Hugh Carson

After a long and painful illness death came as a happy release to Mr. Hugh Carson, Waterdown's oldest and highly respected citizen. Deceased was in his 83rd year at the time of his death.

The late Mr. Carson was a man of estimable character, his entire life of 82 years having been spent in Waterdown. He was perhaps one of the best known men in this part of the county and had the utmost respect of all who knew him.

He is survived by his widow and two daughters at home, and six sons, Fred, Leo, Harry, James and Frank of village, and Joseph of Hamilton, all of whom have the deepest sympathy of a host of friends.

The funeral will take place Friday morning from his late home on the Station Road to St. Thomas church, interment being in the church cemetery.

Mrs. William Edge

Mrs. Charlotte Everitt, wife of our esteemed townsman William Edge, died suddenly on Tuesday last at the home of her sister in Beamsville, where she had gone in the hope that the change would benefit her health. Deceased was in her 60th year at the time of her death and leaves to mourn her loss, besides her husband, one daughter, Mrs. E. Place of Waterdown, two sisters, Mrs. Garbert of Beamsville; Mrs. James Attridge of Waterdown, and six brothers, John, Charles, William, Joseph, James and George Everitt.

Deceased was born on the homestead on Dundas street and had lived here practically all her life. She was married to Mr. Edge 18 years ago. Deceased was a lady greatly respected by all and will be sadly missed from our midst. The deepest sympathy is extended to sorrowing relatives and friends.

Remedies for Poison Ivy.

The American Botanist records that W. L. McAtee has collected a list of 244 alleged cures for "ivy" poisoning. Among the vegetable substances recommended to be taken internally are extracts or infusions of sweet fern, snake-root, pasque flower, aconite, spice bush, coffee, poison sumach (?), pipsissewa, yellow jastaine, belladonna and bryony. It is pointed out that "poison ivy" probably has a reputation for harmfulness all out of proportion to its abilities; a few people are rather severely poisoned by it, but the majority seem to be immune or nearly so. We should like to add that a great deal of supposed "ivy" poisoning may be due to other plants, since there are scores of plants that are capable of causing more or less severe dermatitis in susceptible people. Copious information on this subject was published in 1887 by Dr. J. C. White in his book "Dermatitis Venenata."

When Canada Became British.

The Treaty of Paris, concluded in 1763, ended the Seven Years' War between France and Britain for the New France of that day and the Canada of to-day. Following the defeat of Montcalm by Wolfe in 1759 and of Vaudreuil in 1760, the transfer of the country to Britain was made, and the Treaty of Paris is its official document.

Part of the Conditions.

Algy Hardup went to his employer and asked for a rise.
 Old Skinfint went off the deep-end with a mighty splash.
 "But," stammered Algy, "there is nothing unreasonable, sir, in my asking you for a rise. Don't you remember, sir, you promised me one after I had been with you a year?"
 "Yes," snapped the employer; "but don't you remember that I made this rise conditional on your giving satisfaction?"
 "Oh, dear! Haven't I satisfied you, sir?" asked Algy pitifully.
 "Satisfied me?" thundered old Skinfint. "Do you think you are satisfying me when you ask me for a rise?"

Do Your Bit to Prevent Bush Fires

YOUR co-operation—the co-operation of all the citizens of Ontario—is the biggest need in Ontario Forestry to-day.

History shows that impoverishment and national decline follows from the destruction of a country's forests.

Most of the area of this Province is non-agricultural, suited by Nature only for growing trees. This land remains yours but the Government sells the trees.

Every summer in Ontario an average area of 425,000 acres of forest land is burnt over, equal to a strip 130 miles long by 5 miles wide. This yearly desolation at the hands of her own people is gradually turning the northern part of the Province into a rocky desert. On thousands of acres, even the soil has been destroyed by fire!

Save Ontario's Forests They're Yours

The average yearly number of forest fires in Ontario is about 1,275. The vigilance of the Fire Rangers keep two-thirds of Ontario's forest fires down to an average size of less than five acres. But the others are big enough to raise the total average to 350 acres.

Forest fires in Ontario are destroying provincial assets of timber and pulp wood upon which the Province relies to help pay her share of Canada's War Debt. Forest fires destroy fish and game, decrease the regularity of stream flow, cause spring floods, land erosion and the crippling of water powers; turn revenue-producing areas into rock deserts.

Out of every 100 fires in Ontario's forests only three are caused by lightning, while ninety or more are due to man's care-

lessness. One thousand men scattered over 100,000,000 acres, have little chance of preventing fires. All they can hope to do is to see the smoke in time to check them and put them out before they spread beyond control.

The problem of adequate protection of Ontario's Forests from fire is almost entirely a moral one involving the whole public of Ontario. The vast majority of forest fires are caused by human carelessness due to lack of civic responsibility. The tendency is to leave all the responsibility to the Government for protecting the forests from fire. The Government cannot protect the forests belonging to the people of Ontario unless the people of Ontario co-operate. Forestry needs your patriotism, your public spirit, your regard for the general welfare of Canada.

Bread from Stones

(National Crop Improvement Service.)

Uncle Henry Wallace, father of the American Secretary of Agriculture, used to say that you cannot expect to remove fertility year after year from the soil without renewing it any more than you could keep on drawing money out of the bank without making a deposit. He used to rage up and down the land denouncing the man who mined his soil and called it farming.

The late Cyril G. Hopkins, of the University of Illinois, belonged to the same school and single-handed he crusaded against soil robbery by advocating building up of a permanent soil fertility by the use of rock phosphate.

He demonstrated on three hundred acres of very poor land in Southern Illinois, that he could by using manure, limestone and rock phosphate, produce 35 1/2 bushels of wheat per acre, whereas on his check plots, where farm manure alone was used, he got but 11 1/2 bushels.

He taught that our nitrogen supply can be taken from the air and that we generally have enough potash, but that we must replenish the phosphates.

The time will come when Canadian land must be renewed and while our farmers, especially in the West, have never used artificial fertilizers, it must be apparent that the economical time to restore fertility is before the soil is exhausted.
