spring followed by bright red berries which become dark purple later in the season. It grows wild in Great Britain and has proven very hardy in this country. It makes a compact and desirable hedge. This bush is easily raised from seed, which should be sown in the autumn soon after it ripens, when it will usually germinate the following season. If the seeds are kept over and sown in the spring, germination is often delayed until the following year.

22. Chinese Lilac. *Syringa chinensis (rothamagensis)*.—Planted in 1890, height 2 ft. 9 in., width near base 2 ft. 9 in. This lilac makes a fair hedge but is too loose and open in its growth to entitle it to a place among the best. The foliage is relatively small and the clusters of violet bloom add to the appearance of the hedge during the flowering season. This variety was introduced from China in 1795, it may be increased by suckers which are produced freely.

23. Breaking Buckthorn. *Rhamnus frangula*. Planted in 1890, height 4 ft. 3 in., width near base 4 ft. 9 in. This shrub is a native of Britain but is quite hardy here and makes a thrifty strong growing compact hedge which deserves a place in the front rank. The leaves are small and the flowers which are borne in the axils of the leaves are very small and of a greenish white colour. Later in the season they are succeeded by round black berries about a quarter of an inch in diameter. This buckthorn is easily grown from seed.

24. Cockspur Thorn. *Crataegus crus galli*. Planted in 1890, height 3 ft. 9 in., width near base 3 ft. This thorn, which is a native of Ontario, makes a compact and useful hedge, the branches being armed with long stout thorns. It is not a rapid grower but the growth is even and regular. No bloom has yet appeared on this hedge. Thorns are usually grown from seeds which generally lie in the ground over a season before sprouting.

25. Box Elder. *Negundo aceroides*. Planted in 1891, height 3 ft. 8 in., width near base 3 ft. 6 in. This native tree has been found very useful for hedge purposes in Manitoba and the North-west Territories, where such inclosures are desired more especially to break the force of winds. This tree in hedge grows rapidly and on this account requires more frequent clipping than some others and needs to be kept well cut back if the growth of the side shoots is to be satisfactorily maintained. It is too rank a grower here to make a neat hedge.

26. Van Houtte's Spiræa. *Spiræa Van Houttei*.—Planted in 1891; height, 3 feet; width near base, 2 ft. 6 in. This spiræa has too slender and weak a growth to make a useful and compact hedge, but it is very beautiful when in bloom as it is then almost covered with white flowers from top to bottom for about a fortnight. This shrub is

## Experimental Farms.

more valuable as single specimens in the shrubbery or on the lawn than for hedge purposes. It is easily propagated by cuttings.

27. Swedish Juniper. *Juniperus communis fastigiata*.—Planted in 1891; height, 2 ft. 9 in.; width near base, 2 ft. The Swedish juniper has made a very neat and fairly compact evergreen hedge, and appears to be quite hardy. It does not make a strong growth, but it thickens up well, and twice trimming during the year keeps it in good shape. Young trees of this juniper can be had from most of the larger nurseries.

28. Nettle tree. *Celtis occidentalis*.—Planted in 1891; height, 2 ft. 9 in.; width near base, 3 ft. 6 in. This hardy native tree has made a low, bushy and very compact hedge. The young trees were small when put out and the hedge has not grown as rapidly as was expected from the natural habit of the tree. The growth, however, has been rigid, firm and even, and the hedge is compact and shapely. The lack of symmetry in the leaves at the base gives an interesting character to this hedge. The nettle tree is usually propagated by seeds and is also said to grow from cuttings of well ripened shoots planted in the autumn.

29. Rocky Mountain Blue Spruce. *Picea pungens*.—Planted in 1891; height, 2 ft. 6 in.; width near base, 2 ft. This is one of the most desirable evergreens of recent introduction. It is found native in the vicinity and on the slopes of the Rocky Mountains, and when grown from seed collected from trees found at the higher limits of its growth, it is quite hardy here. Its habit is somewhat stiff, but it is richly clothed with foliage which varies in tint in different specimens from a rich deep green to a pale steely blue. This hedge was planted with young plants selected for their blue colour, but during their subsequent growth some have become decidedly blue, some slightly blue, while others have put on different tints of green. This blending of colour gives the hedge a unique and most attractive character. The hedge is stately in form, very compact, and bears clipping well. Young specimens of this evergreen can be obtained from many of the larger nurseries.

30. Josika's Lilac. *Syringa Josikea*.—Planted in 1891; height 3 ft. 6 in.; width near base, 3 ft. Of the several lilacs yet tried this seems to be the most promising for hedge purposes. It is a native of Hungary and has a stiff and stately habit which becomes intensified in a regularly clipped hedge and the large foliage with which it is clothed, while thick, leathery and deep in colour, has a polished surface and laurel-like appearance which is very attractive. It blooms later than the ordinary lilac and makes a very compact and useful hedge and is quite hardy. May be propagated from suckers.

Most of the remaining sixteen hedges have been more recently planted and have not made sufficient growth to permit of an opinion yet being formed of their respective merits. They will be reported on hereafter. The following is a list of the names of the trees and shrubs of which these hedges are composed:—

### Evergreen.

Douglas Spruce.—*Pseudotsuga Douglasii*.

Swiss Stone Pine.—*Pinus cembra*.

Douglas' Golden Arbor-vitæ.—*Thuja occidentalis aurea*.

Ginnalian Maple.—*Acer Ginnala*.

Russian Olive.—*Eleagnus angustifolia*.

High Bush Cranberry.—*Viburnum opulus*.

Round Leaved Spiræa.—*Spiræa media rotundifolia*.

Double flowering Mock Orange, or Syringa.—*Philadelphus coronarius primulæ-florus*.

Golden Leaved Mock Orange, or Syringa.—*Philadelphus coronarius aurea*.

Douglas' Spiræa.—*Spiræa Douglasii*.

Amur Privet.—*Ligustrum amurense*.

Maule's Pyrus.—*Pyrus Maulei*.

Wild Plum.—*Prunus Americana*.

Crenate Deutzia.—*Deutzia crenata*.

Headed Cytisus.—*Cytisus capritatus*.

Elongate Cytisus.—*Cytisus elongatus*.

## A CHOICE COLLECTION OF HARDY ORNAMENTAL SHRUBS.

The inquiry is frequently made both by visitors and correspondents, who have but a limited garden space, what are the best and most attractive shrubs for such limited areas. As a partial reply to this question a selection of 12 varieties will be briefly described, each one of which, by its grace of form, its attractive foliage, or beauty of flower, or all combined, will afford much gratification to its possessor. The list is so small that many choice things are unavoidably omitted and no attempt will be made to include in this small number any of the very beautiful evergreens so desirable in every collection. These may be dealt with on a future occasion. Several of the most desirable of the shrubs in this select list have already been mentioned under ornamental hedges, but they are well deserving of special commendation also for the garden or lawn. The illustrations used have been engraved from photographs of specimens growing on the Central Experimental Farm.

1. Lilac Chas. X. *Syringa vulgaris* Chas. X.—Lilacs are among the best known and most beautiful of the spring flowering shrubs and are universally admired. They are easily grown and flower freely. Some varieties, however, produce flowers in much greater abundance than others. There are about ten species in all of this genus, and of some of these there are many varieties, but none have produced, under cultivation, forms giving so great a variety of character of bush and colour of flower as the common lilac, *Syringa vulgaris*, and it is one of the most beautiful of these forms known as Chas. X., which will first claim our attention. Fig. 3 is from a photograph taken in June, 1894, of a specimen

FIG. 3.—LILAC CHAS. X.

about 4 feet high on one of the lawns. This variety is rather dwarf in habit and slow in growth, probably because there is a great tax annually on its powers in the profuse production of bloom with which it is covered. No other lilac in the large collection now brought together on the experimental farms blooms so profusely as Chas. X., and the bush is perfectly hardy. The flowers are of a deep purplish lilac, fragrant and borne on large trusses.

## Experimental Farms.

2. Woody Caragana. *Caragana frutescens*.—This is one of a family of most useful and desirable shrubs the most familiar member of which is the Siberian pea tree, *Caragana arborescens*, which is referred to under ornamental hedges (No. 1). *Caragana frutescens* is also a native of Siberia, but is a less rapid grower and rarely grows higher than 3 to 4 feet, while the Siberian pea tree attains, under favourable conditions, in a few years a height of 10 to 12 feet or more. *C. frutescens* also produces flowers more abundantly and the individual flowers are larger. It is a most attractive object when in bloom as the whole bush is thickly covered with bright yellow pea shaped flowers. The flowers open early in the season and are succeeded by small green seed pods which, when approaching ripeness, change to a dull reddish colour and when fully ripe they burst and the seeds are scattered. This desirable shrub is easily raised from seed which may be sown in the autumn as soon as fully ripe, or early in the spring.

3. Large Flowered Variegated Weigelia *Diervilla grandiflora variegata*.—The cultivated weigelias which are now referred by botanists to the genus *Diervilla* are among the most beautiful flowering shrubs in cultivation. The large flowered weigelia is a native of Japan—a country which has given us in recent times many beautiful shrubs and flowers. The foliage on the ordinary form of this shrub is green, but in the variegated form, to which reference is here specially made, the leaves are beautifully margined with white which makes it a most attractive object on the lawn at all seasons of the year. When in bloom the flowers are so profuse that much of the foliage is hidden. The flowers are white shaded with rose and are funnel shaped at the base, they are produced in axillary and terminal clusters. Fig. 4 shows one of these shrubs

FIG. 4.—VARIEGATED WEIGELIA.

in bloom, a specimen in the arboretum at the Experimental Farm. Most of the weigelias are tender in this climate, and the branches are killed back every winter, half way or more to the ground. This winter killing may be partially prevented by protecting these shrubs during the winter with a wrapping of straw or evergreen branches. The variegated form has been hardier with us than any of the others and has never been protected. From the figure it will be seen that this bush flowered well in 1894, nearly to the tips. It is easily propagated from cuttings.

4. Van Houtte's Spiræa. *Spiræa Van Houttei*.—This charming spiræa is a fitting companion to the weigelia just referred to on account of the abundance of bloom

which it produces. The spiræas form a very large group of interesting and attractive shrubs, representatives of which are found native in almost every part of the world. None, however, are more beautiful when in flower than Van Houtte, which is then literally a sheet of pure white bloom. This bush has already been referred to under ornamental hedges (No. 26), but it is more useful when grown as an individual shrub. Fig. 5 represents a specimen in full bloom on one of the lawns on the Experimental Farm.

FIG. 5.—VAN HOUTTE'S SPIRÆA.

This bush is about 4 feet high and a little more than 4 feet across. It has a graceful and partly pendulous habit, as a rule it is hardy here, but in severe winters the branches are sometimes injured at the tips. It is quite hardy in Western Ontario; the usual method of propagation is from cuttings.

5. Thunberg's Barberry. *Berberis Thunbergii*.—This beautiful barberry, which has already been referred to under No. 28 in the chapter on hedges as one of the most charming shrubs for that purpose, is even more attractive when grown as a single specimen. Then it has an opportunity of displaying its beauty of form which is neat and graceful. The flowers are produced early in the season, but they are not conspicuous and are partly hidden under the branches. Later, the scarlet berries are quite ornamental and the brilliant scarlet colour assumed by the leaves of this bush towards the close of the season makes it then a most conspicuous and attractive object.

6. Red Tartarian Honeysuckle. *Lonicera tatarica*.—This is a very hardy and useful shrub, a native of Tartary, which has long been a favourite among lovers of shrubs and trees. The flowers open early in the spring. They are rose coloured and so abundant as to partly hide the foliage. Fig. 6 shows one of these shrubs in bloom, a specimen in one of the flower borders on the farm. They remain in flower for two or three weeks, and after the flowers are gone they are succeeded by dark coloured berries which are quite ornamental. In growth the bush has a rounded form and graceful habit. There are a number of species in this group brought from different parts of the world some of which have yellow flowers, others white, red or variegated. A group of the different species and varieties planted together such as may be seen in the Arboretum at

## Experimental Farms.

the Experimental Farm is most charming in the pleasing contrasts of flower and foliage which they display.

7. Golden Leaved Spiræa. *Spiræa opulifolia aurea*.—This attractive spiræa has also been referred to under hedges (No. 12) as one of the most desirable shrubs for this

FIG. 6.—RED TARTARIAN HONEYSUCKLE.

purpose. It is equally useful on the lawn and in the shrubbery : although not specially attractive in flower its clusters of seed vessels are pretty and its golden foliage contrasts so beautifully with the deep green of a well kept lawn or the varying tints of green and purple in the shrubbery that it has become quite a favourite. The golden leaved spiræa is a strong grower, soon attaining a height of 5 or 6 feet, is more or less rounded in form and rather stiff in habit ; the foliage also is larger than that of most of the spiræas. It is very hardy and may be easily grown from cuttings.

8. Guelder Rose or Snowball. *Viburnum opulus sterilis*.—This is an old favourite in gardens, too well known to need much description. It forms a very handsome shrub with large foliage, and is a sterile form of the high bush cranberry, *Viburnum opulus*, in which all the flowers are sterile and fully developed, forming large nearly globular clusters, of a pure white colour which remain on the bush a considerable time before fading. Fig. 7 represents a bush in one of the groups on the Experimental Farm. This species may be propagated by layering or by cuttings of the half ripened shoots made during the summer and inserted in sandy soil in a somewhat shady position.

9. The Pliant Viburnum. *Viburnum lantana*.—There are several handsome species among the Viburnums besides the snowball, and one especially, the pliant viburnum which commends itself for several reasons. This bush has already been spoken of favourably under hedges (No. 21). Grown as an individual specimen it makes a fine shapely bush, erect in habit with beautiful foliage, and produces large flat cymes of white flowers early in the season, which are succeeded by clusters of berries which at first are

bright red and when ripe nearly black. It is very hardy and may be propagated by layers or cuttings as directed for the snowball, or it may be grown from seed.

FIG. 7.—GUELDER ROSE OR SNOWBALL.

10. White Japan Rose. *Rosa rugosa alba*.—The red flowering form of *Rosa rugosa* has already been referred to when treating of hedges under No. 11. This is the same

FIG. 8.—WHITE JAPAN ROSE.

species with white flowers. It is a vigorous grower and makes a shapely rounded bush about 4 feet high, as seen in figure 8, which represents a specimen in the Arboretum

## Experimental Farms.

at the Experimental Farm. Both the red and white varieties bloom freely and remain in flower for a considerable period, and both may be propagated by suckers which are freely produced when the bushes are well established.

11. Large flowered Mock Orange (*Philadelphus grandiflora*.) Our collection would be very incomplete without an example of the Mock Orange or Syringa. There are several species belonging to this genus, which are very beautiful and interesting, especially when in bloom. Grandiflora is one of the best of them. The flowers are large, pure white, and sweet scented, and are produced in great abundance during the month of June. The bush is a vigorous grower; and if not interfered with will, under favourable conditions, eventually reach a height of 8 or 10 feet. Since the flowers are produced only on the wood of the previous year, this may be cut away when the flowering period is over, which will give more room to the new shoots, and they will become better ripened. In this way these shrubs may be kept smaller and made to produce flowers in greater profusion. The Syringas will, however, do very well without any pruning beyond the occasional removal of dead wood, and flower freely. The large flowered species is fairly hardy and usually comes through the winter without much injury, especially where partially protected by other trees and shrubs, but in seasons of unusual severity the shoots are often partly winter killed.

12. Large flowered Hydrangea. *Hydrangea paniculata grandiflora*. Although placed last, because it is later in flowering, the merits of this hydrangea would fairly entitle it to be put among the first and best of flowering shrubs. It was introduced from Japan in 1874, and during the twenty years which have since elapsed, it has become one of the most widely diffused and favourite shrubs in cultivation. It succeeds well under many different climatic conditions, and will grow in almost any soil which is fairly rich, provided it be well supplied with water. Fig. 9 represents a specimen in

FIG. 9.—LARGE FLOWERED HYDRANGEA.

one of the flower borders at the farm, and shows the profuse flowering habit of this shrub. The clusters of bloom are very large, sometimes nearly a foot long and 8 to 10 inches wide, and are borne at the ends of the branches. After fully expanding, the flowers, which are white, remain in good condition for about a fortnight, after which they begin to assume a pinkish hue and gradually become soiled with dust and by in-

sects, and eventually wither. During the early autumn when this bush is in the height of its glory, there are very few other shrubs in bloom. This gives the greater prominence to this showy and valuable shrub which would however hold its place well in any company. This hydrangea is quite hardy in the Ottawa district, and may be propagated by cuttings made from the partly ripened wood during the summer months.

#### FOREST AND ORNAMENTAL TREES AND SHRUBS.

During the year 1894, the forest belts and clumps, which were planned when the work began on the central experimental farm, have been completed by the planting of 3,442 trees along the northern boundary of the farm. Particulars of this work will be found in the appended report of the Foreman of Forestry, Mr. W. T. Macoun. In this report it is shown that there are now growing on the experimental farm in the various permanent plantations, avenues, hedges and groups in the shrubbery borders, a total of 35,735 trees and shrubs. To this number may be added 1,407 specimens, which have been planted in the Arboretum under charge of the botanist, making a total of 37,142 trees and shrubs, all of which have been planted since the improvements began on the experimental farm in 1887. In this mass of material, there will be found plantations of various sizes of all the valuable economic woods which can be grown in this country for timber or for fuel from which useful data will in future, from time to time, be obtained as to the annual growth of the individual trees and the quantity of wood growth per acre. There are also now in the entire collection more than 700 varieties of trees and shrubs under test as to their hardiness and adaptability to the climate of the Ottawa district. In this number, there are included species and varieties from every part of the world where the climate is such as to give a reasonable probability of success in their growth. It is expected that many additional varieties will be added during the coming season.

The forest tree department, including the ornamental trees and shrubs, has from the outset been under the special charge of the Director. No sufficient provision having been made otherwise for the work, it was at first more convenient that the material annually distributed by this branch should be put up and mailed by the horticultural division, and this plan was temporarily adopted. I beg to acknowledge my indebtedness to the horticulturist, Mr. John Craig, for the efficient and willing service he has rendered me in this important work, which has required on his part a considerable amount of labour and oversight. Under Mr. Craig's supervision, there were sent out through the mail in 1890, 1,000 packages containing 100,000 young forest trees, each variety labelled, and with each package a circular giving instructions for their planting and care. In 1891, 2,000 packages were mailed containing 200,000 young forest trees; there were also sent out that year 3,782 bags of tree seeds. In 1892, there were distributed 983 packages of trees and 918 bundles of cuttings of promising varieties of Russian Poplars and Willows. In 1893, 830 packages of trees, 798 of cuttings and 214 of mixed cuttings and trees. In addition, there were distributed that year 1,523 bags of tree seeds. These tree cuttings and tree seeds were nearly all sent on request to settlers on the North-west plains, where trees are absent or very scarce. In 1890 and 1891, larger packages of promising trees and shrubs were also sent to the Mounted Police stations and Indian agencies, also to the experimental gardens of the Canadian Pacific Railway located in the North-west at different points along the main line. My thanks are also due to Mr. Craig for the willing help rendered me in extending the forest plantations on the central farm in 1890 and 1891, also for the supervision given to their care during those years.

Experience has shown that the experiments conducted with native tree seeds and cuttings of poplars and willows have been more successful than those with most of the young trees. The box elder has however generally done well when grown from seed collected in the North-west.

Now that a very large amount of such material is available at the branch farms at Brandon, Man., and Indian Head, N.W.T., it is proposed to carry on the distributions

## Experimental Farms.

in future mainly from these points. It is probable that young forest trees and wood for cuttings of poplars and willows grown in the climate in which they are to be planted will prove hardier and better adapted to the country than if grown in the east, they will also reach their destination with less delay. A good supply of native tree seeds can also usually be obtained in the North-west.

Several of the varieties of Russian poplar and willow—cuttings of which have been distributed from the central farm and of which there is now material in abundance for further distribution at the branch farms in the North-west—are noted for their rapid growth. They also make shapely and useful trees for wind breaks and shelter belts and would in a few years if planted in sufficient numbers be useful for fuel. Fig. 10 repre-

FIG. 10.—RUSSIAN POPLAR. *P. certinensis*.

sents a specimen of one of the best of these poplars, *Populus certinensis*, which was planted as a young tree in the Arboretum at the Central Farm in 1889. During the five years which have since elapsed, this tree has grown to a height of 25 feet or more and its branches expand about 15 feet, while the trunk two feet from the ground has a

diameter of about 8 inches. Nearly equal growth has been made by the Voronesh willow, Fig. 11, and the laurel leaved willow represented by Fig. 12, planted also in 1889.

FIG. 11.—VORONESH WILLOW.

FIG. 12.—LAUREL LEAVED WILLOW.

Both of these willows when planted in the open soon make fine round-headed bushy trees, which make very rapid growth and soon furnish useful shelter.

# Experimental Farms.

## REPORT OF THE FOREMAN OF FORESTRY.

The spring of 1894 was a very early one and work was begun in connection with the division of forestry and ornamental grounds during the first week of April. The mulching of barnyard manure which covered the lawns was removed and the grass was uninjured, excepting in a few exposed places where there was no mulch, and where the snow had been blown off. During the spring and summer the grass was regularly cut by the pony lawn mower, and the lawns at all times looked well.

Tree planting was begun on the 18th of April and continued until May 30th.

The horse cultivator was used throughout the season among the trees and shrubs as often as necessary, which kept the surface of the soil loose and the weeds subdued. Very little cultivating was required in the forest belt along the western boundary of the farm, as the trees there are large enough in the rows (5 feet apart) to shade the ground and prevent weeds from growing; the same may be said regarding a great many of the trees in the rows 10 feet apart. In the older plantations of trees in the mixed belt along the northern boundary, very little cultivation was found necessary.

The trees and shrubs on the farm have, in nearly all cases, made good growth.

### REPLACING TREES IN FOREST BELT ALONG WESTERN BOUNDARY.

By consulting the list of trees given in the report for 1893 as living in the forest belt along the western boundary, it will be seen that there still remained a number of vacancies to be filled. In this plantation the experiment is that of growing trees in blocks all of the same species. In cases where the trees have grown so as to shade the entire surface, it was considered unnecessary to fill the vacancies with young trees of the same species for the reason that they would, in all probability, be smothered by the larger trees before they could establish themselves. Where the species were not perfectly hardy, the same kinds were not always re-planted. For the first time since the forest belt was begun, several trees, eight in all, were girdled by mice, all of which were White Ash (*Fraxinus Americana*). There were 131 trees replaced in this belt to fill vacancies.

### MIXED FOREST BELT, PLANTATION OF 1893.

In last year's Annual Report a list was given of the trees added to the mixed forest belt during the spring of 1893; also the number of these which had died during the summer of that year. Another record was taken in the spring of 1894, and it was found that 25 more had died in the winter of 1893-94. Of these 8 were *Ulmus montana* and 17 *Acer Pseudoplatanus*, neither of which species are perfectly hardy here. The vacancies caused by the death of trees during the summer of 1893 and the winter of 1893-94 were filled, and in the case of *Acer Pseudoplatanus* and *Ulmus montana*, replaced by hardier species. This plantation has made very gratifying growth, and towards the close of the season when the growth was completed, in some cases the trees were already touching one another. During the growing season, the soil was kept frequently stirred by the horse cultivator, and to this is to be attributed, in a large degree, the satisfactory growth which the trees have made.

### MIXED FOREST BELT, PLANTATION OF 1894.

To complete the mixed forest belt along the northern boundary of the farm, there remained yet to be planted a strip of land a little more than 500 yards long, extending to Preston street, the greater portion of which had always been one of the roughest parts of the farm. Beginning at the hill opposite Fourth Avenue there was a steep bank sloping to the east. This was partly filled with stones which had been gathered from the farm. In October this stone was covered with a thick coating of soil sufficient

to make a gradual descent to the base of the hill. For the next 500 feet the surface of the land was about level and the soil of a moist, peaty nature. The rest of the land was more or less stony or gravelly. In places where the solid rock came too near the surface, a coating of soil was put over it sufficient to start the young trees, and any very uneven places were filled in with soil. The land was ploughed and harrowed and the stones taken off before the trees were planted.

The forest belt was completed to Preston Street before winter set in, thus making a continuous belt about sixty feet in width along the northern boundary of the farm, with the exception of the breaks caused by a roadway and the Prescott and Ottawa Railway. Even now, before the trees have made any growth, the improvement made by the levelling of the land and the planting of the trees is very marked.

The following is a list of the species planted and the number of trees of each species —

## ADDITIONS TO MIXED FOREST BELT.

<i>Acer platanoides</i> —Norway maple.....	62
<i>Acer Pseudoplatanus</i> —Sycamore maple.....	1

## TREES IN FOREST PLANTATIONS.

Now that the forest belt along the northern boundary is completed a list of all the trees in the various forest plantations may be given.

The following summary is submitted :—

	Trees.
Forest belt along western boundary.....	9,701
Mixed forest belt along northern boundary, older plantations.....	2,329
Mixed forest belt along northern boundary, plantations of 1893.....	3,511
“ “ “ “ of 1894.....	3,442
Evergreen clump.....	1,856
Total number.....	<u>20,839</u>

## ADDITIONS TO TREES AND SHRUBS ON ORNAMENTAL GROUNDS.

During the spring of 1894 the work of planting additional trees and shrubs on the ornamental grounds was carried on. Several new clumps were arranged and a number

## Experimental Farms.

of single specimens planted, there are now growing on the ornamental grounds in all 2,206 specimens.

### NEW HEDGES.

A hedge of *Arbor vitæ* (*Thuja occidentalis*) was planted along Preston street, comprising 500 trees. As the road had been graded and the soil where the hedge was to go being of very poor quality, new soil was drawn and put in the trench prepared for the young trees. The trees used for this purpose were larger than is desirable and had to be severely cut back. Most of them have lived during the summer and promise fairly well.

The inclosure, near the Director's house, prepared mainly for special hybridizing experiments, having been found too small for the purpose, was enlarged during the fall of 1893, and in the spring of 1894, hedges of white spruce (*Picea alba*) and *Arbor vitæ* (*Thuja occidentalis*) were planted along the extended sides and end. There were planted, 121 white spruce and 116 *Arbor vitæ*.

A hedge composed of 393 Norway spruce (*Picea excelsa*) was planted along the eastern boundary of the orchard from the corner of the poultry yard to the junction of the eastern and northern boundary. Nearly all of the young trees have lived.

The following summary of all the trees and shrubs in all the permanent plantations on the Farm, excepting those in the Arboretum, is herewith submitted.

	Total number of trees.
Forest belts.....	20,839
Avenue trees.....	971
Trees and shrubs on ornamental grounds.....	2,206
Hedges.....	11,719
Total.....	35,735

### SEEDING DOWN AMONG ORNAMENTAL CLUMPS OF TREES AND SHRUBS.

Since the ornamental planting was begun on this farm, the clumps of trees and shrubs, where not on permanent lawns, have been kept cultivated with the horse cultivator in order to promote their growth and to destroy weeds. As these clumps had been cultivated in this manner for several seasons, the weeds subdued, and the trees in most cases well established, most of the land on which the groups were, was seeded down during the past season. Nearly everywhere the grass has taken well and with a light mulch of manure which has been spread over it this fall, it is hoped that the grass will come through the winter in good condition. That growing immediately around the trees has been removed and the soil will be kept loose at the surface so that the trees may have favourable conditions for making rapid growth. In addition to the seeding down of the ornamental clumps a new lawn has been made, about an acre in extent, leading to the office building and adjoining the residences of the officers. A part of this land was graded and prepared and the lawn grass seed sown during the autumn of 1893, and the remainder in the spring of 1894. Most of the grass sown in the autumn came through the winter well, a few spots only having to be re-sown where the wash of water in the spring had carried away some of the soil. Before the summer ended the whole area was under sod. This new lawn has also been lightly mulched with barnyard manure this fall to protect the newly formed sod. It is intended to utilize part of this ground for the testing of perennial flowers which will be grouped in beds prepared for this purpose. Already one bed has been planted with a large collection of lilies and another with irises.

A sufficient area was also sodded around the house occupied by the poultry manager, and a large part of the planted area in the Arboretum was seeded down with suitable lawn grass mixtures. That sown early in the season has formed a fairly good sod and it is hoped that by the end of next season the whole area will be covered with good sod.

W. T. MACOUN.

## NOTES ON GERANIUMS.

The work conducted on the Experimental Farms has a wide range and embraces, in addition to everything which is of direct importance to farmers and fruit growers in their work, the subjects of ornamental trees, shrubs and flowers including plants valuable for decorative purposes both without and within the house. Information gained and given on these matters will, it is hoped, prove useful not only to farmers and their wives but also to all classes of our people who take an interest in these subjects and lead to the more general beautifying of Canadian homes, thus making them more attractive. The following notes on varieties of geraniums which have been tested at the Central Experimental Farm have been prepared by Mr. W. T. Ellis, foreman of the seed testing and propagating houses, and cover the experience of the past three years with many sorts, also tests of a number of the newer varieties for shorter periods. The careful notes which Mr. Ellis has made of the experience gained here as to the suitability of the different varieties for bedding and pot culture will, it is hoped, prove interesting and useful to many.

## REPORT ON GERANIUMS PLANTED OUTSIDE, 1894.

*La Vestale*.—Plants very small and not well rooted, when planted out. Made very fair growth and bloomed profusely, colour pure white and does not shade, truss large, on long footstalk standing well up, foliage pale green with faint zone. Promises to be the best white variety tried.

*Leon Perault*.—Free growing with compact habit but stems weak and do not stand up well, made fair growth and bloomed very profusely, colour brilliant fiery scarlet, large truss on long footstalk, a very promising variety for bedding out.

*Ernest Lauth*.—Very free growing, compact habit, stems strong and short jointed, foliage large, bright green, with faint zone, very free blooming, double, large truss, flowers well formed, colour bright magenta crimson, a good bedding variety.

*S. A. Nutt*.—A very free growing variety, foliage large, dark green, with faint zone. Very free flowering, immense truss, double, rich deep crimson, on long footstalk. The best double variety for pot culture, and for bedding out.

*Mary Hallock Foote*.—A very strong coarse growing variety, small truss of salmon coloured flowers, very shy bloomer, not a desirable sort.

*Sam Sloan*.—A magnificent variety, strong free growing, wood rather long jointed, foliage deep green, very large and velvety with faint zone. Bears an immense truss of rich deep crimson single bloom, on long footstalk, individual florets very large and perfectly shaped. The best geranium for bedding purposes we have tried, as it is one mass of crimson bloom the whole season until cut down by frost.

*Souvenir de Mirande*.—Strong growing variety, with light green foliage, flowers well formed, upper petals white with salmon rose edge, lower petals rose streaked with white, medium sized truss. Has not done well, planted out, and is useless for winter blooming indoors, and of but little value even in summer.

*Mazepa*.—A very free growing variety, stems shortjointed, foliage large dark green, with faint zone, very free flowering, immense truss, colour deep carmine scarlet, a good single geranium, one of the best for bedding purposes, and unsurpassed for pot culture as a winter blooming variety.

*Fanny Thorpe*.—A very free growing variety with dwarf, shortjointed, compact habit, foliage large, dark green, with broad dark zone, distinctly marked, medium sized truss of delicate rose colour, outer edge of petals white, very free flowering. One of the best geraniums for bedding purposes, and first class for pot culture, as a winter flowering variety. Single.

*B. K. Bliss*.—A very strong free growing shortjointed variety, with light green velvety foliage, flowers double of a vivid fiery scarlet, borne freely on a medium size truss, with long footstalk. Good for bedding out and pot culture.

*Mme. Ayme de Chevaliere*.—A strong free growing variety, with dwarf, bushy, compact habit, foliage large, pale green. Immense truss of double pure white bloom, borne

## Experimental Farms.

on long footstalk, blooms have a rather ragged appearance, very free flowering, and a decided acquisition both for bedding purposes and pot culture.

*M. Adrien Corret.*—Strong growing, compact habit, large pale green foliage, large truss of double cherry scarlet bloom, very free flowering. First class for bedding and pot culture.

*Gloire de Lyonnaise.*—A very strong free growing variety, large velvety foliage, of light green colour, with faint zone in the old leaves. Bears an immense truss of bright orange scarlet flowers, lower petals shaded rose. Have measured individual florets 3 inches in diameter. One of the best single flowered geraniums in cultivation both for bedding and for pot culture.

*La Favorite.*—Strong growing and of dwarf compact habit, foliage large and pale green in colour. Flowers double, pure white, large truss, most perfectly formed florets of any variety tried here. Very free flowering when planted out. Grown in pots this variety makes good healthy growth but does not bloom at all satisfactorily.

*Mrs. A. Blanc.*—Very strong, tall growing variety, foliage very large, dark green and velvety, with dark, strongly marked zone, very free flowering bearing an immense truss of large flowers on long footstalk, colour apricot red, veined with a darker shade. Good both for bedding and pot culture.

*Gloire de France.*—A strong free growing variety, with large pale green foliage with dark zone. Bears an immense truss on long footstalk, individual florets very large and double, colour salmon white, with red eye. First class for pot culture and promises well for bedding.

*Renaissance.*—Slender growth, compact habit, foliage small pale green with dark zone, flowers single, large truss, free bloomer, colour rose with white eye. Has not succeeded well planted out, but was not placed under favourable conditions. A good variety for pot culture but is very apt to lose its foliage if allowed to suffer from lack of water.

*Prokop Daubec.*—A strong robust grower, shortjointed, large dark green foliage with faint zone. A beautiful double free flowering variety, colour bright rose. Good for pot culture, and also for bedding.

*James Vick.*—A very strong growing variety, with large dark green foliage, truss and flowers large, double, flesh coloured, but borne sparingly. Not a desirable variety for bedding or for pot culture.

*Beatrice.*—Dwarf compact habit and free grower, foliage dark green and velvety, truss medium size, borne on long footstalk, colour white with rose eye, very free flowering. One of the best geraniums in cultivation for pot culture, for blooming during the winter months. Has not succeeded well when planted out.

*Imogene.*—Dwarf compact habit and free growth, foliage small, very dark green, with darker zone, medium sized truss very free flowering, colour blush shading to crimson in centre. First class for pot culture, always covered with bloom. Has never succeeded when planted out.

*Satisfaction.*—Strong, free and compact habit of growth, foliage large and glossy, very free flowering, large truss on long footstalk, colour beautiful soft rose, a very good variety for bedding and also for pot culture.

*Queen of the West.*—Very free growing variety, of compact habit, glossy dark green foliage, with zone distinctly marked, very free flowering, medium sized truss, colour orange scarlet, one of the best bedders, stands all kinds of weather, but of no use for pot culture.

*General Grant.*—Very free and compact habit of growth, light green foliage, free flowering, medium sized truss, colour brilliant scarlet, first-class bedder, stands all kinds of weather; of no use for pot culture.

*Garden Director.*—Very strong, free growing variety, foliage dark velvety green, with faint zone. Very free flowering, bears a large truss on long footstalk, individual florets very large, semi-double, colour orange scarlet, a good bedder, but of no value for pot culture.

*Madame Saleroi.*—Very dwarf, compact habit, thrifty, healthy growth, foliage very small, clear green, edged with pure white. A first class variety for edging, as it rarely grows more than six inches high.

The above varieties have all been tried here two years or more, and in recommending the best, it is difficult to make a selection, where all are good, but for bedding, the following six single varieties are recommended.

*La Vestale*, pure white, Sam Sloan, crimson, Fanny Thorpe, rose edged with white, Gloire de Lyonnaise, orange scarlet shaded rose, Mazeppa, carmine scarlet, Queen of the West, orange scarlet. The following are recommended as the six best doubles for bedding: S. A. Nutt, crimson, B. K. Bliss, bright scarlet, M. Adrien Corret, cherry scarlet, Mme. Ayme de Chevrelière, white, Ernest Lauth, magenta crimson, Satisfaction, rose.

The best of the above named varieties for pot culture are, singles: *La Vestale*, Mazeppa, Fanny Thorpe, Gloire de Lyonnaise, Sam Sloan, Beatrice and Imogene; doubles, S. A. Nutt, B. K. Bliss, Mme. Ayme de Chevrelière, M. Adrien Corret, Ernest Lauth and Gloire de France.

#### VARIETIES OF LATER INTRODUCTION.

*Wm. Pfitzer*.—A very strong free growing variety, compact habit, foliage very large, dark green, velvety, with faint zone. Very free flowering, immense double truss, on long footstalk, colour, bright orange salmon, distinctly edged with white. One of the most beautiful and showy varieties tried here. A decided acquisition as a winter blooming geranium for pot culture. When in rapid growth the wood being soft it requires more care in watering than other geraniums, as if the soil is kept too wet the wood is apt to rot at the base of the stems, but we have found no difficulty in growing it successfully if the soil is kept rather dry, and when the wood is thoroughly ripened all danger from this cause is past. It also gives promise of being one of the best of the newer varieties for bedding.

*Meteor*.—Strong growing compact habit, foliage large bright green with dark zone, flowers, single, bright scarlet, large truss, very free flowering, gives promise of being one of the best for bedding purposes: has not done well as a pot plant.

*Panache de Nancy*.—Weak straggling growth, very poor habit, flowers small and truss small, colour salmon, streaked with white, not at all desirable either for bedding or pot culture.

*Ingenieur Parlier*.—A very strong growing variety, with large pale green foliage, flowers borne in large truss on long footstalk, colour violet red, double, free flowering, has done well as a pot plant, and promises to be a good bedder.

*Chaplin*.—Very strong, free growing variety, with large velvety leaves of dark green colour, flowers freely, large truss, bright scarlet, semi-double. Not as good as Garden Director, which it much re-embles.

*Buffalo Bill*.—Large strong grower, glossy green foliage with a dark zone, flowers double, large truss, colour creamy white, marbled with rose. A very shy bloomer.

*Copernic*.—A strong free grower, with large glossy foliage, large truss, flowers single, rosy carmine, shading to salmon with white eye. Made good growth, but did not bloom well.

*Admiration*.—A strong dwarf, freegrowing variety, with light green velvety foliage, very free flowering, double, colour pale rose shading deeper to the eye, large truss. A very good variety for pot culture, and did well bedded out under adverse circumstances.

NOTE.—I find this variety catalogued under the head of singles.

*L'Immortelle*.—Very dwarf compact habit, dark green foliage with faint zone. Large truss, colour dark magenta streaked with lighter lines, a very shy bloomer, and has not done well either planted out, or as a pot plant.

*M. G. Meynot*.—Made very weak growth, single flower, large truss, colour salmon pink with white eye, upper petals shading to white, a rather shy bloomer.

*Alfred Tennyson*.—A strong, free growing variety, free flowering, trusses large, on long stout footstalks, colour, bright orange scarlet, upper petals shaded with lilac, semi-double. A very promising variety.

*Mad. Alfred Mame*.—Made fair growth, flowers freely, truss large, colour rosy scarlet. A promising single flowering sort.

## Experimental Farms.

*Sir Trevor Lawrence*.—A very free, strong growing variety, truss large, flowers perfectly formed, and freely borne, double, colour rosy pink, a very promising sort.

*Golden Dawn*.—Of medium growth, compact habit, free flowering, truss medium size on long footstalks, florets large, colour orange scarlet, double, a promising variety.

*Van Dael*.—Made very weak growth, flowers poor and sparsely borne, colour salmon rose bordered with white.

*Mad. de la Rue*.—Made fair growth, fine large truss of full double bloom, colour orange scarlet. A promising variety.

*E. Legouve*.—Made fair growth, flowers semi-double, immense truss, rather loose, on strong stiff stem, colour, orange salmon. A very distinct variety.

*Comte d'Elbe*.—Made fair growth, habit compact, foliage darkly zoned, very free flowering, truss large but rather loose and flowers ragged, colour, rosy pink. A very promising variety.

*Gettysburg*.—Very free growing dwarf, compact habit, foliage large, dark green, with well marked zone, very free flowering, truss large, flowers well formed, colour bright crimson maroon, a decided acquisition, the best of the new introductions.

*J. J. Harrison*.—A very strong free grower, foliage large, pale green, and velvety, very free flowering, semi-double, large truss, and individual florets very large, colour, brilliant scarlet. Has done well planted out.

*Lord Lytton*.—Dwarf, strong growing and branching, with large pale green foliage, very free flowering, truss large on long footstalk, double, colour cherry red, upper petals orange red. Has done well here and promises to be one of the best of the newer varieties.

*M. Remy Martin*.—Very free growing, and dwarf branching habit, blooms very profusely, large truss on long footstalk, colour bright rose, upper petals marked with white, double. A promising variety.

*Carmen Sylva*.—A very strong grower, free flowering, large truss, colour white, did fairly well planted out.

*Mrs. J. M. Garr*.—Made fair growth, dwarf, compact habit, free flowering, medium sized truss, single, colour white, but apt to shade to rose when exposed to the sun. Not so good as some other white varieties.

*Aurora Boreale*.—A strong free growing variety, free flowering, single, truss large on long footstalk, colour pale rose with white eye. Succeeded well planted out.

*Dr. Levasseur*.—Free growing, dwarf compact habit, free flowering, medium sized truss, florets large, colour lower petals orange cerise marked with lilac, the upper petals lilac, veined with red and edged with cerise. One of the best of the newer varieties.

*White Swan*.—Made fair growth, dwarf, compact habit, double, free flowering, truss medium size, colour white, blooms well the whole season, but is not specially desirable as there are several better of the same class.

*Prof. Peuch*.—Very dwarf compact habit, very free flowering, truss and flower large but rather ragged, colour magenta rose, single.

*Chas. Jolly*.—Made very strong growth, habit of plant dwarf and compact, large fine shaped truss, colour orange scarlet, very free flowering, double. One of the best of the new varieties.

*Banquise*.—Made very weak growth and did not bloom.

*Chr. Larelle*.—A free strong growing variety, very free bloomer, truss large on long footstalk, large individual florets, colour salmon rose, edged with white. One of the best of the new varieties.

*Mrs. Parker*.—Very free growing compact habit, foliage bright green with white edge, flowers pale pink.

*P. Crozy*.—A free growing variety, makes a dwarf bushy plant, foliage medium sized and of heavy texture, free flowering, truss medium sized, colour bright scarlet, a fine variety. This is a hybrid between the zonale and the ivy sections of geraniums, showing the characteristics of the zonale in the foliage, and the ivys in the flowers.

The 33 varieties last named were tried for the first time planted out last season. Many of them were grown under conditions not calculated to give the best results, therefore it would be unwise to condemn any of these without further trial, which

it is the intention to make during the coming season. The following are considered the most promising for bedding: Meteor, single, Ingenieur Parlier, double, Ch. Larelle, single, Lord Lytton, double, Sir Trevor Lawrence, double, Aurora Boreale, single, Gettysburg, single, Dr. Levavasseur, single, Chas. Jolly, double, and Wm. Pfitzee, double. The last named has been grown two seasons in pots and has proved to be one of the best for winter blooming.

#### TUBERCULOSIS AT THE BRANCH EXPERIMENTAL FARMS.

In Bulletin No. 20, in which particulars are given regarding the results of tests of the cattle at the Central Experimental Farm for tuberculosis, the announcement was made (p. 33) that arrangements were in progress for a similar thorough testing of all the animals at the branch experimental farms. In accordance with instructions received from the Hon. Minister of Agriculture the necessary preparations were made for the carrying out of this investigation, and the branch farm at Brandon, Man., was first visited.

#### EXPERIMENTAL FARM, BRANDON, MAN.

On arrival on the 19th of July, 1894, I found that the cattle composing the herd there consisted of 28 animals, 4 of which were grades and 24 were pure bred of the following breeds:—

	Cows.	Heifers.	Bulls.
Durhams .....	4	2	2
Ayrshires .....	2	..	3
Holsteins .....	2	1	2
Galloways .....	2	1	1
Herefords .....	..	1	1

A short time before my arrival these animals had been carefully inspected and four of their number had been isolated from the rest of the herd as showing symptoms of disease. The remaining animals were regarded as healthy. They were in good condition and most of them appeared to be in robust health.

Having secured the assistance of Dr. F. Torrance, V.S., of Brandon and Dr. S. J. Thompson, V.S., of Carberry, Provincial Inspector for the Province of Manitoba, the normal temperature of each animal was taken (per rectum) on the evening of the 19th and morning of the 20th of July. The tuberculin was injected at 11 a.m., and the temperature of each animal taken subsequently every three hours for a period of 21 hours with the results shown in the following table:—

# Experimental Farms.

## TUBERCULIN tests at Brandon, N. W. T.

\* Several of the animals could not be got in from pasture in time for the first test of normal temperature.

From this table it will be seen that of the 28 animals tested 21 showed a rise in temperature of from two to six degrees Fahrenheit, thus indicating a diseased condition. This result was a matter of surprise to all as so many of them appeared to be healthy, vigorous and in good condition and had never shown any symptoms of disease. The diseased animals were all killed the following day and a careful postmortem examination made in each case with the following results :

1. Rose of Sydenham, Durham cow, 8 years.—Lining of the thoracic cavity covered with many large and small masses of grapy tubercle, partly cheesy and partly calcareous, peritoneum also covered with finely granular tubercles. Lungs with many small patches of tubercle in their substance and small masses distributed over the surface. About one-fourth of the udder was much affected and almost solidified with tubercle.

2. Rose of Darlington, Durham cow, 4 years.—A large portion of one lung was filled with soft tuberculous matter ; the other lung was healthy. Thoracic glands enlarged and filled with solidified tubercle. The udder was slightly tuberculous, and attached to the womb there was found a considerable quantity of soft tuberculous matter.

3. Cowslip, Durham cow, 4 years.—In the right lung there were several large cavities filled with tubercle, varying in consistence, some soft and partly fluid, and some solidified. The left lung was healthy. Thoracic glands enlarged and filled with caseous and calcareous tubercle. The tip of one lobe of the liver was also diseased by deposit of tubercle.

4. Fashion, Durham cow, 3 years.—The left lung had a large tuberculous mass in its substance, grapy tubercular deposits were found on the walls of the thorax, and the thoracic glands were enlarged and filled with tuberculous matter, some of which was soft but solidified and some hard and calcareous.

5. Countess of Brandon, Durham heifer, 1½ years.—The lungs in this animal were healthy and there was no appearance of disease on the lining of the thoracic cavity. In the thoracic glands were found small masses of tubercle and several of the mesenteric glands were enlarged and filled with calcareous tubercle.

7. General H., Durham bull, 3 years.—In one lung a large abscess was found just under the surface filled with solidified tubercle, some of it surrounding the cavity, being calcareous. Tuberculous matter was also found in two of the thoracic glands ; in one case in small quantity and in an early stage, and in the other the gland was enlarged and filled with semi-solid tubercle. Some of the mesenteric glands were also tuberculous.

9. Jewel, Ayrshire cow, 5 years.—Lungs healthy ; one of the thoracic glands enlarged and filled with solidified tubercle. Small tubercles were found on the outer surface of the stomach and small granules of a tuberculous character on the surface of the spleen.

11. Middlesex, Ayrshire bull, 3 years.—Substance of lungs healthy, but some small tubercles were found on the surface. One of the thoracic glands was enlarged and filled with solidified tubercle. Surface of the spleen also dotted with a few small tubercles.

12. Dandy Jock, Ayrshire bull, 1 year.—Surface of both lungs dotted with miliary tubercles, no disease found in their substance, lining of thoracic cavity covered with grapy deposit of tubercle. Thoracic glands enlarged and partly filled with tubercle most of which was in a calcareous condition.

13. Brandon Prince, Ayrshire bull, 1 year.—Surface of one lung dotted with small miliary tubercles, otherwise lungs appeared healthy. Thoracic glands somewhat enlarged and filled with cheesy tubercle.

14. Queen of Waterloo, Holstein cow, 6 years.—In this animal the lungs and all the other organs appeared to be healthy and no disease was found in any of the thoracic, mesenteric or other glands, but many small tubercles were found scattered over the surface of the inner lining of the bowels.

16.—Princess of Holland, Holstein heifer, 1½ years.—The lungs were free from tubercle, but specimens of a small parasitic worm were found in the bronchial tubes.

## Experimental Farms.

Small tubercles were found in considerable numbers on the outer surface of both large and small intestines.

17. Holland Prince, Holstein bull, 3 years.—Lungs and other organs healthy. Some small tubercles were found in one of the thoracic glands and two others were packed solid with calcareous tubercle.

19. Violet, Galloway cow, 8 years.—A large part of one lung was found filled with semi solid tuberculous matter, the other lung was free from disease. Several of the thoracic glands were also filled with solidified and calcareous tubercle.

20. Hannah B, Galloway cow, 6 years.—Lungs healthy, gland behind pharynx partly filled with calcareous tubercle. In the liver a small cavity was found about one inch in diameter filled with soft tubercle, some small tubercles were also found on the surface of the spleen.

21. Juno, Galloway heifer, 2 years.—Tubercle was found in several places in the substance of the lungs. The thoracic glands were enlarged and filled with tuberculous matter, some of it was of a soft solid consistence, some calcareous.

22. Chester, Galloway bull, 7 years.—In one lung was found a mass of tubercle about the size of a hen's egg, also a tubercular abscess about same size near the base, the other lung was free from tubercle. The thoracic glands were partly filled with solidified tubercle. Some tuberculous masses were found in the rectum and other larger masses lodged in fat surrounding the third stomach and also in fatty matter among the intestines.

23. Hereford heifer, 1 year.—Only one small tubercle was found in the substance of the lungs, but small tubercles were scattered over the entire inner surface of the thorax. The thyroid glands were enlarged and filled with soft tubercle; surface of intestines dotted with small tubercles.

24. Hereford bull, 2 years.—One lung had a mass of tubercle just below the surface near the tip, the other lung was healthy. There was a slight grapy deposit on the lining of the thorax, and the thoracic glands were partly filled with solidified and calcareous tubercle.

25. Grade steer, 2 years.—In one lung there was a mass of tubercle near the tip, otherwise the substance of the lungs was healthy, the surface of the thoracic cavity was dotted with grapy tubercle, and the thoracic glands were enlarged and filled with tubercle, partly of a cheesy consistence and partly calcareous. Small tubercles were also found on the surface of the spleen.

26. Lily, grade cow, age unknown.—A large mass of tubercle was found in one lung near the tip, the other lung was healthy, the thoracic glands were enlarged and filled with soft solidified tuberculous matter; large grape-like masses of tubercle were attached to the inner lining of the thorax, and a large tumour was found attached to the lower side of the diaphragm, enclosing soft tuberculous matter.

Of the 21 animals destroyed 19 were pure bred, and 2 were grades. Nine of these were bred in Manitoba and twelve came from Ontario. The course adopted in this instance and subsequently followed at the other branch farms was to bury the animals about six feet below the surface, and scatter lime freely over the bodies before filling the hole.

The following instructions were left in each case regarding the cleansing and disinfecting of the buildings:—

Remove the remaining cattle and clean the buildings thoroughly, sweeping walls, woodwork and ceiling. When dry, spray thoroughly the whole surface, floors, woodwork of divisions, walls and ceiling with the following disinfecting solution:

1 lb. corrosive sublimate (corrosive chloride of mercury).  
 $\frac{1}{2}$  lb. chloride of ammonium (muriate of ammonia), dissolved in a 40 gallon barrel of water.

Repeat the spraying after two days, then whitewash the whole of the woodwork, walls and ceiling with lime-wash containing glue or sugar to prevent it from rubbing off and coat with hot coal tar the floors of the stalls and the sides of the divisions for about one foot above the base.

EXPERIMENTAL FARM, INDIAN HEAD, N.W.T.

After completing the work at Brandon, I visited the Experimental Farm at Indian Head, arriving there on the morning of July 23rd. On this farm there were 39 head of cattle, three of which were calves under two months. Nine were grades and 30 pure bred of the following breeds :—

	Cows.	Heifers.	Calves.	Bulls.
Durhams . . . . .	4	2	3	2
Holsteins . . . . .	5	1	2	1
Polled Angus . . . . .	6	..	2	2

In this instance I had the assistance of Dr. F. Torrance, V.S., of Brandon, and Dr. J. Harris, V.S., of Moosomin, N.W.T. The normal temperature of each animal was taken twice on July 24th, excepting the three young calves which were not tested, and the tuberculin injected at 5 p.m. the same day. Subsequently the temperature was taken at intervals of 3 hours for 18 hours, with the results shown in the appended table :—

Name of Animal.	No. of Minims injected.	Normal Temperature		Temperature after Injection of Tuberculin, July 24, 5 p.m.							
		July 24.		July 24.		July 25.					
		11 a.m.	2 p.m.	8 p.m.	11 p.m.	2 a.m.	5 a.m.	8 a.m.	11 a.m.

## Experimental Farms.

Thirteen of these animals gave evidence by rise in temperature of the presence of the disease. These were killed on the 24th, and a post-mortem examination made in each case.

1. Cowslip, Durham Cow, 7½ years.—The lungs of this animal were free from disease, but small patches of tubercle were found in the liver, near the surface. A large mass of tubercle, weighing about a pound, was attached to the omentum with other smaller masses adjacent, mesenteric glands enlarged and filled with tubercle. A tuberculous cyst attached to the stomach was also filled with pus-like tubercle. Deposits of tubercle were also found in the udder.

2. Red Rosebud, Durham Cow, 6½ years.—The apex of one of the lungs was filled with cheesy and softer masses of tubercle, the other lung was healthy. There was a tumour in the throat of a part fatty and part fibrous character, inclosing small masses of tubercle, some of which was solidified and some semi-fluid.

3. Nellie Elgins, Durham cow, 3½ years.—Lungs and other organs healthy. Thoracic glands much enlarged and filled with solidified and calcareous tubercle—parts of the udder indicated the presence of tubercle in its early stages.

7. Red Knight, Durham Bull, 3½ years.—Lungs and other organs healthy. No tubercle was found in any of the thoracic or mesenteric glands, but the lymphatic gland on each side of base of scrotum was found charged with tubercle in a semi-fluid condition.

14. Siepkje 3rd's calf, 8 months, Holstein heifer.—In this animal the lungs and liver were healthy, and no tubercle was found in any of the glands. In the udder were found hardened patches of tubercle, and small tubercles were also found on the surface of the spleen.

17. Pride of Eastview, Polled Angus Cow, 8 years.—The lungs appeared to be free from tubercle, but had an unhealthy appearance, the tip of one lobe of the liver was also light coloured and unhealthy looking, not clearly tuberculous, but may have been tubercle in an early stage. The glands were free from tubercle, but tuberculous matter was found on both sides of the udder in patches.

18. Stella of Eastview, Polled Angus Cow, 7 years.—Both lungs were almost filled with masses of soft solidified tubercle. The thoracic glands were much enlarged, weighing about two pounds in all, and were filled with tubercle mostly in a calcareous condition. Small tubercles were found on the surface of the spleen, and the udder had small patches of tubercle on both sides.

19. Daisy of Eaton, Polled Angus Cow, 5½ years.—One small mass of tubercle was found in one of the lungs near the tip, otherwise these organs seemed healthy. The glands were free from tubercle, but a few small tubercles were found on the surface of the spleen.

20. Lady Eaton, Polled Angus Cow, 3½ years.—A large mass of tubercle was found in the substance of one lung, and many smaller masses distributed through the adjacent structure. Several small tubercles were found just under the surface of the liver, also on the surface of the spleen. The thoracic glands were much enlarged and filled with caseous tubercle.

21. Stella of Assiniboia, Polled Angus Cow, 3 years.—The lungs of this animal were healthy, but a small patch of tubercle was found in the liver. Two of the lymphatic glands were also found to be slightly tuberculous. In this cow the disease was in a very early stage.

30. Nellie, Grade heifer, 2 years.—No tubercle was found in the lungs, but the surface had an unhealthy appearance, liver healthy, one of the thoracic glands was enlarged and partly filled with solidified tubercle.

33. Grade Steer, 2 years.—One lump of semi-solid tubercle was found in the substance of one of the lungs about the size of a hen's egg, and three of the thoracic glands were enlarged and partly filled with caseous tubercle.

35. Holstein Grade Steer, 5 months.—In this instance the lungs and other organs were healthy, but the thoracic glands were considerably enlarged and filled with caseous tubercular matter.

In the table it will be seen that the yearling Durham bull, Prince, of Qu'Appelle, No. 8 had a very unusually high normal 104.3, and although this ran up to 104.8 with-

in three hours after the tuberculin was injected it fell so rapidly afterwards to the usual normal that it was evident that the high point reached was not due to the action of the tuberculin. The sudden rise also of 2 degrees which took place in the case of the Polled Angus calf No. 26 within three hours after injection was followed by a rapid fall to the normal so shortly after that it was highly improbable that the rise was caused by the tuberculin. As the mother (Cowslip) of one of the young calves not tested was found to be diseased, the calf also was killed but no evidence of disease was found in it—the mothers of the other two young calves proved to be healthy, and they of course were not slaughtered.

In this instance 10 of the animals destroyed were pure-bred and 3 grades—four were bred at Indian Head and nine sent from Ontario.

#### EXPERIMENTAL FARM, NAPPAN, N.S.

During the month of August, I visited the branch experimental farm at Nappan, N. S., with the object of testing the cattle there. As mentioned in Bulletin No. 20, p. 31, one case of tuberculosis had occurred there in the summer of 1893 when the suspected animal was killed and on post-mortem examination found to be affected with this disease. Two of the progeny of this cow were tested shortly after with tuberculin, and shown to be free from the disease, and as the remaining animals appeared to be healthy no further steps were taken at that time in testing the herd.

There were 39 animals in the herd on the Nappan Farm, 18 of which were grades, and 21 pure bred. Most of them were in good condition, and apparently healthy. The pure bred animals consisted of the following breeds :

	Cows.	Heifers.	Calves.	Bulls.
Durhams.....	5	2		1
Ayrshires.....	3	1		1
Holsteins.....	3	1	1	1
Jerseys.....	2			

In this investigation I was assisted by Dr. Geo. Townsend, V. S., of New Glasgow, N. S., Dr. Wm. Jakeman, V. S., of Halifax, and Dr. F. G. Hall, V. S., of Amherst, N. S. The normal temperatures of the animals were taken on the evening of August 22nd, and morning of the 23rd. The tuberculin was injected at 1 p.m. that day and the temperature taken every three hours after for 18 hours with the results given in the following table :—

## Experimental Farms.

In this instance ten of the animals gave evidence of the presence of the disease. These were killed on the 24th and the particulars of their condition are given in the following notes, taken at the several post-mortem examinations.

4. Fern Duchess, Durham cow.—In this animal the lungs were healthy, so also were the glands. A large tubercular deposit was found on the sternum, measuring about 7 inches by 5 and 2 inches deep. The muscular tissue being filled with tubercle, some of it pus like, some caseous. This patch extended from the bone upwards to within about  $1\frac{1}{2}$  inches of the skin. There was no appearance of bruise or other injury on the surface. There was an indurated tumour in one of the teats containing caseous tubercle, small lumps of tubercle were also found between the serous and mucous walls of the intestines.

6. Bess, Durham heifer, 1 year.—The lungs of this animal were healthy. One of the thoracic glands was considerably enlarged and filled with tubercle, and several others were diseased but less affected. The intestinal walls were dotted with tubercles of various sizes, most of them filled with material of a cheesy consistence.

7.—Duchess of Nappan, Durham heifer, 1 year.—This animal was not in good condition, and was evidently ailing; her right lung was found to be in a condition of atrophy and much wasted, its surface was covered with small tuberculous pustules, the left lung was better developed, but similarly covered with pustules. The intestinal walls were also studded with tubercular deposits of a granular character.

8. Nappan's Fashion, Durham bull, 4 years.—In this case there was found distributed through the substance of one of the lungs a considerable number of small masses of caseous tubercle, the other lung appeared to be healthy. One of the thoracic glands was much enlarged and filled with caseous tubercle, and several other glands in the thoracic cavity were found filled with tubercle, either cheesy or pus-like but in less quantity.

20. Kate Remona, Jersey cow, 5 years.—In different portions of the substance of both lungs, lumps of tubercle were found in a caseous condition, one lung was found adhering to the side. The thoracic glands were much enlarged, indurated and packed with caseous tubercle, and one of the mesenteric glands was similarly affected. Small lumps of tubercle were imbedded in the muscular tissue of the intestines, the inner part of the placenta was also dotted with pustules of tubercle.

22. Old Tingley, Durham grade, 10 years.—In this animal the lungs and other organs were found healthy and no tuberculous deposit could be detected in any of the glands. Small nodules of tubercle in a caseous condition were lodged under the serous coat of the intestines and distributed in varying proportion all over the large and small intestines.

26. Susie, Guernsey grade cow, 6 years.—Lungs healthy, no deposit found in thoracic glands. Mesenteric glands partly filled with caseous tubercle. Small masses of tubercle attached to the surface of the liver, uterus and intestines.

28. Mary, Durham grade cow, 3 years.—Both lungs dotted with tubercular matter in its earlier stages, small deposits of tubercle were also found in the substance of the liver. Inguinal glands slightly tuberculous, the interior walls of the uterus had also patches of tubercle.

32.—Molly, Durham grade heifer, 1 year.—The tip of one lung for about 5 inches was indurated and filled with tubercle in its early stages. No evidence of the presence of tubercle was found in any of the other organs or glands nor about the intestines.

37. Wild Eyes, grade steer, 2 years.—This animal was in poor condition. No evidence of tubercle was detected in the lungs, liver or other organs or glands of the body excepting in one of the mesenteric glands, in which tuberculous matter was found, small masses of tubercle were also found attached to the mesentery.

In this series of tests it will be observed that the temperatures on which some animals were condemned are lower than some other cases where no action was taken. There was, however, in every instance, where slaughter took place,  $1\frac{1}{2}$  degrees or more Fahrenheit of increase above the average normal temperature, except in the case of Duchess of Nappan No. 7, a yearling Durham heifer, which was not thrifty and appeared to be suffering from some internal trouble. She was killed on a rise in temperature

of 145 degrees above her average normal and the condition of the organs on post-mortem justified this action. The case of Jennie No. 10, an Ayreshire cow, was suspicious but her temperature varied considerably at different times during the test, which, at the highest, was but nine-tenths of a degree above the highest normal. As there were other reasons which might account for these fluctuations in her case, she has been left over for a second test.

Of the ten animals destroyed five were grades and five pure bred. One of the pure bred animals was sent from Ontario, one was purchased in New Brunswick, and of the remainder, including the grades, some were raised at the Nappan farm and the others bought from farmers in Nova Scotia.

EXPERIMENTAL FARM, AGASSIZ.

On the 13th of September, 1894, I arrived at Agassiz, B. C., and proceeded to test the cattle there, which numbered 18 head, 2 of which were grade animals and 16 pure bred. The pure bred animals consisted of the following breeds.

	Cows.	Heifers.	Calves.	Bulls.
Durhams .....	2	2	—	1
Ayrshires .....	2	2	1	2
Holsteins .....	2	—	—	2

The preliminary tests of normal temperature were completed on the morning of September 14th, and the tuberculin injected at 1 p.m. on the same day. The temperature was subsequently taken every 3 hours for 21 hours with the results given in the appended table.

TUBERCULIN Tests at Agassiz Experimental Farm, British Columbia.

From the figures in the table, it will be seen that five of the animals showed a sufficient increase in temperature to justify the opinion that they were diseased. These were killed on the following day, and on post-mortem examination all were found to be tuberculous. In two of them the disease was in an advanced condition, in the other three it was in its earlier stages.

1. May Gwynne, Durham Cow, 9 years.—The entire interior surface of thorax and abdomen was covered with granular grapy tubercular deposit, the lining of the diaphragm, the bowels, the entire surface of the lungs and nearly the whole surface of the liver was similarly covered. The substance of both lungs was full of patches and lumps of tubercle, most of which was in a caseous condition. The thoracic and mesenteric glands were all considerably affected and contained caseous tubercle. Spots of tuberculous matter were also freely distributed over both large and small intestines. There was no evidence of tubercle in the udder. This was the worst case of the disease I have ever met with.

2. Cheam Gwynne, Durham Cow, 4 years.—Several patches of tuberculous matter were found at the tips of both lungs. There were three small spots also on the liver, one of which extended below the surface for nearly one inch. The thoracic and mesenteric glands were free from disease, but one of the salivary glands was slightly affected with tubercle, there were also a few tubercular pustules on the intestines. The udder was healthy.

5. Durham Bull, 3½ years.—The lungs showed no evidence of disease, but there were two small patches of incipient tubercle on one lobe of the liver near the tip. One of the thoracic glands was very much enlarged and filled with tuberculous matter partly of a cheesy consistence and partly calcareous. There was a small tumour under the skin of rump which contained small patches of tubercle in its earlier stages.

6. Violet, Ayrshire Cow, 6 years.—The tip of one lobe of the lungs had a lump of caseous tubercle imbedded in the tissues about the size of a walnut, otherwise the lungs appeared to be healthy. One of the mesenteric glands was found enlarged and filled with caseous tubercle.

15. Netherland Prince, Holstein Bull, 3½ years.—No tubercle was found in the lungs. One of the thoracic glands was slightly tuberculous, and there were a few warty tuberculous patches on the surface of the spleen. The inner lining of the diaphragm was coated with tubercular pustules, and on opening the liver a large abscess was found containing about half a pint of creamy white tuberculous matter. The liver was also grown to the side and to some of the adjacent organs.

The five animals destroyed were all pure bred, three of them had been sent from Ontario, and two from Manitoba.

#### RELIABILITY OF TUBERCULIN AS AN INDICATOR.

Including the animals reported on in Bulletin 20, opportunity has now been given to test the reliability of the indications of tuberculin in connection with the experimental farm work in 74 cases, in each one of which—excepting the doubtful case reported on in Bulletin 20, p. 28—the existence of the disease as indicated by the rise in temperature has been demonstrated.

#### TUBERCULOSIS SHOULD NOT BE CONFOUNDED WITH PLEURO PNEUMONIA.

It is most unfortunate that so many intelligent people in the community, including some members of the press, fail to realize that tuberculosis is a disease entirely distinct from pleuro pneumonia. Pleuro pneumonia is a terribly contagious disease which when once established in a herd carries its victims off suddenly and rapidly, while tuberculosis, although contagious, is usually very slow in its workings, and an animal may have the disease for years without its being manifested by any external symptoms.

*Pleuro pneumonia is essentially a lung disease* under the influence of which the lungs become rapidly congested and very shortly lose the power of discharging their natural functions, and the animal dies.

## Experimental Farms.

*Tuberculosis is not essentially a lung disease.* Out of the 74 cases of post-mortem examination referred to, in 26 of them or more than one-third of the whole no disease whatever could be detected in the lungs, nor were their functions interfered with in any way, the disease in this large proportion of cases being confined to some of the other organs or glands of the body.

The distinctness of character between these two diseases should always be borne in mind. Tuberculosis is identical with the disease known as consumption in the human family, and exists among cattle to a greater or less extent it is said in every country where they are kept in a state of domestication. Whereas pleuro pneumonia happily is much less prevalent and is not known to exist anywhere in Canada.

### VISITORS TO THE CENTRAL FARM.

During 1894 a large number of farmers have visited the Central Farm. In addition to the daily visits of individuals and small groups, special excursions were organized from different points within a radius of from 100 to 200 miles both in Ontario and Quebec under the auspices of farmers' institutes, and agricultural societies and circles. Many took advantage of the low rates offered by the railway companies, and visited the farm and inspected the different branches of work in progress here. On most of such occasions opportunities were given for some of the officers of the farm to address the assembly, and give such information regarding the organization and arrangement of the work on the farm also as to the location of objects of special interest, as would enable the visitors to make the best possible use of the limited time afforded them: and all the members of the farm staff available have on such occasions devoted their whole time to the visiting friends. These efforts have been much appreciated, the visitors going away well pleased with the information gained. During the summer a number of seats have been provided and distributed over the grounds, under the shade of trees or among groups of shrubbery for the convenience of visitors. The number of visitors to the farm during the year has been about twelve thousand.

### MEETINGS ATTENDED.

During the year the following important meetings of a representative or provincial character have been attended, and large audiences addressed:—

On December 6th and 7th, 1893, the annual meeting of the Fruit Growers Association for the province of Ontario, held at Peterboro', Ont., where I presented a paper on "Some desirable ornamental trees, shrubs and plants for cultivation in Ontario."

On the 16th and 17th of January, 1894, the annual meeting of the Fruit Growers' Association of Nova Scotia was attended at Wolfville, Nova Scotia, where addresses were given on "The life history of an apple tree—what an orchard takes from the soil, and how this may be restored;" also, on "Results of fruit tests on the Experimental Farms."

On February 21st and 22nd, the annual meeting of the Dairymen's Association of New Brunswick, held at Fredericton, N.B., where addresses were delivered on "Soils, and how to maintain their fertility;" also, on "The growing of vegetables and fruits by the farmer for his family."

On the 23rd and 24th of the same month the annual meeting of the Dairymen's Association of Nova Scotia was attended at Kentville, N.S., and addresses delivered on some of the results of the work of the experimental farms in the interests of agriculture.

The annual meeting of the Central Farmers' Institute of Manitoba was attended at Brandon, Manitoba, on July 17th, 18th and 19th, and addresses delivered on the "Benefits conferred on the farmer by the work of the experimental farms;" also, in reference to "Agricultural education."

In August the annual meeting of the Society for the Promotion of Agricultural Science was attended on the 14th and 15th in Brooklyn, N. Y., where, as president of

the society I delivered an address containing a summary of the methods adopted by the Government of Canada for the promotion of agriculture.

I also attended the meeting of the agricultural conference held in Truro, N. S., in August in connection with the visit of their Excellencies the Governor General and the Countess of Aberdeen, and took part in the proceedings.

#### VISITS TO THE BRANCH EXPERIMENTAL FARMS.

Two visits have been paid this season to the branch experimental farms at Brandon and Indian Head and one each to Nappan and Agassiz. The first trip was made in July, and the second during the month of September.

##### EXPERIMENTAL FARM AT BRANDON, MAN.

At the time of the earlier visit, July 17th to 20th, the crops were suffering much from a protracted drought, the straw of the grain was very short and the yield did not promise well. Subsequently, the results of the harvest proved better than had been expected. The yield was not large, although better than last year, but the quality of the grain was excellent. The Indian corn looked well, but the roots and other late crops had suffered much, from the long continued dry weather. The avenues, belts and hedges of forest trees looked well and had made good growth notwithstanding the unfavourable season.

This farm is proving a most useful institution to the farmers of Manitoba, and kind words of appreciation and commendation are heard on every hand in regard to the suitability of the location, the value of the experimental work planned, and the excellent way in which the farm is conducted by the much esteemed superintendent.

The grading and planting of the groups of shrubs and ornamental trees about the residence of the superintendent briefly referred to in my last annual report, together with the subsequent sodding, had produced a most marked improvement in the surroundings and had transformed a bare and barren looking place into a fertile looking and beautiful spot dotted with thrifty growing trees and shrubs, affording in all directions pleasant objects for the eye to rest upon. Provision is being made to add to this interesting collection of trees and shrubs during the coming season.

##### EXPERIMENTAL FARM AT INDIAN HEAD, N. W. T.

Crops suffered in a still greater degree from the excessive dry weather in the North-west Territories, and those at Indian head were no exception to the general rule. The good results of summer fallowing and good farming were very apparent during this visit, for, while the crop on the Indian Head experimental farm was reduced to about one half of the average return, those farmers in the neighbourhood who had not followed the good example set by our efficient superintendent, Mr. A. Mackay, had scarcely any crop worth cutting. The wind-breaks and belts of forest trees which have been planted on this farm are now rapidly transforming it from a bare plain to a piece of attractive and diversified landscape. Their great usefulness in collecting snow during the winter and thus giving more moisture to the land has also been clearly demonstrated in the increased yields of grain and roots obtained on land adjacent to such plantations, for particulars of which I would refer the reader to the excellent report of the superintendent of that farm appended.

The train service during the greater part of the year has not been convenient for visitors to the farm, the trains passing Indian Head each way during the night. For this reason the number of visitors to the farm has not increased as it undoubtedly would have done under more favourable circumstances.

##### EXPERIMENTAL FARM AT NAPPAN, N.S.

This branch farm was visited in August, when the work in progress there was carefully inspected. The hay crop had been large and was well saved, but the protracted

## Experimental Farms.

dry weather which followed the hay harvest had resulted in a short growth of straw in cereal crops and in many instances lessened the yield. In quality, however, the grain is usually good, the kernel being plump and well developed. Most of the other crops on the experimental farm had given or at that time gave promise of satisfactory returns. For particulars in regard to these and other interesting points the reader is referred to the report of the superintendent of that farm appended.

The fruit orchard had made satisfactory progress and many of the young apple trees were bearing, some of the plums and cherries had also borne fruit. A new line of experimental work in the tile draining of marsh land was begun this year which it is hoped will prove advantageous. The general progress made in the improvement of the land and the condition in which the buildings, implements and stock were kept was very satisfactory and creditable to the superintendent in charge.

### SECOND VISIT TO THE WEST.

In travelling westward for the second journey, the route to the Pacific by the "Soo" line was chosen in order to gain an opportunity of visiting the Experimental stations in Minnesota and South Dakota, U.S.

### MINNESOTA EXPERIMENT STATION.

The Minnesota Station at St. Anthony's Park, Minneapolis, was inspected on the 4th and 5th of September, when I was most courteously received by Prof. W. M. Hays, the officer in charge, also by Prof. S. B. Green, who has charge of the horticultural and botanical departments and by the other officers of the station who all did everything in their power to make my visit pleasant. It was a source of much regret to me that Prof. Thos. Shaw, late of Guelph, now a highly esteemed member of the staff of this institution, was unavoidably absent during the time of my visit.

There are 250 acres of land belonging to the Minnesota experiment station, about 100 acres of which are laid out in experimental plots for grain, corn, fodder plants, &c. The grain crops had all been cut before my arrival, but the yields were reported as small on account of the drought. The corn and other late crops remaining were all very much stunted and parched. The experiments planned here are of a very practical character and promise to be very useful to the farmers of the state. The land is well situated and appeared to be of good quality, and in ordinary seasons would no doubt give satisfactory returns. The area devoted to experiments with fruits and economic and ornamental trees and shrubs was large. Many promising varieties, especially of plums were seen in fruit and opportunities afforded of testing their respective merits as grown in this climate. Much useful information was also gained from the tests in progress with some of the hardy Russian apples and with the hardier forms of trees and shrubs.

On Sept. 6th I left Minneapolis for Brookings, South Dakota. On the route through South Dakota as well as after arrival at Brookings, it was everywhere evident that the effects of the dry season had been felt most severely, the crops had all been very much stunted and had ripened prematurely. Many of the fields of grain had been left uncut and the straw was very short, in some instances not more than 8 or 10 inches high with very small and partly developed heads, some of the best of these fields were being cut with a mower as the material was too short to use a binder, and the heads were raked into heaps and hauled to the thresher, but it is a question whether the yield thus obtained, at the low prices prevailing, would pay for the extra labour involved. With so little straw and a very light crop of hay, the prospects for wintering stock were very discouraging to many farmers.

The Experiment station and agricultural college grounds at Brookings, which consist of about 400 acres, are nicely located on a piece of high rolling prairie. The officers at the station were all very courteous and gladly gave me all the information at their command. Under the guidance of Prof. L. C. Corbett, who has charge of the fruit and

forest plantations, I visited the forest tree belts, which were very instructive, as they had been planted about 10 years and thus afforded opportunities of comparison with the growth of similar trees more recently planted at Indian Head and Brandon. Prof. Chilcott, the agriculturist, drove me over the lands devoted to agricultural experiments. The chemist, Prof. J. H. Shepard, kindly conducted me through the laboratory and submitted samples of the waters from artesian wells in various parts of the state which he had collected for the purpose of analysis. Prof. T. A. Williams, the Botanist and Entomologist, also gave me much information regarding the plants and shrubs, hardy in this part of South Dakota, and assisted me in collecting seeds of some of the most promising sorts for test in Canada. I left on the following day for the west, much pleased with the information gained.

That formidable weed known as Russian thistle was very common over a large area in both the Dakotas and where farms have been abandoned after partial breaking or where fields have been neglected this weed was observed in great abundance.

On the way to Moose Jaw, a day was spent at Estevan, N.W.T., where some of the recently opened coal seams were visited. The supply of this material in that locality is most abundant and the quality seems to be that of a very good lignite.

Arrangements had been made that Mr. A. Mackay, the Superintendent of the Experimental Farm at Indian Head, should join me in this journey to the Pacific coast, and from Moose Jaw we travelled together to Agassiz where we arrived September 13th.

#### EXPERIMENTAL FARM, AGASSIZ.

Satisfactory progress had been made with the work on this branch farm. The young orchards were bearing fruit, and the plums, which were just in their prime, were of excellent quality and yielding well; a considerable number of the young apple trees had also come into bearing. There are now more than 1,200 varieties of fruit under test at this farm. The experiments in planting on the higher bench lands on the sides of the mountains are proving very successful, the young fruit trees coming earlier into leaf there than those planted in the orchards in the valley. These experiments are of great importance to the province for these patches of land on the hill sides are of little or no value for general agricultural purposes, and if they can be advantageously turned into fruit orchards, it will give a great impetus to fruit growing in British Columbia, as the quantity of such land available is very large. The plantations of hard wood forest trees on the mountain sides have been enlarged during the past year, and in a few years it will be demonstrated whether such valuable eastern hard woods as the black walnut, cherry, hickory, oak, elm, ash and maple can be grown here to advantage. With all its wealth of timber, British Columbia has very little hard wood, and the successful cultivation of these valuable eastern trees in that province would no doubt eventually prove a great boon. The unusual spring floods which did so much injury to the crops in the lower lands in the valley of the Fraser did not reach the Experimental Farm. The grain and hay had given good returns, and the root crops promised well. The arrangements for supplying the barn and dwelling with spring water from the mountain were nearly completed, a considerable area of new land had been cleared and broken up, and the general advancement made in all departments was most creditable, showing that the energy and push which the efficient superintendent has shown from the first has not abated.

While on the coast a visit was paid to the Chilliwack and Sumas districts on the south side of the river, where the effects of the spring flood were more severely felt. On the lower lands which had been covered with water for several weeks the submerged grain crops had been destroyed, but as soon as possible after the waters had subsided, many of the fields were resown, but the season was too far advanced to admit of the ripening of the grain. At the time of my visit it was in head and was being cut and cured for fodder.

In the orchards which had been flooded a large proportion of the cherry trees had been killed. It was also observed that many of the trees in the young plantations of plums, pears and apples which had been overflowed, were dead, but in most instances

## Experimental Farms.

the older and well established trees did not appear to have suffered permanent injury. This will not, however, materially affect the general fruit interests of the province for the reason that a large proportion of the orchards newly planted are on highground. The settlers have shown a most praiseworthy degree of energy in their endeavours to repair the damage done, and this part of the country will no doubt soon resume its wonted appearance of luxuriant fertility.

### VISIT TO CALGARY.

On the return journey a day was spent at Calgary where the irrigation ditch and flume recently constructed by Mr. G. Alexander was visited and examined. The water had been turned on the day previous and was flowing through the channels provided for it over a large area of land. The ditch which takes the water from the other side of Bow River is about five miles long, and the flume which carries the water across the river on a substantial bridge is barrel-shaped, three feet in diameter and has a length of 2,000 feet. This water supply will now be available, it is said, for the irrigating of 2,000 acres of land on the plains near Calgary and with some further extension of the work it is believed that this area can be doubled and 4,000 acres sufficiently supplied with water from this ditch. Other irrigation ditches are in progress of construction in that district and the results of the crops of next season under these favourable conditions as to moisture will be watched with great interest.

### SECOND INSPECTION OF BRANCH FARMS AT INDIAN HEAD AND BRANDON.

Continuing eastward the farms at Indian Head and Brandon were again inspected. The grain crops at Indian Head had been harvested, but on account of the drought the yield had fallen considerably short of that of previous years. The fields and plots at that time threshed of wheat, varied from 15 to 22 bushels per acre and other cereals in proportion. North of Indian Head where on some farms local showers were had during the critical period of growth the yield has ranged from 20 to 30 bushels per acre, while south and west of the town and in other districts not favoured with local showers the yields of grain have been very light, averaging much less than those realized on the experimental farm.

At the Experimental Farm at Brandon, the yields of all sorts of grain had been more satisfactory, and better than was expected at the time of my visit in July. Wheat on the Experimental Farm was turning out from 22 to 30 bushels per acre and oats and barley in proportion. An encouraging feature in connection with the crop this year throughout the west is the unusually fine quality of the grain produced.

### CORRESPONDENCE.

The following is a summary of the letters received and despatched at the Central Experimental Farm from November 30th, 1893, to November 30th, 1894, also of the bulletins and reports distributed by mail during the same period.

	Letters received.	Letters sent.
Director.....	9,325	6,076
Dairy Commissioner and Agriculturist.....	4,768	5,236
Horticulturist.....	1,668	1,912
Chemist.....	1,297	1,171
Entomologist and Botanist.....	2,362	2,251
Poultry manager.....	1,118	966
Accountant.....	1,276	1,039
	21,814	18,651

## CIRCULAR LETTERS SENT.

The larger part of these are instructions sent with samples of seed-grain, tree seeds, &c., distributed.....	29,695
Number of reports and bulletins mailed.....	141,537

## ACKNOWLEDGMENTS.

I desire on this occasion again to express my obligations to all the officers of the several Experimental Farms for their diligence and cordial co-operation in carrying out the measures which have been planned in connection with their several departments and for the earnest interest they have taken in the successful prosecution of their several branches of work. Where all have done so well special acknowledgments may seem unnecessary. A personal acknowledgment is, however, specially due to those members of the staff, who have so ably aided me in those sections of the work of which from the beginning I have assumed the personal charge ; also for the assistance I have received in carrying on portions of the agricultural work, specially arranged for with the agriculturist. To Mr. John Fixter, the farm foreman, to Mr. W. T. Macoun, the foreman in forestry, who has also acted as my assistant in the experimental field work, to Mr. W. T. Ellis, who has had charge of the seed testing and propagating houses, and to Mr. J. Kirkpatrick, who has carried on the work of seed distribution, my grateful thanks are due for the assiduous care they have shown in carrying out these several divisions of the work, and in collecting and preserving the data which forms the basis of much of the information presented in this respect.

WM. SAUNDERS,

*Director, Dominion Experimental Farms.*

## Experimental Farms.

# REPORT OF THE AGRICULTURIST.

(JAS. W. ROBERTSON.)

---

To Wm. SAUNDERS, Esq.,  
Director, Dominion Experimental Farms,  
Ottawa.

SIR,—I have the honour to present reports on, (1) experiments in the feeding of swine, (2) work in the experimental dairy and (3) the 40-acre lot.

Experiments were begun in the fattening of two lots of steers on a ration of which the bulky-fodder portion was mainly corn ensilage, to be compared with a ration of which the bulky-fodder portion was mainly the Robertson Mixture ensilage, composed of Indian corn, horse beans and sunflower heads. Feeding experiments along similar lines were begun with milking cows. Enough information has not yet been obtained to warrant the publication of any conclusions from these tests, which are still in progress.

As in former years, my duties and opportunities as Dairy Commissioner received the greatest part of my time and labour. Executive and commercial work in connection with the establishment and management of the Branch Experimental Dairy Stations has taken me much from home. There were within the year 23 Dairy Stations and 2 Dairy Schools, besides 3 Travelling Dairies, under my charge.

The supervision of the major part of the Agriculturist's work, viz., the grain and root crops, was taken by yourself as heretofore.

I am indebted to Mr. John Fixter, farm foreman, Mr. R. R. Elliott, herdsman, and Mr. Chr. Marker, butter-maker, for particularly painstaking assistance in the work reported upon.

I have the honour to be, sir,  
Your obedient servant,

JAS. W. ROBERTSON,  
*Agriculturist.*

## PART I.—THE FEEDING OF SWINE.

Experiments in the feeding of swine were continued during 1894, to gain information on the quantities of feed consumed per pound of increase, in the live weight of swine of different breeds or breeding.

Incidentally some information was gained on the relative quantities of grain and skim-milk required to produce one pound of increase in live weight.

Tests were begun to discover whether the feeding of wheat and of buckwheat resulted in the production of meat of a soft and inferior quality.

## FIRST SERIES.

This series of tests was a continuation of those reported as *third series* in the annual report of 1893.

In 1893 the swine in this test were fed until December 6 on a mixture, composed of equal parts (by measure) of barley, rye, frosted wheat (all ground) and wheat bran, fed after being soaked in cold water for 8 and 18 hours.

From December 6 until the end of the test, the swine in **seven pens** were fed on the same mixture, soaked in cold water, for an average period of 18 hours, plus 3 pounds of skim-milk per head per day.

*Conclusion.* From these tests with 31 swine, which were continued 8 weeks and 12 weeks, it appears that:—

(1) On the average **3 lbs. of a mixture**, composed of equal parts by measure, of barley, rye, frosted wheat (all ground), and wheat bran, plus **2·32 lbs. of skim-milk** were consumed per pound of increase in the live weight.

*Comparison of Breeds and Breeding.*

The following tables show the quantities of feed consumed per pound of increase in live weight, by swine of different breeds or breeding during different feeding tests.

Table VIII shows the quantities of frosted wheat, ground and soaked in cold water for an average period of 18 hours, consumed by swine of different breeding per pound of increase in live weight. They were fed for a period of 12 weeks (Oct. 3 to Dec. 26) as reported at pages 71-72, Experimental Farms Report, 1893.

## Experimental Farms.

Table IX. shows the quantity of a mixture of equal parts by weight of barley and frosted wheat, both ground and soaked in cold water for an average period of 30 hours, plus pulped carrots, consumed by swine of different breeding per pound of increase in live weight. They were fed for a period of 12 weeks (Feb. 7 or 14 to May 2 or 9) as reported at pages 73-74, Experimental Farms Report, 1893.

Table XI. shows the quantity of a mixture of equal parts by measure of barley, rye, frosted wheat (all ground) and wheat bran, soaked in cold water for an average period of 18 hours, plus 3 pounds of skim-milk per head per day, consumed per pound of increase in live weight by swine of different breeding. Some of them were fed for a

period of 8 weeks (December 6 to January 31), and some of them for a period of 12 weeks (December 6 to February 28).

2 do ...	Berkshire sire, and Tamworth dam ...	May 7 ...	173	do 225	3.77	2.45

*Conclusions.* From these **four series of tests** it appears that :—

(1.) The breeding of the swine which gave the **largest increase** per pound of feed consumed was different in each of the four tests, viz. :—

Table VIII. { Crossbreds, *Berkshire* sire and *Poland China* dam ;  
 “ IX., Crossbreds, *Improved Large Yorkshire* and *Berkshire* Grade dam ;  
 “ X., Grades, *Improved Large Yorkshire* sire and *Essex* dam ;  
 “ XI., Grades, *Tamworth* sire and *Berkshire* grade dam ;  
 “ XII., Crossbreds, *Improved Large Yorkshire* sire and *Berkshire* dam ;

(2.) The breeding of the swine which gave the **least increase** per pound of feed consumed was :—

Table VIII., Pure breds, *Improved Large Yorkshire* ;  
 “ IX., do do do  
 “ X., Crossbreds, *Essex* sire and *Improved Large Yorkshire* dam ;  
 “ XI., do *Berkshire* sire and *Tamworth* dam ;

(3.) There was **no constant** or appreciable **superiority** in the breeds and breeding tested, in respect to the quantity of feed consumed per pound of increase in live weight ;

(4.) The difference in the thriftiness, or power to increase in live weight per pound of feed consumed, was greater between **different animals** in the same litter than between breeds or breeding as such, in different litters ;

(5.) On the whole for fattening purposes, **crossbred** swine and **grades** gave better results than pure breds.

## SECOND SERIES.

### *Test in feeding skim-milk.*

An experiment was begun to gain further information on the quantity of skim-milk which may be equivalent to one pound of mixed grain in the fattening of swine.

**Six Swine** of a litter of crossbreds of *Improved Large Yorkshire* sire and *Poland China* dam (farrowed Sept. 25th) were put into **three lots** as nearly even as possible. There were ten pigs in the litter from which they were selected. They were fed on a mixture composed of equal parts by weight of pease, wheat and rye, all ground and soaked in cold water for an average of 18 hours, plus skim-milk to **two** of the lots.

## Experimental Farms.

Pen No. 9 contained 2 swine. They were fed **as much** of the mixture as they would eat.

TABLE XII.

	Feb. 21.	Mch. 21	Apr. 18	Totals.

Feed consumed.....		217½	158½	376½
do per lb. of increase in live weight.....		2·47	1·86	<b>2·17</b>
		7·63	14·69	<b>11·10</b>

Pen No. 11 contained 2 swine. They were fed at the rate of **half as much** of the mixture per day as was consumed by the 2 swine in pen No. 9, plus as much skim-milk as they would drink.

TABLE XIV.

	Feb. 21.	Mar. 21.	Apr. 18.	Totals.
	Lbs.	Lbs.	Lbs.	Lbs.
Live weight.....	231	311	404	.....
Increase in weight.....		80	93	173
Feed consumed.....		145	105½	250½
do per lb. of increase in live weight.....		978	1,685	2,663
		1·81	1·13	<b>1·44</b>
		12·22	18·11	<b>15·30</b>

*Conclusions.* From these tests with 6 swine, which were continued 8 weeks, it appears that:—

(1.) When 2 swine were fed **three-quarters as much** of a mixture of grain as other 2 swine consumed per day, they consumed in addition, a quantity of skim-milk which made 1 lb. of the mixture of grain equal to **8·82 lbs. of skim-milk**, in the feed consumed per pound of increase in live weight.

(2.) When 2 swine were fed **half as much** of a mixture of grain as other 2 swine consumed per day, they consumed in addition, a quantity of skim-milk which made 1 lb. of the mixture of grain equal to **7.76 lbs. of skim-milk**, in the feed consumed per pound of increase in live weight.

*Summary of comparative value of skim-milk and grain, in feed consumed per pound of increase in live weight.*

From tests made in 1892, 1893 and 1894 with 48 swine it appears that when a small quantity (about 3 lbs. per head per day) of skim-milk was fed, **a less quantity** of it was equal to 1 lb. of the grain in the feed consumed per pound of increase in live weight, than when a large quantity (about 15 lbs. per head per day) was fed.

The results are shown in the following table :—

TABLE XV.

No. of swine in test.	Skim-milk consumed per head per day.	
	Lbs.	
31	3	1 pound mixed grain equal to 3.23 lbs. skim-milk
4	5.4	1 do do do 5.38 do
4	13.6	1 do frosted wheat do 7.91 do
5	15.7	1 do mixed grain do 7.34 do
2	17.1	1 do do do 8.82 do
2	23.7	1 do do do 7.76 do

*Conclusions.* From these tests and from our experience in feeding young pigs, it appears that :—

(1.) Skim-milk may form the largest part of the feed of **young and growing pigs** with advantage and economy ;

(2.) For the fattening of swine weighing on the average over 100 lbs. each, live weight, it is economical to give an **allowance** of skim-milk **not exceeding** 5 lbs. per head per day ;

(3.) In every case the swine fed with part of their ration of skim-milk were **lustier, more vigorous** and of a more healthy appearance than swine fed wholly on a ration of grain.

### THIRD SERIES.

*To discover the cause of "soft" hogs.*

A series of experiments were begun to discover the effect on the quality of the meat and cured bacon from the feeding of wheat and buckwheat to swine. Complaints were common from buyers of swine in Western Ontario that the quality of flesh was soft in a larger percentage of animals than formerly ; and an opinion was current to the effect that the "softness" was the result of the feeding of wheat or of buckwheat.

**Fourteen swine** of three different litters were sorted into three lots as nearly even as possible.

Pen No. 2 contained 4 swine of the following breeding :—

2 Crossbreds by *Berkshire* sire and *Improved Large Yorkshire* dam ;

1 do *Tamworth* sire and *Berkshire* dam ;

1 Pure bred *Tamworth*.

These were fed on a **mixture** of equal parts by measure of barley, rye, wheat (all ground) and wheat bran, soaked in cold water for an average period of 30 hours.

On October 11th these 14 swine were shipped alive to the Ingersoll Packing Company, Ingersoll, Ont., to be slaughtered and cured in the manner followed by packers who send bacon and hams to the British market. The swine of each lot were marked differently, and a report was made upon them by the manager of the Ingersoll Packing Company, according to the descriptive marks.

The report on the condition of the swine, 10 hours after they were killed, was as follows :—

- “ Lot 1, fed on mixed grain ; leaf lard, fairly firm ; best of the three lots.  
 Lot 2, fed on ground wheat ; lard, softish ; not so firm as hogs of lot 1.  
 Lot 3, fed on ground buckwheat ; lard soft, and hogs also soft.

The report on the sides of bacon after they were cured was as follows :—

- Lot 1, fed on mixed grain ; four hogs ; all the sides turned out good hard meat, they were the best of the three lots.  
 Lot 2, fed on ground wheat ; five hogs ; six sides were soft and four quite firm.  
 Lot 3, fed on ground buckwheat, five hogs ; two sides were soft and eight sides were firm.”

*Conclusions.*—From these tests it is evident that the feeding of wheat alone and of buckwheat alone is **not always a cause** of “soft” hogs and “soft” sides, since some of the swine fed on wheat and buckwheat yielded sides classed as firm. Further tests in this connection are in progress.

*Quantity of grain per pound of increase in live weight.*

From feeding experiments extending over three years in the fattening of 112 swine upon grain, it appears that :—

1. On the average **4.38 lbs. of grain** (barley, rye, pease, wheat, frosted wheat, and wheat bran) was the quantity consumed per pound of increase in the live weight ;
2. In the feeding of grain, considering quantity of feed consumed, and the general health of the animals, it is profitable to feed the **grain ground and soaked in water** for an average period of about 30 hours ;
3. It is profitable to add about 3 or 5 lbs. of **skim-milk or buttermilk** per head per day to the grain fed to fattening swine.

## PART II.—THE EXPERIMENTAL DAIRY.

The work at the Experimental Dairy, which has been carried on far enough to be reported upon, comprises the following :—

- (1.) Comparative tests of pure Cultures of bacteria in the ripening of cream ;
- (2.) Churning cream at different stages of ripeness.

### I. COMPARATIVE TESTS OF PURE CULTURES OF BACTERIA.

It is well known that the flavours peculiar to butter and cheese are due to the development and growth of bacteria in the milk or cream before and after they are manufactured.

Bacteriologists have rendered valuable service to the dairy industry through patient and intelligent research. Selecting from samples of first class butter or ripe cream, certain species of bacteria, which seemed to impart to the butter that flavour which is found in good butter only, and cultivating them in a sterilized medium, —sometimes using milk, cream and whey—when they found what they considered the right ones, they placed on the market what is known as pure Cultures of bacteria for ripening cream. In the course of the last few years several of these Cultures have been obtainable, and now the question is often asked : “Which is the better or best?” To help to ascertain that, was the object of these practical tests.

## Experimental Farms.

The Cultures put under test were:—

1. Zoffmann's pure Culture of lactic ferment (liquid.)
2. Chr. Hansen's " " " " " (dry.)
3. Central Experimental Farm Culture (liquid.)
4. Ordinary buttermilk (liquid.)

"Fermentation starter" is the designation applied to the portion of fermented (or sour) milk, buttermilk or cream which is added to cream to ripen it for churning. The ripening of the cream consists in the development of the ferment or ferments which are added to it, or which get into it from the atmosphere, from contact with vessels or utensils or from other sources.

The milk which was used in the preparation of the fermentation starters herein reported on, was treated according to the directions, issued by the manufacturers of the Cultures of lactic ferment before they were added to it. The fermentation starters which were used in tests recorded in table 2 were prepared directly from the cultures as received from the manufacturers. There was no likelihood of a deterioration of them before the tests were made. The cream used in the tests was previously pasteurized (heated to 154° Fahr.) and all other conditions of treatment were alike in the tests.

The first named Culture was originated and manufactured by Mr. Zoffmann of Denmark, and was sent here by Mr. Ed. Wagner, of New York, arriving in apparently good condition; the fermentation starter prepared from it always had a flavour similar to that of sour whey; it also had a somewhat more "rennetty" action on the milk and cream into which it was put, than the others at the same temperature. When the starter, prepared from it, was left standing for a short time, the whey or water appeared on the surface.

The Chr. Hansen's Culture was prepared at Chr. Hansen's bacteriological laboratory, Copenhagen, Denmark. At first the Culture was put on the market in liquid form, but as it did not keep satisfactorily when shipped to distant places, a change was made in its preparation, and it can now be obtained in dry form, from the leading dealers in dairy supplies. It is claimed that it will keep quite vigorous for at least 6 months in a dry state when properly sealed. The fermentation starter prepared from it had a pleasant, clean, though somewhat weak flavour.

The Central Experimental Farm Culture was prepared at the dairy here. A small quantity—about two quarts—of skimmed milk was heated to 205° Fahr. The temperature was maintained at that point for ten minutes, after which, and while exposed to the atmosphere of the butter-making room, it was cooled to 80° Fahr. It was left in a closed glass-stoppered bottle at the ordinary temperature of the dairy room, from 60° to 70° Fahr., for five days. It was then found to be coagulated and to possess a mild, pure, lactic-acid flavour, which became more distinct, after it had been kept in cold water at a temperature of 40° Fahr. for three days. This was the Culture. As the flavour was such as was characteristic of cream from which fine-flavoured butter had always been obtained, it was decided to prepare from it, a fermentation starter for the ripening of cream.

The fermentation starter was prepared by heating a quantity of skim-milk, (equal to about ten per cent of the quantity of cream to be ripened) to 150° Fahr. The temperature was maintained at that point for ten minutes, after which it was cooled to 80° Fahr. A portion of the Culture, at the rate of ten per cent of the quantity of skim-milk, was then added to it. This became the 'fermentation starter.' It was left to ripen at a temperature, not exceeding 80° Fahr. for 20 hours. When the flavour and odour were distinctly acid, it was placed in cold water at a temperature of 40° Fahr. and kept cold in order to arrest further development of the ferment. The flavour was somewhat sharp and quite pure. The butter made from the cream which was ripened with it, had a richer flavour and better keeping quality than that made from the others.

The butters were examined and scored, as shown in tables I. and II.

Table I. shows the results of 5 comparative trials of the, (1) Chr. Hansen's dry lactic ferment or pure Culture; and (2) ordinary buttermilk as fermentation starters. The yield of butter in these trials was slightly in favour of the buttermilk Culture, but the keeping quality was in favour of the Hansen's pure Culture.

TABLE I.

{ after 48 days..... "	*33·5	36·0	40·5

\*45 points for perfection.

Remarks on the butter at the second time of scoring:—

- (1.) Zoffmann's Culture, "off and foul."
- (2.) Chr. Hansen's " "considerably off flavour."
- (3.) C. E. F. " "of a better keeping quality than the others."

## Experimental Farms.

Table III. shows a summary of 41 tests made of the different fermentation starters at different seasons of the year. The figures are representative of the whole year. The pure Culture in 16 cases was that which was prepared by Chr. Hansen, in two cases that prepared by Zoffmann. The cream used in these tests was separated from the milk by a centrifugal machine.

Proportional yield.....	100·00	100·44	101·43

*Conclusions.*—From these tests it appears that :—

- (1.) The flavour of butter is largely determined by the ferments (or bacteria) which develop in the milk or cream ;
- (2.) The ferments (or bacteria) which cause milk and cream to ripen (or turn sour) are ordinarily introduced into them from the atmosphere, from the milk vessels, from the bodies of the cows or and from the clothing and persons of the milkers ;
- (3.) Where no disease exists and where no offensive odour is prevalent, the ferments (or bacteria), which get into the milk and cream, produce only odours and flavours which are agreeable in the butter ;
- (4.) The atmosphere of a thoroughly clean dairy building, contains ferments (or bacteria) which get into all milk and cream exposed to it, and which are capable of imparting to the butter a flavour of high market value ;
- (5.) The Culture of ferments (or bacteria) obtained from that source—the Central Experimental Farm Culture—imparted a more valuable flavour to the butter, than the pure Culture of lactic ferment from the laboratories of Messrs. Zoffmann and Chr. Hansen ;
- (6.) A slightly larger quantity of butter was made per pound of butter-fat in the cream, and a little shorter period of churning, (three minutes less), was required after the use of the Central Experimental Farm Culture, than after the use of the other Cultures tested ;
- (7.) Every butter-maker may make a Culture of ferments (or bacteria) for the making of a fermentation starter of excellent quality, in his or her own butter-making room, if everything in and about it be kept scrupulously clean ;
- (8.) The use of a fermentation starter of fine flavour, imparts to the butter made from stable-fed cows, and from cows which have been milking for periods of more than six months, a flavour of high market value, which is not usually obtainable otherwise.

### II. CHURNING CREAM AT DIFFERENT STAGES OF RIPENESS.

A series of tests were made to ascertain the effect of churning the cream at different stages of ripeness, on the quantity, flavour and keeping quality of the butter made therefrom.

Table IV. shows the particulars.

The ripening of the cream recorded in the first and second columns of the table was commenced at a temperature of 80° Fahr. As soon as the cream was at the desired con-

dition of ripeness, (*i. e.* thick and slightly sour), it was cooled to the churning temperature—57° Fahr. One-half of it was churned at once, and the remaining half was left for eight hours more before it was churned. Four additional tests were made with cream ripened in 12 hours, and this being done in one of the warm months of summer a temperature of 76° proved to be sufficiently high, hence the lowering of the temperature for ripening in the second column to the average of 78° (as shown in table.) The sweet cream (third column) was kept in ice water to the time of churning. In each of four of these tests, the cream was all mixed in one lot, before it was divided into lots for different treatments.

TABLE IV.

	20 hours ripening.	12 hours ripening.	Churned sweet.
Number of tests made.....	4	8	5

Score for flavour after 10 weeks.....	*40	40	38
	No commercial difference; the 20 hours lots were of a slightly fuller flavour than the others.		Weak flavour.

\*45 points for perfection.

*Conclusions.*—From these tests it appears that :—

(1.) A **slightly greater yield** of butter, ( $\cdot 94$  of a pound of butter per 100 pounds of butter-fat in the cream), was obtained from cream which was ripened for 20 hours, than from cream ripened for 12 hours ;

(2.) The butter from the cream which was ripened for 20 hours, was **slightly richer in flavour** but was of no higher commercial value, than that from the cream ripened 12 hours.

(3.) The butter from the cream which was churned sweet was **slightly less in quantity**, (1·10 pounds and 2·04 pounds of butter respectively per 100 pounds of butter-fat in the cream), than the butter from the lots of cream ripened for 12 hours and 20 hours respectively ;

(4.) The butter from the cream which was churned sweet was **2 points lower in flavour**, than that from the ripened cream.

### III. NOTES ON BUTTER-MAKING BY THE USE OF CENTRIFUGAL SEPARATORS.

These have been prepared to meet the needs of butter makers who desire the assistance of specific simple directions.

*The Milk.*—The milk for the separator should be carefully strained and heated to a temperature of 80 or 85 degrees Fahr. If the milk be fed at a lower temperature, the cream is apt to become thick and clotted in the cylinder of the separator.

## Experimental Farms.

Cold milk has a greater density than that of milk at a higher temperature; and therefore the higher temperature up to 85 degrees, the greater the efficiency of the separation, all other conditions being equal.

Particular care should be exercised to prevent the mixing of any bitter milk with the general supply. If any appreciable quantity of bitter milk be mixed, the result will be a quality of butter likely to be more or less bitter in flavour. In very bad cases it may become quite oily. These are both serious defects in butter.

In creameries where the heating and cooling conveniences are rather limited, to separate the milk at a temperature of 80° Fahr. will be satisfactory; but in those cases the inflow of milk should be lessened and be regulated according to the percentage of fat which is discovered to be left in the skim milk. That should be reduced to one-tenth of one per cent.

*The Separator.*—While there are differences in the capacity and construction of different separators, the efficiency of the skimming depends largely upon the skill and management of the operator. The thoroughness of the separation of the fat depends, mainly on: (1) The speed at which the separator is run; (2) the temperature of the milk; and (3) the quantity of milk run through per hour. It is desirable that the separator be run at its maximum of speed, and that that be not exceeded. The different manufacturers of separators guarantee their machines good for a certain maximum speed, which is usually stamped on the bowl.

When the quantity of cream to be separated can be regulated by a set screw in the bowl, that should be set to allow from 14 to 16 per cent of the quantity of milk to flow through the cream outlet. A good rule is to take off cream which contains about 25 per cent of butter fat.

*Ripening of the Cream.*—The temperature of the cream when set to be ripened, may vary from 65° to 80° Fahr. according to the season. The higher temperature is used during the late fall and winter.

The temperature at which it is set for ripening, should be maintained for about 6 hours, during which time it should be stirred occasionally. After that, it should be left undisturbed until ripe for churning. No close cover over the cream vat need be used. A clean canvas cover is sufficient. Care should be taken to purify the canvas cover by boiling it frequently.

*Fermentation Starter.*—It is quite important that every butter-maker should have on hand a fermentation starter of a pure clean flavour and of a uniform smooth consistency. The fermentation starter may be prepared from skim-milk which is pure, sweet and free from taint. The milk should be heated to 150 degrees Fahr. and left at that temperature for 10 minutes. It may then be cooled to a temperature of 80 degrees Fahr., when the bacteria Culture should be added. Bacteria Cultures may now be obtained in the market from firms who deal in dairy supplies. A Culture may be prepared in the manner described on page 87 of this report, or some buttermilk of pure nice flavour may be used instead. In the latter case the buttermilk should be added, at the rate of 10 per cent, to the skim-milk, which has been heated to 150° Fahr. The can or vat in which the fermentation starter is set must be perfectly clean and free from rust spots or other sources or causes of contamination. Where the butter-maker has not a specially constructed fermentation-starter vat, he may use a clean tin can and cover it with four ply of cheese cloth or butter cloth which has been kept in boiling water for at least 10 minutes. The vessel containing the starter should then be put in a place where the temperature will be maintained at from 75° to 80° Fahr. until the whole is curdled. It may then be cooled down gradually. When the acid becomes quite distinct it is ready for use. Where no bad flavour exists and no difficulty has been experienced in churning, it is quite safe to use the buttermilk of the previous churning as a fermentation starter for the cream. If at any time the flavour of the butter seems to deteriorate, a new vigorous starter should be secured and that again should be renewed whenever found to be necessary.

The fermentation starter may be added to the cream at the rate of from 5 to 10 per cent of the quantity of cream.

In any case where the cream has become somewhat tainted from any cause a comparatively larger quantity than usual of a fermentation starter should be added. This may in a great measure check the development of the taint (if it be of fermentation origin) and leave the particular fermentation of the added starter to be the prevailing one.

*Churning.*—The preferable degree of ripeness in the cream will be indicated by the following points,—a mild, pleasant acid taste, a uniformly thick consistency, and a glossy appearance, somewhat like white oil paint. If not at the exact temperature desired for churning, it should be cooled or warmed to that point, which may range from 54 to 58 degrees Fahr., according to the season. It should be *strained* into the churn and the churn should not be filled to more than two-fifths of its capacity.

If butter colour is to be used, it should be added to the cream before the churning is commenced. The regular speed of a factory revolving churn should be about 65 revolutions per minute; and when butter granules are formed in the churn, a few gallons of weak brine (salt and water), should be added, to assist in the separation between the granules of butter and the buttermilk, and also to give a firmer body to the butter.

The churning should then be continued until the granules of butter become a little larger than clover seed. The buttermilk should then be drawn off and a quantity equal to the buttermilk, of pure cold water, at a temperature of from 50 to 58 degrees Fahr., according to the season, should be put into the churn, for the purpose of washing out the buttermilk from the butter granules. The churn should receive a few quick revolutions, and the water should be drawn off immediately. Attention to this is of some importance, as the water will contain more or less curdy matter, which, if allowed to settle on the sides of the churn, forms a film there, where it is apt to adhere to the butter when that settles gradually as the water is drawn off.

After the butter has been left to stand for some 20 minutes, it should be salted at the rate of from one quarter of an ounce of salt per pound of butter to one ounce of salt per pound of butter, according to the preferences of the market which is to be supplied. The very finest quality of pure butter salt only should be used. That which is of a uniform fineness of grain and velvety to the touch is suitable.

*The Working of the Butter.*—After the butter is salted it should be left for 2 or 3 hours, to allow the salt to dissolve. Then, by a second working, the excess of moisture may be expelled, the salt thoroughly mixed, and any streakiness in colour corrected. Care must be taken that the butter be not overworked and made greasy. This may result from the butter being worked at a temperature either too high or too low. Where practicable, it should be worked at a temperature which leaves it in a waxy condition, causing it to bend about one-half towards the under layer when it is being doubled on the butter worker. Sometimes injury results from a larger quantity being placed on the butter worker than can be handled conveniently.

*Preparing Packages and Packing the Butter.*—Where the butter packages are not tinned or paraffine lined, they should be filled with strong hot brine and left to soak for a day. The brine may be used several times, if boiled each time. The insides of the packages should then be rubbed with fine salt and a lining of butter cloth or parchment paper, preferably the latter, should be put in. The package will then be ready for filling.

In packing, the butter should be pressed against the side of the package, keeping it slightly hollow in the centre of the package, the object being to pack the butter so close to the side that no air spaces will be left between the butter and the package. These are often seen when a tub or box of butter is "stripped." Care must also be exercised in using the packer, not to move the butter more than is really necessary to make it compact. When the package is filled, the surface should be smoothed with a hardwood ladle or scraper, and then covered with fine butter cloth or strong parchment paper.

## Experimental Farms.

### PART III.—THE FORTY-ACRE LOT.

In 1891 about forty acres of land were set apart for the purpose of growing fodder crops for cattle in order to illustrate how many cattle might be fed each year upon the products of that area. It was not intended that any method of cultivation should be adopted which would require the employment of hand labour to an extent beyond the reach of the ordinary farmer. The main object was to direct the attention of farmers to the practicability of keeping cattle in larger numbers than had been their custom on the moderate and small-sized farms of Canada. The soil in the part of the farm devoted to this experiment is of a clay and sand loam—varying from a very light sand to a compact clay.

A dressing of barnyard manure was applied to 29 acres of the lot in the spring of 1891, at the rate of from 18 to 20 tons per acre. Since that time no manure or fertilizer has been applied except that obtained from the cattle fed on the crops grown on the lot. Small quantities of additional grain have been fed to these cattle, as the crops have been found insufficient to carry the number of cattle put on the 40-acre lot at the beginning of the different years.

The crops suffered from the misfortune of unfavourable weather in 1891 and 1893.

By the steps which were taken in 1892-93 to stamp out the disease of tuberculosis from the herd, it became impracticable to continue the feeding of a number of the cows on the crops from this lot. The feeding of cows to the number of 30 altogether, on the crops from the 40-acre lot, was resumed July 7th, 1894.

The following records of the crops show the progress of the experiment :—

#### TOTAL YIELD OF CROPS FROM 40-ACRE LOT IN 1891.

##### *Ripened Crops.*

		Lbs of Straw.	Lbs. of Grain.
8 acres,	Mixed Cereal Crop.....	26,454	13,245
	{ Golden Vine Pease.....		905
3 acres	{ Goose Wheat.....	1,003	437
	{ Beardless Barley.....	3,102	1,373
	{ Banner Oats.....	2,790	2,060
3 acres,	Mixed Cereal crop.....	10,442	4,345
14	Totals.....	43,791	22,365

##### *Root Crops.*

		Lbs.
1 acre,	Carrots.....	26,785
1 acre,	{ Mangels.....	8,110
	{ Turnips.....	9,655
1 acre,	Turnips.....	29,584
3	Total.....	74,134
$\frac{1}{2}$ acre,	Cabbage and Kohl Rabi.....	15,296

*Cured Fodder Crops.*

	Lbs.
2 acres, Spring Rye.....	14,080
Mixed Cereal crop (second cutting).....	1,825
1 acre, Indian Corn, stooked and cured.....	11,940
11½ acres, Indian Corn, put into silos.....	130 Tons. 1,750

14½

- 1½ acres, Indian Corn, fed green to cattle from 7th of August.  
 3¾ acres, Mixed Cereal crop, fed green to cattle.  
 4½ acres, pastured.

The total cost for labour in the growing of these crops of 1891, and in the delivering of them at the barn, silos or stable, threshed or cut and ready to feed, was as follows:—

Hauling and spreading of manure.....	\$109 62
Ploughing, harrowing, sowing and planting.....	114 00
Hand cultivating and weeding.....	85 62
Cultivating by horse.....	23 65
Reaping, teaming, threshing, cutting, grinding, etc.....	223 70
Other labour.....	9 15
	\$565 74
Permanent improvements, draining and fencing.....	33 50

The time of a man and team of horses was charged at the rate of \$2.50 per day and the time of a man at \$1.25 per day.

TOTAL YIELD OF CROPS FROM 40-ACRE LOT IN 1892.

*Cereal Crops.*

	Lbs. of Straw.	Lbs. of Grain.
8.75 acres, Mixed Cereal crop.....	25,039	13,317
		Lbs., cured Fodder.
5 acres, Mixed Cereal crop.....		32,605
		Lbs., green fodder.
1.75 acres, Mixed Cereal crop, (fed green).....		22,801
3.25 acres, Fall Rye.....		26,155
1.9 acres, Spring Rye.....		15,910
Second cutting of Spring Rye (partly cured).....		4,040

*Root Crops.*

	Tons.	Lbs.
2 acres, Carrots.....	25	1,015
2 acres, Mangels.....	28	1,128
1 acre, Greystone Turnips (catch crop after mixed cereals)...	10	305

*Indian Corn Crops.*

	Tons.	Lbs.
9 acres, Indian Corn.....	156	352
3 acres, Indian Corn.....	39	1,065
3 acres, Indian Corn.....	38	860
.46 acre, Indian Corn and Sunflowers.....	4	1,720
.46 acre, Sunflower heads.....	3	710
.41 + acre, Horse Beans.....	2	1,760
2.43 acres, pastured.....		

## Experimental Farms.

The total cost for the growing of the crops in 1892 from 45.41 acres (of which 4 acres were cropped twice) was \$795. That included rent of land at \$3 per acre, the labour for cultivation, seed, sowing, harvesting and delivering them, at the barn, root-house, silos or stable, threshed or cut and ready to feed. It also included an allowance for proportion of time of farm foreman: but it did not include any allowance for the use of farm machinery (except the engine), nor did it include any amount as an equivalent for the exhaustion of soil or the application of manure.

The time of a man was reckoned at \$1.25 per day and the time of a man and team of horses at \$2.50 per day.

### TOTAL YIELD OF CROPS FROM 40-ACRE LOT IN 1893.

#### *Cereal Crops.*

	Lbs. of straw.	Lbs. of grain.
3.31 acres, Mixed Cereal crop.....	7,802	1,948
5.60 acres do .....	23,061	8,025
		<b>Lbs. cured fodder.</b>
.78 acres do .....		2,500
.29 acres Fall Rye fed green.....		.....
3.71 acres do .....		20,685
1.88 acres Clover, first crop.....		8,310
do second crop not all cured.....		6,660

#### *Root Crops.*

	Tons.	Lbs.
2 acres, Carrots.....	48	310
2 acres, Mangels.....	40	140

#### *Indian Corn and Horse Bean Crops.*

	Tons.	Lbs.
14 acres Corn and Horse Beans, mixed.....	163	574
4 acres do (after Rye).....	39	1,335
4 acres Sunflower heads.....	13	555

#### *Pasture.*

2.43 acres.  
1.88 acres after clover was cut.

