> > igir gin e la on, her st p n, illu

e la all NU nicł

aps fer tire gin ht qui th The copy filmed here has been reproduced thanks to the generosity of:

Metropolitan Toronto Library Canadian History Department

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shall contain the symbol \longrightarrow (meaning "CON-TINUED"), or the symbol ∇ (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the mathod:

1 2 3

L'exemplaire filmé fut reproduit grâce à la générosité de:

Metropolitan Toronto Library Canadian History Department

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par le premier plat et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole \longrightarrow signifie "A SUIVRE", le symbole ∇ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

An Address to the Public.

THE favorable reception this work has met with, claims the Author's most grateful acknowledgments. A large edition having run off in a few months, and the fale appearing to be still unabated, a new impression is become necessary. On this occassion was he to conceal his feelings and pass over in filence, a distinction to beneficial and flattering, he would justly incur the imputation of ingratitude. That he might not do this, he takes the opportunity, which now presents itself, of conveying to the Public (though in terms inadequate to the warm emotions of his heart) the fense he entertains of their favor; and thus transmits to them his thanks.

In this new edition, care has been taken to rectify those errors which have unavoidably proceeded from the hurry of the prefs, and likewife any incorrectness in the language that has found its way into it.

The credibility of fome of the incidents related in the following pages, and fome of the ftories introduced therein, having been queffioned, particularly the prognoftication of the Indian prieft on the banks of Lake Superior, and the ftory of the Indian and his rattle fnake, the author thinks it neceflary to avail himfelf of the fame opportunity, to endeavour to eradicate any impreffions that might have been made on the minds of his readers, by the apparent improbability of thefe relations.

As to the former, he has related it just as it happened. Being an eye-witness to the whole transaction (and, he flatters himself, at the time, free from every trace of fceptical obstinacy or enthusiastic credulity) he was confequently able to describe every circumstance minutely and impartially. This he has done; but without endeavouring to account for the means by which it was accomplished. Whether the prediction was the result of prior observations, from which certain confequences were expected to follow

by the fagacious prieft, and the completion of it merely accidental; or whether he was really endowed with, fupernatural powers, the narrator left to the judgment of his readers; whole conclusions, he fuppofes, varied according as the mental faculties of each were disposed to admit or reject facts that, cannot be accounted for by natural causes.

The ftory of the rattle fnake was related to him by. a French gentleman of undoubted veracity; and were the readers of this work as thoroughly acquainted with the fagacity, and inftinctive proceedings of that. animal, as he is, they would be as well affured of the truth of it. It is well known that those fnakes which have survived through the fummer the accidents reptiles are liable to, periodically retire to the woods, at. the approach of winter ; where each (as curious obfervers have remarked) takes possession of the cavity its had occupied the preceeding year. As foon as the feafon is propitious, enlivened by the invigorating rays of the fun, they leave these retreats, and make their way to the fame fpot, though ever fo diftant, on which they before had found fubfiltence, and the means of propagating their fpecies. Does it then require any extraordinary exertions of the mind to believe, that one of these regular creatures, after having been kirdly treated by its mafter, should return to the box, in which it had ufually been fupplied with food, and had met with a comfortable abode, and that nearly about the time the Indian, from former experiments, was able to guess at ? It certainly does not; nor will the liberal and ingenuous doubt the truth of a ftory fo well authenticated, because the circumftances appear extraordinary in a country where the jubject of it is fearcely known.

These explanations the author hopes will fuffice to convince his readers, that he has not, as travellers are fometimes supposed to do, amused them with improbable tales, or wished to acquire importance by making his adventures favor of the marvellous.

O fooner was the late war with, France concluded, and peace established by the treaty of Verfailles in the year 1763, than I began to confider (having rendered my country fome fervices during the war) how I might continue still ferviceable, and contribute, as much as lay in my power, to make that vait acquisition of territory, gained by Great-Britain in North-America, advantageous to it. It. appeared to me indifpenfably needful, that government should be acquainted, in the first place, with. the true state of the dominions rhey were now become possessed of. To this purpose, I determined, as the next proof of my zeal, to explore the most unknown parts of them, and to fpare no trouble or expence in acquiring a knowledge that promifed to be fo uleful to my countrymen. I knew that many obftructions would arife to my scheme from the want of good Maps and Charts ; for the French, whilft. they retained their power in North-America, had taken every artful method to keep all other nations, particularly the English, in ignorance of the concerns of the interior parts of it : and to accomplish this defign with the greater certainty, they had published. inaccurate Maps and falfe accounts; calling the different nations of the Indians by nicknames they had given them, and not by those really appertaining to them. Whether the intention of the French in doing this, was to prevent these nations from being difcovered and traded with, or to conceal their difcourfe, when they talked to each other of the Indian concerns, in their presence, I will not determine ; but whatfoever was the caufe from which it afroe, it tended to millead.

As a proof that the English had been greatly deceived by these accounts, and that their knowledge relative to Canada had ufually been very confined; -before the conquest of Crown-Point in 1759, it had been efteemed an impregnable fortrefs; but no fooner was it taken, than we were convinced that it had acquired its greateft fecurity from falle reports, given out by its poffeffors, and might have been battered down with a few four pounders. Even its fituation, which was represented to be fo very advantageous, was found to owe its advantages to the fame fource. It cannot be denied but that fome Maps of these countries have been published by the French with an appearance of accuracy; but these are of fo fmall a fize and drawn on to minute a fcale, that they are nearly inexplicable. The fources of the Millifippi, I can affert from my own experience, are greatly mifplaced ; for when I had explored them, and compared their fituation with the French. Charts, I found them very erroneoully represented, and am fatisfied that these were only copied from the rude sketches of the Indians.

Even fo lately as their evacuation of Canada, they continued their fchemes to deceive; leaving no traces by which any knowledge might accrue to their. conquerors; for although they were well acquainted with all the Lakes, particularly with Lake Superior, having constantly a veffel of confiderable burden. thereon, yet their plans of them are very incorrect. I difcovered many errors in the defcriptions given: therein of its illands and bays, during a progress of eleven hundred miles that I coafted it in canoes. They likewife, on giving up the pofferfion of them, took care to leave the places they had occupied, in the fame uncultivated flate they had found them; at the fame time deftroying all their naval force. I obferved myfelf part of the hulk of a very large veffel, burnt to the water's edge, just at the opening from the Straits of St. Marie into the Lake. Thele

These difficulties, however were not fufficient to deter me from the undertaking, and I made preparations for fetting out. What I chiefly had in view. after gaining a knowledge of the manners, cuftoms, languages, foil and natural productions of the different nations that inhabit the back of the Miffi Gppi, was to afcertain the breadth of that vaft continent, which extend from the Atlantic to the Pacific Ocean. in its broadeft part between 43 and 46 degrees northern latitude. Had I been able to accomplish this, I. intended to have proposed to government to establish a post in some of those parts about the Straits of Annian, which, having been first discovered by Sir Francis Drake, of courfe belong to the English. This I am convinced would greatly facilitate the difcovery of a Northweft paffage, or a communication between Hudson's bay and the Pacific Ocean. An event fo defirable, and which has been fo often fought for, but without fuccefs. Belides this important end, a fettlement on that extremity of America would answer many good purposes, and repay every expence the eftablishment of it might occasion. For it would not only disclose new sources of trade, and promote many uleful discoveries, but would open a: paffage for conveying intelligence to China, and the English settlements in the East Indies, with greater expedition than a tedious voyage by the Cape of Good Hope, or the Straits of Magellan will allow of.

How far the advantages arising from such an enterprize may extend, can only be alcertained by the favorable concurrence of future events. But that the completion of the scheme, I have had the honor of first planning and attempting, will some time or other be effected, I make no doubt. From the unhappy divisions that at prefent subsist between Great-Britain and America, it will probably be some years before the attempt is repeated; but whenever it is, and the execution of it carried on with propriety, those who

are fo fortunate as to fucceed, will reap, exclusive of the national advantages that must enfue; emoluments beyond their most fanguine expectations. And whilk their spirits are elated by their fuccess, perhaps they may below some commendations and blessings on the perfon who first pointed out to them the way. These, though but a shadowy recompence for all my toil, I shall receive with pleasure.

To what power or authority this new world will become dependent, after it has arisen from its prefent uncultivated flate, time alone can difcover. But as the feat of empire from time immemorial has been gradually progrefive towards the weft, there is no doubt but that at fome future period, mighty kingdoms will emerge from these wildernesses, and flately palaces and folemn temples, with guilded spires reaching the skies, supplant the Indian huts, whose only decorations are the barbarous trophies of their vanguished enemies.

As fome of the preceding paffages have already informed the reader that the plan I had laid down for penetrating to the Pacific Ocean, proved abortive, it is neceffary to add, that this proceeded not from its impracticability (for the further I' went the more convinced I was that it could certainly be accomplished)' but from unforeseen disappointments. However, I proceeded to far, that I was able to make fuch discoveries as will be useful in any future attempt, and prove a good foundation for fome more fortunate fuccesfor to build upon. These I shall now lay before the public in the following pages ; and am fatisfied that the greatest part of them have never been published by any perfon that has hitherto treated of the interior nations of the Indians ; particularly, the account I give of the Naudoweffies, and the fituation of the heads of the four great rivers that take their rife within a few leagues of each other, nearly about the center of this great continent, viz-The.

filippi weft,

The river Bourbon, which empties itfelf into Hudfon's bay; the waters of Saint Lawrence; the Miffilippi, and the river Oregan, or the river of the weft, that falls into the Pacific Ocean, at the Straits of Annian.

The impediments that occasioned my returning, before I had accomplified my purposes, were these. On my arrival at Michillimackinae, the remotest English post, in September 1766, I applied to Mr. Rogers, who was then Governor of it, to furnish me with a proper affortment of goods, as presents for the Indians who inhabit the track I intended to purfue. He did this only in part; but promised to fupply me with fuch as were necessary, when I reached the Falls of Saint Anthony. I afterwards learned that the Governor fulfilled his promise in ordering the good to be delivered to me; but those to whose care he intrusted them, instead of conforming to his orders disposed of them elsewhere.

Disappointed in my expectations from this quarter, I thought it necessary to return to La Prairie Le Chien ; for it was impossible to proceed any further without prefents to enfure me a favorable reception. This I did in the beginning of the year 1767, and finding my progrefs to the weftward thus retarded, I determined to direct my course northward. I took this step with a view of finding a communication from the heads of the Miffiffippi into Lake Superior, in order to meet, at the grand Portage on the Northwest fide of that lake, the traders that usually come, about this feafon, from Michillimackinac., Of thefe I intended to purchase goods, and then to pursue my journey from that quarter, by way of the lakes du Pluye, Dubois, and Ounipique to the heads of the river of the weft, which, as I have faid before, falls into the Straits of Annian, the termination of my intended progrefs.

I accemplified the former part of my defign, and reached lake Superior in proper time; but unlucking the traders I met their, acquainted me that they had no goods to (pare,) those they had with them being barely fufficient to answer their own demands in their remote parts. Thus disappointed a fecond time, I found myself obliged to return to the place from whence I began my expedition, which I did after continuing fome months on the north and east borders of take Superior, and exploring the bays and rivers that empty, themselves into this large body of where.

As it may be expected that I fould by before the put ic the reafons that these differences, of for much importance to every one who has any connections mith America, have not been imparted to them before, notwithstanding they were made upwards of ten years ago, I will give them to the world in a plain and candid manner, and without mingling with them any complaints on account of the ill treatment I have received.

On my arrival in England, I prefented a petition to his majefty in council, praying for a reimburfement of those fums I had expended in the fervice of government. This was referred to the lords commissioners of trade and plantations. Their lordships, from the tenor of it thought the intelligence I could give, of fo much importance to the nation, that they ordered me to appear, before the board. This meffage I obeyed, and underwent a long examination; much I believe to the fatisfaction of every lord prefent. When it was finished, I requested to know what I should do with my papers; without hefitation the first lord replied, that I might publish them whenever I pleased. In consequence of this permission, I disposed of them to a bookfeller; but when they were nearly ready for the prefs, an order was iffued from the council board, requiring me to deliver, without

10

but unluckily that they had h them being mands in the econd time, l e place from ch I did after and eaft borthe bays and large body of

INTRODUCTION.

without delay, into the plantation office, all my Charts and Jeurnals, with every paper relative to the difeoveries I had a ade. In order to obey this comnand, I was obliged to re-purchale them from the ookfeller at a very great expense and deliver them and it is fresh diffursement I endeavored to get innexed to the account I had already delivered in ; but the requeft was denied me; norwithftanding I had only acted, in the difforfal of my papers, conformably to the permission I had received from the Board of trade. This lofs, which amounted to a ery confiderable turn, I was obliged to bear, and to eft fatisfied with an indemnification for my other appences.

Thus fituated, my only expectations are from the vor of a generous public; to whom I shall now comnunicate my Plans, Journals, and Observations, of which I luckily kept copies, when I delivered the originals into the plantation office. And this I do the more readily, as I hear they are millaid ; and there is no probability of their ever being published. To those who are interested in the concerns of the interior parts of North-America, from the contiguity of their poffeffions, or commercial, engagements, they will be extremely useful, and fully repay the fum at which they are purchased. To those, who, from a audable curiofity, with to be acquainted with the manners and customs of every inhabitant of this globe, the accounts here given of the various nations that inhabit fo waft a tract of it, a country hitherto almost unexplored, will furnish an ample fund of amusement, and gratify their most curious expectations. And I flatter myfelf they will be as favorably received by the public, as descriptions of islands, which afford no other entertainment than what arifes from their novelty; and difcoveries; that feem to promife very few advantages to this country, though acquired at an immense expense.

Το

To make the following work as comprehensible and entertaining as possible, I shall first give my readers an account of the route I pursued over this immense continent, and as I pass on, describe the number of inhabitants, the situation of the rivers and lakes, and the productions of the country. Having done this, I shall treat, in distinct chapters, of the manners, customs, and languages of the Indians, and to complete the whole, add a vocabulary of the words mostly in use among them.

And here it is neceffary to befpeak the candor of the learned part of my readers in the perufal of it, as it is the production of a perfon unufed, from oppofite avecations, to literary purfuits. He therefore begs they would not examine it with too critical an eye; efpecially when he affures them that his attention has been more employed on giving a just defcription of a country that promifes, in four e future period, to be an inexhaustible fource of riches to that people who shall be fo fortunate as to possible it, than on the ftyle or composition; and more careful to render his language intelligible and explicit, than shooth and florid.

INAL.

WITH A

DESCRIPTION

OFTHE

COUNTRY, LAKES, Ge.

IN June 1766, I fet out from Eofton, and proteeded by way of Albany and Niagara, to Michillimackinac, a fort fituated between the lakes Huron and Michigan, and diftant from Bofton 1300 miles. This being the uttermost of our factories towards the northwest, I confidered it as the most convenient place from whence I could begin my intended progress, and enter at once into the regions I defigned to explore.

Referring my readers to the publications already extant for an account of those parts of North-America, that from lying adjacent to the back fettlements, have been frequently acfcribed, I shall confine myself to a defcription of the more interior parts of it, which, having been but feldom visited, are confequently but little known. In doing this, I shall in no instance exceed the bounds of truth, or have recourse to those useles and extravagant exaggerations too often made useof by travellers, to excite the curiosity of the public, or to increase their own importance. Nor shall I infert any observations, but such as I have made myself, or from

the .

14

the credibility of those by whom they were related, am enabled to vouch for their authenticity.

Michillimackinac, from whence I began my travels, is a fort composed of a ftrong stockade, and is usually defended by a garrison of one hundred men. It contains about thirty houses, one of which belongs to the Governor, and another to the Commissions, who find it a traders also dwell within its fortifications, who find it a convenient fituation to traffic with the neighbouring nations. Michillimackinac, in the language of the Chipéway Indians, fignifies a Tortoife; and the place is supposed to recieve its name from an island, lying about fixor feven miles to the north-cast, within fight of the fort, which has the appearance of that animal.

During the Indian war that followed foon after the conquest of Canada in the year 1763, and which was carried on by an army of confederate nations; composed of the Hurons, Miamies, Chipeways, Ottowaws, Pontowattimies, Willifauges, and some other tribes, under the direction of Pontiae, a' celebrated' Indian warrior, who had always been in the French intereft, it was taken by furprize in the following manner : the Indians having fettled their plan, drew near the fort, and began a game at ball, a pastime much used among them, and not unlike tennis. In the height of their game, at which fome of the English officers, not fulpecting any deceit, flood looking on, they ftruck the ball, as if by accident, over the ftockade; this they repeated two or three times, to make the deception more complete; till at length, having by this means lulled every fulpicion of the century at the fouth gate, a party rufhed by him; and the reft foon following, they took poffeffion of the fort, without meeting with any opposition. Having accomplished their defign, the Indians had the humanity to fpare the lives of the greateft part of the garrifon and traders, but they made them all prifoners, and carried them off. However, fome timeafter they took them to Montreal, where they were

ere related,

my travels. d is ufually n.'. It conongs to the v. Severa! who find it a eighbouring lage of the id the place fland, lying within fight hat animal. on after the l which was tions; com-Ottowaws, other tribes, ated Indian ich intereft. nanner : the ar the fort. uled among ight of their ers, not fuly ftruck the his they reeption more leans lulled gate, a parowing, they ig with any defign, the of the greatthey made · However, where they were

were redeemed at a good price. The fort alfo was given up again to the English at the peace made with Pontiac, by the commander of Detroit the year following.

Having here made the neceflary dispositions for perfuing my travels, and obtained a credit from Mr. Rogers, the Governor, on fome English and Canadian traders, who were going to trade on the Miffifippi, and received also from him a promife of a fresh supply of goods when I reached the falls of St. Anthony. I left the fort on the 3d of September, in company with these traders. It was agreed that they should furnish me with such goods as I might want, for prefents to the Indian chiefs, during my continuance with them, agreeable to the Governor's order. But when I arrived at the extent of their route, I was to fir I other guides, and to dependenthe goods the Governor had promifed to supply me with.

We accordingly fet out together, and on the 18th arrived at Fort La Bay. This fort is fituated on the fouthern extremity of a bay in the Lake Michigan, termed by the French, the bay of Puants; but which, fince the English have gained posseful of all the fettlements on this part of the continent, is called by them, the Green Bay. The reason of its being thus denominated, is from its appearance; for on leaving Michillimackinac in the fpring feason, though the trees there have not even put forth their buds, yet you find the country around La Bay, notwithstanding the passage has not exceeded fourteen days, covered with the finest verdure, and vegetation as forward as it could be were it fummer.

This fort is also only furrounded by a flokade, and being much decayed, is fearcely defensible against fmall arms. It was built by the French for the protection of their trade, fome time before they were forced to relinquish it; and when Canada and its dependencies were furrendered to the English, it was immelet diately garrifoned with an officer and thirty men. Thefe were made prifoners by the Menomonies foon after the furprife of Michillimackinac, and the fort has neither been garrifoned or kept in repair fince.

The bay is about ninety miles long, but differs much in its breadth, being in fome places only fifteen miles, in others from twenty to thirty. It lies nearly from north-east to fouth-west. At the entrance of it from the lake are a string of islands, extending from north to fouth, called the Grand Traverse. These are about thirty miles in length, and ferve to faciliate the passage of canoes, as they shelter them from the winds, which some with violence across the lake. On the fide that lies to the south-east is the nearest and best navigation.

The Islands of the Grand Traverse are mostly smalland rocky. Many of the rocks are of an amazing fize, and appear as if they had been fashioned by the hands of artifts. On the largest and best of these islands stands a town of the Ottowaws, at which I found one of the most confiderable chiefs of that nation, who received me with every honor he could possibly show to a stranger. But what appeared extremely fingular to me at the time, and must do fo to every perfon unacquainted with the cuftoms of the Indians, was the reception I met with on landing. As our canoes approached the fhore, and had reached within about threescore rods of it, the Indians began a fue-de-joy; in which they fired their pieces loaded with balls; but at the fame time they took care to difcharge them in fuch a manner as to fly a few yards above our heads : during this they ran from one tree or flump to another, fhouting and beheaving as if they were in the heat of battle. At first I was greatly furprifed, and was on the point of ordering my attendants to return their fire; concluding that their intentions were hoftile ; but being undeceived by some of the traders, who informed methat this was their usual method of receiving the chiefs of oth-

er nations, I confidered it in its true light, and was pleafed with the refpect thus paid me.

Among the prefents I I remained here one night. made the chiefs, were fome fpirituous liquors ; with which they made themselves merry, and all joined in a dance, that lasted the greatest part of the night. In the morning when I departed, the chief attended me to the fhore, and, as foon as I had embarked, offered up, in an audible voice, and with great folemnity, a fervent prayer in my behalf. He prayed " that the Great Spirit would favour me with a profperous voyage; that he would give me an unclouded fky, and finooth waters, by day and that I might lie down, by night, an a beaver blanket, enjoying uninterrupted fleep, and pleafant dreams; and also that I might find continual protection under the great pipe of peace." In this manner he continued his petitions till I could no longer hear them.

I must here observe, that notwithstanding the inhabitants of Europe are apt to entertain horrid ideas of the ferocity of these favages, as they are termed, I received from every tribe of them in the interior parts, the most hospitable and courteous treatment; and am convinced, that till they are contaminated by the example, and spiritous liquors of their more refined neighbours, they retain this friendly and inoffensive conduct towards strangers. Their inveteracy and cruelty to their enemies, I acknowledge to be a great abatement of the favourable opinion I would wish to entertain of them; but this failing is hereditary, and having received the fanction of immemorial custom, has taken too deep root in their minds to be easily extirpated.

Among this people I eat of a very uucommon kind of bread. The Indians, in general, ufe but little of this nutritious food: whilf their corn is in the milk, as they term it, that is, just before it begins to ripen, they flice off the kernels from the cob

to which they grow, and knead them into a pafe. This they are enabled to do without the addition of any liquid, by the milk that flows from them; and when it is effected, they parcel it out into cakes, and enclosing them in leaves of the baffwood tree, place them in hot embers, where they are foon baked. And better flavored bread I never eat in any country.

This place is only a fmall village/containing about twenty-five houfes and fixty or feventy warriors. I found nothing there worthy of further remark.

The land on the fouth-east fide of the Green bay, is but very indifferent, being overspread with a heavy growth of hemlock, pine, spruce, and fir-trees. The communication between Lake Michigan and the Green bay, has been reported by some to be impracticable, for the passage of any vessels larger than cances or boats, on account of the shoals that lie between the islands in the Grand Traverse; but on sounding it I found sufficient depth for a vessel of fixty tons, and the breadth proportionable.

The land adjoining to the bottom of this bay is very fertile, the country in general level, and the perfpective view of it pleafing and extensive.

A few families live in the fort, which lies on the weft fide of the Fox river, and opposite to it, on the east fide of its entrance, are fome French fettlers who cultivate the land, and appear to live very comfortably.

The Green bay or bay of Puants is one of those places to which the French, as I have mentioned in the introduction, have given nicknames. It is termed by the inhabitants of its coafts, the Menomonie Bay; but why the French have denominated it the Puant or Stinking bay, I know not. The reason they themfelves give for it is, that it was not with a view to mislead ftrangers, but that by adopting this method, they could converse with each other concerning the Indians, in their prefence without being understood by them. For it was remarked by the perfors who first traded traded a each oth names that the plotting them fo arifing ghifh an terior I fame p cafion

Lak

divide

ay is very perfpec-

the weft the east who culrtably. of those ioned in s termed nie Bay; Puant or y themview to method. ing the ftood by vho first raded

traded among them, that when they were fpeaking to each other about them, and mentioned their proper names they inftantly grew fulpicious, and concluded that their vifitors were either fpeaking ill of them, or plotting their deftruction. To remedy this they gave them fome other name. The only bad confequencies arifing from the practice then introduced is, that Enghifh and French geographers, in their plans of the interior parts of America, give different names to the fame people, and thereby perplex those who have occafion to refer to them.

Lake Michigan, of which the Green Bay is a part, is divided on the north-east from Lake Huron by the Straits of Michillimackinae; and is fituated between forty two and forty fix degrees of latitude, and between eighty four and eighty-feven degrees of west longitude. Its greatest length is two hundred and eighty miles, its breadth about forty, and its circumferance nearly fix hundred. There is a remarkable string of small islands begining over against Askin's farm, and runnig about thirty miles fouth-west into the lake. These are called the Beaver Islands. Their struation is very pleafant, but the foil is bare. However they afford a beautiful prospect.

On the north-west parts of this Jake the waters branch out into two bays. That which lies towards the north is the Bay of Noquets, and the other the Green Bay just described.

The waters of this as well as the other great lakes are clear and wholefome and of fufficient depth for the navigation of large fhips. Half the fpace of the country that lies to the eaft, and extends to Lake Huton, belongs to the Ottowaw Indians. The line that divides their territories from the Chipeways, runs nearly north and fouth, and reaches almost from the fouthern extremity of this lake, acrofs, the high lands, to Michillimackinac, through the center of which it paffes. So that when these two tribes happen to meet at

the

the factory, they each encamp on their own dominions, at a few yards diftance from the flockade.

The country adjacent either to the east or west fide of the lake, is compoled but of an indifferent foil, except where fmall brooks or rivers empty themfelves into it; on the banks of thefe it is extremely fertile, Near the borders of the lake grow a great number of fand cherries, which are not lefs remarkable for their manner of growth, than for their exquisite flavor, They grow upon a fmall fhrub, not more than four feet high, the boughs of which are fo loaded that they lie in clufters on the fand. As they grow only on the fand the warmth of which probably contributes to bring them to fuch perfection; they are called by the French, cherries de fable, or fand cherries. The fize of them does not exceed that of a fmall mufket ball, but they are reckoned fuperior to any other fort for the purpole of fleeping in fpirits, There also grow around the lake, goofeberries, black currents, and an abundance of juniper, bearing great quantities of berries of the finest fort.

Sumack likewife grows here in great plenty; the leaf of which, gathered at Michaelmas, when it turns red, is much effeemed by the natives. They mix about an equal quantity of it with their tobacco, which. causes it to smoke pleafantly. Near this lake, and indeed about all the great lakes, is found a kind of willow, termed by the French, bois rouge, in English, red wood. Its bark when only of one year's growth, is of a fine fearlet color, and appears very beautiful; but as it grows older, it changes into a mixture of grey and red. The stalks of this shrub grow many of them together, and rife to the height of fix or eight feet, the largest not exceeding an inch diameter. The bark being fcraped from the fticks, and dried and powdered, is also mixed by the Indians with their tobacco, and is held by them in the highest estimation, for their winter fmoking. A weed that grows near the great lakes,

lakes, in rocky places, they use in the fummer feafon. It is called by the Indians, Segockimac, and creeps like a vine on the ground, fometimes extending to eight or ten feet, and bearing a leaf about the fize of filver penny, nearly round; it is of the fubstance and color of the laurel, and is, like the tree it refembles, an evergreen. These leaves, dried and powdered, they likewise mix with their tobacco; and as faid before, fmoke it only during the fummer. By these three fuccedaneums, the pipes of the Indians are well fupplied through every feason of the year; and as they are great fmokers, they are very careful in properly pathering and preparing them.

On the 20th of September, I left the Green Bay, and proceeded up Fox river, ftill in company with the traders and some Indians. On the 25th I arrived at the great town of the Winnebagoes, fituated on a small island, just as you enter the east end of the lake Winnebago. Here the queen who presided over this tribe instead of a Sachem, received me with great civility, and entertained me in a very diffinguished manner, during the four days I continued with her.

The day after my arrival I held a council with the chiefs, of whom I asked permission to pass through their country, in my way to more remote nations, on bufinefs of importance. This was readily granted me the request being effected by them as a great compliment paid totheir tribe. The queen fat in the council, but only asked a few questions, or gave some trifling directions in matters relative to the fate; for women are never allowed to fit in their councils, except they happen to be invefted with the fupreme authority, and then it is not cuftomary for them to make any formal fpeeches as the chiefs do. She was a very antient woman, fmall in ftature, and not much diftinguished by her drefs from feveral young women that attended her. These her attendants seemed greatly pleased when ever I showed any tokens of respect to their queen, particularly

21

particularly when I faluted her, which I frequently did to acquire her favor. On these occasions the good old lady endeavoured to assume a juvenile gaiety, and by her smiles showed the was equally pleased with the attention I paid her.

The time I tarried here, I employed in making the beft obfervations possible on the country, and in collecting the most certain intelligence I could, of the origin, language and customs of this people. From these enquiries I have reason to conclude, that the Winnebagoes originally refided in fome of the provinces belonging to New Mexico; and being driven from their native country, either by intestine divisions, or by the extentions of the Spanish conquests, they took refuge in these more northern parts about a century ago.

My reafons for adopting this fuppolition, are, first, from their unalienable attachment to the Naudoweffie Indians (who, they fay, gave them the earliest fuccor during their emigration) notwithstanding their prefent refidence is more than fix hundred miles diftant from that people.

Secondly, that their dialect totally differs from every other Indian nation yet difcovered; it being a very uncouth, 'guttural jargon, which none of their neighbors will attempt to learn. They converfe with other nations in the Chipéway, tongue, which is the prevailing language throughout all the tribes, from the Mohawks of Cannada, to those who inhabit the borders of the Miffifippi, and from the Hurons and Illinois to fuch as dwell near Hudfon's Bay.

Thirdly, from their inveterate hatred to the Spaniards. Some of them informed me that they had many excursions to the fouth-weft, which took up feveral moons. An elder chief more particularly acquainted me, that about forty-fix winters ago, he marched at the head of fifty warriors, towards the fouth-weft, for three moons. That during this expedition, whilft

CARVER'S TRAVELS.

they were croffing a plain, they difcovered a body of men on horfe-back, who belonged to the Black People; for fo they call the Spaniards. As foon as they perceived them, they proceeded with caution, and concealed thentfelves till night came on ; when they drew fo near as to be able to difcern the number and fituation of their enemies. Finding they were not able to cope with fo great a fuperiority by day-light, they waited till they had retired to reft; when they rushed upon them, and, after having killed the greateft part of the men, took eighty horfes loaded with what they termed white frome. This I suppose to have been filver, as he told me the horfes were flod with it, and that their bridles were ornamented with the fame. When they had fatiated their revenge, they carried off their spoil, and being got so far as to be out off the reach of the Spaniards that had escaped their fury, they left the useless and ponderous burthen, with which the horfes were loaded, in the woods, and mounting themselves, in this manner returned to their friends. The party they had thus defeated, I conclude to be the caravan that annually conveys to Mexico, the filver which the Spaniards find in great quantities on the mountains lying near the heads of the Coleredo River: and the plains where the attack was made, probably fome they were obliged to pafs over in their way to the heads of the river St. Fee, or Rio del Nord, which falls into the Gulf of Mexico, to the weft of the Miffifippi.

The Winnebagoes can raife about two hundred warriors. Their town contains about fifty houfes, which are ftrongly built with pallifades, and the ifland on which it is fituated, nearly fifty acres. It lies thirty five miles, reckoning according to the courfeof the river, from the Green Bay.

The river, for about four or five miles from the bay, * has a gentle current; after that fpace, till you arrive at the Winnebago Lake, it is full of rocks and very

rapid.

rapid. At many places we were obliged to land our canoes, and carry them a confiderable way. Its breadth, in general, from the Green Bay to the Winnebago Lake, is between feventy and a hundred yards: the land on its borders very good, and thinly wooded with hickory, oak and hazel.

The Winnebago Lake is about fifteen miles long from east to west, and fix miles wide. At its foutheast corner, a river falls into it that takes its rife near fome of the northern branches of the Illinois River. This I called the Crocodile River, in confequence of a story that prevails among the Indians, of their having destroyed in fome part of it, an animal, which from their description must be a crocodile or an alligator.

The land adjacent to the Lake is very fertile, abounding with grapes, plums, and other fruits, which grow fpontaneoufly. The Winnebagoes raife on it a great quantity of Indian corn, beans, pumpkins, fquathes and watermelons, with fome tobacco. The Lake itfelf abounds with fifh, and in the fall of the year, with geefe, ducks and teal. The latter, which refort to it in great numbers, are remarkably good and extremely fat, and are much better flavored than those that are found near the fea, as they acquire their exceflive fatness by feeding on the wild rice, which grows so plentifully in these parts.

Having made fome acceptable prefents to the good old queen, and received her bleffing, I left the town of the Winnebagoes on the 29th of September, andabout twelve miles from it, arrived at the place where the Fox River enters the Lake, on the north fide of it. We proceeded up this river, and on the 7th of October reached the great Carrying Place, which divides it from the Ouifconfin.

The Fox River, from the Green Bay to the Carrying Place, is about one hundred and eighty miles. From the Winnebago Lake to the Carrying Place the which are great abun tile, and p excepting rather too can iupply number of fort for w the whole would be c Aboutf of the Wi to that na Deer an and a grea the ffream The riv ing been, the united whom the wonted cu and the F related to About : traders ha ple, a part mand of (wrongs.

Carrymiles: Place the the current is gentle, and the depth of it confiderable; notwithftanding which, it is in fome places with difficulty that cances can pais through the obftructions they meet with from the rice ftalks, which are very large and thick, and grow here in great abundance. The country around it is very fertile, and proper in the higheft degree for cultivation, excepting in fome places near the river; where it is rather too low. It is in no pair very woody, and yet can fupply fufficient to answer the demands of any number of inhabitants. This river is the greateft refort to wild fowl of every kind, that I met with in the whole courfe of my travels; frequently the fun would be obfcured by them for fome minutes together.

About forty miles up this river, from the great town of the Winnebagoes, itands a imaller town belonging to that nation.

Deer and bears are very nemerous in these parts, and a great many beavers and other furs are taken on the fireams that empty themselves into this river.

The river I am treating of, is remarkable for having been, about eighty years ago, the refidence of the united bands of the Ottigaumies and the Saukies, whom the French had nicknamed, according to their wonted cuftom, Des Sacs and Des Reynards, the Sacks and the Foxes, of whom the following anecdote was related to me by an Indian.

About fixty years ago, the French millionaries and traders having received many infults from thefe people, a party of French and Indians, under the command of Captain Morand marched to revenge their wrongs. The Captain fet out from the Green Bay in the winter, when they were unfufpicious of a vifit of this kind, and purfuing his route over the fnow to their villages, which lay about fifty miles up the Fox River, came upon them by furprife. Unprepared as they were, he found them an eafy conqueft, and confequently killed or took priloners the C

greatest part of them. On the return of the Frenchto the Green Bay, one of the Indian chiefs in alliance with them, who had a confiderable band of the prifoners under his care, ftopped to drink at a brook ; in the mean time his companions went on : which being obferved by one of the women whom they had made captive, fhe fuddenly, feized him with both her hands, whilft he ftooped to drink, by an exquisitely fusceptible part, and held him fast till he expired on the fpot. As the chief, from the extreme torture he fuffered, was unable to callout to his friends, or to give any alarm, they paffed on without knowing what had happened; and the woman having cut the bands of those of her fellow prifoners who were in the rear, with them made her efcape. This heroine was ever after treated by her nation as their deliverer, and made a chiefefs in her own right, with liberty to entail the fame honor on her decendants : an unufual diffinction, and permitted only on extraordinary occasions.

About twelve miles before I reached the Carrying Place, I obferved feveral fmall mountains which extended quite toit. Thefe indeed would only be efteemed as molehills, when compared with those on the back of the colonies, but as they were the first I had feen fince my leaving Niagara, a track of nearly eleven hundred miles, I could not leave them unnoticed.

The Fox River, where it enters the Winnebago Lake, is about fifty yards wide, but it gradually decreafes to the Carrying Place, where it is no more than five yards over, except in a few places where it widens into fmall lakes, though ftill of a confiderable depth. I cannot recollect any thing elfe that is remarkable in this river, except that it is to ferpentine for five miles, as only to gain in that place one quarter of a mile.

The Carrying Place between the Fox and Ouifconfin Rivers is inbreadth not more than a mile and three quarters, though in fome maps it is fo delineated as to appear to be ten miles. And here I cannot help remarking, French

marking, that all the maps of thefe parts, I have ever feen, are very erroneous. The rivers in general are deferibed as running in different directions from what they really do: and many branches of them, particularly the Millifippi, omitted. The diffances of places, likewife, are greatly mifreprefented. Whether this is done by the French geographers (for the Englifh maps are all copied from theirs) through defign, or for want of a juft knowledge of the country, I caunot fay; but I am fatisfied that travellers who depend upon them in the parts, I vifited, will find themfelves much at a lofs.

Near one half of the way, between the rivers, is a morals overgrown with a kind of long grafs, the reftof it a plain with fome few oak and pine trees growing thereon. I observed here a great number of rattlefnakes. Monf. Pinnifance, a French trader, told me a remarkable ftory concerning one of these reptiles, of which he faid, he was an eye-witnefs. An Indian belonging to the Menomonie nation, having taken one of them, found means to tame it; and when he had done this, treated it as a Deity ; calling it his Great Father, and carrying it with him in a box, wherever he went. This the Indian had done for feveral fummers, when Monf. Pinnifance accidentally met with him at this Carrying Place, just as he was fetting off for a winter's hunt. The French gentleman was furprifed, one day, to fee the Indian place the box which contained his god, on the ground, and opening the door, gave him his liberty; telling him whilft he did it, to be fure and return by the time he himfelf fhould come back, which was to be in the month of May following. As this was but October Monfieur told the Indian, whole fimplicity aftonished him, that he fancied he might wait long enough when May arrived for the arrival of his great father. The Indian was fo confident of his creature's obedience, that he offered to lay the Frenchman a wager of two gallons of

of rum, that at the time appointed he would come and crawl into the box. This was agreed on, and the fecond week in May following, fixed for the determination of the wager. At that period they both met there again ; when the Indian fet down his box, and called for his great father. The make heard him not; and the time being now expired, he acknowledged that he had loft. However, without feeming to be difcouraged, he offered to double the bet, if his great father came not within two days more. This was further agreed on ; when behold on the fecond day about one o'clock, the fnake arrived, and of his own accord crawled in the box, which was placed ready for him. The French gentleman vouched for the truth of this flory, and from the accounts Ihave often received of the docility of those creatures, I fee no reafon to doubt his veracity.

I observed that the main body of the Fox river came from the fouth-weft, that of the Ouifconfin from the north-east; and also that some of the small branches of thefe two rivers, in defeending into them, doubled within a few fect of each other, a little to the fouth of the Carrying Place. That two fuch rivers should take their rife so near each other, and after running fuch different courfes, empty themfelves into the fea, at a diftance fo amazing (for the former having paffed through feveral great lakes, and run upwards of two thousand miles, falls into the Gulf of St. Lawrence, and the other, after joining the Miffilippi, and having run an equal number of miles, difembogues itself into the Gulf of Mexico) is an instance scarcely to be met in the extensive continent of North America. I had an opportunity the year following, of making the fame obfervations on the affinity of various head branches of the waters of the St. Lawrence and the Miffifippi to each other; and now bring them as a proof, that the opinion of those geographers, who affert, that rivers taking their rife fo near

On the 8th of October we got our canoes into the-Ouifconfin River, which at this place is more than a hundred yards wide; and the next day arrived at the Great Town of the Saukies. This is the largest and best built Indian town I ever faw. It contains about ninery houses each large, enough for several families. These are built of hewn plank, neatly jointed and covered with bark fo compactly as to keep out the most penetrating rains. Before the doors are placed comfortable fheds, in which the inhabitants fit, when the weather will permit, and imoke their pipes. The ftreets are regular and fpacious ; fo that it appears more like a civilized town, than the abode of favages. The land near the town is very good. In their plantations, which lie adjacent to their houfes, and which are neatly laid out, they raife great quantities of Indian. corn, beans, melons, &c. fo that this place is effeemed the best market for traders to furnish themselves with provisions, of any within eight hundred miles of it.

The Saukies can raife about three hundred warriors, who are generally employed every fummer in making incurfions into the territories of the Illinois and Pawnee nations, from whence they return, with a great number of flaves. But those people frequently retaliate, and, in their turn, deftroy many of the Saukies, which I judge to be the reason that they increase no faster.

Whilft I flaid here I took a view of fome mountains that lie about fifteen miles to the fouthward, and abound in lead ore. I afcended on one of the higheft of thefe, and had an extensive view of the country. For many miles nothing was to be feen but leffer mountains, which appeared at diffance like haycocks, they C c being being free from trees. Only a few groves of hickory, and funted oaks, covered fome of the vallies. So plentiful is lead here, that I faw large quantities of it lying about the ftreets in the town belonging to the Saukies, and it feemed to be as good as the produce of other countries.

On the 10th of October we proceeded down the river, and the next day reached the first town of the Ottigaumies. This town contained about fifty houses, but we found most of them deferted, on account of an epidemical diforder that had lately raged among them, and carried off more than one half of the inhabitants. The greater part of those who furvived, had retired into the woods to avoid the contagion.

On the 15th we entered that extensive river the Miffifippi. The Ouifconfin, from the Carrying Place to the part where it falls into the Miffifippi, flows with a fmooth, but ftrong current; the water of it is exceedingly clear, and through it you may perceive a fine and fandy bottom, tolerably free from rocks. In it are a few iflands, the foil of which appeared to be good, though fomewhat woody. The land near the river alfo feemed to be, in general, excellent; but that at a diffance is very full of mountains, where it is faid there are many lead mines.

About five miles from the junction of the rivers, I obferved the ruins of a large town, in a very pleafing fituation. On enquiring of the neighbouring Indians, why it was thus deferted, I was informed, that about thirty years ago, the Great Spirit had appeared on the top of a pyramid of rocks, which lay at a little diftance from it, towards the weft, and warned them to quit their habitations; for the land on which they were built belonged to him, and he had occafion for it. As a proof that he, who gave them thefe orders, was really the Great Spirit, he further told them, that the grafs should immediately fpring up on those very rocks from whence he now addreffed them, which they knew knew to b foon after had taken growth of rai. I ap French o in what r not.

> This p on the ba Ouifconf ries les C a large to lies; the and pleat they raif I faw her town is 1 and ever of the end of] of to the clude th ral coun be more at this p limacki cil, they ferent l The near w. is abou tioned and ful rich, an A li finall r call Le

knew to be bare and barren. The Indians obeyed, and foon after difcovered that this miraculous alteration had taken place. They shewed me the spot, but the growth of the grass appeared to be noways supernatural. I apprehend this to have been a stratagem of the French or Spaniards, to answer some felfish view; but in what manner they effected their purposes I know not.

This people, foon after their removal, built a town on the bank of the Miffifippi, near the mouth of the Ouisconfin, at a place called by the French, La Prairies les Chiens, which fignifies the Dog Plains; it is a large town, and contains about three hundred families; the houfes and well built after the Indian manner, and pleafantly fituated on a very rich foil, from which they raife every neceffary of life in great abundance. I faw here many horfes of a good fize and fhape. This town is the great mart where all the adjacent tribes, and even those who inhabit the most remote branches of the Millifippi, annually affemble about the latter end of May, bringing with them their furs to dispose of to the traders. But it is not always that they conclude their fale here; this is determined by a general council of the chiefs, who confult whether it would be more conducive to their interest, to fell their goods at this place, or carry them on to Louisiana, or Michillimackinac. According to the decision of this council, they either proceed further, or return to their different homes.

The Miffifippi, at the entrance of the Ouifconfin, near which flands a mountain of confiderable height, is about half a mile over; but opposite to the last mentioned town, it appears to be more than a mile wide, and full of Islands, the foil of which is extraordinary rich, and but thinly wooded.

A little further to the weft, on the contrary fide, a fmall river falls into the Miflifippi, which the French call Le Jaun Riviere, or the Yellow River. Here the traders

traders who had accompanied me hitherto, took up their refidence for the winter. I then bought a canoe, and with two fervants, one a French Canadian, and the other a Mohawk of Canada, on the 19th proceeded up the Miffifippi.

About ten days after I had parted from the traders I landed as I ufually did, every evening, and having pitched my tent, I ordered my men, when night come on, to lay themfelves down to fleep. By a light that I kept burning I then fet down to copy the minutes I had taken in the courie of the preceding day. About ten o'clock, having just finished my memorandoms, I stepped out of my tent to see what weather it was. As I caft my eyes towards the bank of the river, I thought I faw by the light of the ftars, which fhone bright, fomething that had the appearance of a herd of beafts, coming down a decent at fome diftance ; whilft I was wondering what they could be, one of the number fuddenly fprung up, and difcovered to me the form of a man. In an inftant they were all on their legs, and I could count about ten or twelve of them running towards me. I immediately re-entered the tent, and having awakened my men, ordered them to take their armes and follow me. As my first apprehensions were for my canoe, I ran to the water's fide, and found a party of Indians (for fuch I now difcovered them to be) on the point of plundering it. Before I reached them, I commanded my men not to fire till I had given the word, being unwilling to begin hostillities unless occasion absolutely required. I accordingly advanced with refolution, close to the points of their spears, they had no other weapons, and brandifning my hanger, afked them with a ftern voice, what they wanted ? They were ftaggered at this, and perceiving they were like to meet with a warm reception, turned about and percipitately retreated. We purfued them to an adjacent wood, which they entered, and we faw no more of them. However, for

fear of their return, we watched alternately during the remainder of the night. The next day my fervants were under great apprehentions, and earnftly entreated me to return to the traders we had lately left. But I told them, that if they would not be efteemed old women (a term of the greatest reproach among the Indians) they must follow me ; for I was determined to perfue my intended route, as an Englishman, when once engaged in an adventure never retreated. On this they got into the canoe, and I walked on the fhore to guard them from any further attack. The party of Indians who had thus intended to plunder me, I afterwards found to be fome of those ftraggling bands, that having been driven from among the different tribes to which they belonged, for various crimes, now affociated themfelves together, and, living by plunder, prove very troublefometo travellers who pais this way; nor are even Indians of every tribe fpared by them. The traders had before cautioned me to be upon my guard against them, and I would repeat the fame caution to those whose business might call them into these parts.

On the 1ft of November I arrived at Lake Pepin, which is rather an extended part of the River Miffifippi, that the French have thus denominated, about two hundred miles from the Ouifconfin. The Miffifippi below this lake, flowes with a gentle current, but the breadth of it is very uncertain, in fome places it being upwards of a mile, in others not more than a quarter. This river has a range of mountains on each fide throughout the whole of the way; which in particular parts approach near to it, in others lie at a greater diffance. The land betwixt the mountains, and on their fides, is generally covered with grafs, with a few groves of trees interfperfed, near which large droves of deer and elk are frequently feen feeding. In many places pyramids of rocks appeared, refem-

bling old ruinous towers; at others amazing preci-

pices;

pices; and what is very remarkable, whilft this fcene prefented itfelf on one fide, the oppofite fide of the fame mountain was covered with the fineft herbage, which gradually afcended to its fummit. From thence the most beautiful and extensive prospect that imagination can form, opens to your view. Verdant plains, fruitful meadows, numerous illands, and all thefe abounding with a variety of trees that yield amazing quantities of fruit, without care or cultivation; fuch as the nut tree, the maple which produces fugar, vines loaded with rich grapes, and plumb-trees bending under their blooming burdens, but above all, the fine river flowing gently beneath, and reaching as far as the eye can extend, by turns attract your admiration and excite your wonder.

The Lake is about twenty miles long, and near fix in breadth; in fome places it is very deep, and abounds with various kinds of fifh. Great numbers of fowl frequent alfo this Lake and the rivers adjacent; fuch as ftorks, fwans, geefe, brants and ducks : and in the groves are found great plenty of turkeys and prearidges. On the plains are the largeft buffaloes of any in America. Here I obferved the ruins of a French factory, where it is faid Captain St. Pierre refided, and carried on a very great trade with the Naudoweffies, before the reduction of Canada.

About fixty miles below this Lake is a mountain remarkably fituated; for it flands by itfelf exactly in the middle of the River, and looks as if it had flidden from the adjacent fhore into the fiream. It cannot be termed an ifland, as it rifes immediately from the brink of the water to a confiderable height. Both the Indians and the French call it the Mountain in the River.

One day having landed on the fhore of the Miffifippi, fome miles below Lake Pepin, whilft my attendants were preparing my dinner, I walked out to take a view of the adjacent country. I had not proceeded far, befor which I per tion that had a nearer inf that it had r ries ago. N grafs, I cou breaft worl the beft par cover five t. circular, and much defac ble, and app much milita The ditch y ing more c tainly had convinced 1 purpole. covered by ground for. a few ftrag In many p the feet of the bed of to draw cer examined a tention, an encamping it. liffifipattento take oceeded ed far, before I came to a fine, level, open plain, on which I perceived at a little diftance a partial elevation that had the appearance of an intrenchment. On a nearer infpection 1 had greater reafon to fuppofe that it had really been intended for this many centuries ago. Notwithstanding it was now co ed with " grafs, I could plainly difcern that it had once been a breaft work of about four feet in height, extending the best part of a mile, and fufficiently capacious to cover five thousand men. Its form was somewhat circular, and its flanks reached to the River. Though much defaced by time, every angle was diftinguishable, and appeared as regular, and fashioned with as much military skill, as if planned by Vauban himfelf. The ditch was not visible, but I thought on examining more curioully, that I could perceive there certainly had been one. From its fituation alfo, I am convinced that it must have been defigned for this purpole. It fronted the country, and the rear was covered by the River; nor was there any rifing ground for a confiderable way, that commanded it; a few straggling oaks were alone to be seen near it. In many places fmall tracts were worn acrofs it by the feet of the elks and deer, and from the depth of the bed of earth by which it was covered, I was able to draw certain conclusions of its great antiquity. 4.I. examined all the angles, and every part with great attention, and have often blamed myfelf fince, for not encamping on the fpot, and drawing an cract plan of. it. To fnew that this defeription is not the offspring. of a heated imagination, or the chimerical tale of a miltaken traveller, I find on enquiry fince my return, that Monf. St. Pierre, and feveral traders, have, at different times, taken notice of fimilar appearances, on which they have formed the fame conjectures, but without examining them is minutely as I did: How a work of this kind could exift in a country that has hitherto (according to the general received opinion) been the feat of war to untutored Indians alone, whole

whofe whole flock of military knowledge has only, till within two centuries, amounted to drawing the bow, and whofe only breaft work, even at prefent, is the thicket, I know not. I have given as exact an account as pollible, of this ingular appearance, and leave to future explorers of these diffant regions, to discover whether it is a production of nature or art.

Perhaps the hints I have here given, might lead to a more perfect investigation of it, and give us very different ideas of the antient state of realms that we at present believe to have been from the carliest period only the habitations of favages.

The Millifippi, as far as the entrance of the River St. Croix, thirty miles above Lake Pepin, is very full of illands; fome of which are of a confiderable length. On thefe alfo, grow great numbers of the maple or fugar tree, and around them vines loaded with grapes creeping to their very tops. From the Lake upwards few mountains are to be feen, and thofe but fmall Near the River St. Croix, refide three bands of the Naudoweffie Indians, called the River Bands.

This nation is composed, at prefent of eleven bands. They were originally twelve; but the Affinipoils fome years ago, revolting, and separating themselves from the others, there remain only at this time eleven. Those I met here are termed the River Bands; because they chiefly dwell near the banks of this River: the other eight are generally distinguished by the title, Naudowessies of the Plains, and inhabit a country that lies more to the westward. The names of the former are the Nehogatawonahs, the Mawtawbauntowahs, and the Shahiweentowahs, and confist of about four hundred warriors.

A little before I met with these three bands, I fell in with a party of the Mawtawbauntowahs amounting to forty warriors and their families. With these I refided a day or two, during which time five or fix of their number who had been outon an excursion, re-

turned in great hafte, and acquainted their companions that a large party of the Chipeway warriors, "cnough," as they expressed themselves, " to fwallow them all up" were close at their heels, and on the point of attacking their little camp. The chiefs applied to me and defired I would put myfelf at their head, and lead them out to oppose their enemies. As I was a stranger, and unwilling to excite the anger of either nation, I knew not how to act; and never found myfelf in a greater dilemma. Had I refufed. to affift the Naudoweffies I should have drawn on myfelf their difpleafure, or had I met the Chipeways with hoftile intentions, I fhould have made that people my foes, and had I been fortunate enough to have elcaped their arrows at this time, on fome future occafion fhould probably have experienced the feverity of their revenge." In this extremity I chofe the middle courfe, and defired that the Naudoweffics would fuffer me to meet them, that I might endeavour to a-To this they reluctantly affented, bevert their fury. ing perfuaded, from the inveteracy which had long prevailed between them, that my remonstrances would be in vain.

Taking my Frenchman with me, who could fpeak their language, I haftened towards the place where the Chipeways were fuppofed to be. The Naudoweffies, during this, kept at a diffance behind. As I approached them with the pipe of peace, a fmall party of their chiefs, confifting of about eight or ten, came in a friendly manner towards me; with whom, by the means of my interpreter, I held a long converfation; the refult of which was, that their rancor being by my perfuafions in fome meafure mollified, they agreed to turn back, without accomplifhing their favage purpofes. During our difcourfe I could perceive, as they lay feattered about, that the party was very numerous, and many of them armed with mufkets.

Having happily fucceeded in my undertaking, I D returnd

returned without delay to the Naudoweffies, and defired they would inftantly remove their camp to fome other part of the country, left their enemies fhould repent of the promife they had given, and put their intentions in execution. They accordingly followed my advice, and immediately prepared to ftrike their tents. Whilft they were doing this, they loaded me with thanks; and when I had feen them on board their canoes, I perfued my route.

To this adventure I was chiefly indebted for the friendly reception I afterwards met with from the Naudoweffies of the Plains, and for the refpect and honors I received during my abode among them.

And when I arrived many months after at the Chipéway village, near the Ottowaw lakes, I found that my fame had reached that place before me. The chiefs received me with great cordiality, and the elder part of them thanked me for the mifchief I had prevented. They informed me, that the war between their nation and the Naudoweffies had continued without interruption for more than forty winters. That they had long wifhed to put an end to it, but this was generally prevented by the young warriors of either nation, who could not reftrain their ardor when they met. They faid, they should be happy if some chief of the same pacific disposition as myfelf, and who poffeffed an equal degree of refolution and ccolnéfs, would fettle in the country between the two nations; for by the interference of fuch a perfon, an accommodation, which on their parts they fincerely defired, might be brought about. As I did not meet any of the Naudoweffies afterwards, I had not an opportunity of forwarding fo good a work.

About thirty miles below the falls of St. Anthony, at which I arrived the tenth day after I left Lake Pepin, is a remarkable cave of an amazing depth. The Indians term it Wakon-teebe, that is, the Dwelling of the Great Spirit. The entrance into it is about ten feet w within is 1 1 broad. About tw the water unfearcha prevents a threw a f with my to the wa fize, it cal reverbèra found in appeared them with trace the the infid ftone so e with a kr the Miffi ding a'na of the ri Atal burying. dians : living in yet they place; w the chie public a Ten ver St. menelo is not n fair riv ceeded entran thould

ten feet wide, the height of it five feet. The arch within is near fifteen feet high and about thirty feet broad. 'The bottom of it coulitts'of fine clear fund. About twenty feet from the entrance begins a lake, the water of which is transparent, and extends to an unfearchable diftance ; for the darknefs of the cave prevents all attempts to acquire a knowledge of it. I threw a fmall pebble towards the interior parts of it, with my utmost strength ; I could bear that it fellinto the water, and notwithltanding it was of a fmall fize, it caufed an aftonishing and horrible noife, that reverberated through all those gloomy regions. 1 found in this cave many Indian hieroglyphics, which appeared very ancient, for time had nearly covered them with mofs, fo that it was with difficulty I could trace them. They were cut in a rude manner, upon the infide of the walls, which were compoled of a ftone fo extremely foft that it mi, ht cafily be penetrated with a knife : a ftone every where to be found near the Miffifippi. The cave is only acceffible by afcending a'narrow, fteep passage, that lies near the brink of the river.

At a little diftance from this drary cavern, is the burying-place of feveral bands of the Naudoweffie fudians : though these people have no fixed refidence, living in tents and abiding but a few monthsonone spot, yet they always bring the bones of their dead to this place; which they take the opportunity of doing when the chiefs meet to nold their councils, and to settle all public affairs for the enfuing summer.

Ten miles below the Falls of St. Anthony, the River St. Pierre, called by the natives the Waddapawmenefotor, falls into the Miffifippi from the weft. It is not mentioned by Father Hennipin, although a large, fair river, : this omiffion I conclude, must have proceeded from a fmall ifland that is fituated exactly at its entrance, by which the fight of it is intercepted. I fhould not have diffeovered this river myfelf, had I not taken

deome ould heir wed their l me oard

the the and iem. the bund The c elhad betinuters. but rs of vhen ome and colna-, an rely neet opony,

pth. welpout

taken a view, when I was fearching for it, from the high lands opposite, which rife to a great height.

Nearly over against this river, I was obliged to leave my canoe, on account of the ice, and travel by land to the Falls of St. Anthony, where I arrived on the 17th of November. The Miflifippi from the St. Pierre to this place, is rather more rapid than I had hitherto found it, and without islands of any confideration.

Before I left my canoe I overtook a young prince of the Winnebago Indians, who was going on an embaffy to fome of the bands of the Naudoweffies. Finding that I intended to take a view of the Falls, he agreed to accompany me, his curiofity having been ofren excited by the accounts he had received from fomeof his chiefs: he accordingly left his family (for the Indians never travel without their houfholds) at this place, under the care of my Mohawk fervant, and we proceeded together by land, attended only by my Frenchman, to this celebrated place.

We could diffinctly hear the noife of the water full fifteen miles before we reached the falls; and I was greatly pleafed and furprifed, when I approached this affonithing work of nature; but I was not long at liherty to indulge thefe emotions, my attention being called off by the behaviour of my companion.

