The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shall contain the symbol ➡ (meaning "CONTINUED"), or the symbol ▼ (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

Archives of Ontario
Toronto

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par le premier plat et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par le première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole ➡ signifie "A SUIVRE", le symbole ▼ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

CIRCULAR

AS THE season has again come around, in which I present my Annual Circular to the farmers and dealers in Implements throughout the country, I take this opportunity of most cordially thanking them for the liberal support they have given me in 1892. During the year just passed, I have sold over Five Thousand Mills, and over Three Thousand Six Hundred of my Improved Bagging Attachments, which is as many as have been sold by all the other factories in Canada put together, and then doubled.

Considering the above facts, and after reading the testimonials which I print for your inspection, I place my Fanning Mill and Bagging Attachment for 1893 before you, with the utmost confidence that I have the most reliable Fanning Mill manufactured in America for cleaning, separating and bagging all kind of grain. I make a specialty of Fanning Mills, and let no chance pass to have the best improvements that can be obtained.

Special points in favor of my mill are the following: Easy to turn; screw feed for the hopper; low and handy to get in the grain; strong and durable; well painted; screens and riddles to clean and separate all kinds of grain and seeds grown in Canada; fast and good cleaning of wheat. Special attention has been given to the fast cleaning of barley, removing all foul seed, dirt and broken weeds. My long mash Zinc Screen for taking rye, oats and chaff from wheat, works grandly. The attachment for knocking or agitating the screens to keep the meshes from filling

up has been improved, and is now the best that can be got. I claim my plan of placing the screens and riddles in the shoe cannot be surpassed. You can give them any pitch desired, and also put as many in at one time as you like, or as are required to clean the grain. You can use one riddle, or you can, by placing another under it, have a Two-ply Gang, or you can put another under the second and have a Three-ply Gang. The advantage from this plan is very great. You can use one, two or three ply, as the condition of the grain requires. Each screen is branded plain what it is to be used for, so no mistake can be made. Full printed directions are also furnished with each Mill

Mills sold on liberal terms, and delivered, freight paid, at any station in Canada. To all who favor me with their order I assure prompt and careful attention, and will also guarantee satisfaction.

MANSON CAMPBELL,
Box 106,
CHATHAM, ONT.

I wish to draw the attention of the farmers to the superiority of the Chatham Fanning Mill, and when I state as a fact that I have sold on an average 17 mills every working day for three years in the Province of Ontario, it speaks in louder terms than any words I can use. In 1891 I sold over 4500 Mills, and in 1892 I went over the same ground and sold over 5000 Mills—9500 in the two years. There must be merit to back up the mill or it could not be done. The bagging attachment is also fast growing in favor. I only started to manufacture baggers four years ago. The first year I made 25, the next year 600; the following year 1600, and in 1892 I sold over 3600. That is gaining ground very fast and the time is near at hand when a mill cannot be sold without a bagger, and that time will come as soon as farmers see them work and see the labor they save as well as the waste in grain they save. Supposing a man would go to a farmer, and say, I will agree to shovel into bags all the grain you have this year

for \$10.00. The farmer would jump at the chance. Now the bagger will do all that and it will not cost \$10 to buy one. The objection may be urged that they turn hard; but such is not the case; they turn very easily and will bag from 40 to 70 bushels of wheat in an hour, and will bag 80 to 90 bushels of oats in an hour and do it easily, and when done your grain is all in bags and no shoveling nor sweeping nor backache. It is done and ready to go to market. The farmer who does without a Bagger is standing in his own light and losing money. I sold over 700 mills in Manitoba last fall and every single man took a Bagger and it paid them to do so.

✧ Testimonials ✧

CHATHAM, May 9, '92.

MANSON CAMPBELL,

DEAR SIR,—Last Fall we, the undersigned, Grain Merchants, being in need of a first class general purpose Fanning Mill, asked the different makers to place a mill in our warehouse to be tested and bought on their respective merits. The first mill placed for a test was the Newkirk Mill which we found to be totally unfitted and incompetent to do the work required of it. The mill we wanted was the best that could be bought regardless of price. After giving all a thorough test, we bought a "Famous," although we were offered mills by other makers for one half the price of yours and would advise all farmers to give your mill a trial before buying any other. We also use the Bagging Attachment, with which we are well pleased, and as for the Clay Crusher for crushing clay in beans, it is the Boss of them all.

Yours truly,

TIGHE & STRINGER,

per ROBERT PAYNE, Buyer

RODNEY, County of Elgin, June 11, 1890.

This is to certify that I was present at the trial of the Chatham and New Model on the farm of Mr. A. Huff, Raleigh, and

did the turning of both mills, in which the Chatham mill cleaned and bagged for market 39 bags of wheat in 50 minutes, which was over twice as fast as could be done with the New Model, and the grain was cleaner than could possibly be made by the New Model under the management of Mr. Fløter, and as a matter of fact Mr. Huff and two of his sons and son-in-law each bought a Chatham mill.

Cheerfully yours,
JAMES CARNAGIE.

TOTTENHAM, Ontario, County Simcoe, April 28, 1893.