The total cost for the growing of the crops in 1893 from 44 acres (of which 4 acres were cropped twice), was \$833. That included rent of land at \$3 per acre, the labour for cultivation, seed, sowing, harvesting and delivering them at the barn, root house, silos or stable, threshed or cut and ready to feed. It also included an allowance for proportion of time of farm foreman; but it did not include any allowance for the use of farm machinery (except the engine); nor did it include any amount as an equivalent for the exhaustion of soil or the application of manure. The time of a man was reckoned at \$1.25 per day, and the time of a man and team of horses at \$2.50 per day.

### TOTAL YIELD OF CROPS FROM 40-ACRE LOT IN 1894.

#### *Cereal Crops.*

	Lbs. cured fodder.
7.75 acres, Mixed Cereal crop.....	36,200

*Pasture.*

4.31 acres.

The total cost for the growing of the crops in 1894 from 45.09 acres (of which 2.75 acres were cropped twice) was \$816.54. The details are given hereafter.

## NOTES ON THE MIXED CEREAL CROPS.

**7.75 acres** of Mixed Cereal crops.—A different mixture, of *Rio Grande Wheat*, *Canadian Thorpe Barley*, *Banner Oats* and *Mummy Pease*, was sown on each of seven plots. One bushel of *Granton Horse Beans* was sown on each acre in addition, and also 3 lbs. of *Flax*. By reason of damage from weather and the uneven character of the soil, the yields per acre from the different mixtures, do not give results which can be taken as evidence of the best mixtures of these grains for fodder crops.

Plots No. 4, 5 and 6 were injured to the extent of nearly a quarter of an acre in each, by water standing on them.

**1 acre** of Mixed Cereals.—This was sown with a mixture of *Canadian Thorpe Barley*  $1\frac{1}{2}$  bushels; *Mummy Pease*,  $1\frac{1}{2}$  bushels; *Granton Horse Beans*, 1 bushel; and *Flax* 3 lbs. From July 4th it was cut and fed to the cattle. The green weight per acre was 15,390 pounds.

## COST OF LABOUR FOR GROWING CROP OF MIXED CEREALS.

The following is a statement of the cost of labour for growing 7.75 acres of mixed cereals and putting the crop in the barn:—

Rent of land, at \$3 per acre.....	\$ 23 25
Ploughing, at \$2 per acre.....	15 50
Harrowing twice, rolling once, at 20 cents per acre each.....	4 65
Disc harrowing, 6 acres, at 50 cents per acre.....	3 00
Seed.....	28 60
Sowing $\frac{3}{4}$ day, at \$2.50 per day.....	2 25
Cutting and drawing to barn, $4\frac{1}{2}$ days at \$2.50 per day.....	10 50
Horse-rake and horse-fork, 3 $\frac{1}{2}$ days, at \$1.75 per day.....	5 42
Labour, cocking, turning, loading and unloading, 24 $\frac{1}{10}$ days, at \$1.25.....	30 62
Proportion of time of farm foreman.....	15 50

\$139 29

## Experimental Farms.

These figures do not include any allowance for the use of farm machinery, nor do they include any amount as an equivalent for the exhaustion of the soil.

The following table shows, for three years—(1) the cost per acre for labour ; (2) the yield per acre of cured fodder, and (3) the cost per ton for labour of growing, including rent of land, cost of seed, etc., as in statement :—

TABLE II.

1892.....	12.90	*3	521	39.5
1893.....	12.30			
1894.....	17.97	2	671	7.69
Average.....	14.39	2	1,596	58.2

\* Crop of 1893 ripened and threshed.

### ROOT CROPS.

**4 Acres** of Root Crops.—The soil was ploughed in autumn of 1893, and was gang-ploughed 6 inches deep in spring of 1894. It was harrowed with smoothing harrows three times. Drills were made up with a drill plough two feet apart. Manure or fertilizer was not used on this plot. The crop in 1893 was mixed cereals.

The Carrots were sown May 1st, and came up May 12th and 13th. They were pulled October 25th and 30th.

1 acre, Improved Short White, yielded..... 29 tons 1,403 lbs.

1 acre, Mammoth White Intermediate, yielded..... 27 tons 106 lbs.

The Mangels were sown May 1st and 3rd, and came up May 12th and 13th. They were pulled October 16th and 17th.

1 acre, The Gate Post or Mammoth Long Red, yielded.... 21 tons 150 lbs.

1 acre, Mammoth Long Red, yielded..... 21 tons 1,248 lbs.

The following tables show, for three years—(1) the cost per acre for labour ; (2) the yield per acre ; and (3) the cost per ton for labour of growing, including cost of seed, delivery at the root house, \$3 per acre rent of land and proportion of time of farm foreman. The figures do not include any allowance for the use of farm machinery, nor do they include any amount as an equivalent for the exhaustion of the soil. The cost of growing Carrots and Mangels was not kept separate in 1892 :—

### Carrots.

## INDIAN CORN CROPS.

**2 acres** of Longfellow Corn (18 lbs. per acre mixed with 30 lbs. of Granton Horse Beans per acre.)—Land received a dressing of barnyard manure at the rate of ten tons per acre; planted May 21st; Corn came up June 4th and 6th; Beans came up June 6th and 8th. On September 25th a frost (of some 10 degrees), blighted the leaves and caused the crop to dry out probably 25 per cent from the green weight, before it was cut and put into the silo. The Horse Beans among the Corn did not grow well and amounted to only 2½ per cent of the total weight of crop. The total yield from the two acres weighed 27 tons 1,655 lbs.

**2 acres** of Longfellow Corn (18 lbs. per acre, mixed with 30 lbs. of Tick Horse Beans per acre.)—The Horse Beans in this lot did not grow any better than in the plot where Granton Horse Beans were planted. The effect of the frost on September 25th was alike on all the corn crop on the 40-acre lot. The total yield from the two acres weighed 27 tons 1,510 lbs.

**2 acres** of Compton's Early Corn (20 lbs. per acre.)—The total yield from the two acres weighed 30 tons 1,300 lbs.

**3.35 acres** of Longfellow Corn (20 lbs. per acre.)—About one acre was injured by water lying on it in spring; that part did not yield more than ½ a crop. The total yield from the 3.35 acres weighed 36 tons 205 lbs.

**7.75 acres** of Longfellow Corn (20 lbs. per acre.)—Some low parts of this field had water standing on them a week after the Corn came up. It was planted May 17th and came up May 29th and 30th. The frost on September 25th blighted the leaves and the Corn was not cut until October 6th and 8th. The total yield from the 7.75 acres weighed 94 tons 1,473 lbs.

## COST OF LABOUR FOR GROWING INDIAN CORN FOR FODDER.

The following is a statement of the cost of labour for growing 17.1 acres of Indian Corn and putting the crop into the silos:—

Rent of land at \$3 per acre.....	\$ 51 30
Ploughing at \$2 per acre.....	34 20
Harrowing, three times, 20 cents per acre per time.....	10 26
Rolling and disc-harrowing, ½ day at \$2.50.....	1 25
Seed, including 2 bushels horse beans.....	11 50
Sowing, 2 days at \$2.50.....	5 00
Hoing, 24½ days at \$1.25.....	30 63
Cultivating with single horse, 8½ days at \$1.75.....	15 05
Cultivating with team, 6 days at \$2.50.....	15 00
Cutting, loading, etc., in field and at silo, 79 days at \$1.25.....	98 75
Drawing in, 16 days at \$2.50.....	40 00
Man at engine, 8 days at \$1.50.....	12 00
Use of engine and fuel, 7 days at \$5.00.....	35 00
Proportion of time of farm foreman.....	34 00

\$393 94

## Experimental Farms.

These figures do not include any allowance for the use of farm machinery (except the engine), nor do they include any amount as an equivalent for the exhaustion of soil.

The following table shows, for three years—(1) the cost per acre for labour; (2) the yield per acre; and (3) the cost per ton for labour of growing, including cost of seed and rent of land, etc., as in statement:—

TABLE V.

	Cost per acre.	Yield per acre.	Cost per ton.
	\$	Tons. Lbs.	\$
1892 .....	22.68	15 1,218	1.45
1893 .....	22.35	11 550	1.98
1894 .....	23.03	12 1,388	1.81
Average.....	22.68	13 385	1.74

### HORSE BEANS.

**4.18 acres of Horse Beans.**—The land was clay loam. It was ploughed in autumn of 1893, and a dressing of farmyard manure at the rate of 6 tons per acre was ploughed under in the spring of 1894. The Beans were sown June 6th by the use of a force-feed seed-drill having only two spouts delivering seed. These were three feet apart. From 45 pounds to 50 pounds of seed per acre were used. Part of the seed did not germinate, and when the Beans came up numerous spaces, of from 12 inches to 30 inches in the rows, were vacant. These were afterwards planted by the use of hand corn planters. The field was a very weedy one; and an unusual measure of hand hoeing was given to clean it. These two items of unusual expense caused the cost per acre and per ton to be higher than under normal conditions.

1 acre of Horse Beans, of the *Tick* variety, yielded 12 tons 170 lbs.

1 acre of Horse Beans, of the *Granton* variety yielded 12 tons 1,030 lbs.

The Beans were planted June 6th and came up June 13th. They were cut from October 2nd to 6th. Pods were formed on most of the plants, but they were not ripe nor filled. The height of the stalks was from  $4\frac{1}{2}$  to  $5\frac{1}{2}$  feet.

#### COST OF LABOUR FOR GROWING HORSE BEANS FOR FODDER.

The following is a statement of the cost of labour for growing 4.18 acres of Horse Beans and putting the crop into the silos:—

Rent of land at \$3 per acre .....	\$12 54
Ploughing in autumn at \$2 per acre .....	8 36
Ploughing in spring at \$2 per acre .....	8 36
Harrowing, three times at 20 cents per acre per time .....	2 51
Seed, 4 bushels at \$1.50 .....	6 00
Sowing, $\frac{1}{8}$ day at \$2.50 .....	1 25
Second planting, 2 days at \$1.25 .....	2 50
Cultivating, single horse, $3\frac{1}{8}$ days at \$1.75 .....	6 65
Hoeing, 16 days at \$1.25 .....	20 00
Cutting, loading, etc., in field and at silo, 17 days at \$1.25 .....	21 25
Drawing in, 6 days at \$2.50 .....	15 00
Man at engine, 2 days at \$1.50 .....	3 00
Use of engine and fuel, 2 days at \$5 .....	10 00
Proportion of time of farm foreman .....	8 00
	\$125 42

These figures do not include any allowance for the use of farm machinery (except engine) nor do they include any amount as an equivalent for the exhaustion of the soil.

The following table shows, for two years—(1) the cost per acre for labour; (2) the yield per acre; and (3) the cost per ton for labour, including cost of seed and rent of land, etc., as in statement:—

TABLE VI.

	Cost per acre.	Yield per acre.		Cost per ton.
	\$	Tons.	Lbs.	\$
1893.....	24.80	*8	927	2.93
1894.....	30.00	12	866	2.41
Average.....	27.40	10	896	2.67

\*Weighed after being left to wilt in field for two days.

## SUNFLOWER HEADS.

**4 acres** of Sunflowers.—The Mammoth Russian variety was sown April 23rd, by using a Planet Junior seed drill, with 5 lbs. of seed per acre, in rows 3 feet apart. The plants came up thick and were thinned when two or three inches high, so as to leave one plant every 12 or 18 inches in the rows. The heads were allowed to become almost ripe before they were cut; and they were in a drier condition than in former years. In 1892 the yield per acre was 7½ tons, containing 75.62 per cent of water. In 1894 the heads when cut contained on the average 69.3 per cent of water.

## COST OF LABOUR FOR GROWING SUNFLOWER HEADS FOR FODDER.

The following is a statement of the cost of labour for growing 4 acres of Sunflowers and putting the heads into the silos:—

Rent of land at \$3 per acre.....	\$12 00
Ploughing at \$2 per acre.....	8 00
Harrowing, twice at 20 cents each time per acre.....	1 60
Rolling, at 20 cents per acre.....	80
Seed, 20 lbs.....	2 00
Sowing, 1½ days at \$1.25.....	2 00
Hoeing and thinning 10½ days, at \$1.25.....	13 13
Hand-wheel hoeing, 2 days, \$1.25.....	2 50
Cultivating, 2 ° days, at \$1.75.....	5 07
Cutting and putting into silos, 17½ days, at \$1.25.....	21 88
Horse and cart, drawing in, 6½ days, at \$1.75.....	11 38
Proportion of time of farm foreman.....	8 00
	\$88 36

These figures do not include any allowance for the use of farm machinery, nor do they include any amount as an equivalent for the exhaustion of soil. The cost for labour was \$22.09 per acre. The average yield of heads, nearly all ripe, was 3 tons, 1,009 lbs., which gives an average cost of \$6.30 per ton for labour of growing, including cost of seed and rent of land, etc., as in statements.

## MILK FROM THE 40-ACRE LOT.

From July 8th, 1894, 30 milking cows have been fed on the crops from the 40-acre lot. A small quantity of wheat-bran and oil-cake is being fed in addition to the crops from the 40 acres.

## Experimental Farms.

Some changes have been made in the individual cows composing the herd from time to time. In all 37 cows have been used.

Considering the dates on which most of the cows have 'come in' or will 'come in,' a larger quantity of milk may be expected in the half year from January 1st to July 6th, than in the half year (herein reported on) from July 7th to December 31st.

The total quantity of milk obtained was 59,896 pounds.

It contained, on the average, 3.85 per cent of fat.

The quantity of butter-fat was 2,306 pounds.

A small portion of the milk was fed to young calves ; a quantity was sold for table use ; and the remainder was made into butter.

The yield of butter at the Experimental Dairy has been 115 pounds of butter per 100 pounds of butter-fat in the milk. If all the milk from the 40-acre lot herd had been manufactured into butter, it would have yielded 2,651.9 pounds, from July 7th to December 31st.

## Experimental Farms.

# REPORT OF THE HORTICULTURIST.

(JOHN CRAIG)

---

WM. SAUNDERS, Esq.,  
Director, Dominion Experimental Farms,  
Ottawa.

SIR,—I have the honour to submit a report of some of the work carried on in the Horticultural Division of the Central Experimental Farm for the year 1894.

The fruit year as a whole may be looked upon as successful and satisfactory, although the meteorological conditions governing spring and early summer were, in some of the best fruit growing regions, notably the Niagara Peninsula, quite abnormal. In that district the apple crop more than any other suffered from the heavy rains of May and June, while the severe drought of midsummer had the effect of decreasing the size of early peaches, pears and apples, as well as ripening them prematurely.

The early and simultaneous ripening of such large quantities had a deleterious effect upon domestic markets, resulting in exceedingly low prices being realized for early peaches and pears. The lack of rainfall emphasized the value of thorough and frequent shallow cultivation, as a means of conserving the moisture of the soil.

In the province of Quebec the necessity of a better system of fertilizing and cultivating the orchard than has been practised in the past is becoming recognized. Apples of greater export value than the varieties now composing the older orchards are being selected where new planting is being done. Nova Scotia has marked an era in her horticultural progress by the establishment of a School of Horticulture, under the control of the Provincial Fruit Growers' Association, and the directorship of Prof. E. E. Faville. This is the only school of its kind in Canada, if not in America.

### COLD STORAGE OF FRUITS.

The great success scored by Canada in her exhibit of fruits at the opening of the World's Columbian Exposition, in May, 1893, was, in a large measure, due to the cold storage facilities afforded by the World's Fair authorities, and but for the unfortunate burning of the storage building and with it a great deal of Canadian fruit, the display would have been much more extensive and varied. The fact, however, that summer and autumn apples, like Duchess of Oldenburg, St. Lawrence and Wealthy, were placed in good condition upon the tables during the months of May and June, gave food for thought to the thinking mind, and raised the question of the usefulness of the system to the commercial grower and the shipper of fruit.

It is well known that cold storage and refrigerator cars have played an important part for some years in the economy of marketing the great Californian fruit product. It is also well known that large dealers in great fruit markets, like Chicago and New York, have used in common with produce and commission men cold storage warehouses, in which to hold perishable fruit during periods of low prices owing to over-stocked markets. Our information on these lines has, however, been rather vague and unsatisfactory.

With the object of ascertaining some facts based upon personal experience, preliminary experiments were instituted on this line during the present season.

Arrangements were made with the Montreal Cold Storage Company for storing packages of the different fruits as they matured. In this connection I beg to acknow-

ledge the courtesy and generous assistance rendered by the managers of this company, Messrs. T. J. Chisholm and D. J. McGillis, in aiding me in carrying out the experiments. Although sufficient time has not elapsed since the initiation of the experiments to permit the collection of information of value regarding the later fruits, yet its degree of usefulness in marketing the earlier and more perishable fruits, has been, if not actually defined, quite clearly indicated. The unusual amount of heat and drought in the districts from which the fruit was procured, undoubtedly injured the keeping qualities of the fruit under trial. Last year Wealthy apples grown at Ottawa kept in a cold cellar until May. This year many have already decayed and the remainder are very soft, under the same conditions

## PEACHES.

Mountain Rose and Early Crawford peaches, wrapped in tissue paper, packed in 20-pound baskets and stored in an atmosphere of 34 degrees Fahr. on September 5th, remained in good condition till October 1st; soon after this they began to show signs of discolouration. The same varieties under the same conditions, without wrappers, on October 1st showed 5 to 6 per cent decayed. On October 10th 30 per cent of Mountain Rose, wrapped, had decayed; of Mountain Rose, unwrapped, fully 75 per cent were rotten. At this date Early Crawfords were in a relatively better condition, as follows:—Wrapped, 10 per cent decayed; unwrapped, 15 per cent. The decayed fruit did not fall away as is usually the case, but instead lost flavour and colour, while retaining its form. The discoloration began first near the stone and worked outwards. Up to October 1st the flavour was unimpaired, but after this it deteriorated rapidly. I may say the fruit was well ripened before storing took place. Such fruit will not keep more than a few days when taken out of cold storage.

## PLUMS.

Lombard and Monroe plums were stored in baskets, the fruit being wrapped and unwrapped as in the case of the peaches. They were stored on September 6th in a temperature of 34 degrees Fahr., which was maintained uniformly throughout.

The results gained on the whole do not differ materially from those with peaches, and indicate that stone fruits as a class cannot be profitably stored for a longer period than three weeks and that in the case of fruit originally well ripened, probably not so long, after this period there is a rapid deterioration both in flavour and firmness.

## PEARS.

*Bartlett*.—Fully ripe, wrapped, packed in baskets, stored on September 1st, began to decay November 15th. The same unwrapped were badly decayed on that date.

*Bartlett*.—Fully ripe, wrapped and packed in cases holding from 50 to 75 pears each, were in good condition on December 1st. Flavour unimpaired. On December 10th 25 to 30 per cent were rotten; on December 15th fully 50 per cent had decayed. Flavour somewhat impaired.

*Flemish Beauty*.—Fully matured, wrapped and packed in baskets; decayed earlier than Bartlett, beginning to show signs of rotting on October 15th. The same variety unwrapped began to decay on October 6th.

*Flemish Beauty*.—Fully matured, wrapped and packed in kegs were in good condition up to November 1st; they decayed rapidly after this and few remained by December 10th.

The unwrapped in kegs had entirely "wasted" by December 6th.

*Beurre Clairgeau*.—Wrapped in baskets, were in good condition when last examined, December 31st. The same unwrapped were also in good condition on the same day.

*Beurre d'Anjou*.—Wrapped and packed in kegs and boxes, were also in good condition on December 10th; and the same may be said of Duchess.

It would seem that matured Bartlett and Flemish Beauty cannot be safely kept in storage after November 15th or at latest December 1st.

## Experimental Farms.

### APPLES.

Trial packages of three varieties of these were sent to the storage warehouse from the Central Farm, as they ripened.

*Tetofsky*.—Wrapped, packed in baskets, were in good condition with flavour unimpaired up to November 15th, when they commenced to discolour and lose flavour. On December 10th the greater proportion were decayed and unfit for use. There was a little difference in favour of the wrapped fruit, but the improvement was not so marked as in the case of the pears.

*Duchess*.—Packed the same way, began to decay on December 10th; the same variety unwrapped showed 8 to 10 per cent of rotten fruit at this date.

*Wealthy* and *Colvert*.—Both in boxes and barrels, unwrapped, are of course perfect at this date, Dec. 31st. Summer apples, in common with other soft fruits, kept best when wrapped in tissue paper and put up in wooden packages.

### GRAPES.

Sample baskets of Lindley, Delaware and Niagara grapes stored on September 27th are at this date, December 20th, in good condition.

The deductions which may be drawn from the results of this preliminary trial in the preservation of fruits by cold storage may be summarized as follows:—

1. Fruit for storage should be picked when fully grown, but before it has thoroughly matured.
2. Early pears, peaches and the larger varieties of plums should be wrapped separately in tissue paper.
3. Tight wooden boxes are the most satisfactory packages for storing and handling. When baskets are used they should be provided with strong "vener" covers.
4. Stone fruits, such as peaches and plums, under ordinary circumstances should not be held for a longer period than two or three weeks.
5. The marketing season for early pears and apples may be extended from thirty to sixty days, and under favourable circumstances for a longer period.
6. The outcome of experiments with fall and early winter varieties of apples and pears, including samples of grapes, yet remains to be developed.

### TOBACCO EXPERIMENTS.

Some of the principal features of the experiments with tobacco, as outlined in my report for 1893, were continued this year. A fewer number of varieties were grown, but in greater quantity.

The season was not as favourable for the growth of this plant as was last year, but the results on the whole were very encouraging. As soon as information from a manufacturer's standpoint, with regard to the quality of the different varieties raised last year, is secured, it will be given to the public, together with the results of experimental work in 1894.

### TREATMENT OF FUNGOUS DISEASES.

This branch of my work has entailed a large amount of correspondence during the year, and is one of increasing public interest and importance. Fruit growers and proprietors of small orchards and gardens are awakening to the fact that without taking active measures for the prevention of fungous enemies, the profits from this industry are each year greatly reduced. It is hoped that the important and convincing results of the spraying experiments carried on in conjunction with the Fruit Growers' Association of Ontario, detailed in the body of the report, will be of direct beneficial effect to

orchardists of the Dominion, and that the recommendations will be carried into practice with the opening of spring operations on the farm.

From correspondents I am pleased to find frequent corroboration of the benefits to be derived from spraying. As an instance, Mr. W. W. Dunlop, of Outremont, Que., a large grower of English gooseberries, successfully prevented mildew on "Whitesmith" gooseberries this year, by making two applications of Bordeaux mixture. He now prefers this material to Potassium Sulphide, which was the first preventive remedy recommended, and which also gave good results. Market gardeners are also learning that the "rust" (*Anthracnose*) of beans, and the "rust" of celery may be prevented by using the Copper Salt remedies.

"Anthracnose of the Bean" is described on page 164, Experimental Farms Report for 1892, and I am glad to state that the unsolicited experience of growers confirms the efficacy of the remedies outlined in that article. I may also say that recent experiments made by spraying the plants with Bordeaux mixture instead of soaking the seed in bluestone, have given equally satisfactory results.

"Blight of the Pear and Apple" has again wrought considerable injury to orchards in Eastern Ontario and Quebec. Orchardists are, however, recognizing the dangerous character of this disease, and are exercising more care in cutting out and destroying by fire affected branches or trees, as was recommended last year.

Fruit growers in British Columbia are experiencing considerable loss in their apple orchards, from a disease of the bark, the cause of which thus far is not clearly understood. Probably part of the bark injury attributed to this disease is due to what is known as "sunscald," a physiological effect of severe and sudden cold weather following a period of warm weather. The freezing of the sap causes expansion, accompanied by a rupture of the bark. Planting on northern and western slopes and growing low-headed trees will obviate this to a certain extent. Alkaline washes are also to be recommended and are valuable aids in keeping the bark in a healthy condition.

#### MEETINGS ATTENDED.

During the year I attended and gave addresses at the following meetings of a provincial character:—

In February, at Abbotsford, Que., the first meeting of the "Pomological Society and Fruit Growers' Association of the Province of Quebec," was held. I had the privilege of assisting in the organization of this body, which has since been generously recognized by the Provincial Legislature, and which bids fair to be of great value in furthering the fruit interests of the province.

The same society, at their annual meeting in the city of Quebec, December 10-11-12.

Meeting of the Ontario Fruit Growers' Association, at Orillia, December 4-5-6.

Agricultural Convention, at Charlottetown, P.E.I., Aug. 9, by invitation of the Dairy Commissioner for the Dominion, Professor J. W. Robertson.

Agricultural Convention for New Brunswick, held at Fredericton, August 16th, by invitation of the Dairy Commissioner for the Dominion.

Closing exercises of the Nova Scotia School of Horticulture, Wolfville, June 4th.

Farmer's institutes were also addressed as follows:—Coaticooke, Que.; Bell's Corners, Ont.; Metcalfe, Ont.; Richmond, Ont.; Manotick, Ont.; Cornwall, Ont.; Grimsby, Ont.

At all of these a lively and growing interest was shown, pointing to substantial horticultural advancement.

#### ACKNOWLEDGMENTS.

I beg gratefully to thank the secretaries and officers of the various Provincial Societies devoted to the fruit growing interests of the Dominion for valuable assistance and kindly encouragement received during the year. To Dr. B. D. Halsted, of New

## Experimental Farms.

Brunswick, New Jersey, I am much indebted for valuable aid in determining specimens illustrating various forms of plant diseases, and to correspondents generally for bringing under my notice the occurrence of these diseases in different parts of the country.

I have also to record with thanks the following donations :—

- W. R. Grace, Garden City, Kansas. Scions of plums and apricots ; currant cuttings.  
Miss E. M. Schantz, Zionsville, Pa. Apple scions.  
J. S. Breece, Fayetteville, N. C. "Critic" grape vines.  
Dr. R. B. Clark, Fay, Kansas. Grape vines.  
H. W. Hope, Paint, Ohio. "Upp" apple tree.  
G. J. Streator, Garrettsville, Ohio. Scions of black walnut.  
W. R. Dempsey, Trenton, Ont. Apple and pear scions.  
Toronto Pump Co., Toronto. Spraying pump.

It gives me pleasure again to testify to the efficient service rendered by Mr. Wm. Taylor, foreman in this department, in carrying out the various branches of work committed to his care.

I have the honour to be, sir,  
Your obedient servant,

JOHN CRAIG,  
*Horticulturist.*

## SPRAYING EXPERIMENTS.

No line of work associated with the successful culture of fruits at the present time, is charged with greater interest to the horticulturist than is the subject under consideration. It is also true that no other advance in horticultural practice has been so readily taken up by the more progressive and practical, nor more discussed by the theoretical and procrastinating class. Third and fourth classes may be made of those who have tried without success the remedies recommended, and those who disbelieve and have not tried. But honest doubt should always be respected.

Again, there are few, if any, operations now included in the annual programme of the fruit grower whose success is so dependent on conditions practically outside the control of the operator than is spraying. Meteorological conditions, as rain and wind, heat and cold, bear a marked influence on the results, and often discourage a beginner from carrying into practice good resolutions formed at the opening of the season. An unfavourable season will so frequently mar the effect of conscientious effort as to place in doubt the beneficial results, thus shaking the confidence of the beginner.

Before going into the subject proper, namely, the result of the season's work, it might prove interesting to preface it with a brief history of the introduction of the practice of spraying.

In 1882 Professor Millardet, an eminent botanist, of Bordeaux, France, had his attention called to the fact that grape vines sprinkled with a mixture of bluestone and lime to deter the inroads of boys and vagrants, were much less attacked by mildew than other vines not so treated. Acting on the suggestion conveyed by this object lesson, he carried on experiments during 1883 and 1884, and gave to the public the result of his work on May 1st, 1885. As Mr. Fairchild, of the Department of Agriculture, Washington, says in an excellent article recently published on Bordeaux Mixture as a fungicide, "It appears that to Millardet is due the credit of first correctly interpreting the immunity, shown by the treated vines in Medoc, and of conceiving a practical method by which copper sulphate could be used as a remedy for the disease in question."

The news of this discovery was soon chronicled in America, the bulletins of recommendations were issued by the Department of Agriculture at Washington and the California Experiment Station early in 1886. The following two years gave to the public the results of experiments conducted in the United States, and established a formula for Bordeaux mixture which has been more or less generally accepted and has become in a measure, a standard. This formula was recommended by Mr. Galloway, Chief of the Division of Vegetable Pathology, at Washington, D.C., and consisted of 6 pounds of copper sulphate and 4 pounds of lime in 22 gallons of water. The first formula, however, was much stronger than this and contained 18 pounds of copper sulphate and about 30 pounds of lime to which was added 30 gallons of water. Such a mixture resembled a thick paste and was applied by means of wisps of straw or brooms. Many other mixtures were soon introduced and tried by the active American scientists principally on account of the difficulty of applying the concentrated form of Bordeaux mixture. In the spring of 1890, the first year of the appointment of the writer as Horticulturist to the Central Experimental Farm, Ottawa, experiments were planned and carried out in orchards at Abbotsford, Quebec. The experiments were designed to show the benefit of spraying with ammoniacal copper carbonate in varying proportions, copper sulphate of varying strength, and the value of hyposulphite of soda as a fungicide. The variety of apple treated was Fameuse and the results gained demonstrated the profit of spraying with ammoniacal copper carbonate of the strength since recommended by the Horticultural Division of the Experimental Farm. Experiments have been continued each year up to the present, but marked with more or less success according to the character of the season. In the initial stages of this work the important questions of economy and ease of application, in addition to the effectiveness had to be studied by

## Experimental Farms.

the experimenter so that a remedy when discovered might be practicable and thus commend itself generally to the public.

These experiments covered the trials of over thirty spraying mixtures, and among the fruits included were apple, pear, plum, cherry, peach, and the majority of the small fruits.

Owing to the difficulty of applying and the cost of making the concentrated Bordeaux mixture, many other copper salt compounds have been tested, with the result that many were discarded, while a few were recommended for trial. Copper sulphate, or bluestone, having entered into all mixtures giving favourable results, the number of formulæ recommended have gradually lessened with each year's experience till at the present time, while we have yet much to learn, the fruit grower need not burden his mind with a bewildering array of receipts or formulæ, almost as numerous as the legion of enemies which attack his orchards and vineyards.

As a result of experiments conducted in 1892, the writer recommended a modified formula for the preparation of Bordeaux mixture. This was given to the public by means of bulletins and circulars during 1892 and 1893. The formula is as follows:—4 pounds of copper sulphate, 4 pounds of lime and 50 gallons of water. The cost of this need not exceed one-half cent per gallon, and admits of the addition and application of Paris green at the same time, and coupled with this was ammoniacal copper carbonate, which will not be used as freely as Bordeaux mixture on account of its greater cost and the increased labour of preparing it. For spraying late in the season, when stains on the fruit are undesirable, it is the most useful agent yet discovered. In copper sulphate we have the base or foundation of both the above mixtures, and a very effective fungicide to apply *before the foliage appears*. With this trio, backed up by intelligence and perseverance, the fruit-grower may largely increase the revenue derived from his orchard.

### EXPERIMENTAL WORK IN 1894.

Through the co-operation of the Fruit Growers' Association of Ontario, it is believed that the value of this work has received such an emphatic confirmation that the resulting impetus will place the practice of spraying to lessen fungous injury, as well as insect attacks, on a plane well out of the reach of controversy. While the benefits arising from the practice have been satisfactorily proved by the writer, as well as by leading fruit-growers, and the system strongly advocated, yet conflicting results obtained here and there continually threw a dark shadow and gave rise to doubt and discussion. This, I am happy to say, culminated in a resolution moved by the retiring President of the Ontario Fruit Growers Association, Mr. A. H. Pettit, at the meeting of the society, held at Peterborough, December, 1893. This resolution read as follows:—"That in the opinion of this meeting it is desirable that the Director of the Experimental Farms be requested to make during the coming season at several centres of fruit culture a public practical test of the efficacy of the solutions recommended for the prevention of the scab on apples." On recommendation of the Director, the Minister of Agriculture, for the Dominion, recognizing the important interests involved, was pleased to authorize the initiation of the work. Experiments were instituted at seven different centres in the Grimsby and St. Catharines districts. It is a pleasure to record the cordial spirit of co-operation manifested by the fruit growers of the Grimsby and St. Catharines districts and the helpful manner in which they facilitated the progress of the work. The inauguration of the experiments was unavoidably delayed till May 1st, which, on account of the abnormally early spring, was fully two weeks later than desirable. This, followed by the unprecedented and continuous rains during May and June, coupled with the scorching heat and drought of midsummer and autumn, all combined to form a season with conditions most unfavourable to obtaining even average results. Regarding the character of the weather, Mr. Wm. Orr, of Stoney Creek, Ont., writing under date of June 18th, says: We have been labouring under almost unsurmountable difficulties in trying to carry out our spraying programme. It has rained every day, with

one exception, for twenty-one days, and ploughed ground has been like a mortar bed. It has even been impossible to get upon well under-drained land part of the time." The same condition of affairs is chronicled by Messrs. M. Pettit, A. H. Pettit, C. P. Carpenter and E. J. Woolverton, in the Grimsby district. Writing from St. Catharines, under date of June 15, Mr. M. Burrell, says "that owing to the disastrous weather we have been at a standstill. For more than two weeks it has been raining daily, and not only has all farm work been suspended, but spraying operations have been impossible an account of the softness of the ground."

Mr. A. H. Pettit says, on June 20th: "We shall again go to spraying as soon as we can float a wagon with the barrel in it."

Following on the heels of the downpour came a period of ideal weather for the development of fungous growth. Never, to my knowledge, has the apple scab fungus (*Fusicladium*) appeared in such a virulent form. The fungus coming before the fruit had much more than formed, attacked the foliage so severely as to cause it to resemble and be easily mistaken for the ordinary twig blight. In many districts apple trees presented a scorched and browned appearance as if suffering from blight and severe drought. Most varieties lost a large proportion of their leaves, which of course resulted in a corresponding loss of the fruit. This visitation, however, had the effect of emphasizing the value of spraying as a factor having an important bearing on increasing the yield in seasons of severe fungous visitation, as well as improving the quality of the fruit. I mention this now to elucidate the apparent discrepancy in the yields of treated and untreated trees. To sum up briefly, untreated trees lost their foliage and consequently their crop of fruit. Spraying prevented the growth of the fungus on the foliage which was thereby retained and with it a large proportion of the fruit. These are points worth remembering. Peaches, cherries and plums were treated with the two-fold object of preventing loss from a fungous disease causing the fruit to rot on the tree, and insect attacks. Apples and pears to prevent injury from scab and spot (*Fusicladium*) and insect pests. The results owing to the difficulties outlined above, were not conclusive in every instance; this was reasonable in consideration that in one or two cases no spraying was done between May 4th and June 5th, owing to the continuous rainfall. Another cause affecting the completeness of the report was the failure of some of the experimenters in the hurry of marketing operations to record carefully the yields of the sprayed and unsprayed trees. Writing of this phase of the question one of the Committee very sensibly remarks that "there seems to be a little difficulty in getting reliable statistics as to numbers, weights, &c. When the exact moment arrives for counting specimens and weighing fruit the experimenter will probably be so rushed with other work that the details of the experiment may be neglected and the value of the whole test seriously impaired."

However, I am pleased to state, that the records which have been secured, are sufficiently convincing of themselves to be entirely satisfactory, although it is to be regretted that full returns could not be obtained in every case.

#### PEACHES.

Experiments mainly designed to prevent rot and leaf-curl were carried on in the orchards of Messrs. J. H. Broderick and Eli Gregory & Son, of St. Catharines, Ont., with the help of these gentlemen and the kind co-operation of Mr. Burrell.

The trees should have been sprayed according to the programme outlined in the accompanying calendar, but owing to the earliness of the season they were too far advanced to risk the application of copper sulphate. Treatment accordingly began on May 1st, with Bordeaux mixture: four pounds of copper sulphate, four pounds of lime to 50 gallons of water. The second application was made on May 15th. Three ounces of Paris green were added to each barrel of mixture. The trees were treated again on June 4th, June 20th, and July 5th. On account of some indications of injury to the foliage the formula was weakened for the last two applications, to three pounds each of copper sulphate and lime and the same quantity of water. Up to July 5th, rain was more or less constant. On July 31st, Mr. Burrell reported that there seemed

## Experimental Farms.

to be no difference between sprayed and unsprayed trees in the number of peaches affected by curculio. In regard to rot: "Early Rivers" showed 2 to 4 per cent rotten on sprayed trees and 5 to 7 per cent. on unsprayed trees. At this time the fruit was beginning to colour. The spot fungous (*cladosporium*) was considerably worse on unsprayed trees. On August 7th, "Early Rivers" showed about six per cent of rotten fruit on sprayed trees and eight per cent on unsprayed trees. "Early Richmond" gave approximately the same results. As the crop was excessively heavy the amount of affected fruit even on unsprayed trees could not be regarded as harmful, owing to the beneficial effects accruing from this thinning process. In fact the quality of the crop would have been much improved by removing at least 30 per cent of the fruit which set, a large proportion of which was allowed to mature.

With regard to the leaf curl, there was none on the treated trees and scarcely a sign of it throughout the orchard. Mr. Burrell noted at harvesting time that in all cases the fruit on the sprayed trees was higher coloured than that on the untreated trees. This was undoubtedly due to the absence of the spot fungus already referred to as *Cladosporium*.

The crop of peaches in Mr. Gregory's orchard was also uniformly large, and of good quality throughout. So little apparent difference could be noticed that picking records were not preserved. My own notes taken on 26th June and 29th August indicate that there was less rot on the sprayed trees among the early varieties such as Rivers, Mountain, Rose and Crawford.

To sum up, experiments on peaches were not attended by marked results owing to the absence in a large measure of fungous diseases, and the presence of an unusually heavy crop of fruit. From the experience of the past season it appears desirable to apply even a weaker formula of Bordeaux than that recommended, and it is suggested that after the foliage has appeared 3 pounds each of copper sulphate and lime to 50 gallons of water, be used. This formula might be used in treating all stone fruits, although cherries were not injured by the ordinary formula.

### PLUMS.

I am glad to be able to report more definite results regarding the treatment of plums. In Mr. Broderick's orchard a block of plums composed of Munro, Bradshaw and Lombard, was selected, and a part of each sprayed on the dates already given. The trees were young, just coming into bearing. Rot was more or less prevalent on all varieties, but the greatest damage to the trees was wrought by the Shot-Hole fungus (*Septoria cerasina*), and in preventing this disease the best results were obtained. Fruit growers well know the effect on the fruit of the loss of the foliage previous to the harvesting period—decreased size and poor colouring are sure to follow.

Notes taken on 26th June and 29th August emphasize the fact that the foliage of the sprayed trees was vastly superior to the unsprayed. In walking through the orchard the difference in the health and luxuriance of the two series at once made itself apparent.

To obtain accurate data regarding the character of the fruit two trees were selected as much alike as possible in every respect, one sprayed, the other unsprayed. The fruit of each was gathered and weighed. The sprayed tree yielded 14½ pounds of sound plums, the unsprayed 12 pounds. But the difference was most noticeable in the superior size and quality of the fruit from the sprayed tree. A hundred plums from this tree weighed three pounds and nine ounces, while 100 plums unsprayed, weighed two pounds and one ounce.

The sprayed plums would easily sell as good first, while the unsprayed owing to small size and lack of colour, could hardly be classed as "seconds."

Touching the treatment of plums, Mr. Wm. Orr, of Stoney Creek, Ont., writes as follows:—"Other years we have lost heavily from rot, especially on Duane's Purple and Pond's Seedling, frequently losing the greater part of the crop of these varieties. This year the trees were heavily loaded with fine clean fruit which was marketed without any serious loss from rot. The check trees of Pond's Seedling dropped their

fruit early in the season, and the checks of Duane's Purple rotted considerably, although not so badly as they did some other years."

In connection, Mr. Orr states that "he found spraying with Paris green effectual in destroying the curculio."

Mr. Burrell, of St. Catharines, also writes that he had two rows of bearing plum trees, the end tree of each row being left unsprayed. On October 22nd when these two untreated trees were practically bare of foliage the rest were looking green and thick with leaves. I may say in this connection that the Experimental Farm plum orchard, made up of some 75 varieties, including many varieties of *Prunus Americana*, has been kept entirely free from rot by the persistent application of Bordeaux mixture each year in conjunction with Paris green to prevent curculio attacks. Native plums in the vicinity of Ottawa have for the past three years been a failure owing to rot (*Monilia*) and the spot disease (*Cladosporium*.) In my opinion, no plum grower can afford to omit spraying with Bordeaux mixture and Paris green.

#### CHERRIES.

Experiments for the prevention of rot were carried out in the orchards of Messrs. Broderick and Gregory of St. Catharines, Ont., and E. J. Woolverton, of Grimsby, Ont.

Spraying began with Bordeaux mixture on May 1st, when the blossoms were beginning to open. Three additional applications were made with the same mixture with the addition of Paris green. Records of yields were obtainable from Messrs. Broderick and Woolverton. The former gives the yields of two trees of Yellow Spanish as nearly alike in every respect as possible at the beginning of the season.

Sprayed tree yielded 90 pounds of sound fruit.
Unsprayed "                    30                    "                    "

Mr. Broderick adds that the lower branches of the treated tree were well loaded with sound fruit, while there were a good many cherries at the top of the tree which was not thoroughly covered in spraying. This emphasizes the necessity of great care in applying the fungicide to all parts of the tree.

Mr. Woolverton's results were rather startling in their emphatic conclusiveness. He reports as follows:—"Gave cherries three applications of Bordeaux mixture with four ounces of Paris green to 50 gallons of water on the following dates, blossoms having fallen, May 10th, May 26th and June 4th, also one application of Ammoniacal Copper Carbonate on July 4th." Note; June 4th "cherries already show good results; the tree left unsprayed is much inferior in fruit and foliage to the one treated."

July 9th. "Picked fruit on unsprayed tree, yield, 17 pounds." July 10th. "Picked part of fruit off sprayed tree, amounting to 112 pounds; the remainder not quite ripe." July 17th. "Picked remainder of fruit on sprayed tree, 18 pounds; total yield, 130 pounds."

"Spraying cherry trees with Bordeaux mixture not only prevents rot, but seems to prolong the growing season, as will be seen from the above dates of picking." He further says that the advantage from spraying these trees is apparent from the following figures which are absolutely correct. Cherries from sprayed trees netted \$9.25, and were a choice sample. Cherries from unsprayed trees netted \$1.20, and were a medium sample.

These are actual results, obtained from two large trees, the advantage being on the side of the unsprayed, in point of size of tree and bearing capacity, at the time spraying began. One of the lessons this teaches is that in the case of cherries early spraying—that is, before the buds start—is not so important as the thorough and frequent application of the fungicide during the growing period of the fruit.

#### PEARS.

The spotting and cracking of early pears, notably, the Flemish Beauty, has for the past few years been a source of great loss to fruit growers. Strong evidence on this

## Experimental Farms.

subject was submitted by Mr. Orr of Stoney Creek, at the meeting of the Ontario Fruit Growers' Association at Peterboro'. He also reported failure in preventing the disease by spraying with Bordeaux mixture. The orchard referred to was one of those selected for experiment this year, but unfortunately owing to the following reasons given by Mr. Orr, no definite results were obtained. He says: "Owing to an extremely wet June, it was impossible to carry out the experiments thoroughly or as we should like to have done. The severe drought in mid-summer seriously impaired the quality and size of the fruit. The soil, being heavy clay, felt the effects of the dry weather most keenly. A heavy wind storm occurred before harvesting time and blew off the more or less prematurely ripened fruit, which at this time was unfit for market. It was therefore impossible to estimate the value of the work done on pears."

Notes taken on 1st September, indicate that as far as it was possible to judge by appearances the sprayed trees carried more and better fruit, and had much better foliage than those untreated. On the matter of pears we have, however, interesting evidence from Mr. M. Pettit, of Winona. Although experiencing much inconvenience from continuous rainfall he reported on 26th May that "on looking over the sprayed and unsprayed he could see quite a difference in favour of the sprayed trees. The Beurré Giffard and Flemish Beauty unsprayed showed considerable fungus, both on leaf and fruit, while on the sprayed trees there is scarcely any to be found. I also think there is more fruit on the sprayed trees."

Writing again under date of 7th November, Mr. Pettit says, "regarding the yield of pears, I am unable to give you exact figures, but I think the sprayed trees of Flemish Beauty had fully 75 per cent more fruit than those not sprayed. Beurré Giffard trees sprayed twice before blooming and regularly afterwards, were loaded with perfectly clean fruit, while trees of the same variety not sprayed until the fungus appeared—which was very soon after the pears had formed, on 29th May and 9th June—were almost entirely destroyed. There was not much difference in the Bartlett's sprayed, and unsprayed as they were all a good clean sample this year."

The trees were sprayed with copper sulphate on 16th April, Bordeaux mixture on 4th, 15th and 29th May and 13th and 29th June. Paris green was added in the later sprayings. The best proof of Mr. Pettit's belief in the work is his statement that he fully intends to spray thoroughly next year. He also concludes as a result of the season's experiments on pears, that two sprayings before the blooming period are of more value and have more effect than four sprayings after that period.

The orchard of Mr. E. J. Woolverton also provided a striking example of the effect of Bordeaux mixture upon Flemish Beauty pears. Of two young trees of this variety standing alongside each other in the same row one was sprayed, the other not treated. On 29th August the sprayed tree was clothed with luxuriant foliage and carried an average crop of clean fruit, while its neighbour, the unsprayed, had lost fully 25 per cent of its leaves and was almost bare of fruit. The result at harvest time was a bushel of good pears on the one hand and a few inferior specimens on the other.

Let us conclude then that the "cracking and spotting" of the pear may be prevented with great benefit to the tree and fruit by the timely application of Bordeaux mixture, and that in treating these diseases the early applications are most important.

### APPLES.

It is gratifying to be able to record results which cannot be accepted otherwise than as absolutely conclusive, in connection with perhaps the most important class of fruit which entered into the experiment, viz., apples.

The unusual difficulties and hindrances encountered make the results all the more emphatic and valuable. The work also should have been commenced at least ten days earlier than it was begun, and the first spraying should have been made with copper sulphate. This is in line with the experience of Mr. Murray Pettit.

An interesting experiment was planned and inaugurated in the extensive apple orchard of Mr. C. P. Carpenter, but was not carried out owing to the conditions of the

ground, it being so soft as to preclude the possibility of getting horses into the orchard. Thirty-two days elapsed between the first and second sprayings, but the benefit of the first application could easily be seen in August on the foliage of Greening, Colvert, Spy and Early Harvest. Mr. Carpenter also noticed an improvement in the quality of Northern Spy.

The results gained by Messrs. M. Pettit, E. J. Woolverton and A. H. Pettit, are given in detail in the accompanying tabulated statement.

In submitting his results Mr. M. Pettit says that the "Snow apples were not quite free of fungus, but much better than last season. Spys were much improved, while the test on Baldwins was a great success."

Mr. E. J. Woolverton, writing under date of October 25th, says: "I have no doubt that, had the experimental plots received an application of copper sulphate earlier in the season, the results would have been still more satisfactory; but even now after all the fruit is picked it is an easy matter to pick out the treated trees from the untreated owing to the much richer and more healthy character of their foliage."

Mr. A. H. Pettit, at one time indifferent in regard to the value of spraying, and who deserves my best thanks, not only for inciting the movement, but for most faithfully and conscientiously carrying out under extreme difficulty the entire plan of the experiment, as originally laid down, writes as follows:—

"I now inclose you a statement of the result of the spraying experiment with *Bordeaux mixture* conducted in my orchard under your direction during the past season. And in doing so I must express my great satisfaction in the results obtained. It has shown the effects in such marked degree.

"The experiment you conducted here this season has demonstrated to me, and many other fruit growers, that spraying with Bordeaux properly applied and at regular intervals will be of great practical value in destroying the fungus that is, I believe, causing the unfruitfulness of our orchards. The sprayed trees, aside from the largely increased crop, presented a fine healthy foliage, while those by the side of them, unsprayed, showed a very unhealthy appearance and no fruit.

"I might add that while the fruit on the sprayed trees was of good size and colour, it was not entirely free from damage by the Codling Moth; and two or three varieties, notably the American Golden Russet, Fameuse and Swaar were affected by a scab to quite an extent. Now, this may have taken root during our excessive wet weather a few days after the first spraying. I am also inclined to think, although I have no means of knowing it to be so, that the Bordeaux mixture does to some extent destroy the action of the Paris green. Had it not been for the work of the Codling Moth, the percentage of first quality would have been greater.

"Now, I may go a little beyond the experiment proper. Having sprayed a number of trees to a greater or less extent, the season, as you are aware, was most unfavourable in some respects, not only for spraying regularly, but for the cultivation of the orchard and vineyard, the extreme wet, followed by the rapid drying up of the land. I was pressed for time to get what spraying I did get done (beyond the experiment proper) with any regularity, and some were done moderately well, while other parts were not done so well; but I can distinctly trace the good effects of the application in the increased production and also in the improved condition of the foliage, even to the extent of one side of quite a number of the trees producing good results and good foliage on the side sprayed, while the other side of the tree was barren of fruit and carried unhealthy foliage.

"I believe, sir, that the value of this experiment so practically demonstrated will give a wonderful inspiration to our fruit growers to fight straight along this line, and I trust your report will be as convincing and as widely distributed as possible, in order that every fruit grower may reap the reward of your and your associates' researches and experiments to destroy the insects and diseases that are affecting our fruit trees and fruits, and I trust if there are any other doubting fruit growers as to the benefit of spraying, you will convert them at once, even should it be the means of flooding the universe with clean, choice Canadian fruit."

The orchards from which the most complete returns have been received are those of Mr. E. J. Woolverton and A. H. Pettit, of Grimsby, Ont. Tables I. and II. show

## Experimental Farms.

the varieties treated and the percentage of yield of fruit of the different grades after being carefully sorted. Mr. Woolverton's table also shows the relative percentage of windfalls in both series. Having these figures, the deductions which appear in Tables III. to X. inclusive, are drawn therefrom in order to present the results in a clearer and more convincing manner. In Table XI. is presented the combined and averaged results of all experiments, and the percentage of gain in yield of fruit of the sprayed over the unsprayed trees. This table shows that the sprayed trees yielded 24 per cent more of first-class fruit and 6 per cent and 18 per cent less, respectively, of second and third class.

The effect of the improvement *in quality alone* upon the gross receipts from an acre of bearing apple trees may be shown as follows:—Supposing the yield to be 50 barrels, we find according to results gained that spraying would give us \$56.75 worth of No. 1 fruit, \$31.50 worth of seconds, and \$6.97 of thirds, or a total of \$95.22 per acre. The same unsprayed would give No. 1 fruit \$26.75 worth, \$37 worth of seconds and \$13.64 worth of thirds, or a total of \$77.40, leaving a balance of \$17.82 in favour of the sprayed per acre. This is also supposing that all the "seconds" and "thirds" could be disposed of, which is very problematical. The cost of spraying an acre of apple trees five times with dilute Bordeaux mixture need not exceed \$6.00 and may be under \$5.00; there should be a net profit of \$10.00 on the basis of equal yields, but improved quality. But as a result of these experiments, and looking now at spraying *as affecting the yield*, we find that the sprayed trees gave 74.14 per cent of the total yield, this return added to the improved quality of the fruit, gives a difference in the net receipts of \$51.53 in favour of the sprayed acre. I do not think this side of the argument need be pushed farther, though it would probably prove interesting to know the effect of this on the crop of the province. Each grower will find it to his interest, however, to make a calculation for his own satisfaction on this basis.

### EQUIPMENTS FOR SPRAYING.

Where the area to be sprayed exceeds 15 acres it will probably pay to buy a horse power pump. These are now made by several firms dealing in force pumps. One which I have used with satisfaction at Ottawa during the past season was purchased from the Field Force Pump Co., of Lockport, N. Y.

Where a barrel is used—and I may say that one of these will answer the requirements of all having 15 acres or less to spray—a strong force pump should be secured. The valves and inside working parts should be of brass, the metal chambers and all castings strong and heavy, and the packing of the most durable character. Nothing is more annoying, and nothing acts more as deterrent to the introduction of the practice of spraying, than the "breakdowns" which occur with irritating frequency at the beginning of the work each year. This matter has been represented so strongly to Canadian firms that I believe satisfactory pumps will be forthcoming next season. I have used with good results pumps manufactured by the Toronto Pump Co., and the Goold, Shapley, Muir Co., of Brantford, Ont., although the first "Ideal" pumps manufactured by the latter firm showed defect under strong pressure, these, I believe, have been remedied. Holmes and Holladay, Clarksburg, Ont., also manufacture a strong force pump suitable for fitting into a barrel. Each pump should be supplied with two lines of hose, the lengths proportionate to the height of the trees, and each hose fitted with a stop-cock. In cases of clogging the stop-cock will always be appreciated. The nozzles which gave greatest satisfaction were the "Vermorel" and the "McGowen," the latter is most economical of fluid and should be used exclusively when the trees are small, or upon the lower branches. The McGowen is a valuable instrument for carrying the liquid to the upper branches with a minimum degree of waste. A bamboo pole, through which a brass tube may be inserted, is an improvement over an ordinary pole for the purpose of elevating the nozzle. I wish to impress upon fruit growers the desirability of beginning the season's work with apparatus fully equipped and in good working order, as the ease with which the applications are made influences to a large extent the thoroughness of the work, and upon the thoroughness will depend in a large measure the success attending the undertaking.

## PREPARATION OF BORDEAUX MIXTURE.

The ingredients are copper sulphate, lime and water. A good quality of copper sulphate should be secured. As pointed out by Mr. Fairchild, a brand which contains a large amount of iron or zinc sulphate should not be used, although it has not been proved that these ingredients actually injure the mixture. He further states that lime which is made from stone containing a large amount of clay is likely to be what is known as "dead" lime, and to contain small insoluble granules. This kind of lime may be used, but is likely to give trouble by clogging the nozzle unless the resulting milk be well strained before adding it to the copper sulphate. Lime which is air-slacked should not be employed in any case since its use results in injury to the foliage. The method of preparing the mixture has so often been described that I need not again repeat the directions.

Where large orchard areas are under treatment the work of preparing Bordeaux mixture may be greatly lessened by making at the beginning of the season stock solutions of copper sulphate, and lime, which may be diluted as needed. Dissolve 100 pounds of copper sulphate in 50 gallons of water, and each two gallons when stirred will contain 4 pounds of the salt. In another barrel slake 100 pounds of lime and make up to a milk by adding 50 gallons of water. Each gallon should contain 2 pounds of lime. Where it is desired to make a barrel of Bordeaux mixture, take 2 gallons of the stock solution of copper sulphate and add a sufficient quantity of the milk of lime to neutralize it completely. If the lime is of good quality two gallons of the well stirred stock solution will be sufficient. If the lime is of poor quality the proper quantity will be shown by the ferrocyanide of potassium test. If the lime is deficient a drop of the ferrocyanide of potassium added to the mixture will turn brown. Add lime water till the ferrocyanide remains colourless.

Spraying with Bordeaux mixture is a practice which has come to stay, at least till a more effective agent is discovered. The work of the season demonstrates the fact that it is efficacious and profitable in proportion as it is thoroughly and perseveringly practised.

## AN EXPERIMENT TO PROVE THE EFFICACY OF PARIS GREEN WHEN APPLIED WITH BORDEAUX MIXTURE.

This simple experiment was suggested by fruit growers, who, having used the combined fungicide and insecticide, found at harvesting time a comparatively large percentage of wormy fruit, this led them to suspect that the Bordeaux mixture exercised a weakening influence on the toxic qualities of the arsenic, or, combined with it in such a manner as to render the arsenic comparatively innocuous to insects.

On this point Mr. A. H. Pettit in submitting his report on spraying experiments, says: "I am inclined to think though I have no means of knowing it to be so, that the Bordeaux mixture does to some extent destroy the action of Paris green, otherwise the percentage of fruit of first quality would have been much larger." The unusual amount of wormy fruit, however, may undoubtedly be attributed to the presence of a second brood of Codling Moth, which occurred in Grimsby during this season. This occurrence is discussed by Mr. Fletcher in the report of the Entomologist.

The chemical action consequent upon the addition of Paris green to Bordeaux mixture is discussed by Mr. Shutt, who also gives the results of laboratory experiments. The conclusions reached are quite in line with results gained from practical trials in the orchard, which may be described as follows:—

Two trees each of three varieties of crabs were selected, all promising a heavy crop of fruit. Immediately after the blossoms had fallen one tree of each variety was sprayed with Bordeaux mixture to which was added 4 ounces of Paris green, one additional application was given two weeks later. The remaining tree of each variety was sprayed with Paris green in water in the same proportion and on the same dates that is, 1 lb. to 200 gallons. The fruit was picked in the autumn, windfalls being kept distinct from the hand-picked. The number of wormy fruits in each case, separated and counted. The results are given in detail in the following table:—

SHOWING Percentage of Wormy Fruit under both Treatments.

Variety.	How Treated.	Grade of Fruit.	Percentage Wormy.	Averages.
<i>Crabs.</i>				
Orange	Paris green	Handpicked	8	8·01
	Bordeaux mix.	Windfalls	8·03	
do	Paris green	Handpicked	2·66	11·39
do	Bordeaux mix.	Windfalls	20·13	
Hyslop	Bordeaux mix.	Handpicked	9·55	15·10
do	Paris green	Windfalls	20·65	
do	do	Handpicked	11·76	13·71
do	do	Windfalls	15·67	
Quaker Beauty	Bordeaux mix.	Handpicked	6·72	10·86
do	Paris green	Windfalls	15·00	
do	do	Handpicked	11·82	16·31
do	do	Windfalls	20·81	
Average of all treated with Paris green				13·80
do do Bordeaux mixture				11·32

The above table shows that trees treated with the combined insecticide and fungicide had 2·48 per cent less wormy fruit than those treated with Paris green alone. The difference is trifling, but sufficient to settle any doubt or uneasiness, that might be experienced on the question of the efficacy of Paris green as an insecticide when applied with Bordeaux mixture.

Previous experiments show that the amount of wormy fruit might be reduced 8 to 12 per cent by using Paris green with the fungicide.

## LARGE FRUITS.

*Apples.*—The varieties comprising the “standard” apple orchard, so named in contradistinction to the block containing Russian varieties, have on the whole succeeded fairly well, and many kinds have produced samples of fruit. Wealthy, Tetofsky and Duchess have borne heavily for three years, though only planted in 1888.

Scott’s Winter, McMahan White, Gideon and Winter St. Lawrence have borne for two years and give every promise of being useful varieties.

Other kinds not strictly hardy have fruited this year, but cannot be commended for cultivation when grown upon their own stocks.

Among these are Ribston Pippin, Blenheim Pippin, Wagener and Swayzie Pomme Grise; varieties of much value from a commercial standpoint, and highly appreciated as dessert fruits. There is little doubt that the area of their successful and profitable culture might be extended by top-grafting them on suitable stocks, as the trees fail in this locality not so much from direct winter killing as from “sunscalding” of the stem and main branches. By using free growing hardy stocks not affected in this way, the fruit grower in this and similar localities may be assured of a measure of success with these desirable apples.

With a view of securing object lessons of this character, a number of hardy Russian apples have been set in orchard during the past two years, some of which were top-grafted last spring, the remainder are to be top-worked the coming season.

Among suitable Russian varieties for this purpose are:—Hibernal, Cross, and Silken Leaf. When these are not easily procurable Talman Sweet and Haas (Fall Queen, Gros Pommier) may be used with equal or perhaps greater satisfaction, as they attain greater size than most of the Russian sorts. Wealthy has been used in the experimental orchard to a considerable extent as a stock in testing many new varieties, named and unnamed. It is principally defective, in that the scion frequently outgrows the stock, causing rough and unsightly joints at the points of union. This is a serious defect and should be guarded against.

In practising top-grafting on a large scale one of two methods may be followed, viz., top-working the young trees at two years old in the nursery row, and setting them in orchard the following spring, or performing the operation one or two years after setting in orchard. The first plan is the more commendable.

The scions to be used should be cut before severe weather sets in. They will keep in good condition if packed tightly in boxes with dry forest leaves and stored in a cold cellar. The scions should be perfectly dormant and the grafting be done during April and early May, or before the beginning of leaf formation; fair success will follow the operation in this locality up to 1st June. Feeble and immature growth are too likely to follow as a result of such belated work, and it always pays the grafter to keep well ahead of the season. The union should be covered with grafting wax and bound with a cotton bandage.

In the accompanying tabular statement a classification of varieties which have been tested in the standard orchard since 1890, is made on the basis of relative immunity from winter injury during the past four years. Those in column 2 “slightly injured” lost in most cases only a few inches of the terminal growth. In column 3 the injury was more severe, and was often accompanied by sunscald and stem injury. In column 4 will be found the names of those which seem to have been unable to withstand the vicissitudes of this climate and which, therefore, if planted at all in this and similar localities, climatically considered, should only be tried as top-grafts in a limited way.

## APPLES NEW OR MUCH ADVERTISED.

## GIDEON.

Originated by Peter M. Gideon, Excelsior, Minn., U.S., and is of the same parentage as Wealthy. The tree is upright in habit and an exceedingly vigorous grower, making strong, clean shoots, and supplied with strikingly large leaves, noted for their thick leathery and somewhat pubescent character. I think it is a better tree than Wealthy and less likely to split at the forks when fruiting heavily. It has never been injured by winter in this locality, but has been affected by blight to some extent.

## GIDEON.

The fruit is of the size of Wealthy, but much less highly coloured. It holds to the tree better than Wealthy, but is not equal to it in quality. Where McMahan can be grown it is doubtful whether the planter should include this variety.

## Experimental Farms.

*Description of fruit.*—Above medium size, roundish conic, irregularly ribbed; skin, thick, smooth and greasy. Light yellow, lightly blushed with red and pink mottlings. Cavity, deep and broad; stem, long slender. Basin, small, moderately deep, indistinctly plaited. Calyx, closed. Flesh, white, crisp, juicy, tender, sharp sub-acid. Quality, medium. A number one cooking apple, and not to be despised for dessert. Season, December.

### McINTOSH RED.

This fine variety is included with the object of drawing attention to its weak points, as well as its strong points.

The tree is fairly hardy and productive. Quality, first-class. Appearance, handsome. Season, that of the Fameuse or a trifle later, but like the Fameuse it falls an easy prey to the "Spot Fungus" (*Fusicladium*) and no grower should plant it without first making up his mind to deal vigorously with the enemy. The benefits of spraying are now so well recognized, and completely demonstrated, that with such an efficient remedy at hand no one should be deterred from growing this fine variety.

### McMAHAN WHITE.

Introduced by A. L. Hatch, Ithaca, Wis., U.S. This variety has already been noted in the report of this division of the Central Experimental Farm, but attention is again drawn to some of its merits as an apple of value for regions where Northern Spy, Ribston Pippin and Rhode Island Greening cannot be grown profitably on account of their inability to withstand the severity of the climate. It has proved so far a remarkably vigorous and healthy grower, making probably more well matured wood growth than any other variety in the orchard, and is free from many of the defects characteristic to varieties unadapted to this climate. It has borne moderately heavy crops for the past two years. The fruit is of the largest size, smooth and handsome, though lacking in colour as grown in this vicinity.

*Description.*—Fruit, large to very large, round, regular. Skin, green or waxy yellow with a delicate pink blush. Cavity, deep, narrow and lined with dark russetting. Stem, short, swollen at base. Basin of medium depth, slightly wrinkled. Flesh, white, rather coarse, crisp, juicy. Quality, fair. Season, November to January.

### SALOME.

Three trees of this variety were planted in 1888; they have not been injured by winter thus far, and have made a uniform, healthy growth. The tree is strictly globular in form, of very compact habit, with a straight, clean stem. This variety has been extensively advertised as a valuable winter sort, of superior hardiness; the latter quality it certainly possesses.

*Description.*—Fruit; medium or above, roundish conic approaching oblong, prominently ribbed. Skin; green at first, but takes on during winter a suffused pinkish mauve colour. Longitudinal lines between stem and calyx are occasionally present. Cavity; moderate size. Stem; stout, curved, an inch or more in length. Basin; small, irregularly ribbed. Calyx; large, open. Flesh; yellowish white, firm, juicy, pleasant sub-acid. Quality; fair. Season; late winter. This variety when picked was entire'y green, but at this date, Dec. 20th, is quite attractive on account of its pleasing colour. It is an apple without striking characteristics in regard to quality, and yet needs proving as to productiveness, but thus far it seems to be an improvement on Walbridge, a reputed winter variety.

### SCOTT'S WINTER.

Introduced by Dr. T. H. Hoskins, of Newport, Vermont. It has already been widely planted and the object of mentioning it here, is not so much to recommend it

unqualifiedly, as to draw attention to some points to be borne in mind in connection with its cultivation.

In the first place this is an apple belonging essentially to the same class as Gideon and McMahan, in regard to the locality in which it should be cultivated. Secondly, it should not be grown in sod or without high manuring and clean cultivation, on account of the size of fruit, which is naturally small, and without this treatment becomes unprofitably so. At Grenville, P.Q., Mr. Robert Hamilton reports it "not quite hardy." At other points in Quebec, as well as Ottawa, there has been no complaint along this line. The fruit when well grown is of medium size and handsomely striped and splashed with dark red. It does not reach good eating condition until after mid-winter when its sharp acidity becomes less pronounced. As a keeping apple it certainly excels, being in its best condition from February till May. Its principal value is for culinary purposes.

#### WINTER DUCHESS.

This variety has fruited for two years past and has proved to be a handsome fall apple of fair quality, but not as good as Wealthy, which comes in at the same season.

#### WALBRIDGE.

A much advertised winter apple on account of hardiness of tree and keeping quality of fruit. Both claims are quite true, as the tree is an exceedingly vigorous grower, while the fruit without special care keeps through the winter. The fruit, however, is very small and entirely lacks attractiveness, besides being poor in quality. The tree is also a light bearer, and should be planted sparingly. It is said to do best on warm, sandy soils. Where this variety has been extensively planted it would be a wise policy on the part of the owner to top graft the greater portion with more saleable varieties.

#### RUSSIAN APPLES.

The work of testing these varieties is being carried on from year to year with more or less corroborative results. Some conclusions reached and expressed in my report for 1891 may be repeated as follows:—

1. "That the northern limits of apple culture can be materially extended by planting the hardiest of these varieties."

2. "That all fruit growing districts in Canada may be benefited by adding a judicious selection of the best kinds."

3. "That among them are many valuable summer apples."

4. "That experience seems to indicate that among them are winter apples of fair quality and of superior hardiness." This belief has in a measure been justified by later experience.

5. "That, in the milder portions of Ontario, these winter apples are not sufficiently tested to warrant their being recommended for more than trial in a limited way."

With present experience, I can now say that I do not know of any winter Russian apple which seems to me worthy of cultivation where Ontario and Northern Spy can be grown successfully. The nearest approach to these which I have seen among those which in the same regions could be classed as winter apples, is in the case of "Longfield" and "Arabka." The former can, however, only be classed among winter apples when grown in Northern Quebec.

#### LONGFIELD.

Imported from Russia in 1870 by the United States Department of Agriculture, also by Professor Budd from different sources in Russia in 1883. On account of its

## Experimental Farms.

remarkable productiveness, coupled with early bearing habits, it has become widely known. It is said to be a synonym of No. 587, English Pippin.

The tree is difficult to manage in nursery, growing slowly and having a marked predilection for producing a crooked stem and a gnarled top. In orchard, partly on account of bearing very heavily, the tree assumes a more or less pendant form, which makes it easily distinguished from other varieties.

The leaves too are markedly pubescent. This variety is spoken highly of in Vermont, Wisconsin, Iowa, Minnesota, and has lately found favour with prominent Western New York horticulturists, notably S. D. Willard, of Geneva. I am inclined to think the variety grown at Geneva differs slightly in form and appearance from the Western Longfield and that introduced at Abbotsford, Quebec, by the late Charles Gibb. The typical Longfield is almost globular and very regular in form, whereas specimens of the New York variety brought under my notice last year were more or less ribbed, and the form tended towards the oblong.

LONGFIELD.

*Description*.—Fruit medium to small, round, regular; skin, bright yellow, blushed with bright pink; cavity, almost wanting in some specimens; stem, long, slender; basin, small, smooth; calyx closed. Flesh, white, rather soft, melting, juicy, mild, sub-

acid; quality good, with a suggestion of Fameuse flavour. Season in this locality, October to December; yet specimens are frequently kept through winter at Abbotsford, Quebec, while Mr. J. C. Chapais, of St. Denis, Quebec, sent me specimens in good condition in June of 1892. Like the Fameuse, it lacks the qualities which constitute a good export fruit.

Fruit should be thinned and the tree well manured, as the tree is likely to overbear.

ARABKA.

ARABKA (*Syn. Herren. Lord's Apple*).

There has been some confusion existing among fruit growers as to the identity of this variety. The Arabka imported by the United States Department of Agriculture

## Experimental Farms

turned out a summer apple of the Duchess type. Another Arabka imported by Messrs. Ellwanger & Barry, of Rochester, N.Y., answers the description given by the best Russian authorities, and it is this one which is herein described.

Tree, an upright, vigorous grower; leaves, large and thick. It has been perfectly hardy at this point, but has suffered severely from blight for two years past; apart from this defect, which has been more or less common to all the Russian varieties, it appears very promising, as noted in my report for 1891.

*Description.*—Fruit, large, flattish conic; skin, deep green overlaid by a more or less complete covering of purplish red, and a still darker bloom, interspersed with numerous dots, handsome; cavity of medium size, smooth, narrow; stem, one inch long; basin, shallow, somewhat wrinkled, Calyx, open. Flesh, greenish white, firm, coarse, sharp sub-acid, lacking in aroma and flavour; quality, medium. Core, open. Season, December to March.

CROSS-DEPT.

Among other fall and early winter varieties may be mentioned *Romna*, *Hibernal* and *Cross-Dept.* They all belong to the same family and are large, coarse, handsome apples

of value only in the colder sections of the Dominion either as top-grafting stocks or for culinary purposes. Their usefulness in these lines should not be under-estimated as hardness and productiveness are characteristics of prime importance in most fruit growing districts of the Dominion.

#### CHERRIES.

The cherry orchard has progressed very favourably, considering the large number of varieties under trial. As stated in previous reports, none of the sweet cherries have succeeded in this locality and our work has been therefore confined to those of the Morello class, or to forms intermediate between these and the Dukes. The crop of fruit this year was light, except on Ostheim, Minnesota Ostheim, Orel 25 and Vladimir (*of Morris*). These varieties, as in former years, bore a full crop. I have to report in this connection that the trees of the seedling *Koslov Bush Morello*, imported by the Fruit Growers' Association of Ontario in 1890, and placed in charge of the Horticulturist of the Central Experimental Farm, have proved hardy at Ottawa, but exhibit considerable variation in habit of growth and character of leaf and bud. A few blossomed last year, but set no fruit. A larger number blossomed this year and some fruit matured. An examination of the blossoms disclosed the fact that in many instances, they were abnormal in regard to the size and character of the stamens, which may account for the

KOSLOV-MORELLO.

fruit setting so lightly. Samples of fruit secured were of fair size, bright red, heart shaped; flesh soft and rather astringent. Pit, large. Altogether, not promising, so far. But it is not fair to base an opinion on first fruits. I may say that Dr. Charles E. Saunders succeeded in crossing this with other forms of the Morello, and interesting results may be looked for from this union.

## Experimental Farms.

Most of the Russian and German cherries described in Bulletin No. 17 of the Experimental Farm have realized expectations then expressed in regard to hardiness and productiveness. The varieties specially recommended are being planted to a considerable extent, but would be more generally cultivated if the trees were easily obtainable. Scions of these are available to a limited extent from the Central Farm.

### SAND CHERRY—*Prunus pumila*, L.

The encouraging and almost astonishing success which has attended the efforts of those who have directed their energies to the improvement of the native plum, has had the effect of drawing attention to the possibility of a like improvement of the native cherry.

Among the wild edible fruited cherries none present so many desirable characteristics, combined with a natural variability, as are found in the different forms of the Dwarf cherry. The common sand cherry *Prunus pumila* L., is widely distributed throughout Canada. Macoun says it is found in New Brunswick, Quebec, and westward along the St. Lawrence and great lakes and on the prairies to about the 106th meridian. Its natural habitat is on sandy or rocky shores, flourishing even among drifting sand. An allied form *Prunus Besseyi*, Bailey, is found growing freely upon the sandy plains west of the Missouri River creeping up to, and upon the foothills of the Eastern Rockies.

Plants of the Sand cherry are easily grown from seed. "When young—one year old—it is strictly erect, but as it becomes older the base or trunk becomes reclined and often covered with sand; but the young growth maintains its erect character. The plant has long and narrow sharply-toothed leaves and a willow-like habit." (Bailey in Bulletin No. 70, Cornell University Exp. Sta.) This willow-like appearance is quite marked, so much so that some of those who received plants of this cherry, which were distributed last spring through the provincial horticultural societies, were led to inquire if a willow had not been sent in mistake for the Sand cherry. At four or five years, this plant forms a trailing bush three or four feet high, with a horizontal stretch of branches, twice that distance. The trailing branches frequently take root and thus it is easily propagated by layering. On account of its dwarf habit and great hardiness, it would seem valuable for cold districts, especially where it would be naturally protected by snow. The fact of it growing so freely on any sandy location would seem to indicate that it possesses the requisite qualifications for successful cultivation in dry climates.

### FRUIT.

The fruit exhibits in the wild state and under cultivation, great variability as to size, quality, and season of maturity. In the spring of 1888 six plants were set in nursery row at the Central Farm, which were obtained from the drifting sands on the eastern shores of Lake Huron. They made fair growth and began fruiting in 1891. The fruit was not promising either in regard to size or quality. Attempts were made—but without success—by the writer in 1891-92 to effect a cross between the sand cherry and varieties of the Morello. A considerable quantity of seed was collected in 1892 and sown the following year. Several thousand plants were raised, a portion of which were distributed to members of the provincial horticultural organizations of the Dominion. As in all probability these plants will vary widely, I shall be obliged if those who have received them will report to this division in regard to the character of fruit obtained. A considerable proportion of the plants grown from seed in 1893 and allowed to remain undisturbed in the nursery row, fruited this year. The accompanying illustration is reproduced from a photograph of a selected sample of fruit, natural size, from one of these plants.

As a rule the fruit is smaller than Early Richmond, black, round and sometimes slightly conical or heart-shaped. The flesh is rather tough, the juice inclined to be bitter and the pit large. The variation illustrated (and there were many others all more

or less striking) is larger than Early Richmond, flesh firm, not tough, juice sub-acid, pit of medium size. It ripened soon after the middle of August, but did not fall from the bush till the middle of September.

PRUNUS PUMILA—SELECTED SAND CHERRY.

Prof. Green of the Experiment Station of Minnesota, speaking of the fruit of *Prunus pumila*, says : "Quality varies greatly, some being a mild, not disagreeable sub-acid, others insipid, and still others very astringent. \* \* \* When cooked it makes a nice sauce."

#### SAND CHERRY AS A STOCK.

It has been recommended by Prof. Green and by Prof. Budd of Iowa, as a desirable stock for hardy forms of the Morello cherry. I am unable from personal experience to endorse this assertion, as experiments tried here last year and the year previous, in budding Morello cherries upon this stock resulted in every case in almost complete failures. Cherry root grafts were scarcely more successful. Native and European plums, both budded and grafted "took" much better, and so far have made a satisfactory growth. The permanency of the union yet remains to be proven. Prof. Green quotes Hon. C. W. Heiderman, New Ulm, Minn., as stating that he "had been very successful in grafting the sand cherry on the native plum," and remarks that if this proves satisfactory "we will have in this sand cherry, so worked, a very pretty orna-

## Experimental Farms.

mental tree, as beautiful in flower, and in habit as some of the Japan forms of weeping cherries, and withal hardy."

### PROPAGATION.

As already stated, it grows easily from seed, and may readily be multiplied by layering. It also throws up suckers, and in common with plants of this habit may be propagated from root cuttings.

### PLUMS.

Upwards of 60 varieties of *Prunus domestica*, mostly blue and yellow plums, grown as standards, have been tested in the plum orchard at Ottawa since 1888. This does not include about 20 varieties belonging to the same type but of Russian or Eastern European origin. The greater proportion of the first named class have failed entirely, a small share of them live from year to year being annually cut back by the winters, and a still smaller number have produced a few samples of fruit. Those which have succeeded best are Glass Seedling, Shropshire Damson, Blue Damson, Copper, and Canada Egg. The better known commercial varieties like Lombard, Duanes Purple, Munro, and Bradshaw, have failed entirely. Glass Seedling, Shropshire Damson, and Canada Egg, may be grown with fair success in sheltered, city gardens, but are unreliable in orchard culture.

A number of Russian plums have been under trial, and are promising as far as hardiness is concerned, but up to date have not given evidence of productiveness, nor have they borne fruit of high quality. Two varieties, however, deserve special mention on account of desirable characteristics of fruit as well as of tree.

### EARLY RED.

Imported from Russia by Professor Budd from Dr. Regel, of St. Petersburg, Russia, during the winter of 1881-2. Professor Budd writing in 1890 says: "this was sent out quite extensively eight years ago marked "Mixed Arab." The sorts mixed were Early Red, White Nicholas and Black Arab—now called Black Plum. It has since been proved that nearly all the trees sent out were Early Red, which is our No. 3 from St. Petersburg. The tree has proven hardy as far North, as our native plums can be grown, and an early bearer of purplish red fruit as large as the Lombard, better in quality and two weeks earlier."

EARLY RED.

At Ottawa the tree preserves a compact almost globular form, making a slow growth annually, of well ripened wood which thus far has not been injured, even by 30 degrees below zero, Fahr. Shoots are slender, of a purplish colour; leaves, small ovate.

*Fruit.*—One and five-eighths long, by one and a half inches, laterally; perfectly oval, dark red with white dots showing through a light lilac coloured bloom. Suture, not clearly defined. Stem, one-half to three quarters of an inch long. Flesh, firm, meaty yet juicy; fair quality. I do not consider it surpasses Lombard in this respect. Stone is of medium size and closely adhering to flesh. Ripens during the second week in September in this latitude. If this variety proves productive it will be a decided acquisition.

## MOLDAVKA.

Imported with the last by Professor Budd from J. E. Fischer, of Voronesh, Russia. Of this Professor Budd says: "a South Russian variety that stands if grown with a low stem, up to the 43rd parallel. It comes into bearing early and the fruit is nearly as large, handsome and as good as the Bradshaw." Like "Early Red," the tree is a round topped, sturdy grower. The young shoots are stout and thick, of a reddish purple colour. The leaves large and leathery. I do not think it is as hardy as the last, but four trees of it have stood our test winters so far without injury.

*Fruit.*—Large, frequently two inches in length and one and three-quarter inches laterally. Ovate, slightly onesided. Colour, dull brownish purple overlaid with a heavy, blue bloom. Suture, well marked and terminating in a swollen knot on one side. Stem, short, stout, set in a deep, round cavity. Flesh, greenish yellow, moderately firm, juicy, mildly sub-acid, not highly flavoured; medium quality. Stone, medium size, oval, firmly attached. Ripens soon after September 1st. My field notes say "rather promising, but so far a light bearer."

MOLDAVKA.

## NATIVE PLUMS.

All who have seen the best varieties of the native plum are becoming more impressed every year with their value. New and desirable varieties are constantly appearing, all pointing to the possibility of still greater improvement. In my report for 1892 attention is drawn to some of those which had fruited at the Central Farm, and illustrations were given of the most valuable. Impressions and opinions formed and expressed in that article have been confirmed by the experience of the last two years, and I feel justified in urging upon nurserymen and fruit growers in Eastern Ontario and the province of Quebec the desirability of propagating the varieties then recommended. Whether considered from a commercial or home-use standpoint, there is money as well as satisfaction for the grower who cultivates them.

## Experimental Farms.

The following varieties have been added since 1892 :—

Name.	Character of Tree.	Origin.	Type.
Bicksley . . . . .	Hardy . . . . .	Iowa . . . . .	P. Americana.
Black Hawk . . . . .	do . . . . .	do . . . . .	do
Comfort . . . . .	do . . . . .	do . . . . .	do
Chas. Downing . . . . .	Tender . . . . .	do . . . . .	P. Chicasa.
Col. Wilder . . . . .	do . . . . .	do . . . . .	P. Americana.
Garfield . . . . .	do . . . . .	do . . . . .	P. Chicasa.
Hunt . . . . .	Hardy . . . . .	do . . . . .	P. Americana.
Jas. Vick . . . . .	Tender . . . . .	do . . . . .	P. Chicasa.
Jessie . . . . .	? . . . . .	Kansas . . . . .	do
Milton . . . . .	Tender . . . . .	Iowa . . . . .	do
Pottawattamie . . . . .	do . . . . .	do . . . . .	do
Rockford . . . . .	Hardy . . . . .	do . . . . .	P. Americana.
Sophie . . . . .	? . . . . .	Maryland . . . . .	P. Chicasa.
Stoddard . . . . .	Hardy . . . . .	Iowa . . . . .	P. Americana.

HAWKEYE.

Attention is drawn to the following varieties :—

**HAWKEYE.**—Introduced by H. A. Terry, Crescent City, in the Hawkeye State (Iowa). Tree a free grower, more easily trained in symmetrical form than most of this

class. Young shoots dark red with large pointed buds. Leaves, large, prominently veined. With a judicious amount of heading in when young the tree readily assumes a compact, round-headed form. Hawkeye so far has shown remarkable productiveness, this, coupled with the large size, fine appearance and fair quality of the fruit, will undoubtedly make it a popular variety.

*Description.*—Fruit, large, almost round; skin, thick, dark red, with lilac coloured bloom; suture indistinctly marked. Flesh, deep yellow, firm (for a native), juicy. Stone large, flat, separates readily from the flesh. Quality good. Ripens September 10th to 20th. When canned there is a perceptible but not unpleasant suggestion of astringency about the skin. This variety possesses the qualities of a keeper and shipper.

## STODDARD.

Introduced by C. G. Patten, Charles City, Iowa, The tree resembles Hawkeye in general characteristics. Fruit medium to large, round or slightly one sided; average specimens, measure one and a half by one and a half inches. Skin thick, not astringent, shading from yellowish red to dark red. Bloom of light lilac colour. Suture distinctly marked. Flesh deep yellow with red shading, juicy, sweet. Quality good. Pit large, flat, clinging. Season rather earlier than Hawkeye, but this may change somewhat with increased production and advancing age of tree.

## NEW PLUMS RECEIVED FOR EXAMINATION.

A large number of interesting samples of new plums either thought by the originators to be worthy of introduction, or forwarded for examination, have been received this year. I have selected a few which appeared worthy of special mention.

SNELLING (*P. hortulana*, Bailey).

Tree produced 13 or 14 years ago by Mr. W. H. Snelling, of New Edinburgh, Ontario, from a farmer at Gatineau Point, Quebec, as a sprout near an old tree. It evidently belongs to the Miner family of plums, which Prof. Bailey has placed as a division of *Prunus hortulana*. Mr. Snelling reports that the tree, which is now fourteen years of age, has fruited heavily for several years, and has never been affected by rot or the spot disease (*Cladosporium carpophilum*. V. Thümen.)

*Description.*—Size,  $1\frac{3}{4}$  inches from the stem to calyx,  $1\frac{1}{8}$  inches laterally. This is the measurement of a large specimen. Form, usually round; stem, one inch long, set in a round cavity. Calyx basin, almost wanting. Suture, well defined, though not deeply marked. Colour, a yellowish red ground, covered in part with darker red approaching crimson; very little bloom. Skin thin, tender, and apt to crack when fully ripe. Slightly astringent. Flesh soft, very juicy, sweet; quality good. Stone large, flat, almost round, without wings. Ripens from the 15th to the 20th of August. Mr. Snelling has sent to this office specimens of the fruit and wood for the past two years, and I am assured that it is a variety worth careful trial. The tenderness of the skin and softness of flesh are its weakest points.

LILLIAN AUGUSTA (*Prunus domestica*.)

From Richard Trotter, Owen Sound, Ontario. Received on August 24th, 1894. Mr. Trotter says: "I send you four plums for your inspection. They are not the largest, but are of average size. The tree is hardy and a good bearer. I was obliged to pull them before they were fully ripe, in order to save them. I have named the variety 'Lillian Augusta.'"

*Description.*—Two and a quarter inches by two inches laterally. Form, symmetrical, egg-shape; colour, greenish yellow; stem, three quarters of an inch long; suture, indistinctly defined; cavity, small; basin, wanting; flesh, firm, meaty, fairly juicy,

## Experimental Farms

slightly acid : quality good ; stone, medium to small, partly free. On the whole a promising variety.

JOHN A.

From Richard Trotter, Owen Sound, Ontario, received September 10th ; Mr. Trotter says this variety is the result of a cross between a local seedling called "Evelyn" and "Fellenberg," the latter being the male parent. It is a rapid, strong grower with heavy foliage, which it retains late in the season. The fruit keeps well.

*Description of fruit.*—Large, oblong or egg-shaped, slightly flattened laterally ; tapering towards stem ; colour, dark bronzy red with brighter blush near calyx ; bloom, heavy purplish blue ; suture, quite deeply marked ; cavity, one sided with swollen lip on side opposite suture ; stem, one and a quarter inches in length, stout ; flesh, greenish yellow, firm and juicy, a pleasant sub-acid ; pit, large and semi-clinging ; the prune characteristics are strongly marked ; as a keeper it may be valuable.

A. M. Smith, of St. Catharines, Ontario, sends, under date of October 5th, a sample of blue plums which I have described as follows :—

Size, one and three eighth inches, by one and a quarter inches ; nearly round ; colour, blue with a thick blue bloom ; suture, indistinctly marked ; stem, three quarters of an inch long ; cavity, narrow and small ; skin, thin ; flesh, firm, dark coloured, juicy, moderately sweet ; fair quality ; stone, small, round, adherent to flesh. This is probably a Damson seedling, and may be valuable on account of its lateness.

### SOME DESIRABLE CRAB APPLES.

The Siberian crab, *Pyrus prunifolia*, has played a most important part in the amelioration and improvement of pomaceous fruits adapted to cold latitudes. Contemporaneously with the early settlers of Canada came the red and yellow Siberian crabs, and in nearly every old seedling orchard may be found venerable trees bearing this useful kitchen fruit, contributing their quota year after year to the housewife's store of jellies and preserves. In the tree we have a rare combination of vigour and productiveness, but also a tendency to blight. The most important development among apples from this race is the Wealthy, which was given to the public by Peter M. Gideon, of Excelsior, Minnesota, after years of patient labour. October, Peter, and Gideon are other varieties originated from the same stock and therefore supposed to be true hybrids between the cultivated American apple and the Siberian crab.

The late Chas. Gibb, writing in 1884 said : "The Russian apple will undoubtedly enable us to extend our area of apple culture northward. Let us remember, however, that the hardiest known form of the apple is the Cherry crab of Siberia."

In weighing their merits and demerits he says, "their good points are 1st, hardiness and productiveness ; 2nd, early bearing ; thinness of skin of the fruit ; 4th, brisk, sprightly flavour. The weak points are, 1st, smallness of size of fruit ; 2nd, an astringent or 'puckery' flavour, and I would add, a tendency to blight."

It is well to remember, as Mr. Gibb adds, "that the smallest crab can produce as good a codling worm as the largest apple, and that inferior crabs, whose fruit is not worth picking, may produce large numbers of codling moths, and may thus be a source of great loss to the owner of the orchard."

The following is a descriptive list of those which have fruited during the past three years. They are all true Siberians or their descendants, with the exception of Soulard (*Pyrus coronaria*.)

TABULATED information concerning varieties of Crabs.

Name.	Origin.	Size.	Colour.	Quality, Flavour.	Use.	Season.
Ball's Winter.....		Large....	Green, blushed..	Astringent medium..	Jelly.....	Dec. to Jan.
Bowman.....		Medium..	Pink.....	Good.....	Canning....	Sept.
Brier's Sweet.....	B a r a b o o, Wis.....	Large....	Yellowish pink..	Sweet, good.....	Baking.....	do
Chicago.....	Marengo, Ill.	Small....	Yellow.....	Sub-acid, medium..	do.....	do

Van Wyck.....	New York....	Small....	Yellow.....	Astringent.....	Jelly.....	do
Whitney.....	Illinois.....	Large....	Striped red.....	Sub-acid, good.....	Table, canning	Aug.

It is difficult to select the best from such an extended list, when the variation is often very slight and frequently inappreciable. The following are desirable kinds, and are described in their order of ripening :

**EARLY STRAWBERRY**—This originated in Minnesota some years ago, and I have known it for at least ten years. The tree is a strong grower, making a large spreading top. It does not come into bearing as early as other varieties, but is, on the other hand, reliable and productive. The fruit is medium to large, round, striped and mostly covered with red. Flesh is of fine texture, brisk sub-acid and free from astringency. It ripens with the Red Astrachan apple, which it fully equals, if not surpasses, in quality. This is also an excellent variety for canning. Of recent years the fruit has "spotted" to a greater or less extent.

**WHITNEY** (*syn. Whitney's No. 20*).—This originated with A. R. Whitney, Franklin Grove, Ill., and has been propagated and disseminated with great rapidity on account of the hardiness and symmetry of the tree, as well as its productiveness. These characteristics make it a favourite with nurserymen. The fruit is of the largest size for a crab, and might easily pass for a small apple. In form it approaches oblong, is deeply splashed and striped with red. The flesh is mellow, juicy, sub-acid. Quality, good. After maturing, the fruit decays very rapidly, rotting first at the core. Ripening about the middle of August, it disappears in a few days, and considerable judgment is required in order to harvest it without loss.

**HYSLOP**—One of the best known and most generally cultivated of all the Siberian crabs. It is not as prolific as Transcendent, but keeps longer and is a handsomer fruit.

## Experimental Farms.

While very astringent, the thinness of the skin of this variety makes it a favourite for canning and for jelly-making.

The tree is reported as succeeding on even heavy clays. It is in good condition from September 15th to October 15th.

**MARTHA.**—This is a remarkably handsome tree in orchard, the form being symmetrical and upright, clothed with large healthy leaves, strikingly pubescent. Bears young and heavily. Fruit, medium to large, oblate; skin, smooth and shiny, nearly covered with a pinkish blush. Cavity deep; basin smooth, regular. Flesh yellow, crisp, juicy and acid. Excellent for canning and jelly-making. About the same season as the last.

**GIBB.**—Raised by the late G. P. Peffer, of Pewaukee, Wis., from seed of Yellow Siberian, fertilized with Fall Greening. It was named by Mr. Peffer in honour of Chas. Gibb, who first observed it bearing in his orchard. The following is Mr. Gibb's description of this valuable crab: "The fruit is large in size, averaging two inches across by an inch in depth. I have grown specimens which were three inches in diameter. The skin is yellow, with a blush of dull red on one side; flesh remarkably yellow, crisp and juicy, with a rich mingling of acidity and sweetness. Its astringency is so slight that it is hardly perceptible unless specially looked for. The flesh is quite firm, but breaking, although not melting, until it becomes yellow and ceases to be crisp. Its thinness of skin and sprightliness of flavour are Siberian characteristics which make it a favourite."

The tree is a slow grower, hardy and bears young and heavily. Mr. Gibb stated further that it was his "favourite crab for canning." Season, September 15th to 30th.

**ORANGE.**—Originated in Minnesota. Tree hardy. Upright in habit of growth. It bears young and is very productive, so much so that the fruit becomes small with advancing years. Average specimens are of medium size, rough, with a rough, russetty yellow skin. The flesh is sub-acid and quite pleasant when eaten raw. When over-ripe it lacks juice and is apt to be pithy. Season, Sept. 15th to Oct. 15th. Excellent for canning.

Among the most desirable of the winter crabs for which there is small demand, I will mention: *Coral*, *Meeder's Winter* and *Quaker Beauty*.

## SMALL FRUITS.

### GRAPES.

The past season was one of the most favourable for the thorough ripening of this fruit which has occurred in this vicinity within a decade. Fungous diseases were not prevalent to a serious extent, and those appearing were easily controlled with Bordeaux mixture. At the Central Canada Exhibition held during the last week of September, 142 varieties were shown, of which number fully 75 were well ripened. Ripening continued up to Oct. 15th.

"Farrell," a white grape mentioned in the report of the Horticulturist, last year, produced in abundance enormous bunches of fruit upon vines planted three years ago. The berries, which, were described as small last year, were much larger this season, and while the fruit did not reach perfect maturity, yet it gave assurance of good quality. It should be tested in our best grape growing districts. It is the largest white grape which has fruited here.

**BRILLIANT.**—Of T. V. Munson, a cross between Delaware and Lindley, is a promising red variety for home use. It does not seem sufficiently vigorous or productive for market. But the vines are still young. Good quality.

**PEABODY**—A seedling of Clinton raised by J. H. Ricketts of N. Y., is by no means a new variety, but it is mentioned here with a view of dilating on its good points.

1. It bears heavily and has been but slightly affected by mildew and to a small extent by Anthracnose.

2. The fruit ripens every year at Ottawa, and the berry holds well to the bunch.

3. Bunch large, well shouldered; berries, medium size, black, oval; quality, first class, combining a sprightly acid with a rich vinous flavour. After eating fruit of Niagara or of the Rogers varieties, a bunch of the Peabody is positively refreshing. Of greatest value in the garden of the amateur.

SECRETARY—Produced by J. H. Ricketts, Newburg, N. Y., bycrossing Clinton with Muscat Hamburg. This variety yielded remarkably fine bunches the past season.

Bunches and berries medium size, the latter oval. Skin moderately thick, pulp very meaty and of an exceedingly pleasant vinous acid. Seeds small, 2 to 3 in each berry. On account of its meaty character of flesh, it keeps well. This variety combines in a remarkable manner in both vine and fruit the good qualities of European and American grapes. It is not likely to become commercial as it does not succeed in all soils, and is not a vigorous grower. *Mills* might be classed with it, as having the same meaty character of flesh.

### RASBERRIES.

All varieties not protected, suffered badly last winter, and the principle of, and advantages accruing from, winter protection are now pretty generally accepted.

The production and trial of seedlings is being continued and the work is extending each year. The variation of the new varieties from year to year consequent upon environment in the matter of soil or climatic conditions, consequently impresses the lesson of caution upon the introducer of new varieties. Many seedlings now discarded, gave three years ago strong indications of value and usefulness, but time and changed conditions have developed defects not then apparent. A number of the best seedlings have been named and sent to the branch farms for trial, and the quantity of each increased for a more comprehensive test at the Central Farm.

As a market berry nothing better among red varieties, than Cuthbert has yet appeared. *Gladstone*, *Superlative* and *Beaconsfield* of the *Rubus Idæus* or European class have fruited, but do not appear valuable and will no doubt remain in the amateur list, on account of lack of productiveness as well as tenderness of cane and softness of berry. *Sarah* raspberry did not fruit heavily on account of having mutilated the roots in securing cuttings for propagation.

Of *Black Caps*, *Older*, described and illustrated last year, easily retained first place, both for productiveness and quality. The plant is also more easily kept in form than other members of this division.

### STRAWBERRIES.

The season was favourable to the development of this fruit, although unfavourable, owing to more or less continuous rainfall, to marketing it in good condition. The strawberry plot contained most of the new varieties, including a considerable number of Farm grown seedlings. It was planted in the spring of 1893. The rows are three and a half feet apart with the plants grown in matted form, which is after all the only practicable commercial system.

The ground was cultivated and the runners cut off until mid-summer, when the interspaces were mulched with manure. Any weeds appearing after this were pulled by hand or cut out with a hoe. After the ground was frozen in the autumn, the whole bed was covered with a coating of oat straw, the lightest covering being given to the rows. The plants came through in fine condition. The straw was removed before growth commenced and the ground cultivated till the fruit began to ripen when the straw was returned to the rows. Each variety was made up of two parallel rows 30 feet in length.

## Experimental Farms.

The tabular statement on p. 142 gives information regarding the yield and character of the foliage, in regard to its freedom from rust. In order to test the effect of burning the leaves after harvesting the fruit, as is often recommended, the foliage on one row of each variety was mowed off and burnt without removing it from the plants. Where there was an extra amount of litter about the plants the crowns were injured, which had the effect of thinning the plants in the rows quite materially. The resulting growth was at first luxuriant and healthy, but rust soon appeared, and made rapid headway, developing so quickly that there was little discernable difference from a casual

examination in the autumn between the two series. But the tabular statement shows that in health there was a marked difference in favour of the burnt rows. What will be the result of the experiment next year on the health and fruitfulness of the plants so treated remains to be seen.

It also remains an open question which will be tested next year, whether the same or better results might not be secured by treating the vines with Bordeaux mixture. Burning the vines, however, is an inexpensive operation, and one treatment serves the purpose. Notes were taken on a scale of 1—10 the highest number being expressive of entire freedom from rust.

## FRUITS RECEIVED FOR EXAMINATION.

I have to acknowledge the kindness of many enthusiastic fruit growers and originators of new fruits in bringing to my attention the merits of new varieties by description, and by forwarding specimen fruits. While individual descriptions are impossible as well as inadvisable in all cases, yet I wish my correspondents to understand that their thoughtfulness is fully appreciated, and I trust will be continued, as the usefulness of this division of the farm is largely enhanced by the co-operation of fruit growers and nurserymen.

Herewith is appended a list of the most important samples of fruits received during the year. In addition to this a much larger number of specimens of named varieties have been received for identification, all of which were examined with pleasure and reported upon to the sender.

# Experimental Farms.

## APPLES.

Sender.	Remarks.
A. H. Brooks, Clarkson, Ont. ....	A handsome fall apple.
Dr. A. Harkness, Lancaster, Ont. ....	Proved to be " White Astrachan."
Thos. W. Letts, Calumet Island, Que. ....	Fall, of fair quality.
W. J. Kerr, Smith's Falls, Ont. ....	Good quality, but too small.
" " " " " " " " " " " " " " " " "	Siberian crab ; keeps well.
J. S. Murray, Cocagne, N.B. ....	Fall ; too many of same season.
C. J. Honner, Amherstburg, Ont. ....	Sweet, winter apple ; promising.
W. H. Hope, Paint, Ohio, U.S. ....	Good quality ; autumn.

## PLUMS.

R. Brodie, St. Henry, Montreal, Que. ....	Plums of good quality.
W. A. Holton, Hamilton, Ont. ....	Seedling blue plum.
W. H. Snelling, New Edinburgh, Ont. ....	See description.
Keop Bros., Winona, Ont. ....	Probably a named variety.
Richard Trotter, Owen Sound, Ont. ....	See description " Lillian August."
" " " " " " " " " " " " " " " " "	" " " " " John A."
D. B. Hoover, Almira, Ont. ....	No. 1 promising blue.
" " " " " " " " " " " " " " " " "	No. 2 free stone ; good.
J. Woods, Monticello, Ont. ....	Resembles " Blue Orleans."
A. M. Smith, St. Catharines, Ont. ....	Extra good keeper.
R. C. Bradshaw, Thornhill, Man. ....	Good specimens of native plum.

## PEARS.

C. H. Roberts, Paris, Ont. ....	Seedling No. 5, promising ; quality good ; season Nov- ember and December.
R. McDonald, Dufferin, Charlotte Co., N.B. ....	Resembles " Flemish Beauty."
W. H. Dempsey, Trenton, Ont. ....	Cross between " Sheldon " and " Duchess."

## PEACHES.

C. G. Davis, Freeman, Ont. ....	Resembles " Early Crawford."
---------------------------------	------------------------------

## MISCELLANEOUS.

J. P. Cockburn, Gravenhurst, Ont. ....	White fruited blueberry.
J. A. Carrière " " " " " " " " " " " " " " " " "	Seedling gooseberry.

## DISTRIBUTION OF POPLAR AND WILLOW CUTTINGS.

This line of work has been continued on a less extended scale than in former years, on account of the active part taken in it by the Branch Farms at Indian Head and Brandon. Two hundred and sixty-five packages, each containing 125 cuttings, were sent to farmers in Manitoba, and 215 packages to applicants residing in the North-west Territories. These have been sent out, as in other years, only in response to direct individual requests, so that there is greater assurance that they are given into the hands of those persons most likely to appreciate and care for them, and who will report the results of their experience.

## ASPARAGUS AND RHUBARB SEED.

The distribution of asparagus and rhubarb seed has also been continued, much to the satisfaction of many settlers in sections remote from seedsmen and nurserymen, and also with much direct encouragement towards the more general cultivation of these useful vegetables.

## HARDY APPLE AND CRAB SEED.

None of the named varieties of apples which have thus far been tried at Brandon, Manitoba, or at Indian Head, in the North-west Territories, give promise of success, though A. P. Stevenson, of Nelson, Southern Manitoba, reports some success with Russian apples and crabs. With a view of introducing seedlings of the hardiest known types of apples, a small distribution of crab and apple seed was made last spring. It is hoped that a certain percentage of the resulting seedlings will endure the climate and bear fruit, and if so the seed of this fruit should be carefully preserved and sown again. It is quite possible that in course of time varieties in a measure adapted to the climate and soil of these regions may be developed by this process. Two hundred packages were sent out with appropriate instructions for planting the seed and caring for the resulting young trees.

## PLANTS AND SCIONS OF NEW FRUIT.

In accordance with the system adopted last year, a distribution of several new and desirable shrubs and fruits was made through the provincial fruit growing organizations of Ontario, Quebec and Nova Scotia. By this means the Horticultural Division of the farm is brought into a line of useful co-operative work with these societies and in touch with those most interested in the development of horticulture in the Dominion. This distribution includes only varieties which are not generally obtainable commercially in Canada, and which are considered worthy of introduction.

## Experimental Farms.

# REPORT OF THE CHEMIST

(FRANK T. SHUTT, M.A., F.I.C., F.C.S.)

OTTAWA, December 15th, 1894.

WM. SAUNDERS, Esq.,  
Director, Dominion Experimental Farms,  
Ottawa.

SIR,—I have the honour to submit herewith the eighth annual report of the Chemical Department of the Dominion Experimental Farms.

The past year has been an exceedingly busy one, the demands made upon the department being greater than ever before. In evidence of this, and to show the increasing interest on the part of Canadian agriculturists in the chemistry of agriculture, it may be stated that no less than 256 samples have been received from farmers for examination, and reported upon. These include soils, fertilizers, well waters and agricultural products in general. The correspondence, including letters received and despatched, for the last twelve months, numbers 2,288 letters. Last year the samples received were 143, and the correspondence 1,596 letters.

These two features alone indicate the interest in and popularity of our work, and above all make plain that the information afforded has proved of value to practical farmers. This is exceedingly gratifying, since, until quite recently, the application of chemistry to agriculture has been made little of by many who might have benefited by it.

Much of the work referred to is of such a character that it cannot be here included, without unduly increasing the size of this report. Its usefulness, on that account, however, must not be minimized; for in teaching the individual we teach the future generation. Each one becomes a centre for the dissemination of knowledge.

Among the more important conventions at which I have delivered addresses may be mentioned those of

- The Creameries' Association of Ontario, at Belleville, Ont.
- The Dairymen's Association of Nova Scotia, at Yarmouth, N.S.
- The Dairymen's Association of Eastern Ontario, at Peterborough, Ont.
- The American Public Health Association, at Montreal, Que.
- The Agricultural Conference of Nova Scotia, at Truro, N.S.

Several important investigations in connection with Canadian agriculture and horticulture have been carried on during the past year. The results obtained and the conclusions arrived at are given in the pages of the present report. They may be summarized as follows:—

**SOILS.**—A complete analysis is not made of all soil samples sent in for examination, but only of those which are thoroughly representative of large areas and have never been cropped nor manured. This restriction is necessary, owing to the very large amount of extremely careful work involved in soil analysis. Eleven of such specimens of virgin soil, comprising samples from British Columbia, Manitoba, Ontario, Quebec, Nova Scotia and Prince Edward Island, are here reported upon. Several of these are treated of at length, since the soils are typical. Rational and economic methods of improvement and manuring are recommended where deemed necessary or advisable.

A considerable number of soils are forwarded by farmers. These are subjected to a qualitative and physical examination and a report given as to their general character, suitability for certain crops, together with suggestions as to fertilizers and treatment.

**SWAMP MUCK.**—A chapter on the occurrence, composition and use of this material is given, together with a table of the data obtained from the analysis of samples from different parts of Canada, but chiefly from the Maritime Provinces. The attention of all farmers anxious to preserve their barnyard manure from loss of fertilizing constituents, is specially directed to this article.

**SEA WEED.**—To those whose farms are close to the sea, the analysis of sea weed here stated will prove of value. Its manurial worth and the best methods for applying it are given.

**CONTRIBUTIONS TO HORTICULTURAL CHEMISTRY.**—These include : (1) an article on the chemistry of the copper-salt fungicides, which, from the number of questions received during the past year, will I think prove of interest and value to orchardists ; (2) the results of an investigation to ascertain if arsenic from Paris green passes into solution in dilute Bordeaux mixture and ammoniacal copper carbonate ; (3) a second paper on the chemistry of the apple, which gives in detail the analyses of the fruit of four leading varieties and the deductions to be made therefrom as to fertilizers for orchards ; and (4) the results of an investigation into the composition of the strawberry plant, the data including the analyses of four prominent varieties. The last two investigations were commenced several years ago, their completion being necessarily postponed, owing to press of other work.

**MISCELLANEOUS.**—Analyses and brief reports of 50 samples of well waters from farmers' homesteads, examined this year, are given. Attention is again directed to the grave danger in using impure and polluted water, either for household purposes or for stock.

A short paper on methods for exterminating gophers is added. Numerous inquiries have been received this year from Manitoba and the North-west Territories respecting these pests. It is hoped that the suggestions made may prove of service to those troubled by these mischievous rodents.

I have thought it well that we should here place on permanent record our analysis of the "Mammoth Cheese," made under the direction of the Dominion Dairy Commissioner, at Perth, Ontario, and subsequently exhibited at the World's Fair, Chicago, U. S. A.

During the early months of the year, Mr. P. H. LeRossignol, B.A.Sc., the assistant chemist, fell ill. To my very great regret, his health became so shattered that he was obliged to ask for leave of absence. This was granted by the Honourable the Minister of Agriculture, and took effect on June 1st, Mr. Howard T. Barnes, B.A.Sc., of McGill College, taking his duties temporarily, until September 1st. At that date, Mr. LeRossignol was rather worse than better, and shortly after found that it would be impossible to resume work. He then sent in his resignation. Within a few weeks after that time, Mr. LeRossignol died at his home in Toronto. I wish to record my great indebtedness to him for his very faithful work while here as my assistant. He proved himself a careful and skilful worker, well versed in the theory and practice of chemistry. As an analyst, he was both rapid and accurate, and much of the work in the present report is the outcome of his enthusiastic industry.

Towards the end of November, Mr. Henry S. Marsh, Associate of the Institute of Chemistry, was appointed to the vacant post.

I have the honour to be, sir,  
Your obedient servant,

FRANK T. SHUTT,

*Chemist, Dominion Experimental Farms.*

Chemical Laboratories,  
Central Experimental Farm,  
Ottawa.

## Experimental Farms.

# VIRGIN SOILS OF CANADA.

The examination of typical soils representing large areas of territory, has been continued. From the chemical and physical data so obtained, it is possible to give information respecting the treatment and manuring most likely to be productive of good results in the districts from which the soil were sent. In addition to this immediately useful outcome of the work, it may be pointed out that we are gradually amassing figures that will lead to a better knowledge of the soils of Canada in general—a knowledge not only valuable to our own farmers, but also to those who have thoughts of emigrating from European countries.

In former reports I have dwelt at some length upon the factors which conduce to a soil's fertility. It will therefore be unnecessary for me to recapitulate here, more especially as the soils whose composition is given in the following table, are considered in detail.

The soils examined during 1894 comprise specimens from British Columbia, Manitoba, Ontario, Quebec, New Brunswick and Prince Edward Island. The results show that Canada possesses soils which compare most favourably in richness of plant food with the best and most fertile of other countries. Concerning much of the prairie soil in Manitoba and the North-west Territories, as well as regards those alluvial soils that have been formed as river deltas or tidal deposits, both on the Pacific and Atlantic coasts, it has been ascertained that they are exceedingly rich, possessing vast stores of plant food, a large portion of which is assimilable and ready to be used by crops. Many soils from other parts of the Dominion have also shown themselves to be excellent.

The analytical results are given in tabular form, and the deductions therefrom will be found, together with a brief description of each soil examined, under the various provinces from which the specimens were obtained.

## BRITISH COLUMBIA.

### NOS. 1 AND 2. SOILS FROM PITT MEADOWS.

#### PHYSICAL CHARACTERS.

*Surface Soil.*—A black loam in a moderately fine granular condition. When air-dried it is a grayish black and crumbles easily to powder; this on moistening does not become plastic or sticky, nor on subsequent drying does it cake.

The tilth (mechanical texture) appears to be very good, allowing freedom for root development and permeation of air and water. At the same time, it is sufficiently compact and heavy to prevent easy leaching; it is undoubtedly retentive of both moisture and fertilizing ingredients to a high degree.

The soil granules display a remarkable homogeneity, proving the very intimate incorporation of the organic matter with the inorganic basis of the soil. The sand, upon separation, appears to be very fine.

*Subsoil.*—A grayish yellow soil, powdering easily when air-dried. It contains a considerable amount of fine sand and does not become plastic on moistening. I should expect it to offer a very fair drainage to the surface soil.

#### CHEMICAL COMPOSITION.

*Surface Soil.*—This is a clay loam possessing a large amount of vegetable organic matter. The latter constituent is always present in arable soils; but a high percentage, as in the present instance, always characterizes soils of great fertility. Briefly, the chief functions of organic matter may be stated as follows: By its decomposition in the

soil, much plant food is set free for the use of succeeding crops, and the carbonic acid, liberated as a product of its decay, acts as a solvent (in the presence of water) in a very marked degree upon the inorganic constituents of the soil; by its nitrification, nitrates—the form in which plants take up their nitrogen—are produced; and, lastly, by its presence, the physical condition of the soil, as regards temperature and retentivity of moisture, is improved.

In *Nitrogen* this soil is particularly rich, containing almost 1.0 per cent, or nearly 34,000 pounds per acre, estimating the weight of an acre of soil to the depth of one foot to be 3,500,000 pounds. Ordinary fertile soils possess from .2 per cent to .5 per cent of nitrogen, and many which produce paying crops, contain indeed less than .2 per cent of this valuable element. The physical condition of this soil is such that nitrification would proceed satisfactorily, granted that the climatic influences are favourable.

In *Potash* and *Phosphoric Acid* this soil is well supplied; in this respect comparing most favourably with soils of great productiveness.

Nitrogen, Potash and Phosphoric Acid are known as the essential elements of plant food, since successive croppings without a concomitant return of fertilizing material exhaust a soil, more particularly of these three important and costly substances.

*Lime*.—Many agricultural chemists consider as deficient in lime, soils containing less than one per cent. It would therefore prove in all probability, advantageous to dress this soil with lime or marl. Such an application would not only provide plant food and assist in the nitrification of the organic matter, but would correct the slight sourness which now exists. With regard to the latter character, viz., acidity, it may be remarked that it is due to the circumstances accompanying the formation of the soil. I am of the opinion that it is not strong enough to materially affect vegetation. All traces of sourness will quickly disappear with culture and aeration, and more quickly still if lime or marl be applied.

This is an alluvial deposit, composed of the detritus brought down by the Pitt River. Such soils are usually very rich and fertile, and there is no reason to suppose that this one will prove an exception. We have seen that, physically and chemically, this soil ranks with the best; its excellent qualities of tilth and richness of composition are undoubtedly owing to the peculiarly favourable circumstances attendant upon its formation and deposition.

## MANITOBA.

### No. 3.—VIRGIN PRAIRIE SOIL.

This sample was obtained from section 31, township 4, range 1 west, and sent to me as “representing the unfertilized and uncropped prairie soil of the Red River valley for many miles around.”

This surface soil, which is fairly uniform throughout its depth, averages a little over two feet in thickness and mixes very gradually with the subsoil, which is blue clay. The latter, as tested by boring, extends to a depth of at least 250 feet.

This soil is a deep black loam, of a fine and peculiarly characteristic granular order. It reduces easily in the air-dried condition to a grayish brown powder. Though there is present a considerable amount of undecomposed root fibre, the soil proper presents a remarkable homogeneity in appearance, indicating a process of physical refining in its formation and a uniformity in its chemical composition. Its appearance and physical condition, as well as its fertility, considered from a chemical standpoint, are no doubt due to the very intimate incorporation of the large amount of organic matter this soil possesses, with the clay and sand which constitute the basis of the soil.

On moistening the soil, it does not “puddle” nor become plastic, though it contains a considerable amount of clay; nor does it subsequently dry into a hard or “cakey” mass, which would exclude air and prevent free root development. On the evaporation of the water, the soil easily powders or rather granulates, thus evincing its extreme friability.

## Experimental Farms.

The value of these qualities will be seen on a brief consideration of the factors which go to make up a soil's fertility. These are (1) climatic influences (rainfall, temperature, &c.), (2) tilth or physical condition, and (3) chemical composition.

In tilth, the relative proportions of clay, sand, limestone and organic matter, play an important role, culture and the weather often materially assisting. Retentivity of moisture and fertilizing material, permeability to air and water, freedom for root growth, stability and strength with friability are among the chief qualities of well tilled soil. Though the total amount of plant food is in direct relation to the kinds and amounts of organic and inorganic materials which compose the soil, the percentage of such food immediately available for crop use is largely dependent upon tilth and climatic influence.

The importance of a good physical state is, therefore, obvious, and judging from the present sample, the tilth of this prairie soil must be regarded as of a high order.

This loam is characterized chiefly by its very high percentage of organic matter and nitrogen, and its remarkable richness in potash; it thus stands pre-eminent in two of the three essential constituents of plant food.

Experience and scientific investigation have shown that the most fertile soils the world over are invariably rich in organic matter (humus) and nitrogen. The presence of humus regulates the soil's temperature, increases its water-holding capacity, and is of much value from a physical standpoint in loosening and aerating the soil. By nitrification that valuable and important element, nitrogen, is set free in an available form—as nitrates. The decomposition of the humus in the soil also gives rise to the production of carbonic acid gas, by the agency of which, when dissolved in the soil-water, much inert inorganic material is rendered soluble and useful for plant growth.

*Nitrogen.*—The percentage of nitrogen may usually be considered an indication, or rather a measure, of a soil's fertility. This soil has an average depth, over a large area, of two feet, but if we calculate the weight of nitrogen in the first foot only (assuming the weight of soil to that depth over one acre to be 3,500,000 lbs.), we find a store of nitrogen that may become available amounting to 33,145 lbs. Ordinary fertile soils to a like depth contain from 3,500 to 10,000 lbs. of nitrogen per acre; hence the vast reserve of this valuable constituent in this prairie soil is apparent.