The prince had no fooner gained the point that overlooks this wonderful cafcade, than he began with an audible voice to addrefs the Great Spirit, one of whofe places of refidence he imagined this to be. He told him that he had come a long way to pay his adorations to him, and now would make him the beft offerings in his power. He accordingly first threw his pipe into the stream; then the roll that contained his tobacco; after thefe, the bracelets he wore on his arms and wrifts; next an ornament that encircled his neck, composed of beads and wires; and at last the ear-rings from his ears; in short he prefented to his god, every part of his drefs that was valuable; during this this he h threw h tated. All th length c Great S on our t clear, ur till we h the Gre I was fuch ele ftead of obferved the prin fincere r but that the univ made w Indee once an we wer employ and eve proofs fhip; 1 great.re yaging help dr the mo much, The Father velled i first Eu body o a molt bout tl

er full I was d this at libeing

at owith e of He adot ofwhis d his cled t the his ring is this he frequently fmote his breast with great violence threw his ar no about, and appeared to be much agitated.

41

All this while he continued his adorations and at length concluded them with fervent petitions that the Great Spirit would constantly afford us his protection on our travels, giving us a bright fun, a blue fky, and clear, untroubled waters; nor would he leave the place till we had fmoked together with my pipe, in honor of the Great Spirit.

I was greatly fupprifed at b holding an inftance of fuch elevated devotion in fo yo ing an Indian, and inftead of ridiculing the ceremonies attending it, as I obferved my catholic fervant tacitly did, Hooked on the prince with a greater degree of refpect for thefe fincere proofs he gave of his piety; and I doubt not but that his offerings and prays were as acceptable to the univerfal Parent of mankind, as if they had, been made with greater pomp, or in a confectated place.

Indeed, the whole conduct of this young prince at once amazed and charmed me. During the few days we were together, his attention feemed totally to be employed in yielding me every affiftance in his power; and even in fo fhort a time, he gave me innumerable proofs of the moft generous and difinterefted friendfhip; fo that on our return I parted from him with great reluctance. Whilft I beheld the artlefs, yet engaging manners of this unpolifhed favage, I could not help drawing a comparifon between him and fome of the more refined inhabitants of civilized countries, not unch, I own, in favor of the latter.

The Falls of St. Anthony received their name from Father Louis Hennipin, a French miffionary, who travelled into these parts about the year 1680, and was the first European ever seen by the natives. This amazing body of waters, which are above 250 yards over, form a most pleasing cataract; they fall perpendicularly about thirty feet, and the rapids below, in the space of

200

300 yards more, render the defent confiderably greater; fo that when viewed at a diftance, they appear to be much higher than they really are. 'The above mentioned traveller has laid them down at above fixty feet; but he has made a greater error in calculating the height of the Falls of Niagara; which he afferts tobe 600 feet; whereas from later obfervations accurately made, it is well known that it does not exceed 140 feet. But the good father I fear too often had no other foundation for his accounts, than report, 5c, at beft, a flight infpection.

- In the middle of the Falls ftands a fmall island, about forty feet broad and fomewhat longer, on which grow a few cragged hemlock and fpruce trees; and about half way between this island and the eastern fhore is a rock, lying at the very edge of the Fall, in an oblique position, that appeared to be about five or fix feet broad, and thirty o forty long. These Falls vary much from all the others I have feen, as you may approach close to them without finding the least obstruction from any intervening hill or precipice.

The country around them is extremely beautiful. It is not an uninterrupted plain, where the eye, finds no relief, but composed of many gentle ascents, which in the fummer are covered with the finest verder, and interspersed with little groves, that give a pleasing variety to the prospect. On the whole, when the Fallsare included, which may be feen at the diftance of four miles, a more pleafing and picturesque view cannot, I believe, be found through the universe. I could have withed that Fhad happened to enjoy this glorious fight at a more feafonable time of the year, whill the trees and hillocks were clad in nature's gayeft livery, as this must have greatly added to the pleasure I received ; however even then it exceeded my warmest expectations. I have endeavoured to give the reader as just an idea of this enchanting fpot, as poffible; but all defcription, whether of the pencil or the pen, must fall infinitely fhort of the original. At

At a little diftance below the Falls ftands a fmall ifland, of about an acre and an half, on which grow a great number of oak trees, every branch of which able to fupport the weight, was full of eagles nefts. The reafon that this kind of birds refort in fuch numhers to this fpot, is, that they are here fecure from the attacks either of man or beaft, their retreat being guarded by the rapids, which the Indians never attempt to pafs. Another reafon is, that they find a conftant fupply of food for themfelves and their young, from the animals and fifth which are dafhed to pieces by the Falls, and driven on the adjacent fhore.

Having fatisfied my curiofity, as far as the eye of man can be fatisfied, I proceeded, on, ftill accompanied by my young friend, till I had reached the River St. Francis, near fixty miles above the falls. To this river Father Hennipin gave the name of St. Francis, and this was the extent of his travels, as well as mine, towards the northweft. As the feafon was fo advanced, and the weather extremely cold, I was not able to make fo many obfervations on these parts as I otherwife should have done.

It might however, perhaps, be neceffary to obferve that in the little tour I made about the Falls, after travelling fourteen miles, by the fide of the Miffifippi, I came to a river nearly twenty yards wide, which ran from the north eaft, called Rum River. And on the 20th of November came to another termed Goofe River, about twelve yards wide. On the 21ft I arrived at the St. Francis, which is about thirty yards wide. Here the Miffifippi itfelf grows narrow, being not more than ninety yards over ; and appears to be chiefly composed of fmall branches. The ice prevented me from noticing the depth of any of these three tivers.

The country in fome places is hilly, but without large mountains; and the land is tolerably good. I observed here many deer and carriboos, fome elk, with abundance abundance of beavers, otters, and other furs. A little above this, to the north eaft, are a number of fmall lakes called the Thousand Lakes; the parts about which, though but little frequented, are the best within many miles, for hunting, as the hunter never fails of returning loaded beyond his expectations.

The Miffifippi has never been explored higher up than the River St. Francis, and only by Father Hennipin and myself thus far. So that we are obliged folely to the Indians, for all the intelligence we are able to give relative to the more northern parts. As this River is not navigable from the fea for veffels of any confiderable burthen, much higher up than the Forks of the Ohio, and even that is accomplished with great difficulty, owing to the rapidity of the current, and the windings of the river; those fettlements that may be made on the interior branches of it, must be indifputably fecure from the attacks of any maritime power. But at the fame time the fettlers will have the advantage of being able to convey their produce to the feaports, with great facility, the current of the river from its fource to its entrance into the Gulf of Mexico, being extremely favorable for doing this in fmall craft. This might also in time be facilitated by canals: or fhorter cuts; and a communication opened by water with New-York, Canada, &c. by way of the lakes. The Forks of the Ohio are about nine hundred miles from the mouth of the Miffifippi, following the courfe of the river;, and the Mefforie two hundred miles above thefe. From the latter it is about twenty mile, to the Illinois River, and from that to the Ouifconfinswhich I have given an account of, about eight hundred more.

On the 25th I returned to my canoe, which I had left at the mouth of the River St. Picrre ; and here I parted with regret from my young friend, the prince of the Winnebagoes. This river being clear of ice, by reafon of its fouthern fituation, I found nothing to obftruct obstruct my about forty into it from that I could forty miles Red Marbl before they The Riv fifippi, is al that breadt has a great very brikkly fome rapids

obstruct my passage. On the 28th, being advanced about forty nules, I arrived at a small branch that fell into it from the north; to which, as it had no name that I could diffinguish it by, I gave my own. About forty miles higher up I came to the Forks of Verd and Red Marble Rivers, which join at some little diffancebefore they enter the St. Pierre.

The River St. Pierre, at its junction with the Miffifippi, is about a hundred yards broad, and continues that breadth nearly all the way I failed upon it. It has a great depth of water, and in fome places runs very brifkly. About fifty miles from its mouth are fome rapids, and much higher up there are many others.

I proceeded up this river about two hundred miles to the country of the Naudoweffies of the Plains, which lies a little above the Forks formed by the Verd and Red Marble Rivers, juft mentioned, where a branch from the fouth nearly joins the Mefforie River. By the accounts I received from the Indians, I have reafon to believe that the River St. Pierre and the Mefforie, though they enter the Mifflippi twelve hundred miles from each other, take their rife in the fame neighbourhood; and this within the fpace of a mile.

The River St. Pierre's northern branch rifes from a number of lakes near the fhining mountains; and it is from fome of thefe, alfo, that a capital branch of the River Bourbon, which runs into Hudfon's Bay, has its fources.

From the intelligence I gained from the Naudoweffie Indians, among whom I arrived on the 7th of December, and whofe language I perfectly acquired during a refidence of five months; and alfo from the accounts I afterwards obtained from the Affinipoils, who fpeak the fame tongue, being a revolted band of the Naudoweffies; and from the Killiftinoes, neighbours of the Affinipoils, who fpeak the Chipéway language, and inhabit the heads of the River Bourbon; I fay from these nations, together with my own obfervations,

fervations, I have learned that the four most capital rivers on the Continent of North America, viz, the St-Lawrence, the Missifippi, the river Bourbon, and the Oregon or the river of the West (as I hinted in my Introduction) have their fources in the fame neighbourhood: The waters of the three former are within thirty miles of each other; the latter, however is rather further west.

This fhews that thefe parts are the higheft lands in North-America; and it is an inftance not to be parelleled on the other three quarters of the globe, that four rivers of fuch magnitude fhould take their rife together, and each, after running feperate courfes, difcharge their waters into different oceans at the diftance of two thousand miles from their fources. For in their paffage from this fpot to the bay of St. Lawrence, eaft; to the Bay of Mexico, fouth; to Hudfon's Bay, north; and to the bay at the Straits of Annian weft, each of thefe traverfe upwards of two thoufand miles.

I fhall here give my readers fuch reflections as occurred to me, when I had received this interesting information, and had by numberless enquiries, as fortained the truth of it; that is, as far as it was possible to arrive at a certainty without a personal investigation.

It is well known that the Colonies, particularly thole of New-England and Canada; are greatly affected, about the time their winter fets in, by a north-welt wind, which continues for feveral months, and renders the cold much more intenfe there than it is in the interior parts of America. This I can, from my own knowledge, affert, as I found the winter, that I paffed to the weltward of the Miffilippi, far from fevere; and the north-welt wind blowing on thole countries confiderable more temperate than I have often experienced it to be nearer the coaft. And that this did not arife from an uncertainty of the feasons, but was annually the case, I conclude, both from the fmall

quantity

quantity of I fnow-fhoes I the more eat winter.

quantity of fnow that then fell, and a total difufe of fnow-fhoes by thefe Indians, without which none of the more eaftern nations can possibly travel during the winter.

As naturalists observe, that air refembles water in many refpects, particularly by often flowing in a compact body; and that this is generally remarked to be with the current of large ftreams, and feldom acrofs them, may not the winds that fet violently into the Bay of Mexico about the latter end of the year, take their courfe over the continent in the fame direction as the Miffifippi does; till meeting with the north winds (that from a fimilar caufe blow up the Bourbon from Hudfon's Bay) they are forced acrofs the great lakes, down the current of the waters of the St. Lawrence, and united, commit those ravages, and occasion those fevere winters, experienced in the before-mentioned countries ? During their progrefs over the lakes they become expanded, and confequently affect a greater tract of land than they otherwife would do,

According to my fcanty knowledge of natural philofophy, this does not appear improbable. Whether it is agreeable to the laws eftablished by naturalists to account for the operations of that element, I know not. However, the description here given of the fituation of these vast bodies of water, and their near approach to each other, with my own undigested suppositions of their effect on the winds, may prove perhaps, in abler hands, the means of leading to many useful discoveries.

On the 7th of December, I arrived (as I faid before) at the utmost extent of my travels towards the west; where I met with a large party of the Naudowessie Indians, among whom I resided feven months. These confituted a part of the eight bands of the Naudowessies of the Plains; and are termed the Wawpeentowahs, the Tintons, the Astrahcootans, the Mawhaws, and the Schians. The other three bands, whose names

As I proceeded up the River St. Pierre, and had nearly reached the place where these people were encamped, I observed two or three canoes coming down the stream; but no sooner had the Indians that were on board them, discovered us, than they rowed toward the land, and leaping assorted with precipitation, left their canoes to float as the current drove them. In a few minutes I perceived some others; who, as soon as they came in fight, followed with equal speed, the example of their countrymen.

I now thought it neceffary to proceed with caution; and therefore kept on the fide of the river oppofite to that on which the Indians had landed. However, I ftill continued my courfe, fatisfied that the pipe of peace, which was fixed at the head of my cance, and the Englifh colors that were flying at the ftern, would prove my fecurity. After rowing about half a mile further, in turning a point, I difcovered a great number of tents, and more than a thoufand Indians, at a little diftance from the fhore. Being now nearly oppofite to them, I ordered my men to pull directly over, as I was willing to convince the Indians by fuch a ftep, that I placed fome confidence in them.

As foon as I had reached the land, two of the chiefs prefented their hands to me, and led me, amidit the aftonifhed multitude, who had most of them never feen a white man before, to a tent. Into this we entered, and according to the custom that universally prevails

48

vails amo

pipe of p

became f

vails among every Indian nation, began to fmoke the pipe of peace. We had not fat long-before the crowd became fo great, both around, and upon the tent, that we were in danger of being crushed by its fall. On this we returned to the plain, where, having gratified the curiofity of the common people, their wonder abated, and ever after they treated me with great respect.

From the chiefs I met with the moft friendly and hofpitable reception; which induced me, as the feafon was fo far advanced, to take up my refidence among them during the winter. To render my ftay as comfortable as poflible, I first endeavoured to learn their language. This I foon did, fo as to make myfelf perfectly intelligible, having before acquired fome flight knowledge of the language of those Indians that live on the back of the fettlements; and in confequence met with every accommodation their manner of living would afford. Nor did I want for fuch amufements as tended to make fo long a period passcheerfully away. I frequently hunted with them; and at other times, beheld with pleasure their recreations and pastimes, which I shall deferibe hereaster.

Sometimes I fat with the chiefs, and whilf we finoked the friendly pipe, entertained them, in return for the accounts they gave me of their wars and excurfions, with a narrative of my own adventures, and a defcription of all the battles fought between the Englifh and French in America, in many of which I had a perfonal fhare. They always paid great attention to my details, and afked many pertinent queftions relative to the European methods of making war.

I held these conversations with them in a great measure to procure from them fome information relative to the chief point I had constantly in view, that of gaining a knowledge of the fituation and produce, both of their own country, and those that lay to the westward of them. Nor was I disappointed in my designs; for I procured from them much useful intel-E. ligence.

It the never we enly preails ligence. They likewile drew for me plans of all the countries with which they were acquainted; but as I entertained no great opinion of their geographical knowledge, I placed not much dependence on them, and therefore think it unneceffary to give them to the public. They draw with a piece of burnt coal, taken from the hearth, upon the infide bark of the birch tree; which is as fmooth as paper, and anfwers the fame purpofes, notwithflanding it is of a yellow caft. Their fketches are made in a rude manner, but they feem to give us as just an idea of a country, although the plan is not fo exact, as more experienced draughtfmen could do.

I left the habitations of thefe hofpitable Indians the latter end of April 1767; but did not part from them for feveral days, as I was accompanied on my journey by near three hundred of them, among whom were many chiefs, to the mouth of the River St. Pierre. At this feafon, thefe bands annually go to the Great Cave, before mentioned, to hold a grand council with all the other bands; wherein they fettle their operations for the enfuing year. At the fame time they carry with them their dead, for interment, bound up in buffaloes' fkins. Befides thofe that accompanied me, others were gone before, and the reft were to follow.

Never did I travel with fo cheerful and happy a company. But their mirth met with a fudden and temporary allay from a violent from that overtook us one day on our paflage. We had just landed, and were preparing to fet up our tents for the night, when a heavy cloud overfpread the heavens, and the most dreadful thunder, lightning, and rain iffued from it, that ever I beheld.

The Indians were greatly terrified, and ran to fuch fhelter as they could find; for only a few tents were as yet crected. Apprehensive of the danger that might ensue from standing near any thing which could ferve ferve for tain fucl took my chuting ftorm, t. dians v from it entertai I was 1 fcarcely thunder the ligh fulphur their co help tre the fton formed evil fpi had his Wh

fuch were that ould ve ferve for a conductor, as the cloud appeared to coutain such an uncommon quantity of electrical fluid, I took my ftand as far as poflible from any covering; chuing rather to be exposed to the peltings of the ftorm, than to receive a fatal stroke. At this the Indians were greatly furprifed, and drew conclusions from it not unfavourable to, the opinion they already entertained of my refolution. Yet I acknowledge that I was never more effected in my life; for nothing fcarcely could exceed the terrific fcene. The peals of thunder were fo loud that they flook the earth ; and the lightning flathed along the ground in ftreams of fulphur: fo that the Indian chiefs themfelves, although their courage in war is ufually invincible, could not help trembling at the horrid combustion. As soon as the ftorm was over, they flocked around me, and informed me, that if was a proof of the anger of the evil fpirits, whom they were apprehensive that they had highly offended.

When we arrived at the Great Cave, and the Indians had deposited the remains of their deceased friends in the burial-place that stands adjacent to it, they held their great council, into which I was admitted, and at the same time had the honour to be installed or adopted a chief of their bands. On this occasion I made the following speech, which I infert, to give my readers a specimen of the language and manner in which it is necessary to address the Indians, so as to engage their attention, and to render the speaker's expression consonant to their ideas. It was delivered on the first day of May 1767.

"My brothers, chiefs of the numerous and powerful Naudoweffies! I rejoice that through my long abode with you, I can now fpeak to you (though after an imperfect manner) in your own tongue, like one of your own children. I rejoice alfo that I have had an opportunity fo frequently to inform you of the glory and power of the Great King that reigns over the English

glifh and other nations ; who is defcended from a very ancient race of fovereigns, as old as the earth and waters; whose feet stand on two great islands, larger than any you have ever feen, amidit the greatest waters in the world; whofe head reaches to the fun, and whofe arms encircle the whole earth : the number of whole warriors are equal to the trees in the vallics, the stalks of rice in yonder marshes, or the blades of grass on your great plains : who has hundreds of canoes of his own, of fuch amazing bignefs, that all the waters in your country would not fuffice for one of them to fwim in ; each of which have guns, not fmall like mine, which you fee before you, but of fuch magnitude, that an hundred of your ftouteft young men would with difficulty be able to carry one. And thefe are equally furprising in their operation against the great king's enemies when engaged in battle ; the terror they carry with them, your language wants words to express. You may remember the other day when we were encamping at Wadawpawmenefoter, the black clouds, the wind, the fire, the flupendous noife, the horrible cracks, and the trembling of the earth, which then alarmed you, and gave you reafon to think your gods were angry with you; not unlike thefe are the warlike implements of the English, when they are fighting the battles of their great king.

"Several of the chiefs of your bands have often told me, in times paft, when I dwelt with you in your tents, that they much withed to be counted among the children and allies of the great king my mafter. You may remember how often you have defired me, when I return again to my own country, to acquaint the great king of your good difposition towards him and his fubjects, and that you wished for traders from the English to come among you.

"Being now about to take my leave of you, and to return to my own country, a long way towards the rifing fun, I again afk you to tell me whether you continue continue council la your chie wards the with in co are all wil of my gre nations, at him of yo "I cha

continue of the fame mind as when I fpoke to you in council last winter; and as there are now feveral of your chiefs here, who came from the great plains towards the fetting of the fun, whom I have never fpoke with in council before, I ask you to let me know if you are all willing to acknowledge yourfelves the children of my great master the King of the English and other nations, as I shall take the first opportunity to acquaint him of your defires and good intentions.

"I charge you not to give heed to bad reports, for there are wicked birds flying about among the neighbouring nations, who may whifper evil things in your ears against the English, contrary to what I have told you; you must not believe them, for I have told you the truth.

"And as for the chiefs that are about to go to Michillimackinac, I shall take care to make for them and their fuite, a straight road, fmooth waters, and a clear fky; that they may go there, and fmoke the pipe of peace, and reft fecure on a beaver blanket under the fhade of the great tree of peace. Farewell !"

To this speech I received the following answer, from the mouth of the principal chief.

"Good brother ! I am now about to fpeak to you with the mouths of these my brothers, chiefs of the eight bands of the powerful nation of the Naudoweffics. We believe and are well fatisfied in the truth of every thing you have told us about your great nation, and the great king our greatest father; for whom we fpread this beaver blanket, that his fatherly protection may ever reft eafy and fafe amongst us his children : your colors and your arms agree with the accounts you have given us about your great nation. We defire that when you return, you will acquaint the great king how much the Naudoweflies with to be counted among his good children.

"You may believe us when we tell you that we will not open our ears to any who may dare to fpeak evil of

t to the vou of our great father the king of the English and other nations.

"We thank you for what you have done for us in making peace between the Naudoweffies and the Chipéways, and hope when you return to us again, that you will complete this good work; and quite difpelling the clouds that intervene, open the blue fky of peace, and caufe the bloody hatchet to be deep buried under the roots of the great tree of peace.

"We with you to remember to reprefent to our great father how much we defire that traders may be tent to abide among us with fuch things as we need, that the hearts of our young men, our wives and children may be made glad. And may peace fubfift between us, fo long as the fun, the moon, the earth, and the waters fhall endure. Farewell !"

I thought it necessary to caution the Indians against giving heed to any bad reports that may reach them from the neighbouring nations, to the difadvantage of the English, as I had heard, at different places through which I paffed, that emiffaries were ftill employed by the French to detach those who were friendly to the English, from their interest. And I faw, myfeit, feveral belts of Wampum that had been delivered for this purpofe to fome of the tribes I was among. On the delivery of each of these, a Talk was held, wherein the Indians were told that the English, who were but a petty people, had stolen that country from their great father the king of France, whilft he was alleep; but that he would foon awake, and take them again under his protection. These I found were fent from Canada, by perfons who appeared to be well affected towards the government under which they lived.

Whilft I tarried at the mouth of the River St.Pierre, with thefe friendly Indians, I endeavoured to gain intelligence whether any goods had been fent towards the Falls of St. Anthony for my ufe, agreeable to the promife promife I h left Michil dians, who that this ag ed to give u north-weft plan. I th where I pr left there u As thefe

to renew 1 to make n to Lake Si Portage o nually go of whom procure g to penetra Straits of

cure ther advifed for where the of hearing with of time I he the Gove fary for In cost and twe enfuing doing, v attend to St. Pier

promife I had received from the Governor, when I left Michillimackinac. But finding from fome Indians, who paffed by in their return from those parts, that this agreement had not been fulfilled, I was obliged to give up all thoughts of proceeding further to the north-west by this route, according to my original plan. I therefore returned to La Prairie le Chien, where I procured as many goods from the traders I left there the preceeding year, as they fould spare.

As thefe, however, were not fufficient to enable me to renew my first defign, I determined to endeavour to make my way across the country of the Chipéways to Lake Superior; in hopes of meeting at the Grand Portage on the north fide of it, the traders that annually go from Michillimackinac to the north-weft; of whom I doubted not but that I should be able to procure goods enough to answer my purpose, and also to penetrate through those more northern parts to the Straits of Annian.

And I the more readily returned to La Prairie le Chien, as I could by that means the better fulfil the engagement I had made to the party of Naudoweffies mentioned at the conclusion of my fpeech.

During my abode with this people, withing to fecure them entirely in the intereft of the English, I had advifed fome of the chiefs to go to Michillimackinac, where they would have an opportunity of trading, and of hearing the accounts that I had entertained them with of my countrymen, confirmed. At the fame time I had furnished them with a recommendation to the Governor, and given them every direction neceffary for their voyage.

In confequence of this, one of the principal chiefs, and twenty-five of an inferior rank, agreed to go the enfuing fummer. This they took an opportunity of doing, when they came with the reft of their band to attend the grand council at the mouth of the River St. Pierre. Being obliged, on account of the difappointment

crre, n inards the fe pointment I had just been informed of, to return fo far down the Miffifippi, I could from thence the more eafily fet them on their journey.

As the intermediate parts of this river are much frequented by the Chipéways, with whom the Naudoweffies are continually at war, they thought it more prudent, being but a fmall party, to take the advantage of the night, than to travel with me by day; accordingly no Koner was the grand council broke up, than I took a friendly leave of thefe people, from whom I had received innumerable civilities, and purfued once more my voyage.

I reached the eaftern fide of Lake Pepin the fame night, where I went ashore and encamped as usual. The next morning, when I had proceeded fome miles further, I perceived at a diftance before me, a fmoke, which denoted that fome Indians were near; and in a fhort time discovered ten or twelve tents, not far from the bank of the river. As I was apprehenfive that this was a party of the Rovers I had before met with, I knew not what course to pursue. My attendants purfuaded me to endeavour to pafs by them on the opposite fide of the river; but as I had hitherto found that the best way to enfure a friendly re_eption from the Indians, is to meet them boldly, and without fhewing any tokens of fear, I would by no means confent to their proposal. Instead of this I croffed directly over, and landed in the midft of them, for by this time the greatest part of them were standing on the fhore.

The first I accosted were Chipéways, inhabiting near the Ottowaw Lakes; who received me with great cordiality, and shook me by the hand in token of friendship. At some little distance behind these should a chief remarkably tall and well made, but of so ftern an aspect, that the most undaunted person could not behold him without seeling fome degree of terror. He seemed to have passed the meridian of life, and by by the mode difcovered the proached his to have met w the others; h hand, and low way tongue, "The Englift hawk in his tence would vent which, ing it in a ca him fee I w

biting great en of ftood ftern d not rror. and y by the mode in which he was painted and tatowed, I difcovered that he was of high rank. However, I approached him in a courteous manner, and expected to have met with the fame reception I had done from the others; but to my great furprife, he withheld his hand, and looking fiercely at me, faid, in the Chipéway tongue, "Cawin nifhifhin faganofh," that is, "The Englifh are no good." As he had his tomahawk in his hand, I expected that this laconic. fentence would have been followed by a blow; to prevent which, I drew a piftol from my belt, and, holding it in a carelefs pofition, paffed clofe by him, to let him fee I was not affraid of him.

I learned foon after from the other Indians, that this was a chief, called by the French, the Grand Sautor, or the Great Chipéway Chief, for they denominate the Chipéways, Sautors. They likewife told me that he had been always a fleady friend to that people, and when they delivered up Michillimackinac to the Englifh on their evacuation of Canada, the Grand Sautor had fworn that he would ever remain the avowed enemy of its new posseffors, as the territories on which the fort is built belonged to him.

Finding him thus difpofed, I took care to be confantly upon my grard whilft I ftaid; but that he might not fuppofe I was driven away by his frowns, I took up my abode there for the night. I pitched my tent at fome diffance from the Indians, and had no fooner laid myfelf down to reft, than I was awaked by my French fervant. Having been alarmed by the found of Indian mufic, he had run to the outfide of the tent, where he beheld a party of the young favages dancing towards us in an extraor dinary manner, each carrying in his hand a torch fixed on the top of a long pole. But I thall defer any further account of this uncommon entertainment, which at once furprifed and alarmed me, till I treat of the Indian dances.

The

The next morning I continued my voyage, and before night reached La Prairie le Chien; at which place the party af Naudoweffies foon overtook me. Not long after, the Grand Scator alfo arrived, and before the Naudoweffies left that place to continue their journey to Michillimackinac, he found means, in conjunction with fome French traders from-Louifiana, to draw from me about ten of the Naudoweffie chiefs, whom he prevailed upon to go toward those parts.

The remainder proceeded, according to my directions, to the Englith fort; from whence I afterwards heard that they returned to their own country without any unfortunate accident befalling them, and greatly pleafed with the reception they had met with. Whilit not more than half of thole who went to the fouthward, through the difference of that fouthern climate from their own, hved to reach their abode. And fince I came to England I have been informed, that the Grand Sautor having rendered himfelf more and more difguttful to the English, by his inveterate enmity towards them, was at length stabbed in his tent, as he encamped near Michillimackinac, by a trader, to whom I had related the foregoing story.

"I should have remarked, that whatever Indians happen to meet at La Prairie le Chien, the great mart to which all who inhabit the adjacent countries refort, though the nations to which they belong are at war with each other, yet they are obliged to reftrain their enmity, and to forbear all hoftile acts during their flay there. This regulation has been long eftablifhed among them for their mutual convenience, as without it no trade could be carried on. The fame rule is observed also at the Red Mountain (afterwards defcribed) from whence they get the itone of which they make their pipes; these being indifpenfable to the accommodation of every neighbouring tribe, a fimilar restriction becomes needful, and is of public utility. The.

The River St. Pierre, which runs through the territories of the Naudoweffies, flows through a most delightful country, abounding with all the necessaries of life, that grow spontaneously; and with a little cultivation it might be made to produce even the luxuries of life. Wild rice grows here in great abundance : and every part is filled with trees bending under their loads of fruits, fuch as plums, grapes, and apples; the meadows are covered with hops, and many forts of vegetables; whilft the ground is ftored with ufeful roots, with angelica, fpikenard, and ground-nuts as large is hens' eggs. At a little diftance from the fides of the river are eminences, from which you have views that cannot be exceeded even by the most beautiful of those I have already described; amidst these are delightful groves, and fuch amazing quantities of maples, that they would produce fugar fufficient for any number of inhabitants.

A little way from the mouth of this river, on the north fide of it, flands a hill, one part of which, that towards the Miflifippi, is composed entirely of white flone, of the fame foft nature as that I have before decribed; for fuch, indeed, is all the flone in this country. But what appears remarkable, is, that the colour of it is as white as the driven fnow. The outward part of it was crumbled by the wind and weather into heaps of fand, of which a beautiful composition might be made; or, I am of opinion that, when properly treated, the flone itfelf would grow harder by time, and have a very noble effect in architecture.

Nearthat branch which is termed the Marble River, is a mountain, from whence the Indians get a fort of red ftone, out of which they hew the bowls of their pipes. In fome of thefe parts is found a black, hard clay, or rather ftone, of which the Naudoweffics make their family utenfils. This country likewife abounds with a milkwhite clay, of which China ware might be made equal in goodnefs to the Afiatic; and alfo with

with a blue clay that ferves the Indians for paint, with this last they contrive, by mixing it with the red flone powdered, to paint themfelves of different colours. Those that can get the blue clay here mentioned, paint themfelves very much with it; particularly when they are about to begin their fports and pastimes. It is alfo efteemed by them a mark of peace, as it has a refemblance of a blue fky, which with them is a fymbol of it, and made use of in their speeches as a figura. tive expression to denote peace. When they wish to fhew that their inclinations are pacific towards other tribes, they greatly ornament both themfelves and their belts with it.

Having concluded my bufinefs at La Prairie le Chien, I proceeded once more up the Miffifippi, as far as the place where the Chipeway River enters it, a little below Lake Pepin. Here, having engaged an Indian pilot, I directed him to fteer towards the Ottawaw Lakes, which lie near the head of this river. This he did, and I arrived at them the beginning of Tuly.

The Chipéway River, at its junction with the Miffifippi, is about eighty yards wide, but is much wider as you advance into it. Near thirty miles up it feparates into two branches, and I took my courfe through that which lies to the eastward.

The country adjoining to the river, for about fixty miles, is very level, and on its banks lie fine meadows, where larger droves of buffaloes and alks were feeding, than I had observed in any other part of my travels. The track between the two branches of this river is termed, the Road of War between the Chipéway and Naudoweffie Indians.

The country to the Falls is almost without any timber, and above that very uneven and rugged, and clofely wooded with pines, beach, maple, and birch. Here a most remarkable and astonishing fight prefented itself to my view. In a wood, on the east of the river.

at fixty adows, c feediy traof this Chipé-

t any l, and birch. efentof the cr, river, which was about three quarters of a mile in length, and in depth further than my eye could reach, I obferved that every tree, many of which were more than fix feet in circumference, was lying flat on the ground, torn up by the roots. This appeared to have been done by fome extraordinary hurricane, that came from the weft fome years ago; but how many I could not learn, as I found no inhabitants near it, of whom I could gain information. The country on the weft fide of the river, from being lefs woody, had efcaped in a great measure this havoe as only a few trees were blown down.

Near the heads of this river, is a town of the Chipeways from whence it takes its name. It is fituated on each fide of the river (which at this place is of no confiderable breadth) and lies adjacent to the banks of a fmall lake. This town contains about forty houses, and can fend out upwards of one hundred warriors, many of whom were fine, fout young men. The houfes of it are built after the Indian manner, and have neat plantations behind them; but the inhabitants, in general, feemed to be the naffieft people I had ever been among. I observed that the women and children indulged themfelves in a cuftom, which though common, in fome degree, throughout every Indian nation, appears to be, according to our ideas, of the most nauseous and indelicate nature; that of fearching each other's head, and eating the prey caught therein.

In July I left this town, and having crofied a number of fmall lakes and caveying places that intervened, came to a head branch of the River St. Croix. This branch I defeended to a fork, and then afeended another to its fource. On both thefe rivers I difcovered feveral mines of virgin copper, which was as pure as that found in any other country.

Here I came to a fmall hnowk, which my guide thought might be joined at fome diffance by ftreams F

62

that would at length render it navigable. The water at below as fo feanty, that my cance would by no means to be in it; but having ftopped up feveral old beaver dams, which had been broken down by the hunters, I was evabled to proceed for fome miles, till by the conjunction of a few brooks, thefe aids became no longer neceffary. In a fhort time the water increafed to a most rapid river, which we defeended till it entered into Lake Superior. This river I named after a gentleman that defired to accompany me from the town of the Ottagaumies to the Carrying Place on Lake Superior, Goddard's River.

To the weft of this is another fmall river, which alfo empties itfelf into the Lake. This I termed Strawberry River, from the great number of ftrawberries of a good fize and flavor that grew on its banks.

The country from the Ottowaw Lakes to Lake Superior, is in general very uneven and thickly covered with woods. The foilin fome places is tolerably good, in others but indifferent. In the heads of the St. Croix and the Chipéway Rivers are exceeding fine flurgeon. All the wildernefs between the Miffifippi and Lake Superior is called by the Indians, the Mofchettoe Country, and I thought it most justly named; for, it being then their feason, I never taw or felt fomany of those infects in my life.

The latter end of July I arrived, after having coafted through Welt Bay, at the Grand Portage, which lies on the north-welt borders of Lake Superior. Here thole who go on the north-welt trade, to the Lakes De Pluye, Dubois, &c. carry over their canoes and baggage about nine miles, till they come to a number of fmall lakes, the waters of fome of which defeend into Lake Superior, and others into the river Bourbon. Lake Superior from Welt Bay to this place is bounded by rocks, except towards the fouthwelt part of the Bay where I first entered it, there it was tolerably level. At the C entrance of dreary and otherwife v bay ferenes the Killifti pcctive kin to this plas illimackina weft. Fro of the Lake

At the Grand Portage is a finall bay, before the entrance of which lies an ifland that intercepts the dreary and uninterrupted view over the Lake, which otherwife would have prefented itfelf, and makes the bay ferene and pleafant. Here I met a large party of the Killiftinoe and Affinipoil Indians, with their refpective kings and their families. They were come to this place in order to meet the traders from Michillimackinac, who make this their road to the northweft. From them I received the following account of the Lakes that lie to the north-weft of Lake Superior.

Lake Bourbon, the moft northern of those test difcovered, received its name from fome French taders who accompanied a party of Indians to Hudfon's Bay fome years ago; and was thus denominated by them in honour of the royal family of France. It is composed of the waters of the Bourbon River, which as I have before observed, rifes a great way to the fouthward, not far from the northern heads of the Miffifippi.

This lake is about eighty miles in length, north and fouth, and is nearly circular. It has no very large islands on it. The land on the castern fide is very good; and to the fouth-west there are some mountains; in many other parts there are barren plains, bogs, and morafies. Its latitude is between filty-two and fiftyfour degrees north, and it lies nearly fouth-weft from Hudion's Bay. As through its northern fituation the weather there is extremely cold, only a few animals are to be found in the country that borders on ir. They gave me but an indifferent account either of the beafts, birds, or fifnes. There are indeed fome buffaloes of a fmall fize, which are fat and good about the latter end of fummer, with a few moole and carriboo deer : however, this deficiency is made up by the furs of every fort that are to be met with in great plenty around the lake. The timber growing here is chiefly fir, cedar, fpruce, and fome maple.

1t

Lake Winnepeek, or as the French write it, Lac Ouinipique, which lies neareft to the foregoing, in composed of the fame waters. It is inlength about two hundred miles north and fouth; its breadth has never been properly afcertained, but is fupposed to be about one hundred miles in its wideft part. This lake is very full of islands; these are, however of no great magnitude. Many confiderable rivers empty themselves into it, which, as yet, are not diftinguished by any names. The waters are stored with fish, fuch as trout and strugeon, and also with others of a timaller kind peculiar to these lakes.

The land on the fouth-weft part of it is very good, especially about the entrance of a large branch of the River Bourbon, which flows from the fouth-weft. On this river there is a factory that was built by the French, called Fort la Reine, to which the traders from Michillimackinac refort to trade with the Affinipoils and Killiftinoes. To this place the Mahahs, who inhabit a country two hundred and fifty miles fouth-weft, come alfo to trade with them; and bring great quantities of Indian corn, to exchange for knives, tomahawks, and other articles. Thefe people are fuppofed to dwell on fome of the branches of the River of the Weft.

Lake Winnepeek has on the north-east fome mountains, and on the cast many barren plains. The maple or fugar tree grows here in great plenty, and there is likewife gathered an amazing quantity of rice, which proves that grain will flourish in these northern climates as well as in warmer. Butfaloes, carriboo, and moose deer, are numerous in these parts. The buffaloes of this country differ from those that are found more to the fouth only in fize; the former being much smaller; just as the black cattle of the northern parts of Great Britain differ from English oxen.

)n

On the waters that fall into this Lake, the neighbouring nations take great numbers of excellent furs. Some of thefe they carry to the factories and fettlements belonging to the Hudfon's Bay Company, fituated above the entrance of the Bourbon River; but this they do with reluctance, on feveral accounts; for fome of the Affinipoils and Killiftiones, who ufually traded with the Company's fervants, told me, that if they could be fure of a conftant fupply of goods from Michillimackinac, they would not trade any where elfe They fhewed me fome cloth and other articles that they had purchafed at Hudfon's Bay, with which they were much diffatisfied, thinking they had been greatly impofed upon in the barter.

Allowing that their accounts were true, I could not help joining in their opinion. But this diffatisfaction might probably proceed, in a great measure, from the intrigues of the Canadian traders : for whilft the French were in poffession of Michillimacinae, having acquired a thorough knowledge of the trade of the north-weft countries, they were employed on that account, after the reduction of Canada, by the English traders there, in the eftablishment of this trade with which they were themfelyes quite unacquainted. One of the methods they took to withdraw thefe Indians from their attachment to the Hudion's Bay Company, and to engage their good opinon in behalf of their new employers, was by depreciating on all occasions the Company's goods, and magnifying the advantages that would arife to them from trafficing entirely with the Canadian traders. In this they too well fucceeded, and from this doubtlefs, did the diffatisfaction the Affinipoils and Killiftinoes expressed to me, partly proceed. But another reafon augmented it; and this was the length of their journey to the Hudson's Bay factories, which, they informed me, took them up three months, during the fummer heats to go and return, and from the imalluefs of their canoes they could not F 2 carry

carry more than a third of the beavers they killed. So that it is not to be wondered at, that thefe Indians should wish to have traders come to refide among them. It is true that the parts they inhabit are within the limits of the Hudson's Bay territories; but the Company must be under the neceflity of winking at an encroachment of this kind, as the Indians would without doubt protect the traders when among them. Befides, the passion granted to the traders that go from Michillimackinac give them liberty to trade to the north-west about Lake Superior; by which is meant Fort La Reine, Lake Winnepeek, or any other parts of the waters of the Bourbon River, where the Couriers de Bois, or Traders, may make it most convenient to refide.

Lac du Bois, as commonly termed by the French in their maps, or in English the Lake of the Wood, is to called from the multiplicity of wood growing on its banks; fuch as oakes, pines, firs, fpruce, &c. This Lake lies still higher upon a branch of the River Bourbon, and nearly east from the fouth end of Lake Winnepeek. It is of great depth in fome places. Its length from east to west about seventy miles, and its greatest breadth about forty miles. It has but few Mlands, and these of no great magnitude. The fishes, fowls, and quadrupeds that are found near it, vary but little from those of the other two lakes. A few of the Killistione Indians fome time encamp on the borders of it to fish and hunt.

This Lake lies in the communicatian between Lake Superior, and the Lakes Winnepeek and Bourbon. Its waters are not effected quite fo pure as those of the other lakes, it having, in many places, a muddy bottom.

Lac La Pluye, fo called by the French, in English the Rainy Lake, is supposed to have acquired this name from the first travellers, that passed over it, meeting with an uncommon deal of rain; or, as some have have affirm perpendicu er which I This La

Lake bon. fe of uddy

glifh this neetome c have affirmed, from a mift like rain, occalioned by a perpendicular water-fall that empties itfelf into a river which lies to the fouth-weft.

This Lake appears to be divided by an ifthmuft. near the middle, into two parts : the welt part is called the Great Rainy Lake, the east, the Little Rainy Lake, as being the leaft division. It lies a few miles further to the caftward, on the fame branch of the Bourbon, than the last mentioned Lake. It is in general very shallow in its depth. The broadest part of it is not more than twenty miles; its length, including both, about three hundred miles. In the west part, the water is very clear and good ; and fome-excellent fifh are taken in it. A great many fowls refort here in the fall of the year. Moofe deer are to be found in great plenty, and likewife the carriboo; whofe fkin for britches or gloves exceeds by far any other to be met with in North America. The land on the borders of this Lake is effected, in fome places, very good, but rather too thickly covered with wood. Here refides a confiderable band of the Chipéways.

Eaftward from this Lake lies feveral fmall ones, which extend in a ftring to the great carrying place, and from thence into Lake Superior. Between thefe little Lakes are feveral carrying places, which render the trade to the north-weft difficult to accomplifh, and exceeding tedious, as it takes two years to make one voyage from Michillimackinac to thefe parts.

Red Lake is a comparatively fmall lake, at the head of a branch of the Bourbon River, which is called by fome Red River. Its form is nearly round, and about fixty miles in circumference. On one fide of it is a tolerable large ifland, close by which a fmall river enters. It bears almost fouth-east bothfrom Lake Winnepeek and from Lake du Bois. The parts adjacent are very little known or frequented, even by the favages themselves,

Not .)

Not far from this Lake, a little to the fouth-west, is another, called White Bear Lake, which is nearly about the fize of the last mentioned. The waters that compose this Lake are the most northern of any that supply the Mississippi, and may be called with propriety its most remote source. It is fed by two or three small rivers, or rather large brooks.

A few miles from it, to the fouth-eaft, are a great number of fmall lakes, none of which are more than ten miles in circumference, that are called the Thoufand Lakes. In the adjacent country is reckoned the fineft hunting for furs of any on this continent; the Indians who hunt here, feldom returning without having their canoes loaded as deep as they can fwim.

Having just before observed that this Lake is the utmost northern fource of the Missifippi, I shall here further remark, that before this river enters the Gulf of Mexico, it has not run lefs, through all its meanderings, than three thousands miles, or, in a straight line from north to fouth, about twenty degrees, which is nearly fourteen hundred English miles.

Thefe Indians informed me, that to the north-weft of Lake Winnepcek lies another, whofe circumference vaftly exceeded any they had given me an account of. They deferibe it as much larger than Lake Superior. But as it appears to be fo far to the north-weft, I should imagine that it was not a lake, but rather the Archipelago, or broken waters that form the communication between Húdfon's Bay and the northern parts of the Pacific Gcean.

There are an infinite number of fmall lakes, on the more weftern parts of the weftern head-branches of the Miflifippi as wellas between thefe and Lake Winnepeek, but none of them are large enough to fuppofe either of them to be the lake or waters meant by the Indians.

They likewile informed me, that fome of the northern branches of the Mefforie and the fouthern branches of the St. F other, excer canoes. A is the road their excur nations inh ver. In the faid, that N of root refet that thefe ed about the A little

orthiches of of the St. Pierre have a communication with each other, except for a mile; over which they carry their cances. And by what I could learn from them, this is the road they take when there war parties make their excursions upon the Pawnees and Pawnawnees, nations inhabiting fome branches of the Messorie River. In the country belonging to these people it is shid, that Mandrakes are frequently found, a species of root refembling human beings of both fexes, and that these are more perfect than such as are discovered about the Nile in Nether-Ethiopia.

A little to the north-weift of the heads of the Mefforie and St. Pierre, the Indians further told me, that there was a nation rather finaller and whiter than the neighbouring tribes, who cultivate their ground, and (as far as I could gather from their expressions) in fome measure the arts. To this account they added that fome of the nations who inhabit those parts that lie to the west of the Shining Mountains, have gold fo plenty among them that they make their most common utenfils of it. These mountains (which I shall deferibe more particularly hereafter) divide the waters that fall into the South Sea from those that runinto the Atlantic.

The people dwelling near them are fuppofed to be fome of the different tribes that were tributary to the Mexican kings, and who fled from their native country, to feek an afylum in thefe parts, about the time of the conquest of Mexico by the Spaniards, more than two centuries ago.

As fome confirmation of this fuppofition, it is remarked, that they have chofen the most interior parts for their retreat, being still preposses with a notion that the fea coasts have been infested ever since with monsters vomiting fire, and hurling about thunder and lightning; from whose bowels issued men, who with unfeen instruments, or by the power of magic;, killed the harmless Indians at an astonishing distance.

From

σq

From fuch as thefe, their forefathers (according to a tradition among them that ftill remains unimpaired) fled to the retired abodes they now inhabit. For as they found that the floating moniters, which had thus terrified them could not approach the land, and that thofe who had defeended from their fides did not care to make excursions to any confiderable diftance from them, they formed a refolution to betake themfelves to fome country, that lay from the fea-coafts, where only they could be fecure from fuch diabolical enemics. They accordingly fet out with their families; and after a long peregrination, fettled themfelves near thefe mountains, where they concluded they had found a place of perfect fecurity.

The Winebagoes, dwelling on the Fox River (whom I have already treated of) are likewife fuppoled to be fome ftrolling band from the Mexican countries. But they are able to give only an imperfect account of their original refidence. They fay they formerly came a great way from the weftward, and were driven by wars to take refuge among the Naudoweffies; but as they are entirely ignorant of the arts, or of the value of gold, it is rather to be fuppoled, that they were driven from their antient fettlements by the above mentioned emigrants, as they paffed on towards their prefent habitation.

These suppositions, however, may want confirmation; for the smaller tribes of Indians are subject to such various alterations in their places of abode, from the wars they are continually engaged in, that it is almost impossible to afcertain, after half a century, the original situation of any of them.

That range of mountains, of which the Shining Mountains are a part, begins at Mexico, and continuing northward on the back or to the eaft of Califortria, feparate the waters of thofe numerous rivers that fall either into the Gulf of Mexico, or the Gulf of California. From thence continuing their courfe ftill northward, northward, b the rivers that end in about north latitude empty themf Hudion's Bay between thef

whom I lef I received to to the nort

C

northward, between the fources of the Miffifippi and the rivers that run into the South Sea, they appear to end in about forty-feven or forty-eight degrees of north latitude; where a number of rivers arife, and empty themfelves either into the South Sea, into Hudion's Bay, or into the waters that communicate between thefe two feas.

Among these mountains, those that lie to the west of the River St. Pierre, are called the Shining Mountains, from an infinate number of chrystal stones, of an amazing fize, with which they are covered, and which, when the sun shires full upon them, sparkle sto as to be seen at a very great distance.

This extraordinary range of mountains is calculated to be more than three thousand miles in length, without any very confiderable intervals, which I believe furpafies any thing of the kind in the other quarters of the globe. Probably in future ages they may be found to contain more riches in their bowels, than those of Indostan and Malabar, or that are produced on the golden coaft of Guinea; nor will I except even the Peruvian mines. To the west of these mountains, when explored by future Columbufes or Raleighs, may be found other lakes, rivers, and countries, full fraught with all the neceffaries or luxuries of life; and where future generations may find an afylum, whether driven from their country by the ravages of lawlefs yrants, or by religious perfecutions, or reluctantly leaving it to remedy the inconveniencies arifing from a fuperabundant increase of inhabitants; whether, I fay, impelled by thefe, or allured by hopes of commercial advantages, there is little doubt but there expectations will be fully gratified in these rich and unexhaufted climes.

But to return to the Affinipoils and Killiftinoes, whom I left at the Grand Portage, and from whom I received the foregoing account of the lakes that lie to the north-west of this place.

tining tinuliforthat alf of e ftill td, The traders we expected being later this feafon than ufual, and our numbers very confiderable, for there were more than three hundred of us, the flock of provisions we had brought with us was nearly exhaufted, and we waited with impatience for their arrival.

One day, whilf we were all expreffing our wiftes for this defirable event, and looking from an eminence in hopes of feeing them come over the lake, the chief prieft belonging to the band of Killiftinoes, tabl us, that he would endeavour to obtain a conference with the Great Spirit, and know from him when the traders would arrive. I paid little attention to this declaration, fuppoing that it would be pro-active of fome juggling trick, juft fufficiently covered and deceive the ignorant Indians. But the king of that tribe telling me that this was chiefly undertaken by the prieft, to alleviate my anxiety, and at the fame time to convince me how much interest he had with the Great Spirit, I thought it necessary to reftrain my animadverfions on his defign.

The following evening was fixed upon for this fpiritual conference. When every thing had been properly prepared, the king came to me and led me to a capacious tent, the covering of which was drawn up, fo as to render what was transacting within, visible to those who stood without. We found the tent furrounded by a great number of the Indians, but we readily gained admission, and feated ourselves on skins laid on the ground for that purpose.

In the center I obferved that there was a place of an oblong fnape, which was composed of stakes stuck in the ground, with intervals between, fo as to form a kind of cheft or coffin, large enough to contain the body of a man. These were of a middle fize, and placed at fuch a distance from each other, that whatever lay within them was readily to be differend. The tent was perfectly illuminated by a great number of torches tree, which In a few amazing la just at my having ftri which he v proftrate of the fkin, an leaving onl er done, th took about elk's hide, he was con thus bound him by the ed him ove fo now dif and I took the object detect the would turi The pri a few feco continued grew loud culately; mixed jar tinoe lan

of an ick in orm a in the and what-The amber of of torches made of fplinters cut from the pine or birch tree, which the Indians held in their hands.

In a few minutes the prieff entered ; when an amazing large clk's fkin being fpread on the ground. just at my feet, he laid himfelf down upon it, after having ftript himfelf of every garment except that which he wore close about his middle. Being now proftrate on his back, he first laid hold of one fice of the fkin, and folded it over him, and then the other ; leaving only his head uncovered. This was no fooner done, than two of the young men who flood by, took about forty yards of ftrong cord, made alfo of an elk's hide, and rolled it tight round his body, fo that he was completely fwathed within the fkin. Being thus bound up like an Egyptian Mummy, one took him by the heels, and the other by the head, and lifted him over the pales into the inclosure. I could alfo now difcern him as plain as I had hitherto done, and I took care not to turn my eyes a moment from the object before me, that I might the more readily detect the artifice; for fuch I doubted not but that it would turn out to be.

The prieft had not lain in this fituation more than a few feconds, when he began to mutter. This he contigued to do for fome time, and then by degrees grew louder and louder, till at length he fpoke articulately; however, what he utterred was in fuch a mixed jargon of the Chipéway, Ottawaw, and Khilftinoe languages, that I could underftand but very little of it. Having continued in this tone for a confiderable while, he at laft exerted his voice to its utmost pitch, fometimes raving, and fometimes praying, till he had worked himfelf into fuch an agitation, that he foamed at his mouth.

After having remained near three quarters of an hour in the place, and continued his vociferation with unabated vigor, he feemed to be quite exhaufted, and remained fpeechlefs. But in an inftant he fprong G upon

upon his feet, notwithstanding at the time he was put in, it appeared impossible for him to move either his legs or arms, and shaking off his covering, as quick as if the bands with which it had been bound were burned afunder, he began to address those who stood around, in a firm and audible voice. "My brothers," faid he, "the Great Spirit has deigned to hold a Talk with his servant, at my earness request. He has not, indeed, told me when the perfons we expect; will be here; but to-morrow, foon after the fun has reached his highest point in the heavens, a canoe will arrive, and the people in that will inform us when the traders will come."

Having faid this, he for pped out of the enclosure, and after he had put on his robes, difinified the affembly. I own I was greatly aftonifhed at what I had feen; but as I obferved that every eye in the company was fixed on me with a view to different my fentiments, I carefully concealed every emotion:

The next day the fun fhone bright, and long before noon all the Indians were gathered together on the emmence that overlooked the lake. The old king came to me and affed me, whether I had fo much confidence in what the prieft had foretold, as to join his people on the hill, and wait for the completion of it; I told him I was at a lofs what opinion to form of the prediction, but that I would readily attend him. On this we walked together to the place where the others were allombled. Every eye was again fixed by turns on me and on the lake; when just as the fun had reached his zenith, agreeable to what the prieft had foretold, a canoe came around a point of land about a league diftant. The Indians no foonerbeheld it, than they fet up an universal shout, and by their looks feemed to triumph in the interest their prieft thus evidently had with the Great Spirit.

In lefs than an hour the canoe reached the flore, when I attended the king and chiefs to receive those who

fhore, those vho who were on board. As foon as the men were landed, we walked all together to the king's tent, when, according to their invariable cuftom, we began to fmoke; and this we did, notwithftanding our impatience to know the tidings they brought, without alking any questions; for the Indians are the most deliberate people in the world. However, after fome trivial conversation, the king enquired of them, whethey they had feen any thing of the traders? The men replied, that they had parted from them a few days before, and that they proposed being here the fecond day from the prefent. They accordingly arrived at that time greatly to our fatisfaction, but more particularly fo to that of the Indians, who found by this event the importance both of their prieft and of their nation, greatly augmented in the fight of a stranger.

This ftory I acknowledge appears to carry with it marks of great credulity in the relater. But no one is lefs tinctured with that weeknefs than myfeli. The circumftances of it, I own, are of a very extraordinary nature; however, as I can vouch for their being free from either exaggeration or mifreprefentation, being myfelf a coel and difpaffionate obferver of them all, I thought it neceffary to give them to the public. And this I do, without withing to miflead the judgment of my readers, or to make any fuperfitious imprefilons on their minds, but leaving them to draw from it what conclusions they pleafe.

I have already observed that the Allinipoils, with a part of whom I met here, are a revolted band of the Naudoweffies; who on account of some real or imagined grievances, for the Indians in general are very tenacious of their liberty, had separated themselves from their countrymen, and sought for freedom at the expence of their cafe. For the country they now inhabit about the borders of Lake Winnepeek, being much further north, is not near so fertile or agreeable

at

as that they have relinquished. They still retain the language and manners of their former affociates.

The Killiftinoes, now the neighbours and allies of the Affinipoils, for they alfo dwell near the fame lake, and on the waters of the River Bourbon, appear to have been originally a tribe of the Chipéways, as they theak their language, though in a different dialect. Their nation confitts of about three or four hundred warriors, and they feem to be a hardy, brave people. I have already given an account of their country when I treated of Lake Winnepeck. As they refide within the limits of Hudfon's Bay, they generally trade at the factories, which belong to that company, but, for the reafons mentioned before, they frequently come to the place where I happened to join them, in order to meet the traders from Michillimackinae.

The anxiety I had felt on account of the traders' delay, was not much alleviated by their arrival. I again found my expectations difappointed, for I was not able to procure the goods I wanted from any of them. I was therefore obliged to give over my defigns, and return to the place from whence I first began my extensive circuit. I accordingly took leave of the old king of the Killistimoes, with the chiefs of both bands, and departed. This prince was upwards of fixty years of age, tall and flightly made, but he carried himfelf very erect. He was of a cour yous, affable difposition, and treated me, as did all the chiefs, with great civility.

I observed that this people ftill continued a custom, that-appeared to have been universal before any of them became acquainted with the manners of the Europeans, that of complimenting ftrangers with the company of their wives; and this is not only practifed by the lower ranks, but by the chiefs themselves, who effect it the greatest proof of courtefy they can give a stranger.

The beginning of October, after having coafted round the north and eaft borders of Lake Superior, I arrived at Cadot's Fort, which adjoins to the Falls of St. Marie, and is fituated near the fouth-west corner of it.

Lake Superior, formerly termed the Upper Lake, from its northern fituation, is fo called on account of its being fuperior in magnitude to any of the Lakes on that valt continent. It might juftly be termed the Cafpian of America, and is fuppofed to be the largeft body of fresh water on the globe. Its circumference, according to the French charts, is about fifteen hundred miles; but I believe, that if it was coasted round, and the utmost extent of every bay taken, it would exceed fixzeen hundred.

After I first entered it from Goddard's River on the west Bay, I coasted near twelve hundred miles of the north and east flores of it, and observed that the greatest part of that extensive tract was bounded by rocks and uneven ground. The water in general appeared to lie on a bed of rocks. When it was calm, and the fun fhone bright, I could fit in my canoe, where the depth was upwards of fix fathoms, and plainly fee huge piles of ftone at the bottom, of different shapes, some of which appeared as if they were hewn. The water at this time was as pure and tranfparent as air ; and my canoe feemed as if it hung fufpended in that element. It was impoffible to look attentively through this limpid medium at the rocks below, without finding, before many minutes were elapfed, your head fwim, and your eyes no longer able to behold the dazzling fcene.