MR. MANSON CAMPBELL :

DEAR SIR,—This is to certify that I had made up my mind not to buy another fanning mill for years, because I had an extra good mill that I thought could not be beaten, but having occasion the clean some alsike clover, for which my mill was not adapted, I borrowed a new Harriston mill to do the work, as I had heard that for alsike clover it could not be beaten. I had four bags of tailings left over after putting the seed through the Harriston mill that I could not do anything with, when your agent, C. C. McDonnell, came along with the Chatham mill and asked to be allowed to clean a bag of the tailings, which consisted of timothy, alsike, red clover, and different kinds of foul seeds. He separated each kind systematically and left it in fine shape for market, and after I saw the splendid work done by the Famous Chatham mill so satisfactory. I bought the mill without a moment's hesitation, and I heartily recommend it to all brother farmers in need of a first class mill, and will say that the bagger alone is worth in three years, the total cost of the mill and bagger combined, and after it is once used you will feel the same as I do, sorry that you did not purchase one of these Chatham mills years ago, as they cannot be beaten in America as a general purpose mill.

After seeing the fanning mill manufactured by Manson
Campbell, of Chatham, Ont, in operation with different kinds of
grain, I must say it is the best mill I have ever seen. The oats,
if there are any to be found in the wheat, are all taken out, and
the wheat is left pure and without any mixture of other grains
in it. What makes this agricultural instrument precious above
all is, it cleans all bad seeds out of the grain

DEAR SIR,—This is to say that I have owned one of the Orillia Mills, known as the Champion Mill, and I used it until I thoroughly understood it. After I had cleaned my seed wheat as clean as I could get it with my Orillia mill, the agent for the Chatham mill came along and we cleaned it through his mill, and I was surprised at the amount of dirt taken out—over one quart out of half bushel of wheat. I sold my Orillia mill for \$20 although I had paid \$30 for it, and I bought a Chatham mill, which I am well pleased with and I know I have the best mill in the market.

Yours truly,

He had put it through Kemptville mill and did it no good. We put it through my mill and separated it with the following results:—10 bushels good wheat, sold for \$1.10 per bush.; one bushel of nice clean Timothy seed, sold for \$3.00. WEST WHITBY, Ontario Co.

MR. MANSON CAMPBELL :

The mill and Bagger I purchased from your agent, Mr. J. H. Tremear, works complete. I have cleaned grain for my neighbor farmers and they also pronounce it complete. It handles wild tares better than any mill I ever saw.

Yours truly,

HARRY COCKERHAM.

DEAR SIR,—After a little delay in getting your mill introduced, I have found the demand for them to increase. I have sold the 45 I got from you, and want now to arrange with you to have a car load of 65 mills and baggers sent on, payable in cash on delivery.

MANSON CAMPBELL,

DEAR SIR,—I am well pleased with my mill.

Yours truly,

ALFRED BRAMNER.

DEAR SIR,—The mill has given me good satisfaction. I had a few loads of wheat that were $\frac{1}{4}$ wild oats and I ran them through the mill and then sold them to one of our noted grain buyers in London for seed, and he did not find any oats in it, so you may know it made a clean job; and the bagger I consider is the very thing for any farmer to have.

Yours truly,

R. H. SCOTT.

DEAR SIR,—The fanning mill gives good satisfaction in every respect, and I recommend it wherever I can to the farmers.

Yours truly,

A. J. GREEN,

Dealer in Grain, Seeds and Beans.

3. KNOCK-DOWN MILL
FOR SHIPMENT.

The Mill is put together with iron bolts and screws in such a way that it can be readily taken apart for shipment, and in that way I can deliver mills, **Freight Paid**, to any station in the Dominion of Canada, as the freight on a Knock-Down Mill is only one half what it is on a mill set up. **Weight of Mill, 200 pounds.** The Mill can be put together at destination in a very short time by one who never saw the mill before, as all the boards go into grooves and cannot go wrong.

Correspondence solicited from all wanting a first-class mill.

MANSON CAMPBELL.

CHATHAM, ONTARIO.

Most all Farmers have more or less Timothy seed in their Fall wheat. If an old meadow is broken up and sown with wheat the Timothy seed in it next crop amounts to very considerable. The Chatham Mill saves it all.

BAGGING ATTACHMENT FOR THE CHATHAM FANNING MILL

THE above cut represents a new machine which is an attachment for bagging the grain after it comes from the Fanning Mill. It is complete in every respect, and will give the best satisfaction to those who use it. The manner of driving the Bagging Attachment has been greatly improved since last year. It is now driven with a Chain Belt that will not slip nor come off the pulleys. A few points in its favor are these: 1st—It runs very easily. 2d—It takes up very little extra room on the floor. 3d—Fourteen inches square space on the floor will hold the machine, and any farmer can spare that from his barn or granary. 4th—Will bag any kind of grain, from the finest seed, such as timothy or clover, up to the coarsest grain, such as beans and corn. 5th—Will bag from 60 to 80 bushels of wheat per hour, 100 bushels of oats per hour. 6th—Your grain does not go to the floor, thereby saving considerable waste. 7th—Two men with the Bagger will do the same work as three men without it. 8th—It can be attached to any Chatham Mill manufactured during the last five years. The machine is worthy the inspection of farmers.