Nitrogen is essentially the fertilizer for cereals, especially when associated with phosphoric acid. It is for this reason that nitrate of soda, sulphate of ammonia, dried blood, and other sources of easily assimilated nitrogen, are so extensively used in conjunction with superphosphate for obtaining lucrative yields of the grains on partially exhausted soils.

*Potash.*—Soils derived from clay are usually rich in potash, and it is probably owing to this cause that this soil contains an amount of potash far in excess of that ordinarily met with. Potash is necessary for all crops, but proves especially useful for roots, grasses, clover, Indian corn and most leafy fodder crops. We may therefore infer that this soil is well adapted to raise in large quantities such food as is necessary to economically maintain stock. Using the factors already given (See table of analyses), we obtain by calculation 33,950 lbs. of potash per acre.

*Phosphoric Acid.*—This constituent may be considered of the greatest importance, next to nitrogen, to the wheat plant, and indeed is very effective for all cereals. In this soil it is present to an amount somewhat above the average. A calculation based on the results of the present analysis shows 9,450 lbs. to the acre.

*Lime.*—After the constituents already discussed, lime stands next in importance, not only because it serves directly as food for plants, but also for the reasons that it materially assists in the nitrification of the organic matter in the soil and liberates potash from its locked up sources. This soil is not rich in calcareous matter, but on the other hand must not be considered deficient—clay loam possessing as a rule from 2 per cent to 3 per cent of carbonate of lime.

It will be unnecessary to call particular attention to the percentages of the other ingredients of this soil, since this sample forms no exception to the rule that of mineral matter, other than that specially reported on here, all soils contain a sufficient amount for all the requirements of farm crops.

## ONTARIO.

## No. 4.—SOIL FROM NEAR PORT ARTHUR.

This is a sample of virgin soil from the farm of Mr. Wm. Wilson on the MacIntyre River near the Red River Road, about six miles west from Port Arthur, and registered as north 100 acres of Lot 24, White's survey, township of MacIntyre.

It is said to be fairly representative of the soil within a radius of five miles, though the land is reported as being somewhat heavier on the whole in the Township of Oliver, five or six miles west of the farm from which this specimen was taken. The land originally was heavily timbered, but was burnt over some twenty-five years ago, and is now covered with poplar, birch, spruce and tamarack from ten to twenty feet high. Oats, clover and root crops generally are reported by Mr. Wilson to give excellent yields.

It is a grayish red, sandy soil of very fine tilth and is free from lumps.

In the essential elements of plant food, viz., nitrogen phosphoric acid and potash, it cannot be considered a rich soil, though under proper tillage and favourable climatic influences, good returns may be expected. The percentages of these constituents lie within the limits set for good agricultural soils, but do not equal those of our more fertile soils. Owing to its physical character, it is a warm soil, and one that would in favourable seasons give an immediate and excellent response to the application of manure. From its light and sandy nature, however, it would be apt to leach readily, teaching the economy of frequent and light applications of soluble fertilizers, if such are employed, rather than heavier dressings at longer intervals. Perhaps its greatest deficiency is in humus. To improve it in this respect, the turning under of green crops, (preferably clover or pease, for such enrich the soil by nitrogen taken from the atmosphere), the application of farm-yard manure and of swamp muck (after composting, if feasible), are to be recommended. By such means, not only could the percentages of organic matter and nitrogen be increased, but the tilth would be vastly benefited, since thereby the soil becomes more retentive of moisture and fertilizing ingredients. Organic matter (humus) in a soil has many functions. In its decomposition, carbonic acid is set free, which in turn tends to liberate mineral plant food from the rock-remains in the soil. In this and many other ways does humus act beneficially, and perhaps the most economical way for the new settler to supply it, is by the ploughing under of a green crop. An application of lime or marl, with the muck or other organic manure would enhance the fertility of this soil, for though not very poor in lime, an addition of such fertilizers would assist in rendering other plant food assimilable and the soil more suitable for the growth of cereals.

If artificial manures are employed, they should be first tried on small areas. Those of a soluble nature, as nitrate of soda and kainit, should be applied as a top dressing in the spring; in this way their effect will be more marked. Since wood ashes can easily be procured, a mixture of them with ground bone might prove as cheap and effective a fertilizer as could be recommended.

## Nos. 5 AND 6.—SOILS FROM MUSKOKA.

These soils are from the farm of Wm. Stalker, lot 14, concession 10, Brunel township, Muskoka, and constitute the eighth and ninth in a series of virgin soils from that district that are being investigated by us. Former reports contain analyses, and deductions therefrom, of those previously examined.

The country in which this sample was taken is well wooded with birch, maple, bass, hemlock and elm.

The surface soil is of a light gray colour, and varies from eight to twelve inches in depth. It differs from the preceding members of the series in being a clay loam, all the others having been light in character. It may be termed a strong soil and one

## Experimental Farms.

that is retentive of fertilizing constituents. It further differs in possessing larger amounts of lime and magnesia, features distinctly in its favour, as rendering it more suitable to the growth of cereals.

It is, however, particularly deficient in organic matter (humus), and very low in nitrogen. In potash, it is fairly rich; in phosphoric acid, only moderately so. Barn-yard manure, a rich compost made with muck, or a green crop turned under, are therefore among the best fertilizers for this land. These should be accompanied if possible with a dressing of lime or marl.

On many new farms there is not sufficient barn-yard manure made to properly keep up, not to speak of increasing, the fertility of the land in cultivation. The constant aim on such farms should be towards keeping more stock, since, by feeding the product of the fields upon the farm, about three-fourths of the plant food withdrawn by the crops is retained for future use. In the meantime, however, it would be well to practice turning under certain green crops, and thus enrich the land with available plant food. It has been explained previously that pease, clover and other legumes are particularly valuable for this purpose, adding to the soil much nitrogen assimilated from the atmosphere—a clear gain—as well as a large amount of organic matter to otherwise improve the soil. When possible, it will be more economical to feed the green crops to stock, returning the manure to the land; but if animals for this purpose are not kept, the turning under of the crop will be found to furnish a nitrogenous manure cheaper than any commercial fertilizer. The use of swamp muck may also be referred to as advantageous for such soils. In the air-dried condition it forms an excellent material for absorbing and retaining liquid manure, its own plant food constituents being converted by the subsequent fermentation in the heap into soluble and available forms.

On another page in this report will be found an article giving information respecting the agricultural value and use of this material.

## QUEBEC.

### Nos. 7 AND 8.—SOILS FROM THE COUNTY OF JOLIETTE.

These are from No. 766 in the official cadastral plan of the parish of Ste. Elizabeth, range St. Peter, county of Joliette.

The surface soil, about seven inches in depth, is black when moist—when it had the appearance of a clay loam of considerable strength, being compact and cohesive.

On drying in the air, it becomes grayish black and powders readily.

The subsoil when moist is plastic, but the air-dried sample reduces easily. This sample when received in the moist state was mottled gray and yellowish red. The dry powder is light yellow.

The surface soil is a clay loam of average fertility, containing all the elements necessary to plant development, and in such proportion as to produce with judicious culture remunerative crops.

*Nitrogen.*—The percentage of nitrogen is .213 per cent. Although the richest soils contain from .5 to 1.0 per cent, the average percentage in good fertile soils is from .15 to .25 per cent. This soil, accordingly, ranks, as regards nitrogen, among those of average fertility.

*Potash.*—The amount of potash is also fairly high (.38 per cent). The percentage of this element varies in soils from .1 to 1.0 per cent, according to the nature of the rock from which the soil has been derived. Clay loams are usually richer in potash than sandy soils.

*Phosphoric Acid.*—The phosphoric acid amounts to .27 per cent. The average in ordinary fertile soils is about .2 per cent, though, like potash, the percentage in virgin soils is dependent upon the character of the originating rock.

Nitrogen, phosphoric acid and potash are known as the essential elements of fertility, for they are those of which the soil is more particularly exhausted when succes-

sive crops are taken without a due return of plant food. Their amounts have therefore been considered in detail.

This soil is somewhat poor in *lime*, and I am of the opinion than an application of marl or lime would be beneficial, both to supply plant food and to improve the tilth.

Such a soil should be well drained. By this means, increased crop yields and greater ease in working would be obtained. Working the soil when wet, should be avoided.

It would undoubtedly prove of advantage to increase the amount of humus of the soil. This can be done with farm-yard manure, well composted swamp muck, or by turning under some green crop,—preferably clover or pease. Such organic matter contains a large amount of nitrogen, one of the most valuable of all soil constituents, and will effect an improvement not only chemically, but physically.

To sum up, this is a good soil of average fertility, and one that can be materially improved on the lines above indicated. It is a strong soil and well adapted for most agricultural crops, and more especially for cereals and fruit trees, provided that other conditions, such as the climate and season, are favourable.

The substance of this report was communicated to Mr. Rémi Hénault, who had procured and forwarded the sample early in the spring of the present year. Under date of October 22nd, he writes as follows :—

“ I am very much pleased to be able to inform you that the analysis and report that I received from my concerning my soil, have been of great service to me and the members of the Agricultural Circle of our parish. You informed me that the soil was poor in lime. I therefore applied this material at the rate of 20 bushels per acre, and as a result my crop was nearly doubled. Next year I shall plough under a growing crop of pease and also the aftermath of clover, and report results.”

It is well to remember that the continued use of lime by itself will in time exhaust the soil, since one of the functions of lime is to set free and render available locked-up plant food in the soil. It must be applied with some organic manure, a green crop turned under and swamp muck, if the future as well as the present is to be considered.

#### No. 9.—SOIL FROM THE COUNTY OF BONAVENTURE.

This sample from Maria, County of Bonaventure, Quebec, was obtained from newly broken land that had been cut, stumped and burnt during the summer of 1891 and 1892. Previous to this, it had been well wooded with birch, maple, spruce and pine. A third and final burning of the bush and stumps had taken place in the spring of 1893, the sample for analysis being procured in November of that year, when it was given a shallow ploughing.

It is a yellow soil, with a shade of red, evidently due to iron, and contains a large number of fragments of undecomposed rock material. Examination proved the coarse material (separated by a 1.5 mm. sieve) to be 36.63 per cent, the fine soil, of which the analysis was made, being 63.37 per cent.

In the table of analyses, it will be noticed that the percentage of clay and fine sand is 40.92. The microscope shows that a considerable part of that amount is fine sand. It is, therefore, probable that the clay and sand are in such proportions as to render the soil favourable, as regards tilth, to the growth of most farm crops.

*Organic Matter and Nitrogen.*—Although the appearance of this soil would lead to the belief that it was deficient in these valuable constituents, analysis proved to the contrary. Usually a rough estimate of the percentage of humus can be made from the colour of the air-dried soil; the iron in this soil had been oxidized by exposure, and the colour was no longer any criterion of the soil's richness. Good soils of average fertility contain, as a rule, from 5 per cent to 10 per cent of humus and from .15 per cent to .25 per cent of nitrogen; the soil under consideration possesses 11.80 per cent of the former and .238 per cent of the latter. In these constituents, therefore, this specimen is by no means lacking, though there can be no doubt that, to a large degree, they were destroyed in the burning of the land.

## Experimental Farms.

*Lime.*—From the analysis, this soil shows a deficiency in lime, one per cent being considered a minimum limit for the best returns. Lime may be supplied either as such, or in the form of marl or gypsum, and would be useful, not only as supplying an element of plant food, but also in promoting nitrification of the organic matter.

*Potash.*—It is exceptionally rich in this constituent, and consequently should prove a good soil for the legumes (clover, pease, &c.), roots and leafy crops generally. No doubt, this potash has been liberated in part by the burning to which the soil was subjected.

*Phosphoric acid.*—The average amount in good, fertile soils is about .2 per cent, so that, as may be seen from the table, this soil, as regards this necessary and valuable plant food, is of average quality.

The comparatively large percentage of iron is worthy of remark, as denoting a capacity for the retention of phosphoric acid and potash.

Organic manures, in one or other of the forms already mentioned (such as barn-yard manure, composted muck, offal or other animal refuse, or a green crop turned under), in conjunction with an application of lime, are to be recommended as beneficial and economical. For the special fertilization of a cereal crop, soluble forms of phosphoric acid and nitrogen, such as superphosphate and nitrate of soda, might be used.

## NEW BRUNSWICK.

### No. 10.—VIRGIN SOIL FROM BALMORAL SETTLEMENT, RESTIGOUCHE.

This, as received, was a pale yellow soil containing a considerable number of lumps or fragments of rock of the same colour, and of various sizes up to one and a half inches in diameter. On close inspection, it was found that these irregular rock fragments consisted chiefly of felspar, partially decomposed, though showing some quartz. The soil is evidently derived from the disintegration and decay of this rock material. The soil was separated by a 2 mm. sieve, with the following results :

Fine soil . . . . .	84.8 per cent.
Rock fragments . . . . .	15.2 “

Except in potash, this soil must be regarded as poor in the more important elements of fertility. The percentage of potash is considerably above that found in average fertile soils ; the abundance of this useful and valuable constituent is undoubtedly due to the felspar from which the soil has originated.

The percentage of phosphoric acid is low. Bone meal, superphosphate or fish waste are perhaps the most available sources from which to supply this necessary element for plant growth.

To supply nitrogen and humus (in both of which important materials this soil is lacking), barnyard manure would, of course, prove very valuable. Air-dried muck, subsequently composted with manure, or, if sufficient manure cannot be obtained, with wood ashes and lime, is also to be highly recommended. A third method, and one that can be strongly advised, is the ploughing under of some green crop, preferably clover or pease, while in flower. A dressing of ground unburnt gypsum is often useful in giving such crops a good start. Fish waste and sea weed would also prove valuable manures for this soil.

Most agricultural chemists regard a soil to be deficient in lime when it contains less than one per cent. This soil would therefore be benefited by a dressing of lime, either as such or as marl (carbonate of lime) or as gypsum (sulphate of lime).

To sum up briefly, organic manures (such as I have mentioned in speaking of nitrogen and humus) and lime are necessary, and the addition of phosphatic fertilizers highly desirable, to render the soil more fertile. The course here suggested will, I think, prove more economical and lasting in its effects than one which includes the use of the more soluble and expensive nitrogenous fertilizers, e.g., nitrate of soda and sulphate of ammonia.

## PRINCE EDWARD ISLAND.

## No. 11.—SOIL FROM KING'S COUNTY.

This soil partakes of the same colour as the light red Triassic sandstone from which it is derived, and in this respect is representative of the characteristic soil of this fertile province. It differs from the preceding specimens in that it is not a truly virgin soil. Some difficulty was experienced in procuring a sample from soil which had not been cropped or manured; this one is said to fairly represent the unmanured but cultivated soil that extends over a large area in the eastern portion of the island. It was obtained from Lot or Township 53.

This soil is a light, sandy loam, of good tilth. By the use of a sieve (mesh 1.5 mm.) the following separation was effected:—

Coarse material, chiefly fragments of red sandstone...	8.3 per cent.
Fine material, chiefly fine red sand.....	91.7 “

From this sample it is of course impossible to speak of the composition of the virgin soil; but such is, however, now exceedingly limited in area. The present report will be of service to those farmers who have not in the past kept up the fertility of their land and who are now anxious to restore to the soil economically that plant food used up by the successive cropping of years.

Judged from its chemical composition, it must be considered as somewhat inferior to those of average fertility. Of the three essential elements, it is highest in potash, containing a very fair amount. In phosphoric acid, it is very low, while the percentage of nitrogen is also less than the average found in fertile soils. The amount of lime present is extremely small, and considerably less than that in any of the other samples examined.

It is evident, therefore, that besides an organic manure to supply humus and a calcareous one to furnish lime, it is necessary to add nitrogen and phosphoric acid, if the best results are to be expected.

Nitrogen and humus are most conveniently (and also most economically) supplied together, as in some organic manures, e. g. barn-yard manure, composted muck, seaweed, fish offal, etc., or a growing crop of one of the legumes (clover or pease) ploughed under. In this way not only the fertility of the soil, but its capacity for retaining plant food and moisture will be greatly increased.

Phosphoric acid may be added in the form of superphosphate or ground bone. If wood ashes are cheaply and easily procured, their application would supply both potash and phosphoric acid.

As already stated, the soil contains a very small percentage of lime. A dressing of lime, marl or gypsum would therefore undoubtedly prove remunerative. If lime is used, other fertilizers (as indicated above) must also be supplied, or in a few years the increased yield resulting from the setting free of soil plant food by the lime, will be followed by a disastrous exhaustion of the elements of fertility. Marl does not affect a soil in as marked a manner as lime, nor does it cause exhaustion to the same degree. Unlike lime it cannot do harm if applied in excess. If it is desired to manure by turning under a green crop, a coating of gypsum and kainit or of wood ashes will materially increase the yield of clover.

It is hoped to supplement this analysis by that of soils procured in different parts of the island.

## SWAMP MUCK.

### ITS ORIGIN AND COMPOSITION.

The deposits of this material that are to be found more or less in all parts of Canada have been formed by the gradual accumulation of partially decomposed vegetable matter—the remains of successive generations of plants, chiefly aquatic. The stagnant waters in which these have grown have, by virtue of a temperate climate, preserved in this semi-decayed condition much valuable plant food. In this way, vast deposits, often many feet thick, have originated which may be considered as store houses from which the farmer can obtain a liberal supply of plant food for his crop at a merely nominal cost.

It is evident from what has been said that the best samples of muck consist entirely of humus and the ash ingredients assimilated by this semi-aquatic flora. When thoroughly dried, the humus can be burnt and, the small quantity of ash (mineral matter) remains. Many specimens, however, are found to contain more or less sand and clay and other foreign and inert matters that have become incorporated with the muck during its formation. Such, of course, detract from the agricultural value of this natural fertilizer.

As might be expected, muck is found in several stages or conditions of decomposition. Some samples are so far advanced in this decay that no evidence of structure remains. This is generally the case with the lower layers of the deposit. Again, many mucks contain unchanged woody fibre. These, while not possessing much plant food that can be readily converted into available forms, serve admirably as absorbents for liquid manure, and often act beneficially in improving the tilth of certain soils. With proper treatment in the compost heap, they may be made to give up their elements of fertility, and prove of much value as a manure.

Muck is found of all shades, varying from light brown to black. The upper layers of the deposit are usually lighter in colour than those beneath. That found on the surface is also distinguished by being easily reducible to powder, when in an air-dried condition, while that found in the lower layers is frequently plastic, drying to a hard compact mass. The latter often contains organic acids that must be neutralized by lime or by exposure to air, before the muck becomes a suitable fertilizer. Freshly dug muck possesses, as a rule, large quantities of water, often as much as 80 per cent. When piled in the air, it loses the larger quantity, the air-dried material containing from 8.15 per cent of water. It is well, therefore, to dig and pile the muck in autumn. Exposure to the winter's frost will sweeten and dry it, besides materially improving its physical properties.

Viewed as a fertilizer, its chief element of value is nitrogen, contained in the humus or organic matter. Very little, if any, of this nitrogen exists in a condition immediately available for crops. It may, however, be converted into soluble forms by suitable treatment, as in the compost heap. The mineral constituents of muck, which are given up as the material decays in the soil, also afford food for plants, since they possess notable quantities of potash, phosphoric acid and lime.

### MUCK COMPOST.

If possible, previous fermentation induced by composting should be brought about before the muck is applied to the land. The benefits of such a preliminary treatment are manifold. In any case, the *freshly dug* muck should not be used, for the reasons already explained. A few months' exposure sweetens, dries and improves it generally.

Alternate layers of barn-yard manure and muck of, say, six inches in depth—make an excellent compost. To such a heap should be added all the bones, carcasses of dead

## Experimental Farms.

animals and garbage that accrue on the farm. The whole should be kept moist and occasionally forked over. Every farm should have a compost heap, conveniently located, since it serves to keep the surroundings clean and healthy, and preserves much valuable fertilizing material that would otherwise not only go to waste, but perhaps prove a nuisance and a menace to health.

When sufficient manure is not obtainable, lime or marl and wood ashes may be substituted—the resulting compost would be poorer in nitrogen, but richer in potash than the one just described.

### MUCK AS AN ABSORBENT.

The air-dried substance is extremely absorptive, many samples being capable of holding as much as 400 times their weight of liquid. It may, therefore, be used with advantage in the barn-yard, the pig-pen, cow-house or wherever the liquid manure is likely to go to waste. By such means, valuable fertilizing material is preserved, and the nitrogen of the muck, by subsequent fermentation, rendered available.

#### RÉSUMÉ.

In concluding this brief account of the value and uses of muck, it may be stated that, speaking generally, the value of muck is dependent upon the amount of nitrogen contained, though the percentages of humus and mineral matter present, considerably enhance the effectiveness. The humus, by its decomposition, liberates carbonic acid in the soil. This acid undoubtedly exerts a beneficial action in setting free mineral plant food. Besides acting chemically, in supplying elements of fertility, a good muck serves to mellow heavy soils by rendering them porous and permeable to air, while thereby sandy soils have their retentive and absorbent quality increased.

Whenever possible, muck should be composted before use, as thereby it is rendered much more valuable.

### THE RECLAMATION OF SWAMP LANDS.

After a *thorough drainage*, which is essential, the muck will settle and become firmer and better adapted in tilth to the growth of ordinary farm crops. If the subsoil can be easily reached by the plough, a judicious mixture of it with the muck will be of benefit; otherwise a dressing of sand, clay or coal ashes may be employed to improve the tilth.

It has already been stated that muck is rich in nitrogen, it will therefore be apparent that barn-yard manure and other nitrogenous manures are not economical fertilizers for muck lands. A liberal application of lime or marl and wood ashes will, however, be productive of good results. By such treatment, lacking, but necessary, plant food is supplied, acidity corrected and nitrification of the organic matter fostered. These materials may be harrowed in after the muck has been lightly ploughed. Wood ashes, on account of their cheapness and the comparative ease with which they may be obtained in Canada, are recommended as the source of potash and phosphoric acid; but if these are not obtainable kainit or muriate of potash and superphosphate may be used.

Muck soils, after suitable treatment, have been found of special value for the growth of vegetable and root crops. If they are rendered firm and compact by good tillage, and a dressing of clay and wood ashes is added, good crops of cereals and grasses can be obtained. The ashes may be applied at the rate of 500 pounds per acre.

The subjoined table gives the percentages of essential constituents in those samples examined during the past year, together with information respecting their occurrence.

ANALYSES of Swamp Mucks (air-dried), 1894.

Number.	Nature of Material.	Locality.	Nitrogen.		Organic and Volatile matter.	Sand and clay.	Mineral matter soluble in acid.	Water.	Remarks.
			Per cent.	Pounds in one ton of air dried muck.					
1	Swamp muck...	Seartown, P.E.I.	0.754	14.1	89.49	2.33	0.98	7.20	Pasty and homogeneous when wet; dries to a hard tough mass of a rich brown colour.

## Experimental Farms.

### MARL.

This naturally-occurring source of lime might be used with advantage and profit on many Canadian farms, since many of our soils require lime; and, where readily obtained, marl is the cheapest of all lime fertilizers.

It is chiefly in connection with the muck beds already referred to, that deposits of marl are found. Thus it happens that two substances, the natural complements of each other, supplying the necessary plant food for light and sandy soils in the cheapest forms obtainable, often occur together and in proximity to those lands that would be most benefited by their application.

Marl is essentially carbonate of lime, the poorer samples containing more or less clay and inert matter. It forms a grayish white mass and frequently incloses many small shells, when it is known as shell marl.

Previous reports have given the composition of marls found in Ontario, Quebec and the Maritime Provinces; we now present the analyses of five samples sent from the vicinity of Okanagan Mission, British Columbia.

ANALYSES of Marls from British Columbia.

	No. 1.	No. 2.	No. 3.	No. 4.	No. 5.
Moisture and volatile matter .....	.54	.50	.52	.48	.53
Insoluble residue .....	2.75	3.68	3.42	3.55	2.30
Oxide of iron and alumina .....	.75	.85	.82	1.00	.80
Lime* .....	50.35	49.45	50.05	48.75	49.60
Magnesia .....	2.07	2.51	2.66	3.10	3.33
Carbonic acid, &c., undetermined .....	43.54	43.01	42.53	43.12	43.44
	100.00	100.00	100.00	100.00	100.00
*Equivalent to carbonate of lime .....	89.91	88.30	89.37	87.05	88.57

These samples, although showing a very high percentage of carbonate of lime, are not in the best physical condition for disintegration and solution in the soil, being hard and rock-like. They are known as "indurated" marl. If, however, they were finely crushed, their application would undoubtedly be of great benefit to lands deficient in lime.

### USES OF MARLS.

Lime is a necessary constituent of plant food, and consequently every fertile soil must contain this material. Marl may be used to furnish cheaply and effectively lime to soils lacking in this constituent.

Potash is another essential in the composition of plants. The lime in a soil serves to set free the potash from its insoluble forms, so that in the presence of lime or marl soils containing only a minimum of immediately available potash, may produce luxuriant crops.

Lime promotes nitrification of the organic matter (humus) of a soil. The nitrogen of humus is not in a condition assimilable by plants, but must first be converted into soluble nitrates. This is brought about by the agency of bacteria, and their development is fostered by the presence of lime in the soil. For this reason, lime or marl gives increased fertility to many soils rich in humus and otherwise of excellent composition.

The alkaline qualities of lime and marl give these substances a special value for neutralizing the acidity and altering certain injurious iron compounds existing in many marshy and low lands. Such soils are frequently also lacking in lime.

Lime and marl improve the tilth of heavy clays, flocculating the soil; this renders it permeable to air and destroys plasticity.

While the application of an *excess* of lime is very apt to do harm and to eventually exhaust a soil's fertility (unless care is taken to replace the plant food withdrawn by the crops), no injury can result from an over application of marl. The latter supplies lime in a mildly alkaline form, peculiarly adapted to the improvement of soils and for the wants of plants.

### AN "EARTHY DEPOSIT"

#### FROM THE NORTH-WEST TERRITORIES.

This material was found on Jack-fish Creek, near Battleford, N. W. T. It occurs in "pockets" 15 inches to 18 inches below the surface of the soil, which is a gravelly loam. The pockets are reported as being variable in size, though none exceed a few feet in diameter. In appearance it is grayish white and earthy, resembling marl. When received, it was in powder and friable lumps. Locally, the substance has been used for whitewashing and cementing purposes. Its composition was ascertained to be as follows:—

#### ANALYSIS.

Water (dried at 100° C.).....	6.78
Loss on ignition (combined water, organic matter).....	3.51
Oxide of iron and alumina.....	1.64
Insoluble residue (clay and sand).....	9.70
Sulphate of lime*.....	24.86
Carbonate of lime.....	53.04
Magnesia.....	1.72
Potash.....	.10
Soda.....	.10
Soluble Silica.....	.12
Phosphoric acid.....	.04
	<hr/>
	100.61
	<hr/>
Nitrogen.....	.04

\*Equivalent to 31.44 per cent gypsum.

This sample may be considered as consisting essentially of marl (carbonate of lime) and gypsum (sulphate of lime). Of the three more valuable elements of plant food, nitrogen, phosphoric acid and potash, it contains only very small amounts.

It would prove useful to all soils deficient in lime. (For particulars regarding the agricultural value of carbonate of lime, see under "Marl," page 161.) Gypsum, besides supplying lime, may be regarded as a fertilizer of special value for pease and clover. It is also considered to give good results with turnips, Indian corn and other leafy crops.

# Experimental Farms.

## SEA-WEED.

(*Fucus furcatus.*)

A sample of sea-weed was received from Mr. Geo. R. Weir, of Smith's Cove, N. S., with a request for a report as to its value as a fertilizer. As large amounts of this material are easily obtainable by the farmers on both the eastern and western coasts of Canada, it was thought desirable to make an analysis. The chief constituents, including more particularly those which make sea-weed valuable as a manure, are stated in the following table:—

### ANALYSIS of Fresh Sea-weed.

Water .....	63.49
Organic matter .....	27.93
Ash or mineral matter .....	8.58
	100.00
	100.00
Nitrogen .....	.468
Phosphoric acid .....	.108
Potash .....	2.025

### POUNDS of Fertilizing Constituents in One Ton of Fresh Material.

Nitrogen .....	lbs. 9.36
Phosphoric acid .....	2.18
Potash .....	40.50

This must be considered a valuable manure on account of the potash and nitrogen it contains. The ease with which it decomposes in the soil, thereby liberating these constituents in a condition at once available for plant use, greatly enhances its value. It is essentially a potassic manure, though to a certain degree it may be called a complete fertilizer. For general farm crops, however, it might be supplemented with profit by bone meal, which would supply phosphoric acid. It would make an excellent material for composting purposes, but, if preferred, may be applied at once to the land. As a green manure, it would add largely to the humus in the soil and undoubtedly improve the tilth or mechanical condition of the latter.

Its best results will be given on open, porous and warm soils. It may be applied at the rate of 20 to 30 tons per acre.

To save the expense of carrying much useless water, it is advisable to allow the sea-weed to partially dry out on the shore before hauling to the farm.

When sea-weed is burnt, the organic matter, containing the nitrogen is lost, but the ash, or mineral matter, retains the phosphoric acid and potash. The percentages of important constituents, as obtained in our laboratory, are as follows:—

### ANALYSIS of Ash of Sea-weed.

Oxide of iron and alumina .....	.66
Lime .....	7.69
Magnesia .....	6.93
Potash .....	23.61
Soda .....	44.07
Phosphoric acid .....	1.27
Sulphuric acid .....	36.94
Soluble silica .....	.67

The ash is seen to be much richer in potash than ordinary wood ashes.

If the farm is at such a distance from the coast as to make this substance too expensive to use in the fresh state, it will be found economical to forego the organic matter and nitrogen and reduce the sea-weed to ash, a ton of which would contain about 400 pounds of potash and 20 pounds of phosphoric acid, on the assumption that the ash contained 15 per cent moisture.

## THE CHEMISTRY OF THE APPLE.

In the Annual Report of the Experimental Farms for 1890, the results of a chemical investigation into the soil constituents required by the leaf of the apple tree, are to be found.

This work was commenced with the view of eliciting such information as would assist the intelligent orchardist in a rational method of fertilizing. When the nature and amount of plant food required by the apple tree in bearing is known, the first steps towards this will have been taken.

The leaves of the following varieties were analysed: Duchess of Oldenburg, Tetofsky, Wealthy, Fameuse and Northern Spy, and their composition at two stages of growth were given.

This investigation has been continued during the past year by the chemical examination of the fruit of four of these varieties.

The mineral matter and nitrogen (which together constitute the plant food taken from the soil) annually assimilated are represented by the increase of wood, the leaves and the fruit. That contained in the leaves is or may be practically all returned to the soil, that removed by the gathering of the crop is now to be spoken of.

In order, however, to present this subject of orchard requirements and fertilization in as complete a way as possible (as well as for the sake of comparison), the table of data from the 1890 report is here reproduced. For the deductions and conclusions therefrom, the reader may be referred to the text of the report afore-mentioned.

This table presents the composition of the leaves, together with such other information as may help to elucidate the question under consideration. After the columns containing the names of the varieties and the data when the leaves were gathered, are three columns in which is given the percentage composition of the leaf—the water, organic matter and mineral constituents. Then follow six columns, containing the percentages of the chief inorganic components of the ash. The percentages of nitrogen in the dry organic matter are then given, followed by columns depicting the amounts of nitrogen, phosphoric acid and potash contained in 1000 lbs. of the green leaf. These figures serve to show the absolute and relative values of the leaves as a fertilizer, as well as the quantities of these materials taken from the soil for the growth of the leaves.

## COMPOSITION OF THE FRUIT.

The general composition, viz., the percentages of water, organic matter and ash (which make up the whole), and the amount of nitrogen, are given for the four varieties examined in the following tabulated form:—

## ANALYSIS of Apples.

Name of Variety of Apple.	Water.	Organic Matter.	Ash.	Nitrogen.
Duchess of Oldenburg .....	88·61	11·14	·25	·0382
Wealthy .....	87·00	12·71	·29	·0375
Fameuse .....	85·22	14·46	·32	·0512
Northern Spy .....	87·08	12·65	·27	·0445
Average .....	86·98	12·74	·28	·0428

Although there is a great similarity in composition in the varieties examined, and none differ much from the average deduced from them all, it is of interest to note that the Fameuse is the richest in organic matter, in ash constituents and in nitrogen. The Wealthy and Northern Spy contain almost identical amounts of organic matter and ash, and the Duchess of Oldenburg has the largest percentage of water and lowest percentage of organic matter and ash.

## PERCENTAGES of Important Constituents in Ash.

Name of Variety of Apple.	Phosphoric acid.	Potash.	Soda.	Oxide of Iron.	Lime.	Magnesia.	Silica.
Duchess of Oldenburg .....	8·90	53·67	3·28	1·77	5·80	5·20	·36
Wealthy .....	8·15	57·00	2·65	1·76	3·33	3·84	·63
Fameuse .....	7·19	56·25	2·56	1·26	3·55	4·03	·32
Northern Spy .....	11·68	54·11	1·94	2·13	3·86	3·99	1·11
Average .....	8·98	55·26	2·61	1·72	4·38	4·27	·60

In this table the composition of the ash in detail is given. Of its components, phosphoric acid and potash are the principal. The latter constitutes over half of the ash (55·26 per cent), while the former is about 9 per cent, the average being 8·98 per cent.

## Experimental Farms.

No great differences between the varieties are here to be noticed, though the Northern Spy presents some striking variations from the average. Its ash contains nearly 3 per cent more phosphoric acid, nearly 1 per cent less soda, about .5 per cent more oxide of iron and alumina, and about .5 per cent more silica than the ash of the other apples.

The ratio of the potash to the phosphoric acid in the ash of the fruit is 6 to 1 ; in the ash of the older leaves (see table), it is 2 to 1. Relatively, therefore the demands of the leaf and the fruit on the soil for these two constituents are very different. It might here be remarked that the greater quantity of the ash ingredients of the fruit is contained in the seeds and walls of the ovary, comparatively little being found in the flesh of the apple.

A comparison of this table with that showing the composition of the ash of the leaf, will reveal further interesting features. The total percentages of ash in similar weights of leaf and fruit, are as 3.46 to .28. Lime is much more abundant in the ash of the leaf, while magnesia, oxide of iron and silica are about the same, taking the older leaves for comparison.

For the purpose of a practical presentation of the subject, the data presented in the following table have been prepared :

WEIGHT of Important Fertilizing Constituents withdrawn from the soil.

Name of Variety of Apple.	Average weight per bushel in pounds.	NITROGEN.		PHOSPHORIC ACID.		POTASH.	
		Lbs. per barrel.	Lbs. per acre, or 160 barrels.	Lbs. per barrel.	Lbs. per acre, or 160 barrels.	Lbs. per barrel.	Lbs. per acre, or 160 barrels.
Duchess of Oldenburg.....	44	.046	7.359	.027	4.307	.162	25.975
Wealthy .....	50	.057	8.220	.032	5.181	.226	36.232
Fameuse .....	50	.070	11.223	.031	5.043	.256	39.456
Northern Spy.....	46	.056	9.006	.039	6.383	.185	29.570
Average.....	47.5	.057	8.952	.032	5.228	.217	32.808

NOTE—In the above calculations the following data are used : Forty trees per acre in an orchard 25 years old yield, on an average, one hundred and sixty (160) barrels. One barrel contains 2 bushels and 3 pecks.

We have here the number of pounds of nitrogen, phosphoric acid and potash estimated as contained in one barrel of the fruit, and the amounts removed per acre by a good crop. None of the quantities are at all excessive, and the cost of returning them would not be great. The largest demand is on the potash in the soil ; next comes the nitrogen, and lastly the phosphoric acid. In the case of the leaves, the nitrogen stood first.

For the vigorous development of the tree and an abundant crop of fruit, the soil must contain these constituents in a more or less *immediately available condition*. It is for this reason, as well as to replace the exhausted plant food, that fertilizers are necessary to profitable apple growing.

*Nitrogen.*—To supply nitrogen, some organic manure is perhaps the most economical. Barnyard manure or the turning under a leguminous crop (the latter being rich in nitrogen) are to be recommended. Besides adding nitrogen, they furnish humus or decaying vegetable matter, which serves a useful function by liberating carbonic acid and which in turn sets free locked-up forms of mineral food. Humus, moreover, has much to do in bringing about good tilth and in the retention of soil moisture. As the period of growth and fruit development in the apple is comparatively long, organic manures in most instances will probably give better returns than those containing more soluble forms of nitrogen, such as nitrate of soda or sulphate of ammonia.

*Potash and Phosphoric acid.*—To furnish potash and phosphoric acid, we would first mention wood ashes. In most parts of Canada they are the cheapest form in which to purchase these constituents. Moreover, they possess them in the relative proportion best suited to tree requirements and in a condition that renders them easily available.

If wood ashes are not obtainable, kainit and muriate of potash may be substituted to supply potash ; and bone meal and superphosphate, the phosphoric acid. Bone meal contains 2 per cent to 3 per cent of nitrogen, in addition to the phosphoric acid, but requires a greater length of time in the ground to give up its constituents ; its effects naturally last longer. For this very reason it is often advocated for orchard fertilization.

Both wood ashes and bone meal furnish lime, which we have seen to be a necessary and somewhat important element.

Soils differ so much in composition, that it is impossible to state definitely the amounts of these fertilizers that should be employed in all cases. The wants of the tree for fruit and leaves have been given and the principles for an economical return of these requirements indicated. In conclusion, it may be said that the best and most profitable crops can be obtained only when the soil contains what might be thought to be a large amount of plant food, the greater part of which is more or less assimilable. A good tilth, among other advantages, tends to a good root development. In such, the rootlets are able to procure food from a much larger area than otherwise ; but in every orchard, owing to the disposition of the roots, there must of necessity be much unoccupied soil, and hence the importance of supplying liberally and in excess of that which is absolutely needed for a season's growth and fruit, those forms of plant food which we have been considering.

## CHEMISTRY OF THE STRAWBERRY PLANT.

In order to ascertain the requirements of the strawberry crop and its effect upon the soil, complete analyses of four varieties of strawberries have been made. The names of these are Sharpless, Crescent, Wilson and Manchester, the whole plant, including roots, being examined. The plants were collected while in flower during the month of June, and before the fruit had appeared. They were carefully freed from adhering soil, weighed and analysed.

The subjoined table gives, in addition to other information, the percentages of water, organic matter and ash (mineral matter), which together make up the composition of the plant :—

ANALYSES of Strawberry Plants.

Name of Variety of Strawberry.	Date.	Weight of plant.	COMPOSITION OF PLANT.		
			Water.	Organic matter.	Ash.
Sharpless, whole plant, in flower.....	June 4.	3 oz.	72·79	25·15	2·06
Crescent “ “ .....	“	3½ “	70·25	27·13	2·62
Wilson “ “ .....	“	2½ “	72·80	24·89	2·31
Manchester “ “ .....	“	3½ “	73·43	24·77	1·80
Average of four varieties.....		3 $\frac{1}{10}$ “	72·32	25·49	2·19

## Experimental Farms.

*Water.*—This, as well known, is a most important constituent to the well-being of the plant, its presence in certain proportions being absolutely essential to plant life and the performance of the functions of food digestion and assimilation. It is the vehicle by which the assimilated food is conveyed to the various tissues and organs of the plant. The importance of a plentiful supply of soil water for the growth of the plants and their abundant fructification cannot be over-estimated; but since nature must, in ordinary cases, be depended upon for it, there is no occasion to further discuss this constituent. It may, however, be remarked that the tilth, cultivation, mulching and the presence of humus (as furnished by an organic manure) have largely to do with the conservation of soil moisture.

*Organic Matter.*—Since all its constituents save nitrogen are procured from the atmosphere, it is unnecessary here to consider it. Special remarks on the nitrogen contained in the strawberry plant will be made when considering the elements removed from the soil.

*Ash.*—This represents the mineral matter taken from the soil. Its two most essential constituents are potash and phosphoric acid.

The foregoing data call for no special comment in detail. There is a great similarity in the composition of the four varieties, the variation from the average being small.

The following interesting table gives the percentages of the important constituents in the ash:—

PERCENTAGES of Important Constituents in Ash.

Name of Variety of Strawberry.	Phos. Acid.	Potash.	Soda.	Oxide of Iron and Alumina.	Lime.	Magnesia.	Silica.
Sharpless, whole plant, in flower.....	7·63	29·91	1·03	2·47	23·67	6·10	4·02
Crescent “ “ .....	5·08	24·28	0·78	2·10	29·10	5·19	3·43
Wilson “ “ .....	5·80	24·31	1·26	2·47	27·82	6·11	4·60
Manchester “ “ .....	5·88	26·93	1·09	2·04	24·75	7·13	5·89
Average.....	6·09	26·36	1·04	2·24	26·33	6·13	4·49

It is here again noticeable that no great differences exist between the plants analysed. Such as occur, might be accounted for by slight variations in the composition of the soil in which they grew.

The ash of the strawberry plant contains about 6 per cent of phosphoric acid, and in the neighbourhood of 25 per cent (one-fourth its weight) of potash.

Of the less important constituents, lime takes the precedence, being equal in amount to the potash.

The comparatively large proportion of silica and of oxide of iron and alumina in the ash, are interesting from a scientific standpoint, but need not be considered here as they are elements supplied in abundance by every soil.

The next table gives the number of pounds of the three essential elements of fertility, derived from the soil and contained in the strawberry plant, per 1,000 pounds of green plants and per acre, estimating the number of plants in an acre at 50,000.

## WEIGHT of Important Fertilizing Constituents withdrawn from the soil.

Name of Variety of Strawberry.	NITROGEN.		PHOSPHORIC ACID.		POTASH.

Of these essential elements it is here made clear that the chief demands for the development of the plant are upon the available potash and nitrogen in the soil. The phosphoric acid stands third, the ratio of potash to phosphoric acid from our analysis being 4 to 1.

Since the plants are finally ploughed under, thus returning the substances formerly abstracted and assimilated from the soil, the only real loss, theoretically, of plant food is that contained in the fruit. The quantity of fruit obtained per acre varies widely, viz, from 75 bushels to 300 bushels, a good average yield weighing probably 10,000 lbs. From the report for 1892 of Dr. Goessmann, Director of the State Experiment Station, Amherst, Mass., U. S. A., the following averages were obtained: Ash in fruit, 52 per cent; potash in ash of fruit, 53.81 per cent; phosphoric acid in ash of fruit, 17.9 per cent. Estimating the weight of fruit at 10,000 pounds, we find that 52 pounds of mineral matter, containing 28 pounds of potash and 9 pounds of phosphoric acid, are removed per acre. The ratio here of phosphoric acid is 3 to 1. Unfortunately, the amount of the nitrogen was not ascertained.

The loss of plant food that the soil sustains through the gathering of the fruit, is not, compared with other crops, an excessive one. At the same time, it is to be remembered that the soil has to provide, in addition to those required by the fruit, the fertilizing constituents as given in the above table though, as already pointed out, the greater part of the latter will eventually return to the soil.

A soil to be well manured must contain a large excess of available plant food over and above the amount that can be utilized by the crop, since it can not be supposed that the roots will be able to absorb, by virtue of their disposition in the soil, more than a comparatively small proportion of such fertilizing ingredients.

The strawberry is usually considered an "exhausting crop"; as far as the real loss of plant food through gathering the fruit is concerned, the facts scarcely bear out this opinion. To replace or restore to the soil the substances so removed by the fruit, would not in itself require a very heavy application of manure. It is found, however, as a matter of practical experience that, to make strawberry culture successful, the soil must be fed very liberally. High manuring for strawberries is a common practice. We may advance several reasons why such is necessary and why this practice does not conflict with what has already been said and shown here.

The growing season is short, and more especially the fruiting period. During a comparatively brief time there is a large demand for immediately available forms of nitrogen, phosphoric acid and potash (and especially the first and last of these,) a demand that must be met if the best results are to be obtained. Even the richest soils contain only small amounts of such plant food, and hence the necessity for the presence in the soil of a large quantity of manure that will readily yield its fertilizing ingredients. This more particularly is found to be the case when the rainfall during the fruiting season is below the average.

## Experimental Farms.

Barn-yard manure is the fertilizer commonly used. This, besides furnishing nitrogen, phosphoric acid and potash, acts beneficially in improving the tilth, in supplying humus, in preserving the soil moisture and equalizing the soil temperature. To supply potash by means of barn-yard manure alone, excess over and above that required for nitrogen and phosphoric acid must be applied, since, owing to faulty methods of preservation, this manure is often used when partially leached out. This consideration would suggest that, for the rational manuring of this crop, potash in some form (wood ashes, kainit, or muriate of potash) should be used in conjunction with the barn-yard manure. Wood ashes are for many reasons to be preferred; they contain potash and phosphoric acid in excellent proportions. The amount and kind of fertilizer required depend very largely upon the season and the character of the soil.

If a drought occurs during the fruiting period, a large excess of barn-yard manure in the soil will prove most effective in retaining the soil moisture; on the other hand, a similar excess if the season is rainy and hot, will tend to the production of foliage and runners to the detriment of the fruit crop. If a soil has been devoted to strawberry culture for some years and barn-yard manure has been exclusively used as the fertilizer, the probabilities are that potash and phosphoric acid are the fertilizing constituents particularly needed. Consequently, wood ashes, or a mixture of finely ground bone and kainit or muriate of potash, as already mentioned, should be applied. Instead of the bone meal, superphosphate may be used; it furnishes the phosphoric acid in a more or less soluble condition, but unlike bone meal does not contain nitrogen. Light dressings, in the spring, of soluble nitrogen, as in nitrate of soda (say 100 lbs. to the acre) are frequently of great value, especially on poor soils.

## THE COPPER SALT FUNGICIDES.

### AN OUTLINE OF THEIR CHEMISTRY.

It is unnecessary to say anything here in support of the practice of spraying; the value of certain copper compounds for the preservation of orchards and vineyards from fungous foes, is every year becoming better known and more widely appreciated. Advanced orchardists the world over recognize the efficacy of the copper fungicides for keeping both foliage and fruit clean and free from injurious attacks.

That the mixture or solution used may be effective in fungicidal power, as well as non-injurious to foliage, two factors must be paid attention to:—(1) the right preparation of the fungicide, and (2) the earliness and frequency of application. It is the first of these only that we shall consider here.

As may have already been inferred, the efficacy of the fungicides is largely dependent upon their chemical composition and physical condition. These in turn are dependent upon the materials and the method of manufacture used. We may further state that a correct and intelligent preparation of the solutions and mixtures necessitates a knowledge, at least in outline, of the changes that take place under varying circumstances of manufacture. The account of these reactions which follow, though necessarily brief, will place the reader in possession of facts of great assistance for effective spraying.

### BORDEAUX MIXTURE.

The source of the copper in all spraying preparations is primarily copper sulphate, commonly known as bluestone—a deep blue crystalline salt, easily soluble in water, the chemical formula of which is  $\text{CuSO}_4, 5\text{H}_2\text{O}$ .

Since the efficacy of copper sulphate as a fungicide has been well established—as illustrated by its beneficial action on seed wheat infected by smut spores—and since it is the basis or source of the copper in the spraying mixtures, and a material easily and cheaply obtained, the question is often asked, “Why cannot a simple solution of bluestone in water be used for spraying?” The answer may be very briefly stated. A solution of copper sulphate sufficiently strong to prevent the growth of fungous diseases would, so far as our present experience shows, prove injurious to foliage. The corrosive character of this chemical must, by precipitation or neutralization, be rendered innocuous before bluestone can be of practical value for spraying when the leaves are out. Fungicides, properly prepared, allow the application of an adequate amount of copper to prove effective and at the same time are non-injurious to foliage.

Bordeaux mixture is perhaps the best known and the most highly valued of all the copper compound fungicides. The formula as now advocated is as follows:—

Copper sulphate. ....	4 pounds.
Lime .....	4 pounds.
Water .....	50 gallons.

Briefly, the directions for manufacture are: The freshly burnt lime is slaked by the addition of successive small quantities of water, and then well stirred with sufficient water to make a thin, creamy mixture. This is now strained through coarse sacking into a barrel containing the dissolved copper sulphate, and then well stirred and made up with water to 50 gallons.

In order to produce a Bordeaux mixture that does not readily “settle out,” the milk of lime and the solution of bluestone should both be well diluted before mixing. Concentrated solutions cause a heavy granular precipitate, which quickly separates and falls to the bottom of the barrel.

Iron or other metal vessels should not be used for dissolving the bluestone in, nor as receptacles for the resulting mixture, since such cause decomposition, injuring both vessel and fungicide.

The reaction that takes place on mixing, is that the lime in solution precipitates the copper from the solution of bluestone as an insoluble compound—cupric hydrate—the sulphuric acid combining with the lime to form sulphate of lime, which on account of its slight solubility remains to a very large extent in suspension. This reaction is represented by the following chemical equation:—

By reason of the slight solubility of lime—1 part in 750 parts of water—the fifty gallons cannot hold in solution at once the amount of lime necessary to precipitate, or throw out of solution, the four parts of bluestone. Since, however, the sulphate of lime for the most part separates out as it is formed, the same water again takes up lime, which causes a further precipitation of cupric hydrate. The reaction is continuous and rapid until all the copper is precipitated. Finally, we have insoluble cupric hydrate, lime (from the excess used) and sulphate of lime in a liquid containing small quantities of the two latter materials in solution.

For the sake of simplicity the reaction has been represented as a simple one, resulting in the formation of cupric hydrate and sulphate of lime. But although the above equation depicts the chief and final reaction when the Bordeaux mixture is properly made, several other compounds may be formed, according to the condition of preparation. Before the reaction is complete, or if sufficient lime is not present, basic sulphate of copper,  $[\text{Cu} (\text{OH})_2, \text{CuSO}_4]$  is most probably produced. As pointed out by Professor Willard and others, the exposure of this compound to the atmosphere, as upon the foliage, results in the re-formation of corrosive sulphate of copper.

Chemistry therefore shows the necessity of an excess of lime, and further explains why an insufficiently precipitated Bordeaux mixture, though it contains no copper in solution, may prove injurious to foliage. The injury arising from the presence of the basic sulphate of copper, as pointed out by Professor Fairchild, may not appear for some time after the application, or until after the first shower.

## Experimental Farms.

To precipitate a definite amount of copper sulphate, a definite amount of lime is necessary—at least 3·5 ounces of freshly burnt lime for each pound of bluestone. In practice, however, in order to ensure the complete precipitation of the copper, and since impurities always exist in the commercial article, an excess of lime should be used. No element of danger is in this way introduced, as the excess of lime, when using the above formula, is not injurious to foliage. It may be pointed out that air-slacked lime contains variable and sometimes large percentages of carbonate of lime, and hence its use for this purpose is not advised. It has occasionally been suggested to use the supernatant lime water which can be poured off from the undissolved lime—lime water in fact. Fifty gallons of such saturated lime water contain only sufficient lime to precipitate (practically) two pounds of copper sulphate. Such a practice would leave copper sulphate in solution. As already remarked, it is owing to the sulphate of lime separating as it is formed, that fresh quantities of lime are dissolved and can, therefore, react with the copper compound.

Well made Bordeaux mixture should be of a deep sky-blue colour. A greenish colour denotes the presence of basic sulphate of copper and an insufficiency of lime. The clear fluid, obtained after filtration or the settling out of the cupric hydrate, should not give a brown colour with potassium ferrocyanide, proving the absence of soluble copper salts. The fluid upon exposure to air should become covered with a thin pellicle of carbonate of lime, indicating the presence of an excess of lime.

Bordeaux mixture will not keep without deterioration; changes occur that materially effect its adhesive qualities. Stock solutions of copper sulphate and milk of lime of known strengths may, however, be kept ready for dilution and mixing. They should be preserved from the atmosphere in well corked stoneware jars.

By the evaporation of the spraying solution the copper is left upon the foliage as the hydrate.

### COPPER CARBONATE.

If a solution of sodium carbonate ( $\text{Na}_2\text{CO}_3, 10\text{H}_2\text{O}$ ) be added to one of copper sulphate ( $\text{CuSO}_4, 5\text{H}_2\text{O}$ ), the copper is thrown down as a pale green precipitate. This is "basic carbonate of copper" (a compound containing both carbonate and hydrate of copper), and has the formula,  $\text{CuCO}_3, \text{CuOH}_2$ . It dries to a light green, amorphous powder. In the above re-action sodium sulphate ( $\text{Na}_2\text{SO}_4$ ) is formed and remains in solution.

The precipitate of basic carbonate of copper may be washed by repeated decantation, and thus freed from the sodium sulphate. Remembering that the weight of basic carbonate formed is, approximately, half that of the copper sulphate used, the addition of the required amount of water makes the spraying mixture known as "copper carbonate in suspension," the formula of which, as recommended by Mr. Craig, is:

Basic carbonate of copper .....	5 ounces.
Water .....	50 gallons.

It is scarcely necessary to add that the form of copper salt left upon the foliage when dry is the basic carbonate ( $\text{CuCO}_3, \text{CuOH}_2$ ).

### AMMONIACAL COPPER CARBONATE.

This spraying fluid results from the solution in ammonia, of the precipitated basic carbonate of copper, just described, and subsequent dilution with the required amount of water. Two soluble compounds are formed, ammonio-cupric carbonate and ammonio-cupric hydrate, which on drying upon the foliage leave basic carbonate of copper and hydrate of copper, respectively. The formula recommended is:

Copper carbonate .....	5 ounces
Ammonia .....	2 quarts.
Water .....	50 gallons.

From the excellent results obtained by the use of this fungicide, it may be inferred that this fluid presents the copper compounds in a form which is at once inimical to fungus life and non-injurious to foliage.

#### EAU CELESTE.

This fungicide is made by adding ammonia to a solution of copper sulphate. The formula usually given for its preparation is :

Copper sulphate .....	1 pound.
Strong ammonia .....	1½ pints.
Water .....	2½ gallons.

The first action of the ammonia is to precipitate basic copper sulphate ( $\text{CuSO}_4$ ,  $2\text{CuOH}_2$ ), which, however, soon dissolves in the excess of ammonia present, to form ammonio-cupric sulphate ( $\text{CuSO}_4$ ,  $4\text{NH}_4\text{OH}$ ), a deep blue fluid. At the same time ammonium sulphate is produced and remains in solution.

The evaporation of the fluid leaves upon the foliage basic copper sulphate and ammonium sulphate.

The fungicides, accordingly, fall into two classes. Bordeaux mixture and Copper carbonate in suspension, on the one hand, apply the copper in a more or less insoluble and precipitated form, while Ammoniacal Copper carbonate and Eau Celeste furnish it in solution. It is probable that the latter provides for a more equal distribution of the copper compounds on the leaves. From a chemical standpoint, it might be inferred that the spraying fluids containing the copper in solution, if made according to correct formulæ and applied of the proper strength, would prove more efficacious than the fluids containing the precipitated copper, though a slight variation in the strength of the latter would involve, in all probability, less risk of injury to foliage. They are more expensive and troublesome to make than Bordeaux mixture, and their use is now almost entirely restricted to a late application on grapes, cherries and pears. When the fruit is approaching maturity, the Bordeaux mixture is apt to leave a slight deposit on the fruit, which affects its sale.

#### AN INVESTIGATION TO ASCERTAIN IF ARSENIC FROM PARIS GREEN PASSES INTO SOLUTION IN DILUTED BORDEAUX MIXTURE AND AMMONIACAL COPPER CARBONATE.

For some time past the practice of adding Paris green to Bordeaux mixture and thus combining the properties of a fungicide and insecticide, has been in vogue with many orchardists. The economy of this method, providing the results of the treatment are satisfactory, is very apparent.

With a view of ascertaining if arsenic went into solution under such circumstances, the following formula was used :—

Copper sulphate .....	4 pounds.
Lime .....	4 "
Water .....	50 gallons.
Paris green .....	4 ounces.

This mixture was kept well shaken during the time of the experiment.

After two days a portion was withdrawn and filtered. The filtrate was free from even traces of arsenic. After ten days, another quantity was withdrawn and similarly treated ; analysis proved the absence of arsenic.

There is, therefore, no doubt that the arsenic under such conditions remains insoluble, and, consequently, non-injurious to foliage. The tendency evidently is (as pointed out by Kilgore and Gillette) for the lime of the Bordeaux mixture to render insoluble and inert any soluble compound of arsenic that may be present. Indeed the above authors report having largely increased the amount of Paris green added, without injury resulting to plum and peach foliage.

Judging, therefore, from a chemical standpoint, the Paris green applied with the Bordeaux mixture should be just as efficacious as when applied alone, and, further,

## Experimental Farms.

the addition of this insecticide should not in any way affect the usefulness of the fungicide.

Such a combined insecticide and fungicide, though exceedingly useful in the early part of the season, could not be used with safety on maturing fruit, since, the Bordeaux mixture being adhesive, the Paris green might not be detached or swept away by the wind or rain before the fruit is gathered.

Ammoniacal copper carbonate with Paris green was next tried, the insecticide being added *after the full dilution* to 50 gallons. Since Paris green is readily soluble in strong ammonia, it was scarcely expected that it would remain entirely insoluble in the solution.

The formula used was as follows :—

Copper carbonate.....	5 ounces.
Ammonia—strong .....	2 quarts.
Water ..	50 gallons.
Paris green.....	4 ounces.

After two days, a trace of arsenic was found in solution, which at the expiration of ten days had increased to heavy traces. No appreciable amount, however, had been dissolved.

## WELL WATERS.

The knowledge of the fact that pure water is indispensable for the preservation of good health, is now public property, thanks to the medical profession, our text books on hygiene and the press. Notwithstanding, we find many otherwise intelligent and thoughtful people, totally, and we may say criminally, disregarding this matter of vital importance to themselves and their families.

Many outbreaks of typhoid fever, diphtheria and other zymotic diseases, have been directly traced to the use of a polluted water supply. It is chiefly by the means of impure water that the germs of these diseases are spread throughout a community. Evidence to prove this can be furnished by all physicians and sanitarians. Indeed we have testimony from our own data. In not a few instances where illness and death occurred from typhoid fever and diphtheria, the water supply, on analysis, was found to be seriously contaminated with drainage or soakage of a pernicious character.

If forewarned is forearmed, it is hoped that the dissemination of knowledge on this matter will lead to a better condition of rural water supplies.

The purest water undoubtedly is to be found in the country, for it is there the natural conditions prevail for its occurrence. There should be but little difficulty on the greater number of Canadian farms in obtaining an unpolluted supply. But, unfortunately, wells are often, for the sake of convenience, sunk in the barn-yard, the stable or kitchen. Or they may be dangerously near the privy, pig-pen or other polluting source. The natural result is that the well acts as a cesspit or that excrementitious and waste matter finds its way into the well. It is not unusual to find the well immediately in the rear of the house, the surrounding soil affording a temporary resting place for the kitchen slops, for which no drain has been provided. Implicit confidence is often placed in the impervious character of a clay soil: such, however, becomes in time saturated with filth and pollutes the water which passes through it.

We have examined, during the past six years, a large number samples of water from wells on Canadian farms. This useful work has been continued, and the analyses of fifty waters made in 1894 are now given in tabular form.

A brief report on the quality of the water is given to indicate the character and wholesomeness or otherwise of the samples. Reports at greater length have been furnished those who forwarded the waters.

The particulars respecting the environment of the wells are of necessity omitted, owing to their voluminous character.

It will be noticed that the samples are from all parts of Canada.

In conclusion, it may be stated that without good water, good health cannot be expected. The action of polluted water is often insidious, undermining the general health and frequently causing diarrhœa, indigestion or other intestinal disorders.

To dairymen and milkmen, pure water should, of course, be an absolute essential. The wholesomeness of milk and its products, butter and cheese, is to a large extent directly dependent upon the purity of the water used for the stock and in the subsequent dairy operations.

## THE EXTERMINATION OF GOPHERS.

### STRYCHNINE AS AN EXTERMINATOR.

From the correspondence received during the past season it would appear that the farmers in certain districts of Manitoba and the North-west Territories are seriously troubled by gophers destroying their field and garden crops. Many of the letters are accompanied by a sample of the strychnine to be tested for adulteration, the failure of this poison being attributed to a supposed impurity. All the specimens, however, submitted to examination have proved to be pure, and there seems to be no ground for the wide-spread belief that this article, as generally sold in commerce, is adulterated. We have, therefore, to look further for the apparent failure which we are accustomed to meet with in using strychnine.

From many analyses it appears that strychnine and strychnine sulphate are commonly sold and used for this purpose of poisoning gophers.

Strychnine is a very insoluble substance, one part requiring 6,700 parts of cold, or 2,500 parts of boiling water for solution. In other words, one gallon of cold water can hold about 10 grains, and the same quantity of hot water only 30 grains of strychnine. I think that neglect to recognize this characteristic of marked insolubility has been the chief cause of disappointment with this poison, for unless the strychnine is *in solution*, the grain cannot absorb it. A few drops of a mineral acid (sulphuric or hydrochloric), or if these are not at hand, a small quantity of strong vinegar, will much assist in dissolving the strychnine; but in such a case the solution should not be made in a metal vessel.

Strychnine sulphate is much more soluble than strychnine, one part requiring from 10 to 50 parts (according to different authors) of water for solution. As a large excess of the poison is always used, it would, therefore, seem that the strychnine sulphate would, as a rule, give more satisfactory results than strychnine.

Since poisoning by strychnine has been hitherto almost the only method practised, it will be well to consider a few important points in the preparation of the poisoned grain.

The quantity usually recommended is one ounce of strychnine to one bushel of wheat. If strychnine and not the sulphate is used, this amount appears wasteful, since 8 gallons (the equivalent of one bushel) of hot water can only carry half an ounce of strychnine and it is not at all likely that more water than wheat is used. If a small quantity of acid, or the strychnine sulphate, is used, one ounce of the material may undoubtedly be employed with advantage.

## Experimental Farms.

The strychnine or the strychnine sulphate, as the case may be, should first be powdered. This may be accomplished with a knife blade, piece of iron, or a glass bottle sped as a roller. Use a sufficiency of hot water, and, when the poison is *entirely* dissolved, pour the solution (of which there should be a large enough quantity to cover the grain) used the wheat. Allow the whole to stand for at least 36 hours, or until the grain has become *quite soft*, showing that the strychnine has permeated the substance of the wheat.

A teaspoonful of the poisoned wheat placed at the mouth of each burrow, should be an ample quantity.

Strychnine is an intensely bitter substance even in very dilute solutions, and no doubt the gophers are often deterred from eating the grain by tasting the poison on the outside of the wheat. Numerous correspondents have written to the effect that they cannot get these pests to touch the bait. Though I have never had the opportunity to try its efficacy, I would suggest sugar coating the pills—in other words sprinkling the poisoned and damp wheat with sugar.

To recapitulate: Care should be taken to see, in the first place, that the strychnine is all dissolved; and secondly, that the grain has become soft, showing thorough saturation with the poisoned liquid.

Of course the greatest care must be exercised when using strychnine, in order that children and farm animals may run no risk of poisoning.

### CARBON BISULPHIDE AS AN EXTERMINATOR.

A method that is strongly advocated by those who have practised it in the United States is one employing carbon bisulphide. It is held to be cheaper, more efficacious and less dangerous to use than strychnine.

Carbon bisulphide is a highly inflammable liquid, with a very disagreeable smell. Though not corrosive, its vapour is detrimental to health when breathed in quantities. It, however, can be used without any danger, provided ordinary care is exercised—more especially with regard to fire and flame.

The method is as follows: Saturate a small ball of cotton waste with the bisulphide, and throw it into the burrow in the evening; then close the mouth of the hole with a little earth.

Dry balls of horse manure have been used successfully instead of cotton.

Respecting this method, I would make two quotations. Dr. C. Hart Merriam, Chief of the Division of Ornithology and Mammalogy, Washington, D.C., writes me as follows:—

“As a general rule, we do not recommend either arsenic or strychnine for the extermination of pocket gophers. We prefer the sulphide of carbon as cheaper and more efficacious. A handful of rags or waste wet with the bisulphide should be thrust into a fresh burrow; the mouth of the burrow should then be stopped. The fumes from the bisulphide being heavier than atmospheric air, float down along the tunnel to its remotest ramifications, destroying all animals there.”

In a letter from Prof. Niswander, of the Wyoming Experiment Station, I have the following testimony:—

“Over 2,000 burrows have been treated by me in 1893 by bisulphide, and 99 per cent of the trials have been successful.

“In a few instances the holes had been apparently opened from the outside, and these were all counted with the unsatisfactory trials. I have no hesitation in recommending carbon bisulphide for burrowing animals.”

Further, he says:—

“The most important thing in the use of strychnine is to get the gophers to eat it; with the bisulphide this is not necessary. Both arsenic and strychnine are dangerous to stock running loose, the bisulphide entails no such risk.”

During the early months of this summer, Mr. Mackay, Superintendent of the Experimental Farm at Indian Head, N.W.T., was asked to make some experiments with

carbon bisulphide as an exterminator. Under date of 3rd October, he writes me as follows :—

“I regret to say that my results with bisulphide are not as complete as I could have wished. It was some time before a supply could be obtained, and when it arrived, gophers were getting scarce. Further, it was then difficult to ascertain how many if any were in the holes. However, ten holes were found in which gophers were seen. In these the bisulphide was placed, according to directions, and the holes closed. Of these, two have been opened by the inmates, and eight remain closed, showing that in the latter, death to the gophers resulted. This is a *much better result* than can be obtained with strychnine, but the experiment is not sufficiently extensive to be considered conclusive.”

In view of this favourable testimony, I should advise our farmers and municipalities to give the bisulphide a trial. The retail price of bisulphide of carbon varies with the locality; in Ontario it is from 25c. to 40c. per lb. Professor Niswander, whom I have quoted above, states that it may be purchased wholesale from the manufacturer, E. R. Taylor, Cleveland, Ohio, at ten cents per lb. f. o. b. at the factory. Owing to its inflammable character, specially high rates of freight are charged. One gallon, about 10 lbs., is a quantity sufficient for 160 to 200 burrows.

#### STRYCHNINE FOR THE POISONING OF CROWS AND BLACKBIRDS.

Every year our farmers, more especially in the older provinces, are much annoyed by the depredations of crows. The loss sustained through the spoliation of Indian corn fields by these birds must be a large one annually. In Manitoba and the North-west Territories, the blackbird, in like manner, makes havoc in the wheat fields.

Poisoning by the use of strychnine would appear at present to be the most efficacious and economical manner of getting rid of these marauders.

Two plans for killing the crows were tried this year on the Central Experimental Farm. The first was by scattering, just before the plants appeared above the surface of the ground, corn grains that had been soaked in a solution of strychnine. In the preparation of the poisoned grain, the remarks in the foregoing chapter are strictly applicable. It must further be stated that the skin of the corn kernel is exceedingly hard and impermeable to fluids. It was accordingly found necessary to soak the grain for three days in the strychnine solution, before its tissue becomes thoroughly impregnated.

The other method consisted in chipping away a small piece of the shell from an egg and inserting a small crystal of strychnine. A small pair of forceps were found most useful for this purpose. The eggs were sunk in the soil to about three-quarters of their depth, about seven or eight being placed at intervals over an area of two acres. Crows being very fond of eggs and having a very keen sight, were soon attracted.

From one year's experiments it is scarcely possible to say which is the better plan. Both succeeded in protecting the field, *when the dead birds were allowed to lie on the field.* This work will be continued another year and results reported.

It is very probable that wheat soaked till soft in a solution of strychnine and scattered over wheat fields, would protect the latter from the ravages of the blackbird.

#### ANALYSIS OF THE “MAMMOTH CHEESE.”

A representative sample of the Canadian mammoth cheese, taken from the block of 70 pounds as returned from England, was found on careful analysis to have the following composition :—

Moisture. . . . .	32·06
Butter fat. . . . .	34·43
Curd (casein and albumen). . . . .	28·00
Ash, salt, milk-sugar, &c. . . . .	5·51
	<hr/>
	100·00

The cheese was perfectly sound and entirely free from skippers.

## Experimental Farms.

The two most important constituents in cheese are butter-fat and curd. The amounts and relative proportion of these substances not only assign to cheese its nutritive value, but upon them also depend largely its palatability and digestibility. I should judge from the analysis that this cheese was eminently satisfactory in all these particulars. English Stilton cheese (made from whole milk, to which some cream has been added) after being kept for some time contains about 29·5 per cent of fat and 24·5 per cent of curd. It is, therefore, evident that the mammoth cheese compares most favourably, both as regards heat- and flesh-producing constituents, with this well known and high-priced brand of English cheese.

## Experimental Farms.

# REPORT OF THE ENTOMOLOGIST AND BOTANIST

JAMES FLETCHER, F.R.S.C., F.L.S.

WM. SAUNDERS, Esq.,  
Director, Dominion Experimental Farms,  
Ottawa.

SIR,—I have the honour to hand you herewith a report on some of the more important subjects which have been brought officially under my notice during the past season. In addition to those mentioned in the report, a great many other subjects have been studied, which will be of value on future occasions. The correspondence of this department is now very large; there were received in the year 1894 from January 1st to December 31st, 2,404 letters; and despatched during the same period, 2,465. Contained in the letters received are very valuable data and records of observations by correspondents. These although not used now are carefully preserved, and will be made use of, when the various subjects to which they refer, are treated of in full: among the latter are insect enemies of root crops, fodder crops, vegetables, forest trees and live stock; the important subjects of grasses and weeds, which have been much inquired about, will require extended treatment at an early date. It will be seen that the greater part of the work of the past season, has been with reference to fruit insects. The matter submitted herewith is such as it has appeared to me, was of the greatest importance to bring forward at once, although, in some instances, the information obtained is incomplete. In accordance with an arrangement made last spring, the work upon parasitic fungous diseases is now carried on by Mr. Craig, the Horticulturist.

In the arboretum and botanic garden, a good deal has been done during the past season. A large proportion of the part already laid out and planted, has been seeded down to grass. Extensive additions have been made to the collection of shrubs and trees, and two long borders have been prepared and graded for the reception of the collection of native and foreign perennials. It is hoped to make this an attractive feature of the botanic garden. A large collection of seeds of native plants has now been made, and next year these will be utilized for the botanic garden.

The experiments with native grasses have been continued, and much useful information with regard to the various species tried here and tested by correspondents is being placed on record. The experiments in the treatment of potato rot were this year extremely satisfactory and showed the very great advantage of spraying potatoes with Bordeaux mixture to protect them against the disease. In accordance with your instructions, I prepared for publication, early in July last, a short bulletin (*Experimental Farm Notes*, No. 2) on "Potato Blights." This was widely noticed through the press, and I am pleased to learn that many Canadian farmers tested the remedy and found it satisfactory. Mr. Clarence N. Goodspeed, of Peniac, N. B., writes in regard to spraying potatoes with Bordeaux mixture: "I would say that I sprayed mine twice with very good results. Our land is low and often covered with water by freshets, and seems very liable to potato disease. For the last ten or fifteen years our potatoes have rotted in the ground more or less, sometimes one-third. This year we did not find one potato diseased in our field of four acres. We had some on ground that had been planted two years, some one year, and some never planted before. In this last plot the best results were obtained, and the stalks remained quite green until the crop was dug. I am satisfied with the results obtained."

Many appreciative letters have been received from farmers testifying to the value of the information sent out from this department. I give as an example the following, which relates to one of the most injurious enemies of field crops, but at the same time

one of the most easily controlled. In the beginning of July, Mr. George Thomas, of Jones Falls, Ont., a recent settler in Canada, but who has had an extensive experience as a farmer in England, wrote for a remedy for the "cabbage worm," the caterpillar of the Imported White Cabbage Butterfly, and was recommended to use insect powder diluted with four times its weight of common flour. Reporting on his experience, Mr. Thomas says: "Only for your prompt reply, I should have been the loser of 7,000 cabbages, Brussels sprouts and cauliflowers. I find the white butterfly no respecter of sorts; but it is of conditions, as I noted it was most severe on the weakest plants. I would here respectfully suggest for such the addition of superphosphate, as it is an insecticide and cheap fertilizer, say five cwt. per acre. I think many make the mistake of using the application once and no more. I had to resort to your splendid remedy on three occasions for successive broods, and it effectually eradicated the caterpillars. I had a perfect crop, while many others in this neighbourhood lost their plants by inattention, or maybe through ignorance. I like the idea of mixing with flour, as when applied when the dew is on the leaves it adheres admirably. Such information as this you send and such as is sent by the other departments of the Experimental Farms, is, I believe, of incalculable value to the farmers of Canada, and worth thousands of dollars to those who will make use of it."

Mr. Forrest E. Caldwell, of Manotick, Ont., likewise says: "I consider the bulletin which you sent me concerning insects, has saved me a great deal of money. In the case of wire worms alone, I have two fields of ten acres each, and on these almost every grain crop I have sown for the last twenty years, has been a failure. From what I now know, since I got the farm bulletins, I recognize that the cause of this loss was wire worms and nothing else. Having followed the advice given me at the Experimental Farm, I fully believe I have been saved a considerable sum of money, and I am glad to testify to the value of the institution to all farmers who are wise enough to avail themselves of the advantages it offers. When I received the bulletin above referred to, I had just made up my mind to try a series of several experiments which I had seen recommended in newspapers, and which I now know would have been useless and expensive. By following your advice, I have been saved all this trouble and expense, as well as saved my crop."

*Meetings Attended.*—By permission of the Hon. Minister, I have been pleased to attend and speak at several meetings of farmers and fruit growers, and I believe that good work has been done in showing farmers the nature of my work and convincing them that it is of value to them, and that when applications are made for information concerning insects and plants, every effort will be made by the Entomologist and Botanist to assist them.

Meetings were attended at the following places:—

January.—Manotick, Ont.; Ingersoll, Ont.; Aylmer, Que.

February.—Montreal, Abbotsford, Cowansville, Chelsea, all in Quebec.

April.—Angus, Ont.; Queenston, Ont.; Knowlton, Que.; Cookshire, Que.; Danville, Que.; Richmond, Que.

June.—Jubilee Point, Rice Lake, Ont.; Riceville, Ont.; Richmond, Ont.

August.—Charlottetown, P. E. I.; Knowlton, Que.

October.—East Templeton, Que.; Aylmer, Que.

November.—London, Ont.

December.—St. Joseph de Beauce, Que.; Orillia, Ont.

*Acknowledgments.*—I take pleasure in again gratefully acknowledging the valuable assistance I have received from my many correspondents in all parts of the Dominion, who have much aided the work of my department by making observations and by sending me prompt notice of the occurrence of injurious insects and weeds. My thanks are also particularly due to: Mr. L. O. Howard, the United States Entomologist, and his staff, for many favours in the identification of insects, for the use of figures and for valuable publications; to my kind friend, Miss Eleanor A. Ormerod, for many courtesies and for information concerning crop attacks in England similar to some occurring in Canada, as well as for some valuable books and reports, among others the "Agricultural Zoology"

## Experimental Farms.

of Dr. J. Ritzema Bos, and a collection of the excellent works of Prof. Alfred Nalepa, of Linz, Austria, upon the Phytoptidæ; to Prof. T. D. A. Cockerell, of Las Cruces, New Mexico, for making a careful study of several species of Canadian Coccidæ; to Prof. T. A. Williams, of Brookings, South Dakota, for the identification of species of Aphididæ, and for the drawing of *Aphis mali*, used in this report; to Prof. L. R. Jones, of Burlington, Vermont, for a series of photographs, illustrating injuries to potatoes by fungous and insect pests.

As in previous years, I am under great obligation to Prof. John Macoun for information concerning the distribution and for identification of native plants.

The following donations have been received in this department during the year:—

W. R. Carles, Esq., British Consul, Chinkiang, China: bulbs of three species of *Lycoris*.

Mrs. Dunsterville, Allahabad, India: bulbs of the Aden lily.

S. A. Fisher, Esq., Knowlton, Quebec: bulbs of *Amaryllis* and *Eucharis amazonica*.

T. N. Willing, Esq., Calgary, Alberta: specimens of rare western plants and insects.

T. E. Bean, Esq., Laggan, Alberta do do

Prof. Comstock, Director, Arizona Experiment Station: roots of the new tanning plant, "Cafiaigre," for trial in Canada.

H. B. Small, Esq., Ottawa: seeds of palms from South America.

Frank Gillmor, Esq., Kansas City, Mo.: seeds of *Nelumbium luteum*.

Miss Marion Gordon, Nanaimo, British Columbia: botanical specimens.

J. FLETCHER,

*Entomologist and Botanist.*

OTTAWA, 31st December, 1894.

## CEREALS.

The grain crops of the Dominion have been little injured by insects during the past year. Hessian-fly and Wheat-midge attacks were noticeably less in most of the districts where inquiry was made. The American Frit-fly so destructive to spring wheat in the Ottawa district in 1890, this season could not be found in wheat, and only in small numbers in grasses.

THE GRAIN APHIS (*Siphonophora avenae*, Fab.) has, as usual, been complained of to some extent from all provinces, but has not been the cause of serious loss. In the Maritime Provinces, particularly in Nova Scotia, a peculiar affection of oats, by which the tips of the leaves turned to a bright crimson hue, was very generally attributed to the attacks of this insect. This however, I believe, was upon insufficient evidence. I visited the Maritime Provinces early in August, and had an opportunity of examining fields of oats and wheat in Prince Edward Island. At that time, there was no trace of the Grain Aphis in the fields, and the oat plants had outgrown the disease. Mr. J. Vroom, of St. Stephen, writes: "July 21. What is the matter with the grain in this section? Nearly all the oats and barley fields are blighted, though it does not seem to be the ordinary blight which the farmers ascribe to unfavourable weather. The newspapers are saying that a 'bug' is in the stalks, but the stalks seem to me all right." Writing later, on Aug. 8, Mr. Vroom says:—"All the oat and barley fields about here are more or less affected, whether sown early or late. By newspaper reports from all the southern counties of New Brunswick, I judge that the disease is widespread, if not general, in this region. At Grand Manan, where seed time is a little later than on the mainland, the fields were quite red in July, after those in this and the neighbouring parishes had apparently recovered from the attack. When first noticed, usually when the plants were about 6 or 8 inches in height, the tips of the leaves were turning red, much redder than in the case of any blight that has been seen here in recent years. An aphis was frequently seen at the base of the diseased leaf, and was by many supposed to be the cause of the trouble. When healthy leaves succeeded and the fields were again turning green, the aphides disappeared. The fields that were under best cultivation, were least affected, the strong and rapid growth of the plants enabling them to quickly outgrow the rust."

Although the cause of this disease is not yet explainable, from such inquiries as I have been able to make, it seems to have been chiefly induced by unfavourable cold wet weather in June, followed by a hot dry period. There were also present in the crimson leaves, and probably the cause of that colour, myriads of a bacillus which was referred to on page 179 of the Experimental Farms report for 1890, in an article by Mr. B. T. Galloway, Chief of the Division of Vegetable Pathology, of the United States, in the following words:—"The germ has been repeatedly obtained from diseased oats and grown in various artificial culture media, such as nutritive gelatine, oat broth, hay infusion, etc. Inoculations with this material have produced the disease in every case. In shape, the organism is sometimes nearly round, although, as a rule, it is several times longer than broad. So very minute is it, that when magnified a thousand times, it is little larger than the head of a pin." It would appear then that the plants were reduced in vigour by unfavourable atmospheric conditions, and were then attacked by this disease, due to a definite and recognizable organism; but that, owing to the removal of the aggravating cause by the improvement of the weather, the plants, particularly and more quickly on well tilled farms, to a large extent outgrew the injury. As opposed to the theory that this disease was due to the attacks of the grain aphis, the "crimson leaf" is of such rare occurrence that, when it first appeared in 1890 as well as this season, it was universally noted as something new; on the other hand, the grain aphis is invariably present in some numbers every year and should, if it were a characteristic of their attack, always produce the crimson leaves, which it does not. Moreover, as was first pointed

## Experimental Farms.

out to me by Mr. John R. McKenzie, a progressive farmer, of Roger's Hill, Pictou, N.S., and since confirmed by my own inquiries, although the "red leaf" was prevalent all over the Maritime provinces, the grain aphid was not exceptionally abundant, and was much less so in some districts than is frequently the case.

**WIRE WORMS (*Elateridae*).** Several letters inquiring for the best remedy for wire worms have been received. The experience of the past shows that the only one of the many remedies recommended which has given any measure of success is late fall ploughing. Last spring Mr. Forrest E. Caldwell, of Manotick, Ont., called upon me, and in discussing this matter, told me that he had one field in which for the last twenty years every crop of wheat and oats had invariably been badly attacked by wire worms, but that barley and rye in the same fields, as a rule, gave a good crop. To test the immunity of rye, which it was convenient for him to sow this year, I requested him to put the land under that crop, which he did, and he now reports that it was one of the finest crops he ever saw. Fall ploughing Mr. Caldwell has found of little use in controlling wire worms.

**GRASSHOPPERS (*Acrydiidae*).** Early in the season several letters of complaint came in of the unusual abundance of young grasshoppers. In most districts heard from, these disappeared suddenly about midsummer. Mr. G. C. Caston, of Craighurst, Ont., attributes this to three parasites which he found occurring abundantly, and describes as the Red Mite, a hair worm and a maggot, the last two being internal parasites, and the mites attacking the insect beneath and at the base of the wings. The severest attack by grasshoppers was upon Sable Island, off Nova Scotia, and was brought to my notice by the Department of Marine and Fisheries, with a request for suggestions as to their extermination. It was stated that the locusts sent had been very abundant on Sable Island the past summer, and had injured the grass and vegetables to such an extent that the agent of the department feared there would be a scarcity of fodder for the wild ponies during the coming winter. In forwarding the specimens, Mr. J. Parsons wrote: "Some three or four years ago a few were noticed for the first time on the island; the following year there were more, and in the summer of 1893 they were numerous. This season they infest the island. All the cultivated vegetables have been injured, and the grass crop greatly reduced. Whether brought to the island in hay or by wind, or whether the eggs have hatched after being long buried, the superintendent does not know." There is no doubt, I think, that the progenitors of the present invasion were blown from the mainland, as they have been found at sea at a much greater distance from land. From all I can learn of the nature of Sable Island, I judge that this colony of grasshoppers could be easily controlled there by the use of hopper-dozers, as recommended on page 166 of my last year's report, in which the young could be caught and destroyed before their wings appeared. The species of grasshopper concerned was the Lesser Migratory Locust (*Melanoplus atlantis*, Riley). Fig. 1 represents the Rocky Mountain Locust; the present species closely resembles it in shape, but is one-third smaller in size.

Fig. 1. The Rocky Mountain Locust.

## THE PEA MOTH.

(*Semasia* sp.)

**Attack.**—Small whitish and slightly hairy caterpillars, when full grown about half an inch in length, frequently found inside the pods of pease about the time they are ready for table use, or a little later.

"Maggoty" or "wormy" pease are well known to the house-keeper, but it is seldom that they are sufficiently abundant in gardens to cause much complaint, and I do not think that anything has been yet written in this country upon the life history of the insect of which these "worms" are one of the preparatory stages. Owing to the

immunity of certain districts in Canada from the attacks of the Pea Weevil, *Bruchus pisi*, L., large quantities of seed pease have of late years been grown in these districts for European and American seed houses. Late last season and during the present summer, complaints have come in of the ravages of the Pea Moth, the caterpillar of which is generally spoken of in the trade as the "grub." Mr. N. H. Cowdry, an extensive grain merchant, of Lindsay, Ont., writes:—

"We have no 'pea bugs' in this section; but the 'grubs' seem to be nearly as bad a pest; our farmers know no way to prevent the attack."

Messrs. N. B. Keeney and Son, of LeRoy, N. Y., wrote to me as follows:—

"November, 18, 1893.—We are growing pease for the seed trade in the counties east of Toronto, Ont., and also in Northern Michigan. The principal obstacle we encounter in our Canadian field, is the injury by a worm which works inside the pea pod and eats the outside of the green pea when it is in suitable condition for cooking. The injury done by this worm frequently results in destroying the usefulness of from 10 to 20 per cent of the crop, and we would like to know if there is any possible means of preventing the work of this worm."

"June 29, 1894.—We shall be glad to have instructions from you and will follow same to our best ability, and we hope a remedy may be discovered for this very serious hindrance to the prosperity of Canadian pea growers. This insect has never worked, to any extent, on this side of the line, so far as we have been able to learn; nor have we ever seen it in Northern Michigan, notwithstanding we have shipped Canadian grown pease to Michigan for seed."

Several specimens of the larvæ were from time to time forwarded to me by Mr. N. H. Cowdry and Messrs. Keeney and Son's agents, and these are now passing the winter as larvæ inside their cocoons. Next spring I hope to obtain the perfect insect, which is undoubtedly a small moth and may possibly prove to be the European Pea Moth, *Semasia nebritana*, Treits. (*Grapholitha pisana*, Gn.). The preparatory stages and the habits of the insect, as far as worked out, all agree closely with those of the European species, as figured and described in Curtis's *Farm Insects*, page 348, and Miss Ormerod's valuable *Manual of Injurious Insects*, page 163. Miss Ormerod's description of the English species is as follows:—

"These caterpillars or maggots are fleshy and slightly hairy, about or somewhat more than a quarter of an inch in length, and are generally yellowish in colour, with a black head, a brown band on the ring next to the head, and eight brown dots on most of the following rings. They sometimes, however, vary in colour; in some specimens the head and the next ring are brown, and in some they are intensely black. The legs on the three rings next to the head are black.

"The caterpillars go down into the earth to change, where they spin a cocoon (that is, a kind of egg-shaped covering formed of silken threads drawn from the mouth) in which they remain till spring, when they turn to chrysalids, out of which the moths appear in June.

"The moths are rather more than half an inch in the spread of the wings, satiny, and mouse-coloured. The upper wings have a row of very short white streaks directed backwards from the front edge, and a silvery oval ring with five short black lines inside it placed near the hinder margin."

The following account of the habits of this insect is from the *Agricultural Zoology* of Dr. J. Ritzema Bos (London, 1894):—

"The moths fly about in large numbers round the pea blossoms, always a short time after sunset. The females lay one, two, or at most three eggs on a very young pod, or an ovary. In fourteen days the caterpillar is hatched, bores into the pod, and attacks the pease. The opening made in the margin of the pod closes up again. The pod generally ripens early. When it opens, the full-grown caterpillars creep out, and become pupæ in the soil, within a web, where the pupa lives through the winter. The pease attacked are always covered, while in the pod, with the coarse-grained excrement of the caterpillars, and are often united two or three together by web fibres."

Commenting on the above, Mr. Cowdry writes:—"The pods here seldom open naturally, and I think do not ripen early. The quantity of excrement and web fibres is

## Experimental Farms.

not so large in this country." This agrees with what I have myself seen. In fact, of a great many pods examined, I have never seen one which opened of itself; but in all cases, the larva has eaten a clean, round hole through the side of the pod, and the quantity of excrement and web is small.

In reply to a letter of inquiry, the following has been received from Professor C. H. Fernald, the eminent microlepidopterist, of Amherst, Mass.:—"I would say that I have never seen, nor heard of *Grapholitha pisana*, Gn., (more properly named *Semasia nebritana*, Treits.) in this country, nor of any similar insect attacking pease."

The species which attacks our Canadian pease appears to be widely distributed, and probably attacks also the seeds of other Leguminosæ. The extent of the injury in part of the seed-pea growing districts of Ontario is referred to in the extracts given below. The injury to pease was noticed also, west of Toronto, in Essex county, about Hamilton and London; also in several places in the province of Quebec, in Nova Scotia, very bad in some parts in New Brunswick and in Prince Edward Island. In collecting seeds of native plants for the Farm museum, I found that the seeds of *Lathyrus ocholeucus* and *L. palustris* at East Templeton, Que., were almost entirely destroyed in every pod examined; likewise at Ottawa the seeds of the new fodder plant *Lathyrus sylvestris-Wagneri* on this farm and *Vicia cracca* growing wild were seriously attacked.

As far as I can judge from the observations of the past year, the egg is probably laid upon the young forming pods, either before or soon after the flowers have fallen, but occasionally later, as Mr. Cowdry found quite small caterpillars on July 27, when most of the larvæ were full-grown. The egg is laid on the outside of the pod, and the young caterpillar eats its way into it. At that time, it is of course very small, and the hole is soon obliterated by the natural growth of the pod.

The caterpillar then begins to feed upon one of the seeds, generally at the upper end. Sometimes, only one pea is injured, but frequently two or three are more or less eaten. The caterpillar having attained full growth about the last week in July, gnaws a small round hole through the pod, from which it falls to the ground, and burrowing a short distance into the earth, spins a thin but close oval cocoon of white silk, thickly covered outside with grains of earth, in which it remains torpid until the following spring. It then changes to the chrysalis, and the perfect moth appears about the time the peas are in flower. There is only one brood in the season. The following extracts from letters by Mr. N. H. Cowdry, who is a careful observer and an experienced entomologist, give many valuable data concerning the life history of the insect:—

"June 9, 1894.—I send you by to-day's mail two pea plants, each with one pod tied up inclosing the caterpillar. Mr. Keeney, of Le Roy, N.Y., and I took a drive in the country last Saturday and looked over plenty of material, but only found the specimens sent you. It is likely, therefore, that they have not damaged the early varieties of pease this year to much extent, or the excessive rain may have diminished their numbers."

"July 17.—So far, I have not yet found the moth, but suspect that it may be identical with two specimens which I was unable to catch. They were about a third of an inch long, whitish with brown markings. Almost all the pease infested, were full sized, never very young and only partially matured. Often, however, the small pea at one end of the pod in almost matured pods would be damaged, but only those very small ones which would not mature. I could never find any trace of the caterpillar in very immature pods, only in those in which the pease were nearly or quite matured. So far, I have only examined crops of Extra Early, Alaska and American Wonder, all of which will be harvested this week.

"About when or where the egg is laid, I can give you no information, but it appears to me that the larva generally begins its work near the upper end of the pea. From the very immature larvæ that I have observed in nearly mature pease, I think it very unlikely that the egg is deposited on the flower, and I have never been able to find any trace of the passage of the caterpillar through the pod. It is very probable that numbers of the pupæ can be found under the bunches of pea straw in the fields."

"July 27.—I opened several pods in the field and noticed as before that no very immature pods were attacked. The small abortive pease in the green, partially matured

pods, were often eaten, however. The caterpillar has so far appeared to give its attention solely to partially matured pods, never to very immature pods, and (so far as I have noticed) not as yet to pods nearly or wholly dried and mature. What does this mean? I find the caterpillar (both very small and apparently nearly ready to change into a chrysalis) in almost fully developed pods, never in very ripe or very green flat ones. The assumption is that the caterpillar only works with partially matured pease. How is it then that I have never found as yet this season fully matured pods at all damaged, although I have opened several? I confess that this fact rather puzzles me.

“Now, as to the date when the caterpillar finishes its work, I send you to-day unopened a pod with a hole in it, the first which I have seen. You will probably see, when you open it, that it contains some damaged pease only and not the cause of the trouble. In the same box you will notice a caterpillar which appeared to me to be ready to pupate, and the pod in which it was contained. Judging from the perforated pod and the mature look of some of the caterpillars, I imagine that the larvæ are only now reaching full growth. Some, however, which I saw yesterday are very young, not many days old. Either the season for oviposition is very extended, or we have two species or two forms of the same moth to deal with.

“With the exception of the crop which I examined to-day, all the early varieties have been harvested. Some will be threshed very soon, others not perhaps for some weeks. I will try to find the chrysalis. I think that it will be found under straw in barns or somewhere thereabout.

“You say that only in late years the damage has been so great as to attract attention. Farmers and dealers here say the damage of late years has not been greater than before. That they have always noticed the injury and sometimes as causing more loss than now.”

“July 30.—I now want to find out where the pupæ are to be found. So far I have not found any quite mature pods with either damaged pease or caterpillars in them, probably because they matured too early to be affected, and not that the caterpillar cannot eat the hard, mature pease. In a bin of Black eyes of last year's growth I find that by far the larger number of damaged pease are quite mature, proving, I think, that the larva continues to feed on them until full grown, whether the pease are hard or not.”

“August 3.—I examined a crop of dwarf pease last Wednesday, and found that a portion grown on low land, badly stunted by wet, was very much injured by the caterpillar, while the higher portions of the field escaped serious damage from it. During the winter, when the farmers bring in their pease, I hope to get some evidence as to the influence of sowing early or late, on high or low land, &c. In a crop of dwarf pease which I examined on the 1st of August, nearly all the grubs had finished their work and left the pods.”

“October 22.—In accordance with your request of some months ago, I send you to-day some perforated pea pods. Also in a pill box the only cocoon which I have found naturally placed. It was found in a pea field, loosely attached to the under surface of a stone.

“Early pease this year escaped with very little injury from the caterpillar. The later common pease are damaged to about the same extent as in the average of former years. The damage this year is certainly less than in some seasons past, but greater than in others.”

“December 22.—The farmers here are almost all of the opinion that early sown pease escape the caterpillar better than those sown later. One or two say that very late sowing is of benefit; but this is opposed by the general opinion. Early peas are always damaged less than late pease, although I hear that early ripening varieties are sometimes badly damaged. They have, however, I believe, a much better chance than later ripening varieties. High ground is supposed to produce crops more free from ‘worm’ eaten pease than low land. Some farmers think that pease are more liable to damage in dry seasons than in wet ones. Regarding the time during which the damage is done, I do not know when it begins, but I think it only ends when the pease get too hard to gnaw. I noticed several caterpillars (one only half grown) on August 23 in a small lot of late garden pease. I opened a cocoon a few days ago, and found the

## Experimental Farms.

caterpillar very slightly changed. It was, of course, shorter, and with the legs much drawn in, but otherwise not at all like a chrysalis."

The following letter is from a large buyer of seed pease, and gives reliable information as to the importance of finding a remedy as soon as possible for this serious pest:

"December 31, 1894.—Replying to your valued favour of 22nd December, the damage done to the pea crop in this vicinity by the Pea Moth, concerning which I wrote you last summer, has steadily increased during the last six years until now it has come to be a very serious matter. Many crops, especially such as have to be fit for seed, contain from 5 to 25 per cent of moth-eaten pease which have to be picked out by hand at great expense, in order to make the sample a satisfactory one. I do not know of any remedy for this evil.

"Our farmers find that pease grown after pease are apt to be more seriously affected than pease grown after sod, but even in cases of this kind the damage is frequently very considerable, especially in smooth varieties of pease. Am very much in hopes your investigation may result in discoveries which will enable our farmers to successfully combat this serious enemy of the pea crop and restore the pea-growing industry to its former prosperity."—J. M. Brooks.

*Remedies.*—There is little danger of this insect increasing largely and becoming a serious pest in gardens, because in most instances, the pease are picked early, and the larvæ destroyed before they are full grown. Miss Ormerod suggests that where "maggot attack is noticeable, the pea haulm should be cleared away directly the crop is gathered, so that all stray pods (which are very likely to be infested) may be cleared off the ground before the maggots leave the pods. This haulm should be carefully destroyed at once; the safest way is to burn it, and it would be a good plan to lay it along the rows where the infested peas stood and burn it there, so as to get rid at once of all grubs remaining in the pods or near the surface of the ground. For field treatment, as the haulm could not well be spared, it would be desirable if a pea growing district was infested, to plough deeply so as to bury the chrysalids deeply; or to skim the surface lightly so as to lay them open to the attacks of birds; but commonly the regular rotation of crops might be expected to prevent this infestation getting ahead." (*Manual*, p. 164.)

From my own breeding experiments as well as from Mr. Cowdry's collections in the fields, we know that this insect normally passes the winter in the fields where the pease which the caterpillars had infested, were grown. This fact seems to be recognized by pea-growers. Messrs. N. B. Keeney & Son write:—

"Le Roy, N. Y., July 24.—There seems to be a theory among farmers that pease grown on fields where pease have been previously grown are more likely to have worms than crops grown where pease have not been previously grown for some years. This would seem to confirm your belief that the caterpillars spin their cocoons near the surface of the soil."

"August 6.—We cannot give you the names of farmers who state that pease grown on land previously cropped to pease are more liable to attack from the insect under discussion than new land; but this is the general opinion among all growers, and they try to avoid growing pease after pease, as far as possible, on this account, as well as to avoid the danger of impoverishing the soil."

The above records will show the importance of three things: (1) the planting of pease as early as possible, and for a time at any rate growing the earliest ripening varieties only, in an infested locality; (2) the advisability of using every year fresh land, as far as possible removed from fields used before for the cultivation of seed pease; (3) the value of deep ploughing so as to bury the chrysalids so deep that the moths could not emerge. If, as suggested by Miss Ormerod, applications can be made to the growing crop in order to prevent the moths laying their eggs, the most suitable for the purpose would probably be carbolized plaster, or some other carbolized dry powder such as wood ashes or slaked lime, 1 pint of crude carbohc acid with 50 pounds of the diluent.

Mr. Cowdry writes with regard to remedies:—"I think ploughing deeply so as to bury the cocoons far enough to prevent the moths from getting to the surface, is preferable to shallow ploughing; as it is probable, if the cocoons are on the surface, that they would withstand the frost and not be a very tempting morsel for birds.

"When a crop is badly infested, I think it would be well to cut it before it is quite mature; most of the larvæ would then be taken into the barn, where the conditions would not be so favourable for their development, and those which did survive and become moths, would have less chance of doing damage next season. Harvesting when not quite mature, would not materially affect the value of the crop, which would already be damaged by the caterpillars. Sowing oats and pease together I think is well worth a careful trial, especially when good seed is required. The pease can easily be separated from the oats by a fanning mill."

### THE ARMY WORM.

(*Leucania unipuncta*, Haw.)

Fig. 2—The Army Worm.

*Attack.*—Brown, or sometimes blackish, striped caterpillars (Fig. 2), eating the leaves and stripping the stems of grasses and many other low plants. When attacking cereals, frequently cutting off the heads. When full-grown, over an inch and a half in length, and, when occurring in large numbers, migrating in bodies from one food patch to another. On reaching full growth, the caterpillars burrow into the ground and turn to light brown chrysalids, from which in about two or three weeks the moths emerge.

These (Fig. 3) are of a warm satiny-brown colour sprinkled with minute black specks and with a small but distinct white spot in the middle of each upper wing. They are very active. When the wings are closed, the moth measures about an inch in length.

Fig. 3. — Chrysalis and moth of the Army Worm.

The life-history of the Army Worm in Canada is as follows: There are two broods in the year. Eggs are laid in autumn and hatch in ten or twelve days. After feeding for a short time, the small caterpillars, like many of the cut-worms, become torpid and pass the winter beneath tufts of grass and other low herbage. In the following spring they complete their growth, feeding on the young grass and grain crops, and produce the moths in June. These lay eggs for the second brood, which is usually much the more abundant and destructive. By the latter part of July, in this part of Canada, the young caterpillars are large enough, when abundant, to attract attention by their depredations. They are full grown by about the first week in August, when, burrowing an inch or two into the ground, they change to chrysalids and emerge as perfect moths towards the end of the month.

The chief complaints of depredations by the Army Worm this season have been received from North-western Ontario, along the line of the Canadian Pacific Railway.

"Mattawa, Ont., July 11.—Inclosed you will find specimens of a worm or caterpillar which is invading gardens and fields in myriads. It has already done considerable damage to corn, and is now attacking everything else, and I am afraid it will destroy everything, unless you can advise some remedy. We have more or less of them every season."—C. G. HURDMAN.

"Baillieboro', Ont., July 16.—I am sending you a sample of worms which have got into my pasture. They eat everything and appear to increase very rapidly. It is low, flat land, such as they call 'beaver meadow.'"—R. H. WOOD.

## Experimental Farms.

“Sturgeon Falls, Ont., July 17.—It is reported that a small black worm or caterpillar, about one inch long, is making considerable havoc in our locality. This insect attacks oats especially, the leaves of which it eats up, leaving only the stem; the ground is all covered with them. Last year this insect made its appearance in the neighbouring township, Caldwell; but there were none here.”—JOSEPH GUÉRIN.

“Mattawa, Ont., July 23.—On a farm of mine some 26 miles from here, on the Ottawa river, an army of the most destructive bugs have made their appearance, and seem likely to entirely destroy the late sown timothy grass, oats and corn. It is a dark coloured grub, black on back, striped lengthwise with lighter markings, lighter coloured on the under side. They feed on the tender leaves of corn at night and hide in the centre of the shoots during the day, and on oats they hide under anything on the ground that affords them a shelter. They are completely destroying oats. Please let me know what can be done to stop the ravages of this, to me, new pest. Could I use an insecticide on corn?”—A. LUMSDEN.

In the reply on July 24, the insect was named, and then its habits were described. “With regard to an insecticide, it is of course very difficult to apply any remedy to such a crop as timothy, and I should imagine at this time that that crop is sufficiently advanced to be cut. The fields might then be rolled to destroy the caterpillars. It is even more difficult to make any application to corn, and the only one that occurs to me as likely to be practicable, would be dusting the plants with a mixture of Paris green and flour, wood-ashes, land plaster, or any other fine and perfectly dry powder, in the proportion of one pound of Paris green to 50 of the powder.”

“August 1.—Since the reception of your letter of July 24th, I have visited my farm and found it to be an army worm that was destroying the crops there. I am anxious to know of some method of compassing their destruction, and told my farmer to follow out your suggestions, as well as one of my own, of giving them shelter under straw in the early morning and then burning it in the heat of the day, say 2 p.m. Where the oats, timothy and clover plants grow, the young feed first on the grass, then attack the oats, but rarely touch clover, as is evidenced by a field seeded to grass last year, when they first appeared. This year there is an immense growth of clover, but not one blade of timothy, and they are doing the same thing this season. I had my men kill them out of the corn, which is now getting past them. I find the grubs are now entering the second stage of their existence, and I find them in large numbers about an inch under the surface of the ground, at the roots of plants. Will these remain hibernating all fall and winter, or may we expect a destroying army this fall again? Could you suggest some method of destroying them in the soil, or would fires kept burning in June at night, catch the moths? I found the worm in destructive force as far north as the upper end of Lake Temiscamingue, 325 miles from here.”—A. LUMSDEN.

The following letter was received from the *Farmer's Advocate*, of Winnipeg, with some specimens of ears of wheat, the chaff of which had been much nibbled on the outside:—

“I send by mail a few specimens of the caterpillar that has done such havoc to the wheat during the exhibition week. When I left home on Thursday, there was nothing to be seen. On Sunday the whole field was covered; by Wednesday almost every head was the same as those I inclose, and every leaf stripped from the stock. By Sunday they had pretty well disappeared, and had apparently gone into the ground to turn into the chrysalis state, and I inclose a few in that condition. They have only appeared in the new land and summer fallow, but far worse on the new land. I hope you will be able to find out what they are and say whether they are likely to appear next year.”—JAMES GLENNIE.

In *The Nor-west Farmer* for August, 1894, is an article on the Army Worm, in which the statement is made that the caterpillar was reported by visitors at the Winnipeg Industrial Exhibition to have been seen in considerable force on wheat crops 15 or 20 miles north-west of Portage la Prairie.

*Remedies.*—Although only occurring occasionally in excessive numbers, and then in but few localities, this moth is very widely distributed in Canada, and may generally be found in most parts in low lands where the caterpillars have suitable conditions for growth and an abundance of food. It has also been observed that the Army Worm is most abundant in wet seasons following a dry autumn, the damp weather giving them the same conditions over a large area as they would find in their own special habitat, viz., low, swampy, and grassy places.

When the caterpillars appear only in moderate numbers, they have an abundant food supply, and do not then acquire the habit of "marching," which is merely moving from one place where all the food has been devoured, to a fresh pasture. When, however, their appearance is excessive, they must of necessity move on to some other place or starve. They may be prevented from marching from one field to another by ploughing a deep furrow across their path. This should be cleared out so as to have the edge nearest to the field to be protected, perpendicular or slightly overhanging. Along the trench so formed, pits must be dug about 12 feet apart. When the caterpillars come to the trench, they are unable to climb up the opposite side, and after a few trials, walk along until they fall into the pits, when they may be destroyed by covering them with earth and tramping it down, or, as Prof. Luggler, of Minnesota, suggests, "with a liberal dose of kerosene oil and water. Even a shallow ditch will answer this purpose if the earth is made friable enough to keep the worms from ascending. If a log is dragged continually through such a ditch, nearly all the worms collected there are either killed or maimed."

If pits are not dug, where the caterpillars occur in large numbers, the trench will soon be filled, and they will walk over on the bodies of their fellows. In case any of the worms succeed in crossing the ditch, a narrow strip of the plants on the opposite side of the trench should be dusted or sprinkled with a strong mixture of Paris green diluted either with 25 times its weight of flour, ashes or land plaster, or mixed with water as strong as one ounce to a pailful of water.

When an attack has been very severe in any locality, much good may be done by burning the old grass and stubble in autumn or spring; in this way many of the young larvæ are destroyed, as well as the old stems, which it seems are the favourite place for the spring brood of moths to lay their eggs upon.

An encouraging feature in connection with an invasion by the Army Worm, is the fact that it is extremely rare for the insects to appear in large numbers two years running in the same place. This is due to the fact that they are almost invariably attended by parasitic foes, which destroy them so effectually that the occurrence of two "Army Worm years" in the same locality is almost unknown.

## FRUITS.

The following concise report on the fruit crops of the year has been kindly supplied by my colleague, Mr. John Craig: "Apples were a light crop in Southern Ontario and a fair to good crop in the eastern part of the province, as well as in Quebec and Nova Scotia. There was an exceptionally large crop of pears and of unusually good quality. All young, well cultivated peach orchards gave a heavy yield; neither rot nor curculio seem to have done much damage; thinning in many instances would have been advantageous. Plums and cherries were a good crop, but suffered considerably from rot and curculio. Of small fruits, grapes yielded and ripened well everywhere; raspberries were a light crop in Eastern Ontario and Quebec, owing to injuries sustained during the previous winter. In Western and Southern Ontario the crop was light also on account of dry weather. Strawberries were injured in Central and Southern Ontario by late frost; in Eastern Ontario and Quebec the crop was heavy, but the fruit soft on account of continued wet weather during the picking season. Other small fruits yielded heavily."

## Experimental Farms

Fig. 4.—The Codling Moth.

THE CODLING MOTH (*Carpocapsa pomonella*, L. Fig. 4) was last season a cause of great loss in all parts of Canada where this insect occurs. A great many letters have been received not only concerning its depredations, but testifying to the great value of spraying with the arsenites. The experience of the past enables us to state positively that Paris green in the proportion of one pound to 200 gallons of water, to which one pound of lime has been added, sprayed over the apple trees by means of spraying pump and nozzle, at the time the eggs are laid, is the best, cheapest and most effective remedy for this insect.

Careful observations made during the last ten years convince me that in this part of Canada there is only one regular brood of this insect in the year. This is, I believe, the case as far west as Toronto. In the fruit-growing districts of Western Ontario there are two broods. Prof. Saunders tells me that about London, Ont., during his long experience there as a fruit-grower, the second brood was invariably the more destructive. In California there are known to be at least three broods. It is claimed that so far there is no authentic record of this insect having been found breeding in British Columbia. Should it get introduced, it is probable that there would be two or three broods. The British Columbian Government have wisely adopted stringent measures to prevent the introduction of such a serious pest.

Referring to the second brood of the Codling Moth, Mr. L. Woolverton writes as follows:—

“Grimsby, Ont., Dec. 21.—The late brood of the Codling Moth did much harm to the ripening fruit and needs more careful attention in future. The injury done by this insect in Canadian orchards must amount to hundreds of thousands of dollars annually. If our practical fruit growers could be induced more generally to use faithfully those methods for insect destruction pointed out by yourself and other careful experimenters, it would result in an immense increase in the profits of their business. The trouble is that they only half try the remedies, if at all, and then lose faith because they do not secure such good results as they expect.”

As to the extent of the injury by the second brood, Mr. Murray Pettit writes:—  
“Winona, Ont., Nov. 7.—In reply to your inquiry *in re* Codling Moth, the late brood was much worse this season in this locality than ever before to my knowledge. I think fully one-third of the Bartlett, Flemish Beauty and Kieffer pears ripened before attaining full size. Some dropped, and part of them were picked with those naturally ripened.”

Mr. A. W. Peart, a careful experimenter, writes as follows:—“Freeman, Ont., April 10.—As you are aware, I have been spraying for several years. Paris Green I find effective against the Codling Moth, but am not so certain about its effects on the curculio. I have used lime in water with Paris green of usual quality, and find no damage to foliage.”

“December 10.—I have sprayed for Codling Moth for many years and am satisfied that I check its ravages in a measure. This year the proportion of worms was larger than for years; but this I account for by the rains interfering with the action of the poison, and the unusually light crop of apples; the lighter the crop, the more worms relatively, is, I think, about an axiom, as well as the converse: the heavier the crop, the fewer the worms are in proportion. The curculio was also bad; in fact, I do not remember any year during the last decade, which produced so many insects and fungous pests. We shall certainly have to take more energetic measures to cope with these pests than we have in the past, if we want to make fruit growing profitable.”

The following extract is from Bulletin 52, Ontario Bureau of Industries, Toronto, November 20th, 1894 :

"Gosfield, S., Essex : There have been a few local tests of spraying apple trees. Where they have been sprayed three or four times at intervals the results have been almost marvellous—large, fine, clean, almost perfect fruit,—packers from Huron County say the best they have ever handled. On orchards near by not sprayed there have been but few apples gathered, and these hardly worth the name, being little, gnarled, wormy and scabby."

Fig. 5.—The Plum Curculio.

THE PLUM CURCULIO (*Conotrachelus nenuphar*, Herbst, fig. 5.)—Plums and apples in some districts, have been severely attacked during the season, but peaches less than usual, by the Plum Curculio. Owing to the enormous crop of peaches, the limited destruction by the curculio and rot is thought by Mr. Craig to have been a benefit to the main crop. A great many letters have been received from Ontario and Quebec, complaining of the work of this weevil on plums. Its depredations on apples were also noted. Mr. T. W. Ramm, writing from Ross Mount, Ont., on August 24, says :—

"I send you the worst specimen of an apple that has ever been seen on my place, and I had hundreds about as bad, that either fell off early or I removed them from the tree myself. Much of this injury I attribute to the curculio ; there being no plums, the curculio stings the apples, and it is ten times worse than the Codling Moth, for it makes apples gnarled, bitter, hard and woody, in fact, utterly worthless. The experience of this year satisfies me that we must spray or cut down our trees."

Mr. Robert Jack, of Chateauguay, Quebec, gives the names of the following varieties as being particularly subject to injuries by the curculio : Duchess, Yellow Transparent, Grimes's Golden.

Although opinions differ as to the extent of immunity of a crop sprayed with Paris green from attack by the Plum Curculio, there is, no doubt, sufficient benefit to make this method still the cheapest and most practical. The following letter is from Mr. G. W. Cline, of Winona, Ont., probably one of the most extensive and successful plum growers in Ontario :—

"December 19.—My crop of plums was saved this season by spraying five times with 3 ounces Paris green to a 40 gallon barrel of water kept well stirred. I usually spray from four to six times, according to the wetness of the season, beginning at the time the covering of the young plum is just bursting open, never before, as I find the curculio does not begin to bite before warm weather, which begins about that time. I have always saved my crop for some twelve years, when I have sprayed at proper time and kept it up as required, and would not return to the jarring process again under any consideration. I never use any lime with Paris green, and never had but a few cases of trees scorched on one side, when the men were sucking the water too close to the bottom of the barrel, which had not been properly stirred. If the mixture is kept well stirred, I find no trouble in saving my crop always from the curculio."

Mr. James Stewart, of Meaford, Ont., writes :—"I have sprayed my plums for two or three years, and I have found a great benefit in so doing. Last spring I sprayed when the fruit was nicely formed, and a second time in about two weeks. As a result, I had a splendid crop of plums. I am certain there was not a pint of plums fell from the trees, and I know that some of my neighbours who did not spray, lost nearly all their plums."

## Experimental Farms.

Fig. 6.—Fall Canker-worm: *a*, *b*, side and end view of egg; *c*, mass of eggs; *d*, caterpillar; *e*, enlarged segment of caterpillar.

CANKER-WORMS (*Anisopteryx*).—Reports of damage by Canker-worms have as usual been received from various districts. Identification of the exact species has in most instances been impossible. The following letter from Mr. A. W. Peart, with which specimens of the Fall Canker-worm (*A. pometaria*, Harris, Fig. 6), were forwarded, is of special interest, giving the late date in the year when the female moths were active in the Hamilton district:—

“Freeman, Ont., December 17.—I send you by this mail female Canker-worm moths. We had a sharp frost of at least 16° about November 28, and the following day, in going through the orchard, I was surprised to find many dead moths on the trees. Their bodies were rigid and firm. Upon pressing them with the small blade of a knife, they offered such a peculiar and strong resistance that I concluded they must be frozen. There has been a heavy rain since; and the moths have been washed to the ground among the clover, and are hard to find. Living females are still climbing the trees. I first noticed the female moths climbing the trees about the middle of October, and they are still moving, though in fewer numbers at this date. In my experience, both in this and previous years, the Canker-worm is confined almost exclusively to the Northern Spy, although many other varieties of apple are adjacent to and scattered among the Spys. Spraying with me was not very satisfactory this year, on account of the frequent rain falls during the spraying season. However, I did manage to keep the Canker-worm in check fairly well by the use of Paris green, one pound to 200 gallons of water, with a little lime added.”

THE SHOT-BORER (*Xyleborus dispar*, Fab., Fig. 7.). Some useful observations have been made on the habits and life history of this injurious enemy of the apple and plum. Some of these I give herewith.

“Church Street, N. S., May 8.—Have been examining my apple trees to see if the borers are at work yet. I cannot find any nor any of their fresh work.”

Fig. 7.—The Shot-borer.

“June 7.—In your last letter you wished me to keep watch for the apple borer. Have been working among young apple trees every day this spring, and on June 2, I saw the first and only one this spring, and this in a young tree in an old orchard.”—LEANDER WOODWORTH.

In 1893 Mr. Leander Woodworth wrote to me that he had seen the beetles at work on the bark on June 10.

“Berwick, N. S., December 2, 1893.—I first discovered the borers last spring, when I found 25 of my best young trees with the bark turning red, and upon examination found them full of borers. I cut down all but a few and burned them. I washed all my young trees with lime in June. Then I made a wash of soft soap, 1 gallon; water, 3 gallons; carbolic acid, ½ pint, and washed the trees with this mixture twice in June, once in July and once in August. I have examined the trees carefully and cannot find any work of the borers this year. The trees that had the borers in them were young, healthy, fine-growing trees, as good as any that could be found in the valley.”—JOHN S. WOODWORTH.

“Berwick, N. S., December 1, 1893.—I do not know for certain at what time the borers begin to attack the trees, but I think about the end of May. As far as I know, Gravenstein trees (young ones) seem to suffer most, and I am of opinion that the borer will attack healthy trees as well as diseased ones.”—W. H. WOODWORTH.

From the above it would seem that preventive washes should be put on the trees from the beginning of May; three washes one month apart would probably be sufficient.