I difcovered alfo by accident another extraordinary property in the waters of this lake. Though it was in the month of July that I paffed over it, and the furface of the water, from the heat of the fuperamblent air, impregnated with no fmall degree of warmth, yet on letting down a cup to the depth of about a fa-

G 2

thom,

CARVE

CARVER'S TRAVELS.

thom, the water drawn from thence was fo excellively cold, that it had the fame effect when received into the mouth as ice.

The fituation of this lake is varioufly laid down; but from the most exact observations I could make, it lies between forty-fix and fifty degrees of north latitude, and between eighty-four and ninety-three degrees of west longitude, from the meridian of London.

There are many islands in this lake, two of which are very large; and if the land of them is proper for cultivation, there appears to be fufficient to form on each a confiderable province; efpecially on Isle Royal, which cannot be lefs than an hundred miles long, and in many places forty broad. But there is no way at prefent of afcertaining the exact length c. breadth of either. Even the French, who always kept a fmall schooner on this lake, whill they were in posses of Canada, by which they could have made this difcovery, have only acquired a flight knowledge of the external parts of these islands; at least they have never published any account of the internal parts of them, that I could get intelligence of.

Nor was I able to difcover from any of the converfations which I held with the neighbouring Indians, that they had ever made any fettlements on them, or even landed there in their hunting excurfions. From what I could gather by their difcourfe, they fuppofe them to have been, from their firft formation, the refidence of the Great Spirit; and relate many ridiculous ftories of enchantment and magical tricks that had been experienced by fuch as were obliged through ftrefs of weather to take shelter on them.

One of the Chipéway chiefs told me, that fome of their people being once driven on the island of Maurepas, which lies towards the north-east part of the lake, found on it large quantities of a heavy, thining, yellow fand, that from their defcription must have been gold dust. duft. Being ftruck w it, in the morning, w they attempted to bria amazing fize, accordin height, ftrode in the v ed them to deliver b Terrified at his gigan nearly overtaken ther fhisting treasure; on parc without further dent, no Indian that near the fame haunt counted to me many equally fabulous.

The country on the Superior is very mouther being intenfely having but little power is very flow; and confound on its flore. It cies in great abundar mon fize, and fine flat the lake in amazing and goofberries in the second se

But the fruit whi ry refembling a raft of a lighter red, and delicious than the withstanding that it it grows on a shrub fimilar to those of that was it transpla ly climate, it woul fruit.

Two very large lake, on the north the Nipegon Rive Allanipegon, whic

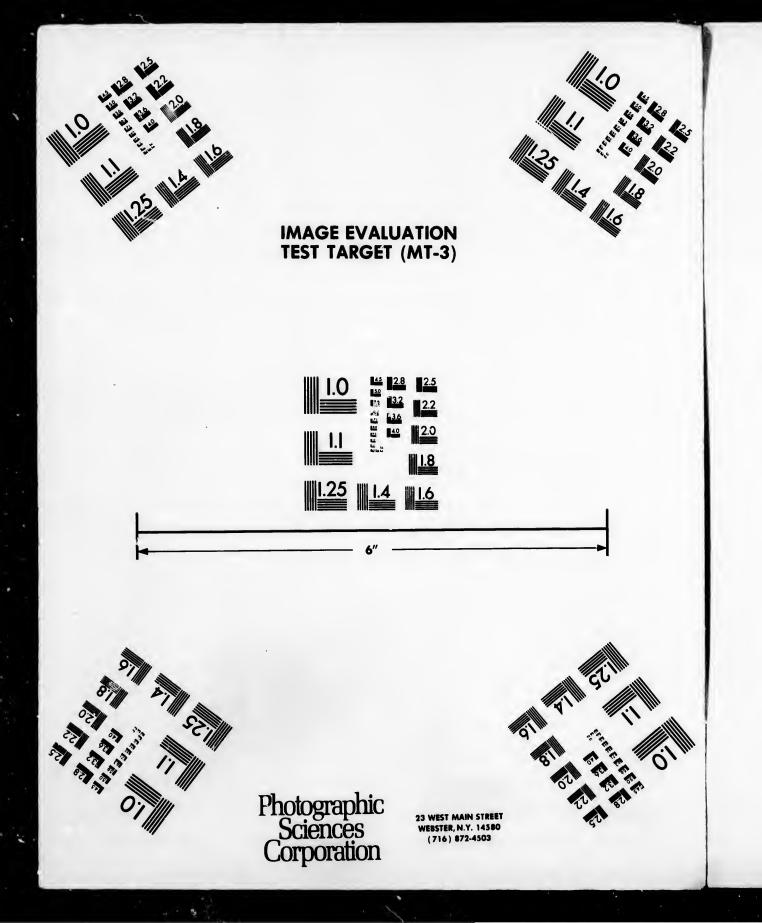

duft. Being ftruck with the beautiful appearance of it, in the morning, when they re-entered their canoe, they attempted to bring fome away; but a fpirit of an amazing fize, according to their account, fixty feet in height, ftrode in the water after them, and commanded them to deliver back what they had taken away. Terrified at his gigantic ftature, and feeing that he had nearly overtaken them, they were glad to reftore their fhiring treasure; on which they were fuffered to deparc without further moleftation. Since this incident, no Indian that has ever heard of it, will venture near the fame haunted coaft. Befides this, they recounted to me many other ftories of thefe iflands, equally fabulous.

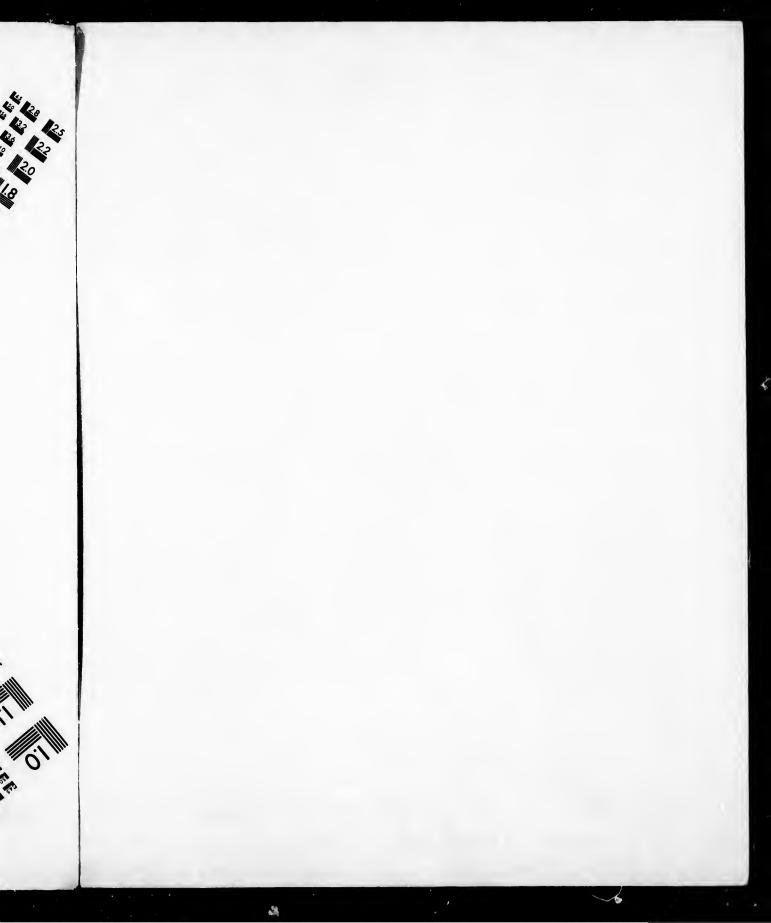

The country on the north and east parts of Lake Superior is very mountainous and barren. The weather being intenfely cold in the winter, and the funhaving but little power in the fummer, vegetation there is very flow; and confequently but little fruit is to be found on its flore. It however produces fome few fpecies in great abundance. Whortleberries of an uncommon fize, and fine flavor, grow on the mountains near the lake in amazing quantities; as do black currants and goofberries in the fame luxuriant manner.

But the fruit which exceeds all the others, is a berry refembling a rafberry in its manner of growth, but of a lighter red, and much larger; its tafte is far more delicious than the fruit I have compared it to, notwithftanding that it is fo highly effected in Europe : it grows on a fhrub of the nature of a vine, with leaves fimilar to those of the grape; and I am perfuaded that was it transplanted into a warmer and more kindly climate, it would prove a most rare and delicious fruit.

Two very large rivers empty themfelves into this lake, on the north and north-east fide; one is called the Nipegon River, or, as the French pronounce it, Allanipegon, which leads to a band of the Chipeways, inhabiting

inhabiting a lake of the fame name, and the other is termed the Michipicooton River, the fource of which is fituated towards James's Bay, from whence there is but a fhort carriage to another river, which empties itfelf into that bay, at a fort belonging to the company. It was by this paffage that a party of French from Michillimackinac, invaded the fettlements of that fociety in the reign of Queen Anne. Having taken and deftroyed their forts, they brought the cannon which they found in them to the fortrefs from whence they had iffued ; thefe were fmall brafs pieces, and remain there to the prefent time ; having, through the ufual revolutions of fortune, returned to the poffeffion of their former mafters.

Not far from the Nipegon is a fmall river, that just before it enters the lake, has a perpendicular fall from the top of a mountain, of more than fix hundred feet. Being very narrow, it appears at a diftance like a white garter fufpended in the air.

A few Indians inhabit round the eaftern borders of this lake, supposed to be the remains of the Algonkins, who formely poffeffed this country, but who have been nearly extripated by the Iroquois of Canada. Lake Superior has near forty rivers that fall into it, fome of which are of confiderable fize. On the fouth fide of it is a remarkable point or cape, of about fixty miles in length, called Point Chegomegan. It might as properly be termed a peninfula, as it is nearly feparated from the continent, on the east fide, by a narrow bay that extends from east to weft. Canoes have but a short portage across the isthmus, whereas if they coaftit round, the voyage is more than an hundred miles. About that diftance to the weft of the cape just defcribed, a confiderable river falls into the lake, the head of which is composed of a great affemblage of small freams. This river is remarkable for the abundance of virgin copper that is found on and near its banks. A metal which is met with also in feveral other places

on this coaft. I observed that many of the small islands, particularly those on the eastern shores, were covered with copper ore. They appeared like beds of copperas, of which many tons lay in a fmall fpace. A company of adventures from England began, foon after the conquest of Canada, to bring away fome of this metal, but the diftracted fituation of affairs in America has obliged them torelinquish their scheme. It might in future times be made a very advantageous trade, as the metal, which cofts nothing on the fpot, and requires but little expence to get it on board, could be conveyed in boats or canoes through the Falls of St. Marie, to the life of St. Joseph, which lies at the bottom of the Straits near the entrance into Lake Huron; from thence it might be put on board larger veffels, and in them transported across that lake to the Falls of Niagara ; there being carried by land acrois the Portage, it might be conveyed without much more obstruction to Quebec. The cheapness and ease with which any quantity of it may be procured, will make up for the length of way that is neceffary to transport it before it reaches the fea coaft, and enable the proprietors to fend it to foreign markets on as good terms as it can be exported from other countries.

Lake Superior abounds with a variety of fifh, the principal and beft are the trout and flurgeon, which may be caught at almost any feasion in the greatest abundance. The trouts in general weigh about twelve pounds, but some are caught that exceed fifty. Befidesthese, a species of white fifth is taken in great quantities here, that resemble a shad in their shape, but they are rather thicker, and less bony; they weigh about four pounds each, and are of a delicious taste. The best way of catching these fifth is with a net; but the trout might be taken at all times with the hook. There are likewise many forts of smaller fish in great plenty here, and which may be taken with ease; among these is a fort resembling a herring, that are generally made use of as a bait for the trout. Very small crabs, not larger than half a crown piece, are found both in this and Lake Michigan.

This Lake is as much affected by ftorms as the Atlantic Ocean; the waves run as high, and are equally as dangerous to fhips. It difcharges its waters from the fouth-eaft corner, through the Straits of St. Marie. At the upper end of thefe Straits ftands a fort that receives its name from them, commanded by Monf. Cadot, a French Canadian, who being proprietor of the foil, is ftill permitted to keep pofieffion of it. Near this fort is a very ftrong rapid, againft which though it is impofible for cances to afternd, yet when conducted by careful pilots, they might pafs down without, danger.

Though Lake Superior, as I have before obferved, is supplied by near forty rivers, many of which are confiderable ones; yet it does not appear that one tenth part of the waters which are conveyed into it by these rivers, are carried off at this evacuation. How fuch a superabundance of waters can be disposed of, as it must certainly be by fome means or other, without which the circumference of the lake would be continually enlarging, I know not : that it does not empty itfelf, as the Mediterranean fea is supposed to do, by an under current, which perpetually counteracts that near the furface, is certain ; for the ftream which falls over the rock is not more than five or fix feet in depth, and the whole of it paffes on through the Straits into the adjacent lake; nor is it probable that fo great a quantity can be abforbed by exhalations; confequently they must find a passage, through fome subterranean cavities, deep, unfathomable, and never to be explored.

The Falls of St. Marie, do not descend perpendicularly as those of Niagara or St. Anthony do, but consist of a rapid which continues near three quarters of a mile, over which cances well piloted might pass. At

At the be moft comm are to be for ftanding on with dippin and Octobe that feafon crowd up chough ma thoufands The Str bearing fou The current not fo rapi vent the n Ifland of S It has b into Lake of the mo place in w advantage whence n illands th and on the of land, t contribut bafon (as the ravag adjoining Lake J Straits of Superior grees of five degi triangula miles. On th able for

At the bottom of thefe Falls, Nature has formed a most commodious station for catching the fish which are to be found there in immense quantities. Perfons standing on the rocks that lie adjacent to it, may take with dipping nets, about the months of September and October, the white fish before mentioned; at that feason, together with feveral other species, they crowd up to this spot in such amazing shoals, that enough may be taken to supply, when properly cured, thousands of inhabitants throughout the year.

The Straits of St. Marie are about forty miles long, bearing fouth-eaft, but varying much in their breadth. The current between the Falls and Lake Huron is not fo rapid as might be expected, nor do they prevent the navigation of fhips of burden as far up as the Island of St. Jofeph.

It has been obferved by travellers that the entrance into Lake Superior, from these Straits, affords one of the most pleasing prospects in the world. The place in which this might be viewed to the greatest advantage, is just at the opening of the lake, from whence may be seen on the left, many beautiful little islands that extend a confiderable way before you; and on the right, an agreeable successfield of small points of land, that project a little way into the water, and contribute, with the islands, to render this delightful bason (as it might be termed) calm and secure from the ravages of those tempeltuous winds by which the adjoining lake is frequently troubled.

Lake Huron, into which you now enter from the Straits of St. Marie, is the next in magnitude to Lake Superior. It lies between fory-two and forty-fix degrees of north latitude, and feventy-nine and eightyfive degrees of welt longitude. Its fhape is nearly triangular, and its circumference about one thousand miles.

On the north fide of it lies an island that is remarkable for being near an hundred miles in length, and no

no more than eight miles broad. This island is known by the name of Manataulin, which fignifies a Place of Spirits, and is confidered by the Indians as facred as those already mentioned in Lake Superior.

About the middle of the fouth-weft fide of this lake, is Saganaum Bay. The capes that feparate this bay from the lake, are eighteen miles diftant from each other; near the middle of the intermediate fpace ftand two illands, which greatly tend to facilitate the paffage of cances and fmall veffels, by affording them fhelter, as without this fecurity it would not be prudent to venture acrofs fo wide a fea; and the coafting round the bay would make the voyage long and tedious. This bay is about tighty miles in length; and in general about eighteen or twenty miles broad.

Nearly half way between Saganaum Bay and the north-weft corner of the Lake, lies another, which is termed Thunder Bay. The Indians, who have frequented thefe parts from time immemorial, and every European traveller that has paffed through it, have unanimoufly agreed to call it by this name, on account of the continual thunder they have always obferved here. The bay is about nine miles broad, and the fame in length, and whilft I was paffing over it, which took me up near twenty-four hours, it thundered and lightened during the greateft part of the time to an exceflive degree.

There appeared to be no visible reason for this, that I could discover, nor is the country in general subject to thunder; the hills that stood around were not of a remarkable height, neither did the external parts of them seem to be covered with any subplurous substance. But as this phænomenon must originate from some natural cause; I conjecture that the shores of the bay, or the adjacent mountains, are either impregnated with an uncommon quantity of subplurous matter, or contain some metal or minered apt to attract in a great degree, the electrical particles that are hourly borne borne over tion of th which cafu to the difc The fifth in Lake Su

The fifth in Lake Huron are much the fame as those in Lake Superior. Some of the land on its banks is very fertile, and proper for cultivation, but in other parts it is fandy and barren. The promontory that feparates this lake from Lake Michigan, is composed of a vast plain, upwards of one hundred miles long, but varying in its breadth, being from ten to fifteen miles broad. This tract, as I have before observed, is divided into almost an equal portion between the Ottawaw and Chipeway Indians. At the north-east corner this lake has a communication with Lake Michigan, by the Straits of Michillimackinac already defcribed.

I had like to have omitted a very extraordinary circumftance, relative to thefe Straits. According to obfervation, made by the French, whilft they were in poffeffion of the fort, although there is no diurnal flood or ebb to be perceived in thefe-waters, yet, from an exact attention to their ftate, a periodical alteration in them has been difcovered. It was obferved that they arofe by gradual, but almost imperceptible degrees till they had reached the height of about three feet. This was accomplifhed in feven years and a half; and in the fame fpace they as gently decreafed, till they had reached their former fituation; fo that in fifteen years they had completed this inexplicable revolution.

At the time I was there, the truth of these observations could not be confirmed by the English, as they had then been only a few years in possession of the fort; but they all agreed that fome alteration in the limits of the Straits was apparent. All the clakes are fo affected by the winds, as fonctimes to have the ap-H pearance pearance of a tide, according as they happen to blow; but this is only temporary and partial.

A great number of the Chipéway Indians live feattered around this lake, particularly near Saganaum Bay. On its banks are found an amazing quantity of the fand cherries, and in the adjacent country nearly the fame fruit, as those that grow about the other lakes.

From the Falls of St. Marie I leifurely proceeded back to Michillimackinae, and arrived there the beginning of November 1767, having been fourteen months on this extensive tour, travelled near four thousand miles, and visited twelve nations of Indians lying to the west and north of this place. The winter setting in foon after my arrival, I was obliged to tarry there till June following, the navigation over Lake Huron for large vessels not being open, on account of the ice, till that time. Meeting here with sociable company, I passed these months very agreeably, and without finding the hours tedious.

One of my chief amufements was that of fifting for trouts. Though the Straits were covered with ice, we found means to make holes through it, and letting down ftrong lines of fifteen yards in length, to which were fixed three or four hooks baited with the fmall fifth before deferibed, we frequently caught two at a time of forty pounds weight each; but the common fize is from ten to twenty pounds. Thefe are most delicious food. The method of preferving them during the three months the winter generally lasts, is by hanging them up in the air; and in one night they will be frozen fo hard that they will keep as well as if they were cured with falt.

I have only pointed out in the plan of my travels the circuit I made from my leaving Michillimackinac till I arrived again at that fort. Those countries that lie nearer to the colonies have been fo often and fo minutely described, that any further account of them would would be u ders in the posed, a de many of w the fame ti will not be In June ed in the C tons burth where we troit. would be useles. I shall therefore only give my readers in the remainder of my journal, as I at first proposed, a description of the other great lakes of Canada, many of which I have navigated over, and relate at the same time a few particular incidents that I trust will not be found inapplicable or unentertaining.

In June 1768 I left Michillimackinac, and returned in the Gladwyn Schooner, a veffel of about eighty tons burthen, over Lake Huron to Lake St. Claire, where we left the fhip, and proceeded in boats to Detroit. This lake is about ninety miles in circumference, and by the way of Huron River, which runs from the fouth corner of Lake Huron, receives the waters of the three great lakes, Superior, Michigan, and Huron. Its form is rather round, and in fome places it is deep enough for the navigation of large veffels, but towards the middle of it there is a bar of fand, which prevents those that are loaded from paffing over it. Such as are in ballaft only may find water to carry them quite through; the cargoes, however, of fuch as are freighted must be taken out, and after being transported across the bar in boats, re-shipped again.

The river that runs from Lake St. Claire to Lake. Erie (or rather the Strait, for thus it might be termed from its name) is called Detroit, which is in French, the Strait. It runs nearly fouth, has a gentle current, and depth of water fufficient for fhips of confiderable burthen. The town of Detroit is fituated on the weftern banks of this river, about nine miles below Lake St. Claire.

Almost opposite on the eastern fhore, is the village of the ancient Hurons : a tribe of Indians which have been treated of by fo many writers, that adhering to the restrictions I have laid myself under of only defcribing places and people little known, or incidents that have passed unnoticed by others, I shall emit giving a description of them. A missionary of the or-

blow;

ing for th ice, id letth, to th the it two comfe are them lafts, night cep as

ravels ckinac is that ind fo them uld der of Carthulian Friars, by permillion of the bilhop of Canada, refides among them.

The banks of the River Detroit, both above and below these towns, are covered with settlements that extend more than twenty miles; the country being exceedingly fruitful, and proper for the cultivation of wheat, Indian corn, oats, and peas. It has also many spots of fine pasturage; but as the inhabitants, who are chiefly French that submitted to the English government, after the conquest of these parts by General Amherst, are more attentive to the Indian trade than to farming, it is but badly cultivated.

The town of Detroit contains upwards of one hundred houfes. The fireets are fomewhat regular, and have a range of very convenient and handfome barracks, with a fpacious parade at the fouth end. On the weft fide lies the king's garden, belonging to the governor, which is very well laid out, and kept in good order. The fortifications of the town confift of a ftrong flockade, made of round piles, fixed firmly in the ground, and lined with palifades. Thefe are defended by fome fmall baftions, on which are mounted a few indifferent cannon of an inconfiderable fize, juft fufficient for its defence againft the Indians, or an enemy not provided with artillery.

The garrifon in time of peace, confifts of two hundred men, commanded by a field officer, who acts as chief magiftrate under the governor of Canada. Mr. Turnbull, captain of the 6oth regiment, or Royal Americans, was commandant when I happened to be there. This gentleman was defervedly efteemed and respected, both by the inhabitants and traders, for the propriety of his conduct; and I am happy to have an opportunity of thus publicly making my acknewledgments to him for the civilities I received from him during my ftay.

In the year 1762, in the month of July, it rained on this town and the parts adjacent, a fulphureous water ter of the being coll ed perfect every pur Indian wa I mean no them, not rable well mena hap been recor racity; I which I w probity, done, to d Pontiac Michillim work, act rior of th the Englis to the latt mer, even thefe two predation ed an arn nations be new the v the Engli by furprit had lately How v

ter of the color and confiftence of ink: fome of which being collected into bottles, and wrote with, appeared perfectly intelligible on the paper and anfwered every purpofe of that ufeful liquid. Soon after, the Indian wars already fpoken of, broke out in thefe parts. I mean not to fay that this incident was ominous of them, notwithftanding it is well known that innumerable well attefted inftances of extraordinary phænomena happening before extraordinary events, have been recorded in almost every age by historians of veracity; I only relate the circumstance as a fact, of which I was informed by many perfons of undoubted probity, and leave my readers, as I have heitherto done, to draw their own conclusions from it.

Pontiac, under whom the party that furprifed Fort Michillimackinac, as related in the former part of this work, acted, was an enterprifing chief or head-warrior of the Miames. During the late war between the Englifh and the Fichich, he had been afteady friend to the latter, and continued his inveteracy to the former, even after peace had been concluded between thefe two nations. Unwilling to put an end to the depredations he had been fo long engaged in, he collected an army of confederate Indians, confifting of the nations before enumerated, with an intention to renew the war. However, inftead of openly attacking the Englifh fettlements, he laid a fcheme for taking by furprife those forts on the extremities which they had lately gained possible of the set of th

How well the party he detached to take Fort Michillimackinac fucceeded, the reader already knows. To get into his hands Detroit, a place of greater confequence, and much better guarded, required greater refolution, and more confummate art. He of courfe took the management of this expedition on himfelf, and drew near it with the principal body of his troops. He was however, prevented from carrying his defign into execution, by an apparently trivial and unforefeen H 2 circumftance.

circumstance. On fuch does the fate of mighty Em-

The town of Detroit, when Pontiac formed hisplan, was garrifoned by about three hundred men commanded by Major Gladwyn, a gallant officer. As at that time every appearance of war was at an end, and the Indians feemed to be on a friendly footing, Pontiac approached the Fort, without exciting any fuspicions in the breast of the governor or the inhabitants. He encamped at a little distance from it, and fent to let the commandant know that he was come to trade; and being defirous of brightening the chain of peace between the English and his nation, defired that he and his chiefs might be admitted to hold a council with him. The governor ftill unfufpicious, and not in the leaft doubting the fincerity of the Indians, granted their general's requeft, and fixed on the next morning for their reception.

The evening of that day, an Indian woman who had been employed by Major Gladwyn, to make him a pair of Indian fhoes, out of curious elk-fkin, brought them home. The Major was fo pleafed with them, that intending thefe as a prefent for a friend, he ordered her to take the remainder back, and make it into others for himfelf. He then directed his fervant to pay her for thofe fhe had done, and difmiffed her. The woman went to the door that led to the ftreet but no further; fhe there loitered about as if fhe had not finished the business on which fhe came. A fervant at length observed her, and asked her why fhe ftaid there; fhe gave him, however, no answer.

Some flort time after, the governor himfelf faw her; and enquired of his fervant what occafioned her ftay. Not being able to get a fatisfactory anfwer, he ordered the woman to be called in. When fhe came into his prefence he defired to know what was the reafon of her loitering about, and not haftening home before the gates were flut, that fhe might complete were to be

in due-time the work he had given her to do. She told him, after much hefitation, that as he had always behaved with great goodnefs towards her, fhe was unwilling to take away the remainder of the fkin, becaufe he put fo great a value upon it; and yet had not been able to prevail upon herfelf to tell him fo. He then afked her, why fhe was more reluctant to do fo now, then fhe had been when fhe made the former pair. With increafed reluctance fhe anfwered, that fhe never fhould be able to bring them back.

His curiofity being now excited, he infifted on her disclosing to him the fecret that seemed to be ftruggling in her bosom for utterance. At last, on receiving a promife that the intelligence fhe was about to give him should not turn to her prejudice, and that if it appeared to be beneficial, the thould be rewarded for it, the informed him, that at the council to be held with the Indians the following day, Pontiac and his chiefs intended to murder him; and, after having maffacred the garrifon and inhabitants, to plunder the town. That for this purpose all the chiefs who were to be admitted into the council-room, had cut their guns fort, fo that they could conceal them under their blankets; with which, at a fignal given by their general, on delivering the belt, they were all to rife up, and inftanly to fire on him and his attendants. Having effected this, they were immediately to rufh into the town, where they would find themfelves fupported by a great number of their warriors, that were to come into it during the fitting of the council, under pretence of trading, but privately armed in the fame manner. Having gained from the woman every neceffary particular relative to the plot, and alfo of the means by which fhe acquired a knowledge of them, he difmiffed her with injunctions of fecrecy, and a promife of fulfilling on his part with punctuality, the engagements he had entered into.

The

her , he ame the ome olete

The intelligence the governor had just received, gave him great uneafine's; and he immediately confulted the officer who was next to him in command, on the fubject. But that gentleman confidering the information as a ftory invented for fome artful purpofes, advifed him to pay no attention to it. This conclusion, however, had happily no weight with him. He thought it prudent to conclude it to be true, till he was convinced that it was not fo; and therefore, without revealing his fulfpicions to any other perfon, he took every needful precaution that the time would admit of. He walked round the fort during the whole night, and faw himfelf that every centinel was on duty, and every weapon of defence in proper order.

As he traverfed the ramparts, which lay neareft to the Indian camp, he heard them in high feftivity, and, little imagining that their plot was discovered, probably pleafing themfelves with the anticipation of their fuccefs. As foon as the morning dawned, he ordered all the garrifon under arms; and then imparting his apprehenfions to a few of the principal officers, gave them fuch directions as he thought neceffary.

At the fame time he fent round to all the traders, to inform them, that as it was expected a great number of Indians would enter the town that day, who might be inclined to plunder, he defired they would have their arms ready, and repel every attempt of that kind.

About ten o'clock, Pontiac and his chiefs arrived; and were conducted to the council-chamber, where the governor and his principal officers, each with piftols in their belts, awaited his arrival. As the Indians paffed on, they could not help obferving that a greater number of troops than ufual were drawn up on the parade, or marching about. No fooner were they entered, and feated on the fkins prepared for them, than Pontiac afked the governor on what occafion his young men, meaning the foldiers, were thus drawn

s arrived; ber, where h with pifing that a drawn up oner were for them, ccafion his us drawn up up, and parading the ftreets. He received for answer, that it was only intended to keep them perfect in their exercise.

The Indian chief-warrior now began his fpeech, which contained the ftrongeft professions of friendshipand good will towards the English; and when he came to the delivery of the belt of wampum, the particular mode of which, according to the woman's information, was to be the fignal for his chiefs to fire, the governor and all his chiefs drew their fwords halfway out of their feabbards; and the foldiers at the fame inftant made a clattering with their arms before the doors, which had been purpofely left open. Pontiac, though one of the boldeft of men, immediately turned pale, and trembled ; and inftead of giving the belt in the manner proposed, delivered it according to the ufual way. His chiefs who had impatiently expected the fignal, looked at each other with aftonishment, but continued quiet, waiting the refult.

The governor in his turn made a speech; but inflead of thanking the great warrior for the profeffions of friendship he had just uttered, he accused him of being a traitor. He told him that the English, who knew every thing, were convinced of his treachery and villainous defigns; and as a proof that they were well acquainted with his most fecret thoughts and intentions, he stepped towards the Indian chief that fet neares to him, and drawing aside his blanket, discovered the shortened firelock. This entirely disconverted the Indians, and frustrated their defign.

He then continued to tell them, that as he had given his word at the time they defired an audience, that their perfons fhould be fafe, he would hold his promife inviolable, though they fo little deferved it. However, he advifed them to make the beft of their way out of the fort, left his young men on being acquainted with their treacherous purpofes, fhould cut every one of them to pieces.

Pontiac

Pontiac endeavoured to contradict the accufation, and to make excufes for his furfpicious conduct, but the governor, fatisfied of the falfity of his proteftations, would not liften to him. The Indians immediately left the fort, but inftead of being fenfible of the governor's generous behaviour, they threw off the mafk, and the next day made a regular attack upon it.

Major Gladwyn has not escaped cenfure for this miltaken lenity; for probably had he kept a few of the principal chiefs prifoners, whilft he had them in his power, he might have been able to have brought the whole confederacy to terms, and have prevented a war. But he atomed for this overfight, by the gallant defence he made for more than a year, amidit a variety of difcouragements.

During that period fome very fmart fkirmithes happened between the befiegers and the garrifon, of which the following was the principal and most bloody: Captain Delzel, a brave officer, prevailed on the governor to give him the command of about two hundred men, and to permit him to attack the enemy's camp. This being complied with, he fallied from the town before day-break; but Pontiae, receiving from fome of his fwist-footed warriors, who were constantly employed in watching the motion of the garrifon, timely intelligence of their defign, he collected together the choices of this troops, and met the detachment at fome distance from his camp, near a place fince called Bloody-Bridge.

As the Indians were vaftly fuperior in numbers to Captain Delzel's party, he was foon over-powered and driven back. Being now nearly furrounded, he made a vigorous effort to regain the bridge he had just croffcd, by which alone he could find a retreat; but in doing this he lost his life, and many of his men fell with him. However, Major Rogers, the fecond in command, affisted by Lieutenant Breham, found means to draw of and condu Thus co the Major which, he lieved, as place, and The Gl took my and whic on Lake I der, who ficient bal with a re before th tion, it w from Yun their cano At len fiderable vages beg ter, the l manded, ftores the feeing no fire to th order wa chief of 1 guage, g comman dians hu greateft ble; whi tage of t further (This : rits; and not be in fation, , but oteftaimmeible of rew off

bers to ed and e made t croffbut in en fell ond in means to draw off the fhattered remains of their little army, and conducted them into the fort.

Thus confiderably reduced, it was with difficulty the Major could defend the town; notwithftanding which, he held out against the Indians till he was relieved, as after this they made but few attacks on the place, and only continued to blockade it.

The Gladwyn Schooner (that in which I afterwards took my paffage from Michillimackinac to Detroit, and which I fince learn was loft with all her crew, on Lake Erie, through the obftinacy of the commander, who could not be prevailed upon to take in fufficient ballaft) arrived about this time, near the town, with a reinforcement, and neceffary fupplies. But before this veffel could reach the place of its deftination, it was most vigorously attacked by a detachment from Pontiac's army. The Indians furrounded it in their canoes, and made great havoc among the crew. At length the Captain of the schooner, with a confiderable number of his men being killed, and the favages beginning to climb up the fides from every quart ter, the lieutenant (Mr. Jacobs, who afterwards commanded, and was loft in it) being determined that the ftores should not fall into the enemy's hands, and feeing no other alternative, ordered the gunner to fet fire to the powder-room, and blow the fhip up. This order was on the point of being executed, when a chief of the Hurons, who understood the English language, gave out to his friends the intention of the commander. On receiving this intelligence, the Indians hurried down the fides of the fhip with the greatest precipitation, and got as far from it as possible; whilft the commander immediately took advantage of their confernation, and arrived without any further obstruction at the town.

This feafonable fupply gave the garrifon fresh spirits; and Pontiac being now convinced that it would not be in his power to reduce the place, proposed an accommodation; accommodation; the governor withing as much to get rid of fuch troublefome enemies, who obfructed the intercourfe of the traders with the neighbouring nations, liftened to his propofals, and having procured advantageous terms, agreed to a peace. The Indians foon after feparated, and returned to their different provinces; nor have they fince thought proper to difturb, at leaft in any great degree, the tranquilility of thefe parts.

Pontiac henceforward feemed to have laid afide the animofity he had hitherto borne towards the English. and apparently became their zealous friend. 'To reward this new attachment, and to infure a continuance of it, government allowed him a handfome pen-But his reftlefs and intriguing spirit would not fion. fuffer him to be grateful for this allowance, and his conduct at length grew sufpicious; to that going, in the yeat 1767, to hold a council in the country of the Illinois, a faithful Indian, who was either commiffioned by one of the English governors, or instigated by the love he bore the English nation, attended him as a fpy; and being convinced from the speech Pontiac made in the council, that he ftill retained his former prejudices against those for whom he now professed a friendslip, he plunged his knife into his heart, as foon as he had done fpeaking, and laid him dead on the fpot. But to return from this digreffion. Lake Erie receives the waters by which it is fuppled from the three great lakes, through the Straits of Detroit, that lie at its north-west corner. This lake is fituated between forty-one and forty-three degrees of north latitude, and between feventy-eight and eighty-three degrees of weft longitude. It is near three hundred miles long from east to weft, and about forty in its broadeft part : and a remarkable long narrow point lies on its north fide, that projects for feveral miles into the lake towards the fouth-caft. here

There are feveral islands near the west end of it so infested with rattle-fnakes, that it is very dangerous to land on them. It is impossible that any place can produce a greater number of all kinds of these reptiles than this does, particularly of the water-fnake. The lake is covered near the banks of the islands with the large pond-lilly; the leaves which lie on the furface of the water so thick, as to cover it entirely for many acres together; and on each of these lay, when I passed over it, wreathes of water-fnakes basking in the fun, which amounted to myriads.

The most remarkable of the different species that infest this lake, is the hissing-fnake, which is of the fmall speckled kind, and is about eight inches long. When any thing approaches, it flattens itself in a moment, and its spots, which are of various dyes, become visibly brighter through rage; at the same time it blows from its mouth, with great force, a subtile wind, that is reported to be of a nauseous smell, and if drawn in with the breath of the unwary traveller, will infallibly bring on a decline, that in a few months must prove mortal, there being no remedy yet discovered which can counteract its baneful influence.

The stones and pebbles on the shores of this lake are most of them tinged, in a greater or lefs degree, with spots that refemble brass in their colour, but which are of a more sulphureous nature. Small pieces, about the size of hazle-nuts, of the same kinds of ore, are found on the sands that lie on its banks, and under the water.

The navigation of this lake is effected more dangerous than any of the others, on account of many high lands that lie on the borders of it and project into the water, in a perpendicular direction for many miles together; fo that whenever fudden forms arife, canoes and boats are frequently loft, as there is no place for them to find a fhelter. This lake discharges its waters at the north-east end, into the River Niagara, which runs north and fouth, and is about thirty fix miles in length; from whence it falls into Lake Ontario. At the entrance of this river, on its eastern fhore, lies Fort Niagara; and, about eighteen miles further up, those remarkable Falls which are esteemed one of the most extraordinary productions of nature at present known.

As thefe have been vifited by fo many travellers and fo frequently defcribed, I thall omit giving a particular defcription of them, and only obferve, that the waters by which they are fupplied, after taking their rife near two thousand miles to the north-weft, and paffing through the Lakes Superior, Michigan, Huron, and Erie, during which they have been receiving conftant accumulations, at length ruth down a flupendous precipice of one hundred and forty feet perpendicular; and in a ftrong rapid, that extends to the diftance of eight or nine miles below, fall nearly as much more : this river foon after empties itfelf into Lake Ontario.

The noife of these Falls may be heard an amazing way. I could plainly diftinguish them in a calm morning more than twenty miles. Others have faid that at particular times, and when the wind fits fair, the found of them reaches fifteen leagues.

The land about the Falls is exceedingly hilly and uneven, but the greatest part of that on the Niagara River is very good, especially for grass and pasturage.

Fort Niagara stands nearly at the entrance of the west end of Lake Ontario, and on the east part of the Straits of Niagara. It was taken from the French in the year 1759, by the forces under the command of Sir William Johnson, and at present is defended by a confiderable garrison.

Lake Ontario is the next and least of the five great Lakes of Canada. Its fituation is between forty-three and forty-five degrees of latitude, and between seventy-fix

ing from

ty-fix and feventy-nine degrees of west longitude. The form of it is nearly oval, its greatest length being from north-east to south-west, and in circumference, about fix hundred miles. Near the south-east part it receives the waters of the Ofwego River, and on the north-east discharges itself into the River Cataraqui. Not far from the place where it iffues, Fort Frontenac formerly stood, which was taken from the French during the last war, in the year 1758, by a standard received.

At the entrance of Ofwego River flands a fort of the fame name, garrifoned only at prefent by an inconfiderable party. This fort was taken in the year 1756, by the French, when a great part of the garrifon, which confifted of the late Shirley's and Pepperel's regiments, were maffacred in cold blood by the favages.

In Lake Ontario are taken many forts of fifh, among which is the Ofwego Bafs, of an excellent faryour, and weighing about three or four pounds. There is also a fort called the Cat-head or Pout, which are in general very large, fome of them weighing eight or ten pounds; and they are effected a rare difh when properly dreffed.

On the north-weft part of this Lake, and to the fouth-eaft of Lake Huron, is a tribe of Indians called Miffifauges, whofe town is denominated Toronto, from the lake on which it lies; but they are not very numerons. The country about Lake Optario, effecially the more north and eaftern parts, is composed of good land, and in time may make very flourishing fettlements.

The Oniada Lake, fituated near the head of the River Ofwego, receives the waters of Wood-Creek, which takes its rife not far from the Mohawk's River. Thefe two lie fo adjacent to each other, that a junction is effected by fluices at Fort Stanwix, about twelve miles from the mouth of the former. This lake

al in the the

hilly and Niagara afturage. e of the rt of the French ommand ended by

ive great ty-three n feventy-fix lake is about thirty miles long from east to west, and near fifteen broad. The country around it belongs to the Oniada Indians.

Lake Champlain, the next in fize to Lake Ontario, and which lies nearly east from it, is about eighty miles in length, north and fouth, and in its broadeft part fourteen. It is well ftored with fifth, and the lands that lie on all the borders of it, and about its rivers, very good.

Lake George formerly called by the French, Lake St. Sacrament, lies to the fouth-weft of the last mentioned lake, and is about thirty-five miles long from north-east to fouth-west, but of no great breadth. The country around it is very mountainous, but in the vallies the land is tolerably good.

When these two lakes were first discovered, they were known by no other name than that of the Iroquois Lakes; and I believe in the first plans taken of those parts, were so denominated. The Indians also that were then called the Iroquois, are fince known by the name of the Five Mohawk nations, and the Mohawks of Canada. In the late war, the former, which confist of the Onondagoes, the Oniadas, the Senecas, the Tuscarories, and Iroondocks, fought on the fide of the English : the latter which are called the Cohnawaghans, and St. Francis Indians, joined the French.

A vaft tract of land that lies between the two laft mentioned lakes and Lake Ontario, was granted in the year 1629, by the Plymouth Company, under a patent they had received from King James I. to Sir Ferdinando Gorges, and to Captain John Mason, the head of that family, afterwards diftinguished from others of the fame name, by the Masons of Connecticut. The countries specified in this grant are faid to begin ten miles from the heads of the rivers that run from the east and south into Lake George and Hele Champlain; and continuing from these in a di-

rect line westward, extend to the middle of Lake Ontario; from thence, being bounded by the Cataraqui, or river of the Iroquois, they take their course to Montreal, as far as Fort Sorrell, which lies at the junction of this river with the Richlieu; and from that point are enclosed by the last mentioned river till it returns back to the two lakes.

This immenfe space was granted by the name of the Province of Laconia, to the aforefaid gentlemen, on specified conditions and under certain penalties; but none of these amounted in case of omission in the fulfilment of any part of them, to forfeiture, a fine only could be exacted.

On account of the continual wars to which these parts have been fubject, from their fituation between the fettlements of the English, the French, and the Indians, this grant has been fuffered to lie dormant by the real proprietors. Notwithstanding which, feveral towns have been fettled fince the late war, on the borders of Lake Champlain, and grants made to different people by the governor of New York, of part of these territories, which are now become annexed to that province.

There are a great number of lakes on the north of Canada, between Labrador, Lake Superior, and Hudfon's Bay, but thefe are comparatively fmall. As they lie out of the track that I purfued, I fhall only give a fummary account of them. The most westerly of thefe are the Lakes Nipifing and Tamifcaming. The first lies at the head of the French River, and runs into Lake Huron; the other on the Ottawaw River, which empties itself into the Cataraqui at Montreal. Thefe lakes are each about one hundred miles in circumference.

'The next is Lake Miftaffin, on the head of Rupert's River, that falls into James's Bay. This Lake is fo irregular from the large points of land by which it is interfected on every fide, that it is difficult either to I 2 defcribe

t, and elongs

wo laft ted in inder a to Sir on, the l from inectire faid rs that re and 1 a direct describe its shape, or to ascertain its size. It however appears on the whole to be more than two hundred miles in circumference.

Lake St. John, which is about eighty miles round, and of a circular form, lies on the Saguenay River, directly north of Quebec, and falls into the St. Lawrence, fomewhat north-east of that city. Lake Manikouagone lies near the head of the Black River, which empties itfelf into the St. Lawrence to the eastward of the last mentioned river, near the coast of Labrador, and is about fixty miles in circumference, Lake Pertibi, Lake Wincktagan, Lake Etchelaugon, and Lake Papenouagane, with a number of other small lakes, lie near the heads of the Bustard River to the north of the St. Lawrence.

Many others, which it is unneceffary to particularize here, are also found between the Lakes Huron and Ontario.

The whole of those I have enumerated, amounting to upwards of twenty, are within the limits of Canada; and from this account it might be deduced, that the northern parts of North-America, through these numerous inland feas, contain a greater quantity of water than any other quarter of the globe.

In October 1768 I arrived at Bofton, having been abfent from it on this expedition two years and five months, and during that time travelled near feven thoufand miles. From thence, as foon as I had properly digefted my Journal and Charts, I fet out for England to communicate the difcoveries I had made, and to render them beneficial to the kingdom. But the profecution of my plans for reaping thefe advantages have hitherto been obftructed by the unhappy divisions that have been fomented between Great-Britain and the Colonies by their mutual enemies. Should peace once more be reftored, I doubt not but that the countries I have defcribed will prove a more abundant fource of riches to this nation, than either

its Eaft or West-Indian settlements; and I shall not only pride myself, but sincerely rejoice in being the means of pointing out to it fo valuable an acquisition. I cannot conclude the account of my extensive travels, without expressing my gratitude to that beneficent being who invisibly protected me through those perils which unavoidably attend so long a tour among fierce and untutored favages.

At the fame time let me not be accufed of vanity or prefumption, if I declare that the motives alledged in the introduction of this work, were not the only ones that induced me to engage in this arduous undertaking. My views were not folely confined to the advantages that might accrue either to myfelf, or the community to which I belonged; but nobler purpofes contributed principally to urge me on.

The confined flate, both with regard to civil and religious improvements, in which fo many of my fellow-creatures remained, aroufed within my bofom an irrefiftible inclination to explore the almost unknown regions which they inhabited; and as a preparatory step towards the introduction of more poliss and more humane fentiments, to gain a knowledge of their language, customs, and principles.

I confefs that the little benefit too many of the Indian nations have hitherto received from their intercourfe with thofe who denominate themfelves Chriftians, did not tend to encourage my charitable purpofes; yet as many, though not the generality, might receive fome benefit from the introduction among them of the polity and religion of the Europeans, without retaining only the errors or vices that from the depravity and perversion of their professors are unhappily attendant on these, I determined to perfevere.

Nor could I flatter myfelf that I fhould be able to accomplifh alone this great defign; however, I was willing

RE

It is true, that the Indiany are not without fome fenfe of religion, and fuch as proves that they worthip the Great Creator with a degree of purity unknown to nations who have greater opportunities of improvement ; but their religious principles are fay from being fo faultlefs as definibed by a learned writer, or unmixed with opinions and ceremonies that greatly leffen "heir excellency in this point. So that could the doctrines of genuine and vital Christianity be introduced among them, pure and untainted, as it flowed from the lips of its Divine Instructor, it would certainly tend to clear away that superstitious or idolatrous drofs by which the rationality of their religious tenets are obscured. Its mild and beneficent precepts would likewife conduce to foften their implacable difpolitions; and to refine their favage manners ; in event most defirable ; and happy shall I efteem myfelf, if this publication shall prove the means of pointing out the path by which falutary in-Aructions may be conveyed to them, and the converfion, though but of a few, be the confequence.

ORIGIN, MANNERS, CUSTOMS, RELIGION AND LANGUAGE

OF THE

INDIAN

CHAPTER I.

OF THEIR ORIGIN.

HE means by which America received its first inhabitants, have, fince the time of its difcovery by the Europeans, been the subject of numberless disquisitions. Was I to endeavour to collect the different opinions and reasonings of the various writers that have taken up the pen in defence of their conjectures, the enumeration would much exceed the bounds I have prefcribed to myself, and oblige me to be lefs explicit on points of greater moment.

From the obscurity in which this debate is enveloped, through the total difuse of letters among every nation of Indians on this extensive continent, and the uncertainty of oral tradition at the distance of so many ages, I fear, that even after the most minute investigation,

gation, we fhall not be able to fettle it with any great degree of certainty. And this apprehension will receive additional force, when it is confidered that the diversity of language, which is apparently distinct between most of the Indians, tends to ascertain that this population was not effected from one particular country, but from several neighbouring ones, and completed at different periods.

Moft of the hiftorians, or travellers that have treated on the American Aborigines, difagree in their fentiments relative to them. Many of the ancients are fuppofed to have known that this quarter of the globe not only exifted, but alfo that it was inhabited. Plato in his Timæus has afferted, that beyond the island which he calls Atalantis, and which, according to his defcription, was fituated in the Western Ocean, there were a great number of other islands, and behind those a vast continent.

Oviedo, a celebrated Spanish author of a much later date, has made no fcruple to affirm that the Antilles are the famous Hesperides so often mentioned by the poets; which are at length restored to the kings of Spain, the descendants of king Hesperus, who lived upwards of three thousand years ago, and from whom these islands received their name.

Two other Spaniards, the one, Father Gregorio Garcia, a Dominican, the other, Father Joseph De Acosta, a Jesuit, have written on the origin of the Americans.

The former, who had been employed in the miffions of Mexico and Peru, endeavoured to prove from the traditions of the Mexicans, Peruvians, and others which he received on the fpot, and from the variety of characters, cuftoms, languages, and religion obfervable in the different countries of the New World, that different nations had contributed to the peopling of it. The la of the m might ha dits the o be by fea tion of th either by to each o ward of the affertions pled by the John the opin others w

The

The latter, Father De Acosta, in his examination of the means by which the first Indians of America might have found a passage to that continent, diferedits the conclusions of those who have supposed it to be by sea, because no ancient author has made mention of the compass: and concludes, that it muss be either by the north of Asia and Europe, which adjoin to each other, or by those regions that lie to the fouthward of the Straits of Magellan. He also rejects the affertions of such as have advanced that it was peopled by the Hebrews.

John de Laët, a Flemish writer, has controverted the opinions of these Spanish fathers, and of many others who have written on the same subject. The hypothesis he endeavours to establish, is, that America was certainly peopled by the Scythians or Tartars : and that the transfmigration of these people happened soon after the dispersion of Noah's grandsons. He undertakes to show, that the most northern Americans have a greater resemblance, not only in the features of their countenances, but also in their complexion and manner of living, to the Scythians, Tartars, and Samœides, than to any other nations.

In anfwer to Grotius, who had afferted that fome of the Norwegians paffed into America by way of Greenland, and over a vaft continent, he fays, that it is well known that Greenland was not difcovered till the year 964; and both Gomera and Herrera inform us that the Chichimeques were fettled on the Lake of Mexico in 721. He adds, that thefe favages, according to the uniform tradition of the Mexicans who difpoffeffed them, came from the country fince called New-Moxico, and from the neighbourhood of California; confequently North-America muft have been inhabited many ages before it could receive any inhabitants from Norway, by way of Greenland. It is no lefs certain, he obferves, that the real Mex-

icans founded their empire in 302, after having fub-

that the inct behat this inticular es, and

treated ir fentients are he globe d. Plahe ifland ng to his n, there behind

The

dued the Chichimeques, the Otomias, and other barbarous nations, who had taken poffeffion of the country round the Lake of Mexice, and each of whom fpoke a language peculiar to themfelves. The real Mexicans are likewife fuppofed to come from fome of the countries that lie near California, and that they performed their journey for the most part by land; of courfe they could not come from Norway.

De Laet further adds, that though fome of the inhabitants of North-America may have entered it from the north-weft, yet, as it is related by Pliny, and fome other writers, that on many of the iflands near the western coast of Africa, particularly on the Canaries, fome ancient edifices were feen, it is highly probable from their being now deferted, that the inhabitants may have paffed over to America; the passage being neither long nor difficult. This migration, according to the calculation of those authors, must have happened more than two thousand years ago, at a time when the Spaniards were much troubled by the Carthaginians; from whom having obtained a knowledge of navigation, and the construction of thips, they might have retired to the Antiles, by the way of the western illes, which were exactly half way on their voyage.

He thinks also that Great-Britain, Ireland, and the Orcades were extremely proper to admit of a fimilar conjecture. As a proof, he inferts the following paffage from the history of Wales, written by Dr. David Powel, in the year 1170.

This historian fays, that Madoc, one of the fons of Prince Owen Gwynnith, being difgusted at the civil wars which broke out between his brothers, after the death of their father, fitted out several veffels, and having provided them with every thing necessary for a long voyage, went in quest of new lands to the westward of Ireland; there he discovered very fertile countries, but destitute of inhabitants; when

new lands

ered very

s; when anding The Flemish author then returns to the Scythians, between whom and the Americans he draws a parallel. He observes that several nations of them to the north of the Caspian Sea, led a wandering life; which, as well as many other of their customs, and way of living, agrees in many circumstances with the Indians of America. And though the refemblances are not absolutely perfect yet the emigrants, even before they left their own country, differed from each other, and went not by the same mane. Their change of abode effected what remained.

He further fays, that a fimilar likenefs exifts between feveral American nations, and the Samœides who are fettled according to the Ruffian accounts, on the great River Oby. And it is more natural, continues he, to fuppofe that Colonies of thefe nations paffed over to America by croffing the icy fea on their fledges, than for the Norwegians to travel all the way Grotius has marked out for them.

This writer makes many other remarks that are equally fentible, and which appear to be just; but he intermixes with these some that are not so wellfounded.

Emanuel de Moraez, a Fortugeufe, in his hiftory of Brazil, afferts that America has been wholly peopled by the Carthaginians and Ifraelites. He brings as a proof of this affertion the difcoveries the former are known to have made at a great diftance beyond the coaft of Africa. The progrefs of which being put a ftop to by the fenate of Carthage, those who happened to be then in the newly difcovered countries, being cut off from all communication with their countrymen, and defititute of many neceffaries of life, fell into a ftate of barbarism. this author thinks that nothing but circumcifion is wanted in order to constitute a perfect refemblance between them and the Brazilians.

George De Hornn, a learned Dutchman, has like wife written on this fubjects. He fets out with de claring, that he does not believe it poffible America could have been peopled before the flood, confidering the fhort fpace of time which elapfed between the creation of the world and that memorable event. In the next place he lays it down and principle, that after the deluge, men a second terreftrial animals penetrated into that count words by fea and by land; fome through accident, and fome from a formed de fign. That birds got thither by flight; which they

were enabled to do by refting on the rocks and if, ands that are fcattered about the Ocean. He further observes, that wild beasts may have found

a free paffage by land; and that if we do not met with horfes or cattle (to which he might have added clephants, camels, rhinoceros, and beafts of many other kinds) it is becaufe those nations that paffed thither, were either not acquainted with their use, or had no convenience to support them.

Having totally excluded many nations that other have admitted as the probable first fettlers of America, for which he gives fubitantial reasons, he suppofes that it began to be peopled by the north; and maintains the primitive colonies spread themselves by the means of the issues of Panama through the whole extent of the continent.

He believes that the first founders of the India Colonies were Scythians. That the Phœnicians and Carthaginians afterwards got footing in America a crofs the Atlantic Ocean, and the Chinefe by wayd the Pacific. And that other nations might from time to time have landed there by one or other of the ways, or might possibly have been thrown on the comby tempests: fince, through the whole extent of the continent

111

mcision is semblance

, has liket with de le America confidering tween' the event, In ble, that af. nimals penby land formed de which they cks and if. y have found lo not meet have added afts of many s that paffel their ufe, or

s that othen rs of Ameri s, he fuppo north; an hemfelves by through the

of the India conicians and America a fe by way of ht from time her of thefe ion the coalt xtent of that continent continent, both in its northern and fouthern parts, we meet with under bted marks of a mixture of the northern nations with those who have come from other places. And faftly, that fome Jews and Chriftians might have been carried there by fuch like events, but that this world have happened at a time when the whole of the new world was already peopled.

After all, he acknowledges that great difficulties attend the determination of the question. These, he fays, are occasioned in the first place by the imperthe extremities of the fect knowledge int h globe, towards the normal fouth pole; and in the next face to the haven which the Spaniards, the first dilcoverers of the new world, made among its most ancient monuments; as witness the great double road betwist Quito and Cuzco, an undertaking fo flupendous, that even the most magnificent of those executed by the Romans cannot be compared to it. He suppose also another migration of the Phœnicians, than rule already mentioned, to have taken place; and this was during a three years voyage made by the Tyrian fleet in the fervice of King Solomon. He efferts on the authority of Jefenhus, that the port st, which this embarkation was made, lay in the Mediterranean. The fleet, he adds, went in queft of elephants teeth and peacocks to the western Coast of Africa, which is Tartish; then to Ophir for gold, which is Haite, or the island of Hispaniola; in the latter opinion he is supported by Columbus, who, when he difcovered that ifland, thought he could trace the furnaces in which the gold was refined.

To these migrations which preceded the Christian ara, he adds many others of a later date from different nations, but these I have not time to enumerate. For the same reason I am obliged to pass over numberless writers on this is bject; and shall content myfelf with only giving the sentiments of two or three more, The

The first of these is Pierre De Charlevoir, a Frenchman, who, in his journal of a 10 rage to North-America, made so lately as the year 1/20, has recapitulated the opinions of a variety of authors on this head, to which he has subjoined his own conjectures. But the latter cannot without the difficulty be extracted, as they are so interwoven with the passages he has quoted that it requires much attention to difcriminate them.

He feems to allow that America might have received its first inhabitants, from Tarkey and Hyrcania. This he confirms, by moreoving that the lions and tigers which are found in the former, must have come from those countries, and whose passage firves for a proof that the two hemispheres join to the northward of Afia. He then draws a corroboration of this argument, from c story he fays he has often heard related by Father Grollon, a French Jesuit, as an undoubted matter of fast.

This Father, after having laboured time time in the millions of New France, palled over to those of China. One day as he was travelling in Tartary, he met a Huron woman whom he had formerly known in Canada. He asked her by what adventure she had been carryed into a country so distant from her own. She made answer, that having been taken in war, she had been conducted from nation to nation, till she had reached the place at which she then was.

Monfieur Charlevoix fays further, that he had been affured another Jefuit, paffing through Nantz, in his return from China, had related much turk another affair of a Spanifh woman from Florics. She alfo had been taken by certain Indians, and given to those of a more diffant country; and by these again to another nation, till having thus been fuccessively passed from country to country, and travelled through regions extremely cold, the at last found herself in Tartary. Here the had married a Tartar, who had attended

tended the conquerors in China, where she was then fettled.

728.

He acknowledges as an allay to the probability of thefe ftories, that thofe who had failed fartheft to the eaftward of Afia, by purfuing the Coaft of Jeffo, or Kamfchatka, have pretended that they had perceived the extremity of this continent; and from thence have concluded that there could not poffibly be any communication by land. But he adds that mancis Guella, a Spaniard, is faid to have afferted, that this feparation is no more than a ftrait, about one hundred miles over, and that fome late voyages of the Japanefe give grounds to think that this ftrait is only a bay, aboys which there is a paflage over land.

He goes on to observe, that though there are few wild beafts to be met with in North-America, except a kind of tigers without spots, which are found in the country of the Iroquoise, yet towards the tropics there are lions and real tigers, which, notwithstanding, might have come from Hyrcania and Tartary; for as by advanting gradually southward they met with climates more agreeable to their natures, they have in time abandoned the northern countries.

He quotes both Solinus and Pliny to prove that the Scythian Anthropophagi once depopulated a great extent of country, as far as the promontory Tabin; and also an author of later date, Mark Pol, a Venetian, who, he fays, tells us, that to the north-east of China and Tartary there are vast uninhabited countries, which might be fufficient to confirm any conjectures concerning the retreat of a great number of Scythians into America.

To this he adds, that we find in the antients the names of fome of thefe nations. Pliny fpeaks of the Tabians; Solinus mentions the Apuleans, who had for neighbours the Maffagetes, whom Pliny fince affures us to have entirely difappeard. Ammianus Marcellinus expressly tells us, that the fear of the An-K 2 thropophagi

114

thropophagi obliged feveral of the inhabitants of those countries to take refuge elsewhere. From all these authorities Monf. Charlevoix conclutes, that there is at least room to conjecture that more than one nation in America had a Scythlan or Tartarian original.

He finishes his remarks on the authors he has quoted, by the following observations. It appears to me that this compoverfy may be reduced to the two following articles; first, how the new world might have been peopled; and secondly, by whom, and by what means it has been peopled.

Nothing, he afferts, may be more eafily anfwered than the firft. America much have been peopled as the three other parts of the world have been. Many difficulties have been formed on this fubject, which have been deemed infolvable, but which are far from being fo. The inhabitunts of both Hemifpheres are certainly the defeendants of the fame father; the common parent of mankind received an express command from Heaven to people the whole world, and accordingly it has been peopled.

To bring this about it was necessary to overcome all difficulties that lay in the way, and they have been got over. Were these difficulties greater with respect to peopling the extremities of Asia, Africa, and Europe, or the transporting men into the islands which lie at a confiderable distance from those continents, than to pass over into America? certainly not.

Navigation, which has arrived at fo great perfection within thefe three or four centuries, might polfibly have been more perfect in those and ages than at this day. Who can believe that Noah and his immediate defcendants knew lefs of this art than we do? That the builder and pilot of the largeft fhip that ever was, a fhip that was formed to traverse an unbounded ocean, and had fo many fhoals and quickfands to guard against, fhould be ignorant of, or should not have communicated to those of his defcen-

dants who furvived him, and by whofe means he was to execute the order of the Great Creator: I fay, who can believe he fhould not have communicated to them the art of failing upon an ocean, which was not only more calm and pacific, but at the fame time confined within its incient limits?

Admitting this, how eafy is it to pale, exclusive of the paffage already defcribed, by land from the coaft of Africa to Brazil, from the Canaries to the Western Islands, and from them to the Antiles? From the British Isles, or the coast of France, to Newfoundland, the passage is neither loss por difficult; I might fay as much of that from Cana to Japan; from Japan, or the Philippines, to the Isles Mariannes; and from thence to Mexico.

There are islands at a confiderable diffance from the continent of Afia, where we have not been furprifed to find inhabitants, why then fhould we wonder to meet with people in America ! Nor can it be imagined that the grandfons of Noah, when they were obliged to foparate, and fpread themfelves in conformity to the defigns of God, over the whole earth, fhould find it abfolutely impossible to people almost one half of it.

I have been more copious in my extracts from this author than I intended, as his reafons appears to be folid, and many of his obfervations juft. From this encomium, however, I must exclude the flories he has introduced of the Huron and Floridan women, which I think I might venture to prenounce fabulous.

I fhall only add, to give my readers a more comprehenfive new of Monfieur Charlevoix's differtation, the method he proposes to come at the truth of what we are in fearch of.

The only means by which this can be done, he fays, is by comparing the language of the Americans with the different nations, from whence we might suppose they have peregnated. If we compare the former

thofe here is nation al. s quotto me vo folmight and by

wered pled as Mawhich r from res are ; the exprefs world,

rcome have r with Africa, iflands contily not. perfecht poles than nd his an we t fhip rse an quickof, or escenints

former with those words that are confidered as primitives, it might possibly set us upon some happy difcovery. And this way of ascending to the original of nations, which is by far the least equivocal, is not so difficult as might be imagined. We have had, and still have, travellers and missionaries who have attained the languages that are spoken in all the provinces of the new world; it would only be necessary to make a collection of their grammers and vocabularies, and to collate them with the dead and living languages of the old world, that pass for originals, and the similarity might easily be traced. Even the different dialects, in spite of the alterations they have undergone, still retain enough of the mother tongue to furnish confiderable lights.

Any enquiry into the manners, cuftoms, religion, or traditions of the Americans, in order to difcover by that means their origin, he thinks would prove fallacious. A difquifition of that kind, he obferves, is only capable of producing a falfe light, more likely to dazzle, and to make us wander from the right path, than to lead us with certainty to the point propofed.

Ancient traditions are effaced from the minds of fuch as either have not, or for feveral ages have been without those helps that are necessary to preferve them. And in this fituation is full one half of the world. New events, and a new arrangement of things, give rife to new traditions, which efface the former, and are themselves effaced in turn. After one or two centuries have passed in turn. After main any traces of the first traditions; and thus we are involved in a state of uncertainty.

He concludes with the following remarks, among many others. Unforefeen accidents, tempefts, and fhipwrecks, have certainly contributed to people every habitable part of the world : and ought we to wonder after this, at perceiving certain refemblances, both

of perfon remote fi ence betw we are d nothing, tive lang upon the By thi mong tha habiting from cac words tot old world to have p and those with fuch parts of migration to be att fimilar to course of I fhall before I that is of among th in the ye history o of the m

of perfons and manners between nations that are moft remote from each other, when we find fuch a difference between those that border on one another ? As we are defitute of historical monuments, there is nothing, I repeat it, but a knowledge of the primitive languages that is capable of throwing any lightupon these clouds of impenetrable darkness.

By this enquiry we fhould at leaft be fatisfied, among that prodigious number of various nations inhabiting America, and differing fo much in languages from each other, which are those who make use of words totally and entirely different from those of the old world, and who consequently must be reckoned to have passed over to America in the earliest ages, and those, who, from the analogy of their language with fuch as are at present used in the three other parts of the globe, leave room to judge that their migration has been more recent, and which ought to be attributed to shipwrecks, or to fome accident fimilar to those which have been spoken of in the course of this treatife.

I fhall only add the opinion of one author more, before I gove my own fentiments on the fubject, and that is of James Adair, Efq. who refided forty years among the Indians, and published the history of them in the year 1772. In his learned and fystematical history of those nations, inhabiting the western parts of the most fouthern of the American colonies; this gentleman without hefitation pronounces that the American Abariginea are descended from the Ifraelites, ether their general captivity.

This descent he endeavours to prove from their religious rites, their civil and martial customs, their marriages, their funeral ceremonies, their manners, language, traditions, and from a variety of other particulars. And fo complete is his conviction on this head, that he fancies he finds a perfect and indisputable

ble fimilitude in each. Through all there I have not time to follow him, and fhall therefore only give a few extracts to flow on what foundation he builds his conjectures, and what degree of credit he is entitled to on this point.

He begins with observing, that though some have supposed the Americans to be descended from the Chinese, yet neither their religion, laws, nor customs agree in the least with those of the Chinese; which sufficiently proves that they are not of this line. Bestides, as our best ships are now should half a year in failing for China (our author does not here recollect that this is from a high northern latitude, across the Line, and then back again greatly to the northward of it, and not directly athwart the Pacific Ocean, for only one hundred and coven degrees) or from thence to Europe, it is very unlikely they should attempt such dangerous discoveries, with their supposed small velsels, against rapid currents, and 1 dark and sickly Monsoons.

He further remarks, that this is more particularly improbable, as there is reafon to have that this nation was unacquished with the use of the and-flone to direct their courfe. China, he fays, is soont eight thousand milet diftant from the American continent, which is twice as far as across the Atlantic Ocean. And we are not informed by any ancient writer of their maritime fkill, or fo much as any inclination that way, befides small coaffing voyages. The winds blew likewife, with little variation from eaft to weft within the latitudes thirty and old, note and fouth; and therefore these could not drive them on the American coaft, it lying directly contrary to fuch a courfe.

Neither could perfons, according to this writers account, fail to America from the north by the way of Tartary or ancient Scythia; that, from its fituation, never having been or can be a maritime power; and

Be-

it is utterly impracticable, he fays, for any to come to America by fea from that quarter. Befides, the remaining traces of their religious ceremonies and civil and martial coftoms are quite oppolite to the like veftiges of the Old Scythians. " Even in the moderate northern climates there is not to be feen the least trace of any ancient stately buildings, or of any thick fettlements, as are faid, to remain in the lefs healthy regions of Peru and Mexico. And feveral of the Indian nations affure us, that they croffed the Miffifippi before they made their prefent northern fettlements; which, connected with the former arguments, he concludes will fufficiently explode that weak opinion of the American Aborigines being lineally descended from the Tartars or ancient Scythians.

Mr. Adair's reasons for supposing that the Americans derive their origin from the Jews are,

First, because they are divided into tribes, and have chiefs over them as the Hraelites had.

Secondly, because, as by a ftrict permanent divine precent the tebrew nation were ordered to worfhip, a terufalem, Jehovah the true and living God, fo do the Indians, ftiling him Yohewah. The ancient Heathens, he adds, it is well known worfhipped a plurality of gods, but the Indians pay their religious devoirs to the Great beneficent fupreme holy Spirit of Fire, who refides as they think above the clouds, and on earth alfo with unpoluted people. They pay no addication to images, or to dead perfons, neither to the celefial luminaries, to evil fpirits, nor to any created beings whatever.

Thirdly, becaufe, agreable to the theocracy or divine government of Ifrael, the Indians think the deity to be the immediate head of their flate.

Fourthly, becaufe, as the Jews believe in the ministration of angels, the Indians also believe that the higher regions are inhabited by good spirits.

Fifthly,

Fifthly, becaufe the Indian language and dialects appear to have the very idiom and genius of the Hebrew. There words and fentences being expressive, concife, emphatical, fonorous, and bold; and often, both i... letters, and fignification, are fynonimous with the Hebrew language.

Sixthly, becaufe they count their time after the manner of the Hebrews.

Seventhly, because in conformity to, or after the manner of the Jews, they have their prophets, highpriefts, and other religious orders.

Eighthly, because their festivals, fasts, and religious rites have a great resemblance to those of the Hebrews.

Ninthly, because the Indians, before they go to war, have many preparatory ceremonies of purification and faiting, like what is recorded of the Israelites. Tenthly, because the fame taste for ornaments, and the fame kind are made use of by the Indians, as by the Hebrews.

Thefe and many other arguments of a fimilar nature, Mr. Adair brings in fupport of his favourite fyftem; but I should imagine, that if the Indians are really derived from the Hebrews, among their religious ceremonies, on which he chiefly feems to build his hypothefis, the principal, that of circumcifion, would never have been laid afide, and its very remembrance obliterated.

Thus numerous and diverfe are the opinions of those who have hitherto written on this subject ! I shall not however, eitherendeavour to reconcile them, or to point out the errors of each, but proceed to give my own sentiments on the origin of the Americans; which are founded on conclusions drawn from the most rational arguments of the writers I have mentioned, and from my own observations; the confistency of these I shall leave to the judgment of my Readers.

The

The better to introduce my conjectures on this head, it is neceffary first to afcertain the distance beween America and those parts of the habitable globe that approach nearest to it.

The Continent of America, as far as we can judge from all the refearches that have been made near the poles, appears to be entirely feparated from the other guarters of the world. "That part of Europe which approaches nearest to it, is the coast of Greenland, lying in about feventy degrees of north latitude ; and which reaches within twelve degrees of the coaft of Labrador, fituated on the north-east borders of this continent. The coaft of Guinea is the nearest part of Africa; which lies about eighteen hundred and fixty miles north-east from the Brazils. The most eastern coast of Asia, which extends to the Korean Sea on the north of China, projects north-east through eastern Tartary and Kamschatka to Siberia, in about fixty degrees of north latitude. Towards which the western coasts of America, from California to the Straits of Annian, extend nearly north-weft, and lie in about forty-fix degrees of the fame latitude.

Whether the Continent of America ftretches any farther north then these ftraits, and joins to the east ern parts of Asia, agreeable to what has been afferted by some of the writers I have quoted, or whether the lands that have been discovered in the intermediate parts are only an archipelago of islands, verging towards the opposite continent, is not yet ascertained.

It being, however, certain that there are many confiderable islands which lie between the extremities of Afia and America, viz. Japon, Yefo or Jedfo, Gama's Land, Behring's Isle, with many others difcovered by Tfchirikow, and befides thefe, from fifty degrees north there appearing to be a cluster of islands's at reach as far as Siberia, it is probable from their proximity to America, that it received its first inhabitants from them.

This conclusion is the most rational I am able to draw, fupposing that fince the Aborigines got footing on this continent, no extraordinary or fudden change in the position or furface of it has taken place, from inundations, earthquakes, or any revolutions of the earth that we are at prefent unacquainted with.

To me it appears highly improbable that it fhould have been peopled from different quarters, across the Ocean, as others have afferted. From the fize of the thips made use of in those early ages, and the want of the compais, it cannot be supposed that any maritime nation would by choice venture over the unfathomable ocean, in fearch of diftant continents. Had this however been attempted, or had America been first accidentally peopled from ships freighted with paffengers of both fexes, which were driven by ftrong eafterly winds across the Atlantic, these fettlers mult have retained fome traces of the language of the country from whence they migrated; and this fince the difcovery of it by the Europeans must have been made out. It also appears extraordinary that feveral of these accidental migrations, as allowed by fome, and these from different parts, should have taken place.

Upon the whole, after the most critical enquiries, and the maturest deliberation, I am of opinion, that America received its first inhabitants from the northeast, by way of the great Archipelago just mentioned, and from these alone. But this might have been effected at different times, and from various parts: from Tartary, China, Japon, or Kamschatka, the inhabitants of these places refembling each other in color, features, and shape; and who, before some of them acquired a knowledge of the arts and sciences, might have likewise refembled each other in their manners, customs, religion, and language.

The only difference between the Chinefe nation and the Tartars lies in the cultivated state of the one, and the particu and lea

formed chiefly without bloody extermi family traction befide t fcarcely It is

the unp

become

cuftom the Tai future : be redu wars be of the driven fome of found t each na ed by t hence thefe p fo man It ap tween

hcad. the 'Ta of Chi cufton well a ed for Ma Indian

im able to got footor fudden ken place, olutions of nted with. t it fhould acrofs the fize of the d the want any marithe unfaents. Had herica been ghted with n by ftrong ttlers mult lage of the d this fince have been that feveral d by fome, have taken

enquiries, binion, that the northnentioned, ve been efous parts: ka, the innother in ore fome of ad fciences, their man-

nation and ie one, and , the the unpolified fituation of others. The former have become a commercial people, and dwell in houtes formed into regular towns and cities; the latter live chiefly in tents, and rove about in different hordes, without any fixed abode. Nor can the long and bloody wars thefe two nations have been engaged in, exterminate their hereditary fimilitude. The prefent family of the Chinefe emperors is of Tartarian extraction; and if they were not fentible of fome claim befide that of conqueft, fo numerous a people would fearcely fit quiet under the dominion of ftrangers.

It is very evident that fome of the manners and cuftoms of the American Indians relemble those of the Tartars; and I make no doubt but that in fome future æra, and this not a very diftant one, it will be reduced to a certainty, that during fome of the vars between the Tartars and the Chinese, a part of the inhabitants of the northern provinces were driven from their native country, and took refuge in some of the isles before-mentioned, and from thence found their way into America. At different periods each nation might prove victorious, and the conquered by turns fly before their conquerors; and from hence might arise the similitude of the Indians to all these people, and that animosity which exists between fo many of their tribes.

It appears plainly to me that a great fimilarity between the Indians and Chinefe is confpicuous-in that particular cuftom of fhaving or plucking off the hair, and leaving only a finall tuft on the crown of the head. This mode is faid to have been enjoined by the Tartarian emperors on their acceffion to the throne of China, and confequently is a farther proof that this cuftom was in use among the Tartars; to whom as well as the Chinefe, the Americans might be indebted for it.

Many words also are used both by the Chinese and Indians, which have a refemblance to each other, not only

munica

mount rica wa

only in their found, but their fignification. The Chinefe call a flave, fhungo; and the Naudoweffe Indians, whofe language, from their little intercourfe with the Europeans, is the leaft corrupted, term a dog, fhungufh. The former denominate one fpecies of their tea, fhoufong; the latter call their tobacco, fhoufaffau. Many other of the words used by the Indians contain the fyllables che, chaw, and chu, after the dialect of the Chinefe.

There probably might be found a fimilar connection between the language of the Tartars and the American Aborigines, were we as well acquainted with it as we are, from a commercial intercourfe, with that of the Chinefe.

I am confirmed in these conjectures, by the accounts of Kamschatka, published a few years ago by order of the Empress of Russia. The author of which fays, that the fea which divides that peninfula from America is full of iflands; and that the diftance between Tschukotskoi-Nofs, a promontory which lies at the eaftern extremity of that country, and the coaft of America, is not more than two degrees and a half of a great circle. He further fays, that there is the greatest reason to suppose that Asia and America once joined at this place, as the coafts of both continents appear to have been broken into capes and bays, which answer each other; more especially as the inhabitants of this part of both refemble each other in their perfons, habits, cuftoms, and food. Their language, indeed, he observes, does not appear to be the fame, but then the inhabitants of each diftrict in Kamschatka speak a language as different from each other, as from that fpoken on the oppofite coaft. These observations, to which he adds, the similarity of the boats of the inhabitants of each coast, and a remark that the natives of this part of America are. wholly ftrangers to wine and tobacco, which he looks upon as a proof that they have as yet had no conmunication

munication with the natives of Europe, he fays, amount to little lefs than a demonstration that America was peopled from this part of Afia.

The limits of my prefent undertaking will not permit me to dwell any longer on this fubject, or to enumerate any other proofs in favour of my hypothefis. I am, however, to thoroughly convinced of the certainty of it, and fo defirous have I been to obtain. every testimony which can be procured in its fupport, that I once made an offer to a private fociety of gentlemen, who were curious in fuch refearches, and to whom I had communicated my fentiments on this point, that I would undertake a journey, on receiving fuch supplies as were needful, through the northeast parts of Europe and Afia to the interior parts of America, and from thence to England; making, as Iproceeded, fuch observations both on the languages and manners of the people with whom I fhould be converfant, as might tend to illustrate the doctrine I have here laid down, and to fatisfy the curiofity of the learned or inquisitive : but as this proposal was judged rather to require a national than a private fupport, it was not carried into execution.

I am happy to find, fince I formed the foregoing conclutions, that they correspond with the fentiments of that great and learned historian, Doctor Robertfon; and though with him, I acknowledge that the investigation, from its nature, is fo obfeure and intricate, that the conjectures I have made can only be confidered as conjectures, and not indifputable conclusions, yet they carry with them a greater degree of probability than the fuppositions of those who affert that this continent was peopled from another quarter.

One of the Doctor's quotations from the Journals of Behring and Tfchirikow, who failed from Kamfchatka, about the year 1741, in queft of the New World, appears to carry great weight with it, and to L 2 afford

afford our conclusions firm fupport: "Thefe commanders having fhaped their courfe towards the eaft, difcovered land, which to them appeared to be part of the American continent; and according to their obfervations, it feems to be fituated within a few degrees of the north-weft coaft of California. They had there fome intercourfe with the inhabitants, who feemed to them to refemble the North-Americans; as they prefented to the Ruflians the Calumet or Pipe of Peace, which is a fymbol of friendfhip univerfal among the people of North-America, and an ufage of arbitrary inftitution peculiar to them."

One of this incomparable writer's own arguments in fupport of his hypothefis, is also urged with great judgment, and appears to be nearly conclusive. He fays, "We may lay it down as a certain principle in this enquiry, that America was not peopled by any. nation of the ancient continent, which had made confiderable progrefs in civilization. The inhabitants of the New World were in a ftate of lociety fo extremely rude, as to be unacquainted with those arts which are the first effays of human ingenuity in its advance towards improvement. Even the most cultivated nations of America were ftangers to many of those. fimple inventions, which were almost coeval with fociety in other parts of the world, and were known in the earliest periods of civil life. From this it is manifest that the tribes which originally migrated to America, came off from nations which must have been no lefs barbarous than their posterity, at the time when they were first discovered by the Euro-If ever the use of iron had been known to peans. the favages of America, or to their progenitors, if ever they had employed a plough, a loom, or a forge, the utility of these inventions would have preferved them, and it is impossible that they should have been abandoned or forgotten." F

Canada,

CHAPTER II.

OF THEIR PERSONS, DRESS, &c.

L ROM the first settlement of the French in Canada, to the conquest of it by the English in 1760, several of that nation, who had travelled into the interior parts of North America, either to trade with the Indians, or to endeavour to make converts of them, have published accounts of their customs, manners, &c.

The principal of these are Father Louis Hennipin, Monf. Charlevoix, and the Baron Le Hontan. The first, many years ago, published fome very judicious remarks, which he was the better enabled to do by the affistance he received from the maps and diaries of the unfortunate M. De la Salle, who was affaffinated whilft he was on his travels, by fome of his own party. That gentleman's journals falling into . Father Hennipin's hand, he was enabled by them to publish many interesting particulars relative to the Indians. But in some respects he fell very short of that knowledge which it was in his power to have attained from his long refidence among them. Nor washe always (as has been already observed) exact in his calculations, or just in the intelligence he has given us.-

The accounts published by the other two, particularly those of Charlevoix, are very erroneous in the geographical parts, and many of the stories told by the Baron are mere delusions.

Some of the Jeluite, who heretofore travelled into thele parts, have also written on this fubject; but as few, if any, of their works have been translated into the English language, the generality of readers are not

fe com. the eaft, be part to their few de-They nts, who ericans; or Pipe univerfal un ufage

II.

not benefited by them; and, indeed, had this been done they would have reaped but few advantages from them, as they have chiefly confined their obfervations to the religious principles of the favages, and the fteps taken for their conversion.

Since the conqueft of Canada; fome of our own countrymen who have lived among the Indians, and learned their language, have published their observations; however as their travels have not extended to any of the interior parts I treat of, but have only been made among the nations that border on our settlements, a knowledge of the genuine and uncontaminated cultoms and manners of the Indians could. not have been acquired by them.

The fouthern tribes, and those that have held a constant intercourse with the French or English, cannot have preferved their manners or their customs in their original purity. They could not avoid acquiring the vices with the language of those they conversed with; and the frequent intoxications they experienced arough the baneful juices, introduced among them by the Europeans, have completed a total alteration in their characters.

In fuch as thefe, a confufedly medley of principles or ufuages are only to be observed; their real and unpoluted- cuftom, could be seen among those nations alone that have held but little communication with the provinces. These I found in the northwest parts, and therefore flatter myself that I am able to give a more just account of the customs and manners of the Indians, in their ancient purity, than any that has been hitherto published. I have made observations on thirty nations, and though mess of these have differed in their languages, there has appeared a great similarity in their manners, and from these have I endeavoured to extract the following remarks. As I ed fyfte particul moft we poffible mult be ranged ous man

As

As I do not propose to give a regular and connected fystem of Indian concerns, but only to relate fuch particulars of their manners, customs, &c. as I thought most worthy of notice, and which interfere as little as possible with the accounts given by other writers, I must beg my readers to excuse their not bein arranged fystematically, or treated of in a more copious manner.

The Indian nations do not appear to me to differ fo widely in their make, color, or conftitution from each other, as represented by some writers. They are in general flight made, rather tall and ftraight, and you feldom fee any among them deformed, their Ain is of a reddifh or copper colour; their eyes are large and black, and their hair of the fame hue, but very rarely is it curled; they have good teeth, and their breath is as fweet as the air they draw in; their cheek bones rather raifed, but more fo in the women than the men ; and the former are not quite fo tall as the European women, however you frequently meet with good faces and agreeable perfons among them, although they are more inclined to be fat than the other fex.

I shall not enter into a particular enquiry whether the Indians are indebted to nature, art or the temperature of the climate for the color of their fkin, nor shall I quote any of the contradictory accounts I have read on this fubject; I fhall only fay, that it appears to me to be the tincture they received originally from the hands of their Creator; but at what period the variation which is at prefent visible, both in the complexion and features of many nations took place, at what time the European whitenefs, the jetty hue of the African, or the copper caft of the American were given them; which was the original color of the first inhabitants of the earth, or which might be efteemed the most perfect, I will not pretend to determine. Many

Many writers have afferted, that the Indians, eren at the maturest period of their existence, are only furnified with hair on their heads ; and that notwithftanding the profusion with which that part is covcred, those parts which among the inhabitants of other climates are ufually the feat of this excrefcence, remain entirely free from it. Even Dr. Robertfon; through their misrepresentations, has contributed to propagate the error; and fuppoling the remark juily founded, has drawn feveral conclusions from it relative to the habit and temperature of their bodies, which are confequently invalid. But from minute enquiries, and a curious infpection, I am able to declare (however respectable I may hold the authority of these historians in other points) that their affertions are erroneous, and proceeding from the want of a thorough knowledge of the cuftoms of the Indians.

After the 2ge of puberty, their bodies, in their natural ftate, are covered in the fame manner as those of the Europeans. The men, indeed, efteem a beard very unbecoming, and take great pains to get rid of it, nor is there any ever to be perceived on their faces, except when they grow old and become inattentive to their appearance. Every crinoue efflorescence on the other parts of the body is held unseemly by them, and both fexes employ much time in their extirpation.

The Naudoweffies, and the remote nations, pluck them out with bent pieces of hard wood, formed into a kind of nippers: whilft those who have communication with Europeans procure from them wire, which they twift into a forew or worm; applying this to the part, they prefs the rings together, and with a fudden twitch draw out all the hairs that are inclosed between them.

The men of every nation differ in their drefs very little from each other, except those who trade with the Europeans; these exchange their furs for blankets, thirts, and other apparel, which they wear as much much fo by a girc broadclo bodics. faft eithe intuffera blanket l upper fic one hand ther; th or camp covering

Thofe than the except fi 2 crown confider feathers The main of the history

They efteem a felves w make uf in they The their co both the to fepar ftill unte gy fubft twift br rim in a it almof eftecme It is their no

1,30

much for ornament as neceffity. The latter faften by a girdle around their waifts about half a yard of broadcloth, which covers the middle parts of their bodics. Those who wear fhirts never make them fast either at the wrist or collar; this would be a most intufferable confinement to them. They throw their blanket loose upon their shoulders, and holding the upper fide of it by the two corners, with a kniste in one hand, and a tobacco pouch, pipe, &c. in the other; thus accoutred they walk about in their villages or camps : but in their dances they feldom wear this covering.

Those among the men who with to appear gayer than the reft, pluck from their heads all the hair, except from a fpot on the top of it, about the fize of a crown piece, where it is permitted to grow to a confiderable length : on this are fastened plumes of feathers of various colors, with filver or ivory quills. The manner of cutting and ornamenting this part of the head diffinguishes different nations from each other.

They paint their faces red and black, which they effeem as greatly ornamental. They also paint themfelves when they go to war; but the method they make use of on this occasion differs from that wherein they use it merely as a decoration.

The young Indians, who are defirous of excelling their companions in finery, flit the outward rim of both their ears ; at the fame time they take care not to feparate them entirely, but leave the fleft thus cut, fill untouched at both extremities, around this fpongy fubftance, from the upper to the lower part, they twift brafs wire, till the weight draws the amputated rim in a bow of five or fix inches diameter, and drags it almost down to the fhoulder. This decoration is effected to be exceflively gay and becoming.

It is also a common cultom among them to bore their nofes, and wear in them pendants of different forts.

tants ofescence. bertion; buted to rk juftly n it relabodies, minute le to deuthority affertions vant of a idians. their na-' as those n a beard ret rid of * eir faces, attentive cence on by them, tirpation. ns, pluck med into' ommunire, which his to the a fudden lofed be-

lrefs very ade with or blankwear as much

forts. I observed that fea shells were much worn by those of the interior parts, and reckoned very ornamental; but how they procure them I could not learn; probably by their traffic with other nations nearer the fea.

They go without any covering for the thigh, except that before fpoken of, round the middle which reaches down half way the thighs; but they make for their legs a fort of stocking, either of skins or cloth ; theie are fewed as near to the fhape of the leg as poffible. fo.as to admit of being drawn on and off. The edges of the stuff of which they are composed are left annexed to the feam, and hang loofe for bout the breadth of a hand; and this part which is placed on the out fide of the leg, is generally ornamented by those who have any communication with Europeans, if of cloth with ribands or lace, if of leather, with embroidery and porcupine quills curioufly colored. Strangers who hunt among the Indians, in the parts where there is a great deal of fnow, find these stockings much more convenient than any others.

Their floes are made of the skin of the deer, clk, or buffzlo : these, after being sometimes dressed according to the European manner, at others with the hair remaining on them, are cut into shoes, and fashioned so as to be easy to the feet, and convenient for walking. The edges round the ancle are decorated with pieces of brass or tin fixed around leather shout an inch long, which being placed very thick, make a cheerful tinkling noise, cither when they walk or dance.

The women wear a covering of fome kind or other from the neck to the knees. Those who trade with the Europeans wear a linen garment, the fameas that used by the men; the flaps of which hang over the petticoat. Such as dress after their ancient manner, make a kind of shift with leather, which covers the body but not the arms. Their petticoats

are made either of leather or cloth, and reach from the waift to the knee. On their legs they wear tockings and thoes, made and ornamented as those of the men.

They differ from each other in the mode of dreffing their heads, each following the cultom of the nation or band to which they belong, and adhering to the form made-use of by their ancestors from time immemorial.

I remarked that most of the females, who dwell on the east fide of the Missifippi, decorate their heads by inclosing their hair either in ribands, or in plates of filver; the latter is only made use of by the higher ranks, as it is a costly ornament. The filver they use on this occasion, is formed into thin plates of about four inches broad, in feveral of which they confine their hair. That plate which is nearest the head, is of a confiderable width; the next narrower and made fo as to pass a little way under the other, and gradually tapering, descend to the waist. The hair of the Indian women being in general very long, this proves an expensive method.

But the women that live to the weft of the Miflifippi, viz. the Naudoweffies, the Affinipoils, &c. divide their hair in the middle of the head, and form it into two rolls, one against each ear. These rolls are about three inches long, and as large as their wrifts. They hang in a perpendicular attitude at the front of each ear, and descend as far as the lower part of it.

The women of every nation generally place a fpot of paint, about the fize of a crown-piece, againft each ear; fome of them put paint on their hair, and fometimes a finall fpot in the middle of the forehead. The Indians, in general, pay a greater attention to their drefs, and to the ornaments with which they decorate their perfons, than to the accomodation of M

h worn ery orald not nations

d or oo trade he fame hang.oancient which tticoats are

their huts or tents. They conftruct the latter in the following fimple and expeditious manuer.

Being provided with poles of a proper length, they failen two of them acrofs, near their ends, with bands made of bark. Having done this, they raife them up, and extend the bottom of each as wide as they propofe to make the area of the tent : they then erect others of an equal height, and fix them to as to fupport the two principal ones. On the whole they lay tkins of the elk or deer, fewed together, in quantity fulficient to cover the poles, and by lapping over to form the door. A great number of fkins are fometimes required for this purpofe, as fome of their tents are very capacious. That of the chief warrior of the Naudoweffies was at leaft forty feet in circumference, and very commodious.

They observe no regularity in fixing their tents when they encamp, but place them just as it fuits their conveniency.

The huts alfo, which those who use not tents, creft when they travel, for very few tribes have fixed abodes, or regular towns, or villages, are equally fimple, and almost as foon constructed.

They fix finall pliable poles in the ground, and bending them till they meet at the top and form a femi-circle, then laft them together. These they cover with mats made of rushes platted, or with birch bark, which they carry with them in their canoes for this purpose.

There cabins have neither chimnics nor windows; there is only a fmall aperture left in the middle of the roofs through which the finoke is difcharged, but as this is obliged to be ftopped up when it rains or fnows violently, the fmoke then proves exceedingly troublefome.

They lie on fkins, generally those of the bear, which are placed in rows on the ground, and if the floor is not large enough to contain beds fufficient for for the rs cree which As t

windows; middle of lifcharged, en it rains exceeding-

the bear, and if the fufficient for for the accommodation of the whole family, a frame is crected about four or five feet from the ground in which the younger part of it fleep.

As the habitations of the Indians are thus rude, their domeftic utenfils are few in number, and plain in their formation. The tools where with they fathion them are fo aukward and defective, that it is not only impoffible to form them with any degree of neatnefs or elegance, but the time required in the elecution is fo confiderable, as to deter them from energing in the manufacture of fuch as are not befolutely neceffary.

The Naudoweffics make the pots in which they boil their victuals of the black clayor frome mentioned in my journal : which refifts the effects of fire, nearly as well as iron. When they roath, if it is a large joint, or a whole animal, fuch as beaver, they fix it as Europeans do, on a fpit made of a hard wood, and placing the ends on two forked props, now and then turn it. If the place is fmaller they fpit it as before, and fixing the fpit in an creft but flanting pofition, with the meat inclining towards the fire, frequently change the fides, till every part is fufficiently roafted.

They make their diffes in which they ferve up their meat, and their bowls and pails, out of the knotty excrefcences of the maple tree or any other wood. They fashion their spoons with a tolerable degree of neatnefs (as these require much less trouble than large utenfils) from a wood that is termed in America, Spoon Wood, and which greatly refembles box wood.

Every tribe are now poffessed of knives, and fteels to ftrike fire with. These being to effentially needful for the common uses of life, those who have not an immediate communication with the European traders, purchase them of such of their neighbours as are fituated nearer the fettlements, and generally give in exchange for them flaves.

Th

OF THEIR MANNERS, QUALIFICATIONS, Sec

W HEN the Indian women fit down, they place themfelves in a decent attitude, with their knees clofe gether; but from being accuflorial to this posture, they walk badly, and appear to be knee.

They have no midwives among them, their clinate, or fome peculiar happinets in their conflictations, sendering any alliftance at that time unneceffary. On these occasions they are confined but a few hours from their usual employments, which are commonly very laborious, as the nicu, who are remarkably indolent, leave to them every kind of trudgery; even in their hunting parties the former will not deign to bring home the game, but fend their wives for it, though it lies at a very confiderable diffance.

The women place their children foon after they are born on boards fluffed with foft mofs fuch as isfound in morafles or meadows. The child is laid on its back in one of this kind of cradles, and being wrapped in fkins or cleth to keep it warm, is fecured in it by fmall bent pieces of timber.

To these machines they fasten strings, by which they hang them to branches of trees; or, if they findnot trees at hand, fasten them to a fump or itone, whill they transact any needful business. In this position are the children kept for fome months, when they are taken out, the boys are fussive to go naked and the girls are covered from the neck to the knees with a shift and a short petticoat.

The Indian women are remarkably decent during their menstrual illness. Those nations that are most remote from the European settlements, as the Naudoweffies,

doweffies, &c. are more particularly attentive to this point; though they all without exception adhere in fome degree to the fame cuftom.

In every camp or town there is an apartment appropriated for their retirement at this time, to which both fingle and married retreat, and feclude themfelves with the utmost strictness during this period from all fociety. Afterwards they purify themselves in running streams, and return to their different employments.

The men on these occasions most carefully avoid holding any communication with them; and the Naudoweffies are so rigid in this observance, that they will not suffer any belonging to them to setch such things as are necessary, even fire, from these female lunar retreats, though the want of them is attended with the greatest inconvenience. They are also so superstitutions as to think, if a pipestem cracks, which among them is made of wood, that the posfession has either lighted it at one of these poluted fires, or held some converse with a woman during her retirement, which is esteemed by them most difgraceful and wicked.

The Indians are extremely circumfpect and deliberate in every word and action; there is nothing that hurries them into any intemperate warmth, but that inveteracy to their enemies, which is rooted in every. Indian heart, and never can be eradicated. In all other inftances they are cool, and remarkably cautious, taking care not to betray on any account whatever their emotions. If an Indian has discovered that a friend is in danger of being intercepted and cut off by one to whom he has rendered himfelf obnoxious; he does not inform him in plain and explicit terms of the danger he runs by purfuing the track near which his enemy lies in wait for him, but he haft coolly afks him which way he is going that day; and having received his answer, with the same indifference M_2

ent during at are molt s the Nauoweffies,

difference tells him that he has been informed that a dog lies near the fpot, which might probably do him a mifchief. This hint proves fufficient; and his friend avoids the danger with as much caution as if every defign and motion of his enemy had been pointed out to him.

This apathy often flews itfelf on occasions that would call forth all the fervor of a fusceptible heart. If an Indian has been absent from his family and friends many months, either on a war or hunting party, when his wife and children meet him at fome distance from his habitation, instead of the affectionate fensations that would naturally arise in the breast of more refined beings, and be productive of mutual congratulations, he continues his course without paying the least attention to those who furround him, till he arrives at his home.

He there fits down, and with the fame unconcern as if he had not been abfent a day, finokes his pipe; those of his acquaintance who followed him, do the fame; and perhaps it is feveral hours before he relates to them the incidents which have befallen him during his abscence, though perhaps he has left a father, brother, or fon on the field, whofe loss he ought to have lamented, or has been unfuccefsful in the undertaking that called him from his home.

Has an Indian been engaged for feveral days in the chace, or on any other laborious expedition, and by accident continued thus long without food, when he arrives at the hut or tent of a friend where he knows his wants may be immediately fupplied, he takes care not to fhow the leaft fymptoms of impatience, or to betray the extreme hunger by which he is tortured; but on being invited in, fits contentedly down, and fmokes his pipe with as much compoture as if every appetite was allayed, and he was perfectly at eafe; he does the fame if among ftrangers. This cuftom is ftrictly adhered to by every tribe, as they

ral days in lition, and ood, when where he oplied, he of impawhich he contentedh compoe was perftrangers. y tribe, as they they efteem it a proof of fortitude, and think the reverie would intitle them to the appellation of old women.

If you tell an Indian that his children have greatly fignalized themfelves against an enemy, have taken many scalps, and brought home many prisoners, he does not appear to feel any extraordinary pleafure on the occasion; his answer generally is, "it is well," and he makes very little enquiry about it. On the contrary, if you inform him that his children are flain or taken prisoners, he makes no complaints, he only replies, "it does not fignify;" and probably, for fome time at least, as not how it happened.

This feeming indifference, however, does not proceed from an entire fuppreffion of the natural affections; for notwithftanding they are efteemed favages, I never faw among any other people greater proofs of parental or tilial tendernefs; and although they meet their wives after a long abfcence with the ftoical indifference just mentioned, they are not, in general, void of conjugal affection.

Another peculiarity is observable in their manner of paying their visits. If an Indian goes to visit a particular perfon in a family, he mentions to whom his visit is intended, and the reft of the family immediately retiring to the other end of the hut or tent, are careful not to come near enough to interrupt them during the whole of the conversation. The fame method is purfued if a man goes to pay his respects to one of the other fex; but then he must be careful not to let love be the subject of his discourse, whils the day light remains.

'The Indians difcover an amazing fagacity, and acquire with the greateft readine's any thing that depends upon the attention of the mind. By experience and an acute obfervation, they attain many perfections to which Europeans are ftrangers. For inflance, they will crofs a foreft or a plain which is two

two hundred miles in breadth, and reach with great exactness the point at which they intend to arrive, keeping during the whole of that space in a direct line, without any material deviations; and this they will do with the same case, whether the weather be fair or cloudy.

With equal acutenels will they point to that part of the heavens the fun is in, though it be intercepted by clouds or fogs. Befides this, they are able to purfue with incredible facility the traces of man er beaft, either on leaves or grafs; and on this account it is with great difficulty a flying enemy escapes difcovery.

They are indebted for these talents not only to nature, but to an extraordinary command of the intellectual faculties, which can only be acquired by an unremitted attention, and by long experience.

They are in general very happy in a retentive memory; they can recapitulate every particular that has been treated of in council, and remember the exact time when thefe were held. Their belts of wampun preferve the fubflance of the treaties they have concluded with the neighbouring tribes for ages back, to which they will appeal, and refer with as much perfpiculty and readinefs as Europeans can to their written records.

Every nation pays great refpect to old age. The advice of a father will feldom meet with any extraordinary attention from the young lineans, probably they receive it with only a bare affent; but they will tremble before a grandfather, and fubmit to his injunction with the utmost alacrity. The words of the ancient part of their community are effected by the young as oracles. If they take during their hunting parties any game that is reckoned by them uncommonly delicious, it is immediately prefented to the eldeft of their relations,

They:

They never fuffer themfelves to be overburdened with care, but live in a flate of perfect tranquillity and contentment. Being naturally indolent, if provifion jult fufficient for their fubfiftance can be procured with little trouble, and near at hand, they will not go far, or take any extraordinary pains for it, though by fo doing they might acquire greater plouty, and of a more effimable kind.

Having much leifung time they indulge this incolence to which they are to profic, by esting, drinking, or fleeping, and rambling about in their towns or camps. But when necessary obliges them to take the field, either to oppose an enemy, or to procure themlives food, they are alert and indefatigable. Many inflances of their activity, on these occasions, will be given when I treat of their wars.

The infatuating fpirit of gaming is not confined to Europe; the Indians also feel the bewitching impulie and often lose their arms, their apparel, and every thing they are possessed of. In this case, however, they do not follow the example of more refined games, ters, for they neither murmur nor repine; not a fretful word cleapes them, but they bear the frowns of forune with a philosophic composure.

The greatest blemish in their character is that favage disposition which impels them to treat their enemies with a severity every other nation shudders at. But if they are thus barbarous to those with whom they meat war, they are friendly, hospitable, and humane m peace. It may with truth be faid of them, that they are the worst enemies, and the best friends, of any people in the whole world.

The Indians in general are ftrangers to the paffion of jealoufy; and brand a man with folly that is diftruftful of his wife. Among fome bands the very idea is not known; as the most abandoned of their young men very rarely attempt the virtue of married women, nor do these often put themselves in the

way of folicitation. Yet the Indian women in general are of an amorous temperature, and before they are married are not the lefs effected for the indulgence of their paffions.

The Indians in their common flate are firangers to all diffiction of property, except in the articles of domeftic ufe, which every one confiders as his own, and increases as circumstances admit. They are extremely liberal to each other, and supply the deficiency of their friends with any superfluity of their own.

In dangers they readily give affiftance to those of their band, who ftand in need of it, without any expectation of return, except of those just rewards that are always conferred by the Indians on merit. Governed by the plain and equitable laws of nature, every one is rewarded folely according to his deferts; and their equality of condition, manners and privileges; with that constant and fociable familiarity which prevails throughout every Indian nation, animatesthem with a pure and truly patriotic spirit, that tends to the general good of the fociety to which they belong.

If any of their neighbours are bereaved by death, or by an enemy of their children, those who are poffessed of the greatest number of flaves, supply the deficiency; and these are adopted by them, and treated in every respect as if they really were the children of the person to whom they are presented.

The Indians, except those who live adjoining to the European colonies, can form to themselves no idea of the value of money; they confider it when they are made acquainted with the uses to which it is applied by other nations, as the fource of innumerable evils. To it they attribute all the mischiefs that are prevalent among Europeans, such as treachery, plundering, devastations, and murder.

They efteem it irrational that one man fhould be poffeffed of a greater quantity than another, and are amazed, that any honor should be annexed to the poffeffion of it. But that the want of this ufelefs metal should be the caufe of depriving perfons of their liberty, and that on account of this partial diffribution of it, great numbers flould be immured within the dreary walls of a prifon, cut off from that fociety of which they constitute a part, exceeds their belief. Nor do they fail, on hearing this part of the European fystem of government related, to charge the inflitutors of it with a total want of humanity, and to brand them with the names of favages and brutes. They fhew almost an equal degree of indifference for the productions of art. When any of these are fhewn them, they fay, " It is pretty, I like to look at it," but are not inquisitive about the construction of it, neither can they form proper conceptions of its ufe. But if you tell them of a perfon who is able to run with great agility that is well skilled in hunting, can direct with unerring, aim a gun, or bend with eafe a bow, that can dextroufly work a canoe, underftands the art of war, is acquainted with the fituation of a country, and can make his way without a guide, through an immense forest, sublisting during this on a small quantity of provisions, they are in raptures; they liften with great attention to the pleafing tale, and beftow the highest commendations on the hero of it.

CHAPTER IV.

CHAPTER IV.

THEIR METHOD OF RECKONING TIME, G.

CONSIDERING their ignorance of aftronomy, time is very rationally divided by the Indians. Those in the interior parts (and of those I would generally be understood to speak) count their years by winters; or, as they express themselves, by fnows.

Some nations among them reckon their years by moons, and make them confift of twelve fynodical or lunar months, obferving, when thirty moons have waned, to add a fupernumerary one, which they term the loft moon; and then begin to count as before. They pay a great regard to the first appearance of every moon, and on the occasion always repeat fome joyful founds, stretching the same time their hands towards it.

Every month has with them a name expressive of its feason; for inftance, they call the month of March (in which their year generally begins at the first New-Moon after the vernal Equinox) the Worm Month or Moon; because at this time the worms quit their retreats in the bark of the trees, wood, &c. where they have sheltered themselves during the winter.

The month of April is termed by them the month of Plants. May, the Month of Flowers. June, the Hot-Moon: July, the Buck Moon. Their reafon for thus denominating thefe is obvious.

August, the Sturgeon Moon; because in this month they catch great numbers of that fish.

September, the Corn Moon, because in that monh they gather in their Indian corn.

October, the Travelling Moon; as they leave at this time their villages, and travel towards the place where they intend to hunt during the winter. Nove the beav ing laid winter f

ploy this Janua harder, any othe

ing able regulate They

or leagu to the about t into hal in their phics ju their w ficns, November, the Beaver Moon; for in this month the beavers begin to take thelter in their houfes, having laid up a fufficient flore of provisions for the winter featon.

December, the Hunting Moon, because they employ this month in pursuit of their game.

January, the Cold Moon, as it generally freezes harder, and the cold is more intenfe in this than in any other month.

February, they call the Snow Moon becaufe more fnow commonly falls during this month, than any other in the winter.

When the moon does not thine they fay the Moon is dead; and fome call the three laft days of it the naked days. The Moon's first appearance they term its coming to life again.

They make no division of weeks; but days they count by fleeps; half days by pointing to the fun at noon; and quarters by the rifing and the fetting of the fun : to express which in their traditions they make use of very fignificant hieroglyphics.

The Indians are totally unfkilled in geography as well as all the other fciences, and yet, as I have before hinted, they draw on their birch bark very exact charts or maps of the countries with which they are acquainted. The latitude and longitude is only wanting to make them tolerably complete.

Their fole knowledge in aftronomy confifts in being able to point out the pole-fiar; by which they regulate their courfe when they travel in the night.

They reckon the diftance of places, not by miles or leagues, but by a day's journey, which, according to the best calculations I could make, appears to be about twenty English miles. These they also divide into halves and quarters, and will demonstrate them in their maps with great exactness, by the hieroglyphics just mentioned, when they regulate in council their war parties, or their most distant hunting excurfiens, N They

146

They have no idea of arithmetic; and though they are able to count to any number, figures as well as letters appear mysterious to them, and above their comprehension.

During my abode with the Naudoweffies, fome of the chiefs observing one day a draft of an eclipfe of the moon, in a book of aftronomy which I held in my haud, they defired I would permit them to look at it. Happening to give them the book flut, they began to count the leaves till they came to the place in which the plate was. After they had viewed it, and afked many queftions relative to it, I told them they need not to have taken fo much pains to find the leaf on which it was drawn, for I could not only tell in an inftant the place, without counting the leaves, but alfo how many preceded it.

They feemed greatly amazed at my affertion, and begged that I would demonstrate to them the polibility of doing it. To this purpose I defired the chief that held the book, to open it at any particular place, and just flowing me the page carefully to conceal the edges of the leaves, so that I might not be able to count them.

This he did with the greateft caution; notwithflanding which, by looking at the folio, I told him, to his great furprife, the number of leaves. He counted them regularly over, and difcovered that I was exact. And when, after repeated trials, the Indians found I could do it with great readine's, and without ever erring in my calculation, they all feemed as much aftonished as if I had raifed the dead. The only way they could account for my knowledge, was by concluding that the book was a spirit, and whifpered me answers to whatever I demanded of it.

This circumftance, trifling as it might appear to those who are less illiterate, contributed to increase my consequence, and to augment the favorable opinion they already entertained of me.

CHAPTER V.

OF THIER GOVERNMENT, Sc.

LVERY feparate body of Indians is divided into bands or tribes; which band or tribe forms a little community with the nation to which it belongs... As the nation has fome particular fymbol by which it is diffinguished from others, fo each tribe has a badge from which it is denominated; as that of the Eagle, the Panther, the Tiger, the Buffalo, &c, &c, One band of the Naudoweffics is represented by a Snake, another a Tortoife, a third a Squirrel, a fourth a Wolf, and a fifth a Buffalo. Throughout every nation they particularize themfelves in the fame manner, and the meanest perfon among them will remember his lineal defcent, and distinguish himfelf by his respective family.

Did not many circumstances tend to confute the fuppolition, I should be almost induced to conclude from this distinction of tribes, and the particular attachment of the Indians to them, that they derive their origin, as fome have afferted, from the Ifraelites.

Befides this, every nation diffinguish themselves by the manner of constructing their tents or huts. And fo well verfed are all the Indians in this diffinction, that though there appears to be no difference on the nicest observation made by an European, yet they will immediately discover, from the position of a pole left in the ground, what nation has encamped on the spot many months before.

Every band has a chief who is termed the Great Chief or the chief Warrior; and who is chofen in confideration of his experience in war, and of his approved valor, to direct their military operations, and

to regulate all concerns belonging to that department. But this chief is not confidered as the head of the ftate; befides the great warrior who is elected for his war-like qualifications, there is another who enjoys a pre-eminence as his hereditary right, and has the more immediate management of their civil affairs. This chief might with greater propriety be denominated the Sachem; whole affent is neceffary in all conveyances and treaties, to which he affixes the mark of the tribe or nation.

Though these two are confidered as the heads of the band, and the latter is usually denominated their king, yet the Indians are sensible of neither civil or military subordination. As every one of them entertains a high opinion of his consequence, and is extremely tenacious of his liberty, all injunctions that carry with them the appearance of a positive command, are instantly rejected with score.

On this account, it is feldom that their leaders are fo indiferent as to give out any of their orders in a peremptory file; a bare hint from a chief that he thin's fuch a thing necefiary to be done, inftantly aroufes an emulation among the inferior ranks, and it is immediately executed with great alacrity. By this method the difguftful part of the command is evaded, and an authority that falls little fhort of abfolute fway inftituted in its room.

Among the Indians no visible form of government is established; they allow of no fuch diffinction as magistrate and fubject, every one appearing to enjoy an independence that cannot be controlled. The object of government among them is rather foreign than domestic, for their attention feems more to be employed in preferving fuch an union among the members of their tribe as will enable them to watch the motions of their enemics, and act against them with concert and vigor, than to maintain interior order by any public regulations. If violence is committed, or blood is fhed, the right of revenging these milder and is left to the family of the injured : the chlorid affume neither the power of inflicting or moderating the punifhment.

Some nations, where the dignity is hereditary, limit the fucceflion to the female line. On the death of a chief, his fifter's for tometimes fucceeds him in preference to his own for ; and if he happens to have no fifter, the nearch female relation affumes the dignity. This accounts for a work on being at the head of the Winnebago nation, when before I was acquainted with their laws, appeared ftrange to n.e.

Each family has a right to appoint one of its chiefs to be an affiftant to the principal chief, who watches over the interest of his family, and without whose confent nothing of a public nature can be carried in-These are generally chosen for their to execution. ability in fpeaking; and fuch only are permitted to make orations in their councils and general affemblies. In this body, with the hereditary chief at its head, the supreme authority appears to be lodged ; as by its determination every transaction relative to their hunting, to their making war or peace, and to all their public concerns are regulated. Next to thefe, the body of warriors which comprehends all that are able to bear arms, hold their rank. This division has fometimes at its head the chief of the nation, if he has fignalized himfelf by any renowned action, if not, some chief that has rendered himself famous.

In their councils, which are held by the foregoing members, every affair of confequence is debated; and no enterprife of the leaft moment undertaken, unlefs it there meets with the general approbation of the chiefs. They commonly affemble in a hut or N 2 tent

tent appropriated to this purpose, and being seats ed in a circle on the ground, the eldest chief rifes and makes a speech; when he has concluded, another gets up; and thus they all speak, if necessary, by turns

On this occasion their language is nervous, and their manner of expression apphatical. Their stile is adorned with images, comparisons, and strong metaphors, and is equal in allegories to that of any of the eastern nations. In all their set speeches they express themselves with much vehemence, but in common discourse according to our usual method of speech.

The young men are fuffered to be prefent at the councils, though the are not allowed tomake a speech till they are regular admitted; they however listen with great attention, and to flow that they both understand, and approve of the resolutions taken by the assembled chiefs, they frequently exclaim, "That is right." "That is good."

The cuftomary mode among all the ranks of exprefing their affent, and which they repeat at the end of almost every period, is by uttering a kind of forcible as piration, which sounds like an union of the letters OAH.

CHAPTER VI:

OF THEIR FEASTS.

MANY of the Indian nations neither make use of bread, falt, or spices; and some of them have never seen or tasted of either. The Naudowessies in particular have no bread, nor any substitute for it. They eat the wild rice which grows in great quantities in different parts of their territories; but they boil foil it an beafts th inaceous it. And they hav not to re ly cat it Neith though buffalo (the nut their te inconve fteemed on the rous. nt at the te a fpeech ever listen both untaken by n, "That

ks of exat at the kind of union of

her make nem have weffies in the for it. at quantibut they boil foil it and eat it alone. They also eat the flesh of the beafts they kill, without having recourse to any farinaccous substance to absorb the groffer particles of it. And even when they confume the fugar which they have extracted from the maple tree, they use it not to render some other food palatable, but generally eat it by itself.

Neither have they any idea of the use of milk, although they might collect great quantities from the buffalo on the elk ; they only confider it as proper for the nutriment of the young of these beasts during their tender state. I could not perceive that any inconveniency attended the total difuse of articles efteemed so necessary and nutritious by other nations, on the contrary, they are in general healthy and vigorous.

One difh however, which answers nearly the fame purpose as bread, is in use among the Ottagaumies, the Saukies, and the more eastern nations where Indian corn grows, which is not only much esteemed by them, but it is reckoned extremely palatable by all the Europeans who enter their dominions. This is composed of their unripe corn as before described, and beans in the fame state, boiled together with bear's shell, the fat of which most the pulse, and renders it beyond comparison delicious. They call this food Succatosh.

The Indians are far from being Cannibals, as they are faid to be. All their victuals are either roafted or boiled; and this in the extreme. Their drink is generally the broth in which it has been boiled.

Their food confifts of the flefh of the bear, the buffalo, the elk, the dear, the beaver, and the racoon ; which they prepare in the manner juft mentioned. They ufually eat the flefh of the deer which is naturally dry, with that of the bear which is fat and juicy; and though the latter is extremely rich and lufcious, it is never known to cloy.

In:

In the foring of the year the Naudoweffies cat the infide bark of a fhrub, that they gather in fome patt of their country; but I could neither learn the name of it, or difcover from whence they got it. It was of a brittle nature and eafily mafticated. The tafte of it was very agreeable, and they faid it was extremely nourifhing. In flavour it was not unlike the turnip, and when received into the mouth refembled that root both in its pulpous and frangible nature.

The lower ranks of the Indians are exceedingly nafty in dreffing their victuals, but fome of the chiefs are very neat and cleanly in their apparel, tents and food.

They commonly eat in large parties, so that their meals may properly be termed feafts; and this they do without being reftricted to any fixed or regular hours, but just as their appetites require, and convenience fuits.

They usually dance either before or after every meal; and by this cheerfulness probably render the Great Spirit, to whom they confider themselves as indebted for every good, a more acceptable facrifice than a formal and unanimated thankfgiving. The men and women feast apart : and each fex invite by turns their companions, to partake with them of the food they happen to have; but in their domestic way of living the men and women eat together.

No people are more hospitable, kind, and free than the Indians. They will readily share with any of their own tribe the last part of their provisions, and even with those of a different nation if they chance to come in when they are cating. Though they do not keep one common stock, yet that community of goods which is so prevalent among them, and their generous disposition, render it nearly of the fame effect.

When the chiefs are convened on any public bulinefs they always conclude with a feaft, at which their feftivity and cheerfulnefs knows no limits.

OF THEIR DANCES.

DANCING is a favorite exercife among the Indians; they never meet on any public occasion, but this makes a part of the entertainment. And when they are not engaged in war or hunting, the youth of both fexes amufe themfelves in this manner every evening.

They always dance, as I have just observed, at their feasts. In these as well as all other dances, every man rifes in his turn, and moves about with great freedom and boldness; finging as he does fo, the exploits of his ancestors. During this the company who are feated on the ground in a circle, around the dancer, join with him in making the cadence, by an odd tone, which they utter all together, and which founds, "Heh, heh, heh." These notes, if they might be fo termed, are articulated with a harsh accent, and strained out with the utmost force of their lungs: fo that one would imagine their strength must be foon exhausted by it; instead of which, they repeat it with the fame violence during the whole of their entertainment.