THE OBLIQUE-BANDED LEAF-ROLLER (*Cacæcia rosaceana*, Harris) has caused considerable damage to fruit in some districts during the past season. It not unfrequently is troublesome on apple trees and currant bushes; but this year it was sent to me as an enemy of birch, apple, pear, gooseberry and black currant. Three unusual and interesting attacks were: on garden geraniums in which the leaves were eaten; on the Silver

Maple (*Acer dasycarpum*), when the seeds only were attacked and hollowed out; and on the pear, where the caterpillars not only destroyed the leaves, but were particularly injurious to the young fruit, eating large cavities into the forming pears, in the same way as Professor Gillette describes the attack of the allied *Cacæcia argyrospila*, Walker, on apples. (*Bul.* 19, *Colorado State Agricultural College*, 1892.) Mr. J.S. Freeman, of Freeman, Ont., in sending the specimens writes:—"June 13. The inclosed worms are eating the pears they are sent with. I believe they have destroyed  $\frac{1}{10}$  of my Bartletts by eating the skin off and holes into them." Mr. C. P. Morgan, Truro, N. S., complained of them attacking his gooseberry and currant bushes, and also notes them as injuring plum and apple trees. Spraying with Paris green is an effective remedy.

Fig. 8.—The Pear Slug.

THE PEAR SLUG (*Eriocampa cerasi*, Peck, Fig. 8.) has been the cause of much injury to pear, plum and cherry trees. Mr. G. W. Henry, the well known nurseryman, of Hatzic, B. C., writes:—"Pear and cherry trees suffered badly from slugs last season; I sprayed with Paris green, which killed the slugs, but also injured many of my young trees badly, though I used at the rate of 300 gallons of

water to 1 pound of Paris green. Fruit-growers are now recognizing the danger of neglecting insects, and I believe in future a more thorough system will be adopted for their destruction." In using Paris green for spraying, an equal quantity of fresh lime should always be added, particularly upon plums and peaches.

The following interesting letter refers also to the same insect:—"Burlington, Ont.—My pear orchard consists of about 1,300 trees, more than half of which are Bartletts. These suffered particularly last season from a dark-coloured slug which ate the substance of the leaf, leaving only the skeleton. The work was done very quickly. After an absence of a few days from the orchard, I found this one variety brown from end to end of the row, Clapp's Favourite, Boussock and Anjou, alongside and mixed with them, being comparatively uninjured. I have 500 dwarf Duchess pears. These were injured next in extent to the Bartletts."—W. F. FISHER.

The pear slug is not a difficult insect to control. Spraying with a weak solution of Paris green or dusting with freshly slaked lime or Paris green diluted with 50 times its weight of some dry powder, are always effective.

THE GRAY PEACH WEEVIL (*Anametis grisea*, Horn) has been again reported this year as a troublesome peach pest. I referred to it in my last report as having injured apple trees in the orchard of Major R. F. Rogers at Grafton, Ont. This year, I am glad to learn that it has given no trouble in that orchard. It has appeared at Queenston, Ont., in the orchard of Mr. C. E. Fisher, but has done very little damage. The following record, however, which was brought to my notice by Mr. L. Woolverton, is of a more serious nature:

"Fenwick, Ont., April 25.—I write to you in the hope that you may be able to suggest a remedy for this beetle, which has proved very destructive to my young peach trees. Last year we tried picking the insects, but notwithstanding our efforts, they killed many of my trees, and are beginning this year again. The trees are just from the nursery, so there is almost nothing to spray. The beetles eat the young bud as soon as it appears, till they finally kill the tree. They seem to prefer the peach but also attack the pear and plum."

"May 21.—I send you some of the beetles you ask for. It has not been very suitable weather for finding them, as they come out best on warm sunny days. They are not as troublesome in my orchard this year as last, but seem to have gone to other orchards. Last year, they killed 130 young peach trees for me, and ate out four rows of strawberries extending across a six-acre field. They only attack the very first leaf buds and the bark of the young trees when first set out, or when a young tree is budded and cut off near the ground; then by eating the bud they destroy the tree. In many of their habits they resemble the potato beetle, such as dropping to the ground and

## Experimental Farms

lying apparently dead. On warm sunny days they move about and eat, and on cold or wet days, they lie concealed at the root of the tree in the earth.”—E. S. ATKINS.

These beetles being wingless, they can only reach the buds of the trees by climbing up the stems; therefore, any mechanical means of preventing this, such as a band of cotton batting, or one of the many kinds of “tree protectors,” placed around the trunks at the time the mature beetles appear in April and May, would be a sufficient remedy.

**THE PEAR LEAF BLISTER** (*Phytoptus (Typhlodromus) pyri*, Sheuten).—This troublesome pest of the pear is becoming much more widespread in Canada. Specimens have been sent in from several localities in the east as well as from British Columbia. Mr. L. Woolverton says:—“The Pear leaf Blister mite is gaining ground on the pear trees in this district, and, so far as I know, growers have done nothing to check it. Some trees have their leaves full of it.” Among several communications from British Columbia, I received one from Mr. T. A. Sharpe, giving an excellent description of the appearance of the injury:

“Agassiz, B. C., July 6.—I send pear leaves which appear to be affected with reddish brown spots on under side, but showing very plainly on the surface. Under the microscope, the under side of the leaf is burrowed and raised into hummocks with craters or openings on the crest. A small insect, not visible to the naked eye, appears to be more or less plentiful on the leaves. Are these insects the cause or are they a secondary injury coming on after the fungus sets in? In any case, what is the remedy?”

Mr. Sharpe then gives an account of several experiments he tried with various mixtures to find a remedy. During the season he has studied this attack with care and has found in the galls another mite (a *Tyroglyphus*) which moves much more quickly than the *Phytoptus*; but he has not yet been able to detect whether or not it is predaceous on the blister mites. The remedy for this pest which has given the best results, is spraying the trees early in spring with Kerosene emulsion.

Fig. 9.—Apple Aphis: winged female.

**THE APPLE APHIS** (*Aphis mali*, Fab., Fig. 9) Attack: Green plant-lice clustered, sometimes in enormous numbers, around the outside and in between the young leaves of the opening buds on apple trees in spring; also on the young shoots in summer and beneath the leaves in autumn. The small black shining eggs are laid in autumn on the branches of apple trees, and do not hatch until the following spring.

The Apple Aphis or green fly is a common insect wherever the apple is grown, and although frequently very abundant, it is seldom that its injuries to its host are of a serious nature in this part of Canada.

Fig. 10. Joints of antenna of Apple Aphis winged female.

From British Columbia, however, there have been received during the past three or four years many complaints of great losses from this pest,—particularly since the publication of the excellent reports of Mr. J. R. Anderson, the energetic statistician of the Provincial Department of Agriculture, have shown the fruit growers of that province that useful information can, on application, be obtained as to the best means of fighting their insect foes. From late correspondence with some of the leading fruit growers, it has occurred to me that part of the damage to apple trees complained of under the name of “aphis,” “green fly,” &c., may have been due to other insects. That the climate of British Columbia is particularly well suited to the development of many species of plant-lice, however, is undoubtedly the case, as I observed in the summer of 1883 and during the spring of 1885, and it is important that as soon as possible the different species should

be studied critically and their life histories worked out, so that the most suitable remedies for those which injure crops may be made known and applied at the proper time. As a contribution towards this knowledge, I am pleased to be able to present herewith careful enlarged drawings of the Apple Aphis (*A. mali*) and of the joints 3, 4, 5, 6 and 7 of its antenna (Fig. 10), made by my esteemed correspondent, Prof. H. T. Williams, of the South Dakota Agricultural College, who has made a special study of the Aphididæ. This, I believe, will be of great assistance to British Columbian fruit-growers in identifying the species.

It is not only in its attack on the apple tree that the Apple aphis levies toll from the farmer, for it is now known to be a serious enemy of fall wheat.

Prof. Riley in his report, as United States Entomologist for 1889 (p. 351), when treating of the Grain Aphis, says: "Observations are complicated by the fact that several other species of plant-lice are found in greater or less numbers upon wheat. The common Apple plant-louse (*Aphis mali*, L.) is often found on wheat after the appearance of the winged generation upon apple, and, indeed it is a question whether this species, in view of what we know of its summer migration, should really be known as the Apple plant-louse, any more than the Hop plant-louse should be called the Plum plant-louse."

Again Prof. F. M. Webster, of Ohio, in a paper on the "Insect Foes of American Cereal grains (*Insect Life*, vol. VI., p. 152), writes:—

"It would appear almost visionary to advocate spraying apple orchards in mid-winter to protect the wheat crop; but nevertheless one of the most serious enemies of young fall wheat passes its egg stage on the twigs of the apple during the winter season. I refer to the Apple leaf-louse (*A. mali*, Fab.). Soon after the young wheat plants appear in the fall, the winged viviparous females of this species flock to the fields and, on these, give birth to their young, which at once make their way to the roots, where they continue reproduction, sapping the life from the young plants. On very fertile soils, this extraction of the sap from the roots has no very serious effect; but, where the soil is not rich, and especially if the weather is dry, this constant drain of vitality soon begins to tell on the plants. Though they are seldom killed outright, these infested plants cease to grow, and later take on a sickly look, and not until the aphis abandons them in autumn to return to the apple, do they show any amount of vigour."

In my last report, I referred to the complaints from British Columbia that many trees had been killed by the Apple Aphis. Commenting on this, Mr. E. Hutcherson, of Ladners, B.C., a good observer, and moreover one who knows well most of the injurious insects of his province, writes as follows:—"I compared aphids I sent you (true *Siphonophora avenæ*.—J. F.) with those on apple and found them different. As regards the Apple aphis killing trees in this province, I do not know, I am sure, where you got your information; but I have failed to find a case in my experience, and I can assure you that it is not actually the case; they may have assisted the Bark blight and Woolly Aphis to some extent, as I have found that weak, poor growing varieties and those suffering from other diseases, are the trees most affected. My experience, in my own orchard, has been that a tree affected this year is almost sure to be free the following season. I cannot say that we have been troubled much with the Apple Aphis for the last two years. We have had rains and wet weather in the spring and early summer, and again early in September; for this reason, the aphids have not been so plentiful as formerly. In this matter I speak not only for my own district, but for the whole province, up to the end of 1893."

And in another letter Mr. Hutcherson reverts to the same subject:—"In speaking of the trees being killed by the Apple Aphis in the Okanagan country, I would say that in some of the orchards there I found trees badly affected with Scurfy Bark-louse, which with the aid of the green aphis had killed quite a few trees." With regard to the correct identification of the Scurfy Bark-louse in the above quotation, I have some doubts; but when I wrote for specimens to the owner of the orchard, I found that the trees had all been cut down and destroyed.

*Remedy.*—The most satisfactory remedy for the Apple Aphis I have found to be the Kerosene emulsion, which should be sprayed on the trees early in spring, just as the

## Experimental Farms.

buds are opening. As many eggs are frequently laid on the trunks, these latter should also be sprayed.

The Apple Aphis very much resembles superficially the Grain Aphis, and, as both occur together on fall wheat, I have asked Prof. Williams to prepare for me a simple table of the chief points by which they may be separated. He has very kindly sent me the following, which will answer all purposes:—

### “*Aphis mali*.

1. Antennæ shorter than body.
2. Antennæ on very slight frontal tubercles.
3. Head pointed in front.
4. Eyes black.
5. Prothorax with lateral tubercles.
6. Head and thorax black.
7. Honey tubes not broadened at base.

### *Siphonophora avenæ*.

1. Antennæ as long or longer than body.
2. Antennæ borne on distinct frontal tubercles, which are approximate at base and of moderate size.
3. Head not pointed in front.
4. Eyes reddish.
5. Prothorax with no lateral tubercles.
6. Head and thorax brown.
7. Honey tubes broadened at base.

“There are, of course, other differences both generic and specific, such as the closely built body and shorter legs and honey tubes of *Aphis*, and more elongated body, longer and larger honey tubes and style of *Siphonophora*, as well as differences in wing characters; but those given above will, I think, serve to separate the insects readily.”

## THE CIGAR CASE-BEARER OF THE APPLE.

(*Coleophora Fletcherella*, Fernald.)

*Attack*.—Small orange-coloured caterpillars with black heads and dark feet, encased in brown leathery cigar-shaped cases which they carry about with them. They attack the leaves of apple, pear and plum trees, by eating a small hole through the epidermis, and then feeding on the parenchyma or soft substance of the leaf, which lies between the upper and lower surfaces, protruding their bodies a long way out of the cases, and eating for some distance around the central hole. When they have consumed all they can reach, they move to a fresh place and make another hole. The brown case is very tough and at the upper end is contracted abruptly into a three-limbed star-shaped orifice, the lips of which fit closely together. Through this hole the excrement is ejected and ultimately the moth makes its exit. The larvæ and the slender dark brown chrysalids are about four millimetres in length; the case is six millimetres. There is only one brood in the season. The small shining steel-gray moths appear at the end of July and the beginning of August, and lay eggs from which the caterpillars hatch the same season and make about one fourth of their growth before winter sets in.

The young larvæ hatch about a fortnight after the eggs are laid, and, burrowing into the leaf, feed upon the cellular portion for a short time. They then cut clean holes through the leaves by taking oval-shaped pieces of the epidermis from both surfaces of the leaf above and below, and with these they form their curious cases by joining them along the edges. The two surfaces of the leaves are easily recognizable on the cases, from the pubescence of that side which was taken from the lower surface. The cases made by the larvæ in the autumn are quite different in shape from those of the full-grown larvæ which are found on the leaves in June. The autumn cases in which the winter is passed, are curved or elongated kidney-shaped, with a narrow wing in the curve. These are retained for a short time in spring, and are enlarged by the addition of small pieces of epidermis attached to the orifice. Occasionally, a larva leaves an old case on reviving in spring, and forms a new one at once; but, as a rule, the old case is detached from its winter resting place, and used for some time.

The summer cases are cylindrical, tapering slightly to the ends, in fact, very much like a miniature cigar in shape.

The following is Professor Fernald's technical description of the insect, which appears in the Canadian Entomologist, 1892, page 122 :—

"*Coleophora fletcherella*, Fernald.—Expanse of wing from 10 to 12 mm. ; head, palpi and basal joints of the antennæ, yellowish steel gray ; body, legs and wings above and beneath, plain steel gray, much more intense in fresh specimens.

"The palpi are without tufts, the basal joints of the antennæ with a slight tuft, and the remaining joints of the antennæ and also the joints of the tarsi are steel gray annulated with white.

"The cases are brown, composed of a portion of leaf, cylindrical or fusiform, slightly compressed laterally, and with a more or less distinct ridge above and beneath. The mouth is more or less oblique, with the edge flaring out slightly. One side of the case is covered with fine hairs the other is smooth, showing that the larva constructs its case from the upper and under sides of the leaf.

"Described from three specimens received from Mr. James Fletcher, for whom I name the species, and who bred it from apple. I have also received the same species from Prof. Lintner, who also bred it from apple."

This insect has been treated of in previous reports of this department (1891, pages 196-198 ; and 1892, page 146).

During the past summer this small but destructive enemy of the apple has been reported to me as injuriously abundant in Ontario, at Oshawa, Maitland and Grimsby, and in Canadian Horticulturist, 1894, page 302, without locality, in Ontario ; and in Nova Scotia, at Lakeville and Woodville. It has also been noticed in small numbers at several places in Ontario, Quebec and the Maritime Provinces. It has shown itself to be very difficult to treat ; but it is probable, from Dr. Young's experience cited below with other correspondence, that spraying with Kerosene emulsion and Paris green early in spring is an effective remedy if persevered in.

The following extracts from some of the letters received will be found instructive and useful :—

"Oshawa, Ont., March 30.—Inclosed you will find two small apple twigs. What is on them? Will you write me and let me know how to destroy them? I have about forty acres of apple orchard and these things are getting very numerous, as you can see by the twigs. As quick as the bud opens in the spring, they crawl out on the young leaves, and, when full grown, are about as big as a kernel of rye."

"April 19.—I am glad to know the name of the little pest that is injuring my apple trees, for I think they are hurting the trees considerably. I first noticed them two years ago. They were not so bad as they were last year, taking the orchard all through.

"I sprayed a part of the orchard two years ago with Paris green, 4 ounces ; sulphate of copper, 4 pounds ; lime, 4 pounds ; water, 50 gallons. I sprayed for the Codling Moth and Black Spot on apple when the apples were about as big as small cherries. Last year, I sprayed all the orchard but about five acres. The trees on these five acres are about twelve years old, about half Northern Spys and Ribston Pippins. The Ribstons are very bad ; the insects are about fifty on the unsprayed trees to one where I sprayed ; but the Northern Spys are not much worse than where I sprayed. How much they are hurting the trees, I cannot tell,—if I went by the fruit, I would say a good deal. Two years ago, I had 1,800 barrels of packing apples ; last year, 375 barrels ; but I am in hopes the Paris green is going to keep them in check."

"June 14.—I now write you my further experience with the Cigar Case-bearer. I sprayed as you recommended as soon as I could. I started on May 7th and sprayed for four days, a part of the orchard with dilute Bordeaux mixture and a part with Paris green alone. I cannot see any difference. I seem to have killed about half or two-thirds of the insects. I believe I should have killed more, but the wind was blowing very hard when I sprayed, and the next week that big rainstorm came. I intended to write before, but was waiting to be sure of the effects of the spraying. The dead caterpillars still stick on the trees ; but the live ones have grown away from the dead ones, so we can tell them now. I am going to spray again in a few days. I thank you very much for the trouble you have taken. When I wrote you first, on the 19th April, I was about discouraged. I did not think the Paris green would kill them. In previous

## Experimental Farms.

years I did not spray until about the 20th June ; the insects were then full grown, and I did not know when I had killed them, for they still stuck on the trees.”—EDWIN WORDEN.

Fearing that Mr. Worden might have been deceived by the inactivity of the larvæ owing to some of them having completed their growth and fastened their cases to the leaves in order to pupate, I wrote to him again, asking him to send me some of the leaves bearing the larvæ which were supposed to be killed. These specimens were sent forward by Mr. Worden on June 19th, when he wrote :—

“ I inclose you the leaves as directed by you. The little pest is hard to conquer. I am spraying again now. If these insects would leave my trees alone, I am satisfied I should have a good crop of apples, but they are even eating the little apples now.”

Upon examining the specimens carefully, it was found that only 17 per cent of the larvæ were dead, which was a disappointment, as it indicated that Paris green as a remedy was only partially successful. Mr. Worden was then requested to spray some of his trees with Kerosene emulsion. His answer was as follows :—

“ July 5.—Inclosed you will find some leaves sprayed with Kerosene emulsion about ten days ago. It does not seem to do much good. I am about discouraged. These little insects seem to be getting worse all the time. Will you write and let me know about how long these insects troubled them in Prince Edward Island? If they are the same you mentioned in your report for 1891, I notice you say they were on plum and pear trees. Now, I have plum and pear trees side by side with the apple trees, and I never saw one on a plum or pear leaf. How would you think it would answer to have torches burning here and there through the orchard about the first of August? I noticed last year about the first of August, if the door or window was open after the lights were lit, the room would be full of little moths. Please write and give me your opinion of the torches and how far apart to have them in the orchard. I am willing to try anything you suggest to get rid of these insects, for I am satisfied the orchard will not do anything while they are on the trees.”

Reply :—“ July 20.—I was absent from Ottawa when your letter arrived and have just returned. By this time the case-bearers will have stopped their work upon your apple trees. Dr. Young, of Aldolphustown, who suffered very severely a year or two ago from this same pest, treated it very successfully with Paris green and Kerosene emulsion. My correspondent, the late Mr. Wm. Brown, of Charlottetown, Prince Edward Island, only had this pest on his trees two years ; his attack was upon plum trees. As you have noted, it is a very remarkable thing how the same insect will attack one kind of plant in one district and another somewhere else. An analogous instance is the ‘ Shot-borer ’ beetle of Nova Scotia, which there attacks the apple tree almost exclusively ; while in England the only reported attack by it, is on plum, and, at the same time, the first attack noticed by this insect was upon pear trees, hence one of its names—the Pear-blight beetle.

“ It is just possible that your suggestion of carrying torches through the orchard when the moths appear may be a valuable one, and I shall be very much obliged if you will try it. The moths are just appearing from the caterpillars which you sent me early in the season, so that now would be the proper time to test this remedy. A convenient way of destroying them in large numbers, if you find that they are attracted by the light, will be to place in the orchard a lantern or lamp in a basin of water, having first sprinkled a little coal oil on the top of the water. The moths flying to the light will fall into the water and be destroyed by the film of coal oil which floats on the surface. I shall be much obliged if you will try this remedy and let me know how it succeeds.”

From the following reply, it will be seen that the use of a light at night to attract the moths was not very successful :—“ I tried the torch light on a small scale. I had to cross the road from my house to the orchard, and, strange to say, while on the road, the moths would come very thick ; but when I got in the orchard, I did not catch so many all night by leaving the torch burning, as I did during the few minutes outside. I think I destroyed about half of the case bearers with the treatment last summer. Next year I am going to try the Kerosene emulsion, but would like to spray a little later than the time you suggest so as to catch the bark louse as well.”—EDWIN WORDEN.

Careful investigations were also made on this insect at Maitland, Ont., by Mr. Harold Jones, who has kindly supplied me with much valuable definite information on its life history. Mr. Jones called upon me on August 24th, and spoke of the case-bearer as having been very abundant in his orchard this year. He first noticed it early in the spring, attacking the buds and the stems of the flowers and leaves. He sprayed at once before the flowers opened. Directly the flowers dropped, he sprayed again with Bordeaux mixture and thinks that 25 per cent of the larvæ were destroyed. He sprayed a third time about three weeks later when the apples were about as large as a pigeon's egg. He observed that, about the third week in June, the larvæ ceased feeding and went to the upper surface of the leaves to pupate. On September, Mr. Jones sent me a supply of the young larvæ with the following letter:—

“Maitland, Ont., September 1.—Referring to our conversation of a week ago, I send you by this mail twigs of apple, with the case-bearers attached. You will note that, whereas three weeks ago the young caterpillars were on the underside of the leaves, now you will find them clustered about the buds, attached to the bark of the present year's growth in every case. They are now about double the size they were on the 10th August when I first observed them. I picked out the worst affected twigs that I could find, for I thought you would be glad to note their habit of clustering.”

Later Mr. Jones sent the following interesting résumé of his observations:—

“November 6.—Referring to our conversation of August last and our correspondence during the early part of September, relating to the actions and life of the Cigar-shaped Case-bearer; I now give you the result of my observations during the season, hoping that there may be some point that may aid you in finding the best time of the season to most effectually destroy this serious pest to our apple orchards.

“During the early part of May, just as the buds were opening, I sprayed my trees with Bordeaux mixture; and a short time after, when the blossoms opened, I noticed that the half-opened leaves and flowers withered and died. I had no idea of the cause at first, but on examination, I found large numbers of a strange insect (since known as the Case-bearer), had punctured the stems of the leaves and flowers and were working so rapidly that, when the blossoms fell and I was able to spray again, some of the trees had very little set fruit left.

“This second spraying was done with Bordeaux mixture and Paris green in the proportion of one pound to 200 galls. of mixture. The results of this application were hard to determine, but I noticed that all further attacks on the young fruit were stopped and the caterpillars were working on the underside of the leaf, whereas before they worked on both sides.

“I think I am safe in estimating 20 or 25 per cent destroyed. I sprayed again with the same mixture and Paris green added, about two weeks afterwards when the apples were about the size of the top of my thumb or larger, this making three applications in all. The last application did not affect them perceptibly, as at that time they had permanently attached themselves to the leaf to go into the pupal state.

“About the 10th of August I first noticed the young brood feeding, they were then so small as to be hardly noticeable, and were less numerous, there being only about one-fifth of their numbers in the spring. During the next 20 or 25 days, they fed and grew to a length of about  $\frac{1}{8}$  of an inch or more. At that time, the first week in September, the weather turned quite cool and they left the leaves and clustered in rings about the base of the present year's wood growth.

“From that date until the middle of October, they could be found either on the leaf feeding, or attached to the twig according as the weather was warm or cold. After the middle of October, they left the foliage and twigs and are now attached to the larger parts of the tree, in some cases down on the trunk, but mostly on the under side of the branches at their junction with the trunk or larger branches, and I also find clusters of them in the shelter formed by a partly healed wound where a limb has been severed.

“This winter during the most severe weather, I intend taking a stiff brush and brushing some of the trees in all the crotches and larger branches and letting the insects fall on the snow, where I am in hopes they will perish.

## Experimental Farms.

"If my theory, that frost and snow will destroy these insects, prove correct, I can quickly and easily remove one-half to three-fourths of the entire brood now lodged on trees eight or ten years of age, and diminish their numbers on larger trees."—HAROLD JONES.

"Lakeville, N. S., June 8.—I inclose to you to-day some specimens of insect pests for examination. The insect attacks the young buds and leaves, destroying the foliage as soon as it appears. The Baldwin, Tompkins, Twenty-ounce Pippin, Talman Sweet and Rhode Island Greening, were attacked and the young leaves almost entirely destroyed, while the Bishop Pippin (Yellow Belle flower) tree was almost entirely free from the pest. I sprayed before blooming with Paris green 4 ounces, lime 3 lbs., water 45 gallons. I could not see that any insects were killed, being just as numerous after spraying. Any information you can give me about destroying this insect, will be thankfully received."

"June 20.—I send you specimens of the insects that have been doing very much damage to fruit trees in this locality this spring. They began their work of destruction about 1st May, when a few were seen to crawl from the angles of the small branches and attach themselves to the leaves just beginning to form. They would move along the branches, the head protruding from the sack or cigar-shaped case. About May 10th I sprayed the trees from which these specimens were taken on June 20th, with Paris green 1 lb., lime 4 lbs., water 160 gallons. At that time only a few were on the foliage. The greater part of the pests were still to be found in the angles of the small branches and rough places of the bark. The application of this mixture destroyed very few, if any. To-day, June 20th, I notice some time after full bloom the blossoms withering and dropping from the tree at the slightest jar from the hand, and the foliage of the tree having the appearance of being riddled with small shot and scorched by heat. On these trees no fruit is forming, although the blossoms looked healthy."—R. A. BECKWITH.

At the end of the season, Mr. Beckwith reported as follows:—"I did not spray as you advised. By July 1, nearly, or quite all of the insects had disappeared, the trees soon after having a healthy appearance. A few orchards only were damaged by this insect in this section of the valley." (Lakeville is in the Annapolis Valley, so celebrated for its fruit.) "Those orchards in which the case-bearer appeared were badly damaged, the crop a total failure."

"Woodville, N. S., March 28.—I send you to-day some apple limbs. You will find on them small insects which have done a great deal of damage in this county. Please explain their habits and send a remedy."

"April 18.—Thanks for information. I am sending you more specimens to-day out of the same orchard.

"These insects destroy the buds, as you see by specimens; destroying the buds injures the crop, as new buds have to start. The insects are now commencing to crawl on to the buds, destroying first the buds, then the blossoms, if any are left, and leaves; so you see something must be done before the trees blossom. They seem to work on some varieties more than on others. The variety sent is Nonpareil. The trees look, at the end of June and in July, when the trees are leafing out and blossoming, as if they had been scorched by fire.

"We consider this little caterpillar the worst enemy to our fruit crop. Please advise me what to do, as the remedy must be applied at once."—G. W. F. McLEAN.

*Remedies.*—As a remedy we at first recommended spraying with Kerosene emulsion during the winter, to destroy the hibernating larvæ, but it appeared to have no effect. Twigs from sprayed trees were sent to me in winter by Dr. Young, which, a fortnight after spraying, still retained strongly the odour of Kerosene (coal oil); when revived by the warmth of my office, the larvæ crawled about uninjured, and Dr. Young reported that these trees treated in winter showed no benefit from the spraying.

Spraying with Kerosene emulsion and Paris green at the time when the buds are opening, has given the best results, as will be seen from the following letters:—

"Adolphustown, Ont., June 26.—On the large block of Duchess apple trees, where we sprayed in 1891 and 1892, where the said worms were so numerous, there is only an odd worm to be seen. But in other parts of the orchard, where they had scarcely

reached at first, they were numerous this spring. We sprayed them with Paris green, but on account of weather, and my brother's illness, the spraying was not complete, nor as effective as one would wish.

"July 3.—The Kerosene emulsion, either warm or cold, used in the winter, had no effect. But when used cold in the spring, after the worms began to move about, was very effectual. It more completely cleaned the trees of the Case-bearers than did the Paris green. Still the Paris green did well and took most of them off. We sprayed with both the same day. We sprayed the next year again with Paris green, and this year again, but this year there were very few indeed in that part of the orchard."—Dr. D. YOUNG.

From the above it would appear that, owing to the fact that the caterpillars for the most part feed beneath the leaves and eat very little of the outer surface, Paris green, although effective in a certain measure, is not a satisfactory means of controlling the Cigar Case-bearer. The best remedy in our experience so far, is Kerosene emulsion applied as a spray when the young larvæ are active, particularly early in spring.

### THE SAN JOSE SCALE.

(*Aspidiotus perniciosus*, Comstock.)

Few insects which attack fruit trees are with more reason dreaded by the horticulturist than the San José or Pernicious Scale of the Pacific Coast. On two or three occasions it has been reported to me as occurring in British Columbia; but I had at first the impression that the insect referred to was the Scurfy Bark-louse (*Chionaspis furfurus*, Fitch), or something else. During the past summer, however, undoubted specimens of *Aspidiotus perniciosus* on apple have been received from British Columbia and have been identified by Mr. L. O. Howard. From recent correspondence, I believe it is probable that, at any rate, some of the serious injury to the apple trees in British Columbia which has been reported as due to the Apple Aphis is in reality caused by this and other scale insects. The fact that one is a plant-louse with well developed organs of locomotion at all stages after hatching, and the other a scale insect, which has the power to move for only two or three days, does not affect this supposition; for, unfortunately, there is even yet a most deplorable ignorance and indifference as to the right names of the worst insect enemies of the farmer and fruit-grower. So that the referring a pest even to the right natural order is the exception rather than the rule, "bugs," "flies," "weevils," "grubs" and "worms" being accused indiscriminately of injuries caused by quite different insects. Not only does this cause loss of time, because, in many instances, specimens have to be written for; but in those cases where cultivators undertake to doctor their crops themselves, the wrong remedy is often applied, of course, to their great disappointment at obtaining no beneficial results. In all cases, whenever possible, specimens should be sent with letters of inquiry.

Knowing the great danger which would result from the failure on the part of Canadian fruit-growers to recognize and use every effort to eradicate so pernicious a foe as the San José Scale, as soon as it was known for certain that specimens had occurred in Canada, I prepared for *The Farmer's Advocate*, of London, Ont., which has a wide circulation, and for the *Annual Report of the Entomological Society of Ontario*, an article giving the life history and the remedies which had been found most effective against this pest. These were drawn for the most part from the records of the warfare waged by the United States Division of Entomology, which have been kindly supplied to me by Mr. L. O. Howard, who has also been good enough to lend me the four figures used to illustrate this article.

I reproduce herewith extracts from these articles so as to bring the proper treatment to the knowledge and attention of as many as possible.

This insect has had attention drawn to it of late by its unexpected appearance in injurious numbers in the Eastern States during the summer of 1893, and the Division of Entomology at Washington, under the direction of the United States Entomologist, Mr. L. O. Howard, has, during the past summer, adopted such vigorous measures to combat it, that there is reason to hope that in all the localities from which it has been reported, the insect has either been eradicated or brought under control.

## Experimental Farms.

Up to 1892, the San José Scale was thought to be confined in North America to the Pacific States, where it has shown itself to be a most destructive enemy of the fruit grower. It was probably first brought to California on fruit trees imported from Chili about 1870, and the name, San José Scale, was given to it by fruit shippers in 1873, from the name of the place in California where it was first noticed. It spread rapidly for seven years without any particular attention being paid to it. In 1880, however, Prof. Comstock pointed out the great loss which it was causing, and gave it the specific name *perniciosus*, for the reason that he considered it to be the most pernicious scale insect known in the country. It not only swarmed in countless numbers on fruit trees in certain orchards, but infested nearly all kinds of deciduous fruit trees grown in California. In a special circular which Mr. Howard issued last year, when the insect appeared in the States of Virginia and Maryland, he says as follows: "In the course of twelve years, the insect spread through all the fruit-growing regions of California, through Oregon and into the State of Washington."

It is known as the worst insect pest of deciduous fruit trees on the Pacific coast, and has caused great pecuniary loss. Many crops of fruit have been ruined, and thousands of trees have been killed. (L. O. Howard, *Circular No. 3*.)

In 1892 the insect was found in New Mexico on apple, pear, plum, peach, quince and rose. It had been brought into New Mexico upon young trees from California. Nearly all the other instances of infestation east of the Rocky Mountains can be traced to two nurseries in New Jersey, where the pest had been introduced in 1886 or 1887 on trees of the Japanese plum "Kelsey," which had been procured from the San José district in California. Idaho pear trees had also been frequently imported from California, which were most probably infested. In 1891 and 1892 several blocks of young apple trees were badly infested. It is on pear trees chiefly that this pernicious scale has been distributed through the State of New Jersey. Prof. J. B. Smith says (*Insect Life*, VII., p. 166):—"The Idaho pear has been the most dangerous because it came infested whenever imported direct, and after it, came in close order, Madame von Siebold, Garber, Lawson, Seckel, Lawrence and Bartlett. Other varieties are also infested, but less frequently, and the scales do not do so well. Kieffers alone are absolutely exempt, and closely following comes the Leconte, which is rarely infested in the nursery, and never in the orchard, in my experience. One tree grafted with Lawson and Kieffer had the Lawson branch and fruit covered with scales, while the Kieffer branch was entirely free. Currants, black and red, became rapidly infested and the scales were certainly distributed on these plants."

Mr. Howard says that this insect spreads rapidly for a scale insect, and is the most dangerous scale known. It is, too, inconspicuous and would be overlooked by many. Specimens of apple boughs received from British Columbia were entirely incrustated with the scales, so as to give them the appearance of having been dusted with ashes. Mr. Howard gives the following description of the scale in his circular above referred to: "The San José Scale belongs to the same group of scale insects, the Diaspinæ or armoured scales, to which the Oyster-shell Bark-louse of the Apple belongs. It differs from this species, and in fact from all other eastern species found on deciduous fruit trees, in that the scale is perfectly round, or, at most, very slightly elongated or irregular. (Fig. 11). It is flat, pressed close to the bark, resembles the bark of the twigs in colour, and when fully grown is between  $\frac{1}{8}$  and  $\frac{1}{4}$  of an inch in diameter. At or near the middle of each scale is a small, round, slightly elongated black point; or this point may sometimes appear yellowish. When occur-

Fig. 11.—San José Scale: c, adult female containing young, greatly enlarged; d, anal fringe of same, still more enlarged.

ring upon the bark of the twigs or leaves and in large numbers, the scales lie close to each other, frequently overlapping, and are at such times difficult to distinguish without a magnifying glass. The general appearance which they present is of a grayish, very slightly roughened scurfy deposit." (Fig. 12.)

The natural rich reddish colour of the limbs of the peach and apple is quite obscured when these trees are thickly infested, and they have then every appearance of being coated with lime or ashes. When the scales are crushed by scraping, a yellowish oily liquid will appear, resulting from the crushing of the soft yellow insects beneath the scales, and this will at once indicate to one who is not familiar with their appearance, the existence of healthy, living scales on the trees. During winter the insect is to be found in the half grown, or nearly full grown condition. The young begin to hatch and to crawl from under the female scales shortly after the trees leaf out, and from this time through the summer there is a constant succession of generations. The insect affects not only the young twigs and limbs and, with young trees, the entire plant, but is also found upon the leaves and upon the fruit. When it is abundant, the fruit is destroyed. One of the most characteristic points in the appearance of the insect upon fruit is the purple discoloration around the edge of each scale.

Fig. 12.—San José Scale : Apple branch with scales ; large scales above at left.

Fig. 13.—San José Scale : male adult, greatly enlarged.

in fighting the San José Scale. In cases of severe attack, it is recommended to cut down the infested trees and burn them. The other methods are : Spraying with insecticidal washes or fumigating the trees with poisonous gasses. The insecticidal washes may be divided into summer washes, which can be applied while the trees are in leaf, and winter washes of a stronger nature which would injure the foliage, but will do no harm to the trees during the winter when these are in a dormant condition, and yet will have the effect of destroying the scale insect. Of the *summer washes*, the ordinary Kerosene emulsion (Riley-Hubbard formula) and a Resin wash [Resin 20 lbs., caustic soda (70 per cent strength) 5 lbs., fish oil 3 pints, water 100 gallons], were recommended by Mr. Howard, and used with success during the past summer. On peach trees, owing to the susceptibility of the foliage to injury, the stock emulsion was diluted with fifteen times its volume of water, instead of nine times, the usual strength advised

## Experimental Farms

Fig. 14.—San José Scale; *a*, pear moderately infested; *b*, female scale enlarged.

for most other plants. It was found advisable to repeat the sprayings at intervals of about a week. The young scale insects were noticed on May 19th at Riverside, Ind., and the females, viviparous in habit, gave birth to young for a full month. This was upon peach trees, and it was found that the Resin wash killed the scales more quickly than the very much diluted Kerosene emulsion. As Mr. Howard points out, this rapidity of the work is important, since where a full grown female is sprayed with Kerosene emulsion, she may live for three or four days, during which time she brings forth young; whereas if sprayed with Resin wash, fewer young scales are produced. The resin wash, however, is readily carried off by the rains, while the Kerosene emulsion is more resistant.

In Prof. J. B. Smith's investigations in Pennsylvania, it is recorded in *Insect Life* (VII., p. 159) that "he has visited the locality at Atglen, Pa., and found that in an orchard of over 7,000 trees, all of certain varieties, and a few of others were infested by the scale. As a result of his recommendations, Kerosene emulsion has been applied three times to most of the trees at intervals of ten days, up to the first week in June. The treatment has been absolutely successful."

For *winter washes*, the Kerosene emulsion and Resin washes may be made stronger. The stock Kerosene emulsion has been used diluted with only  $4\frac{1}{2}$  parts of water, and for the Resin wash the same ingredients were used in the following proportions: Resin, 30 lbs., caustic soda, 9 lbs., fish oil,  $4\frac{1}{2}$  pints, water, 100 gallons.

"The most favoured winter remedy in California, however, is the lime, salt, and sulphur mixture. This consists of unslaked lime 10 lbs., sulphur 5 lbs., stock salt 5 lbs., water to make 15 gallons. This wash will do great damage to the trees if applied during the growing season, and should be used only in winter. All the sulphur and half the lime are placed in a kettle, and  $8\frac{1}{2}$  gallons of water added; after which, the contents of the kettle are boiled briskly for about an hour. The solution, which at first is yellow from the sulphur, will turn very dark brown, assuming more or less of a reddish tint, and will finally change from a thick batter to a thoroughly liquid condition, the product being ordinary sulphide of lime. All the salt is added to the remaining 5 pounds of lime, and the latter slaked; after which, the slaked lime and salt are added to the sulphide of lime already obtained, the whole being then diluted with water to make 15 gallons. This should be strained before application, as it does not form a perfect liquid solution, on account of the considerable quantity of undissolved lime, which will soon sink to the bottom, unless the solution is constantly stirred while being sprayed." (L. O. Howard, *Circular No. 3*.)

The third method of fighting scale insects is known as the Gas Treatment. This has been extensively used in California, but is an expensive operation, and the materials necessary are very poisonous and dangerous to have about a house. It consists, briefly, of covering the tree to be treated with an air-tight tent, and then filling the tent with the poisonous fumes of hydrocyanic acid gas, which is generated by placing 1 oz. of cyanide of potassium, 1 fluid ounce of sulphuric acid and 3 fluid ounces of water in an earthenware vessel beneath the tent. The gas is very light and rises to the top of the tent, and if this be kept on the tree for half an hour, every scale will be destroyed. The quantities of ingredients given above are sufficient for a tent inclosing 150 cubic feet.

What is wanted, however, is to know the best remedy, and it is satisfactory to find that, on the whole, the standard remedy for scale insects, Kerosene emulsion, is the best. In summing up his experience of the year, Mr. Howard says as follows:—"Remedial work against this insect is onerous, but our experience has shown that three sprayings at intervals of ten days during the latter part of May and June, will practically destroy the insect, whether the spraying be conducted with very considerably diluted Kerosene emulsion or with a resin wash, while during the winter a single application of either of the three winter washes will greatly reduce the numbers of the insect. Among the winter washes, our experience leads us to give the preference to strong Kerosene emulsion; next, to the winter Resin wash; and finally, to the lime, salt, and sulphur mixture."

The Kerosene emulsion is now well known to most Canadian fruit growers; but it may be well to give its mode of preparation here.

Kerosene (Coal oil).....	2 gallons.
Common soap or Whale oil soap.....	$\frac{1}{2}$ pound.
Water.....	1 gallon.

Cut up the soap and boil in the water till all is dissolved; then add it boiling hot to the coal oil; churn the whole briskly for 5 minutes with a syringe or force pump. When the emulsion is perfect, it will adhere without oiliness to the surface of glass and when cooling it forms a jelly-like mass, which can be kept indefinitely, if stored in a cool place and covered from dust.

When required for use; for a summer wash, dilute 1 part of the stock made as above with 9 or 15 parts of water. To make the stock dissolve easily, take first 3 parts of hot water to one of the emulsion and then when all is thoroughly mixed, add the rest of the water to make the 9 or 15 parts required; for a winter wash, mix with  $4\frac{1}{2}$  or 9 parts of water.

#### THE PEAR-TREE FLEA-LOUSE.

(*Psylla pyricola*, Förster, Fig. 15.)

Fig. 15.—The Pear-tree Flea-louse, enlarged.

*Attack.*—Small clear-winged insects, wedge shaped like miniature *Cicadae*, the head being broad, flat in front, and the body pointed behind; one tenth of an inch in length, of a reddish brown colour with broad black bands across the abdomen. These insects, at the slightest disturbance, leap from the foliage of infested pear trees and fly for a short distance. Occurring with these, will be found on the leaves the curious flattened oval larvæ (fig. 16), which, when first hatched, are very small, one-eightieth of an inch in length, of a semi-translucent yellow colour, with red eyes. These grow rapidly, and in about a month pass through five nymph stages, during which the body retains its flattened form and becomes much darker until, in the full grown nymph, the large wing-pads and the greater part of the upper surface are black. The eyes and sometimes the body between the black markings are crimson. The presence of this insect

upon trees is easily detected by the copious secretion of honey dew with which the leaves, limbs and trunks of the trees soon become covered and upon which a dirty-looking black fungus, *Fumago salicina*, develops. After a time, the leaves and young fruit fall, the trees assume an unhealthy appearance, and in the case of severe attack the tree dies.

Another enemy of fruit trees which has this year appeared for the first time in Canada, is the Pear-tree Psylla or Flea-louse, specimens of which were sent to me by Mr. J. S. Freeman, of Freeman, Ont., who writes:—

"Freeman, Halton Co., Ont., June 7.—I have a block of three hundred Dwarf Duchess pear trees mixed with apple trees, which are so badly infested with the insects which I am sending you, that, from the appearance

Fig. 16.—Nymph of Pear-tree Flea-louse enlarged.

## Experimental Farms.

of the trees at present, the whole crop, some of the worst specimens of which I am sending you, will be destroyed. I do not think the pear trees were troubled before this season. Would you kindly tell me what the insects are and give a remedy? Would it be too late to apply a remedy this season? Please reply.

Reply.—“June 8. Your letter of 7th inst, with insects inclosed, is just to hand and is of great interest. I wish you had written a little sooner in the season. The insects sent are the Pear-tree Psylla (*Psylla pyricola*), a pest which has done great injury in the States of New Jersey and New York. This is the first record of its appearance in Canada. It is a serious pest, and must be fought vigorously at once. The remedy is Coal-oil emulsion. (See page 12 of bulletin 11 sent herewith). Instead, however, of mixing the stock emulsion with nine times its quantity of water, I would suggest your using 12 times the quantity of water first, and see how that works. I shall be obliged if you will write me at once and let me know how long it is since you first noticed this pest, and if it is very prevalent in your district?

“The presence of this insect is always indicated by a sticky exudation noticeable on the twigs, called honey dew. Upon this, later in the season, a black fungous mould grows which gives the tree a very dirty and unsightly appearance. I cannot impress upon you too strongly the importance of treating this pest at once, and if possible checking its spread. Please let me know if you or any of your neighbours have recently imported trees from the States of New Jersey or New York. I shall be glad to give you any further information in my power.”—J. F.

“Freeman, June 13.—I am much obliged for the information your letter brought me on the 11th inst. I have applied the coal-oil emulsion as you recommended on my Duchess Dwarf trees, which are 12 years old, in 12 times and not 9 of water as in formula; but besides being on these, I find the insects are more or less over my other pear trees of 9 acres of different varieties. I knew from the appearance of my trees that something unusual was attacking them; but I did not make a close examination of them until two days before I wrote you. This must be the first season this pest has been bothersome, or I should have noticed the fungous growth last season if it had been there as this. From inquiry of fruit-growers in this section, I think it is likely that this pest may be found in other orchards. The original trees in my orchard came some 15 years ago from Lockport, N.Y., and I have, with many of my neighbours, planted more or less pear trees every spring since, all the trees coming from the same place, Lockport. Any more information as to destroying this pest, will be gladly received.”—J. S. FREEMAN.

Several articles have lately appeared upon the Pear-tree Flea-louse. By far the most complete study of the subject has been made by Mr. Mark V. Slingerland, of Cornell University, and the results of his labours have been published as *Bulletin 44* of the Cornell University Agricultural Station. In this a full history is given of the development and habits of the insect, illustrated by excellent figures, of which Nos. 15 and 16 have been kindly lent for this article. Winter is passed in the perfect state, the males and females hiding in crevices and beneath flakes of bark on the pear-trees. In the first warm days of spring, the date varying with the season, they emerge from their winter quarters, and after mating, “the eggs are laid in the creases of the bark or in old leaf scars, about the bases of the terminal buds of the preceding year’s growth; some were seen about the side buds near the terminal ones. \* \* \* \* \*” The eggs are scarcely visible to the unaided eye. It would take eighty placed end to end to measure an inch. They are elongate, pyriform in shape, smooth and shiny, of a light orange yellow colour when first laid, becoming darker before hatching. A short stalk to the large end attaches the egg to the bark, and a long thread-like process projects from the smaller end. The temperature conditions in the spring influence not only the time of oviposition of this winter brood, but also the duration of the egg stage. The weather remaining cool, eggs upon the trees under natural conditions, did not hatch until May 10, or more than a month after oviposition began.”

The young nymphs immediately on hatching, suck the sap. Mr. Slingerland found that a few nymphs emerged in spring before the leaves had expanded; these crawled into the buds out of sight. The favourite feeding places of the nymphs to

which their flat bodies adapt them, are in the axils of the leaf petioles and of the stems of the forming fruit. After the fifth moult, the adult insects appear; they are quite different in habits from the nymphs, being extremely active and flying away at the slightest disturbance. The winter form which lays the eggs of this first brood, is larger and brighter-coloured than the summer broods, of which there are two or three.

The eggs of the summer broods are not laid "on the twigs, but on the under sides of the tenderest leaves, among the hairs near the mid rib, or on the petiole near the leaf. Sometimes the female very adroitly places an egg or two in each notch of the toothed edge of the leaf." The summer eggs hatch in eight or ten days.

*Remedies.*—As stated above, the Pear-tree Flea-louse hibernates in the perfect state on the trunks of the trees and begins to move about and mate early in the spring. At this time, the insects are not very active, and when it is known that trees are infested, many can be destroyed with small expense of labour and material by spraying the trees with Kerosene emulsion.

This will be more effective if the rough bark is first removed with a hoe or some similar instrument.

The treatment which is most highly recommended is to spray after most of the young nymphs have hatched. Mr. Slingerland says: "The best time to spray is early in the spring, just after the leaves have expanded. In 1892, about May the 15th, was the best time; then the first brood of nymphs had all emerged and were exposed in the axils. It was the first brood which did the most harm in 1891. Fruit growers should examine their orchards when the leaves are expanding, and, if the nymphs are numerous, the trees should be sprayed at once. A second and even a third spraying may be necessary. The destruction of the nymphs is practicable during a period of two weeks, about May the 15th. If the spraying is thoroughly done at this time, the pest will be so completely checked as to necessitate but little, if any, further attention during the season."

The Pear-tree Flea-louse belongs to the same class of insects as the Aphids or plant-lice, with which they form the second section of the *Homoptera*, known as *Dimera*, or those with two-jointed feet. In this section we find small insects with antennæ longer than the head and, in the winged individuals, four wings, ordinarily all of the same membranous texture. The *Psyllidæ* or flea-lice are small insects found on leaves, and some species, as the Hackberry Flea-louse, give rise to galls. They have long slender antennæ terminated by two bristles. The beak is short and tri-articulate, and the eyes are lateral and prominent as in the *Cicadæ*. In fact, these little flea-lice, although seldom much more than one line in length, very much resemble *Cicadæ* in miniature. On the front of the face are three ocelli placed in a triangle, the posterior ones quite close to the eyes. Unlike the Aphids or plant-lice, the flea-lice have the power of leaping, from which they take their English name.

### THE PEACH BARK-BORER.

(*Phlæotribus liminaris*, Harris.)

*Attack.*—Small cylindrical beetles, one-twelfth of an inch in length, of a brownish black colour, covered with short hairs, which bore in the bark of peach trees, and, if numerous, cause the death of the trees in three or four years. The presence of these beetles is easily recognized by the conspicuous red powder, which is the borings cast out of the holes by them in their mining work, and, in the winter and spring, by enormous quantities of gum which oozes from the infested trees, thus greatly reducing their vitality.

The Peach Bark-borer, although apparently a rare insect in Canada, is a serious pest in one or two orchards in Queenston, Ont.; I have as yet received myself no authentic record of its occurrence in other districts in Canada, although it is referred to by Dr. Lintner and Mr. Slingerland as having occurred in numbers at Ringwood, Ont.

## Experimental Farms.

With a view of bringing out further information as to the prevalence of this pest, and also to put on record what has been done towards finding a remedy and completing its life history, I submit herewith the following correspondence:—

“Queenston, Ont., March 22, 1893.—That small beetle borer which I gave you at the St. David's meeting has been seriously affecting my peach trees. I send you a few more. Will you please tell me about its habits and how to combat it? I wish to be positive as to the non-injury of the peach tree before using any wash. Some of my neighbours claim that they have nearly destroyed some of their peach trees by applying an alkali wash.”—C. E. FISHER.

“Queenston, May 22, 1893.—I send you a piece of bark of a peach tree from my orchard, which is full of the little black beetles that we looked for last winter. The bark of this tree is all like the piece I send, and around the collar of the tree there is not less than a gallon of gum that has run out from the wounds made by this borer. Young trees do not seem to be attacked as much as older ones.”—CAPT. JAMES SHEPPARD.

A remarkable feature of the attacks of this minute beetle upon the peach trees, is the large quantity of gum which oozes from the infested trees and falls to the ground. Upon wet days this swells up and lies in masses of jelly around the foot of the tree. I saw in several instances two or three quarts given off by a single tree. This must be a great injury to the trees and accounts for the short time in which healthy, vigorous trees are killed. The statement that only unhealthy trees are attacked is undoubtedly wrong. Mr. Fisher and I noticed in his orchard healthy young two, three and four-year old trees which the beetles had just begun to attack.

“Queenston, March 2.—With this I send box containing bark from peach tree which I had treated with strong lime and Kerosene emulsion wash twice during last season at intervals of about four weeks, for the Peach Bark-borer. I also send you in the box a small package of bark from a large English cherry tree about seven inches in diameter, which stands several hundreds of yards from my peach orchard and quite isolated from any elm or peach trees. The peach bark beetles have been at work in this tree, although they are not nearly so numerous as in the large peach trees. My reason for thinking that the lime and emulsion wash was not very successful was from the fact that, after it had been washed off by the weather, I saw fresh evidences of the borers' work in these trees, the fine chewed or ground bark standing out around the small holes made by the insects. I shall, however, be better able to judge this season as I have five or six trees specially selected to work with. I notice that the oldest trees are the ones selected by the borer, as I find occasionally an old tree in the orchard quite full of the little pest, though, where the insect first started his depredations, small trees only about  $2\frac{1}{2}$  or 3 inches in diameter and about four years old, have them in; but they do not seem to be nearly so numerous as in the old trees which have rough surfaces and cracks, where I suppose the insect can more easily secure a lodgement. I applied the wash first, I think, in June and then again in July, on a few others about the first week in August. The bark you have, is from a tree which had the two washes first mentioned. From examinations I have made, I am led to believe the borer does not burrow into the solid wood. To prove this I will saw off a section of a tree and mail it to you to-morrow, so you can prove positively whether or not it does. I shall try your advised experiment—the Kerosene emulsion put on with a scrubbing brush—though I have heard you could not injure a peach tree with scalding hot water.

“I shall try, as you suggest, pure kerosene on one tree. I might try the hot water on another and your emulsion on the balance of them. I believe this borer is getting more numerous, and I hope you will be able to find a sure preventive remedy.”—C. E. FISHER.

All the specimens of bark sent contained living beetles, and those in the cherry bark were the true Peach Bark-borer. Careful examination of the sections of wood sent by Mr. Fisher, as well as by Capt. Sheppard, some of which have been kept in closed jars in my office for nearly a year and in which there are still living beetles, and also field observations at Queenston, show that this beetle works entirely in the bark, where all

the stages are passed. I have not found a single instance where the wood has been penetrated.

"Queenston, March 13.—I examined the trunks of the trees, as you suggested, on a sunshiny day and found beetles crawling with their wings set for flying. You know, ordinarily they do not appear as if they had wings, and those I saw had their wings out ready for use. I will try the alkaline wash, and the first wet day we have when the gum is soft, I will try the brush and emulsion. I believe that, unless these beetles are checked in some way, they are likely to be very troublesome and the cause of much loss to peach growers, as they undoubtedly, to my mind, will destroy the trees unless interfered with."

"June 1.—The peach-bark beetles I have been doctoring with linseed oil. I covered the entire trunk. The first tree, which you saw, to which I applied it, seems as thrifty as any one of the others; it is full of fruit. To two I applied the coal oil; one of them around which I placed a cloth to cover the trunk, at your suggestion, is dying; the other, left exposed, is all right. This contains instruction, I suppose. Those to which I applied the whitewash, have not been free from attack. The linseed oil and coal oil trees have not been bothered since. I shall let you know later how the trees get along, and the beetles also."—C. E. FISHER.

I visited the orchards of Mr. Fisher and Captain Sheppard on April 16th last, just before the buds burst, and found that the beetles were very active and crawling over and boring into the bark in large numbers; but no eggs nor larvæ were found then. Young larvæ were found in the breeding jars in my office at Ottawa early in June, from which the perfect beetles emerged in large numbers in the last week of July and into August. I am of the opinion, although I failed to trace it this year, that there is a second brood from eggs laid in August, which matures before winter and hibernates as perfect beetles in the bark. I have found perfect beetles in the bark from November till April, young larvæ in June, pupæ in July, perfect beetles by July 27 and through August.

In a letter to the *Rural New Yorker*, Mr. Slingerland, of New York State, says: "Eggs have been found in May and July, larvæ and pupæ in July, adults in April, May, July, November and February."

On the appearance of the summer brood, the following letter was written to Mr. Fisher:—

"Ottawa, July 27.—Quite a number of Peach Bark-borers have appeared to-day in the breeding jars. This would look as if the eggs laid this spring had now matured and a brood of beetles was issuing from these eggs. Will you please examine your trees and see if the beetles are not abundant on them just now, running over the bark and sinking fresh burrows? It was supposed that there is only one brood in the year, but the above would certainly look as if there were two, at any rate. I notice that the beetles are pairing, and I imagine eggs will be laid and another brood mature from these eggs this autumn, and pass the winter in the bark, where they will remain until next spring. Please give me your opinion on this."—J. F.

"Queenston, Oct. 15.—Those little Peach Bark-borers have been working worse than ever. First, about the treated trees: Two I treated with pure coal oil; I covered the trunk of one with a sack as you suggested; it died first; the other followed suit about two or three weeks later. The one treated with linseed oil died also, but not until the fruit had about half come to maturity. Those I treated with whitewash and whitewash with Paris green, lived, but became infested with the beetles again after the wash was partially carried away by the rain, and did not do well at all; in fact, they look so bad that I have decided to take them all out and burn the trunks. I treated a large number of trees with the boiled linseed oil, covering the trunk entirely of some of them, of others only in places where beetles had secured a lodgement. All these trees were treated, you remember, after the season was more advanced than when the first one was treated. Those that were healthy, did not seem to be injured by the oil. They passed through the season as well as those with no oil application. Some that were sick, succumbed quite early in the season. I think they were unhealthy at the start. You will gather from this what my conclusions would be. A healthy tree would stand

## Experimental Farms.

the linseed oil all right, put on lightly, not thoroughly saturated, after the trees are out in full leaf, but not before. The linseed oil will kill the beetles, but after a time they will trouble the tree again if some are left anywhere. I noticed this, which you may probably know, that old trees, say nine or ten years planted, are more likely to be troubled with the beetles; still, when numerous, as you saw, they attack young trees. The whitewash was not effective. I was thinking, would it do to add to the whitewash carbolic acid sufficient to make a strong odour? Some bugs are sensitive about bad smells. Would this injure the tree? And would it kill the bugs, do you think?

"In reply to yours of July 27th, I examined my trees and found early in August the beetles running over the bark and sinking fresh burrows. About the middle of August they are very numerous, so much so that on a small tree only two inches in diameter, I killed 64 beetles in about 15 or 20 minutes, about sun-down. They must certainly have been a fresh brood, so numerous were they. I believe, with you, that beetles will mature from the eggs laid this autumn and pass the winter in the bark."

"December 31.—We found the beetle active during mild weather in February last, and in this December they worked nearly the whole month.

"Now, my opinion is, that it is dangerous to use coal oil, or linseed oil either, on peach trees before they have the rough furrowed bark. I have several other trees now which I observed this morning, to which linseed oil was applied freely; one I noticed was about dead, a seven year old smooth bark; several others, a year older, partially dead, all smooth bark; others older, rough bark, apparently all right. I think, notwithstanding what you have heard concerning application of coal oil for San José Scale, that it will have to be used with great caution. I regret it very much, too, it is so easily applied and so effectually disposes of them."—C. E. FISHER.

The following letter refers to the same subject:—

"Queenston, December 20.—In reply to yours of the 17th instant, I would say that the Peach Bark-borer can injure seriously, and if not interfered with, will kill peach trees about the third or fourth year after the attack begins. I think all the experiments I have tried have had some good effect; but none have been quite successful. I have used coal oil emulsion applied with a spray pump; also, whitewash and Paris green applied in the same way; also, plain whitewash applied with a brush, and of different degrees of thickness. All the applications seem to check the work of the borer. The Paris green and whitewash, sprayed with force, and the thick whitewash, seem to give the best results. I applied the whitewash and Paris green twice, the whitewash once. I have been told that this borer is known as the Elm-tree Bark-borer, and I notice that they seem to attack peach trees standing near forest trees, more frequently."—CAPT. JAMES SHEPPARD.

The Peach Bark-borer, and the Elm Bark-borer (*Hylesinus opaculus*, Lec.), although at one time thought to be identical, are entirely distinct, as can be seen at once by examining the antennæ. In the case of the former, the club of the antennæ is composed of three separate flattened joints or plates opening like the leaves of a book; although very small, these are easily distinguishable when the insect is moving. In the Elm Bark-borer the club is slightly compressed, ringed, pubescent and oval pointed. This mistake was first made by Dr. Harris many years ago, and was repeated by subsequent writers until attention was drawn to it by Mr. E. A. Schwarz, of the Department of Agriculture at Washington, who has made a special study of the *Scolytidae*, and who has examined the specimens upon which Dr. Harris based his statements.

The above extracts show that a certain amount of success has attended all of these experiments; and, although some important facts have been found out with regard to the life history of this serious enemy of the peach, particularly as to the early date when the beetles are active and the comparatively long time before the eggs are laid in the spring, yet further investigations are necessary to discover the best treatment and the most suitable remedy. Arrangements have been made for further experiments next season. From the work of Mr. C. L. Marlatt, in fighting the San José Scale, as detailed in *Insect Life*, VII., page 116, it would appear that coal oil emulsion of a much greater strength than was tried in Mr. Fisher's orchard, may be applied with safety to peach trees, and it is just possible that the death of Mr. Fisher's trees may have been due to

some other cause than the applications made to destroy the borers. He has kindly consented to take up the investigation again next spring.

There is no doubt that this is a difficult insect to control, and the usual recommendation has been, in cases of bad attack, to cut down the trees and burn them. It seems to me, however, that less heroic measures will be found to meet the case; for, although this pest is very destructive in certain parts of the orchards in the Queens-ton district, a great many of the trees are only slightly attacked and the wholesale destruction of them would entail much unnecessary loss. I believe that frequent applications of weak insecticidal or preventive washes, perseveringly made at regular intervals from the beginning of March to the end of May, and again when the beetles appear in July and August, would prove effective.

The greatest success may be expected from ordinary Kerosene emulsion (Riley-Hubbard formula), reduced with 15 parts of water, linseed oil, whitewash and Paris green, enough of the latter to give the wash a green tinge; whitewash and carbolic acid, one ounce to a pailful of wash; and particularly the ordinary "Saunders Wash," which consists of soft soap reduced to the consistence of thick paint by the addition of a saturated solution of washing soda in water. If applied during the morning of a warm day, this will dry in a few hours, and form a tenacious coating not easily dissolved by rain. As a preventive wash, this has been found excellent upon young apple trees, and should be applied to all fruit trees as a regular horticultural method every year. It could not injure even young peach trees. I believe that a satisfactory remedy for the Peach Bark-borer will depend largely on beginning operations early enough in the spring. Our present knowledge of the subject would indicate the 1st of March to be about the proper date.

Since the above was written, the following important communication from G. C. Snow, New York, to the *American Agriculturist* has appeared in their issue of January 5, 1895:—

*"Experience with the Shot-hole Peach borer."*

"Two years ago I had several peach trees infested with the Shot-hole borer of the peach, strong, well-loaded early Crawfords. Under directions given by Dr. Lintner I applied kerosene with an atomizer twice thoroughly, the object being to get the kerosene in the holes as far as possible. The application was from the ground up to and as far on the large branches as the beetles were at work. The trunk was saturated. The kerosene, apparently, did not kill the beetles or injure the trees. There were five infested. However, one tree ripened its fruit prematurely, presenting all the characteristics of the yellows, except habit of growth. That tree died in the fall, I believe, from the damage by the beetles, the other trees ripened their fruit at the proper time, but it was of no flavour or value, though fairly good in appearance. These trees came out as well as ever the next spring and are in fine health yet. Some other trees were slightly affected at that time. Since then I have had no trouble from the attacks of the beetles. I wash all trees thoroughly in the spring with the usual material, with the addition of carbolic acid."

### THE SPOTTED PARIA.

(*Paria sex-notata*, Say, Fig. 17).

Fig. 17—The Spotted Paria, life size and enlarged.

*Attack.*—Small, shining brown beetles, shaped as in the figure —  $\frac{1}{2}$  of an inch in length; varying much in colour and markings, but in the commonest form having honey-yellow wing-cases, each bearing two large black blotches; thorax reddish brown; eyes black; legs yellow. In many specimens the markings cover the greater part of the wing-cases; and in some, not only the wing-cases, but the thorax as well, is entirely black. All of these varieties occur together on the same plant.

The attacks reported this year have been only on raspberries, but occasionally the strawberry also is injured. The damage is done early in the season at the time of the bursting of the buds of the raspberry, and is frequently serious.

## Experimental Farms.

Depredations by this insect have been reported to me many times during the past three or four years ; but I have held the matter back, hoping to be able to work out the life history. So far, however, I have been unable to obtain eggs or any definite information in Canada except with regard to its injuries. An interesting account of *Paria aterrima*, Oliv., which seems to be extremely similar if not identical with this species, occurs in Prof. Forbes's *Insects affecting the Strawberry*, 1883 ; but as there are certain dates in that account, that I cannot reconcile with our Canadian observations, I had hoped to obtain material to breed the species through all its stages and compare them : but so far I have been unsuccessful. If *Paria sex-notata* proves really to be a distinct species from *Paria aterrima*, there is little doubt that, like that of the latter, as described by Forbes and Cook, the larva feeds on the roots of strawberries and raspberries. Attention is drawn to this insect now at the request of some of the members of the Fruit-Growers' Association of Ontario. The Spotted *Paria* does not attack the raspberry alone ; for in 1874 Mr. John McGrady, of Gatineau Point, Que., suffered a disastrous attack upon his strawberry beds, many of the plants having the leaves completely devoured and the crop ruined. It was found that hellebore was quite useless against the enemy, and later experience has shown that much stronger poisons are necessary against this beetle than for many others. The beetles appeared suddenly and disappeared again as suddenly about ten days later. For three seasons past, the Spotted *Paria* has been the cause of much loss in some raspberry plantations in the Grimsby, Ont., district. On May 1st, Mr. Linus Woolverton wrote :—"I send you some specimens of a little beetle occurring here in large numbers in our raspberry plantations eating up all the buds. Please say what it is and prescribe a remedy. We fear some plantations will have no fruit left." The following letters from Mr. Martin Burrell, of St. Catharines, Ont., a careful experimenter and successful fruit-grower, will show how difficult an insect this is to combat :—

"May 13, 1891.—Will you kindly give me the name and general habits of the inclosed beetles? My raspberry canes are literally infested with them and I think I am not overstating when I say that one-half of the buds have been eaten and nearly all the young leaves punctured.

"Their very objectionable method of work seems somewhat similar to that of the Grape-vine Flea-beetle, but this, apparently is no flea as far as jumping goes ; for, when detected, he immediately turns over on his back and rolls on to the ground curculio fashion. I sprayed my patch yesterday morning at the rate of 2 ounces of Paris green to 40 gallons of water, but the beetles are still in great force ; though possibly 24 hours is not long enough for the poison to take effect. Some blackberry canes adjoining the raspberry patch are scarcely touched by them."

"May 26, 1891.—Many thanks for your kind letter of the 16th inst., identifying the *Paria* beetle for me. They are most troublesome, and were apparently quite as cheerfully active after two sprayings with Paris green as before. I have given them a third spraying—4 ounces to 40 gallons—and even this did not completely rout them, tho' a slight rain 24 hours after spraying may have prevented the poison doing its work fully. The raspberry canes are so far advanced now, however, that I fancy the beetles can do little harm, unless in the way of providing another crop of the pests for 1892."

"Dec. 30, 1891.—I found that *Paria sex-notata*, which you kindly identified for me, very difficult to destroy ; the little villains very seriously injured my raspberry crop and it would certainly take as much as 4 ounces of Paris green to 40 gallons of water to affect them."

"Feb. 17, 1892.—With regard to your inquiry as to my spraying for the *Paria*-beetle last year, I find in my note book :—

"May 11.—Sprayed raspberries for beetle with 2 ounces of Paris green to 40 gallons of water.

"May 14.—Beetles still thick ; only found two dead. Sprayed again 3 oz. to 40 gallons, comparatively ineffective.

"May 20.—Sprayed again 4 to 40, as the beetles were still very thick."

"I find that rain fell 24 hours after the last spraying and I presume partially destroyed its efficacy. I cannot find that I sprayed again, but my impression is that even this dose did not completely fix things; but by this time I think the leaves had pushed on so far that the beetles could not do much damage. As to the effect on my crop, I am perfectly safe in saying that at least one-third of the crop was destroyed, in many cases every bud on the cane being eaten out. I found that the beetles were generally very shy and wary, on being approached, running to the edge of the leaf and rolling off, or else turning over on their backs and simulating death."

"May 20, 1892.—My old enemy, *Paria sex-notata*, has revisited me this spring in greater numbers than ever. I sprayed with Paris green 4 ounces to 40 gallons, but the foe still bobbed up serenely. To give you some idea of the damage it has done me this year, I may state that out of a quarter of an acre of raspberries not a score of canes have leafed out. I am not the only victim this year, as several of my neighbours have been seriously injured by the beetles; I strongly suspect that their canes were more or less injured last year, but they do not seem to have been aware of the existence of the beetle, and some even this year failed to attribute the damage to the right cause. Where the patches are badly affected, I have advised taking out root and branch and burning, and presume this to be the best course. Do you know how many eggs the beetle lays? Or have you in any way traced out its life history?"

"I might mention that I found one specimen eating a grape vine bud. Is this new to you?"

Mr. John Craig, the Horticulturist of the Central Experimental Farm, found this insect early in May last injuriously abundant in raspberry plantations on the road between Hamilton and Grimsby.

Mr. Adolphus Pettit, of Grimsby, stated that it was in great numbers on a neighbour's raspberries, working on the unopened buds and young leaves, and it occurred on many other fruit farms.

*Remedies.*—The Grimsby fruit growers were recommended to dust the bushes at once with Paris green and slaked lime, or some other quite dry powder, 1 pound of the former to 25 pounds of the latter. This mixture is easiest applied by putting it into a

Fig. 18.—Beating net.

bag of cheese cloth and shaking or tapping it over the bushes. Of course, if this can be done when there is a dew, it is so much the better. Owing to the difficulty of destroying these beetles with poisons and the small quantity of foliage on raspberry bushes at the time of attack, perhaps the most practical remedy will be found to be beating the insects off into a beating net, a light wooden frame with cotton stretched tightly between the side pieces (Fig. 18), and then destroying them by throwing them into some vessel holding water with a little coal oil on the top. An easy plan for collecting them is to hold an open and inverted umbrella beneath the canes when beating them, and then brush the insects out into the coal oil pan.

In a report which Mr. Woolverton has been kind enough to send me on the injuries to fruit crops by insects during 1894, he says:—

"The Spotted *Paria* was very troublesome about Grimsby this spring, eating out the buds of the raspberry, and thus materially reducing the crop. I have made public the remedy you prescribe, and it will be tried faithfully next season by our growers."

I shall be obliged to any fruit grower who, next season, will notify me promptly of the occurrence of this insect on its first appearance, and send me living specimens for study.

## Experimental Farms.

### THE APIARY.

In the autumn of 1893 arrangements were made, in response to several representations made to the Honourable Minister of Agriculture, to institute an Apiary at the Central Experimental Farm. At that time, 10 swarms of the Common Black Bee were purchased. In the spring of 1894 a suitable space was chosen near to the house of Mr. John Fixter, the farm foreman, who had some experience in the care of bees, and who undertook the practical management of the apiary. He has had the sole charge of the bees during the season, and has carried out most carefully with the assistance of his brother, Mr. George Fixter, such experiments as I considered it wise to undertake the first year. I beg to acknowledge gratefully much assistance and valuable advice received from Mr. R. F. Holtermann, of the Goold, Shapley & Muir Co., Limited, Brantford, and Editor of the *Canadian Bee Journal*. In consulting with Mr. Holtermann as to the most useful experiments which could be undertaken with such swarms as we had and under the existing circumstances in our apiary (with which he was well informed) he was good enough, not only to suggest a useful line of experiments to compare the different kinds of foundation comb used by beekeepers in the Dominion, but himself to prepare the foundations for these experiments.

On receipt, these specimens of foundation comb were kindly weighed accurately by Mr. Frank T. Shutt, the Chemist of the Dominion Experimental Farms, and then at the end of the season were again weighed after the honey was extracted. Mr. Shutt has been good enough to prepare a report submitted herewith on these comparative weighings, and has drawn some deductions therefrom which will be read with interest. I also submit an interesting report on the management of the apiary by Mr. Fixter.

The two Italian queens referred to, which were substituted for two of our own, were of a race procured from Mr. Holtermann, of which he says: "They are of a set very light in colour which are at present so freely praised on one side, and on the other as freely condemned. It would be a good experiment to try them at Ottawa for wintering as well as for worker qualities next season."

The annual meeting of the County of Russell Bee-keepers' Association was held on October 16, at Chard, Ontario. This meeting was attended by Mr. Fixter, and he gave an account of the work being carried on with bees at the Central Experimental Farm, which was listened to with pleasure and interest.

We have now in the apiary 20 hives of bees, and preparations have been made for repeating the experiments undertaken this year with foundation combs, with different bee-fodder plants, and as to the best method of preventing injury of the bee-moth. I append herewith reports prepared at my request by Messrs. Fixter and Shutt.

#### REPORT OF MR. JOHN FIXTER.

First steps were taken in the Bee department in the autumn of 1893, when several swarms were purchased. They were weighed in the autumn before being put into the cellar, and again in the spring of 1894. In spring they weighed on an average 20 lbs. less per colony; this reduction is considered large and resulted from the temperature of the cellar being very low during the winter which necessitated the bees consuming more honey than if the cellar had been a few degrees warmer. During November and December, 1893, the temperature varied from 34 to 38 degrees Fahr.; during January, 1894, 32° to 34°; February, 32° to 34°; March 38° to 40°; April 1st to 12th, 40° to 48°. These temperatures are considered too low; from 40° to 46° has been found the best temperature for the whole winter. On April 12th, 1894, the bees began to get uneasy, and, the weather being very fine, they were taken out of the cellar and placed on the summer stands. The first ten days they gathered pollen very freely; after that a very

cold wet period set in and lasted several days, when it was found necessary to feed several of the swarms with syrup (2 parts of granulated sugar and 1 part of water) put moderately warm into a Miller feeder and fed in the evening. Swarming began June 14th. The increase in the number of colonies was very small, and the honey flow of the past season has been poor, not only in the Ottawa district, but in many parts of Ontario and Quebec; several bee-keepers have stated that the past season has been the poorest for many years. The apiary on the farm gave an average of  $23\frac{1}{2}$  lbs. of honey per colony. There was very little honey gathered from clover this season, the bees made most of their store from the basswood (or American Linden) and the honey did not increase in weight after the basswood ceased to flower. No honey was gathered by our bees from buckwheat, as there are no fields of this crop within several miles of the farm. In the experimental work with foundation combs, the following swarms were selected for the experiment: No. 20 was a swarm that came off a colony of Common Black Bees on June 23 and weighed 9 lbs.; No. 21 was partly Italian and partly Common Black Bees, both swarming together on June 24; the weight of this swarm was  $9\frac{1}{2}$  lbs.

On August 4th two thoroughbred Italian Queens were presented to the farm by Mr. Holtermann to be introduced into the apiary. Two hives of Common Black Bees were selected that had a good quantity of honey and brood, with young bees just coming out. The old queens and 12 workers with each, were first taken from the swarms and put into a cage, until it was found that the Italian queens had been accepted by the swarms. The Italian queens were introduced as soon as the old queens were taken away, the cage being placed lengthwise on the top of two frames of honey and brood, the bees being allowed to eat their way through about one inch of honey and sugar before the queens could get out. Drone traps were placed at the entrance, so that if the queens attempted to leave, or if any attempt was made to carry them out, they would be easily seen. Both swarms took kindly to their new queens, and 27 days afterwards young Italian workers were noticed.

September 24th: the hives were all weighed and several were found to be short of stores to carry them through the winter. All hives that did not weigh 50 pounds were fed, September 27th, with a syrup, two parts of sugar and one of water, fed moderately warm, in the evening, in a Miller feeder; 6 swarms before being fed weighed  $214\frac{3}{4}$  lbs., and were given 116 lbs. of syrup. In 18 days afterwards they were weighed again and weighed 297 lbs., making  $33\frac{3}{4}$  pounds less weight than was fed. On November 9th the hives were all weighed again, immediately before being put into the cellar. These same six swarms weighed 286 pounds, being 11 pounds less than on October 12th. This experiment indicates that a person feeding should allow about one-third more syrup than the weight required to make up each hive to 50 pounds.

The temperature of the cellar, November 9-30, 1894, varied from  $40^{\circ}$  to  $44^{\circ}$  F.

*REPORT UPON AN EXPERIMENT WITH SOME BRANDS OF  
"FOUNDATION," BY FRANK T. SHUTT, M.A., F.I.C., F.C.S.*

Wax, like honey, is a true secretion and not a material gathered by the bees, special cells or glands having for their function its production. It differs from honey, however, in its formation in certain particulars. Honey would appear to be the result of the action of a diastase or ferment, produced by certain cells in the bee, upon the cane sugar contained in the nectar gathered from flowers. Wax is manufactured, so to speak, in the bee, and is the result of the physiological function of certain glands, as already stated. Wax, therefore, is produced at the expense of the honey or sugar (as the case may be) consumed by the bee. Thus Dumas and Milne-Edwards found that bees fed with 500 grammes of sugar produced 30 grammes of wax, the same weight of honey only yielding 20 grammes. It would also appear that although pollen is not absolutely necessary to the production of wax, its consumption by the bees greatly reduces the amount of honey or sugar otherwise required (Berlepsch). From this it is evident that wax is secreted, primarily at the expense of the tissue and, secondarily, of the food consumed.

## Experimental Farms.

In supplying "foundation" to the bees, the object is to save much of this expenditure, and thus allow the bees more time and energy for the production of honey.

The primary object of the present series of experiments, as suggested by Mr. Holtermann, was to ascertain the relative ease with which the various foundations tested were drawn out and used by the bees; it, naturally, being held that those would be the most profitable which were utilized in this way to the greatest extent by the bees, or, in other words, those to which the least wax was added by the bees in building the comb. It will be seen that other and perhaps more important results have been incidentally obtained.

The experiments were conducted as follows:—

The frames were filled with the various foundations under test, and the exact weight of two inches square, noted. At the close of the season a similar area of two inches square was cut out of the centre of the full comb, the caps of the cells carefully removed and the honey, was extracted with the extractor and finally by successive exhaustions with cold water. The empty honey-comb was finally allowed to dry in the air and was weighed.

The following tables give in consecutive form the data obtained and the averages therefrom.

EXPERIMENTS with Various Brands of "Foundation," 1894.

Particulars respecting the colour and appearance of the foundations and their resulting honey-comb are contained in the subjoined memoranda :

- A. & B.—Foundation, nearly white, clear and bright ; in the honey-comb it was only a shade darker than the cells.
- C. & D.—Foundation a shade darker than A, but almost white. Honey-comb very similar to A.
- E. & F.—Foundation a bright yellow, clear ; in comb, several shades darker than cells, colour gradually diminishing from foundation plate to top of cells.
- G. & H.—Foundation very pale yellow ; in comb it is slightly more yellow in inner section than in outer ; somewhat darker than wax of cells.
- I. & J.—Foundation brownish-yellow, not so light as E. In comb it is considerably darker than cells, colour shading off from centre.
- K. & L.—Foundation almost identical in colour with that of preceding ; in comb, yellowish brown and considerably darker than the cells, colour shading off as in I. & J. On the whole, very similar in appearance to the preceding.
- M.—Foundation a very pale yellow, in colour this comes between E. and A. ; in comb almost white, scarcely any difference in colour to be distinguished between it and the cells.
- N.—Foundation a bright yellow, a little lighter in colour than E. ; incomb, colour almost gone and in this particular scarcely distinguishable from cells.
- O.—Foundation bright yellow, a shade darker than N., probably owing to greater thickness ; in comb, pale yellow and in this respect differing from N., does not show the same shading off from centre as noticed in some of the heavier foundations.
- P.—Foundation, deep yellowish brown, the darkest in the series, appears to be more elastic than M., which is of about the same weight and from the same mill ; foundation in comb, brownish yellow, colour extending about one half the depth of the cells.

#### DEDUCTIONS FROM THE ABOVE DATA.

1.—That a certain minimum weight of wax is apparently required for the construction and strength of the cells, although not necessarily the same weight is required in every case.

2.—That when a light (in weight) foundation is supplied, the bees make up the deficiency ; in other words, the weight of wax produced by the bees is inversely proportional to the amount of wax supplied as foundation.

This is well illustrated by M. and O, and is borne out to a greater or lesser extent (with one or two exceptions) by the other members of the series. It points emphatically

## Experimental Farms.

cally to the economy of supplying the bees with a foundation of not more than seven and a half feet to eight feet to the pound.

3.—That a dark or deeply coloured foundation gives a dark and unsightly “fish-bone” in the resulting comb, materially affecting its palatability and injuring the sale.

4.—That in addition to what has already been said, there appears to be some support to the theory that certain waxes are more easily worked and drawn out by the bees than others. The results obtained in the experiments with the “foundations in general use” and the “inferior waxes” from the Root mill, would, apparently, lend weight to this view. The facts at our command do not at present allow of any general conclusion being arrived at on this point. There can be no doubt, however, that this factor cannot, in view of the data here given, be of equal importance with that of the weight of wax supplied to the bees in the foundation.

5.—That the present experiments give no definite results that would enable us to draw conclusions as to the relative merits, as regards working by the bees, of wax melted at high and low temperatures.

It might be urged from what has already been said, that it would be economical to supply all the wax necessary for the construction of the comb. There are, however, no facts to support this extreme view. The production of the wax by the bees is a normal function, and its entire cessation might possibly affect the honey yield or lead to a disarrangement of the general health of the bees. There is probably a limit in the amount of wax that can be advantageously furnished as foundation, a limit to be ascertained by future experiments.

## SOME SPECIALLY NOXIOUS WEEDS.

Of the many weeds which have been sent in for identification or inquired about during the past year, there are a few which require more than a passing notice just now. Great attention has been given to this most important subject by the superintendents of all of our branch farms. Mr. S. A. Bedford, of Brandon, has forwarded for identification many specimens from farmers in his district, and has done good work in speaking at meetings on the practical treatment of these agricultural pests. Mr. Bedford has besides prepared for exhibition to farmers, specimens of the more injurious weeds. Mr. Angus Mackay, of Indian Head, has done excellent work in the same line, and has collected for the North-west Assembly specimens of Tumble Mustard, French Weed and others, for exhibition purposes. Mr. Thomas Sharpe, of Agassiz, states that there is a good deal of interest shown by farmers in British Columbia about noxious weeds. He thinks that many of these plants are being introduced in packages of trees, stock cars, etc., and has asked that a collection of mounted weeds might be supplied him for exhibition, as many of the farmers do not know the appearance of some of the worst weeds until these get to be a serious pest, and eradicating them is a costly undertaking. Col. W. Blair writes in a similar strain from Nova Scotia, and among other things reports that the Corn Spurry (*Spergula arvensis*, L.), lately recommended by some as a fodder plant, is one of the very worst weeds in his province. I would draw particular attention to the following imported weeds which call for special efforts.

Fig. 19.—The Russian Thistle: a branch of a mature plant.

THE RUSSIAN THISTLE or Russian Tumble-weed (*Salsola Kali*, L., var. *Tragus*, DC., Fig. 19) referred to in my last report, was detected in July last in Manitoba. Immediately on receipt of specimens, I prepared for distribution to the farmers of Manitoba and the North-west Territories a short bulletin (Experimental Farm Notes, No. 4) giving an illustrated description and concise history of the weed, and suggestions as to the best steps to be taken to prevent its spread. At the same time, the Manitoba Government adopted vigorous measures to fight this terrible pest of the Dakotas and some of the other North-western United States. The farmers of the west, and in fact of the whole Dominion, seem to be thoroughly aroused and to recognize the danger of neglecting this enemy. This is evidenced by the very large number of letters of inquiry and specimens sent in to see if they were the Russian thistle. These specimens were for the most part the true Tumble-weed of the west, *Amarantus albus*, L. from Manitoba, the North-west and British Columbia, and *Sonchus arvensis*, L., from Ontario and Quebec.

Although I have made inquiries from correspondents in Manitoba during the last two years as to whether they had observed any plants of the Russian Thistle, I could not learn of its occurrence in Canada until July last. However, Mr. James Dale, of Grund, Man., sent me in the beginning of September, old stems of the previous year. I was under the im-

pression that this was the first record of the occurrence of the pest in Canada, but I find, from an extended report by Mr. A. K. Leith, the Inspector of Noxious Weeds, of the Manitoba Department of Agriculture and Immigration, an advance copy of which has been kindly placed in my hands through the courtesy of the Hon. Thomas Greenway, Minister of the Department, that the Russian Thistle was first noticed five years ago on a farm occupied by one Peter Rhimer; but it was not till three years ago that it spread far over the district. Under instructions from the Hon. Thomas Greenway, Mr. Leith has made a very thorough search through those districts of Manitoba, where it was thought that the weed was likely to occur, and has explained to the settlers the danger of neglecting this enemy. He has also, by order of the Provincial Government, taken such steps as were possible to bring about its extermination. The weed was found in surprising quantities in some localities, as around Morden, where "it was so thick and dense that the crop was entirely choked out. On a piece of land of about five acres, a farmer, Abram Wiebe, cut with a mower and raked up over 90 cocks as large as good sized hay cocks which after drying out, he burnt." Mr. Leith went through the Mennonite reserve and found the pest all through the country in a greater or less degree. The way it was scattered seemed to indicate more that it had

## Experimental Farms.

been spread in seed grain than by its natural manner of rolling. Very little indication of it was found on the natural prairie, except where there was loose earth around gopher holes. The Mennonites all know the plant, but, as a rule, are indifferent whether it is on their land or not, although a few seemed anxious to secure its extermination. The farmers of Manitoba are to be congratulated on the vigorous manner in which the endeavours to exterminate this weed have been prosecuted by the Provincial Department of Agriculture. In addition to the many localities where the Russian Thistle was found on the Mennonite reserve, small patches were also discovered at Carman, Souris, Wawanesa, Belmont and Baldur, all of which were carefully destroyed by order of the department. Although I do not think it at all likely that the Russian Thistle will become a dangerous weed in Ontario, where it has little chance of "tumbling," it may be well to state that vigorous specimens have been found along the Grand Trunk Railway, south of Lake St. Clair by Mr. J. Dearness, of London; at Toronto Junction, in the Canadian Pacific Railway yards, by Miss Zelma Bogart; and at Smith's Falls on the same railway, by Prof. John Macoun.

Fig. 20. The Russian Thistle : a young stem before the flowering period, natural size and a single seed enlarged.

The Russian Tumble-weed or Thistle will be easily recognized from the figures of a mature branch, an immature branch and seed shown herewith (Fig. 20). The plant most frequently mistaken for it is the true tumble-weed, *Amarantus albus*; but the two can be at once distinguished by the fact that, when the plants are immature, the leaves of the true tumble weed are expanded into a blade half an inch across, while those of the Russian Thistle are thread-like and fleshy. When ripe, the seeds of the former are lens-shaped, black and highly polished, not more than  $\frac{1}{2}$  of an inch in diameter, while those of the latter are shaped as in the figure, dull gray and nearly  $\frac{1}{2}$  of an inch in their greatest length.

Some other western weeds have attracted attention by their aggressiveness during the past season. Mr. A. Mackay writes from Indian Head :—" I can safely say that one half of this farm was literally covered with plants of the TUMBLE MUSTARD, *Sisymbrium sinapistrum*, Crantz, blown in from adjacent farms on November 14, last. By good luck, the greater part of this was fallowed last summer, and I hope not many plants will appear next year in the crop. In 1893 there was not a plant in this whole lot. This year when we ploughed the field for the first time, it was a mass of flower, and the plants were so thick that every foot was covered with the weed. The tree plots, garden plots and all places of that nature were filled up, and continued so till the frost came. Of course, we ploughed, hoed, scuffled, as each new crop came up, and kept them from going to seed. But with fresh importations from the same quarter this fall, I have no doubt there will be plenty again next year. All our crops had more or less plants in them. We pulled them whenever it was practicable; but some places were so bad that we did not touch them until the grain was ripe. The plant is easily killed by fallowing the land, but it is spreading fast in the direction of the prevailing winds. Our council has power to cause the destruction of this weed, and likely will take steps the coming year to do so. If something is not done soon, this whole country will be overrun. Russian Thistle has not made its appearance here yet, and I hope it will not; but, as a weed, it is not any worse than our own tumble weed."

There is another member of the Mustard family which is just getting a footing in the North-west Territories as a noxious weed, *i. e.*, *Erysimum orientale*, R. Br., which has been sent to me by Mr. Mackay, from two or three localities in the same district, and from Beulah, Manitoba. Mr. Mackay says under date of August 29: "The weed *Erysimum orientale* is not on the farm, but is found five miles from here, and has caused considerable loss to the farmer on whose place it has obtained a foothold. I think it is only

on this one farm, and has been there for six or seven years. I send you seeds, young plants just starting and full grown specimens, all collected together." This plant is a slender branching annual with grayish green succulent leaves, on the stem oblong oval in shape and clasping at the base: the root leaves are spatulate, more elongated and not clasping at base. The flowers are small, of a creamy white, and borne at the tips of the branches; they are followed by square pods sometimes three inches in length, containing rather large blackish seeds. From what we know of this plant, there is every indication that it may develop into a troublesome weed, and it requires to be watched. This remark also applies to two other members of the Mustard family, which are every year becoming more abundant, *Neslia paniculata*, Desv., and False flax (*Camelina sativa*, Crantz). The name given in English books for this weed is "Hare's Ear Mustard,"

PERENNIAL SOWTHISTLE, Field Sow-thistle (*Sonchus arvensis*, L.). There are, I believe, in the older portions of Canada few noxious plants which are spreading more rapidly and doing more harm than the Perennial Sow-thistle. It is alarmingly abundant through the province of Quebec and throughout the Maritime Provinces. It is a perennial with strong underground stems, which spread out a long distance from the centre. The leaves cover the ground closely and choke out the crop among which the plant grows. The flowering stems, about three feet in height, have no leaves towards the top, where they bear three or four large yellow flowers, which are conspicuously glandular hairy outside and on the footstalks. The seeds are provided with a copious pappus of pure white silky down, by means of which they are blown long distances. At the time the small grains are in flower or a little later, this plant is easily detected in a crop, from the flowers generally standing up a few inches above the grain. As soon as the conspicuous flowers are seen, every stem as well as the rosette-like tuft of leaves around the base of the main stem, should be pulled. This can easily be done at this season, and as soon as the crop is harvested, the stubble should be ploughed. I am informed by Prof. E. A. Barnard, of Quebec, that in some places this plant is so abundant as to have acquired the name of *Crèves-yeux* (Hard on the eyes) from the necessity of covering the face with a veil when threshing grain to keep the particles of down out of the eyes. When this plant is once noticed in a piece of land, every effort should be made to eradicate it, and this requires the greatest care and perseverance.

## Experimental Farms.

# REPORT OF THE POULTRY MANAGER.

(A. G. GILBERT.)

To WILLIAM SAUNDERS, Esq.,  
Director Dominion Experimental Farms,  
Ottawa.

SIR,—I have the honour to submit to you the seventh annual report of the Poultry Department.

Among the subjects treated, with a view to the winter production of eggs, are :—

1. Different rations and their constituents.
2. Rations within easy reach of the farmer.
3. When and how to feed the rations.
4. The essentials necessary to success.

The Diseases of Poultry and their treatment, also receive some attention.

During the year meetings were attended at Manotick, Hensall (2), Dashwood (2), Wingham (2), Harrow (2), Toronto, Richmond and Cornwall (2), in the province of Ontario, and at Aylmer, P.Q., on two occasions. At these places 16 addresses were delivered on the proper care and management of poultry.

I have to acknowledge the reception of settings of eggs, kindly presented to the Department by the following :—

1 setting White Leghorns (Wychoff strain), from Mr. A. A. L. Jack, Chateauguay Basin, P.Q.

1 setting White Leghorns from Mr. A. G. Brown, Watford, Ont.

1 setting Barred Plymouth Rock eggs from Mr. A. Flawn, London, Ont.

The experimental work and results are given in report.

One result obtained, worthy of particular note, was that from the careful treatment of the hens during their moult. As the moulting period approached the hens were put on a generous diet, similar to that given for egg production. With a free run in the fields and the treatment mentioned, the yearling hens, followed by the two-year-old stock, were first over their moult and as a result 538 eggs were had during December, most of which were laid by them. The unusually mild weather in December was no doubt a factor also, but the fine appearance and condition of the stock were too decided to leave any doubt, as to the benefits of care, good feeding, and housing of young stock. As a rule the laying stock of the farmer receive no particular attention at their moult, and most of them are kept until they are too old.

I am, sir, your obedient servant,

A. G. GILBERT,

*Manager Poultry Department.*

## RATIONS.

During the past year careful consideration has been given to, and observation made of, the effect of varied rations in producing eggs in the different seasons. Perhaps closer observation was made during the winter season—the period of artificial existence—with the object of producing eggs, at as little cost as possible at the time when they are highest in price. The substance of these observations will be found in the following pages. It is obvious that the cheaper the cost of production the greater will be the margin of profit, and if we can have this cheap food easily available, so much more beneficial will it be to the farmer and poultryman. It may be like going over old ground to discuss the subject again, but it is one of very great importance, and in which every year makes some important difference and all in the way of advancement. Again, more importance attaches to the subject, because the procuring of a cheap and effective egg-producing food, for winter use, has lately engaged the attention of leading scientists and practical poultrymen in Great Britain and this continent to a greater extent than ever before. Among the leading authorities in England, who have given the subject their attention during the past twelve months is Mr. R. Warrington, a chemist, who says in an article on “poultry and poultry rations” in the *Agricultural Gazette* of London:—“The winter production of eggs and the rearing of early spring chickens, so that the highest prices may be realized in each case, is not made the subject of careful study.”

## THE HEN AN IMPORTANT FACTOR.

And in order to make good his contention he gives the following figures. He says:—“A good cow may produce in a year six times her weight of milk, with a calf in addition. If we take the cow as weighing 1,000 lbs., we have in the salable product about 800 lbs of dry matter, containing 36·8 lbs. nitrogen. Hens of good laying breeds, weighing 1,000 lbs., will in the same time lay 6,000 lbs. of eggs, the contents of which will include 1,404 lbs. of dry matter containing 120 lbs. nitrogen.” In corroboration of this statement, Mr. M. G. Gillikins, another authority, shows in a table prepared by him that taking the Hamburg hen as a layer of 200 eggs per annum, that she will in that number of eggs lay 6·40 times her live weight. He puts the Spanish and Leghorn next with 190 or 150 eggs each, or 4·22 times their weight. “This goes to show,” he says “that in the year of their best production, viz., the second year, the best laying breeds will furnish five to six times their weight in eggs.” Thus we have two good authorities arriving at the same conclusions, which go to show that the hen is being recognized by leading authorities as an important factor in agriculture. Returning to Mr. Warrington and how to feed the hen, he says: “that since cows milk is much richer in nitrogen than the carcass of an animal, so the food supplied to cows should be of a specially nitrogenous character. The argument”, he says, “has still greater weight in the case of the hen, as we have seen that her production in the same time from the same body weight contains three and a quarter times as much nitrogen as that of the cow.” It will be interesting to consider some of the best egg producing rations within easy reach of the farmer.

## DIFFERENT FOODS.

## RATIONS WITHIN EASY REACH OF THE FARMER, THE DAIRYMAN AND MARKET GARDENER.

What should be aimed at, and what has been sought after in the poultry department is to have an effective and cheap ration. What is required is a well balanced

## Experimental Farms.

ration. Col. T. D. Bliss, in Hoard's Dairyman, gives the following list of foods and their description :—

*Highly Nitrogenous Foods*—Skimmed milk, buttermilk, cotton seed cake, linseed meal, rape cake, malt sprouts, brewer's grains, sunflower seeds, hempseed cake, red clover before bloom, young pasture clover, rich pasture grass, lucerne before bloom ; flaxseed, pea-meal.

*Foods with an excess of Carbonaceous Matter.*—Cream, oat bran, corn bran, wheat middlings, corn, buckwheat grain, oats, barley, rye, carrots, sugar beets, potatoes, corn cobs, ensilage, fodder rye.

The following are given as useful forms of food for poultry :—

Cow's milk, barley middlings, buckwheat bran, barley bran, rye bran, coarse wheat bran, cotton seed, millet, wheat, turnips, cabbage, white clover, red clover, and alsike.

### SUITABLE FOR BOTH THE DAIRY COW AND THE HEN.

In the list will be noticed cow's milk, wheat, turnips, red clover, cabbage, wheat bran and buckwheat bran, all of which are more or less available on a farm, particularly where cows are kept in any number. Indeed, the objection may be raised to the vegetable and some of the other materials named, on the ground that they are intended more for cows than hens. But it is a point in favour of the poultry department, that the food which is best suited to the dairy cow is also the best for the laying hens. As a matter of fact much of the waste of the dairy may be utilized as most suitable food in the hennery. In the first report issued by the Experimental Farm Poultry Department will be found the statement "that milk dealers and market gardeners are most favourably situated, as regards the disposal of new laid eggs in winter at the highest figures, for they are among the best people in the city every day." That remark, perhaps, more particularly applied to the opportunities for obtaining high prices, but it is gratifying to find that the dairyman is still more favourably situated, inasmuch that the waste material, or at any rate the material that he has in abundance in his establishment, is one of the best rations for poultry. The waste of the market gardeners, in the shape of unmarketable vegetables, &c., &c., is suitable as good food for egg production.

### Cow's MILK.

As to cow's milk, not long since, I had a letter from a gentleman in the province of Quebec, who asked, "if milk is a satisfactory food for hens, as he had plenty of it?" He was answered that it was not only good for his laying hens, but one of the best rations to make his young chickens grow rapidly and vigorously. Again, a leading authority on dairying in the same province wrote me, "If you think milk can be used to good advantage in the poultry department, you will do well by advocating its use, for we are having a large number of dairies started, and there will be plenty of it to spare." As in the previous case, answer was returned that it was one of the best foods for both fowls and chickens.

### TOO MUCH GRAIN AND ITS EFFECTS.

The experience of the past seven years goes to show that a great deal too much grain is fed. A farmer writes: "I feed my hens all the grain they can eat and yet they do not lay." It is generally the case that when grain is made the sole feed, the result is fat rather than eggs, and as is frequently stated in our reports, "a fat hen will not be a laying one." No doubt in the case mentioned above the farmer fed altogether too much grain. It must be recognized that fat is a disease in the laying stock. It has been stated in a previous report that the laying stock require, while confined to winter quarters, to be supplied with all the materials necessary to make the shell as well as the egg. In other words that the hen, in winter quarters must be supplied

artificially with what she can pick up for herself while running at large. If grain is constantly fed the first intimation given will be an egg laid with a thin shell. This is a hint that there is not enough egg shell forming material in the ration, or in other words that your ration is not well balanced. It is also noticed that if your stock is composed of Asiatics such as Brahmas, Langshans, Cochins, &c., &c., that they are getting too fat. And if the hint is disregarded, the egg shells will become rapidly thinner, until an egg is laid without any shell at all. Sometimes eggs with thin shells, or without shells, are laid as the result of too much "stimulating," such as the inordinate use of red pepper, or condition powders "warranted to make hens lay."

#### CLOVER HAY.

Mr. P. H. Jacobs, a chemist and poultry breeder, who has given the subject a good deal of study, says:—"One hundred grains of lime are needed to make a strong shell on each egg, and as 1,000 lbs. of wheat or corn contain less than a pound of lime, the hen cannot get the lime she requires to make a strong shell. We actually require a ton of wheat to furnish lime enough for ten dozen of eggs." The same authority says that there is thirty times as much lime in white clover as there is in the same quantity of wheat, and twenty-eight times as much in red clover. He goes so far as to say that clover will supply "all the lime the hens require." While the latter statement cannot be fully endorsed by experience in our poultry department, there can be no doubt that it is an excellent ration while used with others. It is first cut into half-inch pieces by clover cutters, and steamed during the night by placing it in a pail and throwing boiling water over it; covering the pail and leaving it until morning. The laying stock in our poultry-house did not take to it when given to them by itself, but eat it readily when mixed with shorts and bran, and which without doubt, made a splendid and effective morning ration. While on this subject it might be as well to quote the statement of the late Mr. F. A. Mortimer, of Pottsville, Pa., who kept over 2,000 pure-bred fowls, and who said two years ago in regard to clover "that had he known of the clover hay food for hens, four years ago, (1888), he could have saved \$1,000 and that since he began to feed it that he got more eggs and found fewer sick hens." Mr. Mortimer is credited with being one of the most scientific feeders of his day. Another authority also, a chemist and editor says:—"There is no ready substitute for clover hay as a poultry food. It is not only rich in nitrogen, lime, sulphur, phosphoric acid, magnesia and soda, but also abounds in potash and carbon. *Balanced with a small quantity of grain*, the heat and warmth of the body is secured, and the elements of egg production provided. It is easily digested and avoids over-fattening, the *great scourge* of the farmer and poultryman."

Observation has led to the conclusion, that while wheat is undoubtedly the best all round, or best balanced grain food, that if fed entirely alone produces fat rather than eggs, particularly in the case of the heavy breeds, but when balanced with red or white clover hay is a good egg producer, and both have the merit of being easily obtained.

Cow's milk, while not in great abundance on every farm is generally so with dairy-men. It is a good food for poultry, skimmed, sour, or in the shape of buttermilk.

Vegetables are in good supply on almost every farm, and particularly so with market gardeners. So we have among our well balanced foods articles of diet within easy reach of the farmer.

#### CUT GREEN BONES.

Not many years ago the orthodox rations for laying stock were grain, vegetables, gravel to grind up the food and lime to make shell, with an occasional warm mash in the morning. Now the three great factors in egg production are cut green bones, green food with grain in moderate quantity, and exercise. The recognition of the poultry department, as an important revenue-producing branch of agriculture, has led to the study of the best means to produce the egg, or, fatten the chicken at the least possible cost,

## Experimental Farms.

and the result has been the adoption of green bones as the principal factor in egg production, because it is the nearest approach to a perfect food yet put within the reach of the poultry-keeper. It is understood that we are treating of fowls which live an artificial existence for several months of the year and which are expected to produce during that period the high price egg. No hens lay as well, as when running at large and enjoying a thoroughly natural existence in summer. The aim of the true poultry-keeper is, to as nearly approach as possible these natural conditions in the winter housing and treatment of his laying stock, and he who most successfully does so reaps the richest reward. It is evident that by finding out what the egg is composed of and feeding those constituents, that we are more likely to get the egg. The authorities quoted from, tell us that lime, nitrogen and phosphoric acid, are among the important constituents of eggs. From the same authorities we learn that green bones are rich in albumen, phosphoric acid and phosphate of lime; hence their value as an egg producing food, and their cost is a minimum one. At our poultry department the green bones are delivered by the butcher,—while serving other customers with meat,—at one cent per pound. We are now met with the difficulty as to how the average farmer can procure this food. If the cost is not too much he can purchase a Canadian-made bone mill for fifteen dollars. The question of cost, is no doubt a serious one to the individual farmer, but it can be made comparatively light by a number clubbing together to purchase a small machine and so arranging that it can be used in turn. Or, place a larger one in a creamery or cheese factory, where there is always power and when the farmer brings his milk he can bring the bones and have them cut up. It takes but a short time to cut up enough bones to feed 50 or 100 hens, once a day, or three times per week. It is but reasonable to anticipate, that when the demand for this food becomes general the large butchering establishments, or *abattoirs*, will cut up the waste bone, and supply the farmers with it, at a moderate figure, say one cent per pound. Cut green bones should be fed in the ratio of one pound to every sixteen laying hens.

### OTHER EGG-PRODUCING RATIONS.

Should it be difficult or impossible to procure cut green bones, the heads, livers and lights of animals killed on the farm may be used, after being well boiled. In some poultry districts no part of an animal that will make clean, wholesome food is allowed to go to waste. This boiled food may be fed separately, or cut up into fine pieces and mixed with ground grains, so as to make a warm morning mash, which should always be fed in a crumbly condition. In such a case, or, indeed in any case, the table and kitchen waste can always be utilized in the warm morning mash. Lime for shell, and the necessary grit, will have to be supplied. The afternoon ration will be a liberal one of grain. Rations might be arranged as follows to meet almost every case.

#### RATION 1.

*Morning*.—Boiled heads, livers, lights, &c., cut up fine and mixed with shorts, bran, cut clover hay, provender, ground oats, and table and kitchen waste with a modicum of black or red pepper dusted in. Pour boiling water over the whole, and allow it to stand until so cool that it can be held in the hand without difficulty. Feed this in a "crumbly" state and in such quantity as to barely *satisfy*, not to *gorge*. Follow this by throwing a handful of grain in the straw, or other litter on the floor, so as to start the hens scratching.

*Noon*.—A small quantity of grain, say oats, to be thrown in the floor litter to keep hens busy.

*Afternoon*.—This last daily ration must be fed before it is too dark, and should be given in such quantity as to fill the crops of the layers, for they have a long night fast before them. Wheat or buckwheat is best.

The foregoing ration ought to suit those who cannot get cut green bones. In such a case lime is best supplied in the shape of ground oyster shells, old mortar, &c.

## RATION 2.

*Morning.*—Cut green bones in quantity of 5 lbs. to every fifteen hens. Follow as in previous ration, by throwing a little grain in the floor litter to keep hens busy.

*Noon.*—Scatter a little more grain to keep hens going.

*Afternoon.*—Send layers to roost with crops full of wheat or buckwheat.

## RATION 3.

*Morning.*—Ground corn, ground oats, bran in proportion of 10 lbs. each; linseed meal 1 lb.; salt 1 oz. Mix this intimately and put 1 quart of it into a bucketful of dry cut clover hay, or any kind of cut hay and mix with boiling water. This is calculated for thirty laying hens; enlarge to suit a greater number.

*Noon.*—As directed in previous rations. Keep the hens active, but do not overfeed at this time.

*Afternoon.*—Give a liberal grain ration, for reasons given.

## RATION 4.

*Morning.*—Two quarts bran; one quart middlings; one quart cornmeal; half pint oil meal. Mix four pounds of this with 16 lbs. small potatoes boiled and a small quantity of ground bone. Dust a little pepper in the mess. The foregoing will be enough for 100 hens.

*Noon and Afternoon.*—Rations as in previous ones.

## RATION 5.

*Morning.*—Small potatoes, turnips, or other vegetables boiled and mixed with one quart of cornmeal and the same quantity of bran, to which may be added the table and kitchen waste, and a couple of handfuls of coarse sand, or fine gravel with a small quantity of ground bone. The whole fed warm for a morning ration offers variety.

*Noon and Afternoon.*—Rations as directed.

## RATION 6.

*Morning.*—A correspondent gives the following in *Farm-Poultry* as a good winter egg-producing ration: 3 lbs. oatmeal, 1 lb. dried blood, 1 lb. cut green bone, 4 lbs. pea-meal, 1 quart skimmed milk. Enough for forty or fifty hens.

*Noon and Afternoon.*—Rations as directed.

Objection may be made to the last named, on the ground of expense, but there is plenty of room for choice in the other rations named.

## THE OTHER ESSENTIALS NECESSARY.

*Green Food.*—In every case vegetable or green food of some kind should be supplied. In previous reports the hanging of a cabbage from the ceiling of the hen-house to within three feet of the floor has been recommended as an excellent means of furnishing green food and exercise. And it certainly is so. Mr. D. J. Lambert, an authority on poultry matters, says:—"Green foods, as has been often said, are too sparingly given. The majority of poultry-keepers feed too much grain. Less grain and more grass should be the watchword. Cabbage, turnips, cut clover, onions, or anything of a vegetable nature, cheapens the cost of feeding, tends to keep the fowls more healthy, and that means increased egg production, and consequently more profit." It is a fact well known to poultrymen that hens and chickens enjoying free range will fill their crops nearly half full with grass and greens every day.

## Experimental Farms.

*Grit* is another important essential. It is actually the hen's teeth. It should be always before the fowls, and may be supplied in the shape of gravel, sifted coal ashes, crushed oyster shells, broken stone or clear grit. There are several forms of grit substances sold for use of poultrymen, all of which are good. Oyster shells are good for grit, also supplying lime for the egg shells.

*Exercise* is another important factor, as has been already remarked, in making hens lay in winter. To keep the hens constantly active requires skilful managing and experience. It is not so easy as may seem, at first glance. It is best secured by throwing the grain among straw, litter, or dry earth (which should be on the floor of the poultry-house) and feeding it as directed in ration No. 1. If dry earth or sand, is used on the floor instead of straw or other dry litter, the earth or sand must be raked over the grain, so as to keep the fowls busy searching for it. In report of last year a diagram of a building and shed attached for the laying stock to scratch in was given with full instructions as to the best means of keeping the laying stock in activity.

*The Drink Water.*—It has been urged in previous reports to have the temperature of the building, if at all possible, at such a figure (35° or 40°) that the water will not freeze. And where it does freeze the chill should be taken off before the layers are permitted to drink it. This should be done at least three or four times daily. A constant supply of pure water is an important essential.

*A Comfortable House* is another requisite to egg production. Experiment has proved that where the layers are kept in cold habitations, that the food instead of going into eggs will be drawn upon to supply animal heat. Experiment has also led to the conclusion that if the hens are kept comfortable at night so much the better will results be. A room with a low roof or a screen, to be let down over the roosting place at night, might utilize the warmth from the bodies of the fowls. In some recently constructed poultry-houses, the room for roosting in, and that for feeding and exercising in, are separate apartments.

### THE SCIENCE OF FEEDING.

The feeding of the laying stock, so as to ensure the best results at as little cost as possible, is a science. It has to be studied, and to be successfully practised an apprenticeship has to be served, in order to gain the experience necessary. Hence you find intending poultry keepers in many cases taking positions in large poultry establishments in order to gain the knowledge or experience necessary to success. By the Experimental Farm system the best methods are found out, and the experience gained, is conveyed to the farmers in the shape of reports and bulletins, so saving time and expense. The rations may be of the very best, and the good effect lost by a lack of knowledge how to feed them properly. The experience of the past eight years leads to the endorsement of the following, "On the proper method of feeding fowls," by Mr. A. F. Hunter, one of the leading poultrymen of the day, who says in *Farm-Poultry*:—A fowl should have an empty crop in the morning and a full one at night, and she should not fill it at one or two railway-restaurant-style of feeds, but should fill it a little at a time and be kept at work all day filling it. The *work* is as essential as the food itself. Next in importance to a well balanced ration is bodily activity and that bodily activity is best promoted by keeping the hen hunting for her food." And then follows instructions as to proper feeding similar to those given in my reports of 1889, 1890 and 1891. Concluding, Mr. Hunter says:—The very best way to feed fowls in winter, is to give them for breakfast a light feed of mash (as described). An hour later scatter three or four handfuls of oats or barley, (in the straw litter) to start them scratching; about eleven o'clock three or four more handfuls of barley or oats and more scratching; about one o'clock a very light feed of wheat, to be scratched for and then enough to fill up the crop for last feed. Keep the hen a little hungry, keep her wanting just a little more, and she will work and sing and lay eggs."

The subject of rations and the proper way to feed them has been treated very fully in the foregoing pages for the reason that numerous letters have been received during the past year, as to what and how to feed and the proper quantity to give. This, not-

withstanding the information fully given in previous reports, which have been extensively circulated and read, and which doubtless goes to show the greatly increased demand there is for information on the subject.

### THE EXPERIMENTAL FARM RATIONS.

#### WHAT WAS FED DURING THE PAST YEAR AND THE RESULT.

During the winter of 1893 beginning from the month of January, the daily rations were mixed as follows:—

*Morning Rations.*—Warm mash composed of ground wheat, ground barley, ground oats, ground rye &c., bran. Occasionally small potatoes were boiled, or cut clover hay steamed and mixed with the mash, so as to have variety. When cut green bones were fed for the morning ration the mash was not given.

*Noon.*—Light feed of oats scattered among the floor litter. Sufficient grain only to keep the layers busy.

*Afternoon.*—Wheat or buckwheat were given in quantity to fill the crops of the layers, and fed early enough so as to have the fowls search for it. When cut green bone was given for last ration, grain was fed afterwards to fill up the crops.

Vegetables in the shape of mangels, carrots, turnips and cabbage were all, or most of the time, before the layers, as were grit, ground oyster shells, gravel, coal ashes, &c., &c. Pure drink water and dust baths were also supplied.

#### THE LAYING STOCK.

The laying stock to which the above mentioned rations were fed, were composed of the following:—

	Hens.	Pullets.
Barred Plymouth Rocks.....	9	13
White ".....	..	18
Houdans.....	6	5
Silver Laced Wyandottes.....	4	6
White ".....	..	7
Langshans.....	1	8
Light Brahmans.....	9	..
White Leghorns.....	11	..
Red Caps.....	5	6
Black Minorcas.....	9	7
Langshan B., Minorca cross.....	..	10
W. Leghorn, Brahma.....	5	3
	59	83

The following were used as breeding stock, and were not supposed to be stimulated to lay:—

#### BREEDING STOCK.

## Experimental Farms.

### COMPOSITION OF THE LAYING STOCK.

The number of layers is apparently 142, but it should be understood that among them were a number of old hens and late hatched pullets. The former would not lay as well as a hen in her prime, and the latter would be late in starting. As stated in previous reports, the old hens, particularly those of the Asiatic breeds, are not money makers during winter, for they are late in moulting, and before beginning to lay eat much of the profit they may afterwards make. The late hatched pullets become apparently stunted, for the time being, by the cold. The old hens are useful as steady sitters and careful mothers, but where reliable incubators are used, they are not required. By careful observation and calculation, there were 75 or 80 steady layers, and they gave the following number of eggs in the months named :—

January.....	777
February.....	791
March.....	1,644

### PREPARING FOR SPRING.

Towards the middle of the last named month the breeding stock were mated, and by the end of the month, the eggs from them were saved for hatching purposes and sold at \$1 per setting. The combined egg yield for the following months was :—

April.....	1,939
May.....	1,650
June.....	1,066

As soon as the weather permitted, the fowls were allowed to the outside runs, where they had grass, gravel and sand.

At the end of June, the breeding season was over, and the hens were allowed to run at large in the fields in rear of the poultry houses, the male birds having been first removed from the breeding pens, and placed in pens by themselves.

### TOTAL EGG YIELD FOR THE YEAR.

The total egg yield for the year, according to months, was as follows :—

January.....	777
February.....	791
March.....	1,644
April.....	1,939
May.....	1,650
June.....	1,066
July.....	941
August.....	386
September.....	236
October.....	161
November.....	114
December.....	538

### SOME LESSONS FROM THE FOREGOING.

It will be noticed from the foregoing figures that during the moulting period of September, October and November, there were few eggs laid, for the reason that the hens were comparatively non-productive. During the moulting season the hens were well fed and cared for, as well as having the run of the fields. The result was the great majority of the yearling and two year old hens were in fine condition and ready for winter laying by the end of November. It should be remembered by farmers that their moulting hens require the same care as do the layers in winter. During the moulting period, the food, which at another time goes into eggs, is drawn upon to supply the rapidly growing feathers. The hen which has been a regular layer all the previous winter will take a rest during her moult and she will have well earned that rest. Another lesson to be learned is that in order to keep up the egg supply during the period

of non-production, scarcity and higher prices, that early hatched pullets are necessary. The difficulty in getting early sitters is no doubt the great drawback, but incubators are now more extensively used for the purpose, and it is only a question of time when they will be in general use.

#### THE BEST LAYERS.

As in previous years the Black Minorcas, Andalusians, Plymouth Rocks, Langshans, Brahas, and Wyandottes, proved themselves the best layers. The White Leghorn Brahma, and the Langshan Black Minorca crosses made excellent layers.

#### LARGE EGGS.

It is worthy of note that the Black Minorcas, (see fig. 1); Langshans, (see fig. 5); and Light Brahas, (see fig. 4), not only laid well during the winter, but laid very large eggs. The month of December of last year (1893), was a particularly cold one, but the breeds named did not seem to be so much affected by it as were the late hatched pullets. On the 16th January four or five dozen of Black Minorca eggs were weighed, when a number were found to go six to a pound, and all went seven to the pound. Eight dozen Brahma and Langshan eggs were also weighed, and the great majority went seven to a pound. The eggs were shown to many visitors as a sample of what could be done by the farmers of the country in supplying the demand for large eggs in any of the markets offering.

We give as follows, cuts and description of the breeds which lay large white and dark coloured eggs, and which have been tried at the Experimental Farm.

#### LAYERS OF LARGE WHITE EGGS.

Fig. 1.—BLACK MINORCAS.

*Black Minorcas.*—This is one of the leading breeds of large white egg layers, perhaps the greatest layers of large eggs known. They are rapidly taking the place of

## Experimental Farms.

the Black Spanish, as they are larger and hardier, the males making fair table fowls. They are good winter layers when properly housed and fed as all fowls should be. The fowls and chickens are hardy, the latter growing rapidly. Females lay 130 and 140 eggs, or more, per annum, and eggs frequently weigh 6, mostly all 7, to a pound. The standard weight of the cock must be 8 pounds; hen,  $6\frac{1}{2}$  pounds; pullet,  $5\frac{1}{2}$  pounds; cockerel,  $6\frac{1}{2}$  pounds. The laying stock require to be kept busy in winter quarters and liberally supplied with egg shell making material. The females are non-setters. The hens of the white variety are also prolific layers.

Fig. 2.—WHITE LEGHORNS.

*White Leghorns.*—One of the best layers at all seasons of a large white egg. Some strains lay larger eggs than others. They are non-setters, hardy, and mature rapidly, and will lay well in winter, in a moderately comfortable house. The chickens thrive well and feather quickly, and the hens lay a white egg of large size. The pullets lay at five or six months, or sooner if hatched early. The Brown and Black Leghorns are also great layers. They are good fowls for farmers when kept with a breed of sitters. They are great flyers, like all the Spanish family. There is no standard weight for this breed. The eggs from hens of a large egg laying strain weigh  $2\frac{1}{4}$  ounces each; per dozen, 1 pound 10 ounces to 1 pound 11 ounces. Like the Black Minorcas, the layers require to be kept in activity and well supplied with lime to make shell.

### ANDALUSIANS.

*Andalusians.*—Another breed of the Spanish type, and as a breed of layers rivaling the Leghorns. They are likely to occupy a high position among poultry fanciers on account of their superior laying merits. They lay well in winter, when looked after, and are hardy, quick-growing chickens. They do not breed true to colour or markings in every case; but that is a matter of secondary importance to those who wish to keep

them for their laying properties. Like the Black Spanish, they are not heavy weights, and in consequence are not so good for table use as the heavier breeds. Pullets lay when six months old. Hens lay large white eggs, the weights of which are often  $2\frac{1}{4}$  ounces each, and 1 pound 11 ounces to 1 pound 13 ounces per dozen. When closely confined they require to be kept busy.

Fig. 3.—HOUDANS.

*Houdans.*—The females are layers of large white eggs. They do better when permitted extensive range. Chickens are hardy, grow rapidly, and are great foragers, but owing to large crest on head are apt to fall an easy prey to hawks, &c. They have the five toes of the Dorking. The cockerels are good for table use, the flesh being white and of superior quality. They often make 1 pound per month in weight. Hens' eggs weigh  $2\frac{1}{4}$  ounces each and a little more when fowls have unlimited run; per dozen, 1 pound 12 ounces to 1 pound 15 ounces. The standard calls for the following weights:—Cock, 7 pounds; hen, 6 pounds; cockerel, 6 pounds; pullet, 5 pounds. The females are non-sitters.

*Other Breeds.*—The following breeds which have not been tried at the Experimental Farm lay large white eggs:—Black Spanish and White Crested Black Polish.

## Experimental Farms.

### LAYERS OF DARK OR BROWN COLOURED EGGS.

Fig. 4.—LIGHT BRAHMAS.

*Light Brahmas.*—There are layers of large richly coloured eggs. They are a well known and old established breed, with many friends and admirers, and grow to a large size and heavy weight, but take time to do so. They have large frames, and a good deal of feed is required to put flesh on them, but they are very hardy, both as chickens and fowls. They are quiet and bear confinement well. Females are fair layers of eggs of good size, but rather heavy for early sitters (when egg-shells are likely to be thin), and apt to be clumsy as mothers. After seven or eight months of age the males make good table fowls. The pullets lay at about seven months of age. The laying stock in winter quarters must be kept in exercise, and must not be overfed or they will become too fat to lay. Hens' eggs weigh  $2\frac{1}{4}$  ounces to  $2\frac{1}{2}$  ounces each; per dozen, 1 pound 12 ounces to 1 pound 13 ounces. The weights demanded by the standard are: cock, 12 pounds; hen,  $9\frac{1}{2}$  pounds; cockerel, 10 pounds; pullet, 8 pounds. They are classified as Asiatics. The Dark Brahmas are also a meritorious variety.

*Langshans.*—These are a favourite breed of great merit, and are classed as Asiatics. The hens lay a large egg of a rich brown colour, and many of them. Some eggs laid by Langshan hens in the poultry department of the Central Experimental Farm during last winter weighed 7 to 1 pound. The cockerels put on flesh at the rate of 1

Fig. 5.—LANGSHANS.

pound per month, and as their flesh is very white they make good market chickens. Both fowls and chickens are very hardy. The standard weights are : cock,  $9\frac{1}{2}$  pounds ; hen, 7 pounds ; cockerel, 8 pounds ; pullet, 6 pounds. Some of the male birds grow to a large size, and weigh between 11 and 12 pounds.

## Experimental Farms.

*Buff Cochins.*—This is another of the Asiatic breeds with a large number of friends. Some strains lay much larger eggs than others. Like all the other breeds of this class, they require to be kept active when in close confinement. The eggs from the hens of some strains weigh  $2\frac{1}{2}$  ounces each, but all are of a rich dark colour. The chickens are hardy and grow well, showing about the same development as those of the Light Brahmas. The standard weights are: cock, 11 pounds; hen,  $8\frac{1}{2}$  pounds; cockerel, 9 pounds; pullet, 7 pounds. The other varieties of this breed are White, Black and

FIG. 6.—BUFF COCHINS.

Partridge Cochins, the characteristics of which are about the same as the Buff. The cockerels put on flesh at the rate of about 1 pound per month after first [month. The pullets lay at about seven months of age. These are perhaps a little slow for farmers, but may make a good cross. They are not now kept at the Experimental Farm] for the reason that they have not been profitable as layers.

*Other Breeds.*—The following breeds not yet tried at the Experimental Farm are also layers of large dark eggs. Black Cochins, Partridge Cochins, and White Cochins.

## BREEDS GOOD FOR EGGS AND MARKET.

FIG. 7.—BARRED PLYMOUTH ROCKS.

*Barred Plymouth Rocks.*—This breed is one of the most popular on the continent as an all round fowl for the farmer, and deservedly so. The females mature quickly and lay well in winter, with moderate protection and proper feeding. The eggs are not quite so large as those of the Minorca or Brahma, although of good marketable size for home and United States markets. Some strains lay larger eggs than others. The chickens are hardy and vigorous. The cockerels have put on more flesh per month, with the same rations, than any others tried at the Central Experimental Farm in six years. After the first month or six weeks the cockerels, with proper care and pushing, ought and will put on flesh at the rate of one pound and a quarter per month. A farmer ought, with a little trouble, to be able to put on the market Plymouth Rock cockerels weighing eight pounds per pair, or four pounds each, at the end of four months. What an improvement there would be in the weight and quality of the chickens sold on the markets of the cities if the majority of farmers bred Plymouth Rocks instead of the “scrubs” usually seen about the barnyards? There are three varieties of this popular breed, viz., the Barred, White and Buff. The latter is a new comer.

## Experimental Farms.

*White Plymouth Rocks.*—This is a variety lately introduced but equally popular. All the good points of the latter are claimed for these new comers, with the addition of greater size and whiter appearance of flesh, owing to the absence of the dark pin feathers. They are hardy, rapid growers as chickens, and the pullets are excellent

FIG. 8.—WHITE PLYMOUTH ROCKS.

layers. At the Experimental Farm last summer (1893) a cockerel hatched on the 21st May weighed six pounds on the 21st September following. The pullets made large and handsome fowls by the middle of winter, and began to lay in six months. The standard calls for the following weights, viz. : cock,  $9\frac{1}{2}$  pounds ; hen,  $7\frac{1}{2}$  pounds ; cockerel, 8 pounds ; pullet, 6 pounds.

*White Wyandottes*.—This is a very promising variety of this popular breed. They have all the good points of the Silver Laced, with the advantage of dressing better for market on account of the white pin feathers not showing so darkly as in the case of the

FIG. 9.—WHITE WYANDOTTES.

Silver Laced or Golden varieties. The chicks are hardy and grow well. The pullets begin to lay at five and a half to six months, and are good layers of a medium sized egg. The cockerels mature early and make good market chickens. A cockerel hatched on 30th May, weighed on 2nd October following 4 pounds.

#### DORKINGS.

*Dorkings*.—The Dorkings are, perhaps, one of the best known and appreciated breeds extant, on account of their superior table qualities. They are a breed that should be sought for by all who wish to put fowls of superior flesh properties on the market. There are three varieties in this country, viz., the Coloured, Silver Gray and White. These all possess the same excellent qualities for the table, and the females are fair layers of an egg of good size. Mr. Allan Bogue, the well known poultry breeder of London, Ont., speaks very highly of them, and says they ought to be much more extensively bred for market.

## Experimental Farms.

### HOW BREEDING PENS WERE MADE UP.

About the first and second weeks of March the different breeds mentioned were mated as follows :—

Breeds.	How Mated.	Remarks.
Brahmas	1 cock . . . . . 9 hens . . . . .	Early eggs not very fertile.
Langshans	1 " . . . . . 5 " . . . . .	"
B. P. Rocks	1 " . . . . . 11 " . . . . .	Fairly fertile from first mating.
White "	1 " . . . . . 11 pullets . . . . .	Eggs remarkably fertile from first.
Black Minorcas.	1 cockerel . . . . . 9 hens . . . . .	Satisfactorily fertile.
White Leghorns	1 cock . . . . . 11 " . . . . .	Hens old. Results satisfactory when hens ran out.
Andalusians	1 " . . . . . 11 " . . . . .	Satisfactory.
White Wyandottes	1 cockerel . . . . . 7 pullets . . . . .	Average.
Silver "	1 cock . . . . . 9 hens . . . . .	Satisfactory.
Golden Polands.	1 " . . . . . 7 " . . . . .	"
<i>Crosses.</i>		
Indian Game—Brahma.	1 " . . . . . 3 " . . . . .	Very good.
" —Dorking.	1 " . . . . . 2 " . . . . .	"
P. Rock — "	1 " . . . . . 2 " . . . . .	"

It is worth noting that the eggs of the White Plymouth Rocks were remarkably fertile from the beginning of the hatching season, notwithstanding the fact that they were pullets and had laid well all winter. This satisfactory result was no doubt owing to the male bird being kept in a separate pen all winter, and to the fowls coming out of the winter in vigorous health. There is an important lesson, in this experience, to all poultry breeders. The early eggs of the Brahmas and Langshans were not as fertile as could be desired, and were not so, doubtless, on account of the hens becoming a little too fat, and to the fact that some of the hens, used as breeding stock, had been good layers during the winter. The run outside soon made an improvement.

The demand for eggs for hatching was very great, and many orders received late, could not be filled. It was gratifying to note the increased inquiry for eggs from farmers, who preferred, in most cases, the Plymouth Rock varieties.

The following were the hatching results :—

### EGGS SET AND CHICKENS HATCHED.

When Set.	Description of Eggs.	When Hatched.	Number of Chickens.
April 3.	13 White P. Rock	April 24	9
" 3.	13 Langshan	" 24	6
" 3.	13 W. P. Rocks	" 24	10
" 13.	13 B. P.	May 4	7
" 26.	13 S. L. Wyandottes	" 17	8
" 26.	13 Andalusian	" 17	13
" 26.	13 " "	" 17	7
" 26.	13 B. Minorcas	" 17	12
" 26.	13 Brahmas	" 17	6
May 2.	11 " "	" 23	3
" 2.	13 B. Minorcas	" 23	12
" 7.	13 " "	" 28	8
" 7.	13 White Leghorn	" 28	10
" 12.	13 B. Minorca	June 2	9
" 12.	13 Crosses	" 2	9
" 12.	13 " "	" 2	4
" 17.	13 B. Minorcas	" 7	10
" 17.	13 White Wyandottes	" 7	5
" 17.	13 P. Rocks	" 7	7
June 24.	13 Crosses	July 15	7
" 30.	13 White Leghorns	" 20	5
Total			167

It will be seen from the above that the eggs from the pen of Black Minorca hens hatched remarkably well. Two settings of 13 each gave 24 chicks, and out of 65 eggs 51 chicks were hatched. Their growth was most satisfactory.

#### GROWTH AND DEVELOPMENT OF CHICKS.

As soon as they were fit, the young chicks and their mothers were placed in small coops, in the grass of the fields, the latter being surrounded by wire netting. New ground was used during the season, and the good effect was visible in the healthy and vigorous growth of the chickens. As in the past seven years, the first food of the newly hatched chickens was stale bread soaked in milk, squeezed dry, and so fed. No food has been found equal to this for putting the chicks on their feet. In a day or two granulated oatmeal was given with the former ration, and this was followed by a mash made of boiled skimmed or sweet milk, mixed into sufficient quantities of cornmeal, shorts, bran and crusts of bread. A little finely cut green bone was also fed. After fourteen days wheat was given in small quantities at first. The chicks were always sent to brood at night with their crops full. If rapid and satisfactory flesh development is aimed at, it is peremptory that the young birds be attended to early and late. It is to be borne in mind that a chicken neglected in the first five weeks of its existence will never make a large bird for market, nor an early layer, if a pullet. To make weighty birds for market, fine birds for the show pen or early laying females, the youngsters must be carefully and steadily pushed from time of hatching, whether by hen or artificial incubator. There can be no getting out of this.

The development of the chickens was much the same as in previous years, the White and Barred Plymouth Rocks taking the lead with a development of one pound per month, without any forcing beyond regular feeding and care, but no more than every chicken should receive. The following table of progress may be interesting, viz. :

Barred P. Rock Cockerel, hatched 24th April ; on 24th August, weighed 4 lbs. 11½ oz.

Langshan Cockerel, hatched 24th April ; on 24th August, weighed 3 lbs. 11 oz.

White P. Rocks showed a gain of 13 to 16 oz. per month.

If the above birds had been caught, penned up and fattened previous to being weighed, they would, of course, have shown greater gain.

#### THE CROSSES MADE AND HOW THEY TURNED OUT.

The following crosses were made :—Indian game, male ; Light Brahma, female. Indian game, male ; Coloured Dorking, female. Plymouth Rock, male ; Coloured Dorking, female. White Leghorn, male ; Barred P. Rock, female.

There was, unfortunately, only one cockerel of the Plymouth Rock—Coloured Dorking cross, and his progress was certainly very satisfactory, and if it can be taken as a criterion, shows the cross to be well adapted for the making of heavy market chickens. Hatched on the 15th April, it weighed on 20th June, following, 2 lbs. 2 oz ; on 15th July, 3 lbs. 7½ oz. ; on 17th August, 5 lbs. 5 oz. A gain of 5 lbs. 5 oz. in four months, without special feeding, is much above the development of the average market chicken. It is the intention to try more of this cross early next season, so as to give opportunity for good growth before the hot season.

The White Plymouth Rock—White Leghorn cross chickens turned out to be pullets, with one exception. Hatched on the 15th July, the cockerel weighed on the 26th December, 4 lbs. 11 oz. The pullets are well developed and vigorous, and promise to make fine fowls.

The Indian Game—Coloured Dorking cross made very handsome heavy pullets, tightly feathered, with compact body and shape of the Indian Game. One of the pullets which was hatched on the 2nd June, weighed on the 26th December, 5 lbs. 4 oz. A cockerel of the same cross hatched on the same day, weighed 5 lbs. 11 oz. on 26th December.

## Experimental Farms.

The Indian Game—Light Brahma cross. A cockerel hatched on the 2nd June, weighed on 26th December, 5 lbs. 11 oz., the same weight as the cockerel of the previous cross, at the same age. The pullets are not so compact in shape or form as those of the Dorking cross.

The Langshan—Black Minorca cross pullets, which were hatched last year (1893), have turned out magnificent—large, dark fowls, some showing more of the Langshan type, and others showing more of the Black Minorca in shape and size. They lay a large deeply coloured (Langshan) egg, of most inviting appearance.

The cross of the White Leghorn—Brahma, which was also made last year, has produced fairly large fowls and prolific layers of eggs of medium size. Both males and females were slightly feathered on the legs. Some were more so than others.

### STRAW VERSUS SAND ON FLOOR.

Careful observation leads to the conclusion that while the sand floor tends to make the conditions more natural, the layers dusting freely in it, that the straw-littered floor is a better incentive to exercise, the fowls searching longer for the grain scattered in it. Large dust baths were provided for the latter pens.

### INCUBATOR TRIAL.

In the early part of March a hot water incubator of 100-egg capacity, with brooder, was purchased from Mr. Gagné, of Quebec. The machine was placed in one of the poultry houses, but the hatching results were not satisfactory, owing to variations of temperature in the building. Another trial will be made in a more suitable location. From the number of letters received on the subject, from farmers and poultry dealers, there can be no doubt that greater interest is being taken, every year, in artificial incubation, and a great incentive to trial and investigation, in the eastern part of the country, has been an admirable work on the subject by Mr. Charles A. Cyphers, of Boston U. S. A.

### DISEASES OF POULTRY.

Numerous letters were received during the year, describing diseases which had affected poultry in different portions of the Dominion. The most important cases are noted as follows:—

#### TURKEYS AFFECTED WITH ROUP.

“MOOSE JAW, 24th October, 1894.

“DEAR SIR,—I have some turkeys which are dying. Some have lost the use of their legs, while others have swollen heads.

(Sd.) “ROBERT MOORE.”

In response to the above, Mr. Moore was informed that his birds with the swollen heads had roup of a pronounced and fatal type. He was advised to at once remove the sick from the well, and to pour turpentine or coal oil—preference given to the former—over the heads and eyes, letting the liquid into the eyes of the sick birds. If roup pills were at hand, to give one night and morning. If not to give a hot mash of shorts and cornmeal, or stale bread soaked in milk with ginger or Cayenne pepper mixed. The house in which the sick birds were, would have to be thoroughly disinfected.

As roup is not unfrequent among turkeys, Mr. Moore's letter was sent to Mr. U. Bonneville, of Danville, P.Q., who has a long experience with turkeys, and who at once replied: “I think your advice to Mr. Moore as good as can be given. I would only add, that in similar cases I use a solution of vitriol—either white or blue—in the proportion of a tea-spoonful to three half pints of water, and with the mixture syringe the

nostrils and slit in the roof of the mouth. Another remedy is sweet oil, 1 oz. ; camphor (pulverized), 1 drachm ; carbolic acid, 12 drops ; mix and inject in nostrils and roof of mouth, twice daily. When the swelling is large and advanced, I lance the part that is most prominent, generally in front of the eyes, in order to get rid of the accumulated matter. I then burn the cut with caustic, in order to prevent its healing too quickly, and inject into the cut the vitriol mixture twice daily. I have never had a case of weakness in legs. Signed, U. BONNEVILLE."

#### FATAL RESULTS CAUSED BY FILTHY WATER.

In November, 1893, Mr. M. Cowley wrote that a disease was carrying off a large number of his fowls. The fowls first went lame, their combs wilted, and after hobbling about—going from bad to worse—for a month or five weeks, they died. Upon examination, the livers in most cases were found ulcerated, while in others they looked as if covered with hayseed. All information possible was given. A description of the ailment was published in report of last year, and excited great interest, one gentleman writing from British Columbia, that his fowls were similarly affected. A fowl which had died from the disease, was sent to Prof. Wesley Mills, of McGill University, for examination, but no satisfactory results were obtained. Two sick fowls were later sent to the Experimental Farm poultry house, and were put in the hospital for observation, but got better. During the latter part of last summer, a letter was received from Mr. Cowley, saying that his fowls continued to die. He was advised to try camphor in some shape in the event of the ailment being acute dysentery or cholera. On the 10th (December) instant, a letter was received from Mr. Cowley, saying "that since the cold weather had set in, and by the use of considerable alum in the drink water, the fowls had got better. He was positive that the trouble was caused by the fowls drinking manure water from the barn. He had built a new place, and at time of writing there was not the slightest sign of disease."

There can be no doubt that the filthy water was the cause of the trouble. The ailment ceased when the fowls were removed from the source of it.

#### VERY LIKE ACUTE INDIGESTION.

On 8th November last, the following letter was received:—

"VANKLEEK HILL, 7th November, 1894.

"DEAR SIR,—We have disease among our chickens. The combs of the sick turn black, and death is quick. The crops seem full of undigested grain. We lose five or six every day. I have a flock of eighty extra fine Bronze turkeys, and I would not like to lose any of them. The old fowls do not seem to take it. Signed, JOHN M. BARTON."

Mr. Barton was written to, and asked to give further particulars as to diet, how housed, &c., and told that the case from description seemed to be one of acute indigestion. A reply was received that the food had been wheat broken up, boiled potatoes and provender, and a little corn. The house had four compartments. Some Leghorns away from the rest had got the disease. Mr. Barton inclosed a clipping from an agricultural paper on "Black Head," by H. S. Babcock, the well-known writer on poultry subjects. Mr. Babcock was immediately written to, and the clipping and Mr. Barton's letters inclosed to him. As the case was an important one, it may be advisable to give Mr. Babcock's letter, as follows:—

"PROVIDENCE, R.I., U. S. A., 16th November, 1894.

"DEAR SIR,—From the incomplete statement of symptoms of disease affecting Mr. Barton's fowls, it is hard to state decisively what it is. I suspect from the rapid action of the ailment and the few symptoms given, that it is acute indigestion or cholera. If it were cholera, there would be likelihood of the old fowls taking it. The black head

## Experimental Farms.

is a disease due to some micro-organism, which affects turkeys, but which so far has not affected fowls in this part of the country, though it is possible that its ravages are not confined to turkeys. This disease is now under investigation by the officials of the United States government. The comb turning black is not the symptom of a single disease, but of many. It occurs in roup, cholera, indigestion, canker, strangulation, &c. The presence of undigested grain in the crops, indicates some disarrangement of the digestive organs.

“ Yours truly,

(Sd.) “ H. S. BABCOCK.”

Mr. Babcock's reply was immediately sent to Mr. Barton, and at the same time he was advised to give his chickens some reliable condition powder, as a tonic, in their soft feed.

On the 23rd November, a reply was received from Mr. Barton, saying that his chickens were better, since the cold weather had set in. He had lost none since the 12th instant. If the disease again broke out, he would report at once.

### FILTHY DRINK WATER.....

One or two cases were reported in which the trouble was, no doubt, caused by the poultry having none other but filthy water to drink. In most suspected cholera cases, the acute symptoms are produced by foul drink water or food, and not unfrequently both.

### OTHER CASES.

There were numerous inquiries as to a cure for colds, catarrh and roup. The latter is often the result of a neglected cold. When taken at its first appearance, cold can be cured by the removal of the ailing fowl to dry quarters, and the use of a good condition powder—in a soft mash—which should be given once a day at any rate. It is better to kill a fowl with pronounced symptoms of roup, for it is only a source of infection or contagion, and should it be cured, is never fit to breed from. A poultry keeper with a flock of good layers cannot be too careful in the introduction of new birds, as disease is frequently so brought by sickly new comers. It is always best to quarantine new purchases for some days, or until assured of their sound condition.

### A SIMPLE CURE FOR ROUP.

Mr. E. H. Sanders, of Watford, gives the following in a letter as a quick and sure remedy for roup or cold, and it certainly has the merit of simplicity. He says: “I bruise onions to a pulp, and then squeeze out the juice. With a syringe I force the juice into the nostrils and into the throat three times daily. I also make a pill of equal parts of the pulp and bread, and give to the sick fowl. Three or four days of this treatment will prove a sure cure.”

### MISCELLANEOUS.

#### AN INTERESTING EXPERIMENT.

At the request of Dr. Jenkins, of Charlottetown, P.E.I., an experiment was made to ascertain the difference, if any, in the weight of eggs at the time of setting under the hen, and at the period of hatching out. For this purpose a certain number of Black Minorca eggs and Indian Game—Brahma cross eggs were selected and marked as below.

The weights were taken at both periods by Mr. F. T. Shutt, M.A., chemist to the Experimental Farms, who gives the result as follows :—

LOSS IN WEIGHT OF EGGS DURING INCUBATION.

	Weight at time of Setting.	Weight after 21 Days.	Per centage of Loss.

PEKIN AND AYLESBURY DUCKS.

During the early part of the month of March, a drake and four ducks of the Pekin breed, and a drake and a like number of ducks of the Aylesbury breed were purchased and arrived during the third week of the month. They were placed in pens in No. 3 house, and were allowed outside run as soon as the weather permitted. Subsequently they were removed to pens with tanks, to which water was supplied by means of pipes. Both breeds laid fairly well, when one of the Pekin ducks became lame, and was soon after followed by another of the same breed with similar lameness. Both recovered, but were subsequently attacked with the same symptoms and died. Death was apparently from paralysis of the limbs and certain parts of the body. The drake and another duck also died during the summer from apparently the same cause. The Aylesbury ducks in the next pen displayed vigorous health from beginning to end of the season, and are apparently in fine condition at the date of writing. The conditions as to feed, care and treatment were the same in both cases. In both runs were grass, gravel, sand and water tank. Mr. John White, of the Canada Atlantic Railway, Ottawa station ticket office, reported the death of nineteen ducks from a disease with identically the same symptoms.

COMMENCEMENT OF WINTER LAYING.

Winter laying commenced at the end of November, by which time the hens were over their moult and in fine condition. The yearling hens of the Black Minorcas and White Plymouth Rock breeds were first to begin to lay.

PURCHASE OF NEW STOCK.

During the latter part of November, the following new stock was purchased—in most cases—to replace old stock, the object being to have as many pullets for laying

## Experimental Farms.

stock as circumstances would permit. The fowls arrived during the first week in December, and were as follows :—

11	Coloured Dorking pullets.
11	White Leghorn do
7	Barred Plymouth Rock pullets.
7	Langshan do
11	White Minorca do
4	Silver Laced Wyandotte do
4	White Java do and
1	Cockerel.

Pullets of our own hatching made up the number to eleven in the case of the breeds designated, making the laying stock in No. 1 house, as follows :—

### NORTH WING.

Pen No. 1—	11	Silver Laced Wyandotte pullets.
do	2—	11 Barred Plymouth Rock do
do	3—	11 White do do yearling hens.
do	4—	11 Langshan pullets.
do	5—	11 L. Brahma hens, three years old.

### SOUTH WING.

Pen No. 1—	11	White Leghorn pullets.
do	2—	11 Black Minorca yearling hens.
do	3—	11 White do pullets.
do	4—	11 Andalusians, 7 yearling hens, 4 pullets.
do	5—	11 Coloured Dorking pullets.

The above are all birds of the first quality, and already some of the White Leghorn, White Minorca and Langshan pullets are laying, and others will soon follow.

The White Javas, with other stock, are in No. 3 house, and began to lay a few days after arrival.

In the south wing of No. 1 house, the laying stock are in pens, on the floors of which sand to the depth of 4 inches has been placed. On the floors of the pens in the north wing of the same house, straw has been put. Observations as to which is the most suitable will be continued. With the exception of the difference in the material on the floors of the pens, the conditions as to temperature, food, and care are the same, and the results to be learned from so many of the different popular breeds side by side cannot fail to be valuable, as they will be interesting.

## Experimental Farms.

# EXPERIMENTAL FARM FOR THE MARITIME PROVINCES.

REPORT OF WM. M. BLAIR, *Superintendent.*

NAPPAN, N.S., 15th December, 1894.

To WILLIAM SAUNDERS, Esq.,  
Director Dominion Experimental Farms,  
Ottawa.

SIR,—I have the honour to submit herewith the following report of the operations on the Experimental Farm for the Maritime Provinces at Nappan, N.S., during the year 1894.

### WEATHER.

Snow fell on 6th November, 1893, and remained until the middle of April, 1894, a very unusual thing in Nova Scotia, the ground being only slightly frozen when the snow fell, the frost did not penetrate deep into the soil, except where the snow was tramped, the result being that potatoes and turnips which happened to remain in the ground all winter grew in the spring. Nevertheless we had very severe frost on several occasions. On 6th February it was 20° below zero; on the 13th, 13°, 14th, 27°, 24th, 10°, and on the 25th 13° below zero.

Farm work commenced on 28th April, and continued with little interruption until all the seed was sown. The weather was all that could be desired until 11th July, when we had a good rain, the last of any account until 17th September. In consequence of this long period of drought all crops suffered very much, reducing the average, excepting the hay, which was well matured at this time and yielded well. Grain was about two-thirds of an average crop; roots about the same. The trees and shrubs planted on the farm felt the effects of the drought very much, and although watered frequently, some of them died. Springs dried up and cattle suffered both for want of food and water.

Both hay and grain were harvested in fine condition, the grain being well filled and heavy.

### MANURES,

In addition to the barn-yard manures which, in our experience, excel all other fertilizers, if properly cared for, some special manures were used, such as superphosphates and bone meal. In consequence of the annual application of more or less of such material and the extension of the system of drainage, the farm is gradually increasing in fertility and becoming better suited to carry on experimental work.

### HAY.

The hay was more than an average crop on both marsh and upland—23 acres of upland gave 57 loads; 27 acres of marsh gave 55 loads; 15 acres of broad leaf gave 19 loads, or in all 131 loads, averaging 2,200 pounds per load, making 144 tons, all of which was secured in excellent condition.

SPRING WHEAT.

Thirty varieties of wheat were sown in plots of one-twentieth acre each on clayey loam soil.

The crop being more or less affected with red rust or leaf blight was not quite up to the average, although the kernels were plump and heavy, and of a good quality ; the straw was stiff, but all more or less rusted.

The following table gives yield per acre, character of the different varieties, &c. The soil was clay loam, and the seed was sown at the rate of 1½ bushels per acre. The land was in roots in 1893 :—

SPRING WHEAT—Test of varieties.

Name of variety.	Date of Sowing.	Date of Ripening.	No. of days Maturing.	Length of Straw.	Character of Straw.	Length of Head.	Kind of Head.	Yield per Acre.		Proportion Rusted.

Advance	" 8	Aug. 23	107	39	Stiff	3	Bearded	15	00	59½	"
Ottawa	" 8	" 22	106	40	"	2½ to 3	"	15	00	60	Considerably.
Hueston	" 8	" 31	115	39	"	3	Beardless	15	00	56	Slightly.
Glengarry (D. Fraser)	" 8	Sept. 4	119	40	"	3½ to 4	"	10	00	54	Very badly.

NOTE.—The weights per bushel given here, and also in all other grain tables in this report, were taken from the grain as it came from the threshing mill, and are not the maximum weights that the grain could be brought to by cleaning.

## Experimental Farms.

### CROSS-BRED WHEATS.

Some new varieties of cross-bred wheat were sown, the yield per acre was large and the kernels were well filled. These seem to be very promising varieties of grain. They were sown on clay loam on land which grew roots in 1893 in  $\frac{1}{20}$  acre plots at the rate of  $1\frac{1}{4}$  bushels per acre. The following table gives the results :—

Name of Variety.	Date of Sowing.	Date of Ripening.	No. of days Maturing.		Length of Straw.	Character of Straw.	Length of Head.	Kind of Head.	Yield per Acre.		Proportion Rusted.
			Inc.	Inches.					Bush.	lbs.	
<i>Huron.</i>

### EXPERIMENTS WITH BARLEY.

Thirteen varieties of two-rowed and twelve varieties of six-rowed barleys were tested, these were sown on 9th May in  $\frac{1}{20}$  acre plots on clayey loam soil, at the rate of two bushels per acre, the previous crop being roots.

The two-rowed sorts seemed more affected with the red rust than the six-rowed. The heads did not fill out well towards the tip, and many of the kernels were completely dried up, those that matured became very plump and gave good weight per bushel. The accompanying table gives comparative earliness, character of growth and yield per acre :—

#### SIX-ROWED BARLEY—Test of varieties.

Name of variety.	Date of Sowing.	Date of Ripening.	Number of days Maturing.		Length of Straw.	Character of Straw.	Length of Head.	Yield per Acre.		Weight per Bushel.	Proportion Rusted.
			Inches.	Inches.				Bus. lbs.	Lbs

Nine new sorts of cross-bred barleys, Swedish (two-rowed) female with Baxter's six-rowed male were tested. These all gave good results, and some of them are very promising.

They were sown at the rate of two bushels per acre in plots of  $\frac{1}{60}$  of an acre each on clay loam, on which roots were grown in 1893.

## EXPERIMENTS WITH OATS.

Fifty-one varieties of oats were sown on 10th May in plots of one-twentieth of an acre each on clayey loam, the land having been in hay the previous year, no fertilizers were used. All the varieties had remarkably stiff straw. The most noticeable variety in regard to stiffness was the "Schonen," which promises to be a very suitable variety to sow with pease.

The earlier sorts did not give as large a yield per acre as the later ones, this was probably due to the leaf rust or blight which struck the grain about the middle of July. The later varieties filled out better than the earlier sorts, but the grain was not as heavy on account of dry weather and leaf blight. The oat crop was about one-third

## Experimental Farms.

less than the usual average per acre, with average weight. The results of the tests are given in the following table:—

OATS—Test of varieties.

## OATS SOWN ON DRAINED AND UNDRAINED LAND.

Eight varieties of oats were sown on drained as well as undrained upland, the soil being as nearly alike as possible. The oats were sown on the drained land 11th May, and on the undrained 17th May, the undrained land being that much later in drying. The growth of straw was much shorter on the undrained land, the drought affecting it much more.

The following table gives yield per acre and weight per bushel of each variety :—

Name of Variety.	Character of Land.	Number of days Maturing.	Yield per Acre.		Weight per Bush.
			Bus.	lbs.	
White Bonanza	Drained	104	39	14	44 lbs.
“	Undrained	98	24	25	42 “
Canadian Triumph	Drained	99	34	24	42 “
“	Undrained	95	25	17	42 “
White Wonder	Drained	96	32	32	43 “
“	Undrained	94	24	7	43 “
Poland White	Drained	106	42	12	44 “
“	Undrained	100	25	19	44 “
Imported Irish	Drained	98	34	24	42 “
“	Undrained	96	31	27	42½ “
Wide-awake	Drained	105	42	32	40 “
“	Undrained	98	33	29	38 “
Doncaster Prize	Drained	107	40	..	40½ “
“	Undrained	107	26	13	38 “
Improved Black Tartarian	Drained	107	49	14	40 “
“	Undrained	106	28	2	38 “

## THICK AND THIN SOWING OF BUCKWHEAT.

In order to test the relative value of thick and thin sowing of buckwheat, one acre was sown with half a bushel of seed, one with one bushel, one with one and one-half bushels, and one with two bushels per acre. Sown on sandy loam, 29th May; harvested on 30th August.

The grain was affected with blight, and did not fill out well. The Silver-hull was the variety used.

One acre	½ bushel seed	per acre,	matured in	92 days,	11½ bushels	51 lbs.	per bushel.
do	1	do	do	92 do	9½ do	52	do
do	1½	do	do	92 do	9 do	54	do
do	2	do	do	92 do	8 do	51	do

Judging from the results of these experiments, it would appear that in sowing Silver-hull buckwheat, there is no advantage in using more than half a bushel of seed per acre.

## EARLY MEDIUM AND LATE SOWINGS OF GRAIN.

Experiments to test the relative value of early and late sowing were again carried on this year. Such experiments will probably need to be repeated many years before reliable conclusions can be reached as to results, but we find in general that it does not pay to commence to work and seed our fields in the spring before they are dry, and observation leads me to believe that some of our farmers in the Maritime Provinces begin to work their fields before they are in a fit condition, whereas a few days more drying would ensure them a larger return. This is probably the reason why some of the first plots sown in the early and late sowing tests are not up to the average in quantity.

## Experimental Farms.

The first grain was sown 9th May in one-twentieth acre plots, on sandy loam, the previous crop being corn, one week intervening between each subsequent sowing. These were continued for six weeks, the same kind of grain being used in each case. There were two plots each of wheat, barley and oats in each series. The following table gives the results :—

EARLY MEDIUM AND LATE SOWN OATS  $\frac{1}{20}$  ACRE PLOTS.

MIXED GRAIN FOR FEED.

Two plots of mixed grain were sown, cut green, and cured for feed, both of these mixtures make good feed, the stock seemed fond of it.

The following table gives yield per acre, the size of the plots was  $\frac{1}{10}$  of an acre. They were sown on May 11th, and harvested August 11th :

No. 1 PLOT.

Quantity sown per acre.	Green.	Dry.

6 " Golden Vine Pease.....		
3½ " Banner Oats.....		

No. 2 PLOT.

6 lbs. Golden Vine Pease.....	Equal to 1 bush. each per acre.	5½ tons.
6 " Red Fife Wheat.....		
3½ " Banner Oats.....		

## Experimental Farms.

### FIELD PEASE.

Ten varieties of field pease were sown 10th May on one-twentieth acre plots. The soil was a light clay loam, which was cropped with turnips in 1893. The pease all made good strong growth and gave large returns.

Although not the largest yielder, the Crown pea is probably the most suitable variety to sow with other grain for mixed feed. The vine being small and stiff does not cause the grain to lodge as badly as other sorts; it also ripens about the same time as the early varieties of grain.

The Pride is a very early and rank-growing pea, and is very fine for table use when green.

Canadian Beauty and Black-eyed Marrowfat have given the largest yield.

#### PEASE—Test of varieties.

Name of variety.	Date of sowing.	Date of ripening.	Number of days maturing.	Character of growth.	Length of pod.	Size of pea.	Yield per acre.		Remarks.	
							Bus. lbs.	Lbs

Mummy, 9 lbs. or 3 bus. of seed sown per acre	" 10	" 20	102	"	1½ to 2	Medium	35	20	62	" "
Centennial, 9 lbs. or 3 bus. seed sown per acre	" 10	" 18	100	"	2¼ to 2½	" ..	33	10	60½	Stiff vine.
Crown, 7½ lbs. or 2½ bus. per acre sown	" 10	" 14	96	"	2 to 2¼	Small ..	30	00	61	Stiff quick growth.

### RYE.

One and a quarter acres of fall rye was sown 11th September, 1893, on loamy soil. This made very strong and vigorous growth, and matured well, ranging at maturity from five to six feet in height, and in some places taller. It was sown at the rate of two bushels per acre, giving a yield of 28 bushels per acre, weighing 57 pounds per bushel. Harvested on 30th July.

This is well known to be a valuable crop used green as food for stock.

### ROOTS.

Turnips were a light crop. The first series of turnip plots were attacked by the cut worm about the middle of June. More than one-half of the young plants were destroyed and the crop was much diminished from this cause.

The second series of plots were not affected by this pest.

The White Globe turnip although a large yielder, is soft and a very poor keeper. Steele's Purple Top Swede is in our experience a desirable sort.

Pearce's Canadian Giant and the Mammoth Long Red Mangels have given the largest yields, and the plants make very strong growth.

The short white varieties of carrots are the best for stock purposes.

Among the red varieties Short Valery and Early Gem are good market sorts.

The land used for these experiments was a clay loam. The first plots were sown on 18th and 19th May. The second series on 1st and 2nd June. The yield of all roots per acre has been calculated from the quantity obtained from three rows each, 66 feet long and 2½ feet apart.

Three varieties of Sugar Beets were also sown in plots of the same size. The second sown plots proved to be considerably the best.

## TURNIP PLOTS.

Name of Variety.	Character of Growth.	1st Plot Sown.	2nd Plot Sown.	1st Plot Pulled.	2nd Plot Pulled.	Yield per Acre. 1st Plot.		Yield per Acre. 2nd Plot.		Yield per Acre. 2nd Plot.

### EXPERIMENT TO ASCERTAIN THE EFFECT OF DIFFERENT QUANTITIES OF MANURE PER ACRE ON TURNIPS.

The land selected for this experiment was sandy loam, and was apparently all in the same state of fertility; the previous crop was buckwheat.

One acre received twenty 30-bush cart loads of well-rotted manure per acre. One, thirty 30-bush. cart loads, and one, forty 30-bush. cart loads per acre, which was spread and ploughed in. In addition two barrels of general fertilizers were used to the acre.

The results were different from what was expected, probably due to the dry summer. Further experiments will be conducted along this line another year.

First plot 20 loads per acre, yielded 578 bushels per acre.

Second plot 30 loads per acre, gave 541 bushels per acre.

Third plot 40 loads per acre, yielded 536 bushels per acre.

## LARGE ROOT PLOTS.

One-half acre of Steele's Improved Short White carrots were sown on 29th May on sandy loam soil. Thirty 30-bush. cart loads of manure and two barrels of general fertilizer being used per acre. They were pulled 23rd October, yielding 660 bushels per acre.

In addition to the turnip plots already mentioned, there was one and one-half acres of these roots which gave a yield of 750 bushels.

Also one-half acre of mangels which gave at the rate of 575 bushels per acre.

## EXPERIMENTS IN CUTTING POTATOES FOR SEED.

Eight different ways of cutting potatoes for seed were tried, Pearce's Extra Early being used for this purpose.

The following results were obtained :—

Name of variety.	Marketable per Acre.	Unmarketable per Acre.	Character.
	Bushel.	Bushel.	
Whole potatoes.....	250	40	Even lot.
One eye.....	220	10	Fairly even.
Two eyes.....	220	30	Large and even.
Three eyes.....	280	20	Large medium, even.
Butt half.....	330	50	Average.
Seed half.....	200	50	Medium.
Seed end cut off.....	380	60	Average.
Cut lengthwise.....	170	50	Small.

## EXPERIMENTS WITH POTATO EYES.

Five new varieties of potatoes, consisting of 100 eyes each were received from Steele, Briggs & Marcon, Toronto.

This seed was planted one foot apart, one eye to the hill. There was very little difference in the yield of each plot, although in one case only about one-quarter of the eyes grew, while in another case about four-fifths grew. These all made good strong growth. They were planted and dug with other potato plots on the same kind of soil.

## POTATO EYES PLANTED—Yield per plot.

Name of variety.	Number of Eyes planted.	Number of Eyes that grew.	Marketable.	Unmarketable.	Matured.	Remarks.
			Lbs.	Lbs.		
Freeman.....	100	68	30	5	Medium late..	White, large, round.
Early Norther.....	100	39	38	3	Medium early..	Light red, very large, round.
Pride of the Table.....	100	62	34	2	" ..	Red, medium large, medium round.
Pride of the Market.....	100	84	37	2	Medium late..	White, large, long, medium flat.
Dreer's Standard.....	100	27	39	2	" ..	Large, round, smooth flat, white.

# Experimental Farms.

## POTATOES.

Fifty-four varieties of potatoes were planted on sandy loam in rows 26 inches apart and 66 feet long. These were all planted on the 23rd May and dug on 13th of September. They all made strong growth, and no rot was detected in any of the varieties. All yields per acre have been calculated from the quantity grown in each case on two rows of 66 feet in length.

## CORN.

Nine varieties of corn were sown 23rd May in rows and in hills, two rows each, 66 feet long and 3 feet apart. The hills were also 3 feet apart each way, all on sandy loam soil.

Sowing in rows gave the largest returns per acre, and required less labour, the seed being sown in rows with the seed drill.

Pearce's Prolific and Longfellow corn proved to be the best varieties, and gave satisfactory results. The early frost of 7th September prevented the corn from properly maturing.

## CORN.

Name of Variety.	Date of Sowing.	Date when cut.	Condition when cut.	Weight per acre grown in rows.		Weight per acre grown in hills.

## ROBERTSON MIXTURE.

Two acres of corn was sown on 26th May, 30 pounds of seed being sown per acre. The soil was a poor sandy loam. Forty 30-bush. cart loads of manure and one barrel of superphosphate was used per acre. The manure was ploughed in, and the fertilizer sown broadcast and harrowed in. The seed was sown with the seed drill in rows three feet apart. A heavy frost on the 7th September prevented it from properly maturing, and considerably reduced the yield per acre. It was cut on 15th September, giving a yield of 12 tons 130 pounds per acre.

One acre of English horse beans was sown on 26th May, 40 pounds of seed being used per acre, sown with the seed drill in rows 3 feet apart. The soil was similar to that of the corn field, and was prepared and fertilized in the same manner and gave a yield of 4 tons 1,485 pounds per acre.

One-half acre of sunflowers were sown 26th May, eight pounds of seed being used, giving a yield of 3,357 pounds or 3 tons 714 pounds of heads per acre. This soil received the same treatment as the corn and beans, and the seed was sown with the drill 3 feet apart in rows.

These were well mixed when put in the silo, the corn and beans were cut to about  $\frac{3}{4}$  inch length, the sunflower heads were put in whole, making about 32 tons of the mixture.

## BORDEAUX MIXTURE FOR THE PREVENTION OF POTATO ROT.

The Bordeaux mixture as a fungicide, as applied to potatoes for the prevention of rot, was again experimented with this year, a plot of State of Maine potatoes being used. The yield of one-half of the plot treated was about the same as the half not treated, there being no rotten ones in either case.

## Experimental Farms.

All plots of the different varieties of potatoes were treated with the Bordeaux mixture in combination with Paris green. There were no rotten ones in any of the plots. A sample box of Church's potato bug finish was sent for trial by their agent, this appeared to be equally as effective as the Paris green. This powder was applied when the dew was on, two applications being sufficient.

### GARDEN BEANS.

Seven varieties of garden beans were sown on 26th May; these made good growth. The Arctic, a yellow and white variety, maturing in 98 days, was not as prolific as the Early Dun Coloured which matured at the same time.

Name of Variety.	Number of days Maturing.	Remarks.
New Stringless Green Pod.....	.....	Fine for use green.
Thorburn's Early Refugee Wax.....	107	Fine variety for use green.
Emperor William.....	110	Not early enough for our season.
Arctic.....	98	Very fine early variety.
Early Dun Colour.....	98	“ “ “ “
Detroit Wax.....	103	Good early variety.
Red German Wax.....	105	“ “ “ “

### PARSNIPS.

Two varieties of parsnips were sown on 12th May, the Hollow Crown and Maltese. The Maltese, with a few exceptions, failed to germinate. The Hollow Crown made good strong growth.

### WATER AND MUSK MELONS.

Several varieties of melons were sown on 26th May, the varieties were Phinney's Early, Montreal market, Col. Preserving, Evans' Superb and Cossaba Large Musk. These varieties all did well until 7th September, when they were completely killed by the early frost.

### CUCUMBERS.

Five varieties of cucumbers were sown on 26th May; these were all killed with the early frost. The following is a list of the varieties in order of their earliness :—

	Character of growth.
Siberian.....	Good yield; good for pickling.
New Giant Pera.....	Large yield.
Japanese Climbing.....	Fair yield.
Improved White Spine.....	Poor yield.
Cool and Crisp.....	Fair yield.

### ONIONS.

Twelve varieties of onions were sown on 11th May. These made poor growth, and with a few exceptions did not mature. The following is a list of varieties grown :—

King of Earlies, Wethersfield W. B., Southport White Globe, Large Red Globe, Yellow Globe, Danvers, New Queen White, Small Silver Skin, Giant Prize Taker, the Oregon, Red Victoria, and Fancy Yellow Globe Danvers.

The King of Earlies matured the best, Wethersfield and Southport White Globe gave fair returns.

GARDEN PEASE.

Eight varieties of garden pease were sown on 12th May. The Sunol variety made very strong and rapid growth, but was not very prolific. Bliss's American Wonder was one of the most prolific varieties.

GARDEN PEASE.

Name of Variety.	Fit for use green.	Character.
Prince of Wales.....	July 26..	Dwarf, large long pod, very prolific.
Burpee's Profusion.....	" 26..	Large pod, dwarf, very prolific.
Juno.....	" 27..	Dwarf, very long pod, medium prolific.
Horsford's Market.....	" 20..	" short pod, but very prolific.
Bliss' American Wonder.....	" 12..	" medium long pod, very prolific.
Sunol.....	" 10..	Pole or climbing, short pod, medium prolific and very early.
American Wonder.....	" 12..	Short pod, dwarf, very prolific.
Stratagem.....	" 22..	Long pod, dwarf, very prolific.

BEETS.

Nine varieties of beets were sown on May 11th. On account of the dryness during the early part of the season some of these made poor growth; one variety, the Columbus, did not seem to be much affected by the drought, and made very early, strong and rapid growth. This is a very promising sort for early market, being earlier than any of the others tested, later in the season it grows large and coarse, and is not as good then as other varieties for table use.

The Flat Egyptian and Black Queen are of excellent flavour and fine quality.

The following table gives the character and quality of the different varieties, as tested at different times:—

Name of Variety.	Form.	Growth.	Size.	Flavour.	Remarks.
Flat Egyptian.....	Flat turnip.....	Good.....	Medium.....	No. 1.	Good market variety.
Columbus.....	M'd. flat turnip.....	Very strong.....	Large.....	" 3.	" " " "
Arlington's Favourite.....	Turnip.....	Good.....	Medium.....	" 2.	Very good market variety.
The Lentz.....	Globe.....	".....	".....	" 3.	" " " "
Black Queen.....	Long tapering.....	Fair.....	".....	" 1.	" " " "
Edmund's Blood Turnip.....	Turnip.....	Good.....	Fair.....	" 2.	" " " "
Rennie's Intermediate.....	Long tapering.....	".....	Large.....	" 3.	Fair market variety.
New Victoria.....	Tapering.....	".....	Medium.....	" 3.	Good " " "
Crosby's Improved Egyptian.....	Turnip.....	".....	Large.....	" 3.	" " " "

TOMATOES.

Six varieties of tomatoes were sown in the hot-bed on April 18. Some of the plants were put in the cold-frame on May 21st, others were set out a week later in their permanent places.

The plants in the cold frame were removed to the beds without apparently damaging their roots. Yet the plants put out direct from the hot bed to the open ground made a stronger growth than those transplanted from the cold frame. The early frost killed the plants before the fruit was fully matured.

## Experimental Farms.

Varieties in order of their earliness :

Name of variety.	Remarks.
Early Ruby.....	Rough, round, flat, good crop, some ripe.
Atlantic Prize.....	Round, flat, good crop, some nearly ripe.
Earliest of all.....	Medium, rough, round, good crop, some nearly ripe.
Everbearing.....	Egg shape, medium cropper.
Dwarf Aristocrat.....	Round, medium crop.
Dwarf Champion.....	“ poor crop.

### CABBAGES.

Twelve varieties of cabbage were sown in the hot bed on April 18th, and transplanted to the open ground May 26th. These all made good, strong growth until June 15th, when some of the plants began to wilt, on examination it was found that the cabbage maggot (*Anthomyia brassicæ*) was at work at the roots. Acting under directions given by the Central Experimental Farm bulletin No. 11, page 26, hellebore was used, but this did not prove effective, and many of the plants had by this time died; a solution of kerosene emulsion was then tried. This seemed to promise better results, but very few of the plants reached maturity.

On July 10th new plants were purchased from a local gardener, the Jersey Wakefield, Drumhead, Winningstadt and Early Blood Red varieties, these were planted in the same hills the others were in, but there was worked in around each hill about two shovels of marsh mud. These all lived and made strong growth.

### CAULIFLOWERS.

Six varieties of cauliflower were started with the cabbages, receiving the same treatment. They likewise were destroyed by the maggot.

### RADISHES.

Six varieties of radishes were sown on May 11th. These all made good, strong, healthy growth, some being fit to use on June 15th. But their roots were infested with a small maggot, which proved to be the raddish maggot (*Anthomyia radicum*) all the radishes were affected with these pests and they soon began to wilt and die preventing any test being made as to quality, although the earliness can be given as the growth was considerably advanced.

Name of variety.	Remarks.
Pearl Forcing.....	Stump-rooted, early, fit for use June 20.
Scarlet White Tipped.....	Turnip-rooted, medium early, fit for use June 23.
Carter's Improved.....	Fine and large, medium late.
New Rosy Gem.....	An excellent variety, medium late.
Scarlet Olive Shaped.....	Oblong in shape, small taper, fit to use June 20.
Brightest Long Red.....	Long, very early, fit to use June 15.

### PUMPKINS.

Two varieties of pumpkins were grown, Steele's Sugar, and Jumbo, or Mammoth King. The Jumbo gave the largest yield, both are fine varieties.

## SQUASH.

Two varieties of squash, English Vegetable marrow and Long White Bush marrow were tried, these were both of excellent quality. Seed sown on May 26th.

## GARDEN CORN.

Four varieties of early corn were grown in the garden. They were sown on May 23rd, the Extra Early Cory was the earliest variety followed by Mitchell's Extra Early, Dreer's first of all, and Early Vermont.

## ASPARAGUS,

Three varieties of asparagus plants two years old, were planted on May 9th, 50 plants of Columbian Mammoth, 50 of Barr Mammoth, and 50 of Giant Early Argenteuil. These are all doing well.

## HOPS.

Two varieties of hops were set out on May 7th, 100 roots of East Kent Golding were received from Agassiz, B. C., and 100 roots of California Cluster from E. Meeker, of Puyallup, Washington, U.S.

The East Kent Goldings were the largest roots and made more rapid progress. A few hops were borne on both sorts.

## GENERAL STATEMENT OF CROPS.

Sixty-five acres in hay gave 144 tons, and in addition to the plots of grain for testing purposes, which yielded 301 bushels, there were five acres in oats and pease, which gave 197 bushels; three-quarter acres in pease which gave 19 bushels; eight acres of marsh in oats, which gave 194 bushels, and three acres in buckwheat, yielding 38 bushels, making in all 749 bushels of grain.

The root plots consisting in all of eight acres gave a yield of about 4,300 bushels. Three acres were sown with corn, beans and sunflowers for ensilage, which gave about 32 tons, and three acres were devoted to crops for feeding purposes during the summer months. About  $4\frac{1}{2}$  acres were in small fruits, nursery, shrubbery garden, &c. The remainder of the cleared land was devoted to pasturage.

## DRAINAGE.

No drainage was done on the upland, but four acres were underdrained on the marsh for the purpose of testing the practicability and economy of underdraining marsh land. So far the drains are working well, and it is hoped that this work may be continued another year, so that a sufficient area may be underdrained to thoroughly test the advantages of such drainage of marsh land, also to ascertain the cost per acre of such work.

## GRASSES.

Thirty-five varieties of grasses were received from the Central Experimental Farm. These were sown in plots on 30th April. In the following list the names and growth of the different varieties are given:—

- Colorado Blue Stem, *Agropyrum glaucum*, fair growth.
- Western Rye Grass, *Agropyrum tenerum*, very strong growth.
- Meadow Fox-tail, *Alopecurus pratensis*, did not grow,
- Sweet Vernal, *Anthoxanthum odoratum*, good growth.
- Tall Oat Grass, *Avena elatior*, very strong growth.
- Slough Grass, *Beckmannia erucaeformis*, did not grow.

## Experimental Farms.

Meadow Brome, *Bromus pratensis*, fair growth.  
Awnless Brome, *Bromus inermis*, medium growth.  
Fringed Brome, *Bromus ciliatus*, good growth.  
Wild Chess, *Bromus secalinus*, fair growth.  
Western Brome, *Bromus pumpehianus*, good growth.  
Mexican Brome, *Bromus segetum*, very strong growth.  
Crested Dog's Tail, *Cynosurus cristatus*, strong growth.  
Orchard Grass, *Dactylis glomerata*, strong growth.  
Northern Blue Joint, *Deyeuxia Langsdorfi*, did not grow.  
Canadian Lyme Grass, *Elymus Canadensis*, did not grow.  
Lyme Grass, *Elymus Virginicus*, fair growth.  
Hard Fescue, *Festuca duriuscula*, fair growth.  
Tall Fescue, *Festuca elatior*, good growth.  
Sheep's Fescue, *Festuca ovina*, did not grow.  
Holy Grass, *Hierochloa borealis*, did not grow.  
Perennial Rye Grass, *Lolium perenne*, very strong growth.  
Satin Grass, *Muhlenbergia Mexicana*, did not grow.  
Bearded Satin Grass, *Muhlenbergia sylvatica*, did not grow.  
Switch Grass, *Panicum virgatum*, good growth.  
Canadian Blue Grass, *Deyeuxia Canadensis*, did not grow.  
Wood Meadow Grass, *Poa nemoralis*, good growth.  
June Grass, *Poa pratensis*, did not grow.  
do *Poa pratensis*, white form, did not grow.  
do *Poa pratensis*, from Calgary, do  
Fetid Drop-seed grass, *Sporobolus heterolepis*, do  
Neglected Blue Joint, *Deyeuxia neglecta*, do

The varieties that have given good results in the past are: Western Rye Grass, Orchard Grass, Late or Fowl Meadow, Fringed Brome, Reed Canary, Western Brome, Tall Fescue, Meadow Fescue and Austrian Brome. The Reed Canary Grass and Western Brome are very early and rank-growing grasses, the former being 23 inches high on 1st June. The Late Meadow is a very fine late pasture grass.

### CURRENTS.

Several varieties of red, white and black currants have been experimented with. In point of productiveness they rank in the following order: Red—New Red Dutch, La Conde, Knight's Early Red, La Hative and La Fertile; White—White Transparent, White Grape and White Dutch; Black—Lee's Prolific, Ogden's Black and Baldwin Black.

The New Red Dutch, White Transparent, and Lee's Prolific are the most promising sorts and have made the strongest growth.

### RASPBERRIES.

Several varieties of raspberries have been experimented with, the Cuthbert has proved to be the best variety of red, and the Golden Queen the finest flavoured and most productive of the yellow sorts.

### GOOSEBERRIES.

The English gooseberries set out in the spring of 1893, with a few exceptions, did remarkably well, and gave some fine fruit.

About the 10th of June the gooseberries were attacked by "the shot hole" fungus (*Septoria ribis*), which spread very rapidly, the bushes were sprayed on June 12th with a solution of Potassium Sulphide, 1 oz. to a bucket of water, again on the 16th with Bordeaux mixture, which was repeated on the 22nd. These applications completely checked and killed the disease. The disease seemed to yield more readily to the Bor-

deaux mixture, and I think this may be safely recommended as a reliable remedy. Mildew never made its appearance, probably on account of the early application of these fungicides.

The American varieties of gooseberries were not so susceptible to the attacks of the fungus as the English sorts, although they were not by any means free from it.

The following is a list of the gooseberries experimented with. The yield of fruit under the circumstances referred to was small :—

Whenham's Industry,	Companion,
White Champagne,	Early Sulphur,
Bobby,	Improved Early Hedgehog,
Red Champagne,	Green Overall,
Dublin,	Governess,
Queen Victoria,	Leader,
Leveller,	Whitesmith,
Crown Bob,	Lancashire Lad,
Pitmaston Green Gage,	Bonny Lass.

Whitesmith, Governess and Early Sulphur were the earliest varieties, among the later ones Whenham's Industry, Victoria, Green Overall and Leader gave the best returns.

The Downing, Smith's Improved and Houghton proved to be the most serviceable American varieties.

#### STRAWBERRIES.

The Bubach, Sharpless and Warfield strawberries have proved to be excellent varieties here. Some fine fruit was grown on the plants sent from the Central Experimental Farm in August, 1893, and the plots of these will be extended. The following additional sorts are also under test :—Nicanor, Crawford, Barton's, Moore's Prolific, Filora, Logan, Van Deman, Standard, West Brook, Surprise, and Boynton.

#### ORNAMENTAL TREES AND SHRUBS.

The following list of ornamental trees and shrubs includes such as have been planted on the farm from time to time, all of which are doing well, and have proven hardy in this climate.

- Abies balsamea*, Balsam fir.
- Acer platanoides*, Norway maple.
- “ *rubrum*, Red maple.
- “ *saccharinum*, Sugar maple.
- Alnus glutinosa*, Sticky alder.
- Ampelopsis quinquefolia*, Virginian creeper.
- Amygdalus nana*, Double flowering almond.
- Artémisia Abrotanum*, Southern wood.
- Berberis Thunbergii*, Thunberg's barberry.
- “ *vulgaris purpurea*, Purple leaved barberry.
- “ *Aquifolium*, American holly.
- Betula papyrifera*, Canoe birch.
- “ *populifolia*, American white birch.
- Caragana arborescens*, Siberian Pea-tree.
- Corylus avellana*, Filbert.
- Deutzia crenata* fl. pl., Double crenate deutzia.
- Diervilla* (*Weigelia*) *grandiflora alba*, Large flowered white weigelia.
- “ “ *grandiflora variegata*, Variegated weigelia.
- “ “ *rosea alba*, White weigelia.
- Elæagnus angustifolia*, Russian olive.

## Experimental Farms.

*Hydrangea paniculata grandiflora*, Large flowered hydrangea.

*Juniperus Hibernica*, Irish juniper.

“ *Virginiana*, Red cedar.

*Juglans cinerea*, Butternut.

*Juglans nigra*, Black walnut.

*Larix Americana*, American Larch.

*Larix Europæa*, European Larch.

*Lonicera Tatarica*, White flowered bush honeysuckle.

“ “ *Red flowered bush honeysuckle.*

*Philadelphus coronarius*, Mock orange or syringa.

“ *grandiflora*, Large flowered syringa.

“ *nana*, Dwarf syringa.

“ *deutziflora*, Deutzia flowered syringa.

*Picea alba*, white spruce.

“ *excelsa*, Norway spruce.

“ *nigra*, Black spruce.

“ *pungens*, Rocky Mountain blue spruce.

*Pinus Austriaca*, Austrian pine.

“ *Mughus nana*, Dwarf Mountain pine.

“ *sylvestris*, Scotch pine.

“ “ *Rigaensis*, Riga pine.

“ *Strobus*, White pine.

*Pseudotsuga Douglasii*, Douglas spruce.

*Populus nigra pyramidalis*, Lombardy poplar.

“ *alba Bolleana*, Bolle's poplar.

*Pyrus Americana*, American mountain ash.

“ *Aucuparia*, European mountain ash.

*Quercus Robur*, English oak.

*Retinospora filifera*, Thread-like retinospora.

“ *plumosa*, Plumose retinospora.

“ *plumosa aurea*, Golden pl. retinospora.

*Ribes aureum*, Yellow flowering currant.

*Salisburia adiantifolia*, Maiden hair tree.

*Salix laurifolia*, Laurel-leaved willow.

*Spiræa Californica*, Californian spiræa.

“ *Media rotundifolia*, Round-leaved spiræa.

“ *opulifolia aurea*, Golden-leaved spiræa.

“ *Van Houttei*, Van Houtte's spiræa.

*Syringa Josikæa*, Josika's lilac.

“ *vulgaris alba*, White lilac.

“ “ *purpurea*, Purple lilac.

*Thuja occidentalis*, Common arbor-vitæ.

“ “ *globosa*, Globose arbor-vitæ.

“ “ *pyramidalis*, Pyramidal arbor-vitæ.

“ “ *Douglas, No. 2*, Douglas' arbor-vitæ.

*Tilia vulgaris*, European Linden.

*Tsuga Canadensis*, Hemlock spruce.

*Ulmus Americana*, White elm.

“ *campestris*, English elm.

“ *racemosa*, Rock elm.

*Viburnum Lantana*, Pliant viburnum.

“ *opulus*, High bush cranberry.

*Morus hybrida*, Russian mulberry.

Shrubs added to the collection during the past summer, which will be reported on as to hardiness, after they have been further tested.

*Rosa rubrifolia*, Red-leaved rose.

*Lonicera chrysantha*, Bush honeysuckle.

*Ligustrum Amurense*, Amur privet.  
*Pyrus baccata cerasiformis*, Cherry-leaved pyrus.  
 “ *sanguinea*, Red berried crab.  
 “ *macrocarpa*, Large fruited berried crab.  
 “ *genuina*, True berried crab.  
 “ *prunifolia*, Plum-leaved crab.  
*Diervilla* (*Weigelia*) *lonerii*, Dark red weigelia.  
 “ “ *candida*, White flowered weigelia.  
 “ “ *hybrida Hendersoni*, Henderson's weigelia.  
*Exohorda grandiflora*, Large flowered exchorda.  
*Cornus mas elegantissima*, Elegant dog wood.

Thirty-five varieties of lilacs were also received and planted in nursery rows. It is proposed to plant these in a large clump, so that the different sorts of this desirable shrub may be more readily examined and compared. These varieties are given in the following list:—

Ambroise veschaffeit,	Souv. de la Spathe,
Flora plena,	Rubra Insignis,
Common white,	Emodi,
Dr. Lindley,	Cœrula superba,
Virginal,	Beranger,
Persian white,	Pyramidalis,
Common purple,	Villosa,
Bertha Damman,	Laciniata, Persian,
Violacea,	Prof. Stockhart,
Lavanensis,	Princess Marie,
Mathieu De Dombasle,	Nigricans,
Rouge de Marley,	Gloire de Croncels,
Japonica,	Madame Moser,
Sangeana,	Renoncule,
Languis,	Gloire de Lorraine,
President Massart,	Ville de Troyes,
Persian small flowering,	Hyacinthiflora.

#### ORCHARD.

The orchard which has been planted, contains now 81 varieties of apples, 8 of crab apples, 20 of pears, 29 of cherries, and 25 of plums. The soil is a clay loam, under-drained, the apple trees have been planted 36 feet apart, each way, and the pears, plums and cherry trees 18 feet apart each way. A part of the trees were set out in 1889-90, and the remainder since then.

The Yellow Transparent, Anis and Sultan are very early and fine varieties of apples ripening by the 1st of September. The White Astrachan, Red Astrachan, Tetofsky and Borovinka, next in earliness, have fruited fairly well. The Longfield and Haas were the most prolific sorts. Maidens Blush and Scotts Winter have also done well, the latter seems to be a very fine variety of winter apple, most of the other varieties planted have not yet fruited. The planting of a second apple orchard was begun in 1892, on a piece of unbroken land in the woods surrounded by a shelter belt of spruce trees. It is expected that this will be completed next year.

# Experimental Farms.

## FLOWERS.

Being often asked for a list of the most attractive and hardiest varieties of annual and perennial flowering plants, the following list is submitted as embracing the most useful and promising varieties tested here.

The annuals that do well, sown in the open ground, those that require to be started in the hot bed and transplanted, and the perennials are arranged in separate tables. It is hoped that the information here given will enable the farmers of our rural districts to make suitable selections of these desirable flowers and induce them to pay more attention to the beautifying of their places and making their surroundings more attractive, thereby giving the young people a better chance to study the beauties of nature and at the same time foster a stronger love for their homes.

The perennials require to be mulched during winter.

## ANNUAL FLOWERS—Seed sown in the open ground.

Alyssum Sweet	Hardy	Beautiful, white, fine for border.
Anagallis (less than 1 ft. high)	"	Fine and beautiful for border.
Asperula azurea setosa	"	Dwarf, good edging flower.
Aster	"	Queen of Autumn flowers.
Acroclinium (Everlasting)	"	18 in high, very pretty.
Brachycome (Swan River Daisy)	"	8 in high, pretty small flower.
Calendula (Marygold)	"	Fine late bloomer.
Calliopsis (Beautiful eye)	"	Very showy, 1 to 3 ft. high.
Candytuft (Iberis)	"	Fine old flower.
Centaurea Cyanus (Bachelor's Button)	"	One of the best flowers.
Centranthus	"	Fine variety,
Chrysanthemum	"	Fine late bloomer.
Clarkia	"	Fine of easy culture.
Convolvulus (Minor)	"	Brilliant flower, trailer.
Datura Wrightii (Trumpet flower)	Half-hardy	Large flower, very beautiful.
Delphinium (Larkspurs)	Hardy	Short bloomers, very fine.
Dahlia	Half-hardy	Fine flowers, keep roots in cellar during winter.
Double Daisy (Bellis)	Hardy	Does best with plenty of water and shade.
Dianthus (Japan Pink, China Pink, Imperial Pink)	"	Very showy.
Erysinum	"	18 in high, yellow bloom.
Eschscholtzia (California Poppy)	"	1 ft. high, very showy and beautiful.
Gaillardia	"	Constant bloomers, very fine.
Gilia	"	1 ft. high, small flower.
Godetia	"	Free bloomer and beautiful.
Helianthus (Sun Flower)	"	Large flowers.
Lavatera	"	Very showy, profuse bloomer.
Gladiolus	Half-hardy	Very beautiful, keep bulbs in cellar in the winter.
Linum (Flax)	"	1 ft. high, beautiful bloomer.
Lupinus (Lupin)	Hardy	Spike flowers, fine variety of free bloomers.
Malope	"	Tall, blooms profusely.
Marigold or Tagetes	Half-hardy	Yellow and brown, very beautiful.
Marvel of Peru (Four-o'clock)	"	Beautiful foliage and flowers.
Matricaria (Feverfew)	Hardy	Fine free bloomer.
Mignonette (Reseda)	"	Very fragrant and fine.
Nigella (Love-in-a-mist)	"	Showy flower.
Nasturtium (Tall and Dwarf)	"	Very beautiful, showy flowers.
Pansy (Viola tricolor)	"	Most beautiful of flowers.
Poppy (Papaver)	"	Beautiful large flower.
Peas, sweet	"	Free flowering, most beautiful flowers.
Phlox Drummondii	"	Very beautiful, easy culture.
Rhodanthe (Everlasting)	"	Fine, red and white.
Scabiosa (Mourning Bride)	"	Fine, beautiful flower.
Salpiglossis	Half-hardy	"
Schyzanthus	"	Beautiful, easy culture.
Stocks (Dwarf and Pyramidal)	"	Very fine, free bloomers.
Thunbergia	"	Climber with very pretty flowers.
Morning Glory	Hardy	Beautiful climber.
Venus's Looking glass	"	Very pretty dwarf plant.
Zinnia Elegans	"	Free bloomer, very fine.

## Experimental Farms.

Seed sown in the hot-bed and plants transplanted to the open ground.

Antirrhinum (Snapdragon).....	Hardy.....	Will keep in cellar during winter, very fine.
Balsam.....	Half-hardy..	Very beautiful.
Browallia.....	“ ..	Beautiful and delicate flower.
Calandrinia.....	Hardy.....	Requires sunny and dry situation, very fine.
Petunia.....	Half-hardy..	Profuse-flowering, easy cultivated.
Portulacca.....	“ ..	Brilliant, grow in sandy soil.

### PERENNIALS.

Aquilegia (Columbine).	Gentiana excisa.
Anemone sylvestris.	Gaillardia aristata.
“ narcissiflora.	Galega orientalis.
Aconitum napellus, Monkshood.	Hypericum pyramidatum, St. Johnswort.
“ lycotonum squarrosa, Monkshood.	Helianthus giganteus, Sunflower.
“ cernuum “	Myosotis alpestris, Forget-me-not.
“ kusmalowi “	Potentilla fruticosa.
Allium stellarianum, Wild onion.	Papaver orientalis, Oriental poppy.
Asclepius tuberosa, Milkweed.	Salvia lavandulifolia.
Delphinium cashmerianum, Larkspur.	Solidago rigida, Golden rod.
“ graniflorum “	Sedum medinezii, Stone crop.
“ laxiflorum “	Thalictrum aquilegifolium.
“ dasyanthus “	Veronica saxatilis, Speedwell.
Dictamnus fraxinella, Gas plant.	“ fruticulosa “
Eremurus altaicus.	“ salurgodes “
Gentiana burseri.	

### BULBS PERENNIAL.

Iris or flowering flag.	Tulips, parrot.
“ English.	Jonquils, single.
“ Spanish.	Narcissus.
Lilium candidum.	“ poeticus.
“ auratum.	“ tazetti.
“ speciosum.	“ pseudo scoticus.
Hyacinths, single red.	“ incomparabilis.
“ “ white.	Scilla bifolia.
“ “ blue.	“ sibirica.
Tulips single.	

### DISTRIBUTION OF SEED GRAIN AND POTATOES.

In all 338 applicants have been supplied this year with wheat, barley, pease, oats or potatoes. The quantity distributed has been 3 lbs. in each package, and not more than two packages have been sent to any one applicant. No seeds of field roots, garden vegetables or flowers have been available for distribution.

Total number of varieties sent out :—

	Packages.
Potatoes.....	203
Wheat.....	138
Oats.....	290
Barley.....	118
Pease.....	31
Total .....	780

Reports have been received of 104 packages of the 780 distributed.

The Delaware potato seems to give general satisfaction, yielding in some localities as high as 85 pounds from 3 lbs. sown, and of good quality.

The Polaris has also given good results, yielding as high as 69 lbs. from 3 lbs. sown. This potato is of excellent quality and a good keeper.

The reports as to the yield of the Early Sunrise prove it to be a fine extra early variety, yielding in some cases as much as 70 lbs. from 3 lbs. sown.

The reports received on barley were few. The Golden Melon in one instance gave a yield of 78 lbs. from 3 lbs. sown. The Duckbill one of the best two-rowed sorts of barley with us has been reported by some as giving a poor yield of inferior grain. This is probably owing to the unusual drought which prevailed during the summer.

The Banner oat has given good yield in most cases. The Scottish Chief, Early Racehorse, Cream Egyptian, Early Archangel, Prize Cluster and Rosedale are all well spoken of and have given from 40 lbs. to 60 lbs. from 3 lbs. of seed sown.

The wheat generally has not given more than 30 lbs. from 3 lbs. sown. Campbell's White Chaff is a variety which appears to give general satisfaction.

#### MEETINGS ATTENDED.

Meetings of farmers for the discussion of agricultural subjects were attended in different parts of the Maritime Provinces:

Victoria, Cumberland Co., N. S., 25th January.  
 Wolfville, King's Co., N. S., 17th and 18th January.  
 Kentville, King's Co., N. S., 22nd and 23rd January.  
 Yarmouth, Yarmouth Co., N. S., 28th February.  
 Aylsford's, King's Co., N. S., 29th February.  
 Horton Landing, King's Co., N. S., 30th February.  
 Moncton, West. Co., N. B., 13th March.  
 Memramcook, West. Co., N. B., 14th March.  
 River John, Pictou Co., N. S., 26th June.  
 Pugwash, Cumberland Co., N. S., 9th July.  
 Fredericton, N. B., 16th August.  
 Truro, N.S., 21st August.  
 Yarmouth, N.S., 28th August.  
 Southampton, N.S., 12th October.  
 Amherst, N.S., 8th November.  
 Centreville, Carleton Co., N.B., 24th November.

#### EXHIBITIONS.

Two exhibitions were attended. The Nova Scotia Provincial Exhibition held at Halifax on September 26th, 27th, and 28th, and a county fair at Sackville, N.B., on October 9th.

The farm exhibit consisted of grain threshed and in straw, roots, fruits and grasses, all grown on the farm in 1894, occupying a space of 10 by 15 feet square.

The exhibit shown this year has been placed in the Assembly Hall of the Amherst Academy, where it is hoped it will be of permanent value.

I have the honour to be, sir,

Your obedient servant,

W. M. BLAIR,  
*Superintendent.*

## Experimental Farms.

# EXPERIMENTAL FARM FOR MANITOBA.

BRANDON, MAN., 31st October, 1894.

To W<sup>M</sup>. SAUNDERS, Esq.,  
Director, Dominion Experimental Farms,  
Ottawa.

SIR,—I have the honour to submit herewith my seventh annual report of the experiments undertaken and work accomplished on the Brandon Experimental Farm during the past eleven months.

Last spring opened quite late and the April rainfall was heavier than usual, greatly delaying seeding; the first grain was sown on the Experimental Farm on the 20th April, ten days later than the average date, and the first experimental plots were not sown until 30th April, and even then many low spots in the fields were miry and germination of grain in them was delayed, allowing the weeds in these spots to get a good start which they kept throughout the season.

After the middle of May the weather remained unusually dry and the rainfall was only 5.1 inches from 1st April to 30th September, or 1.8 inches less than during the same months last year.

Some of the favourable features in the past season was the almost total absence of severe wind storms and the long open fall, the first injury from frost occurring on the 17th September, by which time all grain was either threshed or stacked.

Owing to the light rainfall the yield of all farm produce in the western and south western parts of the province was below the average of other years, but owing to the excellent harvest weather and open fall the sample of grain of all kinds was much better than usual and the only losses sustained have been through injury by smut, for in the face of the very conclusive results obtained from the use of bluestone as a smut preventive it is to be regretted that a number of farmers still either refuse to treat their seed wheat or do it so carelessly, that considerable loss has again resulted from this cause. Parties who had escaped for a number of years were heavy sufferers this year and owing to the abundant supply of good wheat, there was very little demand for smutty grain and it had to be sold at a sacrifice.

A noticeable feature of the past summer is the large exports of beef cattle from the province; it is to be regretted, however, that many of them were only thin stockers sold at a sacrifice and which should have been fed over winter and sold in spring as fat cattle at good prices.

The returns from all fodder plants have been less than usual, but farmers are everywhere learning to utilize the straw, chaff and other by-products instead of burning them as in former years and no scarcity of winter feed is anticipated.

Owing to the prevailing low price of wheat, experimental tests have been made this year with special crops, among them flax, millet seed, and pease for the purpose of comparison the money value per acre of each crop is stated; the values given are based on the wholesale prices prevailing at the farmers' market, Brandon.

### VARIETY TEST OF WHEAT.

Rio Grande, the most productive variety in this year's test, has also made one of the highest average yields for the past four seasons, although a fairly good wheat, it is not considered equal to the Red Fife for milling purposes.

Dion's is a newly introduced wheat, of uncertain origin, has this year equalled the Red Fife in productiveness and matured four days in advance of that variety.

is a heavy bearded wheat, which is considered a serious objection by many farmers here. This variety will have to be tested for a number of years before reliable conclusions can be reached regarding it.

Monarch and Wright's Favourite were sent here by farmers for a comparative test, both are bald varieties, and this year rate low in productiveness.

The old favourites—Red and White Fife—are again nearly at the top of the list, and the difference between them in yield is only one bushel per acre, farmers living in districts where these varieties ripen in time to escape fall frosts in an average year will do well to hesitate before abandoning them for varieties of uncertain value. Much injury is sustained by farmers mixing these inferior varieties with their best grain, and by this means permanently injuring the quality of the grain exported from the province, for that reason farmers should use for feed any variety found inferior in quality and not mix it with their grain offered for sale as is often done.

WHEAT—Test of varieties, sown in plots of  $\frac{1}{10}$  acre in sandy loam.

Name of variety.	Date of Sowing.	Date of Ripening.	Number of days Maturing.	Length of Straw.	Character of Straw.	Length of Head.	Kind of Head.	Yield per Acre.		Weight per Bushel.	Proportion Rusted.

#### CROSS BRED WHEATS.

A noticeable feature of this year's tests is the high standard of productiveness shown by the cross-bred wheats—Preston and Percy—these varieties ranking fifth and seventh respectively on the list, they weigh from one to two pounds above the standard, and are from two to four days earlier in maturing than the Red Fife; and yield about the same as that variety.

Percy is beardless, which will make it all the more acceptable on that account.

## Experimental Farms.

The parentage of the cross-bred varieties referred to in the table is as follows :—

- (Bearded) Preston—Ladoga female and Red Fife male.
- (Beardless) Percy—Ladoga female and White Fife male.
- (Beardless) Stanley—Ladoga female and Red Fife male.
- (Bearded) Advance—Ladoga female and White Fife male.
- (Bearded) Crown—Ladoga female and White Fife male.
- (Bearded) Ottawa—Ladoga female and Red Fife male.
- (Beardless) Major C No. 2 sport—Ladoga female and White Fife male.
- (Beardless) Captor C 1888—Ladoga female and White Fife male.
- (Bearded) Blenheim—Ladoga female and White Fife male.
- (Bearded) Huron—Ladoga female and White Fife male.

Thirty grains of each of the following cross-bred varieties recently originated at the Central Farm at Ottawa were sown in drills—the No. 1 variety was the most promising, having well filled heads.

All the grain was bright and hard, the quantity sown was not large enough to permit of the yield per acre being given.

Name of Variety.	Character of Soil.	Size of Plot.	Date of Sowing.	Date of Ripening.	Number of days Maturing.	Length of Straw.	Character of Straw.	Length of Head.	Kind of Head.	Proportion Rusted.
						In.		In.		
Red Fife, female, Abundance, male	Sandy loam	30 grains	May 16	Aug. 9	85	35	Stiff	4½	Bearded	None.
Red Fife, female, Gehun, male		"	" 16	" 12	88	38	"	4	Beardless.	"
Hard Red Calcutta, female, Red Fife, male	"	"	" 16	" 13	89	44	"	4	Mixed	"
Red Fife, female, Campbell's W. Chaff, male	"	"	" 16	" 12	88	36	"	3½	Beardless.	"

### A TEST OF ROLLING WHEAT.

The use of land rollers after the grain is sown, was almost abandoned a few years ago; latterly a number of farmers are reviving their use and with apparent good results.

The chief objection to the use of rollers on light land is the tendency to injury from wind storms exposing the seed; by rolling before the grain is drilled in this difficulty is largely overcome, owing to an absence of severe wind storms the advantage of this plan was not fully tested this year. This year there has been a slight apparent gain from rolling which is sufficient to more than pay for the work. The tests were made on plots of  $\frac{1}{10}$  acre, soil gravelly loam.

Name of Variety.	Date of Sowing.	Date of Ripening.	Number of days Maturing.	Length of Straw.	Character of Straw.	Length of Head.	Kind of Head.	Yield per Acre.	Weight per Bushel.	Value of Grain per Acre.
				In.		In.		Bus. lbs.	lbs.	
Harrowed and rolled	May 3	Aug. 9	98	29	Stiff	2½	Beardless	17 10	61	\$6.86 @ 40c. per bushel.
Rolled after drilled	" 3	" 9	98	26	"	2	"	17 00	61	\$6.80 " "
Not rolled	" 3	" 9	98	31	"	2½	"	15 30	60	\$6.20 " "

WHEAT CUT AT DIFFERENT STAGES OF RIPENESS.

The result of this year's test varies very little from that of last year, the yields and weight with one exception increasing until the grain was ripe ; it is evident, however, that should danger from early frost threaten, wheat of both red and white varieties can be cut in the dough stage without a very large shrinkage either in weight or yield, and a week's time is often sufficient to save the crop from injury by frost.

Seven pecks seed per acre. Sown with common hoe drill on summer fallow.

Name of Variety.	Stage when cut.	No. days from sowing.	Date of cutting.	Yield per acre.		Weight per bushel.
				Bus. lbs.	Lbs.	
Red Fife, 1st cut	Early milk stage	88	July 30	18 20	55	
" 2nd "	Late "	91	Aug. 2	22 10	58	
" 3rd "	Dough stage	95	" 6	28 00	61	
" 4th "	Ripe yellow.	102	" 13	29 20	62	
White Connell, 1st cut	Early milk stage	88	July 30	16 40	53	
" 2nd "	Late "	91	Aug. 2	19 00	58	
" 3rd "	Dough stage	95	" 6	28 00	61	
" 4th "	Ripe yellow.	102	" 13	27 20	63	

SUMMARY.

1. Wheat cut before reaching the dough stage loses heavily both in yield and weight per bushel.
2. Although it is preferable to allow the grain to harden before cutting still there is very little shrinkage after the dough stage is reached or within say a week of ripening.

COST OF GROWING WHEAT PER ACRE ON SUMMER-FALLOW.

In accordance with your instruction, an endeavour has been made during the past season to determine the cost of growing an acre of wheat in this country. A careful record of the work done on a field on this farm has been kept which forms the basis of this calculation. The conditions however surrounding the various farms of this province are so different, that the cost of growing an acre of wheat to the average farmer, must vary with the circumstances in which he is placed.

Some of these conditions are the size of fields, amount of stone or scrub on the land, quality of the land; favourableness of the season, fall frosts, good or bad harvest weather, distance from market, value of land, whether wheat growing is used to supplement other agricultural products or whether teams and men have to be kept especially for this work, and last but not least the ability of the farmer himself.

The field selected for this purpose was a long field containing fourteen acres, it produced  $29\frac{1}{5}$  bushels per acre of No. 1 hard wheat, weighing 62 lbs. per bushel, and worth 42 cts. per bushel in Brandon at this date (31st October).

It will be seen from the following particulars that it cost \$7.88 per acre or within a fraction of 27 cts. per bushel at  $29\frac{1}{5}$  bushels per acre.

## Experimental Farms.

### Cost of growing Wheat per acre on Summer-fallow.

	Per Acre.
	\$ cts.
Ploughing once .....	1 25
Harrowing twice @ 10 cts. ....	0 20
Cultivating twice @ 20 cts. ....	0 40
Seed, 1½ bushels per acre @ 50 cts. ....	0 75
Drilling .....	0 22
Binding .....	0 33
Cord .....	0 20
Stooking .....	0 18
Stacking .....	0 60
Threshing, including meals for men, 5 cts. per bushel .....	1 46
Teaming to market 4 miles @ 1c. per bushel .....	0 29
Two years rent or interest on land valued at \$15 per acre @ 6 per cent. ....	1 80
Wear and tear of implements per acre .....	0 20
Total cost per acre .....	7 88

### WHEAT, RESULTS OF EARLY, MEDIUM AND LATE SOWING.

These tests were made on  $\frac{1}{10}$  acre plots, soil clay loam. As usual the earliest sown wheat and oats ripened first but is not the largest crop, this also agrees with former years. It appears that the tramping of the earliest sown plot before the land is thoroughly dry, compacts the soil and forms a crust to the permanent injury of the crop.

The wheat was sown, with a common hoe drill, 6 pecks of bluestoned seed per acre, no smut or rust.

Name of Variety.	When sown.	Date of Ripening.	Number of days Maturing.		Character of Straw.	Length of Head.		Kind of Head.	Yield per Acre.		Proportion Rusted.

OATS—RESULTS OF EARLY, MEDIUM AND LATE SOWING.

These tests were conducted on plots of  $\frac{1}{10}$  acre each on clay loam. The effect of sowing grain before the land is in a fit condition to receive the seed is apparent with the oats as well as wheat, the first plots in each case yielding less than the second ones.

The injurious effects of alkali even in small quantities is plainly shown in the reduced yield of the two plots of oats sown on 29th May ; there was no evidence of the alkali until the grain was up when the salts showed slightly on the ground, and the few plants growing on these spots were backward and unhealthy looking.

## Experimental Farms.

Oats were sown with a hoe drill, eight pecks of seed per acre, not bluestoned, with the following results :—

Name of Variety.	When Sown.	Date of Ripening.	Number of days Maturing.	Length of Straw.	Character of Straw.	Length of Head.	Kind of Head.	Yield per Acre.			Proportion Rusted.
								Bus. lbs.	Lbs	Weight per Bushel.

"	5th ".....	56	16	94	34½	3
"	6th ".....	54	14	91	33½	3

### SUMMARY.

1. Three years' experience would appear to indicate that the earliest sown plots of grain almost invariably ripen first.
2. That sowing grain before the land is in a fit condition for the seed results in a reduced yield.
3. Late sowing of both wheat and oats encourages rust, and lessens the yield.
4. Early sown oats always weigh the most.

BARLEY—RESULTS OF EARLY, MEDIUM AND LATE SOWING.

Owing to insufficient seed only seven plots of barley were sown.

The second sown plot of Oderbruch and the third of Canadian Thorpe gave the largest yield.

Barley was sown on turnip ground with a hoe drill, two bushels of seed per acre. The soil was clay loam, and the size of plots  $\frac{1}{10}$  of an acre. The following are the results:—

Name of Variety.	Previous Crop.	When Sown.	Date of Ripening.	Number of days Maturing.		Length of Straw.	Character of Straw.	Length of Head.		Kind of Head.	Yield per Acre.		Weight per Bushel.	Proportion Rusted.

TEST OF DRILLS IN SOWING WHEAT.

This test has been extended over a series of years, including greatly varying soils and seasons, but always with the same results. This year the plots were on gravelly loam, and the result was as usual in favour of drills. It is quite evident that considerable loss is sustained each year by some farmers persisting in the use of broadcast machines, these should be confined to rough backsetting, where it is impossible to work a drill.

The choice of drills, whether shoe press drill, or common hoe drill, should depend largely on the condition of the land to be sown, on clean early ploughed summer fallow or short thin stubble, the hoe drill will give good satisfaction, but on land heavily charged with stubble, only the shoe drill will clean properly.

The following tests were made on plots of  $\frac{1}{10}$  acre each:—

Name of Variety.	Date of Sowing.	Date of Ripening.	Number of days Maturing.	Length of Straw.	Character of Straw.	Length of Head.	Kind of Head.	Amount seed per Acre.	Yield per Acre.	Weight per Bushel.	Proportion Rusted.

## Experimental Farms.

### THE USE OF BLUESTONE AS A SMUT PREVENTIVE.

Although trials of bluestone as a smut preventive have been carried on here for a number of years, and always with the same result, the interests at stake are so large that the test was again repeated this year, with even more than usual success, and we do not understand why some farmers fail in destroying smut by this means.

The mode of application adopted here for wheat only slightly smutty is to dissolve one pound of bluestone in  $1\frac{1}{2}$  pails of water; this is sprinkled over ten bushels of grain with an old broom, keeping the wheat well stirred during the operation; as bluestone dissolves slowly in cold water, it is recommended to use a quart or two of boiling water at first, and after the bluestone is dissolved, cold water can then be added to make up the required quantity.

The reported failures in the use of bluestone are probably due either to carelessness in stirring the wheat, so that the grains are not all wet with the solution, or from imperfectly dissolved bluestone. If the directions given are carefully followed, smut will certainly be almost wholly prevented.

Land summer-fallowed, size of plots  $\frac{1}{10}$  of an acre, six pecks per acre, bluestone liquid sprinkled on the seed, results obtained by counting the wheat heads on 3 feet square. Common drill used, soil clay loam, sown 3rd May, cut 13th August.

Variety.	How treated.	Yield per Acre.	Weight per Bush.	Smutty Heads.	Heads with no smut.	Total number heads.
		Bush. lbs.	lbs.			
Very smutty Red Fife.....	1 lb. Bluestone to 10 bushels....	23 30	61	24	449	473
“ “ .....	1 “ “ to 5 “ .....	22 50	61	None.	360	360
“ “ .....	No Bluestone.....	22 30	58	112	361	473

### LOOSE SMUT IN BARLEY AND OATS.

This fall many farmers report heavy losses from loose smut in coarse grains.

Until the past season, the losses from this kind of smut have been small in this province, but on this farm it has been found very prevalent when infected seed is sown, and in future we may expect it to be more general unless effective steps are taken to check it.

During the past season some tests have been made on this farm with badly smutted Baxter's barley, both soaked and sprinkled with bluestone liquid, the following tables give the result of this experiment, with liquid composed of one pound of bluestone to twelve quarts of water:

How treated.	No. of smutty heads.	No. of sound heads.	Yield per acre.	Weight per bushel.	Remarks.
			Bush. lbs.	lbs.	
Soaked in bluestone liquid 5 hours .....	3	163	20 40	48	Germinated slowly and only 75 %
Sprinkled with bluestone 1 lb. to 10 bush....	35	213	29 08	45	Germination not injured.
No bluestone treatment.....	83	225	24 28	44	

From the above it will be seen that soaking in bluestone solution severely injures the germination of the seed, and that sprinkling only destroys about one-half of the smut, therefore neither of these plans are entirely satisfactory.

Mr. James Elder, of Virden, has tried the following plan with decided success and without injuring the germination of the seed.

A quantity of liquid is prepared, composed of one pound of bluestone dissolved in two pails of water, a coal oil barrel is then three parts filled with the grain and sufficient of the liquid is poured on to just cover the grain, this is allowed to remain for a few minutes only, when the liquid is drawn off through a  $\frac{3}{4}$ -inch hole at the bottom of the barrel, and the grain emptied out, by adding about three-quarters of a pail each time the same liquid can be used a number of times.

#### RED FIFE ON LAND PREPARED IN DIFFERENT WAYS.

In this test the potato ground was ploughed in the spring, 1894. The summer-fallowed land was ploughed in June, 1893, and cultivated on the surface during the summer of that year, and sown without harrowing the following spring.

The third plot was sown on land summer-fallowed in 1892, sown to wheat in 1893, and simply drilled in on the stubble last spring. The soil was clay loam, and the plots one-tenth of an acre each.

The exactness of this test as a comparison between fall-ploughing and the other modes of preparation was interfered with by the fall-ploughed plot being injured by wind.

#### RED FIFE WHEAT.

“ fall “ .....	“ 1.	“ 11.	102	30	“ ..	2 $\frac{1}{2}$	“ ..	17	10	62	* “

\* Slightly injured by wind.

#### SUMMARY.

1. All kinds of grain crops sown after potatoes generally yield well, if the straw is only stiff enough to stand the luxuriant growth.
2. Summer-fallow prepared by ploughing in June and the surface cultivated during the summer always ensures a good crop on this farm.
3. For a second crop after a clean summer-fallow, on land free of perennial weeds, and in a dry year; simply drilling in wheat on the stubble will often give a good return, but if attempted under any other conditions it is likely to bring a failure, and in any case it cannot be called good practice.

#### EXPERIMENTS WITH OATS.

Many farmers throughout the province erroneously attribute the lessened yield of oats for the past three years to the more general use of the white varieties so valuable for milling purposes, and many inquiries for black varieties are being made for next year's sowing. From tables published in last year's annual report from this farm it

## Experimental Farms.

will be seen that the average yield for four years of Banner a good milling white oat was nearly 12 bushels per acre above the yield of Black Tartarian for the same period, and this year the difference is even greater, showing clearly that the lessened yield cannot be charged to the use of a good white oat.

From the accompanying table with its varying yields it is evident that only prolific varieties true to name should be sown. The tests referred to have been conducted on plots of  $\frac{1}{10}$  acre each, soil sandy loam.

The soil used for oat tests this year was somewhat light in character and for that reason suffered more than it otherwise would have done from drought.

The Abundance, Banner and Rosedale, three of the most prolific varieties last year, are also among the best for yield this year, this is the more noticeable from the fact that the soil was of a different character from that used last season.

Abundance, a comparatively new introduction here, heads the list for productiveness in the test of varieties, but is surpassed by the Banner in other portions of the farm.

The Abundance is more branching than the Banner and somewhat shorter in the berry, it is white in colour, and has every appearance of being a good milling oat.

White Schonen is another newly introduced branching oat, white in colour, heavier in weight than Banner, very prolific this year and a week later in ripening than that variety.

Wallis, also new here, would be classed as a white oat, but our supply has many gray kernels which would spoil it for milling purposes; it ripened a few days earlier than Banner and produced ten bushels per acre less.

White Monarch is a second early sided oat with a short plump kernel of a good white colour, fairly prolific and weighs well.

EFFECTS OF BARN-YARD MANURE AS A FERTILIZER.

In last year's report mention is made of a test of barn-yard manure as a fertilizer for wheat, this year the same plots were spring-ploughed and sowed with oats, without further manuring. From the accompanying table it will be seen that the manured plots gave slightly the best yield this year, showing that the effect of the manure extended to the second year.

Name of Variety.	How Manure was applied.	Size of Plot.	Date of Sowing.		Date of Ripening.	Number of days Maturing.		Length of Straw.	Character of Straw.	Length of Head.	Kind of Head.	Yield per Acre.		Weight per Bushel.
			May	18		Aug.	4					In.	In.

BARLEY, TEST OF VARIETIES.

The yield of barley on the Experimental Farm was smaller this year than usual, this was largely due to the very light soil used for the purpose which was unsuitable for such a dry season.

Beaver, Surprise, Trooper, Royal and Newton are all cross-bred varieties, the first four originated at Ottawa, the three first named are the heaviest barleys grown on the farm this year.

As a number of the varieties were dried up by the excessive hot and dry weather and did not ripen naturally, the dates of ripening given on the tables are only approximate.

Excelsior, Champion and Success are newly introduced varieties quite beardless, all of them are very thin and shrunken in the berry this year, weighing only from 43 to 46 lbs. per bushel, but may improve in this respect in seasons of average rainfall.

All were grown in plots of  $\frac{1}{10}$  acre, on summer-fallow; soil sandy loam, sown with a hoe drill, 8 pecks of seed per acre, not bluestoned, only the Common and Rennie's six-rowed were smutty.

### HYBRID BARLEYS.

A number of hybrid varieties of barley were originated at the Central Experimental Farm, Ottawa, by crossing the two-rowed with the six-rowed sorts were tested on the farm this year.

The most promising of these are Pioneer and Bolton, both of which yielded over thirty bushels per acre, the product of these plots has been set aside for further test next year.

For comparison a plot of Thanet barley was sown adjoining these hybrid varieties and is included in the tables. These tests were also made on sandy loam on plots of  $\frac{1}{80}$  acre.

HYBRID BARLEYS IN PLOTS OF  $\frac{1}{80}$  ACRE.

THE USE OF BARN-YARD MANURE FOR BARLEY.

In dry seasons and on light land, it has always been found on this farm that manure applied to a grain crop either with spring- or fall-ploughing has generally the effect of lessening the yield for the first year, no doubt this is owing to the land being kept too loose, allowing moisture to escape. The past season was no exception to this rule, and the following tables show considerable loss from the use of barn-yard manure, which was well rotted. To avoid this difficulty, manure should be applied the previous winter to land intended for summer fallow, it is then thoroughly incorporated with the soil before the grain is sown.

Barley was sown with a hoe drill, eight pecks per acre, not bluestoned; sown on 14th May on plots of  $\frac{1}{10}$  acre.

### MARKET VALUE PER ACRE OF DIFFERENT GRAIN CROPS.

This subject is creating considerable discussion at present, and it is deemed advisable to give the result of five years' experience on this farm.

The years included in the table are from 1890 to 1894, the crops were all grown on summer-fallow, size of plots one-tenth acre, prices given are those prevailing at this date in Brandon.

Name of Variety.	Average yield for 5 years.		Value per bush.	Value per acre.

Red Fife Wheat.. .. .	31	35	42 " .....	13 26
Odessa Barley.. .. .	54	00	23 " .....	12 42

### PEASE.

This is a crop which deserves special attention in this time of low wheat values, with proper treatment it has always given a profitable return here. It requires strong land free of weeds, summer-fallow preferred, timothy sod broken the previous year is also good for the purpose; a liberal and deep seeding will be found the most profitable,  $2\frac{3}{4}$  to 3 bushels of the medium sized pease drilled as deep as possible is about right here. So far there has been a steady local demand for pease at good prices, and judging from the number of inquiries received at this farm, a good export trade could be worked up whenever there is a surplus beyond what is required for the home market. The tests reported on in the following table were obtained on clay loam on plots of one-tenth acre each:—

### OATS AND PEASE MIXED.

Considerable objection has been made to the general cultivation of field pease, principally from the difficulty and expense of cutting this crop with a scythe, and also from the loss after cutting by wind storms.

To ascertain whether this could be lessened, tests were made last year of sowing about equal parts of oats and pease and reaping the combined crop with a grain binder,

it was noticed then that the mixture containing the least quantities of oats gave the most profitable return.

This year a much smaller quantity of oats has been used and the combined yield from two pecks oats and ten pecks of pease has given a very profitable return, and the grain stood up sufficiently well for the binder to work one way, the sheaves were stooked and no loss was sustained from wind storms and no difficulty experienced in threshing the combined crop with a separator, and any ordinary fanning mill will separate the grain when threshed. The tests were conducted on clay loam on plots of one-tenth acre each.

For the best results a stiff strawed variety of oats ripening at the same date as the pease should be used, and to enable the binder to be set low, the land should be well rolled.

## Experimental Farms.

### GRAIN GROWN AFTER POTATOES.

Potatoes grown in close proximity to a railway station are generally a profitable crop here, and another strong point in their favour is that all varieties of grain yield immense crops when sown after potatoes.

It will be seen from the following table that the returns obtained this year from grain sown on potato ground is much higher than from land prepared in any other way. These tests were also conducted on clay loam on one-tenth acre plots.

### FLAX.

The extremely low prices of wheat prevailing in recent years has led to inquiries into the profitableness of products not very generally grown throughout the province. Flax is one of the most promising of these, its growth has been mainly carried on in the Mennonite settlement in Southern Manitoba, where it has been grown to a large extent for a number of years. While the price of nearly all the staples grown by farmers here have fallen, the value of flax has been well maintained, realizing usually from seventy-five cents to one dollar per bushel, the present price is \$1.10 per bushel.

Six plots have this year been devoted to flax, three to gain information regarding the proper time to sow, and three to ascertain the most profitable amount of seed to sow.

Although the rainfall was too small for the best results, it will be seen that this product promises to be quite profitable even in a dry year.

For comparison plots of both red and white wheats were sown adjoining the flax and under the same conditions, it will be seen from the accompanying tables that flax is by far the most profitable crop.

It was sown with a common hoe drill and cut with a grain binder without difficulty, the sheaves were threshed with the ordinary separator, care being taken to feed slowly.

As the flax plant is not vigorous in the early stages of its growth, only clean land should be used, preferably summer-fallow or backsetting, otherwise weeds will greatly reduce the yield.

As much of the flax seed offered for sale contains a large proportion of noxious weeds, principally wild mustard and false flax, care should be exercised when purchasing it for seed.

The plots used for flax will be sown with different kinds of grain next spring, and thus some information may be gained as to its effect on the land in the way of exhaustion. The plots sown were one-tenth acre each, and the soil clay loam.

SUMMARY.

- 1st. Flax at the prevailing prices is a more profitable crop than wheat.
- 2nd. One year's experience would appear to indicate that ninety pounds of seed is more profitable than a smaller amount, this is much more than is generally used.
- 3rd. That the end of May is early enough to sow this crop in a warm dry season.
- 4th. Flax can be sown with a grain drill, cut with a binder, and threshed with a separator.

FLAX AND OATS.

During the spring months many farmers feed to their farm animals a small quantity of flax mixed with oats, larger quantities of this would no doubt be used were it not for the weed seeds found in the flax generally offered for sale.

For the purpose of ascertaining whether it is possible to grow the flax and oats together, and by this means secure clean seed, two pecks of flax and nine pecks of oats were sown, and the combined crop was readily harvested with a grain binder and threshed with a separator; the two kinds of grain were separated and the proportions are given in the following tables. The size of plot used was one-tenth of an acre, and the soil was clay loam.

## Experimental Farms.

As a large proportion of the millet seed used in this country is imported, it was deemed advisable to test the growing of it here. From the accompanying table it will be seen that at the prevailing price of one dollar per bushel, it is a very profitable crop.

### COMMON MILLET GROWN FOR SEED.

Soil, black sandy loam, after potatoes ; sown with a grain drill :

Variety.	When Sown.	Amount seed per Acre.	When Cut.	Weight per Bushel.	Yield of seed per Acre.	Value at \$1.
		Lbs.		Lbs.	Bush. lbs.	\$ cts.
Common Millet.....	May 11..	23	Aug. 15..	51	29 38	29 79
“ .....	“ 11..	45	“ 15..	50	27 09	27 18
“ .....	“ 19..	23	“ 13..	50	21 22	21 45

### GRASSES AND FODDER PLANTS.

The very dry spring weather prevailing during the past two years has made it almost impossible to get a catch of grass when the seed is sown with grain, and the only successful plan here has been to sow grass seed in August on land prepared as for summer-fallow ; stubble land is ploughed early in June and cultivated on the surface until about the 15th August, when the grass seed is sown on the bare fallow and harrowed in, this plan has never failed to give a good stand of grass even in the driest season.

If the grass seed is not sown earlier than the above date, the weeds which always come up freely will be cut down by frost before they ripen, leaving the grass clean the following season.

Five varieties of grass were sown on bare fallow in 1893, size of the plots varied from one-quarter acre to three acres : owing to the very dry season and the light character of the soil the yields were not large.

All the plots sown with native varieties were free from weeds, but for some reason the Austrian Brome grass was somewhat weedy, and none of it could be kept for seed. Ten pounds of seed per acre of each variety was used ; 15 pounds would have been better.

As an indication of their comparative value for spring and fall pasture, the height on 1st May and amount of aftermath is given :

Name of variety.	Yield per Acre.	Height 1st May.	Amount of Aftermath.	Remarks.
	Lbs.			
American Rye Grass ( <i>E. Americanus</i> ).....	2,022	5 inches...	Very little..	Bearded head.
Bald Wheat Grass ( <i>A. tenerum</i> ).....	1,916	4 “ .....	None .....	Quality good.
Bald Rye Grass ( <i>E. Virginicus</i> ).....	1,407	5 “ .....	Very little..	Quality good.
Austrian Brome ( <i>B. inermis</i> ).....	1,668	6 “ .....	Good all fall	Wide leaves.
Drop seed or Wild Timothy ( <i>M. glomerata</i> )	1,391	Not started	A little.....	Quality choice.

## MILLETS.

As millets of different kinds are grown to a considerable extent, a number of tests in connection with these fodder plants have been made.

The Japan millet is a coarse variety with large, rather open heads quite distinct from any variety heretofore grown on this farm. Although badly injured by the drought, it was quite promising and should be again tested.

In the test of thick and thin sowing 23 pounds of seed per acre has given the best returns.

## TEST OF MILLETS ALSO MILLETS AND OATS.

Soil black sandy loam, summer-fallow, seed sown with a grain drill :

## MIXED GRAIN GROWN FOR FODDER.

We are pleased to notice a larger number of farmers growing oats, or oats and pease for fodder, on their own farms, in preference to drawing marsh hay from ten to twenty miles, as in former years.

The season was not a favourable one for fodder, still the return was fair and the quality good.

### FODDER CORN.

Corn, in common with all fodder crops, has suffered severely by the past summer's drought, and the yield is below the average, but is still sufficiently large to make it the most profitable of all forage crops, and it should be more cultivated, especially on the lighter soils of the province. Owing to the very warm dry summer and open fall, a large proportion of the ears ripened on an early sown 10-acre field of North Dakota Flint, about 30 bushels of this was saved for seed, and if wintered safely will be sown next year with the hope that it may produce in time an earlier ripening strain of that variety.

It will be noticed that Longfellow corn gave the largest return of fodder, but it is somewhat later than the North Dakota flint.

Rural Thoroughbred White Flint, the next in productiveness, is a popular ensilage corn in the east, but is altogether too late for this province; taking everything into consideration the North Dakota flint is still the most promising variety for this section.

Mitchell's Extra Early, the earliest of the varieties tested for fodder, gives too small a return for this purpose, but is as early as the native squaw corn, and has larger ears, and should replace it for table use.

It is noticeable that sowing in drills gave the best returns in every case.

#### TEST OF VARIETIES.

Sown after corn, 10 loads of manure ploughed in the fall; size of plots one-tenth acre, soil sandy loam; sown on 21st May with a press drill, drills 3 feet apart, plants 1 foot apart in the drill, also in hills 3 feet apart each way; kept clean with a Breed weeder and one horse cultivator; cut on 5th September and immediately weighed.

## SUNFLOWERS AND HORSE-BEANS.

Sunflowers sown 22nd May, in rows 3 feet apart and 1 foot apart in the row, yielded 13,200 pounds per acre of ripe heads on 11th September.

Horse-beans sown 22nd May in rows 3 feet apart, plants 6 inches apart in the row ; yielded on 11th September, 2,640 pounds per acre of combined stalks and grain.

## SILOS.

The ensilage made last year from corn and sunflowers proved to be all sound and sweet to the bottom of the silo, this year one silo was again filled, and the corn being well matured, the ensilage is the best we have ever had on this farm.

Judging from the four years' test of silos here, they are when placed in a bank barn a decided success, and now that lumber can be obtained at a more reasonable price than formerly, no doubt many will be erected.

## FIELD ROOTS.

In former years only two sowings of each kind of field roots were made ; this year, for the purpose of testing very early sowing, three plots were sown, each of them a week apart. The earliest sown as usual has given the largest yield, this was no doubt largely due to the very dry summer. It would appear, however, from the experience of several years, that even in an average season, the root crop should be sown two weeks earlier than in Ontario.

□ In addition to the usual tables, others have been prepared showing the general average for each sowing, also, the average of each variety for the three sowings.

It will be seen that East Lothian turnip, Mammoth Long Red mangel and Half Long White carrots gave the best average yield. Also, that the first sown turnips yielded a third more than the last sown, the first sown mangels and carrots nearly doubled the last sown.

## TURNIPS.

Yield of turnips sown at three different dates ; on millet stubble, land manured and ploughed in the fall ; seed drilled in on flat drills 30 inches apart ; pulled 9th October. Soil sandy loam : estimate of yield made from product of one row 66 feet long. The first plots were sown on the 8th of May, the second series 15th May and the third 22nd May and all were pulled 9th October.

## MANGELS.

Yield of Mangels sown at three different dates. The first set of plots were sown 8th May, the second 15th May and the third 22nd May, and all were pulled 21st September, sown on millet stubble, land manured and ploughed in the fall; flat drills 30 inches apart. With one exception the earliest sown gave the best yield in each variety. The quality of the roots was excellent. The yields have been estimated from the product of one row 66 feet long.

## SUGAR BEETS.

Yield of sugar beets. Treated the same as mangels. The first plots were sown on 8th May, the second series on 15th May and the third 22nd May, and all were pulled on 21st September. In every case the earliest sown gave the largest return. We find the sugar beet very useful for feeding calves; they are more readily eaten by young animals than mangels. The yield in these tests has been calculated from the product of one row 66 feet long.

## CATTLE.

I regret that owing to the prevalence of tuberculosis among our cattle it has been found necessary to slaughter during the summer the larger portion of the farm herd. For this reason very few experiments with cattle have been undertaken of late.

The cattle that survived the test are in apparent good health and it is believed that the disease has been stamped out; the barn has been thoroughly disinfected.

## FEEDING COWS.

Many inquiries are received from farmers regarding the comparative amount of food consumed by the different breeds of cattle.

## Experimental Farms.

With a view of obtaining some information on this point, two cows of each of the breeds kept on this farm were placed in double stalls and fed all they would eat up clean of the following ration:—

- 40 lbs. Corn ensilage.
- 36 " Cut wheat straw.
- 12 " Frozen wheat chop.
- 3 " Barley chop.

Any food left in the mangers was deducted from the amount charged to each breed. As the beef breeds were dry and the dairy breeds in full milk they are reported on separately.

All were supposed to be in calf.

### YIELD OF MILK FROM THE DIFFERENT BREEDS OF CATTLE.

In view of the many inquiries regarding the quantities of milk given by the dairy breeds kept at this farm, returns are given showing the quantity of milk obtained from two of the cows of each of the dairy breeds. The dates selected were the milking periods of the cows between August, 1892, and October, 1893.

There are several circumstances which would prevent this from being a reliable comparative test of milking qualities of the different breeds, and it is not intended for that purpose. No test of this sort can be taken as accurate when applied to the different breeds in a general way, since individual animals of the same breed vary so much in their power of milk production.

The cows were fed moderately on corn ensilage, cut wheat straw and a little mixed chop in winter and on fairly good native grass pasture during the growing season.

Having no Babcock tester at the time, the amount of butter fat of the milk cannot be given. Since then a tester has been procured which will be used in such tests in future.

All the cows were young, and since then the yields from all of them have greatly increased.

Name.	Breed.	Age.	Days actually giving milk.	Lbs. of milk.

			604	11,984

#### POULTRY.

The poultry house on the Experimental Farm is a frame building 16 x 32 feet, the spaces between the studs are filled with broken bricks laid in mortar ; although sufficiently warm to keep the combs of the fowls from freezing, it is not warm enough to make fowls tender.

The runs in connection with the poultry house being finished, on March 15th, pens of the following breeds of fowls were made up, Barred Plymouth Rock., White Leghorns and Light Brahmas.

The following table shows the average number of eggs laid per bird of each breed of fowls from 1st April to 31st October :

Breed.	April.	May.	June.	July.	August.	September.	October.	Total.
	Eggs.	Eggs.	Eggs.	Eggs.	Eggs.	Eggs.	Eggs.	Eggs.
Barred Plymouth Rock.....	10½	16½	10½	17	11½	15	5	86
White Leghorn.....	10½	11½	20	20	12	.....	.....	74
Light Brahma.....	10	11	9	.....	1	5	2	38

NOTE.—Brahmas were found to have been kept too fat for the best results, and in future will be kept on shorter allowance.

Some of the cross-bred hens began eating their eggs in February, the habit was acquired through the breaking of their thin shelled eggs, a cure was effected by using nest boxes with false bottoms, the egg as soon as laid falling through a hole in the bottom of the nest on a slanting piece of canvas. This proved a perfect remedy and there has been no further loss from this cause.

Considerable difficulty was experienced with soft shelled eggs. This we believe has been remedied during the present season by feeding ground bone, and by giving the hens plenty of exercise in every possible way.

Owing to the difficulty in getting broody hens, settings were not made until May, others were also made during June and July. June hatchings gave rather the best results.

## Experimental Farms.

The following are the live weights reached by fowls of the different breeds.

Variety.	Age.	Weight.	
Barred Plymouth Rock, cock.....	18 months.	9 lbs.	10 oz.
“ “ cockerel.....	3½ “	5 “	8 “
“ “ hen.....	18 “	8 “	“
“ “ pullet.....	4 “	4 “	5 “
White Leghorn, cock.....	18 “	4 “	4 “
“ cockerel.....	4 “	3 “	8 “
“ pullet.....	4 “	3 “	4 “
Black Minorca, cockerel.....	4 “	6 “	“
“ pullet.....	4 “	3 “	10 “
Light Brahma, cock.....	2 years.	11 “	“
“ hen.....	“	8 “	8 “

Insects were destroyed by removing the fowls, and setting fire to a pound of sulphur in an iron receptacle and closing the building tightly for four or five hours.

Grit and water was kept at all times before the fowls when in confinement and any dry grain fed them was mixed with the straw chaff which always covered the floor of their house, the search for this gave the fowls exercise.

Hens purchased from a neighbouring farmer were found to be infested with scaly leg, this was cured by brushing the legs with coal oil, two applications ; a week apart being found sufficient.

## HORTICULTURE.

### APPLES.

Apple trees suffered more last winter than on any preceding year, many of the trees planted in the spring of 1893 being killed root and branch, more particularly those in the orchard on the hill side. No doubt this result was largely due to the snow being swept away by winds. Some of this consignment of trees were planted promiscuously in the forest tree shelter belt and receiving the benefit of snow drifts survived, although badly damaged by frost.

Below is a list of survivors of this set of trees :—

Saccharine,  
Sugar Sweet,  
White Pigeon,  
Titovka Koslov,  
Polumiron,

Silken Leaf,  
Winter Stripe,  
Round Borsdorf,  
Grandmother,  
Borsdorf,

The trees killed root and branch are :

Hare Pipka,  
Little Hat,  
Persian Bogdanoff,  
Charlamoff,  
Miron Grell,  
Orel No. 27,  
Orel No. 5,  
Red Streaked,  
Cinnamon Pine,  
Plodovitka,

Karabovka,  
Golden Reinette,  
Simbirsk No. 11,  
Simbirsk No. 3,  
Simbirsk No. 5,  
Early Sweet,  
Green Crimean,  
Arabka,  
Rambour Reinette.

The thirty-one Russian apple tree seedlings protected by scrub which have stood for four winters, are still alive, but are more or less injured each year by frost.

The Anis apple trees planted in the valley in 1890 and protected by a maple hedge are still alive, but are making no progress, the growth of each summer is cut off the following winter, and the trees are no higher than they were three years ago; were it not for the heavy drifts covering them each winter they would no doubt be killed to the ground before this.