The women, particularly thole of the western nations, dance very gracefully. They carry themselves erect, and with their arms hanging down close to their fides, move first a few yards to the right, and then back again to the left. This movement they perform without taking any steps as an European would do, but with their feet conjoined, moving by turns their toes and heels. In this manner they glide with great agility to a certain distance, and then return; and let those who join in the dance be ever so numerous,

they.

they keep time fo exactly with each other that no interruption enfues. During this, at flated periods, they mingle their fhrill voices, with the hoarier ones of the men, who fit around (for it is to be obferved that the fexes never intermix in the fame dance) which, with the mufic of the drums and chichicoes, make an agreeable harmony.

The Indians have feveral kinds of dances, which they use on different occasions, as the Pipe or Calumet Dance, the War Dance, the Marriage Dance, and the Dance of the Sacrifice. The movements in every one of these are diffimilar; but it is almost impossible to convey any idea of the points in which they are unlike.

Different nations likewife vary in their manner of dancing. The Chipéway throw themfelves into a greater variety of attitudes than any other people; fometimes they hold their heads erect, at others they bend them almost to the ground; then recline on one fide, and immediately after on the other. The Naudoweffies carry themfelves more upright, ftep firmer, and move more gracefully. But they all accompany their dances with the difagreeable noife just mentioned.

The Pipe Dance, is the principal, and the most pleasing to a spectator of any of them, being the least frantic, and the movement of it most graceful. It is but on particular occasions that it is used; as when ambassadors from an enemy arrive to treat of peace, or when strangers of eminence pass through their territories.

The War Dance, which they use both before they fet out on their war parties, and on their return from them, ftrikes terror into ftrangers. It is performed, as the others, amidst a circle of the warriors; a chief gene: ally begins it, who moves from the right to the left, finging at the fame time both his own exploits, and those of his ancesters. When he has concluded his his account lent blow fixed in the for this put

before they eturn from performed, rs; a chief ght to the n exploits, concluded his his account of any memorable action, he gives a violent blow with his war-club, against a post that is fixed in the ground, near the centre of the assembly, for this purpose.

Every one dances in his turn, and recapitulates the wondrous deeds of his family, till they all at laft join in the dance. Then it becomes truly alarming to any ftranger that happens to be among them, as they throw themfelves into every horrible and terniving posture that can be imagined, rehearing at the fame time the parts they expect to act against their enemies in the field. During this they hold their fharp knives in their hands, with which, as they whirl about, they are every moment in danger of cutting each other's throats ; and did they not fhun the threatened mifchief with inconceivable dexterity, it could not be avoided. By these motions they intend to reprefent the manner in which they kill, fealp, and take their prifoners. To heighten the fcene, they fet up the fame hideons yells, cries, and warwhoops they use in time of action : fo that it is impoflible to confider them in any other light than as an affembly of demons.

I have frequently joined in this dance with them, but it foon ceafed to be an amufement to me, as I could not lay afide my apprehensions of receiving fome dreadful wound, that from the violence of their gestures must have proved mortal.

I found that the nations to the weftward of the Midlifippi, and on the borders of Lake Superior, ftill continue to make use of the Pawwaw or Black Dance. The people of the colonies tell a thousand ridiculous ftories of the Devil being raised in this dance by the Indians. But they allow that this was in former times, and is now nearly extind among those who live adjacent to the European fettlements. However I discovered that it was fill used in the interior parts; and though I did not actually fee the Devil faile I by

it, I was witnefs to fome fcenes that could only be performed by fuch as dealt with him, or were very expert and continuous jugglers.

While I was among the Naudoweffics, a dance, which they thus resimed, was performed. Before the dance began, one of the Indians was admitted into a fociety which they denominated Wakon-Kitchewah, that is, the Friendly Society of the Spirit. This fociety is composed of perfons of both fexes, but fuch only can be admitted into it as are of unexceptionable character, and who receive the approbation of the whole body. To this admiffion fucceeded the Pawwaw Dance (in which I faw nothing that could give rife to the reports I had heard) and the whole, according to their ufual cuftom, concluded with a grand feaft.

The initiation being attended with fome very fingular circumftances, which, as I have before obferved, muft be either the effect of magic, or of amazing dexterity, I fhall give a particular account of the whole procedure. It was performed at the time of the new moon, in a place appropriated to the purpofe, near the centre of their camp, that would contain about two hundred people. Being a ftranger, and on all occasions treated by them with great civility, I was invited to fee the ceremony, and placed clofe to the rails of the inclofure.

About twelve o'clock they began to affemble; when the fun fhone bright, which they confidered as a good omen, for they never by choice hold any of their public meetings unlefs the fky be clear and unclouded. A great number of chiefs first appeared, who were dreffed in their best apparel; and after them came the head-warrior, clad in a long robe of rich furs, that trailed on the ground, attended by a retinue of fifteen or twenty perfons, painted and dreffed in the gayest manner. Next followed the wives of fuch as had been already admitted into the fociety; fociety ; er ranks, power to

fociety; and in the rear a confused heap of the lower ranks, all contributing as much as lay in their power to make the appearance grand and flowy.

When the affembly was feated, and filence proclaimed, one of the principal chiefs arole, and in a thort but mafterly speech informed his audience of the occasion of their meeting. He acquainted them that one of their young men willed to be admitted into their feciety; and taking him by the hand prefented him to their view, alking them at the fame time, whether they had any objection to his becoming one of their community.

No objection being made, the young candidate was placed in the centre, and four of the chiefs took their flations close to him; after exhorting him, by turns, not to faint under the operation he was about to go through, but to behave like an Indian and a man, two of them took hold of his arms, and caufed him to kneel; another placed himfelf behind him, fo as to receive him when he fell, and the laft of the four retired to the diftance of about twelve feet from him exactly in front.

This difpolition being completed, the chief than food before the kneeling candidate, began to fpeak to him with an audible voice. He told him that he himfelf was now agitated by the fame fpirit which he flould in a few moments communicate to him; that it would ftrike him dead, but that he would infantly be reftored again to life : to this he added, that the communication however terrifying, was a necessary introduction to the advantages enjoyed by the community into which he was on the point of being admitted.

As he fooke this, he appeared to be greatly agitated; till at last his emotions became to violent, that his countenance was difforted, and his whole frame convulfed. At this juncture he threw fomething that appeared both in thape and color like a finall beau, at

at the young man, which feemed to enter his mouth, and he inftantly fell as motionlefs as if he had been thot. The chief that was placed behind him received him in his arm's, and, by the affiftance of the other two, laid him on the ground to all appearance bereft of life.

Having done this, they immediately began to rub his limbs, and to ftrike him on the back, giving him fuch blows, as feemed more calculated to ftill the quick, than to raife the dead. During thefe extraordinary applications, the speaker continued his harangue, defiring the spectators not to be surprifed, or to dispair of the young man's recovery, as his prefent inanimate fituation proceeded only from the forcible operation of the spirit, on faculties that had hitherto been unused to infpirations of this kind.

The candidate lay feveral minutes without fenfe or motion; but at length, after receiving many violent blows, he began to diffeover fome fymptoms of returning life. Thefe, however, were attended with ftrong convultions, and an apparent obstruction in his throat. But they were foon at an end; for having diffharged from his mouth the bean, or whatever it was that the chief had thrown at him, but which on the cloteft infpection I had not perceived to enter it, he foon after appeared to be tolerably recovered.

This part of the ceremony being happily effected, the officiating chiefs diffobed him of the clothes he had utually worn, and put on him a fet of apparel'entirely new. When he was drefied, the fpeaker once more took him by the hand, and prefented him to the fociety as a regular and thoroughly initiated member, exhorting them, at the tame time, to give him fuch neceflary affiftance, as being a young member, he might flaud in need of. He then also charged the newly elected brother to receive with humility, and to follow with punctuality the advice of his elder brethren. All All the now form the mufic celebratin

y offected, clothes he upparel'eneaker once d him to y initiated he, to give ung memlfo charghumility, f his ekler All All those who had been admitted within the rails, now formed a circle around their new brother, and the music striking up, the great chief fung a long, celebrating as usual their martial exploits.

The only mulic they make use of is a dram, which is composed of a piece of a hollow tree curiously wrought, and over one end of which is thrained a skin, this they beat with a fingle flick, and it gives a found that is far from harmonious, but it just serves to beat time with. To this they fometimes add the chichicoe, and in their war dances they likewife use a kind of fife, formed of a reed, which makes a shrill harsh noife.

The whole affembly were by this time united, and the dance began; feveral fingers affifted the mufic with their voices, and the women joining in the chorus at certain intervals, they produced together a not unpleafing but favage harmony. This was one of the most agreeable entertainments I faw whilst I was among them.

I could not help laughing at a fingular childifh cuftom I observed they introduced into this dance, and which was the only one that had the least appearance of conjuration. Most of the members carried in their hands an otter or martin's fkin, which being taken whole from the body, and filled with wind, on being compressed made a squeaking noise through a fmall piece of wood organically formed and fixed in its mouth. When this infirument was prefented to the face of any of the company, and the found emi,... ted, the perfon receiving it instantly fell down to appearance dead. Sometimes two or three, both men and women, were on the ground together; but inimediately recovering, they role up and joined again in the dance. This feemed to afford, even the calles themfelves, infinite diversion. I afterwards learned that these were their Dii Penates or Household Gods.

After

After fome hours fpent in this manner the feaft began; the diffues being brought near me, I perceived that they confifted of dog's flefth; and I was informed that all their public grand feafts they never made use of any other kind of food. For this purpole, at the feast I am now speaking of, the new candidate provides fat dogs, if they can be procured at any price.

In this cuftom of cating dog's flefh on particular occasions, they refemble the inhabitants of fome of the countries that lie on the north-east borders of The author of the account of Kamfchatka, Afia. published by order of the Empress of Russia (before referred to) inform us, that the people inhabiting Koreka, a country north of Kamfchatka, who wander about in hordes like the Arabs, when they pay their worfhip to the evil beings, kill a rein-deer or a dog, the fleih of which they eat, and leave the head and tongue flicking on a pole with the front towards the caft. Also that when they are afraid of any infectious diftemper, they kill a dog, and winding the guts about two poles, pafs between them. These cuftoms, in which they are nearly imitated by the Indians, feem to add ftrength to my-fupposition, that America was first peopled from this quarter.

I know not under what clafs of dances to rank that performed by the Indians who came to my tent when I landed near Lake Pepin, on the banks of the Mififippi, as related in my Journal. When I looked out, as I there mentioned, I faw about twenty naked young Indians, the most perfect in their fhape, and by far the handfomest of any I had ever feen, comingtowards me, and dancing as they approached, to the music of their drums. At every ten or twelve yards they halted, and fet up their yells and cries.

When they reached my tent, I asked them to come in; which, without deigning to make me any answer, they did. As I observed that they were painted red and and blac an enem dance w Idoubted who had mined t purpofe, my gun to keep a their gus

to come anfwer, nted red and and black, as they ufually are when they go against an enemy, and perceived that fome parts of the wardance were intermixed with their other movements, Idoubted not but they were fet on by the inimical chief who had refused my falutation : I therefore determined to fell my life as dear as possible. To this purpose, I received them fitting on my cheft, with my gun and pistols beside me, and ordered my men to keep a watchful eye on them, and to be also up their guard.

The Indians being entered, they continued their dance alternately, finging at the fame time of their heroic exploits, and the fuperiority of their race over every other people. To enforce their language, though it was uncommonly nervous and expressive, and fuch as would of itfelf have carried terror to the firmest heart, at the end of every period they struck their war-clubs against the poles of my tent, with fuch violence, that I expected every moment it would have tumbled upon us. As each of them, in dancing round, paffed by me, they placed their right hands over their eyes, and coming close to me, looked me Readily in the face, which I could not construe into a token of friendfhip. My men gave themfelves up for loft, and I acknow ledge, for my own part, that I never found my apprehensions more tumultuous on any occasion.

When they had nearly ended their dance, I prefented to them the pipe of peace, but they would not receive it. I then, as my laft refource, thought I would try what prefents would do; accordingly I took from my cheft fome ribands and trinkets, which I laid before them. Thefe feemed to ftagger their refolutions, and to avert in fome degree their anger; for after holding a confultation together, they fat down on the ground, which I confidered as a favorable omen.

Thus

Thus it proved, as in a flort time they received the pipe of peace, and lighting it, first prefented it to me, and then finoked with it themfelves. Soon after they took up the prefents, which had hitherto lain neglected, and appearing to be greatly pleafed with them, departed in a friendly manner. And never did l receive greater pleafure than at getting rid of fuch formidable guests.

It was not ever in my power to gain a thorough knowledge of the defigns of my vifitors. I had fufficient reafon to conclude that they were hoftile, and that their vifit, at fo late an hour, was made through the infligation of the Grand Sautor; but I was afterwards informed that it might be intended as a compliment which they utually pay to the chiefs of every other nation who happen to fall in with them, and that the circumftances in their conduct, which had appeared to infpicious to me, were merely the effects of their vanity, and defigned to imprefs on the minds of those whom they thus visited an elevated opinion of their valor and prowefs. In the morning before I continued my route, feveral of their wives brought me a prefent of fome fugar, for whom I found a few more ribands.

The dance of the factifice is not fo denominated from their offering up at the fame time a factifice to any good or evil fpirit, but is a dance to which the Naudoweffies give that title from being ufed when any public fortunate circumftance befalls them. Whilft I refided among them, a fine large deer accidentally ftrayed into the middle of their encampment, which they foon deftroyed. As this happened juft to the new moon, they effected it a lucky omen; and having roafted it whole, every one in the camp partook of it. After their featt, they all joined in a dance, which they termed, from its being fomewhat of a religious nature, a dance of the factifice. CHAPTER VIII. HUNTING is the principle occupation of the Indians; they are trained to it from their earlieft youth, and it is an exercife which is effecemed no lefs honorable than neceffary towards their fubliftence. A dexterous and refolute hunter is held nearly in as great effimation by them as a diffinguithed warrior. Scarcely any device which the ingenuity of man has diffeovered for enfnaring or deftroying those animals that fupply them with food, or whose fkins are valuable to Europeans, is unknown to them.

Whilit they are engaged in this exercife, they fhake off the indolence peculiar to their nature, and become active, perfevering, and indefatigable. They are equally fagacious in finding their prey, and in the means they use to deftroy it. They differen the footfteps of the beafts they are in purfuit of, although they are imperceptible to every other eye, and can follow them with certainty through the pathlefs foreft.

The beafts that the Indians hunt, both for their fleth on which they fubfit, and for their fkins, of which they either make their apparel, or barter with the Europeans for necefiaries, are the buffalo, the elk, the deer, the moofe, carribboo, the bear, the beaver, the otter, the martin, &c. I defer giving a defeription of these creatures here, and shall only at prefent treat of their manner of hunting them.

The route they shall take for this purpose, and the parties that shall go on the different expeditions are fixed in their general councils, which are held fome time in the summer, when all the operations for the ensuing winter are concluded on. The chief-warrior_a

164

rior, whole province it is to regulate their proceedings on this occasion, with great folemnity iffues out an invitation to those who choose to attend him; for the Indians, as before observed, acknowledge no fuperiority, nor have they any idea of compulsion; and every one that accepts it, prepares himself by fasting during feveral days.

The Indians do not faft as fome other nations do, on the richeft and most luxurious food, but they totally abstain from every kind either of victuals or drink; and fuch is their patience and refolution, that the most extreme thirst could not oblige them to taste a drop of water; yet amidst this fevere abstinence they appear cheerful and happy.

The reafons they give for thus faiting, are, that it enables them freely to dream, in which dreams they are informed where they fhall find the greatest plenty of game; also that it averts the displeasure of the evil spirits, and induces them to be propitious. They also on these occasions blacken those parts of their bodies that are uncovered.

The faft being ended, and the place of hunting made known, the chief who is to conduct them, gives a grand feaft to thofe who are to form the different parties; of which none of them dare to partake till they have bathed themfelves. At this feaft, notwithftanding they have fafted to long, they eat with great moderation; and the chief that prefides employs himfelf in rehearing the feats of thofe who have been molt fuccefsful in the bufinefs they are about to enter upon. They foon after fet out on the march towards the place appointed, painted or rather bedawbed with black, amidft the acclamations of all the people.

It is impossible to defcribe their agility or perfeverance, whilst they are in purfuit of their prey; neither thickets, ditches, torrents, pools, or rivers flop them; they always go straight forward in the most direct direct lin favage in overtake.

When out their mals con or make continue lafts.

rey; neiivers flop the molt direct direct line they possibly can, and there are few of the favage inhabitants of the woods that they cannot overtake.

When they hunt for bears, they endeavour to find out their retreats; for, during the winter, these animals conceal themfelves in the hollow trunks of trees, or make themfelves holes in the ground, where they continue without food, whilst the fevere weather lafts.

When the Indians think they have arrived at a place where thefe creatures usually haunt, they form themfelves into a circle according to their number, and moving onward, endeavour, as they advance towards the centre, to difcover the retreats of their prey. By this means, if any lie in the intermediate fpace, they are fure of aroufing them, and bringing them down either with their bows or their guns: The bears will take to flight at fight of a man or a dog, and will only make refiftance when they are extremely hungry, or after they are wounded.

The Indian method of hunting the buffalo is by forming a circle or a fquare, nearly in the fame manner as when they fearch for the bear. Having taken their different flations, they fet the grafs, which at this time is rank and dry, on fire, and thefe animals, who are extremely fearful of that element; flying with precipitation before it, great numbers are hemmed in a finall compafs, and fearcely a fingle one efcapes

They have different ways of hunting the elk, the deer, and the carriboo. Sometimes they feek them out in the woods, to which they retire during the feverity of the cold, where they are eafily fhot from behind the trees. In the more northern climates they take the advantage of the weather to deftroy the elk; when the fun has just ftrength enough to melt the fnow, and the frost in the night forms a kind of cruft on the furface, this creature being heavy, breaks. it with his forked hoofs, and with difficulty extricates himfelf from it: at this time therefore he is foon overtaken and deftroyed.

Some nations have a method of hunting thefe animals which is more eafily executed, and free from danger. The hunting party divide themfelves into two bands, and choosing 'a spot near the borders of fome river, one party embarks on board their canoes, whilft the other forming themfelves into a femi-circle on the land, the flanks of which reach the flore, let loofe their dogs, and by this means roufe all the game that lies within thefe bounds; they then drive them towards the river, into which they no fooder enter, than the greatest part of them are immedia ely difpatched by those who remain in the canoes

Both the elk and buffalo are very furious when they are wounded, and will return fiencely on their purfuers, and trample them under their feet, if the hunter finds no means to complete their deftruction, or does not feek for fearity in flight to fome adjacent tree; by this method fley are frequently avoided, and fo tired with the purfuit, that they voluntarily give it over.

But the hunting in which the Indians, particularly thofe who inhabit the northern parts, chiefly employ themfelves, and from which they reap the greateft advantage, is the beaver hunting. The feafon for this is throughout the whole of the winter, from November to April; during which time the fur of these creatures is in the greatest perfection. A defeription of this extraordinary animal, the construction of their huts, and the regulations of their almost rational community, I shall give in another place.

The hunters make use of several methods to deft of them. Those generally practifed, are either that of taking them in fuares, cutting through the ice, or opening their causeways. As the c hearing ex fary in app go far fro built clofe dams of the they halte immediate make a go tails, on p guard.

They to ner: tho fore of put the winte to the ne plies of for haunts, p pieces of heaver ha of wood enemies, inftantly At oth

13

As the eyes of the fe animals are very quick, and their hearing exceedingly acute, great precaution is neceffary in approaching their bodies; for as they feldom go far from the water, and their houses are always built close to the fide of fome large river or lake, or dams of their own conftructing, upon the least alarm they halten to the deepeft part of the water, and dive immediately to the bottom; as they do this they make a great noife by beating the water with their tails, on purpose to put the whole fraternity on their, guard.

They take them with fnares in the following manner: though the beavers ufually lay up a fufficient fore of provision to ferve for their fubfiltence during the winter, they make from time to time excursions to the neighbouring woods to procure further fupplies of food. The hunters having found out their haunts, place a trap in their way, baited with fmall pieces of bark, or young thoots of trees, which the beaver has no fooner laid hold of, than a large log of wood falls upon him, and breaks his back; his enemies, who are upon the watch, foon appear, and inftantly difpatch the helplefs animal.

At other times, when the ice on the rivers and lakes is about half a foot thick, they make an opening through it with their hatchets, to which the beavers will foon haften, on being diffurbed at their houfes, for a fupply of fresh air. As their breath occasions a confiderable motion in the water, the hunter has fulficient notice of their approach, and methods are easily taken for knocking them on the head the moment they appear above the furface.

When the houses of the beavers happen to be near a rivulet, they are more easily deftroyed: the hunters then cut the ice, and spreading a net under it, break down the cabins of the beavers, who never fail to make towards the deepest part, where they are entangled and taken. But they must not be fusiered

to remain there long, as they would foon extricate themfelves with their teeth, which are well known to be exceflively fharp and ftrong.

The Indians take great care to hinder their dogs from touching the bones of the beavers. The reafons they give for thefe precautions, are, first, that the bones are fo excessively hard, that they spoil the teeth of the dogs: and, fecondly, that they are apprehensive they shall fo exasperate the spirits of the beavers by this permission, as to render the next hunting feason unfuccessful.

The fkins of thefe animals, the hunters exchange with the Europeans for neceffaries, and as they are more valued by the latter than any other kind of furs, they pay the greatest attention to this species of hunting.

When the Indians deftroy buffalos, elks, deer, &c. they generally divide the fleth of fuch as they have taken among the tribe to which they belong. But in huating the beaver a few families ufually unite and divide the fpoil between them. Indeed, in the first inftance they generally pay fome attention in the division to their own families; but no jealouss or marmurings are ever known to arise on account of any apparent partiality.

Among the Naudoweffies, if a perfon fhoots a deer, buffalo, &c. and it runs to a confiderable diffance before it drops, where a perfon belonging to another tribe, being nearer, first flicks a knife into it, the game is confidered as the property of the latter, notwithstanding it had been mortally wounded by the former. Though this cuftom appears to be arbitrary and unjuft, yet that people cheerfully fabrit to it. This decifion is, however, very different from that practifed by the Indians on the back of the colonies, where the first perfon that hits, is entitled to the beft thare.

CHAPTER IX.

OF THEIR MANNER OF MAKING WAR, C'c.

HE Indians begin to bear arms at the age of fifteen, and lay them afide when they arrive at the age of fixty. Some nations to the fouthward, I have been informed, do not continue their military exerelies after they are fifty.

In every band or nation there is a felect number who are fliled the warriors, and who are always ready to act either offenfively or defenfively, as occasion requires. These are well armed, bearing the weapons commonly in use among them, which vary according to the fituation of their countries. Such as have an intercourse with the Europeans make use of tomahawks, knives, and fire-arms; but those whose dwellings are fituated to the westward of the Missisippi, and who have not an opportunity of purchasing these kinds of weapons, use bows and arrows, and also the Caste Tête or War-Club.

The Indians that inhabit fill further to the weftward, a country which extends to the South Sea, ufe in fight a warlike inftrument that is very uncommon. Having great plenty of horfes, 'hey always attack their enemies on horfeback, and encumber themfelves with no other weapon, than a ftone of a middling fize, curioufly wrought, which they faften by a ftring, about a yard and a half long, to their right arms, a lade above the elbow. Thefe ftones they conveniently carry in their hands, till they reach their enemies, and then fwinging them with great dexterity, as they ride full fpeed, never fail of doing execution. The country which their tribes pofiefs, abounding with large extensive plains, those who attack them R

:6g_

1:3

feldom return; as the fwiftnefs of their horfes, on which they are mounted, enables them to overtake even the flecteft of their invaders.

The Naudoweffies, who had been at war with this people, informed me, that unlefs they found morafies or thickets to which they could retire, they were fure of being cut off: to prevent this they always tools care whenever they made an onfet, to do it near fuch retreats as were impaffiable for cavalry, they then having a great advantage over their enemies, whofe weapons would not there reach them.

Some nations make use of a javelin, pointed with boue, worked into different forms; but their Indian weapons in general are bows and arrows, and the flort club already mentioned. The latter is made of a very hard wood, and the head of it fashioned round like a ball, about three inches and a half diameter; in this rotund part is fixed an edge refembling that of a tomahawk, either of steel or flint, which sover they can procure.

The dagger is peculiar to the Naudoweffic nation, and of ancient construction, but they can give no account how long it has been in use among them. It was originally made of flint or bone, but fince they have had communication with the European traders, they have formed it of steel. The length of it is about ten inches, and that part close to the handle nearly three inches broad. Its edges are keen, and it gradually tapers towards a point. They wear it in a theath made of deer's leather, neatly ornamented with porcupine quills; and it is ufually hung by a ftring, decorated in the fame manner, which reaches as low only as the breaft. The curious weapon is worn by a few of the principal chiefs alone, and confidered both as an uleful instrument, and an ornamental badge of fuperiority.

I observed among the Naudowessies a few targets or shields made of raw buffalo hides, and in the form of the thefe the ær them, ther to

w targets the form of of those used by the ancients. But as the number of these was finall, and I could gain no intelligence of the æra in which they first were introduced among them, I suppose those I faw had descended from father to fon, for many generations.

The reafons the Indians give of making war againft one another, are much the fame as those urged by more civilized nations for diffurbing the tranquility of their neighbours. The pleas of the former are however in general more rational and just, than fuch as are brought by Europeans in vindication of their proceedings.

The extension of empire is feldom a motive with these people to invade, and to commit depredations on the territories of those who happen to dwell near them. To secure the rights of hunting within particular limits, to maintain the liberty of pating through their accustomed tracks, and to guard those lands which they consider from a long tenure as their own, against any infringement, are the general causes of those differitors that so often break out between the Indian nations, and which are carried on with so much animosity.

Though ftrangers to the idea of feparate property, yet the most uncultivated among them are well acquainted with the rights of their community to the domains they posses, and oppose with vigor every envroachment on them.

Notwithstanding it is generally supposed that from their territories being fo-extensive, the boundaries of them cannot be afeertained, yet I am well assured that the limits of each nation in the interior parts are laid down in their rude plans with great precision. By theirs, as I have before observed, was I enabled to regulate my own; and after the most exact observations and inquiries I found very few instances in which they erred.

But

But intereft is not either the most frequent or most powerful incentive to their making war on each other. The passion of revenge, which is the diffinguishing characteristic of these people, is the most general motive. Injuries are felt by them with exquisite fensibility, and vengeance purfued with unremitted ardor. To this may be added, that natural excitation which, every Indian become fensible of, as soon as he approaches the age of manhood to give proof of his valor and prowers.

As they are early poffeffed with a notion that war ought to be the chief butinefs of their lives, that there is nothing more defirous than the reputation of being a great warrior, and that the fealps of their enemies, or a number of prifoners are alone to be effected valuable, it is not to be wondered at that the young Indians are continually reftlefs and uncafy if their ardor is reprealed, and they are kept in a flate of inactivity. Either of thefe propenfitives, the defire of revenge or the gratification of an impulfe, that by degrees becomes habitual to them, is fufficient, frequently, to induce them to commit hoftilities on fome of the neighbouring nations.

When the chiefs find any occasion for making war, they endeavour to aroufe thefe habitudes, and by that means foon excite their warriors to take arms. To chis purpose they make use of their martial elequence, nearly in the following words, which never fails of proving effectual; "the bones of our deceafed countryinen lie uncovered, they call out to us to revenge their wrongs, and we must fatisfy their request. Their fpirits cry out against us. They must be appealed. The genii, who are the guardians of our honour, infpire us with a refolution to feek the enemies of our murdered brothers. Let us go and devour those by whom they were flain. Sit therefore no longer inactive, give way to the impulse of your natural valor, anoint your hair, paint your faces, fill your quivers, caule

caufe the foreft to refound with your fongs, confole the fpirits of the dead, and tell them they shall be revenged."

Animated by thefe exhortations the warriors fnatch their arms in a transport of fury, fing the fong of war, and burn with impatience to imbrue their hands in the blood of their enemies.

Sometimes private chiefs affemble fmall parties and make excurtions againft thofe with whom they are at war, or fuch as have injured them. A fingle warrior, prompted by revenge or a defire to fhow his prowefs, will march unattended for feveral hundred miles, tofurprife and cut off a flraggling party.

Thefe irregular fallies however, are not always approved of by the elder chiefs, though they are oftenobliged to connive at them; as in the inftant before given of the Naudoweffie and Chipéway nations.

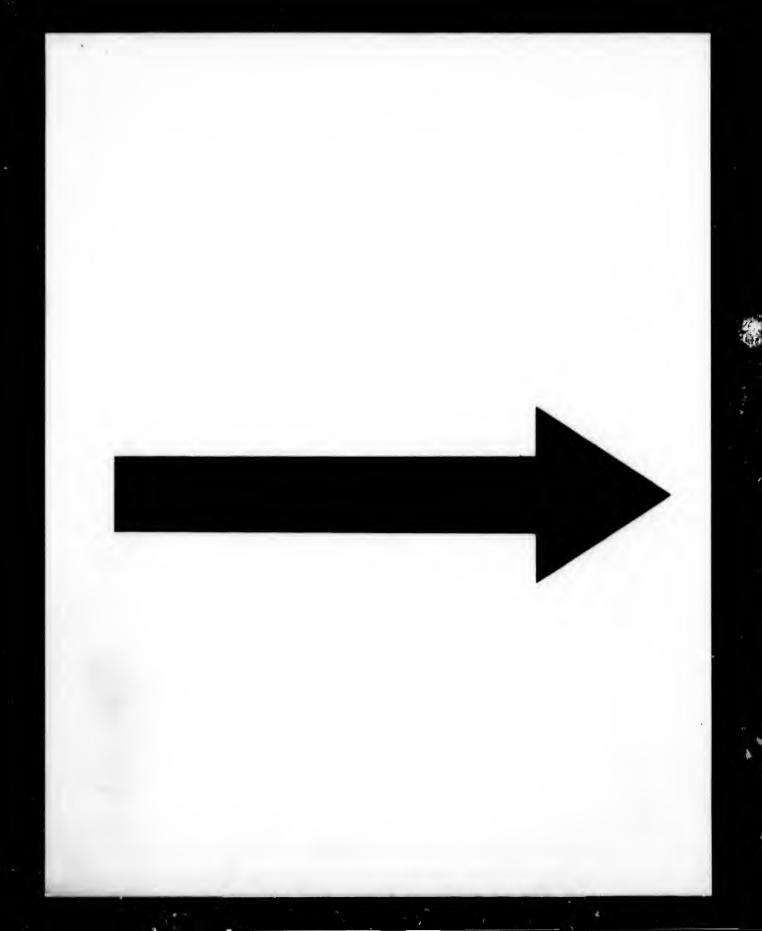

But when a war is national, and undertaken by the community, their deliberations are formal and flow. The elders affemble in council, to which all the head warriors and young men are admitted, where they deliver their opinions in folemn fpeeches, weighing with maturity the nature of the enterprife they are about to engage in, and balancing with great fagacity theadvantages or inconveniences that will arife from it.

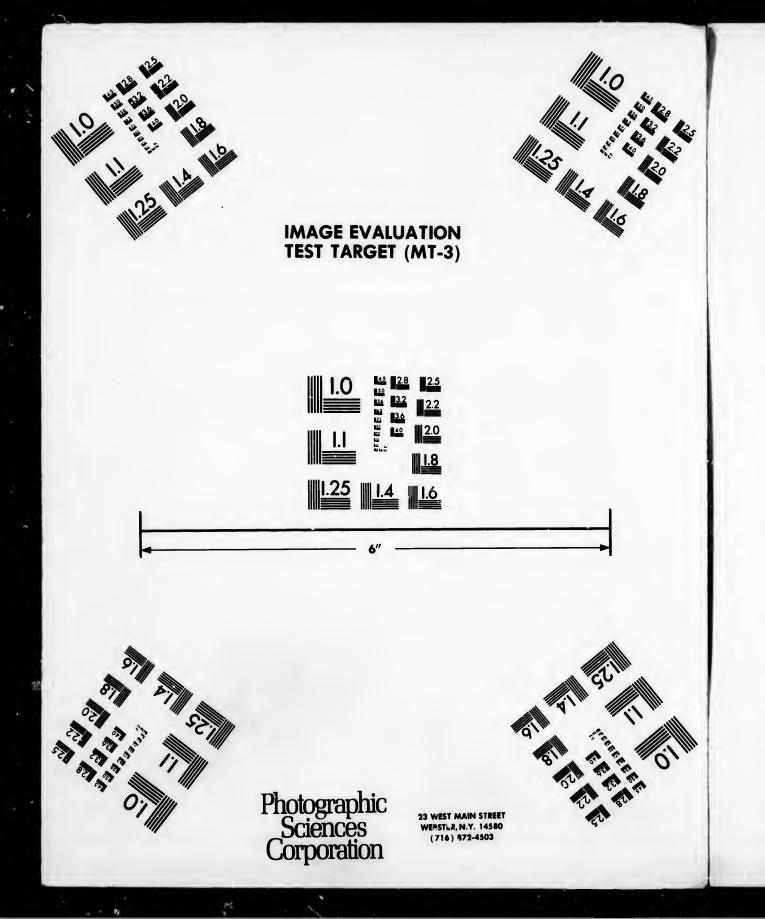

Their priefts are also confulted on the fubject, and even, fometimes, the advice of the most intelligent of their women is atked.

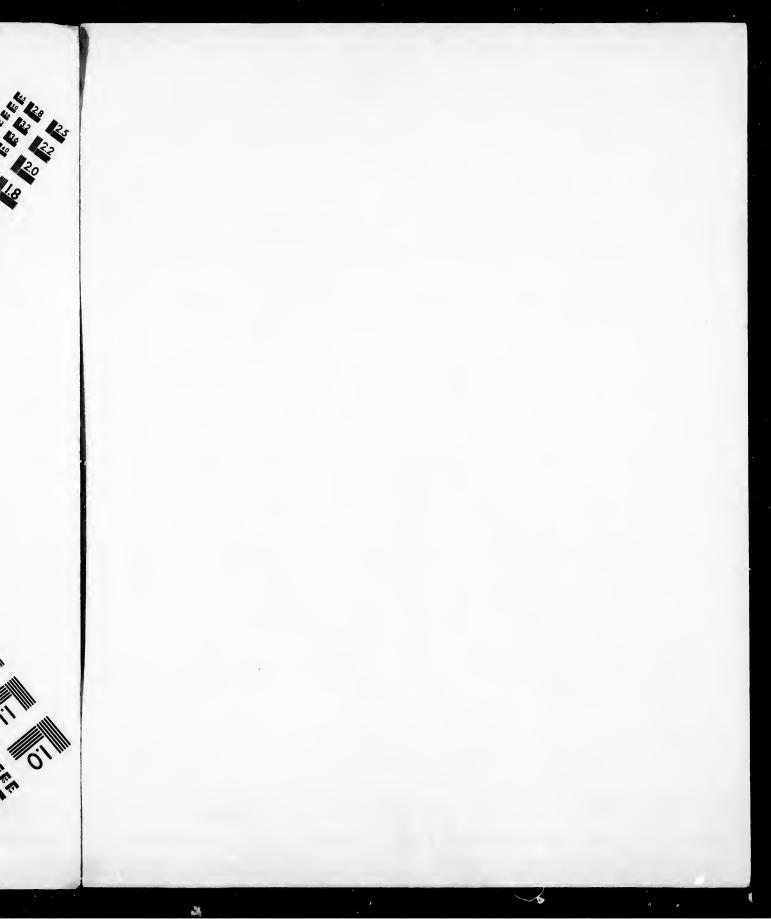

If the determination be for war, they prepare for it with much ceremony.

The chief warrior of a nation does not on all occafions head the war party himfelf, he frequently deputes a warrior of whofe valor and prudence he has a good opinion. The perfon thus fixed on being first bedawbed with black, obferves a fast of feveral days, during which he invokes the Great Spirit, or deprecates the anger of the evil ones, holding whilst it lasts no converse with any of his tribe.

He

He is particularly careful at the fame time to obferve his dreams, for on these do they suppose their fuccess will in a great measure depend; and from the firm perfuasion every Indian actuated by his own presuntous thoughts is impressed with, that he shall march forth to certain victory, these are generally favorable to his wishes.

After he has fasted as long as custom preferibes, he affembles the warriors, and holding a belt of wampum in his hand, thus addreffes them :

"Brothers ! by the infpiration of the Great Spirit I now fpeake unto you, and by him am I prompted to carry into execution the intentions which I am about to difclofe to you. The blood of our deceafed brothers is not yet wiped away; their bodies are not yet covered, and I am going to perform this duty to thein."

Having then-made known to them all the motives that induce him to take up arms againft the nation with whom they are to engage; he thus proceeds : " I have therefore refolved to march through the warpath to furprife them. We will eat their flefh, and drink their blood; we will take fealps, and make prifoners; and fhould we perifh in this glorious enterprife, we fhall not be for ever hid in the duft, for this belt fhall be a recompense to him who buries the dead." Having faid this, he lays the belt on the ground, and he who takes it up declares himfelf his lieutenant, and is confidered as the fecond in command; this, however, is only done by fome diftinguished warrior who has a right by the number of his fealps, to the poft.

Though the Indians thus affert that they will eat the fiefh and drink the blood of their enemies, the threat is only to be confidered as a figurative exprefion. Notwithstanding they fometimes devour the hearts of those they flay, and drink their blood, by way of bravado, or to gratify in a more complete manner mannet thropo The annoin paint, terrible and en this he tions t by all Thi have b a feaft Thi warrid him i and d fo lon and re As receiv muft toexp who will 1 cariy impa N ceedi knov medi with

y will eat mies, the ative exs devour blood, by complete nanner manner their revenge, yet they are not naturally anthropophagi, nor ever feed on the flefh of men.

The chief is now washed from his fable covering, annointed with bear's fat, and painted with their red paint, in fuch figures as will make him appear most terrible to his enemies. He then fings the war fong, and enumerates his warlike actions. Having done this he fixes his eyes on the fun, and pays his adorations to the Great Spirit, in which he is accompanied by all the warriors.

This ceremony is followed with dances, fuch as I have before defcribed; and the whole concludes with a feaft which ufually confifts of dog's flefh.

This feaft is held in the hut or tent of the chief warrior, to which all those who intend to accompany him in his expedition fend their diffues to be filled; and during the feaft, notwithstanding he has fasted fo long, he fits composedly with his pipe in his mouth, and recounts the valorous deed of his family.

As the hopes of having their wounds, fhould they receive any, properly treated, and expeditioufly cured, muft be fome additional inducement to the warriors to expose themfelves more freely to danger, the priefts, who are alfo their doctors, prepare fuch medicines as will prove efficacious. With great ceremony they carry various roots and plants, and pretend that they impart to them the power of healing.

Notwithstanding this fuperstitious method of proceeding, it is very certain that they have acquired a knowledge of many plants and herbs that are of a medicinal quality, and which they know how to use with great skill.

From the time the refolution of engaging in a war is taken, to the departure of the warriors, the nights are fpent in feftivity, and their days in making the needful preparations.

If it is thought neceffary by the nation going to war, to folicit the alliance of any neighbouring tribe, they

they fix upon one of their chiefs who fpeaks the language of that people well, and who is a good orator, and fend to them by him a belt of wampum, on which is fpecified the purport of the embafly in figures that every nation is well acquainted with. At the fametime he carries with him a hatchet painted red.

As foon as he reaches the camp or village to which he is defined, he acquaints the chief of the tribe with the general tenor of his commiffion, who immediately affembles a council, to which the ambaffador is invited. There having laid the hatchet on the ground he holds the belt in his hand, and enters more minutely into the occafion of his embaffy. In his fpeech he invites them to take up the hatchet, and as foon ashe has finished speaking delivers the belt:

If his hearers are inclined to become auxiliaries to his nation, a chief fteps forward and takes up the hatchet, and they immediately efpouse with spirit the cause they have thus engaged to support. But if on this application neither the belt or hatchet are accepted, the emission neither the belt or hatchet are accepted, the emission neither the belt or hatchet are acceptfission have already entered into an alliance with the foes of his nation, and returns with speed to inform his countrymen of his ill fucces.

The manner in which the Indians declare war againft each other, is by fending a flave with a hatchet, the handle of which is painted red, to the nation which they intend to break with; and the meffenger, notwithftanding the danger to which he is exposed from the fudden fury of those whom he thus fets at defiance, executes his commiffion with great fidelity.

Sometimes this token of defiance has fuch an inftantaneous effect on those to whom it is prefented, that in the first transports of their fury a small party will iffue forth, without waiting for the permission of the elder chiefs, and flaying the first of the offending nation they meet, cut open the body and flick a hatchet of the same kind as that they have just received, into into the more re the end exafper they eft The as fuch induftry tedious ages ov

into the heart of their flaughtered foe. Among the more remote tribes this is done with an arrow or fpear, the end of which is painted red. And the more to exafperate, they difmember the body, to fhow that they efteem them not as men, but as old women.

The Indians feldom take the field in large bodies, as fach numbers would require a greater degree of industry to provide for their fublistence, during their tedious marches through dreary forests, or long voyages over lakes and rivers, than they would care to befow.

Their armies are never encumbered with baggage or military flores. Each warrior, befides his weapons, carries with him only a mat, and whilft at a diftance from the frontiers of the enemy fupports himfelf with the game he kills or the fifh he catches.

When they pass through a country where they have no apprehensions of meeting with an enemy, they use very little precaution, fome times there are fearcely a dozen warriors left together, the reft being disperied in pursuit of their game; but though they should have roved to a very confiderable distance from the warpath, they are fure to arrive at the place of rendezvous by the hour appointed.

They always pitch their tents long before fun-fet; and being naturally prefumptuous, take very little care to guard against a furprife. They place great confidence in their Manitous, or household gods, which they always carry with them; and being perfuaded that they take upon them the office of centinels, theysleep very fecurely under their protection.

These Manitous, as they are called by some nations, but which are termed Wakons, that is spirits, by the Naudowessies, are nothing more than the otter and martin skins I have already described, for which, however, they have a great veneration.

After they have entered the enemy's country, no people can be more cautious and circumspect; fires are no longer lighted, no more fhouting is heard, nor the game any longer purfued. They are not even permitted to fpeak; but must convey whatever they have to impart to each other by figns and motions.

They now proceed wholly by ftratagem and ambufcade. Having difcovered their enemies, they fend to reconnoitre them; and a council is immediately held, during which they fpeak only in whifpers to confider of the intelligence imparted by those who were fent out.

The attack is generally made just before day break, at which period they fuppose their foes to be in their foundest fleep. Throughout the whole of the preceding night they will lie flat upon their faces, without ftirring; and make their approaches in the fame posture, creeping upon their hands and feet till they are got within bowshot of those they have destined to destruction. On a fignal given by the chief warrior, to which the whole body makes answer by the most hideous yell, they all start up, and discharging their arrows in the fame instant, without giving their adversaries time to recover from the confusion into which they are thrown, pour in upon them with their war-clubs or tomahawks.

The Indians think there is little glory to be acquired from attacking their enemies openly in the field; their greateft pride is to furprife and deftroy. They feldom engage without a manifeft appearance of advantage. If they find the enemy on their guard, too ftrongly entrenched, or fuperior in numbers, they retire, provided there is an opportunity of doing fo. And they efteem it the greateft qualification of a chief warrior, to be able to manage an attack, fo as to deftroy as many of the enemy as poffible, at the expence of a few men.

Sometimes they fecure themfelves behind trees, hillocks, or ftones, and having given one or two rounds, retire before they are difcovered. Europeans, and, who ing too c cy of it. Gener ber. hind trees, ne or two Europeans, and, who are unacquainted with this method of fighting too often find to their cost the destructive efficacy of it.

General Braddock was one of this unhappy number. Marching in the year 1755, to attack Fort Du Quefne, he was intercepted by a party of French and confederate Indians in their interest, who by this infidious method of engaging found means to defeat his army, which confifted of about two thousand brave and well difciplined troops. So fecurely were the Indians posted, that the English scarcely knew from whence or by whom they were thus annoyed. During the whole of the engagement the latter had fcarcely a fight of an enemy; and were obliged to retreat without the fatisfaction of being able to take the leaft degree of revenge for the havoc made among them. The General paid for his temerity with his life, and was accompanied in his fall by a great number of brave fellows ; whilft his invisible enemies had only two or three of their number wounded.

When the Indians fucceed in their filent approaches, and are able to force the camp which they attack, a fcene of horror that exceeds defeription, enfues. The favage fiercenefs of the conquerors, and the defperation of the conquered, who well know what they have to expect flould they fall alive into the hands of their affailants, occasion the most extraordinary emertions on both fides. The figure of the combatants all befmeared with black and red paint, and covered with the blood of the flain, their horrid yells, and ungovernable fury, are not to be conceived by thofe who have never croffed the Atlantic.

I have frequently been a fpectator of them, and once bore a part in a fimilar fcene. But what added to the horror of it was, that I had not the confolation of being able to oppose their favage attacks. Every circumstance of the adventure flill dwells on my remembrance, and enables me to deferibe with greater performing

perfpicuity the brutal fierceness of the Indians when they have surprised or overpowered an enemy. and if

As a detail of the maffacre at Fort William Henry in the year 1757, the fcene to which I refer, cannot appear foreign to the defign of this publication, but will ferve to give my readers a just idea of the ferocity of this people, I shall take the liberty to infert it, apologizing at the fame time for the length of the digretion, and those egotisms which the relation renders unavoidable.

General Webb, who commanded the Englifh army in North-America, which was then encamped at Fort Edward, having intelligence that the French troops under Monf. Montcalm were making fome movements towards Fort William Henry, he detached a corps of about fifteen hundered men, confifting of Englifh and Provincials, to ftrengthen the garrifon. In this party I went as a volunteer among the latter.

The apprehensions of the English General were not without foundation; for the day after our arrival we faw Lake George (formerly Lake Sacrament) to which it lies contiguous, covered with an immense number of boats; and in a few hours we found our lines attacked by the French General, who had just linded with eleven thousand Regulars and Canadians, and two thousand Indians. Colonel Monro, a brave officer, commanded in the Fort, and had no more than two thousand three hundred men with him, our detachment included.

With these he made a gallant defence, and probably would have been able at last to preferve the Fort, had he been properly supported, and permitted to continue his efforts. On every summons to surrender fent by the French General, who offered the most honorable terms, his answer repeatedly was. That he yet found himself in a condition to repel the most vigorous attacks his besiegers were able to make;

ians when my. am Henry er, cannot cation, but f the feroo infert it, gth of the lation ren-

the Fort, mitted to to furrenffered the edly was. repel the to make; and and if he thought his prefent force infufficient, he could foon be fupplied with a greater number from the adjacent army.

But the Colonel having acquainted General Webb with his fituation, and defired he would fend him fome fresh troops, the General dispatched a messenger to him with a letter, wherein he informed him that it was not in his power to affift him, and therefore gave him orders to furrender up the Fort on the best terms he could procure. This packet fell into the hands of the French General, who immediately fent a flag of truce, defiring a conference with the governor. They accordingly met, attended only by a fmall guard in the centre between the lines; when Monf. Montcalm told the Colonel, that he was come in perfon to demand poffession of the Fort, as it belonged to the King his mafter. The Colonel replied, that he knew not how that could be, nor fhould he furrender it up whilst it was in his power to defend it. The French General rejoined, at the fame time delivering the packet into the Colonel's hand, "By this authority do I make the requisition." The brave Governor had no fooner read the contents of it, and was convinced that fuch were the orders of the commander in chief, and not to be difobeyed, than he hung his head in filence, and relunctantly entered into a negociation.

In confideration of the gallant defence the garrifon had made, they were to be permitted to march outwith all the honors of war, to be allowed covered waggons to transport their baggage to Fort Edward, and a guard to protect them from the f...y of the favages.

The morning after the capitulation was figned, as foon as day broke, the whole garrifon, now confifting of about two thousand men, befides women and children, were drawn up within the lines, and on the point of marching off, when great numbers of the Q Indians

We

Indians gathered about, and began to plunder. We were at first in hopes that this was their only view, and fuffered them to proceed without opposition. Indeed it was not in our power to make any, had we been fo inclined; for though we were permitted to carry off our arms, yet we were not allowed a fingle round of ammuniton. In these hopes however we were disappointed; for prefently fome of them began to attack the fick and wounded, when fuch as were not able to crawl into the ranks, notwithstanding they endeavoured to avert the fury of their enemies by their shricks or groans, were foon dispatched.

Here we were fully in expectation that the diffurbance would have concluded; and our little army began to move; but in a fhort time we faw the front division driven back, and discovered that we were entirely encircled by the favages. We expected every moment that the guard, which the French by the articles of capitulation, had agreed to allow us, would have arrived, and put an end to our apprehensions; but none appeared. The Indians now began to ftrip every one without exception of their arms and clothes, and those who made the least resistance felt the weight of their tomahawks.

I happened to be in the rear division, but it was not long before I shared the fate of my companions. Three or four of the favages laid hold of me, and whilft some held their weapons over my head, the others soon disrobed me of my coat, waistcoat, hat, and buckles, omitting not to take from me what money I had in pocket. As this was transacted close by the passage that led from the lines on to the plain, near which a French centinel was possed, I ran to him and claimed his protection; but he only called me an English dog, and thrust me with violence back again into the midst of the Indians.

I now endeavoured to join a body of our troops that were crowded together at fome diftance; but innumerable

der. We only view, opposition. by, had we mitted to ed a fingle owever we hem began ch as were nding they nemics by ed.

he difturbe army bev the front ve were enected every ach by the v us, would ehenfions; gan to ftrip ind clothes, the weight

but it was ompanions. of me, and head, the tcoat, hat, what moed clofe by the plain, d, I ran to only called olence back

our troops ance; but merable innumerable were the blows that were made at me with different weapons as I pafied on ; luckily however the favages were to clofe together, that they could not firike at me without endangering each other. Notwithftanding which one of them found means to make a thurft at me with a fpear, which grazed my fide, and from another I received a wound, with the fame kind of weapon, in my ankle. At length I gained the fpot where my countrymen flood, and forced myfelf into the midft of them. But before I got thus far out of the hands of the Indians, the collar and wriftbands of my fhirt were all that remained of it, and my flefh was foratched and torn in many places by their favage gripes.

By this time the war-whoop was given, and the Indians began to murder those that were nearest to them without distinction. It is not in the power of words to give any tolerable idea of the horrid scene that we ensued; men, women, and children were dispatched in the most wanton and cruel manner, and immediately scalped. Many of these favages drank the blood of their victims, as it flowed warm from the fatal wound.

We now perceived, though too late to avail us, that we were to expect no relief from the French; and that, contrary to the agreement they had fo lately figned to allow us a fufficient force to protect us from these infults, they tacitly permitted them ; for I could plainly perceive the French officers walking about at fome distance, discoursing together with apparent unconcern. For the honor of human nature I would hope that this flagrant breach of every facred law, proceeded rather from the favage disposition of the Indians, which I acknowledge it is fometimes almost impofible to controul, and which might now unexpectedly have arrived to a pitch not eafily to be restrained, than to any permeditated defign in the French commander. An unprejudiced obferver would,

184 #

would, however, be apt to conclude, that a body of ten thousand christian troops, most christian troops, had it in their power to prevent the massacre from becoming fo general. But whatever was the cause from which it arose, the consequences of it were dreadful, and not to be paralleled in modern history.

No

As the circle in which I ftood inclosed by this time was much thinned, and death feemed to be approaching with hafty firides, it was proposed by some of the most resolute to make one vigorous effort, and endeavour to force our way through the favages, the only probable method of preferving our lives that now remained. This, however desperate, was resolved on, and about twenty of us sprung at once into the midst of them.

In a moment we were all feparated, and what was the fate of my companions I could not learn till fome months after, when I found that only fix or feven of them effected their defign. Intent only on my own hazardous fituation, I endeavoured to make my way through my favage enemies in the beft manner poffible. And I have often been aftonifhed fince, when I have recollected with what composure I took, as I did, every neceffary flep for my prefervation. Some I overturned, being at that time young and athletic, and others I paffed by, dextroufly avoiding their weapons; till at laft two very flout chiefs, of the moft favage tribes, as I could diffinguish by their drefs, whose ftrength I could not refift, laid hold of me by each arm, and began to force me through the crowd.

I now refigned myfelf to my fate, not doubting but that they intended to difpatch me, and then to fatiate their vengeance with my blood, as I found they were hurrying me towards a retired fwamp that lay at fome diffance. But before we had got many yards, an Englifh gentleman of fome diffinction, as I could different by his breeches, the only covering he had on, which were of fine fearlet velvet, rufhed clofe by us. One a body of an troops, lacre from the caufe of it were rn hiftory. led by this to be aped by fome effort, and avages, the lives that was refolvt once into

CARVER'S TRAVELS.

One of the Indians inftantly relinquifhed his hold, and fpringing on this new object, endeavoured to feize him as his prey; but the gendeman being ftrong, threw him on the ground, and would probably have got away, had not he who held my other arm, quitted me to affift his brother. I feized the opportunity, and haftened away to join another party of Englift troops that were yet unbroken, and ftood in a body at fome diftance. But before I had taken many fteps, I haftily caft my eye towards the gentleman, and faw the Indian's tomahawk gafh into his back and heard him utter his laft groan; this added both to my fpeed and defperation.

I had left this flocking fcene but a few yards, when a fine boy about twelve years of age, that had hitherto efcaped, came up to me, and begged that I would let him lay hold of me, fo that he might ftand fome chance of getting out of the hands of the favages. I told him that I would give him every affiftance in my power, and to this purpofe bid him lay hold; but in a few moments he was torn from my fide, and by his fhrieks I judge was foon demolifhed. I could not help forgetting my own cares for a minute, to lament the fate of fo young a jufferer; but it was utterly impoffible for me to take any methods to prevent it.

I now got once more into the midft of friends, but we were unable to afford each other any fuccour. As this was the division that had advanced the furtheft from the fort, I thought there might be a poffibility (though but a bare one) of my forcing my way through the outer ranks of the Indians, and getting to a neighbouring wood, which I perceived at fome diffance. I was ftill incouraged to hope by the almost miraculous prefervation I had already experienced.

Nor were my hopes in vain, or the effort: I made ineffectual. Suffice it to fay, that I reached the wood; but by the time I had penetrated a little way into it, my breath was fo exhausted that I threw myself into Q 2 a brake,

a brake, and lay for fome minutes apparently at the last gasp. At length I recovered the power of refpi. ration; but my apprehensions returned with all their former force, when I faw feveral favages pais by, probably in pursuit of me, at no very great diffance. In this fituation I knew not whether it was better to proceed, or endeavour to conceal myfelf where I lay, till night came on ; fearing, however, that they would return the fame way, I thought it most prudent to get further from the dreadful scene of my distresses. Accordingly, ftriking into another part of the wood, I haftened on as faft as the briars and the lofs of one of my fhoes would permit me ; and after a flow progrefs of fome hours, gained a hill that overlooked the plain which I had just left, from whence I could difcern that the bloody ftorm still raged with unabated furv.

But not to tire my readers, L shall only add, that after paffing three days without fubfiftence, and enduring the feverity of the cold dews for three nights, I at length reached Fort Edward; where with proper care my body foon recovered its wonted firength, and my mind, as far as the recollection of the late melancholy events would permit, its ufual composure.

It was computed that fifteen hundred perfor were killed or made priforers by these favages during this fatal day. Many of the latter were carried off by them and never returned. A few, through favorable accidents, found their way back to their native country, after having experienced a long and fevere captivity.

The brave Colonel Munro had haftened away, foon after the confusion began, to the French camp to endeavour to procure the guard agreed by the ftipulation; but his application proving ineffectual, he remained there till General Webb ient a party of troops to demand and protect him back to Fort Edward. But these unhappy concurrences, which would probably

away, foon camp to enthe ftipulatual, he rety of troops rt Edward. would probably bably have been prevented, had he been left to purfue his own plans, together with the lofs of fo many brave fellows, murdered in cold blood, to whofe valor he had been fo lately a witnefs, made fuch an impreffion on his mind, that he did not long furvive. He died in about three months of a broken heart, and with truth might it be faid, that he was an honor to his country.

I mean not to point out the following circumstance as the immediate judgment of heaven, and intended as an atonement for this flaughter; but I cannot omit that very few of those different tribes of Indians that fhared in it ever lived to return home. The fmall-pox, by means of their communication with the Europeans, found its way among them, and made an equal havoc to what they themselves had done. The methods they purfued on the first attack of that malignant diforder, to abate the fever attending it, rendered it fatal. Whilft their blood was in a state of fermentation, and nature was ftriving to throw out the peccant matter, they checked her operations by plunging into the water : the confequence was that they died by hundreds. The few that furvived were transformed by it into hideous objects, and bore with them to the grave deep-indented marks of this much dreaded difoafe.

Monfieur Montcalm fell foon after on the plains of Quebec.

That the unprovoked cruelty of this commander was not approved of by the generality of his countrymen, I have fince been convinced of by many proofs. One only however, which I received from a perfon who was witnefs to it, fhall I at prefent give. A Canadian merchant, of fome confideration, having heard of the furrender of the English Fort, celebrated the fortunate event with great rejoicings and hospitality, according to the cultom of that country; but no fooner did the news of the maffacre which ensued reach

reach his ears, than he put an immediate ftop to the feftivity, and exclaimed in the feverest terms against the inhuman permission, declaring at the fame time that those who had connived at it, had thereby drawn down, on that part of their king's dominions the vengeance of Heaven. To this he added, that he much feared the total loss of them would defervedly be the confequence. How truly this prediction has been verified we well know.