#### CRAB APPLES.

For two or three years the Transcendent crab apple trees on this farm were quite promising, and a few of them bore fruit, but the past two winters have been very severe on them and nearly all were killed to within a short distance of the ground.

Siberian, Whitneys No. 20, Hyslop, Orange, Early Strawberry and Queen's Choice are still alive, but badly cut back.

Ten additional Transcendents were planted 5th May, 1893, eight of these are still alive, but badly injured.

#### PLUMS.

I take pleasure in reporting a fair share of success with the native plum, the seven native wild plum trees procured from the Brandon Hills and planted in 1890, show the advantage of cultivation, they have made good trees, and this year were loaded with fruit, which varies very much in size and quality, some were found to make excellent preserves, the pits of all were saved, some of them being planted in the fall, the remainder packed in sand for spring sowing. Several of the native plum trees planted in 1893 also bore fruit.

Four native yellow plum trees were received from the Antlers district, and will prove useful for comparison with the red ones already grown here.

Bradshaw, DeSoto, Nicholas and Late Red, all imported varieties, are still in existence, although very poor specimens, being badly injured by frost each winter, the DeSoto is, however, the most promising.

Two varieties were received from the nursery of A. Dupuis, Village des Aulnais, Quebec, consisting of Orleans Blue and Imperial Blue, and planted spring of 1893, these all started, but were entirely killed by frost the following winter.

The following seedlings, viz., 127 Weaver, 12 Cheney, 8 Speer, 6 DeSoto, and 34 Natives, were received from the Central Experimental Farm last spring, and were planted in permanent positions with a southern exposure, and sheltered on the east and west by two year old maple hedges: these are all alive and thrifty at this date.

The native plums on this farm proving so successful, 86 additional young trees were procured this fall from the plantation of Mr. Thomas Frankland, of Stonewall: these are heeled in for the winter, and will be planted next spring.

#### CHERRIES.

The standard cherries tested up to this date have not proved a success, some specimens of the Bessarabian, Lutovka, 6 m. Cherry, Koslov Bush Morello, Vladimir, and Blackhill Cherry, are still alive, but are repeatedly cut back each winter, none of them have as yet borne fruit.

In the spring of 1893 some specimens of the sand cherry, "*Prunus pumila*," both imported and native, were planted. These have come through the winter uninjured by frost and have proved vigorous and hardy; they not only bear a large amount of rather inferior fruit, but are also handsome shrubs when in bloom. A plantation of 200 of these shrubs sent from the Central Farm has been set out in the valley, and although planted late withstood the drought remarkably well, and are all alive and healthy at this date.

Two varieties of cherries were received from Mr. A. Dupuis, Village des Aulnais, Quebec:—Old French and Montmorency, these were fresh root grafts, and the grafts had become disunited in transit, hence they did not grow.

## Experimental Farms.

Below will be found a list of cherries which were received last spring from the Central Experimental Farm, and were planted in the valley in the shelter of maple hedges, many of these were very small and did not survive the drought of the summer, but all the varieties are still represented in the plantation.

Brusseler Braun,	Griotte du Nord,
Bessarabian, on Mazzard stock,	Ostheim seedlings,
do seedlings,	Minnesota Ostheim seedlings,
Orel 23 on Mazzard stock,	Common English do
Orel 24,	Lithaur Weichsel do
Lutovka,	Vladimir do
Shadow Amarelle	Carnation do

### WILD CRAB OF SIBERIA.

After four years' trial, the Siberian crab (*Pyrus baccata*) has proven hardy here, trees both in the open and in the shelter of forest tree belt have never been cut back by frost, and this year we have the pleasure of reporting that some of the trees fruited, the seed of these was carefully saved and planted. The fruit of this crab is too small to be of commercial value, but if it continues hardy, the tree will be useful as a propagatins stock, and the fruit for jelly. Twenty more of these trees and five other varieties of *Pyrus*, viz., *Pyrus baccata sanguinea*, *Pyrus b. genuina*, *Pyrus b. cerasiformis*, *Pyrus b. prunifolia*, and *Pyrus b. macrocarpa*, were planted this season, and will be reported on later.

### SUMMARY OF FIVE YEARS' EXPERIENCE WITH LARGE FRUITS :

*Apples*.—None of the 300 varieties tested on this farm have proved hardy, the most promising is the Anis apple, and it kills back badly each winter.

*Crab Apples*.—None of the varieties of crab apples have proved hardy with us, the most promising is the Transcendent.

*Cherries*.—All the imported cultivated varieties of cherries tested have proved too tender for this climate. The native sand cherry, *Prunus pumila*, is promising as a starting point.

*Plums*.—The DeSoto is the most promising imported plum; the native Manitoba plums are full of promise, and are worthy of more general cultivation.

### CURRANTS.

There are 32 varieties of currants growing on this farm, of these 20 are named, the remaining 12 are seedlings originated at the Central Experimental Farm, these bore fruit here for the first time this season.

Of the named black varieties, Lee's Prolific still heads the list as a useful berry for general cultivation, closely followed by Black Naples and Black Champion, the latter is a vigorous grower, but a shy bearer, fruit has a decided woody flavour.

Of the red currants, Fay's Prolific, Raby Cast'e, Red Cherry and Victoria are listed in their order of merit and fruited well considering the season.

The White Grape also gave a fair yield of fine fruit.

The following new varieties fruited the past season for the first time :—

*Ogden's Black*.—Yield small; size large; very acid.

*Prince of Wales, Black*.—Yield small; flavour poor; size small; growth of wood weak.

*Baldwin Black*.—Yield fair; size medium to large; ripens late.

## NEW RED CURRANTS.

*La Conde*.—Yield fair ; size large ; flavour fair.

*La Hative*.—Size small ; quality poor.

*La Fertile*.—Size large ; yield large : flavour good ; ripened evenly.

*Red Dutch*.—Heavy crop of fine fruit ; flavour good ; ripened evenly.

*Knight's Red*.—Yield fair ; flavour poor ; very early.

*New Red Dutch*.—Small and sour.

*White Transparent*.—Size medium to large ; yield fair ; flavour good.

The unnamed seedling currants are as follows :—

Record number	$\frac{1}{8}$	Black.—Flavour acid, poor ; size medium ; yield fair ; very early ; vigorous growth.
do	$\frac{1}{3}$	Black.—Flavour good ; ripening evenly ; earlier than Lee's Prolific.
do	$\frac{2}{81}$	Black.—Flavour woody ; size small ; yield good ; early.
do	$\frac{3}{83}$	Black.—Size small ; yield very poor ; generally poor.
do	$\frac{5}{8}$	Black.—Size medium to small ; flavour good ; yield fair.
do	$\frac{1}{65}$	Black.—Size small ; flavour good ; yield poor ; growth small.
do	$\frac{7}{54}$	Black.—Flavour very acid ; yield poor ; growth small.
do	$\frac{1}{17}$	Black.—Yield fair ; flavour good ; size medium to large ; growth vigorous.
do	$\frac{1}{48}$ , $\frac{1}{12}$ , $\frac{1}{15}$ , $\frac{1}{18}$	have not yet borne fruit.

## GOOSEBERRIES.

Nineteen varieties were received from the Central Farm, imported from England in the spring of 1893, and planted in shelter plots on the hillside. These consisted of two each of the following varieties: Whenham's Industry, Lancashire Lad, Warrington, Bonnie Lass, Leader, Pitmaston Green Gage, Green Overall, White Champagne, Red Champagne, Companion, Improved Early Hedghog, Crown Bob, Early Sulphur, Dublin, Bobby, Leveller, Whitesmith, Queen Victoria and Governess. In the fall of that year they were found to be healthy and to have become thoroughly established, but the following spring all had succumbed to the severity of our winter.

The Houghton and Smith's Improved still continue hardy and are recommended for general culture in this province, the Houghton is the most prolific, bearing a crop nearly every year, the fruit is small but excellent both raw and preserved. Smith's Improved is larger in size but the bush is a shy bearer here.

The native gooseberry is found to improve greatly under cultivation, with careful pruning large quantities of small but fair flavoured fruit may be produced.

## RASPBERRIES.

The yield of all kinds of raspberries was very small this year owing to excessive dry hot weather just as the fruit was forming.

There are fifteen varieties of this fruit at present under test here ; they are as follows :—

Red,—Turner, Philadelphia, Cuthbert, Dr. Reeder, Marlboro, Taylors's Prolific, Saunders seedlings, Sarah,  $\frac{3}{4}$  and  $\frac{3}{7}$ .

Caroline and Golden Queen,—Yellow, Hilborn,—Blackcap, Nevada, Gainor and Wachussets Thornless—Blackberries.

All tender varieties were laid down and covered with earth before winter set in, and were found to be in excellent condition when uncovered in the spring. The Turner having withstood previous winters was not protected and was only slightly killed back.

The Philadelphia was also left unprotected and proved to be the hardiest variety under cultivation here.

## Experimental Farms.

Some of all varieties have been laid down the present winter, and notes will be taken of their condition during next season.

The Turner and Philadelphia of the red, the Caroline of the yellow, and the Hilborn of the black varieties respectively still sustain their reputation for general usefulness here.

The three seedling raspberries mentioned in last year's report, viz., Record numbers Sarah,  $\frac{3}{7}$  and  $\frac{3}{7\frac{1}{4}}$  were multiplied by suckers. Sarah has proved itself very promising, seems to be fairly hardy, producing a fair crop of large red berries ripening late.  $\frac{3}{7\frac{1}{4}}$  is hardy,  $\frac{3}{7}$  is tender and needs protection.

### STRAWBERRIES.

The strawberries now growing on this farm, are Crescent, Wilson, New Dominion, Parker Earle, Windsor Chief and Pineapple, these produced but a small amount of fruit this season owing to the drought, but there are a fine lot of young plants which will be utilized in forming new beds next spring.

Twenty-five additional varieties were received from the Central Experimental Farm in September, 1893, these were planted immediately and well watered but frost coming soon after, they perished before becoming established. It seems useless to attempt growing strawberry plants here by planting in the fall: the autumn is usually very dry and the plants have not time to get established before frost sets in.

### HUCKLEBERRIES.

Ten bushes of huckleberries were received from Iowa and planted in 1893, all started to grow, but this fall only three were alive, these are not promising and will probably succumb during the present winter.

### QUINCES.

Ten Japan Quince was added to our list of fruits in 1893, these were presented to the farm by Dr. D. H. Harrison, Neepawa, they made fair growth but do not promise to be hardy here.

### FORESTRY.

#### FOREST TREE SHELTER BELT.

This belt is situated on the west boundary of the farm and consists of twenty-one rows 4 feet 6 inches apart, and 775 feet long, the trees are planted 4 feet 6 inches apart in the rows.

Planting was commenced in 1889 and completed in 1890, but during each of these years a number of the trees died, these were replaced but since 1892 very few trees have died.

Some of the trees have grown quite large and last summer it became necessary to cut back some of the rank growers to make room for the slow growing and evergreen varieties.

The accompanying view represents a portion of this shelter belt near the western boundary of the farm.

View of part of Shelter belt planted in 1889 on western boundary of Farm.

## Experimental Farms.

The following list gives the height and spread of branches of the several varieties, also remarks as to their suitability for shelter belts.

The belt has been kept clean with a one-horse cultivator each year since planting commenced.

Variety.	Maximum height	Spread of branches	Remarks.
	in feet.	in feet.	
	Ft.	Ft.	
Oak, mossy cup. . . . .	6	3	Hardy, slow grower, a native.
Ash, white, <i>Fraxinus Americana</i> . . . . .	4	1	Tender, not suitable for this province.
“ black, <i>F. sambucifolia</i> . . . . .	8	4	Hardy and useful—useful wood.
“ red, <i>F. pubescens</i> . . . . .	7	2	“ “ “
“ green, native . . . . .	9	3	Slow of growth, hardy, useful wood.
Mountain Ash, American . . . . .	8	3	Sun-scalds, not desirable.
“ European . . . . .	8	3	“ “ “
“ Manitoba . . . . .			Hardy, promising.
<i>Caragana arborescens</i> . . . . .	6	6	A pretty flowering shrub, quite hardy.
<i>Artemisia Abrotanum</i> . . . . .	6	4	Very useful for bleak places.
Spruce, white (native), <i>Picea alba</i> . . . . .	6	4	A handsome tree, hardy.
“ Norway, <i>Picea excelsa</i> . . . . .	5	3	Half hardy, requires protection.
“ White (Ontario), <i>Picea alba</i> . . . . .	3	1	“ “ “
Cedar, <i>Arbor-vitæ</i> . . . . .	3	4	Slow grower, quite ornamental.
Pine, Scotch, <i>Pinus sylvestris</i> . . . . .	7	3	Hardy only under protection.
“ Austrian, <i>Pinus Austriaca</i> . . . . .	6	3	“ “ “
“ Riga . . . . .	Small.		Hardiness uncertain, promising.
Larch, European . . . . .	6	4	Handsome and hardy.
“ Manitoba . . . . .	8	4	“ “ “
Laurel-leaved willow . . . . .	7	4	Large laurel-like leaves, hardy.
French, laurel-leaved willow . . . . .	7	3	Sun-scalds badly.
Ash-leaved maple, native . . . . .	14	10	A good wind break, rapid grower.
Silver-leaved maple, <i>A. dasycarpum</i> . . . . .	6	2	Not desirable, winter kills.
Norway maple . . . . .	3	1	Very tender, no good here.
White Native Elm, <i>U. Americana</i> . . . . .	6	4	Very hardy, slow grower, handsome.
White Elm Imported, “ . . . . .	3	2	Tender, no use here.
Imported White Birch <i>B. alba</i> . . . . .	11	6	Sun-scalds, half hardy.
Sweet Birch, <i>B. lenta</i> . . . . .	13	7	Vigorous growth, hardy.
Canoe Birch, <i>B. papyrifera</i> . . . . .	12	8	Hardy and ornamental.
American Alder, from Ontario . . . . .	5	2	Half hardy.
European Alder . . . . .	5	2	“ “
<i>Populus bereolensis</i> (Russian Poplar) . . . . .	16	10	Very vigorous, hardy and ornamental.
“ Carolina . . . . .	15	8	Not so spreading in its habits, hardy.
“ <i>Wobstii Riga</i> . . . . .	15	8	Very fast growth, hardy.
“ <i>certinensis</i> . . . . .	11	9	Strong grower, half hardy.
“ <i>Sibirica</i> . . . . .	12	5	Large dark leaves, slow growth.
“ <i>Petrovsky</i> . . . . .	15	10	Seems identical with <i>bereolensis</i> .
“ <i>Alba argentea</i> . . . . .	7	6	Silver-leaved, half hardy.
“ <i>Bolleana</i> . . . . .	5	3	“ “ tender.
“ <i>tremuloides</i> , native . . . . .	10	4	Trembling poplar.
“ <i>Balm of Gilead</i> , native . . . . .	9	7	Promising for shelter belt.
“ Cottonwood (Dakota) . . . . .	16	14	A good windbreak, rapid grower.
“ “ (Nebraska) . . . . .	4	3	Kills to roots each winter.
<i>Salix acutifolia</i> , Sharp-leaved willow . . . . .	15	12	Very rapid grower, good snow collector.
“ <i>Voronesh</i> . . . . .	14	10	Very pretty in winter.
“ Wisconsin, weeping willow . . . . .			Very tender, no good here.

### SUMMARY.

A shelter belt composed of a number of varieties is more interesting and instructive than if only one variety is used ; it is also well to introduce evergreens into such belts as far as is practicable.

The Russian Poplars—*Bereolensis*, *Wobstii Riga* and *Petrovsky*, and our Ash-leaved Maple are quick growers and make good nurses for slower growing and more tender trees.

For permanent trees the slow growing varieties, such as Green, Red and Black Ash and White Elm, should be interspersed with the others, in time the wood of these varieties will be found valuable.

The best and so far only perfectly hardy evergreen is the native White Spruce.

Other conifers that will succeed with some protection are Common Cedar, Larch and Scotch Pine.

#### HEDGES FOR WINDBREAKS.

Below will be found a list of hedges now growing on this farm; they are trimmed each year about harvest time to a uniform height and width, this has a tendency to thicken them.

*Ash-leaved Maple*.—Of this tree about 4,000 feet of double hedge is now being tested, for a comparison, these are planted at different distances apart. It is found that two rows of trees planted alternately 3 feet apart each way makes the most effective windbreak. In height they are now from 6 to 16 feet according to age.

*Ash, Native Green*.—Seven hundred and forty feet of this hedge was planted in 1891; it is a slow grower, but healthy.

*Elm, Native White*.—Three hundred and seventy feet planted in 1891, compact growth, good snow collector.

*Spruce, Native White*.—Two hundred and fifty feet planted in 1893; this is 4 feet high; handsome all the year round; quite healthy and decidedly the most promising wind break hedge.

*Populus Bereolensis*.—Three hundred and seventy feet planted in 1891, with one year old trees in double rows 4 x 4, it now stands 9 feet high, and is a compact and effective windbreak.

*Cottonwood (Dakota)*.—Three hundred and seventy feet planted with cuttings in 1891, now about 5 feet high, is of more spreading habit than Bereolensis Poplar, and so far not nearly so effective as a windbreak.

*Sharp-leaved Willow*.—Three hundred and four feet planted in double rows 4 x 4, with one year old trees. This is the most exposed of all hedges, but has made fine growth, is quite dense, and is now 8 feet high.

*Black Cherry, Native*.—Two hundred feet planted in 1893, with young trees from the bush, this is a free bloomer and very pretty, but runs badly to suckers.

*Caragana arborescens*.—Two hundred feet planted in 1893 with one year old trees, now 3 feet high, hardy and ornamental.

*Asiatic Maple, Acer ginnala*.—For a low ornamental hedge, this is very promising.

#### AVENUES.

There were added 47 ash-leaved maple trees to the avenues last spring, these were planted east and west to connect the two avenues already planted north and south, the trees were selected so as to be uniform in size with those already growing. The summer being unusually dry they made very little growth, but all have apparently become established. The excessive drought of the past two seasons has had very little injurious effect on the avenues. on this farm, only four of the 925 maple trees and none of the 180 native white spruce have died in the two years.

The 240 Russian poplars planted in the avenue on the east side of the farm are all making a rapid growth and will add variety to the avenue planting, 1,345 avenue trees are now growing on the farm, and the loss from all causes is only a fraction of one per cent per annum. This success is we believe due almost entirely to persistent, clean cultivation for six feet on each side of the trees: in fence corners where this was neglected the trees have soon died and had to be replaced.

Avenue trees are planted 20 feet apart, no water is used except for a week or two after planting should very dry weather occur.

## Experimental Farms.

### PLANTING AROUND SUPERINTENDENT'S HOUSE.

Of the 27 varieties of trees and 49 varieties of ornamental shrubs planted around the superintendent's house in the spring of 1893 only the following varieties have winter killed :—

Mountain ash (*Pyrus Americana*), Scotch pine (*Pinus sylvestris*), Beech (*Fagus ferruginea*), Thunberg's barberry (*Berberis Thunbergii*).

Last spring the following varieties were added to the collection, and nearly all of them had become established before winter set in :—

#### TREES.

Siberian Cedar,  
Choke cherry,  
Basket Willow,  
*Pyrus Baccata*,  
Manitoba Basswood,  
Cottonwood,  
Russian Euonymus,  
Native Thorn,

Riga Pine,  
Native Red Willow,  
Blue Spruce,  
Black Ash,  
Green Ash,  
Red Ash,  
Yellow Pine,  
Dwarf Mountain Pine.

#### SHRUBS.

Native Sumac,  
*Lonicera Tatarica*,  
do *Alberti*,  
do *Media*,  
do *Splendens*,  
Amur Tamarix,  
Russian Privet,  
*Prunus Padus*,  
Bitter sweet, Native,  
Rosemary Willow,  
*Pyrus Toringo*,  
*Prunus Maackii*,

*Alnus incana*,  
Improved Elderberry,  
White Tartarian Honeysuckle,  
*Rosa Rugosa*, single,  
do do double,  
*Artemisia Lancieolata*,  
*Caragana grandiflora*,  
Lilac, Ambrose Verschaffeldt,  
do *Flora plena*,  
do Beranger,  
*Spiraea Callosa Alba*.

#### SUCCESS WITH TREE-CUTTINGS.

Below will be found a table giving the results of a comparative test between fall and spring cuttings of forest trees and shrubs.

The fall made cuttings were packed in sand until planting time in spring.

All were planted deep allowing only one bud out of the ground, all cuttings were eight inches long.

## TREE-CUTTINGS.

Variety.	No. of cuttings planted.	When Cut.	Percentage Struck.	Remarks.
Populus Bereolensis.....	100	Fall.....	50 per cent.	Fair growth.
“ “.....	100	Spring.....	75 “	Large healthy growth.
“ Wobstii Riga.....	50	Fall.....	70 “	Fair growth.
“ “.....	50	Spring.....	80 “	Poor “
“ Sibirica.....	100	Fall.....	42 “	Large healthy growth.
“ “.....	100	Spring.....	42 “	“
Cottonwood (Dakota).....	100	Fall.....	70 “	Very large and healthy growth.
“ “.....	100	Spring.....	25 “	Small healthy growth.
Artemisia (Siberian).....	300	Fall.....	100 “	4 feet, healthy growth.
“ “.....	300	Spring.....	100 “	“
“ (Eng. Var).....	25	“.....	100 “	Small growth, very healthy.
“ “.....	25	Fall.....	100 “	“
Salix Voronesh.....	400	Spring.....	100 “	Fair growth.
“ “.....	400	Fall.....	100 “	“
“ Acutifolia.....	250	Spring.....	94 “	“
“ “.....	250	Fall.....	90 “	“

## SUMMARY.

Russian Poplars (Bereolensis and Wobstii Riga) have succeeded best from spring cuttings.  
Cottonwood has done best from fall cuttings.  
Willows and Artemisia cuttings have nearly all grown equally well whether made in the fall or spring.

## SEED GATHERED AND SOWN.

Last season it was found that many of the trees planted on the farm in former years were sufficiently large to bear seeds, a large quantity of this seed was gathered; some of it was sent to the other Experimental farms, a portion sown here in seed beds in the fall, and the balance was packed in sand for sowing and distribution in the spring.

## TREES.

The number of trees, shrubs, etc., growing on the farm at this date is as follows:—

Shelter belts.....	11,211
Avenues.....	1,345
Hedges.....	7,973
Two year old maples.....	8,461
One year old maples.....	2,000
Fruit trees and bushes.....	4,019
Nurseries and permanent plantations.....	30,715
Total.....	65,724

## FOREST TREE AND SMALL FRUIT DISTRIBUTION.

Four hundred and sixty-eight packages of forest trees were sent out from this farm during the year, the trees supplied were of the same varieties as those sent out last year, a list of which will be found on page 267 of last year's report.

In addition to the above, one hundred and seventy-five packages of small fruits were also mailed to farmers throughout the province.

Circulars were sent to the parties receiving trees, asking for a report of their success or otherwise, these particulars will be compiled, and will, no doubt, prove a useful guide in future distributions.

## Experimental Farms.

Three hundred and fifty 1-pound packages of native Ash Leaf Maple seeds were distributed throughout the province, principally to farmers ; reports regarding these are coming in daily, and evidently this is one of the best means of encouraging tree growing, undertaken by the Experimental Farms.

### VEGETABLES.

#### POTATOES.

The light rainfall of the past season greatly reduced the yield of potatoes, but the quality was excellent.

The land was summer-fallowed the previous season, no manure was applied.

The seed was ploughed in, rows 3 feet apart, sets 1 foot apart in the row. Breed's Weeder was run crosswise of the rows until plants were 3 inches high, after which they were cultivated with a one horse cultivator lengthwise.

We would call particular attention to the early maturing of the Early Ohio, which gave dry and good flavoured tubers on 4th August, nearly three weeks earlier than the Early Rose, this agrees with our experience in former years. The varieties were all planted on clay loam, and the yield in each case has been calculated from the product of one row, 66 feet long.

POTATOES—Test of varieties.

Name of Variety.	Planted.	Dug.	Fit for eating.	When Matured.	Quality.	Total Yield per Acre.		Yield per Acre of Sound.		Form and Colour.

## VEGETABLE GARDEN.

The land used for this purpose was well manured in October, 1893, and then ploughed 7 inches deep, well harrowed and rolled, this was again harrowed and rolled in spring but not ploughed.

Owing to the exceptionally dry season, the vegetable garden was not as successful as usual.

## TABLE CORN.

Seven kinds of garden corn were tested and did remarkably well, all ripening seed with one exception.

*Native Squaw Corn*.—Though the ears of this variety are small and of mixed colours yet on account of its earliness it is worth cultivating.

*Mitchell's Extra Early*.—An improvement by selection of the Squaw Corn, a white flint variety with ears of medium size and good flavour, it stood 8 degrees of frost in spring without injury, and can be sown quite early.

*Extra Early Vermont*.—A sweet corn of good flavour.

*Cory*.—A sweet corn white and of first-class flavour, this is undoubtedly the best corn for general purposes here.

*Childs Honey Dew* is rather late for this province.

*Burpee's First of All*.—A sweet variety of merit; flavour splendid and of good appearance; earlier than the Cory.

All were sown in hills 3 feet apart on 23rd May.

Variety.	Ready for use.	Quality.	Flavour.	Average weight per ear.	Average length per ear.	Average diameter.

## CAULIFLOWER.

This vegetable, like the cabbage, suffered much from dry weather, still some fair heads were obtained, which were white and tender.

Seven varieties were tested, sown in hot beds on 19th April, transplanted 23rd June.

*Early Erfurt*.—The earliest variety, heads of good texture and flavour, but the colour was poor.

*Gilt Edge*.—Not large, but of splendid texture and colour, medium early and very tender.

*Early Snowball*.—The best all round variety grown, medium early of snowy white-ness, fine grain and dense heads.

# Experimental Farms.

## CAULIFLOWERS.

Name of Variety.	Fit for Use.	Percentage Headed.	Weight.		Description.
		Per cent.	Lbs.	Oz.	
Early Erfurt . . . . .	Aug. 6 . . . . .	30	2	12	Fair shape, poor colour.
Giant White Pearl . . . . .	" 31 . . . . .	25	2	8	Very poor shape.

Early Snowball . . . . .	" 25 . . . . .	85	2	12	Splendid.
Extra Early White . . . . .	Sept. 4 . . . . .	40	2	12	Fair colour, small.

## CABBAGE.

Nine varieties of cabbage were tested, but on account of the excessive dry weather it could scarcely be considered a fair test.

*Mammoth Rock Red.*—About 70 per cent of this variety headed out, good colour red to the centre, heads firm, a good red variety.

*Marblehead Mammoth.*—Fifty per cent of these headed, but were poor specimens.

*Savoy.*—This variety did fairly well, heads very curly and fine flavoured, but it has not good keeping qualities.

*World Beater.*—Not large, but all headed, and were firm and sound.

*Burpee's All Head.*—Sound, firm heads, similar to World Beater, both in earliness and appearance.

*Louderbach.*—Good solid heads, though small, heads flat and fine flavour.

All were sown in hot beds on 21st April, and transplanted to the garden 23rd June.

Name of Variety.	Date Pulled.	Description.	Percentage Headed.	Average Weight.
			Per cent.	Lbs.

## ONIONS.

This, we are convinced, is a vegetable that will pay well. All the varieties were sown on 20th April in the open ground in drills 1 foot apart.

*Fancy Yellow Globe Danvers.*—A splendid onion, similar to Yellow Globe Danvers, ripens early and thoroughly, attractive in appearance, a first-class onion for Manitoba.

*Oregon Long Keeper.*—A yellow Globe onion of good appearance, ripened well with us.

*Large Red Weathersfield.*—An old standard variety, a good keeper of fine flavour.

*Yellow Globe Danvers.*—This variety has been grown here for a number of years, is a first rate keeper, one of the best varieties for this country.

*Prize Taker*.—This was the largest onion grown this year, a little later than the other varieties.

*King of the Earlies*.—A flat red onion, superseded by Red Weathersfield, not so large and fine in appearance as that variety.

## ONIONS.

Name of Variety.	When ripe.	Shape.	Colour.	Yield per Acre.

## CELERY.

The seed being sown a little later this season than usual, and not having a large water supply, celery did not grow large, but all the varieties were of excellent quality and flavour; six varieties were tested, all sown in hot beds 13th April.

*White Plume*.—This was the earliest sort tested, some being ready for use 31st August, a self-blanching variety of splendid flavour, crisp and solid, but not as good a keeper as some of the other sorts.

*Perle Le Grande*.—A golden self-blanching variety of beautiful and attractive appearance, has a rich nutty flavour, peculiar to itself, a first-class sort.

*Rennie's Giant White*.—A celery of large size and quick growth.

*Giant Golden Heart*.—A beautiful variety, having a rich golden heart. Thick stalks of excellent flavour.

*De Candolle*.—A late variety, will apparently make a good keeper. All were blanched by the hilling system.

## CELERY.

## Experimental Farms

### TOMATOES.

Seven varieties of tomatoes were tested. The seed was sown in hot bed on April 19th and transplanted to the open ground June 23rd, the latter operation being delayed on account of long continued dry weather. A noticeable feature of this test was the increased yield from home grown seed, the difference in productiveness was quite marked all through the season.

Name of Variety.	First ripe.	Proportion ripened.	Weight of one average tomato.	Shape.	Yield per 30 foot row.

Earliest of all .....	Aug. 13.	$\frac{1}{3}$ .....	3 ounces	Wrinkled, poor....	22	8
Earliest of all .....	" 8	$\frac{1}{3}$ .....	2 $\frac{1}{4}$ "	" " .....	6	4
Early Ruby .....	" 20.	$\frac{1}{3}$ .....	3 "	Fairly smooth.....	5	5
Dwarf Champion .....	" 28.	$\frac{1}{2}$ .....	3 $\frac{1}{4}$ "	Smooth, good shape	3	9
Livingston's Aristocrat .....	" 31.	None .....	3 "	Fairly smooth.....	7	8
Ever-bearing .....	" 13.	$\frac{1}{3}$ .....	1 "	Plum shaped.....	2	10
Atlantic Prize .....	Sept. 8.	$\frac{1}{3}$ .....	3 $\frac{1}{2}$ "	Fairly smooth.....	5	9

From the foregoing tables it will be seen that the *Earliest of All* ranks first for earliness, closely followed by *Early Ruby*, and on account of the much better shape of the latter, it is preferable on early land.

*Everbearing* ripened next in order, it has egg-shaped fruit, with a very thick skin and poor flavour.

*Dwarf Champion* is of fine appearance, but somewhat late.

*Atlantic Prize* and *Livingston's Aristocrat* are good varieties, but too late for this climate.

Severe pruning when the fruit is well set is found to hasten ripening materially.

### PEAS.

*Sunol*.—This was the earliest variety tested this year, and is well worthy of notice, small pods, a prolific bearer and of good flavour.

*American Wonder*.—This is the earliest of the wrinkled pease, dwarf and productive, a very desirable variety.

*Horsford's Market Garden*.—One of the best second early peas tested, very prolific, and bears its pods in pairs, flavour good.

*Prince of Wales*.—A good late pea, large pods and excellent flavour, very prolific, one of the best varieties tested.

*Juno*.—The best late pea tested, flavour excellent.

*Blue Podded*.—A novelty, which has nothing to recommend it.

All sown in drills 4 feet apart on 24th April.

## PEASE.

Name of Variety.	Fit for use.	Height.	Size of Pod.	No. of Peas in Pod.	Flavor.	Yield.
Sunol.....	June 14	1 foot....	1½ inches.	4 to 5	Good.....	Fair.
American Wonder.....	" 18	6 inches..	2 " "	5 to 6	".....	"
Horsford's Market Garden.....	July 6	1½ feet....	2½ " "	8	".....	Very prolific.
Burpee's Profusion.....	" 7	14 inches..	2 " "	7	".....	"
Prince of Wales.....	" 8	2½ feet....	3 " "	8	Very good..	Fair.
Juno.....	" 8	14 inches..	2 " "	7 to 8	Excellent..	Very prolific.
Blue Podded.....	" 10	18 " "	2½ " "	6 to 7	Poor.....	Fair.
Yellow, for split purposes.....	" 30	18 " "	2 " "	5 to 6	Good.....	"

## CARROTS.

Five varieties were sown but only four germinated, these did fairly well, being clean and free from rot.

Sown with drill in rows 14 inches apart, on May 1.

Name of Variety.	Shape.	Yield per Acre.	Remarks.
		Bush.	
Half Long Scarlet Nantes...	Stump rooted half long.	659	Excellent flavour, fine shoulder, one of the best.
Early Scarlet Horn.....	" " "	470	Good flavour and appearance.
Improved Danvers Half Long	" " "	452	Good shape and flavour.
French Forcing.....	" round. "	367	Excellent flavour, a good early carrot.

## BEETS.

*Black Queen.*—A fine new variety which can be highly recommended, flesh dark colour, leaves nicely curled, very attractive, the best variety tested.

*Victoria.*—A very good variety, long and of a fairly even red flesh and good flavour. The yield is based on the return from one row half a chain long.

All were sown 12th May in drills 18 inches apart.

## BEETS.

Name of Variety.	Shape.	Colour.	Average weight per root.		Yield per acre.
			Lbs.	Oz.	Bush.
Rennie's Intermediate.....	Long.....	Very good, dark, no white....	5	4	677
Columbus.....	Turnip.....	Only fair, contains white....	2	8	516
Improved Arlington.....	Round.....	Very poor, too white.....	1	12	516
Crosby's Improved Egyptian.....	".....	" " ".....	1	4	516
Dark Red Blood Egyptian.....	".....	Fair, a little white.....	5	0	500
Victoria.....	".....	Very fair.....	1	15	484
Edmand's Early.....	Turnip.....	Very poor, too much white..	2	0	368
Black Queen.....	Pear shaped.	Very dark.....	1	0	337
Lentz Extra Early.....	Turnip.....	Very dark.....		12	322

## Experimental Farms.

### BEANS.

Five varieties of beans were tested, and did very well, all ripening their seed sown in rows 2 feet apart on 23rd April.

*Challenge Dwarf Black Wax* was the earliest of the varieties tested, a bean of good colour and fairly productive, a good early variety.

*Emperor William*.—A white wax bean of excellent flavour and extremely vigorous and productive, pod rather crooked. This was the largest yielder of the varieties tested.

*Thorburn's Early Refugee Wax*.—A very productive yellow bean of good flavour, altogether a very desirable variety.

*New Stringless Green Pod*.—A green bean of good flavour, but with us not nearly so productive as the other varieties tested.

*Broad Windsor Bean*.—A broad bean of good flavour, dwarf, very prolific and should be more generally grown.

The following table gives particulars of this test :—

Name of Variety.	Dates sown.	Ready for use.	Size of pod.	Beans per pod.	Colour.	Flavour.	Yield.
			Ins.				
Challenge Dwarf, Black Wax.....	April 23	July 14	4 to 5	5 to 6	Yellow ..	Fair.....	Fair.
New Stringless, Green Pod.....	" 23	" 15.	5	5 to 6	Green....	" .....	Good.
Emperor William.....	" 23	" 17.	6	7	" .....	Excellent.	"
The Extra Early Refugee Wax .....	" 23	" 17.	5	6	Yellow ..	Good.....	Heavy.
Johnston's Wonderful Broad Bean..	May 18	" 18.	4	4 to 5	.....	Very good	Fair.

### RADISH.

Six varieties of radish were tested, all were sown in the open, in drills 12 inches apart, on 1st May.

*Rosy Gem*, the best early variety, is a small radish of excellent quality, mild and crisp, and retains its qualities a long time.

*Brightest Long Scarlet*, of medium length, stump rooted and of a brilliant scarlet colour, mild and crisp, a fine market radish on account of its colour.

*Pearl Forcing*, has a rich waxy white appearance, texture firm and solid, grows to an immense size, on 15th July specimens were a foot long and of excellent quality, this is a good late variety.

*Charter's Improved*, and *White Tipped Turnip*, were adversely affected by the dry weather, and were tough, hot and stringy.

Name of Variety.	Date sown.	Ready for use.	Shape.	Colour.	Flavour.
Rosy Gem.....	May 1.	May 31.	Turnip.....	Rose .....	Excellent.
Brightest Long Scarlet.....	" 1.	June 1.	Long .....	Scarlet....	"
Early Scarlet .....	" 1.	" 4.	Olive shaped	" .....	Good.
Charter's Improved.....	" 1.	" 6.	Long.....	" .....	Poor.
Pearl Forcing.....	" 1.	July 15.	" .....	White.....	Fair.
White Tipped Turnip.....	" 1.	June 7.	Turnip....	S.W. Tip'd.	Poor.

## LETTUCE.

Eight varieties of lettuce were sown, one of which did not germinate, viz., *Sensation*. The other varieties did fairly well.

*California Cream Butter*.—A cabbage variety of fair quality, very much curled, and little heart.

*Trianon*.—A fine Cos lettuce, when tied, makes a splendid heart, cool, crisp and mellow, apparently synonymous with Paris W. Cos.

*California All Heart*.—One of the best of the cabbage lettuces tested, beautifully curled and correctly named "All Heart."

*New Iceberg*.—One of the most beautiful of the cabbage lettuces, nicely curled and the edges of the leaves tinted with a reddish colour, cool and crisp, will prove a standard variety.

With one exception all were sown on 24th April in drills 8 inches apart in the open. *New Iceberg* was sown three weeks later.

Name of Variety.	Shape.	Flavour.	Weight.	Time Seeded.
			Lbs.	
California Cream Butter.....	Cabbage.....	Fair.....	1½	June 28.
Trianon.....	"Cos".....	Very good..	2½	July 10.
California All Heart.....	Cabbage.....	".....	2	" 14.
Golden Queen.....	".....	Good.....	1	" 5.
New Iceberg.....	".....	".....	1	" 25.
Toronto Gem.....	".....	Fair.....	3	" 5.
Paris White Cos.....	"Cos".....	Very good..	2½	" 10.

## CUCUMBERS.

Five varieties were tested both in frames and outside, those sown in frames were certainly the best, a spent hot-bed seems to suit them remarkably well, all sown 21st May.

*White Spine*.—Fruit 7 to 10 inches long of a dark green colour, the best spine cucumber tried, early.

*Cool and Crisp*.—Skin very dark green, of very attractive appearance, early.

*Siberian*.—The earliest variety tested, small, very productive, produces cucumbers in about 60 days from sowing.

*Giant Pera*.—The largest and longest cucumber tested, of splendid shape, a good late variety.

*Crosse and Blackwell's Pickling*.—A small fruited variety, 3 or 4 inches long, fine for pickling.

## CUCUMBERS.

Name of Variety.	When ready for use.		Shape.	Flavour.	Productiveness.
	Sown in hot beds.	Sown outside.			
White Spine.....	July 1....	Aug. 15..	Medium size, rough.	Good.....	Very prolific.
Cool and Crisp.....	" 5....	" 18....	".....	Fair.....	Medium.
Siberian.....	" 5....	" 16....	Medium size.....	".....	Fairly prolific.
Giant Pera.....	" 31....	" 25....	Long and smooth..	Excellent...	Very prolific.
Crosse and Blackwells Pickling.....	" 20....	" 12....	".....	Fair.....	Fairly prolific.

## Experimental Farms.

### RHUBARB.

Owing to the scarcity of fruit in Manitoba, large quantities of rhubarb are consumed. For this reason considerable attention has been paid to this useful plant, and a collection of 22 varieties have been under test.

These plants have received very little attention, except to keep them clean from weeds during the growing season and manure well each fall.

From the accompanying table it will be seen that the yields under the same conditions vary greatly.

Tottle's Improved, a variety which originated in this province, still takes the lead, it is a large, tender, productive variety, very vigorous and seldom goes to seed.

Variety.	When planted.	Fit for use.	Colour.	Quality.	Yield per plant.	
					lbs.	oz.
Tottle's Improved .....	1892...	May 20	Light red..	Tender....	35	5

General Taylor .....	" "	" 2	Green.....	Hard.....	1	12

### FLOWERS.

Owing to the very dry season, the flower garden on the farm was not as good as usual, still it was surprising how well some of the varieties bloomed, even in the hottest weather.

ANNUALS.

Name of Variety.	Date sown.	How sown.	Planted out.	Flowering period.	Remarks.
<i>Acrocinium album</i> .....	April 17	Boxes, hot bed	June 20	June 19 to Sept. 16	A good everlasting.
<i>Adonis estivalis</i> .....	" 16	" " "	" 21	Sept 1 to " 16	Rather late for us.
<i>Alyssum Tom Thumb</i> .....	May 22	Outside .....	.....	July 10 to " 16	Nice for edgings.
<i>Antirrhinum majus nanum</i> .....	April 17	Boxes, hot bed	June 20	" 7 to " 16	Very fine.
Asters, Truffauts perfection	" 13	" " "	" 15	Aug. 4 to frost....	One of the finest annuals.
" Peony Flowered. . . . .					
" Victoria .....					
Balsams, mixed .....	" 17	" " "	" 20	July 20 to Sept. 16	An old standard.
<i>Browallia</i> , mixed .....	" 16	" " "	" 27	June 27 to " 16	A pretty dwarf annual.
<i>Calandrinia</i> , mixed .....	" 17	" " "	" 20	July 1 to frost .....	Did fairly well.
<i>Cheiranthus maritima</i> .....	" 20	" " "	" 11	June 3 to Aug. 1. . .	Should be sown outside.
<i>Clarkia</i> , mixed .....	" 16	" " "	" 20	" 20 to " 20	Did not do well.
<i>Cerinth auriculata</i> .....	" 16	" " "	" 13	" 19 to Sept. 14	Not of much value.
<i>Calliopsis</i> , mixed .....	Selfs'wn	Outside.....	.....	" 28 to " 16	Very useful and showy.
<i>Chrysanthemum</i> .....	April 16	Boxes, hot bed	June 20	" 15 to " 16	A useful annual.
<i>Convolvulus minor</i> .....	" 19	Outside.....	.....	" 30 to " 16	"
<i>Carthamus tinctoria</i> .....	" 16	Boxes, hot bed	June 23	July 10 to July 16	An insignificant variety.
<i>Centaurea cyanus</i> .....	" 16	" " "	" 20	" 1 to Sept. 15	Very free flowering.
<i>Centrosema grandiflora</i> .....	" 17	" " "	" 21	Aug. 11 to " 10	Pretty climber.
<i>Datura</i> , sweet nightingale..	" 20	" " "	" 23	" 7 to " 16	Fine for centres.
<i>Eschscholtzia Californica</i> ...	May 22	Outside .....	.....	July 10 to " 10	A showy annual.
<i>Gaillardia Lorenziana</i> .....	April 14	Boxes, hot bed	June 20	" 7 to " 16	A grand annual.
<i>Godetia</i> , mixed .....	" 17	" " "	" 20	" 12 to " 5	Did not do well.
<i>Gilia tricolor</i> .....	" 14	" " "	" 20	Aug. 1 to " 16	Not of much value.
<i>Helichrysum monstrosum</i> .....	" 16	" " "	" 20	July 28 to " 16	A fine everlasting.
<i>Linaria reticulata</i> .....	Selfs'wn	Outside.....	.....	June 1 to frost....	Very free flowering.
<i>Larkspur</i> , mixed .....	.....	.....	.....	" 12 to July 28	Did not do well.
<i>Zinnias</i> .....	April 16	Boxes, hot bed	June 12	July 14 to Sept. 16	A showy annual.
<i>Linum roseum</i> .....	May 22	Outside .....	.....	" 1 to " 10	Very showy.
<i>Marigold</i> , dwarf French .....	April 16	Boxes, hot bed	June 15	June 15 to " 16	A showy annual.
El Dorado.....	" 16	" " "	" 12	July 15 to " 16	Not of much value.
<i>Mignonette</i> , 8 varieties.....	May 30	Outside.....	.....	" 14 to " 16	Fine for perfume.
<i>Marabilla jalapa</i> .....	April 17	Boxes, hot bed	June 18	" 25 to " 16	A fine annual.
<i>Nasturtiums</i> , mixed .....	May 22	Outside.....	.....	Aug. 1 to " 16	An old favourite.
<i>Phlox Drummondii</i> .....	April 13	Boxes, hot bed	June 11	June 15 to frost....	A brilliant annual.
<i>Poppies</i> , several varieties.....	May 22	Outside.....	.....	July 28 to Sept. 5	A very showy annual.
<i>Phlox</i> (Double Yellow).....	April 18	Boxes, hot bed	June 23	June 30 to " 16	Not up to reputation.
<i>Pyrethrum aureum</i> .....	" 16	" " "	" 23	Foliage plant.....	Fine for edgings.
<i>Portulaca</i> , mixed .....	Selfs'wn	Outside.....	.....	July 15 to frost....	An old favourite.
<i>Ricinus</i> , Queen of "Cam-bodia" .....	April 20	Pots, hot bed..	June 20	Foliage plants ..	Fine for centres.
<i>Sweet Peas</i> .....	" 18	Outside .....	.....	June 27 to Sept. 5	A most useful annual.
<i>Stocks</i> , mixed .....	" 19	Boxes, hot bed	June 14	July 7 to " 16	An old favourite.
<i>Scabiosa</i> , mixed .....	" 14	" " "	" 23	" 15 to " 16	A very pretty annual.
<i>Sunflower</i> (new miniature).....	" 20	" " "	" 23	" 20 to " 10	A pretty dwarf sunflower.
" Tall .....	" 16	" " "	" 23	" 20 to " 15	Very effective background
" Texas Silver Queen .....	" 19	" " "	" 23	Aug. 20 to " 16	A novelty in sunflowers.
<i>Sapiglossis</i> , Finest mixed .....	" 14	" " "	" 23	July 30 to frost....	A splendid showy annual.
<i>Schizanthus</i> , mixed .....	" 17	" " "	" 23	June 20 to Sept. 5	A very pretty annual.
<i>Viscaria</i> , mixed .....	" 16	" " "	" 20	" 26 to " 30	Not very desirable.
<i>Verbena</i> .....	" 13	" " "	" 18	July 28 to " 16	Did not do well.

Thirty-five varieties of perennials were growing on this farm last spring, many of them very attractive and fine bloomers.

As the principal object in growing perennials here is to ascertain which are hardy in this climate, mention will be specially made of those found by experience to be hardy in our severe winters.

All have been protected on approach of winter by covering with strawy manure or corn stalks, this has been removed gradually in early spring.

# Experimental Farms.

## PERENNIALS.

Variety.	When planted.	Date of flowering.	Remarks.
Columbine (double purple).....	May 3, 1894	June 30 to July 10	A grand flower.
“ Chrysantha.....	“ 11, “	July 23 to Sept. 1	A handsome, long, spurred variety.
Delphinium grandiflorum.....	“ 10, “	July 7 to frost....	One of the best.
Dianthus barbatus.....	Sown 1893...	June 17 to frost...	One of the most brilliant.
Hemerocallis flava.....	Fall, 1893...	July 24 to Aug. 30	Splendid for masses.
Hyacinths, mixed.....	“ 1893...	May 25 to June 12	Flowered freely in spring, must be well protected in winter.
Gladiolus, mixed.....	Started in frame May 5, planted out June 11, '94.	Aug. 7 to frost....	Did very well, but too dry to make large bulbs; requires so be taken up in fall.
Iris, 7 varieties.....	Fall, 1893...	June 9 to 29.....	One of the best early perennials.
Lilium umbellatum.....	“ .....	June 29 to July 10	Very hardy and showy.
“ auratum.....	Fall, 1893...	July 23 to July 26	A most brilliant lily.
Linum perenne blue.....	May 7, 1894.	July 25 to Sept. 5	Very pretty, but should not be allowed to spread.
Narcissus, mixed.....	Fall, 1893...	May 26 to June 10	Proved quite hardy here.
Platycodon grandiflorum.....	“ .....	Aug. 5 to Sept. 10	A showy perennial, one of the best.
“ .....	“ .....	Aug. 7 to Sept. 10	“ .....
Pansies, mixed.....	1893.....	May 1 to frost...	An old favourite, and hardy here.
Scilla sibirica.....	Fall, 1893...	May 1 to May 16...	A pretty spring flower, very hardy.
Tulips, mixed.....	“ .....	May 15 to June 18	Show well here, and are among the first to bloom in spring.

## ROSES.

The roses received in previous years were planted in exposed positions, and we have had very little success with them generally, the *Rosa Rugosa* family being the only exception, these have proved quite hardy and have flowered freely, the blooms are mostly single, but their foliage and fruit is very attractive.

The following varieties were added to the stock this year:—

Perpetual Moss,	Perpetual White,
Henri Martin,	M. Cranston,
Marie Rady,	Dinsmore,
Gem of the Prairie,	M. P. Wilder,
American Beauty,	Seven Sisters.
Madame Bruant,	

These were planted in one of the sheltered plots; Madame Bruant and American Beauty gave some fine bloom. The plants were all protected on approach of winter by placing frames around the plants and banking well with manure.

## SEED GRAIN DISTRIBUTION.

It is found that farmers here are so hurried at the harvest seasons that very few of them will expend the labour necessary to keep a 3-pound sample of a new variety of grain separate from the varieties already on their farm, for that reason more attention has been given here to the sale of two bushel lots, the amounts harvested from parcels of this size are sufficiently large to thresh with a separator, and are more likely to be kept distinct.

Only varieties which from several years' test have proven to be superior to those generally grown, are distributed.

As the stock of such seed grain was small last year, a great many applications could not be filled, this year the supply is larger, and already many applications have been received.

The following are the number of parcels and kinds of grain distributed during the past year :—

3 lb. samples, wheat.....	25
2 bushels and over, wheat.....	16
3 lb. samples, oats.....	43
2 bushels and over, do.....	11
3 lb samples, barley.....	18
2 bushels and over, barley.....	95
Potatoes.....	71

Total number of applicants supplied..... 279

Circulars were sent to each person supplied with two bushels or over. About one-third of those supplied with Odessa Barley have already sent in reports, the following table is a summary of these :—

SUMMARY OF REPORTS ON ODESSA BARLEY.

No. reports received.	No. reports rust.	No. reports smut.	Injured by spring frost.	Injured by fall frost.	Stiff straw.	Medium stiff straw.	Weak.	Average days maturing.	Average yield per acre.	Range of yield.
31	2	3 "a little," 2 "yes."	5	None.	18	8	4	85	bus. lbs.	10 to 55 bus.

Reports from farmers supplied with wheat and oats are not at hand at this date in sufficient numbers to compile.

TILE DRAINING.

In my last annual report I mentioned that 3,400 feet of tile drain had been laid on the farm in 1893. I am pleased to be able to report that this drain worked satisfactorily all the season, and enabled us to reap a heavy crop of oats on two fields which we had been unable to sow during past years on account of deep ponds.

This fall 1,730 feet of additional tile has been laid, completing the draining on that portion of the farm.

The smaller branches have 3-inch tiles, the mains from 4 to 6 inches. The depth varies from 3 feet to 8 feet, the amount of fall is about 10 feet in the 4,300 feet of main drain.

FARMERS' INSTITUTE MEETINGS.

Institute meetings were attended at the following places by invitation, and the papers mentioned read by me :—

- December 8th, 1893.—Bradwardine, "Review of past season," full house.
- do 19th, 1893.—Melita, "Cattle feeding," large attendance.
- do 20th, 1893.—Minga, "Grain growing," small attendance.
- do 21st, 1893.—Killarney, "Results of 1893 experiments," fair attendance.
- do 22nd, 1893.—Crystal City, "Results of 1893 experiments," fair attendance.

## Experimental Farms.

- December 23rd, 1893.—Boissevain, "Fodder plants and dairying," fair attendance.  
 January 3rd, 1894.—Portage la Prairie, "A review," fair attendance.  
 do 17th, 1894.—Manitoba Dairy Association, Winnipeg, "Wintering dairy cows."  
 do 18th.—Kildonan, "Suggestions to suburban farmers."  
 February 10th.—Brandon, "What have we learned about mixed farming during the past year."  
 do 15th.—Blythe, same subject, good attendance.  
 March 3rd.—Blythe "Feeding cattle," good attendance.  
 do 8th.—Boissevain, "Grain experiments," full house.  
 do 9th.—Manitou, "Grain experiments," good attendance.  
 do 10th.—Morden, "Mixed farming," good attendance.  
 do 12th.—Kildonan, "Trees, fruits and flowers," good attendance.  
 do 13th.—Rosser, "Farm experiments," small attendance.  
 do 14th.—Neepawa do do  
 do 26th.—Belmont, "Varieties of grain," full house.  
 June 2nd.—Elkhorn, "How to farm with profit under present circumstances."  
 do 15th.—Oak Lake, "A review."  
 do 27th.—Oak Point, "Care of stock and small fruit cultivation."

### ACKNOWLEDGMENTS.

I beg to acknowledge the following donations to this farm during the year:—

- Joseph Anderson, Napinka, Man., half bushel Wright's favourite wheat.  
 A. B. Jones, Hartford, South Dakota, Success, Champion and Excelsior Barleys.  
 Wm. Wagner, Ossowa, Man., French Tares.  
 G. A. Davenport, Russell, Man., Monarch wheat.  
 Frank Cutten, Birds Hill, Man., selected wild raspberry.  
 A. P. Stevenson, Nelson, Man., Collection plants.  
 James Bell, Ninette, Man. do  
 Rev. W. W. Colpitts, tree seed.  
 Nelson Bedford, plant seed.  
 A. J. Butcher, Rapid City, wild clover seed.  
 T. M. Boddy, Portage la Prairie, seed potatoes.  
 J. Barton, Brandon, seeds.  
 J. Daniel, Moosomin, N. W. T., vegetable seed.  
 Prof. Bailey, Cornell University, plants.  
 D. D. Buchanan, plants.

### METEOROLOGICAL.

Below will be found the maximum and minimum thermometer readings for the past eleven months, also, the amount of rainfall and sunshine for the growing season:

<i>Rainfall.</i>	Inches.

## CORRESPONDENCE.

Since my last report 2,113 letters have been received and 2,233 letters despatched from this office : this is irrespective of about 1,000 circulars sent out.

I have the honour to remain, sir,  
Your obedient servant,

S. A. BEDFORD,

*Superintendent.*

## Experimental Farms

# EXPERIMENTAL FARM FOR THE NORTH-WEST TERRITORIES.

REPORT OF A. MACKAY, SUPERINTENDENT.

EXPERIMENTAL FARM, INDIAN HEAD, N.W.T.,  
31st October, 1894.

To WM. SAUNDERS, Esq.,  
Director Dominion Experimental Farms,  
Ottawa.

SIR,—I have the honour to submit herewith my seventh annual report, giving particulars of the work accomplished on the North-west Experimental Farm during the year 1894.

The crops on the Experimental Farm the past season have been the poorest since the farm has been established. Although the spring opened favourably and the seeding time was the best for several years past, dry weather set in early in the growing season and with a high temperature, often between 95° and 100°; the harvest resulted in small yields and with many varieties of grain in poor samples.

The crops throughout the Territories were variable. In the northern and north-western districts where rain was more abundant, gratifying results took place. In the eastern part of Assiniboia a fair crop of good wheat has been reaped, while the western half suffered almost a total loss of grain and vegetables. Local showers gave fair crops to a few in a district, while others a few miles away had little or nothing from the showers passing them by. In many cases a good shower saved the crops, and although no large yields are reported, the quality of wheat was good wherever harvested. The harvest came in early and was easily taken off on account of the light crop of straw.

In no year has the beneficial effect of fallowing land been so apparent on the Experimental Farm as during the past season. While grain sown on fall and spring ploughing held out for a time and at first promised well for a good crop, it gradually went back and finally was not worth cutting. Fallow-land on the other hand held out and proved, as it always has done, to be the only safe way of growing grain in this country. In the districts where almost total failure of crops took place, "fallows," it was said, were of no avail in averting the loss. This may have resulted from various causes, but may safely be put down to the fallow not having been worked early enough in the spring to receive the full benefit of the June and July rains of 1893. Many farmers leave their fallows till the proper season is past for the first ploughing, and then make one ploughing do for the season, resulting, in dry years, in certain failure.

Winds were not so destructive to crops on the Experimental Farm as in some former years. They were, however, troublesome and injured a good many plots after the grain was well above ground, the tender blades being cut by the small particles of earth being blown through them. Winds were continuous during a large part of the growing season, and after being very warm caused the ground to dry up much more than it otherwise would have done.

Weeds caused great loss throughout the country the past season, the dry weather giving them a good start in land not properly worked. Pig weed (*Chenopodium album*)

was the most common and did the greatest harm. The Experimental Farm was not exempt from this enemy of the North-west farmer, one field of Red Fife wheat being injured very much, although it had been fallowed the previous year.

As already stated, the crops on the Experimental Farm were poor the past season. This includes grain, roots and part of the vegetables.

In wheats the largest yield did not exceed twenty bushels per acre; while some were as low as twelve bushels. The tests made with fallow against stubble land demonstrated without a doubt the advisability of depending chiefly on the first-mentioned method of preparing land for grain crops. While it may do to risk a portion of the crop on stubble spring-ploughed, it is folly for anyone to depend entirely on it.

Barley was a poor crop, by far the worst ever cut on the farm. The seed came up evenly and the plants made good growth till 8 or 10 inches in height, when dry weather set in, and from then until ripe very little gain was made. The 2-rowed sorts especially were very short in straw and gave small yields.

The oat crop on fallow land was fair, while on either fall or spring work it was hardly worth cutting. One field of five acres on spring ploughing was ploughed up early in the season, so that the piece of land might be fallowed.

Pease were a light crop, but the sample was very good.

Field roots, like the grain, suffered from the dry, hot weather, and as will be seen in the result of tests, gave small yields.

Fodder crops, including corn, mixed grain, &c., were very light, but of good quality. The corn was further advanced at time of cutting than in any previous year, and will, no doubt, make better ensilage than it has generally done.

Trees did not make anything like the growth of the preceding year. Considerable growth, however, was made early in the season, and the long fall without severe frosts has allowed the wood to ripen, and it is expected that all will go through the coming winter in good condition.

Small fruit bushes gave promise early in the season of a most abundant crop of berries, but the dry weather completely dried up raspberries and strawberries, and while currants were numerous, the quality of the fruit was poor and the size small.

The past season has been favourable for stock. Although grass or fodder was short on the prairies from want of rain, absence of flies and mosquitoes enabled the cattle to do much better both in flesh and milk than in the preceding year. I regret having to report the presence of tuberculosis in the herds on Experimental Farm and the killing of 13 animals out of 39 tested. Among the 13 were many of the finest in the herd, including Durhams, Polled Angus, Holstein and Grades. The tests and results will, no doubt, be given more fully elsewhere in this report, and having been carried out under your own supervision, will require no lengthy explanation here.

I am pleased to note the increased interest taken in dairy work throughout the country, as well as the large numbers going into mixed farming. Only in a few districts is wheat still "king," while many are adding cattle, pigs, poultry, &c., to the farm work.

#### WHEAT.

Twenty-eight varieties of wheat were tested the past year, including 12 cross-bred sorts. None of these have produced heavy straw or given a large yield of grain, and the sample of many kinds was thin and light.

Following are the results of the tests in full:—

Test of different varieties, sown same date,  $\frac{1}{10}$  acre each.

## Experimental Farms.

Twenty-six varieties were sown on same day on fallow land, a sandy clay loam, by drill, with the following result :—

Name of Variety.	Date of Ripening.	No. of days Maturing.	Length of Straw.	Character of Straw.	Length of Head.	Kind of Head.	Weight of Straw.		Weight per Bushel.	Proportion Rusted.

### TEST OF SOWING PLOTS A WEEK APART.

Two varieties of wheat, Red Fife and Stanley, were sown on same day of the week for 6 consecutive weeks, on clay loam, size of plots  $\frac{1}{10}$  acre.

The first sown plot of Red Fife was never promising and produced a small yield. In none of the other plots was there much difference noted in the growing season and the yields varied very slightly.

In this test in 1892 and 1893, the earliest sown grain gave slightly the smaller yield.

To this year's result of tests is added date of seeding and yield of same test in 1892 and 1893, for comparison and the average for 3 years is struck. This average shows that very early or very late sowing is not advisable, but that from about April 20th, to the 15th May wheat may be sown with the best results as far as yield is concerned.

SPRING WHEAT—RESULTS OF EARLY, MEDIUM AND LATE SOWING.

## Experimental Farms.

### TEST OF SOWING WHEAT AT DIFFERENT DEPTHS.

This test has been carried on for five years with varying results. In a dry year the deep seeding has an advantage; in a wet year the opposite is the case. Red Fife was used in all tests; sown same day on fallow-land; clay loam; size of plots,  $\frac{1}{10}$  acre.

Name of Variety.	Date of Sowing.	Date of Ripening.	No. of days Maturing.	Length of Straw.	Character of Straw.	Length of Head.	Kind of Head.	Weight of Straw.	Yield per Acre.		Weight per Bushel.

### AVERAGE YIELD PER ACRE FOR THREE YEARS. IN TEST OF SOWING DIFFERENT QUANTITIES OF SEED PER ACRE.

Name of Variety.	1894.		1893.		1892.		3 Years.	
	Date of seeding.	Yield per acre.	Date of seeding.	Yield per acre.	Date of seeding.	Yield per acre.	Average yield.	
		Bush. Lbs.		Bush. Lbs.		Bush. Lbs.	Bush. Lbs.	
Red Fife—								
1 bus. per acre.....	April 24..	14 30	April 20..	28 20	May 3....	38 50	27	13
1¼ " ".....	" 24..	11 40	" 20..	28 —	" 3....	40 —	26	33
1½ " ".....	" 24..	13 20	" 20..	26 30	" 3....	39 40	26	30

Showing, in an average of three years, that one bushel gave slightly better returns than either  $1\frac{1}{4}$  or  $1\frac{1}{2}$  bushels per acre.

CROSS-SEEDING vs. ORDINARY SEEDING.

Some inquiry having been made as to the probable result of cross-seeding, two plots of  $\frac{1}{10}$  acre each were sown with Red Fife, by drill in fallow land, clay loam.

One plot was sown in the ordinary way, first, with 3 pecks per acre, then crossed with the same quantity. The other plot beside it was sown at the rate of  $1\frac{1}{2}$  bushels per acre. Following is the result : . .

GRAIN—WHEAT—TEST OF CROSS-SEEDING vs. ORDINARY SEEDING.

SMUT TEST.

The bluestone test for smut was repeated the past season with surprising results.

The value of bluestone in killing the germs of smut having been demonstrated in prior tests, an experiment was made the past season with very smutty seed to ascertain how badly the seed may be affected and yet be made safe for seeding purposes.

The seed used was the product of the untreated and badly affected seed of the year previous, and was perfectly black and unfit for seed or any purpose whatever.

Three plots of  $\frac{1}{10}$  acre each were sown on same day on fallow land—when ripe six feet square of each plot was cut and the heads counted; the balance of the plot being cut and threshed.

In the untreated plot the product of the 6 feet square contained only 77 good heads of wheat, while 862 were smutty. The plot yielded 5 bushels 40 lbs. of wheat and smut per acre of which about  $\frac{1}{2}$  bushel was sound wheat and the balance smut. The plots treated with bluestone were almost perfectly free from smut, as will be seen in result of test given below.

While no farmer need or should sow badly affected seed, he may rest assured that, with proper treatment it is perfectly safe to do so.

In a few localities a little smut has been found the past season. Where such has been the case it has resulted from one of three causes—1st, using no bluestone—2nd, bluestone used, not very good, or 3rd, not using sufficient water to wet every particle of the wheat treated. In all probability the latter was the principal cause. Not less than  $1\frac{1}{2}$  pails water should be used to 10 bushels wheat with 1 lb. bluestone.

ACRE PLOTS.

Nine sorts were sown on the same day on acre plots of fallow land, clay loam, sown by drill,  $1\frac{1}{4}$  bush. per acre. Following is result.

TEST OF BLUE-STONE FOR SMUT IN SPRING WHEAT.

### TEST of Fall and Spring ploughing and drill on stubble compared with Summer-fallow.

Each year a piece of stubble or root land has been ploughed in the fall and sown with Red Fife in the following spring; another piece has been gang-ploughed in spring at time of seeding; and another piece sown by drill without being worked before or after seeding. Along-side, or as near as it has been possible to have it, a piece of fallow has been sown for comparison. The result of this year's test with tests of 1892 and 1893 and average for 3 years is given below.

Mode of Cultivation.	How sown.	Sown.	Headed.	Ripe.	Matured in.	Yield per Acre.

AVERAGE, 3 YEARS—(From above tests.)

		Bush.	lbs.	
Stubble	{	Fall ploughing . . . . .	18	13 per acre.
		Seed gang-ploughed in . . . . .	21	6 "
		Not ploughed . . . . .	19	50 "
		Fallow-land . . . . .	28	10 "

AVERAGE YIELD PER ACRE FOR THREE YEARS SEEDING OF TEST OF DRILL, BROADCAST AND PRESS-DRILL.

Name of Variety.	1894.		1893.		1892.		3 Years.
	Date of Seeding.	Yield per Acre.	Date of Seeding.	Yield per Acre.	Date of Seeding.	Yield per Acre.	Average Yield.
Red Fife, sown by—		Bush.		Bush.		Bush.	Bush.
Drill . . . . .	April 24..	17·50	May 4..	36·18	May 12..	24·00	26·2
Broadcast . . . . .	" 24..	11·40	" 4..	25·40	" 12..	20·20	19·3
Press-drill . . . . .	" 24..	18·40	" 4..	38·20	" 12..	30·20	29·6

Showing in an average of three years, over three bushels per acre in favour of press-drill vs. drill, and nearly 10 bushels in press-drill vs. broadcast.

AVERAGE YIELD PER ACRE FOR THREE YEARS IN TEST OF SOWING WHEAT AT DIFFERENT DEPTHS.

Name of Variety.	1894.		1893.		1892.		3 Years.
	Date of Seeding.	Yield per Acre.	Date of Seeding.	Yield per Acre.	Date of Seeding.	Yield per Acre.	Average Yield.
Red Fife, sown—		Bush.		Bush.		Bush.	Bush.
1 inch deep . . . . .	April 24..	15·10	May 4..	Blown out	April 20..	24·30	19·50*
2 " . . . . .	" 24..	15·20	" 4..	41·20	" 20	27·00	27·53
3 " . . . . .	" 24..	18·00	" 4..	37·10	" 20..	22·30	25·50

\* 2 years.

In 1893, the one inch in depth was destroyed by winds, so that in this test the average is for two years only. The tests of one inch in depth show that depth to be not sufficient to resist winds and dry weather. The three inches deep, the past year gave nearly three bushels more per acre than either one or two inches, while the average for three years is in favour of two inches by two bushels per acre.

CROSS-BRED WHEATS.

In the cross-bred varieties of wheat little or no difference could be seen between the different varieties while growing.

## Experimental Farms.

When threshed, however, considerable difference was found in yield and quality of the grain, but on account of the season being so unfavourable, a just estimate cannot be made of their value from this year's results. Following will be found names, parentage, date of sowing and ripening, weight and yield of the hybrids:—

Name of Variety.	Parentage.		Sown.	Ripe.	Yield.		Weight

### GENERAL RESULTS OF WHEAT TESTS, 1894 AND 1892-93-94.

1. In the result of the tests made the past season, no one variety of wheat has proved much superior to the others as far as yield is concerned, but in quality the following were much the best:—

Preston, Pringle's Champlain, Rio Grande, Wellman's Fife, Dions, Huron, Red Fern, Red Fife, White Russian, White Connell, White Fife, Mars, Gehun, and Herison Bearded.

2. In the week apart tests, the average of three years points to the season between 20th April and 20th May, as being the proper time to sow wheat as far as yield is concerned, but frost is not taken into account in these tests and should be considered.

3. The average of three years' trial of Press-drill, Drill and Broadcast sowing is in favour of the Press-drill very considerably.

4. One bushel of seed per acre has given best results in three years' tests.

5. Wheat sown three inches deep gave best results the past season, but the average for three years is in favour of seeding 2 inches deep.

6. No gain resulted from Cross-seeding in the test of the past season, and if time in sowing is considered, a loss took place.

7. Fallow-worked land, as it always has done, gave the best returns.

8. Treating seed wheat with Blue-stone has again demonstrated its great value in killing the smut-germ; and saving the grain from being perfectly useless.

### BARLEY.

Twenty-nine varieties of barley were sown last spring, of which 17 were old and 12 new sorts, 15 kinds being 2-rowed and 14 varieties 6-rowed. The 12 new sorts included 6 hybrids, produced at the Central Experimental Farm by crossing 2-rowed with 6-rowed barleys, some of which are very promising, but on account of the extremely dry season gave poor returns.

TEST OF VARIETIES ALL SOWN THE SAME DAY.

Twenty-eight varieties were sown the same day by drill on  $\frac{1}{10}$  acre plots of fallow land, sandy loam ; all the plots were promising until dry weather set in. As will be seen by the following results, the yield was small in every case.

BARLEY—TEST OF DIFFERENT VARIETIES SOWN THE SAME DAY.

RESULT OF SOWING BARLEY AT DIFFERENT DATES ON  $\frac{1}{10}$  ACRE PLOTS.

In this test Canadian Thorpe, a two-rowed sort, and Oderbruch, a six-rowed variety, were used. The soil was clay loam.

All the plots of two-rowed were poor ; the first two sown being very short and weak in the straw. The six-rowed, on the other hand, while short in straw, stood the dry weather much better and ripened evenly, in the order sown, several days earlier than the two-rowed.

The best time to sow barley, as indicated by the results of this test, is from 1st to 15th May, these dates being substantiated by the results of the same test for the past three years.

In addition to this year's test, the dates of seeding and yields for 1893 and 1892 are given with average yield for the 3 years.

# Experimental Farms.

\* Two years only.

### FIELD PLOTS OF BARLEY.

Four field lots were sown on May 8th, in fields of 3 acres each. The varieties of seed chosen for these were among the best two-rowed sorts. The soil was a clay loam.

All lots came up evenly and promised well at first, but later on they came to a standstill and for a long time made very little growth, and when the heads struggled through, they were very short and poorly filled. The following are the results:—

## BARLEY IN FIELD PLOTS OF 3 ACRES EACH.

Name of Variety.	Date of Sowing.	Date of Ripening.	No. of days Maturing.	Length of Straw.	Character of Straw.	Length of Head.	Kind of Head.	Weight of Straw per acre.	Yield per acre.	Weight per Bushel.

## TEST OF PRESS-DRILL vs. DRILL.

In this test the plots were  $\frac{1}{10}$  of an acre, clay loam: the results, as will be seen in the following table, are in favour of ordinary drill by 2 bushels 4 lbs. per acre. In 1893 the returns were in favour of press-drill by 7 bushels per acre.

The plots were on summer fallow, and seed was sown at the rate of 2 bushels per acre and both on the same day.

## TEST OF SOWING DIFFERENT QUANTITIES OF SEED PER ACRE.

In the above test which was made on clay loam on plots of  $\frac{1}{10}$  acre each,  $1\frac{1}{4}$  bushels per acre sown on May 15th yielded 13 bush. and 36 lbs. per acre, and  $1\frac{3}{4}$  bushels sown same date produced 15 bush. and 30 lbs. per acre. The same variety (California Prolific) and the same quantities of seed sown May 8th, 1893, gave 43 bush. 44 lbs. and 44 bush. and 28 lbs. respectively, per acre. In this year's test the two plots were sown on fallow by drill.

## Experimental Farms.

### TEST OF BLUESTONE FOR SMUT IN BARLEY.

For several years many of the varieties of barley have been affected with smut. Bluestone having been used on seed in spring of 1893, with satisfactory results, a test was made during the past season which also proved satisfactory.

The plots were  $\frac{1}{10}$  of an acre each, soil, clay loam, and they were all sown on the same day, at the rate of 2 bushels per acre, by drill on fallow-land, with the following results:—

Name of Variety.	Date of Sowing.	Date of Ripening.	No. of days Maturing.	Length of Straw.	Character of Straw.		Length of Head.	Head.	Weight of Straw.	Yield per Acre.			Good Heads.	Bad Heads.

### TEST OF STUBBLE *vs.* FALLOW.

California Prolific barley was used in this test on  $\frac{1}{10}$  acre plots, clay loam.

The stubble land had been under wheat the year previous and was fallowed the year before that. This spring the stubble was gang-ploughed 3 inches deep. Seed sown before ploughing and land well harrowed after.

The fallow yielded 16 bushels 30 lbs. and the stubble 7 bushels 34 lbs. per acre. The same variety sown on fallow on May 9th, 1893, gave 49 bushels 10 lbs. and stubble (fall ploughed) 41 bushels 32 lbs. per acre.

Plots sown by drill at the rate of 2 bushels per acre.

### STUBBLE *vs.* FALLOW.

Name of Variety.	Date of Sowing.	Date of Ripening.	No. of days Maturing.	Length of Straw.	Character of Straw.		Length of Head.	Head.	Weight of Straw.	Yield per Acre.			Proportion Rusted.

### GENERAL RESULTS OF BARLEY GROWING FOR SEASON OF 1894.

1. In the test of varieties sown on same date, no one variety proved much superior to the others, all suffering from prolonged dry, hot weather.
2. In the week-apart tests, the plots sown between 1st and 15th May, gave the best results, and in 1892 and 1893, the plots sown during that period also gave the best returns.
3. One and three quarter bushels per acre has given better results in this year's test and in test of 1893 than  $1\frac{1}{4}$  bushels.
4. Blue-stone kills smut germs on barley, and should be generally used.
5. Fallow-land gave a fair return this year, while grain on stubble-land was not worth cutting.

### OATS.

The oat crop throughout the Territories suffered greatly from the dry and hot weather during the growing season. Where the crop was sown on fallow-land, fair, and

in some localities where rain favoured them, good returns were obtained ; but the general practice being to sow oats after two or more crops of wheat have been taken off the land, often without ploughing, the result in many districts has been an almost or entire failure of the oat-crop.

On the Experimental Farm, the crop suffered from lack of rain, quite as much as in other sections, and, on any land except fallowed, was hardly worth cutting.

One field of 5 acres promised so poorly that it was ploughed up. Two other fields of 10 and 20 acres each in extent, sown on stubble-land, were hardly worth cutting.

These fields were sown for fodder purposes, but on account of the straw being so short were allowed to remain and cut when ripe.

On fallow-land, the crop was fair, the straw of all varieties being short and thin on the ground, but producing fairly good returns considering the unfavourableness of the season.

TEST OF SOWING DIFFERENT VARIETIES OF OATS ON SAME DATE.

Thirty-nine varieties were sown the same day on fallow, by drill at the rate of 2½ bushels per acre.

Many of these plots were injured after the grain was 5 or 6 inches high by winds blowing soil from adjacent fallow through them, thereby injuring the tender blades.

The results of the test are given in the following table :—

Name of Variety.	Character of Soil.	Size of Plot.	Date of Sowing.	Date of Ripening.	No. of days Maturing.	Length of Straw.	Character of Straw.	Length of Head.	Kind of Head.	Weight of Straw		Yield per Acre.	Weight per Bushel.

### TEST OF SOWING PLOTS OF OATS A WEEK APART.

Two sorts of oats, Banner and Abundance, were used in this test on plots of  $\frac{1}{10}$  acre each. Commencing on April 24 they were sown the same day of each week for six consecutive weeks on fallow-land by drill at the rate of  $2\frac{1}{2}$  bushels per acre.

The first sown plot of each variety was poor from the time it came up, and gave small returns, indicating that the earliest date of seeding was rather too early for oats.

The sowings of the second, third and fourth weeks gave the best results in earliness, straw and yield.

The dates of seeding and yields for same test in 1892 and 1893 are added to this year's test, and, as will be seen by the average of 3 years, the plots sown between 1st and 15th May gave the best returns.

OATS—ONE ACRE PLOTS.

Twenty varieties were sown in acre plots on clay-loam fallowed ; they were sown by drill on the same day. Wind hurt a portion of all the plots, but Hazlett's Seizure, Flying Scotchman, Winter Grey and Bonanza suffered the most.

TEST OF FALLOW vs. STUBBLE.

Two fields, nearly adjoining, of ten acres each, were sown at the same time with 2½ bushels of seed per acre. The plot of fallowed land was sown by drill : the stubble plot was burnt off and the seed sown on the surface by broadcast seeder and gang-ploughed in.

A second field of stubble of 20 acres was burnt off and sown by drill, without ploughing, with 2½ bushels of seed per acre.

For a considerable time the 10 acre field of stubble was very promising, but at last it dried up and was with difficulty cut with the binder. On the 20 acre field of stubble the straw was longer and gave better returns. On the fallow, although the straw was short, the returns were fairly good.

In the following table the results are given.

OATS FALLOW vs. STUBBLE.

Name of Variety.	Date of sowing.	Date of Ripening.	No. of days Maturing.	Length of Straw.	Character of straw.	Length of Head.	Head.	Weight of Straw.		Yield per Acre.	Weight per Bushel.

# Experimental Farms.

## TEST OF SEEDING, PRESS vs. DRILL.

In this test the Banner oat was used and sown in fallowed land at the rate of 2½ bushels per acre.

The press-drill gave 7 bushels 12 lbs. more per acre than ordinary drill and yield of straw was also larger.

As shown in the table the press-drill gave the best returns in 1893 and is 10 bushels 25 lbs. ahead in the average for the two years. The test made in 1892 was badly destroyed by winds and cannot be given.

### PRESS-DRILL vs. DRILL.

Name of Variety.	Character of soil.	Size of Plot.	Date of Sowing.	Date of Ripening.	No. of days Maturing.	Length of Straw.	Character of Straw.	Length of Head.	Head.	Weight of Straw.		Yield per Acre.	Weight per Bushel.	Average, 2 yrs.

### TEST OF SOWING DIFFERENT QUANTITIES OF SEED PER ACRE.

Banner oats were used in this test. Sown on one-tenth acre plots of fallow by drill. Two plots were sown at the rate of 2 bushels and 2½ bushels per acre respectively and one plot alongside, cross-seeded with ¾ bushels per acre, each way.

In this year's test 2 bushels per acre and the cross-sown plot gave the same yield, both being higher in yield than the plot sown at the rate of 2½ bushels per acre. The straw on the cross-sown plot was several inches higher than either of the other two.

Following are the results of this year's test, with date of seeding and yield for 1893 and average for the two years.

Banner Oats, Quantity per Acre and how sown.	1894.						1893.		2 Years.

### GENERAL RESULTS OF OAT-GROWING FOR SEASON OF 1894.

1. Of the 39 sorts tested, sown on same day, where all had equal chances, the varieties:—Banner, White Wonder, Bonanza, Imported Irish, Rosedale, Improved Ligowo and Abyssinia proved themselves good kinds for the North-west Territories.

2. In the test made with a view of determining the best time to sow oats, the period between 1st and 15th May gave the best returns, corresponding in this respect with the same test in 1893 and 1892.

3. In the test of Stubble *vs.* Fallow it is clearly demonstrated that fallowed-land gives very much better returns, both in straw and yield, than stubble-land, no matter how put in.

4. The press-drill gave better results than ordinary drill.

5. Two bushels of seed per acre gave a greater yield than the ordinary quantity,  $2\frac{1}{2}$  bushels, and cross-seeding, taking twice the labour at seeding time, was no better than the plots sown in the usual way.

## PEASE.

Twelve varieties of pease were sown on  $\frac{1}{10}$  acre plots of fallow soil clay loam. Three of these sorts were again sown in larger plots.

All the kinds were short in straw and when threshed gave small yields, but the sample was good in all cases.

## FODDERS.

## GRASSES.

Except on one variety, no satisfactory report can be made this year on grasses. Out of 16 varieties sown in the spring of 1892, only one is now living. Several were blown out and others dried out the first year and of the balance only two gave a crop in 1893, namely : *Bromus inermis* and *Muhlenbergia sylvatica*, the others being so short it was impossible to cut them.

All except *Bromus inermis* promised so poorly this spring that it was thought advisable to plough them up ; consequently, only *Bromus inermis* is left to report on.

## Experimental Farms.

This variety gave a fair crop the past season notwithstanding the amount of dry weather it had to contend against. Getting an early start in the spring, the crop was assured before the drought set in.

*Bromus inermis* has been principally sown on fallow-land without grain, but it has also been sown on stubble land, with and without grain. It has, so far however, done much better when sown alone.

A grain crop requires so much moisture, that the young grass plants suffer during August or whenever the wet season is over. On this account it is recommended that it be sown alone on fallowed-land or on stubble that has been well ploughed and harrowed.

Fifteen pounds per acre is sufficient to sow as it thickens up the second year.

After allowing the *Bromus* to ripen its seed the yield per acre, when cut, was found to be 2 tons 100 lbs.

The following grasses were sown last spring :—

*Bromus inermis*, on stubble, alone, May 10.

“ ganged in on stubble, alone, May 12.

*Bromus inermis* and Alsike, sown together on deep ploughing of oat stubble, May 26.

### FODDER-MIXTURES AND FODDER-PLANTS.

The result of growing fodder the past season was not very satisfactory as far as quantity of production was concerned, but the quality was much better than it has been for several years.

Four mixtures of grain and one variety alone were sown for fodder purposes.

The mixtures containing pease were not benefited by that grain, as at best they were only a few inches high when cut. The best results in yield and quality were given by a mixture of rye and oats.

Hungarian grass and four kinds of millet were sown on spring-ploughing. All were long in germinating, and when rains came, the season was so far advanced that the yields were small in every case.

In the following table will be found results of tests :—

CORN.

Corn was planted for fodder purposes and, although a very small crop, was much better in quality than usual and will, no doubt, give good satisfaction as ensilage. The test of varieties was on clay loam.

Longbrush Evergreen	"	" 29	"								1683		
California Golden Long Brush	"	" 29	"								1560		

HORSE-BEANS.

Sown in drills were poor in quality and quantity and were cut up and put in silo at same time as corn.

SUNFLOWERS.

Sunflowers were also sown for the silo. They were a fair crop but as they became ripe the black-birds devoured the seeds and a large portion of the field was lost in this way. The sunflowers were sown on April 25th on potato land, headed out on July 15th and was ripe on August 1st.

RAPE.

Several acres of rape were sown on June 14th, but on account of dry weather the crop was short. It, however, afforded a considerable quantity of green fodder during October when all other green feed was gone.

By turning the cattle on the rape after milking, no bad flavour was imparted to the milk.

ROOTS.

Turnips, mangels and carrots were a poor crop the past season. For weeks after they were sown the seeds did not germinate but lay dormant until rains came in July, then made very little growth until after the middle of September.

## Experimental Farms

### TURNIPS.

Thirteen sorts of turnips were sown for test on 28th May, and again on 9th June. The last sown came up first and gave the best yield.

The same sorts and two others were sown on May 29th in field lots, and, as they germinated before either of the test plots, they gave considerably the largest returns.

All were sown on fallowed land which had been ploughed, harrowed and rolled before seeding. Seed was sown in drills.

Following are results of tests both of small plots and field plots. The small plots occupied  $\frac{1}{30}$  of an acre each, the field plots  $\frac{1}{8}$  of an acre each, and the soil in all cases was clay loam.

NOTE.—The field on which the above varieties were sown in field plots was well sheltered by a maple plantation, which allowed the ground to retain the moisture, thereby causing the seed to germinate more quickly; hence the increase in yield over the same varieties in the uniform-test plots, which were sown on more exposed grounds, showing the advantage of shelter screens of forest trees.

MANGELS—TEST OF VARIETIES.

Nine varieties of mangels were tested; they were sown on clay loam, on plots of  $\frac{1}{10}$  acre each, on May 29, and again on June 9. Seven of the nine kinds were also sown on clay loam, in larger plots of  $\frac{1}{2}$  acre each, on May 29, and on account of shelter afforded the field by a maple plantation, which made germination of the seed much earlier, the yields per acre were considerably higher than in the test plots:—

## POTATOES.

Fifty-seven varieties of potatoes were planted the past season ; thirty-five of which were chosen for uniform test, on all the Experimental Farms. The varieties enumerated under No. 2 were additional sorts which it was thought desirable to test at Indian Head ; they were all planted on plots of  $\frac{1}{50}$  acre each, soil clay loam. The season was so unfavourable that no just estimate can be made as to the best sorts for the North-West Territories.

In the uniform test the fourteen varieties first mentioned in the tables were the earliest in maturing, closely followed by the next eleven, the remainder of the varieties being late. As will be seen, none of the early sorts yielded well and very few of them were of large size, but all were of excellent quality. Among the varieties under test No. 2, there were six early sorts, four of which were good in size and yield, and all were of good quality.

# Experimental Farms.

## VEGETABLE GARDEN.

Like all other crops on the farm, the vegetables suffered from the very dry, hot weather. A few sorts that it was possible to irrigate, gave splendid results, such as celery, cucumbers, melons and tomatoes, but where irrigation was impossible, a very light crop was the result.

### ARTICHOKES.

These made very poor growth. Only a few small tubers were to be found. They stand the winter well.

### ASPARAGUS.

Conover's Colossal, old bed, fit for use on May 20; splendid crop.

50 Early Argenteuil, new variety, planted May 10, doing well.

50 Mam. Wh. Columbus " " "

50 Barr's Mammoth " " "

50 Donald's Elmira, from C. E. F. " " "

50 Conover's Colossal " " "

Plants grown from seeds, Exp. Farm, Indian Head, planted May 10, doing well.

Seed, 5 rows, Exp. Farm, Indian Head, sown May 15, doing well.

### BEANS.

Eight varieties were planted; all were very poor, the season being too dry when they were filling; as string beans they were hardly fit for use.

#### TEST OF VARIETIES.

### CUCUMBERS—TEST OF 7 VARIETIES—SOWN IN HOT-BED AND TRANSPLANTED INTO FRAME.

Name of Variety.	Sown in Hot Bed.	Transplanted to Frame.	Fit for use.	Fit for use.	Duration of fitness for use.	Remarks.	
	Date.	Date.	From	Till	Months.		
Burpee's White Pearl....	Apr. 19.	May 21.	July 5.	Aug. 20.	1½	Very fine but small. Cut all season. Very fine but small. Cut greatest number. Very good, fair size. Very good. Large well shaped. The best. Very large. Heavy crop all season.	
Siberian .....	" 19.	" 21.	" 5.	" 20.	1½		
Cool and Crisp .....	" 19.	" 21.	" 10.	" 20.	1½		
White Spine.....	" 19.	" 21.	" 10.	" 20.	1½		
Giant Pera.....	" 19.	" 21.	" 10.	" 20.	1½		
<i>Sown in open—No Protection.</i>	Sown.						
Burpee's White Pearl....	May 26.		Aug. 1.	Frozen..			A few good cucumbers. Fair crop.
White Spine..	" 26.		" 1.	"		Good crop of picklers.	
New Paris Pickling.....	" 26.		" 1.	"		Large crop. One of the best for pickling.	
New Siberian .....	" 26.		July 20.	"		Very good. None large enough except for pickling.	

### CELERY—TEST OF 8 VARIETIES

Name of Variety.	Sown in Hot Bed.	Transplanted in Hot Bed.	Transplanted into Garden.	Fit for use.	Lifted.	Remarks.
DeCandolle.....	Mar. 26.	May 15.	June 22.	Aug. 20.	Oct. 11.	Long and white; upright and close.
Rennie's Giant White ....	" 26.	" 15.	" 22.	" 20.	" 20.	Very large; white; not very solid.
White Plume .....	" 26.	" 20.	" 22.	" 20.	" 20.	Seed not true; only 1 dozen White Plume.
Giant Golden Heart ....	" 26.	" 20.	" 22.	" 20.	" 20.	Very large. Similar to Giant White.
Evan's New Triumph....	" 27.	June 4.	" 23.	" 20.	" 20.	Very fine. Large and white.
Henderson's Golden Dwarf	" 31.	" 4.	" 23.	" 20.	" 20.	Extra good. Large, solid and well blanched.
Paris Golden Yellow....	" 31.	" 4.	" 23.	" 20.	" 20.	Good. White and solid.
Perle Le Grand. ....	" 31.	" 4.	" 23.	" 20.	" 20.	Very good. White and solid.

### CARROTS.

Name of Variety.	Sown.	Up.	Fit for use.	Lifted.	Bush. per acre.	Quality.
Early Scarlet Short Horn..	April 23....	May 15....	July 2....	Oct. 1....	202	Good.
Early Very Short.....	" 23....	" 15....	" 2....	" 1....	162	"
French Forcing .....	" 23....	" 15....	" 2....	" 1....	202	"
Half-long Scarlet Nantes..	" 23....	" 15....	" 2....	" 1....	242	Very good.
Danver's Half-long .....	" 23....	" 15....	" 2....	" 1....	242	"
Red Carenton .....	" 23....	" 15....	" 2....	" 1....	242	"

CORN.

Name of Variety.	Sown.	Up.	Fit for use.	Ripe.	Remarks.
Early Vermont.....	May 16....	June 2....	July 25....	Aug. 15 ..	Good crop.
Dreer's First of all.....	" 16....	" 2....	" 25....	" 15....	"
Early Cory.....	" 16....	" 2....	" 25....	" 15....	"
Squaw.....	" 16....	" 2....	" 15....	" 1....	"

NOTE—By wrapping a few of the ears in paper they were saved for seed. The remainder were destroyed by black birds.

CITRONS.

Name of Variety.	Sown in hot bed.	Transplanted into Frame.	Fit for use.	Remarks.
<i>Grown in frames.</i>				
Colorado Preserving...	April 19....	May 21....	Aug. 10....	Grew very large; one plant in frame gave six long-shaped fruits, one weighing over 20 lbs., and the smallest, 10 lbs. The other two plants produced round fruit averaging 10 lbs. each, the largest weighing 16 lbs.
Common Citron.....	" 19....	" 21....	" 10....	A large crop of fruit. One citron weighed 16 lbs, and crop averaged about 8 lbs.
<i>Seed sown in open.</i>				
Colorado Preserving...	May 26....	.....	Aug. 20....	Much smaller than those grown in frames, but the same type, and all fit for use.
Common Citron....	" 26 .....	.....	" 20....	Smaller than those grown in frames, but all fit for use.

LETTUCE.

Name of Variety.	Sown in Hot-Bed.	Transplanted in Hot Bed.	Fit for use.	Remarks.
<i>Sown in Frame.</i>				
Toronto Gem.....	March 29..	April 20..	May 20..	Made large, loose heads, very good.
Garden Queen.....	" 29..	" 20..	" 20..	Made compact heads. Best variety for forcing.
All Head.....	" 29..	" 20..	" 20..	Did not do well in frames.
<i>Sown in Garden.</i>				
	<i>Sown.</i>	<i>Up.</i>	<i>Fit for Use.</i>	
All Heart.....	April 25..	May 9..	June 1..	Very good, large heads, fairly solid.
New Cos.....	" 25..	" 9..	" 20..	Did not do well this season.
White Paris Cos.....	" 25..	" 9..	" 20..	Did not do well this season.
Toronto Gem.....	" 25..	" 9..	" 1..	Very good.
New Sensation.....	" 25..	" 9..	" 1..	Very good, stood dry weather best.
Golden Queen.....	" 25..	" 9..	" 15..	Made good heads, but soon dried up.
California Cream Butter.	" 25..	" 9..	" 15..	Made very large heads, quality not good.

# Experimental Farms.

## MELONS—MUSK.

Name of Variety.	Sown in Hot-Bed.	Transplanted to Garden.	Ripe.	Remarks.
<i>Grown in Frame.</i>				
Emerald Gem.....	April 18..	May 21..	August 18..	Fit for use till frost came. Three plants produced 10 melons, averaging 1 pound each. All ripened but four. Quality, extra fine; red flesh.
Evan's Superb.....	" 19..	" 21..	" 30..	Fit for use till frost came. Three plants gave 8 melons, all ripened but two. Average, 4 lbs. Quality, extra good, green flesh.
Montreal Market.....	" 19..	" 21..	" 28..	Three plants produced 8 melons, all ripened but two. Average, 3 lbs. Quality, extra fine, green flesh.
<i>Sown &amp; Grown in Open.</i>				
Emerald Gem.....	May 26..			Formed a lot of fine fruit which never ripened enough for use. One plant produced six long-shaped melons that were ripe enough to bring seed to maturity but flavour was not good.

## MELONS—WATER.

Phinney's Early. Sown in hot-bed April 19th. Transplanted May 21. Ripe Aug. 18.

Two plants gave six melons of very good quality. All ripened. Weight, 6 lbs. each.

## MELONS—MANGO.

Sown May 26 (in open grounds). Ripe August 15.

Produced a large crop of fruit about the size of an orange.

## LEMON—GARDEN.

Sown May 26, (in open ground). Ripe August 15.

Gave a large crop of fruit about the size of a lemon.

## ONIONS.

Transplanted.	Sown in Hot-Bed.	Up.	Transplanted to Garden.	Fit <sup>1</sup> for use.	Lifted.	Bushels per acre.

New Pearl Forcing .....	" 25	" 9	" 5	Extra good.
Scarlet Olive Shaped .....	" 25	" 9	" 1	Very good at first but soon became hollow.
<i>2nd Seeding in Garden.</i>				
Rosy Gem .....	June 2			Did not do well on account of dry weather.
Brightest and Best .....	" 2			" " " "
New Pearl Forcing .....	" 2			" " " "
Scarlet Olive Shaped .....	" 2			" " " "

## RHUBARB.

Stotts' Mammoth. Fit for use May 24.  
 Victoria. " " "  
 Linnæus. " " "  
 Carleton Club. " " "

Did not do well on account of dry weather.

Sowed seed in hot-bed on April 20. Transplanted 160 plants into nursery on June 8. All doing well.

## SPINACH.

Bloomsdale—Sown April 25. Came up well, but ran to seed almost at once.

## SUMMER SAVORY.

Sown April 25 ; up May 15 ; lifted August 1. Very good.

## TOMATOES.

Name of Variety.	Sown in Hot Bed.	Transplanted in Hot Bed.	Transplanted into Garden.	In Fruit.	Ripe.	Remarks.
Early Ruby.....	March 28.	Apr. 27.	May 30.	June 12.	July 25.	Produced a good crop of large fruit.
Atlantic Prize.....	" 28.	" 27.	" 30.	" 10.	" 25.	Very good. Very even in size and shape.
Earliest of all.....	" 28.	" 27.	" 30.	" 12.	" 25.	Large crop. Not well shaped.
Everbearing.....	" 28.	" 27.	" 30.	" 12.	Aug. 1.	Large crop of small, not well flavoured fruit.
Dwarf Champion.....	" 28.	" 27.	" 30.	" 20.	" 5.	Nearly all fruit decayed.
Livingston's Aristocrat.....	" 28.	" 27.	" 30.	" 20.	" 1.	" "
Red Cherry.....	" 28.	" 27.	" 30.	" 12.	July 16.	Extra good, heavy crop of small fruit.
<i>Seed sown in boxes in house.</i>						
Early Arctic.....	Feb. 7....	Apr. 16.	May 30.	June 5..	July 21.	Very good. Gave a large crop of fine fruit.
Yellow Plum.....	" 7....	" 16.	" 30.	" 10..	" 16.	Extra good. Very heavy crop.

## FLOWER GARDEN.

Flowers suffered very much from the dry hot weather, and although a limited supply of water was at hand and applied freely, it was of very little use against the blazing sun and temperature of 95° to 100°.

Pansies were a poor show until early in the fall, and at this date, November 1, are blooming amid snow and frost better than at anytime before.

Asters made a fine display and continued in bloom for a considerable length of time.

Dianthus, Mignonette, Stocks and Verbenas did fairly well, but dry weather was much against them.

A large number of bulbs were received from the Central Experimental Farm in November, 1893, too late, on account of severe frosts, to plant outside. A few of the following :—Narcissus, Single and Double Hyacinths, Crocus and Scilla Sibirica were potted in November and kept in the house, and gave a fine show of flowers during February and March. The remainder of the bulbs were planted in the garden in the spring, but have not bloomed.

A list of the bulbs and all perennials and annuals is given below with date as to flowering and suitability to the North-west.

A fine lot of Bulbs have been received again this year, the majority of which were planted in the garden and the balance potted for house-flowering.

## ANNUALS.

Alters.—Eight colours, Victoria ; five colours, Dwarf Bouquet ; four colours, Dwarf Pæony Flowered, were sown in hot-bed on April 3 ; transplanted in hot-bed on May 1, and into open-ground on June 13. All grew well and commenced to bloom about August 15, continuing in bloom till first severe frost. A large number were lifted into

## Experimental Farms.

pots and boxes before they were touched by frost, and being protected, made a very fine show in the house for a considerable length of time.

*Antirrhinum*.—Majus and minus were sown in hot-bed on April 20th and transplanted into open ground on June 14th. Both varieties did well; making a good show until first severe frost. No North-west flower garden should be without these.

*Artemisia gracilis*.—Foliage variegated, sown in hot-bed, April 19th; transplanted into garden, June 14th. Not more than one-third of the plants were variegated. Makes a fair border plant. Seed sown in open on June 1st did not come up.

*Alyssum compactum*.—Sown in garden on April 23th, for borders to beds. Came into bloom early in June and continued till hard frost. One of the best flowers we have for bordering beds.

*Anagallis grandiflora*.—Sown in hot-bed April 20 and transplanted into garden June 14th. A very showy free-blooming little plant. In bloom till frozen.

*Abronia umbellata*.—Sown in hot bed April 19th, transplanted into garden June 13th, did well and made a good show. A very good flower for this country.

*Beta Brasiliensis*.—Sown for a border to a bed in garden, but was found to be not suitable for bordering. Would make a much better soiling plant.

*Clarkia elegans*.—Sown in hot-bed on April 20th. Transplanted to garden June 20; made a good show for a few weeks but did not stand the dry weather. It is however well worth a place in any North-west garden.

Seed was sown in garden on May 12th, but it never came up.

*Calandrinia grandiflora*.—Sown in hot-bed on April 20th. Transplanted to garden June 13th. Very showy, fine foliage. Kept in bloom until first severe frost.

*Commelina grandiflora*.—A very pretty blue flower, but does not stand dry weather well, nor make much show.

*Convolvulus minor*.—Sown in garden on May 12. Made a good show all summer and stood dry weather well. Should be in every North-west flower-garden.

*Chrysanthemum Dunetti*.—Sown in garden May 12. Seed came up only fairly well, but the few plants flowered well up to first severe frost.

*Cheiranthus maritimus*.—Sown in hot-bed April 20. Transplanted into garden June 13. A nice little plant for borders. Sown in open on May 12, plants kept in flower longer than those sown in hot-bed and transplanted.

*Dianthus Heddewigii and Chinensis*.—Sown in hot-bed April 19. Transplanted to garden June 13. Both varieties did extra well and flowered the whole season.

*Helichrysum monstrosum* (Everlasting). Sown in hot-bed on April 20. Transplanted into garden June 13, made a fair show during August and September.

*Eschscholtzia* (California poppy).—Sown in garden on May 12. One of the best annuals for the North-west. Stands drouth and first frost, and blooms very freely.

*Gaillardia picta*.—Sown in hot-bed April 19. Transplanted to garden June 13. Came into bloom July 15, and continued until hard frost. One of the best flowers for the North-west Territories.

*Helipterum*.—Sown in hot-bed, April 20. Transplanted into garden June 13. A very pretty yellow everlasting. Flowered quite freely but not very showy. Flowers kept well for winter bouquets.

*Helianthus annuus, pl. fl.* (Double Sunflower).—Seed was sown in pots in hot-bed on April 19, and put out in garden on June 1. None of the plants gave double flowers but were very well branched and made a good show.

*Iberis* (Candytuft).—Sown in garden, April 23rd. Came up well but almost all the young plants were eaten off by the turnip beetle. The few plants that escaped flowered well all through the season.

*Linum grandiflorum*.—Rose and scarlet flax were sown in hot-bed on April 19th. Transplanted into garden June 13th. Both flowered well all through the summer, but the scarlet is the stronger grower and makes more show. They were also sown in garden on May 12th and did well.

Scarlet flax is one of the best flowers for the North-west.

*Lupinus*.—Mixed sown in pots in hot-bed on April 19th. Transplanted to garden June 14th. All the varieties bloomed fairly well, but, on account of the season being so dry, did not make large plants. Lupins are well worth a trial.

**Mignonette.**—Seed of *Spiralis*, *Splendens*, *Giganteum*, *Aurea*, *Victoria* and *Common* Mignonette was sown in garden on May 15th. All varieties did well. *Aurea* made the largest spikes of bloom, but the old *Common* is excelled by none in fragrance. One of the best flowers for a North-west garden.

**Matricaria eximia.**—Sown in hot-bed April 19th. Transplanted into garden June 14th. A very pretty plant for borders; blooms freely and being very hardy is a good plant for the North-west.

**Mallow.**—Seed sown in border on May 12th. Did not come up as well as usual owing to dry weather, but plants made a good show most of the summer. One of the best flowers for the North-west Territories.

**Portulaca.**—Sown in garden, May 12th. Did not do well early in the season but made a fair show during August.

**Phlox Drummondii.**—*Nana Compacta*, *Grandiflora*, *Double Yellow*, *White New fringed* and *Star of Queddenburgh* sown in hot-bed April 19th. Transplanted into garden on June 13th. All flowered fairly well all season but did not make as good a show as the same varieties sown in garden on May 12th.

*Double Yellow*, *New Fringed* and *Star of Queddenburgh* are novelties, but do not make as good a show as the old varieties. *Phlox* is one of the best flowers for the North-west and should be in every garden.

**Poppy.**—*Danebrog*, *Somniferum*, *White Swan* and seed grown on *Experimental Farm*, *Indian Head*, were sown in garden on May 12th. Very few of any of the varieties came up and none of *White Swan*. The few plants that grew did very well and made a good show.

It is hard to get the seed of the poppy to germinate in the open ground, or they would be one of our best flowers. Two plants received from the *Experimental Farm*, *Agassiz*, *B. C.*, were very fine, having a small yellow flower.

**Salpiglossis.**—Sown in hot-bed April 19. Transplanted in garden June 13. The flowers were very fine and made a good show all season. One of the best plants for the North-west Territories.

**Scabiosa.** (*Tom Thumb*).—Sown in hot-bed April 19. Transplanted in garden June 13. Flowered fairly well, but is too small for this country.

**Schizanthus.**—Sown in hot-bed April 19. Transplanted into pots in hot-bed May 1. Put out in garden June 13. There were only six plants, but they made one of the best shows in the garden—covered with bloom all summer. Two plants were potted and did well in the house for a long time. A good flower for the North-west Territories.

**Stocks.**—Large flowering dwarf German Stocks in six colours were sown in hot-bed on April 11, transplanted in hot-bed in May and out in garden June 13. Two large beds were planted out and were a mass of bloom during the whole season up to hard frost. The seed this year was not as satisfactory as formerly, there being a large proportion of single with the double-white. Thirty plants were put out, and there was not a double flower in the lot. Stocks are one of the very best flowers for this country.

**Sweet Peas.**—*Eckford's mixed* was sown on May 12 in clusters and did fairly well considering the season. A good flower for the North-west Territories.

**Verbena.**—*Verbena Grandiflora* was sown in box in the house on February 7, and in hot-bed on March 26. The plants started in house were transplanted into hot-bed on April 16, and the seed sown in hot-bed transplanted in hot-bed on May 1. Both sowings did well; the former came into bloom the sooner, but was not as healthy as the sowing of March 26.

Two beds were set out in garden on June 14 and made a good show all season up to hard frost. A good flower for this country.

**Nasturtiums.**—*Tropeolum Majus* and *Minus*, were sown in hot-bed in pots, but neither did well. The seed sown in gardens, May 12, never came up.

**Zinnias.**—*Robusta* and *Pumila* were sown in hot-bed on May 1, and transplanted to garden on June 14. Both did well and made a fine show till first frost.

**Wild Cucumber.**—Sown around flag-pole on May 12. Did well. One of the best hardy climbers for covering rockery or trellis.

# Experimental Farms.

## PERENNIAL PLANTS.

**Dianthus.**—About one-half the plants came through the winter in good shape. The bed was filled up with plants grown in hot-bed from seed sown on April 3, and planted out in garden on June 13. All flowered well during the whole season, and the young plants are strong and healthy.

**Pansies.**—Did not come through the winter at all well, except a few young plants that were transplanted late in the fall. Seed of Best English, Yellow, Black Centre, Bright Golden Bronze, Finest Mixed Giant and Snowflake was sown on April 3 in the hot-bed. Transplanted in hot-bed on May 1, and into garden on June 13 and 14. All grew fairly well, but the summer was too dry for Pansies. They made a fine show in October, and, on November 1, the plants were still in bloom. All plants are strong and healthy and should stand the winter well. About 400 plants were grown.

**Sweet William.**—The old bed came through the winter well and made a good show for over a month. It has been completely renewed with young plants and another bed planted, both of which are in good shape for the coming winter.

**Forget-me-not.**—Two dozen plants received from Central Experimental Farm, Ottawa, were set out, but they did not come to anything on account of the dry weather.

**Roses.**—The only roses that lived through the winter were two of Marshal P. Wilder, which gave a few very inferior roses.

**Carnation Marguerite.**—Sown April 19. Transplanted into pots May 12, and into garden on June 13. Bloomed August 1. All good double flowers. One of the best flowers for the North-west Territories.

**Perennial Phlox.**—Eugene Schott, Jules Jouy, Boremiham, Virgo Maria, Molier, Jeanne d'Arc, George Sand, Hamlet, Athis, Sylphide, grew well and flowered.

**Hibiscus.**—Alba and Rubra, 14 planted; made a growth of two feet, and one plant flowered.

**Helianthus.**—Very showy, growing about 4 feet high.

**Flowering Flax.**—Hardy and very showy. One of the best perennials for large borders,

**Yellow Flax.**—Very hardy. Makes a good show of fine colour.

**Scarlet Lychnis.**—Hardy and showy.

**Veronica.**—Hardy. Blue spikes of flowers. Fairly showy.

**Primula.**—Forty planted in garden, but did not do well.

**Hollyhock.**—Fine plants grown last year came through the winter well and flowered freely. Two plants from Experimental Farm, Agassiz, B.C., did extra well; making a fine show. Grew 20 young plants which are looking very strong and thrifty now.

**Platycodon Grandiflorum.**—Very hardy. Good showy flowers.

**Sedum.**—Quite hardy. Blooms freely but does not make much show.

**Double Daisy.**—Planted 100 in flower-garden. Made very poor growth, and flowers were small. This climate is too dry for growing them successfully.

**Aquilegia.**—All the old plants died. Planted this spring, 11 *Aquilegia Chrysantha*, 6 alive, 2 flowered fairly well; 6 *Aquilegia*, 3 alive.

**Pæonies.**—The old plants all came through winter well, but only one plant flowered. Planted this spring four new varieties; all dead.

**Narcissus.**—All the *Narcissus* planted this spring lived, but very few of them flowered; all those which were planted last year are dead.

**Tulips.**—None of the tulips planted either this spring or last year have done well. Very few of last year's planting came through the winter.

**Fritillaria.**—Four planted; all flowered fairly well.

**Iris.**—A large number of varieties were planted last spring, sent from the Central Farm, and, as far as can be seen, are nearly all alive now. It is expected that some of the hardier forms of *Iris* will do well in this climate.

## FRUIT TREES.

### APPLES.

No success can yet be reported in growing apple trees.

All varieties planted in 1893 are either dead or so near it that the chances are very much against a single tree being alive in the spring.

The following 27 varieties were planted in the spring of 1893, on a plot well protected by maple hedges. Of the 184 trees set out, and all living when winter of 1893-4 came on, 36 are now barely alive ; the remainder having died during the winter or the past summer.

Name of Variety.	Spring 1893.	Fall 1894.	
	Number Planted.	Number Living.	Number Dead.

APPLE TREES PLANTED IN MAPLE PLANTATION.

Thirty-two trees of seven varieties were planted in a maple plantation in place of maples taken out for avenue purposes. This plantation collected the snow in winter and afforded protection from the winds in summer.

The best of those living, in the following list, are barely alive and have very small chances of going through the winter successfully.

Name of Variety.	1893.	1894.	
	Planted.	Living.	Dead.
Saccharine	2	1	1
Round Borsdorf	5	4	1
White Pigeon	7		7
Polumiron	5	3	2
Winter Stripe	6	3	3
Titovka, Koslow	2	1	1
Moscow Pear	5	3	2
Total	32	15	17

## Experimental Farms.

It will be seen from the foregoing reports that a larger percentage lived in the maple plantation than on the plot protected by hedges.

### CRABS.

Transcendent. Ten planted in spring of 1893. All dead on Nov. 1st, 1894.

### HUCKLEBERRY.

Six planted in spring of 1893. Two living, fall of 1894.

### PLUMS.

Plums, like apples, have heretofore been almost entire failures, but it is expected that native fruit, growing along banks of Red River and in other parts of Manitoba, may succeed here. Although trees of this variety have been growing for several years on the farm, no fruit has resulted, but it is hoped that some of the trees may produce next season.

One hundred seedlings of the wild plum were planted in 1893, and all are doing well. For 1895 planting, 42 varieties of this plum have been obtained from Mr. Frankland's nursery, at Stonewall, Manitoba.

Six Orleans Blue, 6 Montmorency and 4 Imperial Blue plum trees were planted in 1893 obtained from the nursery of A. Dupuis, Village des Aulnaies, Quebec. Of these the 4 Imperial Blues are the only ones living at this date. A small plantation was set out last spring with 81 seedlings of the Weaver Plum, and 20 seedlings of Hungarian Plum.

### CHERRIES.

Except with one variety, no success has been achieved in cherry culture. This sort, Black Hill, an improved variety of the sand cherry (*Prunus pumila*) has now borne fruit for two seasons and promises to be suitable for the country.

The varieties planted in the spring of 1893, Old French and Montmorency, obtained from A. Dupuis, are all dead except one tree of the latter. The ordinary sand cherries (*Prunus pumila*) planted at the same time are doing well.

In May last, the following cherries were planted in a plot well protected from winds:—15 Ostheim Seedlings, 20 Lithaur Weichsel, 20 Minnesota Ostheim, 5 Carnation, 13 Rocky Mountain and 3 Sand Hill Cherries from Dakota. A plantation of 180 sand cherries was also set out; the trees 7 feet apart each way.

### SMALL FRUITS.

#### GOOSEBERRIES.

Twenty-two varieties (58 bushes), mostly English varieties, of this fruit were planted in spring of 1893. Several of the sorts died before winter set in, and all but 30 bushes of 10 varieties have died since.

Following is the list, &c. :—

Name of Gooseberry.	Planted.	Living.	Dead.
Leader.....	1		1
Companion.....	1		1
Whitesmith.....	1		1
Early Sulphur.....	1	1

White Champion.....	1		1
Industry.....	10		10
Downing.....	18	18	
Native from Edmonton, N.W.T.....	5	3	2
	58	30	28

#### CURRENTS.

The following currants were planted in spring of 1893, but have not yet borne fruit :—Red, London Red, Versailles, Red Dutch, Knight's Early Red, New Red Dutch, White Transparent, La Fertile, La Condé and La Hâtive—Black—Prince of Wales, Ogden's Black and Baldwin, Dakota Tree Currant.

#### BLACKBERRIES AND RASPBERRIES

The following varieties were planted in spring of 1893 :—50 Stone's Hardy Blackberry, 50 Shaffer's Colossal, 50 Crimson Beauty, 50 Ohio, and 2 Blackcaps from Edmonton, N.W.T. All are dead except 4 Shaffer's Colossal, 8 Ohio and 1 Black Cap from Edmonton.

#### STRAWBERRIES.

The following were planted in 1893 :—24 Parker Earle, 24 Windsor Chief, 24 Pine Apple and 24 New Dominion. All were badly winter killed in 1893 and remainder died during 1894.

#### SMALL FRUIT CROP, 1894.

The crop of small-fruits on the Experimental Farm has, on the whole, been very poor the past season.

Currants, Red, White and Black produced abundantly, but the fruit was very much smaller than usual on account of the dry weather. Raspberries promised extra well

## Experimental Farms.

early in the season, but were an entire failure. Gooseberries and strawberries were as bad.

Following will be found the results in detail of different varieties of small fruits bearing fruit in 1894.

### RED CURRANTS.

*Fay's Prolific.*—Set a good crop of fruit which ripened fairly well.

*Raby Castle.*—Produced a heavy crop of fruit, which was very much dried up by hot weather.

*Red Dutch.*—Set a very heavy crop of fruit which was badly damaged by dry weather.

*Red Victoria.*—A heavy crop of fruit, badly injured by drouth.

### WHITE CURRANTS.

*White Grape.*—A very heavy crop of fruit which withstood the drouth much better than the Red varieties.

*White Dutch.*—Heavy yield. Slightly hurt by drouth.

### BLACK CURRANTS.

*Black Naples.*—Heavy crop of fruit. Fruit small and did not ripen evenly.

*Lee's Prolific.*—Heavy crop. Fruit fair quality, although considerably injured by dry weather.

*Climax.*—A good crop. Fruit small. Ripened unevenly.

*Charmer.*—A good crop. Fruit small. Ripened unevenly.

*Beauty.*—A good crop. Fruit small. Ripened unevenly.

*Dominion.*—A good crop. Fruit fair size.

### PROSPECTS OF A CURRANT CROP IN 1895.

The Red and White varieties of Currants are not in a thrifty condition and do not promise well for a crop next year. The greater part of the leaves fell off in mid-summer and the fruit buds are small and parched looking.

The Black sorts have a good stock of healthy young wood and the indications at present are in favor of a good crop for 1895.

### RASPBERRIES.

Covered with earth during winter; uncovered on May 9.

Turner—Came out in splendid condition, blossomed and formed fruit well, but dry weather caused leaves to blight and fall off, and no fruit ripened.

Philadelphia—Came out in fair order, but went in same way as Turner.

Cuthbert, Hansell, Caroline and Golden Queen were badly winter-killed and came from the winter covering in poor condition, and being less able to stand the dry, hot spell, no fruit whatever set.

All the varieties have made a good growth from the roots but the canes are not as strong as they usually are at this season of the year.

### GOOSEBERRIES.

Like all other small fruit, gooseberries were a light crop the past season. The tops of the bushes were cut back considerably and the bushes started out in very poor shape. Dry weather made what little fruit there was, very small.

## STRAWBERRIES.

Strawberries came through the winter in a more or less damaged condition. One bed had two-thirds of its plants killed outright. None of the plants blossomed freely, and dry weather caused the fruit to be very small, none of which ripened.

The vines were covered slightly with strawy manure, and the beds had a large bank of snow over them all winter. They were uncovered on May 9.

## NATIVE FRUIT.

Two varieties of native black currants, 2 of gooseberries, 1 raspberry, 1 cranberry, 2 saskatoons and 2 cherries bore fruit the past season.

The black currants were a heavy crop of very large fruit where the bushes had been thinned out; gooseberries, very small, but numerous; raspberries did not ripen; cranberries, ditto; saskatoons, a small crop, and cherries few and small.

## CUTTINGS, 1894.

1,400 cuttings of white, red and black currants were set out last May; 204 are now alive. The loss was caused, no doubt, by dry weather.