But to return-Though the Indians are negligent in guarding against furprises, they are alert and der. trous in furprising their enemies. To their caution and perfeverance in ftealing on the party they defign to attack, they add that admirable talent, or rather inftinctive qualification I have already defcribed, of tracing out those they are in pursuit of. On the fmoothest grafs, on the hardest earth, and even on the very ftones, will they difcover the traces of an enemy, and by the fhape of the foot-fteps, and the distance between the prints, distinguish not only whether it is a man or woman who has paffed that. way, but even the nation to which they belong. However incredible this might appear, yet, from the many proofs I received whilft among them of their amazing fagacity in this point, I fee no reafon to difcredit even these extraordinary exertions of it.

When they have overcome an enemy, and victory is no longer doubtful, the conquerors first dispatch all fuch as they think they shall not be able to carry off without great trouble, and then endeavour to take as many prisoners as possible; after this they return to scalp those who are either dead, or too much wounded to be taken with them.

At this bufinefs they are exceedingly expert. They feize the head of the difabled or dead enemy, and placing one of their feet on the neck, twift their left hand in the hair; by this means, having extended the fkin, that covers the top of the head, they draw out

ert. They emy, and their left ended the draw out their their fealping knives, which are always kept in good order for this cruel purpole, and with a few dextrous strokes take off the part that is termed the fealp. They are fo expeditions in doing this, that the whole time required itarcely exceeds a minute. These they preferve as monuments of their prowess, and at the tame time as proofs of the vengeance they have inficted on their enemies.

If two Indians feize in the fame inftant a prifoner, and feem to have an equal claim, the contest between them is foon decided; for to put a fpeedy end to any dispute that might arise, the perfon that is apprehenfive he shall lose his expected reward, immediately has recourse to his tomahawk or war-club, and knocks on the head the unhappy cause of their contention.

Having completed their purposes, and made as much havoc as possible, they immediately retire towards their own country, with the spoil they have acquired, for fear of being pursued.

Should this be the cafe, they make use of many firatagems to elude the fearches of their purfuers. They fometimes featter leaves, fand, or dust over the prints of their feet; fometimes tread in each other's footsteps: and fometimes lift their feet fo high and tread fo lightly, as not to make any impression on the ground. But if they find all these precautions unavailing, and that they are near being overtaken, they first dispatch and scalp their prisoners, and then dividing, each endeavours to regain his native country by a different route. This prevents all further pursuit; for their pursues now dispairing, either of gratifying their revenge, or of releasing those of their friends who were made captives, return home.

If the fuccefsful party is folucky as to make good their retreat unmolefted, they haften with the greateft expedition to reach a country where they may be perfectly fecure ; and that their wounded companions. 190.

The

The

Their litters are made in a rude manner of the branches of trees. Their fledges confift of two fmall thin boards, about a foot wide when joined, and near fix feet long. The forepart is turned up, and the fides are bordered with finall bands. The Indians draw these carriages with great ease, be they ever so much loaded, by means of a ftring which passes round the breast. This collar is called a Metump, and is in use throughout America, both in the fettlements and the internal parts. Those used in the latter are made of leather, and very curiously wrought.

The prifoners during their march are guarded with the greatest care. During the day, if the journey is over land, they are always held by fome of the victorious party; if by water, they are fastened to the canoe. In the night time they are fastened along the ground quite naked, with their legs, arms, and neck fastened to hooks fixed in the ground. Befides this, cords are tied to their arms or legs, which are held by an Indian, who instantly awakes at the least motion of them.

Notwithstanding fuch precautions are ufually taken by the Indians, it is recorded in the annals of New-England, that one of the weaker fex, almost alone, and unaffisted, found means to elude the vigilance of a party of warriors, and not only to make her eicape from them, but to revenge the cause of her countrymen.

Some years ago, a fmall band of Canadian Indians, confifting of ten warriors attended by two of their wives, made an irruption into the back fettlements of New-England. They lurked for fome time in the vicinity of one of the most exterior towns, and at length, after having killed and fcalped feveral people, found means to take prifoner a woman, who had with

101

n by turns draw them

ter of the f two fmall d, and near o, and the he Indians hey ever fo affes round p, and is in ements and er are made

fually taken is of Newmost alone, vigilance of her eicape of her coun-

ian Indians, wo of their ttlements of time in the ons, and at eral people, ho had with her her a fon of about twelve years of age. Being fatisfied with the execution they had done, they retreated towards their native country, which lay at three hundred miles diftance, and carried off with them their two captives.

The fecond 'night of their retreat, the woman, whole name, if I miltake not, was Rowe, formed a refolution worthy of the most intrepid hero. She thought she should be able to get from her hands the manacles by which they were confined, and determined if she did so to make a desperate effort for the recovery of her freedom. To this purpose, when she concluded that her conquerors were in their soundest she flows to flip the cords from her hands. In this she succeeded; and cautioned her son, whom they had fuffered to go unbound, in a whisper, against being furprised at what she was about to do, the removed at a distance with great wariness the defensive weapons of the Indians, which lay by their fides.

Having done this, fhe put one of the tomahawks into the hands of the boy, bidding him to follow her example; and taking another herfelf, fell upon the fleeping Indians, feveral of whom fhe inftantly difpatched. But her attempt was nearly fruftrated by the imbecility of her fon, who wanted both ftrength and refolution, made a feeble ftroke at one of them, which only ferved to awaken him; fhe however fprung at the rifing warrior, and before he could recover his arms, made him fink under the weight of her tomahawk; and this fhe alternately did to all the reft, except one of the women, who awoke in time, and made her efcape.

The heroine then took of the fcalps of her vanquifhed enemies, and feizing alfo thofe they were carrying away with them as proofs of their fuccefs, fhe returned in triumph to the town from whence fhe had fo lately been dragged, to the great aftonifhment of her ne ighbours, 192

neighbours, who could fcarcely credit their fenfes, or the testimonies she bore of her amazonian intrepidity.

During their march they oblige their prifoners to fing their death-fong, which generally confifts of thefe or fimilar fentences : "I am going to die, I am about to fuffer; but I will bear the feverest tortures my enemies can inflict, with becoming fortitude. I will die like a brave man, and I shall then go to join the chiefs that have fuffered on the fame account."— Thefe fongs are continued with necessary intervals, until they reach the village or camp to which they are going.

When the warriors are arrived within hearing, they fet up different cries, which communicates to their friends a general hiftory of the fuccefs of the expedition. The number of the death-cries they give, declare how many of their own party are loft; the number of war-whoops, the number of prifoners they have taken.

It is difficult to defcribe thefe cries, but the beft idea I can convey of them is, that the former confifts of the found whoo, whoo, whoop, which is continued in a long fhrill tone, nearly till the breath is exhaufted, and then broken off with a fudden elevation of the voice. The latter, is a loud cry, of much the fame kind, which is modulated into notes by the hand being placed before the mouth. Both of them might be heared to a very confiderable diftance.

Whilf thefe are uttering, the perfons to whom they are defigned to convey the intelligence, continue motionlefs and all attention. When this ceremony is performed, the whole village iffue out to learn the particulars of the relation they have just heard in general term, and accordingly as the news prove mournful or the contrary, they answer by fo many acclamations or crics of lamentations.

Being by this time arrived at the village or camp, the women and children arm themfelves with flicks

ige or camp, es with flicks and and bludgeons, and form themfelves into two ranks, through which the prifoners are obliged to pafs. The treatment they undergo before they reach the extremity of the line, is very fevere. Sometimes they are fo beaten over the head and face, as to have fearcely any remains of life; and happy would it be for them if by this ufage an end was put to their wretched beings. But their tormentors take care that none of the blows they give prove mortal, as they with to referve the miferable fufferers for more fevere inflictions.

After having undergone this introductory difcipline, they are bound hand and foot, whilft the chiefs hold a council in which their fate is determined. Those who are decreed to be put to death by the usual torments, are delivered to the chief of the warriors; fuch as are to be spared, are given into the hands of the chief of the uation : fo that in a short time all the prisoners may be affured of their fate, as the sentence now pronounced is irrevocable. The former they term being configned to the house of death, the latter to the house of grace.

Such captives as are pretty far advanced in life, and have acquired great honor by their warlike deeds, always atone for the blood they have fpilt, by the tortures of fire. Their fuccefs in war is readily known by the blue marks upon their breafts and arms, which are as legible to the Indians as letters are to Europeans.

The manner in which thefe hierogly phicks are made, is by breaking the fkin with the teeth of fifh, or iharpened flints, dipped in a kind of ink made of the foot of pitch pine. Like those of the ancients Picts of Britain these are esteemed ornamental; and at the fame time they force as registers of the heroic actions of the warrior, who thus bears about him indelible marks of his valour.

The prifoners defined to death are foon led to the place of execution, which is generally in the cen-

194

tre of the camp or village; where, being ftript, and every part of their bodies blackened, the fkin of a crow or raven is fixed on their heads. They are then bound to a flake, with faggots heaped around them, and obliged, for the last time, to fing their deathfong.

The warriors, for fuch it is only who commonly fuffer this punifhment, now perform in a more prolix manner this fad folemnity. They recount with an audible voice all the brave actions they have performed, and pride themfelves in the number of enemies they have killed. In this rehearfal they fpare not even their tormentors, but firive by every provoking tale they can invent, to irritate and infult them. Sometimes this has the defired effect, and the fufferers are difpatched fooner than they otherwife would have been.

There are many other methods which the Indians make use of to put their prisoners to death, but these are only occasional; that of burning is most generally used.

Whilft I was at the chief town of the Ottagaumies, an Illinois Indian was brought in, who had been made prifoners by one of their war-parties. I had then an opportunity of feeing the cuftomary eruelties inflicted by these people on their captives, through the minutest part of their process. After the previous steps necessary to this condemnation, he was carried, early in the morning, to a little distance from the town, where he was bound to a tree.

This being done, all the boys, who amounted to a great number, as the place was populous, were permitted to amufe themfelves with fhooting their arrows at the unhappy victim. As they were none of them more than twolve years old, and were placed at a confiderable diffance, they had not ftrength to penetrate to the vital parts, fo that the poor wretch

commonly more prolix int with an ve performof enemics are not even voking tale m. Somefufferers are would have

the Indians th, but these most gener-

o had been ies. I had ary cruelties es, through the previon, he was ftance from

iounted to a i, were pering their arvere none of re placed at ngth to pepoor wretch ftood ftood pierced with arrows, and fuffering the confequent agonies, for more than two days.

During this time he fung his warlike exploits. He recapitulated every firatagem he had made ufe of to furprise his chemies : he boafted of the quantity of scalps he poffeffed, and enumerated the prifoners he had taken. He then described the different barbarous methods by which he had put the latter to death, and feemed even then to receive inconceivable pleasure from the recital of the horrid tale, But he dwelt more particularly on the cruelties hehad practifed on fuch of the kindred of his prefent tormentors as had fallen into his hands; endeavouring by thefe aggravated infults to induce them to increale his tortures, that he might be able to give greater proofs of fortitude. Even in the laft ftruggles of life, when he was no longer able to vent in words the indignant provocation his tongue would have uttered, a smile of mingled scorn and triumph fat on his countenance.

This method of tormenting their enemies is confidered by the Indians as productive of more than one beneficial confequence. It fatiates, in a greater degree, that diabolical luft of revenge, which is the predominant paffion in the breaft of every individual of every tribe, and it gives the growing warriors an early propenfity to that cruelty and thirft for blood, which is fo neceffary a qualification for fuch as would be thoroughly fkilled in their favage art of war.

I have been informed, that an Indian who was under the hands of his tormentors, had the audacity to tell them, that they were ignorant old women, and did not know how to put brave prifoners to death. He acquainted them that he had heretofore taken fome of their warriors, and instead of the trivial punishments they inflicted on him, he had devifed for them the most excruciating torments; that having bound them to a stake, he had stuck their bodies full. 196

full of fharp fplinters of turpentine wood, to which he then fet fire, and dancing around them enjoyed the agonizing pangs of the flaming victims.

This bravado, which carried with it a degree of infult, that even the accultomed ear of an Indian could not liften to unmoved, threw his tormentors off their guard, and fhortened the duration of his torments; for one of the chiefs ran to him, and ripping out his heart, ftopped with it the mouth from which had iffued fuch provoking language.

Innumerable are the ftories that may be told of the courage and refolution of the Indians, who happen to be made prifoners by their adverfaries. Many that I have heard are fo aftonifhing, that they feem to exceed the utmost limits of credibility; it is, however, certain that these favages are possible with many heroic qualities, and bear every species of misfortunes with a degree of fortigude which has not been outdone by any of the ancient heroes either of Greece or of Rome.

Notwithstanding these acts of feverity exercised by the Indians towards those of their own species, who fall into their hands, fome tribes of them have been remarked for their moderation, to fuch female prisoners, belonging to the English colonies as have happened to be taken by them. Women of great beauty have frequently been carried off by them, and during a march of three or four hundred miles, through their retired forefts, have lain by their fides' without receiving any infult, and their chaftity has remained inviolate." Inftances have happened where female captives, who have been pregnant at the time of their being taken, have found the pangs of childbirth come upon them in the midft of folitary woods, and favages their only companions; yet from thefe, lavages as they were, have they received every affiftance their fituation would admit of, and been treated with a degree of delicacy and humanity they little expected. This

d, to which em enjoyed ns.

ty exercised own fpecies. f them have luch female nics as have nen of great y them, and dred miles, y their fides chaftity has pened where at the time gs of childitary woods, from thefe, every affift-. been treated they little This

This forbearance, it must be acknowledged, does not proceed altogether from their disposition, but is only inherent in those who have some communication with the French missionaries. Without intending that their natural enemies, the English, should enjoy the benefit of their labours, these fathers have taken great pains to inculcate on the minds of the Indians the general principles of humanity, which has diffused itself through their manners, and has proved of public utility.

Those prisoners that are configned to the house of grace, and these are commonly the young men, women, and children, await the disposal of the chiefs, who, after the execution of fuch as are condemned to die, hold a council for this purpose.

A herald is fent round the village or camp, to give notice that fuch as have loft any relations in the late expedition, are defired to attend the diffribution which is about to take place. Those women who have loft their fons or husbands, are generally fatisfied in the first place; after these, such as have been deprived of friends of a more remote degree of confanguinity, or who choose to adopt some of the youth. The division being made, which is done, as in other cases, without the least dispute, those who have received any share, lead them to their tents or huts; and having unbound them, wash and dress their wounds if they happen to have received any; they then cloath them; and give them the most comfortable and refreshing food their ftore will afford.

Whilft their new domeftics are feeding, they endeavour to administer confolation to them; they tell them that as they are redeemed from death, they must now be cheerful and happy; and if they ferve them well, without murmuring or repining, nothing shall be wanting to make them such atonement for the loss of their country and friends as circumstances will al-

low of.

TI

If any men are fpared, they are commonly given to the widows that have loft their hufbands by the hand of the enemy, flould there be any fuch, to whom, if they happen to prove agreeable, they are foon married. But should the dame be otherwife engaged, the life of him who falls to her lot is in great danger; efpecially if the functes that her late hufband wants a flave in the country of fpirits, to which he is gone.

When this is the cafe, a number of young men take the devoted captive to Tome diffance, and difpatch him without any ceremony : after he has been ipared by the council, they confider him of too little confequence to be entitled to the torments allotted to those who have been judged worthy of them.

The women are ufually diftributed to the men, from whom they do not fail of meeting with a favourable reception. The boys and girls are taken into the families of tuch as have need of them, and are confidered as flaves; and it is not uncommon that they are fold in the fame capacity to the European traders who come among them.

The Indians have no idea of moderating the ravages of war, by fparing their prifoners, and entering into a negociation with the band from whom they have been taken, for an exchange. All that are captivated by both parties, are either put to death, adopted, or made flaves of. And fo particular are every nation in this refpect, that if any of their tribe, even a warrior, fhould be taken prifoner, and by chance be received into the houfe of grace, either as an adopted perfon or a flave, and fhould afterwards make his efcape, they will by no means receive him, or acknowledge him as one of their band.

The condition of fuch as are adopted, differs not in any one inftance from the children of the nation to which they now belong. They affume all the righte of those whose places they supply, and frequently

nly given nds by the y fuch, to , they are otherwife r lot is in at her late fpirits, to

oung men e, and difie has been of too little allotted to im: b the men, h a favourtaken into n, and are mmon that European

ng the ravid entering whom they iat are capath, adoptare every tribe, even by chance s an adopts make his iim, or ac-

differs not he nation ie all the and frequently quently make no difficulty of going in the war-parties against their own countrymen. Should, however, any of those by chance make their escape, and be afterwards retaken, they are esteemed as unnatural children and ungrateful perfons, who have deferted, and made war upon their parents and benefactors, and are treated with uncommon severity.

That part of the prifoners which are confidered as flaves, are generally diffributed among the chiefs; who frequently make prefents of fome of them to the European governors of the out-pofts, or to the fuperintendants or commiffaries of Indian affairs. I have been informed that it was the Jefuits and French miffionaries that first occasioned the introduction of these unhappy captives into the fettlements, and who by fo doing taught the Indians that they were valuable.

Their views indeed were laudable, as they imagined that by this method they fhould not only prevent much barbarity and bloodshed, but find the opportunities of spreading their religion among them encreased. To this purpose they encouraged the traders to purchase such that we as they met with.

The good effects of this mode of proceeding were not however equal to the expectations of these pious fathers. Instead of being the means of preventing cruchy and bloodshed, it only caused differious between the Indian nations to be carried on with a greater degree of violence, and with unremitted ardour. The prize they fought for being no longer revenge or fame, but the acquirement of spinituous liquors, for which their captives were to be exchanged, and of which almost every nation is immoderately fond, they fought for their enemies with unwonted alacity, and were constantly on the watch to surprise and carry them off.

It might full be faid that fewer of the captives are tormented and put to death, fince these expectations 200

of receiving fo valuable a confider ation for them have been excited than there ufually had been; but it does not appear that their accustomed cruelty to the warriors they take, is in the least abated; their natural defire of vengeance must be gratified; they now only become more assiduous in securing a greater number of young prisoners, whilst those who are made captive in their defence, are tormented and put to death as before.

The miffionaries finding, that contrary to their wifnes, their zeal had only ferved to increase the fale of the noxious juices, applied to the governor of Canada, in the year 1693, for a prohibition of this baneful trade. An order was iffued accordingly, but it could not put a total ftop to it; the French Couriers de Boïs were hardy enough to carry it on clandeftinely, notwithstanding the penalty annexed to a breach of the prohibition was a confiderable fine and imprifonment.

Some who were detected in the profecution of it, withdrew into the Indian countries, where they intermarried with the natives, and underwent a voluntary banifhment. Thefe however, being an abaudoned and debauched fet, their conduct contributed very little either towards reforming the manners of their new relations, or engaging them to entertain a favorable opinion of the religion they professed. Thus did thefe indefatigable, religious men, fee their defigns in fome measure once more frustrated.

However, the emigration was productive of an effect which tuxned out to be benchicial to their nation. By the connection of thefe refugees with the Iroquois, Miff-fluages, Hurons, Miamies, Powtowottomies, Puants, Menomonies, Algonkins, &c. and the conftant reprefentations thefe various nations received from them of the power and grandeur of the French, to the aggrandizement of whofe monarch, notwithftanding their banifhment, they ftill retained their habitual

ve of an efheir nation. he Iroquois, wottomies,. d the conns received he French, a, notwithed their habitual binal inclination, the Indians bacame infenfibly prejudiced in favor of that people, and I am perfuaded will take every opportunity of Shewing their attachment to them.

And this, even in despite of the difgraceful estimation they must be held by them, fince they have been driven out of Canada; for the Indians confider every conquered people as in a state of vasialage to their conquerors. After one nation has finally fut dued apather, and a conditional submission is agreed on, it is customary for the chiefs of the conquered, when they fit in council with their subduers, to wear petticoats, as an acknowledgment that they are in a state of subjection, and ought to be ranked among the women. Their partiality to the French has however taken too deep root for time itself to eradicate it.

CHAPTER X.

OF THEIR MANNER OF MAKING PEACE, 50.

HE wars that are carried on between the Indian nations are in general hereditary, and continue from age to age with a few interruptions. If a peace becomes neceffary, the principal care of both parties is to avoid the appearance of making the first advances.

When they treat with an enemy, relative to a fufpenfion of hoftilities, the chief who is commiflioned to undertake the negociation, if it is not brought about by the mediation of fome neighbouring band, abates nothing of his natural haughtinefs : even when the affairs of his country are in the worft fituation, he makes no conceffions, but endeavours to perfuade his adverfaries that it is their intereft to put an end to the war. Accidents fometimes contribute to bring about a peace between nations that otherwife could not be prevailed on to liften to terms of accommodation. An inflance of this, which I heard of in almost every nation I passed through, I shall relate.

About eighty years ago, the Iroquois and Chipéways, two powerful nations, were at war with the Ottagaumies and Saukies, who were much inferior to their adverfaries both in numbers and ftrength. One winter near a thousand of the former made an excurfion from Lake Ontario, by way of Toronto, towards the territories of their enemies. They coasted Lake Huron on its east and northern borders, till they arrived at the island of St. Joseph, which is situated in the Straits of St. Marie. There they crossed these straits upon the ice, about fifteen miles below the falls, and continued their route still westward. As the ground was covered with fnow to prevent a difcovery of their numbers, they marched in a fingle file, treading in each others footsteps.

Four Chipéway Indians, paffing that way, obferved this army, and readily gueffed from the direction of their march, and the precautions they took, both the country to which they were haftening, and their defigns.

Notwithstanding the nation to which they belonged was at war with the Ottagaumies, and in alliance with their invaders, yet from a principle which cannot be accounted for, they took an inftant refolution to apprife the former of their danger. To this purpose they hastened away with their usual celerity, and, taking a circuit to avoid discovery, arrived at the hunting grounds of the Ottagaumies, before fo large a body, moving in fo cautious a manner, could do. There they found a party of about four hundred, warriors, fome of which were Saukies, whom they informed of the approach of their enemies.

This

The chiefs immediately collected their whole force, and held a council on the fteps that were to be taken for their defence. As they were encumbered with their families, it was impossible that they could retreat in time; they therefore determined to choose the most advantageous fpot, and to give the Iroquois the best reception in their power.

Not far from the place where they then happened to be, flood two fmall lakes, between which ran a narrow neck of land about a mile in length, and only from twenty to forty yards in breadth. Concluding that the Iroquois intended to pafs through this defile, the united bands divided their little party into two bodies of two hundred each. One of these took post at the extremity of the pass that lay nearest to their hunting grounds, which they immediately fortified with a breast-work formed of palisdes; whilst the other body took a compass round one of the lakes, with a defign to hem their enemies in when they had entered the defile.

Their ftratagem fucceeded; for no fooner had the whole of the Iroquois entered the pais, than, being provided with wood for the purpofe, they formed a fimilar breaft work on the other extremity, and thus enclosed their enemics.

The Iroquois foon perceived their fituation, and immediately held a council on the meafures that were neceffary to be perfued to extricate themfelves. Unluckily for them a thaw had juft taken place, which had fo far diffolved the ice as to render it impaffible, and yet there ftill remained fufficient to prevent them from either paffing over the lake on rafts, or from fwimming acrofs. In this dilemma it was agreed that they flould endeavour to force one of the breaft works ; but they foon found them too well defended to effect their purpofe.

Notwithstanding this disappointment, with the usual composure and unapprehensiveness of Indians, they

they amufed themfelves three or four days in fifting. By this time the ice being quite diffolved, they made themfelves rafts, which they were enabled to do by fome trees that fortunately grew on the fpot, and attempted to crofs one of the lakes.

They accordingly fet off before day break ; but the Ottagaumies, who had been watchful of their motions, perceiving their delign, detached one hundred and fifty men from each of their parties, to oppofe their landing. Thefe three hundred marched fo expeditioufly to the other fide of the lake, that they reached it before their opponents had gained the fhore, they being retarded by their poles flicking in the mud.

As foon as the confederates arrived, they poured in a very heavy fire, both from their bows and mufquetry, on the Iroquois, which greatly difconcerted them; till the latter finding their fituation defperate, leaped into the water, and fought their way through their enemies. This however they could not do without lofing more than half their men.

After the Iroquois had landed, they made good their retreat, but were obliged to leave their enemies mafters of the field, and in poffelfion of all the furs they had taken during their winter's hunt. Thus dearly did they pay for an unprovoked excursion to fuch a diftance from the route they ought to have purfued, and to which they were only impelled by a fudden detire of cutting off fome of their ancient enemies.

But had they known their ftrength, they might have deftroyed every man of the party that oppofed them; which even at the first onfet was only inconfiderable, and when diminished by the action, totally unable to make any ftand against them.

The victorious bands rewarded the Chipéways, who had been the means of their fuccefs, with a fhare of the fpoils. They prefied them to take any quantity they chose of the richest of the furs, and sent them under and eleort of fifty men, to their own country. The

y might have pofed them; confiderable, y unable to

Chipéways, with a fhare e any quantind fent them own country. The The difiniterested Chipéways, as the Indians in gencral are feldom actuated by mercenary motives, for a confiderable time refused these presents, but were at length perfused to accept of them.

The brave and well concerted refiftance here made by the Ottagaunies and Saukies, aided by the mediation of the Chipeways, who laying afide on this occafion the animofity they had fo long borne those people, approved of the generous conduct of their four chiefs, were together the means of effecting a reconciliation between these nations; and in process of time united them all in the bands of amity.

And I believe that all the Indians inhabiting that extensive country, which lies between Quebec, the banks of the Miflifippi north of the Ouifconfin, and the fettlements belonging to the Hudfon's Bay Company, are at prefent in a flate of profound peace. When their reftlefs difpositions will not fuffer them to remain inactive, these northern Indians feldom commit hostilities on each other, but make excursions to the fouthwards, against the Cherokees, Choctahs, Chickafaws or Illinois.

Sometimes the Indians grow tired of a war which they have carried on against some neighbouring nation for many years without much success, and in this case they seek for mediators to begin a negotiation. These being obtained, the treaty is thus conducted :

A number of their own chiefs, joined by thofe who have accepted the friendly office, fet out together for the country of their enemies; fuch as are chofen for this purpofe, are chiefs of the most extensive abilities, and of the greatest integrity. They bear before them the Pipe of Peace, which I need not inform my readers is of the fame nature as a Flag of Truce among the Europeans, and is treated with the greatest respect and veneration, even by the most barbarous nations. I never heard of an instance wherein the bearers of this facred badge of friendship were ever treated difsection. respectfully, or its rights violated. The Indians believe that the Great Spirit never suffers an infraction of this kind to go unpunished.

The Pipe of Peace, which is termed by the French the Calumet, for what reafon I could never learn, is about four fact long. The bowl of it is made of red marble, and the ftem of it of a light wood, curioufly painted with hieroglyphicks in various colors, and adorned with feathers, of the most beautiful birds; but it is not in my power to convey an idea of the various tints and pleasing ornaments of this much efteemed Indian implement.

Every nation has a different method of decorating these pipes, and they can tell at first fight to what band it belongs. It is used as an introduction to all treatics, and great ceremony attends the use of it on these occasions.

The affiftant or aid-de-camp of the great warrior, when the chiefs are affembled and feated, fills it with tobacco mixed with the herbs before mentioned, taking care at the fame time that no part of it touches the ground. When it is filled, he takes a coal that is thoroughly kindled, from a fire which is generally kept burning in the midft of the affembly, and places it on the tobacco.

As foon as it is fufficiently lighted, he throws off the coal. He then turns the ftem of it towards the heavens, after this towards the earth, and now holding it horizontally, moves himfelf round till he has completed a circle; by the first action he is fuppofed to prefent it to the Great Spirit, whole aid is thereby fupplicated; by the fecond, to avert any malicious interposition of the evil spirits; and by the third to gain the protection of the spirits inhabiting the air, the earth, and the waters. Having thus fecured the favor of those invisible agents, in whose power they fuppofe it is either to forward or obstruct the issues their prefent deliberations, he prefents it to the hereditary

It is afterwards put in the fame manner into the mouths of the ambafladors or ftrangers, who obferve the fame ceremony, then to the chief of the warriors, and to all the other chiefs in turn, according to their gradation. During this time the perfon who executes this honorable office holds the pipe flightly in his hand, as if he feared to prefs the facred inftrument; nor does any one prefume to touch it but with his lips.

When the chiefs who are intrusted with the commission for making peace, approach the town or camp to which they are going, they begin to fing and dance the fongs and dances appropriated to this occasion. By this time the adverse party are apprised of their arrival, and, at the fight of the Pipe of Peace divesting themselves of their wonted enemy, invite them to the habitation of the Great Chief, and furnish them with every conveniency during the negotiation.

A council is then held; and when the fpeeches and debates are ended, if no obfructions arife to put a ftop to the treaty, the painted hatchet is buried in the ground, as a memorial that all animofities between the contending nations have ceafed, and a peace taken place. Among the ruder bands, fuch as have no communication with the Europeans, a war-club, painted red is buried, inftead of the hatchet.

A belt of wampum, is alfo given on this occasion, which ferves as a ratification of the peace, and records to the lateft posterity, by the hieroglyphicks into which the beads are formed, every flipulated article in the treaty.

Thefe belts are made of thells found on the coafts of New-England and Virginia, which are fawed out into beads of an oblong form, about a quarter of an inch long, and round like other beads. Being ftrung on

on leather ftrings, and feveral of them fewed neatly together with fine finewy threads, they then compose what is termed a belt of Wampum.

The fields are generally of two colors, fome white and others violet; but the latter are more highly efteemed than the former. They are held in as much effimation by the Indians, as gold, filver, or precious ftones, are by the Europeans.

The belts are composed of ten, twelve, or a greater number of firings, according to the importance of the affair in agitation, or the dignity of the perfon to whom it is prefented. On more trifling occasions, firings of these beads are presented by the chiefs to each other, and frequently worn by them about their necks, as a valuable ornament.

CHAPTER XI.

· to mind in

OF THEIR GAMES.

AS I have before obferved, the Indians are greatly addicted to gaming, and will even itake, and lofe with composure, all the valuables they are possifiened of. They amufe themselves at feveral forts of games, but the principal and most efteemed among them is that of the ball, which is not unlike the European game of tennis.

The balls they use are rather larger than those made use of at tennis, and are formed of a piece of deerikin; which being moistened to render it supple, is stuffed hard with the hair of the fame creature, and fewed with its finews. The ball-fticks, are about three feet long, at the end of which there is fixed a kind of racket, refembling the palm of the hand, and fashioned of thongs cut from a deer-fkin. In these they catch

Indians are in itake, and y are poffefferal forts of med among like the Eu-

thole made the ce of deerit fupple, is eature, and about three ed a kind of and fafhionthefe they catch catch the ball, and throw it to a great diftance, if they are not prevented by fome of the opposite party, who fly to intercept it.

This game is generally played by large companies, that fometimes coulift of more than three hundred; and it is not uncommon for different bands to play againft each other.

They begin by fixing two poles in the ground at about fix hundred yards apart, and one of these goals belong to each party of the combatants. The ball is thrown up high in the centre of the ground, and in a direct line between the goals : towards which each party endeavours to strike it, and whichsoever fide first causes it to reach their own goal, reckons towards the game.

They are fo exceeding dextrous in this manly exercife, that the ball is ufually kept flying in different directions by the force of the rackets, without touching the ground during the whole contention; for they are not allowed to catch it with their hands. They run with amazing velocity in purfuit of each other, and when one is on the point of hurling it to a great diftance, an antagonist overtakes him, and by a fudden stroke dashes down the ball.

They play with fo much vehemence that they frequently wound each other, and fometimes a bone is breken; but notwithstanding these accidents there never appears to be any fpite or wanton exertions of strength to affect them; nor do any disputes ever happen between the parties.

There is another game alfo in use among them worthy of remark, and this is the game of the Bowl or Platter. 'This game is played between two perfons only. Each perfon has fix or eight little bones not unlike a peachfone either in fize or fhape, except that they are quadrangular; two of the fides of which are colored black, and the others white. These they throw up into the air, from whence they fall into a S 2 bowl

bowl or platter placed underneath, and made to fpin round.

According as these bones present the white or black fide upwards they reckon the game; he that happens to have the greatest number turn up of a similar color, counts five points; and forty is the game.

The winning party keeps his place, and the lofer yields his to another who is appointed by one of the umpires; for a whole village is fometimes concerned in the party, and at times one band plays againfl another.

During this play the Indians appear to be greatly agitated, at every decifive throw fet up a hideous thout. They make a thousand contortions, addreffing themfelves at the fame time to the bones, and loading with imprecations, the evil fpirits that affift their fuccefsful antagonifts.

At this game fome will lofe their apparel, all the moveables of their cabins, and fometimes even their liberty; notwithstanding there are no people in the universe more jealous of the latter than the Indians are.

OF THEIR MARRIAGE CEREMONIES, Sc.

HE Indians allow of polygamy, and perfons. of every rank indulge themfelves in this point. The chiefs in particular have a feraglio, which confifts of an uncertain number, ufually from fix to twelve or fourteen. The lower ranks are permitted to take as many as there is a probability of their being able, with the children they may bear, to maintain. It is not uncommon for an Indian to marry two fifters; fometimes,

ond perfons. pint. The confifts of twelve or to take as eing able, ain. It is vo fifters; netimes, fometimes, if there happen to be more, the whole number; and notwithitanding this (as it appears to civilized nations) unnatural union, they all live in the greatest harmony.

The younger wives are fubmiffive to the elder; and those who have no children, do such menial offices for those who are fertile, as causes their situation to differ but little from a state of servitude. However they perform every injunction with the greatest cherfulness, in hopes of gaining thereby the affection of their husbands, that they in their turns may have the happiness of becoming mothers, and be entitled to the respect attendant on that state.

It is not uncommon for an Indian, although he takes to himfelf fo many wives, to live in a ftate of continence with many of them for feveral years. Such as are not so fortunate as to gain the favor of their husband, by their submissive and prudent behaviour, and by that means to fhare in his embraces, continue in their virgin ftate during the whole of their lives, except they happen to be prefented by him to fonce ftranger chief, whofe abode among them will not admit of his entering into a more lafting connection. In this cafe they fubmit to the injunction of. their hufband without murmuring, and are not difpleafed to the temporary union. But if at any time it is known that they take this liberty without first receiving his confent, they are punifhed in the fame manner as if they had been guilty of adultery.

This cuftom is more prevalent among the nations, which lie in the interior parts, than among those that are nearer the fettlements, as the manners of the latter are rendered more conformable in fome points to those of the Europeans, by the intercourse they hold with them.

The Indian nations differ but little from each other in their marriage ceremonies, and lefs in the manner

1 5 - 1 5 4 - M. W. 187 38 . 1 TAT.

When a young Indian has fixed his inclinations on one of the other fex, he endeavours to gain her confent, and if he fucceeds, it is never known that her parents ever obstruct their union. When every preliminary is agreed on, and the day appointed, the friends and acquaintance of both parties affemble at the house or tent of the oldest relation of the bridegroom, where a feast is prepared on the occasion.

The company who meet to affift at the feftival are fometimes very numerous : they dance, they fing, and enter into every other diversion usually made use of on any of their public rejoicings.

When these are finished, all those who attended merely out of ceremony depart, and the bridegroom and bride are left alone with three or four of the nearest and old ft relations of either fide; those of the bridegroom being men, and those of the bride, women.

Prefently the bride attended by thefe few friends, having withdrawn herfelf for the purpofe, appears at one of the doors of the houfe, and is led to the bridegroom, who ftands ready to receive her. Having now taken their ftation, on a mat placed in the centre of the room, they lay hold of the extremities of a wand, about four feet long, by which they continue feparated, whilf the old men pronounce fome fhort harangues fuitable to the occafion.

The married couple after this make a public declaration of the love and regard they entertain for each other, and ftill holding the rod between them, dance, and fing. When they have finished this part of the ceremony, they break the rod into as many pieces as their are witneffes prefent, who each take a piece, and preferve it with great care.

The bride is then reconducted out of the door at which the entered, where her young companions wait

t the borders ftom.

clinations on gain her conwn that her en every prepointed, the s affemble at of the brideoccafion.

tho attended bridegroom four of the those of the bride, wo-

few friends, e, appears at to the brideer. Having in the centre mities of a ney continue fome fhort

bublic declaain for each them, dance, part of the ny pieces as a piece, and

the door at anions wait to attend her to her father's houfe; there the bridegroom is obliged to feek her, and the marriage is confummated. Very often the wife remains at her father's houfe till fhe has a child; when fhe packs up her apparel, which is all the fortune fhe is generally poffefied of, and accompanies her hufband to his habitation.

When from any diflike a feparation takes place, for they are feldom known to quarrel, they generally give their friends a few days notice of their intentions, and fometimes offer reafons to juftify their conduct. The witneffes who were prefent at the marriage, meet on the day requefted, at the houfe of the couple that are about to feparate, and bringing with them the pieces of rod which they had received at their nuptials, throw them into the fire, in the prefence of all the parties.

This is the whole of the ceremony required, and the feparation is carried on without any murmurings or illwill between the couple or their relations; and after a few months they are at liberty to marry again. When a marriage is thus diffolved, the children which have been produced from it, are equally divided between them; and as children are effeemed a treafure by the Indians, if the number happens to be odd, the woman is allowed to take the better half.

Though this cuftom feems to encourage ficklenefs and frequent feparations, yet there are many of the Indians who have but one wife, and enjoy with her a frate of connubial happinefs not to be exceeded in more refined focieties. There are also not a few infrances of women preferving an inviolable attachment to their hufbands, except in the cafes before-mentioned, which are not confidered as either a violation of their chaftity or fidelity.

Although I have faid that the Indian nations differ very little from each other in their marriage ceremonies, there are fome exceptions. The Naudoweffies have

have a fingular method of celebrating their marriages, which feems to bear no refemblance to those made use of by any other nation I passed through. When one of their young men has fixed on a young woman he approves of, he discovers his passion to her parents, who give him an invitation to come and live with them in their tent.

He accordingly accepts the offer, and by fo doing engages to refide in it for a whole year, in the character of a menial fervant. During this time he hunts, and brings all the game he kills to the family; by which means the father has an opportunity of feeing whether he is able to provide for the fupport of his daughter and the children that might be the confequence of their union. This however is only done whilf they are young men, and for their first wife, and not repeated like Jacob's fervitudes.

When this period is expired, the marriage is folemnized after the cuftom of the country, in the following manner: Three or four of the oldeft-male relations of the bridegroom, and as many of the bride's, accompany the young couple from their refpective tents, to an open part in the centre of the camp.

The chiefs and warriors, being here affembled to receive them, a party of the latter are drawn up in two ranks on each fide of the bride and bridegroom immediately on their arrival. Their principal chief then acquaints the whole affembly with the defign of their meeting, and tells them that the couple before them, mentioning at the fame time, their names, are come to avow publickly their intentions of living together as man aud wife. He then afks the two young people alternately, whether they defire that the union might take place. Having declared with an audible voice that they do fo, the warriors fix their arrows, and difcharge them over the heads of the married pair; this done, the chief pronounces them man and wife. The l body, tz carries l bis te pleatifu fings an clude th Divo fies, that

ouple before r names, are of living toe two young at the union h an audible heir arrows, he married m man and

The

The bridegroom then turns round, and bending his body, takes his wife on his back, in which manner he carries her amidift the accelamations of the spectators his tent. The ceremony is succeeded by the most pleatiful feast the new married man can afford, and sings and dances, according to the usual custom, conclude the festival.

Divorces happen fo feldom among the Naudoweffies, that I had not an opportunity of learning how they are accomplified.

Adultery is effected by them a heinous crime, and punished with the greatest rigor. The husband in these cases bites off the woman's nose, and a separation instantly ensues. I saw an instance wherein this mode of punishment was inflicted, whils I remained among them. The children, when this happens, are distributed according to the usual custom observed by other nations, that is, they are equally divided.

Among the Indians as well as European nations, there are many that devote themfelves to pleafure, and notwithstanding the accounts given by fome modem writers of the frigidity of an Indian conflictution, become the zealous votaries of Venus. The young warriors that are thus disposed, feldom want opportunities for gratifying their passion and as the mode usually followed on these occasions is rather fingular, I shall deferibe it.

When one of these young debauches imagines from the behaviour of the perfon he has chosen for his mistress, that he shall not meet with any great obstruction to his fuit from her, he pursues the following plan.

It has been already obferved, that the Indians acknowledge no fuperiority, nor have they any ideas of fubordination, except in the neceffary regulations of their war or hunting parties; they confequently live nearly in a ftate of equality, purfuant to the first principles of nature. The lover therefore is not apprehensive 216

prehenfive of any check or control in the accomplishment of his purposes, if he can find a convenient opportunity for completing them.

As the Indians are also under no apprehension of robbers, or fecret enemies, they leave the doors of their tents or huts unfastened during the night, as well as in the day. Two or three hours after funset, the flaves or old people cover over the fire, that is generally burning in the midst of their apartment, with assess and retire to their repose.

Whilft darkness thus prevails, and all is quiet, one of these sons of pleasure, wrapped up closely in his? blanket, to prevent his being known, will fometimes enter the apartment of his intended miftrefs. Having first lighted at the fmothered fire a small splinter of wood, which answers the purpose of a match, he approaches the place where the repotes, and gently pulling away the covering from the head, jogs her till fhe If the then rifes up, and blows out the awakes. light, he needs no further confirmation that his company is not difagreeable; but if, after he has difcovered himfelf, the hides her head, and takes no notice of him, he might reft affured that any further folicitations will prove vain, and that it is neceffary immediately for him to retire.

. During his tray he conceals the light as much as poffible in the hollow of his hands, and as the tents or rooms of the Indians are ufually large and capacious, he efcapes without detection. It is faid that the young women who admit their lovers on thefe occafions, take great care, by an immediate application to herbs, with the potent efficacy of which they are well acquainted, to prevent the effects of thefe illicit amours from becoming visible; for fhould the natural confequences enfue, they must forever remain unmarried.

The children of the Indians are always diftinguished by the name of the mother : and if a woman marnice ties feve they are this is, er for 1 and to part, it guifhed indubit father, whethe

as much as as the tents e and capais faid that on thefe ocapplication ich they are thefe illicit id the naturemain undiftinguifhyoman marics ries feveral hufbands, and has iffue by each of them, they are called after her. The reafon they give for this is, that as their offspring are indebted to the father for their fouls, the invitible part of their effence, and to the mother for their corporeal and apparent part, it is more rational that they fhould be diftinguifhed by the name of the latter, from whom they indubitably derive their being, than by that of the father, to which a doubt might fometimes arife whether they are juftly entitled.

There are fome ceremonies made use of by the Indians at the imposition of the name, and it is confidered by them as a matter of great importance; but what these are I could never learn, through the secrefy observed on the occasion. I only know that it is usually given when the children have passed the state of infancy.

Nothing can exceed the tendernels flown by them to their offspring; and a perfon cannot recommend himfelf to their favour by any method more certain, than by paying fome attention to the younger branches of their families. I can impute, in fome measure, to the prefents I made to the children of the chiefs of the Naudoweflies, the hofpitable reception I met with when among them.

There is fome difficulty attends an explanation of the manner in which the Indians diffinguith themfelves from each other. Befides the name of the animal by which every nation and tribe is denominated, there are others that are perfonal, and which the children receive from their mother.

The chiefs are also distinguished by a name that has either fome reference to their abilities, or to the hieroglyphic of their families; and chefe are acquired after they arrive at the age of manhood. Such as have fignalized themfelves either in their war or hunting parties, or are possesse of fome eminent qualification, receive a name that ferves to perpetuate the T

fame of these actions, or to make their abilities confpicu sus.

Thus the great warrior of the Naudoweffies was named Ottahtongoomlifhcah, that is, the Great Father of Snakes; ottah being in English father, tongoom great, and lifhcah a fnake. Another chief was called Honahpawjatin, which means a fwift running over the mountains. And when they adopted me a chief among them, they named me Shebaygo, which fignifies a writer, or a perfon that is curious in making hieroglyphics, as they faw me often writing.

CHAPTER XIII. OF THEIR RELIGION.

LT is very difficult to attain a perfect knowledge of the religious principles of the Indians. Their ceremonies and doctrines have been fo often ridiculed by the Europeans, that they endeavour to conceal them; and if after the greatest intimacy, you defire any of them to explain to you their fystem of religion, to prevent your ridicule, they intermix with it many of the tenets they have received of the French millionaries, fo that it is at last rendered an unintelligible jargon and not to be depended upon.

Such as I could difcover among the Naudoweffies (for they also were very referved in this point) I shall give my readers, without paying any attention to the accounts of others. As the religion of that people from their fituation appears to be totally unadulterated with the superstitions of the church of Rome, we shall be able to gain from their religious customs a more perfect idea of the original tenets and ceremonies of the Indians in general, than from those of any nations that approach nearer to the fettlements. It

vilities con-

weffies was Great Fathfather, toner chief was vift running lopted me a aygo, which ious in makwriting.

A knowledge Their cereridiculed by onceal them; defire any of igion, to premany of the miffionaries, igible jargon

Naudoweffies point) I fhall ention to the that people unadulteratof Rome, we is cuftoms a and ceremothose of any ements. It It is certain they acknowledge one Supreme Being, or Giver of Life, who prefides over all things. The Chipéways call this being Manitou, or Kitchi Manitou; the Naudoweffies, Wakon or Tongo-Wakon, that is, the Great Spirit; and they look up to him as the fource of good, from whom no evil can proceed. They alfo believe in a bad fpirit, to whom they afcribe great power, and fuppofe that through his means all the evils which befall mankind are in Lifted. To him therefore do they pray in their diftreffes, begging that he would either avert their troubles, or moderate them when they are no longer avoidable.

They fay that the Great Spirit, who is infinitely good, neither wifnes or is able to do any mifchief to mankind; but on the contrary, that he flowers down on them all the bleffings they deferve; whereas the evil fpirit is continually employed in contriving how he may punifh the human race; and to do which he is not only poffeffed of the will, but of the power.

They hold also that there are good spirits of a leffer degree, who have their particular departments, in which they are conftantly contributing to the happineis of mortals. These they suppose to preside over all the extraordinary productions of nature, fuch as those lakes, rivers, or mountains that are of an uncommon magnitude; and likewife the beafts, birds, fifnes, and even vegetables, or ftones that exceed the reft of their species in fize or fingularity. To all of these they pay fome kind of adoration ... Thus when they arrive on the borders of Lake Superior, or the banks of the Miffifippi, or any other great body of water, they prefent to the Spirit who refides there fome kind of offering, as the prince of the Winnebagoes did when he attended me to the Falls of St. Anthony.

But at the fame time I fancy that the ideas they annex to the word fpirit, are very different from the conceptions more enlightened nations entertain of it. They

220

They appear to fashion to themselves corporeal reprefentations of their gods, and believe them to be of a human form, though of a nature more excellent than man.

Of the fame kind are their fentiments relative to a futurity. They doubt not but they shall exist in some future state; they however fancy that their employments there will be fimilar to those they are engaged in here, without the labour and difficulties annexed to them in this period of their existence. M.C.

They confequently expect to be translated to a delightful country, where they shall always have a clear unclouded fky, and enjoy a perpetual fpring ; where the forefts will abound with game, and the lakes with fifh, which might be taken without a painful exertion of skill, or a laborious pursuit; in short, that they shall live forever in regions of plenty, and enjoy every gratification they delight in here; in a greater degree.

To intellectual pleasures they are strangers; nor are thefe included in their scheme of happines. But they expect that even these animal pleasures will be proportioned and distributed according to their merit; the skilful hunter, the bold and fuccessful warrior, will be entitled to a greater fhare than those who through indolence or want of skill cannot boaft of any fuperiority over the common herd.

The priefts of the Indians are at the fame time their physicians, and their conjurers ; whilst they heal their wounds, or cure their difeases, they interpret. their dreams, give them protective charms, and fatisfy that defire which is fo prevalent among them, of fearching into futurity.

How well they execute the latter part of their professional engagements, and the methods they make ufe of on fome of these occasions, I have already shewn in the exertions of the prieft of the Killistinoes, who was fortunate enough to fucceed in his extra-

fame time Ift they heal y interpret. , and fatisg them, of

rt of their they make ve already illiftinoes, his extrardinary

ordinary: attempt near Lake Superior. They frequently are fuccefsful, likewife in administering the falubrious herbs they have acquired a knowledge of ; but that the ceremonies they make use of during the administration of them contributes to their fuccefs, I shall not take upon me to affert.

When any of the people are ill, the perfon who is invested with this triple character of docter, priest, and magician, fits by the patient day and night, rattling in his ears a goad fhell-filled with dry beans, called a Chichicouè and making a difagreeable noife that connot be well defcribed.

This uncouth harmony one would imagine fhould difturb the fick perfon and prevent the good effects of the doctor's prefcription; but on the contrary they believe that the method made use of, contributes to his recovery, by diverting from his malignant purpofes the eyil fpirit who has inflected the diforder ; or at least that it will take off his attention, fo that he fhall not increase the malady. This they are credulous enough to imagine he is constantly on the watch to do, and would carry his invetoracy to a fatal length if they did not thus charm him.

I could not difcover that they make use of any other religious ceremonies than those I have described; indeed, on the appearance of the new-moon they dance and fine; but it is not evident that they pay that planet any adoration; they only feem to rejoice at the return of a luminary that makes the night cheerful, and which ferves to light them on their way when they travel during the abscence of the fun.

Notwithstanding Mr. Adair has afferted that the nations among whom he refided, obferve with very little variation all the rites appointed by the Mofaic Law, I own I could never difcover among those tribes that lie but a few degrees to the north weft, the leafttraces of the Jewish religion, except it be admitted that one particular female cuftom and their divisions into

into tribes, carry with them proof fufficient to eftablifh this affertion.

The Jefuits and French miffionaries have alfo pretended that the Indians had, when they first travelled into America, fome notions, though these were dark and confused, of the christian infitution; that they have been greatly aggitated at the fight of a cross, and given proofs by the impressions made on them, that they were not entirely unacquainted with the facred mysteries of Christianity. I need not fay that these are too glaring absurdities to be credited, and could only receive their existence from the zeal of those fathers, who endeavoured at once to give the public a better opinion of the fuccels of their missions and to add support to the cause they were engaged in.

The Indians appear to be in their religous principles, rude and uninftructed. The doctrines they hold are few and fimple, and fuch as have been generally imprefied on the human mind, by fome means or other, in the most ignorant ages. They however have not deviated, as many other uncivilized nations; and too many civilized ones have done, into idolatrous modes of worship; they venerate indeed and make offerings to the wonderful parts of the creation, as I have before observed; but whether those rights are performed on account of the impression fuch extraordinary appearances make on them, or whether they confider them as the peculiar charge, or the usual places of refidences of the invisible spirits they ackowledge, I cannot positively determine.

The human mind in its uncultivated ftate is apt to afcribe the extraordinary occurrences of nature, fuch as earthquakes, thunder, or hurricanes, to the interpolition of unfeen beings; the troubles and difafters alfo that are annexed to a favage life, the apprehensions attendant on a precarious subsistence, and those numberless inconveniences which man in his improved state has found means to remedy, are sup-

posed

te is apt f nature, es, to the s and difb, the apence, and an in his are fuppofed poled to proceed from the interpolition of evil fpirits; the favage confequently lives in continual apprehenfions of their unkipd attacks, and to avert them has recourse to charms, to the fantaftic ceremonies of his prieft, or the powerful influence of his Manitous. Fear has of course a greater fhare in his devotions than gratitude, and he pays more attent to deprecating the wrath of the evil, than to fecuring the favor of the good beings.

The Indians, however, entertain these absurdities in common with those of every part of the globe who have not been illuminated by that religion, which only can disperse the clouds of superfition and ignorance, and they are as free from error as a people can be that has not been favored with its instructive doctrines.

CHAPTER XIV.

OF THEIR DISEASES, Sc.

HE Indians in general are healthy, and fubject but to few difeafes, many of those that afflict civilized nations, and are the immediate confequences of luxury or floth, being not known among them; however, the hardships and fatigues which they endure in hunting or war, the inclemency of the feafons to which they are continually exposed, but above all the extremes of hunger, and that voracious fields their long excursions confequently subject them to; cannot fail of impairing the constitution, and bringing on diforders.

Pains and weakneffes in the ftomach and breaft are fometimes the refult of their long fafting, and confumptions of the exceflive fatigue and violent exercifes

ercifes they expose themselves to from their infancy, before they have sufficient strength to support them. But the diforder to which they are most subject, is the pleurify; for the removal of which, they apply their grand remedy and prefervation against the generality of their complaints, sweating.

The manner in which they conftruct their floves for this purpofe is as follows: They fix feveral fmall poles in the ground, the tops of which they twift together, fo as to form a rotunda: this frame they cover with fkins or blankets; and they lay them on with fo much nicety, that the air is kept from entering through any crevice; a fmall fpace being only left, just fufficient to creep in at, which is immediately after closed. In the middle of this confined building they place red hot ftones, on which they pour water till a fteam arifes that produces a great degree of heat.

This caufes an inftantaneous perfpiration, which they increase as they please. Having continued in it for fome time, they immediately haften to the nearest ftream, and plunge into the water; and, after bathing therein for about half a minute, they put on their clothes, fit down and smoak with great composure, thoroughly perfuaded that the remedy will prove efficacious. They often make use of this sudoriferous method to refresh themselves, or to prepare their minds for the management of any business that requires uncommon deliberation and fagacity.

They are likewife afflicted with the dropfy and paralytic complaints, which, however, are but very feldom known among them. As a remedy for thefe as well as for fevers they make use of lotions and decoctions, composed of herbs, which the physicians know perfectly well how to compound and apply. But they never truft to medicines alone; they always have recourse likewife to fome superstitious ceremo-

eir infancy; port them. fubject, is they apply off the gen-

their floves everal finall ey twift tome they coty them on from enterbeing only is immedihis confined which they ces a great

tion, which tinued in it the neareft fter bathing ut on their composure, prove effiadoriferous spare their efs that re-

it very felit very feln for thefe ns and dephyficians and apply, hey always is ceremonics, nies, without which their patients would not think the phyfical preparations fufficiently powerful.

With equal judgement they make use of fimples for the cure of wounds, fractures, or bruises; and are able to extract by these, without incision, fplinters, iron, or any other fort of matter by which the wound is caused. In cures of this kind they are extremely dextrous, and complete them in much less time than might be expected from their mode of proceeding.

With the fkin of a fnake, which those reptiles annually fhed, they will also extract splinters. It is amazing to see the fudden efficacy of this application, notwithstanding there does not appear to be the least moisture remaining in it.

It has long been a fubject of difpute, on what continent the venereal difeafe first received its destructive power. This dreadful malady is supposed to have originated in America, but the literary contest ftill remains undecided ; to give fome elucidation to it I shall remark, that as I could not discover the least traces among the Naudoweffies, with whom L refided to long, and was also informed that it was yet unknown among the more weftern nations, I think F may venture to pronounce that it had not its origin' in North-America. These nations that have any communication with the Europeans, or the fouthern tribes, are greatly afflicted with it; but they have all of them acquired a knowledge of fuch certain and expeditious remedies, that the communication is not attended with any dangerous confequences.

Soon after I fet out on my travels, one of the traders whom I accompanied, complained of a violent gonorrhœa, with all its alarming fymptoms: this increafed to fuch a degree, that by the time we had reached the town of the Winnebagoes, he was unable to travel. Having made his complaint known to one of the chiefs of that tribe, he told him not to be unea-

íy,

fy, for he would engage that by the following his advice, he fhould be able in a few days to purfue his journey, and in a little longer time be entirely free from his diforder.

The chief had no fooner faid this than he prepared for him a decoction of the bark of the roots of the prickly afh, a tree fearcely known in England, but which grows in great plenty throughout North-America; by the use of which, in a few days he was greatly recovered, and having received directions how to prepare it, in a fortnight after his departure from this place, perceived that he was radically cured.

If from exceffive exercise or the extremes of heat or cold, they are effected with pains in their limbs or joints, they fcarify the parts affected. Those nations who have no commerce with Europeans do this with a fharp flint; and it is furprising to see, to how a fine a point they have the dexterity to bring them; a lancet can fcarcely exceed in fharpness the inftruments they make of this unmalleable fubstance.

They never can be convinced a perfon is ill, whilft he has an appetite; but when he rejects all kind of nourifhment, they confider the difeafe as dangerous, and pay great attention to it; and during the continuance of the diforder, the phylician refules his patient no fort of food that he is defirous of.

Their doctors are not only fuppofed to be fkilled in the phyfical treatment of difeafes; but the common people believe that by the ceremony of the Chichicoué ufually made use of, as before described, they are able to gain intelligence from the spirits, of the cause of the complaints with which they are afflicted, and are thereby the better enabled to find remedies for them. They discover something supernatural in all their diseases, and the physic administered must invariably be aided by these superstitions.

Sometimes a fick perfon fancies that his diforder arifes from witchcraft; in this cafe the phyfician or

liforder 2yfician or uggler juggler is confulted, who, after the ufual preparations, gives his opinion on the flate of the difeafe, and frequently finds fome means for his cure. But notwithflanding the Indian phyficians always annex thefe fuperflitious ceremonies to their preferiptions, it is very certain, as I have already obferved, that they exercife their art by principles which are founded on the knowledge of fimples, and on the experience, which they acquire by an indefatigable attention to their operations.

The following ftory, which I received from a perfon of undoubted credit, proves that the Indians are not only able to reafon with great acuteness on the causes and symptoms of many of the diforders which are attendant on human nature, but to apply with equal judgment proper remedies.