Conclusions arrived at regarding fruit growing in North-west Territories:—

1. That no variety of apples has, so far, proved suitable to the North-west Territories.

2. That Eastern plums or cherries have not succeeded, but that the native Plum of Manitoba, as well as a cherry, a native of the Western States, will fruit and do well here.

3. That cultivated varieties of small fruits do well in an ordinary year, but are liable to suffer from drouth.

4. That raspberries and strawberries require protection in the winter months.

5. That Turner is the best variety of raspberry thus far tested for the North-west Territories.

6. That Red, White and Black Currants are a safe fruit to plant and require no covering in the winter.

7. That gooseberries are very uncertain and are liable to be killed back.

8. That strawberries are the most uncertain of all fruits. If they escape the winters they are easily injured at time of blossoming, by frost, or when fruit is ripening by dry weather.

9. That all small fruits require good protection from winds in the early part of the growing season, and without this there is not much likelihood of success.

10. That anything that retards for ten days or two weeks, the blossoming of small fruits will much increase the chances of a good crop, provided there is sufficient moisture to ripen the fruit.

## FOREST TREES.

The past season, on account of the dry weather, has not been favourable to forest trees. Early in the season, the trees of all sorts came out in leaf and for two months made a rapid growth. Where trees were planted in single rows and the soil around them worked occasionally, they continued to make some progress, but in shelter belts or plantations where the trees are comparatively close together, the dry hot weather early in July stopped nearly all growth and the leaves fell off long before the first frost.

The growth made, although small, seems to have hardened up, and all trees promise well for the coming year.

The value of fallow-land for tree planting was demonstrated in a marked degree, the past season. Among the trees planted along each side of a road on the farm, were 19 trees on sod and 553 on land that had been fallowed the year previous. At this date every tree planted on sod is dead; while not one loss has occurred in the 553 on fallowed-land. The same fate overtook trees or shrubs planted on lawns or other places about the farm where sod or grass exists; while others, planted in ground that had been cultivated and where frequent cultivation was possible, stood the dry weather all right.

## Experimental Farms.

Two new plantations, of four and three acres each in extent, were put out with maples, the past spring. The trees were planted 4 feet apart in the rows and 7 feet between the rows. This was done to permit of two-horse cultivation, either by single or gang ploughs. Heretofore the usual distance apart has been 5 feet each way. For

View of a portion of five acre block planted with Box Elder, in the spring of 1890.

three years after planting this distance is satisfactory but when the branches extend, usually about the fourth year, cultivating cannot be thoroughly done; so the 7 feet by 4 feet has been adopted for the present with a view of finding out which is the best distance apart for forest-trees, with the idea of economy in cost of working. Particulars of the cost of planting and cultivation of these new plantations will be kept.

The accompanying view represents part of a five acre plot planted four years ago.

## TREES GROWING ON FARM.

The following trees, native and introduced, are growing on the farm at present.

## NATIVE.

Planted in	Name of Variety.	Condition.
1889 to 1894....	Maple, Box Elder. ( <i>Negundo aceroides</i> ).....	Doing well.
1890.....	Ash. ( <i>Fraxinus Americana</i> ).....	Growing slowly.
1890.....	Elm. ( <i>Ulmus Americana</i> ).....	
1892.....	Oak. ( <i>Quercus macrocarpa</i> ).....	Very slow growth.
1890.....	Birch. ( <i>Betula papyrifera</i> ).....	Slow growth.
1890.....	Poplar. ( <i>Populus alba</i> ).....	Fair growth.
1890.....	Balsam poplar. ( <i>Populus balsamifera</i> ).....	"
1890.....	Willow. ( <i>Salix</i> 3 varieties).....	Slow growth.
1892.....	Buffalo-berry. ( <i>Shepherdia argentea</i> ).....	Growing well.
1890.....	Choke Cherry. ( <i>Prunus Virginiana</i> ).....	"
1890.....	Wild Red Cherry. ( <i>Prunus Pennsylvanica</i> ).....	"
1890.....	Cranberry. ( <i>Viburnum Opulus</i> ).....	"
1890.....	Saskatoon. ( <i>Amelanchier alnifolia</i> ).....	"
1893.....	Spruce. ( <i>Picea alba</i> ) from Prince Albert, Sask.....	Very slow growth.
1893.....	Spruce. ( <i>Picea alba</i> ) from Manitoba.....	"

## INTRODUCED.

Planted in	Name of Variety.	Condition.
1890.....	Russian Poplar. ( <i>Populus Bereolensis</i> ).....	Good.
1890.....	Russian Poplar. ( <i>Populus Wobstii Riga</i> ).....	"
1890.....	Russian Willow. ( <i>Salix Voronesh</i> ).....	"
1890.....	Willow. ( <i>Salix aurea</i> ).....	"
1890.....	Willow. ( <i>Salix acutifolia</i> ).....	"
1890.....	Willow. Norway.....	"
1890.....	Willow. ( <i>Salix laurifolia</i> ).....	"
1891.....	Elm Nebraska. ( <i>Ulmus Americana</i> ).....	Kills back, hardening
1891.....	Asiatic Maple. ( <i>Acer Ginnala</i> ).....	Doing well.
1892.....	Oak. ( <i>Quercus alba</i> ).....	Very slow growth.
1892.....	Common Alder. ( <i>Alnus glutinosa</i> ).....	Cuts back.
1892.....	Butternut. ( <i>Juglans cinerea</i> ).....	Very slow growth.
1890.....	American Cottonwood. ( <i>Populus monilifera</i> ).....	Rapid growth.
1889.....	Cedar. Arbor Vitae. ( <i>Thuja occidentalis</i> ).....	Very slow growth.
1890.....	Red Cedar. ( <i>Juniferus Virginiana</i> ).....	"
1890.....	American Mountain Ash. ( <i>Pyrus Americana</i> ).....	Kills back badly.
1890.....	European Mountain Ash. ( <i>Pyrus aucuparia</i> ).....	"
1890.....	Norway Spruce. ( <i>Picea excelsa</i> ).....	Very slow growth.
1890.....	White Birch. ( <i>Betula alba</i> ).....	Not very healthy.
1890.....	Yellow Birch. ( <i>Betula lutea</i> ).....	"
1890.....	Scotch Pine. ( <i>Pinus sylvestris</i> ).....	Some doing extra well
1890.....	Riga Pine.....	Very slow growth.
1890.....	Mountain Pine. ( <i>Pinus Mughus</i> ).....	Doing well.
1890.....	Yellow or Bull Pine. ( <i>Pinus ponderosa</i> ).....	"
1890.....	Douglas Fir. ( <i>Pseudotsuga Douglasi</i> ).....	Doing fairly well.
1890.....	Poplar. ( <i>Populus aurea</i> ).....	Good.

Additions were made to wind-breaks on farm last year, both by transplanting and sowing seed. Those already planted were of very great service during the whole of last

## Experimental Farms.

summer in breaking the force of winds and in the garden plots were invaluable in protecting vegetable and other seeds from destruction.

The following is from my report of 1893 on wind-breaks or hedges, which I beg to again submit to those who may desire to sow or plant wind-breaks in the North-west Territory:—

“The wind-breaks already set out demonstrate that one row of *Artemisia* or Willow, with plants two feet apart in the rows, is ample, and one row of Maple or Poplar is also sufficient if the trees are cut back several times each season for a few years, so as to allow them to thicken up at the bottom.

“I desire to call the attention of those in the North-west who may wish to have a small and pretty hedge on their lawn or elsewhere, to the fact that the Native Wolf Willow (*Elæagnus argentea*) and Native Snowberry (*Symphoricarpus racemosus*), both found in abundance on the prairie, are excellent for that purpose. Either grown from seed or transplanted, they are cheaply and easily obtained and in two or three years, with pruning can be made attractive as any eastern hedge.

“Two hedges made from transplanted plants of these shrubs, attract attention of visitors to the farm, and besides being ornamental are useful as a wind-break around the flower-beds and other plots.”

To the foregoing may be added that one row of maple-seed sown about 1st May will make the best wind break around buildings and along roads, when appearance and labour are taken into consideration. If maple is used for gardens, etc., not more than one row should be sown or planted together, as even one row absorbs a great deal of moisture from land in immediate vicinity.

*Artemisia Abrotanum* (Russian) has made the best wind-break and by far the best snow-gatherer for gardens yet tried on the farm; and although not very ornamental, except when green, should be around every garden in the North-west Territories.

For two years back a number of Norway spruce and Scotch and Riga Pine have been transplanted from former plantations, and in both years those transplanted in June have lived; while those set out in May have died with very few exceptions. Winds which are usually worst in May caused the loss amongst those planted early, they not having had time to take root before being almost blown out of the ground.

### TREE SEEDS SOWN, AND TREES TRANSPLANTED, 1894.

In May last a good sized plot was sown with maple-seed and from this there are now from 15 to 25,000 seedlings ready for distributing or transplanting next Spring.

As stated elsewhere, seven acres were planted with maple-trees. In addition to this, 572 trees were set out along roads, and blanks were filled up in avenues and other places. The avenue trees transplanted were drawn from a plantation set out in 1890 and were from 5 to 7 feet high. The trees planted in new plantations were two years old. Avenue trees were all planted in holes dug large and the roots of trees placed a little deeper than where grown.

For plantations drills are made as deep as can be made by plough going twice in each one. If drills are long, two men follow, carrying an armfull of trees and planting them at the proper distance apart in bottom of drill, then covering roots by drawing earth with their feet from each side. When planting is finished, the drills are filled in by plough, using one horse. One man, with team and three men assisting, can plant from 3 to 4 acres in this way in a day.

Summer fallowing is the best preparation for tree planting, as it affords moisture for the young trees after the dry season sets in. If fallow is not available, stubble land may be used but will require more cultivation the first year than the fallow. It is wasting time and trees to plant in sod or in land that can not be properly cultivated.

In 1893 there were between 115 and 120 thousand trees of all sorts on the Experimental Farm; consisting chiefly of native maple (*Negundo*). During the past season this number has been greatly added to by seedling-maples which will be ready for distributing or transplanting next spring.

The following is a list of trees and where growing on Experimental Farm, 1894.

## TREES—1894.

Where growing, etc.	Variety.	Planted or Sown.	Number.
Along West boundary—100 feet wide	Maple	Planted	10,804
“ North boundary—	“	“	10,551
“ North “	Ash	“	240
“ North “	Elm	“	250

## SHRUBS.

It gives me pleasure to report that the list of shrubs, doing fairly well on the farm, is increasing.

Although many of the sorts kill back partially in the winter and are growing slowly, they are all making some progress, both in size and ability to stand the climate.

Among those doing well, Caragana is first in growth and hardiness; Artemisia Abrotanum continues to do well as a hedge; Lilacs, Common White, Persian and Josikea have flowered and given good satisfaction and Acer Ginnala, Russian Olive and Flowering Currant have made a fair growth and stand the winter well. Most of the other shrubs tested are cut back during winter and their growth is very slow.

The Native Shrubs, such as Hawthorn, Silver Berry, Snowberry and Buffalo Berry, do well.

## Experimental Farms.

Following is list of shrubs on farm, condition and date of planting.

### SHRUBS—1894.

Name.	Year planted.	Condition.
Barberry ( <i>Berberis Thunbergii</i> )	1891	Very slow growth and kills back
“ Common ( <i>Berberis vulgaris</i> )	1891	“ “
“ “ ( <i>Berberis elegans</i> )	1891	“ “
Caragana arborescens, Siberian Pea tree	1890	Hardy, doing well.
“ Redowsky	1892	Hardy.
“ frutescens	1892	“
Lilac, Persian	1892	Hardy, flowered.
“ Common white	1892	“
“ Josikea	1892	“
“ Silver White	1892	“
“ Jacques Cabot	1892	“
“ Prince of Wales	1892	“
Honeysuckle, Tartarian	1892	“
“ Tartarian	1893	“
Spiræa Opulifolia	1890	Cuts back.
“ Douglasi	1891	“
Syringa, Double-flowering	1891	“
“ alba grandiflora	1891	“
“ Golden-Leaved	1890	Hardy, flowered.
“ Gordon's	1890	“
Flowering Currant	1892	“
Russian Olive	1892	Hardy.
Artemisia Abrotanum Tobolskianum	1890	Cuts back, but hardy.
Artemisia Abrotanum, Old Man	1893	Hardy.
Acer Ginnala	1891	“
Common Alder	1892	Cuts back.
<i>Native.</i>		
Silver Berry ( <i>Elæagnus argentea</i> )	1890	Very hardy.
Snow Berry ( <i>Symphoricarpos racemosus</i> )	1890	“
Hawthorn ( <i>Cratægus Coccinea</i> )	1890	“

## CONCLUSIONS ARRIVED AT IN REGARD TO TREE CULTURE IN THE NORTH-WEST TERRITORIES.

1. That trees can be grown on the most exposed situations.
2. That tree-seeds should be sown on the farm so that transplanting can be done on the spot; the trees not having to be transported any distance before being set out.
3. That native trees should be chiefly used until protection is afforded by them, when foreign varieties may be introduced with hope of success.
4. That about the first week in May is the best time to sow maple, elm, and ash seed, also the best time for transplanting all deciduous trees.
5. That June is the most favourable time for transplanting evergreens.
6. That tree seeds should be sown in rows on fallow-land, the plants kept free from weeds and the ground stirred frequently during the first season.
7. That trees should be planted or transplanted when young, on fallow land, two or three inches deeper than where they first grew and the ground ploughed, gang-ploughed or scuffed several times during the season for three or four years. Trees should be far enough apart to permit a span of horses to work freely, so that the land may be kept loose and free from grass with the least expense.

## Experimental Farms.

8. That Manitoba maple or Box Elder grows the quickest of all native trees and for windbreaks or plantations gives the most satisfaction.

9. That it is a waste of time, money and trees, to plant without good preparation before and frequent cultivation after.

### DISTRIBUTION

of Grain samples, Forest-trees, Fruit-bushes, Tree-seeds, Potatoes, Flower-seeds, Vegetable seeds, &c.

EXPERIMENTS IN FEEDING STEERS.

Experiments were carried on last winter in feeding steers with the different fodders at command.

One test was made with the following rations :—1. Ensilage, meal and straw ; 2. Dry cut feed, turnips and meal ; and 3. Hay, turnips and meal. Six 2 year old steers were fed in this test for four months, one month being preparatory.

Lot No. 1 was fed on ensilage, meal and all the oat-straw they would eat. Lot No. 2 was fed on cut-feed, consisting of mixed grain fodder, meal and turnips. Lot No. 3, on hay, turnips and meal.

RESULT.

Lot No. 1.—Fed 35 lbs. ensilage, 5 lbs. meal (barley and oats ground) and oat-straw.

Weight.	Dec.	Jan.	Feb.	March.	April.	Gain.
Steer No. 1	880	927	1000	1037	1107	} 497 lbs.
" 2	850	897	955	1050	1120	

Lot No. 2.—Fed 15 lbs. cut dry fodder, 20 lbs. turnips, and 5 lbs. meal, same as in No. 1.

Weight.	Dec.	Jan.	Feb.	March.	April.	Gain.
Steer No. 1	925	954	1010	1080	1145	} 422 lbs.
" 2	770	822	870	915	972	

Lot No. 3.—Fed on 18 lbs. hay, 20 lbs. turnips and 5 lbs. meal, same as No. 1.

Weight.	Dec.	Jan.	Feb.	March.	April.	Gain.
Steer No. 1	1060	1107	1140	1182	1220	} 332 lbs.
" 2	1052	1082	1120	1185	1220	

The six steers for the above test were bought at 2 $\frac{3}{4}$  cents per pound and sold at 3 $\frac{1}{2}$  cents per pound.

Lot No. 1.—Cost \$42.57 and sold for \$77.94.....	Gain of \$35.37
" 2.— " 46.60 " 74.44.....	" 27.84
" 3.— " 58.02 " 85.40.....	" 27.38

TEST NO. 2.

Three steers, 5 years old, fed on different rations for 5 months.

Steer No. 1.—Fed on 50 lbs. ensilage, 8 lbs. meal, and straw—

Weight,	Dec.	Jan.	Feb.	March.	April.	May.	Gain.
1640	1717	1740	1780	1786	1760	120 lbs.	

Steer No. 2.—Fed 25 lbs. cut fodder, 8 lbs. meal and 20 lbs. turnips—

Weight,	Dec.	Jan.	Feb.	March.	April.	May.	Gain.
1500	1540	1610	1690	1757	1755	255 lbs.	

Steer No. 3.—Fed 25 lbs. ensilage, 15 lbs. cut feed and 8 lbs. meal—

Weight,	Dec.	Jan.	Feb.	March.	April.	May.	Gain.
1620	1650	1720	1790	1890	1890	270 lbs.	

Steer No. 1.—Cost at 3 cts., \$49.20, sold for 3 $\frac{3}{4}$ cts., \$66.00.	Profit, \$16.80
" 2.— " 3 cts., 45.00, " 3 $\frac{3}{4}$ cts., 65.80.	" 20.80
" 3.— " 3 cts., 48.60, " 3 $\frac{3}{4}$ cts., 70.87.	" 22.27

## Experimental Farms.

In the above test, ensilage, cut-feed and meal gave the most gain in weight and realized greatest amount of money for feed consumed. Steer No. 1 did not do well while Nos. 2 and 3 made good gain from the first.

### EXPERIMENTS IN FEEDING

#### SWINE.

Swine have done well during the past year.

Two Improved Large Yorkshire sows, Snowie and Dora had litters about the 1st of January of 7 and 8 pigs respectively. The same two sows had litters again in June of 10 pigs each.

By keeping the pigs born in January in a fairly warm place, all lived but grew very slowly and when 10 months old were not nearly as large as pigs usually are at that age, although they were fed regularly with as much as they would eat.

Ten of these pigs were penned off and fed for two months with very little grain. They consumed over 7 lbs of grain for each pound of pork made; which was probably from effects of cold weather they underwent when young.

Although the pig house was comfortable except in extreme weather, some pigs from a litter born in September, 1893, died during the winter. As they could not run outside, they became crippled for want of exercise and were only able to move with great difficulty, and at length had to be killed. This is of frequent occurrence with litters born in the fall and even if with the greatest care they are brought through the winter, the cold they have to encounter has a serious effect on their after growth.

A young Tamworth boar was obtained from the Central Experimental Farm in July last. This animal will be used for crossing and will prove valuable to the neighborhood.

#### TESTS.

During last winter a test was made between feeding pigs on soaked wheat and on boiled wheat, resulting in favour of soaked wheat.

Two pens of four pigs each (a mixed lot) were put up on December 6, and fed until April 6. One pen was fed on wheat soaked for 24 hours, and the other on boiled wheat.

Following is the result in detail:—

#### WHEAT, SOAKED *vs.* BOILED.

Pen No. 1—Soaked—

	Dec.	Jan.	Feb.	March	April		Lbs.
Weight,	317	443	536	664	784.....	Gain	467

Pen No. 2—Boiled—

	Dec.	Jan.	Feb.	March	April		Lbs.
Weight,	275½	374	447	517	627.....	Gain	351½

The pigs in pen No. 1, consumed 2160 lbs., wheat.

“ “ “ 2 “ 2100 lbs. “

Therefore, in this experiment it took 4½ lbs soaked wheat to make one pound of pork; and 6 lbs. of boiled wheat to make the same quantity.

Pork at 6 cents per lb. would make the wheat consumed in pen No. 1, worth 74 cents and in pen No. 2, worth 60 cents per bushel.

#### TEST OF WHEAT *vs.* BARLEY AND WHEAT.

In this test 10 Improved Large Yorkshires were divided into two pens of 5 pigs each; as nearly equal in weight as it was possible to get them; there being only 5 lbs difference between the two.

One pen was fed on soaked wheat and the other on soaked wheat and barley, mixed. The test commenced on September 1st, and on November 1st the pigs in pen No. 1, fed on wheat alone, had made one pound of pork for every 8½ lbs. wheat used; while pen No. 2, fed on wheat and barley, made one pound of pork for each 6 lbs. grain eaten.

The ten pigs used were born on December 28th, 1893, and January 3rd, 1894, and on account, no doubt, of the extreme cold experienced early in their existence, were small for their age when the test commenced. This may account for the large quantity of grain consumed in comparison with the amount of pork made.

FOLLOWING IS TEST IN DETAIL.

Pen No. 1—Fed on soaked wheat—

	Sept. 1st.	Oct. 1st.	Nov. 1st.	Lbs.
Weight,	618	751	820.....	Gain 202

Pen No. 2—Fed on soaked wheat and barley—

	Sept. 1st.	Oct. 1st.	Nov. 1st.	Lbs.
Weight,	623	778	898.....	Gain 275

Pen No. 1—Consumed, 1,757 lbs. wheat; made 202 lbs. pork, or 8½ lbs. feed to 1 lb. of pork.

Pen No. 2—Consumed, 1668 lbs. wheat and barley; made 275 lbs. of pork, or 6 lbs. feed to 1 lb. of pork.

FIG-HOUSE.

The pig-house erected in the summer of 1893 is not entirely satisfactory, the walls being made of concrete, lime, sand and broken stones. The building is too damp during the winter months, for pigs.

In very cold weather a heavy coating of ice forms on the inside of the walls; then on a warm day this melts and produces a wet and unpleasant condition.

POULTRY.

The poultry on the farm has not been very successful during the past year. After a long winter of confinement, none of the birds came out in very good shape for laying and very few of the early laid eggs were fertile.

The Plymouth Rocks commenced, early, to pull their feathers and continued to do so in spite of all remedies tried.

The White Leghorns did the best of any of the four breeds on hand, both in regard to number of eggs laid, and chickens hatched.

Four settings of eggs, one each of Black Minorca, Light Brahma, White Leghorn and Plymouth Rock, were received from the Central Experimental Farm, Ottawa, last May. From these 8 Black Minorca, 6 light Brahma, 6 White Leghorn and 5 Plymouth Rock, chickens were raised.

There are on the farm, at present, the following breeds Black Minorca, Light Brahma, White Leghorn, Plymouth-rock, Houdan and White Wyandotte.

STALLION.

The Clyde stallion "Barlocco," sent by the Haras National Company, from Montreal, reached the farm on May 3rd, and remained for three months, serving 43 mares during that time.

## Experimental Farms.

### LAND PREPARED FOR CROP OF 1895.

During the past season, 165 acres of land were fallowed and made ready to receive the crop of 1895.

The first ploughing was completed by July 12th, with single ploughs turning from 6 to 8 inches deep. The portion ploughed early in the season was harrowed, prior to this date, to induce weeds to germinate; a result somewhat difficult to obtain on account of the dry weather.

After the ploughing was finished, all the land was well harrowed. After harvest a large portion of it was gang-ploughed light, and the balance harrowed with either disc or spring-tooth harrows.

In addition to the summer fallow, ten acres of oat land were ploughed in the fall after the crop had been taken off.

Sixty-five acres of stubble-land were gang-ploughed after the crop had been harvested, with the intention of starting all weeds and volunteer grain this fall. This land will be fallowed next year.

Seven acres of the fallow-land intended for roots next year, had a heavy coating of manure, well rotted, put on late in the fall. Part of the field was ploughed after the manure was applied and the balance left as it was.

The remainder of the year's manure is being put on stubble-land intended for fallowing next year. This has been found to be the best and safest way of applying manure in the Territories. No matter how well rotted, if applied in the fall or spring to land to be cropped at once, if the season be dry the manure will keep the land open and instead of being a benefit will prove an injury. If, however, it is applied on stubble-land and the land fallowed, the manure gets well worked in and the June rains complete the rotting process thoroughly.

### ENSILAGE.

Corn ensilage was a decided success the past winter. Although the crop was small and the ensilage far from filling the silo, what there was of it was good and was eagerly eaten by the stock.

Ensilage made from mixed grain crops, cut when well headed and left for two days to wilt, was also a success; but that made from the same mixed grain crop, left until the heads were filled, though not nearly ripe, was a complete failure. From fifteen to twenty loads of the latter were cut by ensilage cutter and put in silo. Up to Christmas it appeared to be allright but when required for use was found to be quite dry from top to bottom except in a few patches where a small amount of moisture had been retained which were the only parts the cattle would eat.

On account of the mixed grain crop being very light and poor, no ensilage was made from this kind of fodder, the past year. Corn alone was put in silo and being further advanced than in former years the ensilage will no doubt turn out well.

### IMPROVEMENTS.

The improvements made on the farm during the past season were in taking down some old cottages along the railway, improving the reservoirs on the farm, planting seven acres of maple trees and putting out nearly two miles of avenue trees.

### LOCAL EXHIBITIONS AND INSTITUTE MEETINGS.

The only exhibitions attended with products of the farm were Regina and Indian Head.

Wolseley, Broadview, Wapella, Fairmede, Qu'Appelle Station and Fort Qu'Appelle fairs were attended by myself or staff, who assisted as judges.

During last winter I attended farmers' meetings in Moose Jaw, Pense, Qu'Appelle Station, Wolseley, Grenfell, in Assiniboia, and in June last, a large meeting of farmers in Saskatoon, Sask., at all of which papers were read on the work of the Experimental Farm.

## VISITORS TO FARM.

The number of visitors to the farm from a distance slightly decreased during the past season, owing to the train service being a midnight one until after harvest. Local visitors were more numerous than in any year previous.

## CORRESPONDENCE.

During the ten months ending November 1st, 1,720 letters were received and 2,448 letters despatched. In letters received are not included reports on grain and other samples, and in letters despatched, circulars of instruction regarding samples, &c., are not counted.

## METEOROLOGICAL OBSERVATIONS.

Temperature, maximum and minimum, for 10 months; average temperature for growing season; range of temperature for growing season; sunshine for growing season; rainfall for growing season and days cloudy during growing season:—

## Experimental Farms

# EXPERIMENTAL FARM FOR BRITISH COLUMBIA

REPORT OF THOMAS A. SHARPE, SUPERINTENDENT.

AGASSIZ, B. C., 30th November, 1894.

To WM. SAUNDERS, Esq.,  
Director Dominion Experimental Farms,  
Ottawa.

SIR,—I have the honour to submit herewith my report for 1894, being the sixth annual report of the work done on the Experimental Farm at Agassiz.

The season just passed has been a most trying one for the farmers in this province.

The winter although not a severe one, was very wet, and the cold rainy, cloudy weather, continued nearly to the middle of June.

Up to this time, owing to the cold and wet, vegetation had not made as rapid progress as usual, but with the coming of warm sunshiny weather, there was promise of abundant crops, of the most important grains, roots, etc. The weather in the interior had been cold in the spring, and as a consequence of this, the snows had not melted to any considerable extent on the mountains, until late in May. Then the weather became unusually warm and clear, and the rapidly melting snow brought such an unusual supply of water from all its tributaries that the Frazer River rose to a height never before experienced, since the settlement of the country. The land in many important agricultural districts, was overflowed, destroying crops, and carrying off bridges, fences, and in some cases buildings and cattle.

The experimental farm was not overflowed, but a portion of the Canadian Pacific Railway dump across the upper end of the Maria slough was washed out, filling that water course full, and overflowing a large portion of the lands south of the experimental farm, and on account of the coarse gravelly subsoil the water rose from below, and filling the soil, filtered through to the surface on all low spots, and small patches on the farm were covered with water in this way.

A number of the experimental plots of grain, roots and vegetables, were more or less injured, but fortunately, very little damage was sustained by the fruit trees, although a few of the pear and apple trees, stood in water for eight days, they do not show any appearance of injury on that account, and have since made a strong growth.

On the whole the season has been an average one on the experimental farm. The grain crops, where not injured by water, have been fair, the roots good, and apples and plums a good crop.

Although we are not troubled with early autumn frosts in British Columbia, yet it is just as advantageous, and as necessary, to sow grain as early in spring as is practicable, as it is in the Territories where early frosts are feared. The weather in the coast region of British Columbia in the latter part of the summer is mild, and the ripening of grain is not hurried forward, and in consequence the harvesting of late sown grain, is likely to be delayed, and the crop injured by rains.

The rains and chilly weather in the spring sometimes prevent the perfect fertilization or development of the blossoms, of some varieties of fruits, and on this account the crop is sometimes thus diminished.

About twenty acres of new land has been ploughed for the first time this year, and part of it has been planted out in apple trees, and about six acres more have been grubbed and is nearly ready for the plough.

The large field which has been used for a pasture, has been partially cleared of brush, and fallen timber, and sown with mixed grass seeds, and thus the pasture has been greatly improved. The seed has made a good catch, and will, I trust, give good feed next year.

A tank of 20,000 gallons has been put up on the mountain, for the purpose of supplying the stock and buildings, with pure spring water. This will be a great boon and prove very convenient for watering the stock at the stables, and will be a safe guard in case of accident by fire.

At the time of your annual visit of inspection, the cattle on the farm were tested with tuberculin, and five head which when tested showed symptoms of the disease slaughtered, all of which, were on examination found to be affected with tuberculosis. The balance of the herd, consisting of two Shorthorns, five Ayrshires, three Holsteins and two grades, are in good health and condition.

The Berkshire sow had a litter of nine fine pigs, two of which,—one boar and one sow—have been sold for breeders.

Both Dorset ewes had lambs last spring, but all were bucks. One of this year's and last year's were sold to breeders, and two are on hand yet. One of the ewes died during the summer.

One of the horses was ailing last spring and was at one time thought to be in a dangerous condition, with careful treatment he has recovered and is now all right. The other horses are and have been in good health and condition.

The material is on hand for a new poultry house, which it is expected will be built this winter, when the chickens will have better protection. With the present imperfect accommodations they have been exposed to depredations by hawks, skunks, minks and rats, which have caused the loss of quite a number of them. In spring several settings of eggs of different breeds were received from the Central Experimental Farm, but owing to delays or careless handling on the way, none of them hatched out.

The Osage orange and *Arbor-vitæ* hedges have made very satisfactory growth this year, but the Osage orange continues growing so late in the fall, that the wood does not ripen, and the ends of the branches kill back considerably every winter.

The rows of sample hedges of ornamental and flowering shrubs and evergreens have all made a fine growth and look well.

The avenue and shelter belt trees have done extremely well, and are very satisfactory, with the exception of the elm, these grow so rapidly, and carry such a weight of foliage, that from time to time during the summer, large limbs split off, injuring the appearance of the trees.

The shrubs planted on the lawn, and about the buildings, have grown well, and the flowering varieties produced a constant succession of bloom from early spring until frost in the fall.

The splendid collection of seeds and bulbs sent from the Central Experimental Farm, together with the collection of considerably over one hundred and fifty varieties of roses, and other flowering shrubs on the farm, gave a beautiful and abundant supply of flowers from early spring up to the present date, there being pansies now in bloom in the garden.

There is a continual and increasing interest taken in the farm by people, not only in this province, but in other provinces of the Dominion, many letters of inquiry are also received from the United States, Great Britain and other countries, and we have had many visitors.

The August meeting of the British Columbia Fruit Growers Association was held at Agassiz, which was attended by several hundred people, and papers of interest to horticulturists were read. There is a prospect of the summer meeting of the same society being held here next season.

In October we had the honour of a visit from His Excellency the Governor General of Canada. His Excellency was unfortunate in the weather, it being wet during his

## Experimental Farms

visit, as it was on the occasion of his previous visit in 1891. The rain, however, did not prevent him from going through the orchards, and it was encouraging to hear his kindly words of commendation on the progress made since 1891.

## Experimental Farms.

### EXPERIMENTS WITH BARLEY.

#### TWO-ROWED SORTS.

The ground for these plots had been given a dressing of stable manure, and had been well prepared, but when the high water came in June, the land—although not overflowed—became so wet that the plots were very seriously injured, some of them being nearly killed out.

Those showing the best results were on plots where the land was a little the highest, and consequently did not suffer so much. The results this season cannot be taken as a satisfactory test of the relative productiveness of the different varieties.

#### TEST OF VARIETIES—On plots of $\frac{1}{2}$ th acre each.

## EXPERIMENTS WITH OATS.

Thirty-seven varieties of oats were tested. They were sown on loamy soil, on plots of  $\frac{1}{20}$ th of an acre each. The very wet condition of the ground in June interfered with the healthy growth of the grain and lessened the yield, especially on those plots where the land was lowest.

## Experimental Farms.

### OATS—RESULTS OF EARLY, MEDIUM AND LATE SOWING.

These were sown on plots of  $\frac{1}{10}$  acre each. There was no smut or rust, but the yield was much injured in all these plots by the high water. Where late plots have shown a proportionately larger yield, it has been because the land on which those plots happened to be was a little higher than others. All suffered from the water, but some less than others. Every year's experience confirms the opinion that, owing to the difficulty in harvesting late sown grain, on account of showery weather, it is very important to get grain sown here as early in spring as the ground can be prepared.

Name of Variety.	Sown.	Up.	Headed out.	Ripe.	Length of Straw.	No. of days to Ripen.	Yield per Acre.		Remarks.

BARLEY, RESULTS OF EARLY, MEDIUM AND LATE SOWING.

The barley plots for this test, were sown along side of the plots of barley for the comparative test of varieties, and suffered also from water. Plots 1, 2 and 6 were a little higher than 3, 4 and 5, and on this account gave better yields. The size of the plots was  $\frac{1}{10}$  of an acre each. The grain did not suffer from rust or smut. The varieties chosen for the test were Canadian Thorpe a two-rowed sort and Oderbruch a six-rowed variety.

View in Hop-yard, near Agassiz, B. C.

## Experimental Farms.

### GREEN FEED.

Two plots of  $\frac{1}{10}$  of an acre each, were sown with mixed grain for the purpose of cutting green, and curing as hay, with the following results.

Mixture No. 1.—6 lbs. of Golden Vine Pease, 5 lbs. of Prize Prolific barley, and  $3\frac{1}{2}$  lbs. of Banner oats, mixed and sown together on  $\frac{1}{10}$  acre plot equal to 1 bushel of each per acre. Sown April 17, up May 4, cut July 27. Barley in early dough, oats in milk, and Pease about fit for table use. Weight when cut 1,550 lbs.; weight when thoroughly cured 650 lbs., making 7 tons 1,500 lbs. green and 3 tons 500 lbs. cured fodder per acre.

Mixture No. 2.—6 lbs. Golden Vine Pease, 5 lbs. Red Fife Wheat,  $3\frac{1}{2}$  lbs. Banner Oats, cut when oats and wheat were in milk, and pease were a little too hard for table use. Plot  $\frac{1}{10}$  acre, weight when cut 1,925 lbs., when cured 750 lbs., or at the rate of 9 tons, 1,250 lbs. per acre green and 3 tons 1,500 lbs. when cured.

The plots were sown side by side, soil and treatment the same, showing rather better results this year than last, mixture No. 2 being somewhat the heaviest. Last year No. 2 was a little the lightest. Both years, the stock appeared to like this feed very much, and milking cows gave more milk while feeding on it, than on grass similarly cured.

### HYBRIDIZING.

The hybrid grains mentioned in my last report have been sown and harvested this year, and some of them, especially the barleys and pease, are very promising, some of the former being over four feet high with very fine heads, and bright stiff straw. They sported a great deal, but they were carefully harvested and the most promising varieties kept separate for future sowing, with a good prospect of useful results.

Out of a number of potato seedlings, twenty four were chosen and planted in 1893. These have been reduced to six, selecting the most promising to try again.

A little hybridizing was done with grain this year, and those produced last year were sown, with, in most cases, satisfactory returns.

Some efforts have also been made, in the way of producing new varieties of fruits by cross fertilization.

### Hops.

A small experimental yard of hops has been started. A hundred roots of the Kentish Golding, having been procured from Capt. Moore of this place, and a hundred of the California Cluster from Mr. Meeker of Puyallup, Washington Territory.

The roots received from Capt. Moore were exceptionally fine, and have made a very fine growth. The others too, have done well, and will be poled next season when a crop may be expected.

The hop crop in British Columbia has been a medium one, and some very superior samples have been put up in this neighbourhood but prices have been low, owing to extensive plantations in other countries, and heavy yields.

Hop growers have perhaps not suffered in this respect, more than other producers, and they have many reasons to feel hopeful for the future. The soil and climate in many parts of British Columbia have proved to be favourable to the production of large yields of hops of a superior quality.

### TURNIPS.

Twelve varieties of turnips were tested on land that had been in hoed crops the previous year, and was manured in the spring with a light dressing of stable manure.

Two sowings of each variety were made in rows 30 inches apart, and the plants thinned to 6 inches in the rows. These plots were above high water, and the turnips were very good.

The Elephant and Rennie's Prize Purple Top, are, as in previous years, the finest shaped and best turnips we have tested here.

This last named variety is a white turnip only fit for fall feeding.

MANGELS.

The soil for these tests had been dressed with barnyard manured the previous autumn, and was well prepared, but the yields are small on account of the high water in June, which injured some plots much more than others.

Eight varieties of mangels were tested. Two sowings of each variety were made, one April 22nd and the other two weeks later, they were sown 30 inches apart, and thinned to 6 inches in the row.

### SUGAR BEETS.

1 lb. each of the following sugar beet seeds were received, but were drowned out in June.

Klein Wanzleben, French Red Top, Vilmorin's Improved.

### FIELD CORN.

A comparative test of nine varieties of field corn has been made, cut green for ensilage. These were grown both in rows and hills; and, as will be seen from the appended table, the yield varied very much, the rows generally giving a heavier crop than the hills. The plots were all on a loamy soil; the rows were three feet apart and the plants from 6 to 8 inches apart in the rows. The hills were planted three feet apart each way, with 3 or 4 plants in a hill. The yield in each case has been calculated from the weights obtained from two rows 66 feet long, and in the case of the hills from a similar area.

## CORN—GARDEN VARIETIES.

Name of Variety.	Date of Sowing.	Up.	Tasselled.	Fit for table.	Length of ear.	Remarks.
					Inches.	
Mitchell's Extra Early	May 29..	June 11..	July 13..	Aug. 8..	3½ to 5	Not a first class table corn, not sweet and it gets glazed and hard very quickly after being fit for table.
Dreer's First of all....	" 29..	" 12..	" 24..	" 14..	4 to 6	Cobs filled out with large kernels, remaining fit for table a long time, quality good.
Extra Early Vermont.	" 29..	" 11..	" 24..	" 16..	4 to 8	Cobs filled out with medium sized kernels of fair quality.
Cory.....	" 29..	" 11..	" 26..	" 26..	3½ to 6	Cobs well filled, kernels large, and very fine in quality, remaining fit for table a long time, one of the best table corns.

## HORSE BEANS AND RUSSIAN SUNFLOWERS FOR ENSILAGE.

A quantity of Early Mazagan horse beans were sown in drills, 24 inches apart, for mixing with corn, and sunflower heads, for ensilage.

They matured fairly well and yielded at the rate of 2½ tons per acre.

The sunflower heads yielded at the rate of nearly 4½ tons per acre.

## EXPERIMENTS WITH POTATOES.

Forty-six varieties of potatoes were tested side by side on a rich loamy soil in rows 2½ feet apart, with sets one foot apart in the rows. The season was not a good one for potatoes, the dry weather, which began in June and continued until the tubers were nearly full grown, very much reduced the yield especially of some varieties, the quality, however, is in most cases very good. The yields per acre have been calculated from the weight of the crop obtained from two rows each 66 feet long.

## APPLES.

The following varieties of apples fruited this year, some of them for the first time, and some produced only a few apples.

The trees were sprayed with Bordeaux mixture before leafing out, and several times after, but the rains were so frequent, that the mixture was washed off, and as a con-

sequence, could not do its best work, and some varieties of apples were considerably damaged by spot:—

Golden Russet, Alexander, Ben Davis, Baldwin, Bombshell, Colvert, Duchess of Oldenburgh, Fameuse, Pewaukee, Fallawater, Fanny, Gravenstein, Fall Janetting, Haas, King of Tomkin's Co., Keswick Codlin, Longfield, Maiden's Blush, McMahan White, Northern Spy, Red Beitigheimer, Red Astrachan, Swaar, St. Lawrence, Shannon, Smith's Cider, Spitzenburg, 20 oz Pippin, Talman Sweet, Tetofsky, Wealthy, Yellow Bellflower, Gloria Mundi.

*Henry Russet*.—Larger than Golden Russet, of a bronze russet colour, free from spot, tree very productive; apple a good keeper. Season, February to March.

*Anis*.—Very similar to Tetofsky in appearance and time of ripening, but not so productive.

*Bottle Greening*.—Only three apples on the tree, medium size, affected by spot.

*Blenheim Orange*.—Fruit large and very handsome and of very fine quality. Season, November.

*Belle de Boskoop*. Produced a few apples above medium in size, handsome and appears to be a fair keeper.

*Bailey Sweet*.—Fruited sparingly, medium size, very handsome.

*Canada Red*.—Below medium in size, free from blemish, a good keeper, and good either for dessert or cooking.

*Carolina Red June*. Produced a few small apples of very good quality for dessert. Season, August.

*Yellow Transparent*.—Large, clean very handsome apple, good quality.—Season August.

*Cooper's Market*.—Fruit above medium, handsome, and appears to be a good keeper.

*Chenango Strawberry*.—Fruit medium in size, very handsome, excellent for dessert. Season, September.

*Early Harvest*.—Fruit medium, good quality, affected by spot and cracks. Season August.

*Grimes' Golden*.—This variety fruited last year and the apples were very fine for dessert in January and February. Fruit medium in size, free from spot, a good cooking apple.

*Hurlburt*.—Fruited, the second time with us, this year, and proves to be productive and an apple of merit.

*Hastings*.—Fruit small, hard and a good keeper, liable to spot, poor quality, tree a poor producer.

*Jonathan*.—Tree a slow grower, but productive; a fine crop this year; fruit small, handsome and of very fine quality for dessert, a good cooking apple. Season, December to February.

*Jersey Sweet*.—Productive, fruit medium size, juicy and good either for dessert or baking. Season October to November.

*Peck's Pleasant*.—Only a very few apples.

*Ribston Pippin*. Above medium in size, free from spot, productive, very fine flavor. Season, December and January.

*Rolye*.—A free producer, a beautiful red apple, medium in size, a good cooking and dessert apple. Season, November and December.

*Golden Sweet*.—Above medium in size, productive, good for dessert or for baking. Season, August.

*Hawley*.—Tree, vigorous and productive; fruit, large and handsome, a good cooking apple. Season, October and November.

*Scott's Winter*.—Tree, vigorous and productive; apple medium size, handsome, a good cooking apple. Season, December and January.

*Sweet Bough*. Vigorous and productive; fruit very large and handsome, a very good dessert and baking apple. Season, August.

*Salome*. Tree vigorous and productive, medium in size, very handsome, free from spot and a good keeper. Season, January to April.

Plum-tree, in fruit, 1894, Experimental Farm, Agassiz, B. C. ; four years planted.

## Experimental Farms.

*Waxen*.—Medium in size, handsome and a good keeper. Season, January and February.

*Wellington*.—Above medium, handsome, good keeper, acid. Season, February.

*Wolf River*.—Very handsome; only three apples this year.

*Stark*.—Above medium, handsome and said to be a very good keeper.

*Warner's King*.—Vigorous grower; fruit very large, a good cooking apple. Two of the largest this year weighed, one 25½ oz., and the other 25¼ oz. respectively. Season, November.

The following is a list of the varieties received this year, bringing the collection of apples up to over 500:—

Allen's Russet, Antonovka, No. 236, 26 M., Arabka Summer, Atkinson, Aport 252, Almond Reinette, Aport 23 M., Anisim 18 M., Arabka, (Budd and Gibb,) Arabka 257, Anisovka 185, Alaska Crab, Avenarius, Borsdorf No. 19, Belle Pippin, Baraboo, Basil the Great, Beautiful Arkad 453, Bethel, Barloff, Belmont, Brightwater, Bostic Queen, Buncomb, Bloomless, Beauty of Kentucky, Cinnamon Pine, Chase's Jelly Crab, Cranberry Winter, Charlottenthaler, Charlamoff, Court Pendu Plat, Cross, 15 M., Chickasaw Crab, Cove, Crawford Pippin, Cranberry Pippin, Dartmouth Crab, Dickinson, Extra Early Margaret, Early Sweet, Enormous, Early May, E'khorn, English Golden Russet, Excelsior, Florence Crab, Franklin Sweet, Flat Voronesh, Golden White, Good Peasant, Gideons No. 10, Gipsy Girl, Grandmother, Green Crimean, Green Stripe, Golden Ball, Gideons Best, (Peter,) Gideons 20, Gracie, Gells Beauty, Golden Beauty Crab, Gideons 30, Grindstone, Hatcher's Seedling, Hebbel White, Hare Pipka, Headly, Holman, Hughes' Virginia Crab, Hennipin, Hy-fill, Hibernial, Haskells Sweet, Indiana, Jones' Seedling, Kentucky Red Crab, Kossuth, Kentucky Longstem, Kentucky Streak, Kirkbridge, Kara Synap (Niemetz.) Kremer's Glass, Knievskoe, Kurskaya, Karabovka 21 M., Lady Elgin Crab, Lankford, North Carolina Limber-twig, Lord Nelson, Late Duchess, Lady Finger, Little's Red Winter, Lyman's Red Seedling, Long Arcade, Landsburg, Lubsk Queen, Ledenetz, Large Anis, Little Hat, Mann Pippin of Arkansas, Martha Washington, Maxey, Magnum Bonum, Missouri Red Winter, Mother, Melonen, McAfee, No. 3 Sweet, (Gideon) Newton, Orel 980, Orel 6, Orel 5, Orel 27, Ogilvie's Crab, Orel 1, Ostrakoff Glass, (Fisk) Ostrakoff, (Beadle) Oblong, Ohio Nonpareil, Ozark, Palouse, Pyles Red Winter, Pound Sweet, Peach Crab, Pickards, Palmer, Pewaukee Russet, Pointed Pipka, Prior's Red, Persian Bogdanoff, Pauls Imperial Crab, Quaker Beauty Crab, Queen's Choice Crab, Romenskoe, Repka Aport, Rambour Reinette, Rosy Voronesh, Rosy Repka, Red Queen (316), Red Streak, Reinette Gris (28), Romna (599), Red Subluck, Repolovka 1 M, Red Aport, Russian Preserve, Round Borsdorf, Red Russet, Red Limbertwig, Raspberry, Ragan's Yellow, Red Belleflower, Red Siberian Crab, Red Queen, Rutledge, Ridge Pippin, Red Cider, Stephens Red, Striped July, Stuart's Golden, Sweeting, Stone's Eureka, Simbirsk No. 5, Simbirsk No. 3, Simbirsk No. 2, Simbirsk No. 10, Simbirsk No. 4, Suislep No. 19, Skirsch (Cross Vor.), Sweet Borovinka (Beadle), Sambo, Tulpenhocken, Taffet Winter, Ukraine (Gibb,) Voronesh No. 9, Voronesh Reinette, Virginia Greening, Virginia Queen, Wandering Spy, Winter Sweet Paradise, Windsor Chief, Winter May, Winter Green, White Rambour, Watterson's No. 4, White Pigeon, White Borovinka, Watterson, Williams Favorite, No. 585, No. 20 (M), No. 569, Yellow Horse, Julian, Newells Winter.

### PEARS.

Only a few of the pears fruited this year, although many of the young trees blossomed.

*Margaret*.—A medium sized handsome, russet red pear of very fine quality. Ripe Aug. 14th.

*Seckel*.—One tree produced a few of these delicious little pears. Ripe Oct. 6th.

*Gliva Kurskaya*.—Fruit medium sized, regular in form. Golden russet colour, and very pleasant flavor. Ripe September 6th.

*Vicar of Winkfield*.—Above medium in size, poor quality. Ripe Nov. 11th.

The pear orchard now contains 145 varieties ; the following additions having been made to the list during 1894 :—

Bon Chrétien, Fred. Beaudry, Jones' Seedling, Olivier de Serries, Reeder, Pitmaston Duchess, Lady Clapp. Dana's Hovey, Duhamel de Morceau, Urbaniste, Ansault, Mme. Hemmingway, Hoosic, Manning's Early, Lincoln Coreless, Bartlet-Seckel, Dewey's Premium, Edmunds, André Desportes, Bordeaux, Early Bergamot, Beurré de Livonie, Exeglovka, Lemon Kharkoff, Bon Chrétien No. 15, Panna No. 33, Princess No. 3, Tonkovietka (Gibb), Gakovka, Zucherbirn (Budd), Lemon (Gibb), Lemonaya, Riga 108 (Gibb), Voronesh, 102 (Budd).

#### PLUMS.

The cold wet spring did not materially affect the plums, some of the young trees being so heavily laden that they had to be supported, notwithstanding that many had been considerably thinned.

•The following varieties fruited :—

*Saunders*.—Ripe August 8th. A vigorous healthy tree, but not productive. Fruit medium size and of good quality for a few days when just ripe but soon loses its quality by keeping. Skin very thin, the slightest bruise soon turning dark, a poor shipper.

*Peach*.—Ripe August 8th. Fruit very large and handsome, but coarse grained and not of high quality.

*Niagara*.—Very similar to Bradshaw in growth and appearance of tree and fruit. Fruit averages larger than Bradshaw growing alongside, and ripens several days earlier than that variety. Ripened August 22nd. Fruit large, some specimens measuring 2 inches long by 1½ in diameter. Very productive, fruit of very good quality.

*Bradshaw*.—A strong, vigorous, upright grower, and very productive. Ripe August 28th. Fruit large, reddish purple with a light blue bloom, handsome and of good quality.

*Washington*.—A vigorous healthy grower, productive ; fruit, large and handsome, yellow and of good quality, but will not stand shipping. Ripened, August 30th.

*Victoria*.—A spreading grower ; fruit large, pale red and of fine quality, productive. Two trees produced over 100 lbs. Ripe, August 28th.

*Imperial Gage*.—A vigorous, healthy grower, and productive ; fruit greenish yellow, larger than Green Gage and of first-class quality. Ripe, August 28th.

*Jefferson*.—A healthy vigorous grower and moderately productive ; fruit above medium size, golden yellow with a reddish cheek and of fair quality. Ripe, August 28th.

*Columbia*.—A spreading grower, and productive ; fruit large, round brownish purple with a blue bloom ; handsome, very sweet when quite ripe. Ripe, August 29th.

*Moore's Arctic*.—A medium grower and begins fruiting when the tree is quite young ; fruit of medium size, blue and only moderately good. Ripe August 30th.

*Smith's Orleans*.—A vigorous grower fairly productive ; fruit of medium size, reddish purple with a blue bloom, fair quality. Ripe, August 31st.

*Large Golden Prolific*.—Tree a vigorous grower, but as yet has only fruited sparingly ; fruit above medium size and of very fair quality. Ripe, September 1st.

*American Violet*.—A vigorous grower, fairly productive ; fruit, large, handsome and good, a good shipper. Ripe, September 2nd.

*Hudson River Purple Egg*.—Tree a vigorous and strong grower, fairly productive ; fruit, strikingly oblong ; quality good. Ripe, September 2nd.

*Moyer*.—Tree a moderate grower, but not very productive ; fruit of medium size and of medium quality. Ripe, September 3rd.

*Shipper's Pride*.—Vigorous and productive ; fruit above medium size, purple, handsome and of good quality. Ripe, September 3rd.

*Gueit*.—A vigorous grower and one of the most productive varieties yet fruited ; fruit above medium size, purple, very handsome and of good quality, a good shipper. Ripe, September 3rd.

*Fellenberg*.—A vigorous spreading grower, productive ; fruit of medium size, purple, sweet and good. Ripe, September 4th.

## Experimental Farms.

*Peters' Yellow Gage.*—Tree an upright strong grower, and moderately productive; fruit of medium size, handsome and of good quality, but apt to crack if not picked before quite ripe. Ripe, September 4th.

*Lombard.*—A vigorous grower and very productive; fruit above medium in size; dark red and of fair quality. Ripe, September 5th.

*Sugar Plum.*—A vigorous grower, but not productive; fruit small, nearly black, sweet and pleasant. Ripe, September 6th.

*Yellow Egg.*—Tree a thrifty strong grower, and fairly productive; fruit of the largest size and coarse, very handsome and a good shipper. Ripe, September 7th.

*Damson.*—Productive; fruit small, dark blue and rather acid. Ripe, September 7th.

*Munroe.*—Blue. Ripe, September 10th.

*Reine Claude.*—Tree vigorous and very productive; fruit medium in size, yellow and of good quality, but liable to crack when ripe, if the weather is wet. Ripe, September 8th.

*Bleeker's Gage.*—Tree a vigorous grower and productive. Fruit of medium size, yellow, sweet and very good. Ripe Sept. 9th.

*Pond's Seedling.*—A strong upright grower and very productive. Fruit very large, handsome and purple; a good shipper. Ripe Sept. 10th.

*Coe's Golden Drop.*—A fair grower and moderately productive. Fruit above medium in size, and yellow, of very fine quality. Ripe Sept. 10th.

*Red Egg.*—A vigorous grower. Fruit large and handsome. Ripe Sept. 10th.

*Prune d'Agen.*—A moderate grower, and productive. Fruit of medium size, violet purple. Sweet and very good. Ripe Sept. 13th.

*General Hand.*—A very vigorous grower, but not productive. Fruit large, golden yellow, round, and of medium quality. Ripe Sept. 10th.

The following varieties have been added this year to the collection:—

Field, Hubbard, Brunswick, Excelsior, Mason, Botankio No. 1, Bailey's Japan, Burlank, Silver Prune, Holman Prune, French Prune, Tragedy Prune, Dunlop, Brynston's Gage, Orange, Youngken's Golden, Prince Englebert, Wangenheim, Lafayette, Henrietta, Centralia, Long Fruit, Willard, Chabot, Hawkeye. Bringing the number up to 157 varieties, more than 30 varieties fruited during the past season.

### CHERRIES.

The cherry trees, were very full of bloom in spring, but the cold rains probably prevented the proper fertilization of the blossoms, and they fell off. Only the English Morello, Bessarabian, Lieb, Lithaur and Ostheim, produced a few cherries each. All the trees are vigorous and promising.

The following varieties have been added, this year:—

Cleveland, Sparhawk's Honey, Kirtland's Mary and Dwarf Rocky Mountain, making 71 varieties in all.

### APRICOTS.

Although these trees blossomed very freely last spring, and on several varieties the fruit set, when they grew to be as large as Marrowfat pease they fell off.

The trees have in most cases made good growth, and promise well for next year.

The following varieties were received and planted last spring, and have made a vigorous growth:—

Longfellow, Sweet Russian, Dr. Evert Smith. We have now 26 varieties in all.

### NECTARINES.

These trees were not troubled with "curl leaf" last season, and have made a fine healthy growth, and give good promise for fruit next year.

One variety, New White, has been added, making 17 in all.

## MEDLARS.

The medlars have grown vigorously, and blossomed, but did not fruit.

## PEACHES.

Nearly all the peach trees have made a very fine growth this year. They were sprayed, when the leaves were partly expanded, with a strong Bordeaux mixture, for the prevention of curl leaf; I am pleased to say that there was no curl leaf this year, a careful watch was made and only three affected leaves found. This disease does not appear to have been troublesome in any orchard in this locality, even where the trees were not treated to prevent it.

The trees are very promising now, and with a favourable winter, and spring, many varieties should fruit next year.

The following varieties have been added to the collection:—Miller's Cling, Large Early, Gold Dust, Crosby, Champion, Toledo Prolific, Beer's Late, Eaton's Golden, Japan Blood, Peen-to, Park's Late, Hoover's Heath, Jarles' Late White, Silver Medal, Ives' Blood (free), Yum-Yum, Bergen's Yellow, Golden Dwarf, Fourteen Ounce, Magdala, Royal Kensington, Shanghae, Pickett's Late, Barnes, Topaz, Lonoke, I.X.L., Bonanza, Henrietta, Ark. Mamm. Golden, Geary's Hold-on, Blood (free), Flater's St. John, Chas. Wood, Jessie Kerr, Albright's Late, Arkansas, Traveller, Ragan's Yellow, Christiana.

These, with those previously planted, make 178 varieties in all.

## QUINCES.

The Quince trees blossomed in spring, but the blossoms fell off.

The Mammoth Japan and Col. Cheney were the only additions in quinces since my last report; in all, 12 varieties.

## MULBERRIES.

The Victoria and Hicks have been added to the collection of this fruit. When the trees are a year or two older no doubt they will fruit, but up to the present they have only made each year a vigorous wood growth.

## MOUNTAIN ORCHARDS.

The apple, pear, plum, cherry and peach trees, planted in the orchards on the mountain have made a vigorous growth and are very promising, and the question of picking and transporting fruit to the lower level of the valley will soon demand attention.

Preparations are being made to add considerably to the area under fruit trees on the highest bench. A number of young apple and other trees for that purpose, being in nursery rows at the present time.

Some of the grape vines planted on the benches fruited this season, but none of the fruit ripened.

Of the English gooseberries imported in the spring of 1893, a single plant each of several varieties were planted on the bench, and it was satisfactory to note that two varieties, Crown Bob and Whinham's Industry, fruited this year, and although not sprayed, neither fruit nor foliage showed any trace of mildew.

## NUTS.

*Filberts.*—The filbert, *Corylus Avellana*, produced a small crop of fine large nuts this year. The sample produced was very uniform in size, and larger than those commonly

## Experimental Farms.

sold. It seems probable that filberts might be planted with profit, on the rocky hillsides so common in this province, as they would need but little care or attention.

*Almonds.*—The almonds have not fruited yet, but doubtless soon will, as they have made a strong healthy growth.

The following varieties have been added to the list of almonds this year :—

Princess, Terragona, Nonpareil, Ne Plus Ultra and Russian.

*Chestnuts and Walnuts.*—The following have been added to the list during 1894 : Hathaway and Giant Japan chestnuts, and Max Cordiformis walnut, making altogether 28 varieties of nuts.

### GRAPES.

The following varieties of grapes fruited this year :—

Catawba,	Concord,	Delaware,
Wilder,	Amber Queen,	Martha,
Niagara,	Hartford,	Jessica,
Massasoit,	August Giant,	Rogers No. 28,
Early Victor,	Pocklington,	Naomi,
Agawam,	Salem,	Lindley,
Brighton,	Worden,	Herbert (Roger's 44),
Vergennes,	Florence,	Eva,
Noah,	Marion,	Wyoming Red,
Arnold's No. 1,	Lady Washington,	Woodruff Red,
Cottage,	Elvira,	Ulster,
Roger's No. 19,	Goethe (Roger's No. 1),	Ive's Seedling,
Champion,	Roger's No. 41,	Missouri Riessling,
Eldorado,	Roger's No. 24,	Buchanan,
Oriental,	Clinton.	

Of these, only three ripened before the first frost which occurred on October 15th, namely :—

Delaware, bunch and grape small. Ripe October 11th.

Jessica, bunch small and compact, grape sweet and pleasant. Ripe October 11th.

Worden, bunch small, grape irregular in size, of fair flavour. Ripe October 11th.

The following 9 varieties were nearly ripe on October 15th :—

Roger's No. 41, Champion, Ive's Seedling, Goethe (Roger's No. 1.) Wyoming Red, Niagara, Martha, Wilder and Concord.

The following varieties were received and planted this year. :—

Brilliant, Rommel, America, Carman, Dr. Collier.

Making in all 95 varieties of this fruit.

### CRANBERRIES.

One hundred plants each of the Bell and Cherry cranberries were received in spring and planted in nursery rows. These will be planted out as soon as a place can be prepared for them. They are growing fairly well where they are.

### FIGS.

Two each of several varieties of figs were received from Texas in the spring to replace those killed during the previous winters. These, and those which were hardier, and have lived, have grown well, but have not yet fruited.

### CURRANTS.

The older plantations of currants were on land that suffered from high water which is, I think, the reason why the crop has been small and inferior in quality.

## GOOSEBERRIES.

The gooseberries suffered considerably from mildew this year, but not nearly as much as formerly. They were sprayed several times, but the constant rains washed the mixture off, scarcely giving it time to produce any effect.

## BLACKBERRIES.

The following fruited this year, some of them for the first time. :—

*Thompson's Early Mammoth*.—A strong, vigorous grower, but not productive; berry very large and handsome with a very good flavor, a little acid. Ripening August 7th.

*Stone's Hardy*.—A strong grower but not productive; berry only medium in size, and frequently imperfect, quality only moderately good. Ripening August 4th.

*Lovett's Best*.—A medium grower and fairly productive; berry medium size, sweet and very good, keeping its bright color for several days after being picked.

*Evergreen*.—A vigorous grower of trailing habit, productive; fruit medium size and of fair quality. Ripening August 13th.

*Minnewaska*.—A feeble grower, not productive, pleasant flavored and sweet but too small. Ripening August 10th.

*Early Cluster*.—Not a vigorous grower, but productive; berry sweet and pleasant, medium size. Ripening August 6th.

*Early Harvest*.—A feeble grower, but productive; berry medium sized, and very pleasant flavored. Ripening August 7th.

*Crystal White*.—A very feeble grower and not productive; berry small, pleasant flavoured. Ripe August 10th.

*Wilson Junior*.—A straggling grower, and not very productive; berry bright black, handsome, above medium size and fair in quality, acid. Ripening August 10th.

*Wilson's Early*.—A straggling grower and a free producer; berry above medium size, but it often has a hard core, quite acid. Ripening August 10th.

*Erie*.—A strong, vigorous grower and productive; berry large to very large, and very fine quality, sweet and handsome, one the best fruited this year. Ripening August 10th.

*Early King*.—Medium grower and very thorny, productive; berry very irregular in size, ranging from small to very large, and when perfect very sweet and pleasant flavoured. Ripening August 6th.

*Lawton*.—A very vigorous grower, productive; berry large, of medium quality. Ripe August 8th.

*Kittatinny*.—Fruited last year and again this year; canes stout and thorny, productive; berry above medium in size and of very good quality when ripe. Ripe August 9th.

*Snyder, Agawam and Taylor*.—Again produced heavy crops of very fine berries this year. Ripening August 1st, 4th, and 6th respectively.

The varieties thus far fruited would rank in quality as follows: Erie, Snyder, Kittatinny, Taylor, all good shippers, hardy and productive.

## LUCRETIA DEWBERRY.

This variety fruited again this year, and contrary to previous experience, was very productive, and of fine quality, some of the berries being over 1½ inches long and nearly 1 inch thick.

Owing to their trailing habit, they are very difficult to pick, unless trellised, and they are a little too soft for shipping. Ripe, July 22.

## RASPBERRIES.

The following berries have fruited for the first time this year, except Cuthbert, which I have included in this report for comparison.

Blackberries in fruit, 1894, Experimental Farm, Agassiz, B. C.

## Experimental Farms.

*Crimson Beauty*.—Canes of medium growth; berry large, round, bright crimson, firm and promises to be a good shipper. Moderately prolific, a pleasant acid. Fruit ripe, July 8.

*Baumforth's Seedling*.—Canes vigorous in growth, berry of medium size and under medium quality. Unless it improves very much another year, it could not be regarded as a desirable berry. Ripe, July 3.

*Lord Beaconsfield*.—Medium grower, berry large, conical, dark red, acid and firm in flesh, would stand shipping well, not productive. Ripe, July 8.

*Northumberland Filbasket*.—A strong vigorous grower. Fruited sparingly. Berry large and long, color dark red, firm, flavour very good, sweet, a promising variety. Ripening July 8.

*Carter's Prolific*.—Canes very stout, vigorous and productive. Berry large, round, dark red, sweet and pleasant, but appeared to be a little soft. Ripe, July 12.

*Franconia*.—Medium, vigorous, and not very productive. Berry large, round, bright red, rather acid but of good flavour, appeared to be a little crumbly when picked. Ripe, July 9.

*Carman*.—A medium grower, not productive, berry rather small, bright red, acid and only medium in quality. Ripe, July 6.

*Thompson*.—Very bad for suckering, and canes weak. Not productive. Berry small and very crumbly, not desirable. Ripe, July 10.

Another year will be required to give these berries a fair test, but judging from this year, none of the new varieties fruited this season, are likely to prove as valuable for all purposes as the Cuthbert.

*Cuthbert*.—A vigorous strong grower very productive and canes stout, berry above medium in size, flavor very good and a good shipper, holds its size well to the end of the raspberry season. Ripe, July 4.

All the raspberries reported as having fruited last year, have fruited again this year with very similar results.

### YELLOW RASPBERRIES.

*Champlain (yellow)*.—A vigorous grower, productive; berry large, sweet, and very fine in flavor, but appears to be slightly crumbly; ripe, July 11th.

*White Antwerp*.—A moderate grower, productive; berry large, mild acid, good flavour, but pulls to pieces when picked; ripe July 7th.

*Golden Queen*.—A very vigorous grower; berry conical, light yellow, above medium in size, productive and of very good quality, firm, a good shipper; ripe July 10th.

### BLACK CAP RASPBERRIES.

*Ada*.—A rather feeble grower, not productive; berry small, but very finely flavoured; ripe July 17.

*Kansas (black)*.—A strong vigorous grower, and productive; berry above medium size, and very firm and handsome, of sweet and pleasant flavour; ripe July 15th.

*Cromwell*.—A strong, healthy grower, not very productive: berry large and firm, but not of high quality; ripe July 9th.

*Older*.—A strong grower, productive; berry large and handsome, sweet and very finely flavoured; holding size to end of season; one of the best black caps yet tried; ripe July 9th.

*Progress*.—A vigorous grower, but a little tender, the canes killing back at tips every winter, fairly productive; berry small, sweet and pleasant; ripe July 11th.

*Lovett*.—A feeble grower, and not productive; berry medium size, quality good; a bright handsome berry; ripe July 11th.

*Smith's Prolific*.—Not very vigorous or productive; berry very uneven in size, varying from large to very small; quality dry and seedy; ripe July 15th.

*Jackson's May King*.—Canes erect, but not a vigorous grower, not productive; berry small, acid and seedy; ripe July 8th.

*Palmer*.—Canes tall, and very vigorous, productive; berry large, handsome and finely flavoured; one of the best; ripe July 10th.

*Souhegan*.—A moderate grower; berry of medium size and seedy, flavour poor; ripe July 14th.

#### PURPLE RASPBERRIES.

*Shaffer's Colossal*.—Canes very vigorous and tall, productive; berry large, dark purple, acid, rather soft, not handsome; ripe July 18th.

#### STRAWBERRIES.

The blossoms were very abundant, but owing to the repeated heavy cold rain storms, perfect fertilization did not take place, and again, when the berries were ripening, so much rain fell that the flavour and keeping qualities of the fruit were very much injured.

The following is the order of ripening of the varieties which fruited for the first time this year:—

*Warfield*.—Plant a vigorous grower, but the foliage inclined to rust. Berry medium in size, long neck, short weak stem, allowing the berry to drop to the ground, colour, dark red, rather soft, flavour good. Not very productive. Ripe June 14th.

*Chairs*.—Plant vigorous, healthy and productive. Stem short but stout. Berry large, bright red, and fine shape. Acid, but flavour good, firm and promises to stand shipping well. Ripe June 14th.

*Alexander II*.—Plant a strong vigorous grower, foliage healthy, stem long and stout. Berry large, dark, and coxcomb shape, firm, sweet, flavour good. Plant productive. Ripe June 14th.

*Dr. Hogg*.—A strong grower, foliage very large and healthy. Productive. Berry large and good shape, but does not ripen at tip for sometime after the body of the berry is coloured. Rather acid. Ripe June 14th.

*Van Deman*.—Plant vigorous and foliage healthy. Stem slender and short, not productive. Berry medium size, round dark red, acid, flavour very good. Ripe June 15th.

*Hautbois*.—Plant a vigorous grower, foliage healthy, not productive. Berry bright red, size medium to small. Flavour very fine. A very good berry for home use, but too small for a profitable market berry. Ripe June 16th.

*Parker Earle*.—Plant a vigorous grower, foliage healthy, stems long and stout. Berry bright red, above medium in size and very fine flavoured, a good bearer. Ripe June 16th.

*Windsor Chief*.—Plant a strong vigorous grower and productive. Foliage very large and healthy. Berry large, bright red, firm and flavour good, promises to be a good shipper. Ripe June 19th.

*Iowa Beauty*.—Plant healthy and vigorous, stem long, and holds the berry well up. Prolific. Berry large to very large, bright red, a little irregular in shape, but firm and flavour good. Ripe June 18th.

*Eclipse*.—Not a strong grower, foliage inclined to rust, stems short and feeble. Not prolific. Berry bright red, only medium in size and quality. Ripe June 19th.

*Alpha*.—Plant vigorous and healthy, stem long and stout. Fairly productive. Berry bright red. Medium in size and firm. Flavour very good. Ripe June 18th.

*Empress Eugenie*.—Medium grower, foliage healthy, not productive. Berries only medium in size. Flavour good. Ripe June 21st.

*Yale*.—A vigorous healthy grower and productive, stems long and standing up well. Berry above medium in size. Bright red, sweet, and flavour very good, firm, promises well as a shipper. Ripe June 21st.

*Sir Joseph Paxton*.—A strong vigorous grower, but foliage slightly rusted, stem long and stout. Berry bright red and very large, holding its size well to end of season, firm, sweet, and flavour very fine, good shape. One of the best berries fruited this season. Ripe June 23rd.

## Experimental Farms.

*Beder Wood*.—Plant vigorous and healthy, stem long and fairly strong. Berry bright red, above medium in size, flavour fine, berry a little soft. Ripe June 23rd.

*Daisy*.—Plant vigorous, and foliage healthy, stem long and slender. Berry large and grows in large clusters, dark red, firm and solid, good shape, rather acid but flavour first class. Ripe June 23rd.

*Bonny Lass*.—Plant only a medium grower, foliage healthy. Stem medium in length and stout. Berry above medium in size, not very productive, bright red, coxcomb shape. A rich flavoured sweet berry. One of the best for home use. Retains its size and quality to the last. Ripe June 25th.

*Pine Apple*.—Plant vigorous and healthy, stem long and stout, not productive. Berry above medium in size, but soft and flavour poor. Ripe June 26th.

*Laxford Hall*.—Plant vigorous and healthy, stem long and stout, not very productive. Berry only medium in size, round dark red, flavour good, sweet and very firm. Ripe June 26th.

### SHELTER BELTS AND FOREST TREES.

The trees in the shelter belts have made fine growth, and only two or three have died since my last report, and these were in a low spot where the water lay a few days, during the high water in June.

The plantations on the Mountain have done remarkably well, there being a very small per cent of losses, and in most varieties a very fine growth, considering that they have received no care or cultivation since they were planted.

The walnuts and hickory nuts planted last fall on the Mountain, have done very well, at least 70 per cent of the nuts planted having grown, and there may be a larger percentage than this, as they were scattered, over a considerable area, and it is difficult to find a yearling seedling in ferns and underbrush.

Another large lot of walnuts has been received from Ontario and are being planted. There are also on hand several thousand young forest trees of varieties valued for their timber which will be planted on the Mountain next spring.

### TOMATOES.

The following varieties of tomatoes were sown in a hot-bed April 24th, and transplanted June 2nd. A few ripened, but many of the plants were destroyed by water.

*Early Ruby*.—Ripe September 7th, very solid and few seeds, medium size, and smooth.

*Atlantic Prize*.—Did not ripen.

*Earliest of All*.—Small and seedy, ripened September 11th, not productive.

*Everbearing*.—Did not ripen.

*Livingston's Aristocrat*.—Did not ripen.

*New Dwarf Champion*.—Dit not ripen.

### PEPPERS.

The following varieties of peppers were sown in hot bed April 24th and planted out June 6th. They all fruited freely, but none of them ripened.

*Sw et Spanish*.

*Mammoth Golden Dawn*.

*Kaleidoscope*.

### CABBAGE.

The following varieties of cabbage were tested. Seed sown in hot bed April 22nd Transplanted May 18th.

1st.—*Burpee's Surehead*.—Head medium in size, very firm and solid.

2nd.—*Burpee's Earliest of all*.—Heads very early, but small and not compact.

3rd.—*Simmer's Matchless Flat Dutch*.—Heads fair size firm and solid.

4th.—*World Beater*.—Did not head very well, heads poor and soft.

5th.—*Mammoth Red Rock*.—Heads medium sized, very firm and hard.

6th.—*Chester King*.—Only a few plants formed heads and these were quite small.

7th.—*Drumhead Savoy*.—Heads medium large, very firm and compact.

8th.—*Late Drumhead*.—A few very fine heads formed but many plants did not head.

9th.—*Marblehead Mammoth*.—Did not head well ; heads small and soft.

10th.—*Autumn King*.—No heads of value formed on this variety.

11th.—*Stanley*.—Heads very small and inferior.

12th.—*Louderbach*.—Only a few small heads formed.

#### CAULIFLOWER.

Six varieties of cauliflower were sown in a hot bed on April 22nd and planted in the open ground, as soon in May as they were sufficiently grown. But they were injured in June by water, and failed to head.

TESTS OF DIFFERENT VARIETIES OF GARDEN PEASE.

Name of Variety.	Sown.	Up.	Fit for Table.	Remarks.
Sunol.....	May 2	May 17	July 4	Pease medium size, pods short and not well filled, medium in quality, not productive; vines 1½ to 2 feet long.
Bliss' American Wonder.....	" 2	" 20	" 16	Pease large and fine in quality, pods long and well filled, vines 1 to 1½ feet long, not productive.
Burpee's Profusion.....	April 30	" 20	" 24	Vines 2 to 3 feet long and well loaded with long pods, well filled with large pease of good quality.
Kentish Invicta.....	" 30	" 18	" 18	Pods long and well filled, pease medium sized and rather poor in quality, vines 2 to 2½ feet long, not productive.
Juno.....	" 30	" 13	" 26	Vines 1½ to 2 feet long and very productive, pods long and well filled with large pease of very good quality.
Horsford's Market Garden.....	" 30	" 21	" 16	Vines 2 to 2½ feet long and productive, pods long and well filled with large pease of very good quality.
Daniel's Matchless Marrow.....	" 9	" 21	" 20	Vines 2½ to 3 feet long, productive, long well filled pods, pease very large and of excellent quality.
Duke of Albany.....	" 9	" 20	" 20	Vines 2½ to 3 feet, and fairly productive, pods long and well filled, pease large and of best quality.
Prince of Wales.....	" 9	" 20	" 30	Vines 2 to 3 feet long, and productive, pods of medium length and well filled, pease large and of very fine quality.

TESTS OF DIFFERENT VARIETIES OF BEANS.

Name of Variety.	Sown.	Up.	Fit for Table.	Remarks.
Burpee's Bush Lima.....	May 3	.....	.....	Did not germinate.
Early Black Pole Lima.....	" 3	.....	.....	Did not germinate.
Burpee's New String Green Pod.	" 3	May 27	July 27	Did not germinate well, and made a feeble growth, pods small and poor in quality.
Thorburn's Extra Refugee Wax.	" 3	" 24	" 26	Not a vigorous grower, pods small but very fine in quality.
Emperor William.....	" 3	" 27	" 22	Crisp and very fine for table use.

#### ASPARAGUS.

50 plants each of the following varieties of asparagus were received, and planted, and made a fair growth.

Barr's Mammoth, Argenteuil, and Columbian.

# Experimental Farms.

## RADISH.

Name of Variety.	Sown.	Up.	Fit for table.	Remarks.
Scarlet Dwarf White Tip .. . . . .	April 24	May 3.	June 7.	Stringy and not crisp or pleasant to eat.
New Rosy Gem.....	" 24	" 3.	" 4.	Crisp and sweet.
Charters Improved.....	" 24	" 3.	" 16.	Not very good, and ran to seed very soon after being large enough for table use.
Pearl Forcing.....	" 24	" 2.	" 11.	Stringy and tough.
Burpee's Earliest Scarlet Button....	" 24	" 3.	" 1.	Crisp, sweet and very good.
Brightest Red Long Scarlet.....	" 24	" 2.	" 18.	Nearly all went to seed before becoming fit for table.
Scarlet Olive Shaped.....	" 24	" 2.	" 8.	Crisp, but became stringy very soon after being fit for table.

## BEETS, CARROTS, PARSNIPS AND ONIONS.

Nine varieties of table beets, six of carrots, two of parsnips, and thirteen of onions were received and sown, but when the flood came the land on which they were sown became so wet that the crops of all were a failure.

## EXPERIMENTS WITH DIFFERENT VARIETIES OF LETTUCE.

Name of Variety.	Sown.	Up.	Fit for Use.	Remarks.
New Iceberg.....	April 26..	May 16..	June 29..	Crisp and sweet.
New Paris Cos.....	" 24..	" 15..	July 4..	Bitter, not of good quality.
All Heart.....	" 25..	" 13..	" 2..	Crisp, sweet and a vigorous grower.
New Giant White Cos.....	" 25..	" 14..	" 4..	A vigorous grower, crisp but bitter.
New Cos or Celery.....	" 25..	" 14..	" 7..	Very crisp and sweet.
New Sensation.....	" 25..	" 14..	" 4..	Not crisp or sweet and a feeble grower.
California Cream.....	" 25..	" 14..	" 8..	Leaf blighted, turning brown in spots, which made it unfit for use.
Golden Queen.....	" 25..	" 14..	June 27.	A vigorous grower, forming fine heads, crisp and of good quality.

## PARSLEY.

The fine Triple Curled Parsley was sown April 25th, came up May 14th, and was fit for use August 6th. A very fine, vigorous grower.

## CUCUMBERS.

Name of Variety.	Sown.	Up.	Fit for Table.	Remarks.
New Grand Pera.....	May 1....	May 23...	Aug. 2..	Sweet and pleasant, but not crisp or productive.
Cool and Crisp.....	" 1....	" 26...	" 1..	Crisp and of good quality, productive.
Improved White Spine....	" 1....	" 23...	July 20..	Very good quality, crisp and pleasant; productive.
Siberian Cucumber.....	" 1....	" 28...	" 26..	Very small, but of fine quality and productive.

## EXHIBITIONS.

An exhibition of the produce of the Experimental Farm was made at several of the fall shows, where nearly seventy varieties of apples were shown, and a good display of 30 varieties of plums could have been made had the exhibitions been held a little earlier.

*Lathyrus Sylvestris Wagneri*.—All the seed raised of this fodder plant was distributed this year in small packets, as in former years, but no reports have yet been received. The plant makes a feeble growth the first year, which perhaps has discouraged farmers, and they may have ploughed it under.

A single plant 3 years old was exhibited this year, with the roots attached, showing a splendid top growth, and the roots were over 6 feet long, and at the surface of the ground  $1\frac{1}{4}$  inches thick. This plant in the fall of 1891 showed a growth of a single stem, only about 9 inches long. From the strong growth of the roots this plant will probably be valuable in the interior in those parts where there is very little rain.

## METEOROLOGICAL.

1894.	Highest Temperature.	Lowest Temperature.	Number of days on which it rained.	Total Rainfall.	Number of days on which sunshine was recorded.	Total amount of sunshine.		Number of snow storms.	Depth of snowfall.

## STALLION.

The Haras National sent out the same stallion that we had last year.

He made one trip to Chilliwack, and arrangements were made for further trips, but the high water made crossing the river, and travelling on the roads, impossible for a time, and prevented others on this side bringing mares to the farm.

He served about the same number of mares as in the previous year.

I have the honour to be, sir,  
Your obedient servant,

THOS. A. SHARPE.

## Experimental Farms.

STATEMENT of Expenditure on the Dominion Experimental Farms, for the Year ending  
30 June, 1894.

Milk from forty-acre lot	100-101	Pioneer	13
Mixed cereal crops	96-97	Rennie's Improved	13
Root crops on forty-acre lot	97	Royal	13
Sunflower heads	100	Stella	13
cost of growing	100	Trooper	13
Swine, experiments in feeding of	78-86	Vanguard	13
in feeding different crosses of	78-86	two-rowed	13
in feeding of frosted wheat, barley, rye and bran	78-82	Bolton	13
in feeding buckwheat	85-86	California Prolific	13
in feeding pease, wheat and rye equal parts	82-84	Canadian Thorpe	13-14
Bedford, S. A., report on Experimental Farm at Brandon, Man.	281	Danish Chevalier	13
Blair, W. M., report on Experimental Farm at Nappan, N.S.	253	Duck-bill	13
CHEMIST, report of the	147-181	French Chevalier	13
Acknowledgments	148	Golden Grains	13
Apple, chemistry of the	148, 164	Improved Chevalier	13
Apple tree leaves, analyses of	165	Kinver Chevalier	13
fruit composition of	166	Newton	13
Bordeaux mixture, chemistry of	171	Prize Prolific	13
Carbon bisulphide as exterminator of gophers	179	Sidney	13
Cheese, Mammoth, analysis of	180	Thanet	13
Copper carbonate fungicide, chemistry of	173	Victor	13
Copper salt fungicides, chemistry of	148, 171	Barnyard manure fresh and rotted compared	36
Earthy deposit, N. W. T. analysis of	162	Branch Experimental Farms, visits to	72-75
Eau céleste, chemistry of	174	Carrots, experiments with	19-20
Gophers, the extermination of	178	yield of varieties of	19
Marl, analyses and uses of	161	Corn, experiments with	16
Meetings attended	147	Angel of Midnight	17
Muck, swamp, general remarks on	148, 158	Compton's Early	17
analyses of	160	Early Small Auxonne	17
Paris green added to fungicides, chemistry of	174	Early White Pyrenean	17
Sea weed, analysis of	148, 163	Early Yellow Long Eared	17
Soils, virgin, analyses of	147, 149	Evergreen Red Cob	17
from British Columbia	149	Extra Early Huron Dent	17
from Manitoba	150	Gold Medal Dent	17
from New Brunswick	155	Indian Corn (Vilmorin)	17
from Ontario	152	Livingstone's Gold Coin	17
from Prince Edward Island	156	Longfellow	17
from Quebec	153	Mitchell's Extra Early	17
Strawberry plant, chemistry of	148, 168	North Dakota	17
fertilizing constituents withdrawn from soil by	170	No. 1 (A. L. Howard)	17
Strychnine for poisoning crows and black-birds	180	No. 2 (A. L. Howard)	17
Well waters, analyses of	176	No. 18 (C. E. F.)	17
general remarks on	175	No. 30 (C. E. F.)	17

# Experimental Farms.

ENTOMOLOGIST AND BOTANIST— <i>Concluded.</i>	PAGE.	EXPERIMENTAL FARM, AGASSIZ— <i>Concluded.</i>	PAGE.
Cigar case-bearer of the apple	201	Cucumbers, report on	411
Codling moth	195	Currants, report on	405
<i>Coleophora Fletcherella</i>	201	Corn, experiments with	397, 398
<i>Conotrachelus nenuphar</i>	196	Cranberries, report on	405
Corn spurry	223	Cross-fertilizing and hybridizing	395
Correspondence	183	Dewberry Lucretia, report on	406
Donations received	185	Exhibitions	412
<i>Elateride</i>	187	Figs, report on	405
<i>Eriocampa cerasti</i>	198	Fruit trees on bench land	404
<i>Erysimum orientale</i>	225	General remarks on farm operations	388
False flax	226	Gooseberries, report on	406
Fixter, John, report by	219	Grain, results of early, medium and late sowing of	393, 394
"Foundation," experiments with brands of	221	Grape vines, report on	405
Frit-fly, American	186	Green feed	395
Fruit crop, report on	194	Horse beans, report on	398
Fruits, insect enemies of	194	Hops	395
Grain aphid	186	Hybridizing experiments	395
<i>Grapholitha pisana</i>	188	Lettuce, report on	411
Grasshoppers	187	Live stock	388
Grey peach weevil	198	Mangels, experiments with	396
"Hare's-ear mustard"	226	Medlars, report on	404
Hessian fly	186	Meteorological report	412
<i>Hylesinus opaculus</i>	215	Mixed grain for feed	395
Kerosene emulsion	210	Mountain orchards	404
Lesser migratory locust	187	Mulberries, report on	404
Letters, appreciative	183	Nectarines, report on	403
<i>Leucania unipuncta</i>	192	Nut-bearing trees, report on	404, 405
Meetings attended	184	Oats, experiments with	392
<i>Melanoplus atlantis</i>	187	Parsley, report on	411
<i>Neslia paniculata</i>	226	Peaches, report on	404
Oblique banded leaf-roller	197	Pears, report on	401
<i>Paria sex-notata</i>	216	Pease, field varieties, experiments with garden varieties	394, 410
Pea moth	187	Peppers, report on	409
Pear slug	198	Plums, report on	402
Pear-leaf blister	199	Potatoes, experiments with	398, 399
Pear-tree flea-louse	210	Poultry, report on	383
Perennial sowthistle	226	Quinces, report on	404
<i>Phlaotribus liminaris</i>	212	Raspberries, report on	406, 408
<i>Phytoptus pyri</i>	199	Radishes, report on	411
Plum curculio	196	Shelter belt	409
Potato blights	183	Stallion, report on	412
<i>Pylla pyricola</i>	210	Strawberries, report on	408
"Red-leaf" of oats	187	Sugar beets, experiments with	397
Resin washes	208, 209	Sunflowers, experiments with	398
Russian thistle	224	Tomatoes, report on	409
<i>Salsola Kali</i> , var. <i>Tragus</i>	229	Turnips, experiments with	395, 396
San José Scale	206	Weather	387, 412
<i>Semasia</i> , sp.	187	Wheat, spring, experiments with winter, experiments with	390, 389
<i>nebrilana</i>	188	Visitors to farm	383
Shot-borer	197		
Shutt, F. T., report by	221		
<i>Siphonophora avenae</i>	186, 201		
<i>Sisymbrium sinapistrum</i>	225		
<i>Sonchus arvensis</i>	226		
<i>Spergula arvensis</i>	223		
Spotted Paria	216		
Tumble mustard	226		
Tumble weed, true	225		
Wheat midge	186		
Wire-worms	187		
Weeds, some specially noxious	223		
<i>Xyleborus dispar</i>	197		
<b>EXPERIMENTAL FARM, AGASSIZ, report of the Superintendent.</b>		<b>EXPERIMENTAL FARM, BRANDON, report of the Superintendent.</b>	
Apples, report on	399, 401	Acknowledgments	331
Apricots, report on	403	Apple trees, report on	309
Asparagus, report on	410	Avenues	316
Barley, experiments with	391	Barley, experiments with plots, summary of, sown at different dates	292, 293, 288
Beans, report on	410	hybrid	293
Bench orchards, report on	404	field crops of	294
Blackberries, report on	406	Beans, experiments with	325
Cabbage, report on	409	Beets, experiments with	324
Carrots, experiments with	397	Cabbage, experiment with	321
Cauliflowers, experiments with	410	Carrots, experiments with	305, 324
Cherries, report on	403	Cattle, report on experiments with beef breeds do dairy do yield of milk from different breeds	306, 307, 307, 307

# Census Industries.

APPENDIX TO THE REPORT OF THE MINISTER OF AGRICULTURE FOR 1894.

## CENSUS OF CANADA, 1891

### SPECIAL BULLETIN

ON

## MECHANICAL AND MANUFACTURING INDUSTRIES

DEPARTMENT OF AGRICULTURE, OTTAWA, December, 1894.

This bulletin relates to the mechanical and manufacturing establishments of Canada.

Its object is to place the condition of those industries beyond honest cavil, by examining the attacks which have been made upon the results obtained from the statistics gathered by the census enumerators in the census taken in 1891. Those statistics, when compared with the returns of 1881, show the following results:—

	1881.	1891.	Increase.
Number of establishments .....	49,722	75,968	26,246
Capital invested .....	\$134,957,423	\$354,620,750	\$189,663,327
Number of employees .....	254,894	370,256	115,362
Wages paid .....	\$59,401,702	\$100,663,650	\$41,261,948
Cost of raw material .....	\$179,929,193	\$256,119,042	\$76,189,849
Value of products .....	\$309,731,867	\$476,258,886	\$166,527,019

These figures differ both in 1881 and in 1891 somewhat from those which have been previously published. The explanation is that the above statement is the result of a careful examination of the returns of the censuses of 1881 and 1891 for the purpose of grouping the mechanical and industrial establishments according to the value of their output. In some cases errors in addition were discovered; in other cases errors of omission were found. The close scrutiny of each of the 125,690 industries was a work involving great labour, as each industry required 12 columns or about 1,500,000 entries in all. But it was deemed advisable to undertake the work, 1st, as giving to the public such a grouping of our industries as would enable them to see at once in what directions our industrial development was taking place, whether in the line of large industries or otherwise; 2nd, as giving to the public and our public men information which would enable them to see the defects, if any, of the system followed in Canada during three censuses with respect to our industrial establishments, and 3rd, as giving a solution of the question how best to improve the returns so as to remove the doubts of their value which have been raised after each census.

In all cases the compilation has been made from the original sheets without reference to the results published in the 1881 report, or to the preliminary bulletins for 1891.

The basis of the grouping is the yearly output of the several establishments, being the value of the articles produced in the mechanical and manufacturing establishments of the country, as reported to the census enumerators by those to whom they applied for the information.

The divisions made were five in number. This grouping was decided on because it was considered that fewer divisions would not bring out the facts with sufficient clearness, while a greater number of divisions would increase unnecessarily the work of compilation.

The definition of an industrial establishment which has guided the enumerators in the three censuses taken under federal authority is: "An industrial establishment is any place where one or several persons are engaged in manufacturing, altering, making up or changing from one shape into another, materials for sale, use or consumption."

The object in view in all three censuses was to procure full statistics of the small, as well as of the large, industries of the country.

Whether, when the industries are very small, they should be included in the compiled statement is a fair subject for discussion. In the censuses of 1881 and 1891 they were included, if the value of the articles produced amounted to \$50 in the year. Possibly the limit fixed in 1881 was too low, but as it was fixed at that figure it was not deemed advisable, in the absence of any legislative enactment, to raise the limit in the compilation of the statistics gathered in the census of 1891.

To meet the objection that might be, and has been, raised, that such very small industries, if taken, lead to misconception and tend to swell the number of industrial establishments without adding materially to the sum total of the output, the plan of grouping has been adopted.

The material is before each investigator. If he thinks that these small industries should not be included he has but to drop them both for 1881 and 1891 and he has the four remaining groups to compare together.

No. 1 group includes all mechanical and manufacturing establishments whose output of articles produced was in the census years under \$2,000; No. 2, includes all whose yearly output was from \$2,000 to \$12,000; No. 3, all from \$12,000 to \$25,000; No. 4, all from \$25,000 to \$50,000, and No. 5, all having an annual output from \$50,000 and upwards.

#### BY GROUPS.

The results of the examination are given in the following summary:—

Group No. 1—	Value of articles produced in Census year	under \$2,000.
2	"	from \$2,000 to \$12,000.
3	"	" \$12,000 to \$25,000.
4	"	" \$25,000 to \$50,000.
5	"	" \$50,000 and over.

Group.	1881.		1891.		Variation 1891 more than 1881.	Per cent of increase 1891 over 1881.
	Output.	Per cent of total output.	Output.	Per cent of total output.		
	\$		\$		\$	
1	20,734,080	6·7	32,255,192	6·7	+11,521,112	+55·6
2	64,939,604	20·9	93,260,957	19·6	+28,321,353	+43·6
3	36,808,242	11·9	47,709,005	10·1	+10,900,763	+29·6
4	33,482,170	10·9	42,238,542	8·8	+8,756,372	+26·1
5	152,767,771	49·6	260,795,190	54·8	+107,027,419	+69·6
Total.	309,731,867	100·0	476,258,886	100·0	+166,527,019	+53·7

## Census Industries.

A study of this table will show :

1st. That while group 1, (which contains all the smaller industries) has increased by 56 per cent in 1891 compared with 1881, it has not increased more rapidly in 1891 than it did in 1881 proportionately to the total output. In each census year group 1 formed 6·7 per cent of the total output.

If in order to swell the total the enumerators had "raked and scraped" together all the small industries, as they have been charged with doing, to a much greater extent than was done in the census of 1881, the result would be that the group comprising the small industries would have a larger proportion of the whole than it had in 1881. But the proportion is exactly the same. This is the best evidence possible that the enumerators of 1891 used equal diligence with those of 1881 in looking after the small industries. They were bound to do that. Had they been over zealous in the performance of their sworn duty in 1891, as compared with the enumerators of 1881, such ultra zeal would have revealed itself in the analysis by groups.

The results shown in group No. 1, of 1891, prove beyond a peradventure that the enumerators, taken as a body, did their duty honestly and did no more than their duty.

The analysis by groups confirms the general conclusion deduced from the totals. In the census of 1891 the 75,968 mechanical and manufacturing establishments of the country are reported as having an output of \$476,258,886, which is an average of \$6,262 per establishment. In the census of 1881, the 49,722 establishments are reported as having an output of \$309,731,867 or \$6,228 per establishment.

If there had been an abnormally large increase in the number of very small industries taken in 1891, that increase would have shown itself in the reduction of the average per establishment for 1891 below the average of 1881. On the contrary the average is higher.

2nd. The grouping brings out the fact that the greatest absolute and relative increase was in group 5. The increase in 1891 in this group was \$107,027,419 over the output of 1881 for the similar group. That increase is 64·2 per cent of the whole.

If the lowest standard of an industrial establishment is to be considered an output of \$50,000 a year, then judged by that standard the people of Canada in the year 1890-91 provided themselves with manufactures to the value of \$260,795,190 against \$153,767,771 in the year 1880-81. That is, that for every \$100 worth of articles manufactured in Canada in 1880 there was \$169.70 worth of articles manufactured in Canada in 1890, the population only increasing in the same period by 12 per cent.

If the standard of industrial establishments is taken to be an annual output of \$2,000 and over, then in the year 1890-91 the people of Canada were supplied from the manufactories of Canada with \$444,003,694 worth of home manufactured articles against \$288,997,787 worth of the same in 1880-81. This is an increase of \$155,005,907, or 53·7 per cent of an increase in the output of our manufactories in the space of 10 years.

Thus it is shown conclusively that there has been a very great increase in the capacity to supply ourselves with manufactured articles from our own Canadian workshops.

If, now, to groups 2, 3, 4 and 5 be added the output of group 1, which constitutes only one-fifteenth of the total output as given in the census returns, analysis will show that the total output as given in the census year 1890-91 was equal to \$98.54 per head of the population, an increase of \$26.91 per head as the measure of the development of manufacturing in Canada after ten years of effort in that direction. Take off the smaller industries, viz., group 1, and there remains an output of \$91.87 per head in 1890 and of \$66.60 per head in 1880, showing an increase of \$25.27 per head. This is a difference of \$1.64 between the per head output of all five groups in the census years 1890-91 and 1880-81 as compared with the per head output of four groups, No. 1 group being left out.

It is because of this \$1.64 in a total of \$26.91 that an outcry has been raised against the results of the industrial census of 1891. It is not worth fighting over. Drop it out altogether and the increase of \$25.27 per head of the population is sufficient to prove that there has been a great development of our manufacturing capacity,

that the output of all classes of mechanical and manufacturing industries—leaving out for the purpose of the argument the smaller ones of group 1—has been remarkable.

It is no part of the duty of the writer to account for that increase or to set forth the difficulties encountered by those engaged in Canada in mechanical and manufacturing industries owing to their proximity to the more highly organized industries of the same kind in the United States. It is his duty to present the facts with such fulness of detailed analysis as will establish them beyond all doubt, seeing that they have been averred not to be facts at all.

But to many persons a group containing a fair proportion of industries with an output close to \$2,000 a year would not be considered a group of small industries at all. That group contains the germ of future large mechanical and manufacturing industries. It is the most interesting of all the groups in that respect, and that there has been an increase so marked in this group is proof, 1st, that the large industries have not crushed out the small ones, and 2nd, that the activity of the people in the manufacturing direction is on the increase; in other words, that it pays a constantly increasing number of persons engaged in solving the problem of living to turn to mechanical and manufacturing occupations.

These are good signs of healthy growth, and the diagnosis is confirmed by the fact that while in group 1, in 1881, the average output per establishment was \$646 a year, in 1891 it was \$635, an approximation so close as to show that nothing has occurred during the ten years to prevent the development of these smaller industries.

#### GROUP FIVE.

Taking up the largest group, analysis gives the following results:

There were in 1891 in Canada 708 establishments having an annual output of from \$100,000 to \$500,000 and in 1881, 466. Of those with a yearly output from \$500,000 to \$1,000,000 there were 49 in 1891 and 24 in 1881. Those with an annual output of over \$1,000,000 numbered 19 in 1891 and 10 in 1881.

The following table gives the number and province, being analysis of group 5:—

1 Province.	2		3		4	
	Total establishments, with output of \$50,000 and over.		Establishments having an output of \$50,000 to \$100,000.		Establishments having an output of \$100,000 and over.	
	1881.	1891.	1881.	1891.	1881.	1891.
British Columbia.....	13	59	9	41	4	18
Manitoba.....	17	39	12	23	5	16
New Brunswick.....	82	87	50	49	32	38
Nova Scotia.....	47	83	30	52	17	31
Ontario.....	568	916	316	493	252	423
Prince Edward Island.....	4	5	4	4	.....	1
Quebec.....	377	479	187	233	190	246
Territories.....	.....	7	.....	4	.....	3
Total.....	1,108	1,675	608	899	500	776

Further analysis has been made of column 4, by subdividing it into establishments having an output from \$100,000 to \$200,000, \$200,000 to \$300,000, and so on to establishments having an output of \$1,000,000 and over.

The results cannot be published by provinces owing to the fact that in several cases there is in a province but *one* establishment having the output within the designated range. To publish the fact in such cases would be to reveal with more or less distinct-

## Census Industries.

ness the identity of the establishment. The results can, however, be given for Canada. They are as under :

Establishments having an output of :

	1881.	1891.
\$ 100,000 to \$ 200,000 each.....	329	479
200,000 " 300,000 " .....	86	132
300,000 " 400,000 " .....	33	70
400,000 " 500,000 " .....	18	27
500,000 " 600,000 " .....	14	24
600,000 " 700,000 " .....	7	11
700,000 " 1,000,000 " .....	3	14
1,000,000 and over.....	10	19
Total establishments having an output from \$100,000 to \$1,000,000 and over. ....	500	776

The increase in the number of these large establishments is 276 or 55·2 per cent against the increase of 52·1 per cent, which is the increase of all the establishments taken in the census of 1891 over the total number taken in the census of 1881.

### ANALYSIS FOR ONTARIO.

An analysis of the province of Ontario shows that Eastern Ontario (including in that designation Renfrew, Ottawa city, Prescott, Glengarry, Cornwall and Stormont, Russell, Carleton, Dundas, Grenville South, Leeds, Lanark, Frontenac, Brockville, Addington, Prince Edward, Lennox, Hastings, Kingston, Peterborough and Northumberland) had 37 establishments with an output of from \$100,000 to \$500,000, and two with an output of \$500,000 to \$1,000,000 in 1881. In 1891 the same counties and cities had 70 establishments with an output of \$100,000 to \$500,000, 10 with an output from half a million to a million, and one with an output of over a million dollars.

In Central Ontario, comprising Nipissing, Muskoka, Victoria, Durham, Ontario, Simcoe, York, Cardwell, Toronto and Peel, there were 75 establishments having an annual output of from \$100,000 to \$500,000 in 1881, and 152 establishments having an output of the same range in 1891. In 1881 there were four with an output of from half a million to one million dollars a year, and in 1891 the number was the same, 4; in 1881 there were no establishments having an output beyond the million dollar mark and in 1891 there were two.

In Western Ontario, comprising all the remainder of the province there were 128 establishments in 1881, and 170 in 1891, with an output from \$100,000 to \$500,000; four in 1881, and 12 in 1891, with an output from half a million to one million; two in 1881 and two in 1891 went beyond the million dollar mark.

Of those which in the province of Ontario went beyond the one million dollar output the aggregate was \$2,200,000 in 1881, and \$6,175,000 in 1891.

The number of establishments in the province of Ontario having an output of from \$100,000 to \$500,000 increased by 152 which is 62·5 per cent of an increase. The increase in the number of establishments having an output from half a million to one million was 160 per cent and of those beyond the million, mark, \$150 per cent.

### ANALYSIS FOR QUEBEC.

In the province of Quebec, Montreal and Hochelaga are the great centres of the large manufacturing establishments.

In 1881 there were in the whole province 171 establishments having an output of \$100,000 to \$500,000; 13 with an output from half a million to one million, and six with an output of one million and over.

In 1891 the 171 establishments had increased to 219, the 13 to 16 and the six to 11.

In 1891, 92 of the establishments with an output of \$100,000 to \$500,000 were outside of Montreal and Hochelaga. In 1881 there were 69 of these establishments

outside of these two electoral districts. Thus 42 per cent of these establishments were outside of Montreal and Hochelaga in 1891, and 40 per cent in 1881. So that the outside districts have slightly gained on the manufacturing centre in respect to these establishments. Of industrial establishments with an output of half a million to one million the outside districts had 31 per cent in 1891 against 39 per cent in 1881, and of industrial establishments with one million and over of an output Montreal and Hochelaga had them all in 1891, while in 1881 one out of the six was outside of the two districts.

Taking the whole province the increase in the number of establishments with an output from \$100,000 to \$500,000 was 28 per cent. The increase in the number of those with an output of half a million dollars to one million dollars was 23 per cent, and of those having an output of a million dollars and over, 83 per cent. The increase of these three classes in Montreal and Hochelaga was 24.5 per cent, 37 per cent and 120 per cent respectively.

Of the establishments in the province of Quebec which went beyond the one million dollar mark the aggregate in 1881 was \$12,263,159, and in 1891 the aggregate was \$28,416,504.

Of the 19 establishments in Canada having in 1891 over a million dollars of an output, 11 are in the province of Quebec and 5 in the province of Ontario.

Of the 9 establishments which in 1881 had an output of over one million dollars 6 were in the province of Quebec and 2 in the province of Ontario.

The total output of the 19 establishments in 1891 was, \$38,769,004; the 9 establishments in 1881 had an output of \$17,290,159.

The proportion which the output of these establishments bore to the total output of all the industrial and mechanical establishments was in 1891, 8.1 per cent, and in 1881, 5.6 per cent.

It has been calculated that the output of the farms of Canada, allowing an average of 25 cents a day as the cost of farm products consumed by each person in Canada plus the exports of the produce of the farm, is equal to \$500,000,000 a year. The output from the mechanical and manufacturing establishment is valued at \$476,260,000.

The farmers numbered 408,738 in 1891 and, therefore, the average farmer contributed to the state the sum of \$1,223 a year.

The number of establishments in 1891 was 75,968. Thus the mechanical and manufacturing establishments contributed to the State as their share towards the aggregate product of the country the sum of \$6,000 a year.

The total number of hands employed in these mechanical and manufacturing establishments was 370,250. So that the share of each employee in the aggregated products is \$1,275, or somewhat more than each farmer's share, in the sum total of the aggregate products of the farm.

#### CONCLUSION.

The conclusions derived from the statistics are :

1. That all the groups show a very considerable increase in 1891 over 1881.
2. That all the provinces have participated in this development of industrial occupations.
3. That during the ten years there has been a great increase in the number and in the output of the large industrial establishments.
4. That the small industrial establishments have not been affected injuriously by the development of the large establishments.
5. That while the group containing the small industries increased their output as a group in 1891, yet that relatively to the whole this group occupies exactly the same position the similar group did in 1881.
6. That, therefore, the statement that the output for 1891 was inordinately and abnormally increased by bringing into the census of manufacturing and mechanical establishments a greater proportionate number of the very small establishments than were included in the census of 1881 lacks the essential element of truth.

GEORGE JOHNSON,  
*Statistician.*

The following diagram illustrates, 1st, the proportion which each of the five groups in each census bears to the total of all the groups. Thus group 1 in the census of 1881 is 6·7 per cent of the total of all the groups of the census of 1881. Group 1 of 1891 is 6·7 per cent of the total of all the groups of the census of 1891.

2nd. The increase in each group of 1891 compared with a similar group in 1881. This is shown by the shaded part of the columns of 1891. Thus group 1 (shaded part) of 1891 shows that this group has an output of 56 per cent more than the output of group 1 of 1881. The length shows the proportion which in each census each group bears to the other groups of that census. The width in 1891 (shaded lines) shows the growth in each group compared with 1881. Thus group 5 of 1891 is higher than group 5 of 1881. It is also wider. These facts mean that the large industries of the country had an output in 1891 larger in proportion to the whole output of that year, and showed an increase of 69·6 per cent on group 5 of 1881 :—

## PAPERS

REFERRED TO

THE MINISTER OF AGRICULTURE

ON THE

SUBJECT OF THE SCHEDULING OF CANADA

BY THE BOARD OF AGRICULTURE

---

P.C. Paper 90j, dated 2nd April, 1894, a despatch from the Colonial Secretary, transmitting correspondence on the aspects of the cases of alleged pleuro-pneumonia in Canada.

P.C. Paper 279j, dated 10th May, 1894, a despatch from the Colonial Secretary, acknowledging the despatch of Your Excellency, dated 15th February, 1894, covering a Minute of Council containing a statement of the Canadian case. It is requested in this correspondence that an official system of marking cattle for shipment be adopted, and that in cases of suspected animals the herds from which they came be slaughtered for the purpose of *post-mortem* examination.

P.C. Paper 285j, dated 7th May, 1894, a despatch from the Under Secretary of State for the Colonies, covering printed copies of Parliamentary papers C, 7125 and C, 7366.

P.C. Paper 395j, dated 28th June, 1894, a despatch from the Under Secretary of State for the Colonies, covering copies of Order of Board of Agriculture of 26th June, 1894, revoking the Canadian cattle slaughter examination order of 7th May, 1894.

P.C. Paper 482j, dated 22nd August, 1894, a despatch from the Colonial Secretary, covering a printed report of Parliamentary papers in continuation of C, 7123 and C, 7366.

P.C. Paper 483j, dated 21st August, 1894, a despatch from the Under Secretary of State for the Colonies, covering Parliamentary papers C, 7496, in continuation of C, 7123 and C, 7366.

# Scheduling of Canada.

## REPORT

The undersigned has the honour to report to Your Excellency on a reference to him, of the papers as per *précis* prefixed, on the subject of the scheduling of Canadian cattle by the Imperial Board of Agriculture, in 1892, in consequence of the alleged existence in the Dominion of the disease of contagious pleuro-pneumonia.

These papers cover the whole of the proceedings which have taken place, and include the Minute of the Board of Agriculture, of August last, with the accompanying evidence, the whole constituting the reply of the Board to the position taken in the Minute of Your Excellency in Council, passed on a report of the undersigned, dated 24th January, 1894.

This voluminous correspondence and reports of proceedings naturally divide themselves into two parts, the first containing representations in replication to statements in the Canadian Minute of Council mentioned; and the second relating to the justification of the persisted in allegation by the Board of Agriculture of existence of contagious pleuro-pneumonia in Canada.

In the first of these divisions in the letter of the Secretary of the Board of Agriculture to the Colonial Office (April 16th last), in reference to the subject of the slaughter of contact animals, it is stated:—

“Whatever may be the opinion of the Dominion Government as to the diagnosis of the veterinary officers of this department, it is surely going too far to say that the slaughter of herds from which the diseased animals were taken, or of animals with which they had been in contact, would have been an action ‘out of reason’ or ‘ridiculous.’”

In respect to these remarks, the undersigned desires to explain to Your Excellency that it was very far from his intention and that he would be very sorry to convey any impression of the nature of that attributed. He finds that a statement in the Minute of Council (Canadian) in question has been read in a sense different from that intended to be conveyed; and that the misunderstanding is sufficiently important to call for a particular explanation.

The paragraph in the report of the undersigned respecting which the remarks quoted from the letter of the Secretary of the Board were made, was in the following terms:—

“A report by Professor McEachran giving particulars on the subject of the very few animals rejected and the reasons why they were so rejected as being unfit for shipment is appended hereto, marked ‘J’. It appears there was not in a single case any reason why slaughter for suspicion of contagious pleuro-pneumonia could have been justified or in which such action would not have been ridiculous.”

The report of the Canadian inspecting veterinary officer is reprinted in the Imperial parliamentary return marked C.—7366 (page 149). It recites that the number of

animals rejected as being unfit to send forward was 44 out of 107,225 within the period of the season of navigation mentioned, for the following specified causes :—

Actinomycosis (Lump Jaw).....	23
Injuries received in cars.....	9
Tuberculosis.....	6
Mange.....	3
Old, thin and unfit to ship.....	3
Total.....	<u>44</u>

It was not seen in view of such facts, that the question of slaughtering the contact animals in a search for contagious pleuro-pneumonia, was one that could be seriously entertained.

The Board of Agriculture further stated "that the herds to which the diseased animals are reported to have been traced have not been slaughtered out in the same manner as would undoubtedly have been the case if the diseased animals had been home bred, and it had been traced back to the herds in this country."

This reference is to the searches instituted to trace out the herds from which the shipments by the "Monkseaton" and the "Hurons" were made in 1892. These searches of the veterinary surgeons, employed by the Canadian Government, extended from the province of Manitoba to the Eastern Townships in the province of Quebec, a large portion of the area of the Dominion. None of the veterinary officers employed in this service discovered any indication of disease in any of the animals examined, which would have justified slaughter in search of a disease of which suspicion had not in any way manifested itself.

(A special report of Professor McEachran on a reference to him on this point of objections of the Board is appended. Appendix No. 1.)

It has been the unvarying practice of the department to order the slaughter of animals in any case of suspicion of lung disease, for examination and report, with the exception of clearly diagnosed cases of tuberculosis.

The despatch of the Marquis of Ripon to your Excellency of May 10th, suggests that some more efficient system should be adopted of marking all cattle exported to the United Kingdom, so that in the event of any suspicious case arising it might be traced to the place of origin in order that special examination, including the slaughter of contact animals, might be made.

The present system of marking enables the owners to identify their own cattle after the voyage on landing; and in the cases of reference in the past this information has enabled the farms and localities whence the animals came to be indicated and traced out; that is with the exception of a few animals bought on the open market.

A system of indicating every animal, in such way as to enable it to be traced to the point whence it came, at the time of purchase, could only be carried out by a system of ear tags, or branding, at the place and time of purchase. Cattle are purchased for shipment in all parts of the Dominion east of the Rocky Mountains, on farms, in open markets, and on ranches; it follows, in view of the very great extent of territory, a system of this nature would be complex and somewhat difficult to carry out with sufficient supervision of details to secure perfect accuracy. The employment of a special

## Scheduling of Canada.

staff all over the Dominion would be necessary, to afford reasonable assurance that every mark on every animal obtained or purchased at points distant thousands of miles from each other, could be properly certified.

It has not, in the circumstances of the past, been thought that it would be useful to attempt to put such a system in practice; and especially in view of the substantial effectiveness of the present practice so far, in enabling contact animals to the detail of localities and farms to be traced; also having in view the uniform results of the information which has been obtained. In the case of exports of ranch cattle from the North-west, all the animals have their particular ranch brand marks.

This question was referred to Professor Baker, one of the departmental inspectors of cattle for exportation at the port of Montreal, for report, which is appended. (Appendix No. 2.)

The High Commissioner for Canada has officially communicated to the undersigned a copy of correspondence between Sir John Leng, M.P., and Mr. Herbert Gardner, published in *The Times* in November last, in which it is stated by the President of the Board of Agriculture, relating to further expected information from the Canadian Government on the subject of a cattle disease of the lungs, defined in a Minute of the Board in August last, to be pleuro-pneumonia, that:—

“The Board ought before this to have been placed in possession of the views and experience of the veterinary officers in Canada with regard to that disease, whether it is believed in Canada to be pleuro-pneumonia or not. \* \* \* Up to the present, however, the action of the Dominion Government, so far as the Board are informed respecting it, has unfortunately not been such as the Board themselves would have felt it their duty to take if there had been similar grounds for suspecting the existence of pleuro-pneumonia in this country.”

Mr. Gardner makes special reference to paper No. 36 in the published correspondence (C.7123) indicating the kind of information desired, and which he intimates the Board are waiting to receive from the Government of Canada. In paper No 36 referred to, the following passage occurs:—

“The cases (of lung disease meaning a specific type of pleuro-pneumonia) to which Sir Charles Tupper thus refers must have been made the subject of close examination and investigation by the official veterinarians in Canada, and the Board attach great importance to the receipt of full particulars as to the circumstances attending the cases and the nature and results of the inquiries made respecting them.”

This statement proceeds on an assumption that the Canadian Department has in possession reports of cases, of animals affected with a type of lung disease, which “must have been made the subject of close examination and investigation by the official veterinarians in Canada;” and further that the “Board attach great importance to the receipt of full particulars.”

These remarks considered in connection with a somewhat similar statement in a letter of the Board in July, 1893, to the effect that they (the Board) had been given to “understand on the highest authority” that cases of cattle diseases, indicating the existence of a specific type of pleuro-pneumonia, have at intervals come before the Canadian authorities, having morbid appearances identical with those present in the lungs of animals of the “Brazilian” and “Lake Winnipeg” leave the impression that the Board yet suppose something has been held back.

The assumption contained in the extract from Mr. Gardner's letter and the official publications of the Board, that information relating to the kind of disease in question has been withheld, is entirely devoid of any foundation. The Department of Agriculture has not had in possession any reports of its "official veterinarians," or others, of any "examination and investigation" of any case of animal lung disease in Canada, which has not been communicated to the imperial authorities. All reports and correspondence relating to any animal disease in Canada were sent forward as an appendix to the Minute of Council, in January, 1894. These have been published in the imperial parliamentary paper C.—7366 (pages 115-165); and all further reports since the date mentioned are herewith sent forward. (Appendix No. 3.)

These reports and correspondence relating to animal diseases include every report and letter received by the Department on the subject from the date of the commencement of the cattle quarantines in 1880, to the date of this report. Many unimportant details were included in order (1) to show fully the nature of the diseases which have prevailed among animals in Canada, and (2) for the purpose of not affording any ground for question in respect to any matters not communicated.

The undersigned caused examinations to be made by veterinary surgeons of the localities whence the animals which formed part of shipments of cattle among which the lung disease in question was found by the imperial officers during the last year, including the contact animals in the localities whence the animals found affected came. The results were the same as previously reported. No disease was found nor any trace nor suspicion of such (Appendix No. 4).

And further, in the month of November last, the undersigned ordered an expert examination to be made of the lungs of all neat cattle slaughtered at abattoirs in the large cities of the old settled provinces during one month, in order to ascertain if any case of pleuro-pneumonia could be found. The number of sets of lungs examined was 3,085, namely 1,789 at Montreal, 381 at St. John, N.B., 334 at Halifax, N.S., 308 at Toronto, 138 at London, Ont., 57 at Galt and 78 at Hamilton. No trace of the disease of pleuro-pneumonia was found; but at Montreal an interesting fact was discovered. The lungs of one animal were found to be affected by pneumonia, accompanied by the "marbling" so often described in these papers as the characteristic of the disease found in the lungs of Canadian animals which forms the subject of this discussion. The cause, however, of the lesion was not far to seek. A small branch of a rose bush about  $3\frac{1}{2}$  inches in length and  $\frac{1}{8}$  inch in diameter was found imbedded in the lung, some of the prickles of the rose branch remaining attached. It is supposed the animal had inhaled it and that it had worked its way down the bronchial tubes. A carefully coloured drawing was made by direction of Professor McEachran, which he has forwarded to the Department. The specimens of lungs showing the lesions referred to, having the "marbled" appearance, on which so much stress has been laid, are preserved by Professor Adami. It is believed that if there had been any prevailing form of lung disease in Canada some specimens of it would probably have been found in the examinations of lungs of animals slaughtered at the principal Canadian abattoirs during the space of one month. (For reports see Appendix No. 5.)