In Penobfcot, a fettlement in the Province of Maine, in the north-east parts of New-England, the wife of a foldier was taken in labour, and notwithstanding every neceffary affistance was given her, could not be delivered. In this fituation she remained for two or three days, the perfons around her expecting that the next pang would put an end to her existence.

An Indian woman, who accidentally paffed by, heard the groans of the unhappy fufferer, and enquired from whence they proceeded. Being made acquainted with the defperate circumftance attending the cafe, fhe told the informant, that if fhe might be permitted to fee the perfon, fhe did not doubt but that fhe fhould be of great fervice to her.

The furgeon that had attended, and the midwife who was then prefent, having given up every hope of preferving their patient, the Indian woman was allowed to make ufe of any methods fhe thought proper. She accordingly took a handkerchief, and bound it tight over the nofe and mouth of the woman : this immediately brought on a fuffocation ; and from the ftruggles that confequently enfued, fhe was in a few feconds

feconds delivered. The moment this was atchieved, and time enough to prevent any fatal effect, the handkerchief was taken off. The long-fuffering patient thus happily relieved from her pains, foon after perfectly recovered, to the aftonifhment of all those who had been witnefs to her desperate fituation.

The reason given by the Indian for this hazardous method of proceeding was, that desperate disorders require desperate remedies; that as she observed the exertions of nature were not sufficiently forcible to effect the desired consequence, she thought 't necessary to augment their force, which could only be done by fome mode that was violent in the extreme.

CHAPTER XV.

OF THE MANNER IN WHICH THEY TREAT THEIR DEAD.

AN Indian meets death when it approaches him in his hut, with the fame refolution he has often faced him in the field. His indifference relative to this important article, which is the fource of fo many apprehenfions to almost every other nation, is truly admirable. When his fate is pronounced by the phyfician, and it remains to longer uncertain, he harangues those about him with the greatest composure.

If he is a chief and has a family, he makes a kind of funeral oration, which he concludes by giving to his children fuch advice for the regulation of their conduct as he thinks neceffary. He then takes leave of his friends, and iffues out orders for the preparation of a feaft, which is defigned to regale those of his tribe that come to pronounce his eulogium.

After

After the breath is departed, the body is dreffed in the fame attire it ufually wore whilft living, his face is painted, and he feated in an erect pofture on a mat or fkin, placed in the middle of the hut, with his weapons by his fide. His relations being feated round, each harrangues in turn the deceafed; and if he has been a great warrior, recounts his heroic actions nearly to the following purport, which in the Indian language is extremely poetical and pleafing :

. "" You ftill fit among us, Brother, your perfon retains its usual refemblance, and continues fimilar to ours, without any visible deficiency, except that it has loft the power of action. But whither is that breath flown, which a few hours ago fent up fmoke to the Great Spirit ? Why are those lips filent, that lately delivered to us exprefive and pleafing language ? why are those feet motionless; that a short time ago were flecter than the dear on yonder mountains? why ufelefs hang those arms that could climb the taleft tree, or draw the toughest bow? Alas! every part of that frame which we lately beheld with admiration and wonder, is now become as inanimate as is was three hundred winters ago. We will not, however, bemoan thee as if thou wast forever lost to us, or that thy name would be buried in oblivion; thy foul yet lives in the great Country of Spirits, with those of thy nation that are gone before thee; and though we are left behind to prepetuate thy fame, we shall one day join thee. Actuated by the refpect we bore thee whilft living, we now come to tender to thee the last act of kindnefs it is in our power to beftow : that thy body might not lie neglected on the plain, and become a pray to the beafts of the field, or the fowls of air, we will take care to lay it with those of thy predecessors who are gone before thee; hoping at the fame time, that thy spirit will feed with their spirits, and be ready to receive ours, when we also shall arrive at the great Country of Souls."

U

In fhort fpeechs fomewhat fimilar to this does even ry chief fpeak the praifes of his departed friend. When they have fo done, if they happen to be a great diftance from the place of interment, appropriated to their tribe, and the perfon dies during the winter feafon, they wrap the body in fkins, and lay it on a high ftage built for this purpofe, or on the branchs of a large tree, till the fpring arrives. They then, after the manner deforibed in my Journal, carry it, together with all those belonging to the fame nation, to the general burial-place, where it is intered with fome other ceremonies that I could not diffeover.

When the Naudoweffies brought their dead for interment to the great cave, I attempted to get an infight into the remaining burial rites; but whether it was on account of the ftench which arole from fo many bodies, the weather being then hot, or whether they chose to keep this part of their customs secret from me, I could not discover; I found, however, that they confidered my curiofity as ill timed, and therefore I withdrew.

After the interment, the band to which the perfon belongs, take care to fix near the place fuch hieroglyphics as thall flew to future ages his merit and accomplifhments. If any of these people die in the fummer, at a distance from the burying-ground, and they find it impossible to remove the body before it putrefies, they burn the flesh from the bones, preferving the latter, bury them in the manner deferibed.

As the Indians believe that the fouls of the deceafed employ themfelves in the fame manner in the country of fpirits, as they did on earth, that they acquire their food by hunting, and have there, alfo, enemies to contend with, they take care that they do not enter those regions defenceles and unprovided; they confequently bury with them their bows, their arrows, and all the other weapons used either in hunting or war. As they doubt not but they will likewise have occasion occafio things fit in th ly mad paint f The loss wi they w tions, a when t will pe One Naudo ferved The n the fle the fca rank,

ch the perfon uch hieroglyerit and acdie in the -ground, and dy before it ones, prefervleferibed. of the deceafanner in the that they acere, alfo, ene-

t they do not vided ; they their arrows, hunting or kewife have occafion occasion both for the necessaries of life, and those things they efteem as ornaments, they usually deposit in their tombs such skins or stuffs as they commonly made their garments of, domestic utensils, and paint for ornamenting their persons.

The near relations of the deceafed lament his lofs with an appearance of great forrow and anguifh; they weep and howl, and make use of many contortions, as they sit in the hut or tent around the body, when the intervals between the praises of the chiefs will permit.

One formality in mourning for the dead among the Naudoweffies is very different from any mode I obferved in the other nations through which I paffed. The men, to flew how great their forrow is, pierce the flefh of their arms, above the elbows, with arrows; the fcars of which I could perceive on those of every rank, in a greater or lefs degree; and the women cut and gash their legs with fharp broken flints, till the blood flows very plentifully.

Whilft I remained among them, a couple whole tent was adjacent to mine, loft a fon of about four years of age. The parents were fo much affected at the death of their favorite child, that they perfued the usual testimonies of grief with fuch uncommon rigour, as through the weight of forrow and loss of blood, to occasion the death of the father. The woman, who had heretofore been inconfolable, no fooner faw her hufband expire, than she dried up her tears, and appeared cheerful and refigned.

As I knew not how to account for fo extraordinary a transition, I took an opportunity to afk her the reafon of it : telling her at the fame time, that I fhould have imagined the lofs of her hufband would rather have occasioned an increase of grief, than fuch a fudden diminution of it.

She informed me, that as the child was fo young when it died, and unable to fupport itfelf in the coun-

try of fpirits, both fhe and her hufband had been apprehenfive that its fituation would be far from happy; but no fooner did fhe behold its father depart for the fame place, who not only loved the child with the tendereft affection, but was a good hunter, and would be able to provide plentifully for its fupport, than fhe ceafed to mourn. She added, that fhe now faw no reafon to continue her tears, as the child on whom fhe doted, was happy under the care and protection of a fond father, and fhe had only one wifh that remained ungratified, which was that of being herfelf with them.

Expressions fo replete with unaffected tendernes, and fertiments that would have done honor to a Roman matron, made an impression on my mind greatly in favor of the people to whom she belonged, and tended not a little to counteract the prejudices I had hitherto entertained, in common with every other traveller, of Indian infensibility and want of parental tenderness.

Her subsequent conduct confirmed the favorable opinion I had just imbibed; and convinced me, that, notwithstanding this apparent fuspension of her grief, fome particles of that reluctance, to be feparated from a beloved relation, which is implanted either by nature or cuftom in every human heart, still lurked in hers. I observed that she went almost every evening to the foot of the tree, on a branch of which the bodies of her hufband and child were laid, and after cutting off a lock of her hair, and throwing it on the ground, in a plaintive melancholy fong bemoaned its A recapitulation of the actions he might have fate. performed, had his life been spared, appeared to be her favorite theme; and whilft fhe foretold the fame that would have attended an imitation of his father's

become thy hand, and how fatal would thy arrows have proved to the enemies of our bands. Thou wouldst often have drank their blood, and eaten their flefh, and numerous flaves would have rewarded thy toils. With a nervous arm wouldst thou have feized the wounded buffaloe, or have combated the fury of Thou would ft have overtaken the the enraged bear. flying elk, and have kept pace on the mountain's brow with the fleetest deer. What feats mightest thou not have performed, hadft thou staid among us till age had given thee ftrength, and thy father had instructed thee in every Indian accomplishment !" In terms like these did this untutored favage bewail the loss of her fon, and frequently would she pass the greatest part of the night in the affectionate employ.

The Indians in general are very ftrict in the obfervance of their laws relative to mourning for their dead. In fome nations they cut off their hair, blacken their faces, and fit in an erect posture, with their heads, closely covered, and depriving themselves of every pleafure. This feverity is continued for feveral months, and with fome relaxations the appearance is fometimes kept up for feveral years. I was told that when the Naudoweffies recollected any incidents of the lives of their deceased relations, even after an interval of ten years, they would howl fo as to be heard at a great diftance. They would fometimes continue this proof of respect and affection for several hours; and if it happened that the thought occured, and the noife was begun towards the evening, those of their tribe who are at hand would join with them.

A CONCISE CHARACTER OF THE INDIANS.

HE character of the Indians, like that of other uncivilized nations, is composed of a mixture of ferocity and gentlenes. They are at once guided by paffions and appetites, which they hold in common with the fiercest beasts that inhabit their woods, and are possessed of virtues which do honor to human nature.

In the following eftimate I shall endeavour to forget on the one hand the prejudices of Europeans, who usually annex to the word Indian, epithets that are difgraceful to human nature, and who view them in no other light than as favages and cannibals, whils with equal care I avoid my partiality towards them, as fome must naturally arise from the favourable reception I met with during my stay among them.

At the fame time I shall confine my remarks to the nations inhabiting only the western regions, such as the Naudowessies, the Ottagaumies, the Chipéways, the Winnebagoes, and the Saukies; for as throughout that diversity of climates, the extensive continent of America is composed of, there are people of different dispositions and various characters, it would be incompatible with my prefent undertaking to treat of all these, and to give a general view of them as a conjunctive body.

That the Indians are of a cruel, revengeful, inexorable difposition, that they will watch whole days unmindful of the calls of nature, and make their way through pathlefs, and almost unbounded woods, subfifting only on the fcanty produce of them, to purfue and revenge themselves of an enemy; that they hear unmoved

enmoved the piercing cries of fuch as unhappily fall into their hands, and receive a diabolical pleafure from the tortures they inflict on their prifoners, I readily grant; but let us look on the reverfe of this: terrifying picture, and we fhall find them temperate both in their diet and potations (it muft be remembered that I fpeak of those tribes who have little communication with Europeans) that they withstand, with unexampled patience, the attacks of hunger, or the inclemency of the feasons, and esteem the gratification of their appetites but as a fecondary confideration.

We shall likewife fee them focial and humane to those whom they consider as their friends, and even to their adopted enemies; and ready to partake with them of the last morsel, or to risk their lives in their defence.

In contradiction to the report of many other travellers, all of which have been tinctured with prejudice, I can aftert, that notwithftanding the apparent indifference with which an Indian meets his wife and children after a long absence, an indifference proceeding rather from custom than infensibility, he is not unmindful of the claims either of connubial or parental tenderness; the little ftory I have introduced in the preceding chapter, of the Naudoweffie woman lamenting her child, and the immature death of the father, will elucidate this point, and enforce the affertion much better than the most studied arguments I can make use of.

Accuftomed from their youth to innumerable hardfhips, they foon become fuperior to a fenfe of danger, or the dread of death; and their fortitude, implanted by nature, and nurtured by example, by precept and accident, never experiences a moment's allay.

Though flothful and inactive whilf their flores of provision remains unexhausted, and their foes are

INDIANS.

ngeful, inexwhole days ke their way woods, fubn, to purfue at they hear mamoved

at

236

at a diftance, they are indefatigable and perfevering in pursuit of their game, or in circumventing their cnemies.

If they are artful and defigning, and ready to take every advantage, if they are cool and deliberate in their councils, and cautious in the extreme either of discovering their fentiments, or of revealing a fecret. they might at the fame time boaft of poffefling qualifications of a more animated nature, of the fagacity of a hound, the penetrating fight of a lynx, the cunning of the fox, the agility of a bounding roe, and the unconquerable fierceness of the tiger.

In their public characters, as forming part of a community, they poffefs an attachment for that band to which they belong, unknown to the inhabitants of any other country. They combine, as if they were actuated only by one foul, against the enemies of their nation, and banish from their minds every confideration opposed to this.

They confult without unneceffary opposition, or without giving way to the excitements of envy or ambition, on the measures necessary to be purfued for the destruction of those who have drawn on themfelves their difpleafure. No felfish views ever influence their advice, or obstruct their confultations. Nor is it in the power of bribes or threats to diminish the love they bear their country.

The honor of their tribe, and the welfare of their nation, is the first and most predominant emotion of their hearts; and from hence proceed in a great measure all their virtues and their vices. Actuated by this, they brave every danger, endure the most exquisite torments, and expire triumphing in their fortitude, not as a perfonal qualification, but as a national characteriftic.

From thence also flow that infatiable revenge to-. wards those with whom they are at war, and all the sonsequent horrors that difgrace their name. Their uncultivated

re of their motion of n a great Actuated the most their fora nation-

venge toid all the . Their tivated uncultivated mind being incapable of judging of the propriety of an action, in opposition to their passions, which are totally infensible to the controls of reason or humanity, they know not how to keep their fury within any bounds, and confequently that courage and resolution, which would otherwise do them honor, degenerates into a favage ferocity.

But this flort differtation muft fuffice: the limits of my work will not permit me to treat the fubject more copioully, or to purfue it with a logical regularity. The obfervations already made by my readers on the preceding pages, will, I truft, render it unneceffary; as by them they will be enabled to form a tolerable just idea of the people I have been deferibing. Experience teaches, that anecdotes, and relations of particular events, however trifling they might appear, enable us to form a truer judgment of the manners and customs of a people, and are much more declaratory of their real flate, than the most fludied and claborate difquifition, without thefe aids.

CHAPTER XVII.

OF THEIR LANGUAGE, HIEROGLYPHICS, Se.

HE principal languages of the natives of North America may be divided into four claffes, as they confift of fuch as are made use of by the nations of the Iroquois towards the eastern parts of it, the Chipéways or Algonkins to the north-west, the Naudowesffies to the west, and the Cherokees, Chickafaws, &c. to the fouth. One or other of these four are used by all the Indians who inhabit the parts that lie between the coast of Labradore north, the Floridas fouth, the. Atlantic

238

Atlantic Ocean east, and, as far as we can judge from the difeoveries hitherto made, the Pacific Ocean on the we?.

But of all thefe, the Chipéway tongue appears to be the most prevailing; it being held in such esteem, that the chiefs of every tribe, dwelling about the great lakes, or to the westward of these on the banks of the Missifission, with those as far south as the Ohio, and as far north as Hudson's Bay, consisting of more than thirty different tribes, speak this language alone in their councils, notwithstanding each has a peculiar one of their own.

It will probably in time become univerfal among all the Indian nations, as none of them attempt to make excursions to any great distance, or are confidered as qualified to carry on any negociation with a distant band, unless they have acquired the Chipéway tongue.

At prefent, befides the Chipéways, to whom it is natural, the Ottawaws, the Saukies, the Ottagaumies, the Killiftinoes, the Nipegons, the bands about Lake Le Pluye, and the remains of the Algonkins, or Gens de Terre, all converse in it, with fome little variation of a dialect; but whether it be natural to those nations, or acquired, I was not able to discover. I am however of opinion that the barbarous and uncouth dialect of the Winnebagoes, the Menomonies, and many other tribes, will become in time totally extinct, and this be adopted in its stead.

The Chipéway tongue is not encumbered with any unneceffary tones or accents, neither are there any words in it that are fuperfluous; it is also easy to pronounce, and much more copious than any other Indian language.

As the Indians are unacquainted with the polite arts, or with the fciences, and as they are ftrangers to ceremony, or compliment, they neither have nor need an infinity of words wherewith to embellifh their Chi fies gra gut and ten Ch of in nat ten is foi to are mi ide W

ed with any e there any alfo eafy to n any other

h the polite ftrangers to r have nor o embellifh their their discourfe. Plain and unpolifhed in their manners, they only make use of such as serve to denominate the necessfaries or conveniences of life, and to express their wants, which in a state of nature can be but few.

I have annexed hereto a fhort vocabulary of the Chipéway language, and another of the Naudoweffies, but am not able to reduce them to the rules of grammar.

The latter is fpoken in a foft accent, without any guttural founds, fo that it may be learnt with facility, and is not difficult either to be pronounced or written. It is nearly as copious and expressive as the Chipéway tongue, and is the most prevailing language of any on the western banks of the Missifisppi, being in use, according to their account, among all the nations that lie to the north of the Messorie, and extend as far west as the shores of the Pacific Ocean.

As the Indians are not acquainted with letters, it is very difficult to convey with pereifion the exact found of their words; I have however endeavoured to write them as near to the manner in which they are expressed, as such an uncertain mode will admit of.

Although the Indians cannot communicate their ideas by writing, yet they form certain hieroglyphics, which, in fome meafure, ferve to perpetuate any extraordinary transaction, or uncommon event. Thus when they are on their excursions, and either intend to proceed, or have been on any remarkable enterprife, they peel the bark from the trees which lie in their way, to give intelligence to those parties that happen to be at a distance, of the path they must purfue to overtake them.

The following instance will convey a more perfect idea of the methods they make use of on this occation, than any expressions I can frame.

When

When I left the Miffifippi, and proceeded up the Chipéway River, in my way to Lake Superior, as related in my Journal, my guide, who was a chief of the Chipéways that dwell on the Ottawaw Lake, near the heads of the river we had juft entered, fearing that fome parties of the Naudoweffies, with whom his nation are perpetually at war, might accidentally fall in with us, and before they were apprifed of my being in company, do us fome mifchief, he took the following fteps :

He peeled the bark from a tree, near the entrance of a river, and with wood-coal, mixed with bear's greafe, their ufual fubftitute for ink, made in an uncouth, but expressive manner, the figure of the town of the Ottagaumies. He then formed to the left a man dreffed in fkins, by which he intended to reprefent a Naudoweffie, with a line drawn from his mouth to that of a deer, the fymbol of the Chipéways. After this he depictured ftill further to the left a canoe as proceeding up the river, in which he placed a man fitting with a hat on; this figure was defigned to represent an Englishman, or myself, and my Frenchman was drawn with a handkerchef tied round his head, and rowing the canoe; to these he added feveral other fignificant emblems, among which the Pipe of Peace appeared painted on the prow of the canoc.

The meaning he intended to convey to the Naudoweffies, and which I doubt not appeared perfectly intelligible to them, was, that one of the Chipéway chiefs had received a fpeech from fome Naudoweffie chiefs, at the town of the Ottagaumies, defiring him to conduct the Euglifhman, who had lately been among them, up the Chipéway river; and that they thereby required, that the Chipéway, notwithftanding he was an avowed enemy, fhould not be molefted by them on his paffage, as he had the care of a perfen whom they effected as one of their nation.

T

OF THE BEASTS, BIRDS, FISHES, REPTILES, AND INSECTS, WHICH ARE FOUND IN THE INTERIOR PARTS OF NORTH-AMERICA.

OF these I shall, in the first place, give a catalogue, and afterwards a description of such only as are either peculiar to this country, or which differ in some material point from those that are to be met with in other realms.

OF THE BEASTS.

The Tyger, the Bear, Wolves, Foxes, Dogs, the Cat of the Mountain, the Wild Cat, the Buffalo, the Deer, the Elk, the Moofe, the Carrabou, the Carcajou, the Skunk, the Porcupine, the Hedge-hog, the Woodchuck, the Racoon, the Martin, the Fifher, the Mulquafh, Squirrels, Hares, Rabbits, the Mole, the Weezel, the Moufe, the Dormoufe, the Beaver, the Otter, the Mink, and Bats.

The TYGER. The Tyger of America refembles in fhape those of Africa and Afia, but is confiderably fmaller. Nor does it appear to be fo fierce and ravenous as they are. The color of it is a darkifh fallow, and it is entirely free from spots. I faw one on an island in the Chipéway River, of which I had a very good view, as it was at no great distance from me. It fat up on its hinder parts like a dog; and did not seem either to be apprehensive of our approach, or to discover 'any ravenous inclinations. It is however very feldom to be met with in this part of the world.

The BEAR. Bears are very numerous on this continent, but more particularly fo in the northern parts

b, Dogs, the Buffalo, the u, the Carcaedge-hog, the t, the Fifher, ts, the Mole, the Beaver,

rica refembles s confiderably ierce and raa darkifh fal-I faw one on hich I had a diftance from c a dog; and our approach, s. It is hows part of the

the northern parts parts of it, and contribute to furnish both food and beds for almost every Indian nation. Those of America differ in many respects from those either of Greenland or Ruffia; they being not only fomewhat fmaller, but timorous and inoffensive, unless they are pinched by hunger, or fmarting from a wound. The fight of a man terrifies them ; and a dog will pu feve. ral to flight. They are extremely fond of grapes, and will climb to the top of the highest trees in quest of them. This kind of food renders their flefh excelfively rich, and finely flavored; and it is confequently preferred by the Indians and traders to that of any The fat is very white, and befides beother animal. ing fweet and wholefome, is poffeffed of one valuable quality, which is, that it never cloys. The inhabitants of these parts constantly anoint themselves with it, and to its efficacy they in a great measure owe The feason for hunting the bear is their agility. during the winter; when they take up their abode in hollow trees, or make themfelves dens in the roots of those that are blown down, the entrance of which they stop up with branches of fir that lie feattered about. From these retreats it is faid they ftir not. whilft the weather continues fevere, and as it is well known that they do not provide themfelves with food, they are supposed to be enabled by nature to subfift for fome months without, and during this time to continue of the fame bulk.

The WOLF. The wolves of North-America are much lefs than thofe which are met with in other parts of the world. They have, however, in common with the reft of their fpecies, a wildnefs in their looks, and a fiercenefs in their eyes; notwithftanding which, they are far from being fo ravenous as the European wolves, nor will they ever attack a man, except they have accidentally fed on the flefh of thofe flain in battle. When they herd together, as they often do in the winter, they-make a hideous and terrible

fur

rible noife. In these parts there are two kinds; one of which is of a fallow color, the other of a dun, inclining to a black.

The FOX. There are two forts of foxes in North-America, which differ only in their color, one being of a reddifh brown, the other of a grey; those of the latter kind that are found near the river Missifippi, are extremely beautiful, their hair being of a filver grey.

DOGS. The dogs employed by the Indians in hunting appear to be all of the fame fpecies; they carry their cars creek, and greatly refemble a wolf about the head. They are exceedingly useful to them in their hunting excursions, and will attack the fiereeft of the game they are in purfuit of. They are also remarkable for their fidelity to their mafters; but being ill fed by them, are very troublefome in their huts or tents.

The CAT of the Mountain. This creature is in fhape like a cat, only much larger. The hair or fur refembles alfo the fkin of that domeftic animal; the color, however differs, for the former is of a reddifh or orange caft, but grows lighter near the belly. The whole fkin is beautified with black fpots of different figures, of which those on the back are long, and those on the lower parts round. On the cars there are black ftripes. This creature is nearly as fierce as a leopard, but will feldom attack a man.

The BUFFALO. This beaft, of which there are amazing numbers in thefe parts, is larger than an ox, has fhort black horns, with a large beard under his chin, and his head is fo full of hair, that it falls over his eyes, and gives him a frightful look. There is a bunch on his back which begins at the haunches, and increasing gradually to the fhoulders, reaches on to the neck. Both this excrefeence and its whole body are covered with long hair, or rather wool, of a dun or moufe color, which is exceedingly valuable, efpecially

kinds; one f a dun, in-

cially that on the fore part of the body. Its head is larger than a bull's with a very fhort neck ; the breaft is broad, and the body decreases towards the buttocks. These creatures will run away at the fight of a man, and a whole herd will make off when they perceive 'The flefh of the buffalo is excellent a fingle dog. food, its hide is extremely ufeful, and the hair very proper for the manufacture of various articles.

The DEER. There is but one fpecies of deer in North-America, and these are higher and of a flimmer make than those in Europe. Their shape is nearly the fame as the European, their color of a deep fallow, and their horns very large and branching. This beaft is the fwifteft on the American plains, and they herd together as they do in other countries.

The ELK greatly exceeds the deer in fize, being in bulk equal to a horfe. Its body is fhaped like that of a deer, only its tail is remarkably fhort, being not more than three inches long. The color of its hair, which is grey, and not unlike that of a camel, but of a more reddifh caft, is nearly three inches in length, and as coarfe as that of a horfe. The horns of thiscreature grow to a prodigious fize, extending fo wide that two or three perfons might fit between them at the fame time. They are not forked like those of a deer, but have all their teeth or branches on the outer edge. Nor does the form of those of the elk refemble a deer's, the former being flat, and eight or ten inches broad, whereas the latter are round and confiderably narrower. They fled their horns every year in the month of February, and by August the new ones are nearly arrived at their full growth. Notwithstanding their fize, and the means of defence nature has furnished them with, they are as timorous as a deer. Their fkin is very ufeful, and will drefs as well as that of a buck. - They feed on grafs in the fummer, and on mofs or bude 'the winter. Constant. Kom

The

A 2

258

The MOOSE is nearly about the fize of the elk, and the horns of it are almost as numerous as that animal's; the ftem of them, however, is not quite fo wide, and they branch on both fides like those of a deer. This creature alfo fheds them every year. Though its hinder parts are very broad, its tail is not above an inch long. It has feet and legs like a camel; its head is about two feet long, its upper lip much larger than the under, and the noftrils of it are to wide that a man might thrust his hand into them. a confiderable way. The hair of the moofe is light grey, mixed with a blackifh red. It is very elaftic, for though it be beaten ever fo long, it will retain its original Apape. The flefh is exceeding good food, ealy of digeftion, and very nourishing. The nose or upper lip, which is large and loofe from the gums, is efteemed a great delicacy, being of a firm confiftence, between marrow and griftle, and when properly dreffed, affords a rich and lufelous difh. Its hide is very proper for leather, being thick and ftrong, yet foft and pliable. The pace of this creature is always. a trot, which is fo expeditious, that it is exceeded in fwiftness but by few of its fellow inhabitants of these woods. It is generally found in the forefts, where it feeds on mofs and buds. Though this creature is of the deer kind, it never herds as those do. Most au. thors confound it with the elk, deer or carrabou, but it is a species totally different as might be discovered by attending to the defeription I have given of each.

The CARRABOU. This beaft is not near fo tall as the moofe, however it is fomething like it in fhape, only rather more heavy, and inclining to the form of an afs. The horns of it are not flat as those of the elk are, but round like those of the deer; they alfo meet nearer together at the extremities, and bend more over the face than either those of the elk or moofe. It partakes of the face of the deer, and is with difficulty overtak is excits purfuers. The flefh of it larly frce

The flefh of

of it likewife is equally as good, the tongue particularly is in high efteem. The fkin being fmooth and free from veins, is as valuable as fhamoy.

The CARCAJOU. This creature, which is of the cat kind, is a terrible enemy to the preceding four fpecies of beafts. He either comes upon them from fome concealment unperceived, or climbs up into a tree, and taking his flation on fome of the branches, waits till one of them driven by an extreme of heat or cold, takes fhelter under it; when he faftens upon his ucck, and opening the jugular vein, foon brings his prey to the ground. This he is enabled to do by his long tail, with which he encircles the body of his adverfary; and the only means they have to fhun their fate, is by flying immediately to the water; by this method, as the carcajou has a great diflike to that element, he is fometimes got rid of before he can effect his purpofe.

The SKUNK. This is the most extraordinary animal that the American woods produce. It is rather less than a pole-cat, and of the fame species; it is therefore often mistaken for that creature, but is very different from it in many points. Its hair is long and fhining, variegated with large black and white fpots, the former mostly on the shoulders and rump; its tail is very bufly, like that of the fox, part black, and part white like its body; it lives chiefly in the woods and hedges; but its extraordinary powers are only flewn when it is purfued. As foon as he finds himfelf in danger, he ejects, to a great diftance from behind, a fmall ftream of water, of fo fubtile a nature, and at the fame time fo powerful a finell, that the air is tainted with it for half a mile in circumference; and his purfuers, whether men or dogs, being almost fuffocated with the stench, are obliged to give over the purfuit. On this account he is called by the French, Enfant du Diable, the Child of the Devil; or Bête Puante, the Stinking Beaft. It is almost impossible to describe

describe the noisome effects of the liquid with which this creature is fupplied by nature for its defence. If a drop of it falls on your clothes, they are rendered fo difagreeable that it is impossible ever after to wear them; or if any of it enters your eyclids, the pain becomes intolerable for a long time, and perhaps at laft you lofe your fight. The finell of the ikunk, though thus to be dreaded, is not like that of a putrid' carcafe, but a ftrong foetid effluvia of musk, which dif. pleafes rather from its penetrating power than from its naufeoufnefs. It is notwithftanding confidered a: conducive to clear the head, and to raife the fpirits. This water is fuppoled by naturalists to be its urine ; but I have diffected many of them that I have, fhot, and have found within this the bodies, near the urinal vefiel, a finall recent who of water, totally diffinet from the bladder which contained the urine, and from which alone I am fatisfied the horrid ftench proceeds, After having taken out with great care the bag wherein this water is lodged, I have frequently fed on them, and have found them very fweet and good; but one drop emitted taints not only the carcafe, but the whole house, and renders every kind of provisions, that are in it, unfit for use. With great justice therefore do the French give it fuch a diabolical name.

The PORCUPINE. The body of an American porcupine is in bulk about the fize of a fmall dog, but it is both fhorter in length, and not fo high from the ground. It varies very much from those of other countries both in its fhape and the length of its quills. The former is like that of a fox, except the head, which is not fo fharp and long, but refembles more that of a rabbit. Its body is covered with hair of a dark brown, about four inches long, great part of which are the thickness of a ftraw, and are termed its quills. Thefe are white, with black points, hollow and very ftrong, especially those that grow on the back. The quills serve this creature for offensive and defensive weaponts,

quid with which r its defence. If ey are rendered er after to wear lids, the pain bed perhaps at laft e ikunk, though of a putrid' carnusk, which difower than from ing confidered as raife the fpirits. to be its urine; hat I have. fhot, near the urinal ally diftinct from arine, and from ftench proceeds. e the bag wheretly fed on them. good; but one fe, but the whole ovisions, that are ice therefore do ame.

of an American a fmall dog, but to high from the thofe of other ngth of its quills. t the head, which es more that of hair of a dark at part of which termed its quills. hollow and very the back. The g and defensive weapons, weapons, which he darts at his enemies, and if they pierce the fiefh in the leaft degree, they will fink quite into it, and are not to be extracted without incifion. The Indians use them for boring their ears and noise, to infert their pendants, and also by way of ornament in their flockings, hair, &c. belides which, they greatly efteem the fiefh.

The WOOD-CHUCK is a ground animal of the fur kind, about the fize of a martin, being nearly filteen inches long; its body however is rounder, and its legs fhorter; the fore-paws of it are broad, and conftructed for the purpose of digging holes in the ground, where it burows like a rabbit; its fur is of a grey color, on the reddish cast, and its flesh tolerable food.

The RACOON is fomewhat lefs in fize than a beam ver, and its fect and legs are like those of that creature, but fhort in proportion to its body, which itefembles that of a badger. The incre of its head is much like a fox's, only the cars are florter, more round and naked; and its hair is also fimilar to that animal's, being thick, long, foft, and black at the ends. On its face there is a broa dripe that runs acrofs it, and includes the eyes, which are large. Its muzzle is black, and at the end roundifh like that of. a dog; the teeth are also fimilar to those of a dog in number and fhape; the tail 's long and round, with annular ftripes on it like those of a cat; the feet have five long flender toes, armed with fharp claws, by which it is enabled to climb up trees like a monkey, and to run to the very extremities of the boughs. It makes use of its fore feet, in the manner of hands, and feeds itfelf with them. The fleth of this creature is very good in the months of September and October, when fruit and nuts, on which it likes to feed, are plenty.

The MARTIN is rather larger than a fquirrel, and fomewhat of the fame make; its legs and claws, however,

7

however, are confiderably fhorter. Its ears are fhort, broad, and roundifh, and its eyes fhine in the night like those of a cat. The whole body is covered with fur of a brownish fallow color, and there are some in the more northern parts which are black; the skins of the latter are of much greater value than the others. The tail is covered with long hair, which makes it appear thicker than it really is. Its flesh is sometimes eaten, but is not in any great esteem.

The MUSQUASH, or MUSK-RAT, is fo term. ed for the exquilite musk which it affords. It appears to be a diminutive of the beaver, being endowed with all the properties of that fagacious animal, and wants nothing but fize and ftrength, being not much bigger than a large rat of the Norway breed, to rival the creature it fo much refembles. Was it not for its tail, which is exactly the fame as that of an European rat, the ftructure of their bodies is fo much alike, efpecially the head, that it might be taken for a fmall beaver. Like that creature it builds itfelf a cabin, but of a lefs perfect construction, and takes up its abode near the fide of fome piece of water. In the fpring they leave their retreats, and in pairs fubfift on leaves and roots till the fummer comes on, when they feedon ftrawberries, rasberries, and such other fruits as they can reach. At the approach of winter they feparate, when each takes up its lodging apart by itfelf in fome hollow of a tree, where they remain quite unprovided with food, and there is the greatest reason to believe, fubfift without any till the return of fpring.

SQUIRRELS. There are five forts of fquirrels in America; the red, the grey, the black, the variegated and the flying. The two former are exactly the fame as those of Europe; the black are fomewhat larger and differ from them only in color; the variegated alfo refemble them in flape and figure, but are very beautiful, being finely ftriped with white or grey, and fometimes with red and black. The American flying

263

rs are fhort, n the night overed with are fome in the fkins an the othwhich makes th is fome-

flying fquirrel is much lefs than the European, being not above five inches long, and of a ruffet grey or afhcolor on the back, and white on the under parts. It has black prominent eyes, like thofe of the moufe, with a long, flat, broad tail. By a membrane on each fide, which reaches from its fore to its hind legs, this creature is enabled to leap from one tree to another, even if they frand a confiderable diffance apart; this loofe fkin, which it is enabled to ftretch out like a fail, and by which it is buoyed up, is about two inches broad, and is covered with a fine hair or down. It feeds upon the fame provisions as the others, and is cafily tamed.

The BEAVER. This creature has been to often treated of, and his uncommon abilities to minutely deferibed, that any further account of it will appear unneceffary; however for the benefit of those of my readers who are not fo well acquainted with the form and properties of this fagacious and useful animal, I shall give a concise description of it. The beaver is an amphibious quadruped, which cannot live for any long time in the water, and it is faid is even able to exist entirely without it, provided it has the convenience of fometimes bathing itfelf. The largeft beavers are nearly four feet in length, and about fourteen or fifteen inches in breadth over the haunches; they weigh about fixty pounds. Its head is like that of the otter, but larger; its fnout is pretty long, the eyes fmall, the ears flort, round, hairy on the outfide, and fmooth within, and its teeth very long; the under teeth ftand out of their mouths about the breadth of three fingers, and the upper half a finger, all of which are broad, crooked, ftrong; and fharp ; befides those teeth called the incifors, which grow double, are fet very deep in their jaws, and hend like the edge of an axe, they have fixteen grinders, eight on each fide, four above and four below, directly opposite to each other. With the former they are able to cut down trees

264

trees of a confiderable fize, with the latter to break the hardeft fubftances. Its legs are flort, particularly the fore-legs, which are only four or five inches long, and not unlike those of a badger; the toes of the fore-feet are feparate, the nails placed obliquely, and are hollow like quills; but the hind feet are quite different, and furnished with membranes between the toes. By this means it can walk though but flowly, and is able to fwim with as much eafe as any other aquatic animal. The tail has fomewhat in it that refembles a fifh, and feems to have no manner of relation to the reft of the body, except the hind feet, all the other parts being fimilar to those of land animals. The tail is covered with a fkin furnished with fcales, that are joined together by a pellicle; these sales are about the thickness of parchment, nearly a line and a half in length, and generally of a hexagonical figure, having fix corners; it is about eleven or twelve inches in length, and broader in the middle, where it is four inches over, than either at the root or the extremity. It is about two inches thick near the body, where it is almost round, and grows gradually thinner and flatter to the end. The color of the beaver is different according to the different climates in which it is found. In the most northern parts they are generally quite black; in more temperate, brown; their color becoming lighter and lighter as they approach towards the fouth. The fut is of two forts all over the body, except at the feet, where it is very fhort ; that which is the longest, is generally in length about an inch, but on the back it fometimes extends to two inches, gradually diminishing towards the head and tail. This part of the fur is barfh, coarse and thining, and of little use; the other part confifts of a very thick and fine down, fo foft that it feels almost like filk, about three quarters of an inch in length, and is what is commonly manufactured. Caftor, which is ufeful in medicine, is produced from

the body of this creature ; it was formerly believed to be its tefticles, but later difcoveries have flown that it is contained in four bags, fituated in the lower belly. Two of which, that are called the fuperior, from their being more elevated than the others, are filled with a foft, refinous, adhefive matter, mixed with fmall fibres, greyifh without, and yellow within, of a ftrong, difagreeable, and penetrating fcent, and very inflammable. This is the true caftoreum; it hardens in the air, and becomes brown, brittle, and The inferior bags contain an unctuous lifriable. quor like honcy; the color of which is a pale yellow, and its odor fomewhat different from the other, being rather weaker and more difagreeable; it however thickens as it grows older, and at length becomes about the confiftence of tallow. This has alfo its particular use in medicine; but it is not fo valuable as the true caftoreum.

The ingenuity of these creatures in building their cabins, and in providing for their fubfiftence, is truely wonderful. When they are about to chufe themfelves a habitation, they affemble in companies fometimes of two or three hundred, and after mature deliberation fix on a place where plenty of provisions and all neceffaries are to be found. Their houfes are always fituated in the water, and when they can find neither lake nor pond adjacert, they endeavour to fupply the defect by ftopping the current of fome brook or finall river, by means of a caufeway or dam. For this purpose they set about felling of trees, and they take care to chufe out those that grow above the place where they intend to build, that they may fwim down with the current. Having fixed on those that are proper, three or four beavers placing themfelves round a large one, find means with their ftrong teeth to bring it down. They also prudently contrive that it shall fall towards the water, that they may have the lefs way to carry it. After they have by

by a continuance of the fame labour and industry. cut it into proper lengths, they roll thefe into the water, and navigate them towards the place where they are to be employed. Without entering more minutely into the measures they purfue in the conitruction of their dams, I shall only remark, that having prepared a kind of mortar with their feet, and laid it on with their tails, which they had before made ufe of to transport it to the place where it is requisite, they construct them with as much folidity and regularity as the most experienced workmen could do. The formation of their cabins is no lefs amazing. Thefe are either built on poles in the middle of the fmall lakes they have thus formed, on the bank of a river, or at the extremity of fome point of land that advances into a lake. The figure of them is round or oval, and they are fainioned with an ingenuity equal to their dams. Two thirds of the edifice ftand: above the water, and this part is fufficiently capacious to contain eight or ten inhabitants. Each beaver has his place affigned him, the floor of which he curioufly ftrews with leaves, or fmall branches of the pine-tree, fo as to render it clean and comfortable ; and their cabins are all fituated fo contigious to each other, as to allow of an eafy communication. The winter never furprifes thefe animals before their bufinefs is completed; for by the latter end of September their houfes are finished, and their flock of provisions is generally laid in. Thefe confift of finall pieces of wood whole texture is foft, fuch as the poplar, the afpin, or willow, &c. which they lay up in piles, and difpofe of in fuch manner as to preferve their moif-. ture. Was I to enumerate every inftance of fagacity that is to be discovered in these animals, they would fill a volume, and prove not only entertaining but inftructing.

The OTTER. This creature also is amphibious, and greatly refembles a beaver, but is very different from fron as a mu the wai inft are fo c to t for bell mai wh mu mil onl] me tre tafl tho the po bla cre ex the it i gr ou · its

H

011

induftry, into the ace where ing more n the conthat havfeet, and efore made s requifite, and regucould do. amazing. ldle of the bank of a f land that h is round genuity efice ftand: capacious ach beaver ich he cuhes of the nfortable : us to each on. The their bufi-September provitions ll pieces of oplar, the piles, and their moil-. of fagacity hey would ing but in-

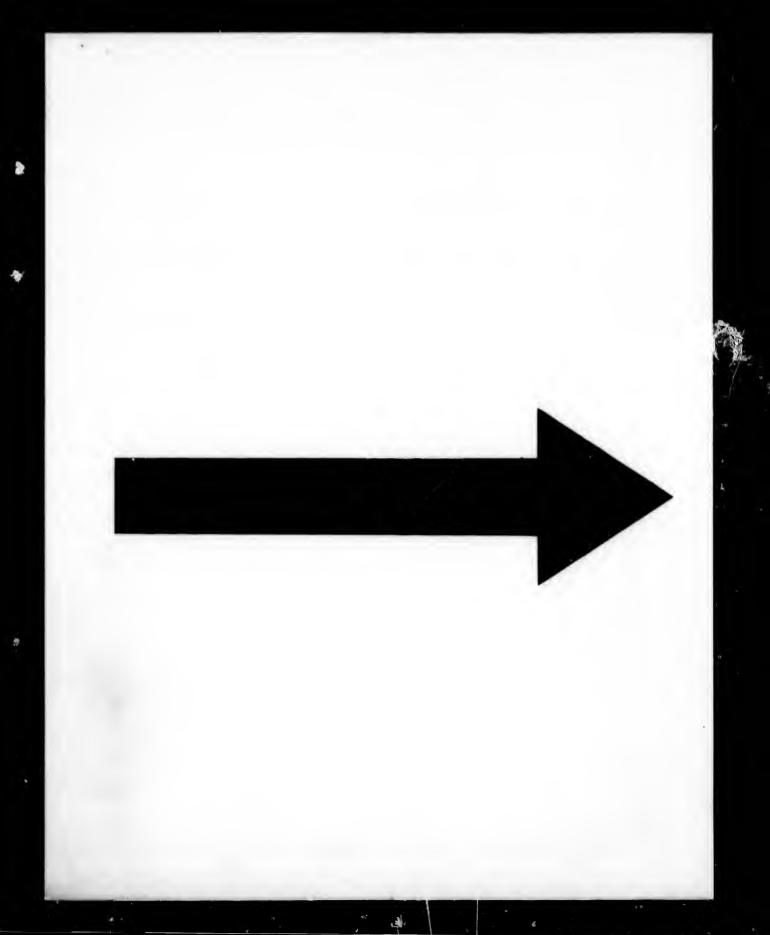

nphibious, y different from from it in many refpects. Its body is nearly as long as a beaver's but confiderably lefs in all its parts. 'The muzzle, eyes, and the form of the head are nearly the fame, but the teeth are very unlike, for the otter wants the large incifors or nippers that a beaver has; inftead of thefe, all his teeth, without any diffinction, are fhaped like those of a dog or wolf. The hair alfo of the former is not half fo long as that belonging to the latter, nor is the color of it exactly the fame, for the hair of an otter under the neck, ftomach, and belly, is more greyifh than that of a beaver, and in many other respects it likewife varies. This animal, which is met with in most parts of the world, but in much greater numbers in North-America, is very mifchievous, and when he is closely purfued, will not only attack dogs but men.

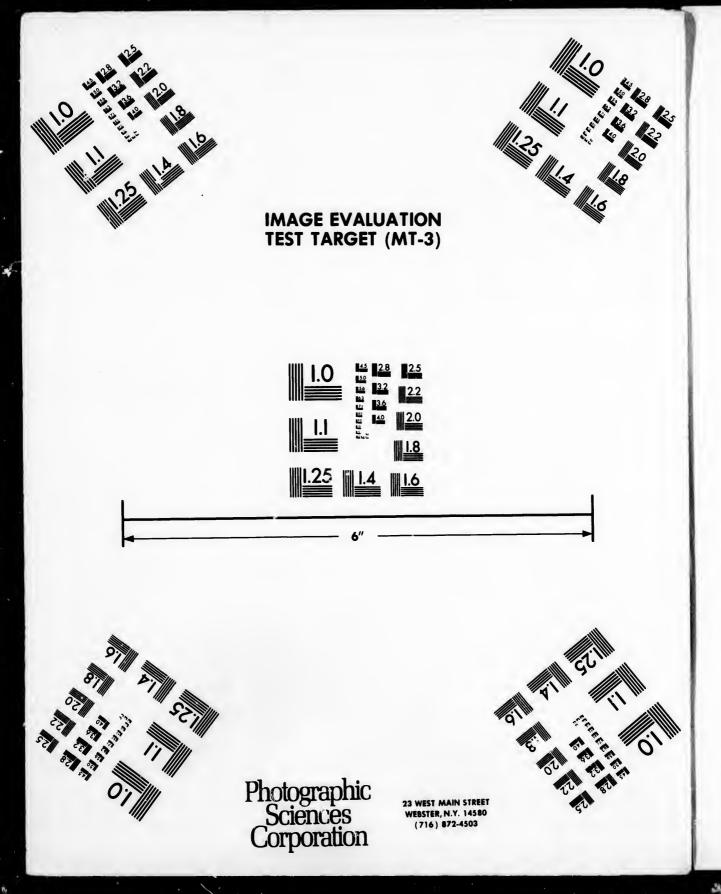

It generally feeds upon fifh, efpecially in the fummer, but in the winter is contented with the bark of trees, or the produce of the fields. Its flefh both taftes and fmells of fifh, and is not wholefome food, though it is fometimes eaten through neceflity.

The MINK is of the otter kind, and fubfifts in the fame manner. In fhape and fize it refembles a pole-cat, being equally long and flender. Its fkin is blacker than that of an otter, or almost any other creature; "as black as a mink," being a proverbiat expression in America; it is not however to valuable, though this greatly depends on the feasion in which it is taken. Its tail is round like that of a fnake, but growing flattish towards the end, and is entirely without hair. An agreeable musky fcent exhales from its body; and it is met with near the sources of rivers on whose banks it chiefly lives.

OF THE BIRDS.

THE Eagle, the Hawk, the Night Hawk, the Fith Hawk, the Whipperwill, the Raven, the Crow, the Owl,

Owl, Parrots, the Pelican, the Crane, the Stork, the Cormorant, the Heron, the Swan, the Goofe, Ducks, Teal, the Loon, the Water-Hen, the Turkey, the Heath Cock, the Partridge, the Quail, Pigeons, the Snipe, Larks, the Woodpecker, the Cuckoo, the Blue Jay, the Swallow, the Wakon Bird, the Black Bird, the Red Bird, the Thrufh, the Whetfaw, the Nightingale, the King Bird, the Robin, the Wren, and the Humming Bird.

The EAGLE. There are only two forts of eagles in thefe parts, the bald and the grey, which are much the fame in fize, and fimilar to the fhape of those of other countries.

The NIGHT HAWK. This bird is of the hawk fpecies, its bill being crocked, its wings formed for fwiftnefs, and its fhape nearly like that of the common hawk; but in fize it is confiderably lefs, and in oplor rather darker. It is fcarcely ever feen but in the evening, when at the approach of twilight, it flies about, and darts itfelf in wanton gambols at the head of the belated traveller. Before a thunder-fhower thefe birds are feen at an amazing height in the air affembled together in great numbers, as fwallows are obferved to do on the lame occafion.

The WHIPPER WILL, or, as it is termed by the Indians, the Muckawils. This extraordinary bird is fomewhat like the laft mentioned in its fhape and color, only it has fome whitifh ftripes acrofs the wings, and like that is feldom ever feen till after fun-fet. It alfo is never met with but during the fpring and fummer months. As foon as the Indians are informed by its notes of its return, they conclude that the froft is entirely gone, in which they are feldom deceived; and on receiving this affurance of milder weather, begin to fow their corn. It acquires its name by the noife it makes, which to the people of the colonies founds like the name they give it, Whipper-will; to an Indian ear, Muck-a-wils. d by the y bird is and coe wings, a-fet. It ing and informhat the lom demilder uires its ople of Whipwords, it it is true, are not alike, but in this manner they firike the imagination of each; and the circumftance is a proof that the fame founds, if they are not rendered certain by being reduced to the rules of orthography, might convey different ideas to different people. As foon as night comes on, thefe birds will place themfelves on the fences, flumps, or flones that lie near fome houfe, and repeat their melancholy notes without any variation till midnight. The Indians, and fome of the inhabitants of the back fettlements; think if this bird perches upon any houfe, that it betokens fome mifhap to the inhabitants of it.

The FISH HAWK greatly refembles the latter in its fhape, and receives his name from his food, which is generally fifh; it fkims over the lakes and rivers and fometimes feems to lie expanded on the water, as he hovers fo clofe to it, and having by fome attractive power drawn the fifh within its reach, darts fuddenly upon them. The charm it makes use of is fuppofed to be an oil contained in a finall bag in the body, and which nature has by fome means or other, fupplied him with the power of using for this purpofe; it is however very certain that any bait touched with a drop of the oil collected from this bird is an irrefiftible lure for all forts of fifh, and infures the angler great fuccefs.

The OWL. The only fort of owls that is found on the banks of the Miffifippi is extremely beautiful in its plumage, being of a fine deep yellow or gold color, pleafingly fhaded and fpotted.

The CRANE. There is a kind of a crane in thefe parts, which is called by Father Hennipin a pelican, that is about the fize of the European crane, of a greyifh color, and with long legs; but this fpecies differs from all others in its bill, which is about twelve inches long, and one inch and an half broad, of which breadth it continues to the end, where it is blunted, and round like a paddle; its tongue is of the fame length. Y 2 DUCKS DUCKS. Among a variety of wild ducks, the different fpecies of which amount to upwards of twenty, I fhall confine my defcription to one fort, that is, the wood duck, or, as the French term it, Canard Branchus. This fowl receives its name from its frequenting the woods and perching on the branches of frees, which no other kind of water fowl (a characteriftic that this ftul preferves) is known to do. It is nearly of a fize with other ducks; its plumage is beautifully variegated, and very brilliant. The flefh of it alfo, as it feeds but little on fifh, is finely flavoured, and much fuperior to any other fort.

The TEAL. I have already remarked in my journal, that the teal found on the Fox River and the head branches of the Miffifippi, are perhaps not to be equalled for the fatnefs and delicacy of their flefh by any other in the world. In colour, fliape, and fize they are very little different from those found in other countries.

The LOON is a water fowl, fomewhat lefs than a teal, and is a fpecies of the dobchick. Its wings are fhort, and its legs and feet large in proportion to the body; the color of it is a dark brown, nearly approaching to black; and as it feeds only on fifh, the flefh of it is very ill flavoured. Thefe birds are exceedingly nimble and expert at diving, fo that it is almoft impoffible for one perfon to fhoot them, as they will dextroufly avoid the fhot by diving before they reach them; fo that it requires three perfons to kill one of them, and this can only be done the moment it raifes its head out of the water as it returns to the furface after diving. It however only repays the trouble taken to obtain it, by the excellent fport it affords.

The PARTRIDGE. There are three forts of partridges here, the brown, the red, and the black, the first of which is most esteemed. They are all much larger than the European partridges, being nearly the fize of a hen pheafant; their head and eyes are alfolike like that fpread lil the cufto on the b buds of the twili when the The V

and there the bank darken tl

like that bird, and they have all long tails, which they fpread like a fan, but not erect; but contrary to the cuftom of those in other countries, they will perch on the branches of the poplar and black birch, on the buds of which they feed early in the morning and in the twilight of the evening, during the winter months, when they are easily shot.

The WOOD PIGEON is nearly the fame as ours, and there are fuch prodigious quantities of them on the banks of the Mifflifippi, that they will fometimes darken the fun for feveral minutes.

The WOODPECKER. This is a very beautifulbird; there is one fort, whofe feathers are a mixture of various colors; and another that is brown all over the body, except the head and neck, which are of a fine red. As this bird is fuppofed to make a greater noife than ordinary at particular times, it is conjectured his cries then denote rain.

The BLUE JAY. This bird is fhaped nearly like the European jay, only that its tail is longer. On the top of its head is a creft of blue feathers, which is raifed or let down at pleafure. The lower part of the neck behind, and the back, are of a purplifh color, and the upper fide of the wings and tail, as well as the lower part of the back and rump, are of a fineblue; the extremities of the wings are blackifh, faintly tinctured with dark blue on the edges, whilft the other parts of the wing are barred acrofs with black in an elegant manner. Upon the whole this bird canfcarcely be exceeded in beauty by any of the winged inhabitants of this or other climates. It has the fame jetting motion that jays generally have, and its cry isfar more pleafing.

The WAKON BIRD, as it is termed by the Indians, appears to be of the fame fpecies as the birds of paradife. The name they have given it, is expreffive of its fuperior excellence, and the veneration they have for it; the wakon bird being in their language the

the bird of the Great Spirit. It is nearly the fize of a fwallow, of a brown colour, fhaded about the neck with a bright green; the wings are of a darker brown than the body; its tail is composed of four or five feathers, which are three times as long as its body, and which are beautifully fhaded with green and purple. It carries this fine length of plumage in the fame manner as a peacock does, but it is not known whether it ever raifes it into the erect polition that birds fometimes does. I never faw any of these birds in the colonies, but the Naudoweffie Indians caught feveral of them when I was in their country, and feemed to treat them as if they were of a fuperior rank to any other of the feathered race.

The BLACK BIRD. There are three forts of birds in North-America that bear this name; the first is the common, or as it is there termed, the crow black bird, which is quite black, and of the fame fize and shape of those in Europe, but it has not that melody in its notes which they have. In the month of September this fort fly in large flights, and do great mischief to the Indian Corn, which is at that time just ripe. The fecond fort is the red-wing, which is rather fmaller than the first species, but like that it is black all over its body, except on the lower rim of the wings, where it is of a fine, bright, full fcarlet. It. builds its neft, and chiefly reforts among the fmall. bushes that grow in meadows and low, iwampy places. It whiftles a few notes, but is not equal in its fong to the European blackbird. The third fort is of the fame fize as the latter, and is jet black like that but all the upper part of the wing, just below the back, is of a fine clear white ; as if nature intended to diverfify the fpecies, and to attone for the want of a melodious pipe by the beauty of its plumage ; for The this alfo is deficient in its mufical powers. beaks of every fort are of a full yellow, and the females of each of a rufty black like the European. The

The RED BIRD is about the fize of a fparrow, but with a long tail, and is all over of a bright vermillion color. I faw many of them about the Ottawaw Lakes, but I could not learn that they fung. I alfo obferved in fome other parts a bird of much the fame make, that was entirely of a fine yellow.

The WHETSAW is of the cuckoo kind, being like that, a folitary bird, and fearcely ever feen. In the fummer months it is heard in the groves, where it makes a noife like the filing of a faw, from which it receives its name.

The KING BIRD is like a fwallow, and feems to be of the fame fpecies as the black martin or fwift. It is called the King Bird becaufe it is able to mafter almost every bird that flies. I have often feen it bring down a hawk.

The HUMMING BIRD. This beautiful bird, which is the fmallest of the feathered inhabitants of the air, is about the third part of the fize of a wren, and is shaped extremely like it. Its legs, which are about an inch long, appear like two fmall needles, and its body is proportionable to them. But its plumage exceeds defcription. On its head it has a fmall tuft of jetty, fhining black ; the breaft of it is red, the belly white, the back, wings, and tail of the finest pale green ; and fmall specks of gold are scattered with inexpressible grace over the whole; besides this, an almost impreceptible down fostens the colors, and produces the most pleasing shades. With its bill, which is of the fame diminitive fize as the other parts of its body, it extracts from the flowers a moifture which is its nourishment; over these it hovers like a bee, but never lights on them, moving at the fame time its wings with fuch velocity that the motion of them is imperceptible ; notwithftanding which they make a humming noife, from whence it receives its name.

OF THE FISHES WHICH ARE FOUND IN THE WATERS OF THE MISSISIPPI.

I have already given a difcription of those that are taken in the great lakes.

The Sturgeon, the Pout or Cat Fish, the Pike, the Carp, and the Chub.

The STURGEON. The fresh water sturgeon is fhaped in no other refpect like those taken near the ica, except in the formation of its head and tail; which are fashioned in the same manner, but the body is not fo angulated, nor are there fo many horny fcales about it as on the latter. Its length is generally about two feet and a half or three feet long, but in circumference not proportionable, being a slender fifh. The flesh is exceedingly delicate and finely flavoured; I caught fome in the head waters of the river St. Croix that far exceeded trout. The manner of taking them is by watching them as they lie under the banks in a clear ftream, and darting at them with a fish-spear; for they will not take a bait. There is also in the Mislifippi, and there only, another fort than the species I have described, which is fimilar to it in every respect, except that the upper jaw extends fourteen or fifteen inches beyond the under; this extensive jaw, which is of a griftly substance, is three inches and a half broad, and continues of that breadth, fomewhat in the fliape of an oar, to the end, which is flat. The flefh of this fifh, however, is not to be compared with the other fort, and is not fo much efteemed even by the Indians.