The intimation in the letter of Mr. Gardner that it is the duty of the Canadian Government to slaughter contact animals to enable expert examination of lungs to be made, for communication to the Board, in the same way as would be done in England, is not practicable in view of the existing facts. If the conditions in Canada were

## Scheduling of Canada.

the same as in the United Kingdom, and the presence of contagious pleuro-pneumonia were indicated by its outbreaks, there would be no difficulty in following out the course of action prescribed by the Board. But there are no manifestations of the type of disease in question in Canada. Such manifestations only appear after long confinement of the animals in railway cars and steamships; in the cars sometimes for a journey of between two and three thousand miles, and in steamships sometimes accompanied by hardships in crossing the Atlantic Ocean. When in 1886 a case of pleuro-pneumonia happened to be imported from Great Britain at the Lévis quarantine all contact animals were, to the utmost extent, immediately destroyed by order of the Canadian Government; and when any case of suspicion of lung affection, other than tuberculosis, has been brought under the notice of the Minister charged with the administration of the laws and regulations relating to such matters, the order, invariably, without a single exception, as has been before reported, has been to slaughter the suspected animal, and to have an expert examination made of the lungs. All reports of such cases have already gone forward, and no further case is known to exist on which to report.

The information relating to examinations and reports of disease now submitted to be sent forward herewith does not differ in character from that previously sent; and there is absolutely nothing further to communicate.

In the absence of disease or suspicion of disease in any locality, the Animal Contagious Diseases Act would not authorize the slaughter of animals in a search for disease; and it is not seen that any step of that kind could with reason be taken.

In respect to the Second Division of the correspondence and Parliamentary papers in this reference relating to the allegation of existence of contagious pleuro-pneumonia in Canada, it is chiefly important to consider the copy of a Minute of the Board of Agriculture, dated August 13th, 1894, signed by Mr. Gardner, as President; and the "Minute of Evidence given to the President of the Board as to the appearances present in the lungs of certain cattle landed in Great Britain from Canada in May and June, 1894."

The Board were assisted, in their investigation, by the Rt. Hon. Sir Henry James, Q.C., M.P., and Dr. J. Burdon Sanderson, F.R.S., Waynflete Professor of Physiology in the University of Oxford, as Assessors.

The Board sat with their assessors on four separate occasions, and received the evidence of the following witnesses:—

"1. Mr. Alexander Curtis Cope, M.R.C.V.S., Chief Veterinary Officer of the Board of Agriculture."

"2. Prof. George Thomas Brown, C.B., Hon. Assoc. R.C.V.S., Consulting Veterinary Adviser to the Board of Agriculture."

"3. Mr. William Wilkinson Smart, M.R.C.V.S., Senior Veterinary Inspector at the Port of Liverpool."

"4. Mr. Stephen Giles Holmans, M.R.C.V.S., Senior Veterinary Inspector at the Port of London (Deptford)."

"5. Dr. German Sims Woodhead, M.D., F.R.C.S., Edin., F.R.S.E."

"6. Dr. Henry Duncan Littlejohn, F.R.C.S., Edin., President of the British Institution of Public Health and Medical Officer of Health for Edinburgh."

"7. Prof. John F. McFadyean, M.B., B. Sc., C.M., F.R.C.V.S., Dean of the Royal Veterinary College."

"8. Dr. Francis Vaucher, F.R.C.S., Edin., M.R.C.S. Edin., F.C.S., Medical Officer of Health for Cheshire."

"9. Prof. James Macqueen, F.R.C.V.S., Professor of Surgery in the Royal Veterinary College."

"10. Mr. William Duguid, F.R.C.V.S., Assistant Veterinary Officer of the Board of Agriculture."

"11. Mr. William Hunting, F.R.C.V.S."

"12. Mr. Richard Rutherford, F.R.C.V.S."

"13. Mr. Clement Stephenson, F.R.C.V.S., Veterinary Adviser to the Northumberland County Council and the Corporation of Newcastle-upon-Tyne."

"14. Mr. Frederick Richard Ingersoll, M.R.C.V.S., one of the Veterinary Inspectors of the London County Council."

"15. Mr. Samuel James Rayment, M.R.C.V.S., one of the Veterinary Inspectors at the Metropolitan Cattle Market."

"16. Dr. M. Armand Ruffer, F.L.S., F.M.S., Lond."

"17. Professor James McColl, F.R.C.V.S., Principal and Professor of the Veterinary College, Glasgow, Veterinary Inspector at the Port of Glasgow and Veterinary Inspector of the Glasgow Corporation."

The evidence taken had relation to the following heads of inquiry.

"1. The appearances ordinarily present in undoubted cases of pleuro-pneumonia (*a*) as described in standard text-books of recognized authority, and (*b*) as met with in the experience of the witnesses."

"2. The appearances present in the 'Toronto' and 'Mongolian' lungs.

"3. The degree of resemblance or of variation as between the appearances of the 'Toronto' and 'Mongolian' lungs, and the appearances stated to be present in undoubted cases of pleuro-pneumonia.

"4. The possibility of error in the differentiation of pleuro-pneumonia from other known lung diseases of cattle.

"The duration of the disease in the 'Toronto' and 'Mongolian' cases, and the possibility of its being occasioned by exposure and hardship in transit.

"6. The general conclusions of the witnesses as to the nature of the disease in the 'Toronto' and 'Mongolian' cases."

A general reference was made to six animals landed in the year 1894, from the "Toronto," the "Laurentian," the "Lake Superior," the "Mongolian" and the "Assyrian," as presenting suspicious features; but the examination practically rested on "the appearances presented by the 'Toronto' and 'Mongolian' lungs."

The Board on a review of the voluminous evidence taken, and which is printed in full in a parliamentary paper, arrived at the conclusions stated in the following words:

"(1.) That there is a close resemblance, amounting to practical identity, between the post-mortem appearances of the 'Toronto' and 'Mongolian' specimens and those presented in cases of pleuro-pneumonia; (2) that the approximation of the appearances in those specimens to those presented in the case of pleuro-pneumonia is very much greater than in the case of any of the known diseases affecting the lungs of cattle; and (3) that none of the appearances recorded in the Canadian cases can be regarded as foreign to pleuro-pneumonia, or as indicative or suggestive of some other disease hitherto unobserved."

The undersigned is unable to concur in these conclusions, and he finds that it is his duty to report to Your Excellency, on a consideration of the evidence presented that he cannot depart from the position defined in his report on January 24th last, on this subject.

Having in view the history of the cases and the pathology of the lesions in question, the undersigned finds very serious conflict in the evidence given by several of the eminent veterinarians examined, with the opinions of the veterinary officers of the Board in almost every head of the inquiry, as above quoted, such differences, however, being reconciled in the conclusions defined in the Minute of the Board, in the terms above stated,—by the device of recalling Messrs. Cope, Brown and Duguid, the Board's

## Scheduling of Canada.

officers in rebuttal, and obtaining from them opinions in support of their own and the Board's position, previously assumed.

Certainly no exception could be taken to a proceeding which afforded these gentlemen every possible opportunity fully to explain their views and maintain their assumed position either in direct evidence or in rebuttal ; but it was, as it strongly appears to the undersigned, at the same time essential, to do justice to the case of Canada, that many more questions should have been put to the distinguished veterinarians whose evidence was rebutted by the Board's officers in relation to the pathology of the lesions of the "Toronto" and "Mongolian" lungs, considered in connection with the history of the cases, the undoubted facts established relating to the non-contagiousness of the disease found, and the total absence of contagious pleuro-pneumonia in Canada.

The High Commissioner for Canada, in London, has officially, as before stated, communicated to the undersigned a copy of correspondence published in *The Times* between Sir John Leng, M.P., and Mr. Herbert Gardner, followed by a letter from himself, which has bearing on this point of the proceedings. Sir John Leng made the following remarks in his letter to Mr. Gardner relating to statements made by Sir Charles Tupper at a gathering of Forfarshire agriculturists and land proprietors and with which Sir John said they were very much impressed :—

"With reference to the inquiry over which you presided last summer into the reports of the experts that neither he (Sir Charles Tupper), as representing the Government of Canada, nor any of the representatives of the great cattle trade of this country were permitted to be present or to take part in the investigation, so that the inquiry was entirely one-sided and conducted to support the foregone conclusions of experts who are known to have made mistakes in some former instances."

Mr. Gardner replied, and after describing the elaborate nature of the inquiry by the Board, stated :—

"There would have been no objection to the presence of Sir Charles Tupper or representatives of the cattle trade during the examination if any desire to that effect had been expressed. \* \* \* \* With regard to the suggestion that Sir Charles Tupper and the representatives of the cattle trade should have been permitted to take part in the investigation, I can only say that it is not possible for the Board of Agriculture to share with any one, however eminent or interested in the question, the responsibility which devolves upon the Board under the law. To the charge that 'the inquiry was entirely one-sided and conducted to support the foregone conclusion of experts who are known to have made mistakes,' I can only oppose a distinct negative and express my surprise that Sir Charles Tupper should have made it."

The High Commissioner in his replication made the following statement :—

"Mr. Gardner states that I might have been present at the inquiry if any desire to that effect had been expressed. I may remark that I did express a wish to be allowed to take part in the inquiry, but was informed by Sir Robert Meade, the permanent under Secretary of State for the Colonies, that this was not practicable. Mr. Gardner, in his letter, confirms Sir Robert Meade's statement, and it will be readily understood in these circumstances I must in any case have declined to be present."

It appears, from the position established by these extracts of correspondence, that the inquiry of the Board must be regarded simply as an elaborate departmental exposition, which sustained the action previously taken, assisted by eminent assessors, rather than a free committee inquiry such as was in the first place understood would be had.

In the conflict of professional opinion under the first four heads of the inquiry as above quoted, the following points appear :—

Mr. Hunting said that he had never seen a case of pleuro-pneumonia of uniform colour (657). "I know of no reliable data upon which a man can distinguish between a *post-mortem* appearance of a sporadic and contagious pleuro-pneumonia in a case" (581). He found general characteristics of two diseases, the Canadian disease and contagious pleuro-pneumonia to be alike, but he added: "There are differences which have not been recognized by Professor Brown, which are not explainable on the theory that it (the Canadian disease) is pleuro-pneumonia" (548). His ground for not thinking the Canadian cases were contagious pleuro-pneumonia was want of variety in colour, want of consolidation of hepatisation, the comparative absence of pleurisy, the effect of spirits of wine on a portion of the lung and hardened exuded material in little spheroidal bodies which can be picked out from interlobular spaces (555). Dr. Sims Woodhead did not think it possible to differentiate between catarrhal pleuro and contagious pleuro-pneumonia, and said if it were "the whole matter might be settled at once" (281). It would be difficult in the early stages to distinguish an acute case of a non-specific kind from an acute case of contagious pleuro-pneumonia (285). He thought "if it were possible to obtain the history of a case, we should be able to determine whether the case was pleuro-pneumonia or not. The difficulty is only in those cases where it is difficult to get history" (287). He had seen animals cooped up during a storm in which there were patches of pleuro in the lungs (278). He could not fix upon any particular appearance in the case before him as in itself pathognomonic, as it is called, characteristic of contagious pleuro-pneumonia (289). Professor Macqueen denied that the evidence was sufficient to make him believe these cases were contagious pleuro-pneumonia (412-433). He found the "Toronto" case inconsistent with contagious pleuro-pneumonia in the early stages. "All the Canadian lungs I have seen present the same lesions" (437-447).

The points of conflict of independent professional opinions from those of the officers of the Board, and on which the Board's conclusions were based, might be multiplied. But sufficient has been quoted to show how important are the differences in view of the nature of the facts in issue.

The Board in their Minute in summarizing the rebuttal evidence of their veterinary staff (p. 44), pointed out that in the course of large experience of examination of the lungs of animals, no mistakes had been made. Adverting to the rebuttal evidence of Professor Brown, the Minute states that "out of 3,133 sets of lungs the veterinary officers of the department had separated 1,087 as being cases of pleuro-pneumonia," and points out that not in "a single instance had disease been traced back to animals which had been declared unaffected with pleuro-pneumonia." The inference to be derived from this statement, is, however, very limited, in relation to the important questions in contention.

In the answer of Professor Brown subjoined, to which particular reference is made in the Board's Minute, he complains that an expression, formerly used by him, "has been made a great deal more of than I myself ever meant in using it." He said with respect to the ovate bodies found in the interlobular tissue when asked whether they were characteristic of some disease peculiar to Canada :—

"I first observed this feature in cattle from the United States and it was so common in them that I, for the purpose of description, spoke of it as being characteristic of the type of pleuro-pneumonia, which we found among those animals. That expression on my part has been made a great deal more of than I myself ever meant in using it.

## Scheduling of Canada.

It meant simply that there was that peculiar condition in a very large number of cases. Having noticed it, I began to look more closely into the lungs of cattle slaughtered in this country, and I found the ovate bodies very frequent indeed, particularly in parts where the deposit was most recent, and most removed from the centres where the disease was evidently in a very acute form" (849).

This explanation of his former statement has reference simply to the point of the finding of ovate bodies in the interlobular tissue, but the report of Professor Brown in 1893 had a much more general scope and important bearing on the questions in issue in the present contention. In that report (dated 3rd July in that year), Parliamentary paper, C-7123, Professor Brown gave the result of an examination of portions of the pp. 79-80. lungs of an ox from Manitoba landed at Liverpool from Montreal on 21st May, in which after describing the appearances presented in ordinary characteristics of contagious pleuro-pneumonia, he stated :—

"It has been suggested that the appearances of the cut surface of the lung of this Canadian ox differed in some respects from those seen in pleuro-pneumonia in this country. For example, it has been pointed out that the lobules in the diseased part instead of varying in colour from light pink to dark red or nearly black were of a uniform vermilion tint, and that the interlobular bands were rather more dense than is generally observed in pleuro-pneumonia and did not exhibit many small cavities (lymph spaces) filled with fluid."

And then he stated :—

"It is undeniable that these peculiarities did exist and it is important to notice that they have from the first been recognized as special characteristics of pleuro-pneumonia in animals which have been landed in this country from the United States regularly since 1878.

"No satisfactory explanation of the deviations referred to has been offered, but the history of pleuro-pneumonia on the North American continent proves beyond doubt that it is as contagious and fatal as the pleuro-pneumonia of Europe."

And he concluded his report by the statement that his decision was concurred in by his colleagues, declaring the case to be one of pleuro-pneumonia of the American type, in the following words :—

"After prolonged and careful inquiry I am forced to the conclusion, in which my colleagues concur, that the Canadian ox 'Lake Winnipeg' was the subject of contagious pleuro-pneumonia identical in morbid anatomy with pleuro-pneumonia among cattle in the United States and differing only in unimportant characters from the European type of the disease."

The undersigned respectfully represents that the explanation of Professor Brown given in evidence before the Board of Agriculture in June last, does not remove the importance of the statements above cited from his report in 1893, and particularly when taken in connection with the known facts of the history of the lesions of the old ox from Manitoba, the examination of the lungs of which was the subject of that report.

In addition to conflict of opinion there is a conflict of statement of fact in the Minute of the Board (pp. 54-55) and the evidence attached. Professor Macqueen, F. R.C.V.S., (Professor of Surgery in the Royal Veterinary College,) who is stated by the Board Minute to have had a good deal of experience with pleuro-pneumonia since 1877, he having acted for nine years as Deputy Inspector to the Local Authority for Glasgow and as Deputy Inspector at the Port of Glasgow. He said he had seen most of the cases sent to the Royal Veterinary College, under the slaughtering order. He is stated

by the Board's Minute to have found between the years 1878 and 1888 "quite often," "cases of localised lung disease" presenting appearances "very similar to the 'Toronto' and 'Mongolian' cases—appearances which included congestion of the pleura and "its reddening over a limited area, a slight swelling of the lung, and the presentation, on "section of a darker red surface, together with a slight thickening of the inter-lobulated connecting tissue, with fluid." These cases, Prof. Macqueen said, he sometimes "reported to Prof. McCall, whose deputy he was, and who would sometimes examine "the animal or the carcass; but he could not understand any one ever thinking that "they were cases of contagious pleuro-pneumonia, 'as we see it.'"

Professor McCall was again recalled and he gave evidence in rebuttal denying his knowledge of such cases. A contradiction on an important point is thus established. But it cannot be said that the evidence of Professor Macqueen is thereby discredited. On the contrary the probabilities of the situation and the facts as known in Canada support it.

The evidence taken by the Board in relation to the fifth head of their inquiry, namely, "The duration of the disease in the 'Toronto' and 'Mongolian' cases," has much interest in relation to the issues in contention.

Dr. Woodhead, as reported in the Minute of the Board, "thought that in both "cases there was evidence that the disease was not of long standing, and he should say "that it would not be more, probably less, than two weeks since the disease began to "give rise to distinct pathological lesions. The incubation period was, he said, given "as lasting such variable periods as 10 days to 6 weeks." Dr. Littlejohn confirmed Dr. Woodhead's opinion, and stated that the disease "was of comparatively short duration." Professor Macqueen said it was a very early case. Mr. Duguid considered the "Toronto" case "acute" and said it was impossible to tell the duration. Mr. Hunting said the "Toronto" was a very early case of the disease; that of the "Mongolian" a little older. Professor Brown expressed the opinion that the disease in both cases was contracted before the voyage began; that the morbid appearance presented could not be produced during the voyage. He fixed the "period" of the "Toronto" case at about "a month."

There was nothing in the evidence taken to show that if it were admitted the disease were a bacterial or germ disease that it had not been contracted after the animal had begun to be driven to the market or railway station, and thence carried by rail to the stock yard at the port of shipment, and thence by ship to the transatlantic port. The time occupied in these several transit proceedings is frequently quite as long as the longer periods named by the experts in evidence at the inquiry of the Board as the period of the duration of the disease, that by Professor Brown himself being limited to one month. In the present state of bacteriological science there is nothing to prove that the lesions in question might not be developed in much less than a month.

The evidence which was given to the Board respecting the recent origin of the lesions, is quite consistent with the inference made, by the veterinary officers of the Canadian Government to the effect that they were incident to hardships during long transit, by driving, by railway, by detention caused by railway cars waiting for connections, the same in the stock yards, and packed in close compartments on ship board, operating on animals unable to bear such strain, from age or other infirmity. Professor Macqueen said in his evidence (393) that "it would be remarkable in the case of a "number of cattle shipped on board a steamer, and remaining on board 10 or 12 days, if

## Scheduling of Canada.

“one or two of the whole shipment did not arrive somewhat sick, and presenting some defect in the lungs.” He stated further (394) that the appearances presented were “very similar to these (Canadian) cases.”

This evidence in relation to absence of long standing of Canadian cattle disease in the cases examined in England, supports a further contention of the Canadian veterinarians to the effect that no old nor encysted cases of pleuro-pneumonia lesions have ever been found, out of the 193,860 slaughtered at the port of landing since the scheduling in 1892; nor among the number of 1,393,589 shipped since 1880, as would indubitably have been the fact had the disease of pleuro-pneumonia existed in Canada.

It is stated in the concluding paragraph of the Minute that the Board desire to place Canadian Veterinarians in possession of a complete statement of the views of experts in the United Kingdom; and it is intimated “that it is with the members of the Veterinary profession in the Dominion that in the opinion of the Board the next step rests.”

The undersigned has departmentally obtained a report from Professor McEachran, the Chief veterinary inspector of the Department, on the subject of this controversy, and such is herewith subjoined (Appendix No. 6). The conclusions which Professor McEachran has arrived at are highly adverse to those of the veterinary officers of the Board.

A report of Professor Adami, (late Fellow of Jesus College, Cambridge,) professor of pathology in McGill University, is communicated to the Department as an inclosure of Professor McEachran's report. It is herewith submitted. Professor Adami criticizes both the methods and the conclusions of the Imperial veterinary officers as well as those of the Board inquiry, the whole of which he finds to be entirely unsatisfactory and inconclusive. (Appendix No. 6a.)

A letter of Dr. Welsh, professor of pathology of the Johns Hopkins University of Baltimore, has also been communicated to the undersigned in the form of an inclosure to Professor McEachran's report. (Appendix No. 6b.) This is also herewith submitted. Professor Welsh states that the lesions which were the subject of the Board's inquiry, are of a very serious kind, and such as he might, on first looking at them, have pronounced to be pleuro-pneumonia, but he found on further examination serious differences which have not been determined by the methods pursued by the Board's officers or the Board's investigation.

Professor McEachran and Professor Adami particularly criticize the answers given by Professor Brown as they appear in the evidence relating to the experiments of Mr. Nocard; and in particulars of great importance, in relation to the issues of the contention. Professor Adami states that no one has so far discovered any pathogenic microorganisms in the true disease of contagious pleuro-pneumonia, and bearing this fact in view, he writes: “Mr. Nocard notes that to the naked eye the condition found by him in the lungs of certain cattle coming from the United States is scarcely distinguishable from the manifestations of the contagious disease. With the greatest clearness he demonstrated that the lungs in question contain great numbers of one special form of bacteria, not found in contagious pleuro-pneumonia; that these, in pure culture, or mixed with the exudation, inoculated in live rabbits, guinea pigs and calves, produce a characteristic disease, which in the case of the calf (when inoculation has been made into the lung) is indistinguishable from the pneumonia found in American cattle, and said to be the same as the Canadian disease.”

If bacteria of special type are found in the lungs of Canadian animals, affected by a marked type of disease, in uniform particulars distinct from contagious pleuro-pneumonia, and which cannot be found in true contagious pleuro-pneumonia, there is a differentiation established which ought to be fully investigated, and which cannot be set aside by the kinds of answers of Professor Brown as they appear in his evidence. It is due to the large interests concerned that all the facts relating to such differentiation should be clearly established.

The undersigned desires to point for the consideration of Your Excellency, in the same way as in a previous report (January, 1894) that the interests connected with the health of animals in Canada are of vastly greater magnitude than any that can possibly attach to the conditions of a market, however valuable, for surplus stock. The value of neat cattle and their products in Canada, as established by the Census of 1891, reached the figures of \$135,500,000; and the development of increase, since the date of enumeration, has been very rapid. All the administration of the Department of Agriculture in matters pertaining to the health of animals has this great interest, and how to protect it from diminution by the entrance of disease, always in view. This fact may be accepted as a reason why in any controversies relating to cattle disease, neither the undersigned nor his officers, would be likely to be misled or influenced in any controversy, by the consideration of obtaining an improvement of conditions of a market for surplus live stock.

To summarize in recapitulation and conclusion what appear to be the chief points established by a consideration of the expert evidence and other information contained in these voluminous papers, referred to the undersigned, he finds:—

(1.) That a disease which appears from lesions in the lungs to have a particular type alleged by the Board of Agriculture to be pleuro-pneumonia, has been found in the case of about a dozen animals out of 193,860 slaughtered at the port of landing since the fall of 1892; and it may be added out of a total of 1,393,589 neat cattle shipped from Canada since 1880.

(2.) That the persistent and reiterated demand by the Board of Agriculture of the Canadian Government to furnish further information of such disease, based on expert examination of lungs after slaughter of animals, cannot be complied with, for the reason that such disease cannot be found in Canada, notwithstanding diligent and repeated veterinary search, this fact leading to the confident belief that it does not exist in Canada, and to the conclusion that it is absolutely impossible to furnish the Board with any further information in relation to it by the discovery of cases in Canada,

(3.) That the lesions stated to have been found in the lungs of animals after landing in England or Scotland, after having been carried in some cases from the Northwest plains of Canada, near the base of the Rocky Mountains, a distance of between two and three thousand miles to the seaport, subject during such carriage to detention arising out of waiting for railway connections, the animals being sometimes confined for several days in stock yards before embarkation, and necessarily packed in close compartments on ship board, where, sometimes despite the utmost care under the regulations, they are in some weathers, subject to insufficient ventilation and other forms of hardship, it being only after the animals have endured such trials, that the lesions in question can be discovered. It follows, therefore, that further elucidation arising from expert inquiry, as asked for by the Board, can only be obtained in the United Kingdom.

## Scheduling of Canada.

(4.) That such disease, moreover, being found in animals having constitutions impaired by age or hardship from confinement in travelling, the form manifested has, for these reasons, been called by veterinary experts in Canada, "transit pneumonia."

(5.) The inference of the Board that such disease, being bacterial or germ, must therefore have been contracted in Canada before embarkation, is not supported by evidence; on the contrary there is nothing to show that it might not be contracted in the conditions and time of transit stated.

(6.) That the weight of expert evidence, as appears in the proceedings of the Board, determined such lesions to be of very recent origin, that is within the period occupied by the transit.

(7.) That there is nothing in the present discoveries of bacteriological science to establish an inference of the Board and their officers that a bacterial or germ disease may not be developed during a transit such as described.

(8.) That experience in Scotland and England, in the same way as in Canada, has shown such disease to be non-contagious, from contact of Canadian animals in very large numbers, spreading over many years, the contention in the Parkhill-Lindores case in 1892, that one Canadian animal communicated the disease in question, is not supported by sufficient evidence, in the face of strong improbability.

(9.) That in all the many thousands of Canadian animals slaughtered in the United Kingdom not a single case of old or encysted pleuro-pneumonia has been found, a condition which is believed would be impossible, if the disease as alleged prevailed in Canada.

(10.) That among 3,085 sets of lungs of cattle slaughtered in abattoirs during one month, in November last, no case nor trace of the disease in question was discovered. It is believed that if such disease had prevailed in Canada some trace of it would have been found by the test.

(11.) The conclusion of the Board of Agriculture in their Minute, that such disease exists in Canada and that it is contagious pleuro-pneumonia of a special type, but not different in its "contagious and fatal effects" from the commonly accepted type known in Europe and elsewhere, is altogether irreconcilable with the fact that it cannot be at all found in Canada, and that it has never, in any part of the Dominion ever been known; that no trace of it even has been nor can be discovered. This declaration is made after very earnest special search by veterinarians employed for that purpose by the Canadian Government.

(12.) That the continuing of the restrictive Order requiring the slaughter of Canadian cattle at the port of arrival, for the reason of alleged presence of the disease of pleuro-pneumonia in Canada, is not supported and it is believed cannot be, by any proof, of its existence.

If the Board of Agriculture should consider it advisable to send one or more veterinarians for any further elucidation of the facts, on the authority of persons employed by themselves, the undersigned would advise that the offer made in 1892 be repeated, and that he be authorized to pay their expenses from his departmental appropriation, applicable to such service.

In submitting this report for the consideration of Your Excellency, the undersigned respectfully recommends that, if approved, a copy may officially be communicated to

the Marquis of Ripon, for such action as he may find advisable, with the object to obtain if possible a reconsideration of the present decision of the Board respecting Canadian cattle.

The whole respectfully submitted,

A. R. ANGERS,

*Minister of Agriculture.*

Department of Agriculture, Ottawa.

January 31st, 1895.

# Scheduling of Canada.

## APPENDIX No. I.

### REPORT ON NON-SLAUGHTER OF ALLEGED CONTACT ANIMALS.

(By PROFESSOR McEACHRAN, D.V.S., F.R.C.V.S., DEAN OF FACULTY OF  
COMPARATIVE MEDICINE, MCGILL UNIVERSITY.)

OFFICE OF THE INSPECTOR OF STOCK,  
MONTREAL, 26th July, 1894.

SIR,—In reply to yours of 24th instant, asking for a recital of “my reasons for the advice I have given recommending the non-slaughtering in Canada of herds from which cattle suspected of having pleuro-pneumonia contagiosa have been taken,” I beg to say that under the “Animal Contagious Diseases Act” there is no provision for slaughtering cattle, other than that contained in section 12, namely :

“The Governor in Council may, from time to time, cause to be slaughtered animals suffering from infectious or contagious disease, and animals which are or have been in contact with or close proximity to a diseased animal or to an animal suspected of being affected by infectious or contagious disease.”

Having in every instance in which exported animals have been reported from Canadian steamships at British ports, as being affected by an alleged contagious disease said to be pleuro-pneumonia contagiosa, either personally or through other qualified inspectors, had careful clinical examinations of the contact herds, to which they were traced, made, and finding no infectious nor contagious disease, nor animals which had been in contact with or close proximity to diseased animals, nor to animals suspected of being affected by infectious or contagious disease, I could find no justification for advising the Minister to take an order for the slaughtering of any animals.

And furthermore, having examined portions of the lungs of the animals said to have been affected by contagious pleuro-pneumonia, I am convinced that such naming was an error, and that the disease which was found in the animals affected, was a non-contagious pneumonia. I was also aware that in no instance has the disease discovered at British ports in Canadian cattle spread to other cattle as contagious pleuro-pneumonia is well known to do.

For these reasons I could not recommend the slaughter of healthy cattle, and if I had been ordered by the Minister acting under Order in Council to do so, I should have been at a loss to know whose herds to slaughter, as a shipment of cattle might be collected from 150 farms, scattered over a large area of country.

Besides, it would not be necessary for any one to suggest an action of this kind, if the slightest grounds of suspicion existed. We should have followed our usual practice in such cases, and tested the herd by post-mortem examination.

As to the reasons why we do not slaughter cattle rejected at inspection, the answer is to the same effect, namely, no suspicion of infection. Nearly all the rejected animals are lamed or bruised, unfit to ship, occasionally a very old worthless cow, cases of big-jaw, and now and again a tuberculous animal. But the greater part of the detained animals had suffered merely from fatigue or injuries *en route*, and were passed and sent on by a later steamer. Big-jawed or tuberculous animals are not knowingly allowed to go forward.

To carry out the suggestions of the Board of Agriculture in this connection would not only go beyond the provisions of the Act, but would lead to serious responsibility in unnecessarily destroying not only herds of cattle, but ruining the farmers whose herds would be thus arbitrarily selected for extermination, and I should not know where to begin.

I have the honour to be, sir,

Your obedient servant,

JOHN LOWE, Esq.,  
Deputy Minister of Agriculture,  
Ottawa.

D. McEACHRAN.

## APPENDIX No. 2.

## REPORT ON MARKING CATTLE EXPORTED.

(By M. C. BAKER, D.V.S., FACULTY PROFESSOR OF ANATOMY OF COMPARATIVE MEDICINE, MCGILL UNIVERSITY.)

OFFICE OF INSPECTOR OF STOCK,  
MONTREAL, 19th May, 1894.

SIR,—I have been making further investigation with reference to the feasibility of tracing cattle exported, to the herds from which they came, by means of marks put on at this port or at other places before they leave the country.

I find, for instance, that out of 200 car loads received at the Grand Trunk Railway Stock Yards, 30 car loads were shipped from Toronto and 170 car loads from various other stations along the line. Of those which we may call direct shipments, 65 car loads were in single car load lots, and 105 car loads were shipped in two or more loads from each station. In some cases eight or ten cars from one station.

At the Canadian Pacific Stock Yards out of 200 car loads :—

Sixty came from Toronto ; 30 from Manitoba and North-west ; 95 from various stations shipped in two or more car load lots ; and 15 car loads came in single lots.

I do not think that any marks we might put on the cattle here would, excepting in a very few cases, be any more reliable help in tracing the cattle than the marks that are now put on them by the shippers for identification when they reach their destination.

If cattle are to be marked that they may be traced to the herds whence they came, the marks must be put on them before they leave.

The marks put on by shippers are clipping off the hair on certain parts of the animal, usually about the hips on one side or other.

When the cattle get here, it is only now and then that those in charge of them would be able to tell us anything more definite than they were shipped at such a station and were bought from the farmers in the neighbourhood. It is only when there is something specially striking about the appearance of an animal that the persons in charge can tell exactly where it came from.

There is no system which we can adopt at this port that will enable us to trace the cattle directly beyond the station whence they were put in the cars. The shipper could inform us of whom he bought the cattle in a particular car, and, in such a case all the farms which contributed to that collection would be equally open to suspicion of having sent a suspected animal.

The shipping of cattle has been, so far this season, largely in small lots which renders tracing by the owners' marks more reliable, than when one man ships large numbers, bought up from smaller men, who just now ship and mark their own cattle.

The small shipper does not mark his cattle until he is certain he cannot sell to the larger. If he has to ship himself he puts a mark on them.

The only thing we can do here that I can see is to have all cattle marked with the scissors, before they change hands,—that is when a small dealer sells to the large shipper, and have the marks, so put on, entered in the stock yards shipping book ; and also in the inspection book that we use.

This would not be, by any means, a perfect system of marking. The only perfect system would be by ear tags or branding, by the farmer or feeder before the cattle leave home, and the marks made by him, reported by the shipper to the Inspector, who would note and inspect the marks as well as the cattle, and enter them on the certificate, where they will remain on record.

I have the honour to be, sir,  
Your obedient servant,

M. C. BAKER.

JOHN LOWE, Esq.,  
Deputy Minister of Agriculture,  
Ottawa.

# Scheduling of Canada.

## APPENDIX No. 3.

### PRÉCIS OF CASES OF DISEASES OF ANIMALS REPORTED TO THE DEPARTMENT OF AGRICULTURE, BETWEEN THE 31st JANUARY, 1894, AND THE 31st DECEMBER, 1894.

MONTREAL, 31st January, 1894.

The Chief Veterinary Inspector of the Department of Agriculture, Dr. McEachran, reports that tuberculosis was discovered in a herd of Ayrshire, on the Sommerville Farm, Lachine Rapids, owned by Mr. W. W. Ogilvie.

The whole herd was killed and buried.

GANANOQUE, 17th February, 1894.

Information was received by the Department of Agriculture that disease existed in a Holstein cow, owned by Mr. E. H. Ellis, of Gananoque.

An investigation by Professor Andrew Smith, chief veterinary inspector, of the Department of Agriculture for Ontario, reported the case to be one of tuberculosis.

The animal was slaughtered and a *post-mortem* proved this to be the case.

TRURO, N.S., 26th February, 1894.

Information was received by the Department of Agriculture of disease amongst cattle, near Pictou, N.S.

Mr. Thomas Chalmers, Veterinary Surgeon of the Department of Agriculture, investigated the case and pronounced it to be tuberculosis.

The animals affected were all slaughtered.

Investigations are still going on in this province.

REGINA, N.W.T., 2nd March, 1894.

Information was received by the Department of Agriculture of disease amongst cattle in Cannington district.

Mr. Fred. Torrance, Veterinary Surgeon of the Department of Agriculture, investigated and reported both tuberculosis and actinomycosis, "Lumpy Jaw."

One animal slaughtered.

MARKDALE, EAST GREY, 14th March, 1894.

Information was received by the Department of Agriculture of disease amongst cattle in this district.

An investigation by the chief veterinary inspector of the Department of Agriculture for Ontario, proved the disease to be gangrenous ergotism.

14th March, 1894.

Information was received by the Department of Agriculture of the disease of tuberculosis in some cattle in the neighborhoods of London, Ont.

Professor Andrew Smith, Chief Veterinary Inspector of the Department of Agriculture for the province of Ontario, was communicated with and instructed to examine into such cases of reported tuberculosis.

27th March, 1894.

Veterinary Inspector, J. H. Willson, of the Department of Agriculture, reported a case of tuberculosis at Komoka. The animal was slaughtered.

NOMININGUE, 3rd April, 1894.

Information was received by the Department of Agriculture of disease amongst cattle in Nomingue, Ottawa County.

Dr. Couture, veterinary inspector of the Department of Agriculture, was instructed to investigate and report.

The result of investigation proved that the cattle were suffering from tuberculosis.

EAST NORTHUMBERLAND (Hoard's Station), 6th April, 1894.

Information was received by the Department of Agriculture of a disease amongst animals in Northumberland County.

Instructions were given to Professor Andrew Smith, chief veterinary inspector of the Department of Agriculture for Ontario, to investigate and report.

Cases pronounced non-contagious and due entirely to local causes, bad management and want of proper care.

OSLER, SASK., N.W.T., 7th April, 1894.

Information was received by the Department of Agriculture of a case of tuberculosis at Osler, Sask., N.W.T.

ST. STEPHEN, N.B., 10th April, 1894.

The Department of Agriculture was informed of an outbreak of disease amongst cattle at St. Stephen, N.B.

Dr. Frink, veterinary inspector of the Department of Agriculture, St. John, N.B., was instructed to investigate and report.

Cases pronounced, cow-pox.

ST. JOHN, N.B., 9th May, 1894.

Dr. Frink, V.S., reports disease has died out.

CHARLOTTETOWN, P.E.I., 3rd May, 1894.

Dr. McMillan, veterinary inspector of the Department of Agriculture at Charlottetown, reports that the disease of tuberculosis exists in a herd of cattle owned by Mr. A. S. Coffin, of Savage Harbour.

CHARLOTTETOWN, P.E.I., 4th July, 1894.

Dr. McMillan, veterinary inspector of the Department of Agriculture at Charlottetown, P.E.I., reports a case of tuberculosis in Charlottetown.

BRIGDEN, ONT., 5th May, 1894.

Information was received by the Department of Agriculture, that the disease of tuberculosis existed in some cattle at Brigden.

Professor Andrew Smith, chief veterinary inspector of the Department of Agriculture for the province of Ontario, was instructed to investigate.

TORONTO, 12th May, 1894.

Professor Andrew Smith, chief veterinary inspector of the Department of Agriculture, for the province of Ontario, reported the disease of gangrenous ergotism amongst cattle near Port Elgin.

GRETNA, MAN., 12th June, 1894.

The Department of Agriculture was notified of the existence of disease in a cow near Gretna, Man.

Instructions having been sent Mr. McFadden, Veterinary Surgeon of the Department at Emerson, to report upon this case.

It would appear from the report received that the animal died not of disease, but consequent on being driven some miles on a very hot day shortly after having given birth to a calf.

## Scheduling of Canada.

3rd June, 1894.

Information was received by the Department of Agriculture of suspected disease in cattle on Red Pheasant's Reserve, N.W.T.

On investigation being made, however, it was found that the animals were suffering from local causes, extreme heat, change of food, and "impacted stomachs."

VICTORIA, B.C., 20th July, 1894.

Information was received by the Department of Agriculture of a supposed case of tuberculosis, which, upon investigation by Dr. Blanchard, veterinary inspector of the Department of Agriculture, proved to be unfounded.

WOODSTOCK, ONT., 26th July, 1894.

Information was received by the Department of Agriculture of disease amongst cattle in the township of East Zorra, Oxford.

Professor Andrew Smith, chief veterinary inspector of the Department of Agriculture, for Ontario, was communicated with at once and instructed to investigate and report.

Result proved there was no contagious disease, the trouble caused by bad stabling, &c.

TWEED, ONT., 3rd August, 1894.

Information was received by the Department of Agriculture of a disease amongst cattle in vicinity of Tweed.

Professor Andrew Smith, chief veterinary inspector of the Department of Agriculture in the province of Ontario, was instructed to investigate and report.

Report announced trouble to be tuberculosis. Animals slaughtered.

PRESCOTT, 4th August, 1894.

Information was received by the Department of Agriculture of suspected tuberculosis amongst a herd of cattle in Prescott.

GRANBY, ONT., 20th August, 1894.

Information was received by the Department of Agriculture of the disease of tuberculosis existing on the Rockledge stock ranch, South Roxton.

MAPLE CREEK, N.W.T., 24th August, 1894.

Information reached the Department of Agriculture that blackleg or symptomatic anthrax, was supposed to exist in a herd of cattle in the Medicine Hat District. On investigation it was found that the diseases to which some of the animals succumbed were gastric and acute dysentery.

KERKTON, ONT., 17th September, 1894.

Information reached the Department of Agriculture that the disease of tuberculosis existed in some cattle in this neighbourhood.

COLUMBUS, ONT., 21st September, 1894.

Information was received by the Department of Agriculture of a disease amongst cattle in vicinity of Columbus.

Professor McEachran, chief veterinary inspector of the Department of Agriculture, was instructed to investigate and report.

Animals slaughtered. Result of investigation, supposed poisoning.

October 13th, 1894.

Information was received by the Department of Agriculture of a case of disease of tuberculosis in Drummond County, Quebec.

October 31st, 1894.

Information was received by the Department of Agriculture of an outbreak of disease in cattle in vicinity of Burlington, Ont.

Professor Andrew Smith, chief veterinary inspector of the Department of Agriculture, in the province of Ontario, investigated and reported suspicion of rabies.

VICTORIA, B.C., 15th October, 1894.

Information was received by the Department of Agriculture of the disease of tuberculosis amongst a herd of cattle in the district of Victoria.

OTTAWA, 18th October, 1894.

The Department of Agriculture received a report from Mr. William Saunders, director of the Government Experimental Farms, intimating that the disease of tuberculosis had been discovered in cattle at the different branch farms.

The animals affected were all slaughtered, forty-nine in all, as follows :—

Brandon, Manitoba . . . . .	21
Indian Head, North-west Territories . . . . .	13
Nappan, Nova Scotia : . . . . .	10
Agassiz, British Columbia . . . . .	5
	—
	49

REGINA, 27th November, 1894.

Information was received by the Department of Agriculture of cases of tuberculosis amongst cattle in the Qu'Appelle District, North-west Territories.

SHERBROOKE, P.Q., 29th November, 1894.

Information reached the Department of Agriculture of cases of tuberculosis amongst cattle in the neighbourhood of Sherbrooke.

PERTH, ONT., 18th December, 1894.

Information was received by the Department of Agriculture that disease existed amongst the cattle in the vicinity of Perth.

Professor M. C. Baker, veterinary inspector of the Department of Agriculture, was instructed to investigate and report.

Animals since recovered, disease being local and unimportant.

## Scheduling of Canada.

### APPENDIX No. 4.

#### REPORTS RELATING TO CONTACT ANIMALS IN 1894.

(Telegram).

PORT PERRY, 5th June, 1894.

Have inspected all herds where the forty animals were raised, shipped by Jack to Sullivan, Birkenhead. Find no contagious pleuro-pneumonia and am certain that none ever existed in this district.

W. COWAN, V.S.

To JOHN LOWE, Esq.,  
Deputy Minister of Agriculture,  
Ottawa.

(Copy).

GALT, ONT., 6th June, 1894.

SIR,—As instructed I proceeded to Port Perry and found that the 23 of 40 head of cattle that landed by the ss. "Toronto" were bought by Bongard, Jack & Wheeler and consigned by Jack to Sullivan, Birkenhead. They were bought from the following parties : Jas. Jackson, Hope & Son, Wm. Pogus, in the township of Scugog, and Wm. Swanic, John Leash, J. Otis, Robt. Scott and Philip Stone, in the township of Reach. I visited all those farms and made an inspection of the stock and found that there was no contagious pleuro-pneumonia on any of the farms and no suspicions whatever that it ever had existed there. In reaching the different farms I drove over quite an extent of country and called upon a great many other farmers and am positive that no contagious pleuro-pneumonia has ever been in that section of the country, and it is impossible that the animal in question was affected with contagious pleuro-pneumonia when it left here. As instructed I wired you yesterday but thought it was well to send a fuller report. I am now on my way to Woodstock to make investigation of the cattle that were landed by ss. "Laurentian."

I have, &c.,

W. COWAN, V.S.

JOHN LOWE, Esq.,  
Deputy Minister of Agriculture,  
Ottawa.

(Copy).

Telegram.

INGERSOLL, ONT., 7th June, 1894.

Have visited all farms where fifty-seven cattle were raised, shipped on "Laurentian" by McCulloch. No pleuro-pneumonia ever existed in the district.

W. COWAN, V.S.

JOHN LOWE, Esq.,  
Deputy Minister of Agriculture,  
Ottawa.

Mr. McCulloch loaded 57 cattle on the ss. "Laurentian," bought from Freeman Kran, Wm. Dodge, Foster Wilson and Chas. Dawes. I visited those farms and find no disease among their cattle and no symptoms whatever that pleuro-pneumonia has ever

existed in that district. In reaching these farms, a considerable extent of country had to be driven over, and from careful inquiry, I find there is no reason whatever for suspicion of pleuro-pneumonia ever existing among any of the cattle where Mr. McCulloch had been buying.

I have, &c.,

W. COWAN, V.S.

JOHN LOWE, Esq.,  
Deputy Minister of Agriculture,  
Ottawa.

(Copy.)

GALT, ONT., 8th June, 1894.

SIR,—I wired you yesterday that I had visited all farms where 57 cattle were raised, shipped on the ss. "Laurentian" by Mr. McCulloch. No pleuro-pneumonia existed in the district, and now will give you the full information.

Messrs. Bongard and Wheeler said these were the only parties that they bought shipping cattle from at that time, the other parties that you name in your letter he did not give me as he said they were only butchers' cattle bought from them. Messrs. Bongard and Wheeler are satisfied that I visited all the farms where the 40 cattle were raised, that were shipped on the ss. "Toronto."

If you still think it is necessary for me to see the other parties mentioned in your letter, wire me on receipt of this and I will proceed to do so at once, but having visited that district so thoroughly, I do not think it necessary unless I receive instructions from the Department.

I have, &c.,

W. COWAN, V.S.

JOHN LOWE, Esq.,  
Deputy Minister of Agriculture,  
Ottawa.

(Copy.)

GALT, ONT., 8th June, 1894.

SIR,—Your favour of the 6th inst. to Professor A. Smith has just been forwarded to me, and in reply would say that I learned when at Port Perry that Mr. Jack was in Montreal, but learned that he was in partnership with A. Bongard and Mr. Wheeler, who gave me the names of the parties that they bought cattle from that were shipped on the ss. "Toronto."

Report of cattle shipped on the "Mongolian," by Watson, of Blyth, Ontario, consigned to Sullivan:—

	Animals.
Duncan Garner.....	3
George Robinson.....	4
Adam Robinson.....	5
Wm. Scott.....	6
Joseph Pollock.....	2
B. Comeley.....	5
James Lyons.....	2
R. McGowan.....	6
B. Merritt.....	2
S. Caster.....	1
James Logan.....	3
Mrs. Magrage.....	1
John Wells.....	5
Total.....	45

All raised and fed in that locality.

## Scheduling of Canada.

OFFICE OF GOVERNMENT VETERINARY INSPECTOR FOR PROVINCE OF ONTARIO,

TORONTO, June 22nd, 1894.

SIR,—I beg to forward the inclosed list of the 45 cattle on the “Mongolian.”

Mr. Cowan, V.S., reports that he visited all the farms mentioned; that there was no contagious pleuro-pneumonia in the locality nor any suspicion of that disease; neither had that disease ever appeared there.

I have, &c.,

JOHN LOWE, Esq.,  
Deputy Minister of Agriculture,  
Ottawa.

ANDREW SMITH.

OFFICE OF GOVERNMENT VETERINARY INSPECTOR FOR PROVINCE OF ONTARIO,

TORONTO, 2nd July, 1894.

*Re Cattle on ss. “Lake Superior.”*

SIR,—In accordance with instructions from yourself, I have traced the cattle; and investigations have been made on the farms and on the surrounding farms, in the various localities from which the cattle were procured that were shipped by A. J. Thompson, of Toronto, on the “Lake Superior.”

Mr. Cowan, V.S., has done most of the investigating, and he reports that “he has examined the cattle on the various farms, and driven extensively through the different districts from which these cattle were procured, and he finds that no contagious pleuro-pneumonia exists, or has ever existed, on any of the farms or in any of the districts, and that there is no reason whatever for any suspicion of that disease amongst the cattle.”

In one locality, Kohler, I requested Mr. C. Elliott, V.S., who is an old established and prominent practitioner in that district, to investigate so as to save time and travelling. His report is precisely the same in substance as Mr. Cowan’s.

I inclose a condensed report. The cattle were collected in small numbers from various farms in the different localities mentioned. Can give a more voluminous report, with names of sub-purchasers and the farmers, if necessary.

Cattle shipped on ss. “Lake Superior,” by A. J. Thompson, of Toronto; localities visited and the health of the cattle investigated:—

	Animals.
Various farms in the neighbourhood of Guelph.....	27
“ “ “ Uxbridge.....	6
“ “ “ Claremont.....	37
“ “ “ New Hamburg.....	17
“ “ “ Manheim.....	21
“ “ “ Kohler.....	3
“ “ “ Stouffville.....	3
“ “ “ Ripley.....	1
“ “ “ Owen Sound.....	3
“ “ “ Bowmanville.....	8

Then eight were purchased in Montreal from Dempsey, in Toronto market, which I find impossible to trace accurately; probably came from near Toronto. Certainly no contagious pleuro-pneumonia around Toronto.....

9

---

Total..... 135

The remainder were purchased in Montreal.

I have, &c.,

JOHN LOWE, Esq.,  
Deputy Minister of Agriculture,  
Ottawa.

ANDREW SMITH.

## OFFICE OF GOVERNMENT VETERINARY INSPECTOR FOR PROVINCE OF ONTARIO,

TORONTO, 7th June, 1894.

SIR,—In accordance with instructions received, the cattle consisting of 212 head shipped on the "Numidian" by Gordon & Ironside on the 2nd of June last, have been traced. They came from various farms in the following widely separated localities:—

Bowmanville and neighbourhood.		
Mitchell	"	"
Hickson	"	"
Bright	"	"
Chesterfield	"	"
Brussels	"	"
Wick	"	"
Agincourt	"	"
Scarboro	"	"
Beaverton	"	"
Blackwater	"	"

All the farms have been visited by Mr. Cowan, V.S., and the health of the cattle on those and the surrounding farms investigated. Mr. Cowan reports as before: "That no contagious pleuro-pneumonia exists, or ever has existed in the various localities; and that there is no reason whatever for any suspicion of that disease in the country."

I can give a more voluminous report with the names of sub-purchasers and farmers if necessary.

I have, &amp;c.,

AND. SMITH.

JOHN LOWE, Esq.,  
Deputy Minister of Agriculture,  
Ottawa.

## OFFICE OF THE INSPECTOR OF STOCK,

MONTREAL, 7th July, 1894.

SIR,—I beg to report that I saw Mr. McIntosh with reference to the cattle sold by him to J. Sheridan and shipped by A. J. Thompson & Co., on ss. "Lake Superior," and obtained from him full particulars where the cattle were fed.

I yesterday visited the farms of Mr. Levi French, Eaton Corners; John Hamilton, Randboro; John A. Williams and E. N. Lindsay, Bulmer, from whence their cattle all came. They all had cattle that were stabled all winter with those that were exported.

I found them (the remaining cattle) to be all perfectly healthy, and the farmers assured me that they did not remember when they had had any sick cattle; that their stock had been as I found them, in good health.

I have, &amp;c.,

M. C. BAKER.

JOHN LOWE, Esq.,  
Deputy Minister of Agriculture,  
Ottawa.

## DEPARTMENT OF AGRICULTURE,

OFFICE OF GOVT. VETERINARY INSPECTOR FOR PROVINCE OF ONTARIO.

TORONTO, 19th July, 1894.

SIR,—Yours of the 14th duly to hand, and in compliance with the request contained therein, I forward the result of investigations in tracing the 56 head of cattle shipped by Bongard & Jack on the ss. "Mentmore."

## Scheduling of Canada.

They were purchased from the following parties in the townships of Reach and Brock, in the neighbourhood of Port Perry :—

Arch. McMillan.....	2	animals.
Rich. Oldershaw.....	7	do
Jas. Town.....	7	do
John McLeod.....	7	do
Alan Stewart.....	1	do
West Penal.....	1	do
Sandy Leask.....	11	do
Neil Williamson.....	2	do
Geo. Houck.....	3	do
Geo. Homson.....	6	do
Jas. Geo. McMillan.....	5	do
Geo. Lee.....	1	do
Geo. Gregg.....	3	do
	56	do

Mr. Cowan, V.S., reports that he visited the various farms mentioned, that there is no contagious pleuro-pneumonia among the cattle on them, nor ever has been ; and there is no reason whatever for any suspicion of that disease existing now, or ever having existed in those localities.

I have, &c.,

AND. SMITH.

JOHN LOWE, Esq.,  
Deputy Minister of Agriculture,  
Ottawa.

## APPENDIX No. 5.

REPORT ON LUNGS OF ANIMALS SLAUGHTERED DURING ONE MONTH  
AT ABATTOIRS.OFFICE OF THE INSPECTOR OF STOCK,  
MONTREAL, 18th December, 1894.

SIR,—In compliance with your request of the 17th inst., I herewith inclose the reports of the examination of lungs of the cattle slaughtered during one month (November) at Montreal, St. John and Halifax :—

At Montreal the lungs of 1,789 animals were examined.  
 St. John, N.B. " 381 " "  
 Halifax, N.S. " 334 " "

Total examined . . . . 2,504

Of these all were found to be healthy but 17, as follow ;—

Tuberculosis, Montreal . . . . .	2
Pneumonia, caused by thorn in bronchial tube, Montreal . . . . .	1
Encysted abscess, Montreal . . . . .	1
Tuberculosis, St. John . . . . .	3
Congestion " . . . . .	1
Tuberculosis, Halifax . . . . .	9
Total . . . . .	17

I have, &c.,

M. C. BAKER.

JOHN LOWE, Esq.,  
Deputy Minister of Agriculture,  
Ottawa.

## APPENDIX 5a.

## REPORT ON EXAMINATION OF LUNGS.

(BY PROFESSOR D. MCEACHRAN.)

OFFICE OF THE INSPECTOR OF STOCK,  
OTTAWA, 9th January, 1895.

SIR,—Adverting to the report sent in during my absence by Dr. Baker, on the examination of 2,504 sets of lungs of cattle killed at public slaughter-houses during four weeks in November last, I have to state :—

In every instance in which any abnormal condition was discovered, the lungs were at once brought to the Veterinary College for examination by me, and sent by me to Professor Adami.

Of 1,789 pairs of lungs examined at the Montreal abattoirs, all were free from disease except 4 ; of these 2 were tubercular, 1 an encysted abscess, and 1 local pneu

## Scheduling of Canada.

monia produced by a foreign body, viz., a small branch of a rose bush which had been inhaled and worked its way down the bronchial tubes. Both of these specimens are preserved by Professor Adami.

The foreign-body-pneumonia was so interesting and the "marbling" so like what is seen in "transit-pneumonia" that I had an oil drawing made of it, which I send for your inspection.

Of the 705 pairs of lungs examined at Halifax, N.S., and St. John, New Brunswick, 13 were found tuberculous; all the rest were free from disease.

These examinations were made without the knowledge of owners of cattle. If there had existed a contagious disease in any portion of the large area of the Dominion from which they were collected, such disease would have been found, if not in an acute stage, certainly in the chronic form.

I can only repeat that I know of no lung disease in cattle, and I feel confident that contagious pleuro-pneumonia does not exist in Canada.

If the Board of Agriculture possess any information of such disease in Canada, as their persisting in stating that the Canadian Government have in their possession reports relating to pneumonia would indicate, surely they should not withhold such information. If they have such, we ought to have the benefit of it, and, if they are relying on unfounded reports we ought to be put in a position to contradict them.

I have the honour to be, sir,

Your obedient servant,

D. McEACHRAN,

*Chief Inspector.*

To JOHN LOWE, Esq.,  
Deputy Minister of Agriculture,  
Ottawa.

## APPENDIX 5b.

### REPORT ON EXAMINATION OF LUNGS BY PROF. ANDREW SMITH.

OFFICE OF GOVERNMENT VETERINARY INSPECTOR FOR PROVINCE OF ONTARIO.

TORONTO, December 27th, 1894.

SIR,—According to your instructions, my assistants and myself have examined at various slaughter houses in this city, from November 3rd to December 8th, the lungs of three hundred and eight head of cattle slaughtered therein, and did not find any signs of contagious pleuro-pneumonia nor any disease of the lungs simulating it.

Mr. Wilson, London, examined one hundred and thirty-eight; Mr. Cowan, Galt, fifty-seven; and Mr. Raspberry, of Hamilton, seventy-eight sets of lungs, and no signs of contagious pleuro-pneumonia, nor any disease resembling it, was found.

I have the honour to be, sir,

Your obedient servant,

ANDREW SMITH.

J. LOWE, Esq.,  
Deputy Minister of Agriculture,  
Ottawa.

## APPENDIX No. 6.

REPORT ON PAPERS AND CORRESPONDENCE RELATING TO ALLEGED  
EXISTENCE OF PLEURO-PNEUMONIA IN CANADA.

By D. McEACHRAN, F.R.C.V.S., V.S., EDINBURGH, D.V.S., MCGILL, DEAN FACULTY OF  
COMPARATIVE MEDICINE AND VETERINARY SCIENCE, MCGILL UNIVERSITY,  
CHIEF INSPECTOR OF STOCK.

MONTREAL, December, 1894.

SIR.—In compliance with departmental instructions, I beg to submit for your consideration the following comments and suggestions on the reports in the Imperial Yellow Book (C. 7496) on “Further Papers and Correspondence relating to the landing in Great Britain from Canada of Cattle affected with pleuro-pneumonia.”

*Diagnosis by naked eye appearances only.*

If we rely only on naked eye post-mortem appearances in our efforts to determine a portion of lung tissue to be affected by C. P. P., from my knowledge of the large experience and unquestionable sincerity of the official advisers of the Board of Agriculture, we must admit that the appearances described in their reports particularly of the lung of the steer ex. ss. ‘Toronto’ justified them in suspecting this disease; and justified also the other inspectors of their staff, Messrs. Holmans, Ingersoll and Rayment, in not troubling themselves to seek for further confirmation to their too easily arrived at conclusions.

Not so easily, however, can we reconcile the positive reply of Mr. Clement Stephenson (712) who has, as he says “seen the diseased condition of the lungs in all stages from its inception till death resulted;” and who in May, 1891, examined post-mortem the lungs of 165 cattle which were slaughtered to stamp pleuro-pneumonia out, found “six old encysted cases, four old standing cases, and seven recent cases,” and all this in a herd or herds of cattle owned by men of experience in cattle disease, cared for by trained cattlemen, and watched over by a local authority, having Mr. Stephenson himself as veterinary adviser. (700.)

It might have occurred to him that if contagious pleuro-pneumonia existed in an extensive colony, such as Canada is, where cattle are bought indiscriminately all over the country, by men having no experience whatever in cattle disease, and concentrated at Toronto, in the cattle markets for several days, then shipped by rail 333 miles to Montreal where they are again yarded for several days, and next cooped up in close contact for ten or twelve days on the main deck and spar decks of ocean steamers, if not as large a proportion as above, surely some “old encysted cases” and some old standing cases would be found in the half million of cattle shipped from Canada and landed in Britain during the past five years. Yet, not one such case has been reported, and of the nine cases said to have been discovered out of 500,000 cattle, so far as I know only one cow was so suspected during life, the butchers being the discoverers of the diseased lungs in the others; and even in the Dundee case, the animal with the remainder of the cargo was passed by the Inspector on landing, was sold with the others as healthy a week later, and on the eleventh day one was reported sick.

In connection with this Lindores’ case it is noteworthy that, as will be seen by Professor Duguid’s evidence, one animal was suspected of having communicated contagious pleuro-pneumonia to homebred stock, but attendant circumstances and subsequent events leave ample room for doubt as to the correctness of that suspicion.

## Scheduling of Canada.

Mr. Stephenson's experience, and that of every one who has had experience of contagious pleuro-pneumonia, is that encysted lungs and old standing cases, "chronics," are always to be found where the disease exists. Yet not one has been found in a Canadian animal since exportation begun seventeen years ago.

Mr. Stephenson, like many other members of our profession, accepts in blind faith the teaching of past masters of veterinary science. It is but a short time since the disease of glanders in horses was considered by many of the leading veterinarians of Europe as non-contagious; and only a little while ago this disease was confounded with syphilis, scrofula and tuberculosis.

It is only six years ago that the contagiousness of tuberculosis was recognized officially in France and Britain.

Bacteriology has revolutionized our knowledge of many diseases, so that many things we formerly believed and taught, we now know to have been blind faith. The profession dealing with lungs of diseased animals in a country where contagious pleuro-pneumonia has existed came to diagnose it correctly and to recognize it by naked eye examinations, seldom making a mistake; but surely the discovery of new facts unexpected, though they may be, should not prevent them from believing them possible.

This is the position to-day in relation to transit pneumonia: it resembles but is not identical with contagious pleuro-pneumonia. Two samples of milk may be indistinguishable in appearance, yet one may contain disease germs or poison, and the other not.

Professor James McCall, Principal of the Glasgow Veterinary College, is a gentleman of very large experience with contagious pleuro-pneumonia, a most careful observer and cautious adviser; he is also inspector for the Board of Agriculture at Glasgow, one of the most important ports in Britain for the landing of Canadian cattle. All the stock landed at Glasgow are inspected by him or under his supervision. We are not informed that he has ever sent any lungs to London, yet he says (776) that if he had found contagious pleuro-pneumonia he would in compliance with regulations have done so. Surely if contagious pleuro-pneumonia existed in Canada, Glasgow would get a share of it. It cannot be possible that no diseased conditions of the lungs of Canadian cattle ever come under his notice, yet he has never found pleuro-pneumonia in them, nor has any contagion occurred from the cattle passed by him from Canadian ships and taken to Scotch farms.

He is right when he says (781) that "you cannot tell positively" even after comparison of suspected with genuine contagious pleuro-pneumonia, and that till some organism is discovered as distinctive of pleuro-pneumonia, it will remain so. No organism has yet been discovered as far as he is aware.

I agree with him in his answer to the question (790): "May I ask you whether, in performing that duty you had found appearances in the lungs of Scotch cattle similar to those described by the board of veterinary officers, in the cases from the 'Toronto' and 'Mongolian,' you would have considered yourself justified in advising the local authority to deal with the matter as anything else but contagious pleuro-pneumonia? No, decidedly not, I should have no hesitation in regard to the matter."

Why should he in a contaminated country? I think, however, as a first step in such action, he would endeavour to trace up the source of infection, and if he traced the animal to a country strictly quarantined for nineteen years, whose inhabitants had such a dread of contagious cattle diseases that they had left nothing undone to prevent the introduction of such to their healthy herds, and who had ten thousand times more interest in discovering such a disease, if by chance it had found entrance in spite of their preventive measure he would consider particularly the bearing of such facts. I think I know the Professor well enough to say that in such circumstances, he would keep some contact animals alive to prove by commingling with known healthy animals whether or not his suspicions were correct. That is to say, provided the regulations did not prevent such common sense practice.

Mr. A. C. Cope, chief veterinary officer of the Board of Agriculture, in reply to the question (822): "You have no special information about Canada?" says: "No, we have no information beyond the reports which we have received from the Canadian Government, in which they state that they cannot find any disease in Canada."

What an admission from a gentleman occupying the position of chief adviser of the Board of Agriculture, a position of such immense responsibility, on whose advice the British Government is led to act adversely to the interests of a branch of commerce of so much value to British subjects, both in the colony and in the mother country.

Having had the pleasure, when in London, in May last, of calling on Professor Brown, Mr. Cope, and Mr. Duguid, in a friendly unofficial way, I was struck with the want of interest in acquiring information on the subject in discussion; and the marked disinclination on their part even to refer to it, much less try to acquire information about Canada, or the health of animals in that country. Notwithstanding the divergence of professional opinions and advice to our respective Governments, I may be excused if I ask Mr. Cope if the reports of the Canadian Government conveyed no information, except that we could not find disease? Or does he mean that he does not believe the statements contained in these reports?

Yet, we find (799) that he does believe reports from Zululand. Speaking of having quarantined some of Her Majesty's cattle from Zululand, he says: "We kept them six months before we let them go, and then we did not feel safe about them, because we knew pleuro-pneumonia existed in Zululand, and we felt it quite possible they might have some encysted portions in their lungs."

In this last remark, I quite agree with him. If contagious pleuro-pneumonia existed in Zululand, he would not be disappointed, if large numbers of animals were indiscriminately bought and exported to England, notwithstanding the great care which presumably would be exercised in their selection, in an infected country, if some encysted lungs were found. Yet, he appears to have drawn no such inference from the fact of half a million of Canadian pairs of lungs of animals killed in Britain during ten years, having been examined and not one single encysted case found.

*Transit Pneumonia.*—The fact of every case of suspicion found in Canadian cattle being "recent cases" goes directly to prove the non-existence of the disease in Canada.

Dr. Sims Woodhead, a pathologist of the first rank (233-234) says he has no doubt whatever on this point. In answer to the first question, he says: "The pleurisy is of comparatively recent date;" and to the second, "the pleurisy is at any rate of very recent date," and in both cases it appears that the actual effusion is of quite "recent date."

Professor McQueen, F.R.C.V.S., Professor of Surgery, Royal Veterinary College, says (434): "If it is a case of contagious pleuro-pneumonia such as we have in this country, then I should put it down as a very recent case."

Richard Rutherford, F.R.C.V.S., who has had a very large experience of contagious pleuro-pneumonia both in Australia and in Edinburgh, says: "The lesions are undoubtedly those of a pneumonia strongly resembling if not actually contagious pleuro-pneumonia in an early stage of the disease."

Professor G. T. Brown, ex-Chief Adviser of the Board of Agriculture, and Principal of the Royal Veterinary College, says: "I fixed the period at something like a month, but even if it were only three weeks, it is sufficient to show that the animal must not only have had the infection in the system, but some lesion in the lung, when it was put on board the vessel, because the voyage could never occupy three weeks."

Professor Brown evidently does not know that many of the Canadian cattle, particularly from Manitoba and further west, are driven for from three to five days from the time they leave their grazing grounds, till they are put on the cars; from Fort McLeod to Montreal they are ten to twelve days *en route* owing to delays in connections and other reasons. At Montreal they are usually kept several days for rest, and are ten to twelve days from the time they leave the stock yards at Montreal till they are landed in Britain.

Ontario cattle are bought all over the province in twos or threes or more as the case may be. They are sent by rail to Toronto market. Often a week elapses from the time they leave the farms till they are shipped to Montreal, where they are usually kept from two to three days, and from ten to twelve days on board ship.

Buyers, of course, would not purchase a sick animal nor receive one if sent to them. At Montreal the animals are carefully inspected. On discovering the slightest evidence

## Scheduling of Canada.

of illness, the inspectors must detain them ; consequently, there is little probability of disease sent forward having been contracted on the farms ; hence, we are justified in stating that the lung disease is contracted between the farm and the slaughter-house in Britain ; that in fact it occurs in transit.

If further proof were needed, it will be found in the fact of about 90,000 cattle inspected at Montreal during the past season, only 80 were rejected by the inspectors who had instructions to detain every animal, whether from poor condition, disease, age or injury, which was not likely to carry well. The following table will show the causes of such detention :—

Actinomycosis . . . . .	59
Lame and injured . . . . .	16
Tuberculosis . . . . .	2
Mange . . . . .	1
Old and unsuitable for shipping . . . . .	2
Total . . . . .	80

Not one single case of lung disease. Even the tuberculosis was local.

*What the Board experts think about the probable existence of contagious pleuro-pneumonia in Canada.*—Mr. Cope (817) being asked : “ What is your explanation of the fact that notwithstanding contagious pleuro-pneumonia has existed for a good many years in Canada, there has been no spread of the disease ? ” He replied : “ I do not think that we have ever committed ourselves to the statement that there is contagious pleuro-pneumonia in Canada : our general impression has been that it is very likely that animals have got across the frontier.” (822) “ You have no special information about Canada, I suppose ? ” “ No, we have no information beyond the reports which we have received from the Canadian Government in which they have stated that they cannot find any disease in Canada.”

Professor Brown, in answer to the question (1884) “ May I ask, whether you think that the so-called Canadian cattle came from Canada or the United States ? ” says : “ My first impression was that the cases which came from the frontier had in all probability been smuggled across ; but, the Canadian authorities state that it is absolutely impossible with their restrictions, that anything of the kind should happen. That statement did not quite remove my impression, however, because I know the extreme difficulty which is found in European countries, even with such a short frontier as that between Poland and East Prussia in preventing smuggling of animals.”

(855). “ So that the view of the Canadian Veterinary Authorities is, that whatever disease exists in Canadian cattle comes from Canada ? ” “ No, their view is that it originates on the voyage ; that they have no disease of the kind in Canada.”

(856) “ You think, however, that that is an impossibility ? I think it is absolutely certain that it cannot be so.”

It seems extraordinary that two men occupying such important positions should have to acknowledge such want of information of the topography and internal economy of this country. Where did Professor Brown get the information of “ cases which came from the frontier ? ” The fact is that no cattle can be said to come from the frontier for exportation. It is well known that prospect of gain would be a *sine qua non* of smuggling cattle into Canada from the United States, but thoroughbred cattle are worth more in the United States by 20 per cent to 50 per cent than in Canada. The United States is the best, and almost the only market the Canadian cattle raiser of fine stock has. The importation of cattle from the United States to Canada is almost *nil*. Smuggling of exportable cattle in numbers sufficient to warrant the risks incidental to such an infringement of the quarantine regulations is quite impossible. It would be impossible to drive them by the roads, as they would certainly be seized by Customs Officers and detectives, every one of whom is a preventive officer for quarantine as well as Customs purposes. They would not be carried by railways or steamboats, for neither would venture to carry them at any price.

The penalties, in addition to the confiscation and slaughtering of the animals is a fine of \$200 (£40) for each animal (Sec. 39, Animal Contagious Diseases Act.)

"If any horses, cattle or other animals are imported or introduced, or attempted to be imported or introduced into Canada contrary to the provisions of any order or regulation made in pursuance of this Act, the same shall be forfeited and may be forthwith destroyed or disposed of, as the Minister of Agriculture or any person employed by him in that behalf directs; and every person who imports or introduces or attempts to import or introduce any horses or other animal into Canada, contrary to the provisions of any such order or regulation, shall incur a penalty not exceeding two hundred dollars, for every horse or other animal so imported or introduced, or attempted to be imported or introduced by him. 48-49 V., c. 70, s. 39."

While the smuggling of an individual animal on such portions of the boundary line as have farms adjoining, some even partly in Canada and partly in the States, could not be said to be impossible, although attended by much risk and difficulty. I have no hesitation in affirming that such smuggling as is indicated by Professor Brown is absolutely impossible at any part of our frontier, from ocean to ocean, and the doubts in his mind can not alter that fact.

*Transit Pneumonia the same in United States as in Canadian Cattle.*—Professor Nocard, the highest authority in cattle disease in France, if not in Europe, describes \*(Appendix page XXVIII) minutely the results of his investigations of a "disease of the organs of the respiratory apparatus, different from any that we are acquainted with in France"; which occurred "in four of the several thousands of magnificent oxen from the United States, notably from Virginia, Indiana, and Illinois."

He points out marked pathological and bacteriological differences between this disease and contagious pleuro-pneumonia.

He concludes his report by saying: "It will be seen that the affection in question has no resemblance to anything that has been described in France (contagious pleuro-pneumonia included) \* \* \* \* \* But is this disease, unknown in France, known to American Veterinarians? I have made some researches in regard to this, and I believe it is the same as that which the breeders in the Western States designated by the name of 'corn stalk disease.'" (†See note).

Professor Brown (868) (The President) "You said that these appearances to which our attention was drawn in Mr. Nocard's report are similar to what you have called the North American type of contagious pleuro-pneumonia? Answer, Yes."

At page 79, Yellow-book C.—7123, in his report of the lungs of a Canadian ox, one of 250 sent from Manitoba, "an aged ox that had been worked," which Professor Brown stated, "presented the ordinary characteristics of contagious pleuro-pneumonia," he says: "It has been suggested that the appearances of the cut surfaces of the lungs of this Canadian ox differed in some respects from those seen in pleuro-pneumonia in this country.

"For example: It has been pointed out that the lobules in the diseased part, instead of varying in colour from light pink to dark red, or nearly black, were of a uniform vermilion tint, and that the interlobular bands were rather more dense than is generally observed in pleuro-pneumonia and did not exhibit many small cavities (lymph spaces) filled with fluid.

"It is undeniable that these peculiarities did exist, and it is important to notice that they have from the first been recognized as special characteristics of pleuro-pneumonia in animals which have been landed in the country from the United States, regularly since 1878."

\*Recueil de Médecine Vétérinaire, 30 août 1891.

†NOTE.—In this, I believe Professor Nocard has been misinformed. The diseases found in cattle from the far Western States and in cattle from equally far distances in Canada from 800 to 2,000 miles of railroad transport, in addition to the ocean voyage, often, in rough weather, crowded between decks, are no doubt identical, and the changed conditions and hardships in transit are sufficient to account for an occasional congestion and sub-acute inflammation of the lungs or portion of one or both. Cattle are not fed on corn stalk or in corn fields to any extent in Canada. "Corn stalk disease" is unknown here.

## Scheduling of Canada.

He concluded this report by asserting emphatically that the disease found in Canadian and United States cattle are identical.

"After a prolonged and careful inquiry, I am forced to the conclusion in which my colleagues concur, that the Canadian ox ex-ss. 'Lake Winnipeg' was the subject of contagious pleuro-pneumonia identical in morbid anatomy with pleuro-pneumonia among cattle in the United States, and differing only in unimportant characters from the European type of the disease."

That was Mr. Brown's opinion on the 3rd July, 1893. He then sets forth "after prolonged and careful inquiry," that there was a distinct American type of pleuro-pneumonia; and he claims that the disease described by M. Nocard is identical with that found by himself in Canadian lungs; that is to say, it resembles, but yet it differs from pleuro-pneumonia as seen in England, in the particulars above quoted from his report.

Such being true how can we reconcile it with answers (848-50 866-71) in the minutes of the board? Or reconcile his difference with M. Nocard on the latter point? The question in issue resolves itself into one of confidence in the opinions of two men. Suppose we allow them to be equal; must we not take circumstantial evidence into account? Surely we must and this we find is altogether in favour of M. Nocard, on the points of the non-existence of the disease in Canada, the early stage of the suspected disease found at British ports in Canadian cattle, and the non-infection of the cattle in contact on the steamers.

How can Professor Brown reconcile his answer (870) to the question: "Do you feel satisfied in your own mind that there is such a thing as a peculiar type of pleuro-pneumonia in the United States?" "I think from a large number of cases where these ovid bodies were present it was not unreasonable that we should classify them together as forming a type, but the fact of their being present in association with the ordinary appearances of pleuro-pneumonia does not seem to me to be a matter of any very pathological importance. If I had not noticed them and said nothing at all about them, there would have been no question of any particular type of disease."

We have here a professional man acknowledging in August, 1894, that, what he said in July, 1893, "after prolonged and careful inquiry" and concurred in by his colleagues, was incorrect. The fact justifies the hope that what he asserts with equal assurance in August, 1894, (170) namely that he is "as positive as can be," that the disease affecting the Canadian animal ex-ss. "Toronto" was contagious pleuro-pneumonia, will with equal candour be admitted to be an error, corrected by further experience.

*No microscopical examination made.* It is much to be regretted that as we are informed by Professor Brown (869) "nobody has made any microscopical examination." The staff of the Board made none, the other experts made none, and no opportunity was afforded to Canadian or United States pathologists to do so.

As stated in a former report (appendix Yellow-book 7366) it is my opinion that at the present stage of our knowledge of the microscopical changes and bacteriological facts characteristic of this disease, "no such examination (as that which had taken place) can be considered conclusive apart from the history of the animal and accurate clinical reports." If microscopical examination is neglected the chain of evidence necessary to arrive at a solution of such a vexed question, is incomplete, as is the fact in relation to that under discussion. Hence, I quite agree with Professor Welch, of Baltimore, who in a letter to me of September 26th ultimo, says: "I regret that no microscopical examination is recorded of the Toronto lung which is pronounced to have presented the naked eye appearance of contagious pleuro-pneumonia. In neither of the official publications (C. 7366 nor C. 7496) do I find emphasis placed upon what seems to me a valuable characteristic for diagnosis, viz.: the histological structure of the interlobular exudate, and surrounding tissues. In acute cases you can distinguish four zones in those interlobular bands; there is in the middle of the band a network of fibrillated fibrin remarkable for the paucity of leucocytes; near the edge you come first to a zone of irregular patches composed of nuclear fragments densely packed together and staining deeply with nuclear dyes; outside of this is a zone of packed

“polynuclear leucocytes; and outside of this is connective tissue with proliferating fixed cells, and if the disease is of much duration a more or less thick band of young granulation tissue. The impression is irresistible that some deadly cell poison is present in the lymph spaces, that the leucocytes are attracted in masses towards these spaces, but that they are killed as soon as they reach a certain point at the edge of these spaces when they leave behind them fragmented nuclear.

“Any one who has made a careful histological study of pleuro-pneumonia must have been impressed with these peculiarities; and still our English friends do not seem to have anything to say about these important characteristics.”

*Have any homebred cattle been infected by contact with Canadian cattle?* We have the authority of Professor Brown for saying that the history of pleuro-pneumonia on the North American continent proves, beyond doubt, that it is as contagious and fatal as the pleuro-pneumonia of Europe (C. 7123, p. 80). In this, the contagiousness of the disease, the professions of both continents agree.

Professor W. Duguid, F.R.C.V.S., one of the veterinary officers of the Board of Agriculture, in answer to question 495: “Are there any cases reported in your department of cattle infected by contact with cattle from a Canadian source?” replies: “One case of an animal that was in contact for twenty-four hours with one of the Canadian cattle in 1892 was found affected with the disease in the early stage, some seventeen days after the contact.

“(496). This was an animal imported from Canada?” “Yes. In the autumn of 1892 this animal left the landing stage and was two days, I think, on one farm and then moved to another, where it was found diseased by the Inspector of the local authority; and one of the cattle on the first farm where this Canadian animal had been for one day, was found affected with pleuro-pneumonia 17 days afterwards.”

“(497). The herd had to be destroyed?” “Yes. We destroyed the whole herd on the evidence of the first case.”

“(498). And that was the source of it?” “We believed it was the source of it.”

“(501). No other instance occurred?” “No other instance. The disease was discovered in 1892, and the whole of that Canadian cargo were slaughtered within about three weeks, I think. There was also a lot of homebred cattle on farms where they had been taken, but no disease found.”

“(502). It was never suggested that the cause of the infection of the second animal was the introduction of other animals?” “No, that was never suggested. The history showed that no other fresh cattle had been taken on to the farm but these Canadians.”

“(503). And in that case the Canadian cattle did not spread the disease anywhere else?” “Nowhere except in this one place.”

“(504). They never had a chance?” “No, they were slaughtered out.”

Think of it: Half a million of cattle killed in five years, and only one living animal suspected of being diseased, and only one homebred animal suspected of being infected; and that one on a farm where the Canadian animal was only one day! It must have been an active contagion very different from that described by Professor Brown (862). This cow was seventeen days in contact with others, but we are not told the contagion spread.

The Canadian cow was in contact with other cattle at the second farm (Lindores) seventeen days, and Mr. Duguid informs us that no infection took place on this farm.

No spread of the disease occurred from the Canadian cattle with which this diseased one was in contact on the ship. Mr. Duguid is careful not to state that the cattle were landed on 29th September, were sold by auction on the 6th October, and were only sent to Parkhill farm that evening. He does not explain why some of the cattle with which the sick cow mingled together for these seven days escaped contagion. He merely says that they did escape, as did all that they themselves subsequently mingled with.

Mr. Duguid seems to be badly informed as the suggestions that were made. It was freely suggested and is firmly believed that the Parkhill cow was an Irish cow open to suspicion; and it is freely suggested to-day, as it was then, that the action of the Board in following a course of wasteful slaughter, was a professional blunder.

## Scheduling of Canada.

It is freely hinted also that so loosely was this slaughter order carried out that numbers of Canadian cattle of that cargo were not given up, but were fattened and netted good profits when sold.

This blunder has done much to shake public confidence, in Scotland at least, in the operations of the Board, but it has not in the least shaken the Scotch farmers' confidence in the excellent qualities and freedom from disease of Canadian store cattle.

In conclusion I would say that the main points at issue are:—

(a.) Does contagious pleuro-pneumonia exist in Canada? We answer that we have failed to find it by most diligent search, and we likewise believe that it does not exist, and never was present except when imported at the Point Lévis cattle quarantine in 1886, beyond the fences of which it was not allowed to extend.

(b.) Is it being smuggled into Canada from the United States? We answer: No. There being no inducement, a strictly guarded frontier, confiscation of the animals, a heavy penalty if detected, and the non-existence of the disease in States bordering on Canada, are all against such contention.

(c.) Can contagious pleuro-pneumonia be distinguished by post-mortem lesions apart from history or clinical facts? The imperial officers say yes. We say in early stages most emphatically no, and in this we are supported by most of the best authorities in Europe and America.

I have the honour to be, sir,

Your obedient servant,

D. McEACHRAN, F.R.C.V.S.,

*Chief Inspector.*

To JOHN LOWE, Esq.,  
Deputy Minister of Agriculture,  
Ottawa.

### APPENDIX 6a.

LETTER OF GEORGE ADAMI, M.A., M.D., (LATE OF JESUS COLLEGE, CAMBRIDGE), PROFESSOR OF PATHOLOGY, MCGILL UNIVERSITY.

PATHOLOGICAL LABORATORY, MCGILL UNIVERSITY,  
MONTREAL, 26th November, 1894.

DEAR DOCTOR McEACHRAN,—I beg to acknowledge the receipt of your letter of the 22nd instant with the accompanying copy of the Imperial Yellow-book containing the report of the investigation into the correctness of the diagnosis made by the veterinary officers of the Board of Agriculture. I have pleasure in acceding to the request of the Deputy Minister that I should state my views generally upon the report.

The report may be divided into four parts:—

1. The evidence adduced by the imperial veterinary officers in support of their contention that the Canadian cattle suffered from contagious pleuro-pneumonia.
2. The evidence given by others called in favour of this contention.
3. The evidence given by those not agreeing with the contention.
4. The summing of the committee\*.

To criticise all this material is a most formidable task and one that I hesitate to undertake unless I learn that such an exhaustive criticism is desired. I will therefore confine myself to certain general remarks upon the impressions given upon reading the report and will treat more fully one point only, namely, the stand taken by the imperial veterinary officers as scientific experts.

\* Note the peculiar arrangement of the committee. It was stated in the House of Commons that a committee would be appointed. In the report we are told that the evidence was taken before the Board, together with two assessors, that is to say, not before a committee. Consequently the conclusion of this report is signed simply by Mr. Herbert Gardner. We have not the signatures of the other members and have never learned what were their conclusions.

Personally, I take exception to the Imperial Government setting up men to decide the matter at issue who have not the necessary scientific training which would render them able to decide a point which admittedly is a difficult one, and which only can be decided along lines wholly different from those taken by the Home authorities.

In contradiction to Professor Brown, I do not hesitate to state that there are conditions in the cow's lung which to the naked eye and under the microscope are not distinguishable from the conditions found in the earlier stage of contagious pleuro-pneumonia. This being the case, it is evident that an inquiry based purely upon naked eye and microscopic characters is one liable to end in confusion, liable to lead to mistakes, while decisions based on naked eye characteristics are *à fortiori* liable to be erroneous.

It seems to me remarkable that no questions were put to men of the standing of Dr. Sims Woodhead, Dr. Ruffer and Professor MacFadyen upon matters in which without a doubt, questions would have evoked answers widely different to those given by Professor Brown and the veterinary staff, upon matters with which these experts were especially capable of dealing, while Professor Brown and his staff were not pre-eminently capable of answering them. I refer to the possibility of distinguishing different forms of pneumonia by bacteriological examination and to the possibility of distinguishing different forms by the results of inoculation. With regard to this latter point Professor Brown says quite truly that inoculation with the products of the true contagious pleuro-pneumonia does not reproduce the disease; but he wholly omits to add that Nocard from his cases obtained a micro-organism reproducing a disease so similar to contagious pleuro-pneumonia that he (Brown) declared it to be the same; wholly omits to add that no inoculations were practiced with products of the Canadian lungs in order to determine whether the lesions produced resembled or differed from those produced by products from the genuine disease.

In regard to this as to many other points, it is in the highest degree to be regretted that no representative of Canada was present having the power of cross-questioning the witnesses. The inquiry in short revolved around the questions as to whether the lungs in question agreed in their character with the descriptions given in certain text-books, and as to what experience the various witnesses had had to pronounce upon the characteristics of the true disease; and when witnesses were inclined to doubt the specific nature of the lesions and to urge that other disease might produce similar results the board was amply satisfied to fall back upon Professor Brown and receive from him the direct negative of these opinions.

In a report of this nature depending for its value upon the interpretation of the appearances of disease, the value of the evidence given by individual witnesses is in direct ratio to the scientific standing of the witnesses. The value of the evidence given by the members of the Imperial veterinary staff, for example, depends not upon the amount of material that has passed through their hands in a number of years but upon the power they possess of judging that material and determining its nature.

Now a study of the evidence given by Mr. A. C. Cope and Professor Brown reveals a very remarkable condition of affairs. It shows here and there a most curious deficiency in ordinary pathological (*i. e.* medical) knowledge which certainly is not to be expected in those brought forward as pathological experts.

For the scientific head of the Imperial Veterinary Department to have to admit that he cannot answer fully a simple question on the contagiousness of tuberculosis (question 46) and to state further "I should not like to speculate too much upon it" when all pathologists can determine by experiment that the matter has gone beyond the stage of speculation, and further that "the present *theory* is that it is due to the introduction of the bacillus of tuberculosis into the system," all this displays want of acquaintance with the present standpoint of pathological knowledge with regard to tuberculosis and want of information of the frequently confirmed results of recent investigations that coming from the mouth of one occupying so high a position, is peculiar and surprising (pp. 95-160.) For one in his position to declare frankly his ignorance of the literature in connection with an important section of the inquiry is something unexpected. Surely the English Veterinary Department should be fully informed as to this literature in con-

## Scheduling of Canada.

nection with pleuro-pneumonia whether true (contagious) or false. But it appears from the evidence to know nothing save that Nocard refers to "cornstalk" disease and it does not know what Billings has written upon this form which so closely simulates the real contagious disease. Mr. Cope's statement concerning Billings to the effect that he had not seen a case of corn stalk disease is wrong and demonstrates that he is wholly unacquainted with the writings of this observer.

For an expert to say as does Mr. Cope that "emphysema" is asthma, shows a want of knowledge of terms that ought not to be. There is a similar most dubious looseness in the employment of the terms "serum" and "catarrhal" throughout the evidence of the imperial staff; all indicating a lax, inexact, pathology.

Again, for an expert to bring as convincing rebuttal of observations made upon the existence of a disease simulating contagious pleuro-pneumonia that the case described could not be mistaken for contagious pleuro-pneumonia, because the bands of marbling 5-6 mm. across were after all "mere streaks" (Brown Q. 833) shows a curious ignorance of the metric scale. A scientific expert ought surely to know that this amount is above rather than below the average thickness of the bands seen in contagious pleuro-pneumonia.

While for these experts to deny straightly that other conditions may simulate at least the early stages of contagious pleuro-pneumonia is proof positive that they have never made full investigation into the experimental production of pneumonia in the cow's lungs.

I do not hesitate to say that in all these points the veterinary advisers of the Imperial Board of Agricultural have shown themselves not to be of the high standard that should be expected and demanded from those holding such responsible posts. The mistakes indicated are not of the nature of incidental slips. They are the mistakes of want of acquaintance with matters in which there should be positive knowledge. Those making such mistakes are to be classed with the scientific experts, and their opinion is not of sufficient weight to satisfy the Dominion,—of no weight compared with the opinions of observers of such acknowledged scientific training and eminence as are Mr. Nocard, Dr. Sims Woodhead and Professor MacFadyean.

I say this with full knowledge of the responsibility attaching itself to such a statement. No one will venture to state that Professor Brown, Mr. Cope or Mr. Duguid are of the same high rank as scientific veterinarians as are the heads of the Veterinary Departments in France, Germany, the States and even Denmark. No single original investigation of importance advancing veterinary science has emanated from among the members of the imperial staff during the last ten years, during a period, that is, when discovery after discovery of the greatest value has been announced elsewhere. The bacteriological achievements of the staff have been a succession of failures.

One reads with surprise the answers by a man of Professor Brown's attainments to questions 859 to 863, blankly refusing to accept Professor Nocard's careful series of investigations. M. Nocard notes that to the naked eye the condition found by him in the lungs of certain cattle coming from the United States is scarcely distinguishable from the manifestations of the contagious disease. With the greatest clearness he demonstrated that the lungs in question contain great numbers of one special form of bacteria, not found in contagious pleuro-pneumonia; that these in pure culture or mixed with the exudation, inoculated into live rabbits, guinea pigs and calves produce a characteristic disease, which in the case of the calf (when inoculation has been made into the lung) is indistinguishable from the pneumonia found in American cattle. Professor Brown blankly refuses to accept these observations, and states that the material sent to him by M. Nocard was the true disease despite the fact that no one had so far discovered any pathogenic micro-organisms in the true disease; and the professor had the hardihood to inform the board that a perusal of Mr. Nocard's paper confirmed him further in his belief.

Now, Mr. Nocard is the leading scientific veterinarian of France, and I may say, without exaggeration, of Europe. He has made more researches of the highest importance in the domain of the zymotic diseases of animals than any other living veterinarian with one possible exception, and he is an authority to whom we pathologists have con-

tinually to acknowledge our indebtedness. This point b'ank denial on the part of Professor Brown to regard M. Nocard's cases as other than examples of the true disease, must by pathologists be regarded as an admission that he confuses two wholly different diseases and brings them together under one common term.

The argument upon which the Board and the Imperial Minister of Agriculture lays the greatest stress is no argument at all. They say (Cope 791-800, Brown 830) that out of 3,133 sets of lungs the officers of the department separated 1,087 as cases of pleuro-pneumonia, and point out that in no single case had the disease been traced to animals declared unaffected with pleuro-pneumonia, while where a decision of contagious pleuro-pneumonia was made, the rectitude thereof was frequently confirmed by discovering other cases upon slaughtering the herds. But this only proves that Mr. Duguid and Mr. Cope never passed over undoubted cases of the disease. It in no wise proves that they did not often label as contagious pleuro-pneumonia cases of a mild non-infectious disease. The department does not venture to advance the only valid argument in this connection, namely, that of these 1,087 cases, with only the rarest exceptions, every one could be traced to an infected herd, and that upon slaughtering the herds from which these cases came *constantly* (and not merely *frequently*) other cases were detected.

Altogether I would sum up by saying that the Dominion Government has a strong case for respectfully urging upon the Home Government that the evidence of the imperial veterinary staff is quite insufficient to show that the disease in the Canadian cattle was typical contagious pleuro-pneumonia. No attempt has been made to observe the effects of inoculation, none to obtain the bacteriology of the cases. The Dominion Government may with safety decline to receive the evidence afforded by the Home Government that neither of these courses would prove effectual; and may suggest firmly that they ought to be tried.

I may add that as the results of our experiments we have succeeded in reproducing a condition which to the naked eye is not distinguishable from the early stages of contagious pleuro-pneumonia. It would be well if we could continue the investigations so as to make out an absolutely strong case.

I am, dear Dr. McEachran, yours sincerely,

J. GEORGE ADAMI.

To Professor D. MCEACHRAN,  
&c., &c.,  
Montreal, Que.

## APPENDIX 6b.

### LETTER OF DR. WELSH, PROFESSOR OF PATHOLOGY.

(JOHNS HOPKINS' UNIVERSITY, BALTIMORE.)

935 ST. PAUL STREET,

BALTIMORE, 26th September, 1894.

DEAR PROFESSOR MCEACHRAN,—I thank you very much for the official publications regarding alleged pleuro-pneumonia in Canadian cattle. I have read them, particularly the last one, with much interest, and have given them to Clement to return to you. I confess I hardly know what to make of the whole matter. There would seem to be no doubt that the lungs from ss. "Toronto" case, which is the basis of the last publication, showed to the naked eye lesions indistinguishable from those of genuine pleuro-pneumonia in acute cases. The experts were practically unanimous on this point. I have supposed that when the gross appearances of the lung showed the variagated hepatization and broad bands of interstitial exudate characteristic of contagious pleuro-pneumonia, there could be no doubt that it must be this disease. There are on the one hand anomalous forms of pleuro-pneumonia, which could not well be recognized as such without a knowledge of the circumstances surrounding the case, and on the other hand there are forms of pulmonary hepatization, even with interstitial exudate, which bear more or less

## Scheduling of Canada.

resemblance to contagious pleuro-pneumonia, but which are certainly of a different nature. But, as I have just said, I have believed that when the perfectly typical appearances of acute contagious pleuro-pneumonia are present, there should be no mistake about the diagnosis.

I regret that no microscopical examination is recorded of this Toronto lung, which is pronounced to have presented the characteristic naked eye appearances of contagious pleuro-pneumonia. In neither of these official publications do I find emphasis placed upon what seems to me a most valuable characteristic for diagnosis, viz., the histological structure of the interlobular exudate and surrounding tissues. In acute cases, you can distinguish four zones in these interlobular bands, if the section cuts them across the middle. There is in the middle of the band a network of fibrillated fibrin remarkable for the paucity of leucocytes; near the edge you come first to a zone of irregular particles composed of nuclear fragments densely packed together and staining deeply with nuclear dyes; outside of this is a zone of packed poly-nuclear leucocytes, and outside of this is connective tissue with proliferating fixed cells; and, if the disease is of much duration, a more or less thick band of young granulation tissue. The impression is irresistible that some deadly cell poison is present in the lymph spaces, that the leucocytes are attached in masses toward these spaces, but that they are killed as soon as they reach a certain point at the edge of these spaces, where they leave behind them fragmented nuclear.

Any one who has made a careful histological study of pleuro-pneumonia must have been impressed with these peculiarities, and still our English friends do not seem to have anything to say about these important characters.

Still, I confess that I have believed that a lung presenting the naked eye appearances assigned to that Toronto lung must be the seat of contagious pleuro-pneumonia, but I do not see how it is possible that they should find fresh pleuro-pneumonia in your Canadian cattle when they reach England, and no manifestations of the disease be found in Canada. If it is not contagious pleuro-pneumonia, then it is some hitherto undescribed disease resembling it so closely that competent experts cannot distinguish the two diseases with the naked eye. I wish that some good pathologist could examine microscopically a piece of the Toronto lung. Is it possible that the steamships have become infected, perhaps in England, and that genuine pleuro-pneumonia develops on the voyage? \* I do not see how this can be in view of what is understood to be the period of incubation of the disease and as so many vessels are concerned; still if the same vessels had been used at any previous time in transporting cattle from countries where pleuro-pneumonia existed, they might have become infected.

When I was looking up the literature of contagious pleuro-pneumonia, which by the way I consider to be very unsatisfactory from a pathological point of view, I was impressed with the meagreness of our knowledge concerning pulmonary inflammations in cattle, outside of tuberculosis, contagious pleuro-pneumonia and pneumonia due to strongyles. It seems to me highly important to learn about the various forms of pneumonia which may occur in cattle in regions where there can be no suspicion of contagious pleuro-pneumonia. I am sure that either lobular exudation and hepatization may occur without contagious pleuro-pneumonia, although I have supposed that they could be distinguished from the latter. It may appear that this cannot be done anatomically.

I am sorry that you were prevented from visiting Baltimore last week, but I hope that you may find an early opportunity to come here.

I am, sir,

Yours very truly,

WILLIAM H. WELSH.

To Professor D. McEACHRAN,  
&c., &c.,

# REPORT OF CRIMINAL STATISTICS

FOR THE YEAR ENDED 30TH SEPTEMBER, 1894.

The collection of these statistics is made under authority of the Criminal Statistics Act, Chapter 60, Revised Statutes of Canada.

The annexed report is composed of "Indictable Offences" and "Summary Convictions," the former including all cases tried by police and other magistrates, with the consent of the accused, under the "Speedy Trials," "Summary Trials by Consent," and "Juvenile Offenders" Acts; while the latter is made up of cases disposed of by justices of the peace out of session, under the "Summary Convictions" Act.

As in previous reports, the indictable offences are divided into the following six classes: Offences against the person; Offences against property with violence; Offences against property without violence; Malicious offences against property; Forgery and other offences against currency, and other offences not included in the foregoing classes.

During the year 1894, there were 7,601 charges of indictable offences in the criminal courts of Canada, an increase of 835 over the previous year. From that number of charges, 2,282 were acquitted, 14 detained for lunacy, and 47 received no sentence through several causes, such as "*Nolle prosequi*," "jury disagreed," "bail forfeited," &c., while in 1893 out of 6,766 charges, there were 2,053 acquittals, 9 detained for lunacy, and 74 cases receiving no sentence.

The number of convictions is therefore reduced to 5,258, or 10·50 per 10,000 inhabitants, in 1894, as compared with 4,630, or 9·36 per 10,000 inhabitants in 1893, for the several provinces in the following order:—

## INDICTABLE OFFENCES.

PROVINCES.	Number of Convictions.		Number of Convictions per 10,000 inhabitants.	
	1893.	1894.	1893.	1894.

	4,630	5,258	9·36	10·50

## Criminal Statistics.

# RAPPORT DE LA STATISTIQUE CRIMINELLE

POUR L'ANNÉE FINISSANT LE 30 SEPTEMBRE 1894.

Cette statistique est recueillie sous l'autorité de "l'Acte de la Statistique Criminelle," chapitre 60, Statuts Révisés du Canada.

Le rapport ci-joint se compose de "Délits sujets à poursuite" et de "Condamnations sommaires;" les premières contenant les cas expédiés sommairement par des magistrats de police ou autres juges de paix, du consentement des accusés, en vertu des Actes concernant les "procès expéditifs," les "procès sommaires" et les "jeunes délinquants"; tandis que les dernières ne contiennent que les cas expédiés sommairement par des juges de paix, en dehors des sessions, sous l'autorité de "l'Acte des condamnations sommaires."

Comme dans les rapports précédents, les délits sujets à poursuite se divisent en six classes : outrages contre la personne ; délits avec violence contre la propriété ; délits sans violence contre la propriété ; offenses malicieuses contre la propriété ; faux et délits par rapport à la monnaie, et autres délits non compris dans les classes précédentes.

Durant l'année 1894, il y a eu 7,601 accusations pour délits sujets à poursuite dans les cours criminelles du Canada, soit une augmentation de 835 sur l'année précédente. De ce nombre, il y a eu 2,282 acquittements, 14 emprisonnements pour cause de folie et 47 cas dans lesquels, pour différentes causes, aucune sentence n'a été prononcée; tandis qu'en 1893, sur 6,766 accusations il y a eu 2,053 acquittements, 9 emprisonnements pour cause de folie et 74 cas ne recevant aucune sentence.

Le nombre de condamnations pour offenses sujettes à poursuite se trouve donc réduit à 5,258, ou 10·50 par 10,000 habitants en 1894, contre 4,630, ou 9·36 par 10,000 habitants en 1893, dans l'ordre suivant pour les différentes provinces :

### DÉLITS SUJETS À POURSUITE.

PROVINCES.	Nombre de condamnations.		Nombre de condamnations par 10,000 habitants.	
	1893.	1894.	1893.	1894.
Nouveau-Brunswick .....	121	109	3·76	3·39
Ile du Prince-Edouard .....	24	39	2·20	3·57
Nouvelle-Ecosse.....	199	182	4·40	4·01
Manitoba .....	168	186	9·18	9·95
Québec .....	1,374	1,653	9·06	10·80
Ontario .....	2,315	2,682	10·75	12·33
Les Territoires .....	135	171	12·64	15·40
Colombie-Britannique .....	294	236	26·11	19·57
Canada .....	4,630	5,258	9·36	10·50

As will be seen by the above table, the number of convictions, during the year 1894, has diminished in New Brunswick, Nova Scotia and British Columbia, while it has increased in all the other provinces, and more specially in Ontario and Quebec.

Out of the above number of convictions, 377 belonged to the female sex in 1894, against 343 in 1893, 13.0 per cent were young offenders under 16 years of age in 1894, against 14.4 in 1893. The educational states of the convicted, for 1894, stands thus: unable to read or write, 13.1 per cent; having an elementary education, 74.6 per cent; having a superior education, 2.1 per cent; against 18.9, 71.2 and 1.9 respectively for 1893.

The use of liquors is represented by the following figures:—

Moderate, 54.3 per cent; immoderate, 38.0 per cent in 1894; against 54.4 and 37.5 per cent respectively in 1893. Out of the 5,258 convictions, 4,517 relate to persons convicted for the first time; 365, to persons convicted for the second time; and 376, to persons convicted three times and over in 1894; against 3,828, 465 and 337 respectively in 1893.

The following table gives a detail of the several sentences for the years 1893 and 1894:—

SENTENCES.	1893.	1894.
Sentenced to option of a fine.....	817	798
“ to jail for less than one year.....	2,114	2,428
“ “ one year and less than two.....	234	263
“ to penitentiary for two years and under five.....	274	388
“ “ five years and over.....	137	173
“ “ life.....	1	9
“ to reformatories.....	168	190
“ to death.....	6	11
Other sentences, such as bound to keep the peace, sentence deferred, &c.....	879	998
Totals.....	4,630	5,258

#### INDICTABLE OFFENCES BY CLASSES.

In Class I, “Offences against the person,” into which are included: murder, manslaughter, assault, &c., &c., the number of convictions has increased by 3.5 per cent, the figures being 1,128 for 1893, and 1,168 for 1894. In this class, Ontario and Manitoba show a larger increase than the other provinces.

In Class II, “Offences against property with violence,” including burglary, house and shop-breaking, &c., &c., the number of convictions was 362 for 1893, and 450 for 1894; the increase in this class being principally in Ontario and Quebec.

Class III, “Offences against property without violence,” comprising larceny, horse and cattle stealing, embezzlement, fraud and false pretences, &c., &c., shows an increase of 16.7 per cent during the year; the figures being 2,801 for 1893, against 3,270 for 1894. In this class, all the provinces, with the exception of New Brunswick, show an increase in the number of convictions.

## Criminal Statistics.

Comme on le voit par ce tableau, le nombre des condamnations durant l'année 1894 a diminué dans le Nouveau-Brunswick, la Nouvelle-Ecosse et la Colombie-Britannique, tandis qu'il a augmenté dans toutes les autres provinces, et plus particulièrement dans Ontario et Québec.

Sur le nombre de condamnations plus haut mentionné, 377 appartenaient au sexe féminin en 1894, contre 343 en 1893; 13.0 pour cent des personnes condamnées en 1894 n'avaient pas atteint l'âge de 16 ans, contre 14.4 en 1893. Le degré d'instruction des personnes condamnées, en 1894, est représenté de la manière suivante: 13.1 pour cent incapables de lire et d'écrire; 74.6 pour cent ayant une instruction élémentaire, et 2.1 pour cent, une instruction supérieure, contre 18.9, 71.2 et 1.9 respectivement en 1893. L'usage des boissons enivrantes chez les condamnés est représenté par les chiffres suivants:—Usage modéré, 54.3 pour cent; usage immodéré, 38.0 pour cent en 1894, contre 54.4 et 37.5 respectivement en 1893. Des 5,258 condamnations plus haut mentionnées, 4517 représentent des personnes condamnées pour la première fois; 365, des personnes condamnées pour la deuxième fois; 376, des personnes ayant subi trois condamnations et plus, en 1894, contre 3,828, 465 et 337 respectivement en 1893.

Le tableau suivant donne le détail des sentences pour les années 1893 et 1894 :

SENTENCES.	1893.	1894.
Condamnés à l'option entre la prison et l'amende.....	817	798
“ à la prison pour moins d'un an .....	2,114	2,428
“ “ pour un an et moins de deux .....	234	263
“ au pénitencier pour deux ans et moins de cinq .....	274	388
“ “ pour cinq ans et au-dessus .....	137	173
“ “ pour la vie.....	1	9
“ aux écoles de réforme .....	168	190
“ à mort .....	6	11
Autres sentences, telles que “tenu de garder la paix,” “sentences remises,” etc.....	879	998
Total.....	4,630	5,258

### DÉLITS SUJETS A POURSUITE CLASSIFIÉS.

La classe I, “outrages contre la personne,” (dans laquelle sont compris les cas de meurtre, d'homicide, voies de fait etc.) montre que le nombre des condamnations a augmenté de 3.5 pour cent durant l'année, les chiffres s'élevant à 1,168 en 1894, et à 1,128 en 1893. Dans cette classe d'offences, Ontario et Manitoba accusent une plus forte augmentation que les autres provinces.

Dans la classe II, “offences contre la propriété avec violence,” comprenant les vols avec effraction, les bris de maisons et de magasins, etc., le nombre de condamnations s'élevait à 362 en 1893 et à 450 en 1894. L'augmentation dans cette classe se trouve principalement dans Ontario et Québec.

La classe III, “offences contre la propriété sans violence,” dans laquelle sont compris les cas de larcin, de vol de chevaux et de bétail, de détournement, de fraude et de faux prétexte, etc., montre une augmentation de 16.7 pour cent durant l'année; les chiffres s'élevant à 2,801 en 1893 et à 3,270 en 1894. Dans cette classe, à l'exception du Nouveau-Brunswick, le chiffre des condamnations a augmenté dans toutes les provinces.

In Class IV, "Malicious offences against property," the number of convictions for 1893 was 68, against 56 for 1894; Ontario and Manitoba, in this class, showing the greater decrease.

Class V, "Forgery and offences against the currency," also shows a slight decrease in the number of convictions, the figures being 46 in 1893, against 37 in 1894.

In Class VI, "Other offences not included in the foregoing classes," the figures stand thus: 225 convictions in 1893, and 277 in 1894. The higher increase in this class are to be found in Quebec and Ontario, where the total convictions for the two provinces amounted to 118 in 1893, against 238 in 1894, and the larger decrease in British Columbia, where the figures fell from 69 to 15.

The following table shows the number of cases in which more than one indictment has been taken against the accused for the one and same offence:—

PROVINCES.	Number of Charges.		Number of Acquittals.		Number of Convictions.	
	1893.	1894.	1893.	1894.	1893.	1894.
Prince Edward Island.....	2	6	.....	1	2	5
Nova Scotia.....	12	10	4	5	8	5
New Brunswick.....	4	2	.....	.....	4	2
Quebec.....	114	89	48	27	66	62
Ontario.....	294	399	107	145	187	254
Manitoba.....	16	16	1	4	15	12
British Columbia.....	6	14	2	2	4	12
The Territories.....	5	7	1	3	4	4
Canada.....	453	543	163	187	290	356

#### SUMMARY CONVICTIONS.

There was a small decrease of 116 in the total number of summary convictions for the Dominion, during the year, as shown by the following table:—

PROVINCES.	Summary Convictions.	
	1893.	1894.
Prince Edward Island.....	335	422
Nova Scotia.....	1,755	2,266
New Brunswick.....	2,302	2,096
Quebec.....	8,388	9,194
Ontario.....	15,047	14,033
Manitoba.....	1,132	990
British Columbia.....	1,450	1,201
The Territories.....	614	705
Canada.....	31,023	30,907

As seen by the above, the provinces showing a decrease, are:—Ontario, 1,014; British Columbia, 249; New Brunswick, 206, and Manitoba, 142; and those showing an increase are:—Quebec, 806; Nova Scotia, 511; The Territories, 91, and Prince Edward Island, 87. Out of the above number of summary convictions, 3,042 or 9·8 per cent, belong to females in 1894, against 3,156, or 10·17 per cent in 1893. During the

## Criminal Statistics.

Dans la classe IV, "Dommages malicieux à la propriété," le nombre des condamnations s'élevait à 68 en 1893 et à 56 en 1894. Ontario et Manitoba, dans cette classe, montrent la plus forte diminution.

La classe V, "faux et délits par rapport à la monnaie," montre aussi une faible diminution dans le nombre des condamnations; les chiffres s'élevaient à 46 en 1893 et à 37 en 1894.

Le nombre des condamnations dans la classe VI, "autres offences non comprises dans les classes précédentes," s'élevait à 225 en 1893 et à 277 en 1894. Les plus hautes augmentations dans cette classe se trouvent dans Ontario et Québec, où le nombre des condamnations pour ces deux provinces s'élevait à 118 en 1893 et à 238 en 1894; tandis que la plus grande diminution se trouve dans la Colombie-Britannique, où les chiffres sont tombés de 69 qu'ils étaient en 1893 à 15 en 1894.

Le tableau suivant donne le nombre de cas dans lesquels plus d'une accusation a été portée contre l'accusé pour une seule et même offence :

PROVINCES.	Nombre d'accusations.		Nombre d'acquittements.		Nombre de condamnations.	
	1893.	1894.	1893.	1894.	1893.	1894.
Ile du Prince-Edouard.....	2	6	.....	1	2	5
Nouvelle-Ecosse.....	12	10	4	5	8	5
Nouveau-Brunswick.....	4	2	.....	.....	4	2
Québec.....	114	89	48	27	66	62
Ontario.....	294	399	107	145	187	254
Manitoba.....	16	16	1	4	15	12
Colombie-Britannique.....	6	14	2	2	4	12
Les Territoires.....	5	7	1	3	4	4
Canada.....	453	543	163	187	290	356

### CONDAMNATIONS SOMMAIRES.

Il y a eu, durant l'année, une faible diminution de 116 dans le nombre total des condamnations sommaires pour le Canada, tel que démontré par le tableau suivant :

PROVINCES.	Condamnations sommaires.	
	1893.	1894.
Ile du Prince-Edouard.....	335	422
Nouvelle-Ecosse.....	1,755	2,266
Nouveau-Brunswick.....	2,302	2,096
Québec.....	8,388	9,194
Ontario.....	15,047	14,033
Manitoba.....	1,132	990
Colombie-Britannique.....	1,450	1,201
Les Territoires.....	614	706
Canada.....	31,023	30,907

D'après ce tableau, les provinces dans lesquelles il y a eu diminution sont : Ontario, 1,014; la Colombie-Britannique, 249; le Nouveau-Brunswick, 206, et le Manitoba, 142. Les provinces montrant une augmentation sont : Québec, 806; la Nouvelle-Ecosse, 511; les Territoires, 91, et l'Ile du Prince-Edouard, 87. Du nombre total des condamnations

year, there was a diminution of 526 in the number of offences against the liquor license Acts, also a diminution of 93 in the cases of drunkenness.

A new table has been introduced in the present report, giving the number of fines imposed by police magistrates and other justices of the peace. According to this table, there were 27,100 persons sentenced to pay fine by the several police magistrates and justices of the peace of Canada, during the year 1894, which fines amounted to \$199,426.

The proportion, per cent, to the total number of fines, by provinces, is as follows:—Ontario, 46.32; Quebec, 29.00; Nova Scotia, 7.62; New Brunswick, 7.31; Manitoba, 3.24; British Columbia, 3.12; The Territories, 1.86; Prince Edward Island, 1.53. The average amount for each fine is:—Prince Edward Island, \$14.16; British Columbia, \$13.70; New Brunswick, \$11.67; The Territories, \$11.01; Quebec, \$7.84; Nova Scotia, \$6.77; Ontario, \$5.82; Manitoba, \$5.24; Canada, \$7.35. Of the total amount of fines, 44.61 per cent were offences against the liquor license Acts; 36.50 per cent for drunkenness, vagrancy, assault, disorderly conduct, breach of the peace, and 19.89 per cent for all other offences comprised in the summary convictions.

The following table gives the total number of convictions (indictable and summary) with the number of inhabitants for each conviction returned by provinces, in the order of criminality:—

PROVINCES.	Total Convictions.		Number of inhabitants for each Conviction.	
	1893.	1894.	1893.	1894.
Prince Edward Island.....	359	461	304	237
Nova Scotia.....	1,954	2,448	231	185
Manitoba.....	1,300	1,176	134	159
New Brunswick.....	2,423	2,205	133	146
Quebec.....	9,762	10,847	155	139
Ontario.....	17,362	16,715	124	130
The Territories.....	749	876	142	127
British Columbia.....	1,744	1,437	65	84
Canada.....	35,653	36,165	139	138

By the above table, it will be seen that the total number of convictions has increased in the provinces of Prince Edward Island, Nova Scotia, Quebec and The Territories, while it has decreased in New Brunswick, Ontario, Manitoba and British Columbia.

The number of cases tried before a jury, during the year 1894, was 994, against 943 in 1893.

During the year 1894, there were 166 cases in which the prerogative of mercy has been exercised (including 7 death sentences commuted) against 109 in 1893 with one death sentence commuted.

E. H. ST. DENIS,  
*Assistant Statistician.*

Department of Agriculture,  
30th June, 1895.

## Criminal Statistics.

sommaires, 3,042 ou 9·8 pour cent, appartenaient au sexe féminin en 1894, contre 3,156 ou 10·17 pour cent en 1893. Il y a eu une diminution de 526 durant l'année dans le nombre d'offences contre les lois pour licences de boissons, ainsi qu'une diminution de 93 dans le nombre de cas d'ivresse.

Un nouveau tableau a été introduit dans le présent rapport, donnant le nombre d'amendes imposées par les magistrats de police ou autres juges de paix. D'après ce tableau, 27,100 personnes ont été condamnées à l'amende par les magistrats de police ou autres juges de paix du Canada, durant l'année 1894, lesquelles amendes s'élevaient à \$199,426. La proportion pour cent du total des amendes est distribuée comme suit, par province :—Ontario, 46·32 ; Québec, 29 ; Nouvelle-Ecosse, 7·62 ; Nouveau-Brunswick, 7·31 ; Manitoba, 3·24 ; Colombie-Britannique, 3·12 ; les Territoires, 1·86 ; Ile du Prince-Edouard, 1·53. Les chiffres suivants donnent le montant moyen des amendes dans chaque province :—Ile du Prince-Edouard, \$14.16 ; Colombie-Britannique, \$13.70 ; Nouveau-Brunswick, \$11.67 ; les Territoires, \$11.01 ; Québec, \$7.84 ; Nouvelle-Ecosse, \$6.77 ; Ontario, \$5.82 ; Manitoba, \$5.24 ; Canada, \$7.35.

Du montant total des amendes imposées, 44·61 pour cent l'ont été pour offences contre les lois pour licences de boissons, 36·50 pour cent pour les délits suivants : ivresse, assaut, vagabondage, perturbation de la paix, conduite déréglée ; et 19·89 pour cent pour tous les autres délits compris dans les condamnations sommaires.

Le tableau suivant donne le nombre total des condamnations (délits sujets à poursuite et condamnations sommaires) avec le nombre d'habitants pour chaque condamnation, par province, dans l'ordre de criminalité :

PROVINCES.	Nombre total des condamnations.		Nombre d'habitants pour chaque condamnation.	
	1893.	1894.	1893.	1894.
Ile du Prince-Edouard.. . . . .	359	461	304	237
Nouvelle-Ecosse.. . . . .	1,954	2,448	231	185
Manitoba.. . . . .	1,300	1,176	134	159
Nouveau-Brunswick . . . . .	2,423	2,205	133	146
Québec.. . . . .	9,762	10,847	155	139
Ontario . . . . .	17,362	16,715	124	130
Les Territoires.. . . . .	749	876	142	127
Colombie-Britannique . . . . .	1,744	1,437	65	84
Canada.. . . . .	35,653	36,165	139	138

Par ce tableau on voit que les condamnations ont augmenté, durant l'année, dans l'Ile du Prince-Edouard, la Nouvelle-Ecosse, Québec et les Territoires, tandis qu'elles ont diminué dans le Nouveau-Brunswick, Ontario, Manitoba et la Colombie-Britannique.

Le nombre de cas mis en jugement devant un juré s'élevait à 994 en 1894 et à 943 en 1893.

Il y a eu 166 cas dans lesquels le droit de grâce a été exercé en 1894, y compris 7 sentences de mort commuées, et en 1893 il y en a eu 109, avec une sentence de mort commuée.

E. H. ST. DENIS,  
*Assistant statisticien.*

Département de l'Agriculture,  
30 juin 1895.