The CAT FISH. This fifh is about eighteen inches long; of a brownifh color, and without feales. It has a large round head, from whence it receives its name, on different parts of which grows three or four ftrong, fharp horns about two inches long. Its fins are also very bony and ftrong, and without great care care will It weighs flein of it refembles The C thofe in I

care will pierce the hands of those who take them. It weighs commonly about five or fix pounds; the flesh of it is excessively fat and luscious, and greatly refembles that of an ell in its flavor.

The CARP and CHUB are much the fame as those in England, and nearly about the fame fize.

OF SERPENTS.

The Rattle Snake, the Long Black Snake, the Wall or Houfe Adder, the Striped or Garter Snake, the Water Snake, the Hiffing Snake, the Green Snake, the Thorntail Snake, the Speckled Snake, the Ring Snake, the Two-headed Snake.

The RATTLE SNAKE. There appears to be two species of this reptile; one of which is commonly termed the Black, and the other the Yellow; and of these the latter is generally confidered as the largest. At their full growth they are upwards of five feet long, and the middle part of the body, at which it is of the greatest bulk, measures about nine inches round. From that part it gradually decreafes both towards the head and the tail. The neck is proportionably very small, and the head broad and depreffed. These are of a light brown color, the iris of the eye red, and all the upper part of the body brown, mixed with a ruddy yellow, and chequerd with many regular lines of a deep black, gradually fhading towards a gold color. In fhort the whole of this dangerous reptile is very beautiful, and could it be viewed with lefs terror, fuch a variegated arrangement of colors would be extremely pleafing. But these are only to be feen in their highest perfection at the time this creature is animated by refentment; then every tint rushes from its subcutaneous recess, and gives the furface of the fkin a deeper ftain. The belly is of a palish blue, which grows fuller as it approaches the fides, and is at length intermixed with the

eighteen ut feales. receives three or ng. Its at great care

the color of the upper part. The rattle at its tail, from which it receives its name, is composed of a firm, dry, callous, or horny fubstance of a light brown, and confifts of a number of cells which articulate one within another, like joints; and which increase every year, and make known the age of the creature. Thefe articulations being very loofe, the included points strike against the inner surface of the concave parts or rings into which they are admitted, and as the fnake vibrates, or fhakes its tail, makes a rattling This alarm is always given when it is apprenoife. henfive of danger; and in an inftant after forms itfelf into a fpiral wreath, in the centre of which appear the head erect, and breathing forth vengance against either man or beaft that shall dare to come near it. In this attitude he awaits the approach of his enemies, rattling his tail as he fees or hears them coming By this timely intimation, which heaven feems on. to have provided as a means to counteract the mifchief this venomous reptile would otherwife be the perpetrator of, the unwary traveller is apprifed of his danger, and has an opportunity of avoiding it. It is however to be observed, that it never acts offenfively; it neither purfues nor flies from any thing that approaches it, but lies in the polition described, rattling his tail, as if reluctant to hurt. The teeth with which this ferpent effects his poifonous purpofes are not those he makes use of on ordinary 'occafions, they are only two in number, very finall and fharp pointed, and fixed in a finewy fubstance that lies near the extremity of the upper jaw, refembling the claws of a cat; at the root of each of thefe, might be extended, contracted, or entirely hidden, as need requires, are two fmall bladders which nature has fo constructed, that at the fame instant an incision is made by the teeth, a drop of a greenish, poisonous liquid enters the wound, and taints with its deftructive quality the whole mass of blood. In a moment the

It 3 offeny thing efcribed. 'he teeth s purpory occanall and ice that fembling e, might as need re has fo cifion is onous lidestrucmoment the

he unfortunate victim of its wrath feels a chilly trenor run through all his frame ; a fwelling immediitely begins on the fpot where the teeth had entered, which fpreads by degrees over the whole body, and produces on every part of the fkin the variegated ue of the fnake. The bite of this reptile is more or efs venomous, according to the leafon of the year n which it is given. In the dog days, it often proves instantly mortal, and especially if the wound is made imong the finews fituated in the back part of the eg, above the heel; but in the fpring, in autumn, or luring a cool day which might happen in the fumner, its bad effects are 'to be prevented by the immeliate application of proper remedies ; and these Proridence has bounteously supplied, by causing the Ratle Snake Plantain, an approved antidote to the poifon of this creature, to grow in great profusion where ever they are to be met with. There are fikewife everal other remedies befides this, for the venom of ts bite. A decoction is made of the buds or bark of the white ash, taken internally, prevents its perniious effects. Salt is a newly difcovered remedy, and if applied immediately to the part, or the wound be washed with brine, a cure might be assured. The fat of the reptile allo rubbed on it, is frequently found to be very efficacious. But though the lives of the perfons who have been bitten might be preferved by these and their health in some degree restored, yet they annually experience a flight return of the dreadful fymtoms about the time they received the inftillation. However remarkable it may appear, it is certain, that though the venom of this creature affects, in a greater or lefs degree, all animated nature, the hog is an exception to the rule, as that animal will readily deftroy them without dreading their poifonous fangs, and fatten on their flefh. It has been often obferved, and I 'can confirm the obfervation, that the Rattle Snake is charmed with any harmoni-

ous founds, whether vocal or instrumental; I have many times feen them, even when they have been enraged, place themfelves in a liftening pofture, and continue immoveably attentive and fufceptible of delight all the time the mufic has lafted. I should have remarked, that when the Rattle Snake bites, it drops its under jaw, and holding the upper jaw creft, throws itfelf in a curve line, with great force, and as quick as lightning, on the object of its refentment. In a moment after, it returns again toits defensive posture having difengaged its teeth from the wound with great celerity, by means of the polition in which it had placed its head when it made the attack. It never extends itfelf to a greater diftance than half its length will reach, and though it fometimes repeats the blow two or three times, it as often returns with a fudden rebound to its former state. The Black Rattle Snake differs in no other respect from the Yellow, than in being rather smaller, and in the variegation of its colours, which are exactly reverfed : one is black where the other is yellow, and vice verfa. They are equally venomous. It is not known how these creatures engender ; I have often found the eggs of feveral other species of the make, but notwithftanding no one has taken more pains to acquire a perfect knowledge of every property of these reptiles than myfelf, I never, could difcover the manner in which they bring forth their young. I once killed a female that had feventy young ones in its belly, but these were perfectly formed, and I faw them just before retire to the mouth of their mother, as a place of fecurity, on my approach. The gall of this ferpent, mixed with chalk, are formed into little balls, and exported from America, for medical purpofes. They are of the nature of Gascoign's powders, and an excellent remedy for complaints incident to children. The flesh of the inake allo dried, and made . into

into broth, is much more nutritive than that of vipers, and very efficacious against confumptions.

The LONC BLACK SNAKE. There are also of two forts, both of which are exactly fimilar in fhape and fize, only the belly of one is a light red, the other a faint blue; all the upper parts of their bodies are black and fcaly. They are in general from fix to eight feet in length, and carry their heads, as they crawl along, about a foot and an half from the ground. They eafily climb the higheft trees in purfuit of birds and fquirrels, which are their chief food; and thefe, it is faid, they charm by their looks, and render incapable of cleaping from them. Their appearance carries terror with it to those who are unacquainted with their inability to hurt, but they are perfectly inoffensive and free from venom.

The STRIPED or GARTER SNAKE, is exactly the fame as that fpecies found in other climates.

The WATER SNAKE is much like the Rattle Snake in fhape and fize, but is not endowed with the fame venomous powers, being quite harmlefs.

The HISSING SNAKE I have already particularly defcribed, when I treated, in my Journal, of Lake Erie.

The GREEN SNAKE is about a foot and an haif long, and in color fo near to grafs and herbs, that it cannot be difcovered as it lies on the ground; happily, however, it is free from venom, otherwife it would do an infinite deal of mifchief, as those who pafs through the meadows, not being able to perceive it, are deprived of the power of avoiding it.

The THORN-TAIL SNAKE. This reptile is found in many parts of America, but it is very feldom to be feen. It is of a middle fize, and receives its name from a thorn-like dart in its tail, with which it is faid to inflict a morial wound.

The SPECKLED SNAKE is an aqu, us reptile about two feet and an half in length, .t without venom. venom. Its fkin which is brown and white, with fome fpots of yellow in it, is ufed by the Americans as a cover for the handles of whips, and it renders them very pleafing to the fight.

The RING SNAKE is about twelve inches long; the body of it is entirely black, except a yellow ring which it has about its neck, and which appears like a narrow piece of riband tied round it. This odd reptile is frequently found in the bark of trees and among old logs.

The TWO-HEADED SNAKE. The only fnake of this kind that was ever feen in America, was found about the year 1762, near Lake Champlain, by Mr. Park, a gentleman of New-England, and made a prefent to Lord Amherft. It was about a foot long, and in fhape like the common finake, but it was furnifhed with two heads exactly fimilar, which united at the neck. Whether this was a difficit fpecies of finakes, and was able to propagate its likenefs, or whether it was an accidental formation, I know not.

The TORTOISE or LAND TURTLE. The thape of this creature is fo well known that it is unneceffary to deferibe it. There are feven or eight forts or diem in America, fome of which are beautifully variegated, even beyond defeription. The fhells of many have fpots of red, green, and yellow in them, and the chequer work, is composed of fmall fquares curioufly disposed. The most beautiful fort of these creatures are the fmalless, and the bite of them is faid to be venomous.

LIZARDS, E.

Though there are numerous kinds of this clafs of the animal creation, in the country I treat of, I shall only take notice of two of them; which are termed the Swift and Slow Lizzed.

The SWIFT LIZARD is about fix inches long, and has four legs and a tail. Its body, which is blue, is pre low; remark nor ca eye; than t fon th ver at ther t Th Swift oppol move that t off no Ar fpecie is nea fmall trees vices of th ty di hear or ju mak a fro The refp It i dur

The is uncight cautifhells them, juares thefe is faid

fs of fhall fmed

ong, olue, is is prettily ftriped with dark lines fhaded with yellow; but the end of the tail is totally blue. It is fo remarkably agile, that in an inftant it is out of fight, nor can its movement be perceived by the quickeft eye; fo that it might more juftly be faid to vanish, than to run away. This species are supposed to poifon those they bite, but are not dangerous, as they never attack perfons that approach them, chusing rather to get fuddenly out of their reach.

The SLOW LIZARD is of the fame fhape as the Swift, but its color is brown; it is moreover of an opposite difposition, being altogether as flow in its movements as the other is fwift. It is remarkable that these lizards are extremely brittle, and will break off near the tail as eafily as an icicle.

Among the reptiles of North-America, there 's a fpecies of the toad, termed the TREE TOAD, which is nearly of the fame fhape as the common fort, but fmaller and with larger claws. It is usually found on trees, flicking clofe to the bark, or laying in the crevices of it; and fo nearly does it refemble the color of the tree to which it cleaves, that it is with difficul-These creatures are only ty diffinguished from it. heard during the twilight of the morning and evening. or just before and after a flower of rain, when they make a croaking noife fomewhat fhriller than that of a frog, which might be heard to a great diftance. They infeft the woods in fuch numbers, that their responsive notes at these times make the air resound. It is only a fummer animal, and never to be found during the winter.

INSECT'S.

The interior parts of North-America abound with nearly the fame infects as are met with in the fame parallels of latitude; and the fpecies of them are fo numerous and diversified that even a fuccinct deferip-

42

tion

tion of the whole of them would fill a volume; I fhall therefore confine myfelf to a few, which I believe are almost peculiar to this country; the Silk Worm, the Tobacco Worm, the Bee, the Lightning Bug, the Water Eug, and the Horned Bug.

The SILK WORM is nearly the same as those of France and Italy, but will not produce the same quantity of filk.

The TOBACCO WORM is a caterpillar of the fize and figure of a filk worm, it is of a fine fea green color, on its rump it has a fling or horn near a quarter of an inch long.

The BEES, in America, principally lodge their honey in the earth to fecure it from the ravages of the bears, who are remarkably fond of it.

The LIGHTNING BUG or FIRE FLY is about the fize of a bee, but it is of the beetle kind, having like that infect two pair of wings, the upper of which are of a firm texture, to defend it from danger. When it flies, and the wings are expanded, there is under these a kind of coat, constructed alfo like wings, which is luminous; and as the infect paffes on, caules all the hinder part of its body to appear like a bright fiery coal. Having placed one of them on your hand, the under part only fhines, and throws the light on the fpace beneath; but as foon as it fpreads its upper wings to fly away, the whole body which lies behind them appears illuminated all around. The light it gives is not constantly of the fame magnitude, even when it flies; but feems to depend on the expansion or contraction of the luminous coat or wings, and is very different from that emitted in a dark night by dry wood or fome kinds of filh, it having much more the appearance of real fire. They feem to be fenfible of the power they are poffeffed of, and to know the most fuitable time for exerting it, as in a very dark night they are much more numerous than at any other time. They are only feen during

the fummer months of June, July, and August, and then at no other time but in the aight. Whether from their color, which is a dufky brown, they are not then difcernible, or from their retiring to holes and crevices, I know not, but they are never to be difcovered in the day. They chiefly are feen in low fwanipy land, and appear like innumerable transfient gleams of light. In dark nights when there is much lightning without rain, they feem as if they wished either to imitate or affift the flashes; for during the intervals, they are uncommonly agile, and endeavour to throw out every ray they can collect. Notwithflanding this effulgent appearance, these infects are perfectly harmles, you may permit them to crawl upon your hand, when five or fix, if they freely exhibit their glow together, will enable you to read almost the imallest print.

The WATER BUG is of a brown color, about the fize of a pea, and in fhape nearly oval; it has many legs, by means of which it pafies over the furface of the water with fuch incredible fwiftnefs, that it feems to flide or dart itfelf along.

The HORNED BUG, or as it is fometimes termed the STAG BEETLE, is of a dufky brown color nearly approaching to black, about an inch and an half long, and half an inch broad. It has two large horns, which grow on each fide of the head, and meet horizontally, and with thefe it pinches, very hard; they are branched like thofe of a ftag, from whence it receives its name. They fly about in the evening, and prove very troublefome to thofe who are in the fields at that time.

I must not come that the LOCUST is a feptennial infect, as they are only feen, a fmall number of stragglers excepted, every feven years, when they infest these parts and the interior colonies in large fwarms, and do a great deal of mischief. The years when they thus arrive are denominated the locust years.

CHAPTER XIX.

284

CHAPTER XIX.

of the TREES, SHRUBS, ROOTS, HERBS, FLOWERS, Gc.

I SHALL here observe the same method that I have pursued in the preceding chapter, and having given a lift of the trees, &c. which are natives of the interior parts of North America, particularize such only as differ from the produce of other countries, or, being little known, have not been described.

OF TREES.

The Oak, the Pine Tree, the Maple, the Afh, the Hemlock, the Bafs or White Wood, the Cedar, the Elm, the Birch, the Fir, the Locust Tree, the Poplar, the Wickopic, or Suckwic, the Spruce, the Hornbeam, and the Button Wood Tree.

The OAK. There are feveral forts of oaks in thefe parts ; the black, the white, the red, the yellow, the grey, the fwamp oak, and the chefnut oak : the five former vary but little in their external appearance, the shape of the leaves, and the color of the bark being fo much alike, that they are fearcely diftinguishable; but the body of the tree when fawed difcovers the variation; which chiefly confifts in the color of the wood, they being all very hard, and proper for building. The fwamp oak differs materially from the others both in the fhape of the leaf, which is fmaller, and in the bark, which is fmoother; and likewife as it grows only in a moift, gravelly foil. - It is effeemed the toughest of all woods, being fo strong yet pliable, that it is often made use of instead of whalebone, and is equally ferviceable. The chefnut oak alfo is greatly different from the others, particularly in the fhape

of the le nut-tree is neithe as the la to rails confider The peculian

the qua ber of i It grow and fize not in 1 of Euro The the han juice, f good fu and fw greater

into ca

285

of the leaf, which much refembles that of the chefnut-tree, and for this reafon is fo denominated. It is neither fo ftrong as the former species, nor fo tough as the latter, but is of a nature proper to be split into rails for fences, in which state it will endure a confiderable time.

The PINE TREE. That species of the pine tree peculiar to this part of the continent, is the white, the quality of which I need not describe, as the timber of it is so well known under the name of deals. It grows here in great plenty, to an amazing height and fize, and yields an excellent turpentine, though not in such quantities as those in the northern parts of Europe.

The MAPLE. Of this tree there are two forts, the hard and the foft, both of which yield a lufcious juice, from which the Indians, by boiling, make very good fugar. The fap of the former is much richer and fweeter than the latter, but the foft produces a greater quantity. The wood of the hard maple is very beautifully veined and curled, and when wrought into cabinets, tables, gunftocks, &c. is greatly valued. That of the foft fort differs in its texture, wanting the variegated grain of the hard; it also grows more ftraight and free from branches, and is more eafily fplit. It likewife may be diftinguished from the hard, as this grows in meadows and low-lands, that on the hills and uplands. The leaves are fhaped alike, but those of the fost maple are much the largest, and of a deeper green.

The ASH. There are feveral forts of this tree in thefe parts, but that to which I shall confine my defeription, is the yellow ash, which is only found near the head branches of the Mississippi. This tree grows to an amazing height, and the body of it is so firm and found, that the French traders who go into that country from Louisiana, to purchase furs, make of them periaguays; this they do by excavating them by

HERB3,

hod that d having es of the rize fuch tries, or,

Ash, the edar, the Poplar, ie Horn-

in these ow, the the five ance, the rk being ishable : s the var of the r buildthe othler, and fe as it teemed pliable, ne, and s greate shape of

186

by fire, and when they are completed, convey in them the produce of their trade to New-Orleans, where they find a good market both for their veffels and cargoes. The wood of this tree greatly refembles that of the common ash; but it might be diftinguished from any other tree by its bark ; the rofs or outfide bark being near eight inches thick, and indented with furrows more than fix inches deep, which make those that are arrived to a great bulk appear uncommonly rough; and by this peculiarity they may be readily known. The rind or infide bark is of the fame thicknefs as that of other trees, but its color is a fine bright yellow, infomuch that if it is but flightly handled, it will leave a ftain on the fingers, which cannot eafily be washed away; and if in the fpring you peel off the bark, and touch the fap, which then rifes between that and the body of the tree, it will leave fo deep a tincture that it will require three or four days to wear it off. Many useful qualities belong to this tree, I doubt not will be difcovered in time, befides its proving a valuable acquisition to the dyer.

The HEMLOCK TREE grows in every part of America, in a greater or lefs degree. It is an evergreen of a very large growth, and has leaves fomewhat like that of the yew; it is however quite ufelefs, and only an incumbrance to the ground, the wood being of a very coarfe grain, and full of wind-fhakes or cracks.

The BASS or WHITE WOOD is a tree of a middling fize, and the whiteft and fofteft wood that grows; when quite dry it fwims on the water like a cork; in the fettlements the turners make of it bowls, trenchers, and diffues, which wear fmooth, and will laft a long time; but when applied to any other purpofe it is far from durable.

The WICKOPICK or SUCKWIK appears to be a fpecies of the white wood, and is diffinguished from it by a peculiar quality in the bark, which when pounded, pounded, becomes : With this ly exceed priated to ity, it is o etrate thr a confide The I fize, and quite fm ry prope ed with that app receives

54 2 ..

of a midood that ter like a it bowls, and will ther pur-

ars to be aguished ch when aded, pounded, and moiftened with a little water, inftantly becomes a matter of the confiftence and nature of fize. With this the Indians pay their cances, and it greatly exceeds pitch, or any other material ufually appropriated to that purpofe; for befides its adhefive quality, it is of fo oily a nature, that the water cannot penetrate through it, and its repelling power abates not for a confiderable time.

The BUTTON WOOD is a tree of the largeft fize, and might be diffinguished by its bark, which is quite fmooth and prettily mottled. The wood is very proper for the use of cabinet-makers. It is covered with small hard burs which spring from its branches, that appear not unlike buttons, and from these it receives its name.

NUT TREES.

The Butter or Oil Nut, the Walnut, the Hazel Nut, the Beech Nut, the Pecan Nut, the Chefnut, the Hickory.

The BUTTER or OIL NUT. As no mention has been made by any author of this nut, I shall be the more particular in my account of it. The tree grows in meadows where the foil is rich and warm. The body of it feldom exceeds a yard in circumference, is full of branches, the twigs of which are fhort and blunt, and its leaves refemble those of the walnut. The nut has a shell more like that fruit, which when ripe is more furrowed, and more eafily cracked; it is also much longer and larger than a walnut, and contains a greater quantity of kernel, which is very oily, and of a rich, agreeable flavour. I am perfuaded that a much purer oil than that of olives might be extracted from this nut. The infide bark of this tree dyes a good purple; and it is faid, varies in its shade, being either darker or lighter, according to the month in which it is gathered.

The BEECH NUT: Though this tree grows exactly like that of the fame name in Europe, yet it produces nuts equally as good as chefnuts ; on which bears, martins, fquirrels, partridges, turkies, and many other birds and beafts feed. The nut is contained, whilft growing, in an outfide cafe, like that of a chefnut, but not fo prickly; and the coat of the infide shell is also smooth like that; only its form is nearly triangular. Vaft quantities of them lie fcattered about in the woods, and fupply with food great numbers of the creatures just mentioned. The leaves, which are white, continue on the trees during the whole winter. A decoction made of them is a certain and expeditious cure for wounds which arife from burning or fealding, as well as a reftorative for those members that are nipped by the froft.

The PECAN NUT is fomewhat of the walnut kind, but rather fmaller than a walnut, being about the fize of a middle acorn, and of an oval form; the fhell is eafily cracked, and the kernel fhaped like that of a walnut. This tree grows chiefly near the Illinois River.

The HICKORY is also of the walnut kind, and bears a fruit nearly like that tree. There are feveral forts of them, which vary only in the color of the wood. Being of a very tough nature, the wood is generally ufed for the handles of axes, &c. It is alfo very good fire-wood, and as it burns, an excellent fugar diftils from it.

FRUIT TREES.

I need not to observe that these are all the spontaneous productions of nature, which have never received the advantages of ingrasting, transplanting, or manuring.

The Vine, the Mulberry Tree, the Crab Apple Tree, the Plum Tree, the Cherry Tree, and the Sweet Cum Tree. The

The kinds; grape g. pe, be mad curran in Eng would try. The white, and It quanti The much rope. The plums on on ly gre good whole the pi Th cherr fand ty be thef and heigh this 1 a cu trees gene how turn in th the

d, and feveral of the ood is t is alcellent

pontaeceivor ma-

Apple Sweet The The VINE is very common here, and of three kinds; the first fort hardly deferves the name of a grape; the fecond much refembles the Burgundy grape, and if exposed to the fun a good wine might be made from them. The third fort refembles Zant currants, which are fo frequently used in cakes, &c. in England, and if proper care was taken of them, would be equal, if not superior, to those of that country.

The MULBERRY-TREE is of two kinds, red and white, and nearly of the fame fize of those of France and Italy, and grow in fuch plenty, as to feed any quantity of filk worms.

The CRAB APPLE TREE bears a fruit that is much larger and better flavoured than those of Europe.

The PLUM TREE. There are two forts of plums in this country, one large fort of a purple caft on one fide, and red on the reverfe, the fecond totally green, and much fmaller. Both thefe are of a good flavor, and are greatly effected by the Indians, whofe tafte is not refined, but who are fatisfied with the productions of nature, in their unimproved ftate.

The CHERRY TREE. There are three forts of cherries in this country; the black, the red, and the fand cherry; the two latter may with more propriety be ranked among the fhrubs, as the bufh that bears the fand cherries almost creeps along the ground, and the other rifes not above eight or ten feet in height; however, I shall give an account of them in this place. The black cherries are about the fize of a currant, and hang in clusters, like grapes; the trees which bear them, being very fruitful, they are generally loaded, but the fruit is not good to eat, however they give an agreeable flavor to brandy, and turn it to the color of claret. The red cherries grow in the greatest profusion, and hang in bunches, like the black fort just defcribed; fo that the bushes

A a

which

which bear them appear at a diftance like folid bodies of red matter. Some people admire this fruit, but they partake of the nature and tafte of alum, leaving a difagreeable roughnefs in the throat, and being very aftringent. As I have already deferibed the fand cherries, which greatly exceed the two other forts, both in flavor and fize, I fhall give no farther defeription of them. The wood of the black cherry. tree is very ufeful, and works well into cabinet ware.

The SWEET GUM TREE or LIQUID AM-BER (Copalm) is not only extremely common, but it affords a balm, the virtues of which are infinite. Its bark is black and hard, and its wood fo tender and fupple, that when the tree is felled, you may draw from the middle of it rods of five or fix feet in length. It cannot be employed in building or furniture, as it warps continually. Its leaf is indented with five points, like a ftar. This balm is reckoned by the Indians to be an excellent febrifuge, and it cures wounds in two or three days.

SHRUBS.

The Willow, Shin Wood, Shumack, Saffafras, the Prickly Afh, Moofe Wood, Spoon Wood, Large Elder, Dwarf Elder, Poifonous Elder, Juniper, Shrub Oak, Sweet Fern, the Laurel, the Witch Hazle, the Myrtle Wax Tree, Winter Green, the Fever Bufh, the Cranberry Bufh, the Goofeberry Bufh, the Currant Bufh, the Whirtle Berry, the Rafberry, the Black Berry, and the Choak Berry.

The WILLOW. There are feveral fpecies of the willow, the most remarkable of which is a fmall fort that grows on the banks of the Miffisppi, and and fome other places adjacent. The bark of this shrub supplies the beaver with its winter food; and where the water has washed the foil from its roots, they appear to consist of fibres interwoven together

g

in' i

like thread, the color of which is of an inexpreffibly fine fearlet; with this the Indians tinge many of the ornamental parts of their drefs.

SHIN WOOD. This extraordinary fhrub grows in the forefts, and rifing like a vine, runs near the ground for fix or eight feet, and then takes root again; in the fame manner taking root, and fpringing up fucceflively, one ftalk covers a large ipace; this proves very troubleforme to the hafty traveller, by ftriking against his thins, and entangling his legs; from which it has acquired its name.

The SASSAFRAS is a wood well known for its medicinal qualities. It might with equal propriety be termed a tree as a fhrub, as it fometimes grows thirty feet high; but in general it does not reach higher than those of the fhrub kind. The leaves, which yield an agreeable fragrance, are large, and nearly separated into three divisions. It bears a reddish brown berry, of the fize and shape of Pimento, and which is sometimes used in the colonies as a subflitute for that spice. The bark or roots of this tree, is infinitely superior to the wood for its use in medicine, and I am surprised it is so feldom to be met with, as its efficacy is so much greater.

The PRICKLY ASH is a fhrub that fometimes grows to the height of ten or fifteen feet, and has a leaf exactly refembling that of an afh, but it receives the epithet to its name from the abundance of fhort thorns with which every branch is covered, and which renders it very troublefome to thofe who pafs thro' the fpot where they grow thick. It alto bears a fcarlet berry, which when ripe, has a fiery tafte, like pepper. The bark of this tree, particularly the bark of the roots, is highly effecemed by the natives for its medicinal qualities. I have already mentioned one inftance of its efficacy, and there is no doubt b ut that the decoction of it will expediticully and radically remove all impurities of the blcod.

W

The MOOSE WOOD grows about four fees high, and is very full of branches; but what renders it worth notice, is its bark, which is of fo ftrong and pliable a texture, that being peeled off at any feafon, and twifted, makes equally as good cordage as hemp.

The SPOON WOOD is a fpecies of the laurel, and the wood when fawed refembles box wood.

The ELDER, commonly termed the poifonous elder, nearly refembles the other forts in its leaves and branches, but it grows much straighter, and is only found in fwamps and moift foils. This fhrub is endowed with a very extraordinary quality, that renders it poilonous to fome constitutions, which it affects if the perfon only approaches within a few yards of it, whilft others may even chew the leaves or the rind without receiving the least detriment from them : the poifon, however, is not mortal, though it operates very violently on the infected perfon, whole body and head fwell to an amazing fize, and are covered with eruptions, that at their height refemble the confluent fmall pox. As it grows also in many of the provinces, the inhabitants cure its venom by drinking faffron tea, and anointing the external parts with a mixture composed of cream and marsh mallows.

The SHRUBOAK is exactly fimilar to the oak tree, both in wood and leaves, and like that it bears an acorn, but it never rifes from the ground above four or five feet, growing crooked and knotty. It is found chiefly on a dry gravelly foil.

The WITCH HAZLE grows very buffy, about ten feet high, and is covered early in May with numerous white bloffoms. When this thrub is in bloom, the Indians effecim it a further indication that the froft is entirely gone, and that they might fow their corn. It has been faid, that it is poffeffed of the power of attracting gold or filver, and that twigs ur feet endera ftrong at any ordage

laurel, fonous. cs and s only is enenders affects rds of e rind hem : t opewhofe re cole the ny of mby parts mal-

ight

fied

that.

twigs of it are made use of to discover where the veins of these metals lie hid; but I am apprehensive this is only a fallacious story, and not to be depended on; however that supposition has given it the name of Witch Hazle.

The MYRTLE WAX-TREE is a fhrub about four or five feet high, the leaves of which are larger than those of the common myrtle, but they fmell exactly alike. It bears its fruit in bunches, like a nosegay, rising from the same place in various stalks, about two inches long : at the end of each of these is a little nut, containing a kernel, which is wholly covered with a gluey substance, which being boiled in water, swims on the surface of it, and becomes a kind of green wax; this is more valuable than bees-wax, being of a more brittle nature, but mixed with it makes a good candle, which as it burns, fends forth an agreeable fcent.

WINTER GREEN. This is an ever green, of the fpecies of the myrtle, and is found on dry heaths; the flowers of it are white, and in the form of a rofe, but not larger than a filver penny; in the winter it is full of red berries, about the fize of a floe, which are finooth and round; thefe are preferved during the fevere feafon by the fnow, and are at this time in the higheft perfection. The Indians eat thefe berries, efteeming them very balfamic, and invigorating to the ftomach. The people inhabiting the interior colonies fleep both the fprigs and berries in beer, and ufe it as a diet drink for cleanfing the blood from fcorbutic diforders.

The FEVER BUSH grows about five or fix feet high; its leaf is like that of a lilach, and it bears a reddifh berry of a fpicy flavor. The ftalks of it are exceffively brittle. Adecoccion of the buds or wood is an excellent febrifuge, and from this valuable property it receives its name. It is an ancient Indian remedy for all inflammatory complaints, and like-A a 2 wife wife much efteemed on the fame account, by the inhabitants of the interior parts of the colonies.

The CRANBERRY BUSH. Though the fruit of this buff greatly refembles in fize and appearance that of the common fort which grows on a fmall vine, in moraffes and bogs, yet the buff runs to the height of ten or twelve feet; but it is very rarely to be met with. As the meadow cranberry, being of a local growth, and flourifhing only in moraffes, cannot be transplanted or cultivated, the former, if removed at a proper feason, would be a valuable acquifition to the garden, and with proper nurture, prove equally as good, if not better.

The CHOAK BERRY. The fhrub thus termed by the natives grows about five or fix feet high, and bears a berry about the fize of a floe, of a jet black, which contains feveral fmall feeds within the pulp. The juice of this truit, tho' not of a difagreeable flavor, is extremely tart, and leaves a roughnefs in the mouth and throat when eaten, that has gained it the name of choak berry.

ROOTS AND PLANTS.

Elecampane, Spikenard, Angelica, Sarfaparilla, Ginfang, Ground Nuts, Wild Potatoes, Liquorice, Snake Root, Gold Thread, Solomon's Seal, Devil's Bit, Blood Root, Onions, Garlick, Wild Parfnips, Mandrakes, Hellebore White and Black.

SPIKENARD, vulgarly called in the Colonics Petty-Morrel. This plant appears to be exactly the fame as the Afiatic fpikenard, fo much valued by the ancients. It grows near the fides of brooks in rocky places, and its ftem which is about the fize of a goofe quill, fprings up like that of angelica, reaching about a foot and an half from the ground. It bears bunches of berries in all refpects like those of the elder, only rather larger. These are of fuch a balfamic

294

balfan

make

which

fize o

twine

from

bres,

rooti

half 1

each

SA

balfamic nature, that when infused in spirits, they make a most palatable and reviving cordial.

SARSAPARILLA. The root of this Mant, which is the most estimable part of it, is about the fize of a goole quill, and runs in different directions, twined and crooked to a great length in the grounds from the principal ftem of it fprings many fmaller fibres, all of which are tough and flexible. From the root immediately shoots a stalk about a foot and an half long, which at the top branches into three ftems; each of thefe has three leaves, much of the shape and fize of a walnut leaf; and from the fork of each of the three ftems grows a bunch of bluifh white flowers, refembling those of the spikenard. The bark of the roots, which alone fhould be used in medicine, is of a bitterish flavor but aromatic. It is defervedly efteemed for its medicinal virtues, being a gentle fudorific, and very powerful in attenuating the blood, when impeded by grofs humours .-

GINSANG is a root that was once fuppoled to grow only in Korea; from whence it was ulually exported to Japan, and by that means found its way to Europe; but it has been lately difcovered to be alfo a native of North-America, where it grows to as great perfection, and is equally valuable. Its root is like a fmall carrot, but not to taper at the end; it is fometimes divided into two or more branches, in all other refpects it retembles farfaparilla, in its growth. The tafte of the root is bitterifh. In the caftern parts of Afia it bears a great price, being there confidered as a panacea, and is the laft refuge of the inhabitants, in all diforders. When chewed it certainly is a great ftrengthener of the ftomach.

GOLD THREAD. This is a plant of the fmall vine kind, which grows in fwampy places, and lies on the ground. The roots fpread themfelves juft under the furface of the morafs, and are eafily drawn up by handfuls. They refemble a large entangled fkain

by the nies. he fruit earance a fmall s to the arely to ing of a 25, cant, if reable acnurture,

fkain of thread, of a fine, bright gold color ; and I am perfuaded would yield a beautiful and permanent yellow dyc. It is also greatly efteemed both by the Indians and colonifts, as a remedy for any forepefs in the mouth, but the tafte of it is exquifitely bitter. SOLOMON'S SEAL is a plant that grows on the fides of rivers, and in rich meadow land. It rifes in the whole to about three feet high, the ftalks being two feet, when the leaves begin to fpread themfelves and reach a foot further. A part in every root has an imprefion upon it about the fize of a fixpence, which appears as if it was made by a feal, and from thefe it receives its name. It is greatly valued on account of its being a fine purifier of the blood.

DEVIL's BIT is another wild plant which grows in the fields, and receives its name from a print that feems to be made by teeth in the roots. The Indians fay that this was once an univerfal remedy for every diforder that human nature is incident to; but fome of the evil fpirits envying mankind the poffeffion of fo efficacious a medicine, gave the root a bite, which deprived it of a great part of its virtue.

BLOOD ROOT. A fort of plaintain that fprings out of the ground in fix or feven long rough leaves, the veins of which are red; the root of it is like a fmall carrot, both in color and appearance; when broken, the infide of it is of a deeper color than the outfide, and diftils feveral drops of jnice, that look like blood. This is a ftrong emetic, but a very dangerous one.

HERBS.

Balm, Nettles, Cinque Foil, Eyebright, Sanicle, Plantain, Rattle Snake Plantain, Poor Robin's Plantain, Toad Plantain, Maiden Hair, Wild Dock, Rock Liverwort, Noble Liverwort, Bloodwort, WildBeans, Ground Ivy, Water Creffes, Yarrow, May Weed, Gargit,

Gargit, Skunk Cabbage or Poke, Wake Robin, Betony, Scabious, Mullen, Wild Peafe, Moufe Ear, Wild Indigo, Tobacco and Cat Mint.

SANICLE has a root which is thick towards the upper part, and full of fmall fibres below; the leaves of it are broad, roundifh, hard, fmooth, and of a fine fhining green; a ftalk rifes from these to the height of a foot, which is quite smooth and free from knots, and on the top of it are several small flowers of a reddish white, shaped like a wild rose. A tea made of the root is vulnerary and balfamic.

RATTLE SNAKE PLANTAIN. This useful herb is of the plantain kind, and its leaves, which fpread themselves on the ground, are about one inchand an half wide, and five inches long; from the centre of these arises a small stalk, nearly fix inches long, which bears a little white flower; the root is about the fixe of a goofe quill, and much bent, and divided into feveral branches. The leaves of this herb are more efficacious than any other part of it for the bite of the reptile from which it receives its c. name; and being chewed and applied immediately to the wound, and fome of the juice fwallowed, feldom fails of averting every dangerous fymptom. So convinced are the Indians of the power of this infallible antidote, that for a trifling bribe of fpirituous liquor, they will at any time permit a rattle fnake to drive his fangs into their fl.h. It is to be remarked that during these months in which the bite of these creatures is most venomous, that this remedy for it is in its greatest perfection, and most luxuriant in its growth.

POOR ROBIN'S PLAINTAIN is of the fame fpecies as the laft, but more diminutive in every refpect; it receives its name from its fize, and the poor land on which it grows. It is a good medicinal herb, and often administered with success in fevers and internal weakness.

TOAD

298

TOAD PLANTAIN refembles the common plantain, only it grows much ranker, and is thus denominated, because poads love to harbor under it.

ROCK LIVERWORT is a fort of Liverwort that grows on rocks, and is of the nature of kelp or mofs. It is effected an excellent remedy against declines.

GARGIT or SKOKE is a large kind of weed, the leaves of which are about fix inches long, and two inches and an half broad; they refemble those of fpinage in their color and texture, but not in The root is very large, from which fpring fhape. different stalks that run eight or ten feet high, and are full of red berries : These hang in clusters in the month of September, and are generally called pigeon berries, as those birds then feed on them. When the leaves first spring from the ground, after being boiled, they are a nutritious and wholefome vegetable, but when they are grown nearly to their full fize, they acquire a poifonous quality. The roots applied to the hands or feet of a perfon afflicted with a fever, prove a very powerful absorbent.

SKUNK CABBAGE or POKE is an herb that grows in moift and fwampy places. The lcaves of it are about a foot long, and fix inches broad, nearly oval, but rather pointed. The roots are compoled of great number of fibres, a lotion of which is made use of by the people in the colonies for the cure of the itch. There iffues a ftrong musky fmell from this herb, fomething like the animal of the fame name before defcribed, and on that account it is fo termed.

WAKE R OBIN is an herb that grows in fwampy lands; its ro ot refembles a fmall turnip, and if tafted will greatly inflame the tongue, and immediately convert it from its patural fhape into a round hard fubftance; in which flate it will continue for fome time, and during this no other part of the mouth will will be a gent qua if grated very goo

WILD INDIGO is an herb of the fame fpecies as that from whence indigo is made in the fouthern colonies. It grows in one ftalk to the height of five or fix inches from the ground, when it divides into many branches, from which iffue a great number of fmall hard bluifhleaves that fpread to a great breadth, and among thefe it bears a yellow flower; the juice of it has a very difagreeable fcent.

CAT MINT has a woody root, divided into feveral branches, and it fends forth a ftalk about three feet high; the leaves are like those of the nettle or betony, and they have a strong smell of mint, with a biting acrid taste; the flowers grow on the tops of the branches, and are of a faint purple or whitish color. It is called cat mint, because it is faid cats have an antipathy to it, and will not let it grow. It has nearly the virtue of common mint.*

FLOWERS.

Heart's Eafe, Lillies red and yellow, Pond Lillies, Cowflips, May Flowers, Jeffamine, Honeyfuckles, Rock Honeyfuckles, Rofes red and white, Wild Hollyhock, Wild Pinks, Golden Rod.

I fhall not enter into a minute defcription of the flowers above recited, but only just observe, that they much refemble those of the fame name which grow in Europe, and are as beautiful in color, and as perfect in odor, as they can be fupposed to be in their wild, uncultivated state.

* For an account of Tobacco, fee a treatife I have published on the culture of that plant.

Maize or Indian Corn, Wild Rice, Beans, the Squafh, &c.

MAIZE or INDIAN CORN grows from fix to ten feet high, on a stalk full of joints, which is stiff and folid, and when green, abounding with a fweet juice. The leaves are like those of the reed, about two feet in length, and three or four inches broad. The flowers which are produced at fome diftance from the fruit on the fame plant, grow like the cars of oats, and are fomctimes white, yellow, or of a purple color. The feeds are as large as peafe, and like them quite naked and fmooth, but of a roundifh furface, rather compressed. One spike generally confifts of about fix hundred grains, which are placed closely together in rows, to the number of eight or ten, and fometimes twelve. This corn is very wholefome, eafy of digeftion, and yields as good nourishment as any other fort. After the Indians have reduced it into meal by pounding it, they make cakes of it, and bake them before the fire. I have already mentioned that fome nations cat it in cakes before it is ripe, in which state it is very agreeable to the palate, and extremely nutritive.

WILD RICE. This grain, which grows in the greateft plenty throughout the interior parts of North America, is the most valuable of all the spontaneous productions of that country. Exclusive of its utility as a supply of tood for those of the human species, who inhabit this part of the continent, and obtained without any other trouble than that of gathering it in, the sweetness and nutritious quality of it attracts an infinite number of wild fowl of every kind, which flock from distant climes, to enjoy this rare repast; and by it become inexpressibly fat and delicious. delicio vice to presen other realm gift of the fo great fource in the where and t oats b The feet in th that they bunc leave till it teml havi ting ing to t clof rece out Hay wat fit " you pof pre bee tan Ar

In future periods it will be of great ferdelicious. vice to the infant colonies, as it will afford them a prefent support, until in the course of cultivation, other fupplies may be produced; whereas in those realms which are not furnished with this bounteous gift of nature, even if the climate is temperate and the foil good, the first fettlers are often exposed to great hardfhips from the want of an immediate refource for neceffary food. This useful grain grows in the water where it is about two feet deep, and where it finds a rich, muddy foil. The ftalks of it, and the branches or ears that bear the feed, refemble oats both in their appearance and manner of growing. The stalks are full of joints, and rife more than eight feet above the water. The natives gather the grain in the following manner: Nearly about the time that it begins to turn from its milky ftate and to ripen, they run their canoes into the midst of it, and tying bunches of it together, just below the ears, with bark, leave it in this lituation three or four weeks longer, till it is perfectly ripe. About the latter end of September they return to the river, when each family having its feparate allotment, and being able to diftinguish their own property by the manner of fastening the fheaves, gather in the portion that belongs This they do by placing their cances to them. close to the bunches of rice, in fuch polition as to receive the grain when it falls, and then beat it out, with pieces of wood formed for that purpofe. Having done this, they dry it with fmoke, and afterwards tread or rub off the outfide hufk; when it is fit for use they put it into the skins of fawns, or young buffaloes, taken off nearly whole for this purpofe, and fewed into a fort of fack, wherein they preferve it till the return of their harvest. It has been the fubjest of much speculation, why this spontaneous grain is not found in any other regions of America, or in those countries situated in the same parallels

parallels of latitude, where the waters are as apparently adapted for its growth as in the climate I treat of. As for inftance, none of the countries that lie to the fouth and east of the great lakes, even from the provinces north of the Carolinas, to the extremities of Labradore, produce any of this grain. It is true I found great quantities of it in the watered lands near Detroit, between Lake Huron and Lake Erie, but on inquiry I learned that it never arrived nearer to maturity than just to bloffom; after which it appeared blighted, and died away. This convinces me that the north-welt wind, as I have before hinted, is much more powerful in these than in the interior parts; and that it is more inimical to the fruits of the earth, after it has paffed over the lakes, and become united with the wind which joins it from the frozen regions of the north, than it is further to the westward. BEANS. These are nearly of the same shape as

the European beans, but are not much larger than the imalleft fize of them. They are boiled by the Indians, and eaten chiefly with bear's flefh.

The SQUASH. They have also feveral species of the MELON or PUMPKIN, which by some are called squashes, and which ferve many nations partly as a substitute for bread. Of these there is the round, the crane-neck, the small flat, and the large oblong squash. The smaller forts being boiled, are eaten during the summer as vegetables; and are all of a pleasing flavor. The crane-neck, which greatly excels all the others, are usually hung up for a winter's store, and in this manner might be preferved for several months.

APPENDIX.

APPENDIX.

HE countries that lie between the great lakes and River Miffifippi, and from thence fouthward to Weft Florida, although in the midst of a large continent, and at a great diftance from the fea, are fo fituated, that a communication between them and other realms might conveniently be opened; by which means those empires or colonies that may hereafter be founded or planted therein, will be rendered commercial ones. The great River Miffifippi, which runs through the whole of them, will enable their inhabitants to establish an intercourse with foreign climes, equally as well as the Euphrates, the Nile, the Danube, or the Wolga do those people which dwell on their banks, and who have no other convenience for exporting the produce of their own country, or for importing those of others, than boats and veffels of light burden : notwithstanding which, they have become powerful and opulent flates.

The Miffifippi, as I have before obferved, runs from north to fouth, and paffes through the moft fertile and temperate part of North-America, excluding only the extremities of it, which verge both on the torrid and frigid zones. Thus favorably fituated, when once its banks are covered with inhabitants, they need not long be at a lofs for means to eftablifh an extensive and profitable commerce. They will find the country towards the fouth almost fpontaneoufly producing filk, cotton, indigo, and tobacco; and the more northern parts, wine, oil, beef, tallow.

tallow, fkins, buffalo-wool, and furs; with lead, copper, iron, coals, lumber, corn, rice, and fruits, befides earth and barks for dying.

These articles, with which it abounds even to profusion, may be transported to the ocean through this river without greater difficulty than that which attends the conveyance of merchandize down fome of those I have just mentioned. It is true that the Mississippi being the boundary between the English and Spanish fettlements, and the Spaniards in poffession of the mouth of it, they may obstruct the pasfage of it and greatly dishearten those who make the first attempts; yet when the advantages that will certainly arise to fettlers, are known, multitudes of adventures, allured by the prospect of such abundant riches, will flock to it, and establish themselves, though at the expense of rivers of blood.

But flould the nation that happens to be in poffeffion of New-Orleans prove unfriendly to the internal fettlers, they may find a way into the Gulf of Mexice, by the river Iberville, which empties itfelf from the Miffifippi, after paffing through Lake Maurepas, into Lake Ponchartrain, which has a communication with the fea within the borders of Welt Florida. The River Iberville branches off from the Miffifippi about eighty miles above New Orleans, and though it is at prefent choaked up in fome parts, it might at an inconfiderable expence be made navigable, fo as to anfwer all the purpofes propofed.

Although the English have acquired fince the last peace a more extensive knowledge of the interior parts than were ever obtained before, even by the French, yet many of their productions still remain unknown. And though I was not deficient either in association during the flort time I remained in them, yet I must acknowledge that the intelligence I gained was not fo perfect as I could with, and that it requires further refeaches to make the world ad, copuits, be-

world

world thoroughly acquainted with the real value of thefe long hidden realms.

The parts of the Mifflippi of which no furvey has hitherto been taken, amount to upwards of eight • hundred miles, following the course of the fiream, that is, from the Illinois to the Ouifconfin Rivers. Plans of fuch as reach from the former to the Gulf of Mexico, have been delineated by feveral hands and I have the pleafure to find that an actual furvey of the intermediate parts of the Miffifippi, between the Illinois River and the fea, which the Ohio, Cherokee, and Ouabache Rivers, taken on the fpot by a very ingenious Gentleman,* is now published. I flatter myself that the observations therein contained, which have been made by one whole knowledge of the parts therein defcribed was acquired by a perfonal investigation, aided by a folid judgement, will confirm the remarks I have made; and promote the. plan I am here recommending.

I shall also here give a concise description of each, beginning, according to the rule of geographers, with that which lies most to the north.

It is however neceffary to obferve, that before thefe fettlements can be eftablished, grants must be precured in the manner customary on such occasions, and the lands 'be purchased of those who have acquired a right to them by a long possession is but no greater difficulty will attend the completion of this point, than the original founders of every colony on the continent met with to obstruct their intentions; and the number of Indians who inhabit these tracts being greatly inadequate to their extent, it is not to be doubted, but they will readily give up for a reafonable confideration, territories that are of little use to them; or remove for the accommodation of their

* Thomas Hutchings, E(q. Captain in his Majefty's 60th, or Royal American Regiment of Foot.

B b 2

new

306

new neighbours, to lands at a greater diffance from the Miflifippi, the navigation of which is not effential to the welfare of their communities.

No. I. The country within these lines, from its. fituation, is colder than any of the others; yet I am convinced that the air is much more temperate than in those provinces that lie in the fame degree of latitude to the east of it. " The foil is excellent, and there is a great deal of land that is free from woods in the parts adjoining to the Milliappi ; whill on the contrary the north eaftern borders of it are well wooded. Towards the heads of the River St. Croix, rice grows in great plenty, and there is abundance of copper. Though the falls of Saint Anthony are fituated at the fouth-caft corner of this division, yet that impediment will not totally obstruct the navigation, as the River St. Croix, which runs through a g at part of the fouthern fide of it, enters the Miffitippi just below the Falls, and flows with to gentle a current, that it affords a convenient navigation for boats. This tract is about one hundred miles from north-weft to fouth-east, and one hundred and twenty miles from north-east to fouth-west.

No. II. This tract, as I have already defcribed it in my Journal, exceeds the highest encomiums I can give it; notwithstanding which it is entirely uninhabited, and the profusion of bleffings that nature has flowered on this heavenly fpot, return unenjoyed to the lap from whence they fprang. Lake Pepin, as I have termed it after the French, lies within thefe bounds; but the lake to which that name preperly belongs is a little above the River St. Croix ;however, as all the traders call the lower lake by that name, I have fo denominated it, contrary to the information I received from the Indians. This colony lying in unequal angles, the dimensions of it cannot be exactly given; but it appears to be on an average about one hundred and ten miles long, and eighty broad. No III.

No. III. The greatest part of this division is fituated on the River Ouifconfin, which is navigable for boats about one hundred and eighty miles, till it reaches the carrying place that divides it from the Fox River. The land which is contained within its linnits, is in fome parts mountainous, and in the other confifts of fertile meadows and fine pasturage. It is furnished also with a great deal of good timber, and, as is generally the cafe on the banks of the Miffilippi and its branches, has much fine, open, clear land, proper for cultivation. To these are added an inexhaustible fund of riches, in a number of lead mines which lie at a little diftance from the Ouifconfin towards the fouth, and appear to be uncommonly full of ore. Although the Saukies and Ottagaumies inhabit a part of this tract, the whole of the lands under their cultivation does not exceed three hundred acres. It is in length from east to west about one hundred and fifty miles, and about eighty from north to fouth.

No. IV. This colony confifts of lands of various denominations, fome of which are very good, and others very bad. The beft is fituated on the borders of the Green Bay and the Fox River, where there are innumerable acres covered with fine grafs, most part of which grows to an aftonishing height. This river will afford a good navigation for boats throughout the whole of its courfe, which is about one hundred and cighty miles, except between the Winnebago Lake, and the Green Bay ; where there are feveral carrying-places in the fpace of thirty miles. The Fox River is rendered remarkable by the abundance of rice that grows on its thores, and the almost infinite numbers of wild fowl that frequent its banks. The land which lies near it appears to be very fertile, and promifes to produce a fufficient fupply of all the necessaries of life for any number of inhabitants. A communication might be opened by those .

those who shall settle here, either through the Green Bay, Lake Michigan, Lake Huron, Lake Erie, and Lake Ontario with Canada, or by way of the Ouifconfin into the Mississippi. This division is about one hundred and fixty miles long from north to south, and one hundred and forty broad.

No. V. This is an excellent track of land, and, confidering its interior fituation, has greater advantages than could be expected; for having the Miffifippi on its western borders, and the Illinois on its fouth-east, it has as free a navigation as most of the others. The northern parts of it are fomewhat mountainous, but it contains a great deal of clear land, the foll of which is excellent, with many fine fertile meadows, and not a few rich mines. It is upwards of two hundred miles from north to fouth, and one hundred and fifty from east to west.

No. VI. This colony being fituated upon the heads of the Rivers Illinois and Ouabache, the former of which empties it felf immediately into the Miffifippi, and the latter into the fame river by means of the Ohio, will readily find a communication with the fea through thefe. Having alfo the River Miamis paffing through it, which runs into Lake Erie, an intercourfe might be eftablifhed with Canada alfo by way of the lakes, as before pointed out. It contains a great deal of rich fertile land, and though more inland than any of the others, will be as valuable an acquifition as the beft of them. From north to fouth it is about one hundred and fixty miles, from eaft to weft one hundred and eighty.

No. VII. This division is not inferior to any of the foregoing. Its northern borders lying adjacent to the Illinois river, and its weftern to the Miflifippi, the fituation of it for establishing a commercial intercourse with foreign nations is very commodious. It abounds with all the necessaries of life, and is abour one hundred and fifty miles from north to fouth, and fixty e Green rie, and re Ouifpout one fouth,

hd, and, advane Miffiis on its t of the mewhat of clear any fine It is upfouth, pon the former e Miffiteans of n with

er Miace Erie,ada alfo It conthough is valua north s, from

any of ljacent llifippi, l interus. It abour h, and ixty fixty miles from east to west; but the confines of it being more irregular than the others, I cannot exactly afcertain the dimensions of it.

No. VIII. This colony having the River Ouabache running through the centre of it, and the Ohio for its fouthern boundary, will enjoy the advantages of a free navigation. It extends about one hundred and forty miles from north to fouth, and one hundred and thirty from eaft to weft.

No. IX. X. and XI. being fimilar in fituation, and furnished with nearly the fame conveniences as all the others, I shall only give their dimensions. No. IX. is about eighty miles each way, but not exactly fquare. No. X. is nearly in the fame form, and about the same extent. No. XI. is much larger, being at least one hundred and fifty miles from north to fouth, and one hundred and forty from east to west, as nearly as from its irregularity it is possible to calculate.

After the defeription of this delightful country I have already given, I need not repeat that all the fpots I have thus pointed out as proper for colonization, abound not only with the neceffaries of life, being well ftore 1 with rice, deer, buffaloes, bears, &c. but produce in equal abundance fuch as may be termed luxuries, or at leaft those articles of commerce before recited which the inhabitants of it will have an opportunity of exchanging for the needful productions of other countries.

The difcovery of a north-weft paffage to India has been the fubject of innumerable difquifitions. Many efforts likewife have been made by way of Hudfon's Bay, to penetrate into the Pacific Ocean, though without fuccefs. I fhall not therefore trouble myfelf to engmerate the advantages that would refult from this much-wifhed for difcovery, its utility being already too well known to the commercial world to need any elucidation; I fhall only confine myfelf to the the methods that appear most probable to ensure success to future adventurers.

The many attempts that have hitherto been made for this purpose, but which have all been rendered abortive, seem to have turned the spirit of making useful refeaches into another channel, and this most interesting one has almost been given up as impracticable; but, in my opinion, their failure rather proceeds from their being begun at an improper place, than from their impracticability.

All navigators that have hitherto gone in fearch of this paffage, have first entered Hudson's Bay; the confequence of which has been, that having spent the feason during which only those feas are navigable, in exploring many of the numerous inlets lying therein, and this without discovering any opening, terrified at the approach of winter, they have hastened back for fear of being frozen up, and confequently of being obliged to continue till the return of fummer in those bleak and dreary realms. Even such as have perceived the coasts to enfold themselves, and who have of course entertained hopes of fucceeding, have been deterred from profecuting their voyage, left the winter should fet in before they could reach a more temperate climate.

These apprehensions have discouraged the boldest adventurers from completing the expeditions in which they have engaged, and frustrated every attempt. But as it has been discovered by such as have failed into the northern parts of the Pacific Ocean, that there are many inlets which verge towards Hudson's Bay, it is not to be doubted but that a passage might be made out from that quarter, if it be sought for at a proper feason. And should these expectations be disappointed, the explorers would not be in the same hazardous fituation with those who set out from Hudson's Bay, for they will always be fure of a

APPENDIX.

tre fuc-

n raade ndered making is moft practier proplace,

arch of y; the fighther s fighther s lying pening, haftenquenturn of en fuch of fucg their y could

boldeft ons in ery atas have Dcean, s Hudpaffage fought pectat be in fet out re of a fafe fafe retreat, through an open fea, to warmer regions, even after repeated difappointments. And this confidence will enable them to proceed with greater refolution, and probably be the means of effecting what too much circumfpection or timidity has prevented.

These reasons for altering the plan of inquiry after this convenient passage, carry with them such conviction, that in the year 1774, Richard Whitworth, Esq. member of Parliament for Stafford, a gentleman of an extensive knowledge in geography, of an active enterprising disposition, and whose benevolent mind is ever ready to promote the happiness of individuals, or the welfare of the public, from the representations made to him of the expediency of it by myself and others, intended to travel across the continent of America, that he might attempt to carry a scheme of this kind into execution.

He defigned to have purfued nearly the fame route that I did; and after having built a fort at Lake Pepin, to have proceeded up the River St. Pierre, and from thence up a branch of the River Mefforie, till having difcovered the fource of the Oregan or Riverof the Weft, on the other fide the fummit of the lands that divide the waters which run into the Gulph of Mexico from those that fall into the Pacific Ocean, he would have failed down that river to the place where it is faid to empty itfelf near the Straits of Annian.

Having there established another fettlement on fome spot that appeared best calculated for the support of his people, in the neighbourhood of some of the inlets which tend towards the north-east, he would from thence have begun his refearches. This gentleman was to have been attended in the expedition by Colonel Rogers, myself, and others, and to have taken out with him a sufficient number of artificers and mariners for building the forts and vessels necessary neceffary on the occasion, and for navigating the latter; in all, not lefs than fifty or fixty men. The grants and other requisites for this purpole were even nearly compleated, when the prefent troubles in America began, which put a flop to an enterprife that promifed to be of inconceivable advantage to the British dominions.

FINIS.
